ROLL CALL

INTRODUCTIONS

PUBLIC COMMENTS ON MATTERS ON THE AGENDA WILL BE TAKEN UP AS THE ITEM IS CALLED FOR BUSINESS, BETWEEN STAFF'S REPORT AND CITY COUNCIL DELIBERATION (SPEAKER SLIPS MAY BE TURNED IN UNTIL THE ITEM IS CALLED FOR BUSINESS.)

PUBLIC COMMENTS ON MATTERS NOT ON THE AGENDA UNDER THE JURISDICTION OF THE CITY COUNCIL WILL BE HEARD PRIOR TO CITY COUNCIL REPORTS AND CLOSING COMMENTS. IN THE EVENT THAT THE AGENDA ITEM FOR SUCH PUBLIC COMMENTS HAS NOT BEEN CALLED BY 9:00 P.M., IT SHALL BE CALLED AS THE NEXT ITEM OF BUSINESS FOLLOWING THE CONCLUSION OF ANY ITEM BEING HEARD AT 9:00 P.M. Those wishing to speak should submit a BLUE speaker slip to the Bailiff. There is

AGENDA
September 25, 2012

a three-minute time limit per person. All remarks and questions shall be addressed to the presiding officer or to the City Council and not to any individual Council member, staff member or other person.

JOINT CONSENT CALENDARS (SECTIONS A-D)

All items listed under the Consent Calendars, Sections A, B, C, and D are considered to be routine and non-controversial, and may be enacted by one motion unless a member of the Council, Community Services District, City as Successor Agency for the Redevelopment Agency, Housing Authority or the Board of Library Trustees requests that an item be removed for separate action. The motion to adopt the Consent Calendars is deemed to be a separate motion by each Agency and shall be so recorded by the City Clerk. Items withdrawn for report or discussion will be heard after public hearing items.

A. CONSENT CALENDAR-CITY COUNCIL

A.1 ORDINANCES - READING BY TITLE ONLY

Recommendation: Waive reading of all Ordinances.

A.2 MINUTES - REGULAR MEETING OF SEPTEMBER 11, 2012 (Report of: City Clerk Department)

Recommendation:

Approve as submitted.

A.3 APPROVAL OF PAYMENT REGISTER FOR JULY, 2012 (Report of: Financial & Administrative Services Department)

Recommendation:

Adopt Resolution No. 2012-74, approving the Payment Register for the month of July, 2012 in the amount of \$13,987,791.35.

Resolution No. 2012-74

A Resolution of the City Council of the City of Moreno Valley, California, Approving the Payment Register for the Month of July, 2012.

A.4 PA06-0021 (PM 34577) – INDUSTRIAL – ACCEPT FINAL MAP, AGREEMENT AND IRREVOCABLE LETTERS OF CREDIT FOR PUBLIC IMPROVEMENTS, SOUTHEAST CORNER OF HEACOCK STREET AND CARDINAL AVENUE, DEVELOPER: I-215 LOGISTICS, LLC, A DELAWARE LIMITED LIABILITY COMPANY, NEWPORT BEACH, CA 92660 (Report of: Community & Economic Development Department)

Recommendation:

AGENDA
September 25, 2012

1. Approve Parcel Map 34577, authorize the City Clerk to sign the map and transmit said map to the County Recorder's Office for recordation;
2. Accept the Agreement and Irrevocable Letters of Credit for Public Improvements for PA06-0021(PM 34577);
3. Authorize the Mayor to execute the agreement;
4. Direct the City Clerk to forward the signed agreement to the County Recorder's office for recordation; and
5. Authorize the City Engineer to execute any future time extension amendments to the agreement, subject to City Attorney approval, if the required public improvements are not completed within said timeframe.

A.5 FIRST AMENDMENT TO AGREEMENT WITH DMC DESIGN GROUP FOR MORENO TOWNSITE AREA STORM DRAIN AND MISCELLANEOUS STREET IMPROVEMENTS BETWEEN ALESSANDRO BOULEVARD AND DRAINAGE FACILITY LINE F - PROJECT NO. 801 0011 70 77-2001 (Report of: Public Works Department/CPD)

Recommendation:

1. Approve the First Amendment to Agreement for Professional Consultant Services with DMC Design Group to revise and complete the design for the Moreno Townsite Area Storm Drain and Miscellaneous Street Improvements;
2. Authorize the City Manager or his designee to continue negotiating the cost proposal and then execute said Amendment to Agreement for Professional Consultant Services with DMC Design Group, subject to approval of the City Attorney; and
3. Authorize an increase in the Purchase Order to DMC Design Group in the amount of up to but not to exceed \$57,820 once the final cost negotiations are concluded and the amendment to agreement has been signed by all parties.

A.6 AUTHORIZATION TO AWARD CONSTRUCTION CONTRACT TO GLOBAL POWER GROUP, INC. FOR THE EMERGENCY OPERATIONS CENTER FAMILY CARE CENTER GENERATOR PROJECT - PROJECT NO. 803 0016 70 77 (Report of: Public Works Department/CPD)

Recommendation:

1. Award the construction contract to Global Power Group, Inc. (GPG),

AGENDA
September 25, 2012

12060 Woodside Avenue, Lakeside, CA 92040, the lowest responsible bidder, for Emergency Operations Center Family Care Center Generator project;

2. Authorize the City Manager to execute a contract with GPG;
3. Authorize the issuance of a Purchase Order for \$386,811.70 (\$351,647.00 bid plus 10% contingency of \$35,164.70) to GPG when the contract has been signed by all parties;
4. Authorize the Public Works Director/City Engineer to execute any subsequent change orders to the contract with GPG, up to but not to exceed the Purchase Order's total contingency amount of \$35,164.70, subject to the approval of the City Attorney; and
5. Authorize the Public Works Director/City Engineer to record the Notice of Completion once he determines that all contract requirements and punch-list items are completed by GPG, accept the improvements into the City's maintained system, and release the retention to Contractor if no claims have been filed against the project.

A.7 APPROVE AGREEMENT FOR PROFESSIONAL CONSULTANT CONSTRUCTION GEOTECHNICAL SERVICES WITH NINYO & MOORE FOR MORENO BEACH INTERCHANGE IMPROVEMENTS PHASE 1 - PROJECT NO. 801 0038 70 77-4821 (Report of: Public Works Department/CPD)

Recommendation:

1. Authorize the "Agreement for Professional Consultant Services" with Ninyo & Moore (Ninyo & Moore), 11650 Mission Park Drive, Suite 101, Rancho Cucamonga, CA 91730, to provide professional geotechnical and materials testing services during construction of the SR-60/Moreno Beach Interchange Improvements Phase 1 project for a total agreement amount not to exceed \$109,110;
2. Acting as the Successor Agency, approve this action as a recognized payment obligation of the former Redevelopment Agency of the City of Moreno Valley, add it to the Recognized Obligation Payment Schedule, submit same to the Oversight Board for Approval, and authorize the City Manager to access agency funds only after Oversight Board approval;
3. Authorize the City Manager to execute said "Agreement for Professional Consultant Services" with Ninyo & Moore; and

AGENDA
September 25, 2012

4. Authorize the issuance of a Purchase Order totaling \$109,110 to Ninyo & Moore when the contract has been signed by all parties.

A.8 APPROVE AGREEMENT FOR PROFESSIONAL CONSULTANT CONSTRUCTION SURVEY SERVICES WITH COORY ENGINEERING FOR MORENO BEACH INTERCHANGE IMPROVEMENTS PHASE 1 - PROJECT NO. 801 0038 70 77-4821 (FORMERLY PROJECT NO. 07-41570024) (Report of: Public Works Department/CPD)

Recommendation:

1. Authorize the "Agreement for Professional Consultant Services" with Coory Engineering (Coory), 1718 N. Neville Street, Orange, CA 92865, to provide professional survey services during construction of the SR-60/Moreno Beach Interchange Improvements Phase 1 project for a total agreement amount not to exceed \$100,805;
2. That the City Council Acting as the Successor Agency, approve this action as a recognized payment obligation of the former Redevelopment Agency of the City of Moreno Valley, add it to the Recognized Obligation Payment Schedule, submit same to the Oversight Board for Approval, and authorize the City Manager to access agency funds only after Oversight Board approval;
3. Authorize the City Manager to execute said "Agreement for Professional Consultant Services" with Coory; and
4. Authorize the issuance of a Purchase Order totaling \$100,805 to Coory when the contract has been signed by all parties.

A.9 CITY COUNCIL REPORTS ON REIMBURSABLE ACTIVITIES (Report of: City Clerk's Department)

Recommendation:

Receive and file the Reports on Reimbursable Activities for the period of September 5-18, 2012.

A.10 BIENNIAL UPDATE TO THE PUBLIC RIGHT OF WAY ACCESS AMERICANS WITH DISABILITIES ACT TRANSITION PLAN (Report of: Public Works Department/CPD)

Recommendation:

Receive and file this Biennial Update on Public Right of Way Access Americans with Disabilities Act Transition Plan.

E. PUBLIC HEARINGS

Questions or comments from the public on a Public Hearing matter are limited to five minutes per individual and must pertain to the subject under consideration. Those wishing to speak should complete and submit a GOLDENROD speaker slip to the Bailiff.

E.1 A PUBLIC HEARING REGARDING PA08-0033 (GENERAL PLAN AMENDMENT), PA08-0034 (CHANGE OF ZONE) AND PA08-0035 (CUP) FOR A SMOG INSPECTION STATION AND TIRE SALES COMMERCIAL BUSINESS AT 22184 ALESSANDRO BOULEVARD. THE PROPOSED GENERAL PLAN AMENDMENT WILL CHANGE THE LAND USE DESIGNATION OF A 0.54 ACRE PORTION OF A PARCEL LOCATED AT

AGENDA
September 25, 2012

22184 ALESSANDRO BOULEVARD FROM RESIDENTIAL/OFFICE (R/O) TO COMMERCIAL (C). THE CHANGE OF ZONE WILL CHANGE THE ZONING OF THE PARCEL FROM OFFICE COMMERCIAL (OC) TO COMMUNITY COMMERCIAL (CC). THE APPLICANT IS SOCRATES URENA (Report of: Community & Economic Development Department)

Recommendation: That the City Council:

1. Conduct a public hearing for General Plan Amendment PA08-0033, Change of Zone PA08-0034 and Conditional Use Permit PA08-0035 and subsequent to the public hearing:

ADOPT a Negative Declaration for PA08-0033 (General Plan Amendment), PA08-0034 (Change of Zone) and PA08-0035 (Conditional Use Permit) in that this project will not result in significant environmental impacts);

2. ADOPT City Council Resolution No. 2012-75 thereby APPROVING General Plan Amendment PA08-0033, based on the findings in the City Council Resolution;

Resolution No. 2012-75

A Resolution of the City Council of the City of Moreno Valley, California, approving an Amendment to the General Plan Land Use Element (PA08-0033) to change the Land Use Designation of a 0.54 acre portion of a parcel located at 22184 Alessandro Boulevard (portion of Assessor's Parcel Number 291-190-025) from Residential/Office (R/O) to Commercial (C)

3. INTRODUCE Ordinance No. 854 thereby APPROVING Zone Change PA08-0034, based on the findings in the City Council Ordinance; and

Ordinance No. 854

An Ordinance of the City Council of the City of Moreno Valley, California, Approving PA08-0034 (Zone Change) to change the Land Use District for approximately 0.54 acres of 22184 Alessandro Boulevard (portion of Assessor Parcel Number 291-190-025) from Office Commercial (OC) to Community Commercial (CC)

4. ADOPT City Council Resolution No. 2012-76 thereby APPROVING Conditional Use Permit PA08-0035 for a Smog Inspection Station and Tire Sales commercial business at 22184 Alessandro Boulevard, based on the findings in the Resolution, and the conditions of approval to the resolution as Exhibit A.

AGENDA
September 25, 2012

Resolution No. 2012-76

A Resolution of the City Council of the City of Moreno Valley, California, Approving Conditional Use Permit (PA08-0035) for the conversion of an existing Single Family Residence into Smog Inspection Station and Tire Sales Commercial Business at 22184 Alessandro Boulevard (APN: 291-190-025)

- E.2 A PUBLIC HEARING REGARDING AN APPEAL OF THE PLANNING COMMISSION'S JULY 12, 2012, APPROVAL OF PLOT PLAN PA09-0004 AND TENTATIVE PARCEL MAP NO. 36162 (PA09-0012) AND THE RELATED ENVIRONMENTAL IMPACT REPORT FOR THE VIP MORENO VALLEY PROJECT. THE PROJECT PROPOSES A 1,616,133 SQUARE FOOT WAREHOUSE DISTRIBUTION BUILDING ON APPROXIMATELY 80 ACRES. THE BUILDING INCLUDES 268 DOCK HIGH DOORS AND 44,000 SQUARE FEET OF OFFICE AREA. THE MAP WOULD COMBINE FOUR EXISTING PARCELS INTO A SINGLE PARCEL. THE PROJECT SITE IS LOCATED ON THE SOUTH SIDE OF GROVE VIEW ROAD BETWEEN PERRIS BOULEVARD AND INDIAN STREET AT THE CITY'S SOUTHERN BOUNDARY, IN THE MORENO VALLEY INDUSTRIAL AREA PLAN (SP 208). THE APPLICANT IS VOGEL ENGINEERS, INC. THE APPELLANT IS JOHNSON & SEDLACK ATTORNEYS AT LAW ON BEHALF OF RESIDENTS FOR A LIVABLE MORENO VALLEY AND THE SIERRA CLUB (Report of: Community & Economic Development Department)

Recommendation: That the City Council:

1. Conduct a public hearing for Environmental Impact Report (P11-020), Plot Plan PA09-0004, and Tentative Parcel Map 36362 (PA09-0012) and subsequent to the public hearing:

APPROVE Resolution No. 2012-77 and CERTIFY that the Environmental Impact Report (EIR) for the VIP Moreno Valley Project has been completed in compliance with the California Environmental Quality Act; and

Resolution No. 2012-77

A Resolution of the City Council of the City of Moreno Valley, California, certifying the Final Environmental Impact Report (P11-020), Adoption of the Findings and Statement of Overriding Considerations, and Approval of the Mitigation Monitoring Program for the VIP Moreno Valley Project, generally located in the Moreno Valley Industrial Area Plan (SP 208), on the South side of Grove View Road between Perris Boulevard and Indian Street at the City's southern boundary.

AGENDA
September 25, 2012

2. APPROVE Resolution No. 2012-78 and APPROVE Plot Plan PA09-0004 and Tentative Parcel Map 36162 (PA09-0012), subject to the attached conditions of approval included as Exhibits A and B.

Resolution No. 2012-78

A Resolution of the City Council of the City of Moreno Valley, California, for approval of Plot Plan PA09-0004 for development of a 1,616,133 square foot Warehouse Distribution Facility on 80 acres located within Assessor's Parcel Numbers 488-330-003 through -006 and -026 and PA09-0012 (Tentative Parcel Map No. 36162) to combine four parcels into a single parcel.

- E.3 GENERAL PLAN AMENDMENT TO MODIFY THE CIRCULATION PLAN FOR NASON STREET BETWEEN ALESSANDRO BOULEVARD AND FIR AVENUE (PA12-0026) - (Report of: Public Works Department/CPD)

Recommendation:

1. Conduct a public hearing to consider the action taken by the Planning Commission on August 23, 2012, recommending approval of a General Plan Amendment (PA12-0026) (Project); and subsequent to the public hearing; and
2. APPROVE City Council Resolution No. 2012-79 thereby adopting a Negative Declaration for PA12-0026 in that the project will not result in significant environmental impacts, and approving the General Plan Amendment (PA12-0026), based on the findings in the City Council Resolution.

Resolution No. 2012-79

A Resolution of the City Council of the City of Moreno Valley, California, Approving a General Plan Amendment (PA12-0026) to Modify the City Circulation Plan and Circulation Exhibit, Respectively

PUBLIC COMMENTS ON ANY SUBJECT NOT ON THE AGENDA UNDER THE JURISDICTION OF THE CITY COUNCIL

Jose Chavez

1. Tow trucks and lost/stolen medical equipment
2. Police Department
3. New Ideas

Tom Jerele Sr.

1. Thanked the Mayor & Council for allowing additional speakers on the 4th of July item
2. Chamber Idea - get MVTV involved at Chamber
3. Public Works - Petroleum Pipeline
4. City's Building Official - Very responsive and fair to work with
5. 9/11 Remembrance on all of our Public Service

Vince Lauro

1. November 6 Election - District 5 Candidate

Deanna Reeder

1. Upcoming November Elections - very important to vote
2. Ad Hoc Committee to select City Manager
3. Rancho Belago Signs
4. Campaign Signs

Oscar Valdepeña (representing Moreno Valley Chamber)

1. Thanked the Council for approval of Chamber contract
2. Chamber holds an informative morning event called Adelante
3. Meet the Military Mixer will be held Thursday, September 13 at March Air Field Museum - Free to attend
4. Business Expo will be held on October 11; free to the community
5. Edible Arrangements in Moreno Valley is #1 in their chain (non-member of the Chamber)

Pete Bleckert

1. Glad to hear from City Manager regarding the floods
2. Spoke on history of other floods in the area over the years
3. Sinclair Basin

**CLOSING COMMENTS AND/OR REPORTS OF THE CITY COUNCIL,
COMMUNITY SERVICES DISTRICT, OR COMMUNITY REDEVELOPMENT
AGENCY**

Council Member Jesse L. Molina

1. Thanked the Fire and Police Departments for their actions taken during the flood; it was pretty bad
2. Emphasized that we, as community, need to try being cordial and understanding; stated that his goal is to unite the people of Moreno Valley
3. Attended California League of Cities, where financial condition of cities was discussed; every city was hit hard during the last four years; considering everything, our city is not doing bad
4. Doesn't want Ad Hoc Committee to be dissolved as very talented people are serving on it; feels that July 4th parade was the best

Council Member Robin N. Hastings

1. With staff, attended Round 1 Grand Opening at the mall; it was a very good turnout - this venue is desperately needed for Moreno Valley, for families and our youth; Moreno Valley is the second location in the U.S; encouraged residents to visit it

MINUTES
September 11, 2012

2. Flooding - appreciates Public Works, Robert Lemon and the City Manager for their patience, dedication and quick responses to many emergency calls; several streets were under water, and power was lost from Nason all the way east; a meeting with the residents regarding flood control generated very creative ways to address this issue; will contact Pete Bleckert, the newly reappointed Flood Control Commissioner representing District 5, to provide some assistance

4. Moreno Valley Diamond Girls Softball event was held last Saturday - 300 people attended the opening ceremony; it was a great event

5. Appreciates all the hard work that everybody is doing on behalf of the City and the residents

Mayor Pro Tem William H. Batey II

1. Apologized to Mr. Chavez for issues not resolved to his satisfaction

2. Commended all the City Staff for the great job during the flooding; storm came unexpectedly and calls were coming quick; there were not enough people to handle the situation

3. Announced that last week we lost a long time business owner who used to own Moreno Valley Tire Pros, Mark Williams; he will be missed

4. Youth Fest - commended Parks & Community Services Director Mike McCarty and staff for putting this great event

5. Everyone remembers 9/11 and people lost on that day 11 years ago - a lot of fire departments hold ceremonies for 350 firefighters who were killed along with police officers involved in rescue - they will never be forgotten

Council Member Marcelo Co

1. Congratulated everyone who participated in the 4th of July celebration; great job

2. 9/11 has to be kept in our minds and our kids' minds - we must never let it happen again; we should promote visiting the sites

3. Congratulated the Public Works Director and Eric Lewis for the quick action they did to protect our children and having the study to install new crosswalks near the school on Dracaea and nearby Fire Station; several kids nearly got run over

4. Thanked everyone for giving him an opportunity to attend the League of California Cities; we are in the same boat as everyone else, lacking funds

MINUTES
September 11, 2012

and having a lot of demands from citizens; if we work together, we can find ways and means to be successful; was very impressed with this convention; Assistant City Manager made a good presentation

5. This is an Election Year - Citizens should know that the candidates' signs must be respected; requested not to tear them down or destroy them; please report anybody doing it; violators will be prosecuted

6. Congratulations to all of you for doing a great job in moving us forward in everyday things - our staff is here to do the best they can to help the community

Mayor Richard A. Stewart

1. Stated that at the last televised meeting, he mentioned that he gets invited to many events - invitations are spread out so there is coverage. As a City's representative, he was invited to greet a Hindu group to welcome them to the City. Stated that he welcomes all different religions and all the people and we will continue to represent all the people and go to different churches and places when we have the opportunity as part of the duties to represent the people

2. Commended staff, the Fire and Police Departments and residents for their efforts concerning the floods

3. Boy Scouts Distinguished Citizen Dinner will be held on November 9 at the March Museum

4. Mayor's Event will be held on October 26 with a theme of Italian Comedy Wedding – it will benefit Laura Froehlich's efforts and the Boy Scouts

5. It's very sad that Fire Chief Abdul Ahmad's wife, Rosalinda, passed away. She was an Air Force veteran; will adjourn the meeting in her memory

6. Round 1 is great

7. Advised City Manager and Assistant City Managers that he forwarded an email received on City's network from a constituent on a possible traffic hazard to them

8. On Saturday, attended Youth Fest, Million Father March with Bishop Sykes at Crossword Church at March and Military Appreciation Picnic at March

9. Stated that every time we have a complain about tow trucks, we aggressively and diligently examine them; if we can do anything, we will do

Report to City Council

TO: Mayor and City Council

FROM: Richard Teichert, Financial & Administrative Services Director

AGENDA DATE: September 25, 2012

TITLE: APPROVAL OF PAYMENT REGISTER FOR JULY, 2012

RECOMMENDED ACTION

Staff recommends that the City Council adopt Resolution No. 2012-74, approving the Payment Register for the month of July, 2012 in the amount of \$13,987,791.35.

DISCUSSION

The payment register is using a standard format from the City's new LOGOS General Ledger system. This standard format lists all payments in check number order, followed by a listing of all electronic fund transfers (EFT) in fund transfer order, thus eliminating the need for a separate fund transfer register. Staff is working on possible alternate sorting options as we become fully operational with the features of the new system.

FISCAL IMPACT

The disbursements itemized in the attached Payment Register are reflected in the FY 2012-13 budget. Therefore, there is no fiscal impact other than the expenditure of budgeted funds.

RESOLUTION NO. 2012-74

A RESOLUTION OF THE CITY COUNCIL OF THE
CITY OF MORENO VALLEY, CALIFORNIA,
APPROVING THE PAYMENT REGISTER FOR
THE MONTH OF JULY, 2012

WHEREAS, the Financial & Administrative Services Department has prepared and provided the Payment Register for the period July 1, 2012 through July 31, 2012, for review and approval by the City Council of the City of Moreno Valley; and

WHEREAS, it is in the best interest of the City that the referenced Payment Register be approved.

NOW, THEREFORE, IT IS HEREBY RESOLVED BY THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, that the Payment Register for the period July 1, 2012 through July 31, 2012, in the total amount of \$13,987,791.35 is approved.

APPROVED AND ADOPTED this 25th day of September, 2012.

Report to City Council

TO: Mayor and City Council

FROM: Ahmad R. Ansari, P.E., Public Works Director/City Engineer and Barry Foster, Community & Economic Development Director

AGENDA DATE: September 25, 2012

TITLE: PA06-0021 (PM 34577) – INDUSTRIAL – ACCEPT FINAL MAP, AGREEMENT AND IRREVOCABLE LETTERS OF CREDIT FOR PUBLIC IMPROVEMENTS

SOUTHEAST CORNER OF HEACOCK STREET AND CARDINAL AVENUE

DEVELOPER: I-215 LOGISTICS, LLC,
A DELAWARE LIMITED LIABILITY COMPANY
3501 JAMBOREE ROAD, SUITE 230
NEWPORT BEACH, CA 92660

RECOMMENDED ACTION

Staff recommends that the City Council:

1. Approve Parcel Map 34577, authorize the City Clerk to sign the map and transmit said map to the County Recorder's Office for recordation.
2. Accept the Agreement and Irrevocable Letters of Credit for Public Improvements for PA06-0021(PM 34577).
3. Authorize the Mayor to execute the agreement.
4. Direct the City Clerk to forward the signed agreement to the County Recorder's office for recordation.

5. Authorize the City Engineer to execute any future time extension amendments to the agreement, subject to City Attorney approval, if the required public improvements are not completed within said timeframe.

BACKGROUND

On January 11, 2007, the Planning Commission of the City of Moreno Valley approved Tentative Parcel Map No. 34577 (PA06-0021) along with Plot Plan (PA06-0022) for two industrial warehouse buildings. On November 28, 2011, Amended Plot Plan P11-090 (Building #1; 455,000 square feet) and Amended Plot Plan P11-091 (Building #2; 1,250,000 square feet) were approved by the Planning Director as amendments to the original plot plan. The parcel map is a proposal to subdivide 76.4 gross acres into two parcels. The project is bounded by Indian Street to the east, Heacock Street to the west, San Michelle Road to the south, and Cardinal Avenue to the north.

DISCUSSION

Final Map 34577 is in substantial conformance with the tentative parcel map, and the developer has requested that the map be approved for recordation. The Conditions of Approval for this project require that the developer provide surety for the required improvements.

The developer of this project has completed and submitted an Agreement for Public Improvements. The developer agrees to perform and complete all of the required street improvements within twenty-four (24) months of the date the agreement is executed. The street improvements include but are not limited to: asphalt concrete, curb, gutter, sidewalk, driveway approaches, wheelchair ramp, signage, traffic signal and traffic signal modifications, street lights, storm drain, water, and sewer. The City Engineer may execute any future amendments to the agreement, subject to City Attorney approval, if the required street improvements are not completed within said timeframe.

Accompanying the agreement is an Irrevocable Letters of Credit as Faithful Performance security in the amount of \$5,365,000 and an Irrevocable Letter of Credit as Labor and Material security in the amount of \$2,682,500 issued by Wells Fargo Bank.

FISCAL IMPACT

No fiscal impact is anticipated.

CITY COUNCIL GOALS

PUBLIC FACILITIES AND CAPITAL PROJECTS:

Ensure that needed public facilities, roadway improvements, and other infrastructure improvements are constructed and maintained.

NOTIFICATION

Publication of agenda.

**AGREEMENT FOR PUBLIC IMPROVEMENTS
FOR
PROJECT NO. PA06-0021 (PM 34577)**

This Agreement, made and entered into by and between the City of Moreno Valley, State of California, hereinafter called City, and **1-215 Logistics, LLC A Delaware limited liability company**, herein after called Developer, on the date the City signs this agreement.

WITNESSETH:

FIRST: Developer, for and in consideration of the approval by the City of the final map of that certain land division, or that certain other land development project, known as **PA06-0021 (PM 34577)** agrees, at Developer's own expense, to furnish all labor, equipment and material necessary, and within **TWENTY-FOUR (24)** months from the date this Agreement is executed, to perform and complete in a good and workmanlike manner, all of the required improvements in accordance with those improvement plans for said project which have been approved by the City Engineer, and are on file in the office of the City Engineer, and to do all work incidental thereto in accordance with the standards set forth in City ordinances and regulations, and pay all costs of engineering necessary in connection therewith, which are expressly made a part of this Agreement. All of the above required work shall be done under the inspection of and to the satisfaction of the City Engineer, and shall not be deemed complete until approved and accepted as complete by the City. Developer further agrees to guarantee the required improvements for a period of one year following acceptance by the City and during this one year period to repair and replace, to the satisfaction of the City Engineer, any defective work or labor done or defective materials furnished. Developer shall complete the improvements described in this paragraph pursuant to Section 66462, Government Code. Developer shall also complete any offsite improvements required as a condition of approval and with plans approved by the City Engineer at such time as the City acquires an interest in the land which will permit the improvements to be made, and the Developer waives the 120 day time limitation set forth in Section 66462.5, Government Code.

Security to guarantee the performance of this agreement shall be in the following amounts:

Faithful Performance security shall be in the sum of **FIVE MILLION THREE HUNDRED SIXTY-FIVE THOUSAND AND NO/100** Dollars (*****\$5,365,000.00*****). The estimated cost of said work and improvements, pursuant to the Preliminary Estimate of Cost labeled Exhibit A attached hereto.

Labor and Material security shall be in the sum of **TWO MILLION SIX HUNDRED EIGHTY-TWO THOUSAND FIVE HUNDRED AND NO/100** Dollars (*****\$2,682,500.00*****). The estimated cost securing payment of labor and materials is fifty (50) percent of the total cost estimate of the improvements.

SECOND: Developer agrees to pay to the City the actual cost of such inspection of the works and improvements as may be required by the City Engineer. Developer further agrees that, if suit is brought upon this Agreement or any bond guaranteeing the completion of the required improvements, all costs and reasonable expenses and fees incurred by the City in successfully enforcing such obligations shall be paid by Developer and guaranteed by the surety in addition to the face amount of the security, including reasonable attorney's fees, and that, upon entry of judgment, such costs, expenses and fees shall be taxed as costs and included in any judgment rendered.

Exhibit "B"

THIRD: City shall not, nor shall any officer or employee of City, except for its or their sole negligence, be liable or responsible for any accident, loss or damage happening or occurring to the works specified in this Agreement prior to the completion and approval thereof, nor shall City or any officer or employee thereof, be liable for any persons or property injured by reason of the nature of the work, or by reason of the acts or omissions of Developer, his agents or employees, in the performance of the work, and all of said liabilities are assumed by Developer. Developer agrees to protect, defend and hold harmless City and the officers and employees thereof from all loss, liability or claim because of, or arising out of the acts or omissions of Developer, his agents and employees, in the performance of this Agreement, or arising out of the use of any patent or patented article in the performance of this Agreement.

FOURTH: The Developer hereby grants to the City and/or to any authorized agent or employee of the City, the irrevocable permission to enter upon the lands of the above-referenced land division for the purpose of completing the improvements. This permission shall terminate in the event that the Developer has completed the work within the time specified or any extension thereof granted by the City.

FIFTH: Developer agrees at all times, up to the completion and acceptance of the improvements by the City, to give good and adequate warning to the traveling public of each and every dangerous condition caused by the construction of the improvements, and to protect the traveling public from such defective or dangerous conditions. The Developer shall keep all traveled ways that are a part of, or affected by the construction of this project free and clear of mud, dirt and debris and shall provide twice monthly street sweeping service. A copy of the contract for street sweeping service shall be provided to the City. The Developer's obligation under this provision shall be secured by the bonds securing performance of this Agreement.

SIXTH: The Developer, his agents and employees, shall give notice to the City Engineer at least 48 hours before beginning any work and shall furnish said City Engineer all reasonable facilities for obtaining full information with respect to the progress and manner of work.

SEVENTH: If the Developer, or his agents or employees, neglects, refuses, or fails to prosecute the work with such diligence as to insure its completion within the specified time, or within such extensions of time as have been granted by the City, or if the Developer violates, neglects, refuses, or fails to perform satisfactorily any of the provisions of the plans and specifications, he shall be in default of this Agreement and notice in writing of such default shall be served upon him. The City Council shall have the power, on recommendation by the City Engineer, to terminate all rights of the Developer because of such default. The determination by the City Engineer of the question as to whether any of the terms of the Agreement or specifications have been violated, or have not been performed satisfactorily, shall be conclusive upon the Developer, and any and all parties who may have any interest in the Agreement or any portion thereof. The foregoing provisions of this section shall be in addition to all other rights and remedies available to the City under law.

EIGHTH: Developer agrees to file with City, prior to the date this Agreement is executed, a good and sufficient improvement security in an amount not less than the estimated cost of the work and improvements for the faithful performance of the terms and conditions of this Agreement, and good and sufficient security for payment of labor and materials in the amount prescribed by City ordinances and regulations to secure the claims to which reference is made in Title 15 (commencing with Section 3082) of Part 4 of Division 3 of the Civil Code of the State of California. Developer agrees to renew each and every said bond or bonds with good and sufficient sureties or increase the amounts of said bond or bonds, or both, within ten (10) days after being notified by the City Engineer that the sureties or amounts are insufficient. Notwithstanding any other provision herein, if Developer fails to take such action as is necessary to comply with said notice, he shall be in default of this Agreement unless all required improvements are completed within ninety (90) days of the date on which the City Engineer notified the Developer of the insufficiency of said bonds. Developer reserves the right to substitute the form of security in accordance with the City's Municipal Code at anytime during the term of this agreement, subject to approval by the City Engineer and City Attorney.

NINTH: It is further agreed by and between the parties hereto, including the surety or sureties on the bonds securing this Agreement that, in the event it is deemed necessary to extend the time of completion of the work contemplated to be done under this Agreement, extensions of time **may** be granted by the City from time to time, either at its own option, or upon request of Developer, and such extensions shall in no way affect the validity of this Agreement or release the surety or sureties on said bonds, Developer further agrees to maintain the aforesaid bonds in full force and effect during the terms of this Agreement, including any extensions of time as may be granted therein.

TENTH: It is understood and agreed by the parties hereto that if any part, term or provision of this Agreement is by the courts held to be unlawful and void, the validity of the remaining portions shall not be affected and the rights and obligations of the parties shall be construed and enforced as if the Agreement did not contain the particular part, term or provision held to be invalid.

ELEVENTH: Any notice or notices required or permitted to be given pursuant to this Agreement shall be served on the other party by mail, postage prepaid, at the following addresses:

City:
City Engineer
P.O. Box 88005
14177 Frederick
Moreno Valley, CA 92552-0805

Developer:
I-215 Logistics, LLC
A Delaware limited liability company

Re: Irrevocable Letter of Credit Delivered as Improvement Security Pursuant to California Government Code Sections 66499 et seq. and Regulations of the City of Moreno Valley

Gentlemen:

Wells Fargo Bank, N.A., a financial institution subject to regulation by the State of California and the United States Government, establishes and delivers to the City of Moreno Valley this irrevocable letter of credit in your favor for the account of I-215 Logistics, LLC A Delaware Limited Liability Company located at 3501 Jamboree Rd., Suite 230 Newport Beach, CA 92660 up to an aggregate sum of Five Million Three Hundred Sixty Five Thousand and No/100Dollars (US \$5,365,000.00) as "Improvement Security" as required by Government Code Sections 66499 et seq. and Regulations of the City of Moreno Valley, for Project No. PA06-0021 (PM 34577).

All or any portion of the funds available pursuant to this irrevocable letter of credit will be paid upon the written demand of the City of Moreno Valley. The written demand need not present documentation of any type as a condition of payment, including proof of loss, but will be available by your draft at sight drawn on us and accompanied by your signed certification stating either that:

1. "I-215 Logistics, LLC A Delaware Limited Liability Company has not complied with the performance requirements as set forth in the agreements entered into with the City of Moreno Valley."

Exhibit "C"

OR

2. "I-215 Logistics, LLC A Delaware Limited Liability Company has not maintained the offsite improvements as set forth in the agreements entered into with the City of Moreno Valley for the one year guarantee and warranty period provided, however, that the maximum amount which may be drawn under this subparagraph 2. shall be limited to 10% of the letter of credit.

This irrevocable letter of credit expires at the institution's counter on September 05, 2013; however, it is a condition of this letter of credit that it shall be deemed automatically extended without amendment for successive one year periods from the present and all future expiration dates thereof unless 60 days prior to any such date the institution shall notify the City in writing that the institution elects not to consider this letter of credit renewed for any such additional period.

Upon our sending you such notice of the non-extension of the expiration date of this Letter of Credit, you may also draw under this Letter of Credit, on or before the Final Expiration Date specified in such notice, by presentation of the following documents to us at our above address:

1. A draft drawn on us at sight marked "Drawn under Wells Fargo Bank, N.A. Standby Letter of Credit No. IS0014770U."
2. The original of this Standby Letter of Credit and any amendments thereto.
3. Your signed and dated statement worded as follows (with the instructions in brackets therein complied with):

The undersigned, an authorized representative of the beneficiary of Wells Fargo Bank, N. A. Letter of Credit No. IS0014770U, hereby certifies that it has received notification from Wells Fargo Bank, N.A. that this letter of credit will not be extended past its current expiration date. The undersigned further certifies that (i) as of the date of this statement, it has not received a letter of credit or other instrument acceptable to it as a replacement; and (ii) I-215 Logistics, LLC a Delaware Limited Liability Co. has not been released from its obligations."
I.L.O.C (FP) NO. IS0014770U

Together we'll go far

When the work is completed to the satisfaction of the City, the City Engineer of the City of Moreno Valley will accept the work and thereupon the amount of the obligation of this security will be reduced by 90% with the remaining 10% will be held as security for a one year guarantee period and warranty period provided for in the agreements.

As a part of the obligation secured hereby and in addition to the face amount specified therefore, there shall be included costs and reasonable expenses and fees, including reasonable attorney's fees incurred by the City in successfully enforcing such obligation, all to be taxed as costs and included in any judgment rendered.

This Letter of Credit is Irrevocable.

CITY MANAGER	<i>ms</i>

Report to City Council

TO: Mayor and City Council

FROM: Ahmad R. Ansari, P.E., Public Works Director/City Engineer

AGENDA DATE: September 25, 2012

TITLE: FIRST AMENDMENT TO AGREEMENT WITH DMC DESIGN GROUP FOR MORENO TOWNSITE AREA STORM DRAIN AND MISCELLANEOUS STREET IMPROVEMENTS BETWEEN ALESSANDRO BOULEVARD AND DRAINAGE FACILITY LINE F - PROJECT NO. 801 0011 70 77 - 2001

RECOMMENDED ACTION

Staff recommends that the City Council

1. Approve the First Amendment to Agreement for Professional Consultant Services with DMC Design Group to revise and complete the design for the Moreno Townsite Area Storm Drain and Miscellaneous Street Improvements.
2. Authorize the City Manager or his designee to continue negotiating the cost proposal and then execute said Amendment to Agreement for Professional Consultant Services with DMC Design Group, subject to approval of the City Attorney.
3. Authorize an increase in the Purchase Order to DMC Design Group in the amount of up to but not to exceed \$57,820 once the final cost negotiations are concluded and the amendment to agreement has been signed by all parties.

BACKGROUND

This project involves the design and construction of a storm drain system in Redlands Boulevard south of Alessandro Boulevard to mitigate flooding within the Moreno Townsite Area. The project also includes miscellaneous street improvements associated with construction of the storm drain.

On February 8, 2011, the City Council accepted the initial Hazard Mitigation Grant Program (HMGP) funds in the amount of \$1,178,000 from the Federal Emergency Management Agency (FEMA).

On April 26, 2011, the City Council approved an agreement with DMC Design Group (DMC) to provide design services, various environmental technical studies, and right-of-way engineering support for the project, as well as accepted additional HMGP funds in the amount of \$322,000 from FEMA.

On January 10, 2012, the City Council adopted a Mitigated Negative Declaration (MND) for this project with mitigation measures to be included in the project's specifications to reduce all potential environmental impacts related to the project's construction phase to an acceptable level.

DISCUSSION

A portion of the proposed storm drain system was originally proposed to be designed and constructed in the middle of the Moreno Townsite Area, from Alessandro Boulevard to Campbell Avenue. With this alignment, the proposed storm drain would be in the same location of the existing low laying drainage swale called the Russell's Ditch that runs north-south through side yards of ten private properties in the neighborhood. Construction of these storm drain improvements necessitated the acquisition of storm drain easements from ten property owners.

Staff tried in earnest to acquire the required storm drain easements but was not able to obtain the easements necessary for construction and maintenance of the storm drain due to various property owners' concerns. In addition, because the storm drain easements cross private properties, there are existing improvements and obstructions within the proposed easements that will prevent Riverside County Flood Control and Water Conservation District (District) from accepting and maintaining the storm drain when construction is completed. In order to keep the project moving forward, the design needs to be modified to change a portion of the storm drain alignment.

DMC, with the District's concurrence, proposes to revise the design so that the storm drain mainline would be installed in Redlands Boulevard with laterals extending into Alessandro Boulevard, Kimberly Avenue, Maltby Avenue, and Campbell Avenue to convey storm water from the low lying areas. DMC proposes a not-to-exceed cost of \$57,820 to complete additional design survey, hydrology and hydraulic studies, utility conflict investigations, coordination with the District, plans and bid documents for advertising for constructions bids. However, as this time, the Public Works Director/City Engineer as the City Manager's designee continues to negotiate the cost proposal with DMC.

ALTERNATIVES

1. Approve and authorize the recommended actions as presented in this staff report. Because FEMA grant funds are involved, the project must continue in an expeditious manner. *This alternative will allow for the project to keep its design momentum necessary for the construction of much needed storm drain and street improvements within the Moreno Townsite Area.*

2. Do not approve and authorize the recommended actions as presented in this staff report. *This alternative will delay much needed storm drain and street improvements within the Moreno Townsite Area and may significantly affect the disposition of the FEMA grant funds.*

FISCAL IMPACT

This project is included in Fiscal Year 2012-2013 Capital Improvements Project Budget and financed by FEMA-HMGP Grant Funds and Measure “A” as local match funds. There is no impact to the General Fund.

BUDGETED FUNDS FOR THE PROJECT:

Street Improvement Program (Account No. 2001-70-77-80001 801 0011 70 77)
 \$1,694, 953

ESTIMATED PROJECT COSTS:

Design Cost*	\$ 40,000
Additional Design Cost	\$ 58,000
Construction	\$1,450,000
Construction Geotechnical Services and Survey Services.....	\$ 60,000
Project Management, Administration and Inspection	\$ 60,000
Total	<u>\$1,668,000</u>

*Balance of previous funding authorization

ANTICIPATED PROJECT SCHEDULE

Design Complete..... March 2013
 Advertise and Award Construction Contract..... April 2013
 Construction Complete..... November 2013

CITY COUNCIL GOALS

PUBLIC FACILITIES AND CAPITAL PROJECTS:

Ensure that needed public facilities, roadway improvements, and other infrastructure improvements are constructed and maintained.

POSITIVE ENVIRONMENT:

Create a positive environment for the development of Moreno Valley’s future.

SUMMARY

Staff recommends approval of the First Amendment to Agreement for Professional Consultant Services and an increase to the purchase order with DMC Design Group up to \$57,820 for completion of the design for the Moreno Townsite Area Storm Drain and Miscellaneous Street Improvements project. These improvements will help to mitigate the flooding for this area.

FIRST AMENDMENT TO AGREEMENT
FOR DESIGN PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 801 0011 70 77-2001

This First Amendment to Agreement is by and between the City of Moreno Valley, a municipal corporation, hereinafter referred to as "City," and DMC Design Group, Inc., a California corporation, hereinafter referred to as "Consultant." This First Amendment to Agreement is made and entered into effective on the date the City signs this Amendment.

RECITALS:

Whereas, the City and Consultant entered into an Agreement entitled "Agreement for Design Professional Consultant Services," hereinafter referred to as "Agreement," dated May 19, 2011.

Whereas, the Consultant is providing consultant design services for Moreno Townsite Area Storm Drain and Miscellaneous Street Improvements between Alessandro Boulevard and Drainage Facility Line F.

Whereas, it is desirable to amend the Agreement to expand the scope of the work to be performed by the Consultant as is more particularly described in Section 1 of this First Amendment.

Whereas, the Consultant has submitted a Proposal dated September 10, 2012, for expansion of the scope of work to be performed. A copy of said Proposal is attached as "Exhibit A -- First Amendment" and is incorporated herein by this reference.

SECTION 1 AMENDMENT TO ORIGINAL AGREEMENT

1.1 The Agreement termination date is extended from May 31, 2013 to May 31, 2014, unless the termination date is further extended by an Amendment to the Agreement.

**AMENDMENT TO AGREEMENT FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 801 0011 70 77-2001**

1.2 Exhibit "B" to the Agreement is hereby amended by adding to the scope of work section described in "Exhibit A – First Amendment," entitled "Proposed for Additional Professional Design Consultant Services for the Realignment of Storm Drain Improvements in the Moreno Townsite Area between Alessandro Boulevard and Drainage Facility Line F."

1.3 Exhibit "D" to the Agreement is hereby further amended by adding to the cost proposal in the amount of \$57,820 as described in said "Exhibit A -- First Amendment."

1.4 The City agrees to pay the Consultant and the Consultant agrees to receive a "Not-to-Exceed" fee of \$57,820, in consideration of the Consultant's performance of the work set forth in "Exhibit A -- First Amendment."

1.5 The total "Not to Exceed" fee for this contract is \$229,836 (\$172,016 for the original Agreement plus \$57,820 for the First Amendment to Agreement).

SECTION 2

2.1 Except as otherwise specifically provided in this Amendment, all other terms and conditions of the Agreement shall remain in full force and effect.

SIGNATURE PAGE TO FOLLOW

**AMENDMENT TO AGREEMENT FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 801 0011 70 77-2001**

RE Proposal for Additional Professional Design Consultant Services for the Realignment of Storm Drain Improvements in the Moreno Townsite Area between Alessandro Boulevard and Drainage Facility Line F (Project No. 11-12566730)

Dear Mr. Nguyen:

On August 27, 2012, revised storm drain alignment/conceptual plan for proposed drainage improvements in the Moreno Townsite Area were submitted to the City and Riverside County Flood Control and Water Conservation District. The revised alignment was required to avoid the acquisition of permanent drainage easements for the box culvert structure through properties within the Moreno Townsite community. To comply with this new alignment, it will be necessary to revise construction plans, specifications and estimates completed to date before proceeding to preparation of final bid ready construction documents.

Based upon the August 27, 2012 alignment plan submitted to the City/RCFC, DMC estimates the following effort will be required to revise the existing plans, specifications and estimates:

• Task 3 Topographic Survey	\$3,660
16 hrs @ \$200/hr (2 man survey team) + 4 hrs @ \$115/hr (Survey Manager)	
• Task 4 Base Map	\$1,440
16 hrs @ \$90/hr (CAD Op)	
• Task 5 Utility Coordination	\$23,440
20 Utility Pot Holes @ \$1,100/pothole + 16 hrs @ \$90/hr (CAD Operator)	
• Task 6 Right of Way Support	\$1,440
16 hrs @ \$90/hr (CAD Operator)	
• Task 9.02 Special Studies (Drainage)	\$2,640
24 hrs @ \$110/hr (Design Engineer)	
• Task 10 PS&E	\$17,560
160 hrs @ \$90/hr (CAD Op.) + 24 hrs @ \$110 (Design Engr.) + 4 hrs @ \$130/hr (Proj. Engr.)	
• Task 11 Coordination W/RCFC	\$1,320
12 hrs @ \$110/hr (Design Engr.)	
Total Additional Costs to Current Contract	\$51,500

September 10, 2012
Page 2

The additional costs outlined above are to revise existing plans to complete level based upon the new alignment. DMC will immediately begin this work once it receives written authorization to proceed from the City.

Should you have any questions or concerns, do not hesitate to contact me.

Sincerely,

DMC Design Group, Inc.

David M. Cospet, P.E., Q.S.D.
Principal Engineer

BUDGET OFFICER	
CITY ATTORNEY	
CITY MANAGER	

Report to City Council

TO: Mayor and City Council

FROM: Abdul Ahmad, Fire Chief
Ahmad R. Ansari, P.E., Public Works Director/City Engineer

AGENDA DATE: September 25, 2012

TITLE: AUTHORIZATION TO AWARD CONSTRUCTION CONTRACT TO GLOBAL POWER GROUP, INC. FOR THE EMERGENCY OPERATIONS CENTER FAMILY CARE CENTER GENERATOR PROJECT – PROJECT NO. 803 0016 70 77

RECOMMENDED ACTION

Staff recommends that the City Council:

1. Award the construction contract to Global Power Group, Inc. (GPG), 12060 Woodside Avenue, Lakeside, CA 92040, the lowest responsible bidder, for Emergency Operations Center Family Care Center Generator project.
2. Authorize the City Manager to execute a contract with GPG.
3. Authorize the issuance of a Purchase Order for \$386,811.70 (\$351,647.00 bid plus 10% contingency of \$35,164.70) to GPG when the contract has been signed by all parties.
4. Authorize the Public Works Director/City Engineer to execute any subsequent change orders to the contract with GPG, up to but not to exceed the Purchase Order's total contingency amount of \$35,164.70, subject to the approval of the City Attorney.
5. Authorize the Public Works Director/City Engineer to record the Notice of Completion once he determines that all contract requirements and punch-list items are completed by GPG, accept the improvements into the City's maintained system, and release the retention to Contractor if no claims have been filed against the project.

BACKGROUND

On December 14, 2010, City Council authorized the acceptance of the FY 2010 Emergency Operations Center (EOC) Grant in the amount of \$400,000. City Council also approved the expenditure of the FY 2010 EOC Grant for the Generator Project, EOC Workstation/Peripheral Project, GIS Equipment Project, Traffic Management Display Wall Project, and WebEOC/Security Display Project. The portion of the grant awarded for the EOC Family Care Center Generator project expenditure is \$229,600. The City's Conference and Recreation Center (CRC) is designated as the EOC Family Care Center.

On June 6, 2011, the City retained TMAD Taylor & Gaines (TTG) to provide Professional Consultant Services for the EOC Family Care Center Emergency Generator Analysis and Study.

At the September 26, 2011 Public Safety Subcommittee meeting, the Subcommittee recommended proceeding with constructing a new Emergency Generator for the EOC Family Care Center. Due to budget constraints, the Subcommittee also recommended upgrading the fuel tank at the existing generator as an additive alternate bid item subject to availability in funding. Staff was directed to bring this issue forward to the City Council for approval.

On October 25, 2011, City Council authorized the design of a new Emergency Generator for the EOC Family Care Center per the "Analysis and Study for the Existing and Proposed Generator for Civic Center Buildings" that was prepared by TTG. The City Council also authorized the upgrade of the fuel tank at the existing generator as an additive alternate bid item subject to the availability in funding.

On July 10, 2012, City Council authorized the equipment purchase from Johnson Power Systems for the 700 kw generator set and 5,000 gallon fuel tank at the EOC Family Care Center and the purchase of a new 5,000 gallon fuel tank for the existing generator at City Hall contingent upon available funding. City Council also authorized the appropriation of the savings in the amount of \$458,000 from the 2005 Lease Revenue Bond Fund 3401 (previously Fund 501) for the Public Safety Building Conversion project to the EOC Family Care Center Generator.

The Planning Division has determined that this project qualifies for a Class 2 Categorical Exemption as defined in Section 15302 of the California Environmental Quality Act (CEQA) Guidelines.

DISCUSSION

On August 1, 2012, the Notice Inviting Bids was issued for the construction of the EOC Family Care Center Generator project which consists of the construction and installation of a new 700kW generator and accompanying 5,000 gallon fuel tank at the EOC Family Care Center with an additive alternate bid for the installation of the 5,000 gallon fuel tank at the existing generator located at City Hall.

Formal bidding procedures were followed in conformance with the Public Contract Code. The City Clerk opened bids at 2:00 p.m. on September 11, 2012. Two (2) bids were received as follows:

	Total Bid Amounts
1. Global Power Group, Inc., Imperial, CA.....	\$ 351,647
2. Dalke & Sons Construction, Inc.	\$ 598,160

The lowest responsible bidder was determined by the bid amount as stipulated in the bidding documents. Staff reviewed the GPG's bid and finds GPG to be the lowest responsible bidder in possession of a valid license and bid bond. No material issues were identified through review of references submitted by GPG in their bid.

The contract duration is one hundred & ten (110) working days, after the date of commencement specified in the Notice to Proceed to Fulfill Preconstruction Requirements. The timeframe includes pre-construction contractor submittals and permits, and actual construction. The base bid includes the demolition of the existing structure, construction of the new enclosure, and installation of the new 700 KW generator and 5,000 gallon diesel fuel tank, fuel day tank, and re-circulating pump system at the EOC Family Care Center. Additive Alternate "A" includes the demolition of the existing trash enclosure, construction of the new structure, and the installation of a 5,000 gallon fuel tank at the existing generator at City Hall. This new tank will bring the existing generator into compliance with the National Fire Prevention Association (NFPA) code 110-5.1.2 which requires adequate fuel capacity to run the generator for 96 hours. A new trash enclosure will also be constructed. Staff recommends authorizing both the Base Bid and Additive Alternate "A".

ALTERNATIVES

1. Authorize the recommended actions as presented in this staff report. *This alternative would facilitate the construction of needed EOC Family Care Center generator facilities, and upgrade the fuel tank to meet National Fire Prevention Association (NFPA) code.*
2. Do not authorize the recommended actions as presented in this staff report. *This alternative would delay the construction of needed facilities and delay the upgrade the fuel tank to meet National Fire Prevention Association (NFPA) code.*

FISCAL IMPACT

This project is funded in part with FY 2010 Emergency Operations Center Grant Fund (Fund 2511) and 2005 Lease Revenue Bond (Fund 3401) monies resulting in total available funding of \$826,000.

There is no impact to the General Fund.

Fiscal Year 2012 / 2013 Available Budget:

EOC Grant Funds – Operating Budget (Account No. 2511-40-47-80003 803 0016 70 77)	\$179,000
2005 Lease Revenue Bond (Account No. 3401-70-77-80003 803 0016 70 77)	<u>\$647,000</u>
Total Available Budget.....	\$826,000

ESTIMATED DESIGN AND CONSTRUCTION RELATED COSTS:

Project Design	\$59,000
Generator System Cost at the EOC Family Care Center	\$246,000
Upgrade Fuel Tank Cost at City Hall	\$74,000
Construction Contract (with 10% contingency)	\$387,000
Construction Administration *	<u>\$60,000</u>
Total Estimated Design and Construction Related Costs	\$826,000

* Public Works and consultant staff will provide Project Management and Construction Administration.

ANTICIPATED PROJECT SCHEDULE:

Start Construction	November 2012
End Construction.....	May 2013
Generator Commission	May 2013

CITY COUNCIL GOALS

POSITIVE ENVIRONMENT:

Create a positive environment for the development of Moreno Valley’s future.

PUBLIC FACILITIES AND CAPITAL PROJECTS:

Ensure that needed public facilities, roadway improvements, and other infrastructure improvements are constructed and maintained.

SUMMARY

This construction project will install a new 700kW generator with an above-ground 5,000 gallon tank dedicated to EOC Family Care Center as the base bid and the new 5,000 gallon fuel tank next to the existing generator at City Hall as additive alternate bid. Staff recommends awarding a contract to GPG to construct these improvements.

NOTIFICATION

Adequate advance notification will be provided to all affected building tenants, all emergency response services, the public utilizing the services within the Emergency Operations Center Family Care Center and City Hall, Waste Management of the Inland Empire, and other interested parties, as required.

Agreement No. _____

AGREEMENT

**PROJECT NO. 803 0016 70 77
CITY OF MORENO VALLEY
EOC FAMILY CARE CENTER GENERATOR PROJECT**

THIS Agreement, effective as of the date signed by the City of Moreno by and between the City of Moreno Valley, a municipal corporation, County of Riverside, State of California, hereinafter called the "City" and **Global Power Group, Inc.**, hereinafter called the "Contractor."

That the City and the Contractor for the consideration hereinafter named, agree as follows:

1. CONTRACT DOCUMENTS. The Contract Documents consist of the following, which are incorporated herein by this reference:

- A. Governmental approvals, including, but not limited to, permits required for the Work
- B. Any and all Contract Change Orders issued after execution of this Agreement
- C. This Agreement
- D. Addenda Nos. 1 and 2 inclusive, issued prior to the opening of the Bids
- E. City Special Provisions, including the General Provisions and Technical Provisions
- F. Standard Specifications for Public Works Construction ("Greenbook") – latest edition in effect at the Bid Deadline, as modified by the City Special Provisions
- G. Reference Specifications/Reference Documents
- H. Project Plans
- I. City Standard Plans
- J. The bound Bidding Documents
- K. Contractor's Certificates of Insurance and Additional Insured Endorsements
- L. Contractor's Bidder's Proposal and Subcontractor Listing

In the event of conflict between any of the Contract Documents, the provisions placing a more stringent requirement on the Contractor shall prevail. The Contractor shall provide the better quality or greater quantity of Work and/or materials unless otherwise directed by City in writing. In the event none of the Contract Documents place a more stringent requirement or greater burden on the Contractor, the controlling provision shall be that which is found in the document with higher precedence in accordance with the above order of precedence.

2. REFERENCE DOCUMENTS. The following Reference Documents are not considered Contract Documents and were provided to the Contractor for informational purposes:

- A. None

3. SCOPE OF WORK. The Contractor shall perform and provide all materials, tools, equipment, labor, and services necessary to complete the Work described in the Contract Documents, except as otherwise provided in the Plans, Standard Specifications, or City Special Provisions to be the responsibility of others.

4. PAYMENT.

4.1. **Contract Price and Basis for Payment.** In consideration for the Contractor's full, complete, timely, and faithful performance of the Work required by the Contract Documents, the City shall pay Contractor for the actual quantity of Work required under the Bid Items awarded by the City performed in accordance with the lump sum prices and unit prices for Bid Items and Alternate Bid Items, if any, set forth in the Bidder's Proposal submitted with the Bid. The sum of the unit prices and lump sum prices for the Base Bid Items and Alternate Bid Items, if any, awarded by the City is Three Hundred Fifty One Thousand Six Hundred Forty Seven and 00/100 Dollars (\$351,647.00) ("Contract Price"). It is understood and agreed that the quantities set forth in the Bidder's Proposal for which unit prices are fixed are estimates only and that City will pay and Contractor will accept, as full payment for these items of work, the unit prices set forth in the Bidder's Proposal multiplied by the actual number of units performed, constructed, or completed as directed by the City Engineer.

4.2. **Payment Procedures.** Based upon applications for payment submitted by the Contractor to the City, the City shall make payments to the Contractor in accordance with Article 9 of the Standard Specifications, as modified by Article 9 of the City Special Provisions.

5. CONTRACT TIME.

A. **Initial Notice to Proceed.** After the Agreement has been fully executed by the Contractor and the City, the City shall issue the "Notice to Proceed to Fulfill Preconstruction Requirements." The date specified in the Notice to Proceed to Fulfill Preconstruction Requirements constitutes the date of commencement of the Contract Time of One Hundred and Ten (**110 Working Days**). The Contract Time includes the time necessary to fulfill preconstruction requirements, and to complete construction of the Project (except as adjusted by subsequent Change Orders).

The Notice to Proceed to Fulfill Preconstruction shall further specify that Contractor must complete the preconstruction requirements within Twenty (**20 Working Days**) after the date of commencement of the Contract Time; this duration is part of the Contract Time.

Critical preconstruction requirements include, but are not limited to, the following:

- Submitting and obtaining approval of critical required submittals/ deferred submittals
- Obtaining Building Permit and other Deferred Permits
- Obtaining a Temporary Use Permit for a construction yard
- Notifying all agencies, utilities, residents, etc., as outlined in the Bidding Documents
- Completion of all pre-construction activities.

If the City's issuance of a Notice to Proceed to Fulfill Preconstruction Requirements and Notice to Proceed with Order of Materials is delayed due to Contractor's failure to return the fully executed Agreement and insurance and bond documents within ten (10) Working Days after Contract award, then Contractor agrees to the deduction of one (1) Working Day from the number of days to complete the Project for every Working Day of delay in the City's receipt of said documents. This right is in addition to and does not affect the City's right to demand forfeiture of Contractor's Bid Security of Contractor persistently delays in providing the required documentation.

B. **Notice to Proceed with Construction.** After all preconstruction requirements are met in accordance with the Notice to Proceed to Fulfill Preconstruction Requirements, the City shall

issue the "Notice to Proceed with Construction," at which time the Contractor shall diligently prosecute the Work, including corrective items of Work, day to day thereafter, within the remaining Contract Time.

6. LIQUIDATED DAMAGES

6.1. Liquidated Damages. The Contractor and City (collectively, the "Parties") have agreed to liquidate damages with respect to Contractor's failure to fulfill the preconstruction requirements, and/or failure to complete the Work within the Contract Time. The Parties intend for the liquidated damages set forth herein to apply to this Contract as set forth in Government Code Section 53069.85. Contractor acknowledges and agrees that the liquidated damages are intended to compensate the City solely for Contractor's failure to meet the deadline for completion of the Work and will not excuse Contractor from liability from any other breach, including any failure of the Work to conform to the requirements of the Contract Documents.

In the event that Contractor fails to fulfill the preconstruction requirements and/or fails to complete the Work within the Contract Time, Contractor agrees to pay the City **\$500.00 per Calendar day** that completion of the Work is delayed beyond the Contract Time, as adjusted by Contract Change Orders. The Contractor will not be assessed liquidated damages for delays occasioned by the failure of the City or of the owner of a utility to provide for the removal or relocation of utility facilities.

The Contractor and City acknowledge and agree that the foregoing liquidated damages have been set based on an evaluation of damages that the City will incur in the event of late completion of the Work. The Contractor and City acknowledge and agree that the amount of such damages are impossible to ascertain as of the date of execution hereof and have agreed to such liquidated damages to fix the City's damages and to avoid later disputes. It is understood and agreed by Contractor that liquidated damages payable pursuant to this Agreement are not a penalty and that such amounts are not manifestly unreasonable under the circumstances existing as of the date of execution of this Agreement.

It is further mutually agreed that the City will have the right to deduct liquidated damages against progress payments or retainage and that the City will issue a Change Order or Construction Change Directive and reduce the Contract Price accordingly. In the event the remaining unpaid Contract Price is insufficient to cover the full amount of liquidated damages, Contractor shall pay the difference to the City.

6.2. Owner is Exempt from Liability for Early Completion Delay Damages. While the Contractor may schedule completion of all of the Work, or portions thereof, earlier than the Contract Time, the Owner is exempt from liability for and the Contractor will not be entitled to an adjustment of the Contract Sum or to any additional costs, damages, including, but not limited to, claims for extended general conditions costs, home office overhead, jobsite overhead, and management or administrative costs, or compensation whatsoever, for use of float time or for Contractor's inability to complete the Work earlier than the Contract Time for any reason whatsoever, including but not limited to, delay cause by Owner or other Excusable Compensable Delay. See Section 6-6 of the Standard Specifications and City Special Provisions regarding compensation for delays.

7. INSURANCE.

7.1. **General.** The Contractor shall procure and maintain at its sole expense and throughout the term of this Agreement, any extension thereof, Commercial General Liability, Automobile Liability, and Workers' Compensation Insurance with such coverage limits as described herein.

7.2. **Additional Insured Endorsements.** The Contractor shall cause the insurance required by the Contract Document to include the City of Moreno Valley, the City Council and each member thereof, and the Moreno Valley Community Services District (CSD), and their respective officials, employees, commission members, officers, directors, agents, employees, volunteers and representatives as an additional insureds. For the Commercial General Liability coverage, said parties shall be named as additional insureds utilizing either:

1. Insurance Services Office ("ISO") Additional Insured endorsement CG 20 10 (11/85); or
2. ISO Additional Insured endorsement CG 20 10 (10/01) and Additional Insured Completed Operations endorsement CG 20 37 (10/01); or
3. substitute endorsements providing equivalent coverage, approved by the City.

The endorsements shall be signed by a person authorized by the insurer to bind coverage on its behalf. The coverage shall contain no special limitations on the scope of protection afforded to such additional insureds. Coverage for such additional insureds does not extend to liability to the extent prohibited by Insurance Code Section 11580.4.

7.3. **Waivers of Subrogation.** All policies of insurance required by the Contract Documents shall include or be endorsed to provide a waiver by the insurers of any rights of recovery or subrogation that the insurers may have at any time against the City of Moreno Valley, the City Council and each member thereof, and the Moreno Valley Community Services District (CSD), and their respective officials, employees, commission members, officers, directors, agents, employees, volunteers and representatives.

7.4. **Primary Coverage.** All policies and endorsements shall stipulate that the Contractor's (and the Subcontractors') insurance coverage shall be primary insurance as respects the City of Moreno Valley, the City Council and each member thereof, and the Moreno Valley Community Services District (CSD), and their respective officials, employees, commission members, officers, directors, agents, employees, volunteers and representatives, and shall be excess of the Contractor's (and its Subcontractors') insurance and shall not contribute with it.

7.5. **Coverage Applies Separately to Each Insured and Additional Insured.** Coverage shall state that the Contractor's (and its Subcontractors') insurance shall apply separately to each insured or additional insured against whom claim is made or suit is brought, except with respect to the limits of the insurer's liability. Coverage shall apply to any claim or suit brought by an additional insured against a named insured or other insured.

7.6. **Self-Insurance.** Any self-insurance (including deductibles or self-insured retention in excess of \$50,000) in lieu of liability insurance must be declared by Contractor and approved by the

City in writing prior to execution of the Agreement. The City's approval of self-insurance, if any, is within the City's sole discretion and is subject to the following conditions:

1. Contractor must, at all times during the term of the Agreement and for a period of at least **one (1)** year after completion of the Project maintain and upon Owner's reasonable request provide evidence of:
 - (a) Contractor's "net worth" (defined as "total assets" [defined as all items of value owned by the Contractor including tangible items such as cash, land, personal property and equipment and intangible items such as copyrights and business goodwill]) minus total outside liabilities must be reflected in a financial statement for the prior fiscal year reflecting sufficient income and budget for Contractor to afford at least one loss in an amount equal to the amount of self-insurance;
 - (b) financial statements showing that Contractor has funds set aside/budgeted to finance the self-insured fund (i.e., Contractor has a program that fulfills functions that a primary insurer would fill; and
 - (c) a claims procedure that identifies how a claim is supposed to be tendered to reach the financing provided by the self-insured fund.

2. If at any time after such self-insurance has been approved Contractor fails to meet the financial thresholds or otherwise fails to comply with the provisions set forth in this Paragraph 7, at the option of the City:
 - (a) the Contractor shall immediately obtain and thereafter maintain the third party insurance required under this Paragraph 7 and otherwise on the terms required above; or
 - (b) the insurer shall reduce or eliminate such deductibles or self-insured retention as respects the City, its officers, officials, employees and volunteers; or
 - (c) the Contractor shall procure a bond guaranteeing payment of losses and related investigation, claim administration, and defense expenses.

7.7. Insurer Financial Rating. Insurance companies providing insurance hereunder shall be rated A-:VII or better in Best's Insurance Rating Guide and shall be legally licensed and qualified to conduct insurance business in the State of California.

7.8. Notices to City of Cancellation or Changes. Each insurance policy described in this Paragraph 7 shall contain a provision or be endorsed to state that coverage will not be cancelled without **thirty (30) days'** prior written notice by certified or registered mail to the City (this obligation may be satisfied in the alternative by requiring such notice to be provided by Contractor's insurance broker and set forth on its Certificate of Insurance provided to the City), except that cancellation for non-payment of premium shall require (10) days prior written notice by certified or registered mail. If an insurance carrier cancels any policy or elects not to renew any policy required to be maintained by Contractor pursuant to the Contract Documents, Contractor agrees to give written notice to the City at the address indicated on the first page of the Agreement. Contractor agrees to provide the

same notice of cancellation and non-renewal to the City that is required by such policy(ies) to be provided to the First Named Insured under such policy(ies). Contractor shall provide confirmation that the required policies have been renewed not less than seven (7) days prior to the expiration of existing coverages and shall deliver renewal or replacement policies, certificates and endorsements to the City Clerk within fourteen (14) days of the expiration of existing coverages. Contractor agrees that upon receipt of any notice of cancellation or alteration of the policies, Contractor shall procure within five (5) days, other policies of insurance similar in all respects to the policy or policies to be cancelled or altered. Contractor shall furnish to the City Clerk copies of any endorsements that are subsequently issued amending coverage or limits within fourteen (14) days of the amendment.

7.9. **Commercial General Liability.** Coverage shall be written on an ISO Commercial General Liability "occurrence" form CG 00 01 (10/01 or later edition) or equivalent form approved by the City for coverage on an occurrence basis. The insurance shall cover liability, including, but not limited to, that arising from premises operations, stop gap liability, independent contractors, products-completed operations, personal injury, advertising injury, and liability assumed under an insured contract. The policy shall be endorsed to provide the Aggregate Per Project Endorsement ISO form CG 25 03 (11/85). Coverage shall contain no contractors' limitation or other endorsement limiting the scope of coverage for liability arising from pollution, explosion, collapse, or underground (x, c, u) property damage. Contractor shall provide Products/Completed Operations coverage to be maintained continuously for a minimum of **one (1) year** after Final Acceptance of the Work.

Contractor shall maintain Commercial General Liability insurance with the following minimum limits: \$1,000,000 per occurrence / \$2,000,000 aggregate / \$2,000,000 products-completed operations.

7.10. **Business Automobile Liability.** Coverage shall be written on ISO form CA 00 01 (12/93 or later edition) or a substitute form providing equivalent coverage for owned, hired, leased and non-owned vehicles, whether scheduled or not, with \$1,000,000 combined single limit per accident for bodily injury and property damage. If necessary, the policy shall be endorsed to provide contractual liability coverage.

7.11. **Workers' Compensation.** Contractor shall comply with the applicable sections of the California Labor Code concerning workers' compensation for injuries on the job. Compliance is accomplished in one of the following manners:

1. Provide copy of permissive self-insurance certificate approved by the State of California; or
2. Secure and maintain in force a policy of workers' compensation insurance with statutory limits and Employer's Liability Insurance with a minimal limit of **\$1,000,000** per accident; or
3. Provide a "waiver" form certifying that no employees subject to the Labor Code's Workers' Compensation provision will be used in performance of this Contract.

7.12. **Subcontractors' Insurance.** The Contractor shall include all Subcontractors as insureds under its policies or shall furnish separate certificates and endorsements for each Subcontractor. All coverages for Subcontractors shall be subject to all of the requirements stated herein.

8. **BONDS.** The Contractor shall furnish a satisfactory Performance Bond meeting all statutory requirements of the State of California on the form provided by the City. The bond shall be furnished as a guarantee of the faithful performance of the requirements of the Contract Documents

as may be amended from time to time, including, but not limited to, liability for delays and damages (both direct and consequential) to the City and the City's Separate Contractors and consultants, warranties, guarantees, and indemnity obligations, in an amount that shall remain equal to one hundred percent (100%) of the Contract Price.

The Contractor shall furnish a satisfactory Labor and Materials Payment Bond meeting all statutory requirements of the State of California on the form provided by the City in an amount that shall remain equal to one hundred percent (100%) of the Contract Price to secure payment of all claims, demands, stop notices, or charges of the State of California, of material suppliers, mechanics, or laborers employed by the Contractor or by any Subcontractor, or any person, firm, or entity eligible to file a stop notice with respect to the Work.

All bonds shall be executed by a California-admitted surety insurer. Bonds issued by a California-admitted surety insurer listed on the latest version of the U.S Department of Treasury Circular 570 shall be deemed accepted unless specifically rejected by the City. Bonds issued by sureties not listed in Treasury Circular 570 must be accompanied by all documents enumerated in California Code of Civil Procedure Section 995.660(a). The bonds shall bear the same date as the Contract. The attorney-in-fact who executes the required bonds on behalf of the surety shall affix thereto a certified and current copy of the power of attorney. In the event of changes that increase the Contract Price, the amount of each bond shall be deemed to increase and at all times remain equal to the Contract Price. The signatures shall be acknowledged by a notary public. Every bond must display the surety's bond number and incorporate the Contract for construction of the Work by reference. The terms of the bonds shall provide that the surety agrees that no change, extension of time, alteration, or modification of the Contract Documents or the Work to be performed thereunder shall in any way affect its obligations and shall waive notice of any such change, extension of time, alteration, or modification of the Contract Documents. The surety further agrees that it is obligated under the bonds to any successor, grantee, or assignee of the City.

Upon the request of any person or entity appearing to be a potential beneficiary of bonds covering payment of obligations arising under the Contract, the Contractor shall promptly furnish a copy of the bonds or shall authorize a copy to be furnished.

Should any bond become insufficient, or should any of the sureties, in the opinion of the City, become non-responsible or unacceptable, the Contractor shall, within ten (10) Calendar Days after receiving notice from the City, provide written documentation to the Satisfaction of the City that Contractor has secured new or additional sureties for the bonds; otherwise the Contractor shall be in default of the Contract. No further payments shall be deemed due or will be made under Contract until a new surety(ies) qualifies and is accepted by the City.

9. RECORDS. The Contractor and its Subcontractors shall maintain and keep books, payrolls, invoices of materials, and Project records current, and shall record all transactions pertaining to the Contract in accordance with generally acceptable accounting principles. Said books and records shall be made available to the City of Moreno Valley, Riverside County, the State of California, the Federal Government, and to any authorized representative thereof for purposes of audit and inspection at all reasonable times and places. All such books, payrolls, invoices of materials, and records shall be retained for at least three (3) years after Final Acceptance.

10. INDEMNIFICATION.

10.1. General. To the fullest extent permitted by law, the Contractor assumes liability for and agrees, at the Contractor's sole cost and expense, to promptly and fully indemnify, protect, hold

harmless and defend (even if the allegations are false, fraudulent, or groundless), the City of Moreno Valley, its City Council, the Moreno Valley Housing Authority, and the Moreno Valley Community Services District (CSD), and all of their respective officials, officers, directors, employees, commission members, representatives and agents ("Indemnitees"), from and against any and all claims, allegations, actions, suits, arbitrations, administrative proceedings, regulatory proceedings, or other legal proceeds, causes of action, demands, costs, judgments, liens, stop notices, penalties, liabilities, damages, losses, anticipated losses of revenues, and expenses (including, but not limited to, any fees of accountants, attorneys, experts or other professionals, or investigation expenses), or losses of any kind or nature whatsoever, whether actual, threatened or alleged, arising out of, resulting from, or in any way (either directly or indirectly), related to the Work, the Project or any breach of the Contract by Contractor or any of its officers, agents, employees, Subcontractors, Sub-subcontractors, or any person performing any of the Work, pursuant to a direct or indirect contract with the Contractor ("Indemnity Claims"). Such Indemnity Claims include, but are not limited to, claims for:

- A. Any activity on or use of the City's premises or facilities;
- B. Any liability incurred due to Contractor acting outside the scope of its authority pursuant to the Contract, whether or not caused in part by an Indemnified Party;
- C. The failure of Contractor or the Work to comply with any Applicable Law, permit or orders;
- D. Any misrepresentation, misstatement or omission with respect to any statement made in the Contract Documents or any document furnished by the Contractor in connection therewith;
- E. Any breach of any duty, obligation or requirement under the Contract Documents, including, but not limited to any breach of Contractor's warranties, representations or agreements set forth in the Contract Documents;
- F. Any failure to coordinate the Work with City's Separate Contractors;
- G. Any failure to provide notice to any party as required under the Contract Documents;
- H. Any failure to act in such a manner as to protect the Project from loss, cost, expense or liability;
- I. Bodily or personal injury, emotional injury, sickness or disease, or death at any time to any persons including without limitation employees of Contractor;
- J. Damage or injury to real property or personal property, equipment and materials (including, but without limitation, property under the care and custody of the Contractor or the City) sustained by any person or persons (including, but not limited to, companies, corporations, utility company or property owner, Contractor and its employees or agents, and members of the general public);
- K. Any liability imposed by Applicable Law including, but not limited to criminal or civil fines or penalties;
- L. Any dangerous, hazardous, unsafe or defective condition of, in or on the Site, of any nature whatsoever, which may exist by reason of any act, omission, neglect, or any use or occupation of the Site by Contractor, its officers, agents, employees, or Subcontractors;
- M. Any operation conducted upon or any use or occupation of the Site by Contractor, its officers, agents, employees, or Subcontractors under or pursuant to the provisions of the Contract or otherwise;

- N. Any acts, errors, omission or negligence of Contractor, its officers, agents, employees, or Subcontractors;
- O. Infringement of any patent rights, licenses, copyrights or intellectual property which may be brought against the Contractor or Owner arising out of Contractor's Work, for which the Contractor is responsible; and
- P. Any and all claims against the City seeking compensation for labor performed or materials used or furnished to be used in the Work or alleged to have been furnished on the Project, including all incidental or consequential damages resulting to the City from such claims.

10.2. **Effect of Indemnitees' Active Negligence.** Contractor's obligations to indemnify and hold the Indemnitees harmless exclude only such portion of any Indemnity Claim which is attributable to the active negligence or willful misconduct of the Indemnitee, provided such active negligence or willful misconduct is determined by agreement of the parties or by findings of a court of competent jurisdiction. In instances where an Indemnitee's active negligence accounts for only a percentage of the liability for the Indemnity Claim involved, the obligation of Contractor will be for that entire percentage of liability for the Indemnity Claim not attributable to the active negligence or willful misconduct of the Indemnitee(s). Such obligation shall not be construed to negate, abridge or otherwise reduce any other right or obligation of indemnity which would otherwise exist as to any party or person described in this Paragraph 11. Subject to the limits set forth herein, the Contractor, at its own expense, shall satisfy any resulting judgment that may be rendered against any Indemnitee resulting from an Indemnity Claim. The Indemnitees shall be consulted with regard to any proposed settlement.

10.3. **Independent Defense Obligation.** The duty of the Contractor to indemnify and hold harmless the Indemnitees includes the separate and independent duty to defend the Indemnitees, which duty arises immediately upon receipt by Contractor of the tender of any Indemnity Claim from an Indemnitee. The Contractor's obligation to defend the Indemnitee(s) shall be at Contractor's sole expense, and not be excused because of the Contractor's inability to evaluate liability or because the Contractor evaluates liability and determines that the Contractor is not liable. This duty to defend shall apply whether or not an Indemnity Claim has merit or is meritless, or which involves claims or allegations that any or all of the Indemnitees were actively, passively, or concurrently negligent, or which otherwise asserts that the Indemnitees are responsible, in whole or in part, for any Indemnity Claim. The Contractor shall respond within thirty (30) Calendar Days to the tender of any Indemnity Claim for defense and/or indemnity by an Indemnitee, unless the Indemnitee agrees in writing to an extension of this time. The defense provided to the Indemnitees by Contractor shall be by well qualified, adequately insured and experienced legal counsel acceptable to the City.

10.4. **Intent of Parties Regarding Scope of Indemnity.** It is the intent of the parties that the Contractor and its Subcontractors of all tiers shall provide the Indemnitees with the broadest defense and indemnity permitted by Applicable Law. In the event that any of the defense, indemnity or hold harmless provisions in the Contract Documents are found to be ambiguous, or in conflict with one another, it is the parties' intent that the broadest and most expansive interpretation in favor of providing defense and/or indemnity to the Indemnitees be given effect.

10.5. **Waiver of Indemnity Rights Against Indemnitees.** With respect to third party claims against the Contractor, to the fullest extent permitted by law, the Contractor waives any and all rights to any type of express or implied indemnity against the Indemnitees.

10.6. **Subcontractor Requirements.** In addition to the requirements set forth hereinabove, Contractor shall ensure, by written subcontract agreement, that each of Contractor's

Subcontractors of every tier shall protect, defend, indemnify and hold harmless the Indemnitees with respect to Indemnity Claims arising out of, in connection with, or in any way related to each such Subcontractors' Work on the Project in the same manner in which Contractor is required to protect, defend, indemnify and hold the Indemnitees harmless. In the event Contractor fails to obtain such defense and indemnity obligations from others as required herein, Contractor agrees to be fully responsible to the Indemnitees according to the terms of this Paragraph 11.

10.7. No Limitation or Waiver of Rights. Contractor's obligations under this Paragraph 11 are in addition to any other rights or remedies which the Indemnitees may have under the law or under the Contract Documents. Contractor's indemnification and defense obligations set forth in this Paragraph 11 are separate and independent from the insurance provisions set forth in the Contract Documents, and do not limit, in any way, the applicability, scope, or obligations set forth in such insurance provisions. The purchase of insurance by the Contractor with respect to the obligations required herein shall in no event be construed as fulfillment or discharge of such obligations. In any and all claims against the Indemnitees by any employee of the Contractor, any Subcontractor, any supplier of the Contractor or Subcontractors, anyone directly or indirectly employed by any of them, or anyone for whose acts any of them may be liable, the obligations under this Paragraph 11 shall not be limited in any way by any limitation on the amount or type of damages, compensation or benefits payable by or for the Contractor or any Subcontractor or any supplier of either of them, under workers' or workmen's compensation acts, disability benefit acts or other employee benefit acts. Failure of the City to monitor compliance with these requirements imposes no additional obligations on the City and will in no way act as a waiver of any rights hereunder.

10.8. Withholding to Secure Obligations. In the event an Indemnity Claim arises prior to final payment to Contractor, the City may, in its sole discretion, reserve, retain or apply any monies due Contractor for the purpose of resolving such Indemnity Claims; provided, however, the City may release such funds if the Contractor provides the City with reasonable assurances of protection of the Indemnitees' interests. The City shall, in its sole discretion, determine whether such assurances are reasonable.

10.9. Survival of Indemnity Obligations. Contractor's obligations under this Paragraph 11 are binding on Contractor's and its Subcontractors' successors, heirs and assigns and shall survive the completion of the Work or termination of the Contractor's performance of the Work.

11. SUCCESSORS AND ASSIGNS. The Parties bind themselves, their heirs, executors, administrators, successors and assigns the covenants, agreements and obligations contained in the Contract Documents. The Contractor shall not, either voluntarily or by action of law, assign any right or obligation of the Contractor under the Contract Documents without prior written consent of the City.

ADDITIONAL OPTIONAL INFORMATION

INSTRUCTIONS FOR COMPLETING THIS FORM

Any acknowledgment completed in California must contain verbiage exactly as appears above in the notary section or a separate acknowledgment form must be properly completed and attached to that document. The only exception is if a document is recorded outside of California. In such instances, any alternative acknowledgment verbiage as may be printed on such a document so long as the verbiage does not require the notary to do something that is illegal for a notary in California (i.e. certifying the authorized capacity of the signer). Please check the document carefully for proper notarial wording and attach this form if required.

- State and County information must be the State and County where the document signer(s) personally appeared before the notary public for acknowledgment.
- Date of notarization must be the date that the signer(s) personally appeared which must also be the same date the acknowledgment is completed.
- The notary public must print his or her name as it appears within his or her commission followed by a comma and then your title (notary public).
- Print the name(s) of document signer(s) who personally appear at the time of notarization.
- Indicate the correct singular or plural forms by crossing off incorrect forms (i.e. he/she/they, is/are) or circling the correct forms. Failure to correctly indicate this information may lead to rejection of document recording.
- The notary seal impression must be clear and photographically reproducible. Impression must not cover text or lines. If seal impression smudges, re-seal if a sufficient area permits, otherwise complete a different acknowledgment form.
- Signature of the notary public must match the signature on file with the office of the county clerk.
 - ❖ Additional information is not required but could help to ensure this acknowledgment is not misused or attached to a different document.
 - ❖ Indicate title or type of attached document, number of pages and date.
 - ❖ Indicate the capacity claimed by the signer. If the claimed capacity is a corporate officer, indicate the title (i.e. CEO, CFO, Secretary).
- Securely attach this document to the signed document.

**PROJECT NO. 803 0016 70 77
CITY OF MORENO VALLEY
EOC FAMILY CARE CENTER GENERATOR PROJECT**

KNOW ALL MEN AND WOMEN BY THESE PRESENTS:

THAT WHEREAS, the City Council of the City of Moreno Valley, State of California, known as "City," has awarded to Global Power Group, Inc., as Principal hereinafter designated as "Contractor" and have entered into an Agreement whereby the Contractor agrees to construct or install and complete certain designated public improvements, which said Agreement, effective on the date signed by the City Manager and identified as **Project No. 803 0016 70 77**, and all Contract Documents are hereby referred to and made a part hereof; and

WHEREAS, said Contractor under the terms of said Contract Documents is required to furnish a bond guaranteeing the faithful performance of said Agreement;

NOW THEREFORE, we the undersigned Contractor and _____, as Surety, are held and firmly bound unto the City of Moreno Valley, County of Riverside in the penal sum of _____ dollars, (\$ _____), lawful money of the United States, to be paid to the said City or its certain attorney, its successors and assigns; for which payment, well and truly to be made, we bind ourselves, our heirs, executors and administrators, successors and assigns, jointly and severally liable (CCP 995.320 (a)(1)), firmly by these presents.

THE CONDITION OF THIS OBLIGATION IS SUCH, that if the above bound Contractor, his or her or its heirs, executors, administrators, successors or assigns, shall in all things stand to and abide by, and well and truly keep and perform the covenants, conditions and provisions in said Contract Documents and any alterations thereof made as therein provided, on his or her or their part, to be kept and performed at the time and in the manner therein specified, and in all respects according to their true intent and meaning, and shall indemnify and save harmless the City of Moreno Valley, its officers, agents and employees, as therein stipulated, then this obligation shall become null and void; otherwise it shall be and remain in full force and effect. In the event suit is brought upon this bond by the City and judgement is recovered, the Surety shall pay all costs incurred by the City in such suit, including a reasonable attorney fee to be fixed by the court.

The Surety hereby stipulates and agrees that no change, extension of time, alteration, or addition to the terms of the Contract Documents or to the Work to be performed thereunder, or the Provisions accompanying the same shall in any way affect its obligations on this bond, and it does hereby waive notice of any such change, extension of time, alteration or addition to the terms of the Contract Documents or to the Work or the Provisions.

BUDGET OFFICER	<i>caf</i>
CITY ATTORNEY	<i>RLH</i>
CITY MANAGER	<i>ms</i>

Report to City Council

TO: Mayor and City Council and the City Council Acting as the Successor Agency

FROM: Ahmad R. Ansari, P.E., Public Works Director/City Engineer

AGENDA DATE: September 25, 2012

TITLE: APPROVE AGREEMENT FOR PROFESSIONAL CONSULTANT CONSTRUCTION GEOTECHNICAL SERVICES WITH NINYO & MOORE FOR MORENO BEACH INTERCHANGE IMPROVEMENTS PHASE 1 – PROJECT NO. 801 0038 70 77-4821 [FORMERLY PROJECT NO. 07-41570024]

RECOMMENDED ACTION

Staff recommends that the City Council:

1. Authorize the “Agreement for Professional Consultant Services” with Ninyo & Moore (Ninyo & Moore), 11650 Mission Park Drive, Suite 101, Rancho Cucamonga, CA 91730, to provide professional geotechnical and materials testing services during construction of the SR-60/Moreno Beach Interchange Improvements Phase 1 project for a total agreement amount not to exceed \$109,110.
2. Acting as the Successor Agency, approve this action as a recognized payment obligation of the former Redevelopment Agency of the City of Moreno Valley, add it to the Recognized Obligation Payment Schedule, submit same to the Oversight Board for Approval, and authorize the City Manager to access agency funds only after Oversight Board approval.
3. Authorize the City Manager to execute said “Agreement for Professional Consultant Services” with Ninyo & Moore.
4. Authorize the issuance of a Purchase Order totaling \$109,110 to Ninyo & Moore when the contract has been signed by all parties.

BACKGROUND

The SR-60/Moreno Beach Drive Phase 1 project is one of the key projects in the City Manager's Economic Development Action Plan. Phase 1 improvements are designed to reconstruct the eastbound on- and off-ramps to SR-60 and connect the west leg of Eucalyptus Avenue to Moreno Beach Drive. On December 13, 2011, the City Council approved a Construction Cooperative Agreement with the State of California for the construction phase, giving the City authority to advertise, award, and administer the construction of Phase 1. Design and right-of-way for Phase 1 were completed, the project was advertised, and bids were opened on August 13, 2012. On August 28, 2012, the City Council awarded the construction contract.

DISCUSSION

The Construction Cooperative Agreement with Caltrans requires that the City meet Caltrans material testing requirements on the project. The City issued a Request for Proposal (RFP) to provide geotechnical and materials testing services based on the construction plans, specifications, and Caltrans methods. On August 1, 2012, staff received fourteen (14) proposals. A selection team of City and Caltrans staff reviewed the eleven (11) qualified proposals and ranked them in order, based on firm experience and qualifications, experience of key personnel, and project approach.

Staff has completed negotiations with the top-ranked geotechnical firm and is recommending awarding a professional services agreement for construction-related geotechnical and materials testing services to [Ninyo & Moore](#). Services performed will be on an as-needed basis and consist of geotechnical testing and sampling performed under the direction of a licensed Geotechnical Engineer, use of a nuclear gauge for compaction tests, and Caltrans certified laboratory testing with results in 48 hours. A purchase order for \$109,110 will be issued for this agreement.

The recommended contract award is an action of the City Council with a funding source from the assets of the former City of Moreno Valley Redevelopment Agency. The recommended actions are included on the Recognized Obligations Payment Schedule (ROPS) approved by the City Council acting as the Successor Agency on February 14, 2012. The Successor Agency Oversight Board approved the ROPS for the period January through June 2012 on May 23, 2012, which has subsequently been approved by the State Department of Finance (DOF). This ROPS approval includes "placeholder" line items representing the expenditure of bond proceeds for approval purposes. The Successor Agency approval of this contract is required to move forward toward complete approval and compliance with ABx1 26 law. The contract will be presented to the Successor Agency Oversight Board, along with an updated ROPS that will include the contractor listed as an enforceable obligation. After Oversight Board approval, the contract and updated ROPS will be sent to the DOF for review. There is a risk that the Oversight Board may not approve the contract or updated ROPS. In addition, the State Department of Finance (DOF) has the authority to challenge actions approved by the Oversight Board within 10 days of the approved action. In light of the current process for

approval of the contract and the updated ROPS, the property tax to pay the contracts being recommended has not been authorized to pay the contract obligations. The City Council by approving the recommended contract is assuming the risk that in the event tax increment is not approved to pay the contracts by the Oversight Board or through successful challenge by the State DOF, the City would be obligated to pay the contract commitments from alternative funding sources, most likely the City's General Fund.

ALTERNATIVES

1. Approve and authorize the recommended actions as presented in this staff report. *This alternative will comply with the Caltrans Construction Cooperative Agreement requiring the City to meet Caltrans professional materials testing requirements and facilitate the timely construction of needed improvements.*
2. Do not approve and authorize the recommended acting as presented in this staff report. *This alternative will significantly delay the construction of needed improvements.*

FISCAL IMPACT

The project is included in the Fiscal Year 2012/2013 Capital Improvement Program. There is no impact to the General Fund.

PROJECT SCHEDULE

Begin Construction	October 2012
Construction Completion and Acceptance	October 2013

CITY COUNCIL GOALS

REVENUE DIVERSIFICATION AND PRESERVATION:

Develop a variety of city revenue sources and policies to create a stable revenue base and fiscal policies to support essential city services, regardless of economic climate.

PUBLIC SAFETY:

Provide a safe and secure environment for people and property in the community, control the number and severity of fire and hazardous material incidents, and provide protection for citizens who live, work and visit the City of Moreno Valley.

PUBLIC FACILITIES AND CAPITAL PROJECTS:

Ensure that needed public facilities, roadway improvements, and other infrastructure improvements are constructed and maintained.

POSITIVE ENVIRONMENT:

Create a positive environment for the development of Moreno Valley's future.

SUMMARY

The SR-60/Moreno Beach Interchange Phase 1 Improvements project goal is to improve the interchange through reconstruction and realignment. The project construction is funded utilizing Successor Agency 2007 Tax Allocation Bonds and Transportation Uniform Mitigation Fees (TUMF). City staff recommends awarding a contract for \$109,110 to Ninyo & Moore to provide geotechnical and materials testing services for the project.

TRANSPORTATION UNIFORM MITIGATION FEE (TUMF) - ZONAL
PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]**

This Agreement is by and between the City of Moreno Valley, California, a municipal corporation, hereinafter described as "City," and **Ninyo & Moore**, a California corporation, hereinafter described as "Consultant." This Agreement is made and entered into effective on the date the City signs this Agreement.

RECITALS

WHEREAS, the City has determined it is in the public interest to proceed with the work hereinafter described as "Project"; and

WHEREAS, the City has determined the Project involves the performance of professional and technical services of a temporary nature as more specifically described in Exhibit "A" (City's Request for Proposal) and Exhibit "B" (Consultant's Proposal) hereto; and

WHEREAS, the City does not have available employees to perform the services for the Project; and

WHEREAS, the City has requested the Consultant to perform such services for the Project; and

WHEREAS, the Consultant is professionally qualified in California to perform the professional and technical services required for the Project;

THEREFORE, the City and the Consultant, for the consideration hereinafter described, mutually agree as follows:

Attachment "A"

**AGREEMENT FOR PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]**

DESCRIPTION OF PROJECT

1. The project is described as professional consultant **geotechnical and materials testing services** for:

**SR-60 / MORENO BEACH DRIVE PHASE 1 IMPROVEMENTS PROJECT
PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]**

SCOPE OF SERVICES

2. The Consultant's scope of service is described on Exhibit "B" attached hereto and incorporated herein by this reference. In the event of a conflict, the City's Request for Proposal shall take precedence over the Consultant's Proposal.

3. The City's responsibility is described on Exhibit "C" attached hereto and incorporated herein by this reference.

PAYMENT TERMS

4. The City agrees to pay the Consultant and the Consultant agrees to receive a "Not-to-Exceed" fee of **\$109,110** in accordance with the payment terms provided on Exhibit "D" attached hereto and incorporated herein by this reference.

TERM OF AGREEMENT

5. This agreement will terminate on **December 31, 2014** unless the termination date is extended by an amendment to the agreement.

TIME FOR PERFORMANCE

6. The Consultant shall commence services upon receipt of written direction to proceed from the City.

**AGREEMENT FOR PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]**

7. The Consultant shall perform the work described on Exhibit "A" in accordance with the design/construction schedule as stated in the Notice to Proceed.

8. The Consultant and the City agree that the schedule in Paragraph 7 above represents their best estimates with respect to completion dates, and both the Consultant and the City acknowledge that it will not unreasonably withhold approval of the Consultant's requests for extensions of time in which to complete the work required of the Consultant hereunder.

9. The Consultant shall not be responsible for performance delays caused by others or delays beyond the Consultant's reasonable control, and such delays shall extend the time for performance of the work by the Consultant. Delays caused by non-performance or unjustified delay in performance by a subconsultant of the Consultant are not considered to be beyond the Consultant's reasonable control.

10. (a) The Consultant agrees that the personnel, including the principal Project manager, and all subconsultants assigned to the Project by the Consultant, shall be subject to the prior approval of the City.

(b) No change in subconsultants or key personnel shall be made by the Consultant without written prior approval of the City.

SPECIAL PROVISIONS

11. It is understood and agreed that the Consultant is, and at all times shall be, an independent contractor and nothing contained herein shall be construed as making the Consultant or any individual whose compensation for services is paid by the Consultant, an agent or employee of the City, or authorizing the Consultant to create or assume any obligation or liability for or on behalf of the City.

AGREEMENT FOR PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]

12. The Consultant may also retain or subcontract for the services of other necessary consultants with the prior written approval of the City. Payment for such services shall be the responsibility of the Consultant. Any and all subconsultants employed by the Consultant shall be subject to the terms and conditions of this Agreement, except that the City shall have no obligation to pay any subconsultant for services rendered on the Project.

13. The Consultant and the City agree to use reasonable care and diligence to perform their respective services under this Agreement. Unless hereinafter specified, neither party shall be responsible for the services of the other or any subcontractor or sub-consultant employed by the other party.

14. The Consultant shall comply with applicable federal, state, and local laws in the performance of work under this Agreement.

15. (a) The Consultant agrees to indemnify, defend, and save the City, the Moreno Valley Housing Authority (MVHA), the Moreno Valley Community Services District (CSD), the Western Riverside Council of Governments (WRCOG), the State of California, Eastern Municipal Water District (EMWD), and Riverside County Flood Control and Water Conservation District (RCFC & WCD) and their officers, agents and employees harmless from any and all liability, claims, demands, damages, or injuries to any person, including injury to the Consultant's employees and all claims which arise from or are connected with the negligent performance of or failure to perform the work or other obligations of the Consultant under this Agreement, or are caused or claim to be caused by the negligent acts, recklessness or willful misconduct of the Consultant, its officers, agents or employees, or its subconsultant(s) or any person acting for the Consultant or under its control or direction.

**AGREEMENT FOR PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]**

(b) The City agrees to indemnify, defend and save the Consultant and their officers, agents and employees harmless from any and all liability, claims, damages or injuries to any person, including injury to the City's, the State's, MVHA's, CSD's, WRCOG's, EMWD's, and RCFC & WCD's employees and all claims which arise from or are connected with the negligent performance or failure to perform the services or other obligations of the City under this Agreement, or are caused or claim to be caused by the negligent acts, recklessness or willful misconduct of the City, the State, MVHA, CSD, WRCOG, EMWD, and RCFC & WCD, their officers, agents or employees, or its subcontractor(s) or any person acting for the City or under its control or direction.

16. (a) The Consultant shall procure and maintain, at its sole expense, throughout the term of this Agreement and any extension thereof, Professional Errors and Omission Insurance coverage in the form and substance and with carriers acceptable to the City. Such coverage limits shall not be less than \$1,000,000 per claim and aggregate.

(b) During the entire term of this Agreement, the Consultant agrees to procure and maintain General Liability Insurance in form and substance and with carriers acceptable to the City at its sole expense to protect against loss from liability imposed by law for damages on account of bodily injury, including death therefrom, suffered or alleged to be suffered by any person or persons whomever, resulting directly or indirectly from any act or activities of the Consultant its sub-consultant or any person acting for the Consultant or under its control or direction, and also to protect against loss from liability imposed by law for damages to any property of any persons caused directly or indirectly by or from acts or activities of the Consultant or its subconsultants, or any person acting for the Consultant or under its control or direction.

AGREEMENT FOR PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]

(c) Such Public Liability and Property Damage Insurance shall be maintained in full force and effect throughout the terms of the Agreement and any extension thereof in the minimum limits provided below:

GENERAL LIABILITY

Bodily Injury	\$1,000,000 per occurrence
Property Damage	\$ 500,000 per occurrence

A combined single limit policy with aggregate limits in the amount of \$2,000,000 will be considered equivalent to the above minimum limits.

(d) If the operation under this Agreement results in an increased or decreased risk in the opinion of the City Manager, then the Consultant agrees that the minimum general liability limits hereinabove designated shall be changed accordingly upon request by the City Manager.

(e) The Consultant shall procure and maintain, at its sole expense, and throughout the term of this Agreement and any extension thereof, Public Liability and Property Damage Insurance coverage for owned and non-owned automotive equipment operated on City premises. Such coverage limits shall not be less than \$1,000,000 combined single limit.

(f) The Consultant shall procure and maintain, at its sole expense, Workers' Compensation Insurance in such amounts as will fully comply with the laws of the State of California and which shall indemnify, insure and provide legal defense for both the Consultant and the City, the State, MVHA, CSD, WRCOG, EMWD, and RCFC & WCD, against any loss, claim, or damage arising from any injuries or occupational diseases happening to any worker employed by the Consultant in the course of carrying out the Agreement.

AGREEMENT FOR PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]

(g) A Certificate of Insurance, or an appropriate insurance binder evidencing the above insurance coverage shall be submitted to the City Clerk prior to the execution of this Agreement on behalf of the City.

(h) The Certificate of Insurance or an appropriate binder shall bear an endorsement containing the following provisions:

"Solely as respect to services done by or on behalf of the named insured for the City of Moreno Valley, it is agreed that the City of Moreno Valley, the Moreno Valley Housing Authority (MVHA), the Moreno Valley Community Services District (CSD), the Western Riverside Council of Governments (WRCOG), the State of California, Eastern Municipal Water District (EMWD), and Riverside County Flood Control and Water Conservation District (RCFC & WCD), their officers, employees and agents are included as additional insured under this general liability policy and the coverage(s) provided shall be primary insurance and not contributing with any other insurance available to the City of Moreno Valley, the Community Redevelopment Agency of the City of Moreno Valley, the Moreno Valley Community Services District and Western Riverside Council of Governments, its officers, employees and agents, under any third party liability policy."

(i) Insurance companies providing insurance hereunder shall be rated (A minus: VII - Admitted) or better in Best's Insurance Rating Guide and shall be legally licensed and qualified to conduct insurance business in the State of California.

(j) The terms of the insurance policy or policies issued to provide the above insurance coverage shall not be amended to reduce the above required insurance limits and

coverages nor shall such policies be canceled by the carrier without thirty (30) days prior written notice by certified or registered mail of amendment or cancellation to the City, except that cancellation for non-payment of premium shall require ten (10) days prior written notice by certified or registered mail. In the event the said insurance is canceled, the Consultant shall, prior to the cancellation date, submit to the City Clerk new evidence of insurance in the amounts established.

17. During the performance of this Agreement, the Consultant will not unlawfully discriminate against any employee or applicant for employment because of race, religion, creed, color, national origin, sex, or age. The Consultant will take affirmative action to ensure that applicants are employed, and that employees are treated during employment without regard to their race, religion, creed, color, national origin, sex, or age.

18. Consultant and subconsultants shall pay prevailing wage rates when required by the Labor Laws of the State of California.

19. (a) The Consultant shall deliver to the Public Works Director/City Engineer of the City or his designated representative, in both hard copy and electronic format, fully completed and detailed project-related documents which shall become the property of the City. The Consultant may retain, for its files, copies of any and all material, including drawings, documents, and specifications, produced by the Consultant in performance of this Agreement. It shall be understood that the City shall be the owner of all project-related documents and drawings at all times and during all phases of the project.

(b) The Consultant shall be entitled to copies of all furnished materials for his files and his subconsultants, if any.

AGREEMENT FOR PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]

(c) The City agrees to hold the Consultant free and harmless from any claim arising from any unauthorized use of computations, maps, and other documents prepared or provided by the Consultant under this Agreement, if used by the City on other projects without the permission of the Consultant. Consultant acknowledges that Consultant work product produced under this agreement may be public record under State law.

20. (a) The City may terminate this Agreement without fault on the part of Consultant by giving at least ten (10) days written notice to the Consultant. The written notice shall specify the date of termination. Upon receipt of such notice, the Consultant may continue services on the project through the date of termination, provided that no service(s) shall be commenced or continued after receipt of the notice, which is not intended to protect the interest of the City. The City shall pay the Consultant within thirty (30) days after the date of termination for all non-objected to services performed by the Consultant in accordance herewith through the date of termination. Such termination may be effective immediately.

(b) Upon notice of termination, the Consultant shall deliver to the Public Works Director/City Engineer of the City or his designated representative, in both hard copy and electronic format, fully completed and detailed project-related documents which shall become the property of the City. The Consultant may retain for its files copies of any and all materials, including drawings, documents, and specifications produced by the Consultant in performance of this Agreement. It shall be understood that the City shall be the owner of all project-related documents and drawings, regardless of the completeness of said documents.

(c) The Consultant shall be entitled to copies of all furnished materials for his files and his subconsultants, if any.

**AGREEMENT FOR PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]**

(d) The City agrees to hold the Consultant free and harmless from any claim arising from any unauthorized use of computations, maps, and other documents prepared or provided by the Consultant. Consultant acknowledges that Consultant work product produced under this Agreement may be public record under State law.

(e) Either party may terminate this Agreement for cause. In the event the City terminates this Agreement for cause, the Consultant shall perform no further service(s) under the Agreement unless the notice of termination authorizes such further work.

21. This Agreement is binding upon the City and the Consultant and their successors and assigns. Except as otherwise provided herein, neither the City nor the Consultant shall assign, sublet, or transfer its interest in this Agreement or any part thereof without the prior written consent of the other.

22. A City representative shall be designated by the City and a Consultant representative shall be designated by the Consultant. The City representative and the Consultant representative shall be the primary contact person for each party regarding performance of this Agreement. The City representative shall cooperate with the Consultant, and the Consultant's representative shall cooperate with the City in all matters regarding this Agreement and in such a manner as will result in the performance of the services in a timely and expeditious fashion.

23. This Agreement represents the entire and integrated Agreement between the City and the Consultant, and supersedes all prior negotiations, representations or Agreements, either written or oral. This Agreement may be modified or amended only by a subsequent written Agreement signed by both parties.

24. Where the payment terms provide for compensation on a time and materials basis, the Consultant shall maintain adequate records to permit inspection and audit of the Consultant's

**AGREEMENT FOR PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 801 0038 70 77

time and materials charges under this Agreement. The Consultant shall make such records available to the City at the Consultant's office during normal business hours upon reasonable notice. Nothing herein shall convert such records into public records. Except as may be otherwise required by law, such records will be available only to the City. Such records shall be maintained by the Consultant for three (3) years following completion of the services under this Agreement.

25. The City and the Consultant agree, that to the extent permitted by law, until final approval by the City, all data shall be treated as confidential and will not be released to third parties without the prior written consent of both parties.

26. The Consultant shall employ no City official or employee in the work performed pursuant to this Agreement. No officer or employee of the City shall have any financial interest in this Agreement in violation of federal, state, or local law.

27. All Plans, drawings, Specifications, reports, logs, and other documents prepared by the Consultant in its performance under this Agreement shall, upon completion of the project, be delivered to and be the property of the City, provided that the Consultant shall be entitled, at its own expense, to make copies thereof for its own use.

28. The laws of the State of California shall govern the rights, obligations, duties, and liabilities of the parties to this Agreement, and shall also govern the interpretation of this Agreement.

PROFESSIONAL CONSULTANT MATERIALS TESTING AND GEOTECHNICAL SERVICES
SR-60 / MORENO BEACH DRIVE PHASE 1 IMPROVEMENTS PROJECT
FOR THE CITY OF MORENO VALLEY'S CAPITAL PROJECTS DIVISION
EA 32301
PROJECT ACCOUNT NO. 797.79731**

I. INVITATION

You are hereby invited to submit a Proposal for Professional Consultant Construction **Material Testing and Geotechnical Services** associated with the SR-60 / MORENO BEACH DRIVE PHASE 1 IMPROVEMENTS PROJECT as shown on the Plans and Specifications.

Five (5) copies (one of the copies will be unbound and paper clipped, with no tabs, holes, perforations, or cardboard inserts, suitable for copying with an automatic-feed copy machine and one copy shall be on compact disk) of your Proposal shall be submitted no later than **5:00 p.m., August 1, 2012** addressed to Capital Projects Division, 14177 Frederick Street (hand delivery), P.O. Box 88005, Moreno Valley, California 92552-0805 (mail delivery), Attention: Margery Lazarus, Senior Engineer, P.E.

II. PROJECT DESCRIPTIONS

The SR-60/Moreno Beach Drive Phase 1 project site is located at the State Route (SR) 60 Interchange and Moreno Beach Drive in the City of Moreno Valley, CA. The work of this project generally includes realigning the SR-60/Moreno Beach eastbound off-and-on-ramps, adding an eastbound auxiliary lane, installation of new traffic signal at the new intersection of the eastbound ramps and Moreno Beach Drive, adding a retaining wall, adding ramp metering, extension of Eucalyptus Avenue to Moreno Beach Drive, modification of the traffic signal at the intersection of Eucalyptus and Moreno Beach Drive, coordination of utility relocations, irrigation, and related work.

Work lies within and in the vicinity of State of California (Caltrans) and City of Moreno Valley rights of way. The work includes earthwork, grading, asphalt concrete (AC) paving, concrete retaining walls, tree removal roadway excavation, imported borrow, drainage pipes and minor concrete structures, concrete curb and gutter, protection, drainage, traffic control, signing, striping, traffic and ramp meter signals, irrigation, erosion control, EMWD water line relocation, overhead SCE relocation, and related work.

III. PROJECT BUDGET AND SCHEDULE

The City of Moreno Valley will fund the construction with Local Funds consisting of TUMF and Successor Agency to RDA Funds (Account 797.79731), and Local Funds.

The Consultant shall be required to meet or exceed the following timeline for this contract:

Anticipated Award of Consultant Contract	September 2012
Public Bid for SR-60/Moreno Beach Phase 1 Construction Contract	July 2012
Award of Construction Contract	October 2012
Construction Duration for SR-60/Moreno Beach Phase 1	189 Working Days (9 months)

Exhibit "A"

IV. SCOPE OF ENGINEERING SERVICES

The selected Consultant will be required to have personnel available for assignment to this project who have successfully provided professional services as it relates to all activities of public works field and laboratory construction materials testing, geotechnical and soils inspection services of the contractor's work and office support services. The Consultant selected shall provide **Materials Testing and Geotechnical Inspection Services** with personnel trained and experienced in the geotechnical inspection, field and laboratory materials testing of public works improvements, and particularly the types of construction and materials utilized for this project. The project is located within Caltrans Right of Way and all testing methods, procedures, frequencies shall comply with the contract specifications, Caltrans Materials Testing Manuals and Guidelines, and the Quality Assurance Plan. The Selected Consultant is required to prepare a Quality Management Plan detailing required testing procedures and frequencies in compliance with Caltrans Local Assistance Procedures Manuals and Construction contract requirements. The minimum experience required includes five (5) years of geotechnical inspection and materials testing on increasingly complex public works and Caltrans projects. The Consultant firm selected must also provide all equipment and supplies necessary to perform the services assigned and support services necessary to complete the scope of work. It is expected that the Consultant selected to fulfill this contract will be able to provide qualified personnel on an on-demand basis with 24-hour notice for geotechnical inspection, sampling and testing for the duration of the construction project, and as needed for preconstruction activities and as necessary to closeout the project.

The Consultant must have recent experience working within the Caltrans Right-of-Way and shall be required to follow all Caltrans safety procedures when executing the work.

The Consultant geotechnical personnel shall have the necessary training, knowledge and experience related to the materials, methods, and workmanship for the specific construction work to be performed for this project. Additionally the Consultant geotechnical personnel must be familiar with the safe practices required when working around all types of construction equipment which will be utilized on this project including equipment for roadway construction, storm drain construction (including trench shoring and safety), and grading. The Consultant geotechnical personnel shall be familiar with the industry standards of practice for the execution of quality public works construction projects and shall be able to understand and interpret public works construction plans and specifications; Caltrans Standard Plans and Specifications; City codes, ordinances and standards; Eastern Municipal Water District (EMWD) standards; Riverside County Flood Control and Water Conservation District (RCFCD) standards; and California Occupational Safety and Health Administration (OSHA) Construction Safety Orders. The Consultant geotechnical personnel shall be able to interact professionally with contractors, engineers, surveyors, property owners, business owners, and the public at large; coordinate with other City personnel, Caltrans personnel and consultants; promote quality customer service and a professional image of the City; and respond promptly and courteously to requests. The Consultant geotechnical personnel shall be able to follow verbal and written instructions and communicate clearly and concisely, both orally and in writing.

**REQUEST FOR PROPOSAL FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 07-41570024
Page 3 of 13**

The Consultant geotechnical personnel must be under the responsible charge of a person registered by the California State Board of Registration for Professional Engineers and Land Surveyors as a Geotechnical Engineer and as a Civil Engineer.

Please be reminded that the Consultant is required to have a current City business license if the firm is awarded the work.

The Consultant shall perform public works geotechnical inspection and materials testing services for this project to include, but not be limited to, the following:

- Expertise in geotechnical matters related to storm drain and roadway construction and grading, and knowledge of the local area soils and geology, City, Caltrans practices and generally accepted industry standards for work associated with this type of project.
- Safe and proper use of Nuclear Gauge for compaction testing.
- Proper procedures and protocols for field sampling and testing of graded earth materials, backfill materials, sub-grade, base, AC and PCC.
- Ability to provide field test results immediately to the City's Consultant Resident Engineer and Inspector, and laboratory test results within 48-hours, unless test procedures and protocols require longer.
- Review of contractor material submittals, sample/test frequency protocols and criteria for acceptable results and provision of materials and compaction reports.

Office Activities:

1. Review and thoroughly understand all contract documents, including construction drawings, specifications, and referenced testing methods and protocols.
2. Review and thoroughly understand geotechnical and soils reports, materials testing lab reports, contractor submitted mix reports, and other like documentation.
3. Review and thoroughly understand project schedules and related sampling, testing, and submittal requirements (field sampling and testing, compliance certificates, materials samples, etc.) from the contractor for conformance to the plans and specifications.
4. Participate in pre-construction meetings, field meetings, construction progress meetings, final walk-through meetings, as-built plan completion meetings, equal opportunity meetings, and other administrative meetings as necessary.
5. Monitor and report on the Contractor's extra work as it relates to geotechnical sampling, testing and reporting, field and laboratory materials testing.
6. Assist in the negotiation of change orders as they relate to geotechnical sampling, testing, and reporting, as requested by the City.
7. Review all unknown, unforeseen, and changed conditions that occur, and all disputed work claims from the Contractor as it relates to geotechnical responsibilities and field testing, and recommend a course of action to the Engineer.
8. Prepare and maintain all geotechnical files, daily inspection records, including site photographs, project status reports, and all geotechnical inspection and testing records as they relate to earthwork materials testing and compaction testing.
9. Prepare and maintain records of geotechnical work requested and completed, geotechnical related computer files, daily geotechnical field work (when on-site),

**REQUEST FOR PROPOSAL FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 07-41570024
Page 4 of 13**

- geotechnical inspections, samples and test records, field and laboratory test results, and all geotechnical related records and files.
10. Provide labor compliance reports and certified payroll for the Consultant's field work.

Field Activities:

1. Coordinate with the Contractor, City personnel, and City's selected Consultant Resident Engineer on the job site as needed.
2. Coordinate ongoing geotechnical field and laboratory testing, as required, including reviewing and monitoring the Contractor's requests for re-testing.
3. Conduct on-demand field geotechnical inspections for quality of materials and installation and workmanship, including quality, placement, and compaction of earthen materials, for conformance to plans and specifications pursuant to all applicable City codes, ordinances, and directives.
4. Keep daily (when on-site) geotechnical field notes and take photographs of the field sampling and geotechnical inspection work, including photographic evidence of non-complying materials or work. A daily report identifying work done by the geotechnical technician, including photographs, shall be submitted to the Project Inspector by the next business day for review and filing.
5. During the course of field work, if the Consultant geotechnical personnel observe an unsafe situation, he/she shall immediately advise the Contractor's nearest available personnel and notify the City's Inspector and the City's Consultant Resident Engineer.
6. Any retests not due to the Consultant's errors will be identified separately on the invoice. Ten (10) re-tests (allow a maximum of two hours per trip) should be estimated for proposal purposes.

General:

1. Participate with the City in meetings with contractors, public utility agencies, and other government agency representatives as requested.

SUBMITTAL SCHEDULE

Proposals Due	5:00 p.m., August 1, 2012
Consultant Selection	On or before August 30, 2012
Notice to Proceed (Tentative)	Week of September 17, 2012

V. CONSULTANT'S PROPOSAL AND COMPENSATION

The Consultant's Proposal shall be no more than 20 pages, excluding a cover letter of up to two pages, dividers, and certificates. Proposals failing to provide sufficient information and assurances of performance to accurately assess each category of the required services and failing to comply with requirements and conditions of the RFP will not be given further consideration. The Consultant's Proposal shall include the following:

- A. A statement that this Request For Proposal shall be incorporated in its entirety as a part of the Consultant's Proposal.

**REQUEST FOR PROPOSAL FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 98-25897**

- B. A statement that this Request For Proposal and the Consultant's Proposal will jointly become part of the Agreement for Professional Consultant Services for this project when said Agreement is fully executed by the Consultant and the Mayor or City Manager of Moreno Valley.
- C. A statement that the Consultant's Services to be provided, and fees therefore, will be in accordance with the City's Request For Proposal except as otherwise specified in the Consultant's Proposal under the heading "ADDITIONS OR EXCEPTIONS TO THE CITY'S REQUEST FOR PROPOSAL."
- D. A single and separate section with the heading "ADDITIONS OR EXCEPTIONS TO THE CITY'S REQUEST FOR PROPOSAL" containing a complete and detailed description of all of the exceptions to the provisions and conditions of this Request for Proposal upon which the Consultant's Proposal is contingent and which shall take precedence over this Request For Proposal.
- E. A statement of qualifications applicable to this project including the names, qualifications and proposed duties of the Consultant's Staff to be assigned to this project; a listing of recent similar projects completed including the names, titles, addresses and telephone numbers of the appropriate persons whom the City could contact. If one or more of the Consultant's staff should become unavailable, the Consultant may substitute other staff of at least equal competence only after prior written approval by the City.
- F. A resource allocation matrix must be submitted with the Proposal. The resource allocation matrix shall list detailed tasks in rows and the appropriate individual (Job Title Only) as well as the number of hours that these individuals will be working on each task listed, included in adjacent columns. The resource allocation matrix is required of both the primary consultant, as well as any sub-consultant. In addition, the applicable construction support services consultant must list the type and number of hours of Material Testing & Geotechnical work within the Proposal. Failure to do so will result in the Consultant's Proposal being deemed incomplete and it will not receive further consideration. Construction support services Consultants are not required to provide a Project Schedule with milestones. The resource allocation matrix, in addition to any tasks the consultant chooses to list, shall include but not limited to meetings, specific deliverables, and other relevant milestones.
- G. A rate schedule must be submitted with the proposal. The rate schedule must list titles, names, roles, and hourly billing rates in rows. A statement that said hourly rate schedules in part of the Consultant's Proposal for use in invoicing for progress payments and for extra work incurred shall also be included. All extra work will require prior approval from the City. COST PROPOSAL DETAILS MUST BE IN A SEALED ENVELOPE.
- H. A statement of sub-consultant's qualifications (including relief personnel) applicable to this project including the names, qualifications and proposed duties of the sub-consultant's staff to be assigned to this project; a listing of recent similar projects completed including the names, titles, addresses, and telephone numbers of the appropriate persons whom the City could contact.

REQUEST FOR PROPOSAL FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 07-41570024

A statement that the Consultant acknowledges and understands that the consultant will not be allowed to change a sub-consultant without written permission from the City.

- I. A statement that all charges for Consultant (construction) services is a "Not-to-Exceed Fee" which must include conservatively estimated reimbursable expenses, as submitted with and made a part of said Consultant's Proposal.
- J. A statement that the Consultant will document and provide the results of the work to the satisfaction of the City. This may include preparation of field and final reports, or similar evidence of attainment of the Agreement objectives.
- K. A statement that the Consultant will immediately document and notify the City of any defects or hazardous conditions observed in the vicinity of the project site prior, during, or after the construction work.
- L. A copy of the Consultant's hourly rate schedule and a statement that said hourly rate schedule is part of the Consultant's Proposal for use in invoicing for progress payments and for extra work incurred that is not part of this Request For Proposal. **An itemized cost breakdown for the work described herein must be submitted in a separate sealed envelope as part of your Proposal submittal.** All extra work will require prior approval from the City. The City requests the consultant to provide in the proposal the number of hours on the job, in addition to the cost proposal. The Cost Proposal must be in a sealed envelope.
- M. A statement that the Consultant will not discriminate against any employee or applicant for employment because of race, color, religion, sex, or national origin.
- N. A statement that all federal laws and regulations shall be adhered to notwithstanding any state or local laws and regulations. In a case of conflict between federal, state or local laws or regulations the strictest shall be adhered to.
- O. A statement that the Consultant shall allow all authorized federal, state, county, and City officials access to place of work, books, documents, papers, fiscal, payroll, materials, and other relevant contract records pertinent to this special project. All relevant records shall be retained for at least three years.
- P. A statement that the Consultant shall comply with the Davis-Bacon Fair Labor Standards Act (40 USC 276-a through a-7), and the implementation regulations issued pursuant thereto (29 CFR Section 1, 5), any amendments thereof and the California Labor Code. Pursuant to the said regulations, entitled "Federal Labor Standards Provisions," Federal Prevailing Wage Decision" and State of California prevailing wage rates, respectively.
- Q. A statement that the Consultant shall comply with the Copeland Anti-Kickback Act (18 USC 874) and the Implementation Regulation (29 CFR 3) issued pursuant thereto, and any amendments thereof.

**REQUEST FOR PROPOSAL FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 07-41570024**

- R. A statement that the Consultant offers and agrees to assign to the City all rights, title, and interest in and to all causes of action it may have under Section 4 of the Clayton Act (15 USC Sec. 15) or under the Cartwright Act (Chapter 2 [commencing with Section 16700] of Part 2 of Division 7 of the Business and Professions Code), arising from purchases of goods, services, or materials pursuant to the public works or the subcontract. This assignment shall be made and become effective at the time the City tenders final payment to the Consultant, without further acknowledgment by the parties.
- S. This solicitation and resultant Contract is not financed in whole or part with federal funds, but the City encourages Bidders to follow Title 49, Code of Federal Regulations, Part 26 (49 CFR 26) entitled "Participation by Disadvantaged Business Enterprises in Department of Transportation Financial Assistance Programs." Bidders who obtain DBE participation on this Contract will assist the City in meeting its DBE goals for the Project.

DBEs and other small businesses are strongly encouraged to participate in the performance of this Contract. The City encourages Bidders to give DBEs and other small businesses the opportunity to participate in the performance of the Work that is the subject of this solicitation and to take all necessary and reasonable steps for this assurance. The Bidder shall not discriminate on the basis of race, color, national origin, sex, age, or physical or mental disability, sexual orientation or retaliation in the award and performance of subcontracts.

A Race Neutral program is one that, while benefiting DBEs, is not solely focused on DBE firms. A Race Neutral program utilizes measures that can assist a wide variety of small businesses, including DBEs, such as arranging solicitations, times for the presentation of proposals, quantities, specifications, and delivery schedules in ways that facilitate DBE and other small business participation (e.g., unbundling large contracts to make them more accessible to small businesses, requiring or encouraging prime contractors to subcontract portions of work that they might otherwise perform with their own forces). Race Neutral DBE participation includes: a DBE obtaining a prime contract through customary competitive procurement procedures; a DBE being awarded a subcontract on a prime contract, whether or not the prime contract has a DBE goal; and a DBE being awarded a subcontract from a prime contractor that did not consider its DBE status in making the award.

The Consultant is encouraged to include DBE firms in the proposal. Complete the forms listed in "Attachments" at the end of this RFP.

VI. GENERAL COMPLIANCE WITH LAWS AND WAGE RATES

- A. The Consultant shall be required to comply with all federal, state, and local laws and ordinances applicable to the work. This includes compliance with prevailing wage rates and their payment in accordance with California Labor Code, Section 1775.
- B. The Consultant is required to submit certified payrolls weekly. This applies to all applicable field personnel working on the project. In accordance with Section 1771.5 (b) (5) of the California Labor Code, the City will withhold payments when the payroll records are delinquent or inadequate.

**REQUEST FOR PROPOSAL FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 07-41570024**

VII. FEDERAL EMPLOYEE BENEFIT

No member of, or delegate to, the Congress of the United States, and no Resident Commissioner shall be admitted to any share or part of the Agreement to the said project or to any benefit to arise from the same.

The Consultant shall complete and include the "Certification for Contracts, Grants, Loans, and Cooperative Agreements" and "Disclosure of Lobbying Activities" forms with the Proposal.

VIII. PAYMENT TO CONSULTANT

- A. This work is to be performed for a "Not-to-Exceed Fixed Fee."
- B. The Consultant shall provide a "Project Fee Schedule" indicating the fee for individual tasks with a "Not-to-Exceed Fixed Fee" which shall be the sum of all tasks, by part, phase, and milestone and shall be submitted in a separate sealed envelope with cost proposal.
- C. Tasks shall include, but not be limited to, all Professional Consultant Services necessary to complete the work covered by this Proposal.
- D. The City will pay the Consultant for work completed based on milestones completed and accepted by the City. These milestones are:
 - 1. Project Bidding, Advertise and Award.
 - 2. Any other additional authorized work on a task successfully completed and accepted monthly basis.

The City shall make the sole and final determination if a milestone as described above is complete and acceptable for payment.

- E. Monthly invoices will specifically identify job title, person-hours, and costs incurred by each task.
- F. Reimbursement costs such as mileage, printing, telephone, photographs, postage and delivery, are to be included in the "Not-to-Exceed Fee."
- G. All tasks including labor and reimbursable costs such as mileage, printing, telephone, photographs, postage, and delivery shall have supporting documentation presented at the time payment is requested.
- H. The City will pay the Consultant for all acceptable services rendered in accordance with the "Agreement for Professional Consultant Services."
- I. When the Consultant is performing, or is requested to perform, work beyond the scope of service in the "Agreement for Professional Consultant Services," an "Amendment to the Agreement" will be executed between the City and Consultant.

**REQUEST FOR PROPOSAL FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 07-41570024**

- J. The Consultant shall receive no compensation for any re-work necessary as result of the Consultant's errors or oversight.

IX. INSURANCE

- A. The Consultant shall provide Errors and Omissions Professional Insurance. Such coverage limits shall not be less than \$1,000,000 per claim and aggregate.
- B. The Consultant shall have Public Liability and Property Damage Insurance in the amounts as follows:

	<u>GENERAL LIABILITY</u>	
Bodily Injury	\$1,000,000	per occurrence
Property Damage	\$ 1,000,000	per occurrence

A combined single limit policy with aggregate limits in the amount of \$2,000,000 will be considered equivalent to the above minimum limits.

- C. The Consultant shall have Public Liability and Property Damage Insurance coverage for owned and non-owned automotive equipment in the amount of not less than \$1,000,000.
- D. The Consultant shall have Workers' Compensation Insurance in the amounts that fully comply with the laws of the State of California and employer's liability insurance with limits of not less than \$1,000,000 each accident.
- E. A Certificate of Insurance or an appropriate binder shall bear an endorsement containing the following provisions:

"Solely as respect to services done by or on behalf of the named insured for the City of Moreno Valley, it is agreed that the City of Moreno Valley, the Moreno Valley Housing Authority (MVHA), Western Riverside Council of Governments (WRCOG), and the Moreno Valley Community Services District, its officers, employees and agents are included as additional insured under this general liability policy and the coverage(s) provided shall be primary insurance and not contributing with any other insurance available to the City of Moreno Valley, the Moreno Valley Housing Authority (MVHA), Western Riverside Council of Governments (WRCOG), and the Moreno Valley Community Services District, its officers and employees and agents, under any third party liability policy."

- F. Insurance companies providing insurance hereunder shall be rated (A minus: VII - Admitted) or better in Best's Insurance Rating Guide and shall be legally licensed and qualified to conduct insurance business in the State of California.
- G. The terms of the insurance policy or policies issued to provide the above insurance coverage shall not be amended to reduce the above required insurance limits and coverage's nor shall such policies be canceled by the carrier without thirty (30) days prior written notice by certified or registered mail of amendment or cancellation to the

**REQUEST FOR PROPOSAL FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 07-41570024**

Agency, except that cancellation for non-payment of premium shall require ten (10) days prior written notice by certified or registered mail. In the event the said insurance is canceled, the Consultant shall, prior to the cancellation date, submit to the City Clerk new evidence of insurance in the amount established.

- H. It is the consultant's responsibility to ensure that all subconsultants comply with the following: Each subconsultant that encroaches within the City's right-of-way and affects (i.e., damages or impacts) City infrastructure must comply with the liability insurance requirements of the City's Land Development Division. Examples of such subconsultant work include soil sample borings, utility potholing, etc.

The "Application for Encroachment Permit" form (four pages), including "Application for Encroachment Permit Liability Insurance Requirements," is available in the Land Development Division and must be completed and submitted in full to the City. It is the Consultant's responsibility to ensure that all subconsultants submit the appropriate encroachment permit and insurance documentation at the same time that the Consultant's insurance documentation is submitted.

X. INDEMNIFICATION

- A. To the maximum extent allowable by law, the Consultant, when functioning in the capacity of a design professional, agrees to indemnify, defend, and save the City, the City of Moreno Valley Housing Authority(MVHA), the Moreno Valley Community Services District (CSD), and the Western Riverside Council of Governments (WRCOG), their officers, agents and employees harmless from any and all liability, claims, demands, damages, or injuries to any person, including injury to the Consultant's employees and all claims that arise out of, pertain to, or relate to the negligence, recklessness or willful misconduct of the Consultant, its officers, agents or employees, or its sub consultant(s) or any person acting for the Consultant or under its control or direction; provided, however, that this indemnification and hold harmless shall not include claims arising from the negligence or willful misconduct of the City, MVHA, CSD, and WRCOG; their officers, agents or employees.
- B. The consultant, when not functioning in the capacity of a design professional, agrees to indemnify, defend, and save the City, the Moreno Valley Housing Authority(MVHA), the Moreno Valley Community Services District (CSD), and the Western Riverside Council of Governments (WRCOG), their officers, agents and employees harmless from any and all liability, claims, demands, damages, or injuries to any person, including injury to the Consultant's employees and all claims which arise from or are connected with the negligent performance of or failure to perform the work or other obligations of the Consultant under this Agreement, or are caused or claim to be caused by the negligent acts of the Consultant, its officers, agents or employees, or its sub consultant(s) or any person acting for the Consultant or under its control or direction; provided, however, that this indemnification and hold harmless shall not include claims arising from the sole negligence or willful misconduct of the City, MVHA, CSD, and WRCOG, their officers, agents or employees.
- C. The City agrees to indemnify, defend and save the Consultant and their officers, agents and employees harmless from any and all liability, claims, damages or

**REQUEST FOR PROPOSAL FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 07-41570024**

injuries to any person, including injury to the City's, MVHA, CSD's, and WRCOG's employees and all claims which arise from or are connected with the negligent performance or failure to perform the services or other obligations of the City under this Agreement, or are caused or claim to be caused by the negligent acts of the City, MVHA, CSD, and WRCOG, their officers, agents or employees, or its subcontractor(s) or any person acting for the City or under its control or direction; provided, however, that this indemnification and hold harmless shall not include any claims arising from the negligence or willful misconduct of the Consultant, its officers, agents or employees

XI. TERMINATION FOR CONVENIENCE OF THE CITY

The City reserves the right to terminate the "Agreement for Professional Consultant Services" for the "convenience of the City" at any time by giving ten (10) days written notice to the Consultant of such termination and specifying the effective date thereof. All finished or unfinished drawings, maps, documents, field notes and other materials produced and procured by the Consultant under the said aforementioned Agreement is, at the option of the City, City property and shall be delivered to the City by the Consultant within ten (10) working days from the date of such termination. The City will reimburse the Consultant for all acceptable work performed as set forth in the executed Agreement.

XII. INDEPENDENT CONTRACTOR

The Consultant's relationship to the City in the performance of the Consultant's services for this project is that of an independent Contractor. The personnel performing said Construction Materials Testing & Geotechnical Services shall at all times be under the Consultant's exclusive direction and control and shall be employees of the Consultant and not employees of the City. The Consultant shall pay all wages, salaries and other amounts due his employees in connection with the performance of said work and shall be responsible for all employee reports and obligations, including but not necessarily restricted to, social security, income tax withholding, unemployment compensation, and Workers' Compensation.

XIII. CONTRACT

The Contract includes the Agreement for Professional Consultant Services, City's Request for Proposal, Consultant's Proposal, and Exhibits.

The Political Reform Act and the City's Conflict of Interest Code require that consultants be considered as potential filers of Statements of Economic Interest. Consultants, as defined by Section 18701, may be required to file an Economic Interest Statement (Form 700) within 30 days of signing a Consultant Agreement with the City, on an annual basis thereafter if the contract is still in place, and within 30 days of completion of the contract.

XIV. GENERAL CONDITIONS

- A. Pre-contractual expenses are defined as expenses incurred by the Consultant in: (1) preparing the Proposal; (2) submitting the Proposal to the City; (3) presentation during selection interview; (4) negotiating with the City any matter related to this

**REQUEST FOR PROPOSAL FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 07-41570024**

Proposal; (5) any other expenses incurred by the Consultant prior to an executed Agreement.

The City shall not, in any event, be liable for any pre-contractual expenses incurred by the Consultant.

- B. The City reserves the right to withdraw this RFP at any time without prior notice. Further, the City makes no representations that any Agreement will be awarded to any Consultant responding to this RFP. The City expressly reserves the right to postpone reviewing the Proposal for its own convenience and to reject any and all Proposals responding to this RFP without indicating any reasons for such rejection(s).
- C. The City reserves the right to reject any or all Proposals submitted. Any Contract awarded for these Consultant engagements will be made to the Consultant who, in the opinion of the City, is best qualified.

XV. SELECTION CRITERIA

It is the City's intent to select and utilize one Consultant firm for the project. The City may award the services in part and/or phases. The Consultant may be invited to a selection interview. The Proposals will be rated/ranked according to the following criteria:

- A. The Firm's General Experience and Qualification Information (20 points) – Information about the company (and all sub-consultants) including professional licenses held; ability to furnish required insurance and meet stipulations of the City's "boiler plate" agreement; details about comparable projects completed by the firm, as well as local experience; and its ability to provide the required services in an efficient and expeditious manner.
- B. Experience of Key Personnel (40 points) – Background on key personnel (including all sub-consultants) qualifications, abilities, familiarity with state and federal procedures, local experience on comparable projects and length of service with the firm, reference information preferably with municipal agencies, and proven track record and depth of understanding/knowledge of the proposed Project Manager and key personnel.
- C. Project Approach/Understanding (40 points) – Understanding of Project, discussion of major issues identified on the project and how the consultant team plans to address them; the management approach and organization necessary to complete the specific project; and outline quality control measures to ensure delivery of a quality product on time and within budget that provides a cost efficient, timely and predictable execution of the project construction.

**REQUEST FOR PROPOSAL FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 07-41570024**

XVI. Other Requirements

A. Conflict of Interest

1. The Consultant shall disclose any financial, business, or other relationship with City that may have an impact upon the outcome of this contract, or any ensuing City Construction project. The Consultant shall also list current clients who may have financial interest in the outcome of this Agreement, or any ensuing City construction project, which will follow.
2. The Consultant hereby certifies that it does not now have, nor shall it acquire any financial or business interest that would conflict with the performance of services under this Agreement.
3. Any subcontract in excess of \$25,000 entered into as a result of this Agreement, shall contain all of the provisions of this Agreement.
4. The Consultant hereby certifies that neither the Consultant, its employees, nor any firm affiliated with the Consultant providing services on this project prepared the Plans, Specifications, and Estimates for any construction project included within this contract. An affiliated firm is one, which is subject to the control of the same persons through joint-ownership, or otherwise.
5. The Consultant further certifies that neither Consultant, nor any firm affiliated with the Consultant, will bid on any construction subcontracts included within the construction contract. Additionally, Consultant certifies that no person working under this Agreement is also employed by the construction contractor for any project included within this agreement.
6. Except for subcontractors whose services are limited to materials testing, no subcontractor who is providing services on this Agreement shall have provided services on the design of any project within this contract.

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
TRANSPORTATION UNIFORM MITIGATION FEE (TUMF) - ZONAL
PROJECT NO. XX-XXXX**

This Agreement is by and between the City of Moreno Valley, California, a municipal corporation, hereinafter described as "City," and Consultant Company, a (California corporation, partnership, sole ownership) hereinafter described as "Consultant." This Agreement is made and entered into effective on the date the City signs this Agreement.

RECITALS

WHEREAS, the City has determined it is in the public interest to proceed with the work hereinafter described as "Project"; and

WHEREAS, the City has determined the Project involves the performance of professional and technical services of a temporary nature as more specifically described in Exhibit "A" (City's Request for Proposal) and Exhibit "B" (Consultant's Proposal) hereto; and

WHEREAS, the City does not have available employees to perform the services for the Project; and

WHEREAS, the City has requested the Consultant to perform such services for the Project; and

WHEREAS, the Consultant is professionally qualified in California to perform the professional and technical services required for the Project;

THEREFORE, the City and the Consultant, for the consideration hereinafter described, mutually agree as follows:

Attachment "B"

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXXX**

DESCRIPTION OF PROJECT

1. The project is described as professional consultant _____ services for:

Project Name

Project No. XX-XXXXX

SCOPE OF SERVICES

2. The Consultant's scope of service is described on Exhibit "B" attached hereto and incorporated herein by this reference. In the event of a conflict, the City's Request for Proposal shall take precedence over the Consultant's Proposal.

3. The City's responsibility is described on Exhibit "C" attached hereto and incorporated herein by this reference.

PAYMENT TERMS

4. The City agrees to pay the Consultant and the Consultant agrees to receive a "Not-to-Exceed" fee of \$ _____ in accordance with the payment terms provided on Exhibit "D" attached hereto and incorporated herein by this reference.

TERM OF AGREEMENT

5. This agreement will terminate on **Month Date, Year** unless the termination date is extended by an amendment to the agreement.

TIME FOR PERFORMANCE

6. The Consultant shall commence services upon receipt of written direction to proceed from the City.

7. The Consultant shall perform the work described on Exhibit "A" in accordance with the schedule set forth in Exhibit "E" attached hereto and incorporated by this reference.

Or

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXX**

7. The Consultant shall perform the work described on Exhibit "A" in accordance with the design/construction schedule as stated in the Notice to Proceed.

8. The Consultant and the City agree that the schedule in Paragraph 7 above represents their best estimates with respect to completion dates, and both the Consultant and the City acknowledge that it will not unreasonably withhold approval of the Consultant's requests for extensions of time in which to complete the work required of the Consultant hereunder.

9. The Consultant shall not be responsible for performance delays caused by others or delays beyond the Consultant's reasonable control, and such delays shall extend the time for performance of the work by the Consultant. Delays caused by non-performance or unjustified delay in performance by a subconsultant of the Consultant are not considered to be beyond the Consultant's reasonable control.

10. (a) The Consultant agrees that the personnel, including the principal Project manager, and all subconsultants assigned to the Project by the Consultant, shall be subject to the prior approval of the City.

(b) No change in subconsultants or key personnel shall be made by the Consultant without written prior approval of the City.

SPECIAL PROVISIONS

11. It is understood and agreed that the Consultant is, and at all times shall be, an independent contractor and nothing contained herein shall be construed as making the Consultant or any individual whose compensation for services is paid by the Consultant, an agent or employee of the City, or authorizing the Consultant to create or assume any obligation or liability for or on behalf of the City.

12. The Consultant may also retain or subcontract for the services of other necessary

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXXX**

consultants with the prior written approval of the City. Payment for such services shall be the responsibility of the Consultant. Any and all subconsultants employed by the Consultant shall be subject to the terms and conditions of this Agreement, except that the City shall have no obligation to pay any subconsultant for services rendered on the Project.

13. The Consultant and the City agree to use reasonable care and diligence to perform their respective services under this Agreement. Unless hereinafter specified, neither party shall be responsible for the services of the other or any subcontractor or sub-consultant employed by the other party.

14. The Consultant shall comply with applicable federal, state, and local laws in the performance of work under this Agreement.

[for Non-design contracts]

15. (a) The Consultant agrees to indemnify, defend, and save the City, the Community Redevelopment Agency of the City of Moreno Valley (RDA), the Moreno Valley Community Services District (CSD) and the Western Riverside Council of Governments (WRCOG), their officers, agents and employees harmless from any and all liability, claims, demands, damages, or injuries to any person, including injury to the Consultant's employees and all claims which arise from or are connected with the negligent performance of or failure to perform the work or other obligations of the Consultant under this Agreement, or are caused or claim to be caused by the negligent acts, recklessness or willful misconduct of the Consultant, its officers, agents or employees, or its subconsultant(s) or any person acting for the Consultant or under its control or direction.

(b) The City agrees to indemnify, defend and save the Consultant and their officers, agents and employees harmless from any and all liability, claims, damages or injuries to

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXX**

any person, including injury to the City's, RDA's, CSD's, and WRCOG's employees and all claims which arise from or are connected with the negligent performance or failure to perform the services or other obligations of the City under this Agreement, or are caused or claim to be caused by the negligent acts, recklessness or willful misconduct of the City, RDA, CSD and WRCOG, their officers, agents or employees, or its subcontractor(s) or any person acting for the City or under its control or direction.

Or [for Design contracts]

15. (a) To the maximum extent allowable by law, the Consultant agrees to indemnify, defend, and save the City, the Community Redevelopment Agency of the City of Moreno Valley (RDA), the Moreno Valley Community Services District (CSD) and the Western Riverside Council of Governments (WRCOG), their officers, agents and employees harmless from any and all liability, claims, demands, damages, or injuries to any person, including injury to the Consultant's employees and all claims that arise out of, pertain to, or relate to the negligence, recklessness or willful misconduct of the Consultant, its officers, agents or employees, or its subconsultant(s) or any person acting for the Consultant or under its control or direction; provided, however, that this indemnification and hold harmless shall not include claims arising from the negligence or willful misconduct of the City, RDA, CSD and WRCOG, their officers, agents or employees.

(b) The City agrees to indemnify, defend and save the Consultant and their officers, agents and employees harmless from any and all liability, claims, damages or injuries to any person, including injury to the City's, RDA's, CSD's, and WRCOG's employees and all claims which arise from or are connected with the negligent performance or failure to perform the services or other obligations of the City under this Agreement, or are caused or claim to be caused by the negligent acts of the City, RDA, CSD and WRCOG, their officers, agents or

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXX**

employees, or its subcontractor(s) or any person acting for the City or under its control or direction; provided, however, that this indemnification and hold harmless shall not include any claims arising from the negligence or willful misconduct of the Consultant, its officers, agents or employees.

Or [for Design/CM contracts]

15. (a) To the maximum extent allowable by law, the Consultant, when functioning in the capacity of a design professional, agrees to indemnify, defend, and save the City, the Community Redevelopment Agency of the City of Moreno Valley (RDA), the Moreno Valley Community Services District (CSD) and the Western Riverside Council of Governments (WRCOG), their officers, agents and employees harmless from any and all liability, claims, demands, damages, or injuries to any person, including injury to the Consultant's employees and all claims that arise out of, pertain to, or relate to the negligence, recklessness or willful misconduct of the Consultant, its officers, agents or employees, or its subconsultant(s) or any person acting for the Consultant or under its control or direction; provided, however, that this indemnification and hold harmless shall not include claims arising from the negligence or willful misconduct of the City, RDA, CSD, and WRCOG, their officers, agents or employees.

(b) The consultant, when not functioning in the capacity of a design professional, agrees to indemnify, defend, and save the City, the Moreno Valley Community Redevelopment Agency (RDA), the Moreno Valley Community Services District (CSD) and the Western Riverside Council of Governments (WRCOG), their officers, agents and employees harmless from any and all liability, claims, demands, damages, or injuries to any person, including injury to the Consultant's employees and all claims which arise from or are connected with the negligent performance of or failure to perform the work or other obligations of the Consultant under this Agreement, or are

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXX**

caused or claim to be caused by the negligent acts of the Consultant, its officers, agents or employees, or its subconsultant(s) or any person acting for the Consultant or under its control or direction; provided, however, that this indemnification and hold harmless shall not include claims arising from the sole negligence or willful misconduct of the City, RDA, CSD, and WRCOG, their officers, agents or employees.

(c) The City agrees to indemnify, defend and save the Consultant and their officers, agents and employees harmless from any and all liability, claims, damages or injuries to any person, including injury to the City's, RDA's, CSD's, and WRCOG's employees and all claims which arise from or are connected with the negligent performance or failure to perform the services or other obligations of the City under this Agreement, or are caused or claim to be caused by the negligent acts of the City, RDA, CSD, and WRCOG, their officers, agents or employees, or its subcontractor(s) or any person acting for the City or under its control or direction; provided, however, that this indemnification and hold harmless shall not include any claims arising from the negligence or willful misconduct of the Consultant, its officers, agents or employees.

16. (a) The Consultant shall procure and maintain, at its sole expense, throughout the term of this Agreement and any extension thereof, Professional Errors and Omission Insurance coverage in the form and substance and with carriers acceptable to the City. Such coverage limits shall not be less than \$1,000,000 per claim and aggregate.

(b) During the entire term of this Agreement, the Consultant agrees to procure and maintain General Liability Insurance in form and substance and with carriers acceptable to the City at its sole expense to protect against loss from liability imposed by law for damages on account of bodily injury, including death therefrom, suffered or alleged to be suffered by any

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXXX**

person or persons whomever, resulting directly or indirectly from any act or activities of the Consultant its sub-consultant or any person acting for the Consultant or under its control or direction, and also to protect against loss from liability imposed by law for damages to any property of any persons caused directly or indirectly by or from acts or activities of the Consultant or its subconsultants, or any person acting for the Consultant or under its control or direction.

(c) Such Public Liability and Property Damage Insurance shall be maintained in full force and effect throughout the terms of the Agreement and any extension thereof in the minimum limits provided below:

GENERAL LIABILITY

Bodily Injury	\$1,000,000 per occurrence
Property Damage	\$ 500,000 per occurrence

A combined single limit policy with aggregate limits in the amount of \$2,000,000 will be considered equivalent to the above minimum limits.

(d) If the operation under this Agreement results in an increased or decreased risk in the opinion of the City Manager, then the Consultant agrees that the minimum general liability limits hereinabove designated shall be changed accordingly upon request by the City Manager.

(e) The Consultant shall procure and maintain, at its sole expense, and throughout the term of this Agreement and any extension thereof, Public Liability and Property Damage Insurance coverage for owned and non-owned automotive equipment operated on City premises. Such coverage limits shall not be less than \$1,000,000 combined single limit.

(f) The Consultant shall procure and maintain, at its sole expense, Workers' Compensation Insurance in such amounts as will fully comply with the laws of the State of

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXX**

California and which shall indemnify, insure and provide legal defense for both the Consultant and the City, RDA, CSD and WRCOG against any loss, claim, or damage arising from any injuries or occupational diseases happening to any worker employed by the Consultant in the course of carrying out the Agreement.

(g) A Certificate of Insurance, or an appropriate insurance binder evidencing the above insurance coverage shall be submitted to the City Clerk prior to the execution of this Agreement on behalf of the City.

(h) The Certificate of Insurance or an appropriate binder shall bear an endorsement containing the following provisions:

"Solely as respect to services done by or on behalf of the named insured for the City of Moreno Valley, it is agreed that the City of Moreno Valley, the Community Redevelopment Agency of the City of Moreno Valley, the Moreno Valley Community Services District and Western Riverside Council of Governments, their officers, employees and agents are included as additional insured under this general liability policy and the coverage(s) provided shall be primary insurance and not contributing with any other insurance available to the City of Moreno Valley, the Community Redevelopment Agency of the City of Moreno Valley, the Moreno Valley Community Services District and Western Riverside Council of Governments, its officers, employees and agents, under any third party liability policy."

(i) Insurance companies providing insurance hereunder shall be rated (A minus: VII - Admitted) or better in Best's Insurance Rating Guide and shall be legally licensed

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXXX**

and qualified to conduct insurance business in the State of California.

(j) The terms of the insurance policy or policies issued to provide the above insurance coverage shall not be amended to reduce the above required insurance limits and coverages nor shall such policies be canceled by the carrier without thirty (30) days prior written notice by certified or registered mail of amendment or cancellation to the City, except that cancellation for non-payment of premium shall require ten (10) days prior written notice by certified or registered mail. In the event the said insurance is canceled, the Consultant shall, prior to the cancellation date, submit to the City Clerk new evidence of insurance in the amounts established.

17. During the performance of this Agreement, the Consultant will not unlawfully discriminate against any employee or applicant for employment because of race, religion, creed, color, national origin, sex, or age. The Consultant will take affirmative action to ensure that applicants are employed, and that employees are treated during employment without regard to their race, religion, creed, color, national origin, sex, or age.

18. Consultant and subconsultants shall pay prevailing wage rates when required by the Labor Laws of the State of California.

19. (a) The Consultant shall deliver to the Public Works Director/City Engineer of the City or his designated representative, in both hard copy and electronic format, fully completed and detailed project-related documents which shall become the property of the City. The Consultant may retain, for its files, copies of any and all material, including drawings, documents, and specifications, produced by the Consultant in performance of this Agreement. It shall be understood that the City shall be the owner of all project-related documents and drawings at all times and during all phases of the project.

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXX**

(b) The Consultant shall be entitled to copies of all furnished materials for his files and his subconsultants, if any.

(c) The City agrees to hold the Consultant free and harmless from any claim arising from any unauthorized use of computations, maps, and other documents prepared or provided by the Consultant under this Agreement, if used by the City on other projects without the permission of the Consultant. Consultant acknowledges that Consultant work product produced under this agreement may be public record under State law.

20. (a) The City may terminate this Agreement without fault on the part of Consultant by giving at least ten (10) days written notice to the Consultant. The written notice shall specify the date of termination. Upon receipt of such notice, the Consultant may continue services on the project through the date of termination, provided that no service(s) shall be commenced or continued after receipt of the notice, which is not intended to protect the interest of the City. The City shall pay the Consultant within thirty (30) days after the date of termination for all non-objected to services performed by the Consultant in accordance herewith through the date of termination. Such termination may be effective immediately.

(b) Upon notice of termination, the Consultant shall deliver to the Public Works Director/City Engineer of the City or his designated representative, in both hard copy and electronic format, fully completed and detailed project-related documents which shall become the property of the City. The Consultant may retain for its files copies of any and all materials, including drawings, documents, and specifications produced by the Consultant in performance of this Agreement. It shall be understood that the City shall be the owner of all project-related documents and drawings, regardless of the completeness of said documents.

(c) The Consultant shall be entitled to copies of all furnished materials for his

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXX**

files and his subconsultants, if any.

(d) The City agrees to hold the Consultant free and harmless from any claim arising from any unauthorized use of computations, maps, and other documents prepared or provided by the Consultant. Consultant acknowledges that Consultant work product produced under this Agreement may be public record under State law.

(e) Either party may terminate this Agreement for cause. In the event the City terminates this Agreement for cause, the Consultant shall perform no further service(s) under the Agreement unless the notice of termination authorizes such further work.

21. This Agreement is binding upon the City and the Consultant and their successors and assigns. Except as otherwise provided herein, neither the City nor the Consultant shall assign, sublet, or transfer its interest in this Agreement or any part thereof without the prior written consent of the other.

22. A City representative shall be designated by the City and a Consultant representative shall be designated by the Consultant. The City representative and the Consultant representative shall be the primary contact person for each party regarding performance of this Agreement. The City representative shall cooperate with the Consultant, and the Consultant's representative shall cooperate with the City in all matters regarding this Agreement and in such a manner as will result in the performance of the services in a timely and expeditious fashion.

23. This Agreement represents the entire and integrated Agreement between the City and the Consultant, and supersedes all prior negotiations, representations or Agreements, either written or oral. This Agreement may be modified or amended only by a subsequent written Agreement signed by both parties.

24. Where the payment terms provide for compensation on a time and materials basis,

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXX**

the Consultant shall maintain adequate records to permit inspection and audit of the Consultant's time and materials charges under this Agreement. The Consultant shall make such records available to the City at the Consultant's office during normal business hours upon reasonable notice. Nothing herein shall convert such records into public records. Except as may be otherwise required by law, such records will be available only to the City. Such records shall be maintained by the Consultant for three (3) years following completion of the services under this Agreement.

25. The City and the Consultant agree, that to the extent permitted by law, until final approval by the City, all data shall be treated as confidential and will not be released to third parties without the prior written consent of both parties.

26. The Consultant shall employ no City official or employee in the work performed pursuant to this Agreement. No officer or employee of the City shall have any financial interest in this Agreement in violation of federal, state, or local law.

27. All Plans, drawings, Specifications, reports, logs, and other documents prepared by the Consultant in its performance under this Agreement shall, upon completion of the project, be delivered to and be the property of the City, provided that the Consultant shall be entitled, at its own expense, to make copies thereof for its own use.

28. The laws of the State of California shall govern the rights, obligations, duties, and liabilities of the parties to this Agreement, and shall also govern the interpretation of this Agreement.

Exhibit "B" – Consultant's Proposal
Exhibit "C" – City's Responsibility
Exhibit "D" – Terms of Payment
Exhibit "E" – Consultant's Schedule

CITY - SERVICES TO BE PROVIDED
TO CONSULTANT

1. Furnish the Consultant all in-house data which is pertinent to services to be performed by the Consultant and which is within the custody or control of the City, including, but not limited to, copies of record and off-record maps and other record and off-record property data, right-of-way maps and other right-of-way data, pending or proposed subject property land division and development application data, all newly developed and pertinent design and project specification data, and such other pertinent data which may become available to the City.
2. Provide timely review, processing, and reasonably expeditious approval of all submittals by the Consultant.
3. Provide timely City staff liaison with the Consultant when requested and when reasonably needed.

EXHIBIT "C"

TERMS OF PAYMENT

1. The Consultant's compensation shall not exceed \$_____.
2. The Consultant will obtain, and keep current during the term of this Agreement, the required City of Moreno Valley business license. Proof of a current City of Moreno Valley business license will be required prior to any payments by the City. Any invoice not paid because the proof of a current City of Moreno Valley business license has not been provided will not incur any fees, late charges, or other penalties. Complete instructions for obtaining a City of Moreno Valley business license are located at: <http://www.moval.org/do/biz/biz-license.shtml>
3. The Consultant will electronically submit an invoice to the City once a month for progress payments along with documentation evidencing services completed to date. The progress payment is based on actual time and materials expended in furnishing authorized professional services during the preceding calendar month. At no time will the City pay for more services than have been satisfactorily completed and the City Engineer's determination of the amount due for any progress payment shall be final. The consultant will submit all original invoices to Accounts Payable staff at AccountsPayable@moval.org. Accounts Payable questions can be directed to (951) 413-3076. Copies of invoices may be submitted to the Capital Projects Division at zara@moval.org or calls directed to (951) 413-3131.
4. The Consultant agrees that City payments will be received via Automated Clearing House (ACH) Direct Deposit and that the required ACH Authorization form will be completed prior to any payments by the City. Any invoice not paid because the completed ACH Authorization Form has not been provided will not incur any fees,

late charges, or other penalties. The ACH Authorization Form is located at:

http://www.moval.org/city_hall/forms.shtml#bf

5. The minimum information required on all invoices is:
 - A. Vendor Name, Mailing Address, and Phone Number
 - B. Invoice Date
 - C. Vendor Invoice Number
 - D. City-provided Reference Number (e.g. Project, Activity)
 - E. Detailed work hours by class title (e.g. Manager, Technician, or Specialist), services performed and rates, explicit portion of a contract amount, or detailed billing information that is sufficient to justify the invoice amount; single, lump amounts without detail are not acceptable.

6. The City shall pay the Consultant for all invoiced, authorized professional services within forty-five (45) days of receipt of the invoice for same.

CONSTRUCTION COOPERATIVE AGREEMENT

This agreement, effective on December 4, 2012, is between the State of California, acting through its Department of Transportation, referred to as CALTRANS, and:

City of Moreno Valley, a body politic and municipal corporation or chartered city of the State of California, referred to as CITY.

For the purpose of this agreement, the term PARTNERS collectively refers to CALTRANS and CITY (all signatory parties to this agreement). The term PARTNER refers to any one of those signatory parties individually.

RECITALS

1. California Streets and Highways Code sections 114 and 130 authorize PARTNERS to enter into a cooperative agreement for performance of work within the State Highway System (SHS) right of way.
2. This agreement outlines the terms and conditions of cooperation between PARTNERS to complete the construction capital phase to improve the eastbound ramp configuration at Moreno Beach Drive on State Route 60 (SR-60) in the City of Moreno Valley and construct auxiliary lanes for the eastbound portion of the freeway between the Nason Street overcrossing and the Moreno Beach Drive overcrossing.

For the purpose of this agreement, improvements to the eastbound ramp configuration at Moreno Beach Drive on SR-60 in the City of Moreno Valley and construction of auxiliary lanes for the eastbound portion of the freeway between the Nason Street overcrossing and the Moreno Beach Drive overcrossing will be referred to as PROJECT. All responsibilities assigned in this agreement to complete the construction capital phase of PROJECT will be referred to as OBLIGATIONS.

3. This agreement is separate from and does not modify or replace any other cooperative agreement or memorandum of understanding between PARTNERS regarding PROJECT.
4. Prior to this agreement, the CITY developed the Project Report; Plans, Specifications and Estimate; and the Right of Way Certification (Cooperative Agreement No. 8-1314).
5. CITY prepared the environmental documentation for PROJECT.
6. The estimated date for OBLIGATION COMPLETION is December 31, 2014.

7. In this agreement capitalized words represent defined terms and acronyms. The Definitions section contains a complete definition for each capitalized term.
8. From this point forward, PARTNERS define in this agreement the terms and conditions under which they will accomplish OBLIGATIONS.

RESPONSIBILITIES

9. CITY is SPONSOR for 100% of PROJECT.
10. CALTRANS will provide IQA for the portions of WORK within existing and proposed SHS right of way. CALTRANS retains the right to reject noncompliant WORK, protect public safety, preserve property rights, and ensure that all WORK is in the best interest of the SHS.
11. CITY may provide IQA for the portions of WORK outside existing and proposed SHS right of way.
12. CITY is the only FUNDING PARTNER for this agreement. CITY's funding commitment is defined in the FUNDING SUMMARY.
13. CALTRANS is the CEQA lead agency for PROJECT.
14. CALTRANS is the NEPA lead agency for PROJECT.
15. CITY is IMPLEMENTING AGENCY for CONSTRUCTION.

SCOPE

Scope: General

16. PARTNERS will perform all OBLIGATIONS in accordance with federal and California laws, regulations, and standards; FHWA STANDARDS; and CALTRANS STANDARDS.
17. IMPLEMENTING AGENCY for a PROJECT COMPONENT will provide a Quality Management Plan (QMP) for that component as part of the PROJECT MANAGEMENT PLAN. The District Construction Division, with input from Structure Construction must approve the Quality Management Plan (QMP) before the encroachment permit for construction is issued.
18. Any PARTNER may, at its own expense, have representatives observe any OBLIGATIONS performed by another PARTNER. Observation does not constitute authority over those OBLIGATIONS.

19. Each PARTNER will ensure that all of its personnel participating in OBLIGATIONS are appropriately qualified, and if necessary licensed, to perform the tasks assigned to them.
20. IMPLEMENTING AGENCY shall retain consultants and shall invite CALTRANS to participate in the selection and retention of consultants that participate in OBLIGATIONS. At least one representative from the Construction Division of CALTRANS shall participate in the selection process. A construction management firm shall not be selected without the approval by this representative.
21. If WORK is done under contract (not completed by a PARTNER's own employees) and is governed by the California Labor Code's definition of "public works" (section 1720(a)(a)), that PARTNER will conform to sections 1720 – 1815 of the California Labor Code and all applicable regulations and coverage determinations issued by the Director of Industrial Relations.
22. IMPLEMENTING AGENCY for each PROJECT COMPONENT included in this agreement will be available to help resolve problems generated by that component for the entire duration of PROJECT.
23. CALTRANS will issue, upon proper application, the encroachment permits required for WORK within SHS right of way.

Contractors and/or agents, and utility owners will not perform WORK without an encroachment permit issued in their name.

24. If any PARTNER discovers unanticipated cultural, archaeological, paleontological, or other protected resources during WORK, all WORK in that area will stop and that PARTNER will notify all PARTNERS within 24 hours of discovery. WORK may only resume after a qualified professional has evaluated the nature and significance of the discovery and a plan is approved for its removal or protection.
25. PARTNERS will hold all administrative drafts and administrative final reports, studies, materials, and documentation relied upon, produced, created, or utilized for PROJECT in confidence to the extent permitted by law. Where applicable, the provisions of California Government Code section 6254.5(e) will govern the disclosure of such documents in the event that PARTNERS share said documents with each other.

PARTNERS will not distribute, release, or share said documents with anyone other than employees, agents, and consultants who require access to complete PROJECT without the written consent of the PARTNER authorized to release them, unless required or authorized to do so by law.

26. If any PARTNER receives a public records request, pertaining to OBLIGATIONS, that PARTNER will notify PARTNERS within five (5) working days of receipt and make PARTNERS aware of any disclosed public records. PARTNERS will consult with each other prior to the release of any public documents related to the PROJECT.

27. If HM-1 or HM-2 is found during a PROJECT COMPONENT, IMPLEMENTING AGENCY for that PROJECT COMPONENT will immediately notify PARTNERS.
28. CALTRANS, independent of PROJECT, is responsible for any HM-1 found within the existing SHS right of way. CALTRANS will undertake HM MANAGEMENT ACTIVITIES related to HM-1 with minimum impact to PROJECT schedule.
29. CITY, independent of PROJECT, is responsible for any HM-1 found within PROJECT limits and outside the existing SHS right of way. CITY will undertake or cause to be undertaken HM MANAGEMENT ACTIVITIES related to HM-1 with minimum impact to PROJECT schedule.
30. If HM-2 is found within PROJECT limits, the public agency responsible for the advertisement, award, and administration (AAA) of the PROJECT construction contract will be responsible for HM MANAGEMENT ACTIVITIES related to HM-2.
31. CALTRANS' acquisition or acceptance of title to any property on which any HM-1 or HM-2 is found will proceed in accordance with CALTRANS' policy on such acquisition.
32. PARTNERS will comply with all of the commitments and conditions set forth in the environmental documentation, environmental permits, approvals, and applicable agreements as those commitments and conditions apply to each PARTNER's responsibilities in this agreement.
33. IMPLEMENTING AGENCY for each PROJECT COMPONENT will furnish PARTNERS with written quarterly progress reports during the implementation of OBLIGATIONS in that component.
34. Upon OBLIGATION COMPLETION, ownership or title to all materials and equipment constructed or installed for the operations and/or maintenance of the SHS within SHS right of way as part of WORK become the property of CALTRANS.

CALTRANS will not accept ownership or title to any materials or equipment constructed or installed outside SHS right of way.
35. IMPLEMENTING AGENCY for a PROJECT COMPONENT will accept, reject, compromise, settle, or litigate claims of any non-agreement parties hired to do WORK in that component.
36. PARTNERS will confer on any claim that may affect OBLIGATIONS or PARTNERS' liability or responsibility under this agreement in order to retain resolution possibilities for potential future claims. No PARTNER will prejudice the rights of another PARTNER until after PARTNERS confer on claim.
37. PARTNERS will maintain, and will ensure that any party hired by PARTNERS to participate in OBLIGATIONS will maintain, a financial management system that

conforms to Generally Accepted Accounting Principles (GAAP), and that can properly accumulate and segregate incurred PROJECT costs, and provide billing and payment support.

- 38. PARTNERS will comply with the appropriate federal cost principles and administrative requirements outlined in the Applicable Cost Principles and Administrative Requirements table below. These principles and requirements apply to all funding types included in this agreement.
- 39. PARTNERS will ensure that any party hired to participate in OBLIGATIONS will comply with the appropriate federal cost principles and administrative requirements outlined in the Applicable Cost Principles and Administrative Requirements table below.

Applicable Cost Principles and Administration Requirements		
The federal cost principles and administrative requirements associated with each organization type apply to that organization.		
Organization Type	Cost Principles	Administrative Requirements
Federal Governments	2 CFR Part 225	OMB A-102
State and Local Government	2 CFR, Part 225	49 CFR, Part 18
Educational Institutions	2 CFR, Part 220	2 CFR, Part 215
Non-Profit Organizations	2 CFR, Part 230	2 CFR, Part 215
For Profit Organizations	48 CFR, Chapter 1, Part 31	49 CFR, Part 18
CFR (Code of Federal Regulations)		
OMB (Office of Management and Budget)		
Related URLs:		
• Various OMB Circular:	http://www.whitehouse.gov/omb/grants_circulars	
• Code of Federal Regulations:	http://www.gpoaccess.gov/CFR	

- 40. PARTNERS will maintain and make available to each other all OBLIGATIONS-related documents, including financial data, during the term of this agreement.
- 41. PARTNERS will retain all OBLIGATIONS-related records for three (3) years after the final voucher.
- 42. PARTNERS have the right to audit each other in accordance with generally accepted governmental audit standards.

CALTRANS, the state auditor, FHWA, and CITY will have access to all OBLIGATIONS-related records of each PARTNER, and any party hired by a PARTNER to participate in OBLIGATIONS, for audit, examination, excerpt, or transcription.

The examination of any records will take place in the offices and locations where said records are generated and/or stored and will be accomplished during reasonable hours of

operation. The auditing PARTNER will be permitted to make copies of any OBLIGATIONS-related records needed for the audit.

The audited PARTNER will review the draft audit, findings, and recommendations, and provide written comments within 30 calendar days of receipt.

Upon completion of the final audit, PARTNERS have 30 days to refund or invoice as necessary in order to satisfy the obligation of the audit.

Any audit dispute not resolved by PARTNERS is subject to dispute resolution. Any costs arising out of the dispute resolution process will be paid within 30 calendar days of the final audit or dispute resolution findings.

43. Any PARTNER that hires another party to participate in OBLIGATIONS will conduct a pre-award audit of that party in accordance with the *Local Assistance Procedures Manual*.

44. PARTNERS will not incur costs beyond the funding commitments in this agreement. If IMPLEMENTING AGENCY anticipates that funding for WORK will be insufficient to complete WORK, IMPLEMENTING AGENCY will promptly notify SPONSOR.

IMPLEMENTING AGENCY has no obligation to perform WORK if funds to perform WORK are unavailable.

45. If WORK stops for any reason, IMPLEMENTING AGENCY will place all facilities impacted by WORK in a safe and operable condition acceptable to CALTRANS.

46. If WORK stops for any reason, each PARTNER will continue to implement all of its applicable commitments and conditions included in the PROJECT environmental documentation, permits, agreements, or approvals that are in effect at the time that WORK stops, as they apply to each PARTNER's responsibilities in this agreement, in order to keep PROJECT in environmental compliance until WORK resumes.

47. Each PARTNER accepts responsibility to complete the activities that it selected on the SCOPE SUMMARY. Activities marked with "N/A" on the SCOPE SUMMARY are not included in the scope of this agreement.

48. Contract administration procedures shall conform to CALTRANS' Construction Manual, Local Assistance Procedures Manual (if Federal funds are used), and the PROJECT encroachment permits.

49. If the Resident Engineer is not also a registered Landscape Architect, CITY will furnish, at CITY expense and subject to approval of CALTRANS Landscape Architecture, a registered Landscape Architect to perform work related to architecture treatment and landscaping and to perform the function of an Assistant Resident Engineer/Inspector who is responsible for both daily on-site inspections and final decisions including, but not

limited to, any highway planting and the irrigation systems that comprise a portion of the PROJECT work. Final decisions shall continue to be subject to the satisfaction and approval of CALTRANS.

- 50. Within one hundred eighty (180) days following the completion and acceptance of the PROJECT construction contract, to furnish CALTRANS with a complete set of "As-Built" plans (hard copy and electronic formats) in accordance with CALTRANS' then current CADD Users Manual, Plans Preparation Manual, and CALTRANS practice. The submittal must also include all CALTRANS requested contract records, including survey documents and Records of Surveys (to include monument perpetuation per the Land Surveyor Act, section 8771, including but not limited to preconstruction monumentation documents and a post construction Record of Survey). CITY shall also submit corrected full-sized hardcopy structure plans.

Scope: Environmental Permits, Approvals and Agreements

- 51. Each PARTNER identified in the Environmental Permits table below accepts the responsibility to complete the assigned activities.

Environmental Permits						
Permit	Coordinate	Prepare	Obtain	Implement	Renew	Amend
404 USACOE	CITY	CITY	CITY	CITY	CITY	CITY
401 RWQCB	CITY	CITY	CITY	CITY	CITY	CITY
NPDES SWRCB	CITY	CITY	CITY	CITY	CITY	CITY
1602 DFG	CITY	CITY	CITY	CITY	CITY	CITY

Scope: CONSTRUCTION

- 52. CITY will advertise, open bids, award, approve, and administer the construction contract in accordance with the California Public Contract Code and the California Labor Code.

CITY will not advertise the construction contract until CALTRANS completes or accepts the final plans, specifications, and estimate package; CALTRANS approves the Right of Way Certification; and SPONSOR verifies full funding of CONSTRUCTION SUPPORT and CONSTRUCTION CAPITAL.

By accepting responsibility to advertise and award the construction contract, CITY also accepts responsibility to administer the construction contract.

PARTNERS agree that CITY is designated as the Legally Responsible Person and the Approved Signatory Authority pursuant to the Construction General Permit, State Water Resources Control Board (SWRCB) Order Number 2009-0009-DWQ, as defined in Appendix 5, Glossary, and assumes all roles and responsibilities assigned to the Legally

Responsible Person and the Approved Signatory Authority as mandated by the Construction General Permit.

53. IMPLEMENTING AGENCY will implement changes to the construction contract through contract change orders (CCOs). PARTNERS will review and concur on all CCOs over \$50,000.

CALTRANS must approve all CCOs affecting public safety or the preservation of property, all design and specification changes, and all major changes as defined in the CALTRANS Construction Manual prior to implementing the CCO.
54. If the lowest responsible construction contract bid is greater than the funding commitment to CONSTRUCTION CAPITAL, all PARTNERS must be involved in determining how to proceed. If PARTNERS do not agree in writing on a course of action within 15 working days, this agreement will terminate.
55. CITY will require the construction contractor to furnish payment and performance bonds naming CITY as obligee, and CALTRANS as additional obligee, and to carry liability insurance in accordance with CALTRANS specifications.
56. CITY will submit a written request to CALTRANS for any SFM identified in the PROJECT plans, specifications, and estimate a minimum of 45 days prior to the bid advertisement date for PROJECT construction contract. CITY will submit a written request to CALTRANS for any additional SFM deemed necessary during PROJECT construction.
57. CALTRANS will make SFM available at a CALTRANS-designated location after CITY requests SFM and pays CALTRANS' invoice for estimated SFM costs.
58. As IMPLEMENTING AGENCY for CONSTRUCTION, CITY is responsible for maintenance within PROJECT limits as part of the construction contract.
59. PARTNERS will execute a separate maintenance agreement prior to OBLIGATION COMPLETION.

COST

Cost: General

60. The cost of any awards, judgments, or settlements generated by OBLIGATIONS is an OBLIGATIONS COST.
61. CALTRANS, independent of PROJECT, will pay all costs for HM MANAGEMENT ACTIVITIES related to HM-1 found within the existing SHS right of way.

62. CITY, independent of PROJECT, will pay, or cause to be paid, all costs for HM MANAGEMENT ACTIVITIES related to HM-1 found within PROJECT limits and outside of the existing SHS right of way.
63. HM MANAGEMENT ACTIVITIES costs related to HM-2 are CONSTRUCTION SUPPORT and CONSTRUCTION CAPITAL costs.
64. The cost to comply with and implement the commitments set forth in the environmental documentation is an OBLIGATIONS COST.
65. The cost to ensure that PROJECT remains in environmental compliance is an OBLIGATIONS COST.
66. The cost of any legal challenges to the CEQA or NEPA environmental process or documentation is an OBLIGATIONS COST.
67. Independent of OBLIGATIONS COST, CALTRANS will fund the cost of its own IQA for WORK done within existing or proposed future SHS right of way.
68. Independent of OBLIGATIONS COST, CITY will fund the cost of its own IQA for WORK done outside existing or proposed future SHS right of way.
69. CALTRANS will provide encroachment permits at no cost to PARTNERS, their contractors, consultants and agents, and the following utility companies: Southern California Edison, Moreno Valley Utility, and Eastern Municipal Water District.
70. Fines, interest, or penalties levied against a PARTNER will be paid, independent of OBLIGATIONS COST, by the PARTNER whose actions or lack of action caused the levy. That PARTNER will indemnify and defend each other PARTNER.
71. Travel, per diem, and third-party contract reimbursements are an OBLIGATIONS COST only after those hired by PARTNERS to participate in OBLIGATIONS incur and pay those costs.

Payments for travel and per diem will not exceed the rates paid rank and file state employees under current California Department of Personnel Administration (DPA) rules current at the effective date of this agreement.

If CITY invoices for rates in excess of DPA rates, CITY will fund the cost difference and reimburse CALTRANS for any overpayment.
72. The cost of non-IQA engineering support performed by CALTRANS includes all direct and applicable indirect costs. CALTRANS calculates indirect costs based solely on the type of funds used to pay support costs. State and federal funds are subject to the current Program Functional Rate. Local funds are subject to the current Program Functional Rate

and the current Administration Rate. CALTRANS periodically adjusts the Program Functional Rate and the Administration Rate.

73. If CALTRANS reimburses CITY for any costs later determined to be unallowable, CITY will reimburse those funds.

74. The cost to place PROJECT right of way in a safe and operable condition and meet all environmental commitments is an OBLIGATIONS cost.

75. Because IMPLEMENTING AGENCY is responsible for managing the scope, cost, and schedule of a project component, if there are insufficient funds available in this agreement to place the right of way in a safe and operable condition, the appropriate IMPLEMENTING AGENCY accepts responsibility to fund these activities until such time as PARTNERS amend this agreement.

That IMPLEMENTING AGENCY may request reimbursement for these costs during the amendment process.

76. If there are insufficient funds in this agreement to implement applicable commitments and conditions included in the PROJECT environmental documentation, permits, agreements, and/or approvals that are in effect at a time that WORK stops, each PARTNER implementing commitments or conditions accepts responsibility to fund these activities, as they apply to each PARTNER's responsibilities, until such time as PARTNERS amend this agreement.

Each PARTNER may request reimbursement for these costs during the amendment process.

77. PARTNERS will pay invoices within 30 calendar days of receipt of invoice.

Cost: Environmental Permits, Approvals and Agreements

78. The cost of coordinating, obtaining, complying with, implementing, and if necessary renewing and amending resource agency permits, agreements, and/or approvals is an OBLIGATIONS COST.

Cost: CONSTRUCTION Support

79. The cost to maintain the SHS within PROJECT limits is an OBLIGATIONS COST until PARTNERS execute a separate maintenance agreement.

80. Each PARTNER listed below may submit invoices for CONSTRUCTION Support for source inspection:

- CALTRANS may invoice CITY

81. PARTNERS will exchange funds for actual costs up to a maximum of \$65,000.

CALTRANS will invoice CITY for \$10,000 initial deposit 30 working days prior to the construction contract bid advertisement date. This deposit represents two (2) months' estimated support costs for source inspection.

Thereafter, CALTRANS will submit to CITY monthly invoices for estimated monthly costs based on the prior month's actual expenditures.

After PARTNERS agree that all WORK is complete, CALTRANS will submit a final accounting for all OBLIGATIONS COSTS. Based on the final accounting, PARTNERS will refund or invoice as necessary in order to satisfy the financial commitments of this agreement.

Cost: CONSTRUCTION Capital

82. The cost of all SFM is a CONSTRUCTION CAPITAL cost.

CALTRANS will invoice CITY for the actual cost of any SFM as a CONSTRUCTION CAPITAL cost.

After PARTNERS agree that all WORK is complete, CALTRANS will submit a final accounting for all SFM costs. Based on the final accounting, PARTNERS will refund or invoice as necessary in order to satisfy the financial commitments of this agreement.

SCHEDULE

83. PARTNERS will manage the schedule for OBLIGATIONS through the work plan included in the PROJECT MANAGEMENT PLAN. The Project Manager must approve the PROJECT MANAGEMENT PLAN before the encroachment permit for construction is issued.

GENERAL CONDITIONS

84. PARTNERS understand that this agreement is in accordance with and governed by the Constitution and laws of the State of California. This agreement will be enforceable in the State of California. Any PARTNER initiating legal action arising from this agreement will file and maintain that legal action in the Superior Court of the county in which the CALTRANS district office that is signatory to this agreement resides, or in the Superior Court of the county in which PROJECT is physically located.

85. All OBLIGATIONS of CALTRANS under the terms of this agreement are subject to the appropriation of resources by the Legislature, the State Budget Act authority, and the allocation of funds by the California Transportation Commission.

86. Any PARTNER performing IQA does so for its own benefit. No one can assign liability to that PARTNER due to its IQA activities.

87. Neither CITY nor any officer or employee thereof is responsible for any injury, damage or liability occurring by reason of anything done or omitted to be done by CALTRANS and/or its agents under or in connection with any work, authority, or jurisdiction conferred upon CALTRANS under this agreement.

It is understood and agreed that CALTRANS will fully defend, indemnify, and save harmless CITY and all of its officers and employees from all claims, suits, or actions of every name, kind, and description brought forth under, but not limited to, tortious, contractual, inverse condemnation, or other theories or assertions of liability occurring by reason of anything done or omitted to be done by CALTRANS and/or its agents under this agreement.

88. Neither CALTRANS nor any officer or employee thereof is responsible for any injury, damage, or liability occurring by reason of anything done or omitted to be done by CITY and/or its agents under or in connection with any work, authority, or jurisdiction conferred upon CITY under this agreement.

It is understood and agreed that CITY will fully defend, indemnify, and save harmless CALTRANS and all of its officers and employees from all claims, suits, or actions of every name, kind, and description brought forth under, but not limited to, tortious, contractual, inverse condemnation, or other theories or assertions of liability occurring by reason of anything done or omitted to be done by CITY and/or its agents under this agreement.

89. PARTNERS do not intend this agreement to create a third party beneficiary or define duties, obligations, or rights in parties not signatory to this agreement. PARTNERS do not intend this agreement to affect their legal liability by imposing any standard of care for fulfilling OBLIGATIONS different from the standards imposed by law.

90. PARTNERS will not assign or attempt to assign OBLIGATIONS to parties not signatory to this agreement.

91. PARTNERS will not interpret any ambiguity contained in this agreement against each other. PARTNERS waive the provisions of California Civil Code section 1654.

92. A waiver of a PARTNER's performance under this agreement will not constitute a continuous waiver of any other provision. An amendment made to any article or section of this agreement does not constitute an amendment to or negate all other articles or sections of this agreement.

93. A delay or omission to exercise a right or power due to a default does not negate the use of that right or power in the future when deemed necessary.

94. If any PARTNER defaults in its OBLIGATIONS, a non-defaulting PARTNER will request in writing that the default be remedied within 30 calendar days. If the defaulting PARTNER fails to do so, the non-defaulting PARTNER may initiate dispute resolution.
95. PARTNERS will first attempt to resolve agreement disputes at the PROJECT team level. If they cannot resolve the dispute themselves, the CALTRANS district director and the Director of Public Works/City Engineer of CITY will attempt to negotiate a resolution. If PARTNERS do not reach a resolution, PARTNERS' legal counsel will initiate mediation. PARTNERS agree to participate in mediation in good faith and will share equally in its costs.

Neither the dispute nor the mediation process relieves PARTNERS from full and timely performance of OBLIGATIONS in accordance with the terms of this agreement. However, if any PARTNER stops fulfilling OBLIGATIONS, any other PARTNER may seek equitable relief to ensure that OBLIGATIONS continue.

Except for equitable relief, no PARTNER may file a civil complaint until after mediation, or 45 calendar days after filing the written mediation request, whichever occurs first.

PARTNERS will file any civil complaints in the Superior Court of the county in which the CALTRANS district office signatory to this agreement resides. The prevailing PARTNER will be entitled to an award of all costs, fees, and expenses, including reasonable attorney fees as a result of litigating a dispute under this agreement or to enforce the provisions of this article including equitable relief.

96. PARTNERS maintain the ability to pursue alternative or additional dispute remedies if a previously selected remedy does not achieve resolution.
97. If any provisions in this agreement are deemed to be, or are in fact, illegal, inoperative, or unenforceable, those provisions do not render any or all other agreement provisions invalid, inoperative, or unenforceable, and PARTNERS will automatically sever those provisions from this agreement.
98. PARTNERS intend this agreement to be their final expression and supersede any oral understanding or writings pertaining to OBLIGATIONS.
99. If during performance of WORK additional activities or environmental documentation is necessary to keep PROJECT in environmental compliance, PARTNERS will amend this agreement to include completion of those additional tasks.
100. PARTNERS will execute a formal written amendment if there are any changes to OBLIGATIONS.
101. This agreement will terminate upon OBLIGATION COMPLETION or an amendment to terminate this agreement, whichever occurs first.

However, all indemnification, document retention, audit, claims, environmental commitment, legal challenge, and ownership articles will remain in effect until terminated or modified in writing by mutual agreement.

102. The following documents are attached to, and made an express part of this agreement:
SCOPE SUMMARY, FUNDING SUMMARY.

DEFINITIONS

CALTRANS – The California Department of Transportation

CALTRANS STANDARDS – CALTRANS policies and procedures, including, but not limited to, the guidance provided in the *Guide to Capital Project Delivery Workplan Standards* (previously known as WBS Guide) available at <http://www.dot.ca.gov/hq/projmgmt/guidance.htm>.

CEQA (California Environmental Quality Act) – The act (California Public Resources Code, sections 21000 et seq.) that requires state and local agencies to identify the significant environmental impacts of their actions and to avoid or mitigate those significant impacts, if feasible.

CFR (Code of Federal Regulations) – The general and permanent rules published in the Federal Register by the executive departments and agencies of the federal government.

CONSTRUCTION CAPITAL – See PROJECT COMPONENT.

CONSTRUCTION SUPPORT – See PROJECT COMPONENT.

COOPERATIVE AGREEMENT CLOSURE STATEMENT – A document signed by PARTNERS that verifies the completion of all OBLIGATIONS included in this agreement and in all amendments to this agreement.

COST – The responsibility for cost responsibilities in this agreement can take one of three assignments:

- **OBLIGATIONS COST** – A cost associated with fulfilling OBLIGATIONS that will be funded as part of this agreement. The responsibility is defined by the funding commitments in this agreement.
- **PROJECT COST** – A cost associated with PROJECT that can be funded outside of OBLIGATIONS. A PROJECT COST may not necessarily be part of this agreement. This responsibility is defined by the PARTNERS' funding commitments at the time the cost is incurred.
- **PARTNER COST** – A cost that is the responsibility of a specific PARTNER, independent of PROJECT.

FHWA – Federal Highway Administration

FHWA STANDARDS – FHWA regulations, policies and procedures, including, but not limited to, the guidance provided at www.fhwa.dot.gov/topics.htm.

FUNDING PARTNER – A PARTNER that commits a defined dollar amount to fulfill OBLIGATIONS. Each FUNDING PARTNER accepts responsibility to provide the funds identified on the FUNDING SUMMARY under its name.

FUNDING SUMMARY – The table that designates an agreement’s funding sources, types of funds, and the **PROJECT COMPONENT** in which the funds are to be spent. Funds listed on the **FUNDING SUMMARY** are “not-to-exceed” amounts for each **FUNDING PARTNER**.

GAAP (Generally Accepted Accounting Principles) – Uniform minimum standards and guidelines for financial accounting and reporting issued by the Federal Accounting Standards Advisory Board that serve to achieve some level of standardization. See <http://www.fasab.gov/accepted.html>.

HM-1 – Hazardous material (including, but not limited to, hazardous waste) that may require removal and disposal pursuant to federal or state law whether it is disturbed by **PROJECT** or not.

HM-2 – Hazardous material (including, but not limited to, hazardous waste) that may require removal and disposal pursuant to federal or state law only if disturbed by **PROJECT**.

HM MANAGEMENT ACTIVITIES – Management activities related to either **HM-1** or **HM-2** including, without limitation, any necessary manifest requirements and disposal facility designations.

IMPLEMENTING AGENCY – The **PARTNER** responsible for managing the scope, cost, and schedule of a **PROJECT COMPONENT** to ensure the completion of that component.

IQA (Independent Quality Assurance) – Ensuring that **IMPLEMENTING AGENCY**’s quality assurance activities result in **WORK** being developed in accordance with the applicable standards and within an established Quality Management Plan (**QMP**). **IQA** does not include any work necessary to actually develop or deliver **WORK** or any validation by verifying or rechecking work performed by another partner.

NEPA (National Environmental Policy Act of 1969) – The federal act that establishes a national policy for the environment and a process to disclose the adverse impacts of projects with a federal nexus.

OBLIGATION COMPLETION – **PARTNERS** have fulfilled all **OBLIGATIONS** included in this agreement, and all amendments to this agreement, and have signed a **COOPERATIVE AGREEMENT CLOSURE STATEMENT**.

OBLIGATIONS – All responsibilities included in this agreement.

OBLIGATIONS COST – See **COST**.

OMB (Office of Management and Budget) – The federal office that oversees preparation of the federal budget and supervises its administration in Executive Branch agencies.

PARTNER – Any individual signatory party to this agreement.

PARTNERS – The term that collectively references all of the signatory agencies to this agreement. This term only describes the relationship between these agencies to work together to achieve a mutually beneficial goal. It is not used in the traditional legal sense in which one PARTNER's individual actions legally bind the other partners.

PROJECT – The undertaking to improve the eastbound ramp configuration at Moreno Beach Drive on SR-60 in the city of Moreno Valley and construct auxiliary lanes for the eastbound portion of the freeway between the Nason Street overcrossing and the Moreno Beach Drive overcrossing.

PROJECT COMPONENT – A distinct portion of the planning and project development process of a capital project as outlined in California Government Code, section 14529(b).

- **PID (Project Initiation Document)** – The activities required to deliver the project initiation document for PROJECT.
- **PA&ED (Project Approval and Environmental Document)** – The activities required to deliver the project approval and environmental documentation for PROJECT.
- **PS&E (Plans, Specifications, and Estimate)** – The activities required to deliver the plans, specifications, and estimate for PROJECT.
- **R/W (Right of Way) SUPPORT** – The activities required to obtain all property interests for PROJECT.
- **R/W (Right of Way) CAPITAL** – The funds for acquisition of property rights for PROJECT.
- **CONSTRUCTION SUPPORT** – The activities required for the administration, acceptance, and final documentation of the construction contract for PROJECT.
- **CONSTRUCTION CAPITAL** – The funds for the construction contract.

PROJECT COST – See COST.

PROJECT MANAGEMENT PLAN – A group of documents used to guide a project's execution and control throughout that project's lifecycle.

QMP (Quality Management Plan) – An integral part of the Project Management Plan that describes IMPLEMENTING AGENCY's quality policy and how it will be used.

RESIDENT ENGINEER – A civil engineer licensed in the State of California who is responsible for construction contract administration activities. Said engineer must be independent of the design engineering company and the construction contractor.

SAFETEA-LU – Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users

SCOPE SUMMARY – The attachment in which each PARTNER designates its commitment to specific scope activities within each PROJECT COMPONENT as outlined by the *Guide to Capital Project Delivery Workplan Standards* (previously known as WBS Guide) available at <http://www.dot.ca.gov/hq/projmgmt/guidance.htm>.

SHS (State Highway System) – All highways, right of way, and related facilities acquired, laid out, constructed, improved, or maintained as a state highway pursuant to constitutional or legislative authorization.

SPONSOR – Any PARTNER that accepts the responsibility to establish scope of PROJECT and the obligation to secure financial resources to fund PROJECT. SPONSOR is responsible for adjusting the PROJECT scope to match committed funds or securing additional funds to fully fund the PROJECT scope. If a PROJECT has more than one SPONSOR, funding adjustments will be made by percentage (as outlined in Responsibilities). Scope adjustments must be developed through the project development process and must be approved by CALTRANS as the owner/operator of the SHS.

SFM (State Furnished Material) – Any materials or equipment supplied by CALTRANS.

WORK – All scope activities included in this agreement.

CONTACT INFORMATION

The information provided below indicates the primary contact data for each PARTNER to this agreement. PARTNERS will notify each other in writing of any personnel or location changes. Contact information changes do not require an amendment to this agreement.

The primary agreement contact person for CALTRANS is:
Jamal Elsaleh, Program/Project Management Office Chief
464 W. Fourth Street
San Bernardino, California 92401-1400
Office Phone: (909) 383-6710
Email: jamal.elsaleh@dot.ca.gov

The primary agreement contact person for CITY is:
Margery Lazarus, Senior Engineer, P.E.
P.O. Box 88005
Moreno Valley, California 92552-0805
Office Phone: (951) 413-3133
Email: margeryl@moval.org

SIGNATURES

PARTNERS declare that:

1. Each PARTNER is an authorized legal entity under California state law.
2. Each PARTNER has the authority to enter into this agreement.
3. The people signing this agreement have the authority to do so on behalf of their public agencies.

INSTRUCTIONS FOR COMPLETION OF SF-LLL, DISCLOSURE OF LOBBYING ACTIVITIES

This disclosure form shall be completed by the reporting entity, whether subawardee or prime Federal recipient, at the initiation or receipt of a covered Federal action, or a material change to a previous filing, pursuant to title 31 U.S.C. section 1352. The filing of a form is required for each payment or agreement to make payment to any lobbying entity for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with a covered Federal action. Complete all items that apply for both the initial filing and material change report. Refer to the implementing guidance published by the Office of Management and Budget for additional information.

1. Identify the type of covered Federal action for which lobbying activity is and/or has been secured to influence the outcome of a covered Federal action.
2. Identify the status of the covered Federal action.
3. Identify the appropriate classification of this report. If this is a followup report caused by a material change to the information previously reported, enter the year and quarter in which the change occurred. Enter the date of the last previously submitted report by this reporting entity for this covered Federal action.
4. Enter the full name, address, city, State and zip code of the reporting entity. Include Congressional District, if known. Check the appropriate classification of the reporting entity that designates if it is, or expects to be, a prime or subaward recipient. Identify the tier of the subawardee, e.g., the first subawardee of the prime is the 1st tier. Subawards include but are not limited to subcontracts, subgrants and contract awards under grants.
5. If the organization filing the report in item 4 checks "Subawardee," then enter the full name, address, city, State and zip code of the prime Federal recipient. Include Congressional District, if known.
6. Enter the name of the Federal agency making the award or loan commitment. Include at least one organizational level below agency name, if known. For example, Department of Transportation, United States Coast Guard.
7. Enter the Federal program name or description for the covered Federal action (item 1). If known, enter the full Catalog of Federal Domestic Assistance (CFDA) number for grants, cooperative agreements, loans, and loan commitments.
8. Enter the most appropriate Federal identifying number available for the Federal action identified in item 1 (e.g., Request for Proposal (RFP) number; Invitation for Bid (IFB) number; grant announcement number; the contract, grant, or loan award number; the application/proposal control number assigned by the Federal agency). Include prefixes, e.g., "RFP-DE-90-001."
9. For a covered Federal action where there has been an award or loan commitment by the Federal agency, enter the Federal amount of the award/loan commitment for the prime entity identified in item 4 or 5.
10. (a) Enter the full name, address, city, State and zip code of the lobbying registrant under the Lobbying Disclosure Act of 1995 engaged by the reporting entity identified in item 4 to influence the covered Federal action.

(b) Enter the full names of the individual(s) performing services, and include full address if different from 10 (a). Enter Last Name, First Name, and Middle Initial (MI).
11. The certifying official shall sign and date the form, print his/her name, title, and telephone number.

According to the Paperwork Reduction Act, as amended, no persons are required to respond to a collection of information unless it displays a valid OMB Control Number. The valid OMB control number for this information collection is OMB No. 0348-0046. Public reporting burden for this collection of information is estimated to average 10 minutes per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the Office of Management and Budget, Paperwork Reduction Project (0348-0046), Washington, DC 20503.

**INSTRUCTIONS - LOCAL AGENCY PROPOSER DBE INFORMATION
(CONSULTANT CONTRACTS)**

SUCCESSFUL PROPOSER:

The form requires specific information regarding the consultant or other contract: Local Agency, Location, Project Description, Total Contract Amount, Proposal Date, and successful Proposer's Name.

The form has a column for the Work Item Number and Description or Services to be Subcontracted to DBEs. The prime consultant shall indicate all work to be performed by DBEs including, if the prime consultant is a DBE, work performed by its own forces, if a DBE. The DBE shall provide a certification number to the prime consultant. Enter DBE prime consultant's and subconsultant's certification number. The form has a column for the Names of DBE certified contractors to perform the work (must be certified on or before the proposals are due and include DBE address and phone number).

Enter the Total Claimed DBE Participation dollar amount of items of work in the total DBE Dollar Amount column. (If 100% of item is not to be performed by the DBE, describe exact portion of time to be performed by the DBE.) See "Notice to Proposers Disadvantaged Business Enterprise Information," (Exhibit 10-I) to determine how to count the participation of DBE firms.

Exhibit 10-02 must be signed and dated by the successful proposer at contract execution. Also list a phone number in the space provided and print the name of the person to contact.

Local agencies should complete the Contract Number, Federal-aid Project Number, Federal Share, and Contract Award fields and verify that all information is complete and accurate before signing and sending a copy of the form to the District Local Assistance Engineer within 15 days of contract execution. Failure to submit a completed and accurate form within the 15-day time period may result in the deobligation of funds on this project.

District DBE Coordinator should verify that all information is complete and accurate. Once the information has been verified, the **District Local Assistance Engineer** signs and dates the form.

Subject: **Proposal for Materials Testing and Geotechnical Services
SR-60/Moreno Beach Drive Phase 1 Improvements Program
EA 32301 / Project No. 07-41570024
City of Moreno Valley, California**

Ninyo & Moore Geotechnical and Environmental Sciences Consultants is pleased to submit our proposal to provide materials testing and geotechnical consulting services to the City of Moreno Valley for the SR-60/Moreno Beach Drive Phase 1 Improvements Project. We fully understand the City's needs and desires for these services and are committed to providing the City with high quality and cost-effective geotechnical consulting services. We are ready to meet the City's requirements by making available a tailored team of dedicated professionals who have the resources and requisite experience with similar projects to meet your needs.

Some of the advantages Ninyo & Moore provides the City of Moreno Valley include:

- A proven track record as the geotechnical on-call consultant for many other cities in southern California, including the cities of Moreno Valley, Fontana (since 1995), Rancho Cucamonga, Irvine, Mission Viejo, and Rialto. Under these contracts Ninyo & Moore has performed geotechnical, environmental, and soils and materials testing services on numerous projects that are similar in type and scope to the City of Moreno Valley's planned Public Works/Capital Projects.
- Through the years of providing on-call services to public agencies, Ninyo & Moore has developed an effective and efficient approach to management of on-call/as-needed services contracts. Our approach, described in this Proposal, will be utilized on this contract to benefit the City of Moreno Valley.
- A team composed of highly experienced geotechnical engineers, geologists, inspectors, and field and laboratory technicians. Dr. Jalal Vakili, a Principal Engineer of Ninyo & Moore, will lead the team, and has the authority to draw on the entire resources of Ninyo & Moore for the timely and successful completion of the projects.
- Ninyo & Moore has maintained an office in the Inland Empire since 1993 and has performed many projects in the area. Our services will be coordinated from our Rancho Cucamonga office and geotechnical laboratory located at 11650 Mission Park Drive, Suite 101.

11650 Mission Park Drive, Suite 101 • Rancho Cucamonga, California 91730 • Phone (909) 758-5960 • Fax (909) 758-5966

San Diego • Irvine • Los Angeles • Rancho Cucamonga • Oakland • San Francisco • Sacramento
Las Vegas • Phoenix • Tucson • Prescott Valley • Denver • El Paso • Houston

- As one of the largest geotechnical consulting firms in Southern California, Ninyo & Moore employs over 380 professionals, including numerous California-registered engineers and geologists and certified inspectors and technicians.
- Our field and laboratory technicians with certifications from ICC, NICET, ACI, and Caltrans. Our fully-equipped, in-house soil and material testing laboratories are accredited by Caltrans, American Association of State Highway and Transportation Officials (AASHTO), Cement and Concrete Reference Laboratory (CCRL), the City of Los Angeles, the Division of the State Architect, and many other public agencies.
- Ninyo & Moore is a Minority Business Enterprise bringing 100% MBE participation to this contract.

We are fully prepared to make every possible commitment needed for the successful and timely completion of any project assigned to us. Your favorable consideration of this proposal is appreciated, and we look forward to being of service to the City of Moreno Valley.

Sincerely,
NINYO & MOORE

Certification

INTRODUCTION

Ninyo & Moore is pleased to submit this proposal for materials testing and geotechnical consulting services during construction of the State Route 60/Moreno Beach Drive Phase 1 Improvement Project in Moreno Valley, California. We have prepared our proposal based on the RFP dated July 3, 2012. Based on our review of the project plans and special provisions, we understand that the project will generally consist of realigning the SR-60/Moreno Beach eastbound off-and-on-ramps, adding an eastbound auxiliary lane, installation of a new traffic signal at the new intersection of the eastbound ramps and Moreno Beach Drive, adding a retaining wall, adding ramp metering, extension of Eucalyptus Avenue to Moreno Beach Drive, modification of the traffic signal at the intersection of Eucalyptus and Moreno Beach Drive, coordination of utility relocations, irrigation, and related work. We understand that our services will include sampling and testing during embankment construction (earthwork), structure backfill, trench backfill, wall backfill, subgrade preparation, aggregate base placement, asphalt concrete pavement placement, structural concrete placement, and batch plant inspections. Testing will be performed in general accordance with Caltrans test methods and test frequencies as described in the Caltrans Construction Manual and Standard Specifications, City of Moreno Valley Specifications, Eastern Municipal Water District (EMWD), Riverside County Flood Control and Water Conservation District (RCFCD), and California Occupational Safety and Health Administration (OSHA) Construction Safety Orders.

Our services to the City of Moreno Valley will be provided from our Rancho Cucamonga office and soils and materials laboratory, located at 11650 Mission Park Drive, Suite 101, Rancho Cucamonga, California 91730. The telephone number for our Rancho Cucamonga office is (951) 758-5960, and the fax number is (951) 758-5966. Dr. Jalal, Vakili, a Principal Engineer for Ninyo & Moore, has the authorization to negotiate and enter into contracts on behalf of Ninyo & Moore and will serve as the point-of-contact during the proposal evaluation period. Dr. Vakili's e-mail address is jvakili@ninyoandmoore.com.

REQUIRED STATEMENTS

As required in the City of Moreno Valley's RFP, we are providing the following required statements.

"Ninyo & Moore incorporates the City of Moreno Valley's Request for Proposal for Professional Consultant Services SR-60 / Moreno Beach Drive Phase 1 Improvements Project, EA 32301, Project No. 07-41570024 in its entirety into this Proposal for materials testing and geotechnical services."

"The City of Moreno Valley's Request for Proposal for Professional Materials Testing Geotechnical Services and this Proposal will jointly become part of the Agreement for Professional Materials Testing and Geotechnical Services for this project when the said agreement is fully executed by Ninyo & Moore and the Mayor or City Manager of Moreno Valley."

"Our services to be provided, and fees therefore, will be in accordance with the City of Moreno Valley's Request for Proposal for Professional Materials Testing and Geotechnical Services except as otherwise specified in our proposal under the heading "Additions or Exceptions to the City's Request for Proposal for Professional Materials Testing and Geotechnical Services."

"Ninyo & Moore acknowledges and understands that it will not be allowed to change its subconsultant without written permission from the City."

"Our services for geotechnical and materials testing services will be performed on an hourly basis with a not-to-exceed fee, based on assumed scope of services and detailed man-hour and laboratory testing estimates."

"Ninyo & Moore will document and provide the results of our work to the satisfaction of the City of Moreno Valley in accordance with the contract documents."

"Ninyo & Moore will immediately document and notify the City of any defects or hazardous conditions observed in the vicinity of the project site prior, during, or after the construction work".

"Ninyo & Moore will not discriminate against any employee or applicant for employment because of race, color, religion, sex, or national origin."

"Ninyo & Moore will comply with federal, state and local laws and regulations in performing our services. In case of conflict between federal, state, and local laws or regulations, the strictest shall be adhered to."

"Ninyo & Moore will allow all authorized federal, state, county and City officials access to place of work, books, documents, papers, fiscal, payroll materials, and other relevant contract records pertinent to the special project. All relevant records shall be retained by Ninyo & Moore for at least three years."

"Ninyo & Moore will comply with the Davis-Bacon Fair Labor Standards Act (40 USC 276-a through a-7), and implementation regulations issued pursuant thereto (29 CFR Section 1, 5), any amendments thereof and the California Labor Code. Pursuant to said regulations, entitled 'Federal Labor Standards Provisions,' 'Federal Prevailing Wage Decision' and State of California prevailing rates, respectively."

"Ninyo & Moore will comply with the Copeland Anti-Kickback Act (18 USC 874) and the Implementation Regulations (29 CFR 3) issued pursuant thereto, and any amendments thereof."

"Ninyo & Moore offers and agrees to assign to the City of Moreno Valley all rights, title, and interest in and to all causes of action it may have under Section 4 of the Clayton Act (15 USC Sec. 15) or under the Cartwright Act (Chapter 2 [commencing with Section 16700] of Part 2 of Division 7 of the Business and Professions Code), arising from purchases of goods, services, or materials pursuant to the public works of the subcontract. This agreement shall be made and become effective at the time the City tenders final payment to Ninyo & Moore, without further acknowledgement by the parties."

ADDITIONS OR EXCEPTIONS TO THE CITY RFP

Ninyo & Moore takes no exceptions and has no additions to the City of Moreno Valley's Request for Proposal for Professional Geotechnical and Materials Testing Services, SR-60 / Moreno Beach Drive Phase 1 Improvement Project, EA 32301, Project No. 07-41570024.

GENERAL EXPERIENCE AND QUALIFICATIONS

Ninyo & Moore, a California Corporation, is a minority-owned, multidisciplinary consulting firm that provides high-quality geotechnical and environmental consulting, as well as materials testing and inspection services. The firm was incorporated in 1986 to provide consulting services in geotechnical engineering, construction inspection and testing, engineering geology, hydrogeology, hazardous waste remediation and environmental assessment. Ninyo & Moore has the necessary professional personnel and equipment to perform the requested professional. Ninyo & Moore will utilize the services of Axiom Engineering & Science Corporation, Inc. (Axiom), a certified UDBE/DBE for this project. Axiom will provide materials testing services that will complement our team and resources by bringing their expertise as well as their certified inspectors and technicians. Having graduated from the DBE program, Ninyo & Moore acknowledges the importance of opportunities provided to DBE firms by the larger firms working on major public works projects. We will also utilize the services of drilling subcontractors for exploratory field explorations, if these services are requested.

Ninyo & Moore has the financial resources and organizational capabilities to conduct and complete the proposed work for the City of Moreno Valley and is financially strong, as rated by Dun and Bradstreet (Number 15-410-4079). We are committed to being responsive, thorough, technically sound, and active in the business community. Ninyo & Moore serves its clients through offices located in:

- Rancho Cucamonga
- Irvine
- Los Angeles
- San Diego
- Oakland
- San Francisco
- Sacramento
- San Jose
- Phoenix, Arizona
- Prescott, Arizona
- Las Vegas, Nevada
- Carson City, Nevada
- El Paso, Texas
- Denver, Colorado

The quality of Ninyo & Moore's personnel base of over 400 employees is widely recognized. Our staff of professionals includes experienced and California licensed geotechnical engineers, civil engineers, environmental engineers, engineering geologists, hydrogeologists, environmental scientists, certified technicians and field inspectors, and hazardous waste and regulatory compliance specialists. Our materials testing and inspection personnel are certified by various agencies including Caltrans, International Code Council (ICC), American Welding Society (AWS), California Division of the State Architect (DSA), American Concrete Institute (ACI) as well as other certifying organizations.

The experience of Ninyo & Moore's geotechnical staff encompasses projects throughout the southwestern United States, including evaluations for roads, bridges, highways, municipal and commercial structures, educational, medical and recreational facilities, pipelines, tunnels, reservoirs, treatment plants, power plants, dams, waste-to-energy facilities, tanks, transmission towers, harbors and offshore structures, railroads, airports, low- and high-rise struc-

tures, landfills, and other public and private works. Our environmental staff has diverse experience in environmental assessments, water quality evaluations, environmental audits, regulatory compliance studies, water resources development, soil and groundwater contamination studies, and site remediation.

Ninyo & Moore performs the necessary geotechnical laboratory testing in-house, in one of our three fully-equipped, certified geotechnical and construction materials laboratory facilities in southern California. We have included certifications for our Irvine and Rancho Cucamonga laboratories in an Appendix to this proposal. Our laboratories are supervised by registered engineers and are certified by the City of Los Angeles, Caltrans, California Division of the State Architect (DSA), American Association of State Highway and Transportation Officials (AASHTO), Cement and Concrete Reference Laboratories (CCRL), the U.S. Army Corps of Engineers, and other regulatory agencies. As part of our laboratory accreditation, we have written quality control procedures for laboratory testing, which includes training and certification of both our laboratory personnel and testing equipment.

Ninyo & Moore also has both geotechnical and environmental quality assurance/quality control programs which facilitate compliance with project performance standards, schedules and budgets. These comprehensive quality assurance plans utilize management approach procedural manuals that delineate the interrelationship between management and design team components and describe specific quality control procedures to be used. The programs address data generation, management, and quality assessment guidelines for sampling and analysis procedures, as well as methods of corrective action. The quality assurance program manuals are available for review upon request.

Ninyo & Moore is committed to a policy of equal opportunity for applicants and employees in all areas of the employer-applicant and employer-employee relationship. This policy includes affirmative recruiting as well as hiring, promotion, transfer, discipline, layoff, recall, and termination of all persons on the basis of qualifications, competence, and merit without regard to any individual's sex, race, color, religion, national origin, ancestry, pregnancy, age, marital status, medical condition, veteran status, sexual orientation, or mental or physical disability, including AIDS or HIV-positive status.

Capacity to Accomplish Work Assignments and the Availability of Personnel

The firm's large base of professionals enables Ninyo & Moore to be responsive to client needs and to successfully complete project tasks on time. Current and anticipated work loads are such that there are more than an adequate number of experienced personnel that can be assigned to complete services for any size project. Currently, backlog for geotechnical and environmental professionals is less than 75 percent of current capacity.

Ninyo & Moore has established effective management control systems, have integrated them for efficient project administration, and have trained staff to respond quickly and efficiently to task orders and project situations as they arise in order to meet project deadlines. Having completed many complex projects within strict time constraints, Ninyo & Moore has developed flexible management systems which allow project managers to draw on experienced technical and administrative personnel throughout the company. This allows the use of a wide-ranging personnel base at reduced cost to the project and has resulted in efficient budget control and adherence to project schedules. Contract needs are met by assigning appropriate resources (experienced personnel and equipment) as needed to meet specific project requirements. To further meet these project schedules, personnel are available for weekend and/or around-the-clock efforts. Ninyo & Moore's proposed project personnel possess the appropriate licenses and certifications needed for this project.

Ninyo & Moore has assembled a team of highly qualified and experienced personnel for this important contract. Ninyo & Moore has the personnel resources to replace one or more of our key personnel with equal competency with written City approval, in the unlikely event that one of our key personnel become unavailable. As previously mentioned, we have developed an on-call contract management approach that has been developed to respond efficiently to our client's needs through our project manager. As indicated on our organization chart, our project manager will be the single point-of-contact for the City.

Ninyo & Moore's field staff is highly experienced and qualified to provide testing and inspection services for an extensive range of project requirements. Ninyo & Moore's field and laboratory technicians maintain certifications with Caltrans, ACI, ICC, DSA, OSHA, and NICET, and possess a working knowledge of the requirements and procedures as specified by these agencies. Our proposed field and laboratory technicians are extensively experienced at providing geotechnical soils and materials testing services for construction projects and are fully available for this contract.

Resource Allocation Matrix

Tasks	Individual	Hours Available
Project Coordination and Technical Support	Principal Engineer/Geologist	2 hours
	Project Engineer/Geologist	80 hours
Pre-Construction Meeting	Project Engineer	2 hours
Field Services:		
Earthwork and Embankment	Field Technician	200 hours
Structure Backfill and Trench Backfill	Field Technician	120 hours
Subgrade and Aggregate Base	Field Technician	120 hours

Tasks	Individual	Hours Available
Hot Mix Asphalt (HMA)	Field Technician	140 hours
Portland Cement Concrete	Field Technician	20 hours
Batch Plant Inspector	Field Technician	160 hours
Sample Pick Up	Field Technician	10 hours
Report Preparation	Principal Engineer/Geologist	2 hours
	Project Engineer/Geologist	6 hours
	Secretarial/Clerical	6 hours

Project Experience

Based on our review of the RFP, the following are some of Ninyo & Moore's relevant projects successfully completed by our staff that demonstrates our competence to perform work similar in scope and magnitude required for the City of Moreno Valley.

City of Moreno Valley/Indian at Bay Traffic Signals, Moreno Valley, California

Client: City of Moreno Valley Public Works Department,
 14177 Frederick Street, Moreno Valley, CA 92552

Contact: Margery Lazarus, 951/413-3133

Ninyo & Moore was retained to provide "On-Call" Geotechnical services for the construction of the Traffic Signals at Indian Street and Bay Avenue project. Improvements consisted of removal and reconstruction of sections of the roadway, new curb & gutter, sidewalk, signing, striping, and traffic signalization improvements. The new pavement section was 4 inches asphalt concrete over 8 inches of aggregate base. Our services included project coordination and management with the client construction manager. Our field services included field sampling and testing during earthwork construction, aggregate base placement, and asphalt concrete placement in order to evaluate the materials conformance with the project specifications. Our laboratory services included maximum density/optimum moisture content, and asphalt concrete maximum density. Our test data and daily field reports were submitted to the client.

City of Moreno Valley/ Lasselle at JFK Traffic Signals, Moreno Valley, California

Client: City of Moreno Valley Public Works Department,
 14177 Frederick Street, Moreno Valley, CA 92552

Contact: Margery Lazarus, 951/413-3133

Ninyo & Moore was retained to provide "On-Call" Geotechnical services for the construction of the Traffic Signals at Lasselle Street and John F. Kennedy Drive project. Improvements consisted of removal and reconstruction of sections of the roadway, new curb & gutter, sidewalk, signing, striping, and traffic signalization improvements. The new pavement section was 4 inches asphalt concrete over 8 inches of aggregate base. Our services included project coordination and management with the client construction manager. Our field services included field sampling and testing during earthwork construction, aggregate base placement, and asphalt concrete placement in order to evaluate the materials conformance with the project specifications. Our laboratory services included

maximum density/optimum moisture content, Extraction, % asphalt, including gradation, and asphalt concrete maximum density. Our test data and daily field reports were submitted to the client.

Nutmeg Overcrossing at Interstate 15, Murrieta, California

Client: City of Murrieta , Department of Public Works
26442 Beckman Court, Murrieta, CA 92562

Contact: Mr. Russ Napier; 951-798-1040 *(no longer with agency)*

Ninyo & Moore was retained by the City of Murrieta to provide soils and materials testing services during the construction of the Nutmeg Overcrossing at the Interstate 15 (I-15) freeway in Murrieta, California. The overcrossing, designed in accordance with Caltrans specifications, will have four travel lanes (two lanes in each direction) and consists of a two-span, cast-in-place, prestressed box girder structure supported by two abutments and a center three-column bent. The bent is supported by on spread footing and each abutment is supported on 21 driven steel piles. Ninyo & Moore's services during construction included Quality Assurance and acceptance testing utilizing standard California Test Methods, in accordance with the Caltrans Construction Manual, Standard Specifications, Standard Plans, and the project's Special Provisions. Our services included providing Caltrans certified batch plant inspectors, field technicians, and laboratory technicians to perform the required materials sampling and testing. Our batch plant inspection services included inspection and sampling at the plants during production of asphalt and Portland cement concrete materials. Field sampling and testing of concrete for structures, pavement and miscellaneous items was also in our scope of services. Our field services included soil compaction testing during the abutment embankment construction, structure backfill, utility trench backfill, aggregate base, and asphalt concrete pavement placement operations. Collected construction material samples were tested in our Caltrans certified laboratory by our Caltrans certified laboratory technicians. Laboratory test results were reported and filed in accordance with Caltrans documentation procedures, as well as daily reports of our plant inspections and field testing services.

SR 215 Segments 1 & 2 Project, San Bernardino, California

Client: San Bernardino Associated Governments
1170 W. 3rd Street, 2nd Floor, San Bernardino, California 92410-1715

Contact: Mr. Sagar Pandey; 909/884-8276

Ninyo & Moore was retained to provide materials testing and inspection services during construction of the SR 215 Segments 1 & 2 project in San Bernardino, California. The project consists of widening and realignment of approximately 2.4 miles of the existing SR 215. The construction will accommodate 4 mixed flow lanes and 1 high occupancy vehicle lane in each direction. The project is anticipated to be constructed in several phases and will include site improvements including 39 CIP and MSE retaining walls, 8 new bridges, 5 bridge replacements, 2 bridge widenings, 1 connector replacement, 1 new connector, and 9 bridge removals, masonry block walls, sound walls, concrete flatwork, Portland cement concrete paving, asphalt concrete paving, drainage structures, utility relocations, striping, lighting, and signage improvements over an approximately 4 year period. Services include construction observation and intermittent field and laboratory testing of the construction materials used in the proposed project. Services also include observation, sampling and testing during embankment construction (earthwork), structure backfill, trench backfill, subgrade preparation, aggregate base placement, lean concrete base placement, Portland cement concrete pavement, asphalt concrete pavement placement, structural concrete placement, and batch plant inspections. Testing is being performed in general accordance with Caltrans test methods and test frequencies as described in the Caltrans Construction Manual and Standard Specifications.

I-5 Gateway Project, (Orange County to Los Angeles County)

Client: Caltrans c/o Caltrop
1851 East First Street, Suite 1260, Santa Ana, CA 92705
Contact: Mr. Derich Sukow, 714-426-0595

The project consisted of reconstructing and widening the existing I-5 Freeway from the 91 Freeway interchange to the Los Angeles County line. The construction included removal and replacement of 4 bridges including the Artesia Boulevard Bridge, Western Avenue Bridge, Beach Boulevard Bridge and Stanton Avenue Bridge. The project also included construction of 10 new retaining walls. The retaining wall designs included driven piles, cast-in-drilled-hole (CIDH) piles, spread footings, tie-back anchors and decorative concrete. The adjacent on-ramps and off-ramps were also widened and/or reconstructed. The I-5 main line was reconstructed and lowered in some areas by approximately one meter and raised in other areas by up to approximately four meters. Several of the new foundations had to be constructed near or below the ground water elevation. The working hours often included night shift and weekends.

Our services included project coordination, management and technical support. Our field services included sampling and testing of structural concrete, asphalt concrete (AC), asphalt treated permeable base (ATPB), embankment fill, lean concrete base (LCB), cement treated base (CTB), aggregate base (AB) and polymer concrete overlay. Our services included batch plant inspection during production of asphalt concrete and structural concrete. A mobile lab was set up on-site to help speed up the turn around time on some of the lab tests. Our laboratory testing services included California Impact Test, R-Value, sieve analysis, sand equivalent, AC extraction and gradation, AC maximum density, aggregate cleanness value, durability, percent crushed particles and LA rattler, concrete compressive strength and flexural strength testing and mix design review. Our testing services were performed in general accordance with Caltrans and ASTM test methods and test frequencies.

EXPERIENCE OF KEY PERSONNEL

Dr. Jalal Vakili will serve as Principal-in-Charge for the duration of the contract. Dr. Vakili has a Ph.D. in Geotechnical Engineering, a M.S. degree in Applied Mechanics, and a B.S. degree in Civil Engineering. He is a California-registered civil engineer with over 44 years experience in providing geotechnical services for public work and infrastructure projects for cities, counties, Caltrans, and other State and municipal agencies. His experience includes street improvements; bridges and retaining walls; highways and major transportation corridors; sewers, pipelines, dams and flood control structures; and residential and commercial developments. Dr. Vakili's background includes teaching and performing quality research in the field of geotechnical engineering. Dr. Vakili has been a Principal Engineer at Ninyo & Moore for over 16 years and has been the Principal-in-Charge for many of Ninyo & Moore's on-call contracts with the cities of Moreno Valley, Fontana, Rancho Cucamonga, Rialto, Pasadena, Irvine, and Mission Viejo, Riverside County Transportation Commission (RCTC), Caltrans, the Los Angeles County Department of Public Works, Orange County Sanitation District, Orange County Transportation Authority (OCTA), and John Wayne Airport.

Our project manger will be Mr. Kurt Yoshii. Mr. Yoshii graduated from the University of California, Berkeley with a B.S. degree in Civil Engineering and is a licensed Civil and Geotechnical Engineer in California with over 21 years of experience. For the past 15 years, Mr. Yoshii has been employed at Ninyo & Moore where he has personally

performed various aspects of geotechnical engineering, from site development and planning through construction, field exploration, including sampling and logging, laboratory testing, geotechnical analyses and report preparation. He has also managed numerous construction services projects, which have included mass grading operations, deep excavations, de-watering, ground modification, deep foundation construction, roadway, highway and bridge construction, as well as construction materials testing and inspection services for DSA and OSHPD projects. Mr. Yoshii will be the single point-of-contact for the City on this contract and can be contacted at our Rancho Cucamonga office and laboratory located at 11650 Mission Park Drive, Suite 101, Rancho Cucamonga, California, (909) 758-5960. Mr. Yoshii will be responsible for performing the requested services in accordance with the contract requirements and budget of the specific task order assignments. Mr. Yoshii has managed contracts for public agencies which include Caltrans, the Los Angeles County, Department of Public Works, Orange County Transportation Authority (OCTA), Riverside County Transportation Commission (RCTC), John Wayne Airport, Newport-Mesa Unified School District, and City of Fontana. His geotechnical design experience includes roadways, highways, and bridges, transportation facilities for Caltrans, utility lines, power plants, cell towers, public facilities, including schools, which are performed under technical review of the Division of the State Architect (DSA), and health care facilities and hospitals, under the technical review of the Office of Statewide Health Planning Development (OSHPD). Mr. Yoshii's strengths lie in establishing and maintaining open communication lines with his clients and effectively managing our in-house and subconsultant resources to deliver high quality and prompt services to our clients.

Ninyo & Moore's commitment to quality is evidenced by our written Quality Assurance Manual, which is administered internally by Mr. Lawrence Lovett, Principal Engineer, who is a licensed Quality Engineer in California as well as a licensed Civil Engineer. Mr. Lovett holds a B.S. degree in Civil Engineering from the University of Maryland as well as a Masters Degree in Business Administration from the City University of New York, and has over 40 years of experience.

A summary of our Key Technical personnel is provided in the following table. Comprehensive resumes can be provided on request.

Table 1 – Key Project Team

Team Members	Function	Education	Registrations/Certifications	Years Exp.
Jalal Vakili	Principal-in-Charge	Ph.D. Geotechnical Engineering M.S. Applied Mechanics B.S. Subconsultant

Ninyo & Moore maintains a comprehensive list of certified D/M/W/DVBE firms and contacts these firms on a regular basis for subcontracting needs. Ninyo & Moore will utilize the subcontractor, listed in the following table, to successfully complete the project services.

Firm Name/Address	Contact	Project Experience
Axiom Engineering & Science Corporation (DBE) 1322 Bell Avenue, Suite 1G Tustin, California 92780	Mr. Johnathan Hou, P.E, G.E. 714/247-1002	<ul style="list-style-type: none"> ▪ Blue Line Operations and Maintenance Facilities Expansion Project – Provided preliminary engineering services Client: Los Angeles Metropolitan Transportation Authority Contact: Mr. David Chong, 213/922-3829 ▪ NASA / Jet Propulsion Laboratory (JPL): Provided renovation and redesign of 2 ½ miles of NASA Road. Client: NASA/Jet Propulsion Laboratory Contact: Mr. Sunil Gera, 626/305-6334 ▪ Various School Projects, Southern California: In Coordination with DSA review and approval Client: Los Angeles Unified School District Contact: Mr. Albert Leung, 213/241-5134 ▪ I-5 and I-805 Bridge Inspections Project - Provided construction inspection services for several bridges on this project. Client: Morrison-Knudsen (no longer in business)

Axiom, a certified DBE, is a full service professional engineering, architectural, construction management, inspectors, and materials testing company established in 1984. Axiom has successfully completed over hundreds of major projects since its inception of the firm. The projects include transportation facilities, bridges, educational, commercial, industrial and power generation facilities, and public works projects. Axiom maintains a materials testing laboratory which provides soils and concrete testing in accordance with the ASTM and acceptable industry standards. Their laboratory is certified by Caltrans under its IA Program for testing laboratories.

Ninyo & Moore hereby acknowledges and understands that it will not change the subconsultant without written permission from the City.

PROJECT APPROACH AND UNDERSTANDING

Our approach to service contracts begins with the assignment of a highly qualified and experienced project manager with technical knowledge required for this contract. Our project manager will be the single point-of-contact for the City during the contract period and will be responsible for contract administration and technical coordination of our staff to perform the required tasks on time and within budget. The overall contract budget is tracked and maintained, and reported to the client on a monthly basis. Our Project Manager will meet with the City's representative(s) as needed to discuss the details of the project, as well as to clarify the project-specific issues to be addressed through our materials testing and geotechnical services.

Based on our review of the project plans and special provisions, we understand that the project will generally consist realigning the SR-60/Moreno Beach Eastbound off-and-on-ramps, adding an Eastbound auxiliary lane, installation of new traffic signal at the new intersection of the Eastbound ramps and Moreno Beach Drive, adding a retaining wall, adding ramp metering, extension of Eucalyptus Avenue to Moreno Beach Drive, modification of the traffic signal at the intersection of Eucalyptus Avenue to Moreno Beach Drive, coordination of utility relocations, irrigation and related work. We understand that our services will include, sampling and testing during embankment construction (earthwork), structure backfill, trench backfill, wall backfill, subgrade preparation, aggregate base placement, asphalt concrete pavement placement, structural concrete placement, and batch plant inspections. Testing will be performed in general accordance with Caltrans test methods and test frequencies as described in the Caltrans Construction Manual and Standard Specifications, City of Moreno Valley Specifications, Eastern Municipal Water District (EMWD) and Riverside county Flood Control and Water Conservation District (RCFCD).

Based on our understanding of the proposed construction and project plans, our scope of services will be as follows:

- Project coordination and management, including reviewing the project geotechnical reports, plans, specifications and special provisions, and providing test data summary reports
- Review project schedules and related sampling, testing and submittal requirements from the contractor for conformance to the plans and specifications.
- Attendance at pre-construction meetings and as-needed field meetings, as requested.
- Assist with monitoring and reporting of the contractor's extra work related to sampling, testing and reporting along with assisting with change orders as they relate.
- Review unknown, unforeseen and changed conditions that occur, and disputed work claims from the contractor as it relates and recommend a course of action to the engineer.
- Provide labor compliance reports and certified payroll on a weekly basis.
- On-site materials testing during construction performed by our certified personnel, on an as-requested basis. Our materials testing services for this project are anticipated to include the following:
 - Field technician services for observation, sampling, and density testing of earthwork, including during embankment construction, structure backfill, trench backfill, subgrade preparation, aggregate base and asphalt concrete placement.
 - Field technician services during the placement of Portland cement concrete for structures. In addition, site observations will also be performed for concrete structures, including field inspection, sampling, and testing of concrete placed at the site, as requested by the Resident Engineer. Field testing of the concrete may include casting cylinders for compressive strength, and testing for penetration, air content, unit weight, and temperature.
 - Performance of off-site batch plant inspection and sampling for Portland cement and asphalt concrete during construction, as outlined in the Caltrans Construction Manual.
 - Preparation of daily reports and test data sheets.

- Laboratory testing including, but not limited to, sieve analysis, sand equivalent, cleanness value, maximum density testing, R-value, durability index, expansion index, maximum theoretical unit weight, stability, extraction and gradation of asphalt aggregate, and concrete compressive strength.

Assumptions

Based on our experience with similar projects, the following assumptions have been made in the preparation of our scope of services:

- Our services are subject to prevailing wage requirements.
- Our estimated fee is based on the assumptions outlined above and does not include stand-by time or costs associated with retesting or reinspecting materials that were found not to be in compliance with the project plans or specifications. Our services, including field hours and number of laboratory tests performed, will depend on the actual construction schedule and the contractor's operations. Hours spent that exceed those in the attached tables will be billed on a time-and-materials basis.

Schedule

Ninyo & Moore is prepared to begin our services upon receipt of your authorization to proceed. It is our understanding that the project construction is estimated to be completed in August of 2013 and that our services will be requested and coordinated on a daily basis by the construction management team.

Laboratory Materials Testing and/or Monitoring Approach

Ninyo & Moore performs the necessary geotechnical laboratory testing in-house, in one of our three fully-equipped, certified geotechnical and construction materials laboratory facilities in southern California. Our materials laboratory testing capabilities include conformance and characterization testing of structural steel, concrete, masonry, asphalt, soils, and aggregate materials, including chemical testing, petrographic analyses, destructive and non-destructive testing methods. Our laboratories are supervised by registered engineers and are accredited/certified by the City of Los Angeles, Caltrans, California Division of the State Architect (DSA), American Association of State Highway and Transportation Officials (AASHTO), Cement and Concrete Reference Laboratories (CCRL), the U.S. Army Corps of Engineers, and other regulatory agencies. Our materials testing services for the City will be performed primarily from our certified Rancho Cucamonga laboratory. Supporting our Rancho Cucamonga laboratory will be our certified materials testing laboratories located in Irvine and San Diego, California.

Ninyo & Moore's in-house laboratories are capable of performing a wide variety of geotechnical and materials inspection and testing services, including soils and aggregates, asphalt concrete, reinforced concrete, masonry, prestressed concrete, structural steel, welding, roofing, and fireproofing, and meet the requirements of ASTM E329, ASTM C1077, ASTM D3740, and ASTM D3666. Ninyo & Moore's testing equipment is calibrated annually by representatives utilizing equipment traceable to the National Institute of Standards and Technology, and is regularly

inspected by the ASHTO Materials Reference Laboratory (AMRL) for soils and asphalt and by the Cement and Concrete Reference Laboratory (CCRL) for concrete and aggregates. As part of our laboratory accreditation, we have written quality control procedures for laboratory testing, which includes training and certification of both our laboratory personnel and testing equipment. We have included copies of our Rancho Cucamonga laboratory certifications, accreditations in the Appendix. We are confident our laboratories will meet or exceed the requirements for any task assigned under the proposed contract.

Field Vehicle Resources

Time is a key factor of efficiency for materials sampling and testing during construction. Standard test methods require standard times for test procedures that cannot be changed. Our field technicians are equipped with calibrated sampling and field testing equipment that enable them to perform the necessary testing in the field, as applicable. Depending on the project requirements, certain tests must be run in the laboratory. In order to reduce sample transportation time, Ninyo & Moore has in the past utilized field laboratories set up at a construction site in order to eliminate transporting of samples to an off-site laboratory. This service can be provided to the City upon request.

Schedule, Quality, and Cost Control

Ninyo & Moore recognizes that a major element of project success is the degree to which schedules and budgets are met. Our project manager will be responsible for the overall schedule, quality, budget control, staff assignments, and client coordination. Project management is an on-going task, and our project manager will be committed to this project. Our project management approach includes the following key elements:

- A detailed and accurate Project Work Plan prepared with the client's input.
- Acceptance of the Work Plan by the client.
- Communication of the roles and responsibilities of team members.
- Cost and schedule control monitoring/forecasting procedures.
- A project-specific Quality Assurance/Quality Control (QA/QC) plan.
- Regularly scheduled meetings with project team and client.
- Commitment of the project principal to client satisfaction and providing the resources to meet that commitment.
- Taking immediate corrective action to remedy project impediments to complete client satisfaction.

Our project manager will communicate to the members of the project team the organization and communication procedures, task description and assignments, schedule requirements, cost and budgets, and project guidelines. The ability to clearly communicate information such as scope, costs, schedules, and technical matters is a vital element of any project. A coordinated effort among the team members is required to achieve an integrated program which, in turn, is necessary to deliver quality services within strict budgetary and time constraints for this project.

Most of the management controls to monitor project progress are pre-established prior to the beginning of the project during the proposal preparation and contract negotiations. These controls include:

- **Communication** – Both written and verbal communications are keys to successful on-call contract management. Each task order assignment will be maintained in a separate project file and we will utilize our in-house data records management systems for file records. Project-related documents will be maintained in our files and are available for our client's review at any time.
- **Quality System Approach** -- Ninyo & Moore maintains quality assurance/quality control programs for our geotechnical, environmental, and construction materials testing and inspection services, which facilitate compliance with project performance standards, schedules and budgets. These comprehensive quality assurance programs utilize management approach procedural manuals that delineate the interrelationship between management and design team components and describe specific quality control procedures to be used. The programs address training, data generation, management, and quality assessment guidelines for sampling and analysis procedures, as well as methods of corrective action. The quality assurance program manuals are available for review upon request.

FEE SCHEDULES AND COST ESTIMATES

As requested in the RFP, we are providing our fee in a separated sealed envelope.

INSURANCE

To provide safeguards and to meet the requirements of our clients, we carry the following types of insurance.

Insurance Type	Amount	Carrier
Professional Liability	\$ 5 Million/claim \$ 5 Million aggregate	Alterra Excess & Surplus Insurance
General Liability	\$ 1 Million/claim \$ 2 Million aggregate	Travelers Property Casualty Co. of America
Excess Liability	\$ 9 Million	Travelers Property Casualty Co. of America
Worker's Compensation	\$ 1 Million	American Automobile Insurance Company
Automobile	\$ 1 Million	American Automobile Insurance Company

We have read the City of Moreno Valley's indemnification and insurance requirements, and will meet the requirements upon selection of our firm.

Public Works Department - Capital Projects Division
14177 Frederick Street
Moreno Valley, California 92552-0805

Subject: **Addendum to Proposal for Construction Materials Testing and Geotechnical Services for SR-60/Moreno Beach Drive Phase 1 Improvements Project**
Project No. 07-41570024
City of Moreno Valley, California

Dear Ms. Lazarus:

Based on our discussion today, the following items are clarifications and additions to our proposal for the subject project:

- Laboratory test result turn-around-time will be within 48 hours unless the written testing procedure dictates additional time.
- Daily reports will be prepared and submitted for review and signature at the end of each work day.
- Stand-by time is not anticipated for this contract.
- The contingency fee will not be used unless approved by the City.
- We assume that pile driving for the retaining wall observation will be performed by others.

Ninyo & Moore appreciates the opportunity to submit this proposal and we look forward to working with you. If you have any questions regarding our cost proposal or require additional information, please contact me at your convenience.

Respectfully submitted,
NINYO & MOORE

CITY - SERVICES TO BE PROVIDED
TO CONSULTANT

1. Furnish the Consultant all in-house data which is pertinent to services to be performed by the Consultant and which is within the custody or control of the City, including, but not limited to, copies of record and off-record maps and other record and off-record property data, right-of-way maps and other right-of-way data, pending or proposed subject property land division and development application data, all newly developed and pertinent design and project specification data, and such other pertinent data which may become available to the City.
2. Provide timely review, processing, and reasonably expeditious approval of all submittals by the Consultant.
3. Provide timely City staff liaison with the Consultant when requested and when reasonably needed.

EXHIBIT "C"

TERMS OF PAYMENT

1. The Consultant's compensation shall not exceed \$109,110.
2. The Consultant will obtain, and keep current during the term of this Agreement, the required City of Moreno Valley business license. Proof of a current City of Moreno Valley business license will be required prior to any payments by the City. Any invoice not paid because the proof of a current City of Moreno Valley business license has not been provided will not incur any fees, late charges, or other penalties. Complete instructions for obtaining a City of Moreno Valley business license are located at: http://www.moval.org/do_biz/biz-license.shtml
3. The Consultant shall notify the City in writing ten (10) days in advance of incurring costs at the following milestones: 50%, 75%, and 90% of expended budget. The City will monitor Consultant's expenditure levels in comparison to the physical construction work completed, and if progress is satisfactory in the judgment of the City, City will provide written authorization to proceed to the next milestone. City reserves the right to adjust staffing levels and personnel as appropriate. Consultant shall not change any personnel or subconsultants without prior authorization by the City.
4. The Consultant will electronically submit an invoice to the City once a month for progress payments along with documentation evidencing services completed to date. The progress payment is based on actual time and materials expended in furnishing authorized professional services during the preceding calendar month. At no time will the City pay for more services than have been satisfactorily completed

EXHIBIT "D"

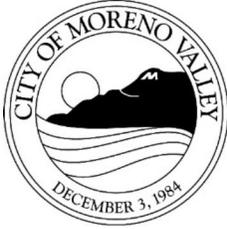

and the City Engineer's determination of the amount due for any progress payment shall be final. The consultant will submit all original invoices to Accounts Payable staff at AccountsPayable@moval.org. Accounts Payable questions can be directed to (951) 413-3073. Copies of invoices may be submitted to the Capital Projects Division at zara@moval.org or calls directed to (951) 413-3131.

5. The Consultant agrees that City payments will be received via Automated Clearing House (ACH) Direct Deposit and that the required ACH Authorization form will be completed prior to any payments by the City. Any invoice not paid because the completed ACH Authorization Form has not been provided will not incur any fees, late charges, or other penalties. The ACH Authorization Form is located at:
http://www.moval.org/city_hall/forms.shtml#bf

6. The minimum information required on all invoices is:
 - A. Vendor Name, Mailing Address, and Phone Number
 - B. Invoice Date
 - C. Vendor Invoice Number
 - D. City Purchase Order Number
 - E. City-provided Reference Number (e.g. Project, Activity)
 - F. Detailed work hours by class title (e.g. Manager, Technician, or Specialist), services performed and rates, explicit portion of a contract amount, or detailed billing information that is sufficient to justify the invoice amount; single, lump amounts without detail are not acceptable.
7. The City shall pay the Consultant for all invoiced, authorized professional services within forty-five (45) days of receipt of the invoice for same.

Report to City Council

TO: Mayor and City Council and the City Council Acting as the Successor Agency

FROM: Ahmad R. Ansari, P.E., Public Works Director/City Engineer

AGENDA DATE: September 25, 2012

TITLE: APPROVE AGREEMENT FOR PROFESSIONAL CONSULTANT CONSTRUCTION SURVEY SERVICES WITH COORY ENGINEERING FOR MORENO BEACH INTERCHANGE IMPROVEMENTS PHASE 1 – PROJECT NO. 801 0038 70 77 [FORMERLY PROJECT NO. 07-41570024]

RECOMMENDED ACTION

Staff recommends that the City Council:

1. Authorize the “Agreement for Professional Consultant Services” with Coory Engineering (Coory), 1718 N. Neville Street, Orange, CA 92865, to provide professional survey services during construction of the SR-60/Moreno Beach Interchange Improvements Phase 1 project for a total agreement amount not to exceed \$100,805.
2. Acting as the Successor Agency, approve this action as a recognized payment obligation of the former Redevelopment Agency of the City of Moreno Valley, add it to the Recognized Obligation Payment Schedule, submit same to the Oversight Board for Approval, and authorize the City Manager to access agency funds only after Oversight Board approval.
3. Authorize the City Manager to execute said “Agreement for Professional Consultant Services” with Coory.
4. Authorize the issuance of a Purchase Order totaling \$100,805 to Coory when the contract has been signed by all parties.

BACKGROUND

The SR-60/Moreno Beach Drive Phase 1 project is one of the key projects in the City's Economic Development Action Plan. Phase 1 improvements are designed to reconstruct the eastbound on- and off-ramps to SR-60 and connect the west leg of Eucalyptus Avenue to Moreno Beach Drive. On December 13, 2011, the City Council approved a Construction Cooperative Agreement with the State of California for the construction phase, giving the City authority to advertise, award, and administer the construction of Phase 1. Design and right-of-way for Phase 1 were completed, the project was advertised, and bids were opened on August 13, 2012. On August 28, 2012, the City Council awarded the construction contract.

DISCUSSION

The Construction Cooperative Agreement with Caltrans requires that the City meet Caltrans field survey requirements on the project. The City issued a Request for Proposal (RFP) to provide survey services based on the construction plans, specifications, and Caltrans requirements. On August 1, 2012, staff received five (5) proposals. A selection team of City and Caltrans staff reviewed the four (4) qualified proposals and ranked them in order, based on firm experience and qualifications, experience of key personnel, and project approach.

Staff has completed negotiations with the top-ranked survey firm and is recommending awarding a professional services agreement for construction-related survey services to Coory. Services performed will be on an as-needed basis, and will consist of field survey layout under the direction of a licensed Land Surveyor, providing all required survey equipment and experienced staff within 48 hours' notice, setting monument ties and staking all proposed improvements in accordance with the Caltrans Survey Manual. A purchase order for \$100,805 will be issued for this agreement.

The recommended contract award is an action of the City Council with a funding source from the assets of the former City of Moreno Valley Redevelopment Agency. The recommended actions are included on the Recognized Obligations Payment Schedule (ROPS) approved by the City Council acting as the Successor Agency on February 14, 2012. The Successor Agency Oversight Board approved the ROPS for the period January through June 2012 on May 23, 2012, which has subsequently been approved by the State Department of Finance (DOF). This ROPS approval includes "placeholder" line items representing the expenditure of bond proceeds for approval purposes. The Successor Agency approval of this contract is required to move forward toward complete approval and compliance with ABx1 26 law. The contract will be presented to the Successor Agency Oversight Board, along with an updated ROPS that will include the contractor listed as an enforceable obligation. After Oversight Board approval, the contract and updated ROPS will be sent to the DOF for review. There is a risk that the Oversight Board may not approve the contract or updated ROPS. In addition, the State Department of Finance (DOF) has the authority to challenge actions approved by the Oversight Board within 10 days of the approved action. In light of the current process for

approval of the contract and the updated ROPS, the property tax to pay the contracts being recommended has not been authorized to pay the contract obligations. The City Council by approving the recommended contract is assuming the risk that in the event tax increment is not approved to pay the contracts by the Oversight Board or through successful challenge by the State DOF, the City would be obligated to pay the contract commitments from alternative funding sources, most likely the City's General Fund.

ALTERNATIVES

1. Approve and authorize the recommended actions as presented in this staff report. *This alternative will comply with the Caltrans Construction Cooperative Agreement requiring the City to meet Caltrans professional survey requirements and facilitate the timely construction of needed improvements.*

2. Do not approve and authorize the recommended acting as presented in this staff report. *This alternative will significantly delay the construction of needed improvements.*

FISCAL IMPACT

The project is included in the Fiscal Year 2012/2013 Capital Improvement Program. There is no impact to the General Fund.

AVAILABLE FUNDS

Successor Agency 2007 Tax Allocation Bonds (Account 4821-70-77-80001 801 0038 70 77).....	\$ 4,879,000

Construction Support Services (Survey)	\$ 101,000
Construction Support Services (Geotechnical).....	\$ 110,000
Administrative Costs*	\$ 170,000
Utility and Agency Inspection and Materials Costs**	<u>\$ 150,000</u>
Total Estimated Cost	\$ 8,148,000

*Includes City project administration, printing and other miscellaneous costs.

**Includes EMWD, SCE, Caltrans, RCFC&WCD and CHP.

PROJECT SCHEDULE

Begin Construction	October 2012
Construction Completion and Acceptance	October 2013

CITY COUNCIL GOALS

REVENUE DIVERSIFICATION AND PRESERVATION:

Develop a variety of city revenue sources and policies to create a stable revenue base and fiscal policies to support essential city services, regardless of economic climate.

PUBLIC SAFETY:

Provide a safe and secure environment for people and property in the community, control the number and severity of fire and hazardous material incidents, and provide protection for citizens who live, work and visit the City of Moreno Valley.

PUBLIC FACILITIES AND CAPITAL PROJECTS:

Ensure that needed public facilities, roadway improvements, and other infrastructure improvements are constructed and maintained.

POSITIVE ENVIRONMENT:

Create a positive environment for the development of Moreno Valley's future.

SUMMARY

The SR-60/Moreno Beach Interchange Phase 1 Improvements project goal is to improve the interchange through reconstruction and realignment. The project construction is funded utilizing Successor Agency 2007 Tax Allocation Bonds and Transportation Uniform Mitigation Fees (TUMF). City staff recommends awarding a contract for \$100,805 to Coory Engineering to provide construction survey services for the project.

PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]**

This Agreement is by and between the City of Moreno Valley, California, a municipal corporation, hereinafter described as "City," and **Coory Engineering**, a California corporation, hereinafter described as "Consultant." This Agreement is made and entered into effective on the date the City signs this Agreement.

RECITALS

WHEREAS, the City has determined it is in the public interest to proceed with the work hereinafter described as "Project"; and

WHEREAS, the City has determined the Project involves the performance of professional and technical services of a temporary nature as more specifically described in Exhibit "A" (City's Request for Proposal) and Exhibit "B" (Consultant's Proposal) hereto; and

WHEREAS, the City does not have available employees to perform the services for the Project; and

WHEREAS, the City has requested the Consultant to perform such services for the Project; and

WHEREAS, the Consultant is professionally qualified in California to perform the professional and technical services required for the Project;

THEREFORE, the City and the Consultant, for the consideration hereinafter described, mutually agree as follows:

Attachment "A"

**AGREEMENT FOR PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]**

DESCRIPTION OF PROJECT

1. The project is described as professional consultant **survey services** for:

**SR-60 / MORENO BEACH DRIVE PHASE 1 IMPROVEMENTS PROJECT
PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]**

SCOPE OF SERVICES

2. The Consultant's scope of service is described on Exhibit "B" attached hereto and incorporated herein by this reference. In the event of a conflict, the City's Request for Proposal shall take precedence over the Consultant's Proposal.

3. The City's responsibility is described on Exhibit "C" attached hereto and incorporated herein by this reference.

PAYMENT TERMS

4. The City agrees to pay the Consultant and the Consultant agrees to receive a "Not-to-Exceed" fee of **\$100,805** in accordance with the payment terms provided on Exhibit "D" attached hereto and incorporated herein by this reference.

TERM OF AGREEMENT

5. This agreement will terminate on **December 31, 2014** unless the termination date is extended by an amendment to the agreement.

TIME FOR PERFORMANCE

6. The Consultant shall commence services upon receipt of written direction to proceed from the City.

7. The Consultant shall perform the work described on Exhibit "A" in accordance with the design/construction schedule as stated in the Notice to Proceed.

AGREEMENT FOR PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]

8. The Consultant and the City agree that the schedule in Paragraph 7 above represents their best estimates with respect to completion dates, and both the Consultant and the City acknowledge that it will not unreasonably withhold approval of the Consultant's requests for extensions of time in which to complete the work required of the Consultant hereunder.

9. The Consultant shall not be responsible for performance delays caused by others or delays beyond the Consultant's reasonable control, and such delays shall extend the time for performance of the work by the Consultant. Delays caused by non-performance or unjustified delay in performance by a subconsultant of the Consultant are not considered to be beyond the Consultant's reasonable control.

10. (a) The Consultant agrees that the personnel, including the principal Project manager, and all subconsultants assigned to the Project by the Consultant, shall be subject to the prior approval of the City.

(b) No change in subconsultants or key personnel shall be made by the Consultant without written prior approval of the City.

SPECIAL PROVISIONS

11. It is understood and agreed that the Consultant is, and at all times shall be, an independent contractor and nothing contained herein shall be construed as making the Consultant or any individual whose compensation for services is paid by the Consultant, an agent or employee of the City, or authorizing the Consultant to create or assume any obligation or liability for or on behalf of the City.

12. The Consultant may also retain or subcontract for the services of other necessary consultants with the prior written approval of the City. Payment for such services shall be the responsibility of the Consultant. Any and all subconsultants employed by the Consultant shall be

AGREEMENT FOR PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]

subject to the terms and conditions of this Agreement, except that the City shall have no obligation to pay any subconsultant for services rendered on the Project.

13. The Consultant and the City agree to use reasonable care and diligence to perform their respective services under this Agreement. Unless hereinafter specified, neither party shall be responsible for the services of the other or any subcontractor or sub-consultant employed by the other party.

14. The Consultant shall comply with applicable federal, state, and local laws in the performance of work under this Agreement.

15. (a) The Consultant agrees to indemnify, defend, and save the City, the Moreno Valley Housing Authority (MVHA), the Moreno Valley Community Services District (CSD), the Western Riverside Council of Governments (WRCOG), the State of California, Eastern Municipal Water District (EMWD), and Riverside County Flood Control and Water Conservation District (RCFC & WCD) and their officers, agents and employees harmless from any and all liability, claims, demands, damages, or injuries to any person, including injury to the Consultant's employees and all claims which arise from or are connected with the negligent performance of or failure to perform the work or other obligations of the Consultant under this Agreement, or are caused or claim to be caused by the negligent acts, recklessness or willful misconduct of the Consultant, its officers, agents or employees, or its subconsultant(s) or any person acting for the Consultant or under its control or direction.

(b) The City agrees to indemnify, defend and save the Consultant and their officers, agents and employees harmless from any and all liability, claims, damages or injuries to any person, including injury to the City's, the State's, MVHA's, CSD's, WRCOG's, EMWD's, and RCFC & WCD's employees and all claims which arise from or are connected with the negligent

performance or failure to perform the services or other obligations of the City under this Agreement, or are caused or claim to be caused by the negligent acts, recklessness or willful misconduct of the City, the State, MVHA, CSD, WRCOG, EMWD, and RCFC & WCD, their officers, agents or employees, or its subcontractor(s) or any person acting for the City or under its control or direction.

16. (a) The Consultant shall procure and maintain, at its sole expense, throughout the term of this Agreement and any extension thereof, Professional Errors and Omission Insurance coverage in the form and substance and with carriers acceptable to the City. Such coverage limits shall not be less than \$1,000,000 per claim and aggregate.

(b) During the entire term of this Agreement, the Consultant agrees to procure and maintain General Liability Insurance in form and substance and with carriers acceptable to the City at its sole expense to protect against loss from liability imposed by law for damages on account of bodily injury, including death therefrom, suffered or alleged to be suffered by any person or persons whomever, resulting directly or indirectly from any act or activities of the Consultant its sub-consultant or any person acting for the Consultant or under its control or direction, and also to protect against loss from liability imposed by law for damages to any property of any persons caused directly or indirectly by or from acts or activities of the Consultant or its subconsultants, or any person acting for the Consultant or under its control or direction.

(c) Such Public Liability and Property Damage Insurance shall be maintained in full force and effect throughout the terms of the Agreement and any extension thereof in the minimum limits provided below:

GENERAL LIABILITY

Bodily Injury	\$1,000,000 per occurrence

PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]**

"Solely as respect to services done by or on behalf of the named insured for the City of Moreno Valley, it is agreed that the City of Moreno Valley, the Moreno Valley Housing Authority (MVHA), the Moreno Valley Community Services District (CSD), the Western Riverside Council of Governments (WRCOG), the State of California, Eastern Municipal Water District (EMWD), and Riverside County Flood Control and Water Conservation District (RCFC & WCD), their officers, employees and agents are included as additional insured under this general liability policy and the coverage(s) provided shall be primary insurance and not contributing with any other insurance available to the City of Moreno Valley, the Community Redevelopment Agency of the City of Moreno Valley, the Moreno Valley Community Services District and Western Riverside Council of Governments, its officers, employees and agents, under any third party liability policy."

(i) Insurance companies providing insurance hereunder shall be rated (A minus: VII - Admitted) or better in Best's Insurance Rating Guide and shall be legally licensed and qualified to conduct insurance business in the State of California.

(j) The terms of the insurance policy or policies issued to provide the above insurance coverage shall not be amended to reduce the above required insurance limits and coverages nor shall such policies be canceled by the carrier without thirty (30) days prior written notice by certified or registered mail of amendment or cancellation to the City, except that cancellation for non-payment of premium shall require ten (10) days prior written notice by certified or registered mail. In the event the said insurance is canceled, the Consultant shall, prior

**AGREEMENT FOR PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]**

to the cancellation date, submit to the City Clerk new evidence of insurance in the amounts established.

17. During the performance of this Agreement, the Consultant will not unlawfully discriminate against any employee or applicant for employment because of race, religion, creed, color, national origin, sex, or age. The Consultant will take affirmative action to ensure that applicants are employed, and that employees are treated during employment without regard to their race, religion, creed, color, national origin, sex, or age.

18. Consultant and subconsultants shall pay prevailing wage rates when required by the Labor Laws of the State of California.

19. (a) The Consultant shall deliver to the Public Works Director/City Engineer of the City or his designated representative, in both hard copy and electronic format, fully completed and detailed project-related documents which shall become the property of the City. The Consultant may retain, for its files, copies of any and all material, including drawings, documents, and specifications, produced by the Consultant in performance of this Agreement. It shall be understood that the City shall be the owner of all project-related documents and drawings at all times and during all phases of the project.

(b) The Consultant shall be entitled to copies of all furnished materials for his files and his subconsultants, if any.

(c) The City agrees to hold the Consultant free and harmless from any claim arising from any unauthorized use of computations, maps, and other documents prepared or provided by the Consultant under this Agreement, if used by the City on other projects without the permission of the Consultant. Consultant acknowledges that Consultant work product produced under this agreement may be public record under State law.

AGREEMENT FOR PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]

20. (a) The City may terminate this Agreement without fault on the part of Consultant by giving at least ten (10) days written notice to the Consultant. The written notice shall specify the date of termination. Upon receipt of such notice, the Consultant may continue services on the project through the date of termination, provided that no service(s) shall be commenced or continued after receipt of the notice, which is not intended to protect the interest of the City. The City shall pay the Consultant within thirty (30) days after the date of termination for all non-objected to services performed by the Consultant in accordance herewith through the date of termination. Such termination may be effective immediately.

(b) Upon notice of termination, the Consultant shall deliver to the Public Works Director/City Engineer of the City or his designated representative, in both hard copy and electronic format, fully completed and detailed project-related documents which shall become the property of the City. The Consultant may retain for its files copies of any and all materials, including drawings, documents, and specifications produced by the Consultant in performance of this Agreement. It shall be understood that the City shall be the owner of all project-related documents and drawings, regardless of the completeness of said documents.

(c) The Consultant shall be entitled to copies of all furnished materials for his files and his subconsultants, if any.

(d) The City agrees to hold the Consultant free and harmless from any claim arising from any unauthorized use of computations, maps, and other documents prepared or provided by the Consultant. Consultant acknowledges that Consultant work product produced under this Agreement may be public record under State law.

**AGREEMENT FOR PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]**

(e) Either party may terminate this Agreement for cause. In the event the City terminates this Agreement for cause, the Consultant shall perform no further service(s) under the Agreement unless the notice of termination authorizes such further work.

21. This Agreement is binding upon the City and the Consultant and their successors and assigns. Except as otherwise provided herein, neither the City nor the Consultant shall assign, sublet, or transfer its interest in this Agreement or any part thereof without the prior written consent of the other.

22. A City representative shall be designated by the City and a Consultant representative shall be designated by the Consultant. The City representative and the Consultant representative shall be the primary contact person for each party regarding performance of this Agreement. The City representative shall cooperate with the Consultant, and the Consultant's representative shall cooperate with the City in all matters regarding this Agreement and in such a manner as will result in the performance of the services in a timely and expeditious fashion.

23. This Agreement represents the entire and integrated Agreement between the City and the Consultant, and supersedes all prior negotiations, representations or Agreements, either written or oral. This Agreement may be modified or amended only by a subsequent written Agreement signed by both parties.

24. Where the payment terms provide for compensation on a time and materials basis, the Consultant shall maintain adequate records to permit inspection and audit of the Consultant's time and materials charges under this Agreement. The Consultant shall make such records available to the City at the Consultant's office during normal business hours upon reasonable notice. Nothing herein shall convert such records into public records. Except as may be otherwise required by law, such records will be available only to the City. Such records shall be

**AGREEMENT FOR PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 801 0038 70 77
[FORMERLY PROJECT NO. 07-41570024]**

maintained by the Consultant for three (3) years following completion of the services under this Agreement.

25. The City and the Consultant agree, that to the extent permitted by law, until final approval by the City, all data shall be treated as confidential and will not be released to third parties without the prior written consent of both parties.

26. The Consultant shall employ no City official or employee in the work performed pursuant to this Agreement. No officer or employee of the City shall have any financial interest in this Agreement in violation of federal, state, or local law.

27. All Plans, drawings, Specifications, reports, logs, and other documents prepared by the Consultant in its performance under this Agreement shall, upon completion of the project, be delivered to and be the property of the City, provided that the Consultant shall be entitled, at its own expense, to make copies thereof for its own use.

28. The laws of the State of California shall govern the rights, obligations, duties, and liabilities of the parties to this Agreement, and shall also govern the interpretation of this Agreement.

I. INVITATION

You are hereby invited to submit a Proposal for Professional Consultant Construction **Surveying Services** associated with the SR-60 / MORENO BEACH DRIVE PHASE 1 IMPROVEMENTS PROJECT as shown on the Plans and Specifications.

Five (5) copies (one of the copies will be unbound and paper clipped, with no tabs, holes, perforations, or cardboard inserts, suitable for copying with an automatic-feed copy machine and one copy shall be on compact disk) of your Proposal shall be submitted no later than **5:00p.m, August 1, 2012** addressed to Capital Projects Division, 14177 Frederick Street (hand delivery), P.O. Box 88005, Moreno Valley, California 92552-0805 (mail delivery), Attention: Margery Lazarus, Senior Engineer, PE.

II. PROJECT DESCRIPTION

The SR-60/Moreno Beach Drive Phase-1 project site is located at the State Route (SR) 60 Interchange and Moreno Beach Drive in the City of Moreno Valley, CA. The work of this project generally includes realigning the SR-60/Moreno Beach eastbound off-and-on-ramps, adding an eastbound auxiliary lane, installation of a new traffic signal at the new intersection of the eastbound ramps and Moreno Beach Drive, adding a retaining wall, adding ramp metering, extension of Eucalyptus Avenue to Moreno Beach Drive, modification of the traffic signal at the intersection of Eucalyptus Avenue and Moreno Beach Drive, coordination of utility relocations, irrigation, and related work. The work lies within State of California (Caltrans) right of way. The work includes earthwork, grading, Asphalt Concrete (AC) paving, concrete retaining walls, roadway excavation, imported borrow, drainage pipes and minor concrete structures, concrete curb and gutter, traffic control, signing, striping, traffic and ramp meter signals, irrigation, erosion control, EMWD water line relocation, overhead SCE relocation, and related work.

III. PROJECT BUDGET AND SCHEDULE

The City of Moreno Valley will fund the construction with Local Funds consisting of TUMF and Successor Agency to RDA Funds (Account 797.79731).

The Consultant shall be required to meet or exceed the following timeline for this contract:

Anticipated Award of Consultant Contract	September 2012
Public Bid for SR-60/Moreno Beach Phase 1 Construction Contract	July 2012
Award of Construction Contract	October 2012
Construction Duration for SR-60/Moreno Beach Phase 1	189 Working Days (9 months)

Exhibit "A"

IV. SCOPE OF ENGINEERING SERVICES

The selected Consultant will be required to have personnel available for assignment to this project who have successfully provided professional services as it relates to all activities of public works construction surveying. . The Consultant selected shall provide Construction Surveying Services with personnel trained and experienced in survey layout for construction of public works improvements and, particularly, Caltrans.. The project is located within Caltrans Right of Way and all Surveying methods, procedures, frequencies shall comply with the contract specifications, and Caltrans Surveying Manuals and Guidelines. The minimum experience required includes five (5) years of construction surveying on increasingly complex public works and Caltrans projects. The Consultant firm selected must also provide all equipment and supplies necessary to perform the surveying services for the construction of the improvements and support services necessary to complete the scope of work. It is expected that the Consultant selected to fulfill this contract will be able to provide qualified personnel on an on-demand basis with 48-hour notice for construction surveying for the duration of the construction project and, as necessary, to close out the project.

The Consultant must have recent experience working within the Caltrans Right of Way and shall be required to follow all Caltrans safety procedures when executing the work. The Consultant surveyors shall be familiar with the industry standards of practice for the execution of quality public works construction projects and shall be able to understand and interpret public works construction plans and specifications; Caltrans Standard Plans and Specifications; City codes, ordinances and standards; Eastern Municipal Water District (EMWD) standards; Riverside County Flood Control and Water Conservation District (RCFCD) standards; and California Occupational Safety and Health Administration (OSHA) Construction Safety Orders. The Consultant surveyors shall be able to interact professionally with contractors, engineers, inspectors , property owners, business owners, and the public at large; coordinate with other City personnel, Caltrans personnel and consultants; promote quality customer service and a professional image of the City; and respond promptly and courteously to requests. The Consultant surveyors personnel shall be able to follow verbal and written instructions and communicate clearly and concisely, both orally and in writing.

The Consultant surveyors personnel must be under the responsible charge of a person registered by the California State Board of Registration for Professional Engineers and Land Surveyors as a Land Surveyor. (Registration as a Civil Engineer prior to 1982 may be substituted for the registration as a Land Surveyor).

Please be reminded that the Consultant is required to have a current City business license if the firm is awarded the work.

The Consultant shall provide public works construction surveying services to generally include, but not limited to, the following:

- Attend the pre-construction meeting
- Establish and confirm horizontal and vertical control, as required.
- Set monument ties, prior to the beginning of construction, all monuments must be researched, tied out, and submitted to the Project Engineer. Monuments that are destroyed during construction shall be replaced per the 1997 Land Survey Act,

**REQUEST FOR PROPOSAL FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 07-41570024
Page 3 of 12**

Article 4, Section 464-Corner Record. Ties shall be submitted per the City of Moreno Valley Tie-Out Standard 601C and 601D on Mylar. Original monument tie-out sheets, corner records, and/or record of survey shall be provided to the City prior to the release of the final progress Payment. Assume two (2) monuments will need to be set for this project.

- Construction staking shall consist of stakes for proposed roadways, waterline improvements, utility improvements, storm drain improvements, cross gutter, sidewalk, concrete curb and gutter, AC pavement limits and grade control, AC berm (or dike), traffic signal equipment locations, fence, wall and related improvements as shown on the plans. Re-staking is to be identified separately on the invoice. Ten (10) trips for on-site re-staking time (allow a maximum of two hours per trip) should be estimated for Proposal purposes.
- Construction Surveying deliverables require performing construction surveying in accordance with the Caltrans Construction Manual, Caltrans Standard Plans, Caltrans Surveying Manual, and the various industry standards stated above in the "Scope of Engineering Services."
- The required work effort will ultimately be initiated through an itemized survey request from the City's Consultant Resident Engineer. The City expects the consultant's field response time to each survey request not to exceed 48 hours as specified in the Caltrans Standard Specifications.

SUBMITTAL SCHEDULE

Proposals Due	5:00 p.m., August 1, 2012
Consultant Selection	On or before September 4, 2012
Notice to Proceed (Tentative)	Week of September 18, 2012

V. CONSULTANT'S PROPOSAL AND COMPENSATION

The Consultant's Proposal shall be no more than 20 pages, excluding a cover letter of up to two pages, dividers, and certificates. Proposals failing to provide sufficient information and assurances of performance to accurately assess each category of the required services and failing to comply with requirements and conditions of the RFP will not be given further consideration. The Consultant's Proposal shall include the following:

- A. A statement that this Request For Proposal shall be incorporated in its entirety as a part of the Consultant's Proposal.
- B. A statement that this Request For Proposal and the Consultant's Proposal will jointly become part of the Agreement for Professional Consultant Services for this project when said Agreement is fully executed by the Consultant and the Mayor or City Manager of Moreno Valley.
- C. A statement that the Consultant's Services to be provided, and fees therefore, will be in accordance with the City's Request For Proposal except as otherwise specified in the Consultant's Proposal under the heading "ADDITIONS OR EXCEPTIONS TO THE CITY'S REQUEST FOR PROPOSAL."

REQUEST FOR PROPOSAL FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 07-41570024
Page 4 of 12

- D. A single and separate section with the heading "ADDITIONS OR EXCEPTIONS TO THE CITY'S REQUEST FOR PROPOSAL" containing a complete and detailed description of all of the exceptions to the provisions and conditions of this Request for Proposal upon which the Consultant's Proposal is contingent and which shall take precedence over this Request For Proposal.
- E. A statement of qualifications applicable to this project including the names, qualifications and proposed duties of the Consultant's Staff to be assigned to this project; a listing of recent similar projects completed including the names, titles, addresses and telephone numbers of the appropriate persons whom the City could contact. If one or more of the Consultant's staff should become unavailable, the Consultant may substitute other staff of at least equal competence only after prior written approval by the City.
- F. A resource allocation matrix must be submitted with the Proposal. The resource allocation matrix shall list detailed tasks in rows and the appropriate individual (Job Title Only) as well as the number of hours that these individuals will be working on each task listed, included in adjacent columns. The resource allocation matrix is required of both the primary consultant, as well as any sub-consultant. Failure to do so will result in the Consultant's Proposal being deemed incomplete and it will not receive further consideration. Title Reports shall be a separate line item under the right-of-way task. Construction support services Consultants are not required to provide a Project Schedule with milestones.
- G. A rate schedule must be submitted with the proposal. The rate schedule must list titles, names, roles, and hourly billing rates in rows. A statement that said hourly rate schedules in part of the Consultant's Proposal for use in invoicing for progress payments and for extra work incurred shall also be included. All extra work will require prior approval from the City. **COST PROPOSAL DETAILS MUST BE IN A SEALED ENVELOPE.**
- H. A statement of sub-consultant's qualifications (including relief personnel) applicable to this project including the names, qualifications and proposed duties of the sub-consultant's staff to be assigned to this project; a listing of recent similar projects completed including the names, titles, addresses, and telephone numbers of the appropriate persons whom the City could contact.
- A statement that the Consultant acknowledges and understands that the consultant will not be allowed to change a sub-consultant without written permission from the City.**
- I. A statement that all charges for Consultant (construction) services is a "Not-to-Exceed Fee" which must include conservatively estimated reimbursable expenses, as submitted with and made a part of said Consultant's Proposal.
- J. A statement that the Consultant will document and provide the results of the work to the satisfaction of the City. This may include preparation of field and final reports or similar evidence of attainment of the Agreement objectives.

REQUEST FOR PROPOSAL FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 07-41570024
Page 5 of 12

- K. A statement that the Consultant will immediately document and notify the City of any defects or hazardous conditions observed in the vicinity of the project site prior, during, or after the construction work.
- L. A copy of the Consultant's hourly rate schedule and a statement that said hourly rate schedule is part of the Consultant's Proposal for use in invoicing for progress payments and for extra work incurred that is not part of this Request For Proposal. **An itemized cost breakdown for the work described herein must be submitted in a separate sealed envelope as part of your Proposal submittal.** All extra work will require prior approval from the City. . The City requests the consultant to provide in the proposal the number of hours on the job, in addition to the cost proposal. The Cost Proposal must be in a sealed envelope.
- M. A statement that the Consultant will not discriminate against any employee or applicant for employment because of race, color, religion, sex, or national origin.
- N. A statement that all federal laws and regulations shall be adhered to notwithstanding any state or local laws and regulations. In a case of conflict between federal, state or local laws or regulations the strictest shall be adhered to.
- O. A statement that the Consultant shall allow all authorized federal, state, county, and City officials access to place of work, books, documents, papers, fiscal, payroll, materials, and other relevant contract records pertinent to this specific project. All relevant records shall be retained for at least three years.
- P. A statement that the Consultant shall comply with the Davis-Bacon Fair Labor Standards Act (40 USC 276-a through a-7), and the implementation regulations issued pursuant thereto (29 CFR Section 1, 5), any amendments thereof and the California Labor Code. Pursuant to the said regulations, entitled "Federal Labor Standards Provisions," Federal Prevailing Wage Decision" and State of California prevailing wage rates, respectively.
- Q. A statement that the Consultant shall comply with the Copeland Anti-Kickback Act (18 USC 874) and the Implementation Regulation (29 CFR 3) issued pursuant thereto, and any amendments thereof.
- R. A statement that the Consultant offers and agrees to assign to the City all rights, title, and interest in and to all causes of action it may have under Section 4 of the Clayton Act (15 USC Sec. 15) or under the Cartwright Act (Chapter 2 [commencing with Section 16700] of Part 2 of Division 7 of the Business and Professions Code), arising from purchases of goods, services, or materials pursuant to the public works or the subcontract. This assignment shall be made and become effective at the time the City tenders final payment to the Consultant, without further acknowledgment by the parties.
- S. This solicitation and resultant Contract is not financed in whole or part with federal funds, but the City encourages Bidders to follow Title 49, Code of Federal Regulations, Part 26 (49 CFR 26) entitled "Participation by Disadvantaged Business Enterprises in Department of Transportation Financial Assistance Programs."

**REQUEST FOR PROPOSAL FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 07-41570024
Page 6 of 12**

Bidders who obtain DBE participation on this Contract will assist the City in meeting its DBE goals for the Project.

DBEs and other small businesses are strongly encouraged to participate in the performance of this Contract. The City encourages Bidders to give DBEs and other small businesses the opportunity to participate in the performance of the Work that is the subject of this solicitation and to take all necessary and reasonable steps for this assurance. The Bidder shall not discriminate on the basis of race, color, national origin, sex, age, or physical or mental disability, sexual orientation or retaliation in the award and performance of subcontracts.

A Race Neutral program is one that, while benefiting DBEs, is not solely focused on DBE firms. A Race Neutral program utilizes measures that can assist a wide variety of small businesses, including DBEs, such as arranging solicitations, times for the presentation of proposals, quantities, specifications, and delivery schedules in ways that facilitate DBE and other small business participation (e.g., unbundling large contracts to make them more accessible to small businesses, requiring or encouraging prime contractors to subcontract portions of work that they might otherwise perform with their own forces). Race Neutral DBE participation includes: a DBE obtaining a prime contract through customary competitive procurement procedures; a DBE being awarded a subcontract on a prime contract, whether or not the prime contract has a DBE goal; and a DBE being awarded a subcontract from a prime contractor that did not consider its DBE status in making the award.

The Consultant is encouraged to include DBE firms in the proposal. Complete the forms listed in "Attachments" at the end of this RFP.

VI. GENERAL COMPLIANCE WITH LAWS AND WAGE RATES

- A. The Consultant shall be required to comply with all federal, state, and local laws and ordinances applicable to the work. This includes compliance with prevailing wage rates and their payment in accordance with California Labor Code, Section 1775.
- B. The Consultant is required to submit certified payrolls weekly. This applies to all applicable field personnel working on the project. In accordance with Section 1771.5 (b) (5) of the California Labor Code, the City will withhold payments when the payroll records are delinquent or inadequate.

VII. FEDERAL EMPLOYEE BENEFIT

No member of, or delegate to, the Congress of the United States, and no Resident Commissioner shall be admitted to any share or part of the Agreement to the said project or to any benefit to arise from the same.

The Consultant shall complete and include the "Certification for Contracts, Grants, Loans, and Cooperative Agreements" and "Disclosure of Lobbying Activities" forms with the Proposal.

**REQUEST FOR PROPOSAL FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 07-41570024
Page 7 of 12**

VIII. PAYMENT TO CONSULTANT

- A. This work is to be performed for a "Not-to-Exceed Fixed Fee."
- B. The Consultant shall provide a "Project Fee Schedule" indicating the fee for individual tasks with a "Not-to-Exceed Fixed Fee" which shall be the sum of all tasks, by part, phase, and milestone and shall be submitted in a separate sealed envelope with cost proposal.
- C. Tasks shall include, but not be limited to, all Professional Consultant Services necessary to complete the work covered by this Proposal.
- D. The City will pay the Consultant for work completed based on milestones completed and accepted by the City. These milestones are:
 - 1. Project Bidding, Advertise and Award.
 - 2. Any other additional authorized work on a task successfully completed and accepted monthly basis.

The City shall make the sole and final determination if a milestone as described above is complete and acceptable for payment.

- E. Monthly invoices will specifically identify job title, person-hours, and costs incurred by each task.
- F. Reimbursement costs such as mileage, printing, telephone, photographs, postage and delivery, are to be included in the "Not-to-Exceed Fee."
- G. All tasks including labor and reimbursable costs such as mileage, printing, telephone, photographs, postage, and delivery shall have supporting documentation presented at the time payment is requested.
- H. The City will pay the Consultant for all acceptable services rendered in accordance with the "Agreement for Professional Consultant Services."
- I. When the Consultant is performing, or is requested to perform, work beyond the scope of service in the "Agreement for Professional Consultant Services," an "Amendment to the Agreement" will be executed between the City and Consultant.
- J. The Consultant shall receive no compensation for any re-work necessary as result of the Consultant's errors or oversight.

IX. INSURANCE

- A. The Consultant shall provide Errors and Omissions Professional Insurance. Such coverage limits shall not be less than \$1,000,000 per claim and aggregate.

**REQUEST FOR PROPOSAL FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 07-41570024
Page 8 of 12**

- B. The Consultant shall have Public Liability and Property Damage Insurance in the amounts as follows:

	<u>GENERAL LIABILITY</u>	
Bodily Injury	\$1,000,000	per occurrence
Property Damage	\$ 1,000,000	per occurrence

A combined single limit policy with aggregate limits in the amount of \$2,000,000 will be considered equivalent to the above minimum limits.

- C. The Consultant shall have Public Liability and Property Damage Insurance coverage for owned and non-owned automotive equipment in the amount of not less than \$1,000,000.
- D. The Consultant shall have Workers' Compensation Insurance in the amounts that fully comply with the laws of the State of California and employer's liability insurance with limits of not less than \$1,000,000 each accident.
- E. A Certificate of Insurance or an appropriate binder shall bear an endorsement containing the following provisions:

"Solely as respect to services done by or on behalf of the named insured for the City of Moreno Valley, it is agreed that the City of Moreno Valley, the Moreno Valley Housing Authority (MVHA) , Western Riverside Council of Governments (WRCOG), and the Moreno Valley Community Services District, its officers, employees and agents are included as additional insured under this general liability policy and the coverage(s) provided shall be primary insurance and not contributing with any other insurance available to the City of Moreno Valley, the Moreno Valley Housing Authority , Western Riverside Council of Governments (WRCOG),and the Moreno Valley Community Services District, its officers and employees and agents, under any third party liability policy."

- F. Insurance companies providing insurance hereunder shall be rated (A minus: VII - Admitted) or better in Best's Insurance Rating Guide and shall be legally licensed and qualified to conduct insurance business in the State of California.
- G. The terms of the insurance policy or policies issued to provide the above insurance coverage shall not be amended to reduce the above required insurance limits and coverage's nor shall such policies be canceled by the carrier without thirty (30) days prior written notice by certified or registered mail of amendment or cancellation to the Agency, except that cancellation for non-payment of premium shall require ten (10) days prior written notice by certified or registered mail. In the event the said insurance is canceled, the Consultant shall, prior to the cancellation date, submit to the City Clerk new evidence of insurance in the amount established.
- H. It is the consultant's responsibility to ensure that all subconsultants comply with the following: Each subconsultant that encroaches within the City's right-of-way and

affects (i.e., damages or impacts) City infrastructure must comply with the liability insurance requirements of the City's Land Development Division. Examples of such subconsultant work include soil sample borings, utility potholing, etc.

The "Application for Encroachment Permit" form (four pages), including "Application for Encroachment Permit Liability Insurance Requirements," is available in the Land Development Division and must be completed and submitted in full to the City.. It is the Consultant's responsibility to ensure that all subconsultants submit the appropriate encroachment permit and insurance documentation at the same time that the Consultant's insurance documentation is submitted.

X. INDEMNIFICATION

- A. To the maximum extent allowable by law, the Consultant, when functioning in the capacity of a design professional, agrees to indemnify, defend, and save the City, the City of Moreno Valley Housing Authority(MVHA), the Moreno Valley Community Services District (CSD), and the Western Riverside Council of Governments (WRCOG}, their officers, agents and employees harmless from any and all liability, claims, demands, damages, or injuries to any person, including injury to the Consultant's employees and .all claims that arise out of, pertain to, or relate to the negligence, recklessness or willful misconduct of the Consultant, its officers, agents or employees, or its sub consultant(s) or any person acting for the Consultant or under its control or direction; provided, however, that this indemnification and hold harmless shall not include claims arising from the negligence or willful misconduct of the City, MVHA, CSD, and WRCOG; their officers, agents or employees.
- B. The consultant, when not functioning in the capacity of a design professional, agrees to indemnify, defend, and save the City, the Moreno Valley Housing Authority(MVHA), the Moreno Valley Community Services District (CSD), and the Western Riverside Council of Governments (WRCOG), their officers, agents and employees harmless from any and all liability, claims, demands, damages, or injuries to any person, including injury to the Consultant's employees and all claims which arise from or are connected with the negligent performance of or failure to perform the work or other obligations of the Consultant under this Agreement, or are caused or claim to be caused by the negligent acts of the Consultant, its officers, agents or employees, or its sub consultant(s) or any person acting for the Consultant or under its control or direction; provided, however, that this indemnification and hold harmless shall not include claims arising from the sole negligence or willful misconduct of the City, MVHA, CSD, and WRCOG, their officers, agents or employees.
- C. The City agrees to indemnify, defend and save the Consultant and their officers, agents and employees harmless from any and all liability, claims, damages or injuries to any person, including injury to the City's, MVHA, CSD's, and WRCOG's employees and all claims which arise from or are connected with the negligent performance or failure to perform the services or other obligations of the City under this Agreement, or are caused or claim to be caused by the negligent acts of the City, MVHA, CSD, and WRCOG, their officers, agents or employees, or its subcontractor(s) or any person acting for the City or under its control or direction;

provided, however, that this indemnification and hold harmless shall not include any claims arising from the negligence or willful misconduct of the Consultant, its officers, agents or employees.

XI. TERMINATION FOR CONVENIENCE OF THE CITY

The City reserves the right to terminate the "Agreement for Professional Consultant Services" for the "convenience of the City" at any time by giving ten (10) days written notice to the Consultant of such termination and specifying the effective date thereof. All finished or unfinished drawings, maps, documents, field notes and other materials produced and procured by the Consultant under the said aforementioned Agreement is, at the option of the City, City property and shall be delivered to the City by the Consultant within ten (10) working days from the date of such termination. The City will reimburse the Consultant for all acceptable work performed as set forth in the executed Agreement.

XII. INDEPENDENT CONTRACTOR

The Consultant's relationship to the City in the performance of the Consultant's services for this project is that of an independent Contractor. The personnel performing said Construction Materials Testing & Geotechnical Services shall at all times be under the Consultant's exclusive direction and control and shall be employees of the Consultant and not employees of the City. The Consultant shall pay all wages, salaries and other amounts due his employees in connection with the performance of said work and shall be responsible for all employee reports and obligations, including but not necessarily restricted to, social security, income tax withholding, unemployment compensation, and Workers' Compensation.

XIII. CONTRACT

The Contract includes the Agreement for Professional Consultant Services, City's Request for Proposal, Consultant's Proposal, and Exhibits.

The Political Reform Act and the City's Conflict of Interest Code require that consultants be considered as potential filers of Statements of Economic Interest. Consultants, as defined by Section 18701, may be required to file an Economic Interest Statement (Form 700) within 30 days of signing a Consultant Agreement with the City, on an annual basis thereafter if the contract is still in place, and within 30 days of completion of the contract.

XIV. GENERAL CONDITIONS

A. Pre-contractual expenses are defined as expenses incurred by the Consultant in: (1) preparing the Proposal; (2) submitting the Proposal to the City; (3) presentation during selection interview; (4) negotiating with the City any matter related to this Proposal; (5) any other expenses incurred by the Consultant prior to an executed Agreement.

The City shall not, in any event, be liable for any pre-contractual expenses incurred by the Consultant.

**REQUEST FOR PROPOSAL FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 07-41570024
Page 11 of 12**

- B. The City reserves the right to withdraw this RFP at any time without prior notice. Further, the City makes no representations that any Agreement will be awarded to any Consultant responding to this RFP. The City expressly reserves the right to postpone reviewing the Proposals for its own convenience and to reject any and all Proposals responding to this RFP without indicating any reasons for such rejection(s).
- C. The City reserves the right to reject any or all Proposals submitted. Any Contracts awarded for these Consultant engagements will be made to the Consultant who, in the opinion of the City, is best qualified.

XV. SELECTION CRITERIA

It is the City's intent to select and utilize one Consultant firm for the project. The City may award the services in part and/or phases. The Consultant may be invited to a selection interview. The Proposals will be rated/ranked according to the following criteria:

- A. The Firm's General Experience and Qualification Information (20 points) – Information about the company (and all sub-consultants) including professional licenses held; ability to furnish required insurance and meet stipulations of the City's "boiler plate" agreement; details about comparable projects completed by the firm, as well as local experience; and its ability to provide the required services in an efficient and expeditious manner.
- B. Experience of Key Personnel (40 points) – Background on key personnel (including all sub-consultants) qualifications, abilities, familiarity with state and federal procedures, local experience on comparable projects and length of service with the firm, reference information preferably with municipal agencies, and proven track record and depth of understanding/knowledge of the proposed Project Manager and key personnel.
- C. Project Approach/Understanding (40 points) – Understanding of Project, discussion of major issues identified on the project and how the consultant team plans to address them; the management approach and organization necessary to complete the specific project; and outline quality control measures to ensure delivery of a quality product on time and within budget that provides a cost efficient, timely and predictable execution of the project construction.

XVI. Other Requirements

- A. Conflict of Interest
 - 1. The Consultant shall disclose any financial, business, or other relationship with City that may have an impact upon the outcome of this contract, or any ensuing City Construction project. The Consultant shall also list current clients who may have financial interest in the outcome of this Agreement, or any ensuing City construction project, which will follow.

**REQUEST FOR PROPOSAL FOR
PROFESSIONAL CONSULTANT SERVICES
PROJECT NO. 07-41570024
Page 12 of 12**

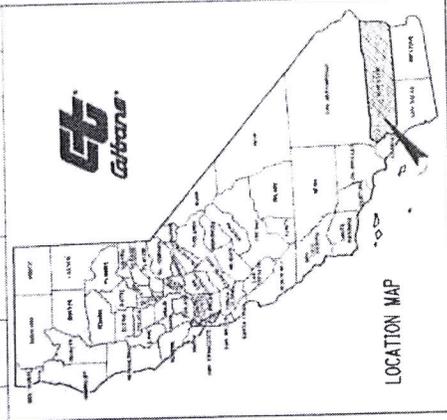

2. The Consultant hereby certifies that it does not now have, nor shall it acquire any financial or business interest that would conflict with the performance of services under this Agreement.
3. Any subcontract in excess of \$25,000 entered into as a result of this Agreement, shall contain all of the provisions of this Agreement.
4. The Consultant hereby certifies that neither the Consultant, its employees, nor any firm affiliated with the Consultant providing services on this project prepared the Plans, Specifications, and Estimates for any construction project included within this contract . An affiliated firm is one, which is subject to the control of the same persons through joint-ownership, or otherwise.
5. The Consultant further certifies that neither Consultant, nor any firm affiliated with the Consultant, will bid on any construction subcontracts included within the construction contract. Additionally, Consultant certifies that no person working under this Agreement is also employed by the construction contractor for any project included within this agreement.
6. Except for subcontractors whose services are limited to materials testing, no subcontractor who is providing services on this Agreement shall have provided services on the design of any project within this contract.

PROJECT NO. XX-XXXXX**

This Agreement is by and between the City of Moreno Valley, California, a municipal corporation, hereinafter described as "City," and **Consultant Company**, a (California corporation, partnership, sole ownership) hereinafter described as "Consultant." This Agreement is made and entered into effective on the date the City signs this Agreement.

RECITALS

WHEREAS, the City has determined it is in the public interest to proceed with the work hereinafter described as "Project"; and

WHEREAS, the City has determined the Project involves the performance of professional and technical services of a temporary nature as more specifically described in Exhibit "A" (City's Request for Proposal) and Exhibit "B" (Consultant's Proposal) hereto; and

WHEREAS, the City does not have available employees to perform the services for the Project; and

WHEREAS, the City has requested the Consultant to perform such services for the Project; and

WHEREAS, the Consultant is professionally qualified in California to perform the professional and technical services required for the Project;

THEREFORE, the City and the Consultant, for the consideration hereinafter described, mutually agree as follows:

Attachment "B"

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXXX**

DESCRIPTION OF PROJECT

1. The project is described as professional consultant _____ services for:

Project Name

Project No. XX-XXXXX

SCOPE OF SERVICES

2. The Consultant's scope of service is described on Exhibit "B" attached hereto and incorporated herein by this reference. In the event of a conflict, the City's Request for Proposal shall take precedence over the Consultant's Proposal.

3. The City's responsibility is described on Exhibit "C" attached hereto and incorporated herein by this reference.

PAYMENT TERMS

4. The City agrees to pay the Consultant and the Consultant agrees to receive a "Not-to-Exceed" fee of \$ _____ in accordance with the payment terms provided on Exhibit "D" attached hereto and incorporated herein by this reference.

TERM OF AGREEMENT

5. This agreement will terminate on **Month Date, Year** unless the termination date is extended by an amendment to the agreement.

TIME FOR PERFORMANCE

6. The Consultant shall commence services upon receipt of written direction to proceed from the City.

7. The Consultant shall perform the work described on Exhibit "A" in accordance with the schedule set forth in Exhibit "E" attached hereto and incorporated by this reference.

Or

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXXX**

7. The Consultant shall perform the work described on Exhibit "A" in accordance with the design/construction schedule as stated in the Notice to Proceed.

8. The Consultant and the City agree that the schedule in Paragraph 7 above represents their best estimates with respect to completion dates, and both the Consultant and the City acknowledge that it will not unreasonably withhold approval of the Consultant's requests for extensions of time in which to complete the work required of the Consultant hereunder.

9. The Consultant shall not be responsible for performance delays caused by others or delays beyond the Consultant's reasonable control, and such delays shall extend the time for performance of the work by the Consultant. Delays caused by non-performance or unjustified delay in performance by a subconsultant of the Consultant are not considered to be beyond the Consultant's reasonable control.

10. (a) The Consultant agrees that the personnel, including the principal Project manager, and all subconsultants assigned to the Project by the Consultant, shall be subject to the prior approval of the City.

(b) No change in subconsultants or key personnel shall be made by the Consultant without written prior approval of the City.

SPECIAL PROVISIONS

11. It is understood and agreed that the Consultant is, and at all times shall be, an independent contractor and nothing contained herein shall be construed as making the Consultant or any individual whose compensation for services is paid by the Consultant, an agent or employee of the City, or authorizing the Consultant to create or assume any obligation or liability for or on behalf of the City.

12. The Consultant may also retain or subcontract for the services of other necessary

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXXX**

consultants with the prior written approval of the City. Payment for such services shall be the responsibility of the Consultant. Any and all subconsultants employed by the Consultant shall be subject to the terms and conditions of this Agreement, except that the City shall have no obligation to pay any subconsultant for services rendered on the Project.

13. The Consultant and the City agree to use reasonable care and diligence to perform their respective services under this Agreement. Unless hereinafter specified, neither party shall be responsible for the services of the other or any subcontractor or sub-consultant employed by the other party.

14. The Consultant shall comply with applicable federal, state, and local laws in the performance of work under this Agreement.

[for Non-design contracts]

15. (a) The Consultant agrees to indemnify, defend, and save the City, the Community Redevelopment Agency of the City of Moreno Valley (RDA), the Moreno Valley Community Services District (CSD) and the Western Riverside Council of Governments (WRCOG), their officers, agents and employees harmless from any and all liability, claims, demands, damages, or injuries to any person, including injury to the Consultant's employees and all claims which arise from or are connected with the negligent performance of or failure to perform the work or other obligations of the Consultant under this Agreement, or are caused or claim to be caused by the negligent acts, recklessness or willful misconduct of the Consultant, its officers, agents or employees, or its subconsultant(s) or any person acting for the Consultant or under its control or direction.

(b) The City agrees to indemnify, defend and save the Consultant and their officers, agents and employees harmless from any and all liability, claims, damages or injuries to

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXXX**

any person, including injury to the City's, RDA's, CSD's, and WRCOG's employees and all claims which arise from or are connected with the negligent performance or failure to perform the services or other obligations of the City under this Agreement, or are caused or claim to be caused by the negligent acts, recklessness or willful misconduct of the City, RDA, CSD and WRCOG, their officers, agents or employees, or its subcontractor(s) or any person acting for the City or under its control or direction.

Or [for Design contracts]

15. (a) To the maximum extent allowable by law, the Consultant agrees to indemnify, defend, and save the City, the Community Redevelopment Agency of the City of Moreno Valley (RDA), the Moreno Valley Community Services District (CSD) and the Western Riverside Council of Governments (WRCOG), their officers, agents and employees harmless from any and all liability, claims, demands, damages, or injuries to any person, including injury to the Consultant's employees and all claims that arise out of, pertain to, or relate to the negligence, recklessness or willful misconduct of the Consultant, its officers, agents or employees, or its subconsultant(s) or any person acting for the Consultant or under its control or direction; provided, however, that this indemnification and hold harmless shall not include claims arising from the negligence or willful misconduct of the City, RDA, CSD and WRCOG, their officers, agents or employees.

(b) The City agrees to indemnify, defend and save the Consultant and their officers, agents and employees harmless from any and all liability, claims, damages or injuries to any person, including injury to the City's, RDA's, CSD's, and WRCOG's employees and all claims which arise from or are connected with the negligent performance or failure to perform the services or other obligations of the City under this Agreement, or are caused or claim to be caused by the negligent acts of the City, RDA, CSD and WRCOG, their officers, agents or

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXXX**

employees, or its subcontractor(s) or any person acting for the City or under its control or direction; provided, however, that this indemnification and hold harmless shall not include any claims arising from the negligence or willful misconduct of the Consultant, its officers, agents or employees.

Or [for Design/CM contracts]

15. (a) To the maximum extent allowable by law, the Consultant, when functioning in the capacity of a design professional, agrees to indemnify, defend, and save the City, the Community Redevelopment Agency of the City of Moreno Valley (RDA), the Moreno Valley Community Services District (CSD) and the Western Riverside Council of Governments (WRCOG), their officers, agents and employees harmless from any and all liability, claims, demands, damages, or injuries to any person, including injury to the Consultant's employees and all claims that arise out of, pertain to, or relate to the negligence, recklessness or willful misconduct of the Consultant, its officers, agents or employees, or its subconsultant(s) or any person acting for the Consultant or under its control or direction; provided, however, that this indemnification and hold harmless shall not include claims arising from the negligence or willful misconduct of the City, RDA, CSD, and WRCOG, their officers, agents or employees.

(b) The consultant, when not functioning in the capacity of a design professional, agrees to indemnify, defend, and save the City, the Moreno Valley Community Redevelopment Agency (RDA), the Moreno Valley Community Services District (CSD) and the Western Riverside Council of Governments (WRCOG), their officers, agents and employees harmless from any and all liability, claims, demands, damages, or injuries to any person, including injury to the Consultant's employees and all claims which arise from or are connected with the negligent performance of or failure to perform the work or other obligations of the Consultant under this Agreement, or are

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXXX**

caused or claim to be caused by the negligent acts of the Consultant, its officers, agents or employees, or its subconsultant(s) or any person acting for the Consultant or under its control or direction; provided, however, that this indemnification and hold harmless shall not include claims arising from the sole negligence or willful misconduct of the City, RDA, CSD, and WRCOG, their officers, agents or employees.

(c) The City agrees to indemnify, defend and save the Consultant and their officers, agents and employees harmless from any and all liability, claims, damages or injuries to any person, including injury to the City's, RDA's, CSD's, and WRCOG's employees and all claims which arise from or are connected with the negligent performance or failure to perform the services or other obligations of the City under this Agreement, or are caused or claim to be caused by the negligent acts of the City, RDA, CSD, and WRCOG, their officers, agents or employees, or its subcontractor(s) or any person acting for the City or under its control or direction; provided, however, that this indemnification and hold harmless shall not include any claims arising from the negligence or willful misconduct of the Consultant, its officers, agents or employees.

16. (a) The Consultant shall procure and maintain, at its sole expense, throughout the term of this Agreement and any extension thereof, Professional Errors and Omission Insurance coverage in the form and substance and with carriers acceptable to the City. Such coverage limits shall not be less than \$1,000,000 per claim and aggregate.

(b) During the entire term of this Agreement, the Consultant agrees to procure and maintain General Liability Insurance in form and substance and with carriers acceptable to the City at its sole expense to protect against loss from liability imposed by law for damages on account of bodily injury, including death therefrom, suffered or alleged to be suffered by any

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXXX**

person or persons whomever, resulting directly or indirectly from any act or activities of the Consultant its sub-consultant or any person acting for the Consultant or under its control or direction, and also to protect against loss from liability imposed by law for damages to any property of any persons caused directly or indirectly by or from acts or activities of the Consultant or its subconsultants, or any person acting for the Consultant or under its control or direction.

(c) Such Public Liability and Property Damage Insurance shall be maintained in full force and effect throughout the terms of the Agreement and any extension thereof in the minimum limits provided below:

<u>GENERAL LIABILITY</u>	
Bodily Injury	\$1,000,000 per occurrence
Property Damage	\$ 500,000 per occurrence

A combined single limit policy with aggregate limits in the amount of \$2,000,000 will be considered equivalent to the above minimum limits.

(d) If the operation under this Agreement results in an increased or decreased risk in the opinion of the City Manager, then the Consultant agrees that the minimum general liability limits hereinabove designated shall be changed accordingly upon request by the City Manager.

(e) The Consultant shall procure and maintain, at its sole expense, and throughout the term of this Agreement and any extension thereof, Public Liability and Property Damage Insurance coverage for owned and non-owned automotive equipment operated on City premises. Such coverage limits shall not be less than \$1,000,000 combined single limit.

(f) The Consultant shall procure and maintain, at its sole expense, Workers' Compensation Insurance in such amounts as will fully comply with the laws of the State of

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXXX**

California and which shall indemnify, insure and provide legal defense for both the Consultant and the City, RDA, CSD and WRCOG against any loss, claim, or damage arising from any injuries or occupational diseases happening to any worker employed by the Consultant in the course of carrying out the Agreement.

(g) A Certificate of Insurance, or an appropriate insurance binder evidencing the above insurance coverage shall be submitted to the City Clerk prior to the execution of this Agreement on behalf of the City.

(h) The Certificate of Insurance or an appropriate binder shall bear an endorsement containing the following provisions:

"Solely as respect to services done by or on behalf of the named insured for the City of Moreno Valley, it is agreed that the City of Moreno Valley, the Community Redevelopment Agency of the City of Moreno Valley, the Moreno Valley Community Services District and Western Riverside Council of Governments, their officers, employees and agents are included as additional insured under this general liability policy and the coverage(s) provided shall be primary insurance and not contributing with any other insurance available to the City of Moreno Valley, the Community Redevelopment Agency of the City of Moreno Valley, the Moreno Valley Community Services District and Western Riverside Council of Governments, its officers, employees and agents, under any third party liability policy."

(i) Insurance companies providing insurance hereunder shall be rated (A minus: VII - Admitted) or better in Best's Insurance Rating Guide and shall be legally licensed

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXXX**

and qualified to conduct insurance business in the State of California.

(j) The terms of the insurance policy or policies issued to provide the above insurance coverage shall not be amended to reduce the above required insurance limits and coverages nor shall such policies be canceled by the carrier without thirty (30) days prior written notice by certified or registered mail of amendment or cancellation to the City, except that cancellation for non-payment of premium shall require ten (10) days prior written notice by certified or registered mail. In the event the said insurance is canceled, the Consultant shall, prior to the cancellation date, submit to the City Clerk new evidence of insurance in the amounts established.

17. During the performance of this Agreement, the Consultant will not unlawfully discriminate against any employee or applicant for employment because of race, religion, creed, color, national origin, sex, or age. The Consultant will take affirmative action to ensure that applicants are employed, and that employees are treated during employment without regard to their race, religion, creed, color, national origin, sex, or age.

18. Consultant and subconsultants shall pay prevailing wage rates when required by the Labor Laws of the State of California.

19. (a) The Consultant shall deliver to the Public Works Director/City Engineer of the City or his designated representative, in both hard copy and electronic format, fully completed and detailed project-related documents which shall become the property of the City. The Consultant may retain, for its files, copies of any and all material, including drawings, documents, and specifications, produced by the Consultant in performance of this Agreement. It shall be understood that the City shall be the owner of all project-related documents and drawings at all times and during all phases of the project.

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXXX**

(b) The Consultant shall be entitled to copies of all furnished materials for his files and his subconsultants, if any.

(c) The City agrees to hold the Consultant free and harmless from any claim arising from any unauthorized use of computations, maps, and other documents prepared or provided by the Consultant under this Agreement, if used by the City on other projects without the permission of the Consultant. Consultant acknowledges that Consultant work product produced under this agreement may be public record under State law.

20. (a) The City may terminate this Agreement without fault on the part of Consultant by giving at least ten (10) days written notice to the Consultant. The written notice shall specify the date of termination. Upon receipt of such notice, the Consultant may continue services on the project through the date of termination, provided that no service(s) shall be commenced or continued after receipt of the notice, which is not intended to protect the interest of the City. The City shall pay the Consultant within thirty (30) days after the date of termination for all non-objected to services performed by the Consultant in accordance herewith through the date of termination. Such termination may be effective immediately.

(b) Upon notice of termination, the Consultant shall deliver to the Public Works Director/City Engineer of the City or his designated representative, in both hard copy and electronic format, fully completed and detailed project-related documents which shall become the property of the City. The Consultant may retain for its files copies of any and all materials, including drawings, documents, and specifications produced by the Consultant in performance of this Agreement. It shall be understood that the City shall be the owner of all project-related documents and drawings, regardless of the completeness of said documents.

(c) The Consultant shall be entitled to copies of all furnished materials for his

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXXX**

files and his subconsultants, if any.

(d) The City agrees to hold the Consultant free and harmless from any claim arising from any unauthorized use of computations, maps, and other documents prepared or provided by the Consultant. Consultant acknowledges that Consultant work product produced under this Agreement may be public record under State law.

(e) Either party may terminate this Agreement for cause. In the event the City terminates this Agreement for cause, the Consultant shall perform no further service(s) under the Agreement unless the notice of termination authorizes such further work.

21. This Agreement is binding upon the City and the Consultant and their successors and assigns. Except as otherwise provided herein, neither the City nor the Consultant shall assign, sublet, or transfer its interest in this Agreement or any part thereof without the prior written consent of the other.

22. A City representative shall be designated by the City and a Consultant representative shall be designated by the Consultant. The City representative and the Consultant representative shall be the primary contact person for each party regarding performance of this Agreement. The City representative shall cooperate with the Consultant, and the Consultant's representative shall cooperate with the City in all matters regarding this Agreement and in such a manner as will result in the performance of the services in a timely and expeditious fashion.

23. This Agreement represents the entire and integrated Agreement between the City and the Consultant, and supersedes all prior negotiations, representations or Agreements, either written or oral. This Agreement may be modified or amended only by a subsequent written Agreement signed by both parties.

24. Where the payment terms provide for compensation on a time and materials basis,

**AGREEMENT FOR PROFESSIONAL
CONSULTANT SERVICES
PROJECT NO. XX-XXXXX**

the Consultant shall maintain adequate records to permit inspection and audit of the Consultant's time and materials charges under this Agreement. The Consultant shall make such records available to the City at the Consultant's office during normal business hours upon reasonable notice. Nothing herein shall convert such records into public records. Except as may be otherwise required by law, such records will be available only to the City. Such records shall be maintained by the Consultant for three (3) years following completion of the services under this Agreement.

25. The City and the Consultant agree, that to the extent permitted by law, until final approval by the City, all data shall be treated as confidential and will not be released to third parties without the prior written consent of both parties.

26. The Consultant shall employ no City official or employee in the work performed pursuant to this Agreement. No officer or employee of the City shall have any financial interest in this Agreement in violation of federal, state, or local law.

27. All Plans, drawings, Specifications, reports, logs, and other documents prepared by the Consultant in its performance under this Agreement shall, upon completion of the project, be delivered to and be the property of the City, provided that the Consultant shall be entitled, at its own expense, to make copies thereof for its own use.

28. The laws of the State of California shall govern the rights, obligations, duties, and liabilities of the parties to this Agreement, and shall also govern the interpretation of this Agreement.

CITY - SERVICES TO BE PROVIDED
TO CONSULTANT

1. Furnish the Consultant all in-house data which is pertinent to services to be performed by the Consultant and which is within the custody or control of the City, including, but not limited to, copies of record and off-record maps and other record and off-record property data, right-of-way maps and other right-of-way data, pending or proposed subject property land division and development application data, all newly developed and pertinent design and project specification data, and such other pertinent data which may become available to the City.
2. Provide timely review, processing, and reasonably expeditious approval of all submittals by the Consultant.
3. Provide timely City staff liaison with the Consultant when requested and when reasonably needed.

EXHIBIT "C"

TERMS OF PAYMENT

1. The Consultant's compensation shall not exceed \$_____.
2. The Consultant will obtain, and keep current during the term of this Agreement, the required City of Moreno Valley business license. Proof of a current City of Moreno Valley business license will be required prior to any payments by the City. Any invoice not paid because the proof of a current City of Moreno Valley business license has not been provided will not incur any fees, late charges, or other penalties. Complete instructions for obtaining a City of Moreno Valley business license are located at: http://www.moval.org/do_biz/biz-license.shtml
3. The Consultant will electronically submit an invoice to the City once a month for progress payments along with documentation evidencing services completed to date. The progress payment is based on actual time and materials expended in furnishing authorized professional services during the preceding calendar month. At no time will the City pay for more services than have been satisfactorily completed and the City Engineer's determination of the amount due for any progress payment shall be final. The consultant will submit all original invoices to Accounts Payable staff at AccountsPayable@moval.org. Accounts Payable questions can be directed to (951) 413-3073. Copies of invoices may be submitted to the Capital Projects Division at zara@moval.org or calls directed to (951) 413-3131.
4. The Consultant agrees that City payments will be received via Automated Clearing House (ACH) Direct Deposit and that the required ACH Authorization form will be completed prior to any payments by the City. Any invoice not paid because the completed ACH Authorization Form has not been provided will not incur any fees,

late charges, or other penalties. The ACH Authorization Form is located at:

http://www.moval.org/city_hall/forms.shtml#bf

5. The minimum information required on all invoices is:
 - A. Vendor Name, Mailing Address, and Phone Number
 - B. Invoice Date
 - C. Vendor Invoice Number
 - D. City-provided Reference Number (e.g. Project, Activity)
 - E. Detailed work hours by class title (e.g. Manager, Technician, or Specialist), services performed and rates, explicit portion of a contract amount, or detailed billing information that is sufficient to justify the invoice amount; single, lump amounts without detail are not acceptable.

6. The City shall pay the Consultant for all invoiced, authorized professional services within forty-five (45) days of receipt of the invoice for same.

CONSTRUCTION COOPERATIVE AGREEMENT

This agreement, effective on December 4, 2012, is between the State of California, acting through its Department of Transportation, referred to as CALTRANS, and:

City of Moreno Valley, a body politic and municipal corporation or chartered city of the State of California, referred to as CITY.

For the purpose of this agreement, the term PARTNERS collectively refers to CALTRANS and CITY (all signatory parties to this agreement). The term PARTNER refers to any one of those signatory parties individually.

RECITALS

1. California Streets and Highways Code sections 114 and 130 authorize PARTNERS to enter into a cooperative agreement for performance of work within the State Highway System (SHS) right of way.
2. This agreement outlines the terms and conditions of cooperation between PARTNERS to complete the construction capital phase to improve the eastbound ramp configuration at Moreno Beach Drive on State Route 60 (SR-60) in the City of Moreno Valley and construct auxiliary lanes for the eastbound portion of the freeway between the Nason Street overcrossing and the Moreno Beach Drive overcrossing.

For the purpose of this agreement, improvements to the eastbound ramp configuration at Moreno Beach Drive on SR-60 in the City of Moreno Valley and construction of auxiliary lanes for the eastbound portion of the freeway between the Nason Street overcrossing and the Moreno Beach Drive overcrossing will be referred to as PROJECT. All responsibilities assigned in this agreement to complete the construction capital phase of PROJECT will be referred to as OBLIGATIONS.

3. This agreement is separate from and does not modify or replace any other cooperative agreement or memorandum of understanding between PARTNERS regarding PROJECT.
4. Prior to this agreement, the CITY developed the Project Report; Plans, Specifications and Estimate; and the Right of Way Certification (Cooperative Agreement No. 8-1314).
5. CITY prepared the environmental documentation for PROJECT.
6. The estimated date for OBLIGATION COMPLETION is December 31, 2014.

7. In this agreement capitalized words represent defined terms and acronyms. The Definitions section contains a complete definition for each capitalized term.
8. From this point forward, PARTNERS define in this agreement the terms and conditions under which they will accomplish OBLIGATIONS.

RESPONSIBILITIES

9. CITY is SPONSOR for 100% of PROJECT.
10. CALTRANS will provide IQA for the portions of WORK within existing and proposed SHS right of way. CALTRANS retains the right to reject noncompliant WORK, protect public safety, preserve property rights, and ensure that all WORK is in the best interest of the SHS.
11. CITY may provide IQA for the portions of WORK outside existing and proposed SHS right of way.
12. CITY is the only FUNDING PARTNER for this agreement. CITY's funding commitment is defined in the FUNDING SUMMARY.
13. CALTRANS is the CEQA lead agency for PROJECT.
14. CALTRANS is the NEPA lead agency for PROJECT.
15. CITY is IMPLEMENTING AGENCY for CONSTRUCTION.

SCOPE

Scope: General

16. PARTNERS will perform all OBLIGATIONS in accordance with federal and California laws, regulations, and standards; FHWA STANDARDS; and CALTRANS STANDARDS.
17. IMPLEMENTING AGENCY for a PROJECT COMPONENT will provide a Quality Management Plan (QMP) for that component as part of the PROJECT MANAGEMENT PLAN. The District Construction Division, with input from Structure Construction must approve the Quality Management Plan (QMP) before the encroachment permit for construction is issued.
18. Any PARTNER may, at its own expense, have representatives observe any OBLIGATIONS performed by another PARTNER. Observation does not constitute authority over those OBLIGATIONS.

19. Each PARTNER will ensure that all of its personnel participating in OBLIGATIONS are appropriately qualified, and if necessary licensed, to perform the tasks assigned to them.
20. IMPLEMENTING AGENCY shall retain consultants and shall invite CALTRANS to participate in the selection and retention of consultants that participate in OBLIGATIONS. At least one representative from the Construction Division of CALTRANS shall participate in the selection process. A construction management firm shall not be selected without the approval by this representative.
21. If WORK is done under contract (not completed by a PARTNER's own employees) and is governed by the California Labor Code's definition of "public works" (section 1720(a)(a)), that PARTNER will conform to sections 1720 – 1815 of the California Labor Code and all applicable regulations and coverage determinations issued by the Director of Industrial Relations.
22. IMPLEMENTING AGENCY for each PROJECT COMPONENT included in this agreement will be available to help resolve problems generated by that component for the entire duration of PROJECT.
23. CALTRANS will issue, upon proper application, the encroachment permits required for WORK within SHS right of way.

Contractors and/or agents, and utility owners will not perform WORK without an encroachment permit issued in their name.

24. If any PARTNER discovers unanticipated cultural, archaeological, paleontological, or other protected resources during WORK, all WORK in that area will stop and that PARTNER will notify all PARTNERS within 24 hours of discovery. WORK may only resume after a qualified professional has evaluated the nature and significance of the discovery and a plan is approved for its removal or protection.
25. PARTNERS will hold all administrative drafts and administrative final reports, studies, materials, and documentation relied upon, produced, created, or utilized for PROJECT in confidence to the extent permitted by law. Where applicable, the provisions of California Government Code section 6254.5(e) will govern the disclosure of such documents in the event that PARTNERS share said documents with each other.

PARTNERS will not distribute, release, or share said documents with anyone other than employees, agents, and consultants who require access to complete PROJECT without the written consent of the PARTNER authorized to release them, unless required or authorized to do so by law.

26. If any PARTNER receives a public records request, pertaining to OBLIGATIONS, that PARTNER will notify PARTNERS within five (5) working days of receipt and make PARTNERS aware of any disclosed public records. PARTNERS will consult with each other prior to the release of any public documents related to the PROJECT.

27. If HM-1 or HM-2 is found during a PROJECT COMPONENT, IMPLEMENTING AGENCY for that PROJECT COMPONENT will immediately notify PARTNERS.
28. CALTRANS, independent of PROJECT, is responsible for any HM-1 found within the existing SHS right of way. CALTRANS will undertake HM MANAGEMENT ACTIVITIES related to HM-1 with minimum impact to PROJECT schedule.
29. CITY, independent of PROJECT, is responsible for any HM-1 found within PROJECT limits and outside the existing SHS right of way. CITY will undertake or cause to be undertaken HM MANAGEMENT ACTIVITIES related to HM-1 with minimum impact to PROJECT schedule.
30. If HM-2 is found within PROJECT limits, the public agency responsible for the advertisement, award, and administration (AAA) of the PROJECT construction contract will be responsible for HM MANAGEMENT ACTIVITIES related to HM-2.
31. CALTRANS' acquisition or acceptance of title to any property on which any HM-1 or HM-2 is found will proceed in accordance with CALTRANS' policy on such acquisition.
32. PARTNERS will comply with all of the commitments and conditions set forth in the environmental documentation, environmental permits, approvals, and applicable agreements as those commitments and conditions apply to each PARTNER's responsibilities in this agreement.
33. IMPLEMENTING AGENCY for each PROJECT COMPONENT will furnish PARTNERS with written quarterly progress reports during the implementation of OBLIGATIONS in that component.
34. Upon OBLIGATION COMPLETION, ownership or title to all materials and equipment constructed or installed for the operations and/or maintenance of the SHS within SHS right of way as part of WORK become the property of CALTRANS.

CALTRANS will not accept ownership or title to any materials or equipment constructed or installed outside SHS right of way.
35. IMPLEMENTING AGENCY for a PROJECT COMPONENT will accept, reject, compromise, settle, or litigate claims of any non-agreement parties hired to do WORK in that component.
36. PARTNERS will confer on any claim that may affect OBLIGATIONS or PARTNERS' liability or responsibility under this agreement in order to retain resolution possibilities for potential future claims. No PARTNER will prejudice the rights of another PARTNER until after PARTNERS confer on claim.
37. PARTNERS will maintain, and will ensure that any party hired by PARTNERS to participate in OBLIGATIONS will maintain, a financial management system that

conforms to Generally Accepted Accounting Principles (GAAP), and that can properly accumulate and segregate incurred PROJECT costs, and provide billing and payment support.

38. PARTNERS will comply with the appropriate federal cost principles and administrative requirements outlined in the Applicable Cost Principles and Administrative Requirements table below. These principles and requirements apply to all funding types included in this agreement.
39. PARTNERS will ensure that any party hired to participate in OBLIGATIONS will comply with the appropriate federal cost principles and administrative requirements outlined in the Applicable Cost Principles and Administrative Requirements table below.

Applicable Cost Principles and Administration Requirements		
The federal cost principles and administrative requirements associated with each organization type apply to that organization.		
Organization Type	Cost Principles	Administrative Requirements
Federal Governments	2 CFR Part 225	OMB A-102
State and Local Government	2 CFR, Part 225	49 CFR, Part 18
Educational Institutions	2 CFR, Part 220	2 CFR, Part 215
Non-Profit Organizations	2 CFR, Part 230	2 CFR, Part 215
For Profit Organizations	48 CFR, Chapter 1, Part 31	49 CFR, Part 18
CFR (Code of Federal Regulations)		
OMB (Office of Management and Budget)		
Related URLs:		
• Various OMB Circular:		http://www.whitehouse.gov/omb/grants_circulars
• Code of Federal Regulations:		http://www.gpoaccess.gov/CFR

40. PARTNERS will maintain and make available to each other all OBLIGATIONS-related documents, including financial data, during the term of this agreement.
41. PARTNERS will retain all OBLIGATIONS-related records for three (3) years after the final voucher.
42. PARTNERS have the right to audit each other in accordance with generally accepted governmental audit standards.

CALTRANS, the state auditor, FHWA, and CITY will have access to all OBLIGATIONS-related records of each PARTNER, and any party hired by a PARTNER to participate in OBLIGATIONS, for audit, examination, excerpt, or transcription.

The examination of any records will take place in the offices and locations where said records are generated and/or stored and will be accomplished during reasonable hours of

operation. The auditing PARTNER will be permitted to make copies of any OBLIGATIONS-related records needed for the audit.

The audited PARTNER will review the draft audit, findings, and recommendations, and provide written comments within 30 calendar days of receipt.

Upon completion of the final audit, PARTNERS have 30 days to refund or invoice as necessary in order to satisfy the obligation of the audit.

Any audit dispute not resolved by PARTNERS is subject to dispute resolution. Any costs arising out of the dispute resolution process will be paid within 30 calendar days of the final audit or dispute resolution findings.

43. Any PARTNER that hires another party to participate in OBLIGATIONS will conduct a pre-award audit of that party in accordance with the *Local Assistance Procedures Manual*.

44. PARTNERS will not incur costs beyond the funding commitments in this agreement. If IMPLEMENTING AGENCY anticipates that funding for WORK will be insufficient to complete WORK, IMPLEMENTING AGENCY will promptly notify SPONSOR.

IMPLEMENTING AGENCY has no obligation to perform WORK if funds to perform WORK are unavailable.

45. If WORK stops for any reason, IMPLEMENTING AGENCY will place all facilities impacted by WORK in a safe and operable condition acceptable to CALTRANS.

46. If WORK stops for any reason, each PARTNER will continue to implement all of its applicable commitments and conditions included in the PROJECT environmental documentation, permits, agreements, or approvals that are in effect at the time that WORK stops, as they apply to each PARTNER's responsibilities in this agreement, in order to keep PROJECT in environmental compliance until WORK resumes.

47. Each PARTNER accepts responsibility to complete the activities that it selected on the SCOPE SUMMARY. Activities marked with "N/A" on the SCOPE SUMMARY are not included in the scope of this agreement.

48. Contract administration procedures shall conform to CALTRANS' Construction Manual, Local Assistance Procedures Manual (if Federal funds are used), and the PROJECT encroachment permits.

49. If the Resident Engineer is not also a registered Landscape Architect, CITY will furnish, at CITY expense and subject to approval of CALTRANS Landscape Architecture, a registered Landscape Architect to perform work related to architecture treatment and landscaping and to perform the function of an Assistant Resident Engineer/Inspector who is responsible for both daily on-site inspections and final decisions including, but not

limited to, any highway planting and the irrigation systems that comprise a portion of the PROJECT work. Final decisions shall continue to be subject to the satisfaction and approval of CALTRANS.

50. Within one hundred eighty (180) days following the completion and acceptance of the PROJECT construction contract, to furnish CALTRANS with a complete set of "As-Built" plans (hard copy and electronic formats) in accordance with CALTRANS' then current CADD Users Manual, Plans Preparation Manual, and CALTRANS practice. The submittal must also include all CALTRANS requested contract records, including survey documents and Records of Surveys (to include monument perpetuation per the Land Surveyor Act, section 8771, including but not limited to preconstruction monumentation documents and a post construction Record of Survey). CITY shall also submit corrected full-sized hardcopy structure plans.

Scope: Environmental Permits, Approvals and Agreements

51. Each PARTNER identified in the Environmental Permits table below accepts the responsibility to complete the assigned activities.

Environmental Permits						
Permit	Coordinate	Prepare	Obtain	Implement	Renew	Amend
404 USACOE	CITY	CITY	CITY	CITY	CITY	CITY
401 RWQCB	CITY	CITY	CITY	CITY	CITY	CITY
NPDES	CITY	CITY	CITY	CITY	CITY	CITY
SWRCB						
1602 DFG	CITY	CITY	CITY	CITY	CITY	CITY

Scope: CONSTRUCTION

52. CITY will advertise, open bids, award, approve, and administer the construction contract in accordance with the California Public Contract Code and the California Labor Code.

CITY will not advertise the construction contract until CALTRANS completes or accepts the final plans, specifications, and estimate package; CALTRANS approves the Right of Way Certification; and SPONSOR verifies full funding of CONSTRUCTION SUPPORT and CONSTRUCTION CAPITAL.

By accepting responsibility to advertise and award the construction contract, CITY also accepts responsibility to administer the construction contract.

PARTNERS agree that CITY is designated as the Legally Responsible Person and the Approved Signatory Authority pursuant to the Construction General Permit, State Water Resources Control Board (SWRCB) Order Number 2009-0009-DWQ, as defined in Appendix 5, Glossary, and assumes all roles and responsibilities assigned to the Legally

Responsible Person and the Approved Signatory Authority as mandated by the Construction General Permit.

53. IMPLEMENTING AGENCY will implement changes to the construction contract through contract change orders (CCOs). PARTNERS will review and concur on all CCOs over \$50,000.

CALTRANS must approve all CCOs affecting public safety or the preservation of property, all design and specification changes, and all major changes as defined in the CALTRANS Construction Manual prior to implementing the CCO.
54. If the lowest responsible construction contract bid is greater than the funding commitment to CONSTRUCTION CAPITAL, all PARTNERS must be involved in determining how to proceed. If PARTNERS do not agree in writing on a course of action within 15 working days, this agreement will terminate.
55. CITY will require the construction contractor to furnish payment and performance bonds naming CITY as obligee, and CALTRANS as additional obligee, and to carry liability insurance in accordance with CALTRANS specifications.
56. CITY will submit a written request to CALTRANS for any SFM identified in the PROJECT plans, specifications, and estimate a minimum of 45 days prior to the bid advertisement date for PROJECT construction contract. CITY will submit a written request to CALTRANS for any additional SFM deemed necessary during PROJECT construction.
57. CALTRANS will make SFM available at a CALTRANS-designated location after CITY requests SFM and pays CALTRANS' invoice for estimated SFM costs.
58. As IMPLEMENTING AGENCY for CONSTRUCTION, CITY is responsible for maintenance within PROJECT limits as part of the construction contract.
59. PARTNERS will execute a separate maintenance agreement prior to OBLIGATION COMPLETION.

COST

Cost: General

60. The cost of any awards, judgments, or settlements generated by OBLIGATIONS is an OBLIGATIONS COST.
61. CALTRANS, independent of PROJECT, will pay all costs for HM MANAGEMENT ACTIVITIES related to HM-1 found within the existing SHS right of way.

62. CITY, independent of PROJECT, will pay, or cause to be paid, all costs for HM MANAGEMENT ACTIVITIES related to HM-1 found within PROJECT limits and outside of the existing SHS right of way.
63. HM MANAGEMENT ACTIVITIES costs related to HM-2 are CONSTRUCTION SUPPORT and CONSTRUCTION CAPITAL costs.
64. The cost to comply with and implement the commitments set forth in the environmental documentation is an OBLIGATIONS COST.
65. The cost to ensure that PROJECT remains in environmental compliance is an OBLIGATIONS COST.
66. The cost of any legal challenges to the CEQA or NEPA environmental process or documentation is an OBLIGATIONS COST.
67. Independent of OBLIGATIONS COST, CALTRANS will fund the cost of its own IQA for WORK done within existing or proposed future SHS right of way.
68. Independent of OBLIGATIONS COST, CITY will fund the cost of its own IQA for WORK done outside existing or proposed future SHS right of way.
69. CALTRANS will provide encroachment permits at no cost to PARTNERS, their contractors, consultants and agents, and the following utility companies: Southern California Edison, Moreno Valley Utility, and Eastern Municipal Water District.
70. Fines, interest, or penalties levied against a PARTNER will be paid, independent of OBLIGATIONS COST, by the PARTNER whose actions or lack of action caused the levy. That PARTNER will indemnify and defend each other PARTNER.
71. Travel, per diem, and third-party contract reimbursements are an OBLIGATIONS COST only after those hired by PARTNERS to participate in OBLIGATIONS incur and pay those costs.

Payments for travel and per diem will not exceed the rates paid rank and file state employees under current California Department of Personnel Administration (DPA) rules current at the effective date of this agreement.

If CITY invoices for rates in excess of DPA rates, CITY will fund the cost difference and reimburse CALTRANS for any overpayment.
72. The cost of non-IQA engineering support performed by CALTRANS includes all direct and applicable indirect costs. CALTRANS calculates indirect costs based solely on the type of funds used to pay support costs. State and federal funds are subject to the current Program Functional Rate. Local funds are subject to the current Program Functional Rate

and the current Administration Rate. CALTRANS periodically adjusts the Program Functional Rate and the Administration Rate.

73. If CALTRANS reimburses CITY for any costs later determined to be unallowable, CITY will reimburse those funds.

74. The cost to place PROJECT right of way in a safe and operable condition and meet all environmental commitments is an OBLIGATIONS cost.

75. Because IMPLEMENTING AGENCY is responsible for managing the scope, cost, and schedule of a project component, if there are insufficient funds available in this agreement to place the right of way in a safe and operable condition, the appropriate IMPLEMENTING AGENCY accepts responsibility to fund these activities until such time as PARTNERS amend this agreement.

That IMPLEMENTING AGENCY may request reimbursement for these costs during the amendment process.

76. If there are insufficient funds in this agreement to implement applicable commitments and conditions included in the PROJECT environmental documentation, permits, agreements, and/or approvals that are in effect at a time that WORK stops, each PARTNER implementing commitments or conditions accepts responsibility to fund these activities, as they apply to each PARTNER's responsibilities, until such time as PARTNERS amend this agreement.

Each PARTNER may request reimbursement for these costs during the amendment process.

77. PARTNERS will pay invoices within 30 calendar days of receipt of invoice.

Cost: Environmental Permits, Approvals and Agreements

78. The cost of coordinating, obtaining, complying with, implementing, and if necessary renewing and amending resource agency permits, agreements, and/or approvals is an OBLIGATIONS COST.

Cost: CONSTRUCTION Support

79. The cost to maintain the SHS within PROJECT limits is an OBLIGATIONS COST until PARTNERS execute a separate maintenance agreement.

80. Each PARTNER listed below may submit invoices for CONSTRUCTION Support for source inspection:

- CALTRANS may invoice CITY

81. PARTNERS will exchange funds for actual costs up to a maximum of \$65,000.

CALTRANS will invoice CITY for \$10,000 initial deposit 30 working days prior to the construction contract bid advertisement date. This deposit represents two (2) months' estimated support costs for source inspection.

Thereafter, CALTRANS will submit to CITY monthly invoices for estimated monthly costs based on the prior month's actual expenditures.

After PARTNERS agree that all WORK is complete, CALTRANS will submit a final accounting for all OBLIGATIONS COSTS. Based on the final accounting, PARTNERS will refund or invoice as necessary in order to satisfy the financial commitments of this agreement.

Cost: CONSTRUCTION Capital

82. The cost of all SFM is a CONSTRUCTION CAPITAL cost.

CALTRANS will invoice CITY for the actual cost of any SFM as a CONSTRUCTION CAPITAL cost.

After PARTNERS agree that all WORK is complete, CALTRANS will submit a final accounting for all SFM costs. Based on the final accounting, PARTNERS will refund or invoice as necessary in order to satisfy the financial commitments of this agreement.

SCHEDULE

83. PARTNERS will manage the schedule for OBLIGATIONS through the work plan included in the PROJECT MANAGEMENT PLAN. The Project Manager must approve the PROJECT MANAGEMENT PLAN before the encroachment permit for construction is issued.

GENERAL CONDITIONS

84. PARTNERS understand that this agreement is in accordance with and governed by the Constitution and laws of the State of California. This agreement will be enforceable in the State of California. Any PARTNER initiating legal action arising from this agreement will file and maintain that legal action in the Superior Court of the county in which the CALTRANS district office that is signatory to this agreement resides, or in the Superior Court of the county in which PROJECT is physically located.

85. All OBLIGATIONS of CALTRANS under the terms of this agreement are subject to the appropriation of resources by the Legislature, the State Budget Act authority, and the allocation of funds by the California Transportation Commission.

86. Any PARTNER performing IQA does so for its own benefit. No one can assign liability to that PARTNER due to its IQA activities.

87. Neither CITY nor any officer or employee thereof is responsible for any injury, damage or liability occurring by reason of anything done or omitted to be done by CALTRANS and/or its agents under or in connection with any work, authority, or jurisdiction conferred upon CALTRANS under this agreement.

It is understood and agreed that CALTRANS will fully defend, indemnify, and save harmless CITY and all of its officers and employees from all claims, suits, or actions of every name, kind, and description brought forth under, but not limited to, tortious, contractual, inverse condemnation, or other theories or assertions of liability occurring by reason of anything done or omitted to be done by CALTRANS and/or its agents under this agreement.

88. Neither CALTRANS nor any officer or employee thereof is responsible for any injury, damage, or liability occurring by reason of anything done or omitted to be done by CITY and/or its agents under or in connection with any work, authority, or jurisdiction conferred upon CITY under this agreement.

It is understood and agreed that CITY will fully defend, indemnify, and save harmless CALTRANS and all of its officers and employees from all claims, suits, or actions of every name, kind, and description brought forth under, but not limited to, tortious, contractual, inverse condemnation, or other theories or assertions of liability occurring by reason of anything done or omitted to be done by CITY and/or its agents under this agreement.

89. PARTNERS do not intend this agreement to create a third party beneficiary or define duties, obligations, or rights in parties not signatory to this agreement. PARTNERS do not intend this agreement to affect their legal liability by imposing any standard of care for fulfilling OBLIGATIONS different from the standards imposed by law.

90. PARTNERS will not assign or attempt to assign OBLIGATIONS to parties not signatory to this agreement.

91. PARTNERS will not interpret any ambiguity contained in this agreement against each other. PARTNERS waive the provisions of California Civil Code section 1654.

92. A waiver of a PARTNER's performance under this agreement will not constitute a continuous waiver of any other provision. An amendment made to any article or section of this agreement does not constitute an amendment to or negate all other articles or sections of this agreement.

93. A delay or omission to exercise a right or power due to a default does not negate the use of that right or power in the future when deemed necessary.

94. If any PARTNER defaults in its OBLIGATIONS, a non-defaulting PARTNER will request in writing that the default be remedied within 30 calendar days. If the defaulting PARTNER fails to do so, the non-defaulting PARTNER may initiate dispute resolution.
95. PARTNERS will first attempt to resolve agreement disputes at the PROJECT team level. If they cannot resolve the dispute themselves, the CALTRANS district director and the Director of Public Works/City Engineer of CITY will attempt to negotiate a resolution. If PARTNERS do not reach a resolution, PARTNERS' legal counsel will initiate mediation. PARTNERS agree to participate in mediation in good faith and will share equally in its costs.

Neither the dispute nor the mediation process relieves PARTNERS from full and timely performance of OBLIGATIONS in accordance with the terms of this agreement. However, if any PARTNER stops fulfilling OBLIGATIONS, any other PARTNER may seek equitable relief to ensure that OBLIGATIONS continue.

Except for equitable relief, no PARTNER may file a civil complaint until after mediation, or 45 calendar days after filing the written mediation request, whichever occurs first.

PARTNERS will file any civil complaints in the Superior Court of the county in which the CALTRANS district office signatory to this agreement resides. The prevailing PARTNER will be entitled to an award of all costs, fees, and expenses, including reasonable attorney fees as a result of litigating a dispute under this agreement or to enforce the provisions of this article including equitable relief.

96. PARTNERS maintain the ability to pursue alternative or additional dispute remedies if a previously selected remedy does not achieve resolution.
97. If any provisions in this agreement are deemed to be, or are in fact, illegal, inoperative, or unenforceable, those provisions do not render any or all other agreement provisions invalid, inoperative, or unenforceable, and PARTNERS will automatically sever those provisions from this agreement.
98. PARTNERS intend this agreement to be their final expression and supersede any oral understanding or writings pertaining to OBLIGATIONS.
99. If during performance of WORK additional activities or environmental documentation is necessary to keep PROJECT in environmental compliance, PARTNERS will amend this agreement to include completion of those additional tasks.
100. PARTNERS will execute a formal written amendment if there are any changes to OBLIGATIONS.
101. This agreement will terminate upon OBLIGATION COMPLETION or an amendment to terminate this agreement, whichever occurs first.

However, all indemnification, document retention, audit, claims, environmental commitment, legal challenge, and ownership articles will remain in effect until terminated or modified in writing by mutual agreement.

102. The following documents are attached to, and made an express part of this agreement:
SCOPE SUMMARY, FUNDING SUMMARY.

DEFINITIONS

CALTRANS – The California Department of Transportation

CALTRANS STANDARDS – CALTRANS policies and procedures, including, but not limited to, the guidance provided in the *Guide to Capital Project Delivery Workplan Standards* (previously known as WBS Guide) available at <http://www.dot.ca.gov/hq/projmgmt/guidance.htm>.

CEQA (California Environmental Quality Act) – The act (California Public Resources Code, sections 21000 et seq.) that requires state and local agencies to identify the significant environmental impacts of their actions and to avoid or mitigate those significant impacts, if feasible.

CFR (Code of Federal Regulations) – The general and permanent rules published in the Federal Register by the executive departments and agencies of the federal government.

CONSTRUCTION CAPITAL – See PROJECT COMPONENT.

CONSTRUCTION SUPPORT – See PROJECT COMPONENT.

COOPERATIVE AGREEMENT CLOSURE STATEMENT – A document signed by PARTNERS that verifies the completion of all OBLIGATIONS included in this agreement and in all amendments to this agreement.

COST – The responsibility for cost responsibilities in this agreement can take one of three assignments:

- **OBLIGATIONS COST** – A cost associated with fulfilling OBLIGATIONS that will be funded as part of this agreement. The responsibility is defined by the funding commitments in this agreement.
- **PROJECT COST** – A cost associated with PROJECT that can be funded outside of OBLIGATIONS. A PROJECT COST may not necessarily be part of this agreement. This responsibility is defined by the PARTNERS' funding commitments at the time the cost is incurred.
- **PARTNER COST** – A cost that is the responsibility of a specific PARTNER, independent of PROJECT.

FHWA – Federal Highway Administration

FHWA STANDARDS – FHWA regulations, policies and procedures, including, but not limited to, the guidance provided at www.fhwa.dot.gov/topics.htm.

FUNDING PARTNER – A PARTNER that commits a defined dollar amount to fulfill OBLIGATIONS. Each FUNDING PARTNER accepts responsibility to provide the funds identified on the FUNDING SUMMARY under its name.

FUNDING SUMMARY – The table that designates an agreement’s funding sources, types of funds, and the **PROJECT COMPONENT** in which the funds are to be spent. Funds listed on the **FUNDING SUMMARY** are “not-to-exceed” amounts for each **FUNDING PARTNER**.

GAAP (Generally Accepted Accounting Principles) – Uniform minimum standards and guidelines for financial accounting and reporting issued by the Federal Accounting Standards Advisory Board that serve to achieve some level of standardization. See <http://www.fasab.gov/accepted.html>.

HM-1 – Hazardous material (including, but not limited to, hazardous waste) that may require removal and disposal pursuant to federal or state law whether it is disturbed by **PROJECT** or not.

HM-2 – Hazardous material (including, but not limited to, hazardous waste) that may require removal and disposal pursuant to federal or state law only if disturbed by **PROJECT**.

HM MANAGEMENT ACTIVITIES – Management activities related to either **HM-1** or **HM-2** including, without limitation, any necessary manifest requirements and disposal facility designations.

IMPLEMENTING AGENCY – The **PARTNER** responsible for managing the scope, cost, and schedule of a **PROJECT COMPONENT** to ensure the completion of that component.

IQA (Independent Quality Assurance) – Ensuring that **IMPLEMENTING AGENCY**’s quality assurance activities result in **WORK** being developed in accordance with the applicable standards and within an established Quality Management Plan (QMP). **IQA** does not include any work necessary to actually develop or deliver **WORK** or any validation by verifying or rechecking work performed by another partner.

NEPA (National Environmental Policy Act of 1969) – The federal act that establishes a national policy for the environment and a process to disclose the adverse impacts of projects with a federal nexus.

OBLIGATION COMPLETION – **PARTNERS** have fulfilled all **OBLIGATIONS** included in this agreement, and all amendments to this agreement, and have signed a **COOPERATIVE AGREEMENT CLOSURE STATEMENT**.

OBLIGATIONS – All responsibilities included in this agreement.

OBLIGATIONS COST – See **COST**.

OMB (Office of Management and Budget) – The federal office that oversees preparation of the federal budget and supervises its administration in Executive Branch agencies.

PARTNER – Any individual signatory party to this agreement.

PARTNERS – The term that collectively references all of the signatory agencies to this agreement. This term only describes the relationship between these agencies to work together to achieve a mutually beneficial goal. It is not used in the traditional legal sense in which one PARTNER's individual actions legally bind the other partners.

PROJECT – The undertaking to improve the eastbound ramp configuration at Moreno Beach Drive on SR-60 in the city of Moreno Valley and construct auxiliary lanes for the eastbound portion of the freeway between the Nason Street overcrossing and the Moreno Beach Drive overcrossing.

PROJECT COMPONENT – A distinct portion of the planning and project development process of a capital project as outlined in California Government Code, section 14529(b).

- **PID (Project Initiation Document)** – The activities required to deliver the project initiation document for PROJECT.
- **PA&ED (Project Approval and Environmental Document)** – The activities required to deliver the project approval and environmental documentation for PROJECT.
- **PS&E (Plans, Specifications, and Estimate)** – The activities required to deliver the plans, specifications, and estimate for PROJECT.
- **R/W (Right of Way) SUPPORT** – The activities required to obtain all property interests for PROJECT.
- **R/W (Right of Way) CAPITAL** – The funds for acquisition of property rights for PROJECT.
- **CONSTRUCTION SUPPORT** – The activities required for the administration, acceptance, and final documentation of the construction contract for PROJECT.
- **CONSTRUCTION CAPITAL** – The funds for the construction contract.

PROJECT COST – See COST.

PROJECT MANAGEMENT PLAN – A group of documents used to guide a project's execution and control throughout that project's lifecycle.

QMP (Quality Management Plan) – An integral part of the Project Management Plan that describes IMPLEMENTING AGENCY's quality policy and how it will be used.

RESIDENT ENGINEER – A civil engineer licensed in the State of California who is responsible for construction contract administration activities. Said engineer must be independent of the design engineering company and the construction contractor.

SAFETEA-LU – Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users

SCOPE SUMMARY – The attachment in which each PARTNER designates its commitment to specific scope activities within each PROJECT COMPONENT as outlined by the *Guide to Capital Project Delivery Workplan Standards* (previously known as WBS Guide) available at <http://www.dot.ca.gov/hq/projmgmt/guidance.htm>.

SHS (State Highway System) – All highways, right of way, and related facilities acquired, laid out, constructed, improved, or maintained as a state highway pursuant to constitutional or legislative authorization.

SPONSOR – Any PARTNER that accepts the responsibility to establish scope of PROJECT and the obligation to secure financial resources to fund PROJECT. SPONSOR is responsible for adjusting the PROJECT scope to match committed funds or securing additional funds to fully fund the PROJECT scope. If a PROJECT has more than one SPONSOR, funding adjustments will be made by percentage (as outlined in Responsibilities). Scope adjustments must be developed through the project development process and must be approved by CALTRANS as the owner/operator of the SHS.

SFM (State Furnished Material) – Any materials or equipment supplied by CALTRANS.

WORK – All scope activities included in this agreement.

CONTACT INFORMATION

The information provided below indicates the primary contact data for each PARTNER to this agreement. PARTNERS will notify each other in writing of any personnel or location changes. Contact information changes do not require an amendment to this agreement.

The primary agreement contact person for CALTRANS is:
Jamal Elsaleh, Program/Project Management Office Chief
464 W. Fourth Street
San Bernardino, California 92401-1400
Office Phone: (909) 383-6710
Email: jamal.elsaleh@dot.ca.gov

The primary agreement contact person for CITY is:
Margery Lazarus, Senior Engineer, P.E.
P.O. Box 88005
Moreno Valley, California 92552-0805
Office Phone: (951) 413-3133
Email: margeryl@moval.org

SIGNATURES

PARTNERS declare that:

1. Each PARTNER is an authorized legal entity under California state law.
2. Each PARTNER has the authority to enter into this agreement.
3. The people signing this agreement have the authority to do so on behalf of their public agencies.

INSTRUCTIONS FOR COMPLETION OF SF-LLL, DISCLOSURE OF LOBBYING ACTIVITIES

This disclosure form shall be completed by the reporting entity, whether subawardee or prime Federal recipient, at the initiation or receipt of a covered Federal action, or a material change to a previous filing, pursuant to title 31 U.S.C. section 1352. The filing of a form is required for each payment or agreement to make payment to any lobbying entity for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with a covered Federal action. Complete all items that apply for both the initial filing and material change report. Refer to the implementing guidance published by the Office of Management and Budget for additional information.

1. Identify the type of covered Federal action for which lobbying activity is and/or has been secured to influence the outcome of a covered Federal action.
2. Identify the status of the covered Federal action.
3. Identify the appropriate classification of this report. If this is a followup report caused by a material change to the information previously reported, enter the year and quarter in which the change occurred. Enter the date of the last previously submitted report by this reporting entity for this covered Federal action.
4. Enter the full name, address, city, State and zip code of the reporting entity. Include Congressional District, if known. Check the appropriate classification of the reporting entity that designates if it is, or expects to be, a prime or subaward recipient. Identify the tier of the subawardee, e.g., the first subawardee of the prime is the 1st tier. Subawards include but are not limited to subcontracts, subgrants and contract awards under grants.
5. If the organization filing the report in item 4 checks "Subawardee," then enter the full name, address, city, State and zip code of the prime Federal recipient. Include Congressional District, if known.
6. Enter the name of the Federal agency making the award or loan commitment. Include at least one organizational level below agency name, if known. For example, Department of Transportation, United States Coast Guard.
7. Enter the Federal program name or description for the covered Federal action (item 1). If known, enter the full Catalog of Federal Domestic Assistance (CFDA) number for grants, cooperative agreements, loans, and loan commitments.
8. Enter the most appropriate Federal identifying number available for the Federal action identified in item 1 (e.g., Request for Proposal (RFP) number; Invitation for Bid (IFB) number; grant announcement number; the contract, grant, or loan award number; the application/proposal control number assigned by the Federal agency). Include prefixes, e.g., "RFP-DE-90-001."
9. For a covered Federal action where there has been an award or loan commitment by the Federal agency, enter the Federal amount of the award/loan commitment for the prime entity identified in item 4 or 5.
10. (a) Enter the full name, address, city, State and zip code of the lobbying registrant under the Lobbying Disclosure Act of 1995 engaged by the reporting entity identified in item 4 to influence the covered Federal action.

(b) Enter the full names of the individual(s) performing services, and include full address if different from 10 (a). Enter Last Name, First Name, and Middle Initial (MI).
11. The certifying official shall sign and date the form, print his/her name, title, and telephone number.

According to the Paperwork Reduction Act, as amended, no persons are required to respond to a collection of information unless it displays a valid OMB Control Number. The valid OMB control number for this information collection is OMB No. 0348-0046. Public reporting burden for this collection of information is estimated to average 10 minutes per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the Office of Management and Budget, Paperwork Reduction Project (0348-0046), Washington, DC 20503.

Distribution: (1) Copy - Fax or scan a copy to the Caltrans District Local Assistance Engineer (DLAE) within 15 days after contract execution. Failure to send a copy to the DLAE within 15 days after contract execution may result in deobligation of funds for this project.
(2) Original - Local agency files

**INSTRUCTIONS - LOCAL AGENCY PROPOSER DBE INFORMATION
(CONSULTANT CONTRACTS)**

SUCCESSFUL PROPOSER:

The form requires specific information regarding the consultant or other contract: Local Agency, Location, Project Description, Total Contract Amount, Proposal Date, and successful Proposer's Name.

The form has a column for the Work Item Number and Description or Services to be Subcontracted to DBEs. The prime consultant shall indicate all work to be performed by DBEs including, if the prime consultant is a DBE, work performed by its own forces, if a DBE. The DBE shall provide a certification number to the prime consultant. Enter DBE prime consultant's and subconsultant's certification number. The form has a column for the Names of DBE certified contractors to perform the work (must be certified on or before the proposals are due and include DBE address and phone number).

Enter the Total Claimed DBE Participation dollar amount of items of work in the total DBE Dollar Amount column. (If 100% of item is not to be performed by the DBE, describe exact portion of time to be performed by the DBE.) See "Notice to Proposers Disadvantaged Business Enterprise Information," (Exhibit 10-1) to determine how to count the participation of DBE firms.

Exhibit 10-02 must be signed and dated by the successful proposer at contract execution. Also list a phone number in the space provided and print the name of the person to contact.

Local agencies should complete the Contract Number, Federal-aid Project Number, Federal Share, and Contract Award fields and verify that all information is complete and accurate before signing and sending a copy of the form to the District Local Assistance Engineer within 15 days of contract execution. Failure to submit a completed and accurate form within the 15-day time period may result in the deobligation of funds on this project.

District DBE Coordinator should verify that all information is complete and accurate. Once the information has been verified, the **District Local Assistance Engineer** signs and dates the form.

CITY of MORENO VALLEY

Moreno Valley, CA 92552

August 1, 2012

Subject: **Construction Survey Services**
SR-60 / Moreno Beach Drive
Phase 1 Improvements Project
Moreno Valley, CA

Ladies and Gentlemen:

Coory Engineering is pleased to submit this proposal, and offer our company resources to the City of Moreno Valley in response to your Request for Proposal for the Construction Survey Services for the SR-60 / Moreno Beach Drive, Phase 1 Improvements Project. Our team is assembled with commitment and discipline to partner with the City of Moreno Valley and to implement this project on time and within a low budget. **Our overhead is very low and our fees are reasonable.**

Over the years, **our company completed similar projects for local agencies within Caltrans right-of-way and in compliance with CT encroachment permit, plans & specifications, and CT / local agencies survey staking manual and guidelines as applicable. Our field staff has excellent working relationship with Project Resident Engineers, Agency Representatives, and Caltrans Oversight Engineers. We are also looking forward to propose the survey work on the upcoming Nason Street project. If we are successful to be selected to perform the two projects at the same time, we will even bring in more savings to the City.**

We commit our resources acquired over thirty two years of successful execution of public and private projects, and offer our experienced and skilled project managers and surveyors for the execution of this project. We assign our top personnel to the key positions on the project. The assigned **Project Manager** for this project will be the undersigned, **Samir M. Khoury, a surveyor and a registered civil engineer with over thirty years of experience** as detailed later on in this proposal. Moreover, all other assigned personnel have superior knowledge of the ins and outs of various city improvement projects.

Construction Survey Services
SR-60 / Moreno Beach Drive
Phase 1 Improvements Project
Moreno Valley, CA

We appreciate the opportunity to present our proposal and look forward to collaborative development of seamless delivery of this project, in a successful manner. **Our proposal meets or exceeds all requirements outlined in the City's RFP.**

Should you have any technical or contractual questions, please contact the undersigned at (714) 202-8700 or email skhoury@cooryengineering.com.

Sincerely,

Samir M. Khoury, PE
President, Coory Engineering

Company Information

- Coory Engineering is certified by the State of California as a Small Business Enterprise (SBE).
- Address: 1718 N. Neville Street
Orange, CA 92865,
Telephone: (714) 202-8700,
Fax: (714) 202-8701.
- The company is a sole proprietorship, owned by Samir M. Khoury.
- Our firm was established in April of 1980.
- We specialize in the practice of General Civil Engineering, Land Surveying and Construction Management. Municipal projects comprise the majority of our work load.

Company contact person:

Mr. Samir M. Khoury
Telephone: (714) 202-8700
Email: Skhoury@cooryengineering.com

Samir M. Khoury is the responsible party for entering into contracts, signing agreements and entering into potential negotiation points.

A. Project Understanding

It is our understanding that the City of Moreno Valley is looking for a consulting firm that can provide Construction Survey services for the SR-60 / Moreno Beach Drive Phase 1 Improvements Project in the City of Moreno Valley.

Per the project plans and the RFP, the project in general is proposing the re-alignment of the SR-60/Moreno Beach eastbound off and on ramps, adding an eastbound auxiliary lane, installation of a new traffic signal at the new intersection of the eastbound ramps and Moreno Beach Drive, adding a retaining wall, adding ramp metering, extension of Eucalyptus Avenue to Moreno Beach Drive, modification of the traffic signal at the intersection of Eucalyptus Avenue and Moreno Beach Drive, coordination of utility relocations, irrigation, and related work. The work lies within Caltrans right of way, the work includes earthwork, grading, asphalt concrete paving, concrete retaining walls, roadway excavation, imported borrow, drainage pipes and minor concrete structures, concrete curb and gutter, EMWD water line relocation, overhead SCE relocation and related work.

Possible typical issue areas in a construction surveying project like this are the following:

- The availability of sufficient survey control
- Communication
- Lost stakes/ Re-staking
- Documentation
- Multiple concurrent tasks
- Utility coordination
- As-builts

The above items of possible typical project's issues do not pose a problem for us. We understand the parameters and nature of a project of this type and magnitude and are familiar with its complexities and the typical difficulties that are encountered. As part of the scope of delivering this project, Coory Engineering is familiar with the project plans, specifications and contract documents. This task is more of a second nature to us as a Survey company than it might be for other surveying outfits because of the nature of the services we provide as a whole. In addition to surveying services, we are also heavily involved in the preparation and delivery of construction documents and specifications for municipal projects such as this one. As such, there is no learning curve when our firm is involved.

B. Project Approach

Over the years our experience has led us to the following approach in dealing with projects such as this one:

1. Research:

1.1 Research Control: Since there is already a design in place for this project, our first task would be to request that the City share with us the survey control that was used in the design phase. This will ensure that we are working within the same parameters as the intended design. As a routine however, we would still conduct our own independent research through City, County and Caltrans records in search for surveying monuments to be used in establishing horizontal and vertical control. Based on our research, our survey crew search for and locate these monuments in the field.

1.2 Construction Documents: A crucial step in this research process is the physical studying of the project plans and specifications to be fully familiar with the project intentions, needs, requirements and methodologies.

2. Site Preparation: Based on the research, the project plans and our assessment of the physical project parameters, we will locate and set a vertical and horizontal field survey control network. The control network will be verified for closure and accuracy, and will be placed in areas outside the construction zone areas, and posted with warnings not to be disturbed. This control will also be available for use by the contractors using laser equipment for purposes of rough-grading operation.

3. Electronic Files: We expect to receive from the City electronic files of the project design. These files will be used by our office engineer for the preparation of staking calculations. Portions of these electronic plans will also be downloaded into the data collectors for field use by the surveyors (as needed) along with the survey calculations.

4. Survey Request Form: Typically, to set a construction surveying task into motion, a survey request form needs to be filled out.

Our standard survey request form is clear in indicating the type of survey needed, the desired offsets, when the area will be ready for staking, when the survey stakes will be used and the order of priority if there is more than one area to be staked.

Unless the City has its own survey request form/ format, we will provide the contractor and/or the project manager with ours. A minimum notice of 24 hours is requested.

5. Minimum Hours: Typical industry minimum hours for a "move-in" is 4 hours. However, Coory Engineering does not have a minimum hour condition in place for this project. We are available to serve you with your maximum and minimal needs. Of course, better planning would slate a full day of work for a move-in if possible.

6. Record Keeping: We are a highly organized company. Cut sheets will be provided on the same day that our work is done. The City will receive a copy of the cut sheets. The surveyor will retain a copy at all times and one copy will be delivered to our project files in the office. For speed, cut sheets are delivered to the City on the same day that a survey is conducted. However, our office copy will be verified for accuracy upon receipt from the field crew. In cases where a conflict is discovered in the cut sheets, the conflict is communicated with the field immediately.

Our cut sheets for any day of work are numbered 1, 2, 3 etc. However, for better filing and an easier re-tracing system, each page will have a continuous serial number.

All other project related paperwork will be filed and maintained up to date, readily available for delivery to the City upon request or upon audit.

7. Design Errors: If design errors are discovered by our surveyors or our office engineer while preparing the staking calculations, the errors will be reported to the City immediately. Plans will not be revised until permitted by the City and/or its designer.

8. Safety Issues: Our crews are used to working in a busy construction environment. They are well versed on safety and safety procedures are strictly enforced and followed.

C. Project Management Plan

The following is a summary of tasks/ services that we will perform for this project:

- Our survey staff will work under the direction of the City's Resident Engineer / Project Manager and perform services in strict compliance with the contract plans, specifications, and Caltrans survey staking manual / guidelines.
- Meet with the City's Project Manager, CM Resident Engineer, CT Oversight Engineer and contractor to coordinate survey staking activities, notifications, and survey notes.
- Identify conflicts, provide field survey data to the Resident Engineer and designer, recommend solutions, document field changes for As-Built.
- Review contract documents, plans and specifications and become thoroughly familiar with the project.
- Research records and establish survey control.
- Participate in pre-construction, field, construction progress, contractors, public utility agencies and other governmental agency meetings.
- Coordinate with field contractors to determine the work to be completed and the status of the completed work.
- Maintain daily communication with City representatives and establish upcoming workload and schedule. Adjust schedule as necessary.
- Define in-house project team responsibilities & establish a system of checks & balances.
- Conduct in-house meetings with the survey crews to layout the planned work, delegate daily activities, deliverables and schedule.
- Establish a filing system & maintain a log.
- Conduct field construction surveying.
- Coordinate ongoing construction surveys and staking as required.
- Review and monitor contractor's request for re-staking.
- Submit reports of completed work to field inspector.
- Maintain copies of all survey documents (Field notes, Cut Sheets, etc...).
- Keep copies of construction surveying documents on-site.
- Provide measurement of contractor's extra work when requested by the City.

- Provide labor compliance reports and certified payroll of field work.
- Participate in final walk-through meetings, as-built plan completion meetings and administrative meetings as necessary.

A project of this nature will require constant open communication and support. It needs the leadership of a project manager with experience who can communicate, anticipate, plan ahead and execute the plan seamlessly on time and within budget. Coory engineering will offer the services of Samir Khoury to act as Project Manager for this project. Samir is a surveyor and a registered civil engineer. He is an ex-employee of the Cities of Lynwood and Santa Fe Springs, and currently serves as a consultant to various cities.

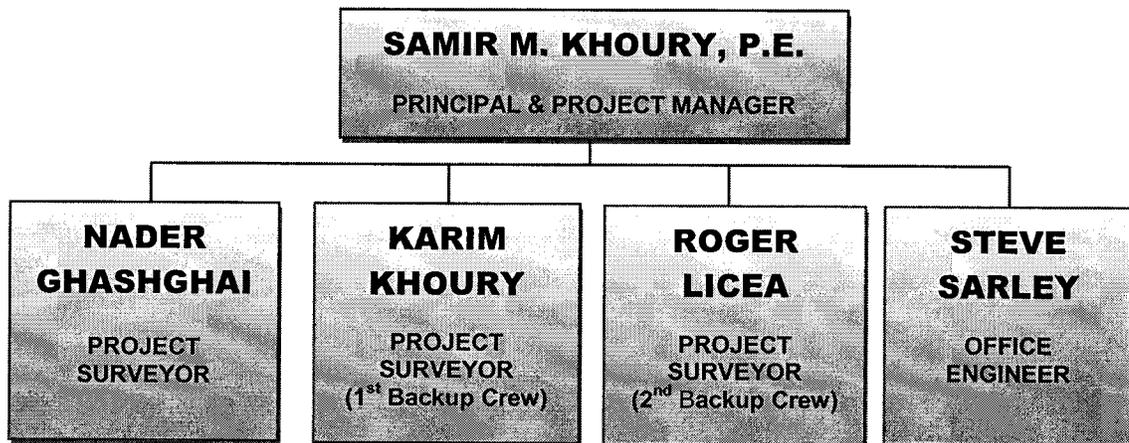

Samir will be involved in City meetings with contractors, public utility agencies and other government agency representatives as requested. He will also attend pre-construction meetings, field meetings, construction progress meetings, equal opportunity meetings, final walk-through meetings, as-built plan completion meetings and other administrative meetings as necessary. Samir will be communicating and coordinating with the City project manager, construction manager and project engineer daily, to keep track of the remaining project budget versus the remaining project work on a regular basis.

Samir will be in charge of in-house meetings with the survey crews to layout the planned work, establish the tasks of the day, the methods of surveying to be employed and the order in which they are to be delivered.

Samir will prepare and maintain a log of survey work requested and completed, survey related computer files, daily survey work, survey field notes, survey grade sheets and survey related records and files. He will be providing labor compliance reports and certified payroll of Coory Engineering's field work.

We assign the following key personnel to provide the requested surveying services: Samir Khoury/ Project Administrator and Project Manager, Nader Ghashghai/ Project Surveyor, Karim Khoury/ (1st Backup) Project Surveyor, Roger Licea/ (2nd Backup) Project Surveyor and Steve Sarley/ Office Engineer for Staking Calculations. Other staff members are available to assist on the project as needed. Below is a project specific organizational chart.

Project-specific Organizational Chart:

Key Personnel for This Project:

Samir M. Khoury / Project Manager:

Samir has over 30 years of experience, is a surveyor and a registered civil engineer in the State of California and he is an ex-employee of the Cities of Santa Fe Springs and Lynwood. He managed many projects for these cities and other cities within Caltrans right-of-way, coordinating work from the design stage through construction and completion. His experience ranges from involvement with heavy construction activities to simple routine street improvement projects. He will be responsible for entering into contract with the city, will oversee the project at large and will be responsible for quality control and quality assurance.

Nader Ghashghai / Project Surveyor

Primary Project Crew:

Nader holds a B.S. degree in Geomatics Engineering and Photogrammetry from Fresno State University. He has over 27 years of experience working in the field of surveying. Nader has been associated with Coory Engineering for the past 17 years. He will be in charge of the primary surveying crew assigned to this project.

Karim Khoury / Project Surveyor

1st Backup Project Crew:

Karim has over 20 years of experience working in the field of Surveying, Civil Engineering and land development. His background in Civil Design is what gives him an edge and makes him an asset in the field of Surveying. He has been associated with Coory Engineering for the past 20 years. He will be in charge of one of the surveying crews assigned to this project.

Roger Licea / Project Surveyor

2nd Backup Project Crew:

Roger has 20 years of experience working in the field of surveying, civil engineering design & land development. Roger is experienced in the use of GPS & Robotic instruments. Roger's experience includes field data collection, construction staking, ALTA surveys, Topographic & Boundary surveys, Flood Certificates, Earthwork Volume surveying. Roger is experienced working with Geologists. He has headed various surveys on many military bases from Coronado base in San Diego to Alameda Point.

Other personnel:

Other personnel assigned to this project are Survey Technicians, draftsmen and clerical staff as needed.

D. Qualifications and Experience

Qualifications:

- i. Coory Engineering has no outstanding or pending complaints as determined through the state of California Department of Consumer Affairs.
- ii. Among the other personnel, we currently employ 4 Professional Engineers licensed in the state of California and 3 survey crews.
- iii. Coory Engineering has been providing design, Survey and Construction Management services for the development of Capital Improvement projects for over 32 years.

Firm Background and Experience:

Coory Engineering is a General Civil Engineering, Surveying and Construction Management company with a major emphasis on Public Works/ Capital Improvement projects. Our firm is located in the City of Orange. Established in 1980, we have been in business for 32 years and are currently staffed with 19 employees. Many of our employees are ex-City employees that are familiar with City work and environment.

Over the years, our firm has repeatedly delivered one successful project after another, and we have done so for a number of public agencies.

In general, street improvement type projects represent the majority of public agencies' project work load. As a result, our work load has predominantly been dedicated to street improvement projects; new streets, street rehabilitation, sewer, water, storm drain, traffic signals, signing and striping, street lighting, utility work and utility coordination, NPDES, irrigation and landscaping, retaining walls, paving, and all associated construction staking.

Below is a partial list of Cities for whom we have performed Design, Construction Management and Construction Surveying services over the years:

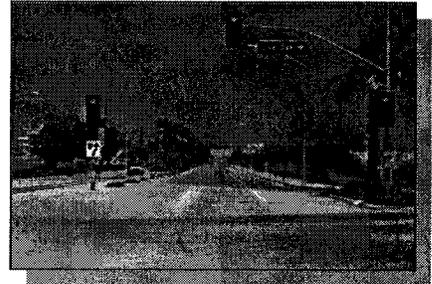

Santa Fe Springs	Whittier	Norwalk	Pico Rivera
Montebello	Irwindale	Calabasas	West Covina
La Habra	Alhambra	Lynwood	Huntington Park
Azusa	Buena Park	Cerritos	Chino
Commerce	Downey	El-Monte	El Segundo

Comparable Examples of previous work:

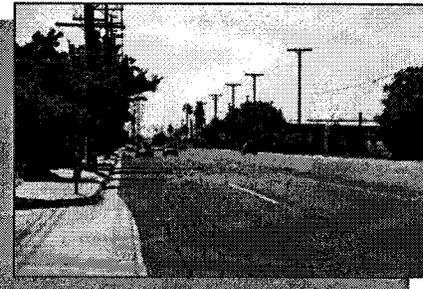

We were the engineering company of choice for the Cities mentioned below. These projects are similar in scope to the subject Project. We performed all the construction surveying:

- **LIVE OAK / ARROW HIGHWAY REHABILITATION PROJECT**

- Overall Cost: \$14,000,000.
- 4.5 Miles Long.
- Included Street Reconstruction and Landscaping.
- **Caltrans ramps and bridge repair. (605 Freeway).**
- Various types of infrastructures including Water, Sewer, Storm Drain, Signals & Lighting.
- Completed – 2009.

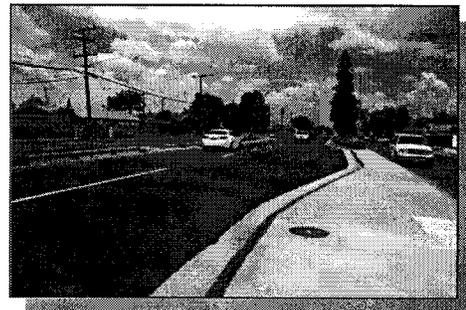

- **GLADSTONE STREET REHABILITATION PROJECT**

- Overall Cost: \$600,000. **(Stimulus Fund).**
- 0.7 Miles Long.
- Complete Reconstruction.
- Completed – 2010.

- **KNOTT AVENUE REHABILITATION PROJECT**

- Overall Cost: \$1,950,000. **(Stimulus Fund).**
- 1.0 Mile Long.
- Reconstruction & Cold Milling.
- Concrete Repairs.
- Artificial Turf in Medians.
- Completed – 2011.

- **LOS ANGELES ST. REHABILITATION PROJECT**

- Cost: \$1,500,000.
- 0.7 Miles Long.
- Complete Street Reconstruction.
- **Caltrans Freeway Off-ramps and bridge repair.**
- New & Modified Traffic Signals.
- Completed – 2011.

Services Provided: Construction Surveying and Design for various public works projects such as Street Rehabilitation, Street Improvement, Storm Drain, Signing & Striping, Traffic Signal, Street Lighting, NPDES, including Specifications, Construction Management & Inspection.

E. Staffing Plan

We are committing 3 crews to be dedicated to this project. Each crew is made up of two persons, a party Chief and a Chainman. Nader Ghashghai's crew will be the primary crew deployed for the project surveying services. If additional crews are needed to satisfy the workload on any given day, then additional crews will be deployed. Each crew is self-sufficient. Each crew is furnished with a fully equipped, fully stocked survey truck. Our crews can be in three separate locations at the same time, performing separate or related tasks.

Approach:

A typical survey task is initiated in one of two ways; pre-scheduled per a project master schedule, or 24 hours in advance of the requested task by an authorized person who makes this request in writing by completing a "Request for Surveying" form. The form is received by Samir Khoury (the Project Manager) who passes it on to Steve Sarley (the Office Engineer). Steve prepares the calculations and an exhibit of the work to be done. The survey crew is prepared and deployed. When additional survey crews are needed, the protocol to follow is the same. Samir deploys the needed number of crews to the job site as necessary.

With 3 crews available to this project, enough resources are available to ensure project needs are met seamlessly and on time.

EXPERIENCE / ALLOCATION MATRIX

Survey Team	AVAILABILITY (%)	Experience (Years)	Education	Street Improvement	FWY Projects	Road Rehabilitation	Storm Drain	Open Channels	Dry Utilities	Wet Utilities	Traffic Control	On-ramps/ Off-ramps	Retaining Walls	Piles	Boundary Surveys

Roger Licea (Party Chief)	100%	20	RCC LATT ITT	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓

F. Work Plan and Schedule

Within one week of the City's Notice to Proceed, Coory Engineering will be available to meet with the City staff to initiate the Project. The meeting will establish clear lines of communications and will cover the review and revision of the project schedule and scope of work. The meeting will be used as a platform to establish general guidelines and to discuss project parameters and constraints and to obtain any additional data.

Coory Engineering will meet with City staff on a regular basis to review the cost, schedule, status and progress of the work, as well as anticipated problems and potential solutions. Coory Engineering will submit status reports on various tasks as needed to keep the City informed.

Coory Engineering shall be available for meetings with City staff, utility agencies and project contractor as needed to complete the project.

Coory Engineering will attend the preconstruction meeting and provide recommendations as necessary.

Coory Engineering will follow and adhere to the agreed-upon construction schedule. We will prepare calculations and conduct construction surveying tasks within 24 hours of notice to provide services, or at a pre-scheduled timeline within the agreed-upon working days.

G. Quality Control and Assurance

We at Coory Engineering have developed and implemented a system of checks and balances that delivers value engineering, constructability, budget control, design completeness and timely delivery.

Before kicking off a project, the project manager and surveyors are issued construction documents, plans and specifications to be fully informed and familiar with the project. Project team members are invited to an in-house project kickoff meeting. The entire team from Principal to technicians is fully informed on the project parameters, scope and schedule expectations. Items that are identified as potential problems are addressed and solutions to the problems are shared. With the combined collaborative input of the team, we are able to review, discuss, share and plan the procedures and project guidelines to be followed. We establish responsibilities and expectations for deliverables. By discussing the project and airing out solutions, we are able to identify and avoid shortfalls or conflicts.

Over the years, the track record of this system of in-house peer review speaks for itself. This system of project development has been proven to deliver timely quality and budget control.

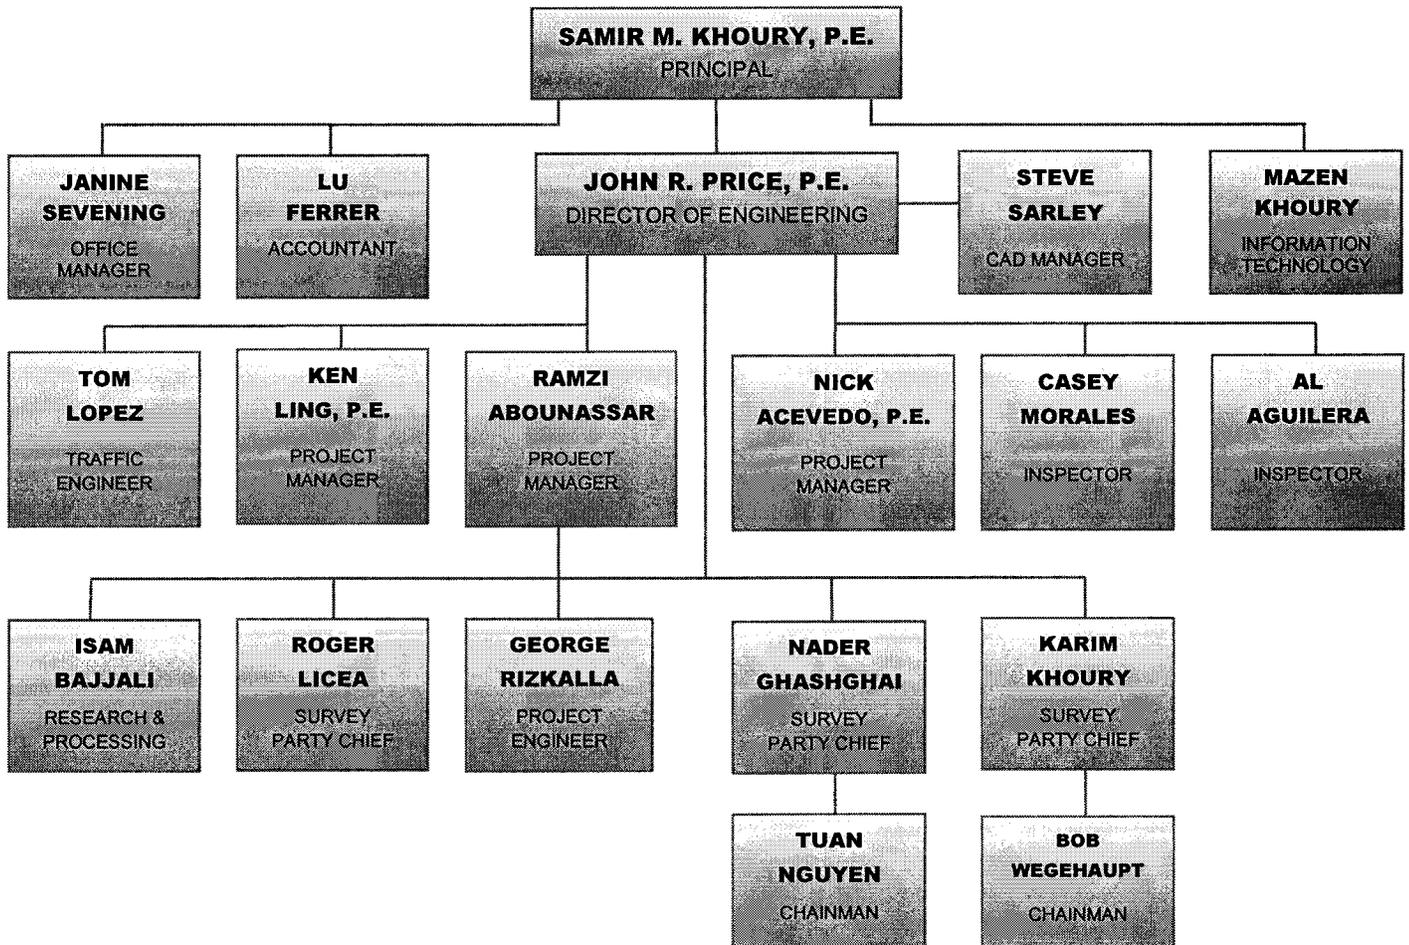

We have a long history of delivering capital improvement projects to our clients on time and within budget. We strive on minimizing change orders to our clients. You are welcome to contact our listed references.

H. Additional Relevant Information

Our team is assembled with commitment and discipline to partner with the City of Moreno Valley and implement the subject project on time and within budget. Our staff members have superior knowledge of the ins and outs of city improvement projects and they have a long track record of successfully completing projects on time and budget.

The following is our company's organizational chart.

COMPANY'S ORGANIZATIONAL CHART

WHY COORY ENGINEERING

Coory Engineering is distinguished for the following reasons:

- Our Overhead is very low and our fees are reasonable.
- We have been in this business for many years (established in 1980). Therefore, in our 32 years of service, we have acquired alot of experience and have served all types of projects, ranging from simple to the very complex.
- Our crews are supervised by Samir Khoury who was formally educated as a surveyor and then as an engineer, acquiring RCE license No. 30567 in 1979. Samir worked in the field and in the office for over thirty years.
- Coory Engineering is a design/survey company. We also offer inspection and construction management services. Therefore, we have a strong understanding of the design message that needs to be applied in the field. This ability gives us a strong tool to quickly identify technical conflicts and the ability to offer quick solutions without delaying the job. We have a strong understanding of the various industry standards including the Green Book, LAPM, EMWD, CALTRANS, CALDOT, WATCH, ETC.
- We are punctual, fast, fully equipped and properly insured. Our errors and omissions insurance exceed City requirements.
- We respect and follow construction protocol and the chain of command.
- Coory Engineering is experienced with and accustomed in serving public agencies. We are familiar with public works. 70% of our work load is dedicated to public agencies.
- We are known for our integrity as can be verified from our numerous references.

I. Proposal Statements

1. Moreno Valley's Request for Proposal for Professional Consultant Construction Survey Services for Project No. EA 08-32301 (Account No. 797.79731) shall be incorporated in its entirety as part of Coory Engineering's Proposal to perform these services.
2. Moreno Valley's Request for Proposal for Professional Consultant Construction Survey Services for Project No. EA 08-32301 (Account No. 797.79731) and Coory Engineering's Proposal to provide these services will jointly become part of the Agreement for Professional Consultant Services for this project when said Agreement is fully executed by Coory Engineering and the Mayor or City Manager of Moreno Valley.
3. Coory Engineering's Services to be provided, and fees therefore, will be in accordance with the City of Moreno Valley's Request for Proposal except as otherwise specified in the Consultant's proposal under the heading "ADDITIONS OR EXCEPTIONS TO THE CITY'S REQUEST FOR PROPOSAL", if any.
4. The Hourly Rate Schedule included in the separate sealed envelope is hereby made a part of Coory Engineering's Proposal for use in invoicing for progress payments and for extra work incurred. All extra work will require prior approval from the City of Moreno Valley.
5. No Sub-consultants are proposed at this time. It is acknowledged and understood that Coory Engineering will not be allowed to introduce or change a sub-consultant without written permission from the City of Moreno Valley.
6. All charges for Coory Engineering's services are a "Not-to-Exceed Fee" and include conservatively estimated reimbursable expenses, as submitted with and made a part of this proposal.
7. Coory Engineering will document and provide the results of the work to the satisfaction of the City. This may include preparation of field and final reports, or similar evidence of attainment of the Agreement objectives.
8. Coory Engineering will immediately document and notify the City of any defects or hazardous conditions observed in the vicinity of the project site prior, during or after the construction work.
9. The Hourly Rate Schedule included in the separate sealed envelope is hereby made a part of Coory Engineering's Proposal for use in invoicing for progress payments and for extra work incurred that is not part of Moreno Valley's Request for Proposal for Professional Consultant Construction Survey Services for Project No. EA 08-32301 (Account No. 797.79731). All extra work will require prior approval from the City of Moreno Valley.

An itemized cost breakdown for the work described herein is included in a sealed envelope as part of our Proposal submittal.

10. Coory Engineering does not and will not discriminate against any employee or applicant for employment because of race, color, religion, sex, or national origin.
11. All Federal laws and regulations shall be adhered to, notwithstanding any State or local laws or regulations. In case of conflict between Federal, State or local laws or regulations, the strictest shall be adhered to.
12. Coory Engineering shall allow all authorized Federal, State, County, and City officials access to our place of work, books, documents, papers, fiscal, payroll, materials, and other relevant contract records pertinent to this special project. All relevant records shall be retained for at least three years.
13. Coory Engineering shall comply with the Davis-Bacon Fair Labor Standards Act (40 USC 276-a through a-7), and the implementation regulations issued pursuant thereto (29 CFR Section 1, 5), any amendments thereof and the California Labor Code. Pursuant to the said regulations, entitled "Federal Labor Standards Provisions," Federal Prevailing Wage Decisions" and State of California prevailing wage rates, respectively.
14. Coory Engineering shall comply with the Copeland Anti-Kickback Act (18 USC 874) and the Implementation Regulation (29 CFT 3) issued pursuant thereto, and amendments thereof.
15. Coory Engineering offers and agrees to assign to the City all right, title, and interest in and to all causes of action it may have under Section 4 of the Clayton Act (15 USC Sec. 15) or under the Cartwright Act (Chapter 2 [commencing with Section 13700] of Part 2 of Division 7 of the Business and Professions Code), arising from purchases of goods, services, or materials pursuant to the public works or the subcontract. This assignment shall be made and become effective at the time the City tenders final payment to the Consultant, without further acknowledgment by the parties.
16. Coory Engineering shall not discriminate on the basis of race, color, national origin, or sex in the award and performance of subcontracts. Coory Engineering will take all necessary and reasonable steps to make sure that DBEs and other small businesses have the opportunity to participate in the performance of the work that is subject to solicitation (if other consultants are deemed necessary for the performance of this proposal).
17. A Completed "Disclosure of Lobbying Activities" form is included in the appendix of this proposal.
18. No Sub-consultants are proposed for this project at this time. We have 3 survey crews available for this project as needed.

J. Additions or Exceptions to the City's Request for Proposal

Coory Engineering takes no Exceptions to the provisions and conditions of the City of Moreno Valley's Request for Proposal for Professional Consultant Construction Survey Services for Project No. EA 08-32301 (Account No. 797.79731).

CITY - SERVICES TO BE PROVIDED
TO CONSULTANT

1. Furnish the Consultant all in-house data which is pertinent to services to be performed by the Consultant and which is within the custody or control of the City, including, but not limited to, copies of record and off-record maps and other record and off-record property data, right-of-way maps and other right-of-way data, pending or proposed subject property land division and development application data, all newly developed and pertinent design and project specification data, and such other pertinent data which may become available to the City.
2. Provide timely review, processing, and reasonably expeditious approval of all submittals by the Consultant.
3. Provide timely City staff liaison with the Consultant when requested and when reasonably needed.

EXHIBIT "C"

TERMS OF PAYMENT

1. The Consultant's compensation shall not exceed \$100,805.
2. The Consultant will obtain, and keep current during the term of this Agreement, the required City of Moreno Valley business license. Proof of a current City of Moreno Valley business license will be required prior to any payments by the City. Any invoice not paid because the proof of a current City of Moreno Valley business license has not been provided will not incur any fees, late charges, or other penalties. Complete instructions for obtaining a City of Moreno Valley business license are located at: http://www.moval.org/do_biz/biz-license.shtml
3. The Consultant shall notify the City in writing ten (10) days in advance of incurring costs at the following milestones: 50%, 75%, and 90% of expended budget. The City will monitor Consultant's expenditure levels in comparison to the physical construction work completed, and if progress is satisfactory in the judgment of the City, City will provide written authorization to proceed to the next milestone. City reserves the right to adjust staffing levels and personnel as appropriate. Consultant shall not change any personnel or subconsultants without prior authorization by the City.
4. The Consultant will submit an invoice to the City once a month for progress payments along with documentation evidencing services completed to date. The progress payment is based on actual time and materials expended in furnishing authorized professional services during the preceding calendar month. At no time will the City pay for more services than have been satisfactorily completed and the

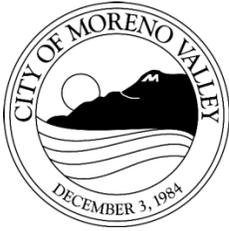

EXHIBIT "D"

City Engineer's determination of the amount due for any progress payment shall be final. The consultant will submit all original invoices to Accounts Payable staff at AccountsPayable@moval.org. Accounts Payable questions can be directed to (951) 413-3073. Copies of invoices may be submitted to the Capital Projects Division at zara@moval.org or calls directed to (951) 413-3131.

5. The Consultant agrees that City payments will be received via Automated Clearing House (ACH) Direct Deposit and that the required ACH Authorization form will be completed prior to any payments by the City. Any invoice not paid because the completed ACH Authorization Form has not been provided will not incur any fees, late charges, or other penalties. The ACH Authorization Form is located at:
http://www.moval.org/city_hall/forms.shtml#bf
6. The minimum information required on all invoices is:
 - A. Vendor Name, Mailing Address, and Phone Number
 - B. Invoice Date
 - C. Vendor Invoice Number
 - D. City Purchase Order Number
 - E. City-provided Reference Number (e.g. Project, Activity)
 - F. Detailed work hours by class title (e.g. Manager, Technician, or Specialist), services performed and rates, explicit portion of a contract amount, or detailed billing information that is sufficient to justify the invoice amount; single, lump amounts without detail are not acceptable.
7. The City shall pay the Consultant for all invoiced, authorized professional services within forty-five (45) days of receipt of the invoice for same.

Report to City Council

TO: Mayor and City Council

FROM: Ahmad R. Ansari, P.E., Public Works Director/City Engineer

AGENDA DATE: September 25, 2012

TITLE: BIENNIAL UPDATE ON PUBLIC RIGHT OF WAY ACCESS
AMERICANS WITH DISABILITIES ACT TRANSITION PLAN

RECOMMENDED ACTION

Staff recommends that the City Council receive and file this Biennial Update on Public Right of Way Access Americans with Disabilities Act Transition Plan.

BACKGROUND

The City's "Americans with Disabilities Act Transition Plan" (ADATP) approved by Council on January 10, 1995, created a plan to bring public buildings, facilities, and access infrastructure into ADA compliance. This included ADA compliance within the public right of way as was required at the time. Since the original ADATP was approved, changes in the law require a more comprehensive approach to public right of way ADA compliance. City staff drafted the Public Right of Way Access Americans with Disabilities Act Transition Plan (PROWADATP) focusing on infrastructure compliance within the public right of way only and presented it to the City Council at its Study Session meeting on August 17, 2010. City Council approved the plan and passed Resolution No. 2010-81 to approve and adopt said plan on September 14, 2010. The PROWADATP serves as an extension of the original 1995 ADATP. Resolution No. 2010-81 requires staff to update the City Council biennially on the progress of the PROWADATP.

DISCUSSION

The PROWADATP requires self-evaluation of the City's infrastructure ADA compliance and accommodation within the public right of way. The PROWADATP adopted the ADA Accessibility Guidelines (ADAAG) for infrastructure compliance within the public right of way which includes but is not limited to sidewalks, curbs, gutters, ramps, access to public transit facilities (bus stops), and traffic signals.

Due to the magnitude of the work effort, staff uses a three phased approach to determine initial priority classification of the infrastructure needs.

- Phase One: Review and prioritize accommodation requests from persons with disabilities.
- Phase Two: Evaluate existing infrastructure and creates a citywide priority database.
- Phase Three: Evaluate the new curb ramp and sidewalk infill where no infrastructure currently exists.

The prioritization is further refined by a location-based 5-Tier system. Tier 1 includes locations nearest to bus stops and routes. Tier 2 includes locations fronting public facilities. Tier 3 locations are adjacent to privately-owned public accommodations. Tier 4 locations do not fall into any other Tiers but are within 50 feet of a existing sidewalk network. Tier 5 locations do not fall into any other Tiers and are greater than 50 feet from an existing sidewalk network.

A 100-point system based on pedestrian safety, use, missing infrastructure, accessibility, vehicle volume and speeds, pedestrian volume and alternative access routing for an ADA total compliance is also used in refining the prioritization.

City staff identified over 3,630 intersections as part of the PROWADATP self evaluation process within Tiers 1 through 5 as a focused priority work effort. Based on the public feedback, monitoring, and inventory process established by the PROWADATP, staff has assessed the following:

- Tier 1: Completed 202 inventoried intersections (approximately 628 corners)
- Tier 2: Completed 382 inventoried intersections (approximately 1,190 corners) with 243 intersections remaining to be inventoried
- Tiers 3, 4, and 5: 2,803 intersections to be inventoried

During Fiscal Year 2012/2013, staff will continue to build the City's ADA compliance database.

As a separate parallel effort, City staff constructed 182 ramps which included five (5) ADA funded project locations (18 intersection corners) in Fiscal Years 2010/2011 and 2011/2012. Approximately 18,000 square feet of infill sidewalk has also been

constructed. Staff anticipates completing an additional five (5) intersections (14 intersection corners) in Fiscal Year 2012-2013. Those locations are:

- Blueberry and John F. Kennedy Drive
- Edgemont Street and Eucalyptus Avenue
- Heacock Street and Bay Avenue
- Heacock Street and Dracaea Avenue
- Kochi and Eucalyptus Avenue

Staff encourages public feedback and recommendations by interested parties such as persons with disabilities and/or organizations representing persons with disabilities. Since the PROWADATP approval, City staff has held Advisory Committee Meetings on June 13, 2011 and August 29, 2012 as well as a Public Outreach Meeting on July 31, 2012. The public was notified and invited to these meetings. The City has established an ADA website where the public can access information on the City's ADA activities and link to other local, state and federal sites. The website also links viewers to the City's PROWADATP and the complaint/grievance form with instruction for processing. The City will continue to improve its outreach efforts with the disabled community.

FISCAL IMPACT

The PROWADATP establishes a dedicated annual program called the Annual ADA Compliance Curb Ramp Upgrades that allocates \$200,000 per fiscal year to address ADA compliance issues. The annual funding comes from Gas Tax (Fund 2000) monies and is restricted to transportation related improvements and activities within the public right of way and cannot be used for other purposes. As an aggregate, in Fiscal Years 2010/2011 and 2011/2012, the City spent approximately \$353,000 of Gas Tax monies, \$142,000 of SB 821 Funds and \$1.25 million of other various CIP Funds on ramp and sidewalk construction. The CIP Funds included Measure A (Fund 2001), Safe Routes to School (SR2S) Grant monies, Community Development Block Grant (CDBG) monies (Fund 2512), 2005 Lease Revenue Bonds (Fund 3401), DIF Arterial Streets (Fund 3301), and TUMF Capital Projects (Fund 3003).

CITY COUNCIL GOALS

ADVOCACY:

Develop cooperative intergovernmental relationships and be a forceful advocate of City policies, objectives and goals to appropriate external governments, agencies and corporations.

PUBLIC SAFETY:

Provide a safe and secure environment for people and property in the community and provide protection for citizens who live, work, and visit the City of Moreno Valley.

PUBLIC FACILITIES AND CAPITAL PROJECTS:

Ensure that needed public facilities, roadway improvements, and other infrastructure improvements are constructed and maintained.

POSITIVE ENVIRONMENT:

Create a positive environment for the development of Moreno Valley's future.

COMMUNITY IMAGE, NEIGHBORHOOD PRIDE AND CLEANLINESS:

Promote a sense of community pride and foster an excellent image about our City by developing and executing programs which will result in quality development, and neighborhood restoration.

SUMMARY

Resolution 2010-81 provides for a biennial update of the PROWADATP efforts and to City Council.

Report to City Council

TO: Mayor and City Council

FROM: Barry Foster, Community & Economic Development Director

AGENDA DATE: September 25, 2012

TITLE: A PUBLIC HEARING REGARDING PA08-0033 (GENERAL PLAN AMENDMENT), PA08-0034 (CHANGE OF ZONE) AND PA08-0035 (CUP) FOR A SMOG INSPECTION STATION AND TIRE SALES COMMERCIAL BUSINESS AT 22184 ALESSANDRO BOULEVARD. THE PROPOSED GENERAL PLAN AMENDMENT WILL CHANGE THE LAND USE DESIGNATION OF A 0.54 ACRE PORTION OF A PARCEL LOCATED AT 22184 ALESSANDRO BOULEVARD FROM RESIDENTIAL/OFFICE (R/O) TO COMMERCIAL (C). THE CHANGE OF ZONE WILL CHANGE THE ZONING OF THE PARCEL FROM OFFICE COMMERCIAL (OC) TO COMMUNITY COMMERCIAL (CC). THE APPLICANT IS SOCRATES URENA.

RECOMMENDED ACTION

Staff recommends that the City Council conduct a public hearing for General Plan Amendment PA08-0033, Change of Zone PA08-0034 and Conditional Use Permit PA08-0035 and subsequent to the public hearing:

1. ADOPT a Negative Declaration for PA08-0033 (General Plan Amendment), PA08-0034 (Change of Zone) and PA08-0035 (Conditional Use Permit) in that this project will not result in significant environmental impacts);
2. ADOPT City Council Resolution No. 2012-75 thereby APPROVING General Plan Amendment PA08-0033, based on the findings in the City Council Resolution;
3. INTRODUCE Ordinance No. 854 thereby APPROVING Zone Change PA08-0034, based on the findings in the City Council Ordinance; and

4. ADOPT City Council Resolution No. 2012-76 thereby APPROVING Conditional Use Permit PA08-0035 for a Smog Inspection Station and Tire Sales commercial business at 22184 Alessandro Boulevard, based on the findings in the Resolution, and the conditions of approval as attached to the resolution as Exhibit A.

ADVISORY BOARD/COMMISSION RECOMMENDATION

The Planning Commission at its May 10, 2012, meeting approved Planning Commission Resolution No. 2012-09 by a 7-0 vote, recommending that the City Council adopt a Negative Declaration for PA08-0033 (General Plan Amendment), PA08-0034 (Change of Zone) and PA08-0035 (Conditional Use Permit) in that this project will not result in significant environmental impacts and approve PA08-0033 (General Plan Amendment), PA08-0034 (Change of Zone) and PA08-0035 (Conditional Use Permit).

BACKGROUND

The proposed project requires a Conditional Use Permit (CUP) for a Smog Inspection Station and Tire Sales business (minor auto repair). The smog aspect of the business is as a “testing center” only, no engine repairs are to be conducted on site. The existing residential structure will be converted into the main office. The building’s facade will be modified to emphasize the main business entrance and to eliminate the two doors on the east side of the building. The front windows will be reduced by one and repositioned in order to make the structure more commercial in appearance. The garage will be used as service bays for the smog inspection testing as well as tire service. The proposed project will provide onsite parking for 10 vehicles and have a security gate.

The project requires the front 1/3 of the parcel’s zoning to be changed from Office Commercial (OC) to Community Commercial (CC). The rest of the parcel will remain in the Residential 10 (R10) zoning district. Approximately .54 acres of the 1.46 acre site will be rezoned to CC and approximately .92 acres will remain R10.

The project site is surrounded by a mix of land uses including Residential/Office (R/O) to the north, east and west of the parcel. There is some Residential 5 (R5) to the northeast of the project site. The neighboring parcels along the front of Alessandro Boulevard are Commercial (C) with Business Park (BP) to the south (across the street along Alessandro Boulevard).

The project site is presently the only Office/Commercial (OC) parcel in the surrounding neighborhood. The Residential zoning is a mix of Residential 15 (R15), Residential 10 (R10) and Residential 5 (R5). Along Alessandro Boulevard from the Old 215 Frontage Road east to Elsworth Street the zoning is Commercial (CC).

The project is located on the edge of the Edgemont neighborhood. The majority of the structures within this area are older single and small multiple-family residences. The project site has an existing older single-family residence with a separate garage structure that currently is vacant located in the front 1/3 of the parcel. The remaining 2/3 of the parcel is currently vacant.

There was a previous approved application (PA03-0037) for the same business that expired, requiring a new application to be submitted. The project was approved back in October 2003 when the site was zoned Community Commercial (CC). During the 2006 General Plan Update, the parcel was rezoned to Office/Commercial (OC). This appears to have been done in recognition of the split zoning on the property and the potential incompatibility of general commercial and residential uses on the same parcel. To avoid potential conflicts, the conditions of approval require a parcel split prior to any residential development of the northerly residential portion of the parcel.

DISCUSSION

The General Plan Amendment, Zone Change and Conditional Use Permit applications were submitted in April 2008. The major issue with this project was a lack of fire flow water pressure on site, as the parcel is located within the Box Springs Mutual Water Company (BSMWC) service area. The applicant worked with both the BSMWS and Eastern Municipal Water District to meet the Fire Prevention's development requirements. The applicant also installed a fire hydrant onsite, which was reviewed and accepted by the Fire Prevention Division.

Public notice was sent to all property owners of record within 300' of the project for the May 10, 2012, Planning Commission meeting. The public hearing notice for this project was also posted on the project site and published in the Press Enterprise on April 19, 2012. Prior to the public hearing, staff had received two phone calls in response to the noticing for this project. The calls were positive towards the project. No members of the public were present at the May 10, 2012, Planning Commission meeting.

The environmental impacts of the proposed change have been considered as part of the review of the project and have been determined to be less than significant. It has been determined that the impacts of the proposed Change of Zone would be essentially the same as the existing zoning. Impacts in the area of traffic, and related areas such as potential for noise would also be comparable under the current General Plan designation.

An Initial Study has been completed for the proposed project. Based upon the Initial Study, a determination has been made that the proposed project will not result in the potential for significant impacts to the environment. Therefore, the adoption of a Negative Declaration is recommended.

ALTERNATIVES

1. Adopt a Negative Declaration for PA08-0033 (General Plan Amendment), PA08-0034 (Change of Zone) and PA08-0035 (Conditional Use Permit) in that this project will not result in significant environmental impacts); **and** adopt City Council Resolution No. 2012-75 thereby approving General Plan Amendment PA08-0033, based on the findings in the City Council Resolution; **and** introduce Ordinance No. 854 thereby approving Zone Change PA08-0034, based on the findings in the City Council Ordinance; **and** adopt City Council Resolution No. 2012-76 thereby approving Conditional Use Permit PA08-0035 for a Smog Inspection Station and Tire Sales commercial business at 22184 Alessandro Boulevard, based on the findings in the Resolution, and the conditions of approval as attached to the resolution as Exhibit A. **Staff recommends this alternative.**
2. Do not adopt a Negative Declaration for PA08-0033 (General Plan Amendment), PA08-0034 (Change of Zone) and PA08-0035 (Conditional Use Permit) in that this project will not result in significant environmental impacts); **and** do not adopt City Council Resolution No. 2012-75 thereby approving General Plan Amendment PA08-0033, based on the findings in the City Council Resolution; **and** do not introduce Ordinance No. 854 thereby approving Zone Change PA08-0034, based on the findings in the City Council Ordinance; **and** do not ADOPT City Council Resolution No. 2012-76 thereby approving Conditional Use Permit PA08-0035 for a Smog Inspection Station and Tire Sales commercial business at 22184 Alessandro Boulevard, based on the findings in the Resolution, and the conditions of approval as attached to the resolution as Exhibit A. **Staff does not recommend this alternative.**

FISCAL IMPACT

Not applicable.

SUMMARY

The proposed Smog Inspection Station and Tire Sales commercial business requires both a General Plan Amendment and Change of Zone for approval of the Conditional Use Permit. The proposed General Plan Amendment will change the land use designation of a 0.54 acre portion of a parcel located at 22184 Alessandro Boulevard (Assessor's Parcel Number 291-190-025) from Residential/Office (R/O) to Commercial (C). The Change of Zone will change the zoning of the parcel from Office Commercial (OC) to Community Commercial (CC).

NOTIFICATION

A display notice was published in the newspaper and a public notice was posted onsite (one along each frontage – Alessandro Boulevard and Sherman Avenue). Notices were also sent to adjacent property owners within 300 feet of the project.

As of the date of report preparation, staff had received no public inquiries in response to the noticing for the City Council public hearing for this project.

Notice of PUBLIC HEARING

This may affect your property. Please read. Notice is hereby given that a Public Hearing will be held by the City Council of the City of Moreno Valley on the following item(s):

CASE(S): PA08-0033 (General Plan Amendment)
PA08-0034 (Change of Zone)
PA08-0035 (Conditional Use Permit)

APPLICANT/OWNER: Socrates Urena

REPRESENTATIVE: Socrates Urena

LOCATION: 22184 Alessandro Boulevard

PROPOSAL: A Conditional Use Permit (CUP) for a Smog Inspection Station and Tire Sales commercial business in an existing structure. The CUP requires a General Plan Amendment from Residential/Office (R/O) to Commercial (C) and Change of Zone from Office Commercial (OC) to Community Commercial (CC).

ENVIRONMENTAL DETERMINATION: Negative Declaration

COUNCIL DISTRICT: 5

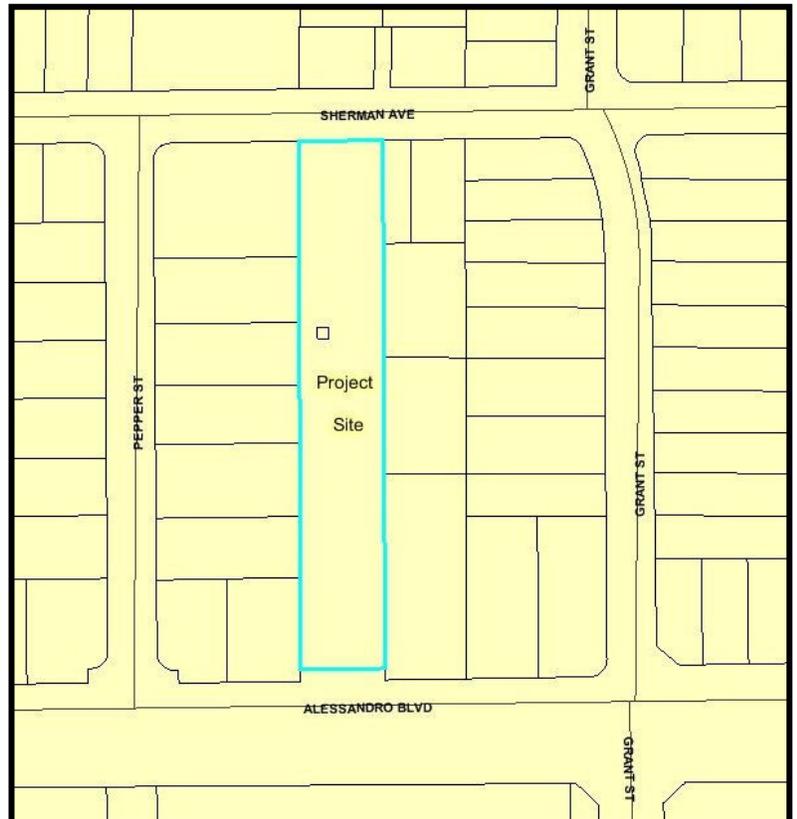

STAFF RECOMMENDATION: Approval

Any person interested in any listed proposal can contact the Community & Economic Development Department, Planning Division, at 14177 Frederick St., Moreno Valley, California, during normal business hours (7:30 a.m. to 5:30 p.m., Monday through Thursday), or may telephone (951) 413-3206 for further information. The associated documents will be available for public inspection at the above address.

In the case of Public Hearing items, any person may also appear and be heard in support of or opposition to the project or recommendation of adoption of the Environmental Determination at the time of the Hearing.

The City Council, at the Hearing or during deliberations, could approve changes or alternatives to the proposal.

If you challenge any of these items in court, you may be limited to raising only those items you or someone else raised at the Public Hearing described in this notice, or in written correspondence delivered to the City Council at, or prior to, the Public Hearing.

RESOLUTION NO. 2012-75

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING AN AMENDMENT TO THE GENERAL PLAN LAND USE ELEMENT (PA08-0033) TO CHANGE THE LAND USE DESIGNATION OF A 0.54 ACRE PORTION OF A PARCEL LOCATED AT 22184 ALESSANDRO BOULEVARD (PORTION OF ASSESSOR'S PARCEL NUMBER 291-190-025) FROM RESIDENTIAL/OFFICE (R/O) TO COMMERCIAL (C).

WHEREAS, the applicant, Socrates Urena, has filed an application for approval of PA08-0033, requesting an amendment to the General Plan Land Use. The requested amendment to the Land Use Element changes approximately 0.54 of an acre of Residential/Office (R/O) land use to Commercial (C) as described in the title of this resolution and the attached Exhibit A. This General Plan Amendment is being processed concurrently with a Zone Change (PA08-0034).

WHEREAS, there is hereby imposed on the associated development projects certain fees, dedications, reservations and other exactions pursuant to state law and City ordinances;

WHEREAS, pursuant to Government Code Section 66020(d)(1), NOTICE IS HEREBY GIVEN that the associated development projects are subject to certain fees, dedications, reservations and other exactions as provided herein;

WHEREAS, an environmental assessment, including an Environmental Initial Study, has been prepared to address the environmental impacts associated with application PA08-0033 as described above and a Negative Declaration has been adopted pursuant to the California Environmental Quality Act (CEQA), as there is no evidence that the proposed General Plan Amendment, and related development applications, as designed and conditioned, will have a significant effect on public health or be materially injurious to surrounding properties or the environment as a whole.

WHEREAS, on May 10, 2012, the Planning Commission of the City of Moreno Valley held a meeting to consider a General Plan Amendment (PA08-0033). At said meeting, the Planning Commission recommended approval of General Plan Amendment PA08-0033 to the City Council, and;

WHEREAS, on September 25, 2012, the City Council of the City of Moreno Valley held a public hearing to consider the consider the subject General Plan Amendment;

ATTACHMENT 2

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred;

WHEREAS, all of the facts set forth in this Resolution are true and correct.

BE IT RESOLVED THAT THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, HEREBY FINDS AS FOLLOWS WITH RESPECT TO PA08-0033:

Based upon substantial evidence presented during the above-referenced public hearing, including written and oral staff reports, and the record from the public hearing, the City Council hereby finds that:

1. Conformance with General Plan Policies – The proposed general plan amendment is consistent with the General Plan, and its goals, objectives, policies and programs.

FACT: The project includes two applications, a General Plan Amendment and Zone Change to change the existing land use for 22184 Alessandro Boulevard (Assessor's Parcel Number 291-190-025). The project site current land use designation is Residential/Office (R/O). This project proposes to change the General Plan and Zoning designation from Residential/Office (R/O) to Commercial (C). There a development application associated with the proposed land use change. The Conditional Use Permit PA08-0035 proposes a Smog Inspection Station and Tire Sales commercial business. Commercial zoning would permit such a development.

Since the proposed General Plan Amendment is compatible in intensity with the current General Plan, the project would not conflict with the goals, objectives, policies or programs of the General Plan.

2. Health, Safety and Welfare – The proposed general plan amendment will not be detrimental to the public health, safety or welfare.

FACT: The proposed General Plan Amendment will not adversely affect the public health, safety or general welfare. An initial study of the potential environmental impacts of the amendment has been conducted in accordance with the provisions of the California Environmental Quality Act (CEQA). A Negative Declaration has been considered and prepared, as there is no evidence that the proposed land use change will have a significant affect on public

health or be materially injurious to surrounding properties or the environment as a whole.

BE IT FURTHER RESOLVED that the City Council of the City of Moreno Valley HEREBY APPROVES Resolution No. 2012-_____ approving PA08-0033, thereby establishing General Plan Land Use as described in the Resolution, and the revised General Plan map attached to the Resolution as Exhibit A .

APPROVED AND ADOPTED this 25th day of September 2012.

ORDINANCE NO. 854

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING PA08-0034 (ZONE CHANGE) TO CHANGE THE LAND USE DISTRICT FOR APPROXIMATELY 0.54 ACRES OF 22184 ALESSANDRO BOULEVARD (PORTION OF ASSESSOR PARCEL NUMBER 291-190-025) FROM OFFICE COMMERCIAL (OC) TO COMMUNITY COMMERCIAL (CC).

The City Council of the City of Moreno Valley does ordain as follows:

SECTION 1:

1.1 Pursuant to the provisions of law, public hearings were held before the City of Moreno Valley Planning Commission and the City Council.

1.2 The matter was fully discussed and the public and other agencies presented testimony and documentation.

1.3 Page 81 of the City of Moreno Valley Official Zoning Atlas shall be modified to reflect the Zone Change (PA08-0034).

1.4 An Initial Study has been completed for PA08-0034 (Zone Change). Based upon the Initial Study, a determination has been made that, as designed and conditioned, this project will not result in the potential for significant impacts to the environment. Therefore, adoption of a Negative Declaration is appropriate.

SECTION 2: FINDINGS

2.1 With respect to the proposed change to page 81 of the City of Moreno Valley Official Zoning Atlas, and based upon substantial evidence presented to the City Council during the public hearing on September 25, 2012, including written and oral staff reports, and the record from the public hearing, the City Council hereby specifically finds as follows:

1. Conformance with General Plan Policies – The proposed use is consistent with the General Plan, and its goals, objectives, policies and programs.

FACT: The project includes three applications, a General Plan Amendment, Change of Zone and Conditional Use Permit to change the existing land use for 0.54 acres Assessor's Parcel Number 291-190-025 (southern end closest to Alessandro Boulevard) and approve a Smog Inspection Station and Tire Sales commercial business. The project site current land use designation is Office Commercial.

ATTACHMENT 3

This project proposes to change the General Plan from Residential/Office (R/O) to Commercial (C) and the Zoning designation from Office Commercial (OC) to Community Commercial (CC). There is a development application (CUP PA08-0035) associated with the proposed land use change for a Smog Inspection Station and Tire Sales commercial business. The proposed zoning would permit such a development.

Since the proposed General Plan Amendment, as well as the Change of Zone, is compatible in intensity with the current General Plan, the project would not conflict with the goals, objectives, policies or programs of the General Plan.

2. Conformance with Specific Plan Policies – The proposed use is consistent with any applicable Specific Plan.

FACT: The project site is not within a specific plan area.

3. Health, Safety and Welfare – The proposed use will not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the vicinity.

FACT: The proposed General Plan Amendment will not adversely affect the public health, safety or general welfare. An initial study of the potential environmental impacts of the amendment has been conducted in accordance with the provisions of the California Environmental Quality Act (CEQA). A Negative Declaration has been considered and prepared, as there is no evidence that the proposed land use change will have a significant affect on public health or be materially injurious to surrounding properties or the environment as a whole.

4. Conformance with Title 9 – The proposed amendment to change the zoning atlas is consistent with the purposes and intent of Title 9.

FACT: The applicant has met the City’s Municipal Code and other regulations to change the zone. As proposed, the zone change from Office Commercial (OC) to Community Commercial (CC) is consistent with the purposes and intent of Title 9.

SECTION 3: ZONE CHANGE

3.1 Based on the findings contained in Section 2 of this Ordinance, the City Council hereby adopts a Zone Change to change to the zoning districts from Office Commercial (OC) to Community Commercial (CC) for the approximately 0.54 acres located at 22184 Alessandro Boulevard, subject to the revised zoning designations depicted in the attached Exhibit A.

SECTION 4: EFFECT OF ENACTMENT

4.1 Except as specifically provided herein, nothing contained in this ordinance shall be deemed to modify or supersede any prior enactment of the City Council which addresses the same subject addressed herein.

SECTION 5: NOTICE OF ADOPTION

5.1 Within fifteen days after the date of adoption hereof, the City Clerk shall certify to the adoption of this ordinance and cause it to be posted in three public places within the city.

SECTION 6: EFFECTIVE DATE

6.1 This ordinance shall take effect thirty days after the date of its adoption.

APPROVED AND ADOPTED this 9th day of October, 2012.

RESOLUTION NO. 2012-76

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING CONDITIONAL USE PERMIT (PA08-0035) FOR THE CONVERSION OF AN EXISTING SINGLE FAMILY RESIDENCE INTO SMOG INSPECTION STATION AND TIRE SALES COMMERCIAL BUSINESS AT 22184 ALESSANDRO BOULEVARD (APN: 291-190-025).

WHEREAS, the applicant, Socrates Urena, has filed applications for the approval of PA08-0035 (Conditional Use Permit) for a Smog Inspection Station and Tire Sales commercial business at 22184 Alessandro Boulevard, as described in the title of this Resolution. This conditional use permit is being processed concurrently with a General Plan Amendment (PA08-0033) and Change of Zone (PA08-0034).

WHEREAS, pursuant to Government Code Section 66020(d)(1), NOTICE IS HEREBY GIVEN that this project(s) is subject to certain fees, dedications, reservations and other exactions as provided herein.

WHEREAS, there is hereby imposed on the subject development project(s) certain fees, dedications, reservations and other exactions pursuant to state law and City ordinances;

WHEREAS, an environmental assessment, including an initial study, has been prepared to address the environmental impacts associated with applications PA08-0033, PA08-0034 and PA08-0035 described above and environmental determinations have been adopted pursuant to the California Environmental Quality Act (CEQA).

WHEREAS, a public hearing was held before the Planning Commission on May 10, 2012, regarding the General Plan Amendment, Change of Zone and Conditional Use Permit. The Planning Commission recommended that the City Council approve and adopt negative declarations for this project.

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred;

WHEREAS, all of the facts set forth in this Resolution are true and correct.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS WITH RESPECT TO PA08-0035:

ATTACHMENT 4

A. This City Council hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this City Council during the above-referenced meeting on September 25, 2012, including written and oral staff reports, and the record from the public hearing, this City Council hereby specifically finds as follows:

1. Conformance with General Plan Policies – The proposed use is consistent with the General Plan, and its goals, objectives, policies and programs.

FACT: The proposal for the a Smog Inspection Station and Tire Sales commercial business at 22184 Alessandro Boulevard will be consistent with the General Plan, its goals, objectives, policies and programs with the approval of PA08-0033.

2. Conformance with Zoning Regulations – The proposed use complies with all applicable zoning and other regulations.

FACT: The proposed project site is located in an “OC” Office Commercial land use district. However, an application for a Change of Zone from OC (Office Commercial) to CC (Community Commercial), is being processed concurrently with this proposal (PA08-0034) and therefore, the proposed project would be in compliance with the applicable regulations.

3. Health, Safety and Welfare – The proposed use will not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the vicinity.

FACT: The proposed project would not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the surrounding. An Environmental Initial Study was prepared in accordance with the Guidelines of the California Environmental Quality Act (CEQA) concluded that this project would not have a negative impact on public health, safety or welfare or improvements in the vicinity.

4. Location, Design and Operation – The location, design and operation of the proposed project will be compatible with existing and planned land uses in the vicinity.

FACT: With the approval of the proposed General Plan Amendment and Change of Zone requests, the proposed use would be in conformance with the existing surrounding land uses. The location, design and operation will also be consistent with the other existing commercial and mixed uses in the immediate vicinity.

BE IT FURTHER RESOLVED THAT THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY APPROVE CONDITIONAL USE PERMIT (PA08-0035), SUBJECT TO THE ATTACHED CONDITIONS OF APPROVAL INCLUDED AS EXHIBIT A.

APPROVED AND ADOPTED this 25th day of September 2012.

Planning Division

For questions regarding any Planning condition of approval, please contact the Planning Division at (951) 413-3206.

GENERAL CONDITIONS

- P1. This approval shall expire three years after the approval date of this project unless used or extended as provided for by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever. Use means the beginning of substantial construction contemplated by this approval within the three-year period, which is thereafter pursued to completion, or the beginning of substantial utilization contemplated by this approval. (MC 9.02.230)

- P2. In the event the use hereby permitted ceases operation for a period of one (1) year or more, or as defined in the current Municipal Code, this permit may be revoked in accordance with provisions of the Municipal Code. (MC 9.02.260)

- P3. The site shall be developed in accordance with the approved plans on file in the Community & Economic Development Department - Planning Division, the Municipal Code regulations, General Plan, and the conditions contained herein. Prior to any use of the project site or business activity being commenced thereon, all Conditions of Approval shall be completed to the satisfaction of the Planning Official. (MC 9.14.020)
- P4. The developer, or the developer's successor-in-interest, shall be responsible for maintaining any undeveloped portion of the site in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)
- P5. All landscaped areas shall be maintained in a healthy and thriving condition, free from weeds, trash and debris. (MC 9.02.030)
- P6. Any signs indicated on the submitted plans are not included with this approval. Any signs, **whether permanent (e.g. wall, monument) or temporary (e.g. banner, flag)**, proposed for this development shall be designed in conformance with the sign provisions of the Development Code or approved sign program, if applicable, and shall require separate application and approval by the Planning Division. **No signs are permitted in the public right of way.** (MC 9.12)
- P7. (GP) All site plans, grading plans, landscape and irrigation plans, fence/wall plans, lighting plans and street improvement plans shall be coordinated for consistency with this approval.

Special Conditions

- P8. **The site at 22184 Alessandro Boulevard has been approved for a Smog Inspection Station and Tire Sales commercial business. A change or modification shall require separate approval. For a Conditional Use Permit, violation may result in revocation in the case of a Conditional Use Permit.**

Prior to Issuance of Grading Permits

- P9. (GP) If potential historic, archaeological, or paleontological resources are uncovered during excavation or construction activities at the project site, work in the affected area will cease immediately and a qualified person (meeting the Secretary of the Interior's standards (36CFR61)) shall be consulted by the applicant to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, prehistoric, or paleontological resource. Determinations and recommendations by the consultant shall be implemented as deemed appropriate by the Community & Economic Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and

all affected Native American Tribes before any further work commences in the affected area.

If human remains are discovered, **no further disturbance shall occur until the County Coroner has made necessary findings as to origin.** If the **County Coroner** determines that the remains are potentially Native American, the California Native American Heritage Commission **shall be contacted within a reasonable timeframe to identify the “most likely descendant.”** The **“most likely descendant” shall then make recommendations, and engage in consultations concerning the treatment of the remains (California Public Resources Code 5097.98).** (GP Objective 23.3, CEQA).

- P10. (GP) Prior to issuance of grading permits, the developer shall pay the applicable Stephens' Kangaroo Rat (SKR) Habitat Conservation Plan mitigation fee. (Ord)
- P11. (GP) Prior to approval of any grading permit, the developer shall submit for review and approval of a tree plan to the Planning Division. The plan shall identify all mature trees (4 inch trunk diameter or larger) on the subject property and City right-of-way. Using the grading plan as a base, the plan shall indicate trees to be relocated, retained, and removed. Replacement trees shall be shown on the plan, be a minimum size of 24 inch box, and meet a ratio of three replacement trees for each mature tree removed or as approved by the **Planning Official.** (GP Objective 4.4, 4.5, DG)
- P12. **(GP) Prior to approval of any grading permits, final median enhancement/landscape/irrigation plans shall be submitted to the Planning Division, and Public Works Department – Special Districts for review and approval by each division. (GP - Circulation Master Plan) Timing of installation shall be determined by PW- Special Districts.**
- P13. **(GP) Prior to approval of any grading permits, plans for any security gate system shall be submitted to the Planning Division for review and approval.**
- P14. **(GP) Decorative pedestrian pathways across circulation aisles/paths shall be provided throughout the development to connect dwellings with open spaces and/or recreational uses or commercial/industrial buildings with open space and/or parking. and/or the public right-of-way. The pathways shall be shown on the precise grading plan. (GP Objective 46.8, DG)**
- P15. **(GP) Prior to the issuance of building permits, the site plan shall show decorative concrete pavers for all driveway ingress/egress locations of the project.**

CONDITIONS OF APPROVAL
PA08-0035 (Conditional Use Permit)
PAGE 4

- P16. **(GP) Prior to issuance of grading permits, the developer shall submit wall/fence plans to the Planning Division for review and approval as follows:**
- A. Walls and fences for visual screening are required when there are adjacent residential uses or residentially zone property. The height, placement and design will be based on a site specific review of the project. All walls are subject to the approval of the Planning Official. (DC 9.08.070)**
 - B. Show location and elevations of the trash enclosure.**
 - C. Landscaping on three sides of the trash enclosure.**

PRIOR TO BUILDING PERMITS

39. (BP) Prior to issuance of building permits, the Planning Division shall review and approve the location and method of enclosure or screening of transformer cabinets, commercial gas meters and back flow preventers as shown on the final working drawings. Location and screening shall comply with the following criteria: transformer cabinets and commercial gas meters shall not be located within required setbacks and shall be screened from public view either by architectural treatment or landscaping; multiple electrical meters shall be fully enclosed and incorporated into the overall architectural design of the building(s); back-flow preventers shall be screened by landscaping. (GP Objective 43.30, DG)
40. (BP) Prior to issuance of building permits, screening details shall be addressed on plans for roof top equipment and trash enclosures submitted for Planning Division review and approval. All equipment shall be completely screened so as not to be visible from public view, and the screening shall be an integral part of the building. For trash enclosures, landscaping shall be included on at least three sides. The trash enclosure, including any roofing, shall be compatible with the architecture for the building(s). (GP Objective 43.6, DG)
41. (BP) Prior to issuance of building permits, two copies of a detailed, on-site, computer generated, point-by-point comparison lighting plan, including exterior building, parking lot, and landscaping lighting, shall be submitted to the Planning Division for review and approval. The lighting plan shall be generated on the plot plan and shall be integrated with the final landscape plan. The plan shall indicate the manufacturer's specifications for light fixtures used and shall include style, illumination, location, height and method of shielding. The lighting shall be designed in such a manner so that it does not exceed 0.5 foot candles illumination beyond at the property line. The lighting level for all parking lots or structures shall be a minimum coverage of one foot-candle of light with a maximum of eight foot-candles. After the third plan check review for lighting plans, an additional plan check fee will apply. (MC 9.08.100, DG)

CONDITIONS OF APPROVAL
PA08-0035 (Conditional Use Permit)
PAGE 5

42. (BP) Prior to issuance of building permits, the developer or developer's successor-in-interest shall pay all applicable impact fees, including but not limited to Transportation Uniform Mitigation fees (TUMF), Multi-species Habitat Conservation Plan (MSHCP) mitigation fees, and the City's adopted Development Impact Fees. (Ord)
43. (BP) Prior to issuance of building permits, for multi-family projects that will be phased, a phasing plan submitted to the Planning Division will be required if occupancy is proposed to be phased.
44. **(BP) Prior to issuance of any building permits, final landscaping and irrigation plans shall be submitted for review and approved by the Planning Division. After the third plan check review for landscape plans, an additional plan check fee shall apply. The plans shall be prepared in accordance with the City's Landscape Standards and shall include:**
- A. Finger and end planters with required step outs and curbing shall be provided every 12 parking stalls as well as at the terminus of each aisle.**
 - B. Diamond planters shall be provided every 3 parking stalls.**
 - C. Drought tolerant landscape shall be used. Sod shall be limited to gathering areas.**
 - D. Street trees shall be provided every 40 feet on center in the right of way.**
 - E. On-site trees shall be planted at an equivalent of one (1) tree per thirty (30) linear feet of the perimeter of a parking lot and per thirty linear feet of a building dimension for the portions of the building visible from a parking lot or right of way. Trees may be massed for pleasing aesthetic effects.**
 - F. Enhanced landscaping shall be provided at all driveway entries and street corner locations**
 - G. The review of all utility boxes, transformers etc. shall be coordinated to provide adequate screening from public view.**
 - H. Landscaping on three sides of the trash enclosure.**
 - I. All site perimeter and parking lot landscape and irrigation shall be installed prior to the release of certificate of any occupancy permits for the site or pad in question (master plot plan).**
45. (BP) Prior to the issuance of building permits, the site plan shall include landscape for trash enclosures to include landscape on three sides, while elevation plans for trash enclosures shall be provided that include decorative enhancements such as an enclosed roof and other decorative features that are consistent with the architecture of the proposed buildings on the site, subject to the approval of the Planning Division.

46. (BP) Prior to the issuance of building permits, the plot plan shall include decorative concrete pavers for all driveway ingress/egress locations for the project.

PRIOR TO CERTIFICATE OF OCCUPANCY

50. (CO) Prior to issuance of Certificates of Occupancy or building final, the required landscaping and irrigation shall be installed. (DC 9.03.040)
51. (CO) Prior to the issuance of Certificates of Occupancy or building final, all required and proposed fences and walls shall be constructed according to the approved plans on file in the Planning Division. (MC 9.080.070).
52. (BP/CO) Prior to issuance of Certificate of Occupancy or building final, installed landscaping and irrigation shall be inspected by the Planning Division. All on-site and common area landscaping shall be installed in accordance with the City's Landscape Standards and the approved project landscape plans and all site clean-up shall be completed.

Building and Safety Division

- B1. The above project shall comply with the current California Codes (CBC, CEC, CMC and the CPC) as well as city ordinances. All new projects shall provide a soils report as well. Plans shall be submitted to the Building and Safety Division as a separate submittal. The 2010 edition of the California Codes became effective for all permits issued after January 1, 2011.

COMMERCIAL, INDUSTRIAL, MULTI-FAMILY PROJECTS INCLUDING CONDOMINIUMS, TOWNHOMES, DUPLEXES AND TRIPLEX BUILDINGS REQUIRE THE FOLLOWING.

- B2. Prior to final inspection, all plans will be placed on a CD Rom for reference and verification. Plans will include "as built" plans, revisions and changes. The CD will also include Title 24 energy calculations, structural calculations and all other pertinent information. It will be the responsibility of the developer and or the building or property owner(s) to bear all costs required for this process. The CD will be presented to the Building and Safety Division for review prior to final inspection and building occupancy. The CD will become the property of the Moreno Valley Building and Safety Division at that time. In addition, a site plan showing the path of travel from public right of way and building to building access with elevations will be required.

- B3. (BP) Prior to the issuance of a building permit, the applicant shall submit a properly completed "Waste Management Plan" (WMP), as required, to the Compliance Official (Building Official) as a portion of the building or demolition permit process.

SCHOOL DISTRICT

- S1. (BP) Prior to issuance of building permits, the developer shall provide to the Community Development Director a written certification by the affected school district that either: (1) the project has complied with the fee or other exaction levied on the project by the governing board of the district, pursuant to Government Code Section 65996; or (2) the fee or other requirement does not apply to the project.

UNITED STATES POSTAL SERVICE

- PO1. (BP) Prior to the issuance of building permits, the developer shall contact the U.S. Postal Service to determine the appropriate type and location of mailboxes.

POLICE DEPARTMENT

Note: All Special conditions are in bold lettering. All other conditions are standard to all or most development projects

Standard Conditions

- PD1. Prior to the start of any construction, temporary security fencing shall be erected. The fencing shall be a minimum of six (6) feet high with locking, gated access and shall remain through the duration of construction. Security fencing is required if there is: construction, unsecured structures, unenclosed storage of materials and/or equipment, and/or the condition of the site constitutes a public hazard as determined by the Public Works Department. If security fencing is required, it shall remain in place until the project is completed or the above conditions no longer exist. (DC 9.08.080)
- PD2. (GP) Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following:
- a. The name (if applicable) and address of the development.
 - b. The developer's name, address, and a 24-hour emergency telephone number. (DC 9.08.080)

CONDITIONS OF APPROVAL
PA08-0035 (Conditional Use Permit)
PAGE 8

- PD3. (CO) Prior to the issuance of a Certificate of Occupancy, an Emergency Contact information Form for the project shall be completed at the permit counter of the Community and Economic Development Department - Building Division for routing to the Police Department. (DC 9.08.080)
- PD4. Addresses needs to be in plain view visible from the street and visible at night. It needs to have a backlight, so the address will reflect at night or a lighted address will be sufficient.
- PD5. All exterior doors in the rear and the front of the buildings need an address or suite number on them.
- PD6. All rear exterior doors should have an overhead low sodium light or a light comparable to the same.
- PD7. The exterior of the building should have high-pressure sodium lights and or Metal halide lights installed and strategically placed throughout the exterior of the building. The parking lots should have adequate lighting to insure a safe environment for customers and or employees.
- PD8. All landscape cover should not exceed over 3' from the ground in the parking lot.
- PD9. Bushes that are near the exterior of the building should not exceed 4' and should not be planted directly in front of the buildings or walkways.
- PD10. Trees, which exceed 20', should have a 7' visibility from the ground to the bottom half of the tree. This is so that patrons or employees can view the whole parking lot while parking their vehicles in the parking lot.
- PD11. Cash registers shall be placed near the front entrance of the store.
- PD12. Window coverings shall comply with the city ordinance.
- PD13. No loitering signs shall be posted in plain view throughout the building.
- PD14. A monument address is to be located in front of the main entrance.
- PD15. Landscape screening is to be located no closer than six feet from the covered parking spaces.

FIRE PREVENTION BUREAU

1. Fire lane shall meet conditions F6, F7, F8, AND F9.
2. The following Standard Conditions shall apply.

With respect to the conditions of approval, the following fire protection measures shall be provided in accordance with Moreno Valley City Ordinances and/or recognized fire protection standards:

- F1. Final fire and life safety conditions will be addressed when the Fire Prevention Bureau reviews building plans. These conditions will be based on occupancy, use, California Building Code (CBC), California Fire Code (CFC), and related codes, which are in force at the time of building plan submittal.
- F2. The Fire Prevention Bureau is required to set a minimum fire flow for the remodel or construction of all commercial buildings per CFC Appendix B and Table B105.1. The applicant/developer shall provide documentation to show there exists a water system capable of delivering 1500 GPM for 2 hour(s) duration at 20-PSI residual operating pressure. The required fire flow may be adjusted during the approval process to reflect changes in design, construction type, or automatic fire protection measures as approved by the Fire Prevention Bureau. Specific requirements for the project will be determined at time of submittal. (CFC 508.3, Appendix B and MVMC 8.36.100 Section D).
- F3. Industrial, Commercial, Multi-family, Apartment, Condominium, Townhouse or Mobile Home Parks. A combination of on-site and off-site super fire hydrants (6" x 4" x 2 1/2") and super enhanced fire hydrants (6" x 4" x 4" x 2 1/2") shall not be closer than 40 feet and more than 150 feet from any portion of the building as measured along approved emergency vehicular travel ways. The required fire flow shall be available from any adjacent fire hydrant(s) in the system. Where new water mains are extended along streets where hydrants are not needed for protection of structures or similar fire problems, super or enhanced fire hydrants as determined by the fire code official shall be provided at spacing not to exceed 500 feet of frontage for transportation hazards. (CFC 508.5.7 & MVMC 8.36.050 Section O and 8.36.100 Section E)
- F4. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.1 and 503.2.5)

CONDITIONS OF APPROVAL
PA08-0035 (Conditional Use Permit)
PAGE 10

- F5. Prior to issuance of Building Permits, the applicant/developer shall provide the Fire Prevention Bureau with an approved site plan for Fire Lanes and signage. (MVMC 8.36.050 and CFC 501.3)
- F6. Prior to construction and issuance of building permits, all locations where structures are to be built shall have an approved Fire Department emergency vehicular access road (all weather surface) capable of sustaining an imposed load of 80,000 lbs. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4 and MVMC 8.36.050 Section A)
- F7. Prior to construction and issuance of Building Permits, fire lanes and fire apparatus access roads shall have an unobstructed width of not less the twenty-four (24) feet as approved by the Fire Prevention Bureau and an unobstructed vertical clearance of not less the thirteen (13) feet six (6) inches. (CFC 503.2.1.1 and MVMC 8.36.050)
- F8. Prior to construction, all roads, driveways and private roads shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.050)
- F9. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4 and MVMC 8.36.050 Section A)
- F10. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.3 and MVMC 8.36.050)
- F11. Prior to building construction, dead end roadways and streets which have not been completed shall have a turnaround capable of accommodating fire apparatus. (CFC 503.2.5 and MVMC 8.36.050)
- F12. Prior to issuance of Building Permits, the applicant/developer shall participate in the Fire Impact Mitigation Program. (Fee Resolution as adopted by City Council)
- F13. Prior to issuance of Building Permits, the applicant/developer shall furnish one copy of the water system plans to the Fire Prevention Bureau for review. Plans shall:
 - a) Be signed by a registered civil engineer or a certified fire protection engineer;
 - b) Contain a Fire Prevention Bureau approval signature block; and
 - c) Conform to hydrant type, location, spacing of new and existing hydrants and minimum fire flow required as determined by the Fire Prevention Bureau.

CONDITIONS OF APPROVAL
PA08-0035 (Conditional Use Permit)
PAGE 11

After the local water company signs the plans, the originals shall be presented to the Fire Prevention Bureau for signatures. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

Existing fire hydrants on public streets are allowed to be considered available. Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are established to prevent obstruction of such roads. (CFC 508.1 and MVMC 8.36.100)

- F14. Prior to issuance of Certificate of Occupancy or Building Final, “Blue Reflective Markers” shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 510.1)
- F15. Prior to issuance of Certificate of Occupancy or Building Final, all commercial buildings shall display street numbers in a prominent location on the street side and rear access locations. The numerals shall be a minimum of twelve (12) inches in height for buildings and six (6) inches in height for suite identification on a contrasting background. Unobstructed lighting of the address(s) shall be by means approved by the Fire Prevention Bureau and Police Department. In multiple suite centers (strip malls), businesses shall post the name of the business on the rear door(s). (CFC 505.1)
- F16. Prior to issuance of a Certificate of Occupancy or Building Final, a “Knox Box Rapid Entry System” shall be provided. The Knox-Box shall be installed in an accessible location approved by the Fire Chief. The Knox-Box shall be supervised by the alarm system and all exterior security emergency access gates shall be electronically operated and be provided with Knox key switches for access by emergency personnel. (CFC 506.1)
- F17. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall be responsible for obtaining underground and/or above ground tank permits for the storage of combustible liquids, flammable liquids, or any other hazardous materials from both the County of Riverside Community Health Agency Department of Environmental Health and the Fire Prevention Bureau. (CFC 3401.4 and 2701.5)
- F18. Prior to issuance of Certificate of Occupancy, approval shall be required from the County of Riverside Community Health Agency (Department of Environmental Health) and Moreno Valley Fire Prevention Bureau to maintain, store, use, handle materials, or conduct processes which produce conditions hazardous to life or

CONDITIONS OF APPROVAL
PA08-0035 (Conditional Use Permit)
PAGE 12

- property, and to install equipment used in connection with such activities. (CFC 2701.5)
- F19. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer must submit a simple plot plan, a simple floor plan, and other plans as requested, each as an electronic file in .dwg format, to the Fire Prevention Bureau. Alternate file formats may be acceptable with approval by the Fire Chief.
- F20. The angle of approach and departure for any means of Fire Department access shall not exceed 1 ft drop in 20 ft (0.3 m drop in 6 m), and the design limitations of the fire apparatus of the Fire Department shall be subject to approval by the AHJ. (CFC 503.2.7 and MVMC 8.36.050 Section I)
- F21. Prior to construction, "private" driveways over 150 feet in length shall have a turn-around as determined by the Fire Prevention Bureau capable of accommodating fire apparatus. Driveway grades shall not exceed 12 percent. (CFC 503 and MVMC 8.36.050)
- F22. Complete plans and specifications for fire alarm systems, fire-extinguishing systems (including automatic sprinklers or standpipe systems), clean agent systems (or other special types of automatic fire-extinguishing systems), as well as other fire-protection systems and appurtenances thereto shall be submitted to the Moreno Valley Fire Prevention Bureau for review and approval prior to system installation. Submittals shall be in accordance with CFC Chapter 9 and associated accepted national standards.
- F23. A permit is required to maintain, store, use or handle materials, or to conduct processes which produce conditions hazardous to life or property, or to install equipment used in connection with such activities. Such permits shall not be construed as authority to violate, cancel or set aside any of the provisions of this code. Such permit shall not take the place of any license required by law. Applications for permits shall be made to the Fire Prevention Bureau in such form and detail as prescribed by the Bureau. Applications for permits shall be accompanied by such plans as required by the Bureau. Permits shall be kept on the premises designated therein at all times and shall be posted in a conspicuous location on the premises or shall be kept on the premises in a location designated by the Fire Chief. Permits shall be subject to inspection at all times by an officer of the fire department or other persons authorized by the Fire Chief in accordance with Appendix Chapter 1 and MVMC 8.36.100.

CONDITIONS OF APPROVAL
PA08-0035 (Conditional Use Permit)
PAGE 13

- F24. Approval of the safety precautions required for buildings being constructed, altered or demolished shall be required by the Fire Chief in addition to other approvals required for specific operations or processes associated with such construction, alteration or demolition. (CFC Chapter 14)
- F25. Prior to issuance of Certificate of Occupancy, permits are required to store, dispense, use or handle hazardous material. Each application for a permit shall include a hazardous materials management plan (HMMP). The location of the HMMP shall be posted adjacent to (other) permits when an HMMP is provided. The HMMP shall include a facility site plan designating the following:
- a) Storage and use areas;
 - b) Maximum amount of each material stored or used in each area;
 - c) Range of container sizes;
 - d) Locations of emergency isolation and mitigation valves and devices;
 - e) Product conveying piping containing liquids or gases, other than utility-owned fuel gas lines and low-pressure fuel gas lines;
 - f) On and off positions of valves for valves which are of the self-indicating type;
 - g) Storage plan showing the intended storage arrangement, including the location and dimensions of aisles. The plans shall be legible and approximately to scale. Separate distribution systems are allowed to be shown on separate pages; and
 - h) Site plan showing all adjacent/neighboring structures and use.

NOTE: Each application for a permit shall include a hazardous materials inventory statement (HMIS).

- F26. Before a Hazardous Materials permit is issued, the Fire Chief shall inspect and approve the receptacles, vehicles, buildings, devices, premises, storage spaces or areas to be used. In instances where laws or regulations are enforceable by departments other than the Fire Prevention Bureau, joint approval shall be obtained from all departments concerned. (CFC Appendix H)
- F27. Construction or work for which the Fire Prevention Bureau's approval is required shall be subject to inspection by the Fire Chief and such construction or work shall remain accessible and exposed for inspection purposes until approved. (CFC Section 106)
- F28. The Fire Prevention Bureau shall maintain the authority to inspect, as often as necessary, buildings and premises, including such other hazards or appliances designated by the Fire Chief for the purpose of ascertaining and causing to be corrected any conditions which would reasonably tend to cause fire or contribute to

CONDITIONS OF APPROVAL
PA08-0035 (Conditional Use Permit)
PAGE 14

its spread, or any violation of the purpose or provisions of this code and of any other law or standard affecting fire safety. (CFC Section 106)

- F29. Permit requirements issued, which designate specific occupancy requirements for a particular dwelling, occupancy, or use, shall remain in effect until such time as amended by the Fire Chief. (CFC Section 104)
- F30. In accordance with the California Fire Code Appendix Chapter 1, where no applicable standards or requirements are set forth in this code, or contained within other laws, codes, regulations, ordinances or bylaws adopted by the jurisdiction, compliance with applicable standards of the National Fire Protection Association or other nationally recognized fire safety standards as are approved shall be deemed as prima facie evidence of compliance with the intent of this code as approved by the Fire Chief. (CFC Section 102.7)
- F31. Any alterations, demolitions, or change in design, occupancy and use of buildings or site will require plan submittal to the Fire Prevention Bureau with review and approval prior to installation. (CFC Appendix Chapter 1)
- F32. Emergency and Fire Protection Plans shall be provided when required by the Fire Prevention Bureau. (CFC Section 105)
- F33. Prior to Certificate of Occupancy all locations where medians are constructed and prohibit vehicular ingress/egress into or away from the site, provisions must be made to construct a median-crossover at all locations determined by the Fire Marshal and the City Engineer. Prior to the construction, design plans will be submitted for review and approval by the City Engineer and all applicable inspections conducted by Land Development Division.
- F34. Prior to construction, all traffic calming designs/devices must be approved by the Fire Marshal and City Engineer.

**CITY OF MORENO VALLEY
PUBLIC WORKS DEPARTMENT - LAND DEVELOPMENT DIVISION
CONDITIONS OF APPROVAL
PA08-0035 Conditional Use Permit for Smog Inspection Station and Tire Sales
APN 291-190-025**

Note: All Special Conditions are in **Bold** lettering and follow the standard conditions.

PUBLIC WORKS DEPARTMENT – LAND DEVELOPMENT DIVISION

The following are the Public Works Department – Land Development Division Conditions of Approval for this project and shall be completed at no cost to any government agency. All questions regarding the intent of the following conditions shall be referred to the Public Works Department – Land Development Division.

General Conditions

- LD1. (G) The developer shall comply with all applicable City ordinances and resolutions including the City's Municipal Code (MC).
- LD2. (G) If the project does not involve the subdivision of land and it is necessary to dedicate right-of-way/easements, the developer shall make the appropriate offer of dedication by separate instrument. The City Engineer may require the construction of necessary utilities, streets or other improvements beyond the project boundary, if the improvements are needed for circulation, parking, access, or for the welfare or safety of the public.
- LD3. (G) It is understood that the conditional use permit correctly shows all existing easements, traveled ways, and drainage courses, and that their omission may require the map or plans associated with this application to be resubmitted for further consideration. (MC 9.14.040)
- LD4. (G) If improvements associated with this project are not initiated within two years of the date of approval of the Public Improvement Agreement, the City Engineer may require that the improvement cost estimate associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the Public Improvement Agreement or issuance of a permit.

CONDITIONS OF APPROVAL
PA08-0035 (Conditional Use Permit)
PAGE 16

- LD5. (G) The developer shall monitor, supervise and control all construction and construction supportive activities, so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:
- (a) Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.
 - (b) Observance of working hours as stipulated on permits issued by the Public Works Department.
 - (c) The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.
 - (d) All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements shall be adhered to during the grading operations.

Violation of any condition or restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedies as noted in the City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.

- LD6. (G) A detailed drainage study shall be submitted to the City Engineer for review and approval at the time of any improvement or grading plan submittal. The study shall be prepared by a registered civil engineer and shall include existing and proposed hydrologic conditions. Hydraulic calculations are required for all drainage control devices and storm drain lines. (MC 9.14.110). Prior to approval of the related improvement or grading plans, the developer shall submit the approved drainage study, on compact disk, in (.pdf) digital format to the Land Development Division of the Public Works Department.
- LD7. (G) The final conditions of approval issued by the Planning Division subsequent to Planning Commission approval shall be photographically or electronically placed on mylar sheets and included in the Grading and Street Improvement plan sets on twenty-four (24) inch by thirty-six (36) inch mylar and submitted with the plans for plan check. These conditions of approval shall become part of these plan sets and the approved plans shall be available in the field during grading and construction.

CONDITIONS OF APPROVAL
PA08-0035 (Conditional Use Permit)
PAGE 17

Prior to Grading Plan Approval or Grading Permit

- LD8. (GPA) Prior to approval of the grading plans, plans shall be drawn on twenty-four (24) inch by thirty-six (36) inch mylar and signed by a registered civil engineer and other registered/licensed professional as required.
- LD9. (GPA) Prior to approval of grading plans, the developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:
- a. The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines shall be located at the top of slopes.
 - b. Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.
 - c. A grading permit shall be obtained from the Public Works Department Land Development Division prior to commencement of any grading outside of the City maintained road right-of-way.
 - d. All improvement plans are substantially complete and appropriate clearance and at-risk letters are provided to the City. (MC 9.14.030)
 - e. The developer shall submit a soils and geologic report to the Public Works Department – Land Development Division. The report shall address the soil's stability and geological conditions of the site.
- LD10. (GPA) Prior to approval of the grading plans for projects that will result in discharges of storm water associated with construction with a soil disturbance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's Identification number (WDID#) from the State Water Quality Control Board (SWQCB). The WDID# shall be noted on the grading plans prior to issuance of the first grading permit.
- LD11. (GPA) Prior to grading plan approval, the developer shall prepare a Storm Water Pollution Prevention Plan (SWPPP) in conformance with the state's Construction Activities Storm Water General Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request. The SWPPP shall be submitted to the Storm Water Program Manager on compact disk(s) in Microsoft Word format.

CONDITIONS OF APPROVAL
PA08-0035 (Conditional Use Permit)
PAGE 18

- LD12. (GPA) Prior to the approval of the grading plans, the developer shall pay applicable remaining grading plan check fees.
- LD13. (GPA/MA) Prior to the later of either grading plan or final map approval, resolution of all drainage issues shall be as approved by the City Engineer.
- LD14. (GP) Prior to issuance of a grading permit, if the fee has not already been paid prior to map approval or prior to issuance of a building permit if a grading permit is not required, the developer shall pay Area Drainage Plan (ADP) fees. The developer shall provide a receipt to the City showing that ADP fees have been paid to Riverside County Flood Control and Water Conservation District. (MC 9.14.100)
- LD15. (GP) Prior to issuance of a grading permit, security, in the form of a cash deposit (preferable), letter of credit, or performance bond shall be required to be submitted as a guarantee of the completion of the grading required as a condition of approval of the project.
- LD16. (GP) Prior to issuance of a grading permit, the developer shall pay the applicable grading inspection fees.

Prior to Improvement Plan Approval or Construction Permit

- LD17. (IPA) Prior to approval of the improvement plans, the improvement plans shall be drawn on twenty-four (24) inch by thirty-six (36) inch mylar and signed by a registered civil engineer and other registered/licensed professional as required.
- LD18. (IPA) Prior to approval of the improvement plans, the developer shall submit clearances from all applicable agencies, and pay all outstanding plan check fees. (MC 9.14.210)
- LD19. (IPA) All public improvement plans prepared and signed by a registered civil engineer in accordance with City standards, policies and requirements shall be approved by the City Engineer in order for the Public Improvement Agreement and accompanying security to be executed.
- LD20. (IPA) Prior to approval of the improvement plans, securities and a public improvement agreement shall be required to be submitted and executed as a guarantee of the completion of the improvements required as a condition of approval of the project.
- LD21. (IPA) The street improvement plans shall comply with all applicable City standards.

CONDITIONS OF APPROVAL
PA08-0035 (Conditional Use Permit)
PAGE 19

- LD22. (IPA) Prior to approval of the improvement plans, the plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three years old and recently slurry sealed streets less than one year old. Pavement cuts for trench repairs may be allowed for emergency repairs or as specifically approved in writing by the City Engineer.
- LD23. (CP) All work performed within the City right-of-way requires a construction permit. As determined by the City Engineer, security may be required for work within the right-of-way. Security shall be in the form of a cash deposit or other approved means. The City Engineer may require the execution of a public improvement agreement as a condition of the issuance of the construction permit. All inspection fees shall be paid prior to issuance of construction permit. (MC 9.14.100)
- LD24. (CP) Prior to issuance of a construction permit, all public improvement plans prepared and signed by a registered civil engineer in accordance with City standards, policies and requirements shall be approved by the City Engineer.
- LD25. (CP) Prior to issuance of construction permits, the developer shall pay all applicable inspection fees.

Prior to Building Permit

- LD26. (BP) Prior to issuance of building permits for non-subdivision projects, all street dedications shall be irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer. All dedications shall be free of all encumbrances as approved by the City Engineer.
- LD27. (BP) Prior to issuance of building permits for non-subdivisions, security shall be required to be submitted as a guarantee of the completion of the improvements required as a condition of approval of the project. A public improvement agreement will be required to be executed.
- LD28. (BP) Prior to issuance of a building permit, this project is subject to requirements under the current permit for storm water activities required as part of the National Pollutant Discharge Elimination System (**NPDES**) as mandated by the Federal Clean Water Act. In compliance with Proposition 218, the developer shall agree to approve the City of Moreno Valley NPDES Regulatory Rate Schedule that is in place at the time of permit issuance. Following are the requirements:

CONDITIONS OF APPROVAL
PA08-0035 (Conditional Use Permit)
PAGE 20

- a. Select one of the following options to meet the financial responsibility to provide storm water utilities services for the required continuous operation, maintenance, monitoring system evaluations and enhancements, remediation and/or replacement, all in accordance with Resolution No. 2002-46.
 - i. Participate in the mail ballot proceeding in compliance with Proposition 218, for the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule and pay all associated costs with the ballot process; or
 - ii. Establish an endowment to cover future City costs as specified in the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule.
- b. Notify the Special Districts Division of the intent to obtain a building permit 90 days prior to the City's issuance of a building permit and the financial option selected. (California Government Code & Municipal Code)

LD29. (BP) Prior to issuance of a building permit, all pads shall meet pad elevations per approved plans as noted by the setting of "Blue-top" markers installed by a registered land surveyor or licensed engineer.

~~Prior to Certificate of Occupancy~~

LD30. (CO) Prior to issuance of the last certificate of occupancy or building final, the developer shall pay all outstanding fees.

LD31. (CO) The City of Moreno Valley has an adopted Development Impact Fee (DIF) nexus study. All projects unless otherwise exempted shall be subject to the payment of the DIF prior to issuance of occupancy. The fees are subject to the provisions of the enabling ordinance and the fee schedule in effect at the time of occupancy.

LD32. (CO) The City of Moreno Valley has an adopted area wide Transportation Uniform Mitigation Fee (TUMF). All projects unless otherwise exempted shall be subject to the payment of the TUMF prior to issuance of occupancy. The fees are subject to the provisions of the enabling ordinance and the fee schedule in effect at the time of occupancy.

LD33. (CO) Prior to issuance of a certificate of occupancy or building final, the developer shall construct all public improvements in conformance with applicable City standards, except as noted in the Special Conditions, including but not limited to the following applicable improvements:

CONDITIONS OF APPROVAL
PA08-0035 (Conditional Use Permit)
PAGE 21

- a. Street improvements including, but not limited to: pavement, base, curb and/or gutter, sidewalks, drive approaches, signing, striping, under sidewalk drains, landscaping and irrigation, pavement tapers/transitions and traffic control devices as appropriate.
- b. Storm drain facilities including, but not limited to: open channel (“u” channel), undersidewalk drain.
- c. Sewer and water systems including, but not limited to: sanitary sewer, potable water and recycled water.
- d. Under grounding of existing and proposed utility lines less than 115,000 volts.

LD34. (CO) Prior to issuance of a certificate of occupancy or building final, all existing and new utilities adjacent to and on-site shall be placed underground in accordance with City of Moreno Valley ordinances. (MC 9.14.130)

LD35. (CO) Prior to issuance of a certificate of occupancy or building final for any Commercial/Industrial facility, whichever occurs first, the owner may have to secure coverage under the State’s General Industrial Activities Storm Water Permit as issued by the State Water Resources Control Board.

SPECIAL CONDITIONS

LD36. Prior to grading plan approval, the following shall be shown on the plans and dedications made, via separate instrument and submitted to the City for review and approval: A 4-foot pedestrian right-of-way dedication behind any driveway approach per City Standard 118C, on Alessandro Boulevard and Sherman Avenue, along the project frontage.

LD37. Prior to grading plan approval, the grading plans shall show any proposed trash enclosure as dual bin; one bin for trash and one bin for recyclables. The trash enclosure shall be per City Standard Plan 627.

LD38. Prior to grading plan approval, the grading plans shall clearly show that the parking lot conforms to City standards. The parking lot shall be 5% maximum, 1% minimum, 2% maximum at or near any disabled parking stall and travel way. Ramps, curb openings and travel paths shall all conform to current ADA standards as outlined in Department of Justice’s “ADA Standards for Accessible Design”, Excerpt from 28 CFR Part 36. (www.usdoj.gov) and as approved by the City’s Building and Safety Division.

**CONDITIONS OF APPROVAL
PA08-0035 (Conditional Use Permit)
PAGE 22**

LD39. Prior to grading plan approval, the plans shall clearly show that the developer has made every attempt to treat runoff, prior to the runoff reaching the treatment control Best Management Practice(s) (BMPs), via maximum use of site design and source control BMPs.

LD40. Prior to grading plan approval, the plans shall show a 24-foot wide fire lane to be constructed per City Standard No. 108E.

LD41. Prior to issuance of a building permit, the offer of dedication for the four-foot additional right-of-way at the proposed driveway approaches per City Standard No. 118C shall be recorded at the Riverside County Recorder's Office.

Special Districts Division

Note: All Special Conditions, Modified Conditions, or Clarification of Conditions are in bold lettering. All other conditions are standard to all or most development projects.

Acknowledgement of Conditions

The following items are Special Districts' Conditions of Approval for project **PA08-0035**; this project shall be completed at no cost to any Government Agency. All questions regarding Special Districts' Conditions including but not limited to, intent, requests for change/modification, variance and/or request for extension of time shall be sought from the Special Districts Division of the Public Works Department 951.413.3480. The applicant is fully responsible for communicating with each designated Special Districts staff member regarding their conditions.

General Conditions

- SD-1 The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services Districts Zones A (Parks & Community Services). All assessable parcels therein shall be subject to the annual Zone A charge for operations and capital improvements.
- SD-2 Any damage to existing landscape areas maintained by the Moreno Valley Community Services District due to project construction shall be repaired/replaced by the developer, or developer's successors in interest, at no cost to the Moreno Valley Community Services District.

Prior to Building Permit Issuance

- SD-3 (BP) This project has been identified to be included in the formation of a Community Facilities District (Mello-Roos) for **Public Safety** services, including but not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. The property owner(s) shall not

CONDITIONS OF APPROVAL
PA08-0035 (Conditional Use Permit)
PAGE 24

protest the formation; however, they retain the right to object to the rate and method of maximum special tax. In compliance with Proposition 218, the developer shall agree to approve the mail ballot proceeding (special election) for either formation of the CFD or annexation into an existing district that may already be established. The Developer must notify Special Districts of intent to request building permits 90 days prior to their issuance. (California Government Code)

SD-4 (BP) This project is conditioned to provide a funding source for the capital improvements and/or maintenance for the **existing Alessandro Blvd.** median landscape. In order for the Developer to meet the financial responsibility to maintain the defined service, one of the following options shall be selected:

- a. Participate in the mail ballot proceeding in compliance with Proposition 218, for Moreno Valley Community Services District **Zone M** (Commercial, Industrial and Multifamily Improved Median Maintenance), and pay all associated costs with the ballot process; or
- b. Establish an endowment to cover the future maintenance costs of the landscaped area.

The developer must notify Special Districts of intent to request building permits 90 days prior to their issuance and the financial option selected to fund the continued maintenance.

SD-5 *Commercial* (BP) If Land Development, a Division of the Public Works Department, requires this project to supply a funding source necessary to provide, but not limited to, stormwater utilities services for the monitoring of on site facilities and performing annual inspections of the affected areas to ensure compliance with state mandated stormwater regulations, the developer must notify Special Districts 90 days prior to the City's issuance of a building permit and the financial option selected to fund the continued maintenance. (California Government Code)

SD-6 (BP) Prior to release of building permit, the developer, or the developer's successors or assignees, shall record with the County Recorder's Office a **Declaration of Covenant and Acknowledgement of Assessments** for each assessable parcel therein, whereby the developer covenants and acknowledges the existence of the Moreno Valley Community Services District, its established benefit zones, and that said parcel(s) is (are) liable for payment of annual benefit zone charges and the appropriate National Pollutant Discharge Elimination System (NPDES) maximum regulatory rate

schedule when due. A copy of the recorded Declaration of Covenant and Acknowledgement of Assessments shall be submitted to the Special Districts Division. For a copy of the Declaration of Covenant and Acknowledgement of the Assessments form, please contact Special Districts, phone 951.413.3480.

CITY OF MORENO VALLEY
CONDITIONS OF APPROVAL
PA08-0033/0034/0035

GPA, Change of Zone, and CUP for smog inspection station and tire sales located at 22184 Alessandro Boulevard.

Note: All Special conditions are in bold lettering. All other conditions are standard to all or most development projects.

Transportation Engineering Division – Conditions of Approval

Based on the information contained in our standard review process we recommend the following conditions of approval be placed on this project:

GENERAL CONDITIONS

TE1. Alessandro Boulevard is classified as a Divided Major Arterial (134'RW/110'CC). Any modifications or improvements undertaken by this project shall be consistent with the City's standards for this facility.

TE2. Conditions of approval may be modified if project is phased or altered from any approved plans.

PRIOR TO IMPROVEMENT PLAN APPROVAL OR CONSTRUCTION PERMIT

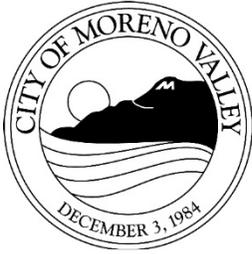

TE3. The driveways shall conform to Section 9.11.080, and Table 9.11.080-14 of the City's Development Code - Design Guidelines and shall be Commercial type per City of Moreno Valley Standard No. 118C.

TE4. Sight distance at driveways and on streets shall conform to City of Moreno Valley Standard No. 125 A, B, C at the time of preparation of final grading, landscape, and street improvements.

TE5. Prior to issuance of a construction permit, traffic control plans prepared by a qualified, Registered Civil or Traffic engineer may be required.

PRIOR TO ISSUANCE OF CERTIFICATE OF OCCUPANCY

TE6. (CO) Prior to issuance of a certificate of occupancy, all approved signing and striping shall be installed per current City Standards and the approved plans.

PLANNING COMMISSION STAFF REPORT

Case(s): PA08-0033 (General Plan Amendment)
PA08-0034 (Change of Zone)
PA08-0035 (CUP)

Date: May 10, 2012

Applicant: Socrates Urena

Representative: Socrates Urena

Location: 22184 Alessandro Boulevard

Proposal: A Conditional Use Permit (CUP) for a Smog Inspection Station and Tire Sales commercial business, which requires a General Plan Amendment and Change of Zone.

Council District: 5

Recommendation: Approval

SUMMARY

The proposed Smog Inspection Station and Tire Sales commercial business requires both a General Plan Amendment and Change of Zone for approval of the Conditional Use Permit. The proposed General Plan Amendment will change the land use designation of a 0.54 acre portion of a parcel located at 22184 Alessandro Boulevard (Assessor's Parcel Number 291-190-025) from Residential/Office (R/O) to Commercial (C). The Change of Zone will change the zoning of the parcel from Office Commercial (OC) to Community Commercial (CC).

ATTACHMENT 5

Project

The proposed project requires a Conditional Use Permit (CUP) for a Smog Inspection Station and Tire Sales business. The smog aspect of the business is as a “testing center” only, no auto repairs are to be conducted on site. The existing residential structure will be converted into the main office. The building’s facade will be modified to emphasize the main business entrance and to eliminate the two doors on the east side of the building. The front windows will be reduced by one and repositioned in order to make the structure more commercial in appearance. The garage will be used as service bays for the smog inspection testing as well as tire service. The proposed project will provide onsite parking for 10 vehicles and have a security gate.

The project requires the front 1/3 of the parcel’s zoning to be changed from Office Commercial (OC) to Community Commercial (CC). The rest of the parcel will remain in the Residential 10 (R10) zoning district. Approximately .54 acres of the 1.46 acre site will be rezoned to CC and approximately .92 acres will remain R10.

There was a previous approved application (PA03-0037) for the same business that expired, requiring a new application to be submitted. The project was approved back in October 2003 when the site was zoned Community Commercial (CC). During the 2006 General Plan Update, the parcel was rezoned to Office/Commercial (OC). This appears to have been done in recognition of the split zoning on the property and the potential incompatibility of general commercial and residential uses on the same parcel. To avoid potential conflicts, the conditions of approval require a parcel split prior to any residential development of the northerly residential portion of the parcel.

Land Use Change

The existing General Plan designation for the project site is Residential/Office (R/O). The applicant proposes a change from the Residential/Office (R/O) designation to Commercial (C) under the General Plan. The project requires the front 1/3 of the parcel’s zoning to be changed from Office Commercial (OC) to Community Commercial (CC). The rest of the parcel will remain in the Residential 10 (R10) zoning district. Approximately .54 acres of the 1.46 acre site will be rezoned to CC and approximately .92 acres will remain R10. If the General Plan Amendment and Change of Zone are approved, the CUP for the Smog Inspection Station and Tire Sales business can be approved as well.

Based upon the information presented above, the proposed change in land use is compatible with existing land uses and would not conflict with the goals, objectives, policies or programs of the General Plan.

Site

The project site is surrounded by mixed group of land uses including Residential/Office (R/O) to the north, east and west of the parcel. There is some Residential 5 (R5) to the northeast of the project site. The neighboring parcels along the front of Alessandro Boulevard are Commercial (C) with Business Park (BP) to the south (across the street along Alessandro Boulevard).

As far as zoning, the project site is the only Office/Commercial (OC) parcel in the surrounding neighborhood. The Residential zoning is a mix of Residential 10 (R10) and Residential 15 (R15) with some Residential 5 (R5). Along Alessandro Boulevard from the Old 215 Frontage Road east to Elsworth Street is zoned Commercial (CC).

The project is located in an area of Moreno Valley referenced to as "Edgemont". The majority of the structures within this area are older single and small multiple-family residences. The project site has an existing older single-family residence with a separate garage structure that currently is vacant located in the front 1/3 of the parcel. The remaining 2/3 of the parcel is currently vacant.

Access

Access to the project site is off Alessandro Boulevard, directing customers to parking in the rear section of the lot. There is an emergency only gate off Sherman Way (north end of the property).

Design

The existing single family dwelling will be converted into office space with a waiting room, cashier's and storage areas. The building's facade will be modified to emphasize the main business entrance and to make the structure more commercial in appearance. The structure will be freshly painted and have a stone veneer place along the bottom sections of the front and side elevations. The garage will be used as the service bay for the smog inspection testing and storage of tires. The proposed project will provide onsite parking for 10 vehicles and have a security gate.

A five-foot landscaped planter will be along the eastern property boundary. The rear of the proposed Community Commercial (CC) section of the parcel will be conditioned to provide a five-foot landscaped planter as well. The existing "front yard" area of the property will be landscaped, including the addition of two Mondell Pine (*Pinus eldarica*) street trees planted 40-feet on-center with unspecified accent trees in between. The project will also be conditioned to provide a two bin trash enclosure that meets the City's requirements as well as landscaping along three sides.

A chain-link fence with metal or plastic slats has been required to separate the portions of the site to be developed from those intended to remain vacant. A block wall is required along any property line with existing residential units.

Review Process

The General Plan Amendment, Zone Change and Conditional Use Permit applications were submitted in April 2008. The biggest issue with this project was its lack of enough fire flow demand/ water pressure on site as the parcel is located within the Box Springs Water District. The applicant worked with both the Box Springs Water District and Eastern Municipal Water District to meet Fire Prevention Bureau's requirements. The applicant also installed a fire hydrant onsite, which was reviewed and accepted by the Moreno Valley Fire Prevention Bureau.

Environmental

The site is currently had a vacant residential structure with a separate garage and is not an area that the Riverside County Integrated Plan (RCIP) has identified as having the potential for burrowing owl habitat. The majority of the property is covered by weeds and dead vegetation.

A review of the FEMA maps for this area indicated that the project site is located outside of the 100-year flood plain.

Based upon review of the Cultural Resources Inventory prepared for the City of Moreno Valley by the Archaeological Research Unit of the University of California in October 1987, there are no known archaeological resources on the site.

With consideration given to the preceding information, an Initial Study has been completed for the proposed project. Based upon the Initial Study, a determination has been made that the proposed project will not result in the potential for significant impacts to the environment. Therefore, the adoption of a Negative Declaration is recommended.

Notification

Public notice was sent to all property owners of record within 300' of the project. The public hearing notice for this project was also posted on the project site and published in the local newspaper. As of the date of report preparation, staff had received no inquiries in response to the noticing for this project.

Staff Recommendation

Staff recommends that the Planning Commission take the following action:

APPROVE Resolution No. 2012-09, and thereby:

1. **RECOMMEND** that the City Council adopt a Negative Declaration for PA08-0033 (General Plan Amendment), PA08-0034 (Change of Zone) and PA08-0035 (Conditional Use Permit) in that this project will not result in significant environmental impacts);
2. **RECOMMEND** that the City Council approve PA08-0033 (General Plan Amendment), PA08-0034 (Change of Zone) and PA08-0035 (Conditional Use Permit).

NEGATIVE DECLARATION

PROJECT TITLE AND FILE NUMBERS: PA08-0033 (General Plan Amendment), PA08-0034 (Change of Zone) and PA08-0035 (Conditional Use Permit)
PROJECT APPLICANT: Socrates Urena TELEPHONE NUMBER: (951) 313-2924
PROJECT LOCATION: 22184 Alessandro Boulevard, Moreno Valley, CA 92553
PROJECT DESCRIPTION: The proposed Smog Inspection Station and Tire Sales commercial business requires both a General Plan Amendment and Change of Zone for approval of the Conditional Use Permit. The proposed General Plan Amendment will change the land use designation of a 0.54 acre portion of a parcel located at 22184 Alessandro Boulevard (Assessor's Parcel Number 291-190-025) from Residential/Office (R/O) to Commercial (C). The Change of Zone will change the zoning of the parcel from Office Commercial (OC) to Community Commercial (CC).

FINDING

The City of Moreno Valley has reviewed the above project in accordance with the City of Moreno Valley's Guidelines for the Implementation of the California Environmental Quality Act, and has determined that an Environmental Impact Report need not be prepared because:

- The proposed project will not have a significant effect on the environment.
- Although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because mitigation measures described in the attached Initial Study and hereby made a part of this Negative Declaration have been added to the project. The Final Conditions of Approval contain the final form and content of all mitigation measures.

This determination is based upon an Initial Study. The project file, including the Initial Study and related documents is available for review during normal business hours (8:00 a.m. to 5:00 p.m. Monday through Friday) at the City of Moreno Valley, Community Development Department, Planning Division, 14177 Frederick Street, Moreno Valley, California 92553, Telephone (951) 413-3206.

PREPARED BY: Claudia Manrique, Associate Planner	DATE: 5/1/2012
--	----------------

NOTICE

The public is invited to comment on the Negative Declaration. The appropriateness and adoption of the Negative Declaration is considered at the time of project approval in light of comments received.

DATE ADOPTED: <u>9/25/2012</u>	BY: <u>City Council</u>

**INITIAL STUDY/
ENVIRONMENTAL CHECKLIST FORM
CITY OF MORENO VALLEY**

1. Project Title: PA08-0033 (General Plan Amendment)
PA08-0034 (Change of Zone)
PA08-0035 (CUP)
2. Lead Agency Name and Address: City of Moreno Valley
14177 Frederick Street
Moreno Valley, CA 92552
3. Contact Person and Phone Number: Claudia Manrique, Associate Planner
(951) 413-3225
4. Project Location: 22184 Alessandro Blvd (APN: 291-190-025)
5. Project Sponsor's Name and Address: Socrates Urena
20620 Avenida Hacienda
Riverside, CA 92508
6. General Plan Designation: Residential/Office (R/O)
7. Zoning: Office Commercial (OC) and Residential 10 (R10)
8. Description of the Project: (Describe the whole action involved, including but not limited to later phases of the project, and any secondary, support, or off-site features necessary for its implementation. Attach additional sheets if necessary)

The proposed project requires a Conditional Use Permit (CUP) for a Smog Inspection Station and Tire Sales commercial complex. The smog aspect of the business is as a "testing center" only, no auto repairs are to be conducted on site. The existing residential structure will be converted into the main office. The building's facade will be modified to emphasize the main business entrance and to eliminate the two doors on the east side of the building. The front windows will be reduced by one and repositioned in order to make the structure more commercial in appearance. The garage will be used as service bays for the smog inspection testing as well as tire service. The proposed project will provide onsite parking for 10 vehicles and have a security gate.

ATTACHMENT 8

The project requires the front 1/3 of the parcel's zoning to be changed from Office Commercial (OC) to Community Commercial (CC). The rest of the parcel will remain in the Residential 10 (R10) zoning district. Approximately .54 acres of the 1.46 acre site will be rezoned to CC and approximately .92 acres will remain R10.

There was a previous approved application (PA03-0037) for the same business that unfortunately expired. The project was approved back in October 2003 when the site was zoned Community Commercial (CC). During the 2006 General Plan Update, the parcel was rezoned to Office/Commercial (OC).

9. Surrounding Land Uses and Setting: (Briefly describe the project's surroundings)

The project site is surrounded by mixed group of land uses including Residential/Office (R/O) to the north, east and west of the parcel. There is some Residential 5 (R5) to the northeast of the project site. The neighboring parcels along the front of Alessandro Boulevard are Commercial (C) with Business Park (BP) to the south (across the street along Alessandro Boulevard).

As far as zoning, the project site is the only Office/Commercial (OC) parcel in the surrounding neighborhood. The Residential zoning is a mix of Residential 10 (R10) and Residential 15 (R15) with some Residential 5 (R5). Along Alessandro Boulevard from the Old 215 Frontage Road east to Elsworth Street is zoned Commercial (CC).

The project is located in an area of Moreno Valley referenced to as "Edgemont". The majority of the structures within this area are older single and small multiple-family residences. The project site has an existing older single-family residence with a separate garage structure that currently is vacant located in the front 1/3 of the parcel. The remaining 2/3 of the parcel is currently vacant.

10. Other public agencies whose approval is required (e.g. permits, financing approval, or participation agreement).

None

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below(■) would be potentially affected by this project, involving at least one impact that is a “Potentially Significant Impact” as indicated by the checklist on the following pages.

	Aesthetics		Greenhouse Gas Emissions		Population/Housing
	Agricultural Resources		Hazards & Hazardous Materials		Public Services
	Air Quality		Hydrology/Water Quality		Recreation
	Biological Resources		Land Use/Planning		Transportation/Traffic
	Cultural Resources		Mineral Resources		Utilities/Service Systems
	Geology/Soils		Noise		Mandatory Findings of Significance

DETERMINATION: (To be completed by the Lead Agency)

On the basis of this initial evaluation:

I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.	
I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.	
I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.	
I find that the proposed project MAY have a “potential significant impact” or “potentially significant unless mitigated” impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.	
I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.	

Signature

Date

Printed Name

For

EVALUATION OF ENVIRONMENTAL IMPACTS

- 1) A brief explanation is required for all answers except “No Impact” answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A “No Impact” answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g. the project falls outside a fault rupture zone). A “No Impact” answer should be explained where it is based on project-specific factors as well as general standards (e.g. the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. “Potentially Significant Impact” is appropriate if there is substantial evidence that an effect may be significant. If there are one or more “Potentially Significant Impact” entries when the determination is made, an EIR is required.
- 4) “Negative Declaration: Potentially Significant Unless Mitigation Incorporated” applies where the incorporation of mitigation measures has reduced an effect from “Potentially Significant Impact” to a “Less Significant Impact.” The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from “Earlier Analysis,” as described in (5) below, may be cross-referenced).
- 5) Earlier analysis may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063 (c) (3) (d). In this case, a brief discussion should identify the following:
 - (a) Earlier Analysis Used. Identify and state where they are available for review.
 - (b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - (c) Mitigation Measures. For effects that are “Less than Significant with Mitigation Measures Incorporated,” describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g. general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7) Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
- 8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project’s environmental effects in whatever format is selected.
- 9) The analysis of each issue should identify: (a) the significance criteria or threshold used to evaluate each question; and (b) the mitigation measure identified, if any, to reduce the impact to less than significance.

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

I. AESTHETICS. Would the project:				
a) Have a substantial adverse effect on a scenic vista?				X
The site is located within an area with several developments nearby and would not have an adverse effect on a scenic vista.				
b) Substantially damage scenic resources, including, but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway?			X	
The site has a vacant single-family residence with a separate garage structure that would benefit from change of use to a commercial office. The house and garage structures have not been well maintained.				
c) Substantially degrade the existing visual character or quality of the site and its surroundings?			X	
The site has a vacant single-family residence with a separate garage structure that would benefit from change of use to a commercial office. The house and garage structures have not been well maintained.				
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?			X	
The site has a vacant single-family residence with a separate garage structure that would benefit from change of use to a commercial office. Any new lighting will have to meet the City's municipal code, which requires lighting sources to be shielded.				
II. AGRICULTURE RESOURCES: In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the project?				
a) Convert Prime Farmland, Unique Farmland or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency to non-agricultural use?				X
The site is not designated as prime farmland on current maps. The project site is designated as "URBAN OR BUILT OUT LAND" on the 2010 current map. The project site has historically been used as single-family residential with an existing, but vacant single-family house and separate garage structure located in the front 1/3 of the parcel (nearest to Alessandro Blvd). As a residential neighborhood, there are no existing agricultural uses or operations within the project boundaries or in the vicinity.				
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?				X
The site is not currently in agricultural use, or under Williamson Act control. There is no existing surrounding agricultural use, or sites under Williamson Act contract. The Municipal Code allows for agricultural uses such as crops in all zoning districts, therefore, the proposed warehouse facility does not conflict with existing zoning for agricultural use, or impact sites under Williamson Act contract.				
c) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?				X
As a residential neighborhood, there are no existing agricultural uses or operations within the project boundaries or in the vicinity.				
III. AIR QUALITY: Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?			X	
The Air Quality Management Plan (AQMP) sets forth a comprehensive program that will lead the air basin into compliance with all federal and state air quality standards. The AQMP control measures and related emission reduction estimates are based upon emissions projections for a future development scenario derived from land use, population, and employment characteristics defined in consultation with local governments. Accordingly, conformance with the AQMP for development projects is determined by demonstrating compliance with local land use plans and/or population projections, or evaluation of assumed emissions.				
The existing 2007 AQMP was developed based on SCAG (Southern California Association of Governments) population projections for the region. The population projections made by SCAG are based on existing and planned land uses as set forth in the various general plans of local governmental jurisdictions within the region. The proposed project is consistent with the land use designation that has been in place for the last several iterations of the regional population projections and the AQMP. Since the project will be developed in accordance with the underlying assumptions of the AQMP, the project would not conflict with or obstruct implementation of the SCAQMD AQMP.				
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation.			X	
The project's land use is consistent with the City's the General Plan. The project is located within the jurisdiction of the South Coast Air Quality Management District. The project would not obstruct implementation of the South Coast Air Quality Management Plan.				
c) Result in a cumulatively considerable net increase of any criteria pollutant for			X	

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?				
The project's land use is consistent with the City's the General Plan. The project is located within the jurisdiction of the South Coast Air Quality Management District. The project would not obstruct implementation of the South Coast Air Quality Management Plan.				
d) Expose sensitive receptors to substantial pollutant concentrations?			X	
As a commercial project, the development would not be expected to produce significant concentrations of pollutants on-site except during construction. Standard conditions of approval provide mitigation from construction related dust products. The nearest sensitive receptors include existing single-family residences to the north, northeast, east, northwest and west of the proposed project. Considering the direction of the prevailing winds from northwest to southeast, dispersion of the pollutants, and the quantity of pollutants generated, the project will not expose sensitive receptors to substantial pollutant concentrations. Once the Smog and Tire Sales business is in operation, no auto repairs are to be conducted on site. The smog aspect of the business is as a "testing center" only.				
e) Create objectionable odors affecting a substantial number of people?			X	
The proposal would have no direct impact in creating objectionable odors. Any commercial development projects under the proposed designations would be required to mitigate or address objectionable odors.				
IV. BIOLOGICAL RESOURCES. Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U. S. Fish and Wildlife Service?			X	
The project site is comprised of one parcel totaling 1.46 acres at 22184 Alessandro Boulevard. The site has an existing substandard single-family residence with a separate garage structure. The residence is currently not occupied and the last date of occupation is no known. The parcel is not within an area that the Riverside County Integrated Plan (RCIP) has identified as needing required studies such as a Burrowing Owl Habitat Assessment. The project site has been disturbed in the past through disking for weed abatement and illegal dumping. Therefore, the proposed project will result in less than significant impacts to Fish and Wildlife resources.				
b) Have a substantially adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U. S. Wildlife Service?			X	
There are no major riparian habitat or other sensitive community on the site. The site was free from standing water or condensed riparian vegetation that could warrant a habitat area for sensitive or endangered species. It is not anticipated that the proposed development would have a substantial adverse effect on existing land use condition on the site as the existing structure will be used.				
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?			X	
The project as proposed would not have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act. The site has been previously graded and has an existing single-family residence and separate garage structure. There are no federally protected wetland areas such as marsh or vernal pools evident at the site. The project is consistent with the General Plan or local policies pertaining to the protection of biological resources. The project is consistent with the goals and objectives of the General Plan under the current land use designation which allows commercial uses.				
d) Interfere substantially with the movement of any resident or migratory fish or wildlife species or with established native resident migratory wildlife corridors, or impede the use of native wildlife nursery sites?			X	
The project as proposed would not interfere substantially with the movement of any resident or migratory fish or wildlife species or with established native resident migratory wildlife corridors, or impede the use of native wildlife nursery sites.				
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?			X	
The proposed project will not conflict with any General Plan or local policy pertaining to the protection of biological resources.				
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or state habitat conservation plan?			X	

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

The proposed project is located within the boundaries of the Stephen's Kangaroo Rat Habitat Conservation Plan (SKR HCP). Also, the City is participating in the Multiple Species Habitat Conservation Plan (MSHCP), a comprehensive habitat conservation-planning program addressing multiple species' needs, including preservation of habitat and native vegetation in Western Riverside County. The project is not within any of the (MSHCP) criteria areas, PQP land, or any special survey areas. There is no riparian, riverine, or vernal pool (fairy shrimp) habitat on the project site. The project as designed and conditioned is consistent with the MSHCP and will have not conflict with the MSHCP. This project will also be subject to fees to support the implementation of the Multiple Species Habitat Conservation Plan. The MSHCP fee is currently \$1938.00 per lot.

V. CULTURAL RESOURCES. Would the project:

a) Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?				X
---	--	--	--	---

Based upon inspection of the project site and review of the Cultural Resources Inventory for the City of Moreno Valley, (Archeological Research Unit, University of California, Riverside, October 1987), there are no known archaeological resources on the site. There are no historical structures existing on the site. There are no known paleontological or unique geological features on the site.

b) Cause a substantial adverse change in the significance of an archaeological resources pursuant to Section 15064.5?				X
---	--	--	--	---

Based upon inspection of the project site and review of the Cultural Resources Inventory for the City of Moreno Valley, (Archeological Research Unit, University of California, Riverside, October 1987), there are no known archaeological resources on the site. There are no historical structures existing on the site. There are no known paleontological or unique geological features on the site.

c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?				X
---	--	--	--	---

Based upon inspection of the project site and review of the Cultural Resources Inventory for the City of Moreno Valley, (Archeological Research Unit, University of California, Riverside, October 1987), there are no known archaeological resources on the site. There are no historical structures existing on the site. There are no known paleontological or unique geological features on the site.

d) Disturb any human remains, including those interred outside of formal cemeteries?				X
--	--	--	--	---

No known human remains have been identified at the project site. Conditions of approval address the issue of inadvertent discoveries. A standard condition of approval will be placed on the project to cease excavation or construction activities if archaeological, paleontological, or historical resources uncovered on the project site.

VI. GEOLOGY AND SOILS. Would the project:

a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:

(i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.			X	
---	--	--	---	--

Based on City's environmental resources, the project site is not on, or close to, any known earthquake fault. There is no new information that would indicate the existence of a fault or fault tract in proximity of the site. There is no risk of ground rupture due to faulting at the proposed project site.

(ii) Strong seismic ground shaking?			X	
-------------------------------------	--	--	---	--

According to the City's environmental information, the project site is not on, or close to, any known earthquake fault. The nearest fault is the San Jacinto fault system, which is located approximately 8-miles to the northeast. The inferred Casa Loma fault system also lies approximately 10-miles to the northeast. It should be noted, that within the City of Moreno Valley, the Casa Loma fault is an inferred unsubstantiated fault trace. The San Andreas fault system is more than 25 miles from the site. The active Sierra Madre and San Gabriel fault zones lie roughly 35 and 40 miles respectively to the northwest of the site. The active Elsinore and Newport-Inglewood fault zones lie approximately 20 and 45 miles, respectively, to the southwest of the site. This faulting is not considered a significant constraint to development on the site with the use of current building codes. Ground-shaking intensity could possibly be moderately-high during a 100-year interval earthquake. There is no new information that would indicate the existence of a fault on the site.

(iii) Seismic-related ground failure, including liquefaction?			X	
---	--	--	---	--

According to the City's environmental resources, the project site is not on, or close to, any known earthquake fault. However, ground-shaking intensity could possibly be moderately-high during a 100-year interval earthquake. Water table and soil conditions are not conducive of seismic related failure.

(iv) Landslides?			X	
------------------	--	--	---	--

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

This site is not near or adjacent to the mountainside areas and landslides will not be an issue. There is no potentially significant impact from landslides.

(b) Result in substantial soil erosion or the loss of topsoil?			X	
--	--	--	---	--

The development of the site will likely result in the reduction of erosion with the placement of buildings and landscaping on the site. During construction, there is the potential for less than significant impacts for short-term soil erosion from minimal excavation and grading. This will be addressed as part of standard construction, such as watering to reduce dust and sandbagging, if required, during raining periods.

(c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?			X	
---	--	--	---	--

The geologic unit or soil is not known to be unstable based on current resources. If required by the conditions of approval, the applicant must provide a soils and geologic report to City Public Works Department. The site will not be located on expansive soil as defined in Table 18-1-B of the Uniform Building Code.

(d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?			X	
---	--	--	---	--

According to the City's environmental information, the geologic unit or soil is not known to be unstable. If required by the conditions of approval, the applicant must provide a soils and geologic report to City Public Works Department. The site will not be located on expansive soil as defined in Table 18-1-B of the Uniform Building Code.

(e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?			X	
---	--	--	---	--

The project will operate on a sewer system that will be reviewed, approved and installed according to Eastern Municipal Water District requirements. The proposed project will not be introducing septic tanks or alternative water disposal systems.

VII. GREENHOUSE GAS EMISSIONS. Would this project?

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?			X	
---	--	--	---	--

Global climate change is caused by greenhouse gas (GHG) emissions throughout the world. Mitigating global climate change will require worldwide solutions. Greenhouse gases are gases emitted from the earth's surface that absorb infrared radiation in the atmosphere. Increases in these gases lead to more absorption of radiation and warm the lower atmosphere, and therefore increase evaporation rates and temperatures on the Earth's surface. The City of Moreno Valley is currently in the process of preparing a Climate Action Strategy. However, at this time, there are no widely accepted thresholds of significance for determining the impact of GHG emissions from an individual project, or from a cumulative standpoint. As provided for in the CEQA Guidelines (Section 15064.4), it is necessary for the lead agency to make a good-faith effort in considering GHG emissions on a project specific basis.

This project was submitted in July 2008 before the greenhouse gas emissions section was added to the Initial Study Checklist and is consistent of the project with the City's adopted General Plan and zoning, therefore the City has chosen to rely on a qualitative analysis. The proposed project is located at 22184 Alessandro Boulevard and includes three applications: General Plan Amendment, Change of Zone and Conditional Use Permit. To the extent possible based on scientific and factual data available, it has been determined that this project will not result in generating greenhouse gas emissions that will either directly or indirectly have a significant impact on the environment.

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?			X	
--	--	--	---	--

The project would not be in conflict with an applicable plan for reducing the emissions of greenhouse gases as there are no adopted plans for the purpose of reducing greenhouse gases in effect at the time of this Initial Study.

VIII. HAZARDS AND HAZARDOUS MATERIALS. Would the project?

a) Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?			X	
--	--	--	---	--

The proposed project, a commercial smog and tire shop consisting of an office building with separate garage (both structures are existing and will be remodeled). The smog aspect of the business is as a "testing center" only, no auto repairs are to be conducted on site. There will be no significant hazard to the public or the environment. There will be no known hazardous emissions or handling of hazardous materials related to this project.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous			X	
---	--	--	---	--

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

materials into the environment?				
The proposed project, a commercial smog and tire shop consisting of an office building with separate garage (both structures are existing and will be remodeled). The smog aspect of the business is as a “testing center” only, no auto repairs are to be conducted on site. There will be no significant hazard to the public or the environment. There will be no known hazardous emissions or handling of hazardous materials related to this project.				
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?			X	
The proposed project, a commercial smog and tire shop consisting of an office building with separate garage (both structures are existing and will be remodeled). The smog aspect of the business is as a “testing center” only, no auto repairs are to be conducted on site. There will be no significant hazard to the public or the environment. There will be no known hazardous emissions or handling of hazardous materials related to this project. The nearest school, Towngate Elementary School, is over a mile away from the project site (northwest).				
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result would it create a significant hazard to the public or the environment?				X
The project is not located on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5.				
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?			X	
The nearest airport is the March Air Reserve Base located to the south. The distance to the runway is approximately 4-miles. The project site is not within the crash zones or the noise contours identified in the most recent Air Installation Compatible Use Zone (AICUZ) study (Municipal Code Section 9.07.060). The site is not within an airport land use plan.				
f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?				X
The project is not located within an airport land use plan. The project is located approximately 1 mile north of March Air Reserve Base.				
g) Impair implementation of, or physically interfere with an adopted emergency response plan or emergency evacuation plan?				X
The proposed project would not have any direct effect on an adopted emergency response plan, or emergency evacuation plan. The City has an adopted Hazardous Waste Management Plan as part of its General Plan, which addresses emergency response pertaining to hazardous materials. The City’s emergency plans are also consistent with the General Plan. Since the proposed project is consistent with the General Plan, the proposed project would not be in conflict in any way with the emergency response or emergency evacuation plans. The project is not located within a designated wildland area where fires are possible.				
h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?				X
The proposed project site is not adjacent to wildlands, and as such would not expose people or structures to a significant risk of loss, injury or death involving wildland fires. In addition, the project is not located within a designated wildland area.				
IX. HYDROLOGY AND WATER QUALITY. Would the project:				
a) Violate any water quality standards or waste discharge requirements?			X	
Pursuant to the requirements of the Santa Ana Regional Water Quality Control Board, a project specific Water Quality Management Plan (WQMP) is required of certain projects involving discretionary approval. This project did not require a WQMP to address pollutants of concern which include nutrients, oxygen demanding substances, and pathogens (bacteria and viruses) due to the size of the project parcel (under 5 acres). Proposed grading activities may temporarily expose soils to wind and water erosion that would contribute to downstream sedimentation. The proposed project would comply with all permits and development guidelines associated with urban water runoff and discharge set forth by the City of Moreno Valley and the Regional Water Quality Control Board. With the approval of the storm drainage facilities by the City Engineer and Riverside County Flood Control District, as well as complying with all applicable storm water discharge permits, impacts would be less than significant.				
b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?			X	

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
-----------------------------------	--------------------------------	--	------------------------------	-----------

This project is located within the Box Springs Water District, which has capacity issues with regards to fire flow requirements. The applicant has received permission from Box Springs Water District to allow the project to connect to Eastern Municipal Water District (EMWD) in order to meet the fire flow demands required by the City of Moreno Valley's Fire Prevention Bureau. With the onsite fire hydrant serviced by EMWD, water supplies are adequate to serve the proposed project. Although the project would cover a majority of the site with impervious surfaces, the landscaped areas would still provide a means for groundwater recharge. Impacts would be less than significant.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?			X	
--	--	--	---	--

During construction of the project, there is the potential for some sediments to be discharged within the storm water system. Erosion plans are required for projects prior to issuance of grading permits for prevention substantial erosion. The site is within the 100-year flood plain. However, there is no streambed or river on the project site, so the project will not cause a change in the existing drainage pattern that would result in substantial erosion or siltation on- or off-site. Therefore, project implementation would not result in modifications that could ultimately result in substantial erosion or siltation on- or off-site. Impacts would be less than significant.

d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or surface runoff in a manner which would result in flooding on- or off site?				X
---	--	--	--	---

A river or streambed were not evident on the site. Runoff patterns will not be altered to the result of flooding on or off-site.

e) Create or contribute runoff which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?			X	
---	--	--	---	--

All storm drainage improvements would be developed to the standards of the City Engineer and the Riverside County Flood Control Agency. As with any urban project, runoff entering the storm drainage system would contain minor amounts of pollutants (including pesticides, fertilizers and motor oil). This would incrementally contribute to the degradation of surface and sub-surface water quality. Additionally, grading activities would temporarily expose soils to water erosion that would contribute to downstream sedimentation. However, the project is subject to the permit requirements of the Santa Ana Regional Water Quality Control Board. As the site is currently 2/3 of the lot is unpaved and exposed, development of the proposed project would lessen the existing site contribution to sediment runoff at project completion. The rear section of the parcel will be left undeveloped under this CUP application.

f) Otherwise substantially degrade water quality?			X	
---	--	--	---	--

All storm drainage improvements would be developed to the standards of the City Engineer and the Riverside County Flood Control Agency. As with any urban project, runoff entering the storm drainage system would contain minor amounts of pollutants (including pesticides, fertilizers and motor oil). This would incrementally contribute to the degradation of surface and sub-surface water quality. Additionally, grading activities would temporarily expose soils to water erosion that would contribute to downstream sedimentation. However, the project is subject to the permit requirements of the Santa Ana Regional Water Quality Control Board. As the site is currently 2/3 of the lot is unpaved and exposed, development of the proposed project would lessen the existing site contribution to sediment runoff at project completion. The rear section of the parcel will be left undeveloped under this CUP application.

g) Place housing within a 100-year floodplain, as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?				X
--	--	--	--	---

An inspection of the site shows no evidence of concentrated drainage. The current Federal Emergency Management maps (FEMA) maps indicate that a small section of the site is in a flood zone (FIRMette map Panel # 745 dated August 28, 2008). The small section of the rear of the parcel is within "Zone X", which is defined by FEMA as "area of moderate flood hazard, usually the area between the limits of the 100-year and 500-year floods." The existing structures (old single-family residence and separate garage) will be used for a commercial smog and tire shop, not as a residence.

h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?				X
---	--	--	--	---

An inspection of the site shows no evidence of concentrated drainage. The current Federal Emergency Management maps (FEMA) maps indicate that a small section of the site is in a flood zone (FIRMette map Panel # 745 dated August 28, 2008). The small section of the rear of the parcel is within "Zone X", which is defined by FEMA as "area of moderate flood hazard, usually the area between the limits of the 100-year and 500-year floods." The majority of the parcel (and where the existing structures are located) are not within a flood zone.

i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?				X
--	--	--	--	---

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

The project is outside of the delineated dam inundation area for Perris Dam at Lake Perris Reservoir.

j) Inundation by seiche, tsunami, or mudflow?				X
---	--	--	--	---

The site is not identified in the General Plan as a location subject to seiche, or mudflow.

X. LAND USE AND PLANNING. Would the project:

a) Physically divide an established community?				X
--	--	--	--	---

The project site is surrounded by mixed group of land uses including Residential/Office (R/O) to the north, east and west of the parcel. There is some Residential 5 (R5) to the northeast of the project site. The neighboring parcels along the front of Alessandro Boulevard are Commercial (C) with Business Park (BP) to the south (across the street along Alessandro Boulevard).

As far as zoning, the project site is the only Office/Commercial (OC) parcel in the surrounding neighborhood. The Residential zoning is a mix of Residential 10 (R10) and Residential 15 (R15) with some Residential 5 (R5). Along Alessandro Boulevard from the Old 215 Frontage Road east to Elsworth Street is zoned Commercial (CC).

The project is located in an area of Moreno Valley referenced to as “Edgemont”. The majority of the structures within this area are older single and small multiple-family residences with a few commercial and office uses along the major corridor of Alessandro Boulevard. The project site has an existing older single-family residence with a separate garage structure that currently is vacant located in the front 1/3 of the parcel. The remaining 2/3 of the parcel is currently vacant.

b) Conflict with an applicable land use plan, policy or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?			X	
---	--	--	---	--

There are no conflicts associated with any land use plans with the approval of the General Plan Amendment and Change of Zone. The proposed project is consistent with the proposed “Community Commercial” zoning within the City’s Municipal Code and General Plan. The project requires the front 1/3 of the parcel’s zoning to be changed from Office Commercial (OC) to Community Commercial (CC). The rest of the parcel will remain in the Residential 10 (R10) zoning district. Approximately .54 acres of the 1.46 acre site will be rezoned to CC and approximately .92 acres will remain R10.

There was a previous approved application (PA03-0037) for the same business that unfortunately expired. The project was approved back in October 2003 when the site was zoned Community Commercial (CC). During the 2006 General Plan Update, the parcel was rezoned to Office/Commercial (OC). Changing the zoning back to Community Commercial (CC) will not cause any conflicts of land use as all the parcels along Alessandro Boulevard are also Community Commercial (CC). Leaving the rear 2/3 of the parcel R10, will create a buffer for the neighboring residential uses.

c) Conflict with any applicable habitat conservation plan or natural community conservation plan?				X
---	--	--	--	---

The City of Moreno Valley is participating in the Multiple Species Habitat Conservation Plan (MSHCP), a comprehensive habitat conservation-planning program addressing multiple species’ needs, including preservation of habitat and native vegetation in Western Riverside County. The project is not within any of the MSHCP criteria areas, PQP land, or any special survey areas.

XI. MINERAL RESOURCES. Would the project:

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?			X	
--	--	--	---	--

The project site is located in an urbanized area with additional development occurring in the vicinity. No active mines or mineral recovery programs are currently active within the project site. No mineral deposits have been identified in the General Plan, consequently, the development of the project site would not conflict with a mineral recovery plan as adopted by the General Plan. Therefore, no significant impacts would occur.

b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?			X	
---	--	--	---	--

The project site is located in an urbanized area with additional development occurring in the vicinity. No active mines or mineral recovery programs are currently active within the project site. No mineral deposits have been identified in the General Plan, consequently, the development of the project site would not conflict with a mineral recovery plan as adopted by the General Plan. Therefore, no significant impacts would occur.

XII. NOISE. Would the project result in:

a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of			X	
---	--	--	---	--

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
-----------------------------------	--------------------------------	--	------------------------------	-----------

other agencies?				
<p>The proposed project has incorporated the City's conditions of approval into the project design. As a result, construction and operation activities would be restricted to Monday through Friday from 6:00 AM to 8:00 PM, excluding holidays, and from 7:00 AM to 8:00 PM on weekends and holidays. As a result, no significant impacts would occur.</p> <p>Permanent noises associated with the proposed residential uses include, but are not limited to, people talking, radios playing and lawn equipment. However, these noise sources would be typical of land uses in the adjacent area as proposed by the General Plan Update and less than the permanent noises associated with the Office use currently established at this site. Therefore, the project as proposed would not introduce unique noise sources. Finally, the City's conditions of approval have been incorporated into the project design that would ensure land use compatibility with regards to noise resulting from the project site.</p>				
b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?			X	
<p>Development of the project may result in ground-borne vibrations or noise generated infrequently through the construction phase. However, this type of effect would be temporary and infrequent and is not expected to occur during project operation.</p>				
c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?			X	
<p>The proposed project has incorporated the City's conditions of approval into the project design. As a result, construction and operation activities would be restricted to Monday through Friday from 6:00 AM to 8:00 PM, excluding holidays, and from 7:00 AM to 8:00 PM on weekends and holidays. As a result, no significant impacts would occur.</p> <p>Permanent noises associated with the proposed residential uses include, but are not limited to, people talking, radios playing and lawn equipment. However, these noise sources would be typical of land uses in the adjacent area as proposed by the General Plan Update and less than the permanent noises associated with the Office use currently established at this site. Therefore, the project as proposed would not introduce unique noise sources. Finally, the City's conditions of approval have been incorporated into the project design that would ensure land use compatibility with regards to noise resulting from the project site.</p>				
d) A substantially temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?			X	
<p>The proposed project has incorporated the City's conditions of approval into the project design. As a result, construction and operation activities would be restricted to Monday through Friday from 6:00 AM to 8:00 PM, excluding holidays, and from 7:00 AM to 8:00 PM on weekends and holidays. As a result, no significant impacts would occur.</p> <p>Permanent noises associated with the proposed residential uses include, but are not limited to, people talking, radios playing and lawn equipment. However, these noise sources would be typical of land uses in the adjacent area as proposed by the General Plan Update and less than the permanent noises associated with the Office use currently established at this site. Therefore, the project as proposed would not introduce unique noise sources. Finally, the City's conditions of approval have been incorporated into the project design that would ensure land use compatibility with regards to noise resulting from the project site.</p>				
e) For a project located within an airport land use plan, or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?			X	
<p>The project is located near the March Air Reserve Base but outside the boundaries of the Air Installation Compatibility Use Overlay District (AICUZ). This is an overlay district that restricts land use on properties located to the north and south of the runway of March Air Reserve Base. The AICUZ includes elements that address noise zones and accident potential zones. The project site is located outside the mapped noise contours associated with aircraft operations at the MARB airfield, indicating noise exposure due to aircraft operations in less than 60 decibels (CNEL). This is well below the accepted noise exposure level for industrial uses. March JPA identified that the project is restricted by FAA Part 77, which limits building heights in this area to 85-feet. The project as proposed has a maximum height of 36-feet and will not be in conflict with height restrictions from adjacent March Air Reserve Base.</p>				
f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?				X
<p>There is no private airstrip within the vicinity of the site, or within the City of Moreno Valley.</p>				
<p>XIII. POPULATION AND HOUSING. Would the project:</p>				
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?			X	
<p>As the site is considered a commercial site, with population and housing growth opportunities indirectly related, the project will be planned consistent with the Citywide plan.</p>				
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?				X

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

While there is an existing residence on the site, it has been vacant for some time now (application submitted in 2008).

c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?				X
---	--	--	--	---

No - While there is an existing residence on the site, it has been vacant for some time now (application submitted in 2008).

XIV. PUBLIC SERVICES. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered government facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

a) Fire protection?			X	
---------------------	--	--	---	--

There will be an incremental increase in the demand for new or altered public services including library, city hall, and city yard facilities. These facilities would be needed with or without the project. Environmental review has already been done for the proposed library as part of the future city hall complex.

b) Police protection?			X	
-----------------------	--	--	---	--

There will be an incremental increase in the demand for new or altered public services including library, city hall, and city yard facilities. These facilities would be needed with or without the project. Environmental review has already been done for the proposed library as part of the future city hall complex.

c) Schools?			X	
-------------	--	--	---	--

There will be an incremental increase in the demand for new or altered public services including library, city hall, and city yard facilities. These facilities would be needed with or without the project. Environmental review has already been done for the proposed library as part of the future city hall complex.

d) Parks?			X	
-----------	--	--	---	--

There will be an incremental increase in the demand for new or altered public services including library, city hall, and city yard facilities. These facilities would be needed with or without the project. Environmental review has already been done for the proposed library as part of the future city hall complex.

e) Other public facilities?			X	
-----------------------------	--	--	---	--

There will be an incremental increase in the demand for new or altered public services including library, city hall, and city yard facilities. These facilities would be needed with or without the project. Environmental review has already been done for the proposed library as part of the future city hall complex.

XV. RECREATION.

a) Would the project increase the use of existing neighborhood or regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?				X
---	--	--	--	---

The General Plan Amendment and Change of Zone would have no direct impact on recreational facilities. Development within the project area will be required to pay development impact fees for residential uses. Part of the commercial fees will go towards recreation facilities within the City of Moreno Valley.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?				X
---	--	--	--	---

The General Plan Amendment and Change of Zone would have no direct impact on recreational facilities. Development within the project area will be required to pay development impact fees for residential uses. Part of the commercial fees will go towards recreation facilities within the City of Moreno Valley.

XVI. TRANSPORTATION/TRAFFIC. Would the project:

a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?			X	
---	--	--	---	--

The project is consistent with the proposed general plan, circulation plan and land use designation of Commercial (C) and the zoning district of Community Commercial (CC), and would not conflict with any applicable plans, ordinances or policies".

b) Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?			X	
--	--	--	---	--

A traffic study was not required by the Transportation Department for this project.

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?			X	
The project is located near the March Air Reserve Base, but outside of the boundaries of the Air Installation Compatibility Use Overlay District (AICUZ). This project will not result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks.				
d) Substantially increase hazards to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g. farm equipment)?				X
As designed, the project will not result in hazards. The project is not adjacent to any potential incompatible uses.				
e) Result in inadequate emergency access?				X
The project has been designed in a manner consistent with City standards. The site will be readily accessible for emergency access.				
f) Conflict with adopted policies or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?				X
The project does not conflict with adopted policies, plans and programs regarding public transit, bicycle or pedestrian facilities or decrease the safety performance of such facilities.				
XVII. UTILITIES AND SERVICE SYSTEMS. Would the project:				
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?				X
The project will not exceed wastewater treatment requirements of the Regional Water Quality Control Board. The project would not exceed the existing or planned capacity of the Moreno Water Reclamation Facility.				
b) Require or result in construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?				X
The project will not exceed wastewater treatment capacity of the Moreno Water Reclamation Facility.				
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?				X
The project will not require or result in the construction of unplanned storm water drainage facilities or expansion of existing facilities.				
d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?				X
This project was determined to not be a project of regional significance per CEQA guidelines, so the preparation of a Water Supply Assessment was not required.				
e) Result in a determination by the wastewater treatment provider which serves or may serve the project determined that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?				X
EMWD, the wastewater treatment provider, has adequate capacity to serve the project in addition to the provider's existing commitments. EMWD has plans for major expansions of the Moreno Water Reclamation Facility. Source: EIR for the General Plan Update.				
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?				X
The General Plan Amendment and Change of Zone itself has no direct impacts on solid waste. There is adequate in landfills to accommodate the future development.				
g) Comply with federal, state, and local statues and regulations related to solid waste?				X
The City is complying with State and Federal regulations regarding solid waste. All future projects will comply with the current policies regarding solid waste.				
XVIII. MANDATORY FINDINGS OF SIGNIFICANCE.				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?			X	

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

The project would not significantly degrade the quality of the environment or reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal. There are no historic structures on the site, and there will be no impact to historic resources. The project will not eliminate important examples of the major periods of California history or prehistory. The analysis in this Initial Study demonstrates that project and cumulative impacts would be less than significant. Finally, the project consists of a tentative tract map that would result in no substantial adverse health effects on human beings.

b) Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?			X	
--	--	--	---	--

This project will not create any impacts, that when viewed in connection with existing land uses, and other recently approved projects, would be considered cumulatively considerable. It is not expected that the proposed project would result in incremental effects. The analysis in this Initial Study demonstrates that the proposed project cumulative impacts would be less than significant.

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?			X	
---	--	--	---	--

The project consists of a General Plan Amendment, Change of Zone and Conditional Use Permit (CUP). The project as designed and conditioned will not cause substantial adverse effects on human beings, either directly or indirectly for the reasons described in this checklist/initial study.

NOTES:

- CONTRACTOR SHALL, PRIOR TO COMMENCEMENT OF WORK, FIELD VERIFY ALL EXISTING PROJECT CONDITIONS, INCLUDING DIMENSIONS AND UTILITY LOCATIONS AND UTILITY SIZES.
- FIELD INFORMATION OF DISCREPANCIES SHALL BE RECORDED ON A REPRODUCIBLE DOCUMENT AND IMMEDIATELY TRANSMITTED TO ARCHITECT FOR PROJECT RECORD, COORDINATION, AND NECESSARY RESOLUTION PRIOR TO CONTINUING WITH WORK.
- CONTRACTOR SHALL VERIFY AND BE RESPONSIBLE FOR ALL WORK AND MATERIALS INCLUDING THOSE FURNISHED BY SUBCONTRACTORS.
- WRITTEN DIMENSIONS TAKE PRECEDENCE OVER SCALED SIZES; DO NOT SCALE DRAWINGS TO DETERMINE ANY LOCATIONS.
- ALL DIMENSIONS ON PLANS ARE TO CENTER LINE OF WALLS / COLUMNS, AND FACE OF STUD #20.3 FOR FACE OF MASONRY #20.1 UNLESS NOTED OTHERWISE.
- ALL WORK SHALL CONFORM TO THE LATEST ADOPTED EDITIONS OF CBC, CEC, CFC, CMC BUILDING CODES.
- ALL ELECTRICAL, MECHANICAL, AND PLUMBING WORK SHALL CONFORM TO THE REQUIREMENTS OF ALL LEGALLY CONSTITUTED AUTHORITIES HAVING JURISDICTION.
- THE GENERAL BUILDING PERMITS SHALL BE PAID FOR BY THE OWNER AND SECURED BY THE GENERAL CONTRACTOR. ALL OTHER REQUIRED PERMITS SHALL BE SECURED AND PAID FOR BY THE CONTRACTOR OR SUBCONTRACTOR DIRECTLY RESPONSIBLE.
- ALL REQUIRED CITY AND COUNTY LICENSES SHALL BE ACQUIRED AND PAID FOR BY THE INDIVIDUAL TRADES.
- ALL CONTRACTORS SHALL HAVE VALID CERTIFICATES OF WORKMAN'S COMPENSATION ON FILE WITH THE APPROPRIATE AGENCIES.
- CONTRACTOR SHALL ASSIST OWNER IN OBTAINING FINAL APPROVAL OF LOCAL HEALTH DEPARTMENT AND THE TEMPORARY AND FINAL CERTIFICATES OF OCCUPANCY.
- CONTRACTOR SHALL PROVIDE BACKING FOR SUPPORT OF ALL WALL, CEILING, AND PARTITION MOUNTED ITEMS SUCH AS LIGHT FIXTURES, SHELVING, EQUIPMENT, AND TELEVISIONS, COORDINATE LOCATIONS AND REQUIREMENTS WITH THE PLUMBING, MECHANICAL, ELECTRICAL DRAWINGS.
- IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO LOCATE ALL EXISTING UTILITIES, WHETHER SHOWN HEREON OR NOT, AND TO PROTECT THEM FROM DAMAGE. THE CONTRACTOR SHALL BEAR ALL EXPENSE FOR THE REPAIR OR REPLACEMENT OF UTILITIES AND ALL OTHER PROPERTY DAMAGED BY OPERATIONS IN CONJUNCTION WITH EXECUTION OF WORK.
- CONTRACTOR SHALL PROVIDE PEDESTRIAN PROTECTION IN ACCORDANCE WITH ALL APPLICABLE BUILDING CODES.
- INTERIOR WALL AND CEILING FINISHES SHALL NOT EXCEED FLAME SPREAD CLASSIFICATIONS DICTATED BY ALL APPLICABLE BUILDING CODES.
- GYP SUM BOARD AND SUSPENDED CEILING SYSTEMS SHALL CONFORM TO ALL LOCAL GOVERNING BUILDING CODES AND ORDINANCES.
- ALL GLASS AND GLAZING SHALL COMPLY WITH ALL 2008 BUILDING CODES AS WELL AS THE U.S. CONSUMER PRODUCT SAFETY COMMISSION, SAFETY STANDARDS FOR ARCHITECTURAL GLAZING MATERIALS (97FR, 1846 TITLE NO. 16, CHAPTER 16, PART 1201).
- PIPES, CONDUITS, OR DUCTS EXCEEDING ONE THIRD OF THE SLAB OR MEMBER THICKNESS SHALL NOT BE PLACED IN STRUCTURAL CONCRETE UNLESS SPECIFICALLY TABLED REFER TO MECHANICAL, ELECTRICAL, PLUMBING, AND STRUCTURAL DRAWINGS FOR LOCATION OF SLEEVES AND OTHER ACCESSORIES.
- AUTOMATIC FIRE SPRINKLER SYSTEM DESIGN AND INSTALLATION IS THE COMPLETE DESIGN-BUILD RESPONSIBILITY OF CONTRACTOR. PRIOR TO INSTALLATION, SUBMIT TO THE ARCHITECT FOR REVIEW, COMPLETE FIRE SPRINKLER SYSTEM DRAWINGS WITH APPROVALS BY ALL AGENCIES HAVING JURISDICTION INDICATED ON ALL SETS.
- THE CONTRACTOR SHALL BE RESPONSIBLE FOR LOCATION OF SYSTEM HEADS, PLUMBING LINES, AND VALVES SO AS NOT TO BE IN CONFLICT WITH OTHER SYSTEMS OR THE INTERIOR DECOR, AND STILL BE LOCATED AS GOVERNED BY FIRE SPRINKLER CODES AND SYSTEM ENGINEERING.
- DRAWINGS SHALL BE SUBMITTED TO ARCHITECT FOR REVIEW OF THE CONTRACTOR'S COORDINATION OF SYSTEM WITH THE DESIGN INTENT OF THE PROJECT PRIOR TO INSTALLATION.
- FIRE SPRINKLERS SHALL BE AUTOMATIC TO PROVIDE 100% COVERAGE AND SHALL COMPLY WITH THE RECOMMENDATIONS OF THE NATIONAL FIRE PROTECTION ASSOCIATION (NFPA) STANDARDS HANDBOOK (LATEST EDITION) AND THE OWNER'S INSURANCE UNDERWRITER(S).
- EXTERIOR OPENINGS SHALL COMPLY WITH ALL SECURITY REQUIREMENTS AS OUTLINED IN ALL LOCAL BUILDING CODES AND ORDINANCES.
- ACCURATE AS-BUILT DRAWINGS SHALL BE GENERATED BY CONTRACTOR DURING CONSTRUCTION AND SUBMITTED TO OWNER UPON COMPLETION OF FINAL PUNCH LIST, BUT PRIOR TO REQUEST FOR FINAL PAYMENT.
- ROOF OBSTRUCTIONS SUCH AS TELEVISION ANTENNA, SOLAR PANELS, AND GUY WIRES SHALL NOT BE LOCATED OR INSTALLED IN SUCH A MANNER AS TO PREVENT FIRE DEPARTMENT ACCESS OR EGRESS IN THE EVENT OF A FIRE.
- BUILDING ROOF RUNOFF SHALL BE DIRECTED TO SURROUNDING LANDSCAPING.

CITY MANAGER	<i>ms</i>

Report to City Council

TO: Mayor and City Council

FROM: Barry Foster, Community & Economic Development Director

AGENDA DATE: September 25, 2012

TITLE: A PUBLIC HEARING REGARDING AN APPEAL OF THE PLANNING COMMISSION'S JULY 12, 2012, APPROVAL OF PLOT PLAN PA09-0004 AND TENTATIVE PARCEL MAP NO. 36162 (PA09-0012) AND THE RELATED ENVIRONMENTAL IMPACT REPORT FOR THE VIP MORENO VALLEY PROJECT. THE PROJECT PROPOSES A 1,616,133 SQUARE FOOT WAREHOUSE DISTRIBUTION BUILDING ON APPROXIMATELY 80 ACRES. THE BUILDING INCLUDES 268 DOCK HIGH DOORS AND 44,000 SQUARE FEET OF OFFICE AREA. THE MAP WOULD COMBINE FOUR EXISTING PARCELS INTO A SINGLE PARCEL. THE PROJECT SITE IS LOCATED ON THE SOUTH SIDE OF GROVE VIEW ROAD BETWEEN PERRIS BOULEVARD AND INDIAN STREET AT THE CITY'S SOUTHERN BOUNDARY, IN THE MORENO VALLEY INDUSTRIAL AREA PLAN (SP 208). THE APPLICANT IS VOGEL ENGINEERS, INC. THE APPELLANT IS JOHNSON & SEDLACK ATTORNEYS AT LAW ON BEHALF OF RESIDENTS FOR A LIVABLE MORENO VALLEY AND THE SIERRA CLUB

RECOMMENDED ACTION

Staff recommends that the City Council conduct a public hearing for Environmental Impact Report (P11-020), Plot Plan PA09-0004, and Tentative Parcel Map 36362 (PA09-0012) and subsequent to the public hearing:

1. **APPROVE** Resolution No. 2012-77 and **CERTIFY** that the Environmental Impact Report (EIR) for the VIP Moreno Valley Project has been completed in compliance with the California Environmental Quality Act; and
2. **APPROVE** Resolution No. 2012-78 and **APPROVE** Plot Plan PA09-0004 and Tentative Parcel Map 36162 (PA09-0012), subject to the attached conditions of approval included as Exhibits A and B.

ADVISORY BOARD/COMMISSION RECOMMENDATION

The Planning Commission at its July 12, 2012, meeting approved Planning Commission Resolution No. 2012-16 by a of 7-0 vote, certifying the Environmental Impact Report for the VIP Moreno Valley project approved Planning Commission Resolution No. 2012-17 by a of 7-0 vote, approving Plot Plan PA09-0004 and Tentative Parcel Map No. 36162 (PA09-0012).

Appeal

An appeal of the Planning Commission's approval was submitted on July 26, 2012, by Johnson & Sedlack Attorneys at Law on behalf of Residents for a Livable Moreno Valley and the Sierra Club. The appeal was received within the required 15 day appeal period. The appeal letter has been included as Attachment 18.

The letter listed the following reasons for the appeal:

- The appellant believes that the project's Environmental Impact Report (EIR) is inadequate;
- The appellant believes that the impacts under the CEQA topics of agriculture, air quality, aesthetics, biology, cultural resources, geology, hydrology, GHG's, and transportation are inadequately analyzed;
- The appellant believes that the EIR fails to adopt all feasible mitigation measures and ensure that mitigation measures are fully enforceable; and
- The appellant believes that the findings made by the City and the Statement of Overriding Considerations adopted for the project is unsupported by the record.

BACKGROUND

VIP Moreno Valley Project

The applicant, Vogel Engineers, Inc. has submitted three applications for development of the VIP Moreno Valley Project, which include a plot plan, a tentative parcel map, and an EIR, in order to develop a 1,616,133 square foot warehouse facility on an approximate 80 acre site (Assessor's Parcel Numbers 316-210-071, -073, -075 and -076) located in the Moreno Valley Industrial Area Plan (SP 208), south side of Grove View Road between Perris Boulevard and Indian Street at the City's southern boundary.

Plot Plan

The Plot Plan is for a 1,616,133 square foot warehouse distribution facility. The warehouse facility is a permitted use in the Industrial zone of the Moreno Valley Industrial Area Plan (SP #208). The east and west elevations of the building are set back 125 from the property line along Perris Boulevard and Indian Street while the truck courts on the north elevation is set back 271 feet from the property line along Grove

View Road and the south elevation is set back 261 feet from the Perris Valley Storm Channel.

The warehouse facility includes 268 loading docks with roll-up doors, truck staging and parking areas for 368 trailers within the enclosed truck court, two office areas and 589 parking spaces for employees and visitors. Proposed parking exceeds the City's minimum requirement for trucks (1 per loading dock) and meets the minimum employee/visitor parking required for a warehouse use.

The loading and truck parking areas have been placed on the northern and southern elevations of the building. The truck courts are screened by perimeter concrete tilt-up walls on the north, east and west. A chain link fence with slats is provided along the project's southern property line to screen the truck loading and parking area from the Perris Valley Storm Channel, as permitted by the Specific Plan.

The project has been conditioned to provide standard parking lot and setback landscape to include ground cover, shrubs and trees. The project's Perris Boulevard, Indian Street and Grove View Road will be developed with standard curb, gutter, parkway, and sidewalk.

Tentative Parcel Map

Tentative Parcel Map No. 36162 is proposed to combine the four parcels located within the project site into a single parcel of approximately 80 acres, as well as provide all required street dedications and utility easements.

ENVIRONMENTAL

Initial Study/Notice of Preparation

An Initial Study was completed after all discretionary applications were deemed complete. Based on the information within the Initial Study, an Environmental Impact Report (EIR) was recommended to be prepared. A Notice of Preparation for the EIR was distributed with the public comment period beginning on August 26, 2011 and ending on September 26, 2011. A public meeting to receive input on the issues to be covered by the EIR was held at City Hall on September 19, 2011.

Draft Environmental Impact Report

Subsequent to that meeting, the Draft EIR was prepared by LSA Associates, Inc. and submitted to the City and its peer consultant for review.

City staff and the peer review consultant reviewed the Draft EIR for compliance with the California Environmental Quality Act (CEQA) Guidelines and required revisions to address identified questions and concerns. After revisions were incorporated into the

document, the Draft EIR was circulated for a 45-day public review period, starting on April 20, 2012, and ending on June 4, 2012.

The Draft EIR was sent to all required State and local agencies and numerous interested parties on April 19, 2012, as well as to the City's Environmental and Historical Preservation Board. Eight comment letters were provided during the 45-day review period. An additional two letters were received after the end of the review period.

Final Environmental Impact Report

Responses to the eight comments received during the 45 day review period are included in the Response to Comments. Comment letters were received after the comment period from Eastern Municipal Water District (EMWD) and from the State Clearinghouse. These letters did not include comments on the project but were instead sent in recognition of the receipt of the Draft EIR. Responses to these letters were also provided and are included in the Final EIR.

The Response to Comments and related documents were mailed to all interested parties and responsible agencies on June 29, 2012, to allow for their review prior to Planning Commission hearing, and to meet the notice period of 10 days required by CEQA. As was the case with the Draft EIR, the draft Final EIR was provided for public review at City Hall, the City Library and posted on the City's website.

Significant and Unavoidable Impacts

Analysis presented in the EIR indicates that the proposed project will have a number of potentially significant impacts, either as direct result of the proposed project or cumulatively with other proposed projects, on agricultural resources, air quality, climate change, and traffic. The EIR includes a number of proposed mitigation measures to reduce or eliminate potential significant impacts. Even with proposed mitigation, a number of potential impacts cannot be reduced to a less than significant level. As identified in the document, the potential impacts noted impacts above are considered to be significant and unavoidable.

Although impacts to agricultural resources, air quality, climate change and traffic cannot be reduced to less than significant levels, CEQA allows a decision making body to consider a statement of overriding considerations and findings. CEQA requires the decision making agency to balance the economic, legal, social, technological or other benefits of a proposed project against its unavoidable environmental impacts when determining whether to approve the proposed project. This would include project benefits such as the creation of jobs or other beneficial project features versus project impacts that cannot be mitigated to less than significant levels. If the decision making body determines that the benefits of a proposed project outweigh the unavoidable adverse environmental effects, it may approve a statement of overriding considerations and approve the project.

Mitigation Measures

The EIR includes mitigation measures intended to reduce project-specific and cumulative impacts for Air Quality, Biological Resources, Cultural Resources, Geology and Soils, Greenhouse Gas Emissions and Global Climate Change, Hydrology and Water Quality, Noise, and Traffic and Circulation. All other environmental effects evaluated in the EIR are considered to be less than significant without mitigation. With mitigation, anticipated impacts to Biological Resources, Cultural Resources, Geology and Soils, Hydrology and Water Quality and Noise are anticipated to be below significant thresholds.

Mitigation measures are included to reduce the environmental impacts where possible, even where the impacts could not be reduced to less than significant levels. All mitigation measures have also been included as conditions of approval for the project.

Approval and Certification

The City Council will take public testimony on the EIR and project. Before the proposed project can be acted upon, the City Council will need to review the final environmental document and either certify or reject the EIR and project Mitigation Monitoring Program.

DISCUSSION

Planning Commission Public Hearing

The day of the July 12, 2012 Planning Commission public hearing, staff received letters from the Sierra Club and Johnson & Sedlack commenting on the project EIR. Copies of the referenced correspondence were provided to the Planning Commission and have been included with the staff report as Attachments 16 and 17. Also included as Attachment 18 are responses to those letters prepared by LSA Associates, Inc. for this appeal hearing.

The public hearing for the project was conducted on July 12, 2012. Following presentation of the staff report, the environmental consulting team spoke and answered Commissioner questions related to circulation, air quality and climate change. The applicant's representative also spoke.

The environmental consultant presented information to the Planning Commission in response to concerns raised by the Sierra Club and Johnson & Sedlack in their comment letters. The focus was internal inconsistencies in the Final EIR and the related mitigation monitoring program. The consultant read into the record recommended changes to correct the inconsistencies in the Final EIR.

The applicant's representative, following some discussion with the Planning Commission, agreed to add two additional mitigation measures to the project to address

concerns raised by the Sierra Club and Johnson & Sedlack related to potential impacts under the topic of climate change. The additional measures were as follows:

- The project shall be designed and constructed to meet LEED Silver (as of July 12, 2012) or comparable design standards; and
- The building roof shall be designed and constructed to accommodate future solar panels.

The above measures have been added to the project's mitigation monitoring program included with the staff report as Exhibit B to Attachment 2.

There was one public speaker at this meeting who was supportive of the energy efficiency design of the project but still had concerns with the potential impact to air quality from future truck trips to the facility.

Following public testimony, the Planning Commissioners discussed the project, and then voted 7-0 to certify the project EIR and to approve the project subject to making corrections to the Final EIR and adding the two mitigation measures as noted above.

ALTERNATIVES

1. Approve Resolution No. 2012-77 and Certify that the Environmental Impact Report (EIR) for the VIP Moreno Valley Project has been completed in compliance with the California Environmental Quality Act, **and** approve Resolution No. 2012-78 approving Plot Plan PA09-0004 and Tentative Parcel Map 36162 (PA09-0012), subject to the attached conditions of approval included as Exhibits A and B. **Staff recommends this alternative.**
2. Do not approve Resolution No. 2012-77 and Certify that the Environmental Impact Report (EIR) for the VIP Moreno Valley Project has been completed in compliance with the California Environmental Quality Act, **and** do not approve Resolution No. 2012-78 approving Plot Plan PA09-0004 and Tentative Parcel Map 36162 (PA09-0012), subject to the attached conditions of approval included as Exhibits A and B. **Staff does not recommend this alternative.**

FISCAL IMPACT

CITY COUNCIL GOALS

Not applicable.

SUMMARY

This report addresses the appeal of the Planning Commission's July 12, 2012, Certification of the VIP Moreno Valley project Final EIR and approval of Plot Plan PA09-0004 for a 1,616,133 square foot warehouse facility on 80 acres and Tentative Parcel Map No. 36162 (PA09-0012) to create a single parcel. An Environmental Impact Report has been prepared for the proposal.

NOTIFICATION

A notice was published in the newspaper and a public notice was posted at required City locations and at the project site. The Final EIR was also re-circulated 10 days in advance of the City Council public hearing to responsible agencies and interested parties that had commented on the Draft EIR.

As of the date of report preparation, staff had received no public inquiries in response to the noticing for the City Council public hearing for this project.

Notice of PUBLIC HEARING

This may affect your property. Please read.
Notice is hereby given that a Public Hearing will be held by the City Council of the City of Moreno Valley on the following item(s):

CASE: PA09-0004 – Plot Plan
PA09-0012 – Tentative Parcel Map No. 36162
P11-020 – Environmental Impact Report

APPLICANT: Vogel Engineers, Inc.

OWNER: Vogel Engineers, Inc.

REPRESENTATIVE: RKZ, Inc.

LOCATION: Moreno Valley Industrial Area Plan (SP 208), south side of Grove View Road between Perris Boulevard and Indian Street at the City's southern boundary.

PROPOSAL: Plot Plan for a 1,616,133 square foot warehouse distribution building to be developed on approximately 80 acres. The building includes 268 dock high doors and 44,000 square feet of office area in four potential office locations. The project is located at the City's southern boundary on the north side of the Perris Valley storm channel. Water quality features include five sandfilter basins and an infiltration swale. Tentative Parcel Map No. 36162 proposes to combine four existing parcels into a single 80 acre parcel for development of the project. An Environmental Impact Report has been prepared for the project.

ENVIRONMENTAL DETERMINATION: Environmental Impact Report

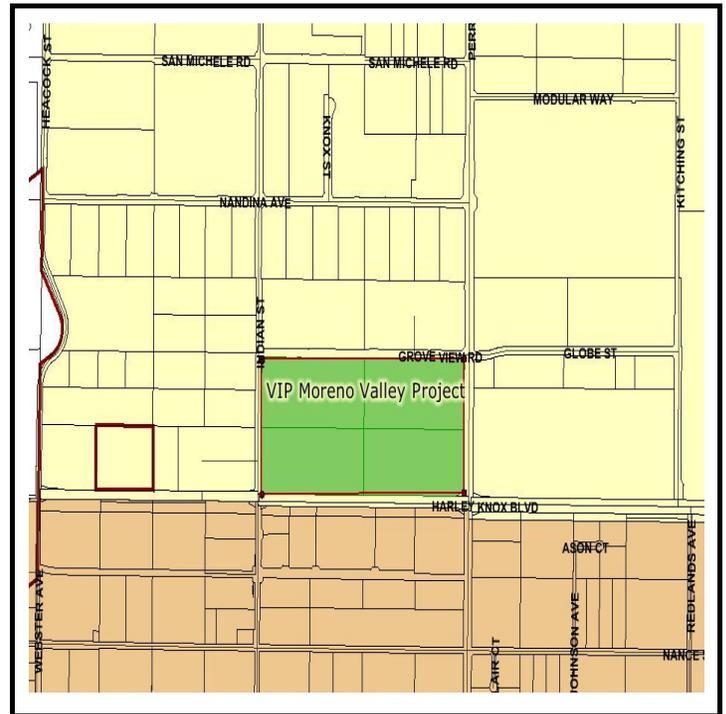

COUNCIL DISTRICT: 4

Any person interested in any listed proposal can contact the Community & Economic Development Department, Planning Division, at 14177 Frederick St., Moreno Valley, California, during normal business hours (7:30 a.m. to 5:30 p.m., Monday through Thursday) or may telephone (951) 413-3206 for further information. The associated documents will be available for public inspection at the above address.

In the case of Public Hearing items, any person may also appear and be heard in support of or opposition to the project or recommendation of adoption of the Environmental Determination at the time of the Hearing.

The City Council, at the Hearing or during deliberations, could approve changes or alternatives to the proposal.

If you challenge any of these items in court, you may be limited to raising only those items you or someone else raised at the Public Hearing described in this notice, or in written correspondence delivered to the City Council at, or prior to, the Public Hearing.

RESOLUTION NO. 2012-77

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, CERTIFYING THE FINAL ENVIRONMENTAL IMPACT REPORT (P11-020), ADOPTION OF THE FINDINGS AND STATEMENT OF OVERRIDING CONSIDERATIONS, AND APPROVAL OF THE MITIGATION MONITORING PROGRAM FOR THE VIP MORENO VALLEY PROJECT, GENERALLY LOCATED IN THE MORENO VALLEY INDUSTRIAL AREA PLAN (SP 208), ON THE SOUTH SIDE OF GROVE VIEW ROAD BETWEEN PERRIS BOULEVARD AND INDIAN STREET AT THE CITY'S SOUTHERN BOUNDARY.

WHEREAS, on September 25, 2012, the City Council of the City of Moreno Valley held a public hearing to consider the Environmental Impact Report and all related environmental documentation for the proposed project, which includes a Plot Plan for a 1,616,133 square foot distribution warehouse facility on approximately 80 acres. The warehouse building includes 268 dock doors and 44,000 square feet of office area in four potential office locations. The project is located at the City's southern boundary on the north side of the Perris Valley storm channel. Water quality features include five sand filter basins and an infiltration swale. Tentative Parcel Map No. 36162 proposes to combine four existing parcels into a single 80 acre parcel for development of the project;

WHEREAS, the project includes applications for a plot plan (PA09-0004) and a tentative parcel map (PA09-0012). All the applications are related but shall not be approved unless the Environmental Impact Report (P11-020) is certified and approved.

WHEREAS, a Draft Environmental Impact Report (DEIR) was initially prepared for this project. Said DEIR was initially circulated for review on April 20, 2012, while the review period ended on June 4, 2012. A Final EIR, (including the Draft EIR and responses to comments), has been completed and is being recommended for certification, prior to the approval of discretionary permits related to the project.

WHEREAS, on September 14, 2012, the City published a notice in the local newspaper (Press Enterprise) and distributed copies of the draft Final EIR with complete responses to comments to the State Clearinghouse, local agencies and other interested parties;

WHEREAS, on September 25, 2012, the City Council held a public hearing to consider a Final EIR for this project.

Resolution No.2012-77
Date Adopted: September 25, 2012

WHEREAS on September 25, 2012, the City Council reviewed in full the Final EIR, the Statement of Overriding Considerations and Mitigation Monitoring Program;

WHEREAS, the draft and final EIR concerning the proposed VIP Moreno Valley Project were prepared in sufficient detail and duly circulated in compliance with the California Environmental Quality Act (CEQA), the State CEQA Guidelines and the City of Moreno Valley Rules and Procedures to Implement CEQA;

WHEREAS, the Final EIR recommended to the City Council includes all responses to comments thereon;

WHEREAS, Final EIR includes a review of potential impacts associated with the implementation of the VIP Moreno Valley Project, including, but not limited to agricultural resources, air quality, climate change and traffic;

WHEREAS, a Mitigation Monitoring Program has been completed to ensure that all of the mitigation measures outlined in the final EIR are implemented, and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, the City Council of the City of Moreno Valley does hereby resolve as follows:

1. The City Council certifies that the final Environmental Impact Report (EIR) for the VIP Moreno Valley Project on file with the Community & Economic Development Department, incorporated herein by this reference, has been completed in compliance with the California Environmental Quality Act, that the City Council reviewed and considered the information contained in the final EIR and that the final EIR reflects the City's independent judgment and analysis; and
2. The City Council hereby adopts the Findings and Statement of Overriding Considerations regarding the final EIR for the VIP Moreno Valley Project, attached hereto as Exhibit A; and
3. The City Council hereby approves the Mitigation Monitoring Program for the final EIR for the proposed VIP Moreno Valley Project, attached hereto as Exhibit B.

Resolution No.2012-77
Date Adopted: September 25, 2012

APPROVED AND ADOPTED this 25th day of September, 2012.

Resolution No.2012-77
Date Adopted: September 25, 2012

**Facts, Findings and Statement of Overriding Considerations
Regarding the Environmental Effects and the Approval of the
VIP Moreno Valley Project
(State Clearinghouse No. 2011081084)**

I. INTRODUCTION

The City Council of Moreno Valley (this “Council”), in certifying the EIR for the VIP Moreno Valley Project and approving Tentative Parcel Map 36162 and a Site Plan authorizing the construction of up to approximately 1,616,133 square feet of distribution warehouse space (the “Project”), makes the Findings described below and adopts the Statement of Overriding Considerations presented at the end of the Findings. The Environmental Impact Report (“EIR”) was prepared by the City acting as lead agency pursuant to the California Environmental Quality Act (“CEQA”). Hereafter, unless specifically identified, the Notice of Preparation (“NOP”), Notice of Availability & Completion (“NOA/NOC”), Draft EIR (“DEIR”), Technical Studies, Final EIR containing Responses to Comments and textual revisions to the Draft EIR (“FEIR”), and the Mitigation Monitoring and Reporting Program (“MMRP”) will be referred to collectively herein as the “EIR.” These Findings are based on the entire record including the EIR. This Council adopts the facts and analyses in the EIR, which are summarized below for convenience.

II. PROJECT SUMMARY

A. PROJECT DESCRIPTION

1. Site Location

The Project is located in the southwest portion of the City of Moreno Valley. The Project site consists of four parcels totaling approximately 71 net acres located on the southwest corner of Perris Boulevard and Grove View Road. The Perris Valley Storm Drain Lateral B channel forms the southern boundary of the site while Indian Street forms the western boundary. The site is located approximately 1.3 miles east of I-215, 4.5 miles south of SR-60, and 1.75 miles west of Lake Perris. March Air Reserve Base is located approximately one half mile west of the Project site.

The Project site is currently vacant, consisting of gently sloping land that has been used historically for agricultural purposes but currently lies fallow. It was most recently used as a sod farm that ceased operating in August 2005. The major roads that provide access to the Project site are Perris Boulevard, Indian Street, Grove View Road, and Harley Knox Boulevard, with the nearest I-215 interchanges at Harley Knox Boulevard and Ramona Expressway.

2. Project Description

The Project would result in the construction and operation of approximately 1,616,133 square feet of distribution warehouse space on an approximately 71-acre site. The single building will be constructed with 264 vertical-lift dock-high roll up doors on the long (north and south) sides of the building to allow access for the loading and unloading of products from diesel truck/trailers. Building interiors are typically large and open to accommodate the temporary storage of the products to be distributed. The building will include a total of approximately 44,000 square feet of business office space for the management of the warehouse. Parking at the warehouse will be provided for 368 trucks and trailers as well as 589 parking stalls for passenger vehicles in accordance with City standards for light industrial uses.

The Project site is currently designated Business Park/Light Industrial in the City's General Plan. The site is zoned Industrial (I) in the Moreno Valley Industrial Area Plan (SP 208), which was originally adopted in 1989, and amended in 2001 and 2002. The proposed high-cube logistics warehouse project is consistent with the existing General Plan land use, the Moreno Valley Industrial Area Plan Specific Plan (SP 208), and zoning for the site.

3. Actions Covered by the EIR

The EIR will support the following discretionary approvals:

- Tentative Parcel Map approval (PM 36162);
- Development Plan Review and Plot Plan approval for the entire Project;
- Construction, grading, and encroachment permit approvals;
- Vacation and/or dedication of public rights-of-way and easements;

- Approval of the Final Water Quality Management Plan (WQMP); and
- Any other City of Moreno Valley approvals that may be necessary pursuant to applicable laws and regulations.

B. PROJECT OBJECTIVES

The Project Objectives include the following:

- Create employment-generating opportunities for the citizens of Moreno Valley and surrounding communities;
- Encourage industrial development and minimize conflicts with the surrounding existing uses;
- Encourage warehouse distribution services that take advantage of the area's close proximity to various freeways and transportation corridors;
- Provide the infrastructure improvements required to meet Project needs in an efficient and cost-effective manner;
- Encourage new development consistent with the capacity and municipal service capabilities;
- Provide a high density, high-quality large-scale industrial development to provide jobs for residents at a variety of income levels;
- Facilitate the efficient and cost-effective movement of goods in and through the City, which, in turn, allows the City to compete economically on a domestic and international scale;
- Provide an industrial warehouse facility that meets the substantial and unmet demands of businesses located in the City and County;
- Cluster industrial warehouse uses near efficient access points to the state highway system to reduce traffic congestion on surface streets and to reduce associated air pollutant emissions from vehicle sources;
- Implement the City's General Plan Industrial/Business Park Land Use designations that are applicable to the site;

- Accommodate new development that channels land uses in a phased, orderly manner and is coordinated with the provision of necessary infrastructure and public improvements;
- Provide new development that will assist the City in obtaining fiscal balance in the years ahead; and
- Address community circulation, both vehicular and pedestrian, utilizing available capacity within the existing circulation system, and provide fair share improvements to various future-year deficient intersections or road segments.

III. ENVIRONMENTAL REVIEW AND PUBLIC PARTICIPATION

The City has conducted an extensive review of this Project which included the DEIR, FEIR and supporting technical studies, along with a public review and comment period first during the circulation of the NOP/Initial Study and then through the circulation of the DEIR. The following is a summary of the environmental review of this Project:

- On August 26, 2011, the City circulated a Notice of Preparation (“NOP”) and the Initial Study that identified the environmental issues that the City anticipated would be analyzed in the Project’s DEIR to the State Clearinghouse, responsible agencies, and other interested parties.
- On September 19, 2011, the City conducted a public scoping meeting to allow members of the public to provide comments and input regarding the scope and content of the DEIR.
- The NOP public review period ran for 30 days, from August 26, 2011 to September 26, 2011. Written comments on the NOP were received from 12 different agencies, organizations, and individuals. The scope of the issues identified in the comments expressing concern included potential impacts associated with: Air Quality, Alternatives Analysis, Biological Resources, Cultural Resources/Sacred Sites, Greenhouse Gas Emissions (GHG)/Global Climate Change, Hazardous Materials/Contamination, Traffic, and Water Availability and Quality.

- Based on the Initial Study included in the DEIR in Appendix A, and comments received pursuant to the NOP, it was determined that some issues need not be addressed in depth in the DEIR because previous studies of other analyses provided sufficient information, analysis, and mitigation to conclude that there was little or no potential for significant impacts. These environmental topics included: (1) Aesthetics; (2) Biological Resources; (3) Cultural Resources; (4) Geology and Soils; (5) Hazards and Hazardous Materials; (6) Hydrology and Water Quality; (7) Land Use Planning; (8) Mineral Resources; (9) Population/Housing; (10) Public Services; (11) Recreation; and, (12) Utilities and Service Systems.
- On April 20, 2012, the NOA/NOC was filed with the Riverside County Recorder and the State Clearinghouse and the DEIR was circulated for the 45 day public review period, which ended June 4, 2012.
- The City received a total of seven (7) comment letters from public agencies; one (1) from a community organization; and two (2) from individuals. The City prepared specific responses to all comments. The responses to comments are included in Section 3.0 of the FEIR.
- On June 29, 2012 in accordance with *California Public Resources Code* Section 21092.5, the City provided written responses to public agencies that commented on the DEIR.
- On June 29, 2012, Notice of the Planning Commission hearing to consider the Project was provided in the *Press Enterprise*, a newspaper of general and/or regional circulation.
- On July 12, 2012, the City Planning Commission held a public hearing to consider the Project and staff recommendations. The Planning Commission, after considering written comments and oral testimony on the EIR, determined that no new information was presented that would require recirculation of the EIR. Following public testimony, submission of additional written comments, and staff recommendations, the City Planning Commission voted unanimously to certify the EIR, adopt Facts, Findings and the Statement of Overriding Considerations, adopt the

recommendations in the Staff Report, and approve the Project, including the PM 36162 (collectively the “Approvals”).

- On July 26, 2012, an appeal letter (dated July 25, 2012) was submitted to the City by the Residents for a Livable Moreno Valley and the Sierra Club, appealing the Planning Commission’s certification of the EIR and approval of the Project to the City Council.
- On September 14, 2012, an errata to the Final EIR approved by the Planning Commission dated June 27, 2012 was provided to the public that included changes to the Mitigation Monitoring and Reporting Plan approved by the Planning Commission and changes to Sierra Club Response to Comment E-9 and E-16 to clarify changes that were made to mitigation measures.
- On September 14, 2012, Notice of the City Council hearing to consider the Project was provided in the *Press Enterprise*, a newspaper of general and/or regional circulation.
- On September 25, 2012, this Council held a public hearing to consider the Project and staff recommendations. The City Council, after considering written comments and oral testimony on the EIR, determined that no new information was presented that would require recirculation of the EIR. Following public testimony, submission of additional written comments, and staff recommendations, this Council certified the EIR, adopted these Facts, Findings and the Statement of Overriding Considerations, and the further recommendations in the Staff Report, and approved the Project, including PM 36207 (collectively the “Approvals”).

IV. INDEPENDENT JUDGMENT FINDING

The Applicant retained the independent consulting firm of LSA Associates, Inc. (“LSA”) to prepare the EIR for the Project. LSA has prepared the EIR under the supervision, direction and review of the City with the assistance of an independent peer review (Michael Brandman Associates). The City of Moreno Valley is the Lead Agency for the preparation of the EIR, as defined by CEQA *California Public Resources Code* Section 21067 as amended. The City Council

has received and reviewed the EIR prior to certifying the EIR and prior to making any decision to approve or disapprove the Project.

Finding: The EIR for the Project reflects the City’s independent judgment. The City has exercised independent judgment in accordance with *California Public Resources Code* Section 21082.1(c) (3) in directing the consultant in the preparation of the EIR, as well as reviewing, analyzing and revising material prepared by the consultant.

A. GENERAL FINDING ON MITIGATION MEASURES

In preparing the Approvals for this Project, City staff incorporated the mitigation measures recommended in the EIR as applicable to the Project. In the event that the Approvals do not use the exact wording of the mitigation measures recommended in the EIR, in each such instance, the adopted Approvals are intended to be identical or substantially similar to the recommended mitigation measure. Any minor revisions were made for the purpose of improving clarity or to better define the intended purpose of the measure.

Finding: Unless specifically stated to the contrary in these Findings, it is this Council’s intent to adopt all mitigation measures recommended by the EIR which are applicable to the Project. If a measure has, through error, been omitted from the Approvals or from these Findings, and that measure is not specifically reflected in these Findings, that measure shall be deemed to be adopted pursuant to this paragraph. In addition, unless specifically stated to the contrary in these Findings, all Approvals repeating or rewording mitigation measures recommended in the EIR are intended to be substantially similar to the mitigation measures recommended in the EIR and are found to be equally effective in avoiding or lessening the identified environmental impact. In each instance, the Approvals contain the final wording for the mitigation measures.

V. ENVIRONMENTAL IMPACTS AND FINDINGS

City staff reports, the EIR, written and oral testimony at public meetings or hearings, these Facts, Findings and Statement of Overriding Considerations, and other information in the administrative record, serve as the basis for the City’s environmental determination.

The detailed analysis of potentially significant environmental impacts and proposed mitigation measures for the Project is presented in Section 4.0 of the DEIR and Section 3.0 of the

FEIR. Responses to comments on the DEIR, along with copies of the comments, are provided in Section 2.0 of the FEIR. Comments on the FEIR were submitted at the Planning Commission hearing on July 12, 2012 from the Sierra Club and Johnson and Sedlack. Responses to those comments, along with copies of the comments, are also provided as attachments to the staff report to the City Council. The comments and the responses to the comments do not constitute additional significant new information that would require recirculation of the EIR.

The EIR evaluated five major environmental categories for potential impacts including Agricultural Resources, Air Quality, GHGs and Climate Change, Noise, and Transportation. Both Project-specific and cumulative impacts were evaluated. Of these five major environmental categories, this Council concurs with the conclusions in the EIR that the issues and sub issues discussed in Sections V(A) and V(B) below either are less-than-significant without mitigation or can be mitigated below a level of significance. For the remaining potential environmental impacts that cannot feasibly be mitigated below a level of significance discussed in Section V.C, overriding considerations exist which make these potential impacts acceptable to this Council.

A. LESS-THAN-SIGNIFICANT ENVIRONMENTAL IMPACTS NOT REQUIRING MITIGATION

The Moreno Valley City Council hereby finds that the following potential environmental impacts of the Project are less-than-significant and therefore do not require the imposition of mitigation measures.

1. Agricultural Resources

a. Conflict with existing zoning or a Williamson Act Contract

Potential Significant Impact: Whether the Project would conflict with existing zoning for agricultural use, or a Williamson Act contract.

Findings: Potential impacts of the Project related to conflicts with existing zoning or a Williamson Act Contract is discussed in detail in Section 4.1 of the DEIR. Based on the entire record, this Council finds that no significant impacts related to existing zoning or Williamson Act will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: As identified in Section 4.1 of the DEIR, the Moreno Valley General Plan policies and zoning designations support agriculture only as an interim use, and no land in the City is designated solely for agricultural use or for agricultural preservation. The uses proposed for the Project site are consistent with the existing underlying General Plan and Zoning designations. In addition, the Project site is not subject to a Williamson Act Contract. The Project site is not zoned for agricultural uses and is not being used for agricultural purposes. No impact would occur and no mitigation is required.

b. Conflict with/Loss of Existing Forest Land or Timberland Zoning

Potential Significant Impact: Whether the Project would conflict with existing zoning for, or cause rezoning of, forest land (as defined in *California Public Resources Code* Section 12220(g)), timberland (as defined by *California Public Resources Code* Section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)), and whether the Project would result in the loss of forest land or conversion of forest land to non-forest uses.

Findings: Potential impacts of the Project related to conflict with/loss of existing forest land or timberland zoning are discussed in detail in Section 4.1 of the DEIR. Based on the entire record, this Council finds that no significant impacts related to loss of forest or timberland will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: Section 4.1 identifies no forest or timberland resources located within the Project site nor is the Project site zoned for forest land or timberland. Implementation of the Project would not require any rezoning or General Plan Amendments as the proposed uses are consistent with the existing underlying General Plan land use designation and zoning designation. The Project would not conflict with existing forest zoning, cause rezoning of forest land, or result in the loss or conversion of forest lands to non-forest uses as no such resources exist in the City. No impacts associated with this issue would occur and no mitigation is required.

2. Air Quality

a. Air Quality Management Plan Consistency

Potential Significant Impact: Whether the Project would conflict with or obstruct implementation of the applicable air quality plan.

Findings: Potential impacts of the Project related to the applicable air quality plan are discussed in detail in Section 4.2 of the DEIR. Based on the entire record, this Council finds that development of the Project will not result in significant impacts related to inconsistencies with the applicable air quality plan and, therefore, no mitigation is required.

Facts in Support of the Findings: The Project is consistent with, and will not impede or otherwise conflict with implementation of the Air Quality Management Plan (“AQMP”). The Project is consistent with AQMP Consistency Criterion No. 1 because it will not cause a potential increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP. The Project will not exceed the California Ambient Air Quality Standards (“CAAQS”) for localized criteria pollutants during the construction phase. While operational emissions will be generated in excess of SCAQMD’s regional threshold criteria (DEIR, pg. 4.2-26), these emissions are already accounted for in the AQMP since the Project is consistent with the land uses and development intensities reflected in the City General Plan and incorporated in the adopted AQMP. Consistent with intent and provisions of the AQMP, the Project will implement all feasible mitigation, and comply with all applicable SCAQMD rules developed to reduce air pollutant emissions. The Project is also consistent with AQMP Consistency Criterion No. 2 because the extent of air pollutant emissions generated by the Project would be no greater than is reflected in the current General Plan and were incorporated in the adopted AQMP. Because the Project is consistent with the General Plan Land Use designation of Business Park/Light Industrial, it does not exceed growth projections contained in the City’s General Plan, and is consistent with growth assumptions in the AQMP. (DEIR, pgs. 4.2-14 to 4.2-15) Accordingly, impacts related to consistency with the applicable air quality plan will be less-than-significant and no mitigation is required.

b. Objectionable Odors

Potential Significant Impact: Whether the Project would create objectionable odors affecting a substantial number of people.

Findings: Potential impacts of the Project related to objectionable odors are discussed in detail in Section 4.2 of the DEIR. Based on the entire record, this Council finds that development of the Project will not result in significant impacts due to objectionable odors and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.2 of the DEIR, the Project does not propose land uses typically associated with emitting objectionable odors. Potential odors during Project construction may result from heavy equipment exhaust and the application of asphalt and architectural coatings. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. Project-related operational odor sources such as vehicle exhaust and routine painting/maintenance activities are typical of industrial/commercial activities and would be localized to the immediate Project vicinity, with little or no off-site effects. Accordingly, impacts related to objectionable odors will be less-than-significant and no mitigation is required. (DEIR, pg. 4.2-15)

c. Long-Term Microscale (CO Hot Spot) Emissions

Potential Significant Impact: Whether the Project would violate any air quality standard or contribute substantially to an existing or projected air quality violation. For CO, the applicable thresholds are:

- California State one-hour CO standard of 20.0 ppm; and
- California State eight-hour CO standard of 9.0 ppm.

Findings: Potential impacts of the Project related to long-term microscale emissions are discussed in detail in Section 4.2 of the DEIR. Based on the entire record, this Council finds that development of

the Project will not result in significant impacts related to long-term microscale emissions and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.2 of the DEIR, the highest one-hour CO concentration experienced at any of the intersections in the Project vicinity would not exceed the one hour CO State standard of 20 ppm. Based on the *Air Quality Analysis* prepared for the Project, the Project would contribute, at most, a 0.2 ppm increase to the one-hour CO concentrations for all scenarios. This is below the 1.0 ppm increase threshold. Also the highest eight-hour CO concentration experienced at any of the intersections in the Project vicinity would not exceed the eight-hour CO state standard of 35 ppm. Based on the Air Quality Analysis prepared for the Project, the Project would contribute, at most, a 0.2 ppm increase to the eight-hour CO concentrations for all scenarios. This is below the 0.45 ppm increase threshold. Since the Project would not exceed the one-hour or eight-hour CO concentration standards, it is reasonable to conclude that no CO hot spots would occur. Therefore, the Project would not have a significant impact on local air quality for CO and no mitigation measures would be required. (DEIR, pgs. 4.2-15 to 4.2-17)

d. Localized Operational Emissions

Potential Significant Impact: Whether the Project would violate any AAQS or contribute to an existing or projected air quality violation; or expose sensitive receptors to pollutants.

For long-term operation, the applicable localized daily thresholds are:

- 12,083 pounds per day of CO;
- 585 pounds per day of NO_x;
- 32 pounds per day of PM₁₀; and
- 14 pounds per day of PM_{2.5}.

Findings: Potential impacts of the Project related to localized operational emissions are discussed in detail in Section 4.2 of the DEIR. Based on the entire record, this Council finds that operations of the Project will not result in significant impacts related to localized operational emissions and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.2 of the DEIR, the operational emissions rates of NO_x, CO, PM₁₀, and PM_{2.5} are less than 10 percent of the LST thresholds for the applicable

pollutant. None of the criteria pollutant emissions would exceed localized thresholds during the operation of the Project. Therefore, the Project would not have a significant impact on localized operational pollutant levels and no mitigation measures would be required. (DEIR, pgs. 4.2-15 to 4.2-17)

e. Operational-Acute Health Risk

Potential Significant Impact: Whether the Project would expose sensitive receptors to substantial pollutant concentrations.

Findings: Potential impacts of the Project related to operational-acute health risks are discussed in detail in Section 4.2 of the DEIR. Based on the entire record, this Council finds that development of the Project will not result in significant impacts related to operational-acute health risks and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.2 of the DEIR, exposure to diesel exhaust can have immediate health effects, such as irritation of the eyes, nose, throat, and lungs, and it can cause coughs, headaches, light headedness, and nausea. In studies with human volunteers, diesel exhaust particles made people with allergies more susceptible to the materials to which they are allergic, such as dust and pollen. Exposure to diesel exhaust also causes inflammation in the lungs, which may aggravate chronic respiratory symptoms and increase the frequency or intensity of asthma attacks. However, according to the rulemaking on *Identifying Particulate Emissions from Diesel-Fueled Engines as a Toxic Air Contaminant* (ARB 1998)¹, the available data from studies of humans exposed to diesel exhaust are not sufficient for deriving an acute non-cancer health risk guidance value. While the lung is a major target organ for diesel exhaust, studies of the gross respiratory effects of diesel exhaust in exposed workers have not provided sufficient exposure information to establish a short-term non-cancer health risk guidance value for respiratory effects. Therefore, the potential for short-term acute exposure from diesel exhaust are considered to be less than significant and no mitigation is required. (DEIR, pg. 4.2-18)

¹ <http://www.arb.ca.gov/regact/diesltac/diesltac.htm>, accessed August 30, 2012.

f. Operational-Chronic Health Risk

Potential Significant Impact: Whether the Project would expose sensitive receptors to substantial pollutant concentrations.

For Maximum Individual Cancer Risk, the applicable thresholds are:

- An increased cancer risk greater than 10 in 1 million (1.0×10^{-5}) at any receptor location; or

For non-cancer chronic hazard indices (HI); the applicable threshold is:

- A cumulative increase for any target organ system exceeding 1.0 at any receptor location.

Findings: Potential impacts of the Project related to operational-chronic health risks are discussed in detail in Section 4.2 of the DEIR. Based on the entire record, this Council finds that development of the Project will not result in significant impacts related to operational-chronic health risks and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.2 of the DEIR, a screening level health risk assessment was performed for the operational emissions associated with the Project based on the SCAQMD's *Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis* guidance. The operations expected to occur at this facility will not emit any toxic chemicals in any significant quantity other than vehicle exhaust. While there may be other toxic substances in use on site, compliance with state and federal handling regulations will bring emissions to below a level of significance. The nearest residences (approximately 1,000 feet) would experience a cancer risk of 6.6 in 1 million, which is below the 10 in 1 million threshold. The nearest residences would also experience a chronic hazard index of 0.0041, which is below the 1.0 threshold. The peak off-site worker cancer risk level is 4.5 in a million, which is also below the 10 in 1 million threshold. Chronic hazard index for the peak off-site worker would be 0.0029, which is below the 1.0 threshold. Since the operational phase of the Project would not exceed any of the operational related health risk assessment thresholds, a less than significant impact would occur and no mitigation is required. (EIR, pgs. 4.2-18 to 4.2-19)

3. Climate Change and Greenhouse Gas Emissions

a. **Greenhouse Gas Plan, Policy, Regulation Consistency**

Potential Significant Impact: Whether the Project would conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases.

Findings: Potential impacts of the Project related to greenhouse gas plan, policy, and regulation consistency are discussed in detail in Section 4.3 of the DEIR. Based on the entire record, this Council finds that development of the Project will not result in significant impacts related to greenhouse gas plan, policy, or regulation consistency and, therefore, no mitigation is required.

Facts in Support of the Findings: The Project would implement appropriate GHG reduction strategies and would ensure that it does not conflict with or impede implementation of reduction goals identified in AB 32, Governor's Executive Order S-3-05, and other strategies to help reduce GHG levels. Therefore, the Project would not conflict with any applicable plan, program, policy, or regulation related to the reduction of GHG emissions resulting in a less than significant impact. (DEIR, pgs. 4.3-16 to 4.2-21)

4. Noise

a. **Airport Noise**

Potential Significant Impacts: Whether a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would result in exposure of people residing or working in the project area to excessive noise levels. Or if a project within the vicinity of a private airstrip, would expose people residing or working in the project area to excessive noise levels.

Findings: Potential impacts of the Project relating to airport noise are discussed in detail in Section 4.4 of the DEIR. Based on the entire record, this Council finds that no significant impacts related to airport noise will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.4 of the DEIR, the nearest airport is the March Air Reserve Base, which is located approximately 0.75 mile northwest of the Project site. The

Project is not identified as being within the noise or safety contours delineated for the March Air Reserve Base Airport. While the Project is located within two miles of a public airport, it is outside of the 60 dBA CNEL contour of the March Air Reserve Air Base, and therefore, the Project would not have the potential to expose people working on the Project site to excessive noise levels from airport operations as the Project site is located outside of the noise and safety contours of March Air Reserve Base. A less than significant impact would occur with implementation of the Project. Additionally, the Project site is not located within the vicinity of a private airstrip; therefore, no impact associated with this issue would occur and no mitigation is required. (DEIR, pgs. 4.4-9 to 4.4-10)

b. Ground-Borne Vibrations

Potential Significant Impact: Whether the Project would result in exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels.

Findings: Potential impacts of the Project relating groundborne vibration and groundborne noise are discussed in detail in Section 4.4 of the DEIR. Based on the entire record, this Council finds that no significant impacts related to ground-borne vibration and groundborne noise will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.4 of the DEIR, the Project does not propose activities or uses that would result in long-term substantial or even perceptible vibration levels. The Project site is not located near steel-wheeled trains. Additionally, roadways in the project area are either paved or would be paved and would not result in traffic driving over rough roads. Construction activities for the project site do not include blasting or pile driving. The primary vibratory source during the construction of the Project would be large bulldozers. Based on published data, typical bulldozer activities generate an approximate vibration level of 0.089 in/sec at a distance of 25 feet. At the distance of the nearest residence to the project boundary (approximately 1,000 feet) the estimated vibration level would not be discernible. While heavy-duty earthmoving equipment would be used during the construction phase of the project, the level of vibration would not be excessive or permanent, nor would it exceed the level at which building damage typically occurs. Therefore, impacts from construction-related groundborne vibration construction would be less than significant and no mitigation is required. (DEIR, pg. 4.4-10)

c. Long-Term Traffic Noise

Potential Significant Impact: Whether the project would result in a substantial temporary, periodic, and/or permanent increase in ambient noise levels in the project vicinity above levels existing without the project.

Findings: Potential impacts of the Project related to long-term noise are discussed in detail in Section 4.4 of the DEIR. Based on the entire record, this Council finds that no significant impacts related to long-term noise will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.4 of the DEIR, project-related traffic noise level increases would be 0.8 dBA or less along all roadway segments analyzed. Noise level increases within this range are small and are not perceptible by the human ear. Therefore, no significant traffic noise impacts would occur to off-site land uses with implementation of the Project. Also the proposed warehouse distribution center uses would not be impacted by the projected 75 dBA CNEL noise contour from Indian Street (within 50 feet of the roadway centerline), Oleander Avenue (within 50 feet of the roadway centerline), or Perris Boulevard (98 feet from the roadway centerline) in 2035. Therefore, noise levels at the on-site uses are below the City's 75 dBA CNEL noise standard for industrial uses. No significant noise impacts to on-site industrial uses would occur and no mitigation measures are required. (DEIR, pgs. 4.4-10 to 4.4-13)

d. Long-Term Operational Noise

Potential Significant Impact: Whether the project would cause exposure of persons to or generation of noise levels in excess of standards established in the City of Moreno Valley General Plan, Moreno Valley Municipal Code, or applicable standards of other agencies.

Findings: Potential impacts of the Project related to long-term operational noise are discussed in detail in Section 4.4 of the DEIR. Based on the entire record, this Council finds that no significant impacts related to long-term operational noise will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: The nearest existing sensitive receptors in the vicinity of the project site are rural residential uses located along Nandina Avenue approximately 1,000 feet north of the project's northern boundary. There are also nonconforming residential dwelling units within commercial and industrial uses on property zoned for commercial or industrial uses approximately

0.5 mile southwest of the project site on the south side of Oleander Avenue between Heacock Street and Patterson Avenue.

The warehouse distribution use has loading docks on the north and south sides of the building, more than 1,000 feet from the existing residences to the north. Noise associated with loading/unloading activities would potentially affect these existing residential uses. Other on-site, noise-producing activities may include traffic and activity within the parking lot (load talking, horn blowing, vehicle door slamming, truck idling, etc.). Although individual activity may generate relatively high and intermittent noise, when added to the typically lower ambient noise and averaged over a longer period of time, the cumulative noise level would be much lower and less than the City's exterior noise standards at the nearest noise-sensitive land uses, and would be considered to have a less than significant impact. (DEIR, pg. 4.4-14)

The project would have rooftop heating, ventilating, and air conditioning (HVAC) equipment, as well as ground floor garbage compactors. Rooftop HVAC units generate noise levels of approximately 62 dBA at 50 feet. The closest noise-sensitive land uses are existing residences which are located more than 1,000 feet to the north from the nearest potential on-site rooftop HVAC equipment location. With the effect of distance divergence, noise generated by HVAC equipment would be reduced by 26 dBA at the closest residences when compared with the noise level measured at 50 feet. Additionally, the roof edge (parapet) creates a noise barrier that reduces noise levels from rooftop HVAC units by an additional 3 to 5 dBA or more for ground floor receptors. Because of the attenuation achieved, nearest residences located to the north of the project site would be exposed to an exterior noise level of 33 dBA L_{max} or lower. This range of noise levels is substantially lower than traffic noise on roadways in the project vicinity and the truck movement and loading/unloading noise. Therefore, because the City's exterior noise standard of 60 dBA $L_{dn}/CNEL$ for HVAC equipment in residential district (Planning and Zoning Code, Chapter 9.03.040) would not be exceeded at the nearest sensitive noise receptors, no significant noise impact resulting from the operation of rooftop HVAC equipment would occur and no mitigation is required. (DEIR, pg. 4.4-15)

Garbage compactors generate approximately 70 dBA L_{max} at 6 feet. With the effect of distance divergence, noise generated by garbage compactors would be reduced to 26 dBA L_{max} or lower at the closest residences. Because the City's exterior noise standard of 60 dBA L_{max} during the day and 55 dBA L_{max} during the night would not be exceeded, no significant noise impacts from the on-site

garbage compactors would occur. In the absence of any significant impact, no mitigation is required. (DEIR, pg. 4.4-15)

It is anticipated that the proposed uses would have some sort of speaker system at the truck loading docks. Typical loud speakers generate a sound level of 75 dBA L_{max} at 50 feet. With the distance attenuation of 26 dBA the speaker noise at the nearest residences will be at or below 49 dBA L_{max} . This range of maximum noise levels is lower than the City's nighttime exterior noise standards of 55 dBA L_{max} standard. Therefore, noise associated with loading dock speakers at the proposed warehouse buildings would not result in noise levels exceeding the typical daytime or nighttime noise standards at the nearest residences to the southeast and no mitigation measures are required. (DEIR, pg. 4.4-15)

The typical maximum allowable interior noise levels for residential uses are 45 dBA between 10:01 p.m. and 7:59 a.m. and 50 dBA between 8:00 a.m. and 10:00 p.m. Typical southern California homes with windows open would achieve up to 12 dBA in exterior to interior noise reduction. When windows are closed, the noise attenuation increases to 24 dBA. Additionally, distance divergence of 1,000 feet provides 26 dBA of noise attenuation. Interior noise levels at the nearest residential homes to the north, attributable to loading/unloading activities from the nearest on-site loading areas, would be reduced to 37 dBA L_{max} with windows open and to 25 dBA L_{max} with windows closed. This range of noise level is compatible with or lower than typical household activity noise. Therefore, no significant interior noise impacts for the nearest sensitive receptors would occur and no mitigation is required. (DEIR, pg. 4.4-16)

5. Transportation

a. Design Features or Incompatible Uses

Potential Significant Impact: Whether the Project would substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Findings: Potential impacts of the Project related to design features or incompatible uses are discussed in detail in Section 4.5 of the DEIR. Based on the entire record, this Council finds that no significant impacts related to the design features or incompatible uses will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.5 of the DEIR, the design of roadways must provide adequate sight distance and traffic control measures. This provision is normally realized through roadway design to facilitate roadway traffic flows. Roadway improvements in and around the Project site would be designed and constructed to satisfy all City requirements for street widths, corner radii, intersection control as well as incorporate design standards tailored specifically to site access requirements.

The final design of all roadways and intersections within the Project site access would be reviewed by a licensed professional civil engineer to ensure adequate safety when traveling to and from the Project site. The Project circulation plan does not include any sharp curves or dangerous intersections in its design. Adherence to applicable existing requirements of the City of Moreno Valley consistent with the City's Circulation Element Objectives 5.1 (create a safe, efficient, and neighborhood-friendly street system), 5.5 (maximize efficiency of the local circulation system by using appropriate policies and standards to design, locate, and size roadways), and 5.11 (eliminate obstructions that impede safe movement of vehicles, bicyclists, and pedestrians) and other agencies would reduce impacts associated with this issue to a less than significant level and no mitigation is required. (DEIR, pgs. 4.4-15 to 4.4-16)

b. Inadequate Emergency Access

Potential Significant Impact: Whether the Project would result in inadequate emergency access.

Findings: Potential impacts of the Project related to inadequate emergency access are discussed in detail in Section 4.5 of the DEIR. Based on the entire record, this Council finds that no significant impacts related to inadequate emergency access will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.5 of the DEIR, the developers of the Project would be required to design, construct, and maintain structures, roadways, and facilities to provide for adequate emergency access and evacuation. Construction activities, which may temporarily restrict vehicular traffic, would be required to implement adequate and appropriate measures to facilitate the passage of persons and vehicles through/around any required road closures. The Project design would be submitted to and approved by the City's Fire and Police Departments prior the issuance of building permits. Adherence to applicable existing requirements of the City of

Moreno Valley and other agencies would reduce impacts associated with this issue to a less than significant level and no mitigation is required. (DEIR, pg. 4.4-16)

c. Alternative Transportation

Potential Significant Impact: Whether the Project would conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.

Findings: Potential impacts of the Project related to alternative transportation are discussed in detail in Section 4.5 of the DEIR. Based on the entire record, this Council finds that no significant impacts related to alternative transportation will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.5 of the DEIR, the design of the Project would be required to adhere to applicable City of Moreno Valley standards that support and/or facilitate alternative modes of transportation, including but not limited to pedestrian pathways and sidewalks consistent with the City's Circulation Element Objective 5.8 (encourage development of an efficient public transportation system for the entire community). Through the City's project review process, policies, plans, and/or programs supporting alternative transportation would be reviewed and incorporated as applicable. Consequently, a less than significant impact would occur as a result of the Project and no mitigation is required. (DEIR, pgs. 4.4-16 to 4.4-17)

d. Air Traffic Patterns

Potential Significant Impact: Whether the Project would increase or otherwise affect existing air traffic patterns.

Findings: Potential impacts of the Project related to air traffic patterns are discussed in detail in Section 4.5 of the DEIR. Based on the entire record, this Council finds that no significant impacts related to any change in air traffic patterns will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.5 of the DEIR, airport facilities within the vicinity of the Project site include the March Air Field, which is part of the March Air Reserve Base (MARB). The Project site is located approximately 0.75 mile east of March Air Field and is entirely within Airport Influence Area II. As part of the standard process for development within Airport

Influence Areas for MARB, projects are required to be reviewed by the ALUC for consistency with the ALUP. As a standard condition imposed during ALUC reviews, developments located within the boundaries of Influence Area III are required to provide aviation easements. To ensure consistency with the ALUC recommendations is maintained, aviation easements will be required as part of a condition of approval for the Project site. Development that would occur within Airport Influence II of MIP would not include any features that would alter air traffic patterns or the level of air traffic at the MIP; therefore, a less than significant air traffic safety impact would occur and no mitigation is required. (DEIR, pgs. 4.4-17 to 4.4-18)

B. ENVIRONMENTAL IMPACTS MITIGATED TO A LEVEL OF LESS-THAN-SIGNIFICANT

California Public Resources Code Section 21081 states that no public agency shall approve or carry out a project for which an EIR has been completed which identifies one or more significant effects unless the public agency makes one or more of the following findings:

- I. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment.
- II. Those changes or alterations are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency.
- III. Specific economic, legal, social, technological, or other considerations make infeasible the mitigation measures or alternatives identified in the EIR, and overriding economic, legal, social, technological, or other benefits of the Project outweigh the significant effects on the environment.

Certain of the following issues from the environmental categories analyzed in the EIR, including biological resources, paleontological resources, geology and soils, hydrology and water quality, noise (short-term construction), and transportation (local intersections and roadways) were found to be potentially significant, but can be mitigated to a less-than-significant level with the imposition of mitigation measures. This Council hereby finds pursuant to *California Public Resources Code* Section 21081 that all potentially significant impacts listed below can and will be mitigated to below a level of significance by imposition of the mitigation measures in the EIR; and

that these mitigation measures are included as Conditions of Approval and set forth in the MMRP adopted by this Council. Specific findings of this Council for each category of such impacts are set forth in detail below.

1. Biological Resources

a. Adverse Effects to Sensitive or Special Status Species

Potential Significant Impact: The EIR evaluated and concluded that the Project could have an adverse effect on candidate, sensitive, or special status species.

Finding: Implementation of the following mitigation measures will reduce the potential adverse impacts to sensitive or special status species to less than significant:

Mitigation Measure BIO-1: No more than 72 hours prior to initiation of ground-disturbing activities, a pre-construction survey shall be completed by a qualified biologist. The survey will identify special status avian species (if any) within the area of intended disturbance. In the event no special status avian species are identified within the limits of disturbance, no further mitigation is required. In the event such species are identified within the limits of ground disturbance, Mitigation Measure BIO-3 shall apply.

Mitigation Measure BIO-2: No more than 72 hours prior to initiation of ground-disturbing activities, a pre-construction burrowing owl survey shall be completed by a qualified biologist for the planned disturbance area. The pre-construction burrowing owl surveys may be conducted as part of the survey required in Mitigation Measure BIO-1. A report detailing the findings of the pre-construction survey shall be submitted to the City prior to the initiation of ground-disturbing activities. In the event no burrowing owls are identified within the limits of ground disturbance, no further mitigation is required. In the event burrowing owls are identified within the limits of ground disturbance, Mitigation Measures BIO-3 and BIO-4 shall apply.

Mitigation Measure BIO-3: If nesting special status avian or burrowing owl species are determined to occupy a proposed area of disturbance, no construction

activity shall take place within 500 feet of an active nest/burrow until it has been determined that the nest/burrow is no longer active, and all juveniles have fledged the nest/burrow.

Mitigation Measure BIO-4: If active burrowing owl burrows are detected outside the breeding season, then passive and/or active relocation may be approved following consultation with the CDFG and/or USFWS. One-way doors may be installed as part of a passive relocation program. Burrowing owl burrows shall be excavated with hand tools by a qualified biologist when determined to be unoccupied, and backfilled to ensure that animals do not re-enter the holes/dens.

Facts in Support of the Finding: According to Section 2.5.2 of the DEIR, the site is characterized as a regularly disked field that supports little to no standing vegetation and is not located within a Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) Criteria Area. However, the site is located in an area that requires habitat assessments for burrowing owl, five Narrow Endemic Plant Species (NEPS), and nine Criteria Area Plant Species (CAPS) in accordance with the MSHCP. During the habitat assessment surveys and focused surveys no sign of burrowing owls were observed. The Project site is not an optimal habitat for burrowing owl. However, because burrowing owls have been known to occur on land that has been disturbed and are considered a mobile and opportunistic species, implementation of **Mitigation Measures BIO-1 through BIO-4** are necessary to reduce the potential impact to less than significant. The five NEPS and nine CAPS were not observed during the general survey (February 2007) and focused surveys (May, June, and July 2009) conducted on site. Overall, the Project site lacks suitable habitat for these species due to historic agricultural activities. Nonetheless, focused surveys were conducted to cover the four depressed areas and the ditch. No special status plants were observed during the focused surveys. Because of the absence of members of the species and suitable habitat, a less than significant impact to other special status plants would occur. (DEIR, pg. 2-9)

2. Cultural Resources

a. **Directly or Indirectly Destroy a Unique Paleontological Resource or Site or Unique Geologic Feature**

Potential Significant Impact: The EIR evaluated and concluded that the Project could have an adverse effect on significant fossil resources.

Finding: Implementation of the following mitigation measures will reduce the impact to unique paleontological resources and site or unique geological features to less than significant:

Mitigation Measure CUL-1: Prior to construction involving excavation four feet or more below existing surface grade, the construction contractor shall provide evidence that a qualified paleontologist has been retained, and that the paleontologist(s) shall be present during all grading and other significant ground-disturbing activities that reach four feet or more below existing surface grade. In the event fossiliferous deposits are encountered, the following measures shall be implemented:

- *Monitoring shall be conducted by qualified paleontological monitor(s) of excavation in areas identified as likely to contain paleontological resources, including undisturbed older Pleistocene alluvium. Paleontological monitors shall be equipped to salvage fossils as they are unearthed, to avoid construction delays, and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. Monitors shall be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens. Monitoring may be reduced if the potentially fossiliferous units are determined upon exposure and examination by qualified paleontological personnel to have low potential to contain fossil resources.*
- *Paleontological monitoring of any earthmoving will be conducted by a monitor, under direct guidance of a qualified paleontologist. Earthmoving in areas of the parcel where previously undisturbed sediments are buried, but not otherwise disturbed, will not be monitored.*

- *Preparation of recovered specimens to a point of identification and permanent preservation, including washing of sediments to recover small invertebrates and vertebrates.*
- *Identification and curation of specimens into a professional, fully accredited museum repository with permanent retrievable storage. The paleontologist must have a written repository agreement in hand prior to the initiation of mitigation activities.*
- *Preparation or a report of findings with and appended itemized inventory of specimens. The report and report and inventory, when submitted to the City of Moreno Valley along with confirmation of the curation of recovered of recovered specimens into an established, accredited museum repository, will signify completion of the program to mitigate impacts to paleontological resources.*

Facts in Support of the Finding: Based on the paleontological resources analysis contained in Section 2.5.3 of the DEIR, the site has a high potential to contain significant fossil resources due to the presence of early to middle Pleistocene alluvial fan deposits. These resources have the potential for being unearthed and damaged during grading and construction activities and are estimated to lie at approximately 4 feet below ground surface. Construction and grading of the Project site will result in soil disturbance below 4 feet, which may unearth previously undetected subsurface paleontological resources. **Mitigation Measure CUL-1** has been identified to reduce the significance of paleontological resource impacts. Adherence to this measure would reduce impacts to paleontological resources to a less than significant level. (DEIR, pgs. 2-12 to 2-13)

3. Geology and Soils

a. Unstable Soils

Potential Significant Impact: The EIR evaluated and concluded that the Project site could experience soil shrinkage during excavation and recompaction.

Finding: Implementation of the following mitigation measures will reduce the potential impact of lateral spreading, subsidence, and collapse to less than significant:

Mitigation Measure GEO-1: Prior to the issuance of grading permits, any existing low density soils and/or saturated soils shall be removed to competent natural soil under the inspection of the Soils Engineering Firm. After the exposed surface has been cleansed of debris and/or vegetation, it shall be scarified until it is uniform in consistency, brought to the proper moisture content and compacted to a minimum of 90 percent relative compaction (in accordance with ASTM: D-1557). In any area where a transition between fill and native soil or between bedrock and soil are encountered, additional excavation beneath foundations and slabs will be necessary in order to provide uniform support and avoid differential settlement of the structure.

The on-site soils or approved import soils may be utilized for the compacted fill, provided they are free of any deleterious materials and shall not contain any rocks, brick, asphaltic concrete, concrete, or other hard materials greater than eight inches in maximum dimensions. Any import soil must be approved by the Soils Engineering firm a minimum of 24 hours prior to importation to the site.

The approved fill soils shall be placed in layers not in excess of six inches in thickness. Each lift shall be uniform in thickness and thoroughly blended. The fill soils shall be brought to within 2 percent of the optimum moisture content, unless otherwise specified by the Soils Engineering firm. Each lift shall be compacted to a minimum of 90 percent relative compaction (in accordance with ASTM: D-1557) and approved prior to the placement of the next layer of soil. Compaction tests shall be obtained at the discretion of the Soils Engineering firm but to a minimum of one test for every 500 cubic yards placed and/or for every two feet of compacted fill placed.

The minimum relative compaction shall be obtained in accordance with accepted methods in the construction industry. The final grade of the structural areas shall be in a dense and smooth condition prior to placement of slabs-on-grade or pavement areas. No fill soils shall be

placed, spread, or compacted during unfavorable weather conditions. When the grading is interrupted by heavy rains, compaction operations shall not be resumed until approved by the Soils Engineering firm.

Facts in Support of the Finding: Section 2.5.4 of the DEIR included a geotechnical analysis that performed in-place soil density tests, which revealed that soil shrinkage that may occur would be approximately 10 percent to 15 percent due to excavation and recompaction. This is based on the assumption that the fill would be compacted to 90 percent of the dry density per ASTM standards. As a result subsidence is estimated at 0.2 feet due to earthwork operations. Impacts are considered potentially significant and mitigation measures are required. The geotechnical analysis determined that there is no potential for landslides or liquefaction. Additionally, potential impacts related to lateral spreading would be reduced to less than significant level through adherence to the California Building Code. **Mitigation Measure GEO-1** would reduce potential impacts associated with unstable soils to a less than significant level. (DEIR, pgs. 2-15 to 2-16)

b. Expansive Soils

Potential Significant Impact: The EIR evaluated and concluded that expansive soils could occur.

Finding: Implementation of the following mitigation measures will reduce to potential impact of expansive soils to less than significant:

Mitigation Measure GEO-2: Prior the issuance of grading permits, the project proponent shall inform the project engineers, architects, owner, maintenance personnel, and other interested parties of the Expansive Soil Guidelines provided in the project's geotechnical analysis [Geotechnical Engineering Investigation Proposed Industrial Development Southwest Corner of Perris Boulevard and Grove View Road Moreno Valley, California, NorCal Engineering, March 7, 2007]. The recommendations identified in the project's Expansive Soil Guidelines shall be implemented by the project engineers, architects, owner, maintenance personnel, and other interested parties in the applicable design guidelines. Applicable design guidelines shall be included and implemented in the project's grading plans.

Facts in Support of the Finding: According to Section 2.5.4 of the DEIR, soils on site include Exeter sandy loam, 0–2 percent slopes (EnA), Exeter sandy loam, deep (EpA), Exeter very fine sandy loam (EwB), Exeter very fine sandy loam, deep (EyB), Greenfield sandy loam (GyA), Ramona sandy loam (RaA), Ramona very fine sandy loam (ReC2), and Travor loamy fine sand, eroded (Tp2). As detailed in the Project’s geotechnical analysis, expansive soils were observed on the Project site. Exploratory trenches revealed the existing earth materials on site to consist of a disturbed soil/fill and natural soil. A fill/disturbed natural soil classifying as a brown, sandy to clayey silt to a silty sand was encountered across the site and ranged in depth from 1 foot to 1½ feet. These soils were noted to be soft to loose and damp. An undisturbed alluvium soil classifying as a brown sandy to clayey silt to a silty sand was encountered beneath the disturbed top soils and fill. These native soils were noted to be firm to stiff, medium dense to dense, and moist. Development of the Project site would be required to adhere to California Building Code and City design and engineering standards. However, because expansive soils are present on site, impacts associated with this issue are potentially significant and mitigation measures are required. **Mitigation Measure GEO-2** would reduce potential impacts associated with expansive soils to a less than significant level. (DEIR, pgs. 2-16 to 2-17)

4. Hydrology and Water Quality

a. **Water Quality Standards and Waste Discharge Requirements**

Potential Significant Impact: The EIR evaluated and concluded that the Project could violate water quality or waste discharge requirements, substantially increase the rate of surface runoff causing flooding, create substantial additional sources of polluted runoff, or otherwise substantially degrade water quality.

Finding: Implementation of the following mitigation measures will reduce the potential impacts related to compliance with water quality standards and waste discharge requirements to less than significant:

Mitigation Measure HYD-01: Prior to grading plan approval and the issuance of a grading permit by the City, the project proponent shall provide evidence to the City that a Notice of Intent (NOI) with the Regional Water Quality Control Board has been filed to be covered under the State NPDES General Construction Permit for discharge of stormwater associated with construction activities.

Mitigation Measure HYD-02: Prior to grading plan approval and the issuance of a grading permit by the City, the project proponent shall submit to the State Water Quality Control Board, a Storm Water Pollution Prevention Plan (SWPPP). The SWPPP shall include a surface water control plan and erosion control plan citing specific measures to control on-site and off-site erosion during the entire grading and construction period. Additionally, the SWPPP shall identify structural and nonstructural BMPs to control sediment and non-visible discharges from the site. BMPs to be implemented in the SWPPP may include but shall not be limited to the following:

- Sediment discharges from the site may be controlled by the following: gravel bags, silt fences, straw wattles and temporary debris basins (if deemed necessary), and other discharge control devices. The construction and condition of the BMPs will be periodically inspected during construction, and repairs will be made when necessary as required by the SWPPP.*
- Materials that have the potential to contribute non-visible pollutants to stormwater must not be placed in drainage ways and must be contained, elevated, and placed in temporary storage containment areas.*
- All loose piles of soil, silt, clay, sand, debris, and other earthen material shall be protected in a reasonable manner to eliminate any discharge from the site. Stockpiles will be surrounded by silt fences.*
- The SWPPP will include inspection forms for routine monitoring of the site during the construction phase to ensure NPDES compliance.*
- Additional BMPs and erosion control measures will be documented in the SWPPP and utilized if necessary.*

- *The SWPPP will be kept on site for the entire duration of project construction and will also be available to the local RWQCB for inspection at any time.*

In the event that it is not feasible to implement the above BMPs, the City of Moreno Valley can make a determination that other BMPs will provide equivalent or superior treatment either on or off site.

Mitigation Measure HYD-03: Prior to the issuance of grading permits, the project proponent shall provide evidence to the City that the following provisions have been added to construction contracts for the project:

- *The Construction Contractor shall be responsible for performing and documenting the application of BMPs identified in the SWPPP. Weekly inspections shall be performed on sediment control measures called for in the SWPPP. Monthly reports shall be maintained by the Contractor and submitted to the City for inspection. In addition, the Contractor will also be required to maintain an inspection log and have the log on site to be reviewed by the City of Moreno Valley and the representatives of the Regional Water Quality Control Board.*

Mitigation Measure HYD-04: Prior to grading plan approval and the issuance of a grading permit by the City, the project proponent shall receive approval from the City of Moreno Valley for a Final Water Quality Management Plan (F-WQMP). The F-WQMP shall specifically identify pollutants of concern, site design, source control, and treatment control BMPs that shall be used on site to control predictable pollutant runoff in order to reduce impacts to water quality to the maximum extent practicable.

Facts in Support of the Finding: According to Section 2.5.6 of the DEIR, development of the Project is required to obtain coverage under an NPDES permit, which includes the submittal of a Notice of Intent (NOI) application to the State Water Resources Control Board (SWRCB), the receipt of a Waste Discharge Identification Number (WDID) from SWRCB, and the preparation of an SWPPP for construction wastewater discharges. During the construction period, the Project would

use a series of Best Management Practices (BMPs) to reduce erosion and sedimentation. These measures may include the use of gravel bags, silt fences, hay bales, check dams, hydroseed, and soil binders. The construction contractor would be required to operate and maintain these controls throughout the duration of on-site activities. In addition, the construction contractor would be required to maintain an inspection log and have the log on site to be reviewed by the City and representatives of the RWQCB. Adherence to **Mitigation Measures HYD-01 through HYD-04** will ensure that these practices and measures take place and would reduce the potential impacts related to compliance with water quality standards and waste discharge requirements to less than significant. (DEIR, pgs. 2-19 to 2-24)

b. Erosion

Potential Significant Impact: The EIR evaluated and concluded that the Project could significantly alter drainage patterns that would result in erosion or siltation.

Finding: Implementation of the following mitigation measures will reduce the potential impacts to less than significant:

Mitigation Measure HYD-05: Prior to grading plan approval and the issuance of a grading permit, the project proponent shall submit a detailed grading plan and drainage report, with supporting engineering calculations, to the City Engineer for review and approval. The plan and report shall incorporate relevant requirements identified by the City and/or site-specific geotechnical investigations. The plan and report shall provide evidence that the storm drainage system would be adequate to convey water for the 100-year storm event from the project site and that the post-development flows exiting the project site are less than or equal to pre-development flows.

Facts in Support of the Finding: According to Section 2.5.6 of the DEIR, the majority of storm flows associated with the Project will be collected by a series of drop inlet catch basins. While the increase in impervious surfaces attributable to the Project would contribute to a greater volume and higher velocity of storm water flows, the Project's drainage system would accept and accommodate runoff that would result from Project construction at or below pre-Project conditions. Therefore, the post-development flows generated on the Project site would not exceed the capacity of the planned

storm water drainage systems. To ensure that long-term drainage capacity issues are reduced to a less than significant level, **Mitigation Measure HYD-05** has been identified. With adherence to this mitigation measure, impacts associated with effects on existing drainage patterns are reduced to less than significant. (DEIR, pgs. 2-24 to 2-25)

5. Noise

a. **Short-Term Construction Noise**

Potential Significant Impact: The EIR evaluated and concluded that noise levels from grading and other construction activities for the Project may range up to 65 dBA at the closest residences north of the Project site for very limited times when construction occurs near the Project's boundary. Construction-related noise impacts from the Project would be potentially significant.

Finding: Implementation of the following mitigation measures will reduce potential short-term construction noise impacts to less than significant:

- 4.4.6.1A *During all project site excavation and grading on site, the project contractor shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers consistent with manufacturers' standards.*
- 4.4.6.1B *The project contractor shall place all stationary construction equipment so that emitted noise is directed away from sensitive receptors nearest to the project site.*
- 4.4.6.1C *The construction contractor shall locate equipment staging in areas that will create the greatest distance between construction-related noise sources and noise-sensitive receptors nearest to the project site during all project construction.*
- 4.4.6.1D *During all project site construction activities, the construction contractor shall limit all construction-related activities that would result in noise to between the hours of 6:00 a.m. and 8:00 p.m. on weekdays and between the hours of 7:00 a.m. to 8:00 p.m. on weekends and holidays, unless written approval is obtained from the City Building Official or City Engineer. For grading activity, the hours are limited to between 7:00 a.m. and 6:00 p.m. weekdays and 8:00 a.m. to 4:00 p.m. on weekends and holidays.*

Facts in Support of the Finding: According to Section 4.4 of the DEIR, two types of short-term noise impacts could occur during the construction of the Project. First, construction crew commutes and the transport of construction equipment and materials to the site for the Project would

incrementally increase noise levels on access roads leading to the site. The second type of short-term noise impact is related to noise generated during excavation, grading, and building erection on the Project site. Construction of the Project is expected to require the use of scrapers, bulldozers, and water and pickup trucks. The site preparation phase, which includes excavation and grading of the site, tends to generate the highest noise levels, because the noisiest construction equipment is earthmoving equipment. Earthmoving equipment includes excavating machinery such as backfillers, bulldozers, draglines, and front loaders. Earthmoving and compacting equipment includes compactors, scrapers, and graders. Typical operating cycles for these types of construction equipment may involve one or two minutes of full-power operation followed by three to four minutes at lower power settings. The maximum noise level generated by each scraper on the Project site is assumed to be approximately 87 dBA L_{max} at 50 feet from the scraper. Each bulldozer would generate approximately 85 dBA L_{max} at 50 feet. The maximum noise level generated by water and pickup trucks is approximately 86 dBA L_{max} at 50 feet from these vehicles. Each doubling of the sound sources with equal strength increases the noise level by three (3) dBA. Assuming that each piece of construction equipment operates at some distance from the other equipment, the worst-case composite noise level during this phase of construction would be 91 dBA L_{max} at a distance of 50 feet from the active construction area.

The nearest noise-sensitive receptor locations to the Project site are existing residences approximately 1,000 feet to the north. These nearest residents may be subject to short-term, intermittent, maximum noise reaching 65 dBA L_{max} , generated by construction activities on the Project site. The ambient noise associated with vehicular traffic and industrial uses in the Project area would mask the majority of the construction noise from the Project site. No significant construction noise impacts would occur if construction of the Project would occur within the permitted hours of 6:00 a.m. to 8:00 p.m. of any working day, and within the permitted hours of 7:00 a.m. and 8:00 p.m. on Sundays and federal holidays. Compliance with the construction hours specified in the City's Municipal Code would result in construction noise impacts that are less than significant. While impacts would be considered less than significant as long as construction activities occur within the designated hours identified in the City's Municipal Code, mitigation measures have been identified to reduce the noise levels that would expose nearby sensitive receptors to noise levels in excess of the City's noise standards.

With adherence to the City’s designated construction hours and with implementation of the proposed mitigation measures, potential short-term construction noise impacts would be reduced below the level of significance. (DEIR, pgs. 4.4-16 to 4.4-18)

6. Transportation

a. Existing Plus Project Roadway Segments

Potential Significant Impact: The EIR evaluated and concluded that two roadway segments are forecasted to exceed satisfactory levels of service in the existing plus project conditions.

Finding: Implementation of the following mitigation measures will reduce project-specific roadway segment impacts to less than significant:

4.5.6.1A. *Prior to the issuance of building permits, the project applicant shall participate in the City of Moreno Valley Development Impact (DIF) Fee Program and pay the project’s fair share for local circulation improvements as outlined in the VIP Moreno Valley Project Traffic Study. The City shall ensure that the intersection and street improvements outlined in the VIP Moreno Valley Project Traffic Study will be constructed pursuant to the timeframes established by the City of Moreno Valley Development Impact Fee Program.*

4.5.6.1B. *Prior to the issuance of building permits, the project applicant shall participate in the County of Riverside Transportation Uniform Mitigation Fee (TUMF) Program and pay the project’s fair share for regional circulation improvements. The City shall ensure that the intersection and street improvements outlined in the VIP Moreno Valley Project Traffic Study will be constructed pursuant to the timeframe established by the County of Riverside TUMF Program.*

Facts in Support of the Finding: According to Section 4.5 of the DEIR, Perris Boulevard north of Grove View Road (southbound); and Perris Boulevard south of South Project Driveway (northbound and southbound) are projected to operate at unsatisfactory levels of service in the existing plus project scenario. The DEIR determined that this roadway currently operates at unsatisfactory levels of service without the project. The City is currently in the process of implementing a Capital Improvement Project to widen Perris Boulevard from Cactus Avenue south to city limits. The improvement project will widen Perris Boulevard to a six-lane street section, consistent with the

General Plan. The project is under construction and is scheduled to be completed in May 2013. The widening will encompass the improvements defined in the DEIR to improve operations of the roadway to the City's level of service standard and mitigate the Project's contribution to the impact. With implementation of the City's improvements to Perris Boulevard and implementation of **Mitigation Measures 4.5.6.1A and 4.5.6.1B** requiring that the Project applicant pay traffic impact fees, project-specific impacts will be reduced to less than significant levels. (DEIR, pgs. 4.5-18 to 4.5-19)

b. Year 2013 Cumulative With Project Conditions Intersection and Roadway Segments

Potential Significant Impact: The EIR evaluated and concluded that eleven intersections and four roadway segments are forecasted to exceed satisfactory levels of service in the year 2013 cumulative plus project conditions.

Finding: Implementation of the following mitigation measures will reduce the Project's contribution to cumulatively considerable intersection and roadway segment impacts to a less than significant level:

4.5.6.2A. *Prior to the issuance of occupancy permits, the project applicant shall have constructed the site access roadway improvements outlined below.*

Indian Street/South Project Driveway: Restripe to convert center turn lane on Indian Street to a two-way left-turn lane. This location does not meet a peak hour signal warrant. This is a site-adjacent improvement to be constructed by the project applicant.

Facts in Support of the Finding: According to Section 4.5 of the DEIR, an intersection and roadway segment level of service analysis was conducted for the year 2013 cumulative with project condition to determine the Project's contribution to cumulative traffic impacts to local intersections and roadway segments. As identified in Table 4.5.E in the DEIR, the addition of Project traffic to the year 2013 cumulative scenario would result in conditions exceeding the established LOS standard at the following intersections:

- I-215 Southbound Ramps/Harley Knox Boulevard (a.m. and p.m. peak hours);
- I-215 Northbound Ramps/Harley Knox Boulevard (a.m. and p.m. peak hours);
- Indian Street/South Project Driveway (p.m. peak hour);

- Indian Street/Harley Knox Boulevard (a.m. and p.m. peak hours);
- Perris Boulevard/Gentian Avenue (a.m. and p.m. peak hours);
- Perris Boulevard/Iris Avenue (a.m. and p.m. peak hours);
- Perris Boulevard/Krameria Avenue (a.m. and p.m. peak hours);
- Perris Boulevard/Nandina Avenue (a.m. and p.m. peak hours);
- Perris Boulevard/Grove View Road (a.m. and p.m. peak hours);
- Perris Boulevard/South Project Driveway (a.m. and p.m. peak hours); and
- Perris Boulevard/Harley Knox Boulevard (a.m. and p.m. peak hours).

The Project contributes to the failure to meet the level of service standard at ten of the eleven intersections resulting in a significant cumulative impact. The unsatisfactory level of service at the Indian Street/South Project Driveway intersection is considered to be a Project-specific impact because the need for the intersection is exclusively for project access.

As identified in Table 4.5.E in the DEIR, the addition of Project traffic to the year 2013 cumulative scenario would result in conditions exceeding the established LOS standard at the following roadway segments:

- Harley Knox Boulevard west of Indian Street (eastbound and westbound);
- Indian Street south of South Project Driveway (northbound and southbound);
- Perris Boulevard north of Grove View Road (southbound only); and
- Perris Boulevard south of South Project Driveway (northbound and southbound).

Section 4.5 of the DEIR identifies the improvements necessary to maintain the level of service standard at the intersections and roadways impacted in the year 2013 plus project condition. The roadway and intersection improvements are consistent with the City's General Plan and DIF program and are included in the County's TUMF program. A portion of the City's DIF is allocated toward funding improvements to the City's transportation system and the specific improvements are based on the General Plan Circulation Element.

The following improvements were identified in the DEIR to maintain or improve the operational level of service of the impacted intersections and roadways. The improvements required to maintain

or to improve the level of service operations of transportation facilities affected by the project will be constructed through the City's DIF as supplemented by the County's TUMF program. The impact will occur in the future when traffic volumes at the impacted intersections and roadways reach the volumes projected for the Year 2013 Cumulative with Project traffic scenario. As part of its Capital Improvement Program (CIP), the City determines the timing of necessary roadway improvements based on periodic review of citywide traffic counts, traffic trends, and a review of traffic accidents. The project will participate with these programs as part of Mitigation Measures 4.5.6.1A and 4.5.6.1B. The list of improvements is as follows:

- I-215 Southbound Ramps/Harley Knox Boulevard: Restripe the left-most westbound through lane as a left-turn lane. Restripe the off-ramp to provide two left-turn lanes and a shared through/right-turn lane. This improvement is part of the TUMF program.
- I-215 Northbound Ramps/Harley Knox Boulevard: Restripe the northbound shared through/left-turn lane as a shared left-turn/through/right-turn lane. Add an eastbound free right-turn lane. This improvement is part of the TUMF program.
- Indian Street/Harley Knox Boulevard: Add an eastbound through lane. Provide overlap phasing for the southbound right-turn lane. These improvements are consistent with the City of Perris General Plan Circulation Element. This improvement is part of the TUMF program.
- Perris Boulevard/Gentian Avenue: Add a southbound through lane. This improvement is consistent with the City of Moreno Valley's General Plan Circulation Element. Perris Boulevard/Iris Avenue: Add a second westbound left-turn lane and an eastbound right-turn lane. These improvements are consistent with the City of Moreno Valley's General Plan Circulation Element. This improvement is part of the City DIF and County TUMF programs.
- Perris Boulevard/Krameria Avenue: Add two southbound through lanes, a northbound through lane, and a northbound right-turn lane. These improvements are consistent with the City of Moreno Valley's General Plan Circulation Element. This improvement is part of the City DIF and County TUMF programs.

- Perris Boulevard/Nandina Avenue: Add a southbound through lane. This improvement is consistent with the City of Moreno Valley’s General Plan Circulation Element. This improvement is part of the City DIF and County TUMF programs.
- Perris Boulevard/Grove View Road: Add a southbound through lane. This improvement is consistent with the City of Moreno Valley’s General Plan Circulation Element. This improvement is part of the City DIF and County TUMF programs.
- Perris Boulevard/South This improvement is part of the City DIF and County TUMF programs.
- Project Driveway: Add a southbound through lane. This improvement is consistent with the City of Moreno Valley’s General Plan Circulation Element. This improvement is part of City DIF and TUMF programs.
- Perris Boulevard/Harley Knox Boulevard: Add two southbound through lanes, one northbound through lane, a second eastbound left-turn lane, and overlap phasing for the southbound right-turn lane. These improvements are part of the TUMF program.
- Harley Knox Boulevard west of Indian Street: Widen to a six-lane Divided Arterial. This improvement is consistent with the City of Perris General Plan Circulation Element. This improvement is part of the TUMF program.
- Indian Street south of South Project Driveway: Widen to a four-lane Undivided Arterial. This improvement is consistent with the City of Moreno Valley General Plan Circulation Element. This improvement is part of the City of Moreno Valley DIF and TUMF programs.
- Perris Boulevard north of Grove View Road: Widen to a six-lane Divided Arterial. This improvement is consistent with the City of Moreno Valley General Plan Circulation Element. This improvement is part of the City’s DIF and TUMF programs.

- Perris Boulevard south of South Project Driveway: Widen to a six-lane Divided Arterial. This improvement is consistent with the City of Moreno Valley and City of Perris General Plan Circulation Elements. This improvement is part of the City of Moreno Valley DIF and County TUMF programs.

With implementation of these improvements, all intersections and roadway segments would operate at the applicable performance standard or better during peak hours for year 2013 cumulative with project conditions resulting in a less than significant impact.

The project will contribute toward these future intersection and roadway improvements to maintain the applicable level of service standard through payment of fees required as part of the DIF and TUMF programs. Because the impact will occur in the future when traffic volumes at the impacted intersections and roadways reach the volumes projected for the Year 2013 Cumulative with Project traffic scenario, the City will determine the implementation schedule of the necessary roadway improvements as part of the CIP. As part of its Capital Improvement Program (CIP), the City determines the timing of necessary roadway improvements based on periodic review of citywide traffic counts, traffic trends, and a review of traffic accidents. The CIP projects are funded by a variety of sources including the County TUMF program and the City's DIF program and general fund. (DEIR, pgs. 4.54-19 to 4.5-28)

C. ENVIRONMENTAL IMPACTS NOT FULLY MITIGATED TO A LEVEL OF LESS-THAN-SIGNIFICANT

The Moreno Valley City Council finds the following environmental impacts identified in the EIR remain significant even after application of all feasible mitigation measures: agricultural resources (individually and cumulative), air quality (individually and cumulative), cumulative climate change and greenhouse gas emissions, transportation (existing plus project and cumulative). In accordance with CEQA Guidelines Section 15092(b)(2), the City Council of the City of Moreno Valley cannot approve the Project unless it first finds (1) under *California Public Resources Code* Section 21081(a)(3), and CEQA Guidelines Section 15091(a)(3), that specific economic, legal, social technological, or other considerations, including provisions of employment opportunities to highly trained workers, make infeasible the mitigation measures or Project alternatives identified in the EIR; and (2) under CEQA Guidelines section 15092(b), that the

remaining significant effects are acceptable due to overriding concerns described in the CEQA Guidelines Section 15093 and, therefore, a statement of overriding considerations is included herein.

1. **Agricultural Resources (Individual and Cumulative Impacts)**

a. **Conversion of State Designated Farmland**

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could impact 16.89 acres of Prime Farmland, 16.23 acres of Farmland of Local Importance, and 38.69 acres of Farmland of Local Importance.

Finding: Based on the entire record, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts to state designated farmland will remain significant and unavoidable.

Facts in Support of the Finding: Section 4.1 of the DEIR identifies several potential agricultural conservation measures contained in the City's General Plan that include: enrolling productive agricultural land into a Williamson Act Contract; providing protection to ongoing agricultural operations from complaints and nuisance complaints from adjacent new development; protecting productive agricultural land subject to conversion through the purchase of or transfer of its development rights; purchasing conservation easements on existing agricultural land to ensure that the land is never converted to urban uses; and donating funds to a regional or statewide program that promotes and implements the use of agricultural land conservation easements.

The potential agricultural conservation measures identified in the DEIR are not considered to be feasible by the City for the following reasons:

Williamson Act Contracts: Williamson Act contracts are entered into voluntarily by property owners and the City cannot force owners to participate in this program. In addition, Williamson Act contracts will result only in temporary preservation of agricultural land since property owners have the option of non-renewal of these contracts at any time after the ten-year contract period ends. No such contracts exist on the property.

Protecting Existing Agricultural Operations: Providing protection for ongoing agricultural activities from new developments, such as buffers between agricultural operations and new development or requiring the notification and disclosure of agricultural activities to the purchasers adjacent

properties, will not permanently protect agricultural land. There is usually a conflict that occurs when urban development is built adjacent to active agricultural land. Ultimately, there is pressure to convert the land to urban land uses.

Transfer of Development Rights, Conservation Easements, or Agricultural Conservation Bank: The purchase or transfer of development rights, purchase of conservation easements, or donation of funds to assist in the conservation of agricultural land would need to be implemented to ensure the preservation of agricultural land. Farming of the project site stopped over seven years ago. As stated previously, the City anticipates the conversion of agricultural land within the City and does not set aside land for permanent preservation. The current General Plan does not include any agricultural designations. The City allows agricultural uses in all land use designations as an interim use until such time as the land is developed per the vision identified in the General Plan. One of the goals stated in the City’s recent General Plan is the “...orderly conversion of agricultural lands.” For this reason, the City expects that the majority of the land within the City will be converted to urban uses, although some agriculture will continue as interim uses, as allowed by the City’s Development Code for all zoning categories. The existing and continued reduction in productive agricultural operations within the City is produced by several factors including; urbanization in the City and Inland Empire resulting in dramatically increasing land prices; high water and labor costs; environmental regulation (e.g., insects, odors, groundwater contamination, and solid waste removal); and competition from Kern County and the Central Valley with lower land costs and reduced regulations. (DEIR, pgs. 4.1-10 to 4.1-14)

The purchase of agricultural conservation easements is “economically infeasible” “[b]ased on the higher costs associated with land, water and labor, increased environmental regulation, and competition from neighboring regions where agricultural operations are less costly; thus, resulting in an inability to make farming profitable. The site has been planned for industrial uses since 1987, the City has recognized that the conversion of agricultural land under its jurisdiction is an eventual and expected outcome of current and future growth and the current General Plan does not include any agricultural designations; therefore mitigation for the loss of is not required. An easement does not compensate for the impact by replacing or providing substitute resources or environments (i.e., the easement would not create any new farmland where no farmland presently exists). See Fourth District Court of Appeal, *Cherry Valley Pass Acres and Neighbors v. City of Beaumont* (2010) 190 Cal.App.4th 316 (Cherry Valley). (See FEIR, p. 57, emph. add.)

The City has determined that these measures are economically infeasible and that they are contrary to the City's vision (as stated in its General Plan) for the Project site and alternative mitigation has not been identified.

b. Conversion of Farmland to a Non-Agricultural Use

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would result in the development of industrial uses on land that has historically been utilized for sod production.

Finding: Based on the entire record, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts from the conversion of farmland to a non-agricultural use will remain significant and unavoidable.

Facts in Support of the Finding: According to Section 4.1 of the DEIR, the Project site has historically been in agricultural production and was most recently used to grow sod, and the sod production ceased operations in August 2005 and has not been in agricultural production since that time. The conversion of the Project site to a non-agricultural use is a result of various economic and demographic factors. Increased cost for water and a continuing demand for housing and other development in the City and region are the primary reasons for this agricultural land conversion. A LESA model was also used to evaluate the site. It was determined that the Project LESA score is 64.38, which is considered significant. The Project would convert land that was previously used for agriculture. However, the Project is a logical extension of development in the City and does not create leapfrog development or islands of agricultural land that would be difficult to farm. The City recognizes development pressures within the City, and that these pressures will increase as the City continues to build out. Additionally, while the Project would not directly cause the conversion of adjacent agricultural land to non-agricultural uses because it has been fallow for seven years, it would contribute to development pressure within the City that could potentially lead to the conversion of agricultural land off site. However, as stated in the previous discussion of these Findings regarding the conversion of state designated farmland, the City has determined the agricultural conservation measures identified by the City are economically infeasible and that they are contrary to the City's vision (as stated in its General Plan) for the Project site and alternative mitigation has not been identified. (DEIR, pgs. 4.1-10 to 4.1-15)

c. Cumulative Agricultural Resource Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would have a significant cumulative impact on agricultural resources in Riverside County.

Finding: Based on the entire record, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts to cumulative state designated farmland will remain significant and unavoidable.

Facts in Support of the Finding: According to Section 4.1 of the DEIR, the Project-related impacts to Farmland of Statewide Importance and the conversion of agricultural land to a non-agricultural use cannot be mitigated through a local or regional program to mitigate impacts to agricultural resources. As stated previously, the City does not maintain a General Plan or zoning designation for agricultural uses and there are no Project-level feasible mitigation measures that would help reduce cumulative impacts. During the last reporting period (2006–2008), 6,540 acres of Prime Farmland, 2,366 acres of Farmland of Statewide Importance, and 8,873 acres of Farmland of Local Importance were converted to other uses. The cumulative effect of development in the region will continue to result in the conversion of agricultural lands to non-agricultural uses. Because agricultural land, including Prime Farmland, Farmland of Statewide Importance, and Farmland of Local Importance is a finite resource, the conversion of approximately 71 acres to industrial uses, combined with planned and future development in the City and region, represents a significant cumulative impact to agricultural operations and resources. (DEIR, pg. 4.1-16) As stated in the previous discussion of these Findings regarding the conversion of state designated farmland and conversion of agricultural land to a non-agricultural use, the City has determined the agricultural conservation measures identified by the City are economically infeasible and that they are contrary to the City’s vision (as stated in its General Plan) for the Project site and alternative mitigation has not been identified.

2. Air Quality (Project-Specific and Cumulative Impact)

a. Short-Term Construction Emissions

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project’s construction source emissions would temporarily exceed SCAQMD regional and localized significance thresholds, thereby potentially violating an air quality standard or contributing to an existing or projected air quality.

Finding: Based on the entire record, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that **Mitigation Measures 4.2.6.1A through 4.2.6.1T** are incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of the following mitigation measures, construction emissions-related air quality impacts are considered significant and unavoidable.

4.2.6.1A *Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall place construction equipment staging areas at least 200 feet away from sensitive receptors. Contract specifications shall be included in the project construction documents, which shall be reviewed by the City.*

4.2.6.1B *Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall utilize power sources (e.g., power poles) or clean-fuel (e.g., fuel other than diesel or gasoline) generators. Contract specifications shall be included in the project construction documents, which shall be reviewed by the City.*

4.2.6.1C *Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall utilize California Air Resources Board (CARB) Tier II Certified equipment or better during the rough/mass grading phase for the following pieces of equipment: rubber-tired dozers and scrapers. Contract specifications shall be included in the project construction documents, which shall be reviewed by the City.*

4.2.6.1D *All clearing, grading, earthmoving, or excavation activities shall cease when winds exceed 25 mph per SCAQMD guidelines in order to limit fugitive dust emissions.*

4.2.6.1E *The contractor shall ensure that all disturbed unpaved roads and disturbed areas within the project are watered at least three times daily during dry weather. Watering, with complete coverage of disturbed areas, shall occur at least three times a day, preferably in the mid-morning, afternoon, and after work is done for the day.*

4.2.6.1F *The contractor shall ensure that traffic speeds on unpaved roads and project site areas are reduced to 15 miles per hour or less to reduce PM₁₀ and PM_{2.5} fugitive dust haul road emissions. Speed limit signs (15 mph maximum) shall be posted at entry*

points to the project site, and along any unpaved roads providing access to or within the project site and/or any unpaved designated on-site travel routes.

4.2.6.1G *Groundcover shall be replaced, and/or non-toxic soil stabilizers shall be applied (according to manufacturers' specifications) to any inactive construction areas (previously graded areas inactive for ten days or more).*

4.2.6.1H *The contractor shall minimize pollutant emissions by maintaining equipment engines in good condition and in proper tune according to manufacturer's specifications and during smog season (May through October) by not allowing construction equipment to be left idling for more than five minutes (per California law).*

4.2.6.1I *The contractor shall ensure use of low-sulfur diesel fuel in construction equipment as required by the California Air Resources Board (CARB) (diesel fuel with sulfur content of 15 ppm by weight or less).*

4.2.6.1J *If available, the project applicant shall use "Low-Volatile Organic Compounds" paints, coatings, and solvents with a VOC content lower than required under Rule 1113 (not to exceed 150 grams/liter; 1.25 pounds/gallon). High Pressure Low Volume (HPLV) applications of paints, coatings, and solvents shall be consistent with South Coast Air Quality Management District Rule 1113. Alternatively, the project applicant shall use materials that do not require painting or are pre-painted.*

4.2.6.1K *Grading plans, construction specifications and bid documents shall also include the following notations:*

- *Off-road construction equipment shall utilize alternative fuels where feasible e.g., biodiesel fuel (a minimum of B20), natural gas (CNG), liquefied natural gas (LNG), propane, except for equipment where use of such fuels would void the equipment warranty;*
- *Gravel pads shall be provided at all access points to prevent tracking of mud onto public roads;*
- *Install and maintain trackout control devices at all access points where paved and unpaved access or travel routes intersect;*

- *The contractor or builder shall designate a person or person(s) to monitor the dust control program and to order increased watering, as necessary, to prevent transport of dust off site;*
- *The contractor or builder shall post a publicly visible sign with the telephone number and person to contact regarding dust complaints. The contact person shall take corrective action within 24 hours;*
- *High-pressure injectors shall be provided on diesel construction equipment where feasible;*
- *Engine size of construction equipment shall be limited to the minimum practical size;*
- *Substitute gasoline-powered for diesel powered construction equipment where feasible;*
- *Use electric construction equipment where feasible;*
- *Install catalytic converters on gasoline-powered equipment where feasible;*
- *Ride-sharing program for the construction crew shall be encouraged and shall be supported by contractor(s) via incentives or other inducement;*
- *Documentation shall be provided to the City of Moreno Valley indicating that construction workers have been encouraged to carpool or otherwise reduce VMT to the greatest extent practical, including providing information on available park and ride programs;*
- *Lunch vendor services shall be permitted on site during construction to minimize the need for off-site vehicle trips;*
- *All forklifts used during construction and in subsequent operation of the project shall be electric or natural gas powered; and*
- *Suspend use of all construction equipment operations during second stage smog alerts.*

4.2.6.1L *Throughout project construction, a construction relations officer/community liaison, appointed by the Applicant, shall be retained on-site. In coordination and cooperation with the City, the construction relations officer/community liaison shall*

respond to any concerns related to PM₁₀ (fugitive dust) generation or other construction-related air quality issues within one working day.

4.2.6.1M All project entrances shall be posted with signs which state:

- Truck drivers shall turn off engines when not in use;*
- Diesel delivery trucks servicing the project shall not idle for more than three (3) minutes; and*
- Telephone numbers of the building facilities manager and CARB, to report violations.*

4.2.6.1N When materials are transported off-site, all material shall be covered, effectively wetted to limit visible dust emissions, and at least six inches of freeboard space from the top of the container shall be maintained.

4.2.6.1O All streets shall be swept at least once a day using SCAQMD Rule 1186 certified street sweepers utilizing reclaimed water trucks if visible soil materials are carried to adjacent streets.

4.2.6.1P Any vegetative cover to be utilized onsite shall be planted as soon as possible to reduce the disturbed area subject to wind erosion. Irrigation systems required for these plants shall be installed as soon as possible to maintain good ground cover and to minimize wind erosion of the soil.

4.2.6.1Q Provide temporary traffic controls such as a flag person, during all phases of construction to maintain smooth traffic flow.

4.2.6.1R All roadways, driveways, sidewalks, etc., should be completed as soon as possible. In addition, building pads should be laid as soon as possible after grading unless seeding or soil binders are used.

4.2.6.1S Implement activity management techniques including a) development of a comprehensive construction management plan designed to minimize the number of large construction equipment operating during any given time period; b) scheduling of construction truck trips during non-peak hours to reduce peak hour emissions; c) limitation of the length of construction work-day period; and d) phasing of construction activities.

4.2.6.1T *Reroute construction trucks away from congested streets and sensitive receptor areas.*

These measures shall be enforced by the on-site facilities manager (or equivalent).

Facts in Support of the Finding: Even after compliance with applicable SCAQMD Rules and implementation of **Mitigation Measures 4.2.6.1A through 4.2.6.1T**, Project construction activities would temporarily exceed SCAQMD regional and localized emissions thresholds for oxides of nitrogen (NO_x) and particulate matter (PM₁₀ and PM_{2.5}). (See DEIR Tables 4.2-I and 4.2-J) Project construction-related emissions in exceedance of SCAQMD's regional and localized significance thresholds are therefore determined to be significant and unavoidable air quality impacts notwithstanding mitigation. (DEIR, pgs. 4.2-19 through 4.2-25). Additional mitigation measures were considered and determined to be infeasible based on the facts in the staff report and in the FEIR Response to Comments D-34 (FEIR, pgs. 64-69).

b. Long-Term Operational Emissions

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could potentially exceed applicable daily thresholds for operational activities.

Finding: Based on the entire record, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that **Mitigation Measures 4.2.6.3A and 4.2.6.3B** is incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, long term construction emissions-related air quality impacts are considered significant and unavoidable.

4.2.6.3A *Prior to issuance of the first building permit, building and site plan designs shall ensure that the project's energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of 20 percent. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and reviewed and approved by the City. The following combination of design features may be used to fulfill this requirement provided that the total increase in energy efficiency meets or exceeds 20 percent:*

- *Exceed California Title 24 Energy Efficiency performance standards for water heating and space heating and cooling, as deemed acceptable by the City.*

- *Increase in insulation such that heat transfer and thermal bridging is minimized.*
- *Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.*
- *Incorporate dual-paned or other energy efficient windows.*
- *Incorporate energy efficient space heating and cooling equipment.*
- *Use interior and exterior energy efficient lighting which exceeds the California Title 24 Energy Efficiency performance standards, as deemed acceptable by the City. Use automatic devices to turn off lights when they are not needed.*
- *To the extent that they are compatible with landscaping guidelines established by the City, use shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and buildings at the project site.*
- *Use paint and a surface color palette for the project emphasizing light and off-white colors which reflect heat away from the buildings.*
- *Install a photovoltaic array (solar panels) or other source of renewable energy generation on-site, or otherwise acquire energy from the local utility that has been generated by renewable resources, to meet the project's office electricity needs.*
- *Reduce energy demand associated with potable water conveyance using the following:*
 - *Landscaping palette emphasizing drought-tolerant plants;*
 - *Use of water-efficient irrigation techniques; and,*
 - *U.S. EPA Certified WaterSense labeled for equivalent faucets, high-efficiency toilets (HETs), and water-conserving shower heads.*
- *Provide secure, weather-protected, on-site bicycle storage/parking.*
- *Provide on-site showers (one for males and one for females). Lockers for employees shall be provided.*
- *Establish a Transportation Management Association (TMA). The TMA will coordinate with other TMAs within the City to encourage and coordinate*

carpooling among building occupants. The TMA will advertise its services to building occupants, and offer transit and/or other incentives to reduce GHG emissions. A plan will be submitted by the TMA to the City within two months of project completion that outlines the measures implemented by the TMA, as well as contact information.

- *Provide preferential parking for carpools, vanpools or other alternative fuel vehicles. Locations and configurations of proposed preferential parking for carpools and vanpools are subject to review and approval by the City. Prior to final site plan approval, delineate preferential parking for carpools and vanpools on the project site plan.*
- *Provide at least two electric vehicle charging stations. Locations and configurations of proposed charging stations are subject to review and approval by the City. Prior to issuance of the first building permit, delineate stub outs for charging stations on the project building plans.*
- *Implement compressed workweek schedules.*
- *Achieve at least 20% per year (as a percentage of previous percentage, not total trips) increase in percentage of consolidated trips carried by SmartWay carriers until it reaches a minimum of 90% of all long haul trips carried by SmartWay 1.0 or greater carriers.*
- *Achieve at least 15% per year (as a percentage of previous percentage, not total trips) increase in percentage of long haul trips carried by SmartWay carriers until it reaches a minimum of 85% of all consolidator trips carried by SmartWay 1.0 or greater carriers.*
- *Use of fleet vehicles conforming to 2010 air quality standards or better.*
- *Installation of catalytic converters on gasoline-powered equipment.*
- *Inclusion of electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets;*
- *Establishment and use of carpool/vanpool programs, complemented by parking fees for single-occupancy vehicles;*

- *Provision of preferential parking for EV and CNG vehicles;*
- *Use of electrical equipment (instead of gasoline-powered equipment) for landscape maintenance;*
- *Use of electric (instead of diesel or gasoline-powered) yard trucks;*
- *Use of SmartWay 1.25 rated trucks.*
- *Provide a display case or kiosk displaying transportation information including the RTA bus schedule in a prominent area accessible to employees.*
- *Use landscape maintenance companies that use battery powered or electric equipment or contract only with commercial landscapers who operate with equipment that complies with the most recent California Air Resources Board certification standards, or standards adopted no more than three years prior to date of use or any combination of these two themes.*

4.2.6.3B The project shall be designed to facilitate the reduction of waste generated by building occupants that is hauled to and disposed of in landfills by providing easily accessible areas that are dedicated to the collection and storage of recyclable materials including: paper, cardboard, glass, plastics, and metals. Locations of proposed recyclable materials collection areas are subject to review and approval by the City. Prior to Final Site Plan approval, locations of proposed recyclable materials collection areas shall be delineated on the project site plan.

Facts in Support of the Finding: Even after compliance with applicable SCAQMD Rules and implementation of **Mitigation Measures 4.2.6.3A and 4.2.6.3B**, Project operational activities will exceed SCAQMD daily emissions thresholds for ROG, NO_x, CO, and PM₁₀. (DEIR Table 4.2.K) Project operational-related impacts that exceed long-term, operational emissions thresholds are therefore determined to be significant and unavoidable air quality impacts notwithstanding mitigation. (DEIR, pgs. 4.2-26 to 4.2.28) Additional mitigation measures were considered and determined to be infeasible based on the facts in the staff report and in the FEIR Response to Comments D-45 (FEIR, pgs. 71-76).

c. Cumulative Air Quality Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could potentially result in a cumulatively considerable net increase of criteria pollutants for which the project region is in non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors).

Finding: Based on the entire record, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts cumulative air quality impacts will remain significant and unavoidable.

Facts in Support of the Finding: Included in Section 4.2 of the DEIR, Table 4.2.K indicates that the long-term operation of the Project would contribute to long-term regional air pollutants despite implementation of mitigation measures. The Basin is in nonattainment for NO_x, PM₁₀, PM_{2.5}, and ozone at the present time; therefore, the operation of the Project would exacerbate nonattainment of air quality standards within the Basin and contribute to adverse cumulative air quality impacts. Implementation of the Project would unavoidably contribute to significant long-term cumulative air quality impacts. (DEIR, pg. 4.2-29)

3. Climate Change and Greenhouse Gas

a. Cumulative Impacts of Climate Change and Greenhouse Gas

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could have a cumulative impact related to climate change and greenhouse gas emissions.

Finding: Based on the entire record, this Council finds that the Project's impacts related to climate change and greenhouse gas emissions is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that **Mitigation Measures 4.2.6.3A, 4.3.6.1A, 4.3.6.1B, and 4.3.6.1C** are incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, long term construction emissions-related air quality impacts are considered significant and unavoidable.

4.3.6.1A Prior to the issuance of building permits, the project applicant shall provide evidence to the City of Moreno Valley that building features have been incorporated in

building plans as required by Title 24 of the California Code of Regulations. These features include but are not limited to the following:

- *Exterior windows in the office areas shall utilize window treatments for efficient energy conservation.*
- *Per CALGreen Code requirements, water-efficient fixtures and appliances, including but not limited to low-flow faucets, dual-flush toilets minimizing water consumption by 20 percent from the Building Standards Code baseline water consumption shall be used.*
- *Per CALGreen Code requirements, a Commissioning Plan shall be prepared and all building systems (e.g., heating, ventilation, and air-conditioning [HVAC], irrigation systems, lighting, water heating) shall be commissioned by the Commissioning Authority.*
- *Per CALGreen Code, restrict watering methods (e.g., prohibit systems that apply water to non-vegetated surfaces) and control runoff.*

4.3.6.1B Prior to the issuance of building permits, the project applicant shall provide evidence to the City of Moreno Valley that the following measures have been be incorporated into the design and construction of the project:

- *Encourage use of locally produced and/or manufactured building materials for at least 10 percent of the construction materials used for the project.*
- *Encourage use of “Green Building Materials,” such as those materials that are resource efficient, and recycled and manufactured in an environmentally friendly way, for at least 10 percent of the project.*
- *Limit unnecessary idling of construction equipment. A reduction in equipment idling would reduce fuel consumption, and therefore, GHG emissions.*
- *Maximize the use of electricity from the power grid by replacing diesel- or gasoline-powered equipment where feasible. This would reduce GHG emissions because electricity can be produced more efficiently at centralized power plants.*

- *Design the project building to exceed the California Building Code’s (CBC) 2008 Title 24 energy standard by 20%, including, but not limited to, any combination of the following:*
 - o *Increase insulation such that heat transfer and thermal bridging is minimized.*
 - o *Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.*
 - o *Incorporate ENERGY STAR or better rated windows in the office area, space heating and cooling equipment, light fixtures, appliances, or other applicable electrical equipment in the office areas.*
- *Provide a landscape and development plan for the project that takes advantage of shade, prevailing winds, and landscaping. The landscaping plan shall be prepared by a registered landscape architect who will consider the following:*
 - o *Plant at least 50 percent low-ozone forming potential (Low-OFP) trees and shrubs, preferably native, drought-resistant species, to meet city/county landscaping requirements.*
 - o *Plant Low-OFP, native, drought-resistant, tree and shrub species, 20% in excess of that already required by city or county ordinance. Consider roadside, sidewalk, and driveway shading.*
- *Install efficient lighting and lighting control systems. Use daylight as an integral part of the lighting systems in buildings.*
- *Install light-colored “cool” roof and cool pavements.*
- *Install energy-efficient heating and cooling systems, appliances and equipment, and control systems.*
- *Install solar or light-emitting diodes (LEDs) for outdoor lighting.*

- *Install electrical outlets on the exterior walls of the warehouse/office building (and perhaps parking lots) to promote the use of electric landscape maintenance equipment.*

4.3.6.1C *Prior to the issuance of occupancy permits, the project applicant shall provide evidence to the City of Moreno Valley that the following measures have been incorporated into the operation of the project:*

- *The project applicant shall use low Global Warming refrigerants or natural refrigerants (ammonia, propane, carbon dioxide [CO₂]) for refrigeration and fire suppression equipment.*
- *Provide vegetative or man-made exterior wall shading devices for east-, south-, and west facing walls with windows in the office areas.*
- *Devise a comprehensive water conservation strategy appropriate for the project and its location. The strategy may include the following, plus other innovative measures that may be appropriate:*
- *Install drought tolerant plants for landscaping.*
- *Use reclaimed water for landscape irrigation within the project. Install the infrastructure to deliver and use reclaimed water.*
- *Install water-efficient irrigations systems, such as weather-based and soil-moisture-based irrigation controllers and sensors for landscaping according to the California Department of Water Resources Model Efficient Landscape Ordinance.*
- *Provide employee education about reducing waste and available recycling services.*

4.3.6.1D *The building roof shall be designed and constructed to accommodate future solar panels.*

4.3.6.1E *The project shall be designed and constructed to meet LEED Silver (as of July 12, 2012) or comparable design standards.*

Facts in Support of the Finding: According to Section 4.3 of the DEIR, the Project is consistent with the strategies to reduce California’s emissions to the levels proposed in Executive Order S-3-05. However, the Project’s GHG emission contribution would result in a cumulative impact regarding climate change and greenhouse gas emissions and the cumulative impacts of the Project on climate change and greenhouse gas emissions are considered to be significant and unavoidable (DEIR, pgs. 4.3-21 - 4.3-27). Additional mitigation measures were considered and determined to be infeasible based on the facts in the staff report and the FEIR Response to Comments D-45 and E-51 (FEIR pgs 71-76 and 125-127). In addition carbon-offsets as mitigation was considered and determined to be infeasible because:

- California has not established any generally applicable standards for requiring offsets for GHG emissions; and
- Most cities and counties in California have not required offsets for GHG emissions on projects of the scale of the proposed project. Since this is a cumulative rather than a project level impact, mitigation for the cumulative level impact will be ineffective unless it is applied to all the cumulative projects.

Using such carbon offsets to mitigate for cumulative impacts is fraught with uncertainty. As the comment implies (“... offsets purchased are real...”), but there is considerable controversy regarding whether offsets that are available today will actually mitigate this cumulative effect.

First, it requires an accurate measure of the emissions to be offset and the offsets to be provided. That calculation turns out to be riddled with uncertainty on both ends. As noted above in the example cited by the commenter, this initial offset of \$7 million for the Rodeo refinery was later reduced to \$4.4 million due to revised calculations of GHG emissions. The UN's Intergovernmental Panel on Climate Change found a margin of error of 10% with measuring emissions from making cement or fertilizer; 60% with the oil, gas and coal industries; and 100% with some agricultural processes.

Second, the provision of offsets requires an accurate measure of the carbon saved elsewhere. Most of the earliest offset projects involved planting trees, which naturally ingest carbon, a complex and unpredictable process which forbids accurate measurement.

Finally, the very idea of offsetting relies on what is known as additionally - evidence that a carbon reduction would not have occurred in the natural order of commercial life. For example, one of the biggest UK companies that sells offsets, Climate Care, distributed 10,000 energy-efficient light bulbs in a South African township; offered the carbon reductions as offsets; and then discovered that an energy company was distributing the same kind of light bulbs free to masses of customers, including their township, so the reduction would have happened anyway.

To accurately calculate the amount of credit for each of the above actions, the offset program must make a number of critical assumptions:

- What is the baseline of emissions for the existing facilities that would be retrofitted to reduce their energy consumption? Would they ultimately be retrofitted in any case, thus limiting the actual resulting reduction in GHG emissions?
- Is the development of the alternative energy source actually dependent on the external funding provided by the offset? Or is the alternative energy developer simply achieving another subsidy?
- How much extra energy (and GHG emissions) is required to construct the alternative energy facility? What period of time should this be amortized over? For example, the development of the California High Speed Rail Project is estimated to reduce energy consumption in the long run. However, the extra energy involved with construction is estimated to have a 40 year payback.

As such, the actual amount of mitigation provided by an offset program can be speculative, based upon the actual performance of the program.

While the above cited issues with offsets are problematic, even if they are successful, they are based upon the assumption that a 1:1 reduction in emissions will actually result in the same reduction in global CO₂ values. This static analysis fails to take into account the dynamic nature of energy consumption worldwide. When energy consumption (a proxy for GHG emissions) is reduced in one location, there are powerful economic reasons to assert that the same energy consumption (GHG emissions) will simply be shifted to another location.

There is a global marketplace for fossil fuel energy based upon a market between buyers and sellers. The sellers, those who own the sources and production of fossil fuel energy, have a powerful economic interest to keep and increase their income stream from the production of fossil fuels.

To the extent that the actions cited above as potential offset measures, in combination with other conservation measures, reduce the demand for fossil fuels in the countries where they are implemented, the owners of these fossil fuel supplies will still want to preserve and enhance their income as much as possible. And there is a large unmet need (unmet as defined by consumer actions) for increased energy consumption in developing countries. For example the average annual energy consumption of a citizen of China or sub-Saharan Africa, at 4.5 metric tons, is far less than that of the average US citizen, at 20 metric tons. To the extent that the US and other countries reduce energy consumption based upon energy efficiency measures, the owners of fossil fuel resources will seek to sell the same energy, perhaps at a lower price, to the less developed countries. If the energy is sold at a lower price, then more energy would need to be sold to generate the same income, and the resulting energy consumption and GHG emissions could actually increase.

There is uncertainty regarding the efficacy, reliability and legal standing of carbon off-sets at this time. For this reason, such mitigation is considered to be infeasible.

4. Transportation

a. Existing Plus Project and Cumulative Plus Project Freeway Segments and Freeway Merge/Diverge Areas

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would contribute to two freeway merge/diverge areas failing to maintain the level of service standard in the existing plus project condition. The EIR evaluated and concluded that the Project would contribute to four freeway segments and merge diverge areas failing to maintain the level of service standard in the year 2013 plus project condition.

Finding: Based on the entire record, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than

significant. Accordingly, Project-related impacts to freeway segments will remain significant and unavoidable.

Facts in Support of the Finding: As indicated in Section 4.5 of the DEIR, the following two freeway segments are projected to operate at unsatisfactory levels of service in the existing plus project analysis:

- Harley Knox Boulevard Off-Ramp (diverge area) at Southbound I-215 (a.m. peak hour); and
- Harley Knox Boulevard On-Ramp (merge area) at Southbound I-215 (a.m. peak hour).

The following four freeway segments and freeway merge/diverge areas are projected to operate at unsatisfactory levels of service in the cumulative year 2013 plus project analysis:

- Freeway segment north of Harley Knox Boulevard (a.m. peak hour);
- Harley Knox Boulevard Off-Ramp (diverge area) at Southbound I-215 (a.m. and p.m. peak hours);
- Harley Knox Boulevard On-Ramp (merge area) at Southbound I-215 (a.m. peak hour); and
- Freeway segment south of Harley Knox Boulevard (a.m. peak hour).

Improvements to affected freeway segments are outside the City's jurisdiction. Since the City has no control over when and how these improvements will be in place, impacts associated with these identified freeway segments would remain significant and unavoidable until such improvements are constructed. (DEIR, pgs. 4.5-18 4.5-28)

D. ADEQUACY OF THE RANGE OF PROJECT ALTERNATIVES

The EIR analyzed four alternatives to the Project as proposed, and evaluated these alternatives for their ability to meet the Project's objectives as described in Section II.B above. CEQA requires the evaluation of a "No Project Alternative" to assess a maximum net change in the environment as a result of implementation of the Project. The No Project Alternative, referred to as the No Project/Existing Zoning Alternative, makes a reasoned assessment as to the future development of the subject site should the Project under consideration not be developed yet the site would be developed in a similar manner to the Project and consistent with existing zoning for the

site. A Reduced Intensity Alternative, a Commercial Center (mixed retail/office) Alternative, and an Off-site Alternative were also selected for analysis. CEQA requires the evaluation of alternatives that can reduce the significance of identified impacts and “feasibly attain most of the basic objectives of the Project.” Thus, in order to develop a range of reasonable alternatives, the Project Objectives must be considered when this Council is evaluating the alternatives.

1. Alternative 1 – No Project/Existing Zoning Alternative

Description: The No Project/Existing Zoning Alternative (hereinafter referenced as the “No Project” Alternative), considers the environmental conditions that would occur if the subject site were developed consistent with its existing Specific Plan 208 zoning designation, consisting of an underlying land use of Business Park/Industrial. To allow for quantified comparison of potential impacts, the No Project Alternative was assumed to result in the development of approximately 1,420,000 square feet of industrial warehouse uses on approximately 63 acres and approximately 180,000 square feet of commercial service uses on approximately 8 acres as would be allowed under the existing zoning and land use designations. The commercial service component of this alternative would be located along the frontage of Perris Boulevard while the industrial warehouse uses would occupy the remaining portion of the site. (DEIR, pg. 6-12)

Impacts: The No Project Alternative, as referenced in Section 6.0 of the DEIR, would result in similar impacts when compared to the Project. Similar to the Project, the No Project Alternative would result in less than significant impacts in the following areas: Aesthetics; Williamson Act Contracts/Agricultural Zoning and Forestry Resources; Biological Resources; Cultural Resources; Geology and Soils; Hazards and Hazardous Materials; Hydrology and Water Quality; Land Use; Mineral Resources; Noise; Population and Housing; Public Services; Recreation and Parks; and Utilities and Service Systems. The Project’s significant and unavoidable agricultural impacts, air quality impacts, climate change and GHG impacts, and transportation impacts would also occur in the same manner as the proposed project. However, under the No Project Alternative, potential air quality, climate change, and traffic/transportation impacts would be greater than the proposed project because of the higher trip generation potential of the commercial uses.

Objectives: Under the No Project Alternative, the subject site would develop in a similar manner as the Project, and most of the Project Objectives would be achieved. However, the objectives specifically oriented towards warehouse and industrial uses would be met at a reduced level due to the commercial component included in this Alternative.

Finding: Under the No Project Alternative, the project site would be developed with approximately 1,420,000 square feet of industrial warehouse uses on approximately 63 acres and approximately 180,000 square feet of commercial service uses on approximately 8 acres. This Alternative would result in the same significant and unavoidable impacts associated with agricultural resources, air quality, climate change and greenhouse gases, and traffic that have been identified within the DEIR. However, potential air quality, climate change, and traffic/transportation impacts would be greater than the proposed project because of the higher trip generation potential of the commercial uses. Because the No Project Alternative results in an increase in potential significant and unavoidable impacts in comparison to the Project, the City Council hereby rejects the No Project Alternative.

2. Alternative 2 – Reduced Intensity Alternative

Description: The Reduced Intensity Alternative assumes the same general land use type as the Project, but at a development intensity scoped to reduce the extent of regional threshold exceedances for air pollution and greenhouse gas emissions that would otherwise result from the Project. In that the same type of development is proposed, most if not all the Project Objectives would be achieved to a certain extent but at a reduced level. Implementation of the Reduced Intensity Alternative would yield approximately 1,212,100 square feet of development, a reduction of approximately 25 percent or approximately 434,033 square feet, when compared to the approximately 1,616,133 square-foot Project analyzed in the EIR.

Impacts: Under the Reduced Intensity Alternative, impacts related to agricultural resources would be similar to the Project as the same amount of land would be disturbed. Similarly, impacts related to short-term construction-related air quality would be similar to the Project as the same amount of land would be disturbed and the same mix of equipment would be utilized. Because of the decrease in vehicle trips achieved under this alternative, impacts to the operation of local roadways and intersections would be proportionally reduced from what was identified for the Project; however, long-term traffic impacts to state freeway segments and merge/diverge areas would remain significant and unavoidable. Long-term operational-related air quality impacts would be reduced in magnitude when compared to the Project but would remain significant and unavoidable. Impacts associated with the generation of greenhouse gas emissions would also be reduced proportionate to the reduction in building area in comparison to the proposed project, but would remain significant and unavoidable.

Objectives: : The Reduced Intensity Alternative (environmentally superior alternative) will result in reduced air pollution and greenhouse gas (GHG) emissions but the significance of these impacts remain significant and unavoidable for air quality, global climate change, and traffic in the same manner as the proposed project. The significant and unavoidable project impacts associated with GHG emissions and traffic cannot be reduced to less than significant though reduction in the size of the project. The significant and unavoidable project impacts associated with air quality can be eliminated if the project is reduced to approximately 90,000 square feet (based on a linear reduction in the project's 990 pounds per day of operational NO_x emissions to below the 55 pounds per day threshold). The Reduced Intensity Alternative would, to some degree, realize the Project Objectives as follows:

- Create employment-generating opportunities for the citizens of Moreno Valley and surrounding communities;
- Encourage industrial development as attractive and productive uses while minimizing conflicts with the surrounding existing uses;
- Encourage warehouse distribution services that take advantage of the area's close proximity to various freeways and transportation corridors;
- Provide the infrastructure improvements required to meet project needs in an efficient and cost-effective manner;
- Encourage new development consistent with the capacity and municipal service capabilities;
- Provide a high-quality large-scale industrial development to provide jobs for residents at a variety of income levels;
- Facilitate the efficient and cost-effective movement of goods in and through the City, which, in turn, allows the City to compete economically on a domestic and international scale;
- Provide an industrial warehouse facility that meets the substantial and unmet demands of businesses located in the City and County;
- Cluster industrial warehouse uses near efficient access points to the state highway system to reduce traffic congestion on surface streets and to reduce associated air pollutant emissions from vehicle sources;

- Implement the City’s General Plan Industrial/Business Park Land Use designations that are applicable to the site;
- Accommodate new development that channels land uses in a phased, orderly manner and is coordinated with the provision of necessary infrastructure and public improvements;
- Provide new development that will assist the City in obtaining fiscal balance in the years and decades ahead; and
- Address community circulation, both vehicular and pedestrian, utilizing available capacity within the existing circulation system, and provide fair share improvements to various future-year deficient intersections or road segments.

However, because the scale of the development would be diminished under the Reduced Density Alternative, the resulting generation of sales tax, the number of jobs created, and potential second tier economic benefits to the City and region (e.g. wholesale/retail support sales; temporary and long-term construction jobs, and facilities maintenance employment opportunities) would likely be reduced when compared to the Project.

The applicant is selling the property at a price that reflects the current market value for similar industrial-zoned properties in this region. The value of warehouse/industrial property is typically based on an assumed minimum building coverage (FAR) of 50%. The subject project FAR (51.5%) supports the seller’s price for the land while meeting the minimum return on investment required to finance the development. The economic viability of the reduced density alternate has been studied which assumes a 25% reduction in FAR or approximately 404,033 square feet. This would result in a 38.6% FAR for the Reduced Density Alternative. The financial analysis for the reduced density project demonstrates that the project is not economically feasible. The estimated net proceeds after costs drop 73% when compared with the original project. Further, the Internal Rate of Return (IRR), commonly used as a metric to finance the real estate, plunges by nearly 60% for the less-dense alternative. This financial analysis demonstrates that the reduced density project alternative is not economically viable when industry standard development costs and minimum thresholds for financing are analyzed.

Finding: Under the Reduced Intensity Alternative, a light industrial warehouse/ distribution facility reduced by approximately 25 percent (or 434,033 square feet) would be realized as compared to the Project. The City Council hereby finds that the Reduced Intensity Alternative will not avoid or

substantially reduce the significant and unavoidable agricultural resources impacts, construction and operational air quality impacts, and cumulative greenhouse gas impacts identified in the EIR. This Alternative would not meet Project Objectives to the same extent as the Project. Furthermore, the scale of the reduction in intensity would not maximize or realize the economic potential of the site. Based on the reduced scope of development, the Reduced Intensity Alternative would diminish capacities and capabilities to satisfy existing and projected unmet market demands within the trade area. The Reduced Intensity Alternative would also result in comparatively fewer opportunities to provide jobs, as compared to the Project. Therefore, the City Council rejects the Reduced Intensity Alternative on the basis that it fails to avoid or substantially reduce the significant and unavoidable impacts of the Project and does not meet the Project Objectives as fully as the Project. The Council also finds that each of these considerations constitutes a ground for rejecting this alternative that is independently sufficient to support the City Council's rejection of this alternative.

3. Alternative 3—Commercial Center (Mixed Commercial/Office)

Description: As identified in Section 6.0 of the DEIR, the Commercial Center Alternative would result in the development of commercial service and office uses on the Project site, although business and professional offices, financial institutions, and medical clinics are permitted in SP 208.

208, they are permitted only in the industrial support areas while commercial service-oriented uses are a permitted throughout the SP 208 Industrial designation. For this reason, the General Plan and zoning designations for the site would need to be amended to accommodate the business and professional offices. Permitted commercial service uses include, but are not limited to, Automotive Sales/Rental/Leasing & Accessories, Automotive/Truck Repair, Business Supply/Equipment Sales/Rental & Services, and Repair Services. Approximately 760,000 square feet of commercial service uses would be developed on approximately 35 acres. The balance of the site (35 acres) would be developed with up to approximately 760,000 square feet of office uses.

Impacts: As identified in Section 6.0 of the DEIR, the Commercial Center Alternative would result in similar impacts for the following eight environmental issues: Agriculture and Forestry Resources; Biological Resources; Cultural Resources; Geology and Soils; Hazards and Hazardous Materials; Hydrology and Water Quality; Land Use and Planning; and Mineral Resources. Because of the increase in vehicle trips under this alternative, impacts to the operation of local roadways and intersections would be proportionally greater than what was identified for the Project. Long-term traffic impacts to state freeway mainline segments and merge/diverge areas would remain significant

and unavoidable. Under the Commercial Center Alternative, impacts related to short-term construction emissions would be similar to the Project as the same amount of land would be disturbed and the same mix of equipment would be utilized. Long-term operational-related air quality emissions would be increased in magnitude because of the increase in vehicle trips when compared to the Project and would remain significant and unavoidable. Traffic-related noise would be increased in magnitude but would be similarly mitigated like the Project and would remain less than significant.

Objectives: Under this alternative, some of the Project objectives are not met as warehouse uses would not be built. However, development of this alternative would provide new employment opportunities for residents of Moreno Valley, but not within the industrial employment sector.

Findings: Under the Commercial Center Alternative, development of commercial service and office uses would occur. This Alternative would have similar impacts that have been identified within the DEIR. However, the Commercial Center Alternative would result in an increase in trip generation in comparison to the Project, and would result in an increase in the severity of the significant and unavoidable impacts to construction and operational air pollution emissions, climate change and greenhouse gas emission, and traffic. The City Council finds that the Commercial Center Alternative would fulfill some but not all of the Project Objectives. Moreno Valley residents would have more opportunities for employment but a warehouse would not be built. Because the Commercial Center Alternative will not fulfill the primary objective of the Project and the severity of significant and unavoidable impacts would be increased in comparison to the Project, the Council hereby rejects the Commercial Center Alternative.

4. Alternative 4—Off-Site Location

Description: As identified in Section 6.0 of the DEIR, this alternative would result in the same intensity of development of approximately 1,616,133 square feet of warehouse uses on approximately 70.3 acres. The alternative Project site identified by the City is bounded by Kramaria Street (extended) to the north, vacant and partially developed property and March Air Reserve Base to the west, Indian Street to the east, and the Perris Valley Storm Drain and vacant land to the south. The off-site location is approximately 1.0 miles northwest of the Project site and is within the same Industrial Area Specific Plan as the Project. This alternative off-site property is not owned or under the control of the applicant. The off-site location is currently zoned SP 208 I and is designated

Business Park in the City's General Plan, identical to the Project development of this site would not require soil import, inherently reducing impacts from air pollution emissions during construction.

Impacts: Section 6.0 of the DEIR, identifies nine environmental issues that would have similar impacts as the Project. These issues are: Cultural Resources; Geology and Soils; Hydrology and Water Quality; Land Use and Planning; Mineral Resources; Population and Housing; Public Services; Recreation; and Utilities and Service Systems. With the Off-Site Location Alternative, impacts related to air quality and traffic impacts would be similar to those identified with the Project. Short-term construction and long-term air quality operational and climate change/greenhouse gas emissions impacts under this alternative would remain significant and unavoidable and would result in similar conditions as identified for the Project. Additionally, due to adjacent sensitive receptors, potential impacts to these receptors would be greater in magnitude when compared to the Project. Similarly, noise impacts would be greater in magnitude due to the adjacent sensitive receptors. Operational traffic would result in increased traffic on vanity roadways and may impact different intersection and roadways in comparison to the Project. Under this Alternative, impacts to agricultural resources would be eliminated.

Objectives: The Off-Site Alternative would meet most of the Project objectives. The location of the Off-Site Alternative further north of Harley Knox Boulevard would not meet the Project objectives of locating distribution services near transportation corridors and clustering such uses near the state highway system.

Finding: Under the Off-Site Alternative, development of the warehouse would occur in a different location. This Alternative would have similar impacts that have been identified within the DEIR. And most of the objectives of the Project would be met, would not meet the Project objectives of locating distribution services near transportation corridors and clustering such uses near the state highway system. The Council finds that the Off-Site Alternative would have similar impacts to all environmental issues except for agriculture because this Alternative would eliminate the significant and unavoidable impacts to agricultural resources. Because the Off-Site Alternative will not substantially reduce the environmental impact of the Project and it would not meet the Project objectives of locating distribution services near transportation corridors and clustering such uses near the state highway system, the Council hereby rejects the Off-Site Alternative.

5. Alternatives Considered and Rejected

A variety of additional alternatives were considered as part of the DEIR's Alternatives Analysis. (DEIR, pgs. 6-3 through 6-5) Three possible alternatives were considered and rejected because they could not accomplish the basic objectives of the Project or they were considered infeasible. Per the *CEQA Guidelines* (Section 15126.6(c)), factors that may be considered when addressing the feasibility of alternatives include failure to meet most of the stated project objectives, infeasibility, or inability to avoid significant environmental effects. The purpose of the Project is to provide for and expand employment and revenue opportunities within the City of Moreno Valley. The Project would expand employment options in a location that is convenient to existing transportation corridors, convenient to existing and future City residents and would augment the City's economic base. The following provides and discussion of the three development scenarios that were considered and rejected as potential alternatives to implementation of the Project based on Section 15126.6 of the *CEQA Guidelines* because they did not feasibly attaining most of the basic objectives of the Project while reducing or avoiding any of the significant effects of the Project:

- No Build Alternative: No development would take place within the Project limits and no impacts would occur. However, disallowing development of the site, as suggested by this alternative, would not fulfill the primary objectives of the Project and the site would likely be developed in accordance with existing zoning should the Project not move forward. Retention of the project site in its current condition would not expand employment opportunities to residents of the City. Retaining the site in its current undeveloped condition would not generate the revenue (e.g., property tax) that could augment the City's current revenue stream. Therefore, the No Build Alternative was rejected from further consideration in the EIR.
- Residential Alternative: The Residential Alternative would develop the 71-acre project site with approximately 355 single-family units based on the City's R5 zone. The R5 zone was utilized as this is the zoning designation of the nearest residential uses to the north along Perris Boulevard and north of the Perris Valley Storm Drain channel. A zone change, General Plan Amendment, and Specific Plan Amendment would be required for this alternative to change the project site from its existing Business Park/Light Industrial (BP) General Plan designation and Industrial Area Plan (SP208 I) zoning designation to a residential R5 designation. Furthermore, a Specific Plan Amendment would be required to remove the project site from the underlying Industrial Specific Plan 208. Since the Residential Alternative consists only of residential uses, employment-generating opportunities would not

occur aside from temporary construction work, which would be filled predominantly by those already residing in the area. The residential uses would produce demand for public services that would exceed the amount of municipal revenues it would generate. The project's full potential to utilize the area's close proximity to various freeways and transportation corridors would not be realized as only residential uses would occur under the Residential Alternative. Additionally, the development of the entire 71-acre project site under this alternative would result in the placement of the residential uses within an area planned for industrial uses which could result in additional adverse impacts such as exposure to air pollutants, noise, and land use incompatibilities. This alternative has been rejected because it would result in greater impacts and would not satisfy the basic City employment generating objectives for development of the Project site.

- Mixed Commercial/Residential Alternative: The Mixed Commercial/Residential Alternative would develop the 71-acre project site with approximately 690,000 square feet of Community Commercial uses and 532 multiple-family units. A zone change, General Plan Amendment, and Specific Plan Amendment would be required for this alternative to change the project site from its existing Business Park/Light Industrial (BP) General Plan designation and SP208 I zoning designation to a residential designation and commercial designation. Additionally, a Specific Plan Amendment would be required to remove the project site from the underlying Industrial Specific Plan 208. While the commercial component of this Alternative would utilize the project site's close proximity to nearby transportation corridors, the development of the remainder of the site with residential uses would not provide the varied employment and service uses and revenue associated with the proposed project. The development of approximately half of the project site under this alternative with residential uses would result in the placement of the residential uses adjacent to SP208 I industrial/business park uses which could potentially result in additional adverse impacts such as exposure to air pollutants, noise, and land use incompatibilities. The residential component of this alternative would produce demand for public services that would exceed the amount of municipal revenues it would generate, and there would be little to no employment opportunities created. Therefore, the mixed commercial/residential alternative would not meet the project objectives of providing new employment and revenue generation options in close proximity to local consumers to the same degree as the proposed project. The employment opportunities and economic benefits derived from the proposed project are superior to the Mixed Commercial/Residential Alternative. This alternative has been rejected

because it would result in greater impacts and would not satisfy the basic City employment generating objectives for development of the project site.

6. Environmentally Superior Alternative

As explained by Section 6.0 in the DEIR, Alternative 2 (Reduced Intensity Alternative) reduces the severity of Project related air quality impacts. However, long-term air quality impacts would remain significant after mitigation for this alternative for ROG, NO_x, PM₁₀ and PM_{2.5}. In a similar manner, Alternative 2 would reduce the volume of daily traffic trips when compared to the Project; however, such impacts to state freeway mainline segments and merge/diverge areas would remain significant and unavoidable until freeway improvements are completed by the state. Alternative 2 would also reduce the quantity of greenhouse gas emission when compared to the Project; however, impacts to Climate Change would remain significant and unavoidable. Although the environmentally superior alternative (reduced density) would result in reduced air pollution and greenhouse gas (GHG) emissions and traffic generation, the significance of these impacts would remain significant and unavoidable for air quality, global climate change, and traffic in the same manner as the proposed project. The significant and unavoidable project impacts associated with GHG emissions and traffic cannot be reduced to less than significant though reduction in the size of the project. The significant and unavoidable project impacts associated with air quality can be eliminated if the project is reduced to approximately 90,000 square feet (based on a linear reduction in the project's 990 pounds per day of operational NO_x emissions to below the 55 pounds per day threshold), which is clearly an unreasonable alternative that would be unable to meet most of the project objectives and this Council therefore rejects. The remaining environmental issues would ultimately be similar to the Project through adherence to existing standards and mitigation measures. Based on the analysis in Section 6.0 and the summary contained in Table 6.K, Alternative 2, the Reduced Intensity Alternative, is the environmentally superior alternative. The amount of development under this alternative would be reduced when compared to the Project; however, the Alternative 2 would not satisfy several of the Project objectives because it would reduce the level at which it meets the employment generating Project objectives. Because the Reduced Intensity Alternative allows the development of warehouse uses and the provision of new employment opportunities, it meets many of the City's stated Project objectives, while at the same time reduces the impacts associated with the Project. However, because of the lower industrial density, the Alternative fails to meet several key employment generating objectives related to density efficiencies in the same manner as the Project. These objectives include: "Provide a high density, high-quality large-scale industrial development to provide jobs for residents at a variety of income levels" and "Cluster industrial warehouse uses near efficient access points to the state

highway system to reduce traffic congestion on surface streets and to reduce concomitant air pollutant emissions from vehicle sources reduces impacts to air quality, global climate change, and traffic.” This is due to the fact that the reduced intensity alternative would develop only a portion of the project site resulting in an inefficient development density and resulting in negative effects such as sprawl in conflict with these objectives.

E. GROWTH-INDUCING IMPACTS

CEQA requires a discussion of ways in which the Project could be growth inducing. Specifically, CEQA Guidelines Section 1512602(d) states that an EIR must describe the ways in which the Project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment.

Section 5.0 of the DEIR identifies the extent to which the new jobs created by a Project are filled by existing residents is a factor that tends to reduce the growth inducing effect of a project. Construction of the Project will create short-term construction jobs. Due to the existing high unemployment levels that exist in the City, the potential exists for these short-term positions to be filled by workers who, for the most part, reside in the City or neighboring communities to the Project area. Therefore, construction of the Project will not generate a permanent increase in population within the Project area.

As previously identified, the Project is expected to employ approximately 646 people. These full-time positions are also anticipated to be filled by workers who, for the most part, reside in the Project area due to high unemployment levels that exist in the City. Operations of the Project will not generate a permanent increase in population within the Project area.

The area surrounding the Project site is governed by the City of Moreno Valley General Plan and the area is guided by Specific Plan 208. Specific Plan 208 guides land use within the Project area to ensure that new development and redevelopment is implemented consistent with the land use policies, controls, and standards contained in Specific Plan 208. Any development of remaining undeveloped land adjacent to the Project site would require its own discretionary approvals and is not reliant on the Project. However, development of the Project site may lead to indirect growth in the Specific Plan area by making available the extension of infrastructure such as water, sewer, drainage, etc. This growth has been planned for and is guided by Specific Plan 208.

The Project would occur within an area currently designated for industrial uses. The Project would not require a General Plan Amendment nor does it require a change in the underlying zoning designation. In addition, the Project reflects the City of Moreno Valley's vision for the area and is consistent with Specific Plan 208. Land uses surrounding the Project site would be in conformance with the City's General Plan and Specific Plan 208. Impacts to population and housing are less than significant; see Section 13 Population and Housing of the Initial Study (Appendix A of the DEIR).

The Project would not eliminate a constraint for development of an approved Project within the City of Moreno Valley. There are no projects in the City of Moreno Valley or surrounding cities that have been approved but are conditioned or dependent on additional improvements at the Project site. Specific Plan 208 guides land uses surrounding the Project site to ensure compatibility between existing operations and adjacent surrounding development. Additionally, the Project would not add capacity to urban services or infrastructure that would be utilized by other project proponents in the surrounding area.

The Project would not result in any significant pressure to redevelop the area around the Project site at a higher density. As previously stated, the development of remaining undeveloped land adjacent to the Project site is independent and not reliant on the Project. Therefore, implementation of the Project would not result in redevelopment of adjacent lands at a higher intensity than already prescribed in the City of Moreno Valley's General Plan and Specific Plan 208.

F. SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL CHANGES

California Public Resources Code Section 21100(b)(2)(B) and CEQA Guidelines Sections 15126(c), 15126.2(c), and 15127, require that for certain types or categories of projects, an EIR must address significant irreversible environmental changes that would occur should the project be implemented. As presented at CEQA Guidelines Section 15127, the topic of Significant Irreversible Environmental Changes needs to be addressed in EIRs prepared in connection with any of the following activities:

- (a) The adoption, amendment, or enactment of a plan, policy, or ordinance of a public agency;
- (b) The adoption by a local agency formation commission of a resolution making determinations; or

- (c) A project which will be subject to the requirements for preparing of an environmental impact statement pursuant to the requirements of the National Environmental Policy Act of 1969, 42 U.S.C. Sections 4321-4347.

The Project does not trigger any of the conditions cited in Guidelines §15127. Nonetheless, this EIR analysis addresses any significant irreversible environmental changes which would be involved in the proposed action should it be implemented [Guidelines, Sections 15126(e) and 15127]. An impact would fall into this category if:

- The project would involve a large commitment of nonrenewable resources;
- The primary and secondary impacts of the project would generally commit future generations of people to similar uses;
- The project involves uses in which irreversible damage could result from any potential environmental incidents associated with the project; and/or
- The proposed consumption of resources is not justified (e.g., the project could waste energy).

Determining whether the proposed project may result in significant irreversible effects requires a determination of whether key resources would be degraded or destroyed in such a way that there would be little possibility of restoring them. The project site is generally fallow agricultural land with the site historically used for sod farming operations. However, as identified within the City's General Plan, the City anticipates the eventual conversion of agricultural uses to urban uses and the proposed project would permanently alter the site by converting predominantly agricultural uses to urban uses. This is a significant irreversible environmental change that would occur as a result of project implementation. Because no significant mineral resources were identified within the project limits, no significant impacts related to these issues would result from development of the project site. Natural resources in the form of construction materials would be utilized in the construction of the proposed project and energy resources in the form of electricity and natural gas would be used during the long-term operation of the project; however, their use is justified in supporting the City's planned use of the site and is not expected to negatively impact the availability of these resources.

In addition, this industrial warehouse project, in concert with the other built or approved industrial warehouse projects, will fundamentally change the character and land use pattern of this portion of the City. Many of the project-specific impacts are addressed, as outlined above, but the change in the use of the land from agricultural to industrial represents a substantial irreversible change for this area. However, this is an intended change a verified by the City’s General Plan land use designations and zoning for the area. (DEIR pgs. 5-2 and 5-3)

VI. STATEMENT OF OVERRIDING CONSIDERATIONS

The Moreno Valley City Council adopts this Statement of Overriding Considerations with respect to the significant unavoidable impacts associated with adoption of the Project as addressed in the EIR, specifically:

1. Agricultural Impacts - Conversion of State Designated Farmland;
2. Agricultural Impacts - Conversion to a Non-Agricultural Use;
3. Cumulative Agricultural Impacts
4. Air Quality Impact - Construction Air Pollutant Emissions;
5. Air Quality Impact - Operational Air Pollutant Emissions;
6. Cumulative Air Pollutant Emissions;
7. Cumulative GHG Emissions;
8. Transportation - Existing Year (2007) with Project Level of Service; and
9. Transportation - Cumulative Impacts to State Freeway Segments and Freeway Merge/Diverge Areas

The Moreno Valley City Council hereby declares that, pursuant to CEQA Guidelines Section 15093, the City Council has balanced the benefits of the Project against any significant and unavoidable environmental impacts in determining whether to approve the Project. If the benefits of the Project outweigh the unavoidable adverse environmental impacts, those impacts are considered “acceptable.”

The City Council hereby declares that the EIR has identified and discussed significant effects that may occur as a result of the Project. With the implementation of the mitigation measures discussed in the EIR, these impacts can be mitigated to a level of less than significant except for the unavoidable and significant impacts discussed in Section V(C) herein.

The City Council hereby declares that it has made a reasonable and good faith effort to eliminate or substantially mitigate the potential impacts resulting from the Project.

The City Council hereby declares that to the extent any mitigation measures recommended to the City are not incorporated, such mitigation measures are infeasible because they are not capable of being accomplished in a successful manner within a reasonable time period, taking into account economic, environmental, legal, social, and technological factors.

The City Council further finds that except for the Project, all other alternatives set forth in the EIR are infeasible because they would prohibit the realization of the Project objectives and/or specific economic, social or other benefits that this City Council finds outweigh any environmental benefits of the alternatives or the other alternatives do not substantively reduce the severity of unavoidable and significant impacts.

The City Council has determined that steps to preserve agricultural land are economically infeasible based on the higher costs associated with land, water and labor, increased environmental regulation, and competition from neighboring regions where agricultural operations are less costly. All of these factors result in an inability to make farming profitable.

The City Council hereby declares that, having reduced the adverse significant environmental effects of the Project, to the extent feasible by adopting the proposed mitigation measures, having considered the entire administrative record on the Project and having weighed the benefits of the Project against its unavoidable significant impact after mitigation, the City Council has determined that the social, economic and environmental benefits of the Project outweigh the potential unavoidable significant impacts and render those potential significant impacts acceptable based on the following considerations:

- The Project will provide development consistent with the General Plan and in conformance with SP 208, municipal standards, codes and policies;

- The Project provides development that improves and maximizes economic viability of a vacant site by transitioning the Project site into a productive light industrial use;
- Based on the square footage of the Project an estimated 646 jobs would be created for the City of Moreno Valley and surrounding communities; and
- The Project provides adequate infrastructure and public amenities, including upgrading and widened streets, signal upgrades and utility improvements.

As the CEQA Lead Agency for the proposed action, the City of Moreno Valley has reviewed the Project description and the alternatives presented in the EIR, and fully understands the Project and Project alternatives proposed for development. Further, this Council finds that all potential adverse environmental impacts and all feasible mitigation measures to reduce the impacts from the Project have been identified in the Draft EIR, the Final EIR and public testimony. This Council also finds that a reasonable range of alternatives was considered in the EIR and this document, Section V(E) above, and finds that approval of the Project is appropriate.

This Council has identified economic and social benefits and important policy objectives, Section V above, which result from implementing the Project. The Council has balanced these substantial social and economic benefits against the unavoidable significant adverse effects of the Project. Given the substantial social and economic benefits that will accrue from the Project, this Council finds that the benefits identified herein override the unavoidable environmental effects.

California Public Resource Code 21002 provides: “In the event specific economic, social and other conditions make infeasible such Project alternatives or such mitigation measures, individual projects can be approved in spite of one or more significant effects thereof.” Section 21002.1(c) provides: “In the event that economic, social, or other conditions make it infeasible to mitigate one or more significant effects of a project on the environment, the project may nonetheless be approved or carried out at the discretion of a public agency...” Finally, California Administrative Code, Title 4, 15093 (a) states: “If the benefits of a Project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered “acceptable.”

The City Council hereby declares that the foregoing benefits provided to the public through approval and implementation of the Project outweighs the identified significant adverse environmental impacts of the Project that cannot be mitigated. The City Council finds that each of

the Project benefits outweighs the unavoidable adverse environmental impacts identified in the EIR and, therefore, finds those impacts to be acceptable.

VII. CERTIFICATION OF THE FINAL ENVIRONMENTAL IMPACT REPORT

The Moreno Valley City Council finds that it has reviewed and considered the FEIR in evaluating the Project, that the FEIR is an accurate and objective statement that fully complies with CEQA and the CEQA Guidelines, and that the FEIR reflects the independent judgment of the City Council.

The City Council declares that no new significant information as defined by CEQA Guidelines Section 15088.5 has been received by the City Council after the circulation of the DEIR that would require recirculation. All of the information added to the FEIR merely clarifies, amplifies or makes insignificant modifications to an already adequate DEIR pursuant to CEQA Guidelines Section 15088.5(b).

The City Council hereby certifies the EIR based on the following findings and conclusions:

A. Findings

1. CEQA Compliance

As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the Findings and supporting documentation. The City Council determines that the Findings contain a complete and accurate reporting of the environmental impacts and mitigation measures associated with the Project, as well as complete and accurate reporting of the unavoidable impacts and benefits of the Project as detailed in the Statement of Overriding Considerations. The City Council finds that the EIR was prepared in compliance with CEQA and that the City Council complied with CEQA's procedural and substantive requirements.

2. Significant Unavoidable Impacts/Statement of Overriding Considerations

The Project will have significant adverse impacts even following adoption of all feasible mitigation measures which are required by the City Council. The following significant environmental impacts have been identified in the FEIR and will require mitigation but cannot be mitigated to a level of insignificance as set forth in Section V(C) of these Findings: Agricultural Impacts—Conversion of State Designated Farmland; Agricultural Impacts—Conversion to a Non-Agricultural Use; Cumulative Agricultural Impacts; Air Quality Impact—Construction Air Pollutant Emissions; Air Quality Impact—Operational Air Pollutant Emissions; Cumulative Air Pollutant Emissions; Cumulative Climate Change and GHG Emissions; Transportation—Existing Year (2007) with Project Level of Service; and Transportation—Existing and Cumulative Impacts to State Freeway Segments and Freeway Merge/Diverge Areas.

The City Council has eliminated or substantially reduced environmental impacts where feasible as described in the Findings, and the City Council determines that the remaining unavoidable significant adverse impacts are acceptable due to the reasons set forth in the preceding Statement of Overriding Considerations.

3. Conclusions

- a. All potentially significant environmental impacts from implementation of the Project have been identified in the EIR and, with the implementation of the mitigation measures defined herein and set forth in the MMRP, will be mitigated to a less-than-significant level, except for the impacts identified in Section V(C) above.
- b. Other reasonable alternatives to the Project that could feasibly achieve the basic objectives of the Project have been considered and rejected in favor of the Project.
- c. Environmental, economic, social and other considerations and benefits derived from the development of the Project override and make infeasible any alternatives to the Project or further mitigation measures beyond those incorporated into the Project.

VII. ADOPTION OF MITIGATION MONITORING AND REPORTING PROGRAM

Pursuant to *California Public Resources Code* Section 21081.6, the City Council hereby adopts, as conditions of approval of the Project, the Mitigation Monitoring and Reporting Plan (MMRP) set forth in Section 4.0 of the FEIR. In the event of any inconsistencies between the mitigation measures as set forth herein and the MMRP, the MMRP shall control, except to the extent that a mitigation measure contained herein is inadvertently omitted from the MMRP, in which case such mitigation measure shall be deemed as if it were included in the MMRP.

MITIGATION MONITORING AND REPORTING PROGRAM

INTRODUCTION

This Mitigation Monitoring and Reporting Program has been prepared for use in implementing mitigation for the:

VIP Moreno Valley Project

The program has been prepared in compliance with State law and the Environmental Impact Report (EIR) (State Clearinghouse No. 2011081084) prepared for the project by the City of Moreno Valley.

The California Environmental Quality Act (CEQA) requires adoption of a reporting or monitoring program for those measures placed on a project to mitigate or avoid adverse effects on the environment (Public Resource Code Section 21081.6). The law states that the reporting or monitoring program shall be designed to ensure compliance during project implementation.

The monitoring program contains the following elements:

- 1) The mitigation measures are recorded with the action and procedure necessary to ensure compliance. In some instances, one action may be used to verify implementation of several mitigation measures.
- 2) A procedure for compliance and verification has been outlined for each action necessary. This procedure designates who will take action, what action will be taken and when, and to whom and when compliance will be reported.
- 3) The program has been designed to be flexible. As monitoring progresses, changes to compliance procedures may be necessary based upon recommendations by those responsible for the program. As changes are made, new monitoring compliance procedures and records will be developed and incorporated into the program.

This Mitigation Monitoring and Reporting Program includes mitigation identified in the Initial Study and the Final EIR.

MITIGATION MONITORING AND RESPONSIBILITIES

As the Lead Agency, the City of Moreno Valley is responsible for ensuring full compliance with the mitigation measures adopted for the proposed project. The City will monitor and report on all mitigation activities. Mitigation measures will be implemented at different stages of development throughout the project area. In this regard, the responsibilities for implementation have been assigned to the Applicant, Contractor, or a combination thereof. If during the course of project implementation, any of the mitigation measures identified herein cannot be successfully implemented, the City shall be immediately informed, and the City will then inform any affected responsible agencies. The City, in conjunction with any affected responsible agencies, will then determine if modification to the project is required and/or whether alternative mitigation is appropriate.

MITIGATION MONITORING AND REPORTING PROGRAM CHECKLIST

Project File Name: VIP Moreno Valley Project

Applicant: Vogel Engineers, Inc.

Date: September 2012

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
AIR QUALITY						
4.2.6.1A Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall place construction equipment staging areas at least 200 feet away from sensitive receptors. Contract specifications shall be included in the proposed project construction documents, which shall be reviewed by the City.	City of Moreno Valley Engineering and Building and Safety Planning Division	Prior to Grading and during grading and construction operations.	Prior to Issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order
4.2.6.1B Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall utilize power sources (e.g., power poles) or clean-fuel (e.g., fuel other than diesel or gasoline) generators where feasible. Contract specifications shall be included in the proposed project construction documents, which shall be reviewed by the City.	City of Moreno Valley Engineering and Building and Safety Planning Division	Prior to Grading	Prior to Issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order
4.2.6.1C Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall utilize California Air Resources Board (CARB) Tier II Certified equipment or better during the rough/mass grading phase for the following pieces of equipment: rubber-tired dozers and scrapers. RESOLUTION NO. 2012-78

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, FOR APPROVAL OF PLOT PLAN PA09-0004 FOR DEVELOPMENT OF A 1,616,133 SQUARE FOOT WAREHOUSE DISTRIBUTION FACILITY ON 80 ACRES LOCATED WITHIN ASSESSOR'S PARCEL NUMBERS 488-330-003 THROUGH -006 AND -026 AND PA09-0012 (TENTATIVE PARCEL MAP NO. 36162) TO COMBINE FOUR PARCELS INTO A SINGLE PARCEL.

Section 1:

WHEREAS, Vogel Engineers, Inc., has filed an application for the approval of PA09-0004, a plot plan for a 1,616,133 square foot warehouse distribution facility on 80 acres, as described in the title of this Resolution.

WHEREAS, on September 25, 2012, the City Council held a public hearing to consider the project.

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

WHEREAS, there is hereby imposed on the subject development project certain fees, dedications, reservations and other exactions pursuant to state law and City ordinances;

WHEREAS, pursuant to Government Code Section 66020(d)(1), NOTICE IS HEREBY GIVEN that this project is subject to certain fees, dedications, reservations and other exactions as provided herein.

NOW, THEREFORE, BE IT RESOLVED, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

A. This City Council hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this City Council during the above-referenced meeting on September 25, 2012, including written and oral staff reports, and the record from the public hearing, this Planning Commission hereby specifically finds as follows:

Resolution No. 2012-78
Date Adopted: September 25, 2012

1. Conformance with General Plan Policies – The proposed use is consistent with the General Plan, and its goals, objectives, policies and programs.

FACT: The General Plan encourages a mix of industrial uses to provide a diversified economic base and ample employment opportunities. Stated policies require the avoidance of adverse impacts on surrounding properties and the screening of industrial uses to reduce glare, noise, dust, vibrations and unsightly views. The project as designed and conditioned would achieve the objectives of the City of Moreno Valley's General Plan. The proposed project is consistent with the General Plan and do not conflict with the goals, objectives, policies, and programs established within the Plan.

2. Conformance with Zoning Regulations – The proposed use complies with all applicable zoning and other regulations.

FACT: The project site is currently zoned Industrial. The proposed use will comply with all applicable zoning regulations and the requirements of the Moreno Valley Industrial Area Plan (SP #208). The project is designed in accordance with the provisions of Chapter 9.05 Industrial Districts of the City's Municipal Code.

3. Health, Safety and Welfare – The proposed use will not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the vicinity.

FACT: The proposed 1,616,133 square warehouse facility as designed and conditioned will not adversely affect the public health, safety or general welfare. A Final EIR has been prepared to address the potential environmental impacts of the project in accordance with the provisions of the California Environmental Quality Act (CEQA).

4. Location, Design and Operation – The location, design and operation of the proposed project will be compatible with existing and planned land uses in the vicinity.

FACT: The project is located in the Moreno Valley Industrial Area Plan (SP 208), south side of Grove View Road between Perris Boulevard and Indian Street at the City's southern boundary.

Land uses to the north include a Waste Management facility and a 426,700 square foot warehouse building. Land uses to the west include the 360,440 square foot i-Herb warehouse building,

Resolution No. 2012-78
Date Adopted: September 25, 2012

approximately 20 acres of vacant Industrial zoned land and a site currently used for container storage. Further to the west is the southern approach to the runways at March Air Reserve Base. Land uses to the east include a ministorage facility, the approximately 255,000 square foot Masonite Door factory, and the approximate 1.2 million square foot Ross Dress For Less distribution facility.

The project site is located at the southerly City limits with a mixture of vacant Industrial zoned land and developed distribution land uses within the City of Perris on the south side of the Perris Valley Storm Drain.

The proposed warehouse distribution facility is a permitted use in the project site's Industrial zone. As designed and conditioned the project is compatible with existing and proposed land uses in the vicinity.

Section 2:

WHEREAS, the applicant, Vogel Engineers, Inc., has filed an application for the approval of PA09-0012 or Tentative Parcel Map No. 36162 to combine the existing four parcels located within the project site into a single 80 acre.

WHEREAS, on September 25, 2012, the City Council of the City of Moreno Valley held a public hearing to consider the subject applications and the environmental documentation prepared for the project.

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

WHEREAS, there is hereby imposed on the subject development project certain fees, dedications, reservations and other exactions pursuant to state law and City ordinances;

WHEREAS, pursuant to Government Code Section 66020(d)(1), NOTICE IS HEREBY GIVEN that this project is subject to certain fees, dedications, reservations and other exactions as provided herein.

NOW, THEREFORE, BE IT RESOLVED, it is hereby found, determined and resolved by the Planning Commission of the City of Moreno Valley as follows:

- A. This Planning Commission hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

Resolution No. 2012-78
Date Adopted: September 25, 2012

B. Based upon substantial evidence presented to this City Council during the above-referenced meeting on September 25, 2012, including written and oral staff reports, and the record from the public hearing, this City Council hereby specifically finds as follows:

1. Conformance with General and Specific Plans – That the proposed land division is consistent with applicable general and specific plans.

FACT: The proposed tentative parcel map is consistent with the General Plan designation of Business Park for the project site. The proposed parcel map will combine the existing four parcels located within the project site into a single 80 acre parcel. The proposed land division is consistent with existing goals, objectives, policies and programs of the general plan.

2. Design Conformance with General and Specific Plans – That the design or improvement of the proposed land division is consistent with applicable general and specific plans.

FACT: The tentative parcel map as designed and conditioned will provide improvements that are consistent with the requirements of the project site's General Plan land use designation of Business Park.

3. Physically Suitable for Proposed Development – That the site of the proposed land division is physically suitable for the type of development.

FACT: The project site is comprised of multiple vacant rectangular shaped parcels that are mostly flat. The project is located in the Moreno Valley Industrial Area Plan (SP 208), south side of Grove View Road between Perris Boulevard and Indian Street at the City's southern boundary. Land uses to the north include a Waste Management facility and a 426,700 square foot warehouse building. Land uses to the west include the 360,440 square foot i-Herb warehouse building, approximately 20 acres of vacant Industrial zoned land and a site currently used for container storage. Further to the west is the southern approach to the runways at March Air Reserve Base. Land uses to the east include a ministorage facility, the approximately 255,000 square foot Masonite Door factory, and the approximate 1.2 million square foot Ross Dress For Less distribution facility.

Resolution No. 2012-78
Date Adopted: September 25, 2012

The project site is located at the southerly City limits with a mixture of vacant Industrial zoned land and developed distribution land uses within the City of Perris on the south side of the Perris Valley Storm Drain.

Overall, the project site is well suited for future development of industrial land uses.

4. Physically Suitable for Proposed Density – That the site of the proposed land division is physically suitable for the proposed density of the development.

FACT: The project site is mostly flat and at grade along Perris Boulevard, Indian Street and Grove View Road. The parcel map is designed in accordance with the provisions of the City's Municipal Code. The project site is physically suitable for the subdivision.

5. Protection of Fish or Wildlife Habitat – That the design of the proposed land division or the proposed improvements are not likely to cause substantial environmental damage or substantially and unavoidably injure fish or wildlife or their habitat.

FACT: A Final EIR has been prepared in accordance with the provisions of the California Environmental Quality Act (CEQA), concluding that with mitigation and as conditioned and designed, the proposed subdivision would result in less than significant impacts to Fish and Wildlife resources. The project has also been determined to be consistent with the Multiple Species Habitat Conservation Plan (MSHCP).

6. Health, Safety and Welfare – That the design of the proposed land division or the type of improvements are unlikely to cause serious public health problems.

FACT: As conditioned, the proposed parcel map would not cause serious public health problems. The Eastern Municipal Water District will provide water and sewer services to the project site. There are no known hazardous conditions associated with the property, the design of the land division or the type of improvements.

7. Easements – That the design of the land division or the type of improvements will not conflict with easements acquired by the public at large for access through or use of property within the proposed subdivision.

Resolution No. 2012-78
Date Adopted: September 25, 2012

FACT: The tentative parcel map has been designed to accommodate and not conflict with existing easements on the subject site including utility and storm drain easements.

8. Consistent with Applicable City Ordinances – That the proposed land division and the associated design and improvements are consistent with applicable ordinances of the city.

FACT: The tentative parcel map is designed in accordance with the provisions of the City’s Municipal Code.

9. Passive or Natural Heating and Cooling – That the design of the land division provides, to the extent feasible, for future passive or natural heating and cooling opportunities in the subdivision.

FACT: The design of this parcel map, to the extent feasible, allows solar access for passive heating and opportunities for placement of shade trees and other vegetation for cooling.

10. Regional Housing – That the effect of the proposed land division on the housing needs of the region were considered and balanced against the public service needs of the residents of Moreno Valley and available fiscal and environmental resources.

FACT: The project does not exceed the planned density, the associated public service demand, or the demand for environmental resources envisioned by the Moreno Valley General Plan. The project will supplement the City’s fiscal resources by paying impact fees for public facilities. Additionally, future residents will pay Community Services District fees, property tax, sales tax and other taxes and fees that will be used to provide landscape maintenance as well as police, fire and other public services.

Section 3:

C. FEES, DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

1. FEES

Impact, mitigation and other fees are due and payable under currently applicable ordinances and resolutions. These fees may include but are not limited to: Development Impact Fee, Transportation Uniform Mitigation Fee (TUMF), Multi-species Habitat Conservation Plan (MSHCP) Mitigation Fee, Stephens Kangaroo Habitat Conservation fee, Underground Utilities in lieu

Resolution No. 2012-78
Date Adopted: September 25, 2012

Fee, Area Drainage Plan fee, Bridge and Thoroughfare Mitigation fee (Future) and Traffic Signal Mitigation fee. The final amount of fees payable is dependent upon information provided by the applicant and will be determined at the time the fees become due and payable.

Unless otherwise provided for by this resolution, all impact fees shall be calculated and collected at the time and in the manner provided in Chapter 3.32 of the City of Moreno Valley Municipal Code or as so provided in the applicable ordinances and resolutions. The City expressly reserves the right to amend the fees and the fee calculations consistent with applicable law.

2. DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

The adopted Conditions of Approval for PA09-0004 and PA09-0012, incorporated herein by reference, may include dedications, reservations, and exactions pursuant to Government Code Section 66020 (d) (1).

3. CITY RIGHT TO MODIFY/ADJUST; PROTEST LIMITATIONS

The City expressly reserves the right to establish, modify or adjust any fee, dedication, reservation or other exaction to the extent permitted and as authorized by law.

Pursuant to Government Code Section 66020(d)(1), NOTICE IS FURTHER GIVEN that the 90 day period to protest the imposition of any impact fee, dedication, reservation, or other exaction described in this resolution begins on the effective date of this resolution and any such protest must be in a manner that complies with Section 66020(a) and failure to timely follow this procedure will bar any subsequent legal action to attack, review, set aside, void or annul imposition.

The right to protest the fees, dedications, reservations, or other exactions does not apply to planning, zoning, grading, or other similar application processing fees or service fees in connection with this project and it does not apply to any fees, dedication, reservations, or other exactions of which a notice has been given similar to this, nor does it revive challenges to any fees for which the Statute of Limitations has previously expired.

Resolution No. 2012-78
Date Adopted: September 25, 2012

BE IT FURTHER RESOLVED that the City Council HEREBY APPROVES Resolution No. 2012-78

1. APPROVING PA09-0004 (Plot Plan), subject to the attached conditions of approval included as Exhibit A; and
2. APPROVING PA09-0012 (Tentative Parcel Map No. 36162), subject to the attached conditions of approval included as Exhibit B.

APPROVED AND ADOPTED this 25th day of September, 2012.

COMMUNITY & ECONOMIC DEVELOPMENT DEPARTMENT

Planning Division

- P1. Approval of Plot Plan PA09-0004 is subject to certification of an Environmental Impact Report by the City of Moreno Valley.**
- P2. Plot Plan PA09-0004 has been approved for development of a 1,616,133 square foot warehouse distribution facility, to be built on a 80 acre site within Assessor's Parcel Numbers 316-210-071, -073, -075 and -076. The facility includes 268 dock doors and 44,000 square feet of office. Required parking for this use equates to a total of 589 employee/visitor parking spaces and 368 truck/trailer parking spaces.**
- P3. Development of the warehouse facility is subject to approval of Tentative Parcel Map No. 36162 and the subsequent recordation of this map.**
- P4. A mitigation monitoring fee, as provided by City ordinance, shall be paid by the applicant within 30 days of project approval. No City permit or approval shall be issued until such fee is paid. (CEQA)**
- P5. Bicycle racks shall be provided at a minimum of five (5) percent of the required vehicular parking and shall be located near the designated office area(s).**

- P6. The gates into truck loading and parking areas that are within view of a public street shall be of solid metal construction or wrought iron with mesh to screen the interior of the loading area.**
- P7. This project shall comply with South Coast Air Quality Management District (SCAQMD) rules related to dust generation (Rule 403) and the use of architectural coatings (Rule 1113).**
- P8. The design of all swales and basins that are visible from the public right-of-way shall be integrated with the surrounding landscape areas.**
- P9. Screening walls of decorative block or concrete tilt-up construction shall be provided to fully screen the truck loading and parking area for from view from Perris Boulevard, Indian Street and Grove View Road.**
- P10. Enhanced landscape shall be provided in the planter areas near each driveway and near the office portions of the facilities.**
- P11. All loudspeakers, bells, gongs, buzzers or other noise attention devices installed on the project site shall be designed to ensure that the noise level at all property lines will be at or below 55 dBA for consistency with the Municipal Code.**
- P12. Loading or unloading activities shall be conducted from the truck bays or designated loading areas only. (MC 9.10.140, CEQA)**
- P13. No outdoor storage is permitted on the project site, except for truck and trailer storage in designated areas within the screened truck courts.**
- P14. If the proposed project requires blasting, it shall be used only as a last resort. In such cases, it shall be approved by the Fire Marshall, and the developer shall comply with the current City ordinance governing blasting. (Ord)**
- P15. This approval shall expire three years after the approval date of this project unless used or extended as provided for by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever. Use means the beginning of substantial construction contemplated by this approval within the three-year period, which is thereafter pursued to completion, or the beginning of substantial utilization contemplated by this approval. (MC 9.02.230)**
- P16. PA09-0004 shall be developed in accordance with the approved plans on file in the Community & Economic Development Department - Planning Division, the Municipal Code regulations, General Plan, the Moreno Valley Industrial Area Plan and the conditions contained herein. Prior to any use of the project site or business activity being commenced thereon, all Conditions of Approval shall be completed to**

CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004

the satisfaction of the City Planning Official. (MC 9.14.020)

- P17. The developer, or the developer's successor-in-interest, shall be responsible for maintaining any undeveloped portion of the project site in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)
- P18. A drought tolerant, low water using landscape palette shall be utilized throughout the project.
- P19. All landscaped areas shall be maintained in a healthy and thriving condition, free from weeds, trash and debris. (MC 9.02.030)
- P20. Any signs indicated on the submitted plans are not included with this approval. Any signs proposed for this development shall be designed in conformance with the sign provisions of the Municipal Code or approved sign program, if applicable, and shall require separate application and approval by the Community & Economic Development Department - Planning Division. (MC 9.12.020)

Prior to Issuance of Grading Permits

- P21. (GP) All site plans, grading plans, landscape and irrigation plans, fence/wall plans, lighting plans and street improvement plans shall be coordinated for consistency with this approval.
- P22. (GP) If potential historic, archaeological, or paleontological resources are uncovered during excavation or construction activities at the project site, work in the affected area will cease immediately and a qualified person (meeting the Secretary of the Interior's standards (36CFR61)) shall be consulted by the applicant to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, prehistoric, or paleontological resource. Determinations and recommendations by the consultant shall be implemented as deemed appropriate by the Community & Economic Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all affected Native American Tribes before any further work commences in the affected area.

If human remains are discovered, work in the affected area shall cease immediately and the County Coroner shall be notified. If it is determined that the remains are potentially Native American, the California Native American Heritage Commission and any and all affected Native American Indians tribes such as the Morongo Band of Mission Indians or the Pechanga Band of Luiseno Indians shall be notified and appropriate measures provided by State law shall be implemented. (GP Objective 23.3, DG, CEQA).

- P23. (GP) Prior to the issuance of grading permits, final erosion control landscape and irrigation plans for all cut or fill slopes over 3 feet in height shall be submitted to the Planning Division for review and approval for the phase in process. The plans shall

**CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 4 OF 50**

be designed in accordance with the slope erosion plan as required by the City Engineer for that phase. Man-made slopes greater than 10 feet in height shall be "land formed" to conform to the natural terrain and shall be landscaped and stabilized to minimize visual scarring. (GP Objective 1.5, MC 9.08.080, DG)

- P24. (GP) Prior to approval of any grading permit, the developer shall submit for review and approval of a tree plan to the Planning Division. The plan shall identify all mature trees (4 inch trunk diameter or larger) on the subject property, City right-of-way or Caltrans right-of-way. Using the grading plan as a base, the plan shall indicate trees to be relocated, retained, and removed. Replacement trees shall be: shown on the plan; be a minimum size of 24 inch box; and meet a ratio of three replacement trees for each mature tree removed or as approved by the Community Development Director. (GP Objective 4.4, 4.5, DG)
- P25. (GP) Prior to issuance of grading permits, the developer shall pay the applicable Stephens' Kangaroo Rat (SKR) Habitat Conservation Plan mitigation fee. (Ord)
- P26. (GP) Prior to approval of any grading permits, plans for any security gate system shall be submitted to the Community Development Department - Planning Division for review and approval.**
- P27. (GP) If a median is required, then prior to approval of any grading permits, final median enhancement/landscape/irrigation plans shall be submitted to the Community Development Department - Planning Division and Public Works Department – Special Districts for review and approval by each division. Timing of installation shall be determined by PW- Special Districts. (GP - Circulation Master Plan)**
- P28. (GP) Prior to issuance of any grading permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein.**
- P29. (GP) Prior to the issuance of grading permits, the grading plan shall show decorative treatment for all driveway ingress/egress locations of the project. Accessible pedestrian pathways interior to the site cannot be painted. If delineation is necessary, then an alternative material is required.**
- P30. (GP) Prior to the issuance of a grading permit, all required planter areas, curbs, including twelve-inch concrete step outs, and required parking space striping shall be shown on the precise grading plan.**
- P31. (GP) Prior to the issuance of grading permits, the following burrowing owl survey requirements shall be incorporated into the grading plans in accordance with the Riverside County Multi-species Habitat Conservation Plan: Within 30 days of and prior to disturbance, a burrowing owl focused survey shall be conducted by a qualified biologist using accepted protocols. The survey shall be submitted to the Planning Division for review and**

approval.

- P32. (GP) Prior to issuance of grading permits, landscape plans (trees, shrubs and groundcover) for basins maintained by a POA or other private entity shall be submitted to the Planning Division for review and approval for the sides and/or slopes. A hydroseed mix with irrigation is acceptable for the bottom of all the basin areas. All detention basins shall include trees, shrubs and groundcover up to the concreted portion of the basin. A solid decorative wall with pilasters, tubular steel fence with pilasters or other fence or wall approved by the Community Development Director is required to secure all water quality and detention basins more than 18 inches in depth.**
- P33. (GP) Prior to issuance of grading permits, the developer shall submit wall/fence plans to the Planning Division for review and approval as follows:**
- A. A maximum 3 foot high decorative wall in lieu of a hedge or berm may be placed in setback areas adjacent to a parking lot.**
 - B. Any proposed retaining walls shall also be decorative in nature, while the combination of retaining and other walls on top shall not exceed the height requirement for the specific plan and/or Municipal Code.**
 - C. A 14 foot tall solid wall of decorative block with pilasters and a cap or concrete tilt-up construction shall be provided to screen the trucks, parked trailers and the loading areas and loading docks from view from Perris Boulevard, Indian Street and Grove View Road.**
 - D. An 8 foot tall chain link fence with slats is required along the southern property line along the Riverside County Flood Control maintenance road.**

Prior to Issuance of Building Permits

- P34. (BP) Prior to issuance of building permits, the Community & Economic Development Department - Planning Division shall review and approve the location and method of enclosure or screening of transformer cabinets, commercial gas meters and back flow preventers as shown on the final working drawings. Location and screening shall comply with the following criteria: transformer cabinets and commercial gas meters shall not be located within required setbacks and shall be screened from public view either by architectural treatment or with landscaping; multiple electrical meters shall be fully enclosed and incorporated into the overall architectural design of the building(s); back-flow preventers shall be screened by landscaping that will provide complete screening upon maturity. (GP Objective 43.30, DG)**
- P35. (BP) Prior to issuance of building permits, screening details shall be addressed on plans for roof top equipment and trash enclosures submitted for Community & Economic Development Department - Planning Division review and approval. All equipment shall be completely screened so as not to be visible from public view, and the screening shall be an integral part of the building. For trash enclosures, landscaping shall be included on at least three sides. The trash**

CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 6 OF 50

- including any roofing, shall be compatible with the architecture for the building(s). (GP Objective 43.6, DG)
- P36. (BP) Prior to issuance of building permits, two copies of a detailed, on-site, computer generated, point-by-point comparison lighting plan, including exterior building, parking lot, and landscaping lighting, shall be submitted to the Community & Economic Development Department - Planning Division for review and approval. The lighting plan shall be generated on the plot plan and shall be integrated with the final landscape plan. The plan shall indicate the manufacturer's specifications for light fixtures used and shall include style, illumination, location, height and method of shielding. The lighting shall be designed in such a manner so that it does not exceed 0.5 foot candles illumination beyond at the property line. The lighting level for all parking lots or structures shall be a minimum coverage of one foot-candle of light with a maximum of eight foot-candles. After the third plan check review for lighting plans, an additional plan check fee will apply. (MC 9.08.100, DG)
- P37. (BP) Prior to issuance of building permits or as permitted by current City policy, the developer or developer's successor-in-interest shall pay all applicable impact fees, including but not limited to Transportation Uniform Mitigation fees (TUMF), Multi-species Habitat Conservation Plan (MSHCP) mitigation fees, and the City's adopted Development Impact Fees. (Ord)
- P38. (BP) Prior to issuance of building permits, final landscaping and irrigation plans shall be submitted to the Community & Economic Development Department - Planning Division for review. All landscape plans shall be approved prior to the release of any building permits for the site. After the third plan check review for landscape plans, an additional plan check fee shall apply. The plans shall be prepared in accordance with the City's Landscape Standards and Specifications and shall include:
- A. A landscape berm, hedge or a maximum 3 foot decorative wall is required adjacent to parking areas along public rights-of-way.
 - B. All finger and end planters shall be included at an interval of one per 12 parking stalls, be a minimum 5' x 16', and include additional 12" concrete step-outs and 6" curbing. (MC9.08.230, City's Landscape Standards)
 - C. All diamond planters shall be included at an interval of one per 3 parking stalls.
 - D. Drought tolerant landscape shall be provided. Sod shall be limited to public gathering areas only and not be included along the perimeter of the project site.
 - E. On site trees shall be planted at an equivalent of one (1) tree per thirty (30) linear feet of building dimension. Trees may be massed for pleasing aesthetic effects.
 - F. **Enhanced landscaping shall be included at all driveway and corner locations.**
 - G. All site perimeter and parking lot landscape and irrigation shall be installed prior to the release of certificate of any occupancy permits for the site or pad in question.

**CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 7 OF 50**

- H. The review of all utility boxes, transformers etc. shall be coordinated to provide adequate screening from public view. (Landscape Guidelines)
 - I. **Street trees planted at 40 feet on center spacing shall be provided along the site's Perris Boulevard, Indian Street and Grove View Road frontages.**
 - J. **Along property boundaries visible from the public view and accessible to the general public, trees shall be planted at a rate of one tree per 30 linear feet of the interior property line. Tree clusters may satisfy this requirement.**
 - K. **The design of all swales and basins that are visible from the public right-of-way shall be integrated with the surrounding landscape areas.**
- P44. (BP) Prior to the issuance of building permits, the landscape plans shall include landscape treatment for trash enclosures located outside of a truck court, to include landscape on three sides, and trash enclosures shall include decorative enhancements such as an enclosed roof and other decorative features that are consistent with the architecture of the proposed commercial buildings on the site, subject to the approval of the Community & Economic Development Director.**
- P45. (BP) Prior to the issuance of building permits, all fences and walls required or proposed on site, shall be approved by the Community & Economic Development Director. (MC 9.08.070)
- P46. (BP) Prior to the issuance of building permits, downspouts will be interior to the building, or if exterior, integrated into the architecture of the building to include compatible colors and materials to the satisfaction of the Community & Economic Development Director.
- P47. (BP) Prior to the issuance of building permits the building site plan shall include decorative concrete or pavers for all driveway ingress/egress locations for the project.**
- P48. (BP) Prior to issuance of building permits, a final map for Tentative Parcel Map No. 36162 (PA09-0012) must be approved and recorded and all conditions of approval related to the parcel map must be satisfied.**
- P49. (BP) Prior to issuance of any building permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein. (CEQA)**

Prior to Issuance of Certificate of Occupancy or Building Final

- P50. (CO) Prior to issuance of any Certificates of Occupancy or building final, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein. (CEQA) (Advisory)**

**CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 8 OF 50**

- P51. (CO) Prior to the issuance of Certificates of Occupancy or building final, all required and proposed fences and walls shall be constructed according to the approved plans on file in the Community & Economic Development Department – Planning Division. (MC 9.080.070).
- P52. (CO) Prior to issuance of Certificate of Occupancy or building final, installed landscaping and irrigation shall be reviewed by the Community & Economic Development Department - Planning Division. The landscaping shall be installed in accordance with the City's Landscape Standards and the approved landscape plans.
- P53. (CO) All rooftop equipment shall be appropriately screened and not visible from the public rights of way.**

MITIGATION MEASURES

Air Quality

- P54. **4.2.6.1A** Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall place construction equipment staging areas at least 200 feet away from sensitive receptors. Contract specifications shall be included in the proposed project construction documents, which shall be reviewed by the City.
- P55. **4.2.6.1B** Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall utilize power sources (e.g., power poles) or clean-fuel (e.g., fuel other than diesel or gasoline) generators where feasible. Contract specifications shall be included in the proposed project construction documents, which shall be reviewed by the City.
- P56. **4.2.6.1C** Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall utilize California Air Resources Board (CARB) Tier II Certified equipment or better during the rough/mass grading phase for the following pieces of equipment: rubber-tired dozers and scrapers. Contract specifications shall be included in the proposed project construction documents, which shall be reviewed by the City.
- P57. **4.2.6.1D** All clearing, grading, earthmoving, or excavation activities shall cease when winds exceed 25 mph per SCAQMD guidelines in order to limit fugitive dust emissions.
- P58. **4.2.6.1E** The contractor shall ensure that all disturbed unpaved roads and disturbed areas within the project are watered at least three times daily during dry weather. Watering, with complete coverage of disturbed areas, shall occur at least three

CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 9 OF 50

times a day, preferably in the mid-morning, afternoon, and after work is done for the day.

- P59. 4.2.6.1F** The contractor shall ensure that traffic speeds on unpaved roads and project site areas are reduced to 15 miles per hour or less to reduce PM10 and PM2.5 fugitive dust haul road emissions. Speed limit signs (15 mph maximum) shall be posted at entry points to the project site, and along any unpaved roads providing access to or within the project site and/or any unpaved designated on-site travel routes.
- P60. 4.2.6.1G** Groundcover shall be replaced, and/or non-toxic soil stabilizers shall be applied (according to manufacturers' specifications) to any inactive construction areas (previously graded areas inactive for ten days or more).
- P61. 4.2.6.1H** The contractor shall minimize pollutant emissions by maintaining equipment engines in good condition and in proper tune according to manufacturer's specifications and during smog season (May through October) by not allowing construction equipment to be left idling for more than five minutes (per California law).
- P62. 4.2.6.1I** The contractor shall ensure use of low-sulfur diesel fuel in construction equipment as required by the California Air Resources Board (CARB) (diesel fuel with sulfur content of 15 ppm by weight or less).
- P63. 4.2.6.1J** If available, the project applicant shall use "Low-Volatile Organic Compounds" paints, coatings, and solvents with a VOC content lower than required under Rule 1113 (not to exceed 150 grams/liter; 1.25 pounds/gallon). High Pressure Low Volume (HPLV) applications of paints, coatings, and solvents shall be consistent with South Coast Air Quality Management District Rule 1113. Alternatively, the project applicant shall use materials that do not require painting or are pre-painted.
- P64. 4.2.6.1K** Grading plans, construction specifications and bid documents shall also include the following notations:
- Off-road construction equipment shall utilize alternative fuels where feasible e.g., biodiesel fuel (a minimum of B20), natural gas (CNG), liquefied natural gas (LNG), propane, except for equipment where use of such fuels would void the equipment warranty;
 - Gravel pads shall be provided at all access points to prevent tracking of mud onto public roads;
 - Install and maintain trackout control devices at all access points where paved and unpaved access or travel routes intersect;
 - The contractor or builder shall designate a person or person(s) to monitor the dust control program and to order increased watering, as necessary, to prevent transport of dust off site;

CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 10 OF 50

- The contractor or builder shall post a publicly visible sign with the telephone number and person to contact regarding dust complaints. The contact person shall take corrective action within 24 hours;
- High pressure injectors shall be provided on diesel construction equipment where feasible;
- Engine size of construction equipment shall be limited to the minimum practical size;
- Substitute gasoline-powered for diesel-powered construction equipment where feasible;
- Use electric construction equipment where feasible;
- Install catalytic converters on gasoline-powered equipment where feasible;
- Ride-sharing program for the construction crew shall be encouraged and shall be supported by contractor(s) via incentives or other inducement;
- Documentation shall be provided to the City of Moreno Valley indicating that construction workers have been encouraged to carpool or otherwise reduce VMT to the greatest extent practical, including providing information on available park and ride programs;
- Lunch vendor services shall be permitted onsite during construction to minimize the need for offsite vehicle trips;
- All forklifts used during construction and in subsequent operation of the project shall be electric or natural gas powered.
- Suspend use of all construction equipment operations during second stage smog alerts.

P65. 4.2.6.1L Throughout project construction, a construction relations officer/community liaison, appointed by the Applicant, shall be retained on-site. In coordination and cooperation with the City, the construction relations officer/community liaison shall respond to any concerns related to PM10 (fugitive dust) generation or other construction-related air quality issues.

P66. 4.2.6.1M All project entrances shall be posted with signs which state:

- Truck drivers shall turn off engines when not in use;
- Diesel delivery trucks servicing the project shall not idle for more than three (3) minutes; and
- Telephone numbers of the building facilities manager and CARB, to report violations.

P67. 4.2.6.1N When materials are transported off-site, all material shall be covered, effectively wetted to limit visible dust emissions, and at least six inches of freeboard space from the top of the container shall be maintained.

CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 11 OF 50

- P68. 4.2.6.1O** All streets shall be swept at least once a day using SCAQMD Rule 1186 certified street sweepers utilizing reclaimed water trucks if visible soil materials are carried to adjacent streets.
- P69. 4.2.6.1P** Any vegetative cover to be utilized onsite shall be planted as soon as possible to reduce the disturbed area subject to wind erosion. Irrigation systems required for these plants shall be installed as soon as possible to maintain good ground cover and to minimize wind erosion of the soil.
- P70. 4.2.6.1Q.** Provide temporary traffic controls such as a flag person, during all phases of construction to maintain smooth traffic flow.
- P71. 4.2.6.1R** All roadways, driveways, sidewalks, etc., should be completed as soon as possible. In addition, building pads should be laid as soon as possible after grading unless seeding or soil binders are used.
- P72. 4.2.6.1S** Implement activity management techniques including a) development of a comprehensive construction management plan designed to minimize the number of large construction equipment operating during any given time period; b) scheduling of construction truck trips during non-peak hours to reduce peak hour emissions; c) limitation of the length of construction work-day period; and d) phasing of construction activities.
- P73. 4.2.6.1T** Reroute construction trucks away from congested streets and sensitive receptor areas.
- P74. 4.2.6.3A** Prior to issuance of the first building permit, building and site plan designs shall ensure that the project's energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of 20 percent. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and reviewed and approved by the City. Any combination of the following design features, may be used to fulfill this requirement provided that the total increase in energy efficiency meets or exceeds 20 percent:
- Exceed California Title 24 Energy Efficiency performance standards for water heating and space heating and cooling, as deemed acceptable by the City.
 - Increase in insulation such that heat transfer and thermal bridging is minimized.
 - Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.
 - Incorporate dual-paned or other energy efficient windows.
 - Incorporate energy efficient space heating and cooling equipment.

CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 12 OF 50

- Use interior and exterior energy efficient lighting which exceeds the California Title 24 Energy Efficiency performance standards, as deemed acceptable by the City. Use automatic devices to turn off lights when they are not needed.
- To the extent that they are compatible with landscaping guidelines established by the City, use shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and buildings at the project site.
- Use paints and a surface color palette for the project emphasizing light and off-white colors which reflect heat away from the buildings.
- Install a photovoltaic array (solar panels) or other source of renewable energy generation on-site, or otherwise acquire energy from the local utility that has been generated by renewable resources, to meet the project's office electricity needs.
- Reduce energy demand associated with potable water conveyance using the following:
 - Landscaping palette emphasizing drought-tolerant plants;
 - Use of water-efficient irrigation techniques; and,
 - U.S. EPA Certified WaterSense labeled for equivalent faucets, high-efficiency toilets (HETs), and water-conserving shower heads.
- Provide on-site bicycle storage/parking consistent with City of Moreno Valley requirements.
- Provide on-site showers (one for males and one for females). Provide lockers for employees.
- Establish a Transportation Management Association (TMA). The TMA will coordinate with other TMAs within the City to encourage and coordinate carpooling among building occupants. The TMA will advertise its services to building occupants, and offer transit and/or other incentives to reduce GHG emissions. A plan will be submitted by the TMA to the City within two months of project completion that outlines the measures implemented by the TMA, as well as contact information.
- Provide preferential parking for carpools, vanpools or other alternative fuel vehicles. Locations and configurations of proposed preferential parking for carpools and vanpools are subject to review and approval by the City. Prior to final site plan approval, delineate preferential parking for carpools and vanpools on the project site plan.
- Provide at least two electric vehicle charging stations. Locations and configurations of proposed charging stations are subject to review and approval by the City. Prior to issuance of the first building permit, delineate stub outs for charging stations on the project building plans.
- Implement compressed workweek schedules;
- Achieve at least 20% per year (as a percentage of previous percentage, not total trips) increase in percentage of consolidated trips carried by SmartWay carriers

until it reaches a minimum of 90% of all long haul trips carried by SmartWay 1.0 or greater carriers.

- Achieve at least 15% per year (as a percentage of previous percentage, not total trips) increase in percentage of long haul trips carried by SmartWay carriers until it reaches a minimum of 85% of all consolidator trips carried by SmartWay 1.0 or greater carriers.
- Use of fleet vehicles conforming to 2010 air quality standards or better.
- Installation of catalytic converters on gasoline-powered equipment.
- Inclusion of electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets;
- Establishment and use of carpool/vanpool programs, complemented by parking fees for single-occupancy vehicles;
- Provision of preferential parking for EV and CNG vehicles;
- Use of electrical equipment (instead of gasoline-powered equipment) for landscape maintenance;
- Use of electric (instead of diesel or gasoline-powered) yard trucks;
- Use of SmartWay 1.25 rated trucks.
- Provide a display case or kiosk displaying transportation information including the RTA bus schedule in a prominent area accessible to employees.
- Use landscape maintenance companies that use battery powered or electric equipment or contract only with commercial landscapers who operate with equipment that complies with the most recent California Air Resources Board certification standards, or standards adopted no more than three years prior to date of use or any combination of these two themes.

P75. 4.2.6.3B The project shall be designed to facilitate the reduction of waste generated by building occupants that is hauled to and disposed of in landfills by providing easily accessible areas that are dedicated to the collection and storage of recyclable materials including: paper, cardboard, glass, plastics, and metals. Locations of proposed recyclable materials collection areas are subject to review and approval by the City. Prior to Final Site Plan approval, locations of proposed recyclable materials collection areas shall be delineated on the project site plan.

Biological Resources

P76. Mitigation Measure BIO-1: No more than 72 hours prior to initiation of ground-disturbing activities, a pre-construction survey shall be completed by a qualified biologist. The survey will identify special status avian species (if any) within the area of intended disturbance. In the event no special status avian species are identified within the limits of disturbance, no further mitigation is required. In the event such species are identified within the limits of ground disturbance, **Mitigation Measure BIO-3** shall apply.

- P77. Mitigation Measure BIO-2:** No more than 72 hours prior to initiation of ground-disturbing activities, a pre-construction burrowing owl survey shall be completed by a qualified biologist for the planned disturbance area. The pre-construction burrowing owl surveys may be conducted as part of the survey required in **Mitigation Measure BIO-1**. A report detailing the findings of the pre-construction survey shall be submitted to the City prior to the initiation of ground-disturbing activities. In the event no burrowing owls are identified within the limits of ground disturbance, no further mitigation is required. In the event burrowing owls are identified within the limits of ground disturbance, **Mitigation Measures BIO-3** and **BIO-4** shall apply.
- P78. Mitigation Measures BIO-3.** If nesting special status avian or burrowing owl species are determined to occupy a proposed area of disturbance a biological monitor will be present during construction to ensure no construction activity shall take place within 500 feet of an active nest/burrow until it has been determined by the biological monitor that the nest/burrow is no longer active, and all juveniles have fledged the nest/burrow.
- P79. Mitigation Measure BIO-4:** If active burrowing owl burrows are detected outside the breeding season, then passive and/or active relocation may be approved following consultation with the CDFG and/or USFWS. One-way doors may be installed as part of a passive relocation program. Burrowing owl burrows shall be excavated with hand tools by a qualified biologist when determined to be unoccupied, and backfilled to ensure that animals do not re-enter the holes/dens.

Cultural Resources

- P80. Mitigation Measure CUL-1:** Prior to construction involving excavation four feet or more below existing surface grade, the construction contractor shall provide evidence that a qualified paleontologist has been retained, and that the paleontologist(s) shall be present during all grading and other significant ground-disturbing activities that reach four feet or more below existing surface grade. If the paleontologist(s) do not find evidence for Pleistocene-era deposits once the maximum excavation depth is reached, monitoring shall be discontinued. In the event fossiliferous deposits are encountered, the following measures shall be implemented:
- Monitoring shall be conducted by qualified paleontological monitor(s) of excavation in areas identified as likely to contain paleontological resources, including undisturbed older Pleistocene alluvium. Paleontological monitors shall be equipped to salvage fossils as they are unearthed, to avoid construction delays, and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. Monitors shall be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens. Monitoring may be reduced if the potentially fossiliferous units are

determined upon exposure and examination by qualified paleontological personnel to have low potential to contain fossil resources.

- Paleontological monitoring of any earthmoving will be conducted by a monitor, under direct guidance of a qualified paleontologist. Earthmoving in areas of the parcel where previously undisturbed sediments are buried, but not otherwise disturbed, will not be monitored.
- Preparation of recovered specimens to a point of identification and permanent preservation, including washing of sediments to recover small invertebrates and vertebrates.
- Identification and curation of specimens into a professional, fully accredited museum repository with permanent retrievable storage. The paleontologist must have a written repository agreement in hand prior to the initiation of mitigation activities.
- Preparation or a report of findings with and appended itemized inventory of specimens. The report and report and inventory, when submitted to the City of Moreno Valley along with confirmation of the curation of recovered of recovered specimens into an established, accredited museum repository, will signify completion of the program to mitigate impacts to paleontological resources

Geology and Soils

P81. Mitigation Measure GEO-1: Prior to the issuance of grading permits, any existing low density soils and/or saturated soils shall be removed to competent natural soil under the inspection of the Soils Engineering Firm. After the exposed surface has been cleansed of debris and/or vegetation, it shall be scarified until it is uniform in consistency, brought to the proper moisture content and compacted to a minimum of 90 percent relative compaction (in accordance with ASTM: D-1557). In any area where a transition between fill and native soil or between bedrock and soil are encountered, additional excavation beneath foundations and slabs will be necessary in order to provide uniform support and avoid differential settlement of the structure.

The on-site soils or approved import soils may be utilized for the compacted fill, provided they are free of any deleterious materials and shall not contain any rocks, brick, asphaltic concrete, concrete, or other hard materials greater than eight inches in maximum dimensions. Any import soil must be approved by the Soils Engineering firm a minimum of 24 hours prior to importation to the site.

The approved fill soils shall be placed in layers not in excess of six inches in thickness. Each lift shall be uniform in thickness and thoroughly blended. The fill soils shall be brought to within 2 percent of the optimum moisture content, unless otherwise specified by the Soils Engineering firm. Each lift shall be compacted to a minimum of 90 percent relative compaction (in accordance with ASTM: D-1557) and approved prior to the placement of the next layer of soil. Compaction tests shall be obtained at the discretion of the Soils Engineering firm but to a minimum of one test for every 500 cubic yards placed and/or for every two feet of compacted fill placed.

The minimum relative compaction shall be obtained in accordance with accepted methods in the construction industry. The final grade of the structural areas shall be in a dense and smooth condition prior to placement of slabs-on-grade or pavement areas. No fill soils shall be placed, spread, or compacted during unfavorable weather conditions. When the grading is interrupted by heavy rains, compaction operations shall not be resumed until approved by the Soils Engineering firm.

It should be noted that the above measure may be modified by the Final Geotechnical or Soils Report.

- P82. Mitigation Measure GEO-2:** Prior the issuance of grading permits, the project proponent shall inform the project engineers, architects, owner, maintenance personnel, and other interested parties of the Expansive Soil Guidelines provided in the project's geotechnical analysis [Geotechnical Engineering Investigation Proposed Industrial Development Southwest Corner of Perris Boulevard and Grove View Road Moreno Valley, California, NorCal Engineering, March 7, 2007]. The recommendations identified in the project's Expansive Soil Guidelines shall be implemented by the project engineers, architects, owner, maintenance personnel, and other interested parties in the applicable design guidelines. Applicable design guidelines shall be included and implemented in the project's grading plans.

Greenhouse Gases and Global Climate Change

- P83. 4.3.6.1A** Prior to the issuance of building permits, the project applicant shall provide evidence to the City of Moreno Valley that building features have been incorporated in building plans as required by Title 24 of the California Code of Regulations. These features include but are not limited to the following:
- Exterior windows in the office areas shall utilize window treatments for efficient energy conservation.
 - Per CALGreen Code requirements, water-efficient fixtures and appliances, including but not limited to low-flow faucets, dual-flush toilets minimizing water consumption by 20 percent from the Building Standards Code baseline water consumption shall be used.
 - Per CALGreen Code requirements, a Commissioning Plan shall be prepared and all building systems (e.g., heating, ventilation, and air-conditioning [HVAC], irrigation systems, lighting, water heating) shall be commissioned by the Commissioning Authority.
 - Per CALGreen Code, restrict watering methods (e.g., prohibit systems that apply water to non-vegetated surfaces) and control runoff.
- P84. 4.3.6.1B** Prior to the issuance of building permits, the project applicant shall provide evidence to the City of Moreno Valley that the following measures have been be incorporated into the design and construction of the project:

CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 17 OF 50

- Encourage use of locally produced and/or manufactured building materials for at least 10 percent of the construction materials used for the project.
- Encourage use of “Green Building Materials,” such as those materials that are resource efficient, and recycled and manufactured in an environmentally friendly way, for at least 10 percent of the project.
- Limit unnecessary idling of construction equipment. A reduction in equipment idling would reduce fuel consumption, and therefore, GHG emissions.
- Maximize the use of electricity from the power grid by replacing diesel- or gasoline-powered equipment where feasible. This would reduce GHG emissions because electricity can be produced more efficiently at centralized power plants.
- Design the project building to exceed the California Building Code’s (CBC) 2008 Title 24 energy standard by 20%, including, but not limited to, any combination of the following:
 - Increase insulation such that heat transfer and thermal bridging is minimized.
 - Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.
 - Incorporate ENERGY STAR or better rated windows in the office area, space heating and cooling equipment, light fixtures, appliances, or other applicable electrical equipment.
- Provide a landscape and development plan for the project that takes advantage of shade, prevailing winds, and landscaping. The landscaping plan shall be prepared by a registered landscape architect who will consider the following:
 - Plant at least 50 percent low-ozone forming potential (Low-OFP) trees and shrubs, preferably native, drought-resistant species, to meet city/county landscaping requirements.
 - Plant Low-OFP, native, drought-resistant, tree and shrub species, 20% in excess of that already required by city or county ordinance. Consider roadside, sidewalk, and driveway shading.
- Install efficient lighting and lighting control systems. Use daylight as an integral part of the lighting systems in buildings.
- Install light-colored “cool” roof and cool pavements.
- Install energy-efficient heating and cooling systems, appliances and equipment, and control systems.
- Install solar or light-emitting diodes (LEDs) for outdoor lighting.
- Install electrical outlets on the exterior walls of the warehouse/office building (and perhaps parking lots) to promote the use of electric landscape maintenance equipment.

**CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 18 OF 50**

P85. 4.3.6.1C Prior to the issuance of occupancy permits, the project applicant shall provide evidence to the City of Moreno Valley that the following measures have been incorporated into the operation of the project:

- The project applicant shall use low Global Warming refrigerants or natural refrigerants (ammonia, propane, carbon dioxide [CO₂]) for refrigeration and fire suppression equipment.
- Provide vegetative or man-made exterior wall shading devices for east-, south-, and west facing walls with windows in the office areas.
- Devise a comprehensive water conservation strategy appropriate for the project and its location. The strategy may include the following, plus other innovative measures that may be appropriate:
 - Install drought tolerant plants for landscaping.
 - Use reclaimed water for landscape irrigation within the project. Install the infrastructure to deliver and use reclaimed water.
 - Install water-efficient irrigations systems, such as weather-based and soil-moisture-based irrigation controllers and sensors for landscaping according to the California Department of Water Resources Model Efficient Landscape Ordinance.
 - Provide employee education about reducing waste and available recycling services.

***P86. 4.3.6.1D** The building roof shall be designed and constructed to accommodate future solar panels.

***P87. 4.3.6.1E** The project shall be designed and constructed to meet LEED Silver (as of July 12, 2012) or comparable design standards.

***Mitigation Measures added by the Planning Commission at the July 12, 2012 public hearing.**

Hydrology and Water Quality

P88. Mitigation Measure HYD-01: Prior to grading plan approval and the issuance of a grading permit by the City, the project proponent shall provide evidence to the City that a Notice of Intent (NOI) with the Regional Water Quality Control Board has been filed to be covered under the State NPDES General Construction Permit for discharge of stormwater associated with construction activities.

P89. Mitigation Measure HYD-02: Prior to grading plan approval and the issuance of a grading permit by the City, the project proponent shall submit to the State Water Quality Control Board, a Storm Water Pollution Prevention Plan (SWPPP). The SWPPP shall include a surface water control plan and erosion control plan citing specific measures to control on-site and off-site erosion during the entire grading and construction period. Additionally, the SWPPP shall identify structural and nonstructural BMPs to control sediment and non-visible discharges from the site.

CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 19 OF 50

BMPs to be implemented in the SWPPP may include but shall not be limited to the following:

Sediment discharges from the site may be controlled by the following: gravel bags, silt fences, straw wattles and temporary debris basins (if deemed necessary), and other discharge control devices. The construction and condition of the BMPs will be periodically inspected during construction, and repairs will be made when necessary as required by the SWPPP.

Materials that have the potential to contribute non-visible pollutants to stormwater must not be placed in drainage ways and must be contained, elevated, and placed in temporary storage containment areas.

All loose piles of soil, silt, clay, sand, debris, and other earthen material shall be protected in a reasonable manner to eliminate any discharge from the site. Stockpiles will be surrounded by silt fences.

The SWPPP will include inspection forms for routine monitoring of the site during the construction phase to ensure NPDES compliance.

Additional BMPs and erosion control measures will be documented in the SWPPP and utilized if necessary.

The SWPPP will be kept on site for the entire duration of project construction and will also be available to the local RWQCB for inspection at any time.

In the event that it is not feasible to implement the above BMPs, the City of Moreno Valley can make a determination that other BMPs will provide equivalent or superior treatment either on or off site.

P90. Mitigation Measure HYD-03: Prior to the issuance of grading permits, the project proponent shall provide evidence to the City that the following provisions have been added to construction contracts for the project:

- The Construction Contractor shall be responsible for performing and documenting the application of BMPs identified in the SWPPP. Weekly inspections shall be performed on sediment control measures called for in the SWPPP. Monthly reports shall be maintained by the Contractor and submitted to the City for inspection. In addition, the Contractor will also be required to maintain an inspection log and have the log on site to be reviewed by the City of Moreno Valley and the representatives of the Regional Water Quality Control Board.

P91. Mitigation Measure HYD-04: Prior to grading plan approval and the issuance of a grading permit by the City, the project proponent shall receive approval from the City of Moreno Valley for a Final Water Quality Management Plan (F-WQMP). The F-WQMP shall specifically identify pollutants of concern, site design, source control, and treatment control BMPs that shall be used on site to control predictable pollutant runoff in order to reduce impacts to water quality to the maximum extent practicable.

P92. Mitigation Measure HYD-05: Prior to grading plan approval and the issuance of a grading permit, the project proponent shall submit a detailed grading plan and drainage report, with supporting engineering calculations, to the City Engineer for review and approval. The plan and report shall incorporate relevant requirements identified by the City and/or site-specific geotechnical investigations. The plan and report shall provide evidence that the storm drainage system would be adequate to convey water for the 100-year storm event from the project site and that the post-development flows exiting the proposed project site are less than or equal to pre-development flows.

Noise

P93. 4.4.6.1A During all project site excavation and grading on site, the project contractor shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers consistent with manufacturers' standards.

P94. 4.4.6.1B The project contractor shall place all stationary construction equipment so that emitted noise is directed away from sensitive receptors nearest to the project site.

P95. 4.4.6.1C The construction contractor shall locate equipment staging in areas that will create the greatest distance between construction-related noise sources and noise-sensitive receptors nearest to the project site during all project construction.

P96. 4.9.6.1D During all project site construction activities, the construction contractor shall limit all construction-related activities that would result in high noise levels to between the hours of 6:00 a.m. and 8:00 p.m. on weekdays and between the hours of 7:00 a.m. to 8:00 p.m. on weekends and holidays, unless written approval is obtained from the City Building Official or City Engineer. For grading activity, the hours are limited to between 7 am and 6 pm weekdays and 8 am to 4 pm on weekends and holidays.

Transportation

P97. 4.5.6.1A. Prior to the issuance of building permits, the project applicant shall participate in the City of Moreno Valley Development Impact (DIF) Fee Program and pay the project's fair share for local circulation improvements as outlined in the VIP Moreno Valley Project Traffic Study. The City shall ensure that the intersection and street improvements outlined in the VIP Moreno Valley Project Traffic Study will be constructed pursuant to the timeframes established by the City of Moreno Valley Development Impact Fee Program.

P98. 4.5.6.1B. Prior to the issuance of building permits, the project applicant shall participate in the County of Riverside Transportation Uniform Mitigation Fee (TUMF) Program and pay the project's fair share for regional circulation improvements. The City shall ensure that the intersection and street improvements outlined in the VIP Moreno Valley Project Traffic Study will be constructed pursuant to the timeframe

**CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 21 OF 50**

established by the County of Riverside TUMF Program.

- P99. 4.5.6.2A.** Prior to the issuance of occupancy permits, the project applicant shall have constructed the site access roadway improvements outlined below.

Indian Street/South Project Driveway: Restripe to convert center turn lane on Indian Street to a two-way left-turn lane. This location does not meet a peak hour signal warrant. This is a site-adjacent improvement to be constructed by the project applicant.

Building and Safety Division

- B1. The above project shall comply with the current California Codes (CBC, CEC, CMC and the CPC) as well as all other city ordinances. All new projects shall provide a soils report. Plans shall be submitted to the Building Department as a separate submittal.

COMMERCIAL, INDUSTRIAL, MULTI-FAMILY PROJECTS INCLUDING CONDOMINIUMS, TOWNHOMES, DUPLEXES AND TRIPLEX BUILDINGS REQUIRE THE FOLLOWING:

Prior to final inspection, all plans will be placed on a CD Rom for reference and verification. Plans will include "as built" plans, revisions and changes. The CD will also include Title 24 energy calculations, structural calculations and all other pertinent information. It will be the responsibility of the developer and or the building or property owner(s) to bear all costs required for this process. The CD will be presented to the Building Department for review prior to final inspection and building occupancy. The CD will become the property of the Moreno Valley Building Department at that time. In addition, a site plan showing the path of travel from public right of way and building to building access with elevations will be required.

- B2. (BP) Prior to the issuance of a building permit, the applicant shall submit a properly completed "Waste Management Plan" (WMP), as required, to the Compliance Official (Building Official) as a portion of the building or demolition permit process.

SCHOOL DISTRICT

- S1. (BP) Prior to issuance of building permits, the developer shall provide to the Community Development Director a written certification by the affected school district that either: (1) the project has complied with the fee or other exaction levied on the project by the governing board of the district, pursuant to Government Code Section 65996; or (2) the fee or other requirement does not apply to the project.

UNITED STATES POSTAL SERVICE

- PO1. (BP) Prior to the issuance of building permits, the developer shall contact the U.S. Postal Service to determine the appropriate type and location of mailbox.

FIRE PREVENTION BUREAU

- 1. Please complete and return attached fire flow letter.**
2. The following Standard Conditions shall apply.

With respect to the conditions of approval, the following fire protection measures shall be provided in accordance with Moreno Valley City Ordinances and/or recognized fire protection standards:

- F1. Final fire and life safety conditions will be addressed when the Fire Prevention Bureau reviews building plans. These conditions will be based on occupancy, use, California Building Code (CBC), California Fire Code (CFC), and related codes, which are in force at the time of building plan submittal.
- F2. The Fire Prevention Bureau is required to set a minimum fire flow for the remodel or construction of all commercial buildings per CFC Appendix B and Table B105.1. The applicant/developer shall provide documentation to show there exists a water system capable of delivering 4000 GPM for 4 hour(s) duration at 20-PSI residual operating pressure. The required fire flow may be adjusted during the approval process to reflect changes in design, construction type, or automatic fire protection measures as approved by the Fire Prevention Bureau. Specific requirements for the project will be determined at time of submittal. (CFC 508.3, Appendix B and MVMC 8.36.100 Section D) **The 50% reduction in fire flow was granted for the use of fire sprinklers throughout the facility. The reduction shall only apply to fire flow, hydrant spacing shall be per the fire flow requirements listed in CFC Appendix B and C.**
- F3. Industrial, Commercial, Multi-family, Apartment, Condominium, Townhouse or Mobile Home Parks. A combination of on-site and off-site super enhanced fire hydrants (6" x 4" x 4" x 2 1/2") shall not be closer than 40 feet and more than 150 feet from any portion of the building as measured along approved emergency vehicular travel ways. The required fire flow shall be available from any adjacent fire hydrant(s) in the system. Where new water mains are extended along streets where hydrants are not needed for protection of structures or similar fire problems, super or enhanced fire hydrants as determined by the fire code official shall be provided at spacing not to exceed 500 feet of frontage for transportation hazards. (CFC 508.5.7 & MVMC 8.36.050 Section O and 8.36.100 Section E)
- F4. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.1 and 503.2.5)
- F5. Prior to issuance of Building Permits, the applicant/developer shall provide the Fire Prevention Bureau with an approved site plan for Fire Lanes and signage. (MVMC 8.36.050 and CFC 501.3)

CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 23 OF 50

- F6. Prior to construction and issuance of building permits, all locations where structures are to be built shall have an approved Fire Department emergency vehicular access road (all weather surface) capable of sustaining an imposed load of 80,000 lbs. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4 and MVMC 8.36.050 Section A)
- F7. Prior to construction and issuance of Building Permits, fire lanes and fire apparatus access roads shall have an unobstructed width of not less than twenty-four (24) or thirty (30) feet as approved by the Fire Prevention Bureau and an unobstructed vertical clearance of not less than thirteen (13) feet six (6) inches. (CFC 503.2.1.1 and MVMC 8.36.050)
- F8. Prior to construction, all roads, driveways and private roads shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.050)
- F9. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4 and MVMC 8.36.050 Section A)
- F10. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.3 and MVMC 8.36.050)
- F11. Prior to building construction, dead end roadways and streets which have not been completed shall have a turnaround capable of accommodating fire apparatus. (CFC 503.2.5 and MVMC 8.36.050)
- F12. Prior to issuance of Building Permits, the applicant/developer shall participate in the Fire Impact Mitigation Program. (Fee Resolution as adopted by City Council)
- F13. Prior to issuance of Building Permits, the applicant/developer shall furnish one copy of the water system plans to the Fire Prevention Bureau for review. Plans shall:
- a) Be signed by a registered civil engineer or a certified fire protection engineer;
 - b) Contain a Fire Prevention Bureau approval signature block; and
 - c) Conform to hydrant type, location, spacing of new and existing hydrants and minimum fire flow required as determined by the Fire Prevention Bureau.

After the local water company signs the plans, the originals shall be presented to the Fire Prevention Bureau for signatures. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 24 OF 50

Existing fire hydrants on public streets are allowed to be considered available. Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are established to prevent obstruction of such roads. (CFC 508.1 and MVMC 8.36.100)

- F14. Prior to issuance of Certificate of Occupancy or Building Final, "Blue Reflective Markers" shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 510.1)
- F15. Prior to issuance of Certificate of Occupancy or Building Final, all commercial buildings shall display street numbers in a prominent location on the street side and rear access locations. The numerals shall be a minimum of twelve (12) inches in height for buildings and six (6) inches in height for suite identification on a contrasting background. Unobstructed lighting of the address(s) shall be by means approved by the Fire Prevention Bureau and Police Department. In multiple suite centers (strip malls), businesses shall post the name of the business on the rear door(s). (CFC 505.1)
- F16. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9)
- F17. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire alarm system monitored by an approved Underwriters Laboratory listed central station based on a requirement for monitoring the sprinkler system, occupancy or use. Fire alarm panel shall be accessible from exterior of building in an approved location. Plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9 and MVMC 8.36.070)
- F18. Prior to issuance of a Certificate of Occupancy or Building Final, a "Knox Box Rapid Entry System" shall be provided. The Knox-Box shall be installed in an accessible location approved by the Fire Chief. The Knox-Box shall be supervised by the alarm system and all exterior security emergency access gates shall be electronically operated and be provided with Knox key switches for access by emergency personnel. (CFC 506.1)
- F19. Prior to issuance of Certificate of Occupancy, approval shall be required from the County of Riverside Community Health Agency (Department of Environmental Health) and Moreno Valley Fire Prevention Bureau to maintain, store, use, handle materials, or conduct processes which produce conditions hazardous to life or property, and to install equipment used in connection with such activities. (CFC 2701.5)
- F20. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer must submit a simple plot plan, a simple floor plan, and other

CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 25 OF 50

- plans as requested, each as an electronic file in .dwg format, to the Fire Prevention Bureau. Alternate file formats may be acceptable with approval by the Fire Chief.
- F21. The angle of approach and departure for any means of Fire Department access shall not exceed 1 ft drop in 20 ft (0.3 m drop in 6 m), and the design limitations of the fire apparatus of the Fire Department shall be subject to approval by the AHJ. (CFC 503.2.7 and MVMC 8.36.050 Section I)
- F22. Prior to issuance of the building permit for development, independent paved access to the nearest paved road, maintained by the City shall be designed and constructed by the developer within the public right of way in accordance with City Standards. (MVMC 8.36.050)
- F23. Prior to construction, "private" driveways over 150 feet in length shall have a turn-around as determined by the Fire Prevention Bureau capable of accommodating fire apparatus. Driveway grades shall not exceed 12 percent. (CFC 503 and MVMC 8.36.050)
- F24. Complete plans and specifications for fire alarm systems, fire-extinguishing systems (including automatic sprinklers or standpipe systems), clean agent systems (or other special types of automatic fire-extinguishing systems), as well as other fire-protection systems and appurtenances thereto shall be submitted to the Moreno Valley Fire Prevention Bureau for review and approval prior to system installation. Submittals shall be in accordance with CFC Chapter 9 and associated accepted national standards.
- F25. A permit is required to maintain, store, use or handle materials, or to conduct processes which produce conditions hazardous to life or property, or to install equipment used in connection with such activities. Such permits shall not be construed as authority to violate, cancel or set aside any of the provisions of this code. Such permit shall not take the place of any license required by law. Applications for permits shall be made to the Fire Prevention Bureau in such form and detail as prescribed by the Bureau. Applications for permits shall be accompanied by such plans as required by the Bureau. Permits shall be kept on the premises designated therein at all times and shall be posted in a conspicuous location on the premises or shall be kept on the premises in a location designated by the Fire Chief. Permits shall be subject to inspection at all times by an officer of the fire department or other persons authorized by the Fire Chief in accordance with Appendix Chapter 1 and MVMC 8.36.100.
- F26. Approval of the safety precautions required for buildings being constructed, altered or demolished shall be required by the Fire Chief in addition to other approvals required for specific operations or processes associated with such construction, alteration or demolition. (CFC Chapter 14 & CBC Chapter 33)
- F27. Prior to issuance of Certificate of Occupancy, permits are required to store, dispense, use or handle hazardous material. Each application for a permit shall include a hazardous materials management plan (HMMP). The location of the

CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 26 OF 50

HMMP shall be posted adjacent to (other) permits when an HMMP is provided. The HMMP shall include a facility site plan designating the following:

- a) Storage and use areas;
- b) Maximum amount of each material stored or used in each area;
- c) Range of container sizes;
- d) Locations of emergency isolation and mitigation valves and devices;
- e) Product conveying piping containing liquids or gases, other than utility-owned fuel gas lines and low-pressure fuel gas lines;
- f) On and off positions of valves for valves which are of the self-indicating type;
- g) Storage plan showing the intended storage arrangement, including the location and dimensions of aisles. The plans shall be legible and approximately to scale. Separate distribution systems are allowed to be shown on separate pages; and
- h) Site plan showing all adjacent/neighboring structures and use.

NOTE: Each application for a permit shall include a hazardous materials inventory statement (HMIS).

- F28. Before a Hazardous Materials permit is issued, the Fire Chief shall inspect and approve the receptacles, vehicles, buildings, devices, premises, storage spaces or areas to be used. In instances where laws or regulations are enforceable by departments other than the Fire Prevention Bureau, joint approval shall be obtained from all departments concerned. (CFC Appendix H)
- F29. Construction or work for which the Fire Prevention Bureau's approval is required shall be subject to inspection by the Fire Chief and such construction or work shall remain accessible and exposed for inspection purposes until approved. (CFC Section 106)
- F30. The Fire Prevention Bureau shall maintain the authority to inspect, as often as necessary, buildings and premises, including such other hazards or appliances designated by the Fire Chief for the purpose of ascertaining and causing to be corrected any conditions which would reasonably tend to cause fire or contribute to its spread, or any violation of the purpose or provisions of this code and of any other law or standard affecting fire safety. (CFC Section 106)
- F31. Permit requirements issued, which designate specific occupancy requirements for a particular dwelling, occupancy, or use, shall remain in effect until such time as amended by the Fire Chief. (CFC Section 104)
- F32. In accordance with the California Fire Code Appendix Chapter 1, where no applicable standards or requirements are set forth in this code, or contained within other laws, codes, regulations, ordinances or bylaws adopted by the jurisdiction, compliance with applicable standards of the National Fire Protection Association or other nationally recognized fire safety standards as are approved shall be deemed

CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 27 OF 50

as prima facie evidence of compliance with the intent of this code as approved by the Fire Chief. (CFC Section 102.7)

- F33. Any alterations, demolitions, or change in design, occupancy and use of buildings or site will require plan submittal to the Fire Prevention Bureau with review and approval prior to installation. (CFC Appendix Chapter 1)
- F34. Emergency and Fire Protection Plans shall be provided when required by the Fire Prevention Bureau. (CFC Section 105)
- F35. Prior to construction, all traffic calming designs/devices must be approved by the Fire Marshal and City Engineer.

FIRE FLOW LETTER

Date:	02/24/2009	Address:	
Case Number:	PA09-0004	A.P.N.:	316-210-071, 073, 075, 076

This is certification the water system is capable of meeting the following required fire flows as determined by the California Fire Code Appendix B.

Based on the information provided on the above referenced case. The fire flow required for this project will be 4000 G.P.M. for duration of 4-HOURS measured at 20-psi residual pressure.

The required fire flow may be adjusted during the approval process to reflect changes in design, construction type or automatic fire protection measures as approved by the Fire Prevention Bureau.

NOTE: THE COMPLETION AND SUBMITTAL OF THIS LETTER TO THE FIRE PREVENTION BUREAU SHALL NOT BE CONSTRUED AS APPROVAL FOR THE INSTALLATION OF THE REQUIRED FIRE HYDRANT (S) AND/OR WATER SYSTEM.

COMMUNITY & ECONOMIC DEVELOPMENT DEPARTMENT
- LAND DEVELOPMENT DIVISION

The following are the Land Development Division Conditions of Approval for this project and shall be completed at no cost to any government agency. All questions regarding the intent of the following conditions shall be referred to the Land Development Division.

General Conditions

- LD1. (G) The developer shall comply with all applicable City ordinances and resolutions including the City's Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). (MC 9.14.010)
- LD2. (G) It is understood that the tentative map correctly shows all existing easements, traveled ways, and drainage courses, and that their omission may require the map or plans associated with this application to be resubmitted for further consideration. (MC 9.14.040)
- LD3. (G) In the event right-of-way or offsite easements are required to construct offsite improvements necessary for the orderly development of the surrounding area to meet the public health and safety needs, the developer shall make a good faith effort to acquire the needed right-of-way in accordance with the Land Development Division's administrative policy. In the event that the developer is unsuccessful, he shall enter into an agreement with the City to acquire the necessary right-of-way or offsite easements and complete the improvements at such time the City acquires the right-of-way or offsite easements which will permit the improvements to be made. The developer shall be responsible for all costs associated with the right-of-way or easement acquisition. (GC 66462.5)**
- LD4. (G) If improvements associated with this project are not initiated within two years of the date of approval of the Public Improvement Agreement, the City Engineer may require that the improvement cost estimate associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the Public Improvement Agreement or issuance of a permit.
- LD5. (G) The developer shall monitor, supervise and control all construction and construction supportive activities, so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:
- (a) Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.
 - (b) Observance of working hours as stipulated on permits issued by the Public Works Department.

CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 30 OF 50

- (c) The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.
- (d) All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements shall be adhered to during the grading operations.

Violation of any condition or restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedies as noted in the City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.

- LD6. (G) The developer shall protect downstream properties from damage caused by alteration of drainage patterns, i.e., concentration or diversion of flow. Protection shall be provided by constructing adequate drainage facilities, including, but not limited to, modifying existing facilities or by securing a drainage easement. (MC 9.14.110)
- LD7. (G) A detailed drainage study shall be submitted to the City Engineer for review and approval at the time of any improvement or grading plan submittal. The study shall be prepared by a registered civil engineer and shall include existing and proposed hydrologic conditions. Hydraulic calculations are required for all drainage control devices and storm drain lines. (MC 9.14.110). Prior to approval of the related improvement or grading plans, the developer shall submit the approved drainage study, on compact disk, in (.pdf) digital format to the Land Development Division of the Public Works Department.
- LD8. (G) Prior to occupancy, the developer shall enter into a Development Impact Fee (DIF) Improvement Credit Agreement to secure credit and reimbursement for the construction of applicable **Indian Street** improvements. If the developer fails to complete this agreement prior to the timing as specified above, no credits or reimbursements will be given. The applicant shall pay Arterial Streets, Traffic Signals, and Interchange Improvements development impact fees adopted by the City Council by resolution. (Ord. 695 § 1.1 (part), 2005) (MC 3.38.030, .040, .050)
- LD9. (G) Prior to occupancy, the developer shall enter into a Transportation Uniform Mitigation Fee (TUMF) Improvement Credit Agreement to secure credit and reimbursement for the construction of applicable **Perris Boulevard** improvements. If the developer fails to complete this agreement by the timing as specified above, no credits or reimbursements will be given for any work. Prior to approval of the TUMF Improvement Credit Agreement, an approved engineer's cost estimate and street improvement plan are required.
- LD10. (G) The final conditions of approval issued by the Planning Division subsequent to Planning Commission approval shall be photographically or electronically placed on

**CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 31 OF 50**

mylar sheets and included in the Grading and Street Improvement plan sets on twenty-four (24) inch by thirty-six (36) inch mylar and submitted with the plans for plan check. These conditions of approval shall become part of these plan sets and the approved plans shall be available in the field during grading and construction.

Prior to Grading Plan Approval or Grading Permit

LD11. (GPA) Prior to approval of the grading plans, plans shall be drawn on twenty-four (24) inch by thirty-six (36) inch mylar and signed by a registered civil engineer and other registered/licensed professional as required.

LD12. (GPA) Prior to approval of grading plans, the developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:

- a. The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines shall be located at the top of slopes.
- b. Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.
- c. A grading permit shall be obtained from the Public Works Department Land Development Division prior to commencement of any grading outside of the City maintained road right-of-way.
- d. All improvement plans are substantially complete and appropriate clearance and at-risk letters are provided to the City. (MC 9.14.030)
- e. The developer shall submit a soils and geologic report to the Public Works Department – Land Development Division. The report shall address the soil's stability and geological conditions of the site.

LD13. (GPA) Prior to grading plan approval, the developer shall select and implement treatment control best management practices (BMPs) that are medium to highly effective for treating Pollutants of Concern (POC) for the project. Projects where National Pollution Discharge Elimination System (NPDES) mandates water quality treatment control best management practices (BMPs) shall be designed per the City of Moreno Valley guidelines or as approved by the City Engineer.

LD14. (GPA) Prior to approval of the grading plans for projects that will result in discharges of storm water associated with construction with a soil disturbance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's Identification number (WDID#) from the State Water Quality

CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 32 OF 50

Control Board (SWQCB). The WDID# shall be noted on the grading plans prior to issuance of the first grading permit.

LD15. (GPA) Prior to the grading plan approval, or issuance of a building permit, if a grading permit is not required, the Developer shall submit two (2) copies of the final project-specific Water Quality Management Plan (WQMP) for review by the City Engineer that :

- a. Addresses Site Design Best Management Practices (BMPs) such as minimizing impervious areas, maximizing permeability, minimizes directly connected impervious areas to the City's street and storm drain systems, and conserves natural areas;
- b. Incorporates Source Control BMPs and provides a detailed description of their implementation;
- c. Incorporates Treatment Control BMPs and provides information regarding design considerations;
- d. Describes the long-term operation and maintenance requirements for BMPs requiring maintenance; and
- e. Describes the mechanism for funding the long-term operation and maintenance of the BMPs.

A copy of the final WQMP template can be obtained on the City's Website or by contacting the Land Development Division of the Public Works Department.

LD16. (GPA) Prior to the grading plan approval, or issuance of a building permit, if a grading permit is not required, the Developer shall record a "Stormwater Treatment Device and Control Measure Access and Maintenance Covenant," to provide public notice of the requirement to implement the approved final project-specific WQMP and the maintenance requirements associated with the WQMP.

A boilerplate copy of the "Stormwater Treatment Device and Control Measure Access and Maintenance Covenant," can be obtained by contacting the Land Development Division of the Public Works Department

LD17. (GPA) Prior to the grading plan approval, or issuance of a building permit, if a grading permit is not required, the Developer shall secure approval of the final project-specific WQMP from the City Engineer. The final project-specific WQMP shall be submitted at the same time of grading plan submittal. The approved final WQMP shall be submitted to the Storm Water Program Manager on compact disk(s) in Microsoft Word format prior to grading plan approval.

LD18. (GPA) Prior to the grading plan approval, or issuance of a building permit as determined by the City Engineer, the approved final project-specific WQMP shall be incorporated by reference or attached to the project's Storm Water Pollution Prevention Plan as the Post-Construction Management Plan.

CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 33 OF 50

- LD19. (GPA) Prior to grading plan approval, the developer shall prepare a Storm Water Pollution Prevention Plan (SWPPP) in conformance with the state's Construction Activities Storm Water General Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request. The SWPPP shall be submitted to the Storm Water Program Manager on compact disk(s) in Microsoft Word format.
- LD20. (GPA) Prior to the approval of the grading plans, the developer shall pay applicable remaining grading plan check fees.
- LD21. (GP) Prior to issuance of a grading permit, or building permit when a grading permit is not required, for projects that require a project-specific Water Quality Management Plan (WQMP), a project-specific final WQMP (F-WQMP) shall be approved. Upon approval, a WQMP Identification Number is issued by the Storm Water Management Section and shall be noted on the rough grading plans as confirmation that a project-specific F-WQMP approval has been obtained.
- LD22. (GP) Prior to issuance of a grading permit, if the fee has not already been paid prior to map approval or prior to issuance of a building permit if a grading permit is not required, the developer shall pay Area Drainage Plan (ADP) fees. The developer shall provide a receipt to the City showing that ADP fees have been paid to Riverside County Flood Control and Water Conservation District. (MC 9.14.100)
- LD23. (GP) Prior to issuance of a grading permit, security, in the form of a cash deposit (preferable), letter of credit, or performance bond shall be required to be submitted as a guarantee of the completion of the grading required as a condition of approval of the project.
- LD24. (GP) Prior to issuance of a grading permit, the developer shall pay the applicable grading inspection fees.

Prior to Map Approval or Recordation

- LD25. (MA) Prior to approval of the map, the developer shall submit a copy of the Covenants, Conditions and Restrictions (CC&Rs) to the Land Development Division for review and approval. The CC&Rs shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project.
- LD26. (MA) Prior to approval of the map, all street dedications shall be irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer. All dedications shall be free of all encumbrances as approved by the City Engineer.
- LD27. (MA) Prior to approval of the map, security shall be required to be submitted as a guarantee of the completion of the improvements required as a condition of

**CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 34 OF 50**

approval of the project. A public improvement agreement will be required to be executed.

LD28. (MR) Prior to recordation of the map, the developer shall submit the map, on compact disks, in (.dxf) digital format to the Land Development Division of the Public Works Department.

Prior to Improvement Plan Approval or Construction Permit

LD29. (IPA) Prior to approval of the improvement plans, the improvement plans shall be drawn on twenty-four (24) inch by thirty-six (36) inch mylar and signed by a registered civil engineer and other registered/licensed professional as required.

LD30. (IPA) Prior to approval of the improvement plans, the developer shall submit clearances from all applicable agencies, and pay all outstanding plan check fees. (MC 9.14.210)

LD31. (IPA) All public improvement plans prepared and signed by a registered civil engineer in accordance with City standards, policies and requirements shall be approved by the City Engineer in order for the Public Improvement Agreement and accompanying security to be executed.

LD32. (IPA) Prior to approval of the improvement plans, securities and a public improvement agreement shall be required to be submitted and executed as a guarantee of the completion of the improvements required as a condition of approval of the project.

LD33. (IPA) The street improvement plans shall comply with all applicable City standards and the following design standards throughout this project:

- a. Corner cutbacks in conformance with City Standard 208 shall be shown on the final map or, if no map is to be recorded, offered for dedication by separate instrument.
- b. Lot access to major thoroughfares shall be restricted except at intersections and approved entrances and shall be so noted on the final map. (MC 9.14.100)
- c. The minimum centerline and flow line grades shall be one percent unless otherwise approved by the City Engineer. (MC 9.14.020)
- d. All street intersections shall be at ninety (90) degrees plus or minus five (5) degrees per City Standard No. 706A, or as approved by the City Engineer. (MC 9.14.020)

LD34. (IPA) Prior to approval of the improvement plans, the plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three years old and recently slurry

CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 35 OF 50

sealed streets less than one year old. Pavement cuts for trench repairs may be allowed for emergency repairs or as specifically approved in writing by the City Engineer.

- LD35. (IPA) Prior to approval of the improvement plans, the developer is required to bring any existing access ramps adjacent to and fronting the project to current ADA (Americans with Disabilities Act) requirements. However, when work is required in an intersection that involves or impacts existing access ramps, those access ramps in that intersection shall be retrofitted to comply with current ADA requirements, unless approved otherwise by the City Engineer.
- LD36. (IPA) Prior to approval of the improvement plans, drainage facilities with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided. (MC 9.14.110)
- LD37. (IPA) Prior to the approval of the improvement plans, the hydrology study shall show that the 10-year storm flow will be contained within the curb and the 100-year storm flow shall be contained within the street right-of-way. In addition, one lane in each direction shall not be used to carry surface flows during any storm event for street sections equal to or larger than a minor arterial. When any of these criteria is exceeded, additional drainage facilities shall be installed. (MC 9.14.110 A.2)
- LD38. (IPA) The project shall be designed to accept and properly convey all off-site drainage flowing onto or through the site. All storm drain design and improvements shall be subject to review and approval of the City Engineer. In the event that the City Engineer permits the use of streets for drainage purposes, the provisions of the Development Code will apply. Should the quantities exceed the street capacity or the use of streets be prohibited for drainage purposes, as in the case where one travel lane in each direction shall not be used for drainage conveyance for emergency vehicle access on streets classified as minor arterials and greater, the developer shall provide adequate facilities as approved by the Public Works Department – Land Development Division. (MC 9.14.110)
- LD39. (CP) All work performed within the City right-of-way requires a construction permit. As determined by the City Engineer, security may be required for work within the right-of-way. Security shall be in the form of a cash deposit or other approved means. The City Engineer may require the execution of a public improvement agreement as a condition of the issuance of the construction permit. All inspection fees shall be paid prior to issuance of construction permit. (MC 9.14.100)
- LD40. (CP) Prior to issuance of a construction permit, all public improvement plans prepared and signed by a registered civil engineer in accordance with City standards, policies and requirements shall be approved by the City Engineer.
- LD41. (CP) Prior to issuance of construction permits, the developer shall submit all improvement plans on compact disks, in (.dxf) digital format to the Land Development Division of the Public Works Department.

**CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 36 OF 50**

LD42. (CP) Prior to issuance of construction permits, the developer shall pay all applicable inspection fees.

Prior to Building Permit

LD43. (BP) Prior to issuance of a building permit, if the project involves a non-residential subdivision, the map shall be recorded.

LD44. (BP) Prior to issuance of a building permit (excluding model homes), an approval by the City Engineer is required of the water quality control basin(s). The developer shall provide certification to the line, grade, flow test and system invert elevations.

LD45. (BP) Prior to issuance of a building permit, all pads shall meet pad elevations per approved plans as noted by the setting of "Blue-top" markers installed by a registered land surveyor or licensed engineer.

LD46. (BP) Prior to issuance of a building permit, the developer shall submit for review and approval, a Waste Management Plan (WMP) that shows data of waste tonnage, supported by original or certified photocopies of receipts and weight tags or other records of measurement from recycling companies and/or landfill and disposal companies. The Waste Management Plan shall contain the following:

- a. The estimated volume or weight of project waste to be generated by material type. Project waste or debris may consist of vegetative materials including trees, tree parts, shrubs, stumps, logs, brush, or any other type of plants that are cleared from a site. Project waste may also include roadwork removal, rocks, soils, concrete and other material that normally results from land clearing.
- b. The maximum volume or weight of such materials that can be feasibly diverted via reuse and recycling.
- c. The vendor(s) that the applicant proposes to use to haul the materials.
- d. Facility(s) the materials will be hauled to, and their expected diversion rates.
- e. Estimated volume or weight of clearing, grubbing, and grading debris that will be landfilled.

Approval of the WMP requires that at least fifty (50) percent of all clearing, grubbing, and grading debris generated by the project shall be diverted, unless the developer is granted an exemption. Exemptions for diversions of less than fifty (50) percent will be reviewed on a case by case basis. (AB939, MC 8.80)

Prior to Certificate of Occupancy

LD47. (CO) Prior to issuance of the last certificate of occupancy or building final, the developer shall pay all outstanding fees.

**CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 37 OF 50**

LD48. (CO) Prior to issuance of a certificate of occupancy, this project is subject to requirements under the current permit for storm water activities required as part of the National Pollutant Discharge Elimination System (**NPDES**) as mandated by the Federal Clean Water Act. In compliance with Proposition 218, the developer shall agree to approve the City of Moreno Valley NPDES Regulatory Rate Schedule that is in place at the time of certificate of occupancy issuance. Following are the requirements:

- a. Select one of the following options to meet the financial responsibility to provide storm water utilities services for the required continuous operation, maintenance, monitoring system evaluations and enhancements, remediation and/or replacement, all in accordance with Resolution No. 2002-46.
 - i. Participate in the mail ballot proceeding in compliance with Proposition 218, for the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule and pay all associated costs with the ballot process; or
 - ii. Establish an endowment to cover future City costs as specified in the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule.
- b. Notify the Special Districts Division of the intent to request building permits 90 days prior to their issuance and the financial option selected. The financial option selected shall be in place prior to the issuance of certificate of occupancy. (California Government Code & Municipal Code)

LD49. (CO) The City of Moreno Valley has an adopted Development Impact Fee (DIF) nexus study. All projects unless otherwise exempted shall be subject to the payment of the DIF prior to issuance of occupancy. The fees are subject to the provisions of the enabling ordinance and the fee schedule in effect at the time of occupancy.

LD50. (CO) The City of Moreno Valley has an adopted area wide Transportation Uniform Mitigation Fee (TUMF). All projects unless otherwise exempted shall be subject to the payment of the TUMF prior to issuance of occupancy. The fees are subject to the provisions of the enabling ordinance and the fee schedule in effect at the time of occupancy.

LD51. (CO) Prior to issuance of a certificate of occupancy or building final, the developer shall construct all public improvements in conformance with applicable City standards, except as noted in the Special Conditions, including but not limited to the following applicable improvements:

- a. Street improvements including, but not limited to: pavement, base, curb and/or gutter, cross gutters, spandrel, sidewalks, drive approaches, pedestrian ramps, street lights, signing, striping, under sidewalk drains,

**CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 38 OF 50**

landscaping and irrigation, medians, redwood header boards, pavement tapers/transitions and traffic control devices as appropriate.

- b. Storm drain facilities including, but not limited to: storm drain pipe, storm drain laterals, open channels, catch basins and local depressions.
- c. City-owned utilities.
- d. Sewer and water systems including, but not limited to: sanitary sewer, potable water and recycled water.
- e. Under grounding of existing and proposed utility lines less than 115,000 volts.
- f. Relocation of overhead electrical utility lines including, but not limited to: electrical, cable and telephone.

LD52. (CO) Prior to issuance of a certificate of occupancy or building final, all existing and new utilities adjacent to and on-site shall be placed underground in accordance with City of Moreno Valley ordinances. (MC 9.14.130)

LD53. (CO) Prior to issuance of a certificate of occupancy or building final for any Commercial/Industrial facility, whichever occurs first, the owner may have to secure coverage under the State's General Industrial Activities Storm Water Permit as issued by the State Water Resources Control Board.

SPECIAL CONDITIONS

LD54. Prior to parcel map approval, the map shall show the following:

- a. **A 4-foot minimum pedestrian right-of-way dedication behind any driveway approach per City Standard 118C, on Perris Boulevard, Indian Street, and Grove View Road.**
- b. **A 2-foot public access easement for the portions of sidewalk which are outside of the public right-of-way, along Perris Boulevard and Indian Street.**
- c. **The appropriate additional right-of-way required for a bus turn-out on Perris Boulevard as depicted on the approved project plans and as conditioned by the City's Transportation Department.**
- d. **Corner cutback right-of-way dedications per City Standard 208 at the southeast corner of Indian Street and Grove View Road and the southwest corner of Perris Boulevard and Grove View Road.**

LD55. Prior to parcel map approval, the Developer shall guarantee the construction of the following improvements by entering into a public improvement agreement and posting security. The improvements shall be completed prior to occupancy of the first building or as otherwise determined by the City Engineer.

- a. Perris Boulevard, Divided Arterial, City Standard 103C (110-foot RW / 86-foot CC) shall be constructed to half-width plus an additional 18 feet east of the centerline, along the entire project's east frontage. Additional right-of-way dedications at driveway approaches as well as a 2-foot pedestrian access easement, along the project's west property line, shall be shown on the parcel map. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, drainage structures, any necessary offsite improvement transition/joins to existing, streetlights, pedestrian ramps, removal/relocation and/or undergrounding of any power poles with overhead utility lines less than 115,000 volts, and dry and wet utilities.**
- b. Indian Street, Minor Arterial, Modified City Standard 105A (88-foot RW / 64-foot CC) shall be constructed to half-width plus an additional 18 feet west of the centerline, along the entire project's east frontage. Additional right-of-way dedications at driveway approaches as well as a 2-foot pedestrian access easement, along the project's west property line, shall be shown on the parcel map. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, drainage structures, streetlights, pedestrian ramps, removal/relocation and/or undergrounding of any power poles with overhead utility lines less than 115,000 volts, and dry and wet utilities.**
- c. Grove View Road, Industrial Collector, City Standard 106 (78-foot RW / 56-foot CC) shall be constructed to half-width plus an additional 18 feet north of the centerline, along the entire project's north frontage. Additional right-of-way dedications at driveway approaches along the project's north property line, shall be shown on the parcel map.. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, drainage structures, any necessary offsite, streetlights, pedestrian ramps, dry and wet utilities.**
- d. Driveway approaches shall be constructed per City Standard No. 118C or as modified as shown on the project plans. The parcel map shall show an additional 4-foot minimum right-of-way dedication behind driveway approaches. No decorative pavers shall be placed within the public right-of-way. Certain project entrance(s) may be required to be constructed as a public street intersection.**
- e. Pavement core samples of existing pavement may be taken and findings submitted to the City for review and consideration of pavement**

improvements. The City will determine the adequacy of the existing pavement structural section. If the existing pavement structural section is found to be adequate, the developer may still be required to perform a one-tenth inch grind and overlay or slurry seal depending on the severity of existing pavement cracking, as required by the City Engineer. If the existing pavement section is found to be inadequate, the Developer shall replace the pavement to meet or exceed the City's pavement structural section standard.

- LD56.** Prior to precise grading plan or improvement plan approval, as applicable, the plans shall show all driveway approaches to be constructed per City Standard Plan 118C modified, as accepted by the City. There shall be 4-foot minimum wide pedestrian sidewalk area at 2% maximum behind the conventional right-of-way. A minimum 4-foot pedestrian right-of-way dedication shall be made on the final parcel map PM 35672.
- LD57.** Prior to precise grading plan approval, the grading plan shall show any proposed trash enclosure as dual bin; one bin for trash and one bin for recyclables. The trash enclosure shall be per City Standard Plan 627.
- LD58.** Prior to precise grading plan approval, the grading plan shall show that the lowest finished floor elevation is a minimum of one foot above the base flood elevation.
- LD59.** Prior to precise grading plan approval, the grading plans shall clearly show that the parking lot conforms to City standards. The parking lot shall be 5% maximum, 1% minimum, 2% maximum at or near any disabled parking stall and travel way. Ramps, curb openings and travel paths shall all conform to current ADA standards as outlined in Department of Justice's "ADA Standards for Accessible Design", Excerpt from 28 CFR Part 36. (www.usdoj.gov) and as approved by the City's Building and Safety Division.
- LD60.** Prior to occupancy, the developer shall obtain an encroachment permit from Riverside County Flood Control & Water Conservation District in order to connect proposed onsite storm drain to the Perris Valley Channel Lateral B.
- LD61.** Prior to occupancy, the developer shall make a good faith effort to cause Riverside County Flood Control & Water Conservation District to dedicate additional public street right-of-way on Indian Street and Perris Boulevard along their property frontage between the project's south property line and the bridges.
- LD62.** Prior to occupancy, all overhead utility lines less than 115,000 volts fronting or within the entire project site boundary shall be placed underground per Section 9.14.130C of the City Municipal Code.

- LD63. The Applicant shall select and implement treatment control BMPs that are medium to highly effective for treating Pollutants of Concern (POC) for the project. POC include project pollutants associated with a 303(d) listing or a Total Maximum Daily Load (TMDL) for receiving waters. Project POC include sediment/turbidity, nutrients, oxygen demanding substances, and pathogens (bacteria and viruses). Exhibit C of the document, "Riverside County Water Quality Management Plan for Urban Runoff" dated July 24, 2006 shall be consulted for determining the effectiveness of proposed treatment BMPs.
- LD64. Overall, the proposed treatment control concept is accepted as the conceptual treatment control BMP for the proposed site.
- LD65. The Applicant has proposed to incorporate the use of vegetated swales, hydrodynamic separators, and sand filters. Final design details of the treatment control BMPs must be provided in the first submittal of the F-WQMP. The size of the treatment control BMPs is to be determined using the procedures set forth in Exhibit C of the Riverside County Guidance Document. The Applicant acknowledges that more area than currently shown on the plans may be required to treat site runoff as required by the WQMP guidance.
- LD66. The Applicant shall substantiate the applicable Hydrologic Condition of Concern (HCOC) (WQMP Section IV) in the F-WQMP. The HCOC designates that the project will comply with Condition A; therefore, the condition must be addressed in the F-WQMP.
- LD67. The Applicant shall, prior to building or grading permit closeout or the issuance of a certificate of occupancy, demonstrate:
- a. That all structural BMPs have been constructed and installed in conformance with the approved plans and specifications;
 - b. That all structural BMPs described in the F-WQMP have been implemented in accordance with approved plans and specifications;
 - c. That the Applicant is prepared to implement all non-structural BMPs included in the F-WQMP, conditions of approval, and building/grading permit conditions; and
 - d. That an adequate number of copies of the approved F-WQMP are available for the future owners/occupants of the project.

PUBLIC WORKS DEPARTMENT – SPECIAL DISTRICTS DIVISION

Note: All Special Conditions, Modified Conditions, or Clarification of Conditions are in bold lettering. All other conditions are standard to all or most development projects.

Acknowledgement of Conditions

The following items are Special Districts' Conditions of Approval for project **PA09-0004**; this project shall be completed at no cost to any Government Agency. All questions regarding Special Districts' Conditions including but not limited to, intent, requests for change/modification, variance and/or request for extension of time shall be sought from the Special Districts Division of the Public Works Department 951.413.3480. The applicant is fully responsible for communicating with each designated Special Districts staff member regarding their conditions.

General Conditions

- SD1. The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services Districts Zones A (Parks & Community Services) and C (Arterial Street Lighting). All assessable parcels therein shall be subject to annual Zone A and Zone C charges for operations and capital improvements.
- SD2. Plans for parkway, median, slope, and/or open space landscape areas designated on the tentative map or in these Conditions of Approval for incorporation into Moreno Valley Community Services District **Zone M**, shall be prepared and submitted in accordance with the *City of Moreno Valley Public Works Department Landscape Design Guidelines*. Contact the Special Districts Division of the Public Works Department to obtain copies of this document.
- SD3. The developer, or the developer's successors or assignees shall be responsible for all parkway and/ or median landscaping maintenance until such time as the District accepts maintenance duties.
- SD4. Any damage to existing landscape easement areas due to project construction shall be repaired/replaced by the developer, or developer's successors in interest, at no cost to the Moreno Valley Community Services District.

Prior to Building Permit Issuance

- SD5. (BP) This project has been identified to be included in the formation of a Community Facilities District (Mello-Roos) for **Public Safety** services, including but not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. The property owner(s) shall not protest the formation; however, they retain the right to object to the rate and method of maximum special tax. In compliance with Proposition 218, the developer shall agree to approve the mail ballot proceeding (special election) for either formation of the CFD or annexation into an existing district that may already be established. The Developer must notify

CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 43 OF 50

Special Districts of intent to request building permits 90 days prior to their issuance.
(California Government Code)

- SD6. (BP) This project is conditioned to provide a funding source for the capital improvements and/or maintenance for the **Perris Blvd.** median landscape. In order for the Developer to meet the financial responsibility to maintain the defined service, one of the following options shall be selected:
- a. Participate in the mail ballot proceeding in compliance with Proposition 218, for Moreno Valley Community Services District **Zone M** (Commercial, Industrial and Multifamily Improved Median Maintenance), and pay all associated costs with the ballot process; or
 - b. Establish an endowment to cover the future maintenance costs of the landscaped area.

The developer must notify Special Districts of intent to request building permits 90 days prior to their issuance and the financial option selected to fund the continued maintenance.

- SD7. *Commercial* (BP) If Land Development, a Division of the Public Works Department, requires this project to supply a funding source necessary to provide, but not limited to, stormwater utilities services for the monitoring of on site facilities and performing annual inspections of the affected areas to ensure compliance with state mandated stormwater regulations, the developer must notify Special Districts 90 days prior to the City's issuance of a building permit and the financial option selected to fund the continued maintenance. (California Government Code)
- SD8. (BP) Prior to release of building permit, the developer, or the developer's successors or assignees, shall record with the County Recorder's Office a **Declaration of Covenant and Acknowledgement of Assessments** for each assessable parcel therein, whereby the developer covenants and acknowledges the existence of the Moreno Valley Community Services District, its established benefit zones, and that said parcel(s) is (are) liable for payment of annual benefit zone charges and the appropriate National Pollutant Discharge Elimination System (NPDES) maximum regulatory rate schedule when due. A copy of the recorded Declaration of Covenant and Acknowledgement of Assessments shall be submitted to the Special Districts Division.

**For a copy of the Declaration of Covenant and Acknowledgement of the Assessments form, please contact Special Districts, phone 951.413.3480.

- SD9. (BP) Final median, parkway, slope, and/or open space landscape/irrigation plans for those areas designated on the tentative map or in these Conditions of Approval for inclusion into Community Services District shall be reviewed and approved by the Community Development Department–Planning Division, and the Public Works

**CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 44 OF 50**

Department–Special Districts and Transportation Divisions prior to the issuance of the first Building Permit.

Prior to Certificate of Occupancy

SD10. (CO) Prior to issuance of a Certificate of Occupancy or building final, the developer shall submit a letter to Special Districts from the Utility service responsible for providing final electrical energy connections and energization of the streetlights for the development project. The letter must identify, by pole number, each streetlight in the development and state the corresponding date of its electrical energization.

SD11. (CO) All parkway and/or median landscaping specified in the tentative map or in these Conditions of Approval shall be constructed prior to the issuance of the Certificate of Occupancy/Building Final for this project.

SD12. (CO) Prior to the issuance of the first Certificate of Occupancy or building final for this project, the developer shall pay Advanced Energy fees for all applicable Zone B (Residential Street Lighting) and/or Zone C (Arterial Street Lighting and Intersection Lighting) streetlights required for this development. The developer shall provide a receipt to the Special Districts Division showing that the Advanced Energy fees have been paid in full for the number of streetlights to be accepted into the CSD Zone B and/or Zone C program. Payment shall be made to the City of Moreno Valley, as collected by the Land Development Division, based upon the Advanced Energy fee rate at the time of payment and as set forth in the current Listing of City Fees, Charges and Rates, as adopted by City Council. Any change in the project which may increase the number of streetlights to be installed will require payment of additional Advanced Energy fees at the then current fee.

PUBLIC WORKS DEPARTMENT – TRANSPORTATION ENGINEERING DIVISION

Note: All Special conditions are in bold lettering. All other conditions are standard to all or most development projects.

Based on the information contained in our standard review process we recommend the following conditions of approval be placed on this project:

GENERAL CONDITIONS

TE1. Conditions of approval may be modified if project is phased or altered from any approved plans.

TE2. Perris Boulevard is classified as a Divided Arterial (110’RW/86’CC) per City Standard Plan No. 103C. The sidewalk shall be curb-separated. Any modifications or improvements undertaken by this project shall be consistent with the City’s standards for this facility.

**CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 45 OF 50**

- TE3. Indian Street is designated as a Minor Arterial (88'RW/64'CC) per City Standard Plan No. 105A. Any modifications or improvements undertaken by this project shall be consistent with the City's standards for this facility.**
- TE4. Grove View Road is designated as an Industrial Collector (78'RW/56'CC) per City Standard Plan No. 106. Any modifications or improvements undertaken by this project shall be consistent with the City's standards for this facility.**

PRIOR TO GRADING PERMIT

- TE5. (GP) Prior to issuance of a grading permit, the project applicant shall submit conceptual striping plans for improvements identified in condition TE11 as well as Indian Street for the City Traffic Engineer's approval.**

PRIOR TO IMPROVEMENT PLAN APPROVAL OR CONSTRUCTION PERMIT

- TE6. The driveways less than 40 feet in width shall conform to Section 9.16.250, and Table 9.16.250A of the City's Development Code - Design Guidelines, and City Standard Plan No. 118C. Driveways wider than 40' shall be designed as intersections with pedestrian access ramps per City standards.**
- TE7. Sight distance at driveways and on streets shall conform to City of Moreno Valley Standard No. 125A, B, C at the time of preparation of final grading, landscape, and street improvements.**
- TE8. Prior to the final approval of the street improvement plans, a signing and striping plan shall be prepared per City of Moreno Valley Standard Plans - Section 4 for all streets with a cross section of 66'/44' and wider.**
- TE9. Prior to issuance of a construction permit, construction traffic control plans prepared by a qualified, Registered Civil or Traffic engineer may be required.**
- TE10. Prior to the final approval of the street improvement plans, the project applicant shall design Perris Boulevard to include a bus bay per City Standard Plan No. 121 in the southbound direction, south of Grove View Road. The bus bay may be designed to serve as a combination right turn lane/bus bay to the satisfaction of the City Engineer.**
- TE11. Prior to the final approval of the street improvement plans, the project applicant shall design the intersection/traffic signal at Perris Boulevard and the South Project Driveway to provide the following (at a minimum):**

**Northbound: One left turn lane, one shared through/right turn lane
Southbound: One left turn lane, one through lane, one right turn lane
Eastbound: One left turn lane, one shared through/right turn lane
Westbound: One left turn lane, one shared through/right turn lane**

NOTE: The curb return radii on the northwest/southwest corners shall be 50 feet.

TE12. Prior to the final approval of the street improvement plans, the project applicant shall design and modify the intersection of Perris Boulevard at Grove View Road to include a 200' northbound left turn lane with raised median. This modification may include relocation of the traffic detector loops and other traffic signal modifications.

PRIOR TO BUILDING PERMIT

TE13. (BP) Prior to issuance of a building permit, traffic signal plans shall be prepared by a registered civil or electrical engineer and shall be submitted to the City Traffic Engineer for the following intersections:

- **Perris Boulevard at South Project Driveway (signal modifications).**
- **Perris Boulevard at Grove View Road (signal modifications).**

TE14. (BP) Prior to issuance of a building permit, the project applicant shall make a fair-share contribution in the amount of \$45,150 to the City of Moreno Valley for the construction of a traffic signal at Perris Boulevard and Suburban Lane. As this traffic signal is not in any existing fee program, payment of DIF and/or TUMF are not considered satisfaction of this obligation.

PRIOR TO CERTIFICATE OF OCCUPANCY OR BUILDING FINAL

TE15. (CO) Prior to issuance of a certificate of occupancy, all approved signing and striping shall be installed per current City Standards and the approved plans.

TE16. (CO) Each gated entrance shall be provided with the following, or as approved by the City Traffic Engineer:

- a) **A storage lane with a minimum of 75 feet queuing length for entering traffic.**
- b) **Appropriate signing and striping.**

All of these features must be kept in working order.

TE17. (CO) Prior to the issuance of a certificate of occupancy, the project applicant shall construct the traffic signal modifications identified in TE13. Construction shall be completed per the approved plans and coordinated with the street improvements.

TE18. (CO) Prior to issuance of a certificate of occupancy, the project applicant shall construct the intersection/roadway improvements identified in TE10, TE11, and TE12 per the approved plans.

TE19. (CO) Prior to the issuance of a certificate of occupancy for the project, driveway access at the following locations will be installed as follows:

- **North Perris Boulevard Driveway: Right-in, right-out access by means of a raised median.**
- **South Perris Boulevard Driveway: Full access by means of a traffic signal.**
- **Grove View Road Driveways: Full access.**
- **Indian Street Driveways: Full access.**

NOTE: All truck driveways shall have curb return radii of 50 feet.

PRIOR TO ACCEPTANCE OF STREETS INTO THE CITY-MAINTAINED ROAD SYSTEM

TE20. Prior to the acceptance of streets into the City-maintained road system, all approved traffic control and signing and striping shall be installed per current City Standards and the approved plans.

PUBLIC WORKS DEPARTMENT – MORENO VALLEY UTILITY

Note: All Special Conditions, Modified Conditions, or Clarification of Conditions are in bold lettering. All other conditions are standard to all or most development projects.

Acknowledgement of Conditions

The following items are Moreno Valley Utility's Conditions of Approval for project(s) PA09-0004 & PA09-0012; this project shall be completed at no cost to any Government Agency. All questions regarding Moreno Valley Utility's Conditions including but not limited to, intent, requests for change/modification, variance and/or request for extension of time shall be sought from Moreno Valley Utility (the Electric Utility Division) of the Public Works Department 951.413.3512. The applicant is fully responsible for communicating with Moreno Valley Utility staff regarding their conditions.

PRIOR TO RECORDATION OF FINAL MAP

MVU1. (R) For single family subdivisions, a three foot easement along each side yard property line shall be shown on the final map and offered for dedication to the City of Moreno Valley for public utility purposes, unless otherwise approved by the City Engineer. If the project is a multi-family development, townhome, condominium, apartment, commercial or industrial project, and it requires the installation of electric distribution facilities within common areas, a non-exclusive easement shall be provided to Moreno Valley Utility to include all such common areas. All easements shall include the rights of ingress and egress for the purpose of operation, maintenance, facility repair, and meter reading.

PRIOR TO ISSUANCE OF BUILDING PERMIT

- MVU2. (BP) **City of Moreno Valley Municipal Utility Service – Electrical Distribution:**
Prior to issuance of building permit, the developer shall submit a detailed engineering plan showing design, location and schematics for the utility system to be approved by the City Engineer. In accordance with Government Code Section 66462, the Developer **shall** execute an agreement with the City providing for the installation, construction, improvement and dedication of the utility system following recordation of final map and concurrent with trenching operations and other subdivision improvements so long as said agreement incorporates the approved engineering plan and provides financial security to guarantee completion and dedication of the utility system.

The Developer **shall** coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to the City, or the City's designee, all utility infrastructure (including but not limited to conduit, equipment, vaults, ducts, wires, switches, conductors, transformers, resistors, amplifiers, and "bring-up" facilities including electrical capacity to serve the identified development and other adjoining/abutting/ or benefiting projects as determined by Moreno Valley Utility) – collectively referred to as "utility system" (to and through the development), along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and /or delivery of any and all "utility services" to each lot and unit within the Tentative Map. For purposes of this condition, "utility services" shall mean electric, cable television, telecommunication (including video, voice, and data) and other similar services designated by the City Engineer. "Utility services" shall not include sewer, water, and natural gas services, which are addressed by other conditions of approval. Properties within development will be subject to an electrical system capacity charge and that contribution will be collected prior to issuance of building permits.

The City, or the City's designee, shall utilize dedicated utility facilities to ensure safe, reliable, sustainable and cost effective delivery of utility services and maintain the integrity of streets and other public infrastructure. Developer shall, at developer's sole expense, install or cause the installation of such interconnection facilities as may be necessary to connect the electrical distribution infrastructure within the project to the Moreno Valley Utility owned and controlled electric distribution system. Alternatively, developer may cause the project to be included in or annexed to a community facilities district established or to be established by the City for the purpose of financing the installation of such interconnection and distribution facilities. The project shall be deemed to have been included in or annexed to such a community facilities district upon the expiration of the statute of limitations to any legal challenges to the levy of special taxes by such community facilities district within the property. The statute of limitations referred to above will expire 30 days after the date of the election by the qualified electors within the project to authorize the levy of special taxes and the issuance of bonds.

**CONDITIONS OF APPROVAL
PLOT PLAN PA09-0004
PAGE 49 OF 50**

MVU3. This Project is subject to a Reimbursement Agreement. The Project is responsible for a proportionate share of costs associated with electrical distribution infrastructure previously installed that directly benefits the Project. The developer shall be responsible to pay to the City of Moreno Valley the sum of **\$423,150.00** for this electrical distribution infrastructure prior to the issuance of building permits.

POLICE DEPARTMENT

Note: All Special conditions are in bold lettering. All other conditions are standard to all or most development projects

Standard Conditions

- PD1. Prior to the start of any construction, temporary security fencing shall be erected. The fencing shall be a minimum of six (6) feet high with locking, gated access and shall remain through the duration of construction. Security fencing is required if there is: construction, unsecured structures, unenclosed storage of materials and/or equipment, and/or the condition of the site constitutes a public hazard as determined by the Public Works Department. If security fencing is required, it shall remain in place until the project is completed or the above conditions no longer exist. (MC 9.08.080)
- PD2. (GP) Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following:
- a. The name (if applicable) and address of the development.
 - b. The developer's name, address, and a 24-hour emergency telephone number. (MC 9.08.080)
- PD3. (CO) Prior to the issuance of a Certificate of Occupancy, an Emergency Contact Information Form for the project shall be completed at the permit counter of the Community & Economic Development Department - Building Division for routing to the Police Department. (MC 9.08.080)

TENTATIVE PARCEL MAP NO. 36162
PAGE 2 OF 34**

- P5. This tentative map shall expire three years after the approval date of this tentative map unless extended as provided by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever in the event the applicant or any successor in interest fails to properly file a final map before the date of expiration. (MC 9.02.230, 9.14.050, 080)
- P6. The site shall be developed in accordance with the approved tentative map on file in the Community & Economic Development Department -Planning Division, the Municipal Code regulations, General Plan, the Moreno Valley Industrial Area Plan and the conditions contained herein. (MC 9.14.020)
- P7. All undeveloped portions of the site shall be maintained in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)
- P8. All landscaped areas shall be maintained in a healthy and thriving condition, free from weeds, trash and debris. (MC 9.02.030)

Prior to Issuance of Grading Permits

- P9. (GP) Prior to issuance of grading permits, the developer shall pay the applicable Stephen's' Kangaroo Rat (SKR) Habitat Conservation Plan mitigation fee. (Ord)
- P10. (GP) All site plans, grading plans, landscape and irrigation plans, fence/wall plans, lighting plans and street improvement plans shall be coordinated for consistency with this approval.
- P11. (GP) If potential historic, archaeological, or paleontological resources are uncovered during excavation or construction activities at the project site, work in the affected area will cease immediately and a qualified person (meeting the Secretary of the Interior's standards (36CFR61)) shall be consulted by the applicant to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, prehistoric, or paleontological resource. Determinations and recommendations by the consultant shall be implemented as deemed appropriate by the Community Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all affected Native American Tribes before any further work commences in the affected area.

If human remains are discovered, work in the affected area shall cease immediately and the County Coroner shall be notified. If it is determined that the remains are potentially Native American, the California Native American Heritage Commission and any and all affected Native American Indians tribes such as the Morongo Band of Mission Indians or the Pechanga Band of Luiseno Indians shall be notified and appropriate measures provided by State law shall be implemented. (GP Objective 23.3, DG, CEQA).

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 3 OF 34**

- P12. (GP) Prior to the issuance of grading permits, final erosion control landscape and irrigation plans for all cut or fill slopes over 3 feet in height shall be submitted to the Planning Division for review and approval for the phase in process. This shall include slopes associated with swales and basins. The plans shall be designed in accordance with the slope erosion plan as required by the City Engineer for that phase. Man-made slopes greater than 10 feet in height shall be "land formed" to conform to the natural terrain and shall be landscaped and stabilized to minimize visual scarring. Graded slopes shall have variations that do not exceed 2:1 (GP Objective 1.5, MC 9.08.080, DG)
- P13. (GP) Prior to approval of any grading permits, any required final median enhancement/landscape/irrigation plans shall be submitted to the Community Development Department - Planning Division and Public Works Department – Special Districts for review and approval by each division. Timing of installation shall be determined by PW- Special Districts. (GP - Circulation Master Plan)**
- P14. (GP) Prior to the issuance of a precise grading permit, the plan shall show decorative treatments for all driveway ingress/egress locations of the project. Accessible pedestrian pathways interior to the site cannot be painted. If delineation is necessary, then an alternative material is required.
- P15. (GP) Prior to the issuance of a precise grading permit, all required planter areas, curbs, including twelve-inch concrete step outs, and required parking space striping shall be shown on the precise grading plan.
- P16. (GP) Prior to the issuance of any grading permits, the following burrowing owl survey requirements shall be incorporated into the grading plans in accordance with the Riverside County Multi-Species Habitat Conservation Plan: Within 30 days of and prior to disturbance, a burrowing owl pre-construction survey shall be conducted by a qualified biologist using accepted protocols. The survey shall be submitted to the Planning Division for review and approval.

Prior to Recordation of Final Map

- P17. (R) Prior to final map recordation, subdivision phasing (including any proposed common open space or improvement phasing, if applicable), shall be subject to the Planning Division approval. Any proposed phasing shall provide for adequate vehicular access to all lots in each phase as determined by the City Transportation Engineer or designee and shall substantially conform to all intent and purpose of the subdivision approval. (MC 9.14.080)

Building and Safety Division

- B1. The above project shall comply with the current California Codes (CBC, CEC, CMC and the CPC) as well as all other city ordinances. All new projects shall provide a soils report. Plans shall be submitted to the Building Department as a separate submittal.

COMMERCIAL, INDUSTRIAL, MULTI-FAMILY PROJECTS INCLUDING CONDOMINIUMS, TOWNHOMES, DUPLEXES AND TRIPLEX BUILDINGS REQUIRE THE FOLLOWING:

Prior to final inspection, all plans will be placed on a CD Rom for reference and verification. Plans will include "as built" plans, revisions and changes. The CD will also include Title 24 energy calculations, structural calculations and all other pertinent information. It will be the responsibility of the developer and or the building or property owner(s) to bear all costs required for this process. The CD will be presented to the Building Department for review prior to final inspection and building occupancy. The CD will become the property of the Moreno Valley Building Department at that time. In addition, a site plan showing the path of travel from public right of way and building to building access with elevations will be required.

- B2. (BP) Prior to the issuance of a building permit, the applicant shall submit a properly completed "Waste Management Plan" (WMP), as required, to the Compliance Official (Building Official) as a portion of the building or demolition permit process.

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 5 OF 34**

FIRE PREVENTION BUREAU

1. **Please complete and return attached fire flow letter.**
2. The following Standard Conditions shall apply.

With respect to the conditions of approval, the following fire protection measures shall be provided in accordance with Moreno Valley City Ordinances and/or recognized fire protection standards:

- F1. Final fire and life safety conditions will be addressed when the Fire Prevention Bureau reviews building plans. These conditions will be based on occupancy, use, California Building Code (CBC), California Fire Code (CFC), and related codes, which are in force at the time of building plan submittal.
- F2. The Fire Prevention Bureau is required to set a minimum fire flow for the remodel or construction of all commercial buildings per CFC Appendix B and Table B105.1. The applicant/developer shall provide documentation to show there exists a water system capable of delivering 4000 GPM for 4 hour(s) duration at 20-PSI residual operating pressure. The required fire flow may be adjusted during the approval process to reflect changes in design, construction type, or automatic fire protection measures as approved by the Fire Prevention Bureau. Specific requirements for the project will be determined at time of submittal. (CFC 508.3, Appendix B and MVMC 8.36.100 Section D) **The 50% reduction in fire flow was granted for the use of fire sprinklers throughout the facility. The reduction shall only apply to fire flow, hydrant spacing shall be per the fire flow requirements listed in CFC Appendix B and C.**
- F3. Industrial, Commercial, Multi-family, Apartment, Condominium, Townhouse or Mobile Home Parks. A combination of on-site and off-site super enhanced fire hydrants (6" x 4" x 4" x 2 1/2") shall not be closer than 40 feet and more than 150 feet from any portion of the building as measured along approved emergency vehicular travel ways. The required fire flow shall be available from any adjacent fire hydrant(s) in the system. Where new water mains are extended along streets where hydrants are not needed for protection of structures or similar fire problems, super or enhanced fire hydrants as determined by the fire code official shall be provided at spacing not to exceed 500 feet of frontage for transportation hazards. (CFC 508.5.7 & MVMC 8.36.050 Section O and 8.36.100 Section E)
- F4. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.1 and 503.2.5)

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 6 OF 34**

- F5. Prior to issuance of Building Permits, the applicant/developer shall provide the Fire Prevention Bureau with an approved site plan for Fire Lanes and signage. (MVMC 8.36.050 and CFC 501.3)
- F6. Prior to construction and issuance of building permits, all locations where structures are to be built shall have an approved Fire Department emergency vehicular access road (all weather surface) capable of sustaining an imposed load of 80,000 lbs. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4 and MVMC 8.36.050 Section A)
- F7. Prior to construction and issuance of Building Permits, fire lanes and fire apparatus access roads shall have an unobstructed width of not less than twenty-four (24) or thirty (30) feet as approved by the Fire Prevention Bureau and an unobstructed vertical clearance of not less the thirteen (13) feet six (6) inches. (CFC 503.2.1.1 and MVMC 8.36.050)
- F8. Prior to construction, all roads, driveways and private roads shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.050)
- F9. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4 and MVMC 8.36.050 Section A)
- F10. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.3 and MVMC 8.36.050)
- F11. Prior to building construction, dead end roadways and streets which have not been completed shall have a turnaround capable of accommodating fire apparatus. (CFC 503.2.5 and MVMC 8.36.050)
- F12. Prior to issuance of Building Permits, the applicant/developer shall participate in the Fire Impact Mitigation Program. (Fee Resolution as adopted by City Council)
- F13. Prior to issuance of Building Permits, the applicant/developer shall furnish one copy of the water system plans to the Fire Prevention Bureau for review. Plans shall:
 - a) Be signed by a registered civil engineer or a certified fire protection engineer;
 - b) Contain a Fire Prevention Bureau approval signature block; and
 - c) Conform to hydrant type, location, spacing of new and existing hydrants and minimum fire flow required as determined by the Fire Prevention Bureau.

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 7 OF 34**

After the local water company signs the plans, the originals shall be presented to the Fire Prevention Bureau for signatures. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

Existing fire hydrants on public streets are allowed to be considered available. Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are established to prevent obstruction of such roads. (CFC 508.1 and MVMC 8.36.100)

- F14. Prior to issuance of Certificate of Occupancy or Building Final, "Blue Reflective Markers" shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 510.1)
- F15. Prior to issuance of Certificate of Occupancy or Building Final, all commercial buildings shall display street numbers in a prominent location on the street side and rear access locations. The numerals shall be a minimum of twelve (12) inches in height for buildings and six (6) inches in height for suite identification on a contrasting background. Unobstructed lighting of the address(s) shall be by means approved by the Fire Prevention Bureau and Police Department. In multiple suite centers (strip malls), businesses shall post the name of the business on the rear door(s). (CFC 505.1)
- F16. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9)
- F17. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire alarm system monitored by an approved Underwriters Laboratory listed central station based on a requirement for monitoring the sprinkler system, occupancy or use. Fire alarm panel shall be accessible from exterior of building in an approved location. Plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9 and MVMC 8.36.070)
- F18. Prior to issuance of a Certificate of Occupancy or Building Final, a "Knox Box Rapid Entry System" shall be provided. The Knox-Box shall be installed in an accessible location approved by the Fire Chief. The Knox-Box shall be supervised by the alarm system and all exterior security emergency access gates shall be

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 8 OF 34**

electronically operated and be provided with Knox key switches for access by emergency personnel. (CFC 506.1)

- F19. Prior to issuance of Certificate of Occupancy, approval shall be required from the County of Riverside Community Health Agency (Department of Environmental Health) and Moreno Valley Fire Prevention Bureau to maintain, store, use, handle materials, or conduct processes which produce conditions hazardous to life or property, and to install equipment used in connection with such activities. (CFC 2701.5)
- F20. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer must submit a simple plot plan, a simple floor plan, and other plans as requested, each as an electronic file in .dwg format, to the Fire Prevention Bureau. Alternate file formats may be acceptable with approval by the Fire Chief.
- F21. The angle of approach and departure for any means of Fire Department access shall not exceed 1 ft drop in 20 ft (0.3 m drop in 6 m), and the design limitations of the fire apparatus of the Fire Department shall be subject to approval by the AHJ. (CFC 503.2.7 and MVMC 8.36.050 Section I)
- F22. Prior to issuance of the building permit for development, independent paved access to the nearest paved road, maintained by the City shall be designed and constructed by the developer within the public right of way in accordance with City Standards. (MVMC 8.36.050)
- F23. Prior to construction, "private" driveways over 150 feet in length shall have a turn-around as determined by the Fire Prevention Bureau capable of accommodating fire apparatus. Driveway grades shall not exceed 12 percent. (CFC 503 and MVMC 8.36.050)
- F24. Complete plans and specifications for fire alarm systems, fire-extinguishing systems (including automatic sprinklers or standpipe systems), clean agent systems (or other special types of automatic fire-extinguishing systems), as well as other fire-protection systems and appurtenances thereto shall be submitted to the Moreno Valley Fire Prevention Bureau for review and approval prior to system installation. Submittals shall be in accordance with CFC Chapter 9 and associated accepted national standards.
- F25. A permit is required to maintain, store, use or handle materials, or to conduct processes which produce conditions hazardous to life or property, or to install equipment used in connection with such activities. Such permits shall not be construed as authority to violate, cancel or set aside any of the provisions of this code. Such permit shall not take the place of any license required by law. Applications for permits shall be made to the Fire Prevention Bureau in such form and detail as prescribed by the Bureau. Applications for permits shall be

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 9 OF 34**

accompanied by such plans as required by the Bureau. Permits shall be kept on the premises designated therein at all times and shall be posted in a conspicuous location on the premises or shall be kept on the premises in a location designated by the Fire Chief. Permits shall be subject to inspection at all times by an officer of the fire department or other persons authorized by the Fire Chief in accordance with Appendix Chapter 1 and MVMC 8.36.100.

- F26. Approval of the safety precautions required for buildings being constructed, altered or demolished shall be required by the Fire Chief in addition to other approvals required for specific operations or processes associated with such construction, alteration or demolition. (CFC Chapter 14 & CBC Chapter 33)
- F27. Prior to issuance of Certificate of Occupancy, permits are required to store, dispense, use or handle hazardous material. Each application for a permit shall include a hazardous materials management plan (HMMP). The location of the HMMP shall be posted adjacent to (other) permits when an HMMP is provided. The HMMP shall include a facility site plan designating the following:
- a) Storage and use areas;
 - b) Maximum amount of each material stored or used in each area;
 - c) Range of container sizes;
 - d) Locations of emergency isolation and mitigation valves and devices;
 - e) Product conveying piping containing liquids or gases, other than utility-owned fuel gas lines and low-pressure fuel gas lines;
 - f) On and off positions of valves for valves which are of the self-indicating type;
 - g) Storage plan showing the intended storage arrangement, including the location and dimensions of aisles. The plans shall be legible and approximately to scale. Separate distribution systems are allowed to be shown on separate pages; and
 - h) Site plan showing all adjacent/neighboring structures and use.

NOTE: Each application for a permit shall include a hazardous materials inventory statement (HMIS).

- F28. Before a Hazardous Materials permit is issued, the Fire Chief shall inspect and approve the receptacles, vehicles, buildings, devices, premises, storage spaces or areas to be used. In instances where laws or regulations are enforceable by departments other than the Fire Prevention Bureau, joint approval shall be obtained from all departments concerned. (CFC Appendix H)
- F29. Construction or work for which the Fire Prevention Bureau's approval is required shall be subject to inspection by the Fire Chief and such construction or work shall

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 10 OF 34**

remain accessible and exposed for inspection purposes until approved. (CFC Section 106)

- F30. The Fire Prevention Bureau shall maintain the authority to inspect, as often as necessary, buildings and premises, including such other hazards or appliances designated by the Fire Chief for the purpose of ascertaining and causing to be corrected any conditions which would reasonably tend to cause fire or contribute to its spread, or any violation of the purpose or provisions of this code and of any other law or standard affecting fire safety. (CFC Section 106)
- F31. Permit requirements issued, which designate specific occupancy requirements for a particular dwelling, occupancy, or use, shall remain in effect until such time as amended by the Fire Chief. (CFC Section 104)
- F32. In accordance with the California Fire Code Appendix Chapter 1, where no applicable standards or requirements are set forth in this code, or contained within other laws, codes, regulations, ordinances or bylaws adopted by the jurisdiction, compliance with applicable standards of the National Fire Protection Association or other nationally recognized fire safety standards as are approved shall be deemed as prima facie evidence of compliance with the intent of this code as approved by the Fire Chief. (CFC Section 102.7)
- F33. Any alterations, demolitions, or change in design, occupancy and use of buildings or site will require plan submittal to the Fire Prevention Bureau with review and approval prior to installation. (CFC Appendix Chapter 1)
- F34. Emergency and Fire Protection Plans shall be provided when required by the Fire Prevention Bureau. (CFC Section 105)
- F35. Prior to construction, all traffic calming designs/devices must be approved by the Fire Marshal and City Engineer.

FIRE FLOW LETTER

Date:	02/24/2009	Address:	_____
Case Number:	PA09-0004	A.P.N.:	316-210-071, 073, 075, 076

This is certification the water system is capable of meeting the following required fire flows as determined by the California Fire Code Appendix B.

Based on the information provided on the above referenced case. The fire flow required for this project will be 4000 G.P.M. for duration of 4-HOURS measured at 20-psi residual pressure.

The required fire flow may be adjusted during the approval process to reflect changes in design, construction type or automatic fire protection measures as approved by the Fire Prevention Bureau.

COMMUNITY & ECONOMIC DEVELOPMENT DEPARTMENT
- LAND DEVELOPMENT DIVISION

The following are the Land Development Division Conditions of Approval for this project and shall be completed at no cost to any government agency. All questions regarding the intent of the following conditions shall be referred to the Land Development Division.

General Conditions

- LD1. (G) The developer shall comply with all applicable City ordinances and resolutions including the City's Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). (MC 9.14.010)
- LD2. (G) It is understood that the tentative map correctly shows all existing easements, traveled ways, and drainage courses, and that their omission may require the map or plans associated with this application to be resubmitted for further consideration. (MC 9.14.040)
- LD3. (G) In the event right-of-way or offsite easements are required to construct offsite improvements necessary for the orderly development of the surrounding area to meet the public health and safety needs, the developer shall make a good faith effort to acquire the needed right-of-way in accordance with the Land Development Division's administrative policy. In the event that the developer is unsuccessful, he shall enter into an agreement with the City to acquire the necessary right-of-way or offsite easements and complete the improvements at such time the City acquires the right-of-way or offsite easements which will permit the improvements to be made. The developer shall be responsible for all costs associated with the right-of-way or easement acquisition. (GC 66462.5)**
- LD4. (G) If improvements associated with this project are not initiated within two years of the date of approval of the Public Improvement Agreement, the City Engineer may require that the improvement cost estimate associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the Public Improvement Agreement or issuance of a permit.
- LD5. (G) The developer shall monitor, supervise and control all construction and construction supportive activities, so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:
- (a) Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 13 OF 34**

- (b) Observance of working hours as stipulated on permits issued by the Public Works Department.
- (c) The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.
- (d) All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements shall be adhered to during the grading operations.

Violation of any condition or restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedies as noted in the City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.

- LD6. (G) The developer shall protect downstream properties from damage caused by alteration of drainage patterns, i.e., concentration or diversion of flow. Protection shall be provided by constructing adequate drainage facilities, including, but not limited to, modifying existing facilities or by securing a drainage easement. (MC 9.14.110)
- LD7. (G) A detailed drainage study shall be submitted to the City Engineer for review and approval at the time of any improvement or grading plan submittal. The study shall be prepared by a registered civil engineer and shall include existing and proposed hydrologic conditions. Hydraulic calculations are required for all drainage control devices and storm drain lines. (MC 9.14.110). Prior to approval of the related improvement or grading plans, the developer shall submit the approved drainage study, on compact disk, in (.pdf) digital format to the Land Development Division of the Public Works Department.
- LD8. (G) Prior to occupancy, the developer shall enter into a Development Impact Fee (DIF) Improvement Credit Agreement to secure credit and reimbursement for the construction of applicable **Indian Street** improvements. If the developer fails to complete this agreement prior to the timing as specified above, no credits or reimbursements will be given. The applicant shall pay Arterial Streets, Traffic Signals, and Interchange Improvements development impact fees adopted by the City Council by resolution. (Ord. 695 § 1.1 (part), 2005) (MC 3.38.030, .040, .050)
- LD9. (G) Prior to occupancy, the developer shall enter into a Transportation Uniform Mitigation Fee (TUMF) Improvement Credit Agreement to secure credit and reimbursement for the construction of applicable **Perris Boulevard** improvements. If the developer fails to complete this agreement by the timing as specified above, no credits or reimbursements will be given for any work. Prior to approval of the

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 14 OF 34**

TUMF Improvement Credit Agreement, an approved engineer's cost estimate and street improvement plan are required.

LD10. (G) The final conditions of approval issued by the Planning Division subsequent to Planning Commission approval shall be photographically or electronically placed on mylar sheets and included in the Grading and Street Improvement plan sets on twenty-four (24) inch by thirty-six (36) inch mylar and submitted with the plans for plan check. These conditions of approval shall become part of these plan sets and the approved plans shall be available in the field during grading and construction.

Prior to Grading Plan Approval or Grading Permit

LD11. (GPA) Prior to approval of the grading plans, plans shall be drawn on twenty-four (24) inch by thirty-six (36) inch mylar and signed by a registered civil engineer and other registered/licensed professional as required.

LD12. (GPA) Prior to approval of grading plans, the developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:

- a. The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines shall be located at the top of slopes.
- b. Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.
- c. A grading permit shall be obtained from the Public Works Department Land Development Division prior to commencement of any grading outside of the City maintained road right-of-way.
- d. All improvement plans are substantially complete and appropriate clearance and at-risk letters are provided to the City. (MC 9.14.030)
- e. The developer shall submit a soils and geologic report to the Public Works Department – Land Development Division. The report shall address the soil's stability and geological conditions of the site.

LD13. (GPA) Prior to grading plan approval, the developer shall select and implement treatment control best management practices (BMPs) that are medium to highly effective for treating Pollutants of Concern (POC) for the project. Projects where National Pollution Discharge Elimination System (NPDES) mandates water quality

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 15 OF 34**

treatment control best management practices (BMPs) shall be designed per the City of Moreno Valley guidelines or as approved by the City Engineer.

LD14. (GPA) Prior to approval of the grading plans for projects that will result in discharges of storm water associated with construction with a soil disturbance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's Identification number (WDID#) from the State Water Quality Control Board (SWQCB). The WDID# shall be noted on the grading plans prior to issuance of the first grading permit.

LD15. (GPA) Prior to the grading plan approval, or issuance of a building permit, if a grading permit is not required, the Developer shall submit two (2) copies of the final project-specific Water Quality Management Plan (WQMP) for review by the City Engineer that:

- a. Addresses Site Design Best Management Practices (BMPs) such as minimizing impervious areas, maximizing permeability, minimizes directly connected impervious areas to the City's street and storm drain systems, and conserves natural areas;
- b. Incorporates Source Control BMPs and provides a detailed description of their implementation;
- c. Incorporates Treatment Control BMPs and provides information regarding design considerations;
- d. Describes the long-term operation and maintenance requirements for BMPs requiring maintenance; and
- e. Describes the mechanism for funding the long-term operation and maintenance of the BMPs.

A copy of the final WQMP template can be obtained on the City's Website or by contacting the Land Development Division of the Public Works Department.

LD16. (GPA) Prior to the grading plan approval, or issuance of a building permit, if a grading permit is not required, the Developer shall record a "Stormwater Treatment Device and Control Measure Access and Maintenance Covenant," to provide public notice of the requirement to implement the approved final project-specific WQMP and the maintenance requirements associated with the WQMP.

A boilerplate copy of the "Stormwater Treatment Device and Control Measure Access and Maintenance Covenant," can be obtained by contacting the Land Development Division of the Public Works Department

LD17. (GPA) Prior to the grading plan approval, or issuance of a building permit, if a grading permit is not required, the Developer shall secure approval of the final project-specific WQMP from the City Engineer. The final project-specific WQMP

CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 16 OF 34

shall be submitted at the same time of grading plan submittal. The approved final WQMP shall be submitted to the Storm Water Program Manager on compact disk(s) in Microsoft Word format prior to grading plan approval.

- LD18. (GPA) Prior to the grading plan approval, or issuance of a building permit as determined by the City Engineer, the approved final project-specific WQMP shall be incorporated by reference or attached to the project's Storm Water Pollution Prevention Plan as the Post-Construction Management Plan.
- LD19. (GPA) Prior to grading plan approval, the developer shall prepare a Storm Water Pollution Prevention Plan (SWPPP) in conformance with the state's Construction Activities Storm Water General Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request. The SWPPP shall be submitted to the Storm Water Program Manager on compact disk(s) in Microsoft Word format.
- LD20. (GPA) Prior to the approval of the grading plans, the developer shall pay applicable remaining grading plan check fees.
- LD21. (GP) Prior to issuance of a grading permit, or building permit when a grading permit is not required, for projects that require a project-specific Water Quality Management Plan (WQMP), a project-specific final WQMP (F-WQMP) shall be approved. Upon approval, a WQMP Identification Number is issued by the Storm Water Management Section and shall be noted on the rough grading plans as confirmation that a project-specific F-WQMP approval has been obtained.
- LD22. (GP) Prior to issuance of a grading permit, if the fee has not already been paid prior to map approval or prior to issuance of a building permit if a grading permit is not required, the developer shall pay Area Drainage Plan (ADP) fees. The developer shall provide a receipt to the City showing that ADP fees have been paid to Riverside County Flood Control and Water Conservation District. (MC 9.14.100)
- LD23. (GP) Prior to issuance of a grading permit, security, in the form of a cash deposit (preferable), letter of credit, or performance bond shall be required to be submitted as a guarantee of the completion of the grading required as a condition of approval of the project.
- LD24. (GP) Prior to issuance of a grading permit, the developer shall pay the applicable grading inspection fees.

Prior to Map Approval or Recordation

- LD25. (MA) Prior to approval of the map, the developer shall submit a copy of the Covenants, Conditions and Restrictions (CC&Rs) to the Land Development Division

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 17 OF 34**

for review and approval. The CC&Rs shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project.

LD26. (MA) Prior to approval of the map, all street dedications shall be irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer. All dedications shall be free of all encumbrances as approved by the City Engineer.

LD27. (MA) Prior to approval of the map, security shall be required to be submitted as a guarantee of the completion of the improvements required as a condition of approval of the project. A public improvement agreement will be required to be executed.

LD28. (MR) Prior to recordation of the map, the developer shall submit the map, on compact disks, in (.dxf) digital format to the Land Development Division of the Public Works Department.

Prior to Improvement Plan Approval or Construction Permit

LD29. (IPA) Prior to approval of the improvement plans, the improvement plans shall be drawn on twenty-four (24) inch by thirty-six (36) inch mylar and signed by a registered civil engineer and other registered/licensed professional as required.

LD30. (IPA) Prior to approval of the improvement plans, the developer shall submit clearances from all applicable agencies, and pay all outstanding plan check fees. (MC 9.14.210)

LD31. (IPA) All public improvement plans prepared and signed by a registered civil engineer in accordance with City standards, policies and requirements shall be approved by the City Engineer in order for the Public Improvement Agreement and accompanying security to be executed.

LD32. (IPA) Prior to approval of the improvement plans, securities and a public improvement agreement shall be required to be submitted and executed as a guarantee of the completion of the improvements required as a condition of approval of the project.

LD33. (IPA) The street improvement plans shall comply with all applicable City standards and the following design standards throughout this project:

- a. Corner cutbacks in conformance with City Standard 208 shall be shown on the final map or, if no map is to be recorded, offered for dedication by separate instrument.

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 18 OF 34**

- b. Lot access to major thoroughfares shall be restricted except at intersections and approved entrances and shall be so noted on the final map. (MC 9.14.100)
 - c. The minimum centerline and flow line grades shall be one percent unless otherwise approved by the City Engineer. (MC 9.14.020)
 - d. All street intersections shall be at ninety (90) degrees plus or minus five (5) degrees per City Standard No. 706A, or as approved by the City Engineer. (MC 9.14.020)
- LD34. (IPA) Prior to approval of the improvement plans, the plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three years old and recently slurry sealed streets less than one year old. Pavement cuts for trench repairs may be allowed for emergency repairs or as specifically approved in writing by the City Engineer.
- LD35. (IPA) Prior to approval of the improvement plans, the developer is required to bring any existing access ramps adjacent to and fronting the project to current ADA (Americans with Disabilities Act) requirements. However, when work is required in an intersection that involves or impacts existing access ramps, those access ramps in that intersection shall be retrofitted to comply with current ADA requirements, unless approved otherwise by the City Engineer.
- LD36. (IPA) Prior to approval of the improvement plans, drainage facilities with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided. (MC 9.14.110)
- LD37. (IPA) Prior to the approval of the improvement plans, the hydrology study shall show that the 10-year storm flow will be contained within the curb and the 100-year storm flow shall be contained within the street right-of-way. In addition, one lane in each direction shall not be used to carry surface flows during any storm event for street sections equal to or larger than a minor arterial. When any of these criteria is exceeded, additional drainage facilities shall be installed. (MC 9.14.110 A.2)
- LD38. (IPA) The project shall be designed to accept and properly convey all off-site drainage flowing onto or through the site. All storm drain design and improvements shall be subject to review and approval of the City Engineer. In the event that the City Engineer permits the use of streets for drainage purposes, the provisions of the Development Code will apply. Should the quantities exceed the street capacity or the use of streets be prohibited for drainage purposes, as in the case where one travel lane in each direction shall not be used for drainage conveyance for

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 19 OF 34**

emergency vehicle access on streets classified as minor arterials and greater, the developer shall provide adequate facilities as approved by the Public Works Department – Land Development Division. (MC 9.14.110)

- LD39. (CP) All work performed within the City right-of-way requires a construction permit. As determined by the City Engineer, security may be required for work within the right-of-way. Security shall be in the form of a cash deposit or other approved means. The City Engineer may require the execution of a public improvement agreement as a condition of the issuance of the construction permit. All inspection fees shall be paid prior to issuance of construction permit. (MC 9.14.100)
- LD40. (CP) Prior to issuance of a construction permit, all public improvement plans prepared and signed by a registered civil engineer in accordance with City standards, policies and requirements shall be approved by the City Engineer.
- LD41. (CP) Prior to issuance of construction permits, the developer shall submit all improvement plans on compact disks, in (.dxf) digital format to the Land Development Division of the Public Works Department.
- LD42. (CP) Prior to issuance of construction permits, the developer shall pay all applicable inspection fees.

Prior to Building Permit

- LD43. (BP) Prior to issuance of a building permit, if the project involves a non-residential subdivision, the map shall be recorded.
- LD44. (BP) Prior to issuance of a building permit (excluding model homes), an approval by the City Engineer is required of the water quality control basin(s). The developer shall provide certification to the line, grade, flow test and system invert elevations.
- LD45. (BP) Prior to issuance of a building permit, all pads shall meet pad elevations per approved plans as noted by the setting of “Blue-top” markers installed by a registered land surveyor or licensed engineer.
- LD46. (BP) Prior to issuance of a building permit, the developer shall submit for review and approval, a Waste Management Plan (WMP) that shows data of waste tonnage, supported by original or certified photocopies of receipts and weight tags or other records of measurement from recycling companies and/or landfill and disposal companies. The Waste Management Plan shall contain the following:
- a. The estimated volume or weight of project waste to be generated by material type. Project waste or debris may consist of vegetative materials including trees, tree parts, shrubs, stumps, logs, brush, or any other type of plants that

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 20 OF 34**

are cleared from a site. Project waste may also include roadwork removal, rocks, soils, concrete and other material that normally results from land clearing.

- b. The maximum volume or weight of such materials that can be feasibly diverted via reuse and recycling.
- c. The vendor(s) that the applicant proposes to use to haul the materials.
- d. Facility(s) the materials will be hauled to, and their expected diversion rates.
- e. Estimated volume or weight of clearing, grubbing, and grading debris that will be landfilled.

Approval of the WMP requires that at least fifty (50) percent of all clearing, grubbing, and grading debris generated by the project shall be diverted, unless the developer is granted an exemption. Exemptions for diversions of less than fifty (50) percent will be reviewed on a case by case basis. (AB939, MC 8.80)

Prior to Certificate of Occupancy

LD47. (CO) Prior to issuance of the last certificate of occupancy or building final, the developer shall pay all outstanding fees.

LD48. (CO) Prior to issuance of a certificate of occupancy, this project is subject to requirements under the current permit for storm water activities required as part of the National Pollutant Discharge Elimination System (**NPDES**) as mandated by the Federal Clean Water Act. In compliance with Proposition 218, the developer shall agree to approve the City of Moreno Valley NPDES Regulatory Rate Schedule that is in place at the time of certificate of occupancy issuance. Following are the requirements:

- a. Select one of the following options to meet the financial responsibility to provide storm water utilities services for the required continuous operation, maintenance, monitoring system evaluations and enhancements, remediation and/or replacement, all in accordance with Resolution No. 2002-46.
 - i. Participate in the mail ballot proceeding in compliance with Proposition 218, for the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule and pay all associated costs with the ballot process; or
 - ii. Establish an endowment to cover future City costs as specified in the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule.
- b. Notify the Special Districts Division of the intent to request building permits 90 days prior to their issuance and the financial option selected. The financial option selected shall be in place prior to the issuance of certificate

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 21 OF 34**

of occupancy. (California Government Code & Municipal Code)

LD49. (CO) The City of Moreno Valley has an adopted Development Impact Fee (DIF) nexus study. All projects unless otherwise exempted shall be subject to the payment of the DIF prior to issuance of occupancy. The fees are subject to the provisions of the enabling ordinance and the fee schedule in effect at the time of occupancy.

LD50. (CO) The City of Moreno Valley has an adopted area wide Transportation Uniform Mitigation Fee (TUMF). All projects unless otherwise exempted shall be subject to the payment of the TUMF prior to issuance of occupancy. The fees are subject to the provisions of the enabling ordinance and the fee schedule in effect at the time of occupancy.

LD51. (CO) Prior to issuance of a certificate of occupancy or building final, the developer shall construct all public improvements in conformance with applicable City standards, except as noted in the Special Conditions, including but not limited to the following applicable improvements:

- a. Street improvements including, but not limited to: pavement, base, curb and/or gutter, cross gutters, spandrel, sidewalks, drive approaches, pedestrian ramps, street lights, signing, striping, under sidewalk drains, landscaping and irrigation, medians, redwood header boards, pavement tapers/transitions and traffic control devices as appropriate.
- b. Storm drain facilities including, but not limited to: storm drain pipe, storm drain laterals, open channels, catch basins and local depressions.
- c. City-owned utilities.
- d. Sewer and water systems including, but not limited to: sanitary sewer, potable water and recycled water.
- e. Under grounding of existing and proposed utility lines less than 115,000 volts.
- f. Relocation of overhead electrical utility lines including, but not limited to: electrical, cable and telephone.

LD52. (CO) Prior to issuance of a certificate of occupancy or building final, all existing and new utilities adjacent to and on-site shall be placed underground in accordance with City of Moreno Valley ordinances. (MC 9.14.130)

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 22 OF 34**

LD53. (CO) Prior to issuance of a certificate of occupancy or building final for any Commercial/Industrial facility, whichever occurs first, the owner may have to secure coverage under the State's General Industrial Activities Storm Water Permit as issued by the State Water Resources Control Board.

SPECIAL CONDITIONS

LD54. Prior to parcel map approval, the map shall show the following:

- a. A 4-foot minimum pedestrian right-of-way dedication behind any driveway approach per City Standard 118C, on Perris Boulevard, Indian Street, and Grove View Road.**
- b. A 2-foot public access easement for the portions of sidewalk which are outside of the public right-of-way, along Perris Boulevard and Indian Street.**
- c. The appropriate additional right-of-way required for a bus turn-out on Perris Boulevard as depicted on the approved project plans and as conditioned by the City's Transportation Department.**
- d. Corner cutback right-of-way dedications per City Standard 208 at the southeast corner of Indian Street and Grove View Road and the southwest corner of Perris Boulevard and Grove View Road.**

LD55. Prior to parcel map approval, the Developer shall guarantee the construction of the following improvements by entering into a public improvement agreement and posting security. The improvements shall be completed prior to occupancy of the first building or as otherwise determined by the City Engineer.

- a. Perris Boulevard, Divided Arterial, City Standard 103C (110-foot RW / 86-foot CC) shall be constructed to half-width plus an additional 18 feet east of the centerline, along the entire project's east frontage. Additional right-of-way dedications at driveway approaches as well as a 2-foot pedestrian access easement, along the project's west property line, shall be shown on the parcel map. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, drainage structures, any necessary offsite improvement transition/joins to existing, streetlights, pedestrian ramps, removal/relocation and/or undergrounding of any power poles with overhead utility lines less than 115,000 volts, and dry and wet utilities.**

- b. Indian Street, Minor Arterial, Modified City Standard 105A (88-foot RW / 64-foot CC) shall be constructed to half-width plus an additional 18 feet west of the centerline, along the entire project's east frontage. Additional right-of-way dedications at driveway approaches as well as a 2-foot pedestrian access easement, along the project's west property line, shall be shown on the parcel map. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, drainage structures, streetlights, pedestrian ramps, removal/relocation and/or undergrounding of any power poles with overhead utility lines less than 115,000 volts, and dry and wet utilities.**
- c. Grove View Road, Industrial Collector, City Standard 106 (78-foot RW / 56-foot CC) shall be constructed to half-width plus an additional 18 feet north of the centerline, along the entire project's north frontage. Additional right-of-way dedications at driveway approaches along the project's north property line, shall be shown on the parcel map.. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, drainage structures, any necessary offsite, streetlights, pedestrian ramps, dry and wet utilities.**
- d. Driveway approaches shall be constructed per City Standard No. 118C or as modified as shown on the project plans. The parcel map shall show an additional 4-foot minimum right-of-way dedication behind driveway approaches. No decorative pavers shall be placed within the public right-of-way. Certain project entrance(s) may be required to be constructed as a public street intersection.**
- e. Pavement core samples of existing pavement may be taken and findings submitted to the City for review and consideration of pavement improvements. The City will determine the adequacy of the existing pavement structural section. If the existing pavement structural section is found to be adequate, the developer may still be required to perform a one-tenth inch grind and overlay or slurry seal depending on the severity of existing pavement cracking, as required by the City Engineer. If the existing pavement section is found to be inadequate, the Developer shall replace the pavement to meet or exceed the City's pavement structural section standard.**

LD56. Prior to precise grading plan or improvement plan approval, as applicable, the plans shall show all driveway approaches to be constructed per City Standard Plan 118C modified, as accepted by the City. There shall be 4-foot minimum wide pedestrian sidewalk area at 2% maximum behind the conventional right-

of-way. A minimum 4-foot pedestrian right-of-way dedication shall be made on the final parcel map PM 35672.

LD57. Prior to precise grading plan approval, the grading plan shall show any proposed trash enclosure as dual bin; one bin for trash and one bin for recyclables. The trash enclosure shall be per City Standard Plan 627.

LD58. Prior to precise grading plan approval, the grading plan shall show that the lowest finished floor elevation is a minimum of one foot above the base flood elevation.

LD59. Prior to precise grading plan approval, the grading plans shall clearly show that the parking lot conforms to City standards. The parking lot shall be 5% maximum, 1% minimum, 2% maximum at or near any disabled parking stall and travel way. Ramps, curb openings and travel paths shall all conform to current ADA standards as outlined in Department of Justice's "ADA Standards for Accessible Design", Excerpt from 28 CFR Part 36. (www.usdoj.gov) and as approved by the City's Building and Safety Division.

LD60. Prior to occupancy, the developer shall obtain an encroachment permit from Riverside County Flood Control & Water Conservation District in order to connect proposed onsite storm drain to the Perris Valley Channel Lateral B.

LD61. Prior to occupancy, the developer shall make a good faith effort to cause Riverside County Flood Control & Water Conservation District to dedicate additional public street right-of-way on Indian Street and Perris Boulevard along their property frontage between the project's south property line and the bridges.

LD62. Prior to occupancy, all overhead utility lines less than 115,000 volts fronting or within the entire project site boundary shall be placed underground per Section 9.14.130C of the City Municipal Code.

LD63. The Applicant shall select and implement treatment control BMPs that are medium to highly effective for treating Pollutants of Concern (POC) for the project. POC include project pollutants associated with a 303(d) listing or a Total Maximum Daily Load (TMDL) for receiving waters. Project POC include sediment/turbidity, nutrients, oxygen demanding substances, and pathogens (bacteria and viruses). Exhibit C of the document, "Riverside County Water Quality Management Plan for Urban Runoff" dated July 24, 2006 shall be consulted for determining the effectiveness of proposed treatment BMPs.

LD64. Overall, the proposed treatment control concept is accepted as the conceptual treatment control BMP for the proposed site.

LD65. The Applicant has proposed to incorporate the use of vegetated swales, hydrodynamic separators, and sand filters. Final design details of the treatment control BMPs must be provided in the first submittal of the F-WQMP. The size of the treatment control BMPs is to be determined using the procedures set forth in Exhibit C of the Riverside County Guidance Document. The Applicant acknowledges that more area than currently shown on the plans may be required to treat site runoff as required by the WQMP guidance.

LD66. The Applicant shall substantiate the applicable Hydrologic Condition of Concern (HCOC) (WQMP Section IV) in the F-WQMP. The HCOC designates that the project will comply with Condition A; therefore, the condition must be addressed in the F-WQMP.

LD67. The Applicant shall, prior to building or grading permit closeout or the issuance of a certificate of occupancy, demonstrate:

- a. That all structural BMPs have been constructed and installed in conformance with the approved plans and specifications;
- b. That all structural BMPs described in the F-WQMP have been implemented in accordance with approved plans and specifications;
- c. That the Applicant is prepared to implement all non-structural BMPs included in the F-WQMP, conditions of approval, and building/grading permit conditions; and
- d. That an adequate number of copies of the approved F-WQMP are available for the future owners/occupants of the project.

PUBLIC WORKS DEPARTMENT – SPECIAL DISTRICTS DIVISION

Note: All Special Conditions, Modified Conditions, or Clarification of Conditions are in bold lettering. All other conditions are standard to all or most development projects.

Acknowledgement of Conditions

The following items are Special Districts' Conditions of Approval for project **PA09-0004**; this project shall be completed at no cost to any Government Agency. All questions regarding Special Districts' Conditions including but not limited to, intent, requests for change/modification, variance and/or request for extension of time shall be sought from the Special Districts Division of the Public Works Department 951.413.3480. The applicant is fully responsible for communicating with each designated Special Districts staff member regarding their conditions.

General Conditions

- SD1. The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services Districts Zones A (Parks & Community Services) and C (Arterial Street Lighting). All assessable parcels therein shall be subject to annual Zone A and Zone C charges for operations and capital improvements.
- SD2. Plans for parkway, median, slope, and/or open space landscape areas designated on the tentative map or in these Conditions of Approval for incorporation into Moreno Valley Community Services District **Zone M**, shall be prepared and submitted in accordance with the *City of Moreno Valley Public Works Department Landscape Design Guidelines*. Contact the Special Districts Division of the Public Works Department to obtain copies of this document.
- SD3. The developer, or the developer's successors or assignees shall be responsible for all parkway and/ or median landscaping maintenance until such time as the District accepts maintenance duties.
- SD4. Any damage to existing landscape easement areas due to project construction shall be repaired/replaced by the developer, or developer's successors in interest, at no cost to the Moreno Valley Community Services District.

Prior to Building Permit Issuance

- SD5. (BP) This project has been identified to be included in the formation of a Community Facilities District (Mello-Roos) for **Public Safety** services, including but not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. The property owner(s) shall not protest the formation; however, they retain the right to object to the rate and method of maximum special tax. In

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 27 OF 34**

compliance with Proposition 218, the developer shall agree to approve the mail ballot proceeding (special election) for either formation of the CFD or annexation into an existing district that may already be established. The Developer must notify Special Districts of intent to request building permits 90 days prior to their issuance. (California Government Code)

- SD6. (BP) This project is conditioned to provide a funding source for the capital improvements and/or maintenance for the **Perris Blvd.** median landscape. In order for the Developer to meet the financial responsibility to maintain the defined service, one of the following options shall be selected:
- a. Participate in the mail ballot proceeding in compliance with Proposition 218, for Moreno Valley Community Services District **Zone M** (Commercial, Industrial and Multifamily Improved Median Maintenance), and pay all associated costs with the ballot process; or
 - b. Establish an endowment to cover the future maintenance costs of the landscaped area.

The developer must notify Special Districts of intent to request building permits 90 days prior to their issuance and the financial option selected to fund the continued maintenance.

- SD7. *Commercial* (BP) If Land Development, a Division of the Public Works Department, requires this project to supply a funding source necessary to provide, but not limited to, stormwater utilities services for the monitoring of on site facilities and performing annual inspections of the affected areas to ensure compliance with state mandated stormwater regulations, the developer must notify Special Districts 90 days prior to the City's issuance of a building permit and the financial option selected to fund the continued maintenance. (California Government Code)
- SD8. (BP) Prior to release of building permit, the developer, or the developer's successors or assignees, shall record with the County Recorder's Office a **Declaration of Covenant and Acknowledgement of Assessments** for each assessable parcel therein, whereby the developer covenants and acknowledges the existence of the Moreno Valley Community Services District, its established benefit zones, and that said parcel(s) is (are) liable for payment of annual benefit zone charges and the appropriate National Pollutant Discharge Elimination System (NPDES) maximum regulatory rate schedule when due. A copy of the recorded Declaration of Covenant and Acknowledgement of Assessments shall be submitted to the Special Districts Division.

**For a copy of the Declaration of Covenant and Acknowledgement of the Assessments form, please contact Special Districts, phone 951.413.3480.

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 28 OF 34**

SD9. (BP) Final median, parkway, slope, and/or open space landscape/irrigation plans for those areas designated on the tentative map or in these Conditions of Approval for inclusion into Community Services District shall be reviewed and approved by the Community Development Department–Planning Division, and the Public Works Department–Special Districts and Transportation Divisions prior to the issuance of the first Building Permit.

Prior to Certificate of Occupancy

SD10. (CO) Prior to issuance of a Certificate of Occupancy or building final, the developer shall submit a letter to Special Districts from the Utility service responsible for providing final electrical energy connections and energization of the streetlights for the development project. The letter must identify, by pole number, each streetlight in the development and state the corresponding date of its electrical energization.

SD11. (CO) All parkway and/or median landscaping specified in the tentative map or in these Conditions of Approval shall be constructed prior to the issuance of the Certificate of Occupancy/Building Final for this project.

SD12. (CO) Prior to the issuance of the first Certificate of Occupancy or building final for this project, the developer shall pay Advanced Energy fees for all applicable Zone B (Residential Street Lighting) and/or Zone C (Arterial Street Lighting and Intersection Lighting) streetlights required for this development. The developer shall provide a receipt to the Special Districts Division showing that the Advanced Energy fees have been paid in full for the number of streetlights to be accepted into the CSD Zone B and/or Zone C program. Payment shall be made to the City of Moreno Valley, as collected by the Land Development Division, based upon the Advanced Energy fee rate at the time of payment and as set forth in the current Listing of City Fees, Charges and Rates, as adopted by City Council. Any change in the project which may increase the number of streetlights to be installed will require payment of additional Advanced Energy fees at the then current fee.

PUBLIC WORKS DEPARTMENT – TRANSPORTATION ENGINEERING DIVISION

Note: All Special conditions are in bold lettering. All other conditions are standard to all or most development projects.

Based on the information contained in our standard review process we recommend the following conditions of approval be placed on this project:

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 29 OF 34**

GENERAL CONDITIONS

- TE1. Conditions of approval may be modified if project is phased or altered from any approved plans.
- TE2. Perris Boulevard is classified as a Divided Arterial (110'RW/86'CC) per City Standard Plan No. 103C. The sidewalk shall be curb-separated. Any modifications or improvements undertaken by this project shall be consistent with the City's standards for this facility.**
- TE3. Indian Street is designated as a Minor Arterial (88'RW/64'CC) per City Standard Plan No. 105A. Any modifications or improvements undertaken by this project shall be consistent with the City's standards for this facility.**
- TE4. Grove View Road is designated as an Industrial Collector (78'RW/56'CC) per City Standard Plan No. 106. Any modifications or improvements undertaken by this project shall be consistent with the City's standards for this facility.**

PRIOR TO GRADING PERMIT

- TE5. (GP) Prior to issuance of a grading permit, the project applicant shall submit conceptual striping plans for improvements identified in condition TE11 as well as Indian Street for the City Traffic Engineer's approval.**

PRIOR TO IMPROVEMENT PLAN APPROVAL OR CONSTRUCTION PERMIT

- TE6. The driveways less than 40 feet in width shall conform to Section 9.16.250, and Table 9.16.250A of the City's Development Code - Design Guidelines, and City Standard Plan No. 118C. Driveways wider than 40' shall be designed as intersections with pedestrian access ramps per City standards.
- TE7. Sight distance at driveways and on streets shall conform to City of Moreno Valley Standard No. 125A, B, C at the time of preparation of final grading, landscape, and street improvements.
- TE8. Prior to the final approval of the street improvement plans, a signing and striping plan shall be prepared per City of Moreno Valley Standard Plans - Section 4 for all streets with a cross section of 66'/44' and wider.
- TE9. Prior to issuance of a construction permit, construction traffic control plans prepared by a qualified, Registered Civil or Traffic engineer may be required.

TE10. Prior to the final approval of the street improvement plans, the project applicant shall design Perris Boulevard to include a bus bay per City Standard Plan No. 121 in the southbound direction, south of Grove View Road. The bus bay may be designed to serve as a combination right turn lane/bus bay to the satisfaction of the City Engineer.

TE11. Prior to the final approval of the street improvement plans, the project applicant shall design the intersection/traffic signal at Perris Boulevard and the South Project Driveway to provide the following (at a minimum):

**Northbound: One left turn lane, one shared through/right turn lane
Southbound: One left turn lane, one through lane, one right turn lane
Eastbound: One left turn lane, one shared through/right turn lane
Westbound: One left turn lane, one shared through/right turn lane**

NOTE: The curb return radii on the northwest/southwest corners shall be 50 feet.

TE12. Prior to the final approval of the street improvement plans, the project applicant shall design and modify the intersection of Perris Boulevard at Grove View Road to include a 200' northbound left turn lane with raised median. This modification may include relocation of the traffic detector loops and other traffic signal modifications.

PRIOR TO BUILDING PERMIT

TE13. (BP) Prior to issuance of a building permit, traffic signal plans shall be prepared by a registered civil or electrical engineer and shall be submitted to the City Traffic Engineer for the following intersections:

- Perris Boulevard at South Project Driveway (signal modifications).**
- Perris Boulevard at Grove View Road (signal modifications).**

TE14. (BP) Prior to issuance of a building permit, the project applicant shall make a fair-share contribution in the amount of \$45,150 to the City of Moreno Valley for the construction of a traffic signal at Perris Boulevard and Suburban Lane. As this traffic signal is not in any existing fee program, payment of DIF and/or TUMF are not considered satisfaction of this obligation.

PRIOR TO CERTIFICATE OF OCCUPANCY OR BUILDING FINAL

TE15. (CO) Prior to issuance of a certificate of occupancy, all approved signing and striping shall be installed per current City Standards and the approved plans.

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 31 OF 34**

TE16. (CO) Each gated entrance shall be provided with the following, or as approved by the City Traffic Engineer:

- a) A storage lane with a minimum of 75 feet queuing length for entering traffic.
- b) Appropriate signing and striping.

All of these features must be kept in working order.

TE17. (CO) Prior to the issuance of a certificate of occupancy, the project applicant shall construct the traffic signal modifications identified in TE13. Construction shall be completed per the approved plans and coordinated with the street improvements.

TE18. (CO) Prior to issuance of a certificate of occupancy, the project applicant shall construct the intersection/roadway improvements identified in TE10, TE11, and TE12 per the approved plans.

TE19. (CO) Prior to the issuance of a certificate of occupancy for the project, driveway access at the following locations will be installed as follows:

- **North Perris Boulevard Driveway: Right-in, right-out access by means of a raised median.**
- **South Perris Boulevard Driveway: Full access by means of a traffic signal.**
- **Grove View Road Driveways: Full access.**
- **Indian Street Driveways: Full access.**

NOTE: All truck driveways shall have curb return radii of 50 feet.

PRIOR TO ACCEPTANCE OF STREETS INTO THE CITY-MAINTAINED ROAD SYSTEM

TE20. Prior to the acceptance of streets into the City-maintained road system, all approved traffic control and signing and striping shall be installed per current City Standards and the approved plans.

PUBLIC WORKS DEPARTMENT – MORENO VALLEY UTILITY

Note: All Special Conditions, Modified Conditions, or Clarification of Conditions are in bold lettering. All other conditions are standard to all or most development projects.

Acknowledgement of Conditions

The following items are Moreno Valley Utility's Conditions of Approval for project(s) PA09-0004 & PA09-0012; this project shall be completed at no cost to any Government Agency. All questions regarding Moreno Valley Utility's Conditions including but not limited to, intent, requests for change/modification, variance and/or request for extension of time shall be sought from Moreno Valley Utility (the Electric Utility Division) of the Public Works Department 951.413.3512. The applicant is fully responsible for communicating with Moreno Valley Utility staff regarding their conditions.

PRIOR TO RECORDATION OF FINAL MAP

MVU1. (R) For single family subdivisions, a three foot easement along each side yard property line shall be shown on the final map and offered for dedication to the City of Moreno Valley for public utility purposes, unless otherwise approved by the City Engineer. If the project is a multi-family development, townhome, condominium, apartment, commercial or industrial project, and it requires the installation of electric distribution facilities within common areas, a non-exclusive easement shall be provided to Moreno Valley Utility to include all such common areas. All easements shall include the rights of ingress and egress for the purpose of operation, maintenance, facility repair, and meter reading.

PRIOR TO ISSUANCE OF BUILDING PERMIT

MVU2. (BP) **City of Moreno Valley Municipal Utility Service – Electrical Distribution:** Prior to issuance of building permit, the developer shall submit a detailed engineering plan showing design, location and schematics for the utility system to be approved by the City Engineer. In accordance with Government Code Section 66462, the Developer **shall** execute an agreement with the City providing for the installation, construction, improvement and dedication of the utility system following recordation of final map and concurrent with trenching operations and other subdivision improvements so long as said agreement incorporates the approved engineering plan and provides financial security to guarantee completion and dedication of the utility system.

The Developer **shall** coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to the City, or the City's designee, all utility infrastructure (including but not limited to conduit, equipment, vaults, ducts, wires, switches, conductors, transformers, resistors, amplifiers, and "bring-up")

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 33 OF 34**

facilities including electrical capacity to serve the identified development and other adjoining/abutting/ or benefiting projects as determined by Moreno Valley Utility) – collectively referred to as “utility system” (to and through the development), along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and /or delivery of any and all “utility services” to each lot and unit within the Tentative Map. For purposes of this condition, “utility services” shall mean electric, cable television, telecommunication (including video, voice, and data) and other similar services designated by the City Engineer. “Utility services” shall not include sewer, water, and natural gas services, which are addressed by other conditions of approval. Properties within development will be subject to an electrical system capacity charge and that contribution will be collected prior to issuance of building permits.

The City, or the City’s designee, shall utilize dedicated utility facilities to ensure safe, reliable, sustainable and cost effective delivery of utility services and maintain the integrity of streets and other public infrastructure. Developer shall, at developer’s sole expense, install or cause the installation of such interconnection facilities as may be necessary to connect the electrical distribution infrastructure within the project to the Moreno Valley Utility owned and controlled electric distribution system. Alternatively, developer may cause the project to be included in or annexed to a community facilities district established or to be established by the City for the purpose of financing the installation of such interconnection and distribution facilities. The project shall be deemed to have been included in or annexed to such a community facilities district upon the expiration of the statute of limitations to any legal challenges to the levy of special taxes by such community facilities district within the property. The statute of limitations referred to above will expire 30 days after the date of the election by the qualified electors within the project to authorize the levy of special taxes and the issuance of bonds.

- MVU3. This Project is subject to a Reimbursement Agreement. The Project is responsible for a proportionate share of costs associated with electrical distribution infrastructure previously installed that directly benefits the Project. The developer shall be responsible to pay to the City of Moreno Valley the sum of **\$423,150.00** for this electrical distribution infrastructure prior to the issuance of building permits.

**CONDITIONS OF APPROVAL FOR PA09-0012
TENTATIVE PARCEL MAP NO. 36162
PAGE 34 OF 34**

POLICE DEPARTMENT

Note: All Special conditions are in bold lettering. All other conditions are standard to all or most development projects

Standard Conditions

- PD1. Prior to the start of any construction, temporary security fencing shall be erected. The fencing shall be a minimum of six (6) feet high with locking, gated access and shall remain through the duration of construction. Security fencing is required if there is: construction, unsecured structures, unenclosed storage of materials and/or equipment, and/or the condition of the site constitutes a public hazard as determined by the Public Works Department. If security fencing is required, it shall remain in place until the project is completed or the above conditions no longer exist. (MC 9.08.080)
- PD2. (GP) Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following:
- a. The name (if applicable) and address of the development.
 - b. The developer's name, address, and a 24-hour emergency telephone number. (MC 9.08.080)
- PD3. (CO) Prior to the issuance of a Certificate of Occupancy, an Emergency Contact Information Form for the project shall be completed at the permit counter of the Community & Economic Development Department - Building Division for routing to the Police Department. (MC 9.08.080)

Errata to the VIP Moreno Valley Final EIR dated June 27, 2012

In responding to the comments to the Sierra Club letter to the Planning Commission dated July 11, 2012 and the Johnson and Sedlack letter to the Planning Commission dated July 12, 2012 there were some inconsistencies found in the VIP Moreno Valley Final EIR that are being corrected in this errata. In an effort to correct an inadvertent errors contained in the Final EIR that was approved by the Planning Commission, corrections to Final EIR Response to Comments E-9 and E-16 are necessary to provide consistency with the Mitigation Monitoring and Reporting Program (MMRP) as approved by the Planning Commission. These changes are contained herein.

During the Planning Commission meeting on July 12, 2012, the Planning Commission approved the project subject to two conditions of approval related to designing and constructing the project to accommodate future solar panels and obtain LEED Silver design standards. These conditions of approval have been added to the MMRP as Mitigation Measures 4.3.6.1D and 4.3.6.1E as follows:

4.3.6.1D The building roof shall be designed and constructed to accommodate future solar panels.

4.3.6.1E The project shall be designed and constructed to meet LEED Silver design standards.

It should be noted that regardless of the language for Mitigation Measure (MM) 4.2.6.3A found in any of the responses to comments to the Draft EIR provided in the Final EIR dated June 27, 2012, the Planning Commission in its hearing on July 12, 2012 approved the following language for MM 4.2.6.3A which supersedes the responses:

4.2.6.3A Prior to issuance of the first building permit, building and site plan designs shall ensure that the project's energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of 20 percent. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and reviewed and approved by the City. Any combination of the following design features ~~including but not limited to the following list~~ may be used to fulfill this requirement provided that the total increase in energy efficiency meets or exceeds 20 percent: *[Note the rest of the MM remains the same as was presented in the Mitigation Monitoring and Reporting Program and a Conditions of Approval adopted by the Planning Commission on July 12, 2012].*

Response to Comment E-9.¹ Mitigation Measure 4.2.6.3A already provides for preferential parking for alternative fueled cars. This mitigation located in the Draft EIR, Section 4.2 Air Quality, pages 4.2-26, 4.2-27, and 4.2-28 reads as follows with changes proposed in Section 3.0 Errata in the Final EIR to address other commentor concerns:

4.2.6.3A Prior to issuance of the first building permit, building and site plan designs shall ensure that the project's energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of 20 percent. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and review and approved by the City. The following ~~Any combination of~~ design features,

¹ As presented to the Planning Commission on July 12, 2012, which was incorrect in the Response to Comments but correct in the Mitigation Monitoring and Reporting Program (MMRP).

~~including but not limited to the following list, may shall~~ be used to fulfill this requirement provided that the total increase in energy efficiency meets or exceeds 20 percent:

- ~~Lease/purchase documents shall identify that require~~ tenants ~~are encouraged to promote provide~~ the following:
 - Provision of preferential parking for EV and CNG vehicles.

Response to Comment E-9.¹ Mitigation Measure 4.2.6.3A already provides for preferential parking for alternative fueled cars. This mitigation located in the Draft EIR, Section 4.2 Air Quality, pages 4.2-26, 4.2-27, and 4.2-28 reads as follows with changes proposed in Section 3.0 Errata in the Final EIR to address other commentor concerns:

4.2.6.3A *Prior to issuance of the first building permit, building and site plan designs shall ensure that the project's energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of 20 percent. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and reviewed and approved by the City.* The following ~~Any~~ combination of design features, ~~including but not limited to the following list, may shall~~ be used to fulfill this requirement provided that the total increase in energy efficiency meets or exceeds 20 percent:

- ~~Lease/purchase documents shall identify that tenants are encouraged to promote the following:~~
 - Provision of preferential parking for EV and CNG vehicles.

Response to Comment E-16.² Draft EIR, Section 4.2 Air Quality contains the following Mitigation Measure 4.2.6.1K that provides for electric or alternative fuel construction equipment and forklifts and Section 4.3 Greenhouse Gas Emissions and Climate Change contains Mitigation Measure 4.2.6.3A which specifies electric trucks and yard trucks in Mitigation Measures 4.2.6.3A. Changes proposed to Mitigation Measure 4.2.6.1K are provided in Section 3.0 Errata in the Final EIR to address other commentor concerns. The measures are as follows:

4.2.6.1K *Grading plans, construction specifications and bid documents shall also include the following notations:*

- *Off-road construction equipment shall utilize alternative fuels where feasible e.g., biodiesel fuel (a minimum of B20), natural gas (CNG), liquefied natural gas (LNG), propane, except for equipment where use of such fuels would void the equipment warranty;*
- Use electric construction equipment where feasible.
- All forklifts used during construction and in subsequent operation of the project shall be electric or natural gas powered.

4.2.6.3A *Prior to issuance of the first building permit, building and site plan designs shall ensure that the project's energy efficiencies surpass applicable 2008 California Title 24, Part*

¹ The response is revised to be consistent with the MMRP as presented to the Planning Commission on July 12, 2012.

² As presented to the Planning Commission on July 12, 2012, which was incorrect in the Response to Comments but correct in the Mitigation Monitoring and Reporting Program (MMRP).

6 Energy Efficiency Standards by a minimum of 20 percent. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and review and approved by the City. ~~The following Any combination of design features, including but not limited to the following list, may shall~~ be used to fulfill this requirement provided that the total increase in energy efficiency meets or exceeds 20 percent:

- ~~Lease/purchase documents shall identify that require~~ tenants ~~are encouraged to promote~~ provide the following:
 - Inclusion of electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets.
 - Use of electrical equipment (instead of gasoline-powered equipment) for landscape maintenance.
 - Use of electric (instead of diesel or gasoline-powered) yard trucks.

Response to Comment E-16.¹² Draft EIR, Section 4.2 Air Quality contains the following Mitigation Measure 4.2.6.1K that provides for electric or alternative fuel construction equipment and forklifts and Section 4.3 Greenhouse Gas Emissions and Climate Change contains Mitigation Measure 4.2.6.3A which specifies electric trucks and yard trucks in Mitigation Measures 4.2.6.3A and 4.2.6.1K. ~~Changes proposed to Mitigation Measure 4.2.6.1K are provided in Section 3.0 Errata in the Final EIR to address other commentor concerns.~~ The measures are as follows:

4.2.6.1K Grading plans, construction specifications and bid documents shall also include the following notations:

- Off-road construction equipment shall utilize alternative fuels where feasible e.g., biodiesel fuel (a minimum of B20), natural gas (CNG), liquefied natural gas (LNG), propane, except for equipment where use of such fuels would void the equipment warranty;
- Use electric construction equipment where feasible.
- All forklifts used during construction and in subsequent operation of the project shall be electric or natural gas powered.

4.2.6.3A Prior to issuance of the first building permit, building and site plan designs shall ensure that the project's energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of 20 percent. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and reviewed and approved by the City. The following ~~Any combination of design features, including but not limited to the following list, may shall~~ be used to fulfill this requirement provided that the total increase in energy efficiency meets or exceeds 20 percent:

1. INTRODUCTION

The Final Environmental Impact Report (EIR) for the proposed VIP Moreno Valley project is composed of the Draft EIR State Clearinghouse No. 2011081084 and Appendices; the Response to Comments; and the Findings, Statement of Overriding Considerations, Staff Reports, and Resolutions. Specifically, this document portion of the EIR includes the Comments and Responses volume of the Final EIR, EIR modifications or errata, and the Mitigation Monitoring and Reporting Program (MMRP). The purpose of this document is to respond to all comments received by the City of Moreno Valley (City) regarding the environmental information and analyses contained in the Draft EIR. Additionally, any corrections to the text and figures of the Draft EIR, generated either from responses to comments or independently by the City, are stated in this volume of the Final EIR. The Draft EIR text has not been modified to reflect these clarifications.

1.1 CONTENT AND FORMAT

Subsequent to this introductory section, Section 2.0 contains copies of each comment letter received on the Draft EIR, along with annotated responses to each comment contained within the letters, Section 3.0 of this document contains corrections and errata to the Draft EIR. Section 4.0 contains the Mitigation Monitoring and Reporting Plan, which includes additional measures developed as a part of this Final EIR.

1.2 PUBLIC REVIEW OF THE DRAFT EIR

As required by the California Environmental Quality Act (CEQA) Guidelines Section 15087, a Notice of Completion (NOC) of the Draft EIR State Clearinghouse No. 2011081084 for the VIP Moreno Valley project was filed with the State Clearinghouse on April 20, 2012 and the Notice of Availability (NOA) of the Draft EIR was filed with the Riverside County Clerk on April 20, 2012.

The Draft EIR was circulated for public review for a period of 45 days, from April 20, 2012 to June 4, 2012. Copies of the Draft EIR were distributed to all Responsible Agencies and to the State Clearinghouse in addition to various public agencies, citizen groups, and interested individuals. Copies of the Draft EIR were also made available for public review at the City Planning Department, at one area library, and on the internet.

A total of ten comment letters was received. Seven of the comment letters received were from Federal, State, regional, or local agencies. One comment letter was received from a citizen group and two letters from individuals. All ten letters have been responded to within this document. Comments that address environmental issues are thoroughly responded to in Section 2.0.

1.3 POINT OF CONTACT

The Lead Agency for this Project is the City of Moreno Valley. Any questions or comments regarding the preparation of this document, its assumptions, or its conclusions, should be referred to:

Jeff Bradshaw, Associate Planner
City of Moreno Valley, Planning Division
14177 Frederick Street
Post Office Box 88005
Moreno Valley, California 92553
Phone: (951) 413-3224
e-mail: jeffreyb@moval.com

1.4 PROJECT SUMMARY

The following information is summarized from the Project Description in the Draft EIR. For additional detail in regard to Project characteristics and Project-related improvements, along with analyses of the Project's potential environmental impacts, please refer to Draft EIR Sections 3.0 and 4.0, respectively.

1.4.1 Project Location

The project site is located in the City of Moreno Valley, Riverside County. The approximately 71-acre site is generally located on the southwest corner of Perris Boulevard and Grove View Road. The Perris Valley Storm Drain Lateral B channel forms the southern boundary of the site while Indian Street forms the western boundary.

1.4.2 Proposed Project

The proposed development would result in the construction and operation of approximately 1,616,133 square feet of distribution warehouse uses on an approximately 71-acre site. The single building will be constructed with 264 vertical-lift dock-high roll up doors on the long (north and south) sides of the building to allow access for the loading and unloading of products from diesel truck/trailers. The building will include a total of approximately 44,000 square feet of business office space for the management of the warehouse. Parking at the warehouse will be provided for 368 trucks and trailers as well as 589 parking stalls for passenger vehicles in accordance with City standards for light industrial uses.

1.4.3 Project Objectives

The purpose of the proposed project is to provide a new facility specializing in warehouse distribution services. Upon development, the proposed project will achieve the following:

Create employment-generating opportunities for the citizens of Moreno Valley and surrounding communities;

Encourage industrial development as attractive and productive uses while minimizing conflicts with the surrounding existing uses;

Encourage warehouse distribution services that take advantage of the area's close proximity to various freeways and transportation corridors;

Provide the infrastructure improvements required to meet project needs in an efficient and cost-effective manner;

Encourage new development consistent with the capacity and municipal service capabilities;

Provide a high density, high-quality large-scale industrial development to provide jobs for residents at a variety of income levels;

Facilitate the efficient and cost-effective movement of goods in and through the City, which, in turn, allows the City to compete economically on a domestic and international scale;

Provide an industrial warehouse facility that meets the substantial and unmet demands of businesses located in the City and County;

Cluster industrial warehouse uses near efficient access points to the state highway system to reduce traffic congestion on surface streets and to reduce associated air pollutant emissions from vehicle sources;

Implement the City's General Plan Industrial/Business Park Land Use designations that are applicable to the site;

Accommodate new development that channels land uses in a phased, orderly manner and is coordinated with the provision of necessary infrastructure and public improvements;

Provide new development that will assist the City in obtaining fiscal balance in the years and decades ahead; and

Address community circulation, both vehicular and pedestrian, utilizing available capacity within the existing circulation system, and provide fair share improvements to various future-year deficient intersections or road segments.

1.4.4 Required Permits and Discretionary Actions

The following discretionary actions are anticipated to be taken by the City of Moreno Valley as part of the proposed project:

Tentative Parcel Map approval (TPM 36162);
Certification of Environmental Impact Report; and
Site Plan approval.

Other non-discretionary actions anticipated to be taken by the City at the Staff level as part of the proposed project include the following:

Approval of a Storm Water Pollution Prevention Plan (SWPPP) to accommodate site runoff during construction. Approval of a Water Quality Management Plan (WQMP) to mitigate for post-construction runoff flows.

Issuance of a Grading permit that requires approval of a grading plan, approval of the final drainage study, approval of the Final WQMP, obtaining an NOI and WDID number, and satisfying those conditions of approval required prior to grading.

Issuance of an Encroachment permit for any construction work done in any City-controlled right-of-way. Encroachment permit issuance requires approval of improvement plans, public improvement agreement execution with securities posted, and satisfying those conditions of approval required prior to grading.

Issuance of a Building permit. The comprehensive building permit includes building, plumbing, mechanical, and electrical permits.

Approvals and permits required by other agencies include:

A National Pollutant Discharge Elimination System (NPDES) permit from the Regional Water Quality Control Board (RWQCB) to ensure that downstream water quality is not worsened.

Approval of water and sewer improvement plans by the Eastern Municipal Water District.

Approval from the City and Riverside County Flood Control and Water Conservation District to ensure that construction site drainage velocities are equal to or less than the pre-construction conditions.

2. RESPONSE TO COMMENTS

A total of ten comment letters was received. Seven of the comment letters received were from Federal, State, regional, or local agencies. One comment letter was received from a citizen group and two letters from individuals. All ten letters have been responded to within this document. Comments that address environmental concerns have been thoroughly addressed. Comments that (1) do not address the adequacy or completeness of the Draft EIR; (2) do not raise environmental issues; or (3) do request the incorporation of additional information not relevant to environmental issues do not require a response, pursuant to Section 15088(a) of the State CEQA Guidelines.

Section 15088 of the State CEQA Guidelines, Evaluation of and Response to Comments, states:

- a) The lead agency shall evaluate comments on environmental issues received from persons who reviewed the draft EIR and shall prepare a written response. The lead agency shall respond to comments received during the noticed comment period and any extensions and may respond to late comments.
- b) The written response shall describe the disposition of significant environmental issues raised (e.g., revisions to the proposed project to mitigate anticipated impacts or objections). In particular, major environmental issues raised when the lead agency's position is at variance with recommendations and objections raised in the comments must be addressed in detail, giving the reasons that specific comments and suggestions were not accepted. There must be good faith, reasoned analysis in response. Conclusory statements unsupported by factual information will not suffice.
- c) The response to comments may take the form of a revision to the draft EIR or may be a separate section in the final EIR. Where the response to comments makes important changes in the information contained in the text of the draft EIR, the lead agency should either:
 1. Revise the text in the body of the EIR; or
 2. Include marginal notes showing that the information is revised in the responses to comments.

Information provided in this volume of the Final EIR clarifies, amplifies, or makes minor modifications to the Draft EIR. No significant changes have been made to the information contained in the Draft EIR as a result of the responses to comments, and no significant new information has been added that would require recirculation of the document.

An Errata to the EIR (Section 3.0) has been prepared to make minor corrections and clarifications to the Draft EIR as a result of City review and comments received during the public review period. Therefore, this Response to Comments document, along with the Errata is included as part of the Final EIR for consideration by the Planning Commission prior to a vote to certify the Final EIR.

2.1 LIST OF PERSONS, ORGANIZATIONS, AND PUBLIC AGENCIES COMMENTING ON THE DRAFT EIR

The persons, organizations, and public agencies that submitted comments regarding the Draft EIR through June 4, 2012, are listed below. A total of ten comment letters was received. Seven of the comment letters received were from Federal, State, regional, or local agencies. One comment letter

was received from a citizen group and two letters from individuals. Each comment letter received is indexed with a number below.

Comment Letters Received Regarding the Draft EIR

- A California Native American Heritage Commission (May 14, 2012)**
Dave Singleton, Program Analyst

- B California Department of Fish and Game (May 21, 2012)**
Jeff Brandt, Senior Environmental Specialist

- C Gerald M. Budlong (May 31, 2012)**

- D Johnson & Sedlack (June 1, 2012)**
Ray Johnson, AICP, Esq.

- E Sierra Club, San Geronio Chapter (June 3, 2012)**
George Hague, Conservation Chair
Moreno Valley Chapter

- F California Department of Transportation, District 8 (June 4, 2012)**
Daniel Kopulsky, Office Chief
Community Planning/IGR-CEQA

- G Eastern Municipal Water District (June 4, 2012)**
Joseph B. Lewis
Director of Engineering Services

- H United States Fish and Wildfire Service (e-mail June 4, 2012)**
Nicole Ronan, Fish and Wildfire Service

- I Riverside County Flood Control and Water Conservation District**
Mekbib Degaga, Engineering Project Manager

- J California Governor's Office of Planning and Research, State Clearinghouse**
Scott Morgan, Director State Clearinghouse

2.2 FORMAT OF RESPONSES TO COMMENTS

Aside from the courtesy statements, introductions, and closings, individual comments within the body of each letter have been identified and numbered. A copy of each comment letter and the City's responses are included in this section. Brackets delineating the individual comments and an alphanumeric identifier have been added to the right margin of the letter. Responses to each comment identified are included on the page(s) following each comment letter. Responses to comments were sent to the agencies that provided comments.

In the process of responding to the comments, there were minor revisions to the Environmental Impact Report. None of the comments or responses constitutes "significant new information" (*CEQA Guidelines* Section 15073.5) that would require recirculation of the Environmental Impact Report.

RECEIVED

MAY 14 2012

CITY OF MORENO VALLEY
Planning Division

Mr. Jeff Bradshaw, Associate Planner
City of Moreno Valley Community & Economic Development Department
14177 Frederick Street
Moreno Valley, CA 92552

Re: SCH#2011081084; CEQA Notice of Completion; draft Environmental Impact Report (DEIR) for the "VIP Moreno Valley Project – PA09-0004 (plot Plan) PA09-0012 (TPM 36162) P11-020 (EIR);" located in the City of Moreno Valley; Riverside, California.

Dear Mr. Bradshaw:

The Native American Heritage Commission (NAHC), the State of California 'Trustee Agency' for the protection and preservation of Native American cultural resources pursuant to California Public Resources Code §21070 and affirmed by the Third Appellate Court in the case of EPIC v. Johnson (1985: 170 Cal App. 3rd 604).

This letter includes state and federal statutes relating to Native American historic properties of religious and cultural significance to American Indian tribes and interested Native American individuals as 'consulting parties' under both state and federal law. State law also addresses the freedom of Native American Religious Expression in Public Resources Code §5097.9.

The California Environmental Quality Act (CEQA – CA Public Resources Code 21000-21177, amendments effective 3/18/2010) requires that any project that causes a substantial adverse change in the significance of an historical resource, that includes archaeological resources, is a 'significant effect' requiring the preparation of an Environmental Impact Report (EIR) per the CEQA Guidelines defines a significant impact on the environment as 'a substantial, or potentially substantial, adverse change in any of physical conditions within an area affected by the proposed project, including ... objects of historic or aesthetic significance.' In order to comply with this provision, the lead agency is required to assess whether the project will have an adverse impact on these resources within the 'area of potential effect (APE), and if so, to mitigate that effect. The NAHC did conduct a Sacred Lands File (SLF) search within the 'area of potential effect (APE) with the following results: Native American cultural resources were not found within the APE. However, the absence of archaeological resources does not preclude their existence at the subsurface level and may be exposed during construction activity.

The NAHC "Sacred Sites," as defined by the Native American Heritage Commission and the California Legislature in California Public Resources Code §§5097.94(a) and 5097.96. Items in the NAHC Sacred Lands Inventory are confidential and exempt from the Public Records Act pursuant to California Government Code §6254 (r).

Early consultation with Native American tribes in your area is the best way to avoid unanticipated discoveries of cultural resources or burial sites once a project is underway.

Culturally affiliated tribes and individuals may have knowledge of the religious and cultural significance of the historic properties in the project area (e.g. APE). We strongly urge that you make contact with the list of Native American Contacts on the attached list of Native American contacts, to see if your proposed project might impact Native American cultural resources and to obtain their recommendations concerning the proposed project. Pursuant to CA Public Resources Code § 5097.95, the NAHC requests cooperation from other public agencies in order that the Native American consulting parties be provided pertinent project information. Consultation with Native American communities is also a matter of environmental justice as defined by California Government Code §65040.12(e). Pursuant to CA Public Resources Code §5097.95, the NAHC requests that pertinent project information be provided consulting tribal parties. The NAHC recommends *avoidance* as defined by CEQA Guidelines §15370(a) to pursuing a project that would damage or destroy Native American cultural resources and Section 2183.2 that requires documentation, data recovery of cultural resources.

5

Furthermore, the NAHC if the proposed project is under the jurisdiction of the statutes and regulations of the National Environmental Policy Act (e.g. NEPA; 42 U.S.C. 4321-43351). Consultation with tribes and interested Native American consulting parties, on the NAHC list, should be conducted in compliance with the requirements of federal NEPA and Section 106 and 4(f) of federal NHPA (16 U.S.C. 470 *et seq*), 36 CFR Part 800.3 (f) (2) & .5, the President’s Council on Environmental Quality (CSQ, 42 U.S.C 4371 *et seq.* and NAGPRA (25 U.S.C. 3001-3013) as appropriate. The 1992 *Secretary of the Interiors Standards for the Treatment of Historic Properties* were revised so that they could be applied to all historic resource types included in the National Register of Historic Places and including cultural landscapes. Also, federal Executive Orders Nos. 11593 (preservation of cultural environment), 13175 (coordination & consultation) and 13007 (Sacred Sites) are helpful, supportive guides for Section 106 consultation. The aforementioned Secretary of the Interior’s *Standards* include recommendations for all ‘lead agencies’ to consider the historic context of proposed projects and to “research” the cultural landscape that might include the ‘area of potential effect.’

6

Confidentiality of “historic properties of religious and cultural significance” should also be considered as protected by California Government Code §6254(r) and may also be protected under Section 304 of he NHPA or at the Secretary of the Interior discretion if not eligible for listing on the National Register of Historic Places. The Secretary may also be advised by the federal Indian Religious Freedom Act (cf. 42 U.S.C., 1996) in issuing a decision on whether or not to disclose items of religious and/or cultural significance identified in or near the APEs and possibility threatened by proposed project activity.

7

Furthermore, Public Resources Code Section 5097.98, California Government Code §27491 and Health & Safety Code Section 7050.5 provide for provisions for inadvertent discovery of human remains mandate the processes to be followed in the event of a discovery of human remains in a project location other than a ‘dedicated cemetery’.

8

To be effective, consultation on specific projects must be the result of an ongoing relationship between Native American tribes and lead agencies, project proponents and their contractors, in the opinion of the NAHC. Regarding tribal consultation, a relationship built around regular meetings and informal involvement with local tribes will lead to more qualitative consultation tribal input on specific projects.

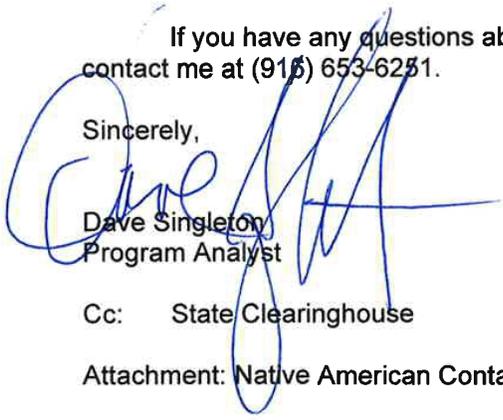

9

Finally, when Native American cultural sites and/or Native American burial sites are prevalent within the project site, the NAHC recommends ‘avoidance’ of the site as referenced by CEQA Guidelines Section 15370(a).

10

If you have any questions about this response to your request, please do not hesitate to contact me at (916) 653-6251.

Sincerely,

Dave Singleton
Program Analyst

This list is applicable for contacting local Native Americans with regard to cultural resources for the proposed SCH#2011081084; CEQA Notice of Completion; draft Environmental Impact Report (DEIR) for the VIP Moreno Valley Project; located in the City of Moreno Valley; Riverside County, California.

2.4 RESPONSE TO LETTER A

California Native American Heritage Commission

Response to Comment A-1. The comment is introductory and states that the Native American Heritage Commission (NAHC) is the State “trustee agency” pursuant to Public Resources Code Section 21070 for the protection and preservation of the State’s Native American resources. The comment also states that the letter contains state and federal statutes relating to Native American historic properties of religious and cultural significance.

The comment is introductory in nature and outlines the NAHC’s authority and role as a commenting agency. The NAHC’s introduction in this comment is noted, and no further response is required.

Response to Comment A-2. The comment states that CEQA requires that any project that causes a substantial adverse change in the significance of a historical resource, which includes archaeological resources, is a “significant effect” requiring the preparation of an EIR. A Draft EIR was prepared for the proposed project and circulated for public review on April 20, 2012. Based on the *Phase I Cultural Resources Assessment and Paleontological Records Review* prepared for the proposed project, the site contains a historic site and a historic isolate, which were recorded and evaluated for significance in accordance with CEQA. Based on the study, it was determined that the historic resource and historic isolate were not considered to be significant. Consequently, construction and grading of the proposed project site will not affect significant historic resources, resulting in a less than significant impact.

Response to Comment A-3. The comment states that the NAHC Sacred Lands File (SLF) search found that no Native American cultural resources were identified within the project area. Similarly, the Draft EIR determined that there were no cultural resources (historic or prehistoric) identified on the project site as a result of records searches or during on site reconnaissance. The comment does not contain any substantive statements or questions about the Draft EIR or the analysis therein. Therefore, no further response is necessary.

Response to Comment A-4. The comment states that NAHC Sacred Sites are confidential and exempt from the Public Records Act pursuant to California Government Code Section 6254. The City acknowledges the sensitivity and confidentiality of the information contained in the cultural resources report. No records maps have been made public nor will they be made public in association with the City’s consideration of the proposed project.

Response to Comment A-5. The comment states that pursuant to California Public Resources Code Section 5097.95, the NAHC requests that pertinent project information be provided to Native American consulting parties, and that Native American consultation is a matter of environmental justice. The comment letter states that early consultation with Native American Tribes in the area of the project site is the best way to avoid unanticipated discoveries once a project is underway. The letter includes a list of Native American contacts and recommends obtaining their recommendations concerning the proposed project.

Appendix B-5 of the Draft EIR contains the Phase I Cultural Resource Assessment and Paleontological Records Review, (Michael Brandman Associate., March 27, 2012) prepared for the proposed project in which Native American consultation was conducted. On February 15, 2007, Michael Brandman Associates sent a letter to the NAHC in an effort to determine whether any sacred sites were listed on the Scared Lands Files for this area of Moreno Valley containing the project site.

In response to the Sacred Land Record Search request, the NAHC identified fourteen Native American contacts that may have knowledge of cultural resources in the project area.

Letters dated February 28, 2007, were sent by MBA to the fourteen Native American contacts provided by the NAHC. The letters notified the parties of the proposed project and requested that the tribes respond with information concerning cultural resources that might be affected.

Response to Comment A-6. The comment states that consultation with Tribes and interested Native American consulting parties on the NAHC list should be conducted in compliance with the requirements of federal National Environmental Policy Act (NEPA), Sections 106 and 4(f) of the National Historic Preservation Act, and the Native American Grave Protection and Repatriation Act (NAGPRA), as appropriate.

The project is not a federal undertaking as defined under Section 106 of the National Historic Preservation Act (NHPA) or 36 Code of Federal Regulations (CFR) Part 800 regulations implementing Section 106. The project does not use federal funds and will not require any federal permits. Therefore, the project does not fall under the regulatory oversight of Section 106. The project is not a federal transportation project, so it also does not fall under the jurisdiction of Section 4(f) of the Department of Transportation Act of 1966. Finally, since there is no federal involvement in the project, the requirements of NAGPRA do not apply.

As described in Response to Comment A-5, above, the City conducted consultation with fourteen local tribes and interested Native American individuals for the project. Consultation included providing those parties with pertinent project and location information.

Response to Comment A-7. The comment states that historic properties of religious and cultural significance are confidential and protected by California Government Code Section 6254. The comment further states that the confidentiality of such resources may also be protected by section 304 of the NHPA. The City acknowledges the sensitivity and confidentiality of any identified resources. The SLF and any associated records maps are not for public distribution. In addition, because the project is not a federal undertaking, it is not regulated under Section 304 of the NHPA.

Response to Comment A-8. The comment identifies State laws regarding the accidental discovery of human remains. In the unlikely event that human remains are encountered during project grading, the County Coroner and the City Planning Division would be notified immediately, and no further disturbance would occur until the County Coroner makes a determination of origin and disposition. If the remains are determined to be Native American, the County Coroner would notify the NAHC, which will determine and notify the most likely descendant (MLD). Implementation of state law reduces potential impacts related to the discovery of human remains on the proposed project site to a less than significant level, and no additional mitigation is required.

Response to Comment A-9. The comment states that effective consultation, in the opinion of the NAHC, is the result of an ongoing relationship between Native American tribes and lead agencies, project proponents and their contractors. The City agrees that effective consultation is desired. The City has reached out to Native American tribes through the consultation process (as detailed in the Draft EIR in Appendix B-5). The comment does not contain any substantive statements or questions about the Draft EIR or the analysis therein. Therefore, no further response is necessary.

Response to Comment A-10. The comment states that the NAHC recommends avoidance when a project would damage or destroy Native American cultural resources. The comment further states that documentation and data recovery of such resources is required pursuant to the CEQA

Guidelines. Based on the *Phase I Cultural Resources Assessment and Paleontological Records Review* prepared for the proposed project, the site has a low potential for containing archeological resources due to the lack of such resources previously discovered in the surrounding area and the disturbed nature of the project site. Consequently, construction and grading of the proposed project site will have a low probability of damaging archeological resources. Impacts to archeological resources are considered to be less than significant.

EDMUND G. BROWN JR., Governor
CHARLTON H. BONHAM, Director

May 16, 2012

Mr. Jeff Bradshaw
City of Moreno Valley
14177 Frederick Street
Moreno Valley, CA 92551

RECEIVED
MAY 21 2012
CITY OF MORENO VALLEY
Planning Division

Subject: Draft Environmental Impact Report for the VIP Moreno Valley Project
City of Moreno Valley, Riverside County -- SCH #2011081084

Dear Mr. Bradshaw:

The Department of Fish and Game (Department) appreciates this opportunity to comment on the Draft Environmental Impact Report for the VIP Moreno Valley Project. The Department is responding as a Trustee Agency for fish and wildlife resources [Fish and Game Code sections §711.7 and 1802 and the California Environmental Quality Act Guidelines (CEQA) section §15386] and as a Responsible Agency regarding any discretionary actions (CEQA Guidelines section §15381), such as a Lake and Streambed Alteration Agreement (California Fish and Game Code Sections §1600 *et seq.*) and/or a Permit for Incidental Take of Endangered, Threatened, and/or Candidate species (Fish and Game Code Sections 2080 and 2080.1).

The proposed Project consists of the construction and operation of approximately 1,616,133 square feet of distribution warehouse uses on a 71-acre site. The Project is located in the City of Moreno Valley and is bounded on the west by Indian Street, on the east by Perris Boulevard, on the north by Grove View Road and on the south by the Perris Valley Storm Drain. The March Air Reserve Base and the Interstate-215 (I-215) are located in the vicinity to the west. The site has been used for dryland farming and is disked. There is vegetation (mostly non-native) on the periphery of the site but the major part of the site is disked.

Western Riverside Multiple Species Habitat Conservation Plan (MSHCP)

The Department is responsible for ensuring appropriate conservation of fish and wildlife resources including rare, threatened, and endangered plant and animal species, pursuant to the California Endangered Species Act (CESA), and administers the Natural Community Conservation Plan Program (NCCP Program). On June 22, 2004, the Department issued Natural Community Conservation Plan Approval and Take Authorization for the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) per Section §2800, *et seq.*, of the California Fish and Game Code. The MSHCP establishes a multiple species conservation program to minimize and mitigate habitat loss and the incidental take of covered species in association with activities covered under the permit.

The proposed Project occurs within the MSHCP area and is subject to the provisions and policies of the MSHCP. The City of Moreno Valley is the Lead Agency and is signatory to the

1

Conserving California's Wildlife Since 1870

Draft Environmental Impact Report for the VIP Moreno Valley Project
City of Moreno Valley, County of Riverside -- SCH# 2011081084
Page 2 of 4

Implementing agreement of the MSHCP. Compliance with approved habitat plans, such as the MSHCP, is discussed in CEQA. Specifically, Section 15125(d) of the CEQA Guidelines requires that the DEIR discuss any inconsistencies between a proposed Project and applicable general plans and regional plans, including habitat conservation plans and natural community conservation plans. An assessment of the impacts to the MSHCP as a result of this Project is necessary to address CEQA requirements.

↑
1

The Project is located in the Reche Canyon/Badlands Area Plan but does not contain any Criteria Cells and the site is not necessary for reserve assembly. MSHCP policies and procedures that apply to the proposed Project include Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools policy (MSHCP section 6.1.2 pp 6-20; "Riparian/Riverine and Vernal Pool Policy"), Protection of Narrow Endemic Plant Species (MSHCP section 6.1.3 pp 6-28; "NEPPSA"), and Additional Survey Needs and Procedures (MSHCP section 6.3.2, Additional Survey Needs and Procedures).

A) Special Survey Areas

The Project is located within the survey area for the western burrowing owl (WBO). WBO is a State Species of Special Concern and is a species subject to the Migratory Bird Treaty Act (MBTA). Focused surveys for the WBO were conducted in 2009. The results of the focused surveys indicate that there were no direct observations or sign of the WBO.

2

B) Protection of Narrow Endemic Plant Species

Plant species requiring habitat assessments include: San Diego ambrosia, many-stemmed dudleya, spreading navarretia, California Orcutt grass, Wrights trichocoronis, Coulter's goldfields, Davidson's saltscale, little mousetail, mud nama, Parish's brittlescale, round-leaved filaree, San Jacinto Valley crowscale, smooth tarplant, and threat-leaved brodiaea. Focused NEPS and Criteria Area surveys were conducted in 2009. The 2009 surveys determined that the NEPS and Criteria Area Plants have a low potential for occurrence because of the absence of suitable habitat and the disking of the site. The DEIR conclusions are supported by the surveys for the Perris Boulevard Widening Project.

3

C) Riparian/Riverine Areas, Vernal Pools, and Fairy Shrimp

A narrow, north-south trending agricultural drainage ditch bisects the center of the site and terminates at a culvert entering the Perris Valley Storm Drain. The document states that the "drainage ditch" does not meet the requirements of this MSHCP policy. The Department reserves the right to determine whether the on-site channel is jurisdictional.

4

Impacts to the species

The biological report states that the only vegetation on the site is located on the periphery because of ongoing disking and consists primarily of non-native plants. Wildlife on the site includes: red-tailed hawk, American kestrel, common raven, American crow, Brewer's blackbird, Say's phoebe, western kingbird, western meadowlark, mourning dove, side-blotched lizard, western fence lizard, California ground squirrel, desert cottontail and pocket gopher.

5

Draft Environmental Impact Report for the VIP Moreno Valley Project
City of Moreno Valley, County of Riverside -- SCH# 2011081084
Page 3 of 4

Proposed mitigation

Impacts to wildlife are covered by the MSHCP and the mitigation requirements in the MSHCP. The DEIR states that preconstruction surveys will be conducted for WBO and nesting birds. If WBO are found on the site the Resource Conservation Agency and the Department should be notified to determine whether additional mitigation measures are required.

6

Department Concerns

The Department reserves the right to determine whether the channel on site is subject to Section 1600 et seq. in the Fish and Game Code. A Determination of Biologically Equivalent or Superior Preservation (DBESP) alternative is not required, according to the DEIR. The Department needs to be notified prior to commencement of grading if bird nests or burrowing owl are identified in pre-construction surveys. In addition, a Lake and Streambed Alteration Agreement (Section 1600 et seq.) may be required. No mitigation has been provided for the loss of this channel.

7

Lake and Streambed Alteration Agreement

Although the proposed Project is within the Western Riverside Multiple Species Habitat Conservation Plan (MSHCP) and is not subject to Section 6.1.2, Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools, a Lake and Streambed Alteration Agreement Notification may still be required by the Department should the site contain jurisdictional waters. Additionally, the Department's criteria for determining the presence of jurisdictional waters are more comprehensive than the MSHCP criteria in Section 6.1.2.

8

A routine delineation was conducted in 2009 and the consultants determined that there were no jurisdictional wetlands or streams on the site. However, the Department retains the right to determine whether the resources on site are jurisdictional waters and subject to the Lake and Streambed Alteration Agreement program. A new streambed jurisdictional delineation needs to be conducted to determine whether the channel (i.e., "drainage ditch") conveys water across the site, particularly during the rainy season, and how many linear feet or acres comprise the channel.

The Department recommends submitting a notification early on, since modification of the proposed Project may be required to avoid or reduce impacts to fish and wildlife resources. To obtain a Streambed Alteration Agreement notification package, please call (562) 430-7924 or go to <http://www.dfg.ca.gov/habcon/1600/forms.html>.

9

If the CEQA documents do not fully identify potential impacts to lakes, streams, and associated resources and provide adequate avoidance, mitigation, monitoring, funding sources, a habitat management plan and reporting commitments, additional CEQA documentation will be required prior to execution (signing) of the Agreement. In order to avoid delays or repetition of the CEQA process, potential impacts to a stream or lake, as well as avoidance and mitigation measures need to be discussed within this CEQA document. Permit negotiations conducted after and outside of the CEQA process are not CEQA-compliant because they deprive the public and agencies of their right to know what project impacts are and how they are being mitigated (CEQA Section 15002).

10

Draft Environmental Impact Report for the VIP Moreno Valley Project
City of Moreno Valley, County of Riverside – SCH# 2011081084
Page 4 of 4

The Department opposes the elimination of ephemeral, intermittent and perennial stream channels, lakes and their associated habitats. The Department recommends avoiding the stream and riparian habitat to the greatest extent possible. Any unavoidable impacts need to be compensated with the creation and/or restoration of in-kind habitat either on-site or off-site at a minimum 3:1 replacement-to-impact ratio, depending on the impacts and proposed mitigation. Additional mitigation requirements through the Department's Streambed Alteration Agreement process may be required depending on the quality of habitat impacted, proposed mitigation, project design, and other factors.

The following information will be required for the processing of a Streambed Alteration Agreement and the Department recommends incorporating this information to avoid subsequent CEQA documentation and project delays:

- 1) Delineation of lakes, streams, and associated habitat that will be temporarily and/or permanently impacted by the proposed project (include an estimate of impact to each habitat type);
- 2) Discussion of avoidance measures to reduce project impacts; and,
- 3) Discussion of potential mitigation measures required to reduce the project impacts to a level of insignificance.

Please refer to section 15370 of the CEQA guidelines for the definition of mitigation. If the project does not include the criteria listed above, the Department believes that it cannot fulfill its obligations as a Trustee and Responsible Agency for fish and wildlife resources.

We recommend that the Department's concerns be addressed in the Final Environmental Impact Report.

Sincerely,

Jeff Brandt
Senior Environmental Scientist

2.6 RESPONSE TO LETTER B

California Department of Fish and Game

Response to Comment B-1. The commentor accurately summarizes both the CEQA requirement for an analysis of the proposed project's consistency with the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) and the MSHCP policies and procedures applicable to the proposed project.

Response to Comment B-2. The commentor accurately summarizes both the MSHCP requirement for a burrowing owl survey and that the surveys conducted for the project showed no burrowing owl sign or observations.

Response to Comment B-3. The commentor accurately summarizes both the MSHCP requirement for survey of narrow endemic plant species and that the surveys conducted for the project determined there is a low potential for occurrence of the species due to lack of suitable habitat and diking of the site. The commentor also notes these conclusions are consistent with the surveys conducted for the Perris Boulevard Widening Project (which is a City of Moreno Valley capital improvement project) and not related to the VIP Moreno Valley Project.

Response to Comment B-4. The commentor notes the Draft EIR statement that the agricultural ditch running north-south across the center of the site is not jurisdictional and indicates CDFG reserves the right to determine whether the on-site ditch is jurisdictional. As stated in the Draft EIR (pages 2-10 and 2-11), the ditch no longer contains the characteristics of jurisdictional waters. This is due to the construction of Grove View Road and storm drains on the north side of the site, resulting in the elimination of an abundant supply of off-site water flow from the north onto the site. Because the ditch no longer carries the abundant supply off-site water flow, it no longer supports the one riparian species (willow) that exists in the ditch. This condition has become even more evident over the past several years, resulting in no jurisdictional waters on the site.

Response to Comment B-5. The commentor accurately summarizes the vegetation and wildlife observed on the site.

Response to Comment B-6. The commentor accurately summarizes the Draft EIR mitigation measure prescribing preconstruction surveys for burrowing owl and nesting birds, and requests that the Regional Conservation Authority and CDFG be contacted should burrowing owl be found on the site in order to determine the need for additional mitigation. This is standard operating procedure, and the project proponent's biological consultant will comply.

Response to Comment B-7. The commentor identifies CDFG's concerns which are summarized as follows: 1) Regarding the on-site ditch that runs north-south through the center of the project site, CDFG states that they reserve the right to determine whether the site is jurisdictional, and if so, a Section 1600 permit would be required for the loss of the on-site ditch; and 2) CDFG requests that they be notified prior to grading activities if bird nests or burrowing owls or observed during the pre-construction surveys required as part of Mitigation Measures BIO-1 through BIO-4.

Response to Comment B-8. The commentor notes that CDFG's criteria for determining jurisdictional waters are more comprehensive than the MSHCP criteria and requests that a new jurisdictional delineation be conducted.. As stated in the Response to Comment B-4, the Draft EIR has already identified that the on-site ditch no longer accepts off-site water flows during storm events because off-site flows now are conveyed to a storm drain located in Grove View Road. The eastern section of Grove View Road between Perris Boulevard and Indian Street was constructed in 2007 while the

western section was constructed in 2009 as part of the two warehouse projects located across the street and north of the proposed project. The conditions observed in the 2009 jurisdictional delineation prepared by Ecological Sciences are still valid, and in fact, the lack of jurisdictional waters has become more obvious due to the lack of off-site water conveyance.

Response to Comment B-9. The commenter provides contact information regarding submittals for Section 1600 permit. Refer to Responses to Comments B-4 and B-9. The project contains no jurisdictional waters, a Section 1600 Streambed Alteration Agreement is not required, and this information is therefore not applicable.

Response to Comment B-10. Refer to Responses to Comments B-4, B-9, and B-10.

Response to Comment B-11. Refer to Responses to Comments B-4, B-9, and B-10.

Subject: Proposed VIP Moreno Valley Distribution Center DEIR

Jeff Bradshaw, Associate Planner
Moreno Valley Planning Division
14177 Frederick Street, Moreno Valley City Hall
Moreno Valley, CA 92553

Dear Mr. Bradshaw:

The proposed VIP Moreno Valley Distribution Center project is consistent with the present specific plan as well as the superseded Oleander Specific Plan of the Moreno Valley General Plan and the zoning ordinance. My opinion of this industrial site concerning prime farmland, remains the same since 1989. The land has been designated as industrial in the specific plans and the zoning ordinance. The land has not met the state definition of prime farmland for the last 20 years or more due to the lack of acreage remaining of the land designated prime farmland on the state map. Viable crops grown on prime farmland have not been commercially possible for quite some time. Much of the site is already developed into industrial uses.

1

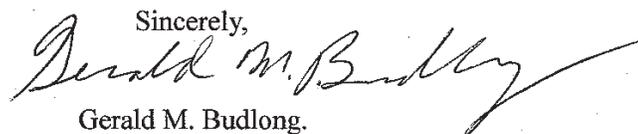

My only concern of the subject DEIR is the omission of groundwater levels and associated adverse impacts such as liquefaction. Why are high groundwater levels and liquefaction issues missing from this EIR?

The environmental cleanup program, called the Installation Restoration Program (IRP), at March Field, incorporating the former March AFB and present March ARB, has monitored the groundwater levels on and off base since the start of this program in the late 1980s. The groundwater levels have been rising an average of one to two feet annually. To date local groundwater levels are as high as 10 feet or less from the ground surface. Projects such as the new MWD water pipeline parallel to I-215 and near the March Field Museum has undergone high groundwater conditions which has prevented completion of approximately 400 linear yards of the project. A new bidding process inviting contractors with expertise in high groundwater conditions was initiated. The Air Force is concerned that the high groundwater conditions may adversely impact foundations at the base. The Air Force is concerned about potential adverse impacts from liquefaction in the event of a future earthquake. It was reported at the April 2012 March Field IRP Board meeting, that underground cement utility vaults at the former DHL airfreight building was experiencing flooding. I inquired whether the flooding was caused by high groundwater conditions. Staff promised they will make inquiries and report back at the October IRP meeting.

2

Are the building foundations for the proposed project engineered for high groundwater level conditions and potential liquefaction events from major earthquakes?

3

Sincerely,

Gerald M. Budlong.

2.8 RESPONSE TO LETTER C

Gerald M. Budlong

Response to Comment C-1. The City appreciates the comments provided on the proposed project regarding the project being consistent with the City's General Plan and zoning code as well as comments on prime farmland and the area not being viable for farming since 1989. The comments are part of the public record and will be forwarded to the City's decision makers for their consideration prior to approving the project and certifying the EIR.

Response to Comment C-2. Appendix B-6 of the Draft EIR contains the *Geotechnical Engineering Investigation Proposed Industrial Development Southwest Corner of Perris Boulevard and Grove View Road Moreno Valley, California* (NorCal Engineering, May 7, 2007) prepared for the proposed project. The geotechnical investigation consisted of forty (40) subsurface exploratory trenches by a backhoe to depths ranging 5-15 feet below current elevations. The report stated "no ground water was encountered in any of the trenches (page 2). This study indicated that the groundwater levels are greater than 100 feet below the surface and the site has a low potential for liquefaction (page 5). The Draft EIR also provided this information in Section 2.5.4 Geology and Soils, page 2-14 which states "*Liquefaction typically occurs in areas where groundwater is shallower than approximately 30 feet, and where there is the presence of loose, sandy soils. According to the City's General Plan, liquefaction is not considered to be a local hazard since groundwater levels in Moreno Valley are far below the surface.¹ The project's geotechnical analysis² indicates that the depth of groundwater within the project vicinity is in excess of 100 feet. The proposed project site is not located in an area identified as being prone to liquefaction. The potential for earthquake-induced liquefaction within the proposed project is considered very low.³ Because liquefaction at the project site is considered to be very low, a less than significant impact related to liquefaction would occur.*"

Response to Comment C-3. The proposed project will be built per the City's and State's building code requirements and those contained in the geotechnical study prepared for the proposed project. The building code includes provisions for seismic safety.

***RE: Moreno Valley Vogel Industrial Park (VIP) Draft Environmental Impact Report
 Comments***

Greetings:

On behalf of the Sierra Club, Moreno Valley Group, and Residents for a Livable Moreno Valley, I hereby submit these comments on the Moreno Valley VIP Draft Environmental Impact Report (DEIR). (PA09-0004, PA09-0012, TPM No. 36162)

Project Summary:

The proposed development would result in the construction and operation of approximately 1,616,133 square feet of distribution warehouse uses on an approximately 71-acre site. The single building will be constructed with 264 vertical-lift dock-high roll up doors on the long (north and south) sides of the building to allow access for the loading and unloading of products from diesel truck/trailers. The building will include a total of approximately 44,000 square feet of business office space for the management of the warehouse. Parking at the warehouse will be provided for 368 trucks and trailers as well as 589 parking stalls for passenger vehicles in accordance with City standards for light industrial uses. See Figure 1.2.

The project is located approximately 1.3 miles east of I-215, 4.5 miles south of SR-60, and 1.75 miles west of Lake Perris. March Air Reserve Base is located approximately one half mile west of the project site. Residences are located to the west of the site.

1

General Comments:

The California Environmental Quality Act (CEQA) was adopted as a disclosure and transparency document. The theory is that by providing a document that adequately describes the environmental consequences of a project to decision makers and the public, the decision makers will make a rational decision based upon the true environmental consequences of the project and if they do not, the electorate can hold them accountable for their decisions. The core of this statutory structure is the adequacy of the document as an informational document.

2

Unfortunately, the Draft EIR for this Project fails as an informational document. The EIR misleads decision makers and the public as to the extent and severity of the Project's environmental impacts. On top of these inadequacies, the Draft EIR is almost constantly conclusory, and does not provide the analysis or examination required by CEQA to inform the public and decision makers of the analytical pathway taken from facts to conclusions. Moreover, the EIR evaluates only impacts to Agricultural and Forest Resources, Air Quality, Greenhouse Gas Emissions and Global Climate Change, Noise, and Traffic. The EIR determines, without basis in CEQA, to *not* evaluate in detail impacts which *are potentially significant* but which will be mitigated below a level of significance, including impacts to Biological Resources, Cultural Resources, Geology and Soils, and Hydrology and Water Quality. While effects determined not be significant need not be discussed in detail in the EIR, effects which may be significant must be evaluated, and then the mitigation measures or alternatives which would reduce or avoid that effect must be described. (Public Res. C. § 21002.1(a), (e); State CEQA Guidelines § 15128, 15126, 15123) The EIR fails as an informational document by failing to analyze and evaluate **all potentially significant environmental effects of the project**, relying instead on the cursory evaluation performed for the environmental assessment. By failing to provide information on the potentially significant effects of the project that can be mitigated below a level of significance, the EIR fails as an informational document. The findings are also not supported by substantial evidence in the record, but rather only by the baseless conclusions cited in the EIR.

3

4

CEQA also requires that where feasible mitigation exists which can substantially lessen the environmental impacts of a project, **all feasible mitigation** must be adopted. In this way CEQA goes beyond its informational role to require that projects substantively lessen their negative effects on the environment. It is critical to proper drafting of an EIR that all feasible mitigation measures be required of a project. This has not been done with this Project. For instance, the EIR fails to require *any* mitigation for the project's significant impacts to agricultural resources. Moreover, all mitigation measures required in the EIR must be fully enforceable and certain to occur. This Project fails to ensure that all feasible mitigation will occur with this Project and instead provides vague, uncertain, and unenforceable approximations of mitigation measures.

5

6

For instance, several “alternatives” listed in the EIR will not satisfy the actual mitigation required, while other mitigation measures merely require the incorporation of writings, not actions.

7

The Moreno Valley VIP project purports to be a “green project” that is environmentally forward thinking; this is simply not the case, and in fact, the Moreno Valley VIP industrial building will be the *least* green building constructed in Moreno Valley in the past 3 years. The EIR provides examples of typical green building features, but fails to require each of those features for this project. The project only requires LEED certification and does not explain why requiring a gold or platinum LEED certification is infeasible, despite having significant air quality and greenhouse gas impacts.

8

Correspondingly, while most of the project’s environmental effects will be a result of its use as a distribution center and corresponding traffic and air quality impacts, not the effects of the warehouse building itself, little if any mitigation is required to reduce these impacts. Regarding traffic effects, the EIR relies heavily on TUMF and DIF programs and concludes that significant effects will be either immediately or promptly reduced by these programs. To the contrary, a significant amount of the streets impacted are not currently planned or funded for improvements, and given the underfunding of these programs are unlikely to see any improvement in the near term. The EIR accordingly understates the traffic and air quality impacts of the project and fails to require all feasible mitigation.

9
10

The EIR also fails to make adequate findings, based on substantial evidence, that the environmentally superior alternative is infeasible. In fact, the environmentally superior alternative satisfies most, if not all project objectives and significantly reduces project impacts, particularly with regards to air quality in an area known to have some of the worst air quality in the nation. At the least, the environmentally superior alternative must be implemented in lieu of the project.

11

Further shortcomings of the EIR are detailed below.

Aesthetics

The finding of less than significant impact is not supported regarding lighting. The EIR acknowledges that the project will create a new source of substantial light, but fails to discuss this impact on nighttime views.

12

Agricultural Resources

The project will result in a significant and unmitigated individual and cumulative impact to agricultural resources by converting *Prime Farmland, Unique Farmland, and Farmland of Statewide Importance*, to non-agricultural use; and would involve other changes in the existing environment which would result in the conversion of Farmland to non-agricultural use.

13

Specifically, the project site is entirely identified as Prime Farmland, Farmland of Statewide Importance, and Farmland of Local Importance. Loss of State Designated Farmland as a result of this project is a significant impact, and accounts for a substantial percent of farmland conversion for Riverside County. The project site's Land Evaluation and Site Assessment score further demonstrates a significant impact from the conversion of quality land and agricultural resources.

14

The EIR plays down the effect of development and operation of industrial uses in increasing development pressure on adjacent agricultural properties. The EIR does not disclose the predicted impacts on properties adjacent to the project site or along the truck routes used to access the project site, as well as city wide impacts.

15

No mitigation is required to reduce the significant adverse impacts of this project to agriculture. While the EIR identifies many mitigation measures that may be implemented, it fails to require any mitigation. The fact that the General Plan EIR found mitigation to be infeasible on a citywide scale does not mean that project level mitigation here is infeasible.

Mitigation measures identified by the CDC to reduce agricultural impacts include:

- The purchase of agricultural conservation easements;
- Transfer of development rights;
- Acquisition of farmland by the city or county;
- mitigation banking;
- the establishment of "urban limits," greenbelts, and buffers;
- the payment of in-lieu fees sufficient to a purchase and maintain farmland conservation easements;
- and planning tools such as clustering development, use of density bonuses, and limiting "leapfrog" development.

16

While the measures regarding planning have been determined to be infeasible by the City, *the EIR does not provide evidence to support the finding of infeasibility with regard to the purchase or transfer of development rights, conservation easements, or donation of funds to assist in the preservation of agricultural lands.* The conclusion of the EIR that these measures for mitigation of agricultural land are contrary to the City's vision and therefore not feasible is unsupported. The purchase of conservation easements must be required as mitigation barring evidence of infeasibility. The purchase of a permanent agricultural conservation easement of land of at least 2:1 of equal quality must be required to mitigate for impacts from the direct and growth inducing/cumulative loss of agricultural land by either the outright purchase of easements or donation of mitigation fees to a local, regional, or statewide organization that provides for acquisition and stewardship of agricultural conservation easements. Such mitigation is not found to be infeasible.

17

Air Quality

The project will result in significant and unavoidable impacts to air quality during construction and operation.

18

Several of the construction air quality impact “mitigation measures” are required by law, and therefore do not qualify as “mitigation.”

19

Existing air quality in the project vicinity generally exceeds state and federal air quality standards for Ozone, Coarse Particulate Matter (PM10), Fine Particulate Matter (PM2.5) for the year. The nearest sensitive receptors to the project are rural residences located approximately 1,000ft north of the project site and 0.5 miles southwest of the project site.

20

The EIR fails to disclose all Moreno Valley General Plan Policies relevant to air pollutant emissions. Such omitted policies and objectives include:

- Ultimate Goal VII: achieve a community which “Emphasizes public health and safety...”
- Goal 6.1: “To achieve acceptable levels of protection from natural and man-made hazards to life, health, and property.”
- Objective 7.5 “Encourage efficient use of energy resources.”
- Policies 7.5.1; 7.5.2; 7.5.5 regarding energy efficiency.

21

The EIR finds that the project would, “add jobs resulting from the development of the industrial uses to the City, with the potential to minimize the VMT traveled within the project site and community.” This potential may not be recognized and is unsupported by evidence in the record and are countered by recent projects within Moreno Valley. For instance, the Sketchers project nearby likewise promised job opportunities for local Moreno Valley workers. However, when all was said and done the facility resulted in a net job loss, and most employees were transferred from Ontario, increasing vehicle miles travelled. (See, “Moreno Valley: Sketchers’ warehouse has caused net job loss,” The Press Enterprise, Jack Katzanek, February 1, 2012. <<http://www.pe.com/business/business-headlines/20120201-moreno-valley-skechers-warehouse-has-caused-net-job-loss.ece>>)

22

The project use will also be truck distribution; hence despite any local employment at the warehouse, the project will not minimize VMT and will not minimize air pollutant emissions consistent with the AQMP, but will instead drastically increase mobile source emissions. In fact, the focus of the AQMP is to attain PM 2.5 standards, which this project will specifically add to through the use of diesel trucks. (See AQMP 4-1.)The finding that the project is consistent with the AQMP is entirely unsupported.

23

Health Risks

The EIR finds that the project will have less than significant operational-acute health risk impacts on the basis that, “studies ...have not provided sufficient information to establish a short-term non-cancer health risk guidance value for respiratory impacts.” This ignores entirely the threshold of significance which asks “Would the proposed project expose sensitive receptors to substantial pollutant concentrations?” and does not necessarily require a health risk guidance value.

24

Operational-Chronic Health Risk Impacts are determined to be less than significant. It is unclear

25

from the EIR that levels at the sensitive receptors of Table 4.2.H were measured, as the EIR states, “Sensitive receptors were placed in a general grid extending in all directions to characterize the risk level surrounding the project site.” In the immediate vicinity of the project site are residences, the Rancho Verde High School (one mile to the east of the project site), and El Potrero Elementary School (one mile to the northeast of the project). The EIR does not demonstrate that impacts at these and other locations were evaluated, particularly given the increased susceptibility of infants, children, and the elderly to health impacts from diesel PM.

25

Moreover, the HRA accounts only for the cancer risk and temporary respiratory impacts caused by this project. In addition to the risk of cancer, diesel PM is known to cause immune system effects; reproductive, developmental, and endocrine effects; nervous system effects; and lung health problems, as recognized by the County in the General Plan. Immune system effects include increased allergic inflammatory responses and suppression of infection fighting ability. Diesel PM has also been associated with reproductive effects such as decreased sperm production, changes in fetal development, low birth weight and other impacts. Diesel PM exposure may also cause impairment to the central nervous system. (*The Health Effects of Air Pollution on Children*, Michael T. Kleinman, Ph.D, Fall 2000, <http://aqmd.gov/forstudents/health_effects_on_children.html#WhyChildren>; *See also, Diesel and Health in America: the Lingering Threat*, Clean Air Task Force, February 2005, <http://www.catf.us/resources/publications/files/Diesel_Health_in_America.pdf>)

26

SCAQMD has stated with regards to the health effects from diesel PM:

“Diesel particles consist mainly of elemental carbon and other carbon-containing compounds... Diesel particles are microscopic...Due to their minute size, diesel particles can penetrate deeply into the lung. There is evidence that once in the lung, diesel particles may stay there for a long time.

In addition to particles, diesel exhaust contains several gaseous compounds including carbon monoxide, nitrogen oxides, sulfur dioxide and organic vapors, for example formaldehyde and 1,3-butadiene. Formaldehyde and 1,3-butadiene have been classified as toxic and hazardous air pollutants. Both have been shown to cause tumors in animal studies and there is evidence that exposure to high levels of 1,3-butadiene can cause cancer in humans...

27

Diesel emissions may also be a problem for asthmatics. Some studies suggest that children with asthma who live near roadways with high amounts of diesel truck traffic have more asthma attacks and use more asthma medication.

Some human volunteers, exposed to diesel exhaust in carefully controlled laboratory studies, reported symptoms such as eye and throat irritation, coughing, phlegm production, difficulty breathing, headache, lightheadedness, nausea and perception of unpleasant odors. Another laboratory study, in which volunteers were exposed to relatively high levels of diesel particles for about an hour, showed that such exposures could cause lung inflammation.” (*The Health Effects of Air Pollution on Children, supra*; *See also, Mira Loma Commerce Center EIR No. 450, Air Quality, Section 4.*)

Furthermore, infants, children, and the elderly are more susceptible to diesel PM and its associated health impacts. Given this project's close proximity to two schools, the Rancho Verde High school (1 mile east) and El Potrero Elementary School (1 mile northeast) this increased susceptibility is extremely relevant. With regards to infants and children, increased susceptibility to TACs and diesel PM exists for a variety of reasons. Children are generally more active than adults, have higher respiration rates, and inhale more pollutants deeper into the lung. Children also have more lung surface area in proportion to their body size and inhale more air pound for pound when compared to adults, taking in 20 to 50 percent more air and associated air pollutants than adults. When compared to adults, children spend more active time outdoors in polluted air environments and exert themselves harder than adults when playing outside. Importantly, this exposure to high pollutant levels in children occurs while their lungs are still developing, and therefore has more severe impacts on this sensitive group. (*The Health Effects of Air Pollution on Children, supra.*)

28

This increased susceptibility to air pollutant emissions for children has resulted in the California EPA Office of Environmental Health Hazard Assessment ("OEHHA") weighting cancer risk by a factor of 10 for exposures to carcinogens from birth to two years old, and by a factor of 3 for exposures from 2 years old to 15 years old. (*Technical Support Document for Cancer Potency Factors: Methodologies for derivation, listing of available values, and adjustments to allow for early life stage exposures*, California EPA OEHHA Air Toxicology and Epidemiology Branch, April 2009, p. 3. <http://www.oehha.ca.gov/air/hot_spots/pdf/TSDCPFApril_09.pdf>.) It is unclear that these increased risks were accounted for in the EIR. Additionally, recent studies conducted by SCAQMD's Brain and Lung Tumor and Air Pollution Foundation have found a specific connection between exposure to diesel PM and brain cancer in children. (Annual Meeting of the Brain & Lung Tumor and Air Pollution Foundation, April 2, 2010, <<http://www.aqmd.gov/hb/2010/April/100425a.htm>>)

29

In addition to an increased risk of cancer, the effects of diesel PM on children include slowed lung function and growth, increased emergency room visits, increased incidences of asthma and bronchitis, crib death, asthma respiratory infections, allergic symptoms, and asthma hospitalizations. (*Diesel and Health in America: the Lingering Threat, supra.*)

This project will contribute to an already dire TAC situation in Riverside County. The Riverside County Planning Commission recently considered GPA 1096, an amendment to the General Plan to add a Healthy Communities Element which seeks to reduce hazardous air quality impacts to environmental and human health. The Healthy Communities Element of the General Plan was approved in view of the following significant health impacts resulting from already poor air quality in Riverside County:

30

- ***Asthma-Related Hospitalizations:*** In 2005, the greatest percentage of asthma-related hospitalizations were among those under age 18 (38%) followed by those over 65 (19%). Blacks experienced the greatest rate of hospitalizations in 2005 at 225.7 per 100,000 population, versus 99.5 and 81.2 for Hispanics and whites, respectively.
- ***Risk of Cancer from Diesel Soot and Other Toxic Air Pollutants: Whereas the regional risk of cancer from diesel soot and other toxic air pollutants dropped by 8 percent between 1998 and 2005, the cancer risk in Riverside County increased by 2 percent.***

31

32

- Poor air quality costs Riverside and San Bernardino around ***\$6.3 billion annually*** in health care expenses.
- 19% of private schools, 11% of public schools, an 21% of licensed child care centers in Riverside County are located within a quarter (1/4) mile of a major highway.
- Around 350,000 Riverside County residents live within a half (1/2) mile of a major highway, including about 40,000 children under age 5.
- Five schools in Riverside County rank in the 10th percentile for air quality, meaning that 90 percent of the schools in the country had better air. Twenty-five schools ranked in the 50th percentile or below.

32

Recognizing these present and unacceptable consequences of air pollution to the health of Riverside’s residents, particularly children and the elderly, the County General Plan and recently approved Healthy Communities Element have adopted General Plan policies pertinent to this project.

Construction Impacts

The EIR erroneously categorizes construction impacts as “Construction Equipment Exhaust Emissions.” While some construction air quality impacts arise from construction equipment exhaust, other emissions exceed the threshold of significance from architectural coatings (ROG), paving, and fugitive dust during site preparation and grading, including the importations of 220,000cy of soil (NOx and PM10).

33

Table 4.2.1 relies on construction phasing not required of the project. For example, paving will result in 3434lbs/day of NOX emissions, 34 times the SCAQMD threshold. However, the EIR finds that, on a “Peak Day,” NOX emissions will be only 390 lbs/day. This reduction is unsupported. Also, paving emissions for ROG are unclear (5.95.9?), but divide into 90 lbs/day on a peak day. Hence, while the EIR correctly finds that construction air quality impacts are significant and require mitigation, it fails to disclose the severity of that impact. Additional mitigation measures are also feasible to further reduce construction air quality emissions including the following:

1. Gravel pads must be installed at all access points to prevent tracking of mud onto public roads.
2. Install and maintain trackout control devices in effective condition at all access points where paved and unpaved access or travel routes intersect (eg. Install wheel shakers, wheel washers, and limit site access.)
3. All roadways, driveways, sidewalks, etc., should be completed as soon as possible. In addition, building pads should be laid as soon as possible after grading unless seeding or soil binders are used.
4. Pave all construction roads.
5. Pave all construction access roads at least 100 feet on to the site from the main road.
6. Limit fugitive dust sources to 20 percent opacity.
7. Require a dust control plan for earthmoving operations.
8. When materials are transported off-site, all material shall be covered, effectively wetted to limit visible dust emissions, and at least six inches of freeboard space from the top of

34

- the container shall be maintained.
9. All streets shall be swept at least once a day using SCAQMD Rule 1186 certified street sweepers utilizing reclaimed water trucks if visible soil materials are carried to adjacent streets.
 10. The contractor or builder shall designate a person or persons to monitor the dust control program and to order increased watering, as necessary, to prevent transport of dust offsite.
 11. Post a publicly visible sign with the telephone number and person to contact regarding dust complaints. This person shall respond and take corrective action within 24 hours.
 12. Extend grading period sufficiently to reduce air quality impacts below a level of significance.
 13. The simultaneous disturbance of the site shall be limited to five acres per day.
 14. Any vegetative cover to be utilized onsite shall be planted as soon as possible to reduce the disturbed area subject to wind erosion. Irrigation systems required for these plants shall be installed as soon as possible to maintain good ground cover and to minimize wind erosion of the soil.
 15. Any on-site stockpiles of debris, dirt or other dusty material shall be covered or watered three times daily.
 16. Any site access points within 30 minutes of any visible dirt deposition on any public roadway shall be swept or washed.
 17. A high wind response plan shall be formulated for enhanced dust control if winds are forecast to exceed 25 mph in any upcoming 24-hour period.
 18. Implement activity management techniques including a) development of a comprehensive construction management plan designed to minimize the number of large construction equipment operating during any given time period; b) scheduling of construction truck trips during non-peak hours to reduce peak hour emissions; c) limitation of the length of construction work-day period; and d) phasing of construction activities.*
 19. Develop a trip reduction plan to achieve a 1.5 AVR for construction employees
 20. Require high pressure injectors on diesel construction equipment.*
 21. Restrict truck operation to "clean" trucks, such as a 2007 or newer model year or 2010 compliant vehicles.*
 22. Require the use of CARB certified particulate traps that meet level 3 requirements on all construction equipment.*
 23. Utilize only CARB certified equipment for construction activities.*
 24. The developer shall require all contractors to turn off all construction equipment and delivery vehicles when not in use and/or idling in excess of 3 minutes.*
 25. Restrict engine size of construction equipment to the minimum practical size.*
 26. Use electric construction equipment where technically feasible.*
 27. Substitute gasoline-powered for diesel-powered construction equipment.*
 28. Require use of alternatively fueled construction equipment, using, e.g., compressed natural gas, liquefied natural gas, propane, or biodiesel.*
 29. Use methanol-fueled pile drivers.*
 30. Install catalytic converters on gasoline-powered equipment.*
 31. Require the use of Alternative Diesel Fuels on diesel equipment used. Alternative diesel fuels exist that achieve PM10 and NOx reductions. PuriNOx is an alternative diesel

formulation that was verified by CARB on January 31, 2001 as achieving a 14% reduction in NOx and a 63% reduction in PM10 compared to CARB diesel. It can be used in any direct-injection, heavy-duty compression ignition engine and is compatible with existing engines and existing storage, distribution, and vehicle fueling facilities. Operational experience indicates little or no difference in performance and startup time, no discernable operational differences, no increased engine noise, and significantly reduced visible smoke.

- 32. Electrical powered equipment shall be utilized in-lieu of gasoline-powered engines where technically feasible.*
 - 33. All forklifts shall be electric or natural gas powered.*
 - 34. Suspend use of all construction equipment operations during second stage smog alerts.*
 - 35. Provide temporary traffic controls such as a flag person, during all phases of construction to maintain smooth traffic flow.*
 - 36. Provide dedicated turn lanes for movement of construction trucks and equipment on- and off-site.*
 - 37. Reroute construction trucks away from congested streets and sensitive receptor areas.*
 - 38. Configure construction parking to minimize traffic interference.*
 - 39. Prior to the issuance of a grading and building permit, the applicant shall submit verification that a ridesharing program for the construction crew has been encouraged and will be supported by the contractor via incentives or other inducements.*
 - 40. Minimize construction worker trips by requiring carpooling and providing for lunch onsite. *
 - 41. Provide shuttle service to food service establishments/commercial areas for the construction crew.*
 - 42. Provide shuttle service to transit stations/multimodal centers for the construction crew.*
 - 43. Require the use of Zero-VOC paints, coatings, and solvents.
- (* Would reduce impacts to GHGs as well)

Mitigation measure (MM) 4.2.6.1B is uncertain and vague, requiring that contractors “utilize power sources...” This should be amended to read that contractors shall utilize electricity from power poles rather than temporary diesel or gasoline power generators. It is further unclear what is considered to be a “clean-fuel.”

MM 4.2.6.1C requires that, during construction, contractors utilize Tier II equipment. This measure does not go far enough. At least Tier III equipment is feasible and must be required where such equipment is available.

MM 4.2.6.1K does not require any mitigation, only that “construction specifications and bid documents” include “notations.” This language must specify that: “the following mitigation shall be required to be implanted and, to ensure implementation, included in grading plans, construction specifications, and bid documents...” Several of the mitigation measures recommended above are included in this section but are not required of the project due to this language.

MM 4.2.6.3A does not go far enough. The EIR does not demonstrate that implementation of all of the design features mentioned would be infeasible. Each of these measures must be required.

Furthermore, it is misleading. Title 24 deals with building energy efficiency, so SmartWay partnerships and other mitigation measures concerning mobile emissions and vehicle standards will not be required to be implemented. ***As most of this project's operational emissions will be derived from mobile sources, and no mitigation measures pertain to reducing these emissions, the mitigation required of this project does not incorporate all feasible mitigation.*** The measures under the bullet "Lease purchase documents shall identify that tenants are encouraged to promote the following" should simply be *required* mitigation for the project unless shown to be infeasible.

39

Operational Emissions

Impact 4.2.6.3 is unclear.

40

The Operational Emissions generated by this project are substantial. For instance, the project's NOX emissions will be 990 lbs/day, 18 times the threshold of significance of a 55lb/day increase; CO emissions will well exceed the threshold of significance at 830 lbs/day, one and a half times the threshold of significance of 550; ROG emissions of 143 lbs/day are 2.6 times the 55 lb threshold, and PM10 well exceeds the 150lbs/day threshold at 170lbs/day. (Note: the rounding of emissions downward where such totals are, for instance, 990.93 for NOx, but this number is rounded down to 990, fails to disseminate the *maximum* daily emissions caused by this project.)

41

The mitigation measures adopted to reduce operational emissions fail to reduce mobile emissions, by far the main source of this project's operational emission. (See, Table 4.2.K) The project's non-mobile source operational emissions are essentially limited to ROG emissions, yet the mitigation measures focus on the energy efficiency of the building. (e.g. MM 4.2.6.3A)

42

MM 4.2.6.3A does not go far enough and is misleading. All this mitigation measure requires is that the project's building energy efficiency exceed Title 24 by 20 percent. This mitigation does not in any way require the implementation of each of the alternatives listed below. Moreover, as Title 24 deals with building energy efficiency, SmartWay partnerships and other mitigation measures concerning mobile emissions and vehicle standards **will not be required to be implemented in order to satisfy the actual requirement of this mitigation.** The listing of alternatives to satisfy this mitigation measure is misleading and causes the EIR to fail as an informational document.

43

The EIR does not demonstrate that requiring that the project implement each of the alternatives listed at MM 4.2.6.3A is infeasible. Each of these alternatives must be required of the project.

44

With regards to operational mobile source emissions, most of this project's operational emissions will be derived from mobile sources, and no mitigation measures directly pertain to reducing these emissions. ***The mitigation required of this project to reduce operational air quality impacts does not incorporate all feasible mitigation*** as it fails to require the mitigation listed at MM 4.2.6.3A under the bullet "Lease purchase documents shall identify that tenants are encouraged to promote the following" yet does not find such mitigation to be infeasible. These measures must simply be *required* mitigation for the project as these measures will actually

45

reduce the project's mobile source operational emissions. Likewise, as discussed above, each of the other alternatives listed at MM4.2.6.3 is feasible and must be required of this project.

The following mitigation measures are feasible and must be required of this project:

1. The operator of the primary facilities shall become SmartWay Partner.*
2. The Project shall meet SmartWay 1.25 ratings.*
3. The project shall use only freight companies that meet SmartWay 1.25 ratings.*
4. (ALTERNATIVELY from 2,3 above) The operator of the primary facilities shall incorporate requirements or incentives sufficient to achieve at least 20% per year (as a percentage of previous percentage, not total trips) increase in percentage of long haul trips carried by SmartWay carriers until it reaches a minimum of 90% of all long haul trips carried by SmartWay 1.0 or greater carriers. Results, including backup data shall be reported to the Planning Department semi-annually.*
5. The operator of the primary facilities shall incorporate requirements or incentives sufficient to achieve a 15% per year (as a percentage of previous percentage, not total trips) increase in percentage of consolidator trips carried by SmartWay carriers until it reaches a minimum of 85% of all consolidator trips carried by SmartWay 1.0 or greater carriers. Results, including backup data shall be reported to the Planning Department semi-annually.*
6. All fleet vehicles shall conform to 2010 air quality standards or better. Results, including backup data shall be reported to the Planning Department semi-annually.*
7. All spaces utilizing refrigerated storage, including restaurants and food or beverage stores, shall provide an electrical hookup for refrigeration units on delivery trucks. Trucks incapable of utilizing the electrical hookup for powering refrigeration units shall be prohibited from accessing the site. All leasing documents shall include these requirements and provide that violation of those provisions will constitute a material breach of the lease that will result in the termination of the lease. Because of the fact that these terms of the lease are designed to benefit the public, the public shall be considered to be a third party beneficiary with standing to enforce the requirements of the lease.*
8. Install catalytic converters on gasoline-powered equipment.*
9. Where diesel powered vehicles are necessary, require the use of alternative diesel fuels. Alternative diesel fuels exist that achieve PM10 and NOx reductions. PuriNOx is an alternative diesel formulation that was verified by CARB on January 31, 2001 as achieving a 14% reduction in NOx and a 63% reduction in PM10 compared to CARB diesel. It can be used in any direct-injection, heavy-duty compression ignition engine and is compatible with existing engines and existing storage, distribution, and vehicle fueling facilities. Operational experience indicates little or no difference in performance and startup time, no discernable operational differences, no increased engine noise, and significantly reduced visible smoke.
10. Electrical powered equipment should be utilized in-lieu of gasoline-powered engines where technically feasible.*
11. Utilize electrical equipment for landscape maintenance.*
12. All forklifts shall be electric or natural gas powered.*
13. Utilize electric yard trucks.*
14. Prohibit idling of trucks for periods exceeding three minutes.*

45

15. Provide electrical vehicle (“EV”) and compressed natural gas (“CNG”) vehicles in vehicle fleets.*
16. Charge reduced or no parking fee for EVs and CNG vehicles.*
17. Install EV charging facilities for a minimum of 10% of all parking spaces.*
18. Install a CNG fueling facility.*
19. Provide preferential parking locations for EVs and CNG vehicles.*
20. Implement parking fee for single-occupancy vehicle commuters.*
21. Plant shade trees in parking lots to provide minimum 50% cover to reduce evaporative emissions from parked vehicles.*
22. Plant at least 50 percent low-ozone forming potential (Low-OFP) trees and shrubs, preferably native, drought-resistant species, to meet city/county landscaping requirements.*
23. Plant Low-OFP, native, drought-resistant, tree and shrub species, 20% in excess of that already required by city or county ordinance. Consider roadside, sidewalk, and driveway shading.*
24. Orient 75 percent or more of homes and buildings to face either north or south (within 30 degrees of N/S) and plant trees and shrubs that shed their leaves in winter nearer to these structures to maximize shade to the building during the summer and allow sunlight to strike the building during the winter months.*
25. Provide grass paving, tree shading, or reflective surface for unshaded parking lot areas, driveways, or fire lanes that reduce standard black asphalt paving by 10% or more.*
26. Electrical outlets shall be installed on the exterior walls of all residential and commercial buildings (and perhaps parking lots) to promote the use of electric landscape maintenance equipment.*
27. Prohibit gas powered landscape maintenance equipment within residential, commercial, and mixed-use developments. Require landscape maintenance companies to use battery powered or electric equipment **or** contract only with commercial landscapers who operate with equipment that complies with the most recent California Air Resources Board certification standards, or standards adopted no more than three years prior to date of use or any combination of these two themes.*
28. Provide a complimentary cordless electric lawnmower to each residential buyer.
29. Implement parking cash-out program for non-driving employees.*
30. Require each user to establish a carpool/vanpool program.*
31. Create a car sharing program within the planned community.*
32. Create a light vehicle network, such as a neighborhood electric vehicle (NEV) system.*
33. Provide preferential parking for carpool/vanpool vehicles.*
34. Provide subsidies or incentives to employees who use public transit or carpooling, including preferential parking.*
35. Provide secure, weather-protected bicycle parking for employees.*
36. Provide direct, safe, attractive pedestrian access from project to transit stops and adjacent development.*
37. Provide direct safe, direct bicycle access to adjacent bicycle routes.*
38. Provide showers and lockers for employees bicycling or walking to work.*
39. Short-term bicycle parking for retail customers and other non-commute trips.*
40. Connect bicycle lanes/paths to city-wide network.*
41. Design and locate buildings to facilitate transit access, e.g., locate building entrances near

45

- transit stops, eliminate building setbacks, etc.*
- 42. Construct transit facilities such as bus turnouts/bus bulbs, benches, shelters, etc.*
- 43. Provide a display case or kiosk displaying transportation information in a prominent area accessible to employees or residents.
- 44. Provide shuttle service to food service establishments/commercial areas.*
- 45. Provide shuttle service to transit stations/multimodal centers.*
- 46. Provide on-site child care or contribute to off-site child care within walking distance.*
- 47. Implement a compressed workweek schedule.*
- 48. Implement home-based telecommunicating program, alternate work schedules, and satellite work centers.*
- 49. All buildings shall be constructed to LEED Platinum standards.*
- 50. Design buildings for passive heating and cooling and natural light, including building orientation, proper orientation and placement of windows, overhangs, skylights, etc.*
- 51. Construct photovoltaic solar or alternative renewable energy sources sufficient to provide 100% of all electrical usage for the entire Project.*
- 52. Install an ozone destruction catalyst on all air conditioning systems.*
- 53. Construct renewable energy sources sufficient to offset the equivalent of 100% of all greenhouse gas emissions from mobile sources (internal combustion engines) for the entire Project. *
- 54. Purchase only green/ renewable power from the electric company.*
- 55. Install solar water heating systems to generate all hot water requirements.*

45

Cumulative Impacts

The finding of less than significant short-term cumulative impacts is unsupported by evidence in the record. The EIR finds that project individual construction emissions will be significant, and that other projects construction simultaneously will result in short term pollutant impacts. However, the EIR then states that because each project will have to comply with SCAQMD measures such cumulative impact is less than significant. This conclusion is unsupported by the EIR or any reasoning. In fact, here compliance with SCAQMD measures did not reduce short-term air quality impacts below a level of significance, and the presumption that it would for other area projects and the cumulative impact is completely unsupported by any evidence.

46

The project will result in significant and unmitigated cumulative operational impacts, yet not all feasible mitigation was adopted to reduce this impact. As discussed above, additional mitigation measures must be implemented to reduce operational impacts.

Biological Resources

The EIR finds that impacts to biological resources will be less than significant with mitigation based on outdated and limited surveys. The EIR therefore fails as an informational document.

47

Cultural Resources

The EIR finds that impacts to cultural resources would be less than significant with mitigation with regards to paleontological resource or unique geologic feature. The project site has a “high

48

potential to contain significant fossil resources due to the presence of early to middle Pleistocene alluvial fan deposits.” The finding of less than significant impacts with mitigation is unsupported as the mitigation required for this potentially significant impact is deficient and fails to incorporate all feasible mitigation.

48

First, MM Cul-1 provides for discontinuing monitoring if “the paleontologist(s) do not find evidence for Pleistocene-era deposits once the maximum excavation depth is reached.” This mitigation measure is impermissibly vague as it fails to state what portion of the site must be excavated to maximum depth before this determination of “no evidence” is made.

49

Second, a qualified paleontological monitor may only “salvage fossils” or temporarily halt or divert equipment to remove large specimens while avoiding construction delays. This salvage of fossils fails to account for the potential importance associated with the placement of those fossils across the site or any study or documentation of the specimens at the site. The salvaging will also likely result in the loss of many paleontological resources as the purpose of the mitigation is demonstrated by this method to be, primarily, to “avoid construction delays” and not to avoid damaging paleontological resources.

50

MM Cul-1 also uses the qualification: “If too few fossil remains are found...”; this is impermissibly vague. There is no quantification of “too few” or objective way to determine whether this has occurred.

51

Overall, the mitigation required for archaeological resources fails to reduce impacts below a level of significance through vagueness and inherent deficiencies. Salvaging fossils also fails to further Objective 7.6 of the General Plan to “Identify and preserve Moreno Valley’s unique historical and archaeological resources for future generations.” The mitigation and potential impacts conflict with Policy 7.6.1 and 7.6.2 will not ensure that the archaeological resources are preserved or mitigated. It is also unclear from the EIR whether Conservation Element Programs, General Plan 9.7.3, program 7-6 has been incorporated where such program requires: “In areas where archaeological or paleontological resources are known or reasonably expected to exist, based upon the citywide survey conducted by the UCR Archaeological Research Unit, incorporate the recommendations and determinations of that report to reduce potential impacts to levels of insignificance.” The EIR therefore fails to require all feasible mitigation, ensure enforceable mitigation, and fails as an informational document.

52

Geology and Soils

The project will require excavation, fill, and recompaction. The project description states that approximately 220,000 cubic yards of additional fill will be required. It is unclear whether the EIR considered impacts from the import of fill, such as traffic and air quality impacts from truck trips to and from the project site to the fill import site, an unknown location at this time. Some 80,000 cy of fill has already been imported to the site, yet the impacts from this fill dirt have

53

been segregated from the remainder for the project. Again, project impacts have been underestimated and improperly segmented.

53

The project is also located on a geologic unit or soil that is unstable as soil shrinkage and expansion may occur. The mitigation for expansive soils, MM Geo-2 is deferred and vague. Specifically, such mitigation requires that the project proponent “inform” engineers, architects, owner, maintenance personnel, and other interested parties of the Expansive Soil Guidelines provided in the geotechnical analysis and that such guidelines “shall be reviewed and considered.” The guidelines must be required of the project in order for such mitigation to certain and enforceable.

54

GHGs

The EIR finds that the project is consistent with GHG plans, policies, and regulations. The reasoning behind several of these findings is unsupported. For instance with regards to transportation, as discussed above, the project is unlikely does not reduce VMT.

55

Compliance with GHG reduction strategies is also unsupported. For instance, the EIR fails to delineate how an energy efficient building features support achieving a 33 percent renewable energy mix statewide, unless the building will be reliant on renewable energy. Similarly, the EIR fails to show how the project is compliant with engine efficiency measures where the project does not require the use of fuel efficient trucks.

56

There is no GHG reduction plan as part of the City of Moreno Valley’s General Plan, hence Tier 2 SCAQMD criteria are improperly applied. Tier 2 criteria is intended for a plan that may be part of a local general plan, for example. Comparing the impacts from this project to statewide emissions in order to find such emissions to be less than significant is improper.

Tier 3 is more properly applied to the industrial project at hand. The screening level for Tier 3 per the December 5, 2008 the SCAQMD Governing Board adoption of interim GHG significance thresholds is less than 10,000 MTCO₂eq/yr. CARB’s threshold for the same is less than 7,000MTCO₂eq/yr and meets construction and transportation performance standards. Applying these interim thresholds to this project, the project is far in exceedence with emissions in the range of 44,000 MTCO₂eq/yr. The finding that the project will have a less than significant individual impact on GHGs and climate change is unsupported in light of the interim numerical thresholds established for industrial projects by SCAQMD and ARB, and these omissions cause the EIR to fail as an informational document. Notably, the GHG appendix E delineates these standards at page 22 (from 2010), but they are neither applied nor mentioned in the EIR.

57

The mitigation measure requiring the devising of a comprehensive water conservation strategy is vague and defers mitigation. There is no requirement that the alternatives listed be incorporated

58

or that the conservation strategy meet any performance standards.

58

Mitigation measure 4.3.6.1A is not mitigation, but a requirement of the California Code of Regulations.

59

Notwithstanding the above deficiencies, the EIR finds cumulative GHG impacts of the project to be significant and unavoidable.

60

Hazards and HazMat

The EIR finds, based on no substantial evidence, that this impact is less than significant. The EIR explains that “potentially hazardous materials...may be used and/or stored on site during the construction and/or occupancy of the proposed industrial facilities.” As the tenant of the proposed industrial building is unknown, this impact should be considered potentially significant. Compliance with applicable laws does not necessarily reduce this impact below a level of significance.

61

Hydrology and Water Quality

The project will have a significant impact to water quality which will be mitigated below a level of significance, yet the EIR fails to undertake an evaluation of this impact beyond the cursory review done for the Environmental Assessment.

62

The project will alter the existing drainage onsite. Mitigation Measure Hyd-05 improperly defers mitigation as the EIR fails to provide any reason why the grading plan and/or drainage report cannot be presently prepared but, instead, must be deferred. Deferred mitigation is only permissible where, for practical reasons, it is not feasible to prescribe specific mitigation measures in the EIR. (*Communities for a Better Environment v. City of Richmond* (2010) 184 Cal.App.4th 70, 94.) This caveat is not demonstrated here, and a grading plan and drainage report must be contemporaneously prepared for the EIR.

63

Land Use

The project will conflict with an applicable habitat conservation plan or natural community conservation plan. It is unclear how MM Bio-1 through MM Bio-4 will reduce this impact below a level of significance. The EIR thereby fails as an informational document and impacts to land use should be considered significant and unmitigated.

64

Noise

The EIR arbitrarily creates a threshold for significance for noise of a 3dbA increase, stating that only this level of increase is considered potentially significant and that a 3 dbA change is used as a threshold of significance. This 3dbA change is *not* a threshold of significance adopted by the City of Moreno Valley. (Guidelines § 15064.7) Furthermore, the statement that only audible

65

changes in existing ambient or background noise levels are considered potentially significant is unsupported except by further conclusory statements.

65

The EIR also relies on the City’s Municipal Code with regards to prohibited acts and noise disturbances. These figures too are not a threshold of significance and are not noise standards adopted by the City. Rather, they represent punishable acts and violations of the law. Exemptions from sound regulations likewise refer to punishable sound violations and not noise standards adopted by the City.

66

The noise standards adopted by the City are described in the General Plan, Section 6.4, which states that acceptable residential exterior noise standards are within 60-65 CNEL, and interior at 45 dbA CNEL. The City’s municipal code sets limits for a noise disturbance as well at the limits of Table 4.4.F, at Residential 60 dBA daytime, 55 dBA nighttime; Commercial 65 dBA daytime, 60dBA nighttime.

67

The EIR states that the noise analysis was done using “the soft site propagation for noise” on the basis that the ground is not pavement in the project vicinity. However, the site itself will be paved, in addition to the roads that vehicles will travel to and from the site. Other uses surrounding the site are also paved and include industrial/warehouse uses to the north, industrial/warehouse and undeveloped property to the south, industrial/warehouse and a self-storage facility to the east, and warehouses, vehicle storage, residences, and undeveloped property to the west. While these uses are interspersed with vacant uses, agricultural and undeveloped land in the project vicinity is zoned for development and will be hastened towards that end through the development of this project and surrounding areas. Overall, the use of soft site analysis is unsupported by the EIR, and noise levels are likely to be much higher than those predicted by the EIR.

68

The noise study relies on a standard vehicle mix to determine traffic noise. This is unsupported given the locale and proposed project use as a distribution facility.

69

The EIR find that the project will increase traffic noise at 5 study roadway segments where four of these segments already exceed the level of significance for noise. This must be considered a significant impact as the project will result in an increase in ambient noise and such noise levels are and will be unacceptable at off-site land uses.

70

The project will also cause exposure and generation of noise levels in excess of General Plan and Municipal Code standards for construction and operation noise. The EIR wrongly looks at noise impacts at the nearest residence, where the proper measure is to look at noise generation at the property line.

71

The EIR concludes that loading and unloading will be “intermittent” and therefore less than significant. However, the warehouse will be a distribution warehouse, with trucks coming and

72

going, loading and unloading throughout the day. Accordingly, as noise levels will be 75 dBA at 50 feet, the noise impact is significant.

72

The EIR finds long-term traffic and operational noise impacts to be less than significant. However, the entire discussion in the EIR regarding noise is very conclusory and fails to provide any sources for the figures relied upon.

73

The Construction noise analysis is fatally flawed, as the source for typical construction equipment noise is quite outdated, from 1987. It is impossible that construction noise sources from 1987 have not been altered in 25 years. The EIR fails as an informational document by failing to rely on contemporary studies and data. The noise exposure during construction will be much greater than predicted by the EIR. (See, attached “Construction Noise Handbook,” Chapters 3, 4, and 9, Federal Highway Administration, August 2006, <http://www.fhwa.dot.gov/environment/noise/construction_noise/handbook/index.cfm>; and “Construction Noise: Exposure, Effects, and the Potential for Remediation; A Review and Analysis,” Electronic Library of Construction Occupational Safety and Health, November/December 2002.) Nonetheless, the EIR concludes that noise levels during construction will be up to 91 dBA at 50 feet.

74

The project will have a significant impact from construction noise that is said to be mitigated below a level of significance. However, as discussed above, such mitigation may not be sufficient after analysis based on contemporary studies. Furthermore, the EIR relies on noise occurring between the hours required by the City. This is not mitigation but the law.

75

As it is uncertain that mitigation will reduce project impacts below a level of significance, the following additional mitigation must be required of the project:

1. Temporary noise barriers must be installed during project construction.
2. Where technically feasible, utilize only electrical construction equipment
3. During construction, the developer shall require that all contractors turn off all construction equipment and delivery vehicles when not in use and prohibit idling in excess of 3 minutes.
4. Provide a “windows closed” condition requiring a means of mechanical ventilation (e.g. air conditioning) for all buildings.
5. Provide upgraded windows with a minimum Sound Transmission Class (STC) rating of 34 for all buildings, and/or require the installation of double-paned windows.
6. Keep new transportation facilities away from vibration sensitive areas.
7. When dealing with existing transportation facilities, obvious vibration causes, such as pot holes, pavement cracks, differential settlement in bridge approaches or individual pavement slabs, etc., may be eliminated by resurfacing.
8. Require the use of rubberized asphalt for construction of all roadways and parking areas.
9. Maintain quality pavement conditions that are free of bumps, pot holes, pavement cracks, differential settlement in bridge approaches or individual pavement slabs, etc.
10. Require resurfacing of roads.

76

- 11. Ban heavy trucks near vibration sensitive uses.
- 12. Use alternate construction methods and tools to reduce construction vibrations. Examples are predrilling of pile holes, avoiding cracking and seating methods for resurfacing concrete pavements near vibration sensitive areas, using rubber tired as opposed to tracked vehicles, placing haul roads away from vibration sensitive areas.
- 13. Scheduling construction activities (particularly pile driving) for times when it does not interfere with vibration sensitive operations (e.g. night time).

Mitigation Measure 4.9.6.1D does not mitigate for noise impacts during construction hours.

Cumulative noise impacts were found to be “No Impact.” This conclusion is unsupported. The discussion of cumulative traffic noise impacts is unsupported.

Transportation

Traffic counts from the project are low given the project’s 264 dock doors, parking for 368 trucks and trailers, and parking for 589 passenger vehicles.

The EIR fails to study many intersections that will be impacted by the project, particularly along Harley Knox Boulevard en route to I-215. Also, no freeway connection to the north was evaluated at Cactus, and no evaluation of impacts to the south to the Ramona Expressway was conducted. The EIR fails as an informational document by failing to study impacts to these intersections. The EIR also fails to look at future traffic impacts.

The EIR attempts to minimize the project’s significant and unmitigated traffic impacts by segregating impacts to existing versus 2013 and local intersections and roadways versus freeway segments.

The project will result in significant and unmitigated cumulative traffic impacts, resulting in less 10 intersections and 4 roadway segments operating as below the City’s LOS standard. Additionally, 3 freeway segments and ramp merge/diverge areas would operate at unsatisfactory levels of service. Despite these impacts, the project does not require any additional mitigation at these intersections or roadways beyond contribution to the DIF and TUMF.

The EIR finds that impacts to intersections and roadway segments within the DIF and TUMF programs will be reduced below a level of significance despite the fact that many of these improvements are not yet funded and will likely not be funded for some time. Mitigation is therefore uncertain and deferred. It appears that the only improvement currently planned is widening of Perris Boulevard, to be completed in May 2013. Nonetheless, the EIR finds that impacts based on Opening year 2013 plus project will be mitigated to less than significant at all significantly impacted roadway segments and intersections other than the I-215 segments and ramps. The fact that an improvement is part of the DIF or TUMF program does not ensure that it will soon be planned or funded, and surely does not ensure that it will be planned, funded, and

built by 2013 to reduce impacts to less than significant.

83

In fact, the roadways reliant on TUMF funds are not presently scheduled for improvement nor are the improvements funded. (See, e.g., 2011 Annual Report, Transportation Uniform Mitigation Fee Program, Western Riverside Council of Governments, “Five Year Transportation Improvement Program,” <http://www.wrcog.cog.ca.us/downloads/AnnualReport_for_web.pdf>, p.39, See, also, <<http://www.wrcog.cog.ca.us/downloads/2012CentralZoneTIP020612.pdf>> [detailing funded expenditures in the Central Zone]) Furthermore, TUMF improvements can take up to 9 years to become a reality from a local jurisdiction developing a project to completion of construction. (2011 Annual Report, Transportation Uniform Mitigation Fee Program, supra, p.7) Project prioritization, programming, and allocation of funds may also be a barrier to improvements on the roadways impacted by this project. (2011 Annual Report, Transportation Uniform Mitigation Fee Program, supra, p.10) The EIR’s conclusion that project transportation impacts on local roadways and intersections is less than significant after mitigation is simply not supported by evidence and the realities of these fair share programs.

84

With regards to DIF funding, the EIR even states that, “As part of its Capital Improvement program, the City determines the timing of necessary roadway improvements based on periodic review of citywide traffic counts, traffic trends, and a review of traffic accidents.” The finding of less than significant impact after mitigation at these impacted intersections and roadway segments is therefore unsupported as such reduction to a level below significance may not occur in the short-term, long-term, or ever if these roadways are not given priority.

85

Mitigation requiring direct funding and completion of improvements at impacted roadways and intersections must be required of the project unless demonstrated to be infeasible. As the project currently stands, not all feasible mitigation has been required of this project to reduce traffic related impacts below a level of significance, and mitigation is uncertain and deferred.

86

Consistency with Local and Regional Plans

The EIR finds that the project is consistent with the SCAQMD AQMP, however the EIR previously found that the project failed to meet SCAQMD’s requirements with regard to air quality control for mobile sources and construction emissions.

87

Consistency with the Transportation chapter of the 2008 RCP is unsupported. The statement that the proposed project will “limit[] the need for vehicle travel” and therefore satisfy the goal of “A more efficient transportation system that reduces and better manages vehicle activity” is erroneous. As discussed above, the project will have significant and unmitigated traffic impacts, and reliance on the TUMF and DIF programs provides for uncertain mitigation for traffic impacts.

88

Consistency with the Economy Chapter is likewise unsupported by the EIR. The Goal of

89

“diversifying the region’s economy” is not satisfied by “add[ing] to the City’s portfolio of industrial services.” Said another way, the project will add more industrial services to already existing/proposed industrial services, the opposite of diversifying the region’s economy.

89

The EIR finds that the project is consistent with the Compass Growth Vision Principles, yet fails to evaluate how the project is consistent with these principles. The evaluation provides is generalized and fails to discuss how the project is, in fact, consistent with principles 1, 2, and 4 re: improving mobility, fostering livability, and promoting sustainability for future generations. The finding of inconsistency is unsupported by the EIR and, again, the EIR fails as an informational document.

90

Segmentation

The project site has already received 80,000 cubic yards of fill of the total 300,000 cubic yards required onsite. The impact from this fill importation was segmented from the project as a whole. Such importation, upon evaluation in the EIR, would likely push the project construction impacts further above several threshold of significance and would likely lead to the exceedance of PM2.5, among perhaps others.

91

Alternatives

Where there is an environmentally superior alternative that significantly decreases the significant impacts of the Project then that alternative must be approved rather than the Project if that alternative is feasible, even if the alternative would impede to some degree the attainment of the project objectives, or would be more costly. [(PRC§ 21002; *Uphold Our Heritage v. Town of Woodside* (2007) 147 Cal.App.4th 587, 597, State CEQA Guidelines § 15126.6(b)]

92

In this case, both the no project alternative and the reduced intensity alternative would reduce impacts when compared with the project. The reduced intensity alternative would reduce several impacts below a threshold of significance when compared to the proposed project. The reduced intensity alternative would also satisfy most of the project objectives. Accordingly the reduced intensity alternative must be approved over the project.

92

The EIR undermines the reduced intensity alternative by claiming that impacts would be similar; this claim is entirely unsupported by the facts and figures provided in comparison. For instance, with regards to traffic impacts, the EIR finds that impacts to roadways and intersections would be reduces. The EIR then, however, finds that the impact “would be similar.” The EIR also finds that the reduced intensity alternative fails to satisfy several project objectives; these findings are likewise unsupported by the evidence. For instance, the EIR states that the reduced intensity alternative fails to meet the objective of clustering industrial warehouses near efficient access points. However, the reduced intensity alternative does not move the project.

93
94

Nonetheless, the reduced intensity alternative substantially reduces impacts and meets most

95

project objectives. Accordingly, it must be approved rather than the project.

↑
95

Lastly, the final line of the environmentally superior alternative pertains to an alternative site. There is no discussion of an alternative site with regards to the reduced intensity alternative. The EIR is misleading and fails as an informational document by claiming that the reduced intensity alternative fails to meet objectives related to location because of an alternative site.

96

Conclusion

Thank you for your consideration of these comments and the attached and/or referenced material.

Sincerely,

Raymond W. Johnson

Johnson & Sedlack, an Environmental Law firm representing plaintiff environmental groups in environmental law litigation, primarily CEQA.

City Planning:

Current Planning

- Two years principal planner, Lenexa, Kansas (consulting)
- Two and one half years principal planner, Lee's Summit, Missouri
- One year North Desert Regional Team, San Bernardino County
- Thirty years subdivision design: residential, commercial and industrial
- Thirty years as applicants representative in various jurisdictions in: Missouri, Texas, Florida, Georgia, Illinois, Wisconsin, Kansas and California
- Twelve years as applicants representative in the telecommunications field

General Plan

- Developed a policy oriented Comprehensive Plan for the City of Lenexa, Kansas.
- Updated Comprehensive Plan for the City of Lee's Summit, Missouri.
- Created innovative zoning ordinance for Lenexa, Kansas.
- Developed Draft Hillside Development Standards, San Bernardino County, CA.
- Developed Draft Grading Standards, San Bernardino County.
- Developed Draft Fiscal Impact Analysis, San Bernardino County

Environmental Analysis

- Two years, Environmental Team, San Bernardino County
 - Review and supervision of preparation of EIR's and joint EIR/EIS's
 - Preparation of Negative Declarations
 - Environmental review of proposed projects
- Eighteen years as an environmental consultant reviewing environmental documentation for plaintiffs in CEQA and NEPA litigation

97

Representation:

- Represented various clients in litigation primarily in the fields of Environmental and Election law. Clients include:
 - Sierra Club
 - San Bernardino Valley Audubon Society
 - Sea & Sage Audubon Society
 - San Bernardino County Audubon Society
 - Center for Community Action and Environmental Justice
 - Endangered Habitats League
 - Rural Canyons Conservation Fund
 - California Native Plant Society
 - California Oak Foundation
 - Citizens for Responsible Growth in San Marcos
 - Union for a River Greenbelt Environment
 - Citizens to Enforce CEQA
 - Friends of Riverside's Hills
 - De Luz 2000
 - Save Walker Basin
 - Elsinore Murrieta Anza Resource Conservation District

Education:

- B. A. Economics and Political Science, Kansas State University 1970
- Masters of Community and Regional Planning, Kansas State University, 1974
- Additional graduate studies in Economics at the University of Missouri at Kansas City
- J.D. University of La Verne. 1997 Member, Law Review, Deans List, Class Valedictorian, Member Law Review, Published, Journal of Juvenile Law

Professional Associations:

- Member, American Planning Association
- Member, American Institute of Certified Planners
- Member, Association of Environmental Professionals
- Member, U.S. Green Building Council, LEED GA

Johnson & Sedlack, Attorneys at Law

26785 Camino Seco
Temecula, CA 92590
(951) 506-9925

12/97- Present

Principal in the environmental law firm of Johnson & Sedlack. Primary areas of practice are environmental and election law. Have provided representation to the Sierra Club, Audubon Society, AT&T Wireless, Endangered Habitats League, Center for Community Action and Environmental Justice, California Native Plant Society and numerous local environmental groups. Primary practice is writ of mandate under the California Environmental Quality Act.

Planning-Environmental Solutions

26785 Camino Seco
Temecula, CA 92590
(909) 506-9825

8/94- Present

Served as applicant's representative for planning issues to the telecommunications industry. Secured government entitlements for cell sites. Provided applicant's representative services to private developers of residential projects. Provided design services for private residential development projects. Provided project management of all technical consultants on private developments including traffic, geotechnical, survey, engineering, environmental, hydrogeological, hydrologic, landscape architectural, golf course design and fire consultants.

San Bernardino County Planning Department

Environmental Team
385 N. Arrowhead
San Bernardino, CA 92415
(909) 387-4099

6/91-8/94

Responsible for coordination of production of EIR's and joint EIR/EIS's for numerous projects in the county. Prepared environmental documents for numerous projects within the county. Prepared environmental determinations and environmental review for projects within the county.

San Bernardino County Planning Department

General Plan Team
385 N. Arrowhead
San Bernardino, CA 92415
(909) 387-4099

6/91-6/92

Created draft grading ordinance, hillside development standards, water efficient landscaping ordinance, multi-family development standards, revised planned development section and fiscal impact analysis. Completed land use plans and general plan amendment for approximately 250 square miles. Prepared proposal for specific plan for the Oak Hills community.

San Bernardino County Planning Department

North Desert Regional Planning Team
15505 Civic
Victorville, CA
(619) 243-8245

6/90-6/91

Worked on regional team. Reviewed general plan amendments, tentative tracts, parcel maps and conditional use permits. Prepared CEQA documents for projects.

Broadmoor Associates/Johnson Consulting

229 NW Blue Parkway
Lee's Summit, MO 64063
(816) 525-6640

2/86-6/90

Sold and leased commercial and industrial properties. Designed and developed an executive office park and an industrial park in Lee's Summit, Mo. Designed two additional industrial parks and residential subdivisions. Prepared study to determine target industries for the industrial parks. Prepared applications for tax increment financing district and grants under Economic Development Action Grant program. Prepared input/output analysis of proposed race track. Provided conceptual design of 800 acre mixed use development.

Shepherd Realty Co.

Lee's Summit, MO

6/84-2-86

Sold and leased commercial and industrial properties. Performed investment analysis on properties. Provided planning consulting in subdivision design and rezoning.

Contemporary Concepts Inc.

Lee's Summit, MO
Owner

9/78-5/84

Designed and developed residential subdivision in Lee's Summit, Mo. Supervised all construction trades involved in the development process and the building of homes.

Environmental Design Association

Lee's Summit, Mo.
Project Coordinator

6/77-9/78

Was responsible for site design and preliminary building design for retirement villages in Missouri, Texas and Florida. Was responsible for preparing feasibility studies of possible conversion projects. Was in charge of working with local governments on zoning issues and any problems that might arise with projects. Coordinated work of local architects on projects. Worked with marketing staff regarding design changes needed or contemplated.

97

City of Lee's Summit, MO

220 SW Main
Lee's Summit, MO 64063
Community Development Director

4/75-6/77

Supervised Community Development Dept. staff. Responsible for preparation of departmental budget and C.D.B.G. budget. Administered Community Development Block Grant program. Developed initial Downtown redevelopment plan with funding from block grant funds. Served as a member of the Lee's Summit Economic Development Committee and provided staff support to them. Prepared study of available industrial sites within the City of Lee's Summit. In charge of all planning and zoning matters for the city including comprehensive plan.

Howard Needles Tammen & Bergendoff

9200 Ward Parkway
Kansas City, MO 64114
(816) 333-4800
Economist/Planner

5/73-4/75

Responsible for conducting economic and planning studies for Public and private sector clients. Consulting City Planner for Lenexa, KS.

Conducted environmental impact study on maintaining varying channel depth of the Columbia River including an input/output analysis. Environmental impact studies of dredging the Mississippi River. Worked on the Johnson County Industrial Airport industrial park master plan including a study on the demand for industrial land and the development of target industries based upon location analysis. Worked on various airport master plans. Developed policy oriented comprehensive plan for the City of Lenexa, KS. Developed innovative zoning ordinance heavily dependent upon performance standards for the City of Lenexa, KS.

97

2.10 RESPONSE TO LETTER D

Johnson & Sedlack

Response to Comment D-1. The commentor has accurately summarized the general aspects of the proposed project. No further response is necessary.

Response to Comment D-2. The City agrees that the major tenet of CEQA is that it is a disclosure process; therefore, your letter along with all the other comments and responses will be forwarded to the City decision makers for their consideration in the review of the EIR. No further response is necessary.

Response to Comment D-3. The commentor's opinions on the quality of the environmental assessment that was done will be forwarded to the decision-makers for their consideration. The City disagrees with the commentor's generalized assertions regarding the adequacy of the VIP Moreno Valley Draft EIR. The comment that the conclusions in the EIR are not based in fact is erroneous. The Draft EIR is based on the findings of technical studies that were prepared for the project that were included in their entirety in the appendices to the Draft EIR. Those studies are:

- General Habitat Assessment, 71± Site (APNs: 316-210-071, -073, -075, -076), Moreno Valley, Riverside County California, Ecological Sciences, Inc., August 1, 2010.
- Jurisdictional Survey and MSHCP Riparian/Riverine/Vernal Pools Evaluation, 71± Site (APNs: 316-210-071, -073, -075, -076), Moreno Valley, Riverside County California, Ecological Sciences, Inc., November 1, 2009.
- Focused Surveys for Selected Criteria Area and Narrow Endemic Plant Species, 71± Site (APNs: 316-210-071, -073, -075, -076), Moreno Valley, Riverside County California, Ecological Sciences, Inc., November 9, 2009.
- Focused Western Burrowing Owl Survey, 71± Site (APNs: 316-210-071, -073, -075, -076), Moreno Valley, Riverside County California, Ecological Sciences, Inc., November 11, 2009.
- Phase I Cultural Resources Assessment and Paleontological Records Review Perris Boulevard Project, Moreno Valley, Riverside County, California, Michael Brandman Associates, March 22, 2007.
- Geotechnical Engineering Investigation Proposed Industrial Development Southwest Corner of Perris Boulevard and Grove View Road Moreno Valley, California, NorCal Engineering, March 7, 2007.
- Phase I Environmental for the Evaluation of Potentially Hazardous Materials, Centec Engineering, February 23, 2007.
- Preliminary Hydrology Report and Hydraulic Analysis for PA09-004, VIP Moreno Valley, SWC Perris Boulevard and Grove View Road, Robert A. Bebensee, R.C.E., March 27, 2009.
- Preliminary Water Quality Management Plan, for PA09-0004 VIP Moreno Valley, SWC Perris Boulevard and Grove View Road, Robert A. Bebensee, R.C.E., July 24, 2009.
- Water Supply Assessment for City of Moreno Valley Plot Plan Application PA09-004, Eastern Municipal Water District, January 20, 2010.
- LESA Modeling Worksheets, LSA Associates, Inc., August 2011.
- Air Quality Analysis VIP Moreno Valley, LSA Associates, Inc., March 2012.
- Health Risk Assessment VIP Moreno Valley, LSA Associates, Inc., March 2012.

- Greenhouse Gas Emissions and Global Climate Change Study, LSA Associates, Inc., December 2011.
- Noise Impact Analysis VIP Moreno Valley, LSA Associates, Inc., March 2012.
- Traffic Study VIP Moreno Valley, LSA Associates, Inc., April 9, 2012.

The Initial Study that was prepared for the proposed project determined that impacts on biological resources, cultural resources, geology, and hydrology and water quality would be less than significant with the implementation of mitigation not potentially significant requiring further analysis in an EIR. Those specific mitigation measures are identified in the Initial Study, Section 2.0 of the EIR and are also included in the Mitigation Monitoring and Reporting Plan (MMRP) attached to the Final EIR. The City formally initiated the environmental process with circulation of an NOP along with the Initial Study, which it sent to responsible agencies and interested individuals for a 30-day review period from August 26 to September 26, 2011. At the close of the public review period, the City had received 12 letters on the NOP. The NOP disclosed that an EIR would be prepared and the issues that would be addressed are agricultural and forest resources, air quality, greenhouse gases and global climate change, noise and transportation. None of the responses to the NOP asked that biological resources, cultural resources, geology, and hydrology and water quality be evaluated in the EIR. As a result the City is not concealing information from the public on the significance of impacts.

Response to Comment D-4. The City respectfully disagrees with the commentator's opinion that the findings in the EIR are not supported by substantial evidence. (also refer to Response to Comment D-3).

Response to Comment D-5. As appropriate, a portion of the mitigation measures suggested by the commentator (refer to Response to Comment D-45) have been incorporated in the Final EIR to further reduce impacts but these mitigation measures do not change the conclusions or analysis in the Draft EIR. All mitigation measures that are in the Draft EIR and mitigation added as a result of responses to D-45, D-34 and E-51 through D-53 have been included in the MMRP (Section 4.0 of the Final EIR) to ensure that they are being implemented.

Response to Comment D-6. It is the commentator's opinion that the mitigation measures in the EIR are vague, uncertain, and unenforceable and are not based in fact nor does the commentator provide any examples. As detailed in the following responses, appropriate and enforceable mitigation of the project's significant individual and cumulative impacts have been identified in the Draft EIR.

Response to Comment D-7. It is not clear as to what the commentator is referring to in stating "several "alternatives" listed in the EIR will not satisfy the actual mitigation required, while other mitigation measures merely require the incorporation of writings, not actions."

The alternatives (Section 6.0 of the Draft EIR) are in compliance with *CEQA Guidelines* Section 15126.6(a), where the Draft EIR describes "a range of reasonable alternatives to the project, or to the location of the project which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project." The EIR need not consider every conceivable alternative; rather it must consider a reasonable range of potentially feasible alternatives to the project, or to the location of the project, which would avoid or substantially lessen significant effects of the project, even if "these alternatives would impede to some degree the attainment of the project objectives, or would be more costly" (*CEQA Guidelines* Section 15126.6(b)). The discussion of project alternatives must "include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project." The alternatives are to "substantially lessen the significant effects of the project", not to satisfy the actual mitigation required.

It is not clear by what the commentor means as to the mitigation measures “merely require incorporation of writings” and no examples were provided by the commentor to clarify the meaning of the statement.

Response to Comment D-8. The commentor inaccurately suggests that the project should be required to obtain a LEED gold or platinum rating as a form of mitigation of significant impacts associated with air pollution and greenhouse gas emissions impacts. The process of obtaining a LEED rating of any level (LEED ratings levels are Certified, Silver, Gold, and Platinum, with Platinum being the highest) is not mitigation. However, the specific green building features that are part of the LEED rating equation can reduce air pollution and greenhouse gas emissions impacts by minimizing and reducing the quantity of emissions. Mitigation Measure 4.2.6.3.A in the Draft EIR prescribes a performance standard requiring a 20% improvement in energy efficiency (over and above the 2008 CBC) for the building and lists suggested measures that can be included in the building’s design to obtain this improvement in energy efficiency. As stated in Mitigation Measure 4.2.6.3.A (Draft EIR page 4.2-26): *“Any combination of design features, including but not limited to the following list, may be used to fulfill this requirement provided that the total increase in energy efficiency meets or exceeds 20 percent.”* With implementation of this measure, the building will meet the 20% performance standard which will render greenhouse gas emissions impacts to a less than significant level on a project-specific basis.

Regarding air quality impacts, many of the suggested mitigation measures have been added in the Final EIR, are incorporated in the Draft EIR already, or were determined to be infeasible. For a list of those mitigation measures please refer to the Tables contained in Response to Comments D-34 regarding construction mitigation measures and D-45 regarding operational mitigation measures.

For clarification purposes, the Level of Significance After Mitigation conclusion regarding the project-specific impact associated with climate change and greenhouse gas emissions that appears on page 4.3-26 has been modified as shown below and as indicated in Section 3.0 Errata in the Final EIR:

Draft EIR, Section 4.3.6.1 Greenhouse Gas Emissions, Page 4.3-26

Level of Significance After Mitigation. The mitigation measures identified above would contribute to a reduction in GHG emissions from energy, mobile, and water usage sources. With implementation of the identified mitigation measures, the proposed project’s GHG emissions are reduced. As described above, project-related GHG emissions are not confined to a particular air basin but are dispersed worldwide. Consequently, it is speculative to determine how project-related GHG emissions would contribute to global climate change and how global climate change may impact the State. Therefore, project-related GHG emissions are not project-specific impacts to global warming but are instead the project’s contribution to this cumulative impact. As stated previously, project-related GHG emissions and their contribution to global climate change impacts in the State are less than significant ~~and less than cumulatively considerable on a project specific basis~~ because: (1) the project’s impacts alone would not cause or significantly contribute to global climate change, and (2) the project has no substantial effect on consumption of fuels or other energy resources, especially fossil fuels that contribute to GHG emissions when consumed. However, project-related GHG emissions and their contribution to global climate change impacts are considered to be cumulatively considerable.

Response to Comment D-9. Please see Response to Comment D-8. In addition, a portion of the air quality mitigation measures suggested by the commentor have been incorporated to further reduce air quality and impacts. Please refer to the Table contained in Response to Comment D-45. However, these mitigation measures do not change the conclusions or analysis in the Draft EIR.

Response to Comment D-10. The commentor incorrectly asserts that the project's traffic impacts are not fully mitigated through contribution to TUMF and DIF. As elaborated in Responses to Comments D-82 through D-85, the project's payment of these fees will result in full and complete mitigation.

Response to Comment D-11. The commentor incorrectly asserts that the environmentally superior alternative meets most project objectives and must be approved instead of the proposed project. Although the environmentally superior alternative (reduced density) will result in reduced air pollution and GHG emissions, impacts associated with these issues would remain significant and unavoidable for air quality, greenhouse gas emissions, and traffic in the same manner as the proposed project (see Draft EIR Section 6.4 Comparison of Project Alternatives, Table 6.K, page 6-31). Also refer to Responses to Comments D-92 through D-95 for further elaboration on this subject.

Response to Comment D-12. While the Draft EIR does acknowledge that *“Development of the project site would introduce a new source of light and glare into the area in the form of street lighting, parking lot lighting, and security lighting for the buildings”* the Draft EIR does not state that the project would result in the introduction of a substantial new source of light as asserted by the commentor. The Draft EIR includes an analysis of potential light and glare impacts that may occur as a result of project implementation.

As noted in the Draft EIR, *“project-related lighting impacts were determined to be less than significant because all development in the City, which includes light generated from warehouse buildings and parking lots, is required to adhere to lighting requirements contained in the City’s Municipal Code (Section 9.08.100 Lighting), which states that any outdoor lighting associated with nonresidential uses shall be shielded and directed away from the surrounding residential uses. Such lighting shall not exceed one-half foot-candle at all property lines and shall not blink, flash, oscillate, or be of unusually high intensity or brightness. Lighting in parking areas and drive aisles must be at least 1.0 foot-candle and cannot exceed a maximum of 8 foot-candles. Adherence to the City’s Zoning Code would ensure that any building or parking lighting would not significantly impact adjacent uses. Therefore, impacts associated with this issue are less than significant and no mitigation is required.”*

Response to Comment D-13. The commentor misidentifies the existing farmland designations on-site. As detailed in the Draft EIR (Section 4.1 Agriculture and Forestry Resources, page 4.1-5), *“Approximately 16.89 acres (23%) of the project site is designated as Prime Farmland,¹ 16.23 acres (23%), is designated Farmland of Statewide Importance, and 38.69 acres (54%) is designated Farmland of Local Importance.”* No Unique Farmland exists on-site. Additionally, the Draft EIR accurately identifies that the project would result in the significant and unavoidable conversion of farmland to a non-agricultural use (Draft EIR Section 4.1.6.1 Conversion of State Designated Farmland, page 4.1-14).

Response to Comment D-14. The comment is noted. As described in Section 4.1.6.1 Conversion of State Designated Farmland, page 4.1-10 of the Draft EIR, *“The conversion of the 16.89 acres of on-site Prime Farmland would be equivalent to 0.03 percent of the total loss of Prime Farmland in the County during this period. Similarly, the conversion of the 16.23 acres of on-site Farmland of Statewide Importance would be equivalent to 0.07 percent of the total loss of Farmland of Statewide Importance in the County during this period. The conversion of the 38.69 acres of on-site Farmland of Local Importance would be equivalent to 1.89 percent of the total loss of Farmland of Local Importance in the County during this period.”* This level of conversion expressed in percentages that would occur with project implementation over the course of a two-year reporting period for the County

¹ Important Farmland Map Riverside County, Farmland Mapping and Monitoring Program, 2004.

does not represent a substantial conversion of farmland within the County. Furthermore, the Draft EIR accurately identifies that the project would result in the significant and unavoidable conversion of on-site farmland to a non-agricultural use (Draft EIR, Section 4.1.6.1 Conversion of State Designated Farmland, page 4.1-14).

Response to Comment D-15. There are no agricultural land uses designated or zoned adjacent to the proposed project site. As described in the Draft EIR (Section 4.1 Agriculture and Forestry Resources, page 4.1-1), *“Developed properties in the vicinity include a waste transfer station and an industrial/warehouse to the north; industrial/warehouse and undeveloped property to the south; industrial/warehouses and a self-storage facility to the east; and warehouses, vehicle storage, residences, and undeveloped property to the west. Active agricultural operations (alfalfa) take place on properties located to the southwest of the project site, west of Indian Street and south of Harley Knox Boulevard”*. The active agricultural uses identified in the Draft EIR are approximately 1,000 feet away.

The Draft EIR does not play down the effect of on-site development on adjacent agricultural uses or on properties along truck routes or citywide. As identified in the Draft EIR (Section, 4.1.6.1 Conversion of State Designated Farmland, page 4.1-12), *“the City has specifically recognized that the conversion of agricultural land under its jurisdiction is an eventual and expected outcome of current and future growth. The current General Plan does not include any agricultural designations. The City allows agricultural uses in all land use designations as an interim use until such time as the land is developed per the vision identified in the General Plan. One of the goals stated in the City’s recent General Plan is the ‘...orderly conversion of agricultural lands.’ The proposed project is a continued extension of development in the surrounding area (industrial/business park). The proposed project does not interfere with the ability of other adjacent properties to be used for agricultural production should the property owner wish to do so, nor does it create any gaps of vacant or agricultural land between the proposed project and the existing adjacent development.”* As described in the Draft EIR, the City’s General Plan and General Plan EIR have considered and evaluated the eventual and expected conversion of agricultural activity within the City. The City has already anticipated the eventual conversion of all agricultural activity within the City.

Furthermore, to predict potential impacts of the conversion of active agricultural operations that are occurring citywide as a result of the implementation of the proposed project is speculative and outside the scope of the Draft EIR and CEQA. Agricultural activity within the City is an interim use until such time a development proposal is submitted for a particular project, which cannot be predicted.

Response to Comment D-16. The potential mitigation measures identified in this comment are not considered to be feasible by the City of Moreno Valley as determined in the City’s General Plan EIR. As identified in the Draft EIR (Section 4.1.6.1 Conversion of State Designated Farmland, page 4.1-13), *“Williamson Act contracts are entered into voluntarily by property owners and the City cannot force owners to participate in this program. The City does have the ability to encourage property owners to participate in Williamson Act programs; however, this is expected to result only in temporary preservation of agricultural land since property owners have the option of non-renewal of these contracts at any time after the ten-year contract period ends. The land would then be available to be developed with urban uses.*

Providing protection for ongoing agricultural activities from new developments, such as requiring buffers between agricultural operation and new development or requiring the notification and disclosure of agricultural activities to the purchasers adjacent properties will not permanently protect agricultural land.

The purchase or transfer of development rights, purchase of conservation easements, or donation of funds to assist in the conservation of agricultural land would need to be implemented to ensure the preservation of agricultural land. As stated previously, the City anticipates the conversion of agricultural land within the City and does not set aside land for permanent preservation. The City expects that the majority of the land within the City will be converted to urban uses, although some agriculture will continue as interim uses, as allowed by the City’s Development Code for all zoning categories. Moreno Valley has determined that these measures are economically infeasible based on the higher costs associated with land, water and labor, increased environmental regulation, and competition from neighboring regions where agricultural operations are less costly; thus, resulting in an inability to make farming profitable. Furthermore, these measures are contrary to the City’s vision (as stated in its General Plan) for the project site; therefore, they are not feasible and alternative mitigation has not been identified.”

The Table below contains the suggested mitigation measures by the commentor. The responses determine whether the Draft EIR contains the mitigation measure, if the mitigation will be added mitigation as part of the Final EIR, or if it will not be included and why.

Suggested Mitigation Measure	Response
1. The purchase of agricultural conservation easements;	<p>Economically infeasible. Based on the higher costs associated with land, water and labor, increased environmental regulation, and competition from neighboring regions where agricultural operations are less costly; thus, resulting in an inability to make farming profitable. The site has been planned for industrial uses since 1987, the City has recognized that the conversion of agricultural land under its jurisdiction is an eventual and expected outcome of current and future growth and the current General Plan does not include any agricultural designations; therefore mitigation for the loss of is not required.</p> <p>An easement does not compensate for the impact by replacing or providing substitute resources or environments (i.e., the easement would not create any new farmland where no farmland presently exists). See Fourth District Court of Appeal, <i>Cherry Valley Pass Acres and Neighbors v. City of Beaumont</i> (2010) 190 Cal.App.4th 316 (<i>Cherry Valley</i>)</p>
2. Transfer of development rights;	<p>Economically infeasible. Based on the higher costs associated with land, water and labor, increased environmental regulation, and competition from neighboring regions where agricultural operations are less costly; thus, resulting in an inability to make farming profitable.</p>
3. Acquisition of farmland by the city or county;	<p>Economically infeasible. Based on the higher costs associated with land, water and labor, increased environmental regulation, and competition from neighboring regions where agricultural operations are less costly; thus, resulting in an inability to make farming profitable. No mechanism for the mitigation of impacts to State-designated Farmland and/or existing agricultural operations has been enacted by either the City of Moreno Valley or the County of Riverside. Rather, the City has specifically recognized that the conversion of agricultural land under its jurisdiction is an eventual and expected outcome of current and future growth. The current General Plan does not include any agricultural designations.</p>
4. Mitigation banking;	<p>Economically infeasible. Neither the City of Moreno Valley or the County have a mechanism in place for mitigation banking. The site has been planned for industrial uses since 1987, the City has recognized that the conversion of agricultural land under its jurisdiction is an eventual and expected outcome of current and future growth and the current General Plan does not include any agricultural designations; therefore mitigation for the loss of is not required. In addition, there is not any agricultural zoned land in the City for the City or County to purchase.</p>

RESPONSE TO COMMENTS, ERRATA AND MMRP
VIP Moreno Valley
City of Moreno Valley

Suggested Mitigation Measure	Response
5. The establishment of "urban limits," greenbelts, and buffers;	Not sufficient. Will not result in permanent protection of agricultural lands. There is no mechanism for the mitigation of impacts to State-designated Farmland and/or existing agricultural operations has been enacted by either the City of Moreno Valley or the County of Riverside. Rather, the City has specifically recognized that the conversion of agricultural land under its jurisdiction is an eventual and expected outcome of current and future growth. The current General Plan does not include any agricultural designations.
6. The payment of in-lieu fees sufficient to a purchase and maintain farmland conservation easements;	Economically infeasible. Based on the higher costs associated with land, water and labor, increased environmental regulation, and competition from neighboring regions where agricultural operations are less costly; thus, resulting in an inability to make farming profitable. An easement does not compensate for the impact by replacing or providing substitute resources or environments (i.e., the easement would not create any new farmland where no farmland presently exists). See (Fourth District Court of Appeal, <i>Cherry Valley Pass Acres and Neighbors v. City of Beaumont</i> (2010) 190 Cal.App.4th 316 (<i>Cherry Valley</i>)) In addition, there is not any agricultural zoned land in the City for the City or County to purchase and there is no existing fee program for farm land in the City.
7. Planning tools such as clustering development, use of density bonuses, and limiting "leapfrog" development.	Economically infeasible. Based on the higher costs associated with land, water and labor, increased environmental regulation, and competition from neighboring regions where agricultural operations are less costly; thus, resulting in an inability to make farming profitable. In addition the project is an industrial project which the site is planned for in the City's General Plan since 1987. In addition, this is not a residential project. The proposed mitigation is not applicable. The project won't promote "leapfrog" development since the area surrounding the project site is developed.

Response to Comment D-17. Please refer to Response to Comment D-16.

Response to Comment D-18. This comment is noted. The commentor has correctly identified potential air quality impacts of the proposed project. The Draft EIR also identifies the same significant and unavoidable air quality impacts as occurring during construction and operation of the project (Draft EIR Section 4.2 Air Quality, pages 4.3-23, 4.2-25 and 4.3-28 through 4.3-29).

Response to Comment D-19. The Draft EIR Section 4.2 Air Quality includes a discussion of the applicable SCAQMD regional rules that are required of all development within the South Coast Air Basin as well as project-specific mitigation measures. The Draft EIR distinguishes between measures that are required by rules enforced by the SCAQMD and proposed mitigation measures identified to reduce potential impacts. The Draft EIR then presents data reflecting the anticipated reduction of emissions achieved as a result of both rules enforced by the SCAQMD and project-specific mitigation measures. The Draft EIR includes text on page 4.2-21 stating, "*To facilitate monitoring and compliance, applicable SCAQMD regulatory requirements are restated in the following mitigation. These measures shall be incorporated in all project plans, specifications, and contract documents.*" No further discussion is required.

Response to Comment D-20. This comment is noted. The commentor has correctly identified existing ambient air quality conditions in the project vicinity and the location of the nearest sensitive receptors. The Draft EIR Section 4.2 Air Quality, Table 4.2.D page 4.2-5 and page 4.2-6 (Section 4.2.1.5 Sensitive Land Uses in the Project Vicinity) also identifies the same ambient air quality conditions and locations of the nearest sensitive receptors.

Response to Comment D-21. The Draft EIR Section 4.2.3.4 Local Policies, page 4.2-9, includes a discussion of the City's General Plan and the policies relevant to air quality. The goals, objectives, and policies cited by the commentor are in portions of the General Plan that deal with public safety and energy conservation, but are included here to address the comment:

Ultimate Goal VII: Emphasizes public health and safety, including, but not limited to, police, fire, emergency and animal services and protection from floods and other hazards.

Response: Section 2.5.10 of the Draft EIR addressed public health and safety relative to the cited public services, and Section 2.5.12 of the Draft EIR addressed utilities including energy use (i.e., the wise use of energy is considered energy conservation). The Draft EIR evaluated these issues and determined that the proposed project would not have significant impacts related to public health and safety (public services) and energy use/conservation with implementation of the project as proposed with the recommended mitigation. Therefore, the proposed project is consistent with this goal.

Goal 6.1: To achieve acceptable levels of protection from natural and man-made hazards to life, health, and property.

Response: Section 4.2 of the Draft EIR addresses health impacts related to air quality (i.e., health risk assessment), Section 2.5.5 of the Draft EIR addresses hazards and hazardous materials, Section 2.5.4 of the Draft EIR addresses geotechnical hazards, and Section 2.5.6 addresses water-related hazards. The EIR concluded that these impacts would be less than significant based on the design of the project and implementation of recommended mitigation measures except for specific daily thresholds for construction and operational air pollutants.

NOTE: The project's consistency with Objective 7.5 and Policies 7.5.1, 7.5.2, and 7.5.5 regarding energy efficiency is included in Chapter 4.3 Climate Change and Greenhouse Gases, which begins on Draft EIR page 4.3-1. However, the following information is provided for the reader's convenience.

OBJECTIVE 7.5: ENCOURAGE EFFICIENT USE OF ENERGY RESOURCES.

Response: Section 2.5.12 of the Draft EIR examines the project's use of energy resources such as electricity and natural gas and concludes that the potential impacts will be less than significant after compliance with the State's new "Green Building Code" (Title 24) including strict energy conservation requirements. In addition, Mitigation Measure 4.2.6.3A (under Air Quality) also addresses energy conservation.

Policy 7.5.1: Encourage building, site design, and landscaping techniques that provide passive heating and cooling to reduce energy demand.

Response: Sections 2.5.12 (Utilities) and 4.2 (Air Quality) of the Draft EIR addresses the design of the project relative to wise energy use (i.e., energy conservation) and determined that impacts in this regard would be less than significant with implementation of the state Green Building Code as well as implementation of Mitigation Measures 4.2.6.3A.

Policy 7.5.2: Encourage energy efficient modes of transportation and fixed facilities, including transit, bicycle, equestrian, and pedestrian transportation. Emphasize fuel efficiency in the acquisition and use of City-owned vehicles.

Response: The proposed project does implement the recommended improvements related to private development in this policy (i.e., bicycle racks, pedestrian access).

Policy 7.5.5: Encourage the use of solar power and other renewable energy systems.

Response: The proposed project does not have a specific end user at this point, but the building design will allow for future installation of solar photovoltaic and solar hot water heating for the office area.

Summary. As stated in section 15002 of the CEQA Guidelines, the basic purposes of CEQA are to 1) Inform governmental decision makers and the public about the potential, significant environmental effects of proposed activities; 2) Identify ways that environmental damage can be avoided or significant reduced; 3) Prevent significant, avoidable damage to the environment by requiring changes in projects through the use of alternative or mitigation measures when the governmental agency find the changes to be feasible; and 4) Disclose to the public the reasons why a governmental agency approved the project in the manner the agency chose if significant environmental effects are involved. While the suggested goals are not cited in the Draft EIR for reasons stated previously, this Draft EIR meets the basic purposes of CEQA and adequately discloses potential project-related effects to human health and the environment within Sections 4.2 Air Quality (beginning on page 4.2-1), 4.3 Climate Change and Greenhouse Gases (beginning on page 4.3-1), 4.4 Noise (beginning on page 4.4-1), and 4.5 Transportation (beginning on page 4.5-1). Based on project design, compliance with existing regulations and implementation of the recommended mitigation measures protects public health and safety and achieves responsible energy conservation to the extent required by the lead agency under CEQA. Therefore, the proposed project is consistent with these General Plan goals, objectives, and policies.

Response to Comment D-22. Since there is no specific end user identified at this time, it is not known if employees will be relocated from another facility. It should be noted that even relocation of an existing use from elsewhere in the region still benefits the local economy. The relocation of employees may have an indirect employment impact in other jurisdictions but an overall neutral effect on the region (likely the jobs would still stay within the region). It is speculative to predict such employment changes since the end user is not known at this time. The cited online article makes no assertion that vehicle miles travelled (VMT) were increased due to an employee transfer and the commentor provides no evidence that this was the case in that example. The context of the analysis the commentor is commenting on relates to the project's consistency with the Air Quality Management Plan (AQMP) and how the project may accommodate the expected increase in population and employment in the City. The project is consistent with existing General Plan and Zoning designations and therefore it is reasonable to assume that given the proximity of existing homes and existing commercial uses in the area coupled with the City's existing low jobs-to-housing ratio (i.e., below the existing SCAG jobs-to-housing ratio), the project has the potential to minimize the VMT within the community.

Response to Comment D-23. The Draft EIR does not find that the project will minimize VMT compared to a "typical" large industrial/warehouse type project. However, this project provides the opportunity for a reduction in employee-related VMT because the proposed project will create jobs and provide the opportunity for City of Moreno Valley residents to find employment close to their homes. Because of the high unemployment levels in the City of Moreno Valley, this potential is real. However, the commute travel reduction is virtually impossible to calculate. Nonetheless, the project will create the potential for reduction in commuting distances for employees that reside in the City or in other municipalities near the project site.

Response to Comment D-24. The conclusion referenced in this comment is based on the previous assessment of localized operational impacts to sensitive receptors (Section 4.2.5.4). Because the project would not result in any exceedances of localized operational emissions thresholds,

operational acute health risk impacts are expected to be less than significant. Additional language has been added to Section 4.2.5.5 of the Section 3.0 Errata Final EIR to refer the reader back to the previous Section 4.2.5.4 to clarify this point.

Draft EIR Section 4.2.5.5, Operational-Acute Health Risk Impacts Page 4.2-18

4.2.5.5 Operational-Acute Health Risk Impacts

Threshold	Would the proposed project expose sensitive receptors to substantial pollutant concentrations?
-----------	--

Exposure to diesel exhaust can have immediate health effects, such as irritation of the eyes, nose, throat, and lungs, and it can cause coughs, headaches, light headedness, and nausea. In studies with human volunteers, diesel exhaust particles made people with allergies more susceptible to the materials to which they are allergic, such as dust and pollen. Exposure to diesel exhaust also causes inflammation in the lungs, which may aggravate chronic respiratory symptoms and increase the frequency or intensity of asthma attacks. However, according to the rulemaking on *Identifying Particulate Emissions from Diesel-Fueled Engines as a Toxic Air Contaminant* (ARB 1998), the available data from studies of humans exposed to diesel exhaust are not sufficient for deriving an acute non-cancer health risk guidance value. While the lung is a major target organ for diesel exhaust, studies of the gross respiratory effects of diesel exhaust in exposed workers have not provided sufficient exposure information to establish a short-term non-cancer health risk guidance value for respiratory effects. As previously identified in Section 4.2.5.4, none of the criteria pollutant emissions would exceed localized thresholds during the operation of the proposed project. Therefore, the proposed project would not have a significant impact on localized operational pollutant levels and no mitigation measures would be required. Similarly Therefore, the potential for short-term acute exposure from diesel exhaust are considered to be less than significant and no mitigation is required.

Response to Comment D-25. The HRA analysis provided in the Draft EIR Section 4.2.5.5 Operational-Acute Health Risk Impacts, page 4.2-18, evaluated the health risk levels at all locations within the area covered by the receptor grid which covers the area surrounding the project and extends out to beyond where the project contribution to ambient air quality is measurable. As stated in the technical Health Risk Analysis (HRA) prepared for the project: Receptors were placed at a grid approximately five by five miles to characterize the regional risk levels and at locations of all identified sensitive receptors” (see page 12 of the HRA contained in Appendix D-2 of the Draft EIR). Within the accuracy of the air dispersion model, using a grid of receptors to allow the display of area-wide distributions and wind effects is a much better indication of predicted pollutant concentrations than only placing a single receptor at a location of interest. This is in accordance with SCAQMD HRA methodology. Furthermore, the HRA considers a worst-case scenario (i.e., health risks at the nearest receptors); therefore, it can be expected that health risks at locations further away would be less than that at the nearest receptors.

Response to Comment D-26. This comment is noted. The HRA analysis provided in the Draft EIR Section 4.2.5.5 Operational-Acute Health Risk Impacts and Section 4.2.5.6 Operational-Chronic Health Risk Impacts, page 4.2-18 includes all health risks for which there are accepted analysis methods. The health effects described in the comment do not have methodologies to support inclusion.

Response to Comment D-27. This comment is stating the facts on diesel emissions provided by the SCAQMD and is noted. No response is required.

Response to Comment D-28. This comment is a statement of fact and is noted. No response is required.

Response to Comment D-29. The HRA analysis provided in the Draft EIR, Section 4.2.5.6 Operational-Chronic Health Risk Impacts, page 4.2-18 accounted for the health risks to all the populations affected by the predicted emissions from the project operations including children. In addition the Draft EIR, Section 4.2.1.5 Sensitive Land Uses in the Project Vicinity, page 4.2-6 identifies those sensitive receptors in the area of the proposed project that are sensitive to air pollutants, which includes residences, schools, medical offices, convalescent facilities, and similar uses. The susceptibility of various portions of the population, including infants and children as well as older people are all considered and analyzed, which includes diesel emissions, in both the air quality and HRA sections of the Draft EIR (Sections 4.2 and 4.3, respectively).

Response to Comment D-30. This comment is a statement of fact and is noted. The City of Moreno Valley General Plan is the governing body for the proposed project not the Riverside County General Plan. Consistency of the project with the Riverside General Plan is not required.

Response to Comment D-31. This comment is a statement of fact and is noted. The commentor does not provide a reference for the statement and there is confusion as to how the bullet item relates to the analysis in the Draft EIR. No response is required.

Response to Comment D-32. This comment is a statement of fact and is noted. The commentor does not provide a reference for the statement and there is confusion as to how the bullet item relates to the analysis in the Draft EIR. The proposed project and the respective HRA prepared for the project and summarized in the Draft EIR, complies with the City of Moreno Valley General Plan policies. The City of Moreno Valley General Plan is the governing body for the proposed project not the Riverside County General Plan. Consistency of the project with the Riverside County General Plan is not required.

Response to Comment D-33. The section title has been changed to reflect that the analysis considers all construction emissions and the change is provided in Section 3.0 Errata in the Final EIR.

Draft EIR Section 4.2.6.1 Construction Emissions, Page 4.2-19

4.2.6.1 Construction Equipment Emissions

Response to Comment D-34. The data shown in Table 4.2.I of the Draft EIR contains typographical errors; however, Table G: Short-Term Regional Construction Emissions in the Air Quality report (Appendix D-1) in the Draft EIR is correct. The 5.95.9 lbs/day of ROG is a typographical error; the actual emission value is 5.9. The 3434 lbs/day of NO_x is also a typographical error; the actual emission value is 34 lbs/day (see Draft EIR Appendix D-1, Air Quality Study). The numbers in Table 4.2.1 under Fugitive Dust PM₁₀, Exhaust PM₁₀, Fugitive PM_{2.5} and Exhaust PM_{2.5} are also typographical errors and now match the table in the Air Quality Report in Appendix D-1 in the Draft EIR. The amendments to Table 4.2.1 do not change the analysis or the conclusions in the Section 4.2 Air Quality in the Draft EIR. The changes to Table 4.2.I have been included in Section 3.0 Errata in the Final EIR.

Draft EIR Section 4.2.6.1 Construction Emissions, Page 4.2-20.

Table 4.2.I: Short-Term Regional Construction Emissions

Source: LSA Associates, Inc., December 2011.

Feasible mitigation measures, including several identified in the list provided by the commentor, have been already included as mitigation for the project and are identified in the Draft EIR. In addition, the mitigation measures shown as “Incorporated” have been added to the Final EIR (Section 3.0 Errata) as suggested by the commentor. The changes to the Draft EIR do not result in a significant impact and has no material effect on the findings of the EIR. The Table below contains each of the mitigation measures suggested for inclusion by the commentor and if it is already included in the Draft EIR, if will be added mitigation as part of the Final EIR, or if will not be included and why.

Suggested Mitigation Measure	Response
1. Gravel pads must be installed at all access points to prevent tracking of mud onto public roads.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1K on page 4.2-22.
2. Install and maintain trackout control devices in effective condition at all access points where paved and unpaved access or travel routes intersect (eg. Install wheel shakers, wheel washers, and limit site access.)	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1K on page 4.2-22.
3. All roadways, driveways, sidewalks, etc., should be completed as soon as possible. In addition, building pads should be laid as soon as possible after grading unless seeding or soil binders are used.	Incorporated. Additional text has been added to Section 4.2.6.1 (page 4.2-23) of the Air Quality Section as Mitigation Measure 4.2.6.1R and summarized in the Errata Section of the Final EIR to include this specific requirement as suggested.
4. Pave all construction roads.	Not Included. All roads surrounding the site are already paved. This suggested mitigation measure is not warranted.
5. Pave all construction access roads at least 100 feet on to the site from the main road.	Not Included. This suggested mitigation measure is not included in Section 4.2 Air Quality of the Draft EIR because it is impractical to pave construction roads onsite. It is infeasible and ineffective to pave roads within the site as the

RESPONSE TO COMMENTS, ERRATA AND MMRP
VIP Moreno Valley
City of Moreno Valley

Suggested Mitigation Measure	Response
	entire site will be graded to process the 220,000 cubic yards of fill to be imported. Such temporary pavement would present unnecessary obstacles and would be destroyed in the process of construction. Paving construction roads within construction areas unnecessarily increase VOC generation, with little or no discernible reduction in other air pollutant emissions. Fugitive dust control is already addressed by Mitigation Measures 4.2.6.1E and 4.2.6.1F .
6. Limit fugitive dust sources to 20 percent opacity.	Not Included. The context of this suggested mitigation measure is unclear. It is not feasible to limit fugitive dust <i>sources</i> to 20 percent opacity. It is inferred that the commentor is suggesting that fugitive dust <i>emissions</i> should be limited to 20 percent opacity consistent with SCAQMD Rule 403. SCAQMD Rule 403 is a regional requirement required of all development within its jurisdiction; therefore, the project is required to adhere to this requirement.
7. Require a dust control plan for earthmoving operations.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1K and 4.2.6.1L on page 4.2-23.
8. When materials are transported off-site, all material shall be covered, effectively wetted to limit visible dust emissions, and at least six inches of freeboard space from the top of the container shall be maintained.	Incorporated. Additional text has been added to Section 4.2.6.1 (page 4.2-24) of the Air Quality Section as Mitigation Measure 4.2.6.1N and summarized in the Errata Section of the Final EIR to include this specific requirement as suggested.
9. All streets shall be swept at least once a day using SCAQMD Rule 1186 certified street sweepers utilizing reclaimed water trucks if visible soil materials are carried to adjacent streets.	Incorporated. Additional text has been added to Section 4.2.6.1 (page 4.2-23) of the Air Quality Section as Mitigation Measure 4.2.6.1O and summarized in the Errata Section of the Final EIR to include this specific requirement as suggested.
10. The contractor or builder shall designate a person or persons to monitor the dust control program and to order increased watering, as necessary, to prevent transport of dust offsite.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1K on page 4.2-22.
11. Post a publicly visible sign with the telephone number and person to contact regarding dust complaints. This person shall respond and take corrective action within 24 hours.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1K on page 4.2-22.
12. Extend grading period sufficiently to reduce air quality impacts below a level of significance.	Not Included. This suggested mitigation measure is not included in Section 4.2 Air Quality of the Draft EIR because extending the grading period would not likely achieve a level of reduction great enough to reduce air quality impacts during the grading phase. In fact, extending the grading period would result in an increase in worker vehicle and construction equipment-related emissions, increasing the severity of the impact. In addition, the same quantity of fugitive dust would be emitted to the air basin under this suggestion and impacts associated with regional emissions would not be reduced. Also refer to the response to #13 below.
13. The simultaneous disturbance of the site shall be limited to five acres per day.	Not Included. As noted in the CalEEMod manual, <i>“In order to properly grade a piece of land multiple passes with equipment may be required. The acres is based on the</i>

RESPONSE TO COMMENTS, ERRATA AND MMRP
VIP Moreno Valley
City of Moreno Valley

Suggested Mitigation Measure	Response
	<p><i>equipment list and days in grading or site preparation phase according to the anticipated maximum number of acres a given piece of equipment can pass over in an 8-hour workday. The equipment specific grading rates are given in the table below as determined by SCAQMD in consultation with building estimator references.” Thus, the CalEEMod calculates a total grading disturbed area many times the size of the project site based on the idea that there are multiple graders, dozers, scrapers, etc. making multiple passes during any one day. This suggested measure to limit simultaneous disturbance of the site to 5 acres per day would not change the results of the air quality modeling and projected air emissions identified in the Draft EIR and in fact may increase emissions due to the grading inefficiencies created by this restriction. By grading a smaller area it prolongs the grading process and releases dust and vehicular emissions (grading construction workers going back and forth to the site over a greater period of time and grading equipment moving around the site) into the air basin over a longer period of time. By grading five acres a day of a minimum grading of 7 days based on a 71 acre site at 10 acres a day the grading would be prolonged to 14 days. There are also logistical considerations getting construction equipment and people back and forth to the site. In addition, there are no sensitive receptors located in close proximity to the project site that would be affected by the dust.</i></p>
<p>14. Any vegetative cover to be utilized onsite shall be planted as soon as possible to reduce the disturbed area subject to wind erosion. Irrigation systems required for these plants shall be installed as soon as possible to maintain good ground cover and to minimize wind erosion of the soil.</p>	<p>Incorporated. Additional text has been added to Section 4.2.6.1 (page 4.2-23) of the Air Quality Section as Mitigation Measure 4.2.6.1P and summarized in the Errata Section of the Final EIR to include this specific requirement as suggested.</p>
<p>15. Any on-site stockpiles of debris, dirt or other dusty material shall be covered or watered three times daily.</p>	<p>Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measures 4.2.6.1E and 4.2.6.1G on page 4.2-22.</p>
<p>16. Any site access points within 30 minutes of any visible dirt deposition on any public roadway shall be swept or washed.</p>	<p>Not Included. It is not clear what is being suggested by this measure. Trackout (i.e., dirt deposition) is addressed through adherence to Mitigation Measure 4.1.6.1K.</p>
<p>17. A high wind response plan shall be formulated for enhanced dust control if winds are forecast to exceed 25 mph in any upcoming 24-hour period.</p>	<p>Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1D on page 4.2-22. While Mitigation Measure 4.2.6.1D does not specify the formulation of a high wind response plan as suggested, this mitigation measures requires that clearing, grading, earthmoving, or excavation activities cease upon 25 mph winds or greater. This requirement in combination with other dust control measures outlined in the Draft EIR will accomplish the intent of the suggested mitigation measures stated here.</p>
<p>18. Implement activity management techniques including a) development of a comprehensive construction management plan designed to minimize the number of</p>	<p>Incorporated. Additional text has been added to Section 4.2.6.1 (page 4.2-23) of the Air Quality Section as Mitigation Measure 4.2.6.1S and summarized in the Errata Section of the Final EIR to include a similar requirement regarding</p>

City of Moreno Valley

Suggested Mitigation Measure	Response
large construction equipment operating during any given time period; b) scheduling of construction truck trips during non-peak hours to reduce peak hour emissions; c) limitation of the length of construction work-day period; and d) phasing of construction activities.	scheduling truck trips during non-peak hours as suggested. Approval of a truck haul route is already required prior to grading permit approval. commentor
19. Develop a trip reduction plan to achieve a 1.5 AVR for construction employees	Not Included. This suggested mitigation measure is not feasible because construction of this type typically requires a large number of small contractors rather than one large contractor such as for large public works projects. Having multiple small contractors means that workers come from many areas and do not work for the same company, therefore, making efforts to coordinate their carpooling ineffective and infeasible. As noted in Mitigation Measure 4.2.6.1K , documentation shall be provided to the City of Moreno Valley indicating that construction workers have been encouraged to carpool or otherwise reduce VMT to the greatest extent practical, including providing information on available park and ride programs. In addition, it should be noted that California Public Health and Safety Code Section 40717.9 states that a "public agency shall not require an employer to implement an employee trip reduction program unless the program is expressly required by federal law and the elimination of the program will result in the imposition of federal sanctions, including, but not limited to, the loss of federal funds for transportation purposes."
20. Require high pressure injectors on diesel construction equipment.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1K on page 4.2-22.
21. Restrict truck operation to "clean" trucks, such as a 2007 or newer model year or 2010 compliant vehicles.	Not Included. Mitigation Measure 4.2.6.1C which requires CARB Tier II Certified equipment or better (page 4.2-21) is identified in the Draft EIR. Where feasible, CARB Tier II Certified equipment or better will be used during construction of the project. The suggested mitigation measures is not capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, and technological factors and is infeasible.
22. Require the use of CARB certified particulate traps that meet level 3 requirements on all construction equipment.	Not Included. Mitigation Measure 4.2.6.1C which requires CARB Tier II Certified equipment or better (page 4.2-21) is identified in the Draft EIR. Where feasible, CARB Tier II Certified equipment or better will be used during construction of the project. infeasible because of CARB off-road regulation changes approved in 2011 making exhaust retrofits of particulate traps no longer mandatory that requiring their use is not feasible.
23. Utilize only CARB certified equipment for construction activities.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1C on page 4.2-21.
24. The developer shall require all contractors to turn off all construction equipment and delivery vehicles when not in use and/or idling in excess of 3 minutes.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1M on page 4.2-23.
25. Restrict engine size of construction	Included. This suggested mitigation measure is already

RESPONSE TO COMMENTS, ERRATA AND MMRP
VIP Moreno Valley
City of Moreno Valley

Suggested Mitigation Measure	Response
equipment to the minimum practical size.	included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1K on page 4.2-23.
26. Use electric construction equipment where technically feasible.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1K on page 4.2-23.
27. Substitute gasoline-powered for diesel-powered construction equipment.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1K on page 4.2-23.
28. Require use of alternatively fueled construction equipment, using, e.g., compressed natural gas, liquefied natural gas, propane, or biodiesel.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1K on page 4.2-22.
29. Use methanol-fueled pile drivers.	Not Included. Project construction does not require use of pile drivers.
30. Install catalytic converters on gasoline-powered equipment.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-23.
31. Require the use of Alternative Diesel Fuels on diesel equipment used. Alternative diesel fuels exist that achieve PM ₁₀ and NO _x reductions. PuriNOx is an alternative diesel formulation that was verified by CARB on January 31, 2001 as achieving a 14% reduction in NO _x and a 63% reduction in PM ₁₀ compared to CARB diesel. It can be used in any direct-injection, heavy-duty compression ignition engine and is compatible with existing engines and existing storage, distribution, and vehicle fueling facilities. Operational experience indicates little or no difference in performance and startup time, no discernable operational differences, no increased engine noise, and significantly reduced visible smoke.	Not Included. It has been determined that Lubrizol, the producer of PuriNox ceased production of PuriNox in December 2006. Additionally, SCAQMD has previously confirmed that PuriNox is not expected to be commercially available in the foreseeable future. Thus, the suggested mitigation measure is not capable of being accomplished in a successful manner within a reasonable period of time because PuriNox is not available commercially. In addition, the requirement to use alternative diesel fuel depends on the availability of such fuel which according to the SCAQMD is not available.
32. Electrical powered equipment shall be utilized in-lieu of gasoline-powered engines where technically feasible.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1K on page 4.2-23.
33. All forklifts shall be electric or natural gas powered.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1K on page 4.2-23.
34. Suspend use of all construction equipment operations during second stage smog alerts.	Incorporated. As noted on the SCAQMD website (http://www.aqmd.gov/aqmd/index.html), the Basin has not experienced a Stage II smog alert since the 1980's. This is due to cleaner burning fuels in vehicles and more stringent rules BY AQMD regarding PM ₁₀ and PM _{2.5} . While the occurrence of a Stage II smog alert cannot be predicted. It is reasonable to assume that a Stage II smog alert would not occur during the construction phase of this project. However, as precaution the mitigation measure has been added to the Errata Section of the Final EIR as a bullet item under Mitigation Measure 4.2.6.1K .
35. Provide temporary traffic controls such as a	Incorporated. Additional text has been added to Section

RESPONSE TO COMMENTS, ERRATA AND MMRP
VIP Moreno Valley
City of Moreno Valley

Suggested Mitigation Measure	Response
flag person, during all phases of construction to maintain smooth traffic flow.	4.2.6.1 (page 4.2-24) of the Air Quality Section as Mitigation Measure 4.2.6.1Q and summarized in the Errata Section of the Final EIR to include this specific requirement as suggested.
36. Provide dedicated turn lanes for movement of construction trucks and equipment on- and off-site.	Not Included. The project site is bounded by Perris Boulevard to the east, Grove View Road to the north, Indian Street to the west, and Perris Valley Storm Channel (PVSC Lateral D unimproved service road) to the south. Perris Boulevard and Grove View Road are improved with curb and gutter on lanes adjacent to the project site, while Indian Street contains a strip of unimproved right-of-way adjacent to the project site. Perris Boulevard contains a raise center median, so left-turn access to/from the site is not possible. Access onto the project site is readily available along Grove View Road and Indian Street. Grove View Road is a low-volume street containing a center two-way left turn lane and already contains adequate provisions for truck access to the site. It is anticipated that the truck haul route permit will require that trucks access the site via Gove View Road.
37. Reroute construction trucks away from congested streets and sensitive receptor areas.	Incorporated. Additional text has been added to Section 4.2.6.1 (page 4.2-23) of the Air Quality Section as Mitigation Measure 4.2.6.1T and summarized in the Errata Section of the Final EIR as suggested. Approval of a truck haul route is already required prior to grading permit approval.
38. Configure construction parking to minimize traffic interference.	Not Included. The project site is bounded by Perris Boulevard to the east, Grove View Road to the north, Indian Street to the west, and Oleander Avenue (PVSC Lateral D unimproved service road). Perris Boulevard and Grove View Road are improved with curb and gutter on lanes adjacent to the project site, while Indian Street contains a strip of unimproved right-of-way adjacent to the project site. Access onto the project site is readily available along Perris Boulevard, Grove View Road and Indian Street. Construction parking is expected to be onsite at the discretion of the construction contractor to facilitate construction of the site.
39. Prior to the issuance of a grading and building permit, the applicant shall submit verification that a ridesharing program for the construction crew has been encouraged and will be supported by the contractor via incentives or other inducements.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1K on page 4.2-23.
40. Minimize construction worker trips by requiring carpooling and providing for lunch onsite.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1K on page 4.2-23.
41. Provide shuttle service to food service establishments/commercial areas for the construction crew.	Not Included. This suggested measure is counterproductive to the suggested measures identified in row 40 above and Mitigation Measure 4.2.6.1K . In addition, construction workers tend bring their own lunch because they take a limited lunch break. For this reason, the suggested measure will result in additional vehicular emission as compared to without the suggested measure. Thus, this suggested measure is not warranted.
42. Provide shuttle service to transit stations/multimodal centers for the	Not included. . This mitigation measure is not practical since the nearest multimodal center is in downtown Riverside

Suggested Mitigation Measure	Response
construction crew.	located 14.5 miles northwest of the project site. In addition, the Riverside Transit Authority (RTA) has an established bus route, No. 19, which services the project area and the site. The RTA has two stops one on either side of Perris Blvd. and Grove View Rd. From the project site the walk north along Perris Blvd. is approximately 0.2 mile to a stop at Perris Blvd and Nandina. There is another bus stop at 17800 Perris Blvd. approximately 0.1 mile from the project site. Therefore, the site is serviced by the RTA and no further actions are necessary.
43. Require the use of Zero-VOC paints, coatings, and solvents.	Included. To the extent feasible, this suggested mitigation measure is partially included (low-VOC vs. zero-VOC) in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1J on page 4.2-23 in accordance with SCAQMD Rule 1113.

* Would reduce impacts to GHGs as well

Response to Comment D-35. The language in Mitigation Measure 4.2.6.1.B in the Draft EIR is as specific as is possible, while still allowing the possibility that the construction contractor can implement it. Requiring the project contractor to utilize electricity from power poles may result in infeasibility if power poles do not exist on-site. Clean-fuel is fuel other than diesel or gasoline. Clarification of the term “clean-fuel” has been incorporated into the Final EIR.

Draft EIR Section 4.2.6.1 Construction Equipment Exhaust Emissions Page 4.2-21.

4.2.6.1B. Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall utilize power sources (e.g., power poles) or clean-fuel (e.g., fuel other than diesel or gasoline) generators. Contract specifications shall be included in the proposed project construction documents, which shall be reviewed by the City.

Response to Comment D-36. The air quality analysis of construction shows that there will be exceedances of ROG, NO_x and PM₁₀. Tier III applies to equipment produced from 2006 to 2008. As of 2012, equipment produced since 2006 are becoming more readily available, but not to the extent that requiring their use is considered feasible mitigation. Tier II specifications result in a substantial reduction in PM₁₀ and PM_{2.5} (62.5% to 72.5%, depending on horsepower) over Tier I equipment, which is the basis of the mitigation measure. Tier III specifications are identical to Tier II for PM₁₀ and PM_{2.5}, thus requiring this more stringent mitigation would have no benefit to the reduction in PM₁₀ and PM_{2.5} and was not required.

Response to Comment D-37. Mitigation Measure 4.2.6.1.K as written in the Draft EIR requires that the listed measures be included in “grading plans, construction specifications and bid documents”. Once in these documents, they become requirements, enforceable by the City or other regulatory agencies. However, the wording of this and similar measures will be reworded to strengthen the implementation requirement of each measure.

Response to Comment D-38. Although the exact effects of the measures listed are not fully quantifiable at this time, the language of the measure will be changed to require implementation of all the listed design features, rather than a future combination of features, as shown below:

Draft EIR Section 4.2.6.3 Long-Term Operational Emissions, Page 4.2-26.

4.2.6.3A Prior to issuance of the first building permit, building and site plan designs shall ensure that the project's energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of 20 percent which is considered sufficient by CARB and the SCAQMD to achieve the AB 32 conservation goals for 2020. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and review and approved by the City. The following ~~Any combination of design features, including but not limited to the following list, may~~ shall be used to fulfill this requirement provided that the total increase in energy efficiency meets or exceeds 20 percent: *(note: the list of design features remains the same except for changes outlined in Response D-39 below)*

Changes to this mitigation measure are provided in Section 3.0 Errata of the Final EIR.

The significant impact that these mitigation measures apply to are almost entirely from mobile sources. The emissions exceed the thresholds by up to 1,700%. There are no feasible mitigation measures available to reduce these emissions to anywhere close to the thresholds, therefore; 20% was proposed by the project as a good-faith effort to make a meaningful reduction.

Response to Comment D-39. The only agencies that have any control over the production of vehicles used with this project, and therefore the emissions controls installed on those vehicles, is the California Air Resources Board and the United States EPA. The indirect control the City has over vehicle operations associated with land use decisions cannot not have a substantial effect on the project's air quality impact as the vehicle emissions of concern are from trucks traveling throughout the Air Basin, far outside the City limits.

Response to Comment D-40. Impact 4.2.6.3 is the air quality impact from operational emissions of the project to the regional air quality. This impact statement includes a typographical error and Section 3.0 Errata of the Final EIR incorporates the amended language to clarify the impact statement.

Draft EIR Section 4.2.6.3 Long-Term Operational Emissions, Page 4.2-25.

Impact 4.2.6.3: Implementation of the proposed project may ~~exceed~~ have the potential to exceed applicable daily thresholds for operational activities.

Response to Comment D-41. This comment reiterates the conclusions presented in the Draft EIR. The rounding of the results is entirely appropriate. It is not inaccurate to report that emissions would be 990.93 lbs/day when all that can really be reported is that the peak emissions could be anywhere between 970 and 990 lbs/day and will be far less for most of the time.

Response to Comment D-42. The wording of Mitigation Measure 4.2.6.3A has been modified to address this comment as outlined in Responses to Comments D-38 and D-39. In addition, the mitigation measures focus on the only project emissions that the project has any ability to reduce.

Response to Comment D-43. The wording of Mitigation Measure 4.2.6.3A has been modified to address this comment as outlined in Responses to Comments D-38 and D-39.

Response to Comment D-44. The wording of Mitigation Measure 4.2.6.3A has been modified to address this comment as outlined in Responses to Comments D-38 and D-39.

Response to Comment D-45. It is not feasible to mandate mitigation on equipment that is controlled by the State and federal governments. As the EIR is only for the construction of the project and the operator has not been identified, the EIR can only specify mitigation that can be implemented by the builder. At the time the operator is known, it is at the City’s discretion to impose operating parameters to the operator of the facility.

Feasible mitigation measures, including several identified in the list provided by the commentor, have been already included as mitigation for the project and are identified in the Draft EIR. In addition, the mitigation measures shown as “Incorporated” have been added to the Final EIR (Section 3.0 Errata) as suggested by the commentor. The changes to the Draft EIR do not result in a significant impact and has no material effect on the findings of the EIR. The Table below contains each of the operational emissions mitigation measures suggested for inclusion by the commentor. If the measure is included in the Draft EIR the response indicates “included”. If the mitigation is being added as part of the Final EIR the response indicates “incorporated”, or if the measure is not included the response discusses why the Final EIR does not contain the measure.

Suggested Mitigation Measure	Response
1. The operator of the primary facilities shall become SmartWay Partner.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-27.
2. The Project shall meet SmartWay 1.25 ratings.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-27.
3. The project shall use only freight companies that meet SmartWay 1.25 ratings.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-27.
4. (ALTERNATIVELY from 2,3 above) The operator of the primary facilities shall incorporate requirements or incentives sufficient to achieve at least 20% per year (as a percentage of previous percentage, not total trips) increase in percentage of long haul trips carried by SmartWay carriers until it reaches a minimum of 90% of all long haul trips carried by SmartWay 1.0 or greater carriers. Results, including backup data shall be reported to the Planning Department semi-annually.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-27.
5. The operator of the primary facilities shall incorporate requirements or incentives sufficient to achieve a 15% per year (as a percentage of previous percentage, not total trips) increase in percentage of consolidator trips carried by SmartWay carriers until it reaches a minimum of 85% of all consolidator trips carried by SmartWay 1.0 or greater carriers. Results, including backup data shall be reported to the Planning Department semi-annually.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-27.
6. All fleet vehicles shall conform to 2010 air quality standards or better. Results, including backup data shall be reported to the Planning Department semi-annually.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-27.
7. All spaces utilizing refrigerated storage, including restaurants and food or beverage stores, shall provide an electrical hookup for refrigeration	Incorporated. Similar language has been added to Section 4.2.6.3 (page 4.2-27) of the Air Quality Section under Mitigation Measure 4.2.6.3A and summarized in

RESPONSE TO COMMENTS, ERRATA AND MMRP
VIP Moreno Valley
City of Moreno Valley

Suggested Mitigation Measure	Response
units on delivery trucks. Trucks incapable of utilizing the electrical hookup for powering refrigeration units shall be prohibited from accessing the site. All leasing documents shall include these requirements and provide that violation of those provisions will constitute a material breach of the lease that will result in the termination of the lease. Because of the fact that these terms of the lease are designed to benefit the public, the public shall be considered to be a third party beneficiary with standing to enforce the requirements of the lease.	the Errata Section of the Final EIR to include a portion of the suggested requirement.
8. Install catalytic converters on gasoline-powered equipment.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-23.
9. Where diesel powered vehicles are necessary, require the use of alternative diesel fuels. Alternative diesel fuels exist that achieve PM10 and NOx reductions. PuriNOx is an alternative diesel formulation that was verified by CARB on January 31, 2001 as achieving a 14% reduction in NOx and a 63% reduction in PM10 compared to CARB diesel. It can be used in any direct-injection, heavy-duty compression ignition engine and is compatible with existing engines and existing storage, distribution, and vehicle fueling facilities. Operational experience indicates little or no difference in performance and startup time, no discernable operational differences, no increased engine noise, and significantly reduced visible smoke.	Not Included. It has been determined that Lubrizol, the producer of PuriNOx ceased production of PuriNOx in December 2006. Additionally, SCAQMD has previously confirmed that PuriNOx is not expected to be commercially available in the foreseeable future. Thus, the suggested mitigation measures is not capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, and technological factors and is therefore infeasible. Heavy duty trucks using other types of alternative fuels are not yet widely available on the market at this time. In addition, there is no specific end user at this time, and a future user may already have a truck fleet that would make implementation of alternative fuel vehicles economically infeasible. As alternative fuel trucks become more widely available (e.g., compressed or liquefied natural gas) and are required in higher numbers at the SoCal ports, it is likely that project trucks will utilize alternative fuels.
10. Electrical powered equipment should be utilized in-lieu of gasoline-powered engines where technically feasible.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-28.
11. Utilize electrical equipment for landscape maintenance.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-28.
12. All forklifts shall be electric or natural gas powered.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1K on page 4.2-23.
13. Utilize electric yard trucks.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-28.
14. Prohibit idling of trucks for periods exceeding three minutes.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.1M on page 4.2-23.
15. Provide electrical vehicle ("EV") and compressed natural gas ("CNG") vehicles in vehicle fleets.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-28.

RESPONSE TO COMMENTS, ERRATA AND MMRP
VIP Moreno Valley
City of Moreno Valley

Suggested Mitigation Measure	Response
16. Charge reduced or no parking fee for EVs and CNG vehicles.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-28. While Mitigation Measure 4.2.6.3A does not specify reduce or no parking fees for these vehicles, it does specify the “provision of preferential parking.”
17. Install EV charging facilities for a minimum of 10% of all parking spaces.	Included. To the extent feasible, a similar mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-27.
18. Install a CNG fueling facility.	Not Included. The facility will not be able to take advantage of alternative fuel trucks as outlined previously in Item 9. The number of trucks this project would support does not justify the additional cost of installing a CNG fueling facility, and would likely be only one end user so the cost of such a facility could not be shared among a larger group of industrial users. Therefore, this measure is infeasible.
19. Provide preferential parking locations for EVs and CNG vehicles.*	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-28.
20. Implement parking fee for single-occupancy vehicle commuters.	Included. To the extent feasible, a similar mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-28.
21. Plant shade trees in parking lots to provide minimum 50% cover to reduce evaporative emissions from parked vehicles.	Included. To the extent feasible, this suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-26.
22. Plant at least 50 percent low-ozone forming potential (Low-OPF) trees and shrubs, preferably native, drought-resistant species, to meet city/county landscaping requirements.	Incorporated. The suggested measure to plant low-ozone forming potential trees and shrubs has been added to the project mitigation under Mitigation Measure 4.3.6.1B .
23. Plant Low-OPF , native, drought-resistant, tree and shrub species, 20% in excess of that already required by city or county ordinance. Consider roadside, sidewalk, and driveway shading.	Incorporated.. The suggested measure to plant low-ozone forming potential trees and shrubs has been added to the project mitigation under Mitigation Measure 4.3.6.1B .
24. Orient 75 percent or more of homes and buildings to face either north or south (within 30 degrees of N/S) and plant trees and shrubs that shed their leaves in winter nearer to these structures to maximize shade to the building during the summer and allow sunlight to strike the building during the winter months.	Not Included The suggested mitigation measure to orient buildings north or south is not applicable to a warehouse building due to the size and shape of the project site and the resulting size and orientation of the proposed industrial building.
25. Provide grass paving, tree shading, or reflective surface for unshaded parking lot areas, driveways, or fire lanes that reduce standard black asphalt paving by 10% or more.	A Portion of the Measure is Included. Tree shading of parking areas is a requirement of all projects and is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-26. Grass paving is not practical in the City’s climate and to date not accepted by the Fire Prevention Bureau

RESPONSE TO COMMENTS, ERRATA AND MMRP
VIP Moreno Valley
City of Moreno Valley

Suggested Mitigation Measure	Response
	in addition heavy trucks cannot park on a grass surface.
26. Electrical outlets shall be installed on the exterior walls of all residential and commercial buildings (and perhaps parking lots) to promote the use of electric landscape maintenance equipment.	Incorporated. The suggested mitigation measure has been added to reduce air quality emissions as a bulleted item to Mitigation Measure 4.2.6.3A .
27. Prohibit gas powered landscape maintenance equipment within residential, commercial, and mixed-use developments. Require landscape maintenance companies to use battery powered or electric equipment or contract only with commercial landscapers who operate with equipment that complies with the most recent California Air Resources Board certification standards, or standards adopted no more than three years prior to date of use or any combination of these two themes.	Incorporated. The suggested mitigation measure has been added to reduce greenhouse gas emissions as a bulleted item to Mitigation Measure 4.2.6.3A .
28. Provide a complimentary cordless electric lawnmower to each residential buyer.	Not Included. As stated, the suggested mitigation measure applies to home buyers and is therefore inappropriate.
29. Implement parking cash-out program for non-driving employees.	Included. A similar mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-27.
30. Require each user to establish a carpool/vanpool program.	Included. To the extent feasible, this suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-27.
31. Create a car sharing program within the planned community.	Not Included. The suggested mitigation measure applies to a planned community and is therefore inappropriate.
32. Create a light vehicle network, such as a neighborhood electric vehicle (NEV) system.*	Not Included. The suggested mitigation measure applies to a residential neighborhood and is therefore inappropriate.
33. Provide preferential parking for carpool/vanpool vehicles.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-27.
34. Provide subsidies or incentives to employees who use public transit or carpooling, including preferential parking.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-27.
35. Provide secure, weather-protected bicycle parking for employees.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-27.
36. Provide direct, safe, attractive pedestrian access from project to transit stops and adjacent development.	Not Included. Pedestrian access to and from the project will take place from the adjacent streets on associated sidewalks that are already provided in the area.
37. Provide direct safe, direct bicycle access to adjacent bicycle routes.	Not Included. Bicycle access from the project will take place to and from the project site on the adjacent streets which already exist in the project area.
38. Provide showers and lockers for employees	Included. This suggested mitigation measure is already

RESPONSE TO COMMENTS, ERRATA AND MMRP
VIP Moreno Valley
City of Moreno Valley

Suggested Mitigation Measure	Response
bicycling or walking to work.	included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-28.
39. Short-term bicycle parking for retail customers and other non-commute trips.	Not Included. As stated, the suggested mitigation measure applies to a retail uses and is therefore inappropriate.
40. Connect bicycle lanes/paths to city-wide network.	Not Included. The suggested mitigation measure applies citywide bicycle planning, and is therefore inapplicable.
41. Design and locate buildings to facilitate transit access, e.g., locate building entrances near transit stops, eliminate building setbacks, etc.	Included as a Part of Site Design. The project site design includes a bus bay along the site's Perris frontage.
42. Construct transit facilities such as bus turnouts/bus bulbs, benches, shelters, etc.	Included as a Part of Site Design. The project site design includes a bus bay along the site's Perris frontage.
43. Provide a display case or kiosk displaying transportation information in a prominent area accessible to employees or residents.	Incorporated The suggested mitigation measure has been incorporated as suggested in the Errata to the Final EIR as a bullet to Mitigation Measure 4.2.6.3A .
44. Provide shuttle service to food service establishments/commercial areas.	Not Included. Warehouse workers tend bring their own lunch because they take a limited lunch break. For this reason, the suggested measure will result in additional vehicular emission as compared to without the suggested measure. Thus, this suggested measure is not warranted.
45. Provide shuttle service to transit stations/multimodal centers.	Not Included. The suggested mitigation measure has not been included. The project site design includes a bus bay along the site's Perris frontage. In addition
46. Provide on-site child care or contribute to off-site child care within walking distance.	Not Included. The suggested mitigation measure applies to areas with high number of employment and is therefore inapplicable.
47. Implement a compressed workweek schedule.	Not Included. The suggested mitigation measure is inapplicable for a high-cube logistics warehouse operation.
48. Implement home-based telecommunicating program, alternate work schedules, and satellite work centers.	Not Included. The suggested mitigation measure is inapplicable for a high-cube logistics warehouse operation.
49. All buildings shall be constructed to LEED Platinum standards.	Not Included. The process of obtaining a LEED rating of any level (LEED ratings levels are Certified, Silver, Gold, and Platinum, with Platinum being the highest) is not mitigation. However, the specific green building features that are part of the LEED rating equation can reduce air pollution and greenhouse gas emissions impacts by minimizing and reducing the quantity of emissions. Mitigation Measure 4.2.6.3.A in the Draft EIR prescribes a performance standard requiring a 20% improvement in energy efficiency (over and above the 2008 CBC) for the building and lists suggested measures that can be included in the building's design to obtain this improvement in energy efficiency.
50. Design buildings for passive heating and cooling and natural light, including building orientation, proper orientation and placement of windows, overhangs, skylights, etc.	Not Included. The suggested mitigation measure is inapplicable for a high-cube logistics warehouse operation.

RESPONSE TO COMMENTS, ERRATA AND MMRP
VIP Moreno Valley
City of Moreno Valley

Suggested Mitigation Measure	Response
51. Construct photovoltaic solar or alternative renewable energy sources sufficient to provide 100% of all electrical usage for the entire Project.	Included. A similar mitigation measure is provided in Mitigation Measure 4.2.6.3A in the Final EIR Errata. It reads as follows: “The project shall install a photovoltaic array (solar panels) or other source of renewable energy generation on-site, or otherwise acquire energy from the local utility that has been generated by renewable resources, to meet the project’s office electricity needs.”
52. Install an ozone destruction catalyst on all air conditioning systems.	Not Included. The suggested mitigation measures is not capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, and technological factors and is infeasible.
53. Construct renewable energy sources sufficient to offset the equivalent of 100% of all greenhouse gas emissions from mobile sources (internal combustion engines) for the entire Project.	Not Included. The suggested mitigation measure includes implementing carbon offsets in an amount equivalent to 100% of all project mobile source greenhouse gas emission. See Response to Comment E-54. This suggested mitigation measure is not capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, and technological factors and is infeasible.
54. Purchase only green/ renewable power from the electric company.	Included. A similar mitigation measure is provided in Mitigation Measure 4.2.6.3A in the Final EIR Errata. It reads as follows: “The project shall install a photovoltaic array (solar panels) or other source of renewable energy generation on-site, or otherwise acquire energy from the local utility that has been generated by renewable resources, to meet the project’s office electricity needs.”
55. Install solar water heating systems to generate all hot water requirements.	Included. To the extent feasible, this suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-26.

Response to Comment D-46. As indicated in the Draft EIR (Section 4.2.5.1, Air Quality Plan Management Plan Consistency, pages 4.2-14 and 4.2-15), the project is consistent with the City’s General Plan and zoning. Therefore, regional planning agencies, including SCAG and the SCAQMD, have already accounted for future industrial use on the proposed project site as part of the land use projections contained in the AQMP and other regional planning documents/programs (i.e., Regional Transportation Plan, etc). Implementation of the AQMP and the modified project-related mitigation measures will help to improve air quality levels in the future. Since the proposed project will contribute to full attainment of national and state ambient air quality standards, future cumulative impacts associated with the proposed and cumulative projects will not make a significant contribution to cumulatively considerable air quality impacts in the region. For clarification purposes, Section 4.2.7.1 Short-Term Air Quality Impacts on page 4.2-25 of the Draft EIR has been modified as shown below and as indicated in Section 3.0 Errata in the Final EIR:

Draft EIR, Section 4.2.7.1 Short-Term Air Quality Impacts, Page 4.2-25

4.2.7.1 Short-Term Air Quality Impacts

The cumulative area for air quality impacts is the Basin. The implementation of the project would contribute criteria pollutants to the area during project construction. A number of individual projects in the area may be under construction simultaneously with the proposed project. Depending on construction schedules and actual implementation of projects in the area, generation of fugitive dust and pollutant emissions during construction would result in substantial short-term increases in air pollutants. However, each project would be required to comply with the SCAQMD's standard construction measures. In addition, implementation of the AQMP will result in improved air quality levels in the future and full attainment of national and state ambient air quality standards, resulting in less than significant cumulative impacts from all short-term and long-term air pollution sources. Therefore, cumulative impacts associated with short-term air quality impacts would be less than significant.

Response to Comment D-47. The commentor states that the biological report that was prepared for the project is outdated and limited in survey coverage, concluding that the EIR fails as an informational document. As indicated in *CEQA Guidelines*, Section 15151, "... an EIR should be prepared with a sufficient degree of analysis to provide decision-makers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. ... The courts have looked not for perfection but for adequacy, completeness, and a good faith effort at full disclosure."

The August 2010 biological report *General Habitat Assessment, 71± Site (APNs: 316-210-071, -073, -075, -076), Moreno Valley, Riverside County California*, Ecological Sciences, Inc., August 1, 2010, referenced in August 2011 Initial Study and the April 2012 Draft EIR is one of several biological studies that have been conducted on the project site and vicinity. While the August 2010 Initial Study and April 2012 Draft EIR incorporated portions of the 2007 biological resource reports (refer to Response to Comment D-3 for a list of all biological technical reports) in describing site conditions, the environmental documents also included substantial additional biological survey data that was collected subsequent to the 2007 biological reports. In fact, additional surveys for burrowing owl, special status plant species, and wetland determination were conducted on the project site by the applicant's biologist in August 2009 and covered the entire project site. This data was revisited in August 2010 and confirmed as still valid. Biological survey reports often have a limited window within which the stated conclusions are considered valid. However, it must be emphasized that the conditions described in the various biological resource reports were verified and updated where necessary during the environmental process. Therefore, contrary to the commentor's opinion, the collective body of survey data for the project site is current, which accounts for the identification and full disclosure of any biological resources of concern on the project site.

2.7.1.1 Response to Comment D-48. The Draft EIR (Section 2.5 Effects Found Not to be Significant, 2.5.3 Cultural Resources, pages 2-12 – 2-13) did find that the proposed project would have a less than significant impact on paleontological resources (fossils) with the implementation of Mitigation Measure CUL-1. This determination was based on the Phase I Cultural Resources Assessment and Paleontological Records Review prepared for the proposed project. In that study it was determined that the site has a high potential to contain significant fossil resources due to the presence of early to middle Pleistocene alluvial fan deposits. These resources are the fossilized biotic remains of ancient environments valued for the information they yield about the history of the earth and its past ecological settings.

These resources have the potential for being unearthed and damaged during grading and construction activities and are estimated to lie at approximately 4 feet below ground surface. Construction and grading of the proposed project site will result in soil disturbance below 4 feet, which may unearth previously undetected subsurface paleontological resources. Mitigation Measure CUL-1 has been identified to reduce the significance of paleontological resource impacts.

Response to Comment D-49. The commentor is correct the mitigation measure does state that there would be a discontinuation of monitoring once maximum depth of excavation is met. If there is no excavation of soils there would not be disturbance of fossils (if they are on-site); therefore, why would monitoring be required. It is not the intent of CEQA to excavate the entire site below 4 feet in the case of this project to find fossils if they are there. If construction excavation is only going to a maximum depth of 10 feet and no fossils are found 10 feet below ground surface it can be assumed that the fossils are not within the first 10 feet below ground surface. With the deletion, the monitoring will continue below 4 feet. For clarification purposes that sentence of the Mitigation Measure CUL-1 has been deleted as indicated in Section 3.0 Errata in the Final EIR.

Draft EIR, Section 2.5.3 Cultural Resources, Page 2-13.

Mitigation Measure CUL-1: Prior to construction involving excavation four feet or more below existing surface grade, the construction contractor shall provide evidence that a qualified paleontologist has been retained, and that the paleontologist(s) shall be present during all grading and other significant ground-disturbing activities that reach four feet or more below existing surface grade. ~~If the paleontologist(s) do not find evidence for Pleistocene-era deposits once the maximum excavation depth is reached, monitoring shall be discontinued.~~ In the event fossiliferous deposits are encountered, the following measures shall be implemented:

- Monitoring shall be conducted by qualified paleontological monitor(s) of excavation in areas identified as likely to contain paleontological resources, including undisturbed older Pleistocene alluvium. Paleontological monitors shall be equipped to salvage fossils as they are unearthed, to avoid construction delays, and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. Monitors shall be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens. Monitoring may be reduced if the potentially fossiliferous units are determined upon exposure and examination by qualified paleontological personnel to have low potential to contain fossil resources.
- Paleontological monitoring of any earthmoving will be conducted by a monitor, under direct guidance of a qualified paleontologist. Earthmoving in areas of the parcel where previously undisturbed sediments are buried, but not otherwise disturbed, will not be monitored.
 - ~~If too few fossil remains are found after 50 percent of the planned for earthmoving has been completed, monitoring can be reduced or discontinued in those areas at the project paleontologist's direction.~~
 - Preparation of recovered specimens to a point of identification and permanent preservation, including washing of sediments to recover small invertebrates and vertebrates.
 - Identification and curation of specimens into a professional, fully accredited museum repository with permanent retrievable storage. The paleontologist must have a written repository agreement in hand prior to the initiation of mitigation activities.

- Preparation of a report of findings with and appended itemized inventory of specimens. The report and report and inventory, when submitted to the City of Moreno Valley along with confirmation of the curation of recovered of recovered specimens into an established, accredited museum repository, will signify completion of the program to mitigate impacts to paleontological resources.

Response to Comment D-50. The City disagrees with the commentor. Mitigation Measure CUL-1 clearly states “...*Preparation of recovered specimens to a point of identification and permanent preservation, including washing of sediments to recover small invertebrates and vertebrates and identification and curation of specimens into a professional, fully accredited museum repository with permanent retrievable storage.*” Paleontologists are professional scientists and their salvaging efforts would not destroy fossils. The paleontologist’s intent and that of the mitigation measure is for construction to stop so the paleontologist can recover the fossil(s) to identify and curate specimens into a professional, fully accredited museum repository with permanent retrievable storage.

Response to Comment D-51. In response to the commentor’s comment that portion of Mitigation Measure CUL-1 has been deleted, refer to Response to Comment D-49.

Response to Comment D-52. There is an inherent misunderstanding as to the meaning of archeological and historic resources verses paleontological resources the definition of which is a follows:

Archaeology studies “human cultures” through the recovery, documentation, and analysis of material remains and environmental data, including architecture, artifacts, biofacts, human remains, and landscapes. The main goal of archaeology is to create the most thorough understanding of how and why both historical and prehistoric people lived, to understand the evolution of human society and civilizations, and to use knowledge of ancestors’ history to discover insights into modern-day societies.¹

An **historic resource** is building, structure, site, district, or object which is significant in American history, architecture, archaeology, engineering, and culture.²

Paleontology is the scientific study of life forms that existed in the earth's distant past as revealed though the examination of fossils of plants, animals, and other organisms. Included is the study of body “fossils”, tracks (ichnites), burrows, cast-off parts, fossilized feces (coprolites), palynomorphs (tiny organic particle of a size between five and 500 micrometers), and chemical residues.³

Objective 7.6 and Policies 7.6.1 and 7.6.2 of the City’s General Plan are referring to historic and archaeological resources not paleontological resources. As far as General Plan Program 9.7.3 and 7-6, a Phase I Cultural Resources Assessment and Paleontological Records Review (refer to Response to Comment D-49) was prepared for the proposed project that determined that the site has a high potential to contain significant fossil resources due to the presence of early to middle Pleistocene alluvial fan deposits. As a result the Draft EIR includes Mitigation Measure CUL-1 to ensure that there paleontological resources are protected. The City disagrees with the commentor in that the Draft EIR does include feasible enforceable mitigation. To ensure monitoring and enforcement, Mitigation Measure CUL-1 is included in the MMRP (Final EIR Section 4.0).

¹ <http://www.newworldencyclopedia.org/entry/Archaeology>, website accessed June 5, 2012.

² http://www.paroute23.com/about_project/glossary.htm#H, website accessed June 5, 2012.

³ <http://www.newworldencyclopedia.org/entry/Paleontology>, website accessed June 5, 2012.

Response to Comment D-53. The import of fill (220,000 cubic yards) to the project site was considered in the evaluation of the proposed project in the Draft EIR in Sections 4.2 (Air Quality, page 4.2-20), 4.3 (Greenhouse Gas Emissions, calculated using same model as used for Air Quality), and 4.4 (Noise, page 4.4-18). The 80,000 cubic yards of fill that is currently on-site is considered the baseline (existing on-site conditions) and this fill was imported to the project site as part of a previously approved stockpile permit (page 3-3) that predated the proposed project. Traffic impacts associated with the soil import operations were not addressed because the operations would result in negligible effects on the local and regional circulation systems due to low trip generation anticipated for the haul trucks and the temporary in nature of the activity.

Response to Comment D-54. Mitigation Measure GEO-2 has been revised to eliminate any perception of vagueness. To ensure monitoring and enforcement, revised Mitigation Measure GEO-2 is included in the MMRP (Final EIR Section 4.0).
Draft EIR, Section 2.4.4 Geology and Soils, Page 2-16.

Mitigation Measure GEO-2: Prior the issuance of grading permits, the project proponent shall inform the project engineers, architects, owner, maintenance personnel, and other interested parties of the Expansive Soil Guidelines provided in the project's geotechnical analysis [Geotechnical Engineering Investigation Proposed Industrial Development Southwest Corner of Perris Boulevard and Grove View Road Moreno Valley, California, NorCal Engineering, March 7, 2007]. The recommendations identified in the project's Expansive Soil Guidelines shall be ~~reviewed and considered~~ implemented by the project engineers, architects, owner, maintenance personnel, and other interested parties ~~to determine in the~~ applicable design guidelines. Applicable design guidelines shall be included and implemented in the project's grading plans.

Response to Comment D-55. This comment is only a statement of opinion. GHG plans, policies, and regulations are still overall vague and difficult to analyze compliance with. While VMT is a factor of GHG emissions, it is not clear how that relates to GHG plans, policies and regulations. As stated in CEQA Guidelines section 15151, *"An EIR should be prepared with a sufficient degree of analysis to provide decision makers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among the experts. The courts have looked not for perfection but for adequacy, completeness, and a good faith effort at full disclosure."* The EIR meets the standards of adequacy of an EIR in accordance with CEQA Guidelines section 15151.

Response to Comment D-56. New development projects derive (most of) their energy from the existing energy grids (mainly electricity and natural gas), so the consumption from one individual development project cannot determine the percentage of energy production/generation from the entire energy grid, or what percentage comes from renewable sources. The achievement of renewable energy goals must be set and achieved at a regional or state level, and cannot be assigned to any individual project. The proposed project is designed to allow onsite solar (photovoltaic) electrical generation, but there is no specific end user defined yet. In addition, a number of changes have been made to the recommended Mitigation Measure 4.2.6.3A that addresses greenhouse gases and sustainability. Improvement in project operations that reduces energy consumption results in lowered GHG emissions from area power production facilities. The discussion that follows Table 4.3.B in Draft EIR Section 4.3.5.1 Greenhouse Gas Plan, Policy, and Regulation Consistency supports the EIR's conclusion of consistency.

Response to Comment D-57. The cited SCAQMD tiered thresholds are still only guidance as proposed draft thresholds and do not carry the force of law or adopted regulations. In addition, the commentor has misinterpreted the application of the 5-tier review system recommended by the SCAQMD. The cited thresholds indicate when a particular project under evaluation should move to the next stage of the evaluation (i.e., the next tier) – they are not thresholds against which to specifically determine a significant impact. In addition, as described in the Draft EIR, the greenhouse gas emissions produced by the project do not in themselves represent a project-level significant impact related to greenhouse gases. That conclusion is consistent with guidance provided by CARB and the SCAQMD. The EIR does correctly conclude that the proposed project would make a significant contribution to cumulatively considerable greenhouse gas impacts, even with implementation of the recommended mitigation, including Mitigation Measure 4.2.6.3A as revised in Responses to Comments D-38 and D-39 in this document.

Response to Comment D-58. A more precise water conservation strategy cannot be described at this point in the project development. This Mitigation Measure is included so that some sort of water conservation strategy will be included, when appropriate (i.e., prior to issuance of occupancy permits).

Response to Comment D-59. This comment is only a statement of fact, requiring no response. As there are no quantifiable reductions supplied, there is no reason not to specify these measures.

Response to Comment D-60. This comment is a statement of fact and is noted. No response is required.

Response to Comment D-61. The commentor incorrectly asserts that impacts associated with transport and storage of hazardous materials cannot be mitigated through applicable laws because the tenant is not known. The comment appears to suggest that a future tenant may not abide by applicable laws that regulate hazardous materials. The City assumes, as a reasonable and legitimate part of the CEQA process, that any future tenant of the project building is required to abide by all state and local laws that regulate the transport, use, and storage of hazardous materials. In addition, this project involves warehousing, not heavy or light industrial uses, and so the potential for onsite uses to handle, store, or transport materials that would be hazardous to public health or safety are relatively low, but would ultimately depend on the end user selected to ultimately occupy the project building.

Response to Comment D-62. The commentor states that the EIR fails to undertake an evaluation of water quality impacts beyond the cursory review done for the Environmental Assessment (i.e. Initial Study). The City disagrees with this statement. As identified in the Draft EIR, Section 2.5.6 (Hydrology and Water Quality, page 2-19 – 2-25), the analysis provides a detailed discussion regarding construction and operational activities in relation to water quality and recommends mitigation measures that would ensure that any water pollutants generated during these phases are treated appropriately. The analysis also describes in detail the proposed drainage features and drainage paths that would be constructed on the project site as well as any flooding impacts that the site would be prone to. These discussions and conclusions are based on a project-specific preliminary water quality management plan and hydrology/hydraulic analysis¹. The water quality analysis was provided as part of the Initial Study subject to public review and comment as part of the NOP process. Based on the input received from the NOP, no additional concerns regarding water quality were identified by

¹ *Preliminary Hydrology Report and Hydraulic Analysis for PA09-004, VIP Moreno Valley, SWC Perris Boulevard and Grove View Road*, Robert A. Bebensee, R.C.E., March 27, 2009, and *Preliminary Water Quality Management Plan, for PA09-0004 VIP Moreno Valley, SWC Perris Boulevard and Grove View Road*, Robert A. Bebensee, R.C.E., July 24, 2009.

an interested member of the public, including the commentor. While the commentor opines that the evaluation of water quality impacts is cursory, the commentor does not provide any meaningful input as to how the analysis can be further evaluated. The water quality analysis included in the Initial Study and Draft EIR represents a good faith effort at full disclosure and no further response is required.

Response to Comment D-63. Section 2.5.6 (Hydrology and Water Quality) of the Draft EIR discussed potential drainage-related impacts resulting from development of the proposed project. As reflected therein, as well as the detailed preliminary Hydrologic and Hydraulic Analysis included as Appendix B-8 (*Preliminary Hydrology Report and Hydraulic Analysis for PA09-004, VIP Moreno Valley, SWC Perris Boulevard and Grove View Road, Robert A. Bebensee, R.C.E., March 27, 2009*) to the Draft EIR, development of the proposed project would result in the construction of impermeable surfaces that will alter the natural drainage of the project site.

As stated in Draft EIR page 2-24, "...storm flows generated from the northerly portion of the proposed building and truck court would be collected by a series of drop inlet catch basins. Storm water runoff generated on site would be routed to three Austin sand filters and pre-treatment hydro-dynamic clarifiers that are intended to remove and reduce the amount of oils, sediment and trash from the storm water. The treated water from these sand filters is pumped into an adjacent on-site storm drain. The on-site storm drain system has been designed to accept a full 100-year storm event and flows would ultimately be routed to the Perris Valley ADP Lateral B-1 in Perris Boulevard that connects to the Perris Valley Storm Drain Lateral B channel. Storm flows generated from the westerly side of the proposed building would be collected by a drop inlet catch basin and routed by pipe to a landscaped swale that would be located along the southerly portion of the property. In the event that the landscape swale receives excess flows, the excess flows would be then routed to a second drop inlet catch basin. From the second drop inlet catch basin, flows would continue to an off-site catch basin and ultimately be routed to the Perris Valley ADP Lateral B-3 in Indian Street, which connects to the Perris Valley Storm Drain Lateral B channel. Storm water runoff generated from the easterly side of the building would be collected by a drop inlet catch basin and route via pipe to a hydro-dynamic clarifier then to an Austin sand filter located in the southeasterly corner of the project site. In the event that the clarifier and sand filter receive excess storm flows, these excess storm flows would be routed to an off-site catch basin and ultimately routed to the Perris Valley ADP Lateral B-1 in Perris Boulevard, which connects to the Perris Valley Storm Drain Lateral B channel. Storm flows generated from would also be routed to a landscaped swale running along the southerly portion of the project site. Flows would then be routed to an Austin sand filter located near the center of the site and ultimately routed to four existing 36-inch diameter reinforced concrete pipes (RCPs) that connect to Lateral B of the Perris Valley Channel. The Austin sand filter located in the southeasterly corner of the project site would also accept stormwater flows from the project site. In the event that flows are in excess of what the sand filter can handle, the excess flows would be directed back to the southerly landscaped swale, and ultimately to an existing 30-inch diameter RCP that connects to Lateral B of the Perris Valley Channel."

The purpose of including Mitigation Measure HYD-05 was to ensure that the preliminary Hydrologic and Hydraulic Analysis was finalized by the City's Engineer and that the calculations contained in the analysis met City requirements. The Draft EIR does not improperly defer mitigation in this regard as an existing preliminary Hydrologic and Hydraulic Analysis has already been prepared for the project. Furthermore, the finalization of hydraulic calculations is a requirement of all projects in the City. Therefore, the inclusion of this requirement as Mitigation Measure HYD-05 is designed to track both the standard requirements and mitigation measures as part of the project's MMRP. Mitigation Measure HYD-05 has been revised accordingly to clarify the finalization of the Hydrologic and Hydraulic Analysis. No further response is required.

Draft EIR, Section 2.5.6 Hydrology and Water Quality Hydrology, Page. 2-24:

To reduce the flows to below or equal to pre-development conditions, the anticipated on-site flows would be routed to the water quality features such as vegetated swales, clarifiers, and sand filters to reduce flows leaving the site to pre-development flow rates. While the increase in impervious surfaces attributable to the proposed project would contribute to a greater volume and higher velocity of storm water flows, the proposed project's drainage system would accept and accommodate runoff that would result from project construction at or below pre-project conditions. Therefore, the post-development flows generated on the project site would not exceed the capacity of the planned storm water drainage systems. Although adherence to the City's drainage requirements, which includes the preparation of drainage sizing calculations, is required of all applicable development within the City, the incorporation of this requirement as Mitigation Measure HYD-05 is designed to track both standard requirements and mitigation measures as part of the project's MMRP. To ensure that long-term drainage capacity issues are reduced to a less than significant level, Mitigation Measure HYD-05 has been identified. With adherence to this mitigation measure, impacts associated with this issue are less than significant.

Mitigation Measure HYD-05: *Prior to grading plan approval and the issuance of a grading permit by the City, the project proponent shall receive approval from the City of Moreno Valley, a Final Hydrologic and Hydraulic Analysis based on the City's existing drainage requirements. ~~submit a detailed grading plan and drainage report, with supporting engineering calculations, to the City Engineer for review and approval. The plan and report shall incorporate relevant requirements identified by the City and/or site specific geotechnical investigations. The plan and report shall provide evidence that the storm drainage system would be adequate to convey water for the 100-year storm event from the project site and that the post-development flows exiting the proposed project site are less than or equal to pre-development flows.~~*

Response to Comment D-64. The commentator opines that the project would conflict with an applicable habitat conservation plan or natural community conservation yet does not provide any specific comment as to how the project does conflict. As stated in *CEQA Guidelines*, Section 15151, "... an evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate." The comment posed is identified as being part of the land use discussion. As identified in Draft EIR Section 2.5.7 Land Use, page 2-25 the discussion of the project's consistency with applicable habitat conservation plans is provided in Draft EIR Section 2.5.2, Biological Resources, pages 2-8 – 2-12. The applicable habitat conservation plan for the area is the Western Riverside County MSHCP.

As stated on Draft EIR Section 2.5.2, Biological Resources page. 2-9, "*The MSHCP defines two distinct consistency processes for development projects based on their location within the MSHCP Plan Area, with separate processes for projects located outside of Criteria Areas and those within a Criteria Area. Through implementation of these requirements, development projects are found to be consistent with the MSHCP, and impacts to covered species are considered less than significant. The project site is not located within an MSHCP Criteria Area, but is located in an area requiring habitat assessments for burrowing owl (*Athene cunicularia*), five Narrow Endemic Plant Species (NEPS), and nine Criteria Area Plant Species (CAPS). A Jurisdictional Delineation is required to assess potential jurisdiction of the ditch running north/south through the center of the project site.*"

Burrowing owls or their sign (pellets, fecal material, or prey remains) were not observed during the habitat assessment surveys (February 2007) or focused surveys (August 2009) conducted on site. It

is unlikely that burrowing owls would be located on site as burrowing owls tend to avoid heavily disked areas because of potential burrows occlude/collapse. However, in the event that burrowing owls are found on site, the inclusion of the Mitigation Measures BIO-1 through BIO-4 (which requires pre-construction surveys for burrowing owl), would fulfill MSHCP requirements. The fulfillment of MSHCP requirements would enable the project to be consistent with the Riverside County MSHCP.

Based on the information contained in the Draft EIR, the five Narrow Endemic Plant Species (NEPS) and nine Criteria Area Plant Species (CAPS) were not observed during the general survey (February 2007) and focused surveys (May, June, and July 2009) conducted on site. Overall, the project site lacks suitable habitat for these species due to historic agricultural activities. Because of the absence of members of the species and suitable habitat, a less than significant impact to special status plants would occur. Since the project would not impact any of the plants identified in the MSHCP, the project is consistent with this component.

The potential for agency jurisdiction of the on-site drainage ditch was assessed as part of the previously referenced Jurisdictional Survey and MSHCP Riparian/Riverine/Vernal Pools Evaluation prepared for the project. The ditch does not meet the three-parameter test for jurisdiction (vegetation, hydrology, and soils). Therefore, the project would not impact jurisdictional waters and would be consistent with the requirements identified in the MSHCP for this component. Based on the analysis contained in the Draft EIR, the project is consistent with the MSHCP, is supported by project specific biological data and survey work, and represents a good faith effort at full disclosure. No further response is required.

Response to Comment D-65. The 3 dBA increase was not identified in the noise impact analysis as a threshold. Rather, it was stated that “audible impacts that refer to increases in noise levels noticeable to humans generally refer to a change of 3 dB or greater, since this level has been found to be barely perceptible in exterior environment;” For noise level changes that are not perceptible by the human ear, they would not cause any audible change and would therefore not result in any significant noise impacts.

Response to Comment D-66. Noise standards identified in the City’s Municipal Code are used to determine if projected noise levels from the proposed on-site operations would result in any significant stationary sources noise impacts on sensitive uses in the project vicinity. Failing to comply with these noise standards would cause project operations, after project implementation, to violate the City’s Municipal Code. Therefore, it is appropriate to use the City’s Municipal Code noise standards to evaluate potential on-site noise-generating operations.

Response to Comment D-67. The City’s noise standards in terms of the 24-hour weighted Community Noise Equivalent Level (CNEL), identified in the General Plan Noise Element, are applicable for land use planning purposes to avoid placing noise-sensitive land uses within the high noise impact zones. Use of these noise standards are adequate when proposing noise-sensitive land uses such as residences near airport, railroad tracks, or heavily traveled highways/freeways. Noise standards included in the City’s Municipal Code are typically used for enforcement purposes to determine if noise associated with a stationary source would exceed or violate the City’s noise standards from stationary sources. They were used in the noise impact analysis (Draft EIR Section 4.4.2.1 City of Moreno Valley General Plan Policies, page 4.4-5) to determine the potential impacts from on-site operations.

Response to Comment D-68. Use of “hard site” is appropriate in an urban area where the majority of the ground surface is paved, and most sound energy is reflected back up in the air. In suburban or rural areas where almost half of the ground surface between the traffic and the receptor location is either vacant land or planted with landscaping vegetation, the use of “soft site” is more appropriate.

Nevertheless, the choice of hard site or soft site for ground reflection only affects the potential noise level on the project site. Project-related changes would be the same under both scenarios. On off-site land uses, the 2013 with project traffic noise levels showed that project-related traffic noise level increases would be 0.8 dBA or less. This range of traffic noise level changes in an outdoor environment gradually over a time period would not be perceptible by the human ear and would not result in any significant noise impacts. As the proposed land use is not noise-sensitive, the use of soft site or hard site for noise reflection would not have any effect on the project findings.

Response to Comment D-69. The proposed project would generate approximately 2,731 vehicular trips a day, and about half of these vehicles are trucks. These project-related vehicles would be 7.5 to 15 percent of the projected 2012 cumulative traffic volumes along roadway segments that would be used by these vehicles. An increase of 7.5 to 15 percent vehicles along these roadway segments would result in an increase of approximately 0.3 to 0.6 dBA on these roads. Even though the proposed project is a distribution facility with higher truck percentage, the change in overall vehicle mix along these affected roadway segments would not be substantial. The resulting traffic noise level changes or increases on off-site land uses would remain small and less than significant. Since the proposed on-site land use is not considered noise-sensitive, and the project-related traffic noise level increases would be the same under both scenarios, this factor would not affect the findings of the noise impact analysis.

Response to Comment D-70. As stated in the Responses to Comments D-65 and D-68, project-related traffic noise level increases would be small and not perceptible by the human ear. The four study roadway segments that have noise levels that already exceed the City's noise standards, with or without the proposed project, have pre-existing conditions that are not a consequence of the proposed project, and therefore, the proposed project is not responsible for the noise level existing noise exceedance on those roadway segments.

Response to Comment D-71. The noise impact analysis for the proposed project (*Noise Impact Analysis VIP Moreno Valley*, LSA Associates, Inc., March 2012) evaluated the long-term operational traffic noise impact in terms of CNEL and the on-site operations noise impact comparing them to the City's Municipal Code noise standards. No exceedance or violation of the noise standards was found and no significant long-term noise impacts would occur. The project site is surrounded by vacant land which is planned for light/industrial uses and commercial/light industrial uses to the south or other existing non-noise-sensitive industrial uses to the north, east and west. The City's Municipal Code states that the noise standards shall apply "*when measured at a distance of 200 feet or more from the real property line of the source of the sound if the sound occurs on privately owned property, or from the source of the sound, if the sound occurs on public right-of-way, public space or other publicly owned property.*" In this case, evaluating the potential noise levels at the property line of the nearest existing noise-sensitive land uses (i.e., residences) that are at a distance of 200 feet or more would adequately determine the project's potential noise impacts. Future noise-sensitive land uses, if proposed in the vicinity of the project site, will be required to mitigate noise associated with all neighboring sources, including the proposed project.

Response to Comment D-72. As stated in the Response to Comment D-71, the project site is surrounded by vacant land that is planned for light industrial/business park in the City of Moreno Valley and to the south in the City of Perris for light industrial/commercial uses or other non-noise-sensitive land uses (refer to Figure in the Draft EIR Section 1.0 page 1-3). These land uses that are directly adjacent to the project would not be significantly affected by the project noise. Noise from on-site operations, including loading/unloading and onsite maneuvering, have been adequately evaluated at the nearest noise-sensitive land uses and no significant noise impacts were identified. Truck noise from trucks driving on public streets is not regulated by the local governments (city or county).

Response to Comment D-73. As stated in the Response to Comment D-71, the noise impact analysis evaluated the traffic noise impact in terms of CNEL and the on-site operations were compared to the City's Municipal Code noise standards. No exceedance or violation of the noise standards was found and no significant long-term noise impacts would occur. All potential noise impact sources were identified and properly evaluated. Please refer to Appendix F (*Noise Impact Analysis VIP Moreno Valley*, LSA Associates, Inc., March 2012) of the Draft EIR for more detailed analysis and discussion on these impacts.

Response to Comment D-74. The noise levels obtained from the 1987 edition of Noise Control for Buildings and Manufacturing Plants (Bolt, Beranek & Newman, 1987) represent a conservative analysis for construction equipment. Because of technology advancement, most current day construction equipment emits lower noise levels compared to the 1987 version. In addition, the project site is surrounded by vacant land or other non-noise-sensitive land uses such as industrial uses. Noise from the on-site construction activity would not result in any significant impacts to adjacent uses (Draft EIR, Section 4.4.5.4 Long-Term Operational Noise Impacts. Page 4.4-13).

Response to Comment D-75. As demonstrated in the Responses to Comments D-65 through D-74, no significant noise impacts would occur with the implementation of the mitigation measures for on-site construction and in addition the requirement of the applicant/contractor to follow the City's Municipal Code Mitigation is provided to reduce construction impacts as well. The land uses that are directly adjacent to the project site are not noise-sensitive and would not be significantly affected by project construction noise. Potential construction noise impacts on the nearest noise-sensitive receptor locations, i.e., existing residences approximately 1,000 feet to the north of the project site, have been adequately evaluated and no significant noise impacts were identified.

It should be noted that the *Moreno Valley Municipal Code* in Chapter 11.80.030 Prohibited Acts (Title 11). Sound level limits are established for both continuous and impulsive (momentary) sounds. The City prohibits grading activities between the hours of 8:00 p.m. and 7:00 a.m. and prohibits construction activities from 8:00 p.m. to 6:00 a.m. during the week and between 8:00 p.m. and 7:00 a.m. on weekends and holidays.

The City's Municipal Code, Section 8.14.040.E, specifies the hours of any construction within the City to occur only as follows: Monday through Friday (except for holidays that occur on weekdays), 6:00 a.m. to 8:00 p.m.; weekends and holidays (as observed by the City and described in Chapter 2.55 of the Municipal Code), 7:00 a.m. to 8:00 p.m., unless written approval is obtained from the City building official or City engineer. According to the City's Municipal Code Ordinance 8.21.050, grading permit requirements, the hours are limited to between 7 am and 6 pm weekdays and 8 am to 4 pm on weekends and holidays.

In addition the Draft EIR, page 4.4-17 states "*The nearest noise-sensitive receptor locations to the project site are existing residences approximately 1,000 feet to the north. These nearest residents may be subject to short-term, intermittent, maximum noise reaching 65 dBA L_{max} , generated by construction activities on the project site. The ambient noise associated with vehicular traffic and industrial uses in the project area would mask the majority of the construction noise from the project site. No significant construction noise impacts would occur if construction of the proposed project would occur within the permitted hours of 6:00 a.m. to 8:00 p.m. of any working day, and within the permitted hours of 7:00 a.m. and 8:00 p.m. on weekends and federal holidays. Compliance with the construction hours specified in the City's Municipal Code would result in construction noise impacts that are less than significant. While impacts would be considered less than significant as long as construction activities occur within the designated hours identified in the City's Municipal Code, mitigation measures [Mitigation Measures 4.4.6A – 4.4.6D] have been identified to reduce the noise*

levels that would expose nearby sensitive receptors to noise levels in excess of the City's noise standards."

Response to Comment D-76. As demonstrated in the Responses to Comment D-74, no significant noise impacts would occur with the implementation of the mitigation measures for on-site construction. Therefore, it is not warranted to include these additional mitigation measures, because none of them would apply to this project.

Suggested Mitigation Measure	Response
1. Temporary noise barriers must be installed during project construction.	Not required. As indicated in the noise impact study, there are no noise-sensitive land uses in the immediate project neighborhood and no noise barriers would be required during project construction. The proposed project will comply with all mitigation measures identified and comply with applicable federal, State, and City guidelines.
2. Where technically feasible, utilize only electrical construction equipment.	Not required. As evaluated in the noise impact study, practical procedures will be taken for the onsite operations. There are no noise-sensitive land uses located in the immediate neighborhood of the project site. No noise impacts would occur.
3. During construction, the developer shall require that all contractors turn off all construction equipment and delivery vehicles when not in use and prohibit idling in excess of 3 minutes.	Not required. Construction equipment will be turned off when not in use. Idling for delivery vehicles will be limited to no more than 5 minutes per truck per trip per day, according to the requirements established by the California Air Resources Board.
4. Provide a "windows closed" condition requiring a means of mechanical ventilation (e.g. air conditioning) for all buildings.	Not required, no nexus to the impact. As indicated in the noise impact analysis, no significant operation noise impacts would occur for noise-sensitive land uses in the project vicinity. No mitigation measures are required.
5. Provide upgraded windows with a minimum Sound Transmission Class (STC) rating of 34 for all buildings, and/or require the installation of double-paned windows.	Not required, no nexus to the impact. As indicated in the noise impact analysis, no significant operational noise impacts would occur for noise-sensitive land uses in the project vicinity. No mitigation measures are required.
6. Keep new transportation facilities away from vibration sensitive areas.	Not required, no nexus to the impact. This comment does not apply to the project because no transportation facilities are being proposed.
7. When dealing with existing transportation facilities, obvious vibration causes, such as pot holes, pavement cracks, differential settlement in bridge approaches or individual pavement slabs, etc., may be eliminated by resurfacing.	Not required, no nexus to the impact. As indicated in the noise impact analysis, no significant operational noise impacts would occur for noise-sensitive land uses in the project vicinity. No mitigation measures are required.
8. Require the use of rubberized asphalt for construction of all roadways and parking areas.	Not required, no nexus to the impact. As indicated in the noise impact analysis, no significant operational noise impacts would occur for noise-sensitive land uses in the project vicinity. No mitigation measures are required.
9. Maintain quality pavement conditions that are free of bumps, pot holes, pavement cracks, differential settlement in bridge approaches or individual pavement slabs, etc.	Not required, no nexus to the impact. As indicated in the noise impact analysis, no significant operational noise impacts would occur for noise-sensitive land uses in the project vicinity. No mitigation measures

RESPONSE TO COMMENTS, ERRATA AND MMRP
VIP Moreno Valley
City of Moreno Valley

Suggested Mitigation Measure	Response
	are required.
10. Require resurfacing of roads.	Not required, no nexus to the impact. As indicated in the noise impact analysis, no significant operational noise impacts would occur for noise-sensitive land uses in the project vicinity. No mitigation measures are required.
11. Ban heavy trucks near vibration sensitive uses.	Not required, no nexus to the impact. As indicated in the noise impact analysis, no significant operational noise impacts would occur for noise-sensitive land uses in the project vicinity. No mitigation measures are required.
12. Use alternate construction methods and tools to reduce construction vibrations. Examples are predrilling of pile holes, avoiding cracking and seating methods for resurfacing concrete pavements near vibration sensitive areas, using rubber tired as opposed to tracked vehicles, placing haul roads away from vibration sensitive areas.	Not required. There are no noise sensitive land uses in the immediate project vicinity. Noise and vibration associated with the proposed project would not result in any significant impacts to adjacent uses.
13. Scheduling construction activities (particularly pile driving) for times when it does not interfere with vibration sensitive operations (e.g. night time).	Not required. There are no noise sensitive land uses in the immediate project vicinity. Noise and vibration associated with the proposed project would not result in any significant impacts to adjacent uses.

Response to Comment D-77. Refer to Responses to Comments D-74 and D-76, no significant noise impacts would occur with the implementation of the mitigation measures for on-site construction. Mitigation Measure 4.4.6.1D *“During all project site construction activities, the construction contractor shall limit all construction-related activities that would result in high noise levels to between the hours of 6:00 a.m. and 8:00 p.m. on weekdays and between the hours of 7:00 a.m. to 8:00 p.m. on weekends and holidays, unless written approval is obtained from the City Building Official or City Engineer. For grading activity, the hours are limited to between 7:00 a.m. and 6:00 p.m. weekdays and 8:00 a.m. to 4:00 p.m. on weekends and holidays,”* is provided to ensure that the Municipal Code is implemented.

Response to Comment D-78. As demonstrated in the noise impact analysis, project-related traffic noise increases in the project vicinity would be small and not perceptible by the human ear (Draft EIR, Section 4.4.5.3 Long-Term Traffic Noise Impacts, page 4.4-10). Project on-site operational noise impacts were also found to be less than significant (Draft EIR Section 4.4.5.4 Long-Term Operational Noise Impacts, page 4.4-13). Since the projected 2013 traffic volumes include traffic trips from other cumulative projects in the project area, no significant project-related long term cumulative noise impacts would occur.

Response to Comment D-79. The commentor’s referral to “traffic counts” is erroneous and is assumed he was referring to the “trip generation” of the project. The trip generation rates for High-Cube Warehouse were the modified National Association of Industrial and Office Properties (NAIOP) rates (based on a 2007 NAIOP letter summarizing the trip generation studies of 13 high-cube warehouses located in western Riverside County) that was approved by the City of Moreno Valley Transportation Engineering staff. The City’s modified NAIOP rates are higher than the Institute of Transportation Engineers (ITE) *Trip Generation, 8th Edition* rates for High-Cube Warehouse, therefore the air pollution, greenhouse gas, and trip generation estimates for the proposed project are overstated resulting in a conservative analysis.

ITE *Trip Generation 8th Edition* is the standard used by City of Moreno Valley in determining project trip generation for new developments. When the initial version of the traffic study for the project was first prepared, the previous version, *7th Edition*, of *Trip Generation* was available. In the previous version, the high-cube warehouse category (land use 152) was not utilized because only p.m. peak hour data was available and the sample size was too small. Due to the lack of data with the high-cube warehouse rates, the City analyzed the 2007 NAIOP trip generation rate data and developed reasonable trip generation rates for high-cube warehouse reflecting a full standard deviation above the average rates disclosed in the 2007 NAIOP trip generation study. As stated above, the City's modified NAIOP rates are higher than the current ITE *Trip Generation 8th Edition* rates for high-cube warehouses. Further, the rate for High-Cube warehouse is dependent on the square footage of the building and not the number of dock doors or parking stalls.

Response to Comment D-80. The intersections analyzed in the EIR were based on discussion with City of Moreno Valley Transportation Engineering staff during the scoping process. Furthermore, intersections on Harley Knox Boulevard from Indian Street to Interstate 215 are not part of the 2010 Riverside County Congestion Management Program and were not included in the analysis. The traffic study did not include the intersection of Patterson Avenue/Harley Knox Boulevard in the analysis because project passenger vehicles and trucks will travel eastbound and westbound on Harley Knox Boulevard and would not make left- or right-hand turns to/from Patterson Avenue. For this reason, potential project impacts to the intersection were determined to be not substantial and the intersection was not included as a study intersection.

Caltrans requires analysis to a State highway facility if a project generates over 100 peak hour trips. The project generates over 100 peak hour trips at the Interstate 215/Harley Knox Boulevard interchange and was included in the Project's Traffic Impact Analysis. Project traffic at Cactus Avenue and Ramona Expressway are less than 100 peak hour trips and were not included in the Draft EIR. Based on the City of Moreno Valley Traffic Impact Analysis guidelines, a General Plan Build-out analysis was not required since the project did not propose a General Plan Amendment or Zone Change.

Response to Comment D-81. It appears the commentor is incorrectly stating that analysis of local intersections, local roadways, freeway mainline segments, and freeway merge/diverge areas as conducted in the EIR constitutes segmenting. The comment is therefore unclear and needs refinement to warrant a response.

Nonetheless, the traffic analysis conducted for the project examined project impacts on existing baseline conditions and year 2013 cumulative conditions. For the each time horizon, a.m and p.m. peak hour impacts were assessed based on a level of service analysis of local intersections, local roadways, freeway mainline segments, and freeway merge/diverge areas.

Response to Comment D-82. As stated in the Project TIA (*Traffic Study VIP Moreno Valley*, LSA Associates, Inc., April 9, 2012), the payment of DIF and TUMF fees is considered the appropriate mechanism for the project to contribute to future roadway improvements, resulting in full and complete mitigation of project-specific impacts. The timing to use the TUMF and DIF fees is established through the capital improvement plan (CIP) overseen by the City, which uses traffic counts, trends, and review of traffic accidents to determine the project priority of the improvements. Project priority categories in the City's CIP include essential (start within 1 year), necessary (start within 1 to 3 years), desirable (start within 3 to 5 years), and deferrable (start within 5 to 10 years).

As stated in the Level of Significance After Mitigation following Mitigation Measures 4.5.6.1A and 4.5.6.1B (see page 4.5-19 of the Draft EIR), improvements to Perris Boulevard are out to bid to potential construction contractors, with construction of the improvement anticipated to finish in May of

2013. Page 4.5-19 of the of the Draft EIR also notes that these improvements to Perris Boulevard for the existing plus project condition are consistent with the City's General Plan and are included in the County's TUMF program. The Draft EIR goes on to note that a portion of the City's DIF is allocated toward funding improvements to the City's transportation system, and the specific improvements are based on the General Plan Circulation Element. For these reasons, the Draft EIR concluded that the project's impacts to affected roadway segments (Perris Boulevard) will be mitigated through payment of the City's DIF and the County's TUMF.

As stated in the Level of Significance After Mitigation following Mitigation Measures 4.5.6.2A (see page 4.5-27 of the of the Draft EIR), the improvements defined to maintain the applicable level of service standard at local intersections and roadways in the 2013 cumulative plus project condition will be built per the City's DIF and County's TUMF programs. Payment of these fees in accordance with Mitigation Measures 4.5.6.1A and 4.5.6.1B was therefore determined to be full and complete mitigation of project impacts to roadway segments and intersections in the 2013 cumulative plus project condition. The intersections and roadway segments on Perris Boulevard and Indian Street are included in the City of Moreno Valley's CIP and are planned to be funded by DIF and TUMF. The intersections and roadway segments on Harley Knox Boulevard are included in the City of Perris' "North Perris Road and Bridge Benefit District" and are also planned to be funded by DIF and TUMF. However, the Draft EIR notes that the necessary improvements to freeway segments are outside the City's jurisdiction and therefore the City has no control over when or how these improvements will be put in place, the impacts to freeways would remain significant and unavoidable until such improvements are built.

It should also be noted that the City also uses other funding sources for future roadway improvements such as Measure "A" (Fund 125), gas tax fund (Fund 121), SCAG Article 3 (SB 821 Grant Awards), proposition 42 replacement funds (Fund 224), CDBG (Fund 285), general city capital projects fund (Fund 412), and public works general capital projects fund (Fund 414). Furthermore, the Perris Boulevard widening project that is expected to begin construction in July 2012 is anticipated to be 100% paid for by TUMF funding (CIP 2012-2013). Improvements in the City that are covered by DIF funds in the CIP 2012-2013 include Cactus Avenue EB improvements/I-215 to Veterans Way, Cactus Avenue EB improvements/Veterans Way to Heacock Street, and Day Street Widening, Heacock Street/Perris Valley Storm Drain to Cactus Avenue, and Ironwood Avenue/Perris Boulevard to Nason Street.

The commentator assumes that all cumulative projects will be built by 2013 and therefore all roadway improvements recommended in the project TIA will be required by 2013. However, the cumulative (2013) scenario analyzed in the project's TIA analysis is a scenario required by the City and doesn't represent real world conditions where most cumulative projects won't be built by 2013 and therefore all improvements won't be required.

Response to Comment D-83. Please refer to the Response to Comment D-82.

Response to Comment D-84. Please refer to the Response to Comment D-82.

Response to Comment D-85. Please refer to the Response to Comment D-82.

Response to Comment D-86. Please refer to the Response to Comment D-82.

Response to Comment D-87. The commentator appears to be suggesting that, because the proposed project exceeds SCAQMD construction and operational emission thresholds, it cannot be consistent with SCAQMD's AQMP. The purpose of the daily thresholds is to provide benchmarks against which to examine a project's short-term (construction) and long-term (operational) air quality impacts as part

of the CEQA process. The purpose of the AQMP is to provide regulation and guidance for achieving federal and state criteria attainment status in the future. The daily thresholds and the AQMP therefore serve two separate and distinct purposes. The land uses proposed by this project are consistent with the local and regional plans that form the basis for the AQMP (i.e., the City's General Plan and SCAG's Regional Comprehensive Plan and Regional Transportation Plan). Therefore, the proposed project is consistent with the AQMP. However, the SCAQMD has also established daily thresholds for construction and operational air pollutant emissions that, if exceeded, represent a significant air quality impact under CEQA. As described in the project's air quality study and the EIR Section 4.2 Air Quality, the proposed project exceeds one or more daily thresholds for both construction and operations. Therefore, the project can be consistent with the AQMP as well as exceed daily thresholds for construction and operational air pollutant emissions. Also refer to Response to Comment D-46 for a discussion on the project's consistency with the AQMP.

Response to Comment D-88. The proposed project will create jobs, providing the opportunity for City of Moreno Valley residents to find employment close to their homes. Although the quantity of commute travel reduction is virtually impossible to calculate, the project will create the potential for reduction in commuting distances for employees that reside in the City or in other municipalities near the project site. Regarding traffic impacts, see Response to Comment D-83. The City has determined that payment of DIF and TUMF fees is considered the appropriate mechanism for the project to contribute to future roadway improvements, resulting in full and complete mitigation of project-specific impacts.

Response to Comment D-89. The commenter opines that the goal of "diversifying the region's economy" is not satisfied by "add[ing] to the City's portfolio of industrial services." As stated in *CEQA Guidelines*, Section 15151, "... an evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate." The commenter is selective in which part of the goal is focused on and fails to take the entirety of all the economy goals into consideration. The full goal from which "diversifying the region's economy" was pulled from is as follows:

"Goal Promote sustained economic health through diversifying the region's economy, strengthening local self-reliance and expanding competitiveness."

The EIR does not make the assertion that the addition of the project would diversify the region's economy. Furthermore, it appears that the goal is to promote sustained economic health through a three pronged approach – diversifying the region's economy, strengthening local self-reliance, and expanding competitiveness. As stated on Draft EIR page 5-10, "...*the proposed project would add to the City's portfolio of industrial services, which would enable the City to be more self-reliant through the provision of goods and services to residents within the City. Through the addition of the proposed project, the City would also expand its economic competitiveness with other areas in the region. Therefore, the proposed project is consistent with this policy.*"

These statements are supported by analysis contained in the Draft EIR. Specifically, the analysis contained in the Economy Chapter (Draft EIR page 5-10) identifies the number of jobs that would be created as part of the project and the balancing of the jobs to housing ratio in the City which generally would allow for the City to be more self-reliant. As identified in Table 2.C of the Draft EIR (Cumulative Projects List page 2-34), there are multiple warehousing projects within adjacent jurisdictions (e.g. City of Perris, City of Riverside, and County of Riverside). The addition of the proposed project would enable the City to offer a similar type of warehousing stock in comparison to other areas in the region.

Lastly, the commentor does not offer any specific detail as to how the analysis contained in this section is unsupported. The analysis contained in the Draft EIR represents a good faith effort at full disclosure and no further response is required.

Response to Comment D-90. The commentor states that Draft EIR fails to evaluate how the project is consistent with the Compass Growth Vision Principles. Table 5.D has been added to the EIR (Section 3.0 Errata in the Final EIR) indicating the proposed project’s consistency with the Compass Growth Vision Principles. No further response is required.

Draft EIR, Section 5 5.4 Consistency With Local And Regional Plans, Page 5-12:

~~The proposed project is consistent with the four principles identified above. The nature of the proposed project allows the transport of commodities from a single area rather than multiple areas, minimizing vehicle trip generation. The proposed project supports the prosperity for all people by providing employment opportunities close to existing housing within the City of Moreno Valley. The proposed project is located in an area that is already developed with urban uses and where existing infrastructure (freeway, sewer, electrical, water, etc.) is accessible. During the construction of the project and as needed throughout the process, necessary utility and roadway improvements will be installed or extended to the project site from adjacent existing facilities. The utility and roadway improvements will facilitate future growth in the surrounding area. The development of the proposed project is consistent with the land use vision for the site and will augment existing services available in the City and region.~~

In addition, a new table (Table 5.D: Compass Growth Vision Report Consistency) has been added as follows.

Table 5.D: Compass Growth Vision Report Consistency

Policy	Consistency Analysis
<p><u><i>Principle 1: Improve mobility for all residents.</i></u></p> <ul style="list-style-type: none"> • <u>Encourage transportation investments and land use decisions that are mutually supportive.</u> • <u>Locate new housing near existing jobs and new jobs near existing housing.</u> • <u>Promote a variety of travel choices.</u> 	<p><u>The project is consistent with this principle.</u></p> <p><u>The actions associated with implementation of the proposed project would allow for warehousing uses to be clustered around other industrial and commercial uses and would encourage a reduction of vehicle miles traveled within the City.</u></p> <p><u>Implementation of the project would create approximately 646 jobs. Existing housing is located approximately 1 mile to the north and 2 miles to the south of the project site. The project is consistent with this portion of Principle 1.</u></p> <p><u>There are a number of transit-oriented strategies that could be implemented by the proposed project to encourage alternate modes of travel, including informational strategies, incentives, and services. (Refer to Mitigation Measure 4.2.6.3A).</u></p>

Table 5.D: Compass Growth Vision Report Consistency

Policy	Consistency Analysis
<p><u>Principle 2: Foster livability in all communities.</u></p> <ul style="list-style-type: none"> • <u>Promote developments which provide a mix of uses.</u> • <u>Promote “people scaled, “walkable communities.</u> • <u>Support the preservation of stable, single-family neighborhoods.</u> 	<p><u>The project is consistent with the applicable portions of this principle.</u></p> <p><u>The proposed project is a warehousing project and does not include any residential uses. Therefore, the project is not considered to be a mixed use project and this portion of Principle 2 is not applicable to the project.</u></p> <p><u>The project site is located in an industrial warehouse area. The project would include sidewalks so that the opportunity of being walkable within this warehouse area is possible. Therefore, the project is consistent with this portion of Principle 2.</u></p> <p><u>The proposed project is a warehousing project and does not include any residential uses. Therefore this portion of Principle 2 is not applicable to the project.</u></p>
<p><u>Principle 3: Enable prosperity for all people.</u></p> <ul style="list-style-type: none"> • <u>Provide in each community a variety of housing types to meet the housing needs of all income levels.</u> • <u>Support educational opportunities that promote balanced growth.</u> • <u>Ensure environmental justice regardless of race, ethnicity, or income class.</u> • <u>Support local and state fiscal policies that encourage balanced growth.</u> • <u>Encourage civic engagement.</u> 	<p><u>Based on the information provided below, this principle is not applicable to the project.</u></p> <p><u>The proposed project is a warehousing project and does not include any residential or educational uses. Therefore this portion of Principle 3 is not applicable to the project.</u></p> <p><u>The project site is vacant and the project located in an area identified for industrial and commercial uses. Therefore, this issue not applicable to the project.</u></p> <p><u>The supporting of local and state fiscal policies and the encouragement of civic engagement is at the City level not the project level. Therefore, this portion of the principle is not applicable to the project.</u></p>
<p><u>Principle 4: Promote sustainability for future generations.</u></p> <ul style="list-style-type: none"> • <u>Focus development in urban centers and existing cities.</u> • <u>Develop strategies to accommodate growth that uses resources efficiently, eliminate pollution and significantly reduce waste.</u> • <u>Utilize “green” development techniques.</u> 	<p><u>The project is consistent with this principle.</u></p> <p><u>The proposed project is located in an area that is already developed with urban uses and where existing infrastructure (freeway, sewer, electrical, water, etc.) is accessible.</u></p> <p><u>Mitigation Measure 4.3.1.6B requires the project to implement various sustainability strategies and “green” development techniques that uses resources efficiently, eliminates pollution, and reduces waste.</u></p>

Response to Comment D-91. See Response to Comment D-53. The import of fill (220,000 cubic yards) to the project site was considered in the evaluation of the air quality impacts attributable to the proposed project (Section 4.2 Air Quality, page 4.2-20) The 80,000 cubic yards of fill that is currently on-site is considered the baseline (existing on-site conditions) and this fill was imported to the project site as part of a previously approved stockpile permit (page 3-3) that predated the proposed project.

Response to Comment D-92. As noted in Response to Comment D-11, the commentor incorrectly asserts that the environmentally superior alternative meets most project objectives and must be approved instead of the proposed project. Although the City concedes that the environmentally superior alternative (reduced density) will result in reduced air pollution and GHG emissions, it bears

noting that impacts associated with these issues would remain significant and unavoidable for air quality, global climate change, and traffic in the same manner as the proposed project (see Table 6.K, page 6-31). The significant and unavoidable project impacts associated with greenhouse gas emissions and traffic cannot be reduced to less than significant though reduction in the size of the project. However, the significant and unavoidable project impacts associated with air quality can be eliminated if the project is reduced to approximately 90,000 square feet (based on a linear reduction in the project's 990 pounds per day of operational NO_x emissions to below the 55 pounds per day threshold).

The commentator mistakenly claims that the reduced intensity alternative (Alternative 2) would meet the following project objectives: "Provide a high density, high-quality large-scale industrial development to provide jobs for residents at a variety of income levels" and "Cluster industrial warehouse uses near efficient access points to the state highway system to reduce traffic congestion on surface streets and to reduce concomitant air pollutant emissions from vehicle sources reduces impacts to air quality, global climate change, and traffic." This is due to the fact that reduced-intensity development patterns are in concept diametrically opposite of the highly dense form of development patterns that are characteristic of clustered development. Said another way, the reduced intensity alternative would result in use of the entire project site in an inefficient manner with associated negative effects such as sprawl.

Response to Comment D-93. The commentator mistakenly claims that there is no basis for the Draft EIR statement that the reduced intensity alternative would have impacts similar to the proposed project. As shown in Table 6.K, the reduced intensity alternative (Alternative 3) would reduce impacts to air quality, global climate change, and traffic. This is due to the reduction in the air pollution emissions, greenhouse gas emissions, and trip generation attributable to the alternative linearly related to the reduction in building square footage (1,616,133 square feet versus 1,212,100 square feet). However, the significant and unavoidable impacts associated with this alternative would remain, similar to the proposed project.

Response to Comment D-94. See Response to Comment D-92.

Response to Comment D-95. See Response to Comment D-93. The significant and unavoidable air quality, global climate change, and traffic impacts associated with the reduced intensity alternative would remain, similar to the proposed project.

Response to Comment D-96. It is not clear as to what the commentator is attempting to point out. If the commentator is suggesting that an alternative be examined that couples both a reduction in development intensity and at an alternative site, the City disagrees. The purpose of the alternative site is to examine the possibility of reducing project impacts by moving it to an alternate location.

Response to Comment E-97. The commentator has attached various references. No response is required.

June 3, 2012

RE: VIP Moreno Valley project’s Draft Environmental Impact Report (DEIR).

The Sierra Club appreciates this opportunity to comment on this DEIR. Much of what you will read below was in our NOP comments, but we feel they were not adequately addressed. We hope to read your responses in the FEIR which do fully answer our comments, concerns, suggestions and questions. Most of our concerns are about Global Warming, Climate Change, Greenhouse Gas Pollution and Air Pollutant emissions. These concerns can be read below and we expect this project to do everything possible to mitigate these problems in our non-attainment area. Your NOP mentions that the consumption of electricity by this warehouse “would generate air pollutant emissions.” While the Sierra Club understands that you “expect to reach LEED certified rating”, we do not understand why you do not match the higher Gold LEED certification recently agreed to by the Alessandro Business Center warehouse in the City of Riverside or even the LEED Silver of Skechers. In fact your words do not guarantee anything about even reaching the lowest level of LEED certification. The City needs to require you to hire a LEED expert and then require you to become LEED certified--hopefully higher than just certified. You could pay less than \$1,000 and lock in current LEED standards for your building. Through the installation of solar panels and other LEED ideas you could avoid generating air pollutants with the electricity you consume. This warehouse and all warehouses need to be required to have their roofs built to accommodate the maximum number of solar panels. You are now able to sell excess energy back and earn money as well as do right for our non-attainment area. The DEIR indicates that the “proposed project would unavoidably contribute to significant long-term cumulative air quality impacts.”(p 4.2-29) The Sierra Club does not believe it is totally unavoidable. The fact you are given a cafeteria list of mitigations to chose from shows that there is more that could and should be done to protect the health of area residents. Why isn’t there a requirement to exceed Title 24 by at least 25% instead of just “exceed” Title 24? (p 4.3-25) Agreeing to require 90% of your off road construction equipment meet Tier III standards would also significantly help our non-attainment city and county. Your DEIR only mentions Tier II and therefor it shows you are not serious about the health of the area’s residents.

Continuing to pave over Prime Agricultural lands as well as those of Local and State Importance must be mitigated. Having locally grown products also cuts down on the Climate Change problems mentioned above and below. Recently a developer donated \$100,000 to the Riverside Land Conservancy to help mitigate for the loss of Ag Lands. The San Jacinto Basin Resource Conservation District is another entity which would use your monetary donation to mitigate the loss of important Ag lands as well as the loss of lands for raptor foraging. It is therefore incorrect to say that “no feasible mitigation is available.” Please consider how your project will seriously mitigate you impacts to Agriculture. You should also make sure your parking provides ample reserved spaces for several form of cars using alternative fuels. Their parking lot also needs to be made of porous material to help with ground water recharge and to lessen run off.

7
8
9

The Sierra Club appreciates that you have the World Logistic Center on your Cumulative Project List. We, however, do not believe all of your analysis have included this massive project. The FEIR will be inadequate unless this and all other projects are part of the analysis in each area of the FEIR. I also did not see the Pro Logis project listed which would be located near the Moreno Valley Auto Mall. Since some of Moreno Valley’s designated truck routes pass by schools and their playgrounds, the Sierra Club expects the FEIR to explain what requirements will be placed on the tenants to avoid this very toxic situation as well as the truckers who will deliver/pickup products for your warehouse. The FEIR needs to show the walking/bicycling routes students take to and from school as well as show how this project’s diesel truck traffic will impact the health of these students. There are two schools which are only about one mile from the project as well as others which may have students impacted by VIP’s toxic diesel trucks. The projects distance from homes needs to be easily understood as well as all the paths trucks could take to the warehouse. Requiring staging areas for diesel equipment to be only a couple of hundred feet from sensitive receptors is inadequate for the health of Moreno Valley Residents. How will you protect the warehouse workers from the long term health affects of breathing toxic diesel emissions throughout their workday and employment? What equipment will you make sure is electric instead of diesel or gasoline in order to lessen pollution and better protect the workers--this includes gardening equipment? The FEIR needs to explain how noise barriers used during construction and use of the warehouse could lessen impacts identified in the Initial Study. Impacts to our local streets as well as our very crowded freeways need to be explained so the average citizen will understand. The FEIR-not just appendices- needs to show the length of trips the diesel trucks will be taking when driving to and from the warehouse as well as their routes. We need to know the maximum number of tucks which will use this warehouse each workday and not just after the first year, but when the warehouse is being used to its maximum capacity during peak times of the year. Your traffic analysis is inadequate unless it includes all of SR 60 which border any part of Moreno Valley. This two and three lane roadway will be significantly affected by VIP traffic-especially when part of cumulative impacts. Decision makers have a right to know before they vote that the section of SR 60 passing through Moreno Valley will become a parking lot with significant pollution. Even your own analysis of some major intersection in our City show they will become LOS F by 2013. Simply paying into a pot of money which may not be used in the impacted part of Moreno Valley does not mitigate your traffic.

20

The land should not be disced or graded for at least six months prior to doing the Burrowing Owl survey otherwise many will believe you are just making it difficult on this special animal as well as making it more likely it will be listed as endangered. The Sierra Club believes the FEIR will

21
22

be inadequate unless our concerns and issues found throughout this letter are thoroughly addressed within the document.

22

I. THE DEIR MUST ADEQUATELY ADDRESS THE IMPACTS OF GLOBAL WARMING AND CLIMATE CHANGE

As a potential significant impact, the Final EIR (FEIR) must more thoroughly evaluate alternatives and mitigation measures that would reduce the Project’s greenhouse gas emissions. Curbing greenhouse gas emissions to limit the effects of climate change is one of the most urgent challenges of our time. Fortunately, the California Environmental Quality Act (“CEQA”), Cal. Pub. Res. Code §§ 21000 et seq., 14 Cal. Code Regs. § 15000 et seq. (“Guidelines”), set forth a clear and mandatory process to address the Project’s greenhouse gas and global warming impacts. This letter sets forth how this analysis should be completed.

23

A. THE DEIR MUST ADEQUATELY SET FORTH THE THREAT OF GREENHOUSE GAS POLLUTION AND GLOBAL WARMING

The FEIR must discuss the grave threats posed by global warming to California and the world. Current scientific consensus on climate change has now determined that the link between greenhouse gas emissions and global warming is highly certain. In California, elected leaders, through Executive Order S-03-05 and the California Global Warming Solutions Act of 2006 (AB 32), have also squarely linked greenhouse gases with global warming.

24

In order to conform to CEQA’s informational mandates and properly inform the public and decision makers of the significance of the Project’s contribution to greenhouse gases, the DEIR must first adequately discuss the threat posed by greenhouse gas emissions and avoid minimizing or discounting the severity of global warming’s impacts. See Guidelines § 15151. See, e.g., *Laurel Heights Improvement Ass’n v. Regents of Univ. of Cal.* (“Laurel Heights I”), 47 Cal.3d 376, 392 (1988) (EIR is intended “to demonstrate to an apprehensive citizenry that the agency has, in fact, analyzed and considered the ecological implications of its action.”); Guidelines § 15151 (requiring an FEIR be detailed, complete, and reflect a good faith effort at full disclosure). A discussion of global warming impacts need not be lengthy, but should, at a minimum, convey the magnitude of the threat posed by global warming to humans and the environment. For the City’s convenience, a scientific background on global warming and the specific threats posed to California is provided below.

25
26

i. Scientific Background on Climate Change

There is no longer credible scientific dispute that the climate is warming. In its most recent assessment, the Intergovernmental Panel on Climate Change (“IPCC”) concluded that “[w]arming of the climate is unequivocal, as is now evident from observations of increases in global average air and ocean temperatures, widespread melting snow and ice, and rising mean sea level.” (IPCC 2007a). Expressed as a global average, surface temperatures have increased by about 0.74°C over the last hundred years, with 11 of the 12 warmest years on record having occurred in the past 12 years (IPCC 2007a). In September 2007, Arctic sea ice plummeted to a record-low level not anticipated by most climate models until 2050, leading scientists to predict

27

that the Arctic could be ice-free in summer by 2030 (National Snow & Ice Data Center 2007).¹ Other observed consequences of the warming climate include sea level rise, increased frequency of droughts, floods, and heat waves and substantial increases in the duration and intensity of hurricanes (IPCC 2007a).

The IPCC now states with “very high confidence” that most of the warming observed over the past 50 years is the result of human generation of greenhouse gases, including carbon dioxide, methane, and nitrous oxide² (IPCC 2007a). The rapid warming observed since the 1970s has occurred in a period when the increase in greenhouse gases has dominated over all other factors (IPCC 2007a). The largest known contribution to global warming is from carbon dioxide (IPCC 2007a). Fossil fuel combustion is responsible for more than 75% of human caused carbon dioxide emissions with the remainder due to land-use change (primarily deforestation) (IPCC 2007a). The global atmospheric concentration of carbon dioxide has increased from a pre-industrial value of about 280 parts per million (ppm) to 379 ppm in 2005, a level that has not been exceeded during the past 650,000 years (during which carbon dioxide concentrations remained between 180 and 300 ppm). (IPCC 2007a; Canadell et al. 2007). In 2006, carbon dioxide concentrations reached a new high of 381.2 ppm (World Meteorological Organization 2007). As greenhouse gas concentrations increase, more heat reflected from the earth’s surface is absorbed by these greenhouse gases and radiated back into the atmosphere and to the earth’s surface.³ Consequently, the higher the level of greenhouse gas concentrations, the larger the degree of warming experienced.

At current growth rates and continued reliance on fossil fuels, atmospheric concentrations of carbon dioxide would likely exceed 1,000 ppm by the end of the century, resulting in an average global temperature increase of more than 5°C (United Nations Foundation & Sigma XI 2007). This is equivalent to the change in temperature since the last ice age – an era in which Europe and North America was under more than one kilometer of ice (United Nations Foundation & Sigma XI 2007). The growing consensus among climate scientists is that the threshold for dangerous climate change, whereupon a potential “tipping point” is reached and ecological changes become dramatically more rapid and out of control, is estimated at a temperature increase of around 2°C from pre-industrial levels, or an atmospheric concentration of carbon dioxide of approximately 450 ppm (United Nations Foundation & Sigma XI 2007; IPCC 2007c). In 2006, Dr. James E. Hansen, Director of the NASA Goddard Institute for Space Studies, and NASA’s top climate scientist, stated: “In my opinion there is no significant doubt (probability > 99%) that . . . additional global warming of 2° C would push the earth beyond the tipping point and cause dramatic climate impacts including eventual sea level rise of at least several meters, extermination of a substantial fraction of the animal and plant species on the planet, and major regional climate disruptions” (Hansen et al. 2006). More recently however, given the recent unpredicted and extreme rate of loss of arctic ice observed in 2007, Dr. Hansen

¹ Based on the startling loss of sea ice in 2007, some scientists have predicted that “the Arctic Ocean could be nearly ice-free at the end of the summer by 2012.” Seth Borenstein, *Ominous Arctic Melt Worries Experts*, Associated Press, Dec. 11, 2007.

² IPCC, 2007: *Summary for Policymakers*, in CLIMATE CHANGE 2007: THE PHYSICAL SCIENCE BASIS, CONTRIBUTION OF WORKING GROUP I TO THE FOURTH ASSESSMENT REPORT OF THE INTERGOVERNMENTAL PANEL ON CLIMATE CHANGE at 4 (Susan Solomon et al. eds., Cambridge Univ. Press 2007) at 2-3. “Very high confidence” is defined at “at least a 9 out of 10 chance of being correct.” *Id.* at 3 n.7.

³ Greenhouse gases have a warming effect because, when solar radiation is reflected by the earth, greenhouse gases capture this thermal radiation and reradiate it back to earth, much like the effect of a common garden greenhouse resulting in the “greenhouse effect.”

concluded that “the safe upper limit for atmospheric CO₂ is no more than 350 ppm” (McKibben 2007). Moreover, according to Hansen, just 10 more years of “business-as-usual” global emissions will make it difficult, if not impossible, to keep atmospheric concentrations of greenhouse gases at levels necessary to avoid a temperature increase above 2°C (Hansen et al. 2007).

Keeping the climate within the 2°C threshold requires significant reductions in the world’s greenhouse gas emissions. To reach this objective, it is estimated that developed countries would have to target an emissions peak between 2012 and 2015, with 30 percent cuts by 2020 and 80 percent cuts from 1990 levels by 2050 (United Nations Foundation & Sigma XI 2007). In recognition of need for immediate action, California has committed itself through Executive Order S-3-05 and the California Global to reduce the state’s emissions to 1990 levels by 2020 and by 80% reductions from 1990 levels by 2050. Ca. Health & Safety Code § 38550; Cal. Executive Order S-3-05 (2005).

The costs of taking no action to reduce greenhouse gas emissions far outweigh the costs of stabilizing emissions. The Stern Review of the Economics of Climate Change, a comprehensive report commissioned by the British government, recently concluded that allowing current emissions trajectories to continue unabated would eventually cost the global economy between 5 to 20 percent of GDP each year within a decade, or up to \$7 trillion, and warned that these figures should be considered conservative estimates (Stern 2006). By contrast, measures to mitigate global warming by reducing emissions were estimated to cost about one percent of global GDP each year, and could save the world up to \$2.5 trillion per year (Stern 2006). The Stern Report determined that if no action is taken to control greenhouse gas emissions, each ton of CO₂ emitted causes damage worth at least \$85 (Stern 2006).

27

ii. Impacts to California from Global Warming

Climate change poses enormous risks to California. Scientific literature on the impact of greenhouse gas emissions on California is well developed.⁴ The California Climate Change Center (“CCCC”) has evaluated the present and future impacts of climate change to California and the project area in research sponsored by the California Energy Commission and the California Environmental Protection Agency (Cayan et al. 2007). The severity of the impacts facing California is directly tied to atmospheric concentrations of greenhouse gases (Cayan et al. 2007; Hayhoe et al. 2004). According to the CCCC aggressive action to cut greenhouse gas emissions today can limit impacts, such as loss of the Sierra snow pack to 30%, while a business-as-usual approach could result in as much as a 90% loss of the snowpack by the end of the century. As aptly noted in a report commissioned by the California EPA:

Because most global warming emissions remain in the atmosphere for decades or centuries, the choices we make today will greatly influence the climate our children and grandchildren inherit. The quality of life they experience will depend on if and how rapidly California and the rest of the world reduce greenhouse gas emissions (Cayan et al. 2007).

Some of the types of impacts to California and estimated ranges of severity – in large part dependent on the extent to which emissions are reduced – are summarized as follows:

- A 30 to 90 percent reduction of the Sierra snowpack during the next 100 years, including earlier melting and runoff.
- An increase in water temperatures at least commensurate with the increase in air

⁴ Additional reports issued by California agencies are available at <http://www.climatechange.ca.gov>, and IPCC

temperatures.

- A 6 to 30 inch rise in sea level, before increased melt rates from the dynamical properties of ice-sheet melting are taken into account.
- An increase in the intensity of storms, the amount of precipitation and the proportion of precipitation as rain versus snow.
- Profound impacts to ecosystem and species, including changes in the timing of life events, shifts in range, and community abundance shifts. Depending on the timing and interaction of these impacts, they can be catastrophic.
- A 200 to 400 percent increase in the number of heat wave days in major urban centers.
- An increase in the number of days meteorologically conducive to ozone (O₃) formation.
- A 55 percent increase in the expected risk of wildfires (Cayan et al. 2007).

By providing details as to the ranges of proposed impacts, and indicating that the higher-range of impact estimates are projected if greenhouse gas emissions continue to increase under a “business as usual” scenario, decision-makers and the public will be better informed of the magnitude of the climate crisis and the urgency with which it must be addressed.

Finally, the DEIR should also include a brief discussion of other laws to address climate change, including California’s mandate to reduce emissions to 1990 levels by 2020 and goal of further reducing emissions to 80% below 1990 levels by 2050. Achievement of state mandated emissions reductions will be severely impeded if agencies across the state continue to approve *new* projects without incorporating measures to reduce the added emissions created by these.

B. The EIR the Project Must Include an Inventory and Analysis of the Project’s Projected Greenhouse Gas Emissions

The first step in determining a project’s greenhouse gas pollution impact is to complete a full inventory of all emissions sources. In conducting such an inventory, all phases of the proposed project must be considered. *See* 14 Cal. Code Regs. □ 15126. A basic requirement of CEQA is that “[a]n EIR should be prepared with a sufficient degree of analysis to provide decision-makers with information which enables them to make a decision which intelligently takes account of environmental consequences.” 14 Cal. Code Regs. □ 15151. The greenhouse gas inventory for a project must include a complete analysis of all of a project’s substantial sources of greenhouse gas emissions, from building materials and construction emissions to operational energy use, vehicle trips, water supply and waste disposal.

A greenhouse gas inventory for the project must include the project’s direct and indirect greenhouse gas emissions. *See* 14 Cal. Code Regs □ 15358(a)(1) (Indirect or secondary effects may include effects related to induced changes in the pattern of land use, population density, or growth rate, and related effects on air and water and other natural systems, including ecosystems.). Consequently, a complete inventory of a project’s emissions should include, at minimum, an estimate of emissions from the following:

- Fugitive emissions of greenhouses gases, such as methane, from the proposed project;
- Emissions during construction from vehicles and machinery;
- Manufacturing and transport of building materials;
- Electricity generation and transmission for the heating, cooling, lighting, and other energy demands of the project;
- Water supply and transportation to the project;

- Vehicle trips and transportation emissions generated by the project;
- Wastewater and solid waste storage or disposal, including transport where applicable; and
- Outsourced activities and contracting.

Methodologies are readily available to inventory the emissions from the proposed project. In its recent white paper, CEQA & Climate Change, Evaluating and Addressing Greenhouse Gas Emissions from Projects Subject to the California Environmental Quality Act (Jan. 2008), the California Air Pollution Control Officers Association (CAPCOA) set forth methodologies for analyzing greenhouse gas pollution (CAPCOA 2008) The California Office of Planning and Research (“OPR”) has also released technical guidance on the preferred approach for analyzing greenhouse gas emissions and climate change entitled “Technical Advisory, CEQA and Climate Change: Addressing Climate Change through California Environmental Quality Act Review” (California OPR 2008). OPR also provides references to methodologies to quantify greenhouse gas emissions. In addition to the methodologies set forth by CAPCOA and OPR, ICLEI’s Clean Air/Climate Protection (CACP) software allows cities to calculate emissions reductions, track and quantify emission outputs, and develop emissions scenarios to inform the planning process.⁵ As noted in the ICLEI Climate Action Handbook, “Expertise in climate science is not necessary” to conduct an emissions inventory and compare this inventory against a forecast year (ICLEI). “A wide range of government staff members, from public works to environment and facilities departments, can conduct an inventory” (ICLEI). ICLEI also provides technical assistance and training to local government using the CACP software. It is incumbent on the City to “disclose all it can” about project impacts and educate itself on methodologies that are available to measure project emissions. *Berkeley Keep Jets Over the Bay Comm. v. Board of Port Comm’rs (“Berkeley Jets”)*, 91 Cal. App. 4th 1344, 1370 (2001).

As with any other project under CEQA, the baseline used for analyzing the impacts of a project is the existing on the ground environmental conditions at the time of the NOP. *See Environmental Planning & Information Council v. County of El Dorado (EPIC)*, 131 Cal.App.3d 350, 355 (1982) (effect of general plan amendment must be compared against actual environment, not assumptions in existing general plan). Accordingly, the DEIR should compare emissions from existing conditions with those that would result from the development of the project, as well as those that would occur under any proposed alternative scenarios. Because the Project envisions development over a long period, the EIR should also provide data on the trajectory for emissions in the planned community and under each proposed alternative in five-year increments.

Without a complete inventory, the DEIR cannot adequately inform the public and decision-makers about the Project’s impacts. Similarly, without a complete inventory and analysis of greenhouse gas emissions that will result from the project, there is simply no way that The EIR can then adequately discuss alternatives, avoidance, and mitigation measures to reduce those impacts.

C. THE EIR MUST ADDRESS THE IMPACT GLOBAL WARMING WILL HAVE

⁵ ICELI’s Clean Air/Climate Protection software is available at <http://www.cacpsoftware.org/> ICLEI-Local Governments for Sustainability is an international association of more than 650 local governments. Cities, counties, towns and villages around the world are members of ICLEI. ICLEI’s mission is to improve the global environment through local action. On the issue of global warming, for example, ICLEI provides resources, tools, peer networking, best practices, and technical assistance to help local governments measure and reduce greenhouse gas emissions in their communities.

ON THE PROJECT

California’s temperatures are expected to rise “dramatically” over the course of this century (Cayan 2007). These factors will impact the planned project, as well as exacerbate its own environmental impacts.

The rise in temperatures resulting from global warming will create a more conducive environment for air pollution formation (Cayan 2007). This will intensify the adverse effects the proposed project will already have on air quality in the project area and threaten residents’ health (Cayan 2007).

Significantly for the state, as well as the project area, is global warming’s impact on water supply. The IPCC specifically identified the American West as vulnerable, warning, “Projected warming in the western mountains by the mid-21st century is very likely to cause large decreases in snowpack, earlier snow melt, more winter rain events, increased peak winter flows and flooding, and reduced summer flows” (IPCC 2007b). Recently, researches found that an increase in atmospheric greenhouse gases has contributed to a “coming crisis in water supply for the western United States” (Barnett 2008). Using several climate models and comparing the results, the researches found that “warmer temperatures accompany” decreases in snow pack and precipitation and the timing of runoff, impacting river flow and water levels (Barnett 2008). These researchers concluded with high confidence that up to 60 percent of the “climate related trends of river flow, winter air temperature and snow pack between 1950-1999” are human-induced.

(Barnett 2008). This, the researchers wrote, is “not good news for those living in the western United States” (Barnett 2008).

The California Center on Climate Change has also recognized the problem global warming presents to the state’s water supply and predicts that if greenhouse gas emissions continue under the business-as-usual scenario, this snowpack could decline up to 70-90 percent, affecting winter recreation, water supply and natural ecosystems (Cayan 2007). Global warming will affect snowpack and precipitation levels, and California will face significant impacts, as its ecosystems depend upon relatively constant precipitation levels and water resources are already under strain (Cayan 2007). The decrease in snowpack in the Sierra Nevada will lead to a decrease in California’s already “over-stretched” water supplies (Cayan 2007). It could also potentially reduce hydropower and lead to the loss of winter recreation (Cayan 2007). All of this means “major changes” in water management and allocation will have to be made (Cayan 2007). Thus, global warming may directly affect the City’s ability to supply clean, affordable water to the residents, or force the City to change how it will utilize water, and it may also impact other activities outside the project area, such as agriculture.

Scientists indicate that climate change will also exacerbate the problem of flooding by increasing the frequency and magnitude of large storms, which in turn will cause an increase in the size and frequency of flood events (NRDC 2007). The increasing cost of flood damages and potential loss of life will put more pressure on water managers to provide greater flood protection (NRDC 2007). At the same time, changing climate conditions (decreased snowpack, earlier runoff, larger peak events, etc.) will make predicting and maximizing water supply more difficult (NRDC 2007). These changes in hazard risk and water supply availability must be considered during environmental review.

Water quality, in addition to water quantity and timing, will also be impacted. Changes in precipitation, flow, and temperature associated with climate change will likely exacerbate water quality problems (NRDC 2007). Changes in precipitation affect water quantity, flow rates, and flow timing (Gleick 2000). Shifting weather patterns are also jeopardizing water quality and

38

39

40

quantity in many countries, where groundwater systems are overdrawn (Epstein 2005). Decreased flows can exacerbate the effect of temperature increases, raise the concentration of pollutants, increase residence time of pollutants, and heighten salinity levels in arid regions (Schindler 1997).

40

These are only examples of how global warming will impact the proposed project and intensify the environmental impacts the project will already have. It is not an exhaustive list. Thus, when assessing the impact of the Project on air quality, water supply, flood hazards, and biological resources, the EIR must take into account global warming. To ignore the impact of global warming on the Project and the resources impacted by the Project would significantly understate Project impacts.

41

D. THE PROJECT’S GREENHOUSE GAS IMPACTS ARE CLEARLY SIGNIFICANT

The greenhouse gas emissions generated by a project of this size and scope will have a clearly significant cumulative impact. An impact is considered significant where its “effects are individually limited but cumulatively considerable.” Guidelines □ 15065(a)(3). Climate change is the classic example of a cumulative effects problem; emissions from numerous sources combine to create the most pressing environmental and societal problem of our time. *Ctr. for Biological Diversity*, 508 F.3d 508, 550 (9th Cir. 2007) (“the impact of greenhouse gas emissions on climate change is precisely the kind of cumulative impacts analysis that NEPA requires agencies to conduct.”); *Kings County Farm Bureau v. City of Hanford*, 221 Cal. App. 3d 692, 720 (1990) (“Perhaps the best example [of a cumulative impact] is air pollution, where thousands of relatively small sources of pollution cause a serious environmental health problem.”). While a particular project’s greenhouse gas emissions represent a fraction of California’s total emissions, courts have flatly rejected the notion that the incremental impact of a project is not cumulatively considerable because it is so small that it would make only a de minimis contribution to the problem as a whole. *Communities for a Better Environment v. California Resources Agency*, 103 Cal.App.4th 98, 117 (2002); see also *Kings County Farm Bureau*, 221 Cal. App. 3d at 720 (“[p]erhaps the best example of [a cumulative impact] is air pollution, where thousands of relatively small sources of pollution cause a serious environmental health problem.”).

42

In addition, there is nothing speculative about the fact that higher levels of greenhouse gas pollution will lead to greater impacts, which is why the State of California has prioritized greenhouse gas pollution reductions under AB 32. Moreover, in the analogous context of the National Environmental Policy Act (NEPA), the Ninth Circuit has already rejected the argument that “global warming is too speculative to warrant NEPA analysis.” *Ctr. for Biological Diversity v. Nat’l Highway Traffic Safety Admin.*, 508 F.3d at 554.

43

In addition, lack of established significance thresholds does not excuse an agency from its obligation under CEQA to determine the significance of a Project’s impacts. CEQA routinely calls for an agency to evaluate impacts in the absence of thresholds or to exercise its individual discretion in determining the significance of an impact. See, e.g., *Protect the Historic Amador Waterways*, 116 Cal. App. 4th at 1111 (agency required to assess potential impact not listed in CEQA checklist). The development of significance thresholds is “encouraged” and not a prerequisite for an impact analysis. Guidelines □ 15064.7. Indeed, as noted in the CAPCOA white paper on CEQA and Climate Change, “[t]he absence of a threshold does not in any way relieve agencies of their obligations to address GHG emissions from projects under CEQA” (CAPCOA 2008). In fact, CEQA may require additional analysis even if a project meets an adopted standard, if other evidence indicates the project may nonetheless have a significant

44

impact. See *Berkeley Keep Jets Over the Bay Committee v. Board of Port Commissioners*, 91 Cal.App.4th 1344, 1380-82 (2001).

As the lead agency, CEQA requires the City to determine the significance of the Project’s emissions with or without established significance thresholds. Guidelines § 15064. CAPCOA provides various means by which a lead agency can determine the significance of project emissions (CAPCOA 2008). Importantly, a universally adopted methodology is *not* necessary to analyze project impacts. *Berkeley Keep Jets*, 91 Cal.App.4th at 1370 (“the fact that a single methodology does not exist...requires the [respondent] to do the necessary work to educate itself about the different methodologies that *are* available.”).

“The determination of whether a project may have a significant effect on the environment calls for careful judgment on the part of the public agency involved, based to the extent possible on scientific and factual data.” Guidelines § 15064(b). Any determination of whether there is a fair argument that the project may have a significant impact must include the consideration of the California Global Warming Solutions Act of 2006 (AB 32), wherein the State of California recognized that “global warming poses a serious threat to the economic well-being, public health, natural resources, and the environment of California” and required that existing levels of greenhouse gases be reduced to 1990 levels by 2020. Health & Safety Code §§ 38501(a), 38550. Because AB 32 establishes that existing greenhouse gas levels are unacceptable and must be substantially reduced within a fixed timeframe, any additional emissions that contribute to existing levels frustrate California’s ability to meet its ambitious and critical emissions reduction mandate. Ignoring emissions from smaller sources would be neglecting a major portion of the greenhouse gas inventory.

In accordance with the scientific and factual data, the City should adopt a zero significance threshold for the Project’s greenhouse gas emissions. As noted by the Ninth Circuit in *Center for Biological Diversity v. Nat’l Highway Traffic Safety Admin.*:

[W]e cannot afford to ignore even modest contributions to global warming. If global warming is the result of the cumulative contributions of myriad sources, any one modest in itself, is there not a danger of losing the forest by closing our eyes to the felling of the individual trees?

508 F.3d 508, 550 (9th Cir. 2007). Accordingly, the City must unequivocally consider Project emissions to be a potentially significant impact.

E. THE EIR MUST ANALYZE AND ADOPT ALL FEASIBLE MITIGATION MEASURES TO REDUCE THE PROJECT’S GREENHOUSE GAS EMISSIONS

In addition to thoroughly evaluating project alternatives, because it is clear that the project’s greenhouse gas emissions will cumulatively contribute to global warming, “the EIR must propose and describe mitigation measures that will minimize the significant environmental effects that the EIR has identified.” *Napa Citizens for Honest Gov’t v. Napa County Bd. of Supervisors*, 91 Cal.App.4th 342, 360 (2001). CEQA requires that agencies “mitigate or avoid the significant effects on the environment of projects that it carries out or approves whenever it is feasible to do so.” Pub. Res. Code § 21002.1(b). Mitigation of a project’s significant impacts is one of the “most important” functions of CEQA. *Sierra Club v. Gilroy City Council*, 222 Cal.App.3d 30, 41 (1990). Therefore, it is the “policy of the state that public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures which will avoid or substantially lessen the significant environmental effects of such projects.” Pub. Res. Code § 21002. Importantly, mitigation measures must be “fully enforceable through permit conditions, agreements, or other measures” so “that feasible mitigation measures will

actually be implemented as a condition of development.” *Federation of Hillside & Canyon Ass’ns v. City of Los Angeles*, 83 Cal.App.4th 1252, 1261 (2000).

To the extent that the project moves forward as planned, there are many mitigation measures the City can consider, as described below. This is not an exhaustive list and the EIR should explore these and all other feasible mitigation measures that will reduce the project’s greenhouse gas emissions (CAPCOA 2008; California Office of the Attorney General 2008).

47

i. Land Use Measures Reducing Traffic Flow

The development plan for the proposed project should incorporate public transit into the project design and should attempt to facilitate the use of public transit. (California Office of the Attorney General 2008). Additionally, the FEIR should analyze ways of including pedestrian and bicycle only streets and plazas within the development and create routes that will allow residents to reach the commercial center, schools and parks by public transportation, bicycling and walking.

48

ii. Land Use and Energy

The FEIR should consider mitigation measures that will ensure the planned community will use energy efficiently and conservatively. In doing so, it should analyze incorporating “green building” in the development. Green buildings are those buildings that lower energy consumption, use renewable energy, conserve water, harness natural light and ventilation, use environmentally friendly materials and minimize waste (Commission for Environmental Cooperation 2008).

49

Buildings create environmental impacts throughout their lifecycle, from the construction phase to their actual use to their eventual destruction (Commission for Environmental Cooperation 2008). In the United States, buildings account for 40 percent of total energy use, 68 percent of total electricity consumption, and 60 percent of total non-industrial waste (Commission for Environmental Cooperation 2008). Buildings also significantly contribute to the release of greenhouse gases. In the U.S. they account for 38 percent of total carbon dioxide emissions (Commission for Environmental Cooperation 2008). More specifically, residential buildings cause up to 1,210 megatons of carbon dioxide, while commercial building create approximately 1,020 megatons (Commission for Environmental Cooperation 2008). This is because buildings require a lot of energy for their day to day operations. Most of the coal-fired power plants – one of the biggest sources of greenhouse gas emissions – slated for development in the United States will supply buildings with the energy they need. In fact, 76 percent of the energy these plants produce will go to operating buildings in the U.S. (Commission for Environmental Cooperation 2008).

50

Using green building techniques, however, can substantially reduce buildings’ influence in increasing greenhouse gas emissions. Green buildings help reduce the amount of energy used to light, heat, cool and operate buildings and substitute carbon-based energy sources with alternatives that do not result in greenhouse gas emissions (Commission for Environmental Cooperation 2008). Currently green buildings can reduce energy by 30 percent or more and carbon emissions by 35 percent. (Commission for Environmental Cooperation 2008). The technologies available for green building are already in wide-use and include “passive solar design, high-efficiency lighting and appliances, highly efficient ventilation and cooling systems, solar water heaters, insulation materials and techniques, high-reflectivity building materials and

51

multiple glazing (IPCC 2007c). Additionally, the U.S. Green Building Council (USGBC), a private, nonprofit corporation, has established a nationwide green building rating system, called Leadership in Energy and Environmental Design (“LEED”). The LEED standard supports and certifies successful green building design, construction and operations. It is one of the most widely used and recognized systems, and to obtain LEED certification from the USGBC, project architects must verify in writing that design elements meet established LEED goals.

Specific mitigation for the greenhouse gas emissions generated by the Project’s energy consumption include, but are not limited to:

- Analyzing and incorporating the U.S. Green Building Council’s LEED (Leadership in Energy and Environmental Design) or comparable standards for energy efficient building during pre-design, design, construction, operations and management.
- Designing buildings for passive heating and cooling, and natural light, including building orientation, proper orientation and placement of windows, overhangs, skylights, etc.;
- Designing buildings for maximum energy efficiency including the maximum possible insulation, use of compact florescent or other low-energy lighting, use of energy efficient appliances, etc.
- Reducing the use of pavement and impermeable surfaces;
- Requiring water re-use systems;
- Installing light emitting diodes (LEDs) for traffic, street and other outdoor lighting
- Limiting the hours of operation of outdoor lighting
- Maximizing water conservation measures in buildings and landscaping, using droughttolerant plants in lieu of turf, planting shade trees;
- Ensure that the Project is fully served by full recycling and composting services;
- Ensure that the Project’s wastewater and solid waste will be treated in facilities where greenhouse gas emissions are minimized and captured.
- Installing the maximum possible photovoltaic array on the building roofs and/or on the project site to generate all of the electricity required by the Project, and utilizing wind energy to the extent necessary and feasible;
- Installing solar water heating systems to generate all of the Project’s hot water requirements;
- Installing solar or wind powered electric vehicle and plug-in hybrid vehicle charging stations to reduce emissions from vehicle trips.

51

iii. Mitigation Related to Project Construction

- Utilize recycled, low-carbon, and otherwise climate-friendly building materials such as salvaged and recycled-content materials for building, hard surfaces, and non-plant landscaping materials;
- Minimize, reuse, and recycle construction-related waste;
- Minimize grading, earth-moving, and other energy-intensive construction practices;
- Landscape to preserve natural vegetation and maintain watershed integrity;
- Utilize alternative fuels in construction equipment and require construction equipment to utilize the best available technology to reduce emissions.

52

iv. Transportation Mitigation Measures

- Encourage and promote ride sharing programs through such methods as a specific percentage of parking spaces for ride sharing vehicles;
- Create a car sharing program within the planned community;
- Create a light vehicle network, such as a neighborhood electric vehicle (NEV) system;

53

- Provide necessary facilities and infrastructure to encourage residents to use low or zero-emission vehicles, for example, by developing electric vehicle charging facilities and conveniently located alternative fueling stations;
- Provide a shuttle service to public transit within and beyond the planned community;
- Incorporate bicycle lanes and routes into the planned community's street systems.

53

v. Carbon Offsets

After all measures have been implemented to reduce emissions in the first instance, remaining emissions that cannot be eliminated may be mitigated through offsets. Care should be taken to ensure that offsets purchased are real (additional), permanent, and verified, and all aspects of the offsets must be discussed in the FEIR. As demonstrated by the Office of the Attorney General offsets are a feasible CEQA mitigation measures⁶ once all feasible mitigation measures have been adopted to reduce the Project's carbon footprint and produce energy using renewable sources.

54

II. THE EIR MUST CONSIDER A REASONABLE RANGE OF ALTERNATIVES

The EIR must consider a meaningful analysis of reasonable alternatives to the Project in order to lessen or avoid the Project's significant impacts. CEQA mandates that significant environmental damage be avoided or substantially lessened where feasible. Pub. Res. Code α 21002; Guidelines $\alpha\alpha$ 15002(a)(3), 15021(a)(2), 15126(d). A rigorous analysis of reasonable alternatives to the project must be provided to comply with this strict mandate. "Without meaningful analysis of alternatives in the EIR, neither courts nor the public can fulfill their proper roles in the CEQA process." *Laurel Heights Improvement Ass'n v. Regents of University of California*, 47 Cal.3d 376, 404 (1988). Moreover, "[a] potential alternative should not be excluded from consideration merely because it 'would impede to some degree the attainment of the project objectives, or would be more costly' even when that alternative includes Project development on an alternative site. *Save Round Valley Alliance v. County of Inyo*, 157 Cal. App. 4th 1437, 1456-57 (2007) (quotations omitted). In analyzing the no-project alternative, the EIR must discuss the need for this project and whether the uses that would potentially utilize the Project can be accommodated in existing areas. As CAPCOA states in its white paper, one way local governments can avoid significant increases in greenhouse gas emissions and help solve the problem of global warming is to "facilitate more efficient and economic use of the lands" already developed within the community (CAPCOA 2008). Reinvesting in existing communities is "appreciably" more efficient than new development and may even result in a net reduction of greenhouse gases (CAPCOA 2008). The EIR should consider an alternative that relies more on higher-density mixed commercial/residential development projects on existing disturbed lands in order to support the reduction of vehicle trips, promote alternatives to individual vehicle travel, and encourage efficient delivery of services and goods (Office of the California Attorney General 2008).

55

56

An analysis of alternatives should also quantify the estimated greenhouse gas emissions, quantified impacts to biological resources, water resources including water quality and water

57

⁶ The California Attorney General's Office has adopted CEQA settlements calling for the auditing, reduction, and offsetting of greenhouse gas emissions related with a Project demonstrating that offsets are a feasible way to reduce a Project's negative environmental effects on global warming. See <http://ag.ca.gov/newsalerts/release.php?id=1466&category=global%20warming> See generally <http://ag.ca.gov/globalwarming/ceqa.php>

availability, and traffic resulting from each proposed alternative. Where is the alternative which mentions agricultural uses in total or part? The quality of this land is such that even I could become a successful farmer. The less dense alternative two is by far superior than this project if one is serious about lessening one's impact on the environment.

57
58
59

CONCLUSION

Thank you for your attention to these comments. We look forward to working with the City to assure that the FEIR conforms to the requirements of CEQA to assure that all significant impacts to the environment are fully analyzed, mitigated or avoided. I hope the FEIR will fully address the concerns found within this letter as I did not see that within the DEIR. The Sierra Club wishes to be placed on the mailing list for all future notices and documents regarding this project. Please mail all notices to Sierra Club, San Gorgonio Chapter, Moreno Valley Group, 26711 Ironwood Ave, Moreno Valley, CA. 92555.

2.12 RESPONSE TO LETTER E

Sierra Club

Response to Comment E-1. This comment suggests that the Draft EIR did not adequately address the concerns raised in their NOP response letter. The comment also requests that their concerns be addressed in the Final EIR, which they advise focuses on global warming, climate change, greenhouse gas pollution, and air pollutant emissions. Lastly, the commentor requests that the project do everything possible to mitigate these issues due to the non-attainment status of the air basin. The commentor notes that their specific issues follow in their letter.

Short-term and long-term project specific and cumulative effects of the proposed project on air quality are evaluated in Section 4.2 Air Quality pages 4.2-1 through 4.2-29 in the Draft EIR. Greenhouse gas emissions and climate change were evaluated in Section 4.3 Climate Change and Greenhouse Gas Emissions pages 4.3-1 through 4.3-27 in the Draft EIR. Where the proposed project's impacts were determined to be significant mitigation was provided to lessen those impacts. It was determined that even with the implementation of feasible mitigation measures the proposed project will have a significant and unavoidable impact on short-term construction air quality, long-term operational air quality impacts, cumulative air quality, and cumulative greenhouse gas emissions.

The concerns raised by the commentor have been responded to in Response to Comments E-1 through E-62. Any comments that were raised by the Commentor that required additions or revisions to the language in the Draft EIR are provided in Section 3.0 Errata to the Draft EIR in the Final EIR.

Response to Comment E-2. This comment states that the NOP mentions consumption of electricity by the warehouse would generate air pollutant emissions. The air quality emissions of the proposed project are analyzed in Section 4.2 Air Quality and also energy use (electricity) is analyzed in Section 4.3 Global Climate Change and Greenhouse Gas Emissions in the Draft EIR.

Response to Comment E-3. Please see Response to Comment D-8. The commentor inaccurately suggests that the project should be required to obtain a LEED Gold rating as a form of mitigation of significant impacts associated with air pollution and greenhouse gas emissions. The process of obtaining a LEED rating is not mitigation. The specific green building features that are part of the LEED rating equation can reduce air pollution and greenhouse gas emissions impacts by minimizing and reducing the quantity of emissions associated with operations of a building.

However, additional air quality related mitigation measures have been added in the Final EIR (refer to Section 3.0 Errata). Please refer to the Table contained in Response to Comment D-45 regarding operational mitigation measures that have been added. The added measures are also in the Mitigation Monitoring and Reporting Plan in Section 4.0 in the Final EIR to ensure they are implemented

Response to Comment E-4. This comment suggests that the roof of the warehouse be built to accommodate solar panels. This measure is included as part of Mitigation Measure 4.2.6.3A has been changed as follows to ensure that solar or other renewable energy source. The mitigation measure has been added in the Final EIR (refer to Section 3.0 Errata). The added measures are also in the Mitigation Monitoring and Reporting Plan in Section 4.0 in the Final EIR to ensure they are implemented

Draft EIR Section 4.2.6.3 Long Term Operation Omissions, Page 4.2-27

4.2.6.3A Prior to issuance of the first building permit, building and site plan designs shall ensure that the project's energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of 20 percent. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and review and approved by the City. ~~The following~~ Any combination of design features, ~~including but not limited to the following list, may shall~~ be used to fulfill this requirement provided that the total increase in energy efficiency meets or exceeds 20 percent:

- ~~• All buildings shall be designed to accommodate renewable energy sources, such as photovoltaic solar electricity systems, appropriate to their architectural design.~~
- The project shall install a photovoltaic array (solar panels) or other source of renewable energy generation on-site, or otherwise acquire energy from the local utility that has been generated by renewable resources, to meet the project's office electricity needs.

Response to Comment E-5. This commentor opines that they disagree with the significant and unavoidable impact associated with long-term (operational) air quality impacts. This impact is related to SCAQMD's thresholds of significance. Mitigation Measures 4.2.6.1A through 4.2.6.1M and 4.2.6.3A and 4.2.6.3B set forth a comprehensive list of measures designed to reduce the quantity of air pollution emissions from project construction as well as project operations. These construction and operational mitigation measures have been supplemented in this Final EIR with the feasible mitigation measures suggested by this commentor and comments received from Johnson & Sedlack (Letter D). It bears noting that there is no readily available way to calculate the air pollution emission reductions associated with these mitigations measures and therefore show that long-term emissions cannot be reduced to below the threshold based on this technical limitation even with implementation of unlimited mitigation.

Response to Comment E-6. Mitigation Measure 4.2.6.3.A in the Draft EIR prescribes a performance standard requiring a 20% improvement in energy efficiency (over and above the 2008 CBC) for the building and lists suggested measures that can be included in the building's design to obtain this improvement in energy efficiency. The 20% energy efficiency improvement over and above 2008 CBC building requirements has been established by air quality and climate change technicians as the project-specific energy efficiency improvement (and associated reduction in GHGs) necessary to meet the Statewide mandate of obtaining a 30% reduction in GHG emissions in comparison to 1990 levels by year 2020. In 2006, the California Legislature passed and Governor Schwarzenegger signed AB 32, the Global Warming Solutions Act of 2006, which set a 2020 greenhouse gas emissions reduction goal into law. AB 32 requires California to reduce GHG emissions to 1990 levels (estimated at 426.6 million metric tons) by 2020 (forecast to be 600 million metric tons under "business as usual"), requiring a 30% reduction in emissions in comparison to the "business as usual" scenario. Since that time, the energy efficiency requirements contained in the 2008 and 2010 updates to the CBC now require that new buildings obtain energy efficiencies that exceed the "business as usual" scenario. For this reason, the City has determined that the appropriate performance standard to meet the statewide GHG emissions reduction goals is a 20% improvement over the 2008 CBC.

Response to Comment E-7. This comment is noted. As identified in the Draft EIR (Section 4.1 Agriculture and Forestry Resources, page 4.1-5), *"Approximately 16.89 acres (23%) of the project site is designated as Prime Farmland, 16.23 acres (23%), is designated Farmland of Statewide Importance, and 38.69 acres (54%) is designed Farmland of Local Importance."* The Draft EIR accurately identifies that the project would result in the significant and unavoidable conversion of farmland to a non-agricultural use (Section 4.1 Agriculture and Forestry Resources, page 4.1-15). The project site was historically used for agricultural operations but currently lies fallow and has been fallow for a number of years. The site was most recently used as a sod farm that ceased operating in

August 2005 and has not been in agricultural production since that time. Thus no existing agricultural operation exists onsite. The project site has not been utilized to grow agricultural products in the last seven years and it is therefore not reasonable to assume that this land is available for cultivation of crops that can be grown locally to reduce potential climate change problems as cited in Comment Letter E.

This commentor also states that a developer recently donated \$100,000.00 to the Riverside Land Conservancy to help mitigate for the loss of agricultural lands but fails to appropriately cite the information and identify the basis for determining the amount of agricultural lands lost in relation to this monetary amount. The City disagrees with the commentor and relies on the Fourth District Court of Appeal, *Cherry Valley Pass Acres and Neighbors v. City of Beaumont* (2010) 190 Cal.App.4th 316 (*Cherry Valley*) decision that concerned a challenge to an EIR for a project that would convert agricultural land to residential uses. Though recognizing the potential for mitigation in the form of agricultural “*conservation easements, Williamson Act preserve status, or temporary protection or conservation plans,*” the EIR noted the long-term trend in agricultural land conversion in the region and concluded that mitigation was not feasible. The court upheld the City’s determination regarding the feasibility of mitigation on the grounds it was supported by substantial evidence in the record. The court also examined the City and County General Plans, which acknowledged that development pressures were constraining the continued viability of agriculture and included the expansion of housing, commercial and industrial land uses. The court then determined that the project was compatible with these planning documents. The court concluded the particular circumstances surrounding the project such mitigation was infeasible and therefore was not required to be adopted. As with this project the site has been planned for industrial uses since 1987, the City has recognized that the conversion of agricultural land under its jurisdiction is an eventual and expected outcome of current and future growth and the current General Plan does not include any agricultural designations; therefore mitigation for the loss of is not required.

The trend of the reduction in agriculture in the Inland Empire is discussed in *Assessing the Economic and Market Trends Affecting Agriculture in the Western Inland Empire* prepared by Justin L. Adams, Ph.D. of Chang & Adams Consulting, September 2011 and *Economic Viability of Agriculture in the East Inland Empire* report prepared by CBRE Consulting, March 18, 2009. Both reports are provided in Appendices B and C to the Final EIR. This reduction in “farming” is due to pressures of the growth in the demand for housing and development and the transportation and warehousing sector; increased restrictions on water deliveries for agricultural uses after several consecutive drought seasons; higher wages in other industries in the region; strong agricultural competition from the southern Central Valley for dairies; increased regulatory pressures from air quality and local jurisdictions regarding particulate matter emissions and land use adjacency issues; and the trend in Riverside and San Bernardino Counties is for agricultural operations to continue to shift to places like Kern County regardless independent of land use policy due to the economic issues.

As stated on Section 4.1.6.1 Conversion of State Designated Farmland, page 4.1-12 of the Draft EIR, “*the City has specifically recognized that the conversion of agricultural land under its jurisdiction is an eventual and expected outcome of current and future growth. The current General Plan does not include any agricultural designations. The City allows agricultural uses in all land use designations as an interim use until such time as the land is developed per the vision identified in the General Plan. One of the goals stated in the City’s recent General Plan is the ‘...orderly conversion of agricultural lands.’ The proposed project is a continued extension of development in the surrounding area (industrial/business park). The proposed project does not interfere with the ability of other adjacent properties to be used for agricultural production should the property owner wish to do so, nor does it create any gaps of vacant or agricultural land between the proposed project and the existing adjacent development.*” As described in the Draft EIR, the City’s General Plan and General Plan EIR have considered and evaluated the eventual and expected conversion of agricultural activity within the City

(Section 4.1.6.1 Conversion of State Designated Farmland, page 4.1-12) Therefore, the City has already anticipated the eventual conversion of all agricultural activity within the City.

As stated in the Draft EIR, mitigation measures must be feasible and fully enforceable through permit conditions, agreements, or other legally binding considerations. To be feasible, mitigation must be capable of being accomplished in a successful manner within a reasonable period of time, taking into account the economic, environmental, legal, social, and technological factors. Identification as to the infeasibility of mitigation measures suggested by the commentor has been provided in the Draft EIR. No mechanism for the mitigation of impacts to State-designated Farmland and/or existing agricultural operations has been enacted by either the City of Moreno Valley or the County of Riverside. Rather, the City has specifically recognized that the conversion of agricultural land under its jurisdiction is an eventual and expected outcome of current and future growth. The current General Plan does not include any agricultural designations. The City allows agricultural uses in all land use designations as an interim use until such time as the land is developed per the vision identified in the General Plan. One of the goals stated in the City's recent General Plan is the "...orderly conversion of agricultural lands." The proposed project is a continued extension of development in the surrounding area (industrial/business park). The proposed project does not interfere with the ability of other adjacent properties to be used for agricultural production should the property owner wish to do so, nor does it create any gaps of vacant or agricultural land between the proposed project and the existing adjacent development.

The potential mitigation measures identified by the City in its General Plan EIR and California Department of Conservation (CDC), which are listed in the Draft EIR (Section 4.1.6.1 Conversion of State Designated Farmland, page 4.1-11), are not considered to be feasible by the City of Moreno Valley as determined in the City's General Plan EIR. Providing protection for ongoing agricultural activities from new developments, such as requiring buffers between agricultural operation and new development or requiring the notification and disclosure of agricultural activities to the purchasers adjacent properties will not permanently protect agricultural land. As identified in the Draft EIR, the City supports agriculture as an interim use within the City and no land is dedicated or designated for agricultural use or agricultural preservation within the City's jurisdiction. With no such dedication or designation in place at this time, the establishment of urban limits, greenbelts, and buffers would not result in permanent protection of agricultural land as none exists within the City. Areas where agriculture land use designations may exist that are outside of the City limits cannot be preserved as it is outside of the City's jurisdiction.

The purchase or transfer of development rights, purchase of conservation easements, or donation of funds to assist in the conservation of agricultural land would need to be implemented to ensure the preservation of agricultural land. The City does not have a funding source for the acquisition of farmland. As stated previously, the City anticipates the conversion of agricultural land within the City and does not set aside land for permanent preservation. The City expects that the majority of the land within the City will be converted to urban uses, although some agriculture will continue as interim uses, as allowed by the City's Development Code for all zoning categories. The City of Moreno Valley has determined that these measures are economically infeasible based on the higher costs associated with land, water and labor, increased environmental regulation, and competition from neighboring regions where agricultural operations are less costly; thus, resulting in an inability to make farming profitable. Furthermore, these measures are contrary to the City's vision (as stated in its General Plan) for the project site; therefore, they are not feasible and alternative mitigation has not been identified.

Response to Comment E-8. Refer to Response to Comment E-7.

Response to Comment E-9. Mitigation Measure 4.2.6.3A already provides for preferential parking for alternative fueled cars. This mitigation located in the Draft EIR, Section 4.2 Air Quality, pages 4.2-26, 4.2-27, and 4.2-28 reads as follows with changes proposed in Section 3.0 Errata in the Final EIR to address other commentor concerns:

4.2.6.3A Prior to issuance of the first building permit, building and site plan designs shall ensure that the project's energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of 20 percent. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and review and approved by the City. The following ~~Any combination of design features, including but not limited to the following list, may shall~~ be used to fulfill this requirement provided that the total increase in energy efficiency meets or exceeds 20 percent:

- o *Lease/purchase documents shall ~~identify that~~ require tenants ~~are encouraged to promote~~ provide the following:*
 - *Provision of preferential parking for EV and CNG vehicles.*

This comment also suggests that the parking lot be required to include porous materials for groundwater recharge. As identified in Table 1.B on page 1-34 of the Draft EIR, impacts associated with groundwater supplies were determined to be less than significant and no mitigation is required. Therefore, there would be no nexus to require this mitigation measure.

Response to Comment E-10. This comment suggests that the World Logistics Project identified as a cumulative project in the Draft EIR was not included in the analysis of the proposed project. The City acknowledges that the World Logistics Project 41,500,000 SF high cube warehouse uses (refer to Table 2.C in Section 2.7 Cumulative Projects on page 2-38 of the Draft EIR). This cumulative project was considered along with the other cumulative projects in Table 2.C in the consideration of traffic impacts on the highway mainline, air quality, greenhouse gas emissions, and loss of agricultural lands in the Draft EIR.

Response to Comment E-11. The ProLogis project is contained in the Draft EIR. It is referred to as the Eucalyptus Industrial Park, cumulative project number 67, shown in Table 2.A and Figure 2.1.

Table 2.C of the Draft EIR identifies the Eucalyptus Industrial Park as A-67, while Figure 2.1 identifies it as M-67. The project is in the City, so the table entry will be modified as follows and as indicated in Section 3.0 Errata in the Final EIR.

Draft EIR, Section 2.7 Cumulative Projects, Table 2.C, Page 34

<u>AM-67</u>	Eucalyptus Industrial Park	East of Moreno Beach Drive, west of Quincy channel, south of SR-60	2,244,638 SF of high cube warehouse uses
--------------	----------------------------	--	--

Response to Comment E-12. The nearest schools to the project site are located approximately one mile to the east and northeast of the project site. Because the primary truck route between the project and I-215 will be Harley Knox Boulevard to the west, the trucks will not be passing by a school. In addition, the project is in an area of the City that has been zoned for industrial uses and the proposed project is consistent with this zoning. This sensitive receptor is a residence located at Patterson Avenue and Harley Knox Boulevard in the City of Perris. It should be noted that the entire area surrounding and adjacent to the proposed project has been previously designated and zoned by the City for future industrial uses. Similarly, the entire area surrounding and adjacent to Harley Knox Boulevard between Perris Boulevard and I-215 has been previously designated and zoned by the City of Perris for future commercial and industrial uses. This means that the single residence located

adjacent to Harley Knox Boulevard in the study area is a legally nonconforming land use. Because this residence on Harley Knox Boulevard is a legally nonconforming use, it is highly unlikely that the residence will exist in the area in the future. Thus, in light of these factors, it is highly unlikely that the currently existing residential use will be exposed to diesel over the course of a long period of time, such as a 70 year exposure used to calculate health risks from diesel particulates.

Response to Comment E-13. The project will not impact the health of students walking or riding their bicycles to school because the majority of the residential areas are located to the east of Perris Boulevard and north and northwest and northeast of Perris Boulevard where it passes over the Perris Valley Storm Drain. This area is more than one mile north of the project site. As noted above the primary trucking route will be Harley Knox Boulevard to the west to the I-215 which does not pass by any schools.

Response to Comment E-14. See Response to Comments E-13. There are no sensitive receptors in close proximity to the project site that would be impacted during project construction or by project truck use of the local roadway system. Nonetheless, the EIR contains a measure requiring a 200 foot buffer between construction staging areas and sensitive receptors (Draft EIR Mitigation Measure 4.2.6.1A, page 4.2-21).

Response to Comment E-15. A *Health Risk Assessment (HRA) VIP Moreno Valley*, LSA Associates, Inc., March 2012 was prepared for the proposed project and included in Appendix D-2 to the Draft EIR. The HRA examined the short-term and long-term potential health effects from project-related emissions of toxic air pollutants (TAP) in the exhaust of diesel-powered delivery trucks on existing surrounding sensitive receptors, including single- and multifamily residences. Onsite workers will be protected by the requirements established by the Occupational Safety and Health Administration (OSHA) and are not considered sensitive receptors in accordance to the California Air Resources Board (CARB). The CARB defines "sensitive" land uses, as homes, medical facilities, daycare centers, schools, and playgrounds.

According to the HRA prepared for the proposed project, "Toxic air pollution emissions associated with the project would occur from a variety of activities related to the project operations. The only significant amount of TAP known to be released from the proposed distribution facility is contained in the exhaust of project-related vehicles. While there may be other toxic air pollutants in use on site, compliance with City, SCAQMD, State, and federal handling regulations will keep those emissions below a level of significance.

Page 13 of the HRA states, "As evaluated in the air quality/health risk assessment, practical procedures will be taken for the onsite operations. The results of the conservative modeling are shown in Table C for carcinogenic and chronic inhalation health risks at the sensitive receptors. Even with the conservative modeling technique used (assuming that an individual stays outdoors at his or her residence 24 hours per day for 70 years, which is the State-required period of time that all HRAs must assess), the nearest sensitive receptor would be exposed to an unmitigated inhalation cancer risk of no more than 3.5 in 1 million, less than the threshold of 10 in a million." The highest worker exposure occurs at the facility to the west of the project, at the corner of Indian Street and E. Oleander Avenue. The unmitigated inhalation cancer risk at that facility will be no more than 0.36 in 1 million, also less than the threshold of 10 in a million. The Chronic Hazard Index would be 0.0022, less than the threshold of 1.0. These risk levels are much higher than are actually expected to occur. No significant health risk would occur from project-related truck traffic, and no mitigation is necessary."

Table C: Long-Term Health Risk Levels from Project Operations

Location	Maximum Cancer Risk (risk per million)	Maximum Noncancer Risk (risk per million)
SCAQMD Threshold	10	1
School 1	0.11	0.000069
School 2	0.79	0.00050
School 3	0.26	0.00016
Nearest Residential to the north	6.6	0.0041
Nearest Residential to the east	5.0	0.0031
Nearest Residential to the south	1.2	0.00074
Workers at facility to the west	4.5	0.0029
Significant?	No	No

Source: LSA Associates, Inc., March 2012.

Response to Comment E-16. The Draft EIR, Section 4.2 Air Quality contains the following Mitigation Measure 4.2.6.1K that provides for electric or alternative fuel construction equipment and forklifts and Section 4.3 Greenhouse Gas Emissions and Climate Change contains Mitigation Measure 4.2.6.3A which specifies electric trucks and yard trucks in Mitigation Measure 4.2.6.3A. Changes proposed to Mitigation Measure 4.2.6.1K are provided in Section 3.0 Errata in the Final EIR to address other commentor concerns. The measures are as follows:

4.2.6.1K Grading plans, construction specifications and bid documents shall also include the following notations:

- Off-road construction equipment shall utilize alternative fuels where feasible e.g., biodiesel fuel (a minimum of B20), natural gas (CNG), liquefied natural gas (LNG), propane, except for equipment where use of such fuels would void the equipment warranty;
- Use electric construction equipment where feasible.
- All forklifts used during construction and in subsequent operation of the project shall be electric or natural gas powered.

4.2.6.3A Prior to issuance of the first building permit, building and site plan designs shall ensure that the project's energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of 20 percent. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and review and approved by the City. ~~The following Any combination of design features, including but not limited to the following list, may shall be used to fulfill this requirement provided that the total increase in energy efficiency meets or exceeds 20 percent:~~

- Lease/purchase documents shall ~~identify that~~ require tenants ~~are encouraged to promote provide~~ the following:
 - Inclusion of electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets.
 - Use of electrical equipment (instead of gasoline-powered equipment) for landscape maintenance.
 - Use of electric (instead of diesel or gasoline-powered) yard trucks.

Response to Comment E-17. The Draft EIR, Section 4.4.6.1 Short-Term Construction Noise Impacts page 4.4-17 states "The nearest noise-sensitive receptor locations to the project site are

existing residences approximately 1,000 feet to the north. These nearest residents may be subject to short-term, intermittent, maximum noise reaching 65 dBA L_{max} , generated by construction activities on the project site. The ambient noise associated with vehicular traffic and industrial uses in the project area would mask the majority of the construction noise from the project site. No significant construction noise impacts would occur if construction of the proposed project would occur within the permitted hours of 6:00 a.m. to 8:00 p.m. of any working day, and within the permitted hours of 7:00 a.m. and 8:00 p.m. on weekends and federal holidays. Compliance with the construction hours specified in the City's Municipal Code would result in construction noise impacts that are less than significant. While impacts would be considered less than significant as long as construction activities occur within the designated hours identified in the City's Municipal Code, mitigation measures [Mitigation Measures 4.4.6A – 4.4.6D] have been identified to reduce the noise levels that would expose nearby sensitive receptors to noise levels in excess of the City's noise standards."

The noise impact analysis for the proposed project (*Noise Impact Analysis VIP Moreno Valley*, LSA Associates, Inc., March 2012, Appendix F to the Draft EIR) evaluated the traffic noise impact in terms of CNEL and the on-site operations noise impact comparing to the City's Municipal Code noise standards. No exceedance or violation of the noise standards was found and no significant long-term noise impacts would occur. The project site is surrounded by vacant land or other non-noise-sensitive land uses such as industrial or commercial uses. Although the City's Municipal Code states that the noise standards shall apply "when measured at a distance of 200 feet or more from the real property line of the source of the sound if the sound occurs on privately owned property, or from the source of the sound, if the sound occurs on public right-of-way, public space or other publicly owned property", in this case, evaluating the potential noise levels at the property line of the nearest noise-sensitive land uses (i.e., residences) would adequately determine the project's potential noise impacts.

As indicated in the noise impact study, no noise barriers would be required during project construction nor are they required during operation of the proposed project. The proposed project will comply with all mitigation measures identified and comply with applicable federal, State, and City guidelines.

Response to Comment E-18. A Traffic Impact Analysis (*Traffic Study VIP Moreno Valley*, LSA Associates, Inc., April 9, 2012) was prepared for the proposed project that analyzed the proposed project's impacts to area roadways during construction and operation of the project. Draft EIR Section 4.5 Traffic and Circulation, pages 4.5-1 – 4.5-28 analyzed the construction and operational impacts to not only area roadways but on the freeway system as well. It was determined that the proposed project would be expected to generate 327 passenger car equivalent (PCE) trips in the a.m. peak hour, 388 PCE trips in the p.m. peak hour, and 5,052 daily PCE trips when built. It was determined that the proposed project upon build out in the year 2013 would have impacts that are cumulative resulting in exceeding the established LOS standard at the following intersections:

- I-215 Southbound Ramps/Harley Knox Boulevard (a.m. and p.m. peak hours);
- I-215 Northbound Ramps/Harley Knox Boulevard (a.m. and p.m. peak hours);
- Indian Street/South Project Driveway (p.m. peak hour);
- Indian Street/Harley Knox Boulevard (a.m. and p.m. peak hours);
- Perris Boulevard/Gentian Avenue (a.m. and p.m. peak hours);
- Perris Boulevard/Iris Avenue (a.m. and p.m. peak hours);
- Perris Boulevard/Krameria Avenue (a.m. and p.m. peak hours);
- Perris Boulevard/Nandina Avenue (a.m. and p.m. peak hours);
- Perris Boulevard/Grove View Road (a.m. and p.m. peak hours);

- Perris Boulevard/South Project Driveway (a.m. and p.m. peak hours); and
- Perris Boulevard/Harley Knox Boulevard (a.m. and p.m. peak hours).

This is a significant impact and mitigation was provided. It is important to note that ten of the eleven intersections also operate at unsatisfactory levels of service under year 2013 cumulative without the project conditions. The unsatisfactory level of service at the Indian Street/South Project Driveway intersection is considered to be a project-specific impact.

The air quality/health risk assessment has discussed the number of truck trips per day that will visit the project site. Trip length assumptions and the truck routes have also been identified in the analysis. Figure 3 of the Health Risk Assessment report (Appendix D-2: *Health Risk Assessment VIP Moreno Valley*, LSA Associates, Inc., March 2012) shows the location of all the truck emissions sources modeled. As described in the report; “An approximate representation of the roadway was obtained by placing a number of volume sources at equal intervals along the roads on site and far enough off site to characterize the emissions at the sensitive receptors near the project site. For other sensitive receptors further from the project site but near the roads the trucks will travel, it is assumed that the health risk levels from the project traffic will be low compared to the total risk from all existing road traffic.”

The Air Quality Study Table I page 26 Appendix D of the Draft EIR indicates the average trip length is 17 miles. This section of the Air Quality study is provided as follows:

5.2.1 Long-Term Project Operational Emissions

Long-term air pollutant emission impacts are those associated with stationary sources and mobile sources involving any project-related changes. The proposed project would result in a net increase in the number of employees in the project area; therefore, the proposed project would result in net increases in both stationary and mobile source emissions. The stationary source emissions would come from additional natural gas consumption for on-site buildings and electricity for the lighting in the buildings and at the parking area. The proposed project is a warehouse/distribution in the Inland Empire area of Southern California. Average truck trip length in this area has been shown to be greater than the default trip length in the CalEEMod model. Table I lists the potential origin and destination points for the truck trips that would be associated with the proposed project. The average trip length for the employee commute is assumed to be 17 mi. This is also greater than the default commute trip length included in the CalEEMod model for the Inland Empire area.

Table I: Average Truck Trips Lengths

Truck Route	Route Length (miles)	Percentage of Trucks on Route
East on State Route 60 to Basin Boundary	30	10%
Port of Los Angeles/Long Beach	80	50%
South on the I-215 to San Diego	50	20%
Inland Empire (i.e., Ontario, Mira Loma, Fontana)	50	10%
Perris Destinations	40	5%
Moreno Valley Destinations	20	5%
Average Truck Trip (54% of trips)	61	

Source: Project Plans

Response to Comment E-19. The trip generation for daily trucks is listed in Table 4.5.D in the Draft EIR, Section 4.5.3.1 Project Trip Generation, page 4.5-14. As shown in Table 4.5.D, the total number of daily trips (total raw trucks) is 1,475. The number of daily truck trips is based on NAIOP rates for High-Cube Warehouse that were approved by the City of Moreno Valley.

Response to Comment E-20. Freeway segment and merge/diverge analysis locations are based on Caltrans guidelines which requires analysis to a State highway facility if a project generates over 100 peak hour trips¹. The project generates over 100 peak hour trips at the Interstate 215/Harley Knox Boulevard interchange and was included in the Draft EIR. Project traffic at freeway segments on SR-60 are less than 100 peak hour trips and were not included in the Draft EIR.

Regarding commenters opinion that payment of DIF and TUMF is inadequate mitigation, please refer to Response to Comment D-82. The payment of DIF and TUMF fees is considered the appropriate mechanism for the project to contribute to future roadway improvements, resulting in full and complete mitigation of project-specific impacts.

Response to Comment E-21. The commentor opines that the project site should not be discsed or graded for at least six months prior to doing the burrowing owl survey. Mitigation Measures BIO-1 through BIO-4 require pre-construction surveys and establish what actions must be taken if the burrowing owl is found on-site during the pre-construction surveys that are in accordance with the Burrowing Owl Consortium 1993 Burrowing Owl Survey Protocol and Mitigation Guidelines² and referred to the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) survey instructions³ to complete the pre-construction burrowing owl survey.

Response to Comment E-22. This comment states that the Final EIR will be inadequate unless the concerns and issues identified in the comment letter are addressed within the document. This comment does not raise any specific issue associated with the Draft EIR. In addition, any concerns and issues identified in the comment letter have been addressed through Responses E-1 through E-62 of the Final EIR. No further response is required.

Response to Comment E-23. Draft EIR Section 4.3 Climate Change and Greenhouse Gas Emissions, pages 4.3-1 – 4.3-27 provides an analysis of the proposed project's impact on greenhouse gas emissions and climate change. The analysis is based on the *Greenhouse Gas Emissions and Global Climate Change Study*, LSA Associates, Inc., December 2011 included as an Appendix D in the Draft EIR. Responses to Comments E-24 through E-54 include specific responses to the commentor's assertions that the Draft EIR did not thoroughly evaluate alternatives and mitigation measures that would reduce greenhouse gas emissions. Where appropriate additional mitigation measures have been add to the Section 3.0 Errata in the Final EIR.

Response to Comment E-24. The commentor opines that global warming poses a grave threat to California and the Draft EIR is obligated to discuss the threats posed by greenhouse gas emissions for the public and decision makers. Page 4.3-1 through 4.3-3 in the Draft EIR (Section 4.3 Climate Change and Greenhouse Gas Emissions) already established the existing background information related to climate change as requested in this comment.

The commenter suggests that there is consensus among scientists regarding the link between GHG and global warming. However, there is still considerable debate about the existence of anthropogenic global warming, and about the long term environmental effects of anthropogenic global warming if in fact such warming is occurring and will occur long term. (See, e.g., *U.S. Senate Minority Report; More Than 700 International Scientists Dissent Over Man-Made Global Warming Claims*; March 16, 2009.)

¹ *Guide for the Preparation of Traffic Impact Studies*, State of California Department of Transportation, December 2002, page 2.

² <http://www2.ucsc.edu/scpbrg/burrowingowls.htm>.

³ http://www.tlma.co.riverside.ca.us/epd/documents/survey_protocols/burrowing_owl_survey_instructions.pdf.

This body of scientific literature argues that (i) there is no scientific consensus on the existence of anthropogenic global warming; (ii) that the Intergovernmental Panel on Climate Change (IPCC) literature is deeply flawed; (iii) that scientists and research grant funding sources have deliberately ignored other possible explanations in global temperature variations.

In addition, quantitative data published by the State Air Resources Board and the IPCC demonstrates that even if California achieved the specified AB 32 greenhouse reduction goals, that this may have no effect on climate increases based on greenhouse gas emissions because emissions from China, Russia, Indonesia and other developing countries have and will greatly surpass the emissions of California.

Response to Comment E-25. Draft EIR Section 4.3 Climate Change and Greenhouse Gas Emissions, pages 4.3-1 – 4.3-27 provides an analysis of the proposed project's impact on greenhouse gas emissions and climate change. The analysis is based on the *Greenhouse Gas Emissions and Global Climate Change Study*, LSA Associates, Inc., December 2011 included as an Appendix D in the Draft EIR. In addition, the commentor asserts that the "ecological implications of its actions" must be discussed. Also refer to Response to Comment E-38 for an explanation on a recent court case regarding global climate change. As set forth in Response to Comment E-38, the courts have confirmed the longstanding tenant of CEQA that impacts from the environment onto a project need not be analyzed.

Response to Comment E-26. Please see Responses to Comments E-25, E-27, and E-38.

Response to Comment E-27. The commentor is providing information relating to the scientific background on climate change and global warming. See Response to Comment E-24 regarding an alternative view of greenhouse gas emissions and the effect of such emissions.

Response to Comment E-28. Section 4.3 Climate Change and Greenhouse Gas Emissions, Subsection 4.3.2 Regulatory Setting in the Draft EIR pages 4.3-7 through 4.3-11 contains a discussion on the various federal, state, local and City laws, regulations and policies concerning greenhouse gas.

Response to Comment E-29. The greenhouse gas impact study (*Greenhouse Gas Emissions and Global Climate Change Study*, LSA Associates, Inc., December 2011) provided emissions from both construction and operation periods. During the construction period, emissions from both equipment exhaust and other area sources were calculated. During the operational period, emissions associated with vehicular (including automobiles and trucks) trips, water and energy usage, waste treatment, and other known sources have been calculated and identified in the study.

Response to Comment E-30. Please see Response to Comment E-29. All known emissions during construction and operations of the proposed project have been identified and calculated.

Response to Comment E-31. Please see Response to Comment E-29. All known emissions during construction and operations of the proposed project have been identified and calculated.

Response to Comment E-32. Please see Response to Comment E-29. All known emissions during construction and operations of the proposed project have been identified and calculated. If the commentor is suggesting that an exhaustive "life-cycle" inventory of the project's greenhouse gas

emissions be prepared, the State Office of Planning and Research provided guidance on this issue and clarified that a life-cycle analysis is not required.¹

Response to Comment E-33. Please see Response to Comment E-29. All known emissions during construction and operations of the proposed project have been identified and calculated.

Response to Comment E-34. Please see the Response to Comment E-29. All known emissions during construction and operations of the proposed project have been identified and calculated. The preparer of the greenhouse gas impact study has followed the guidelines provided by the OPR and CAPCOA and has provided an adequate analysis. It is the City's opinion that it has disclosed the impacts of the proposed project adequately and mitigated the impacts of greenhouse gas emissions where applicable (Draft EIR Section 4.3 Climate Change and Greenhouse Gas Emissions, pages 4.3-1 – 4.3-27).

Response to Comment E-35. The commentor points out that existing conditions must be utilized as the environmental baseline throughout the Draft EIR. The Draft EIR does just this by calculating and presenting the air pollution and greenhouse gas emissions attributable to the proposed project. Because there is currently no land use activity on the project site, existing baseline emissions are zero. Consequently, the calculated emissions represent the emissions associated with the project.

Response to Comment E-36. The project will not be built over a long period of time. There is no phasing proposed with the development. The commentor is confused, the project is not a planned community, it is an approximately 1,616,133 square feet of distribution warehouse (refer to Draft EIR, Section 3.0 Project Description). There is no reason to evaluate the emissions of the proposed project over five year increments since the building will be built all within the same year.

Response to Comment E-37. It is the commentor's opinion that the Draft EIR does not provide a complete inventory of impacts. The Draft EIR evaluated the impacts of the project on air quality (Section 4.2) and greenhouse gas emissions and global climate change (Section 4.3). In addition a full air quality study and greenhouse gas emissions study were prepared for the proposed project and included in their entirety in the Appendix to the Draft EIR. No further response is required.

Response to Comment E-38. According to the greenhouse gas impact study (*Greenhouse Gas Emissions and Global Climate Change Study*, LSA Associates, Inc., December 2011), "*Global climate change is the observed increase in the average temperature of the Earth's atmosphere and oceans along with other significant changes in climate (such as precipitation or wind) that last for an extended period of time. The term "global climate change" is often used interchangeably with the term "global warming," but "global climate change" is preferred to "global warming" because it helps convey that there are other changes in addition to rising temperatures.*" The Draft EIR did analyze the project's effects on greenhouse gas emissions which is a component of global climate change or global warming (Section 4.3 Climate Change and Greenhouse Gas Emissions, pages 4.3-1 – 4.3-27).

In addition, the California requires mandatory measures to be implemented on all new construction projects that consist of a wide array of green measures concerning project site design, water use reduction, improvement of indoor air quality, and conservation of materials and resources. The Cal Green Building Code refers to Title 24, Part 6 compliance with respect to energy efficiency; however, it encourages 15 percent energy use reduction over the required in Part 6. The Cal Green Code prescribes a wide array of measures that would directly and indirectly result in reduction of GHG

¹ *Transmittal of the Governor's Office of Planning and Research's Proposed SB97 CEQA Guidelines Amendments to the Natural Resources Agency*, California Governor's Office of Planning and Research, April 13, 2009, page 2.

emissions from the Business as Usual Scenario (California Building Code). The mandatory measures that are applicable to nonresidential projects include site selection, energy efficiency, water efficiency, materials conservation and resource efficiency, and environmental quality measures.

If the commentor is suggesting that the Draft EIR should analyze global warming on the proposed project there is a recent CEQA Case *Ballona Wetlands Land Trust v. City of Los Angeles and Ballona Ecosystem Education Project v City of Los Angeles*, No.B231965 (Cal. Ct. App 2d Dist., November 9, 2011) where the opponents claimed that the EIR was inadequate because it did not analyze the effects of sea rise due to global warming on the project. The Court held that CEQA did not require the EIR to analyze this risk, concluding that “the purpose of an EIR is to identify the environmental effects of the project on the environment and not the significant effects of the environment on the project.” The court reasoned: “[w]e believe that identifying the environmental effects of attracting development and people to an area is consistent with CEQA’s legislative purpose and statutory requirements, but identifying the effects on the project and its users of locating the project in a particular environmental setting is neither consistent with CEQA’s legislative purpose nor required by CEQA statutes.” Therefore an analysis of the effects of global climate change on the project is not appropriate and is not required.

Response to Comment E-39. Refer to Response to Comment E-38.

Response to Comment E-40. Refer to Response to Comment E-38.

Response to Comment E-41. As stated in Response to Comment E-38, CEQA does not require that the effects of global climate change on the project and other environmental resources must be analyzed in the EIR. CEQA does require that the proposed project’s effects on greenhouse gas emissions and global climate change must be addressed. This analysis was provided in Section 4.3 Greenhouse Gas Emissions and Global Climate Change in the Draft EIR. The Draft EIR did analyze the significant effects on air quality (Section 4.2), water supply (Section 2.0), flood hazards (Section 2.0) and biological resources (Section 2.0) and provided mitigation to reduce those impacts where feasible.

Response to Comment E-42. The Draft EIR analyzed the cumulative effects of the project on greenhouse gas emissions (Section 4.3.7 Cumulative Impacts, page 4.3-26) and it was determined that *“While it is not possible to determine whether the project individually will have a significant impact on global warming or climate change, it will contribute to cumulative GHG emissions in California. Cumulatively, the build out of the proposed project would contribute approximately 0.044 metric tons of CO₂e per year, which is 0.009 percent of California’s existing total emissions for carbon dioxide, methane, and nitrous oxide (478 metric tons of CO₂e per year). The mitigation measures discussed above will likely reduce the project’s emissions of greenhouse gases; however, without the necessary science and analytical tools, it is not possible to determine with certainty whether the project’s emissions of greenhouse gases will be cumulatively considerable, within the meaning of CEQA Guidelines Sections 15065(a)(3) and 15130. The CARB is currently in the process of designing regulations to monitor, limit, and ultimately reduce California GHG emissions but there are as yet no adopted standards for assessing the significance of cumulative impacts from projects.*

Cumulatively, the emissions from electricity production would comprise approximately 3.4 percent of the project’s total CO₂e emissions. Water usage and solid waste disposal emissions comprise approximately 18 percent of the project’s total CO₂e emissions while the emissions from vehicle exhaust would comprise approximately 77 percent of the project’s total CO₂e emissions. The emissions from vehicle exhaust are controlled by the State and Federal governments and are outside the control of the City. The remaining CO₂e emissions are primarily associated with building systems. The proposed project is required to comply with existing State and Federal regulations regarding the energy efficiency

of buildings, appliances, and lighting, which would reduce the project's electricity demand. The new buildings constructed in accordance with current energy efficiency standards would be more energy efficient than older buildings.

With implementation of the strategies and programs described previously, the project is consistent with the strategies to reduce California's emissions to the levels proposed in Executive Order S-3-05. However, given the uncertainty of data and appropriate methodology to accurately analyze, and the inability to quantify the reduction achieved through implementation of strategies and programs previously identified, the proposed project's GHG emission contribution would result in a cumulative impact regarding global climate change and the cumulative impacts of the proposed project on global climate change are considered to be significant and unavoidable."

The Draft EIR did analyze the cumulative effects of the project on greenhouse gas emissions and determined the impacts on global climate change are considered to be significant and unavoidable.

Response to Comment E-43. To clarify, the project is not subject to NEPA and the environmental documentation that was completed is under CEQA. The findings or rulings under NEPA do not apply in this case; however, State CEQA Guidelines Section 15064(b) provides that "...the determination of whether a project may have a significant effect on the environment calls for careful judgment on the part of the public agency involved, based to the extent possible on scientific and factual data," and further, that an "ironclad definition of significant effect is not always possible because the significance of an activity may vary with the setting." The State CEQA Guidelines further indicate that even when thresholds are established, they may include "identifiable quantitative, qualitative or performance level of a particular environmental effect" (State CEQA Guidelines, Section 15064.7).

Furthermore, the Draft EIR page 4.3-26 as modified in this Final EIR, determined "*project-related GHG emissions and their contribution to global climate change impacts in the State are less than significant and less than cumulatively considerable on a project specific basis because: (1) the project's impacts alone would not cause or significantly contribute to global climate change, and (2) the project has no substantial effect on consumption of fuels or other energy resources, especially fossil fuels that contribute to GHG emissions when consumed.*

The Draft EIR (Section 4.3) made a determination that the proposed project would not conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases and no mitigation is required. However, it was determined that the proposed project would generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment and mitigation was proposed to reduce these project-specific effects to less than significant (Draft EIR, page 4.3-21 – 4.3-26).

It should be noted that any GHG emissions reductions achieved locally and within the State may be offset by emissions increases in developing countries such as Brazil, Russia, India and China. In the absence of worldwide reduction commitments that are fully funded, any project level reduction measures cannot assure that significant effects from greenhouse gas emissions will be fully mitigated because significant impacts from greenhouse gas emissions may occur even with implementation of the measures set forth in CARB's AB 32 Scoping Plan.

Response to Comment E-44. Refer to Response to Comment E-43.

Response to Comment E-45. Refer to Responses to Comments E-42 and E-43.

Response to Comment E-46. As the comment is the opinion of the commentator the City is not in the position nor is it reasonable to adopt a "zero" significance threshold. SCAQMD and other air quality

agencies agree that GHG and climate change should be assessed as a potentially significant “cumulative impact” rather than a “project-specific” impact. SCAQMD is considering the adoption of a numeric plan-level efficiency target of 6.6 MTCO₂E per service population.

The intent of CEQA is to determine the significant effects of a project on the environment and provide feasible and reasonable mitigation to reduce impacts to less than significant. In instances where the impact of the project cannot be reduced to less than significant and it is determined the impact is significant and unavoidable, the Lead Agency, must adopt a Statement of Overriding Considerations that finds (1) under Public Resources Code Section 21081(a)(3), and CEQA Guidelines Section 15091(a)(3), that specific economic, legal, social technological, or other considerations, including provisions of employment opportunities to highly trained workers make infeasible the mitigation measures or project alternatives identified in the Final EIR; and (2) under CEQA Guidelines section 15092(b), that the remaining significant effects are acceptable due to overriding concerns described in the CEQA Guidelines Section 15093. CEQA does have a provision as stated above that an impact can be significant and unavoidable if the City makes findings as to why it is willing to accept the significant impact; therefore, it was not CEQA’s intent to not allow any tolerance for impacts on the environment as long a good faith effort is made to reduce the impacts where reasonable.

Response to Comment E-47. See Response to Comment D-8. Mitigation Measure 4.2.6.3.A (Draft EIR page 4.2-26) requires “Any combination of design features, including but not limited to the following list, may be used to fulfill this requirement provided that the total increase in energy efficiency meets or exceeds 20 percent:” With implementation of this measure, the building will meet a 20% reduction in energy performance standard which will render greenhouse gas emissions impacts to a less than significant level on a project-specific basis and consistent with the intention of AB32. It should be noted, however, that many new mitigation measures have been added in the Final EIR. Please refer to the Table contained in Response to Comment D-45 regarding air quality operational mitigation measures as well as indicated in Section 3.0 Errata in the Final EIR.

Response to Comment E-48. Riverside Transit Authority (RTA) has an established bus route, No. 19, which services the project area and the site. The RTA has two stops one on either side of Perris Blvd. and Grove View Rd. From the project site the walk north along Perris Blvd. is approximately 0.2 mile to a stop at Perris Blvd and Nandina. There is another bus stop at 17800 Perris Blvd. approximately 0.1 mile from the project site. Therefore, the site is serviced by the RTA and no further actions are necessary. However, a bus bay has been included in the project design along the site’s Perris frontage.

The commentor is erroneously confusing this project which is a distribution warehouse with a mixed use or commercial project that would have residents living within the project area. It is not appropriate to include plazas and pedestrian and bicycle only streets within the project and to create routes that will allow residents to reach the commercial center, schools and parks by public transportation, bicycling and walking as suggested by the commentor. The project is not building transportation routes. The project is located on existing roadways, Perris Boulevard, Indian Street, and Grove View Road.

Response to Comment E-49. The commentor is erroneously confusing the proposed project, which is a high-cube logistics distribution warehouse, by inferring that it is a planned community with a residential component. Nonetheless, the warehouse building will be required to incorporate many green building techniques required as part of Mitigation Measures 4.2.6.3A-4.2.6.3B and 4.3.6.1A-4.3.6.1C.

Response to Comment E-50. The commentor is erroneously confusing the proposed project, which is a high-cube logistics distribution warehouse, by inferring that it is a residential project. Nonetheless,

please see the response to Comments E-29 and E-32. All known emissions during construction and operations of the proposed project have been identified and calculated (Draft EIR Section 4.3 Climate Change and Greenhouse Gas Emissions, pages 4.3-1 – 4.3-27).

Response to Comment E-51. See Response to Comments D-8 and E-47.

Feasible mitigation measures, including several identified in the list provided by the commentor, have been already included as mitigation for the project and are identified in the Draft EIR. In addition, the mitigation measures shown as “Incorporated” in the following Table have been added to the Final EIR (Section 3.0 Errata) as suggested by the commentor. The changes to the Draft EIR do not result in a significant impact and has no material effect on the findings of the EIR. The Table below contains each of the greenhouse gas reduction measures suggested for inclusion by the commentor and if it is already included, if will be added mitigation as part of the Final EIR, or if will not be included and why.

Suggested Mitigation Measure	Response
1. Analyzing and incorporating the U.S. Green Building Council's LEED (Leadership in Energy and Environmental Design) or comparable standards for energy efficient building during pre-design, design, construction, operations and management.	Incorporated. The project description states In recognition of the trend towards Green Building, the proposed project will pursue the Leadership in Energy and Environmental Design (LEED) Core & Shell rating program. LEED is a voluntary, consensus-based standard to support and certify successful green building design, construction, and operations.
2. Designing buildings for passive heating and cooling, and natural light, including building orientation, proper orientation and placement of windows, overhangs, skylights, etc.	Included. A similar mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-27.
3. Designing buildings for maximum energy efficiency including the maximum possible insulation, use of compact florescent or other low-energy lighting, use of energy efficient appliances, etc.	Included. A similar mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-27.
4. Reducing the use of pavement and impermeable surfaces.	Included where appropriate. Impermeable surfaces will be installed where appropriate but it is not feasible to use impermeable surfaces in the truck parking area since a soft permeable surface will not support the weight of a large truck.
5. Requiring water re-use systems.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.1C on page 4.3-25.
6. Installing light emitting diodes (LEDs) for traffic, street and other outdoor lighting.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.1A on page 4.3-24.
7. Limiting the hours of operation of outdoor lighting.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-27.
8. Maximizing water conservation measures in buildings and landscaping, using drought tolerant plants in lieu of turf, planting shade trees.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-27.
9. Ensure that the Project is fully served by full recycling and composting services.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3B on page 4.2-28.
10. Ensure that the Project's wastewater and solid waste will be treated in facilities where greenhouse gas emissions are minimized and captured.	Infeasible. The site is served by public entities for wastewater and solid waste, Neither the City nor the project proponent has control over those facilities.

RESPONSE TO COMMENTS, ERRATA AND MMRP
VIP Moreno Valley
City of Moreno Valley

Suggested Mitigation Measure	Response
11. Installing the maximum possible photovoltaic array on the building roofs and/or on the project site to generate all of the electricity required by the Project, and utilizing wind energy to the extent necessary and feasible.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.1A on page 4.3-24.
Mitigation Related to Construction	
1. Utilize recycled, low-carbon, and otherwise climate-friendly building materials such as salvaged and recycled-content materials for building, hard surfaces, and non-plant landscaping materials.	Included. A similar mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.1B on page 4.3-25.
2. Minimize, reuse, and recycle construction-related waste.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.1A on page 4.3-24.
3. Minimize grading, earth-moving, and other energy-intensive construction practices.	Infeasible. The entire site must be graded to accommodate the building structure and parking lot.
4. Landscape to preserve natural vegetation and maintain watershed integrity.	Infeasible. The site does not contain natural/native vegetation.
5. Utilize alternative fuels in construction equipment and require construction equipment to utilize the best available technology to reduce emissions.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measures 4.2.6.1B, 4.2.6.1I, and 4.2.6.1K on pages 4.2-21- 4.2.22.
6. Utilize recycled, low-carbon, and otherwise climate-friendly building materials such as salvaged and recycled-content materials for building, hard surfaces, and non-plant landscaping materials.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.1B on page 4.3-25.
Transportation Mitigation Measures	
1. Encourage and promote ride sharing programs through such methods as a specific percentage of parking spaces for ride sharing vehicles.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-27.
2. Create a car sharing program within the planned community;	Not required. The project is not a planned community. . As noted in Mitigation Measure 4.2.6.1K , documentation shall be provided to the City of Moreno Valley indicating that construction workers have been encouraged to carpool or otherwise reduce VMT to the greatest extent practical, including providing information on available park and ride programs.
3. Create a light vehicle network, such as a neighborhood electric vehicle (NEV) system.	Included. This suggested mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-27.
4. Provide necessary facilities and infrastructure to encourage residents to use low or zeroemission vehicles, for example, by developing electric vehicle charging facilities and conveniently located alternative fueling stations.	Included. A similar mitigation measure is already included in Section 4.2 Air Quality of the Draft EIR under Mitigation Measure 4.2.6.3A on page 4.2-27. The mitigation measure the commentor suggests relates to "residents". This project is a high-cube warehouse not a residential development.
5. Provide a shuttle service to public transit within and beyond the planned community.	Not required. The RTA has two stops one on either side of Perris Blvd. and Grove View Rd. From the project site the walk north along Perris Blvd. is approximately 0.2 mile to a stop at Perris Blvd and Nandina. There is another bus stop at 17800 Perris Blvd. approximately 0.1 mile from the project site. Therefore, the site is serviced by the RTA and no further actions are necessary. However, a bus bay has been included in the project design along the site's Perris frontage.

Suggested Mitigation Measure	Response
6. Incorporate bicycle lanes and routes into the planned community's street systems.	Not required. Bicycle access to and from the project will take place from the adjacent streets. In addition the project is not a planned community.

Response to Comment E-52. See the Table included in the Response to Comment E-51 under "Mitigation Related to Construction" Items 1-6.

Response to Comment E-53. See the Table included in the Response to Comment E-51 under "Transportation Mitigation Measures" Items 1-6.

Response to Comment E-54. The use of carbon offsets are infeasible because:

- The cited precedent is a negotiated settlement for a major oil refinery in Contra Costa County, rather than a warehouse development in Riverside County;
- The cited precedent was for the period prior to 2012;
- California has not established any generally applicable standards for requiring offsets for GHG emissions; and
- Most cities and counties in California have not required offsets for GHG emissions on projects of the scale of the proposed project. Since this is a cumulative rather than a project level impact, mitigation for the cumulative level impact will be ineffective unless it is applied to all the cumulative projects.

Using such carbon offsets to mitigate for cumulative impacts is fraught with uncertainty. As the comment implies ("... offsets purchased are real..."), but there is considerable controversy regarding whether offsets that are available today will actually mitigate this cumulative effect.

First, it requires an accurate measure of the emissions to be offset and the offsets to be provided. That calculation turns out to be riddled with uncertainty on both ends. As noted above in the example cited by the commenter, this initial offset of \$7 million for the Rodeo refinery was later reduced to \$4.4 million due to revised calculations of GHG emissions. The UN's Intergovernmental Panel on Climate Change found a margin of error of 10% with measuring emissions from making cement or fertilizer; 60% with the oil, gas and coal industries; and 100% with some agricultural processes.

Second, the provision of offsets requires an accurate measure of the carbon saved elsewhere. Most of the earliest offset projects involved planting trees, which naturally ingest carbon, a complex and unpredictable process which forbids accurate measurement.

Finally, the very idea of offsetting relies on what is known as additionally - evidence that a carbon reduction would not have occurred in the natural order of commercial life. For example, one of the biggest UK companies that sells offsets, Climate Care, distributed 10,000 energy-efficient light bulbs in a South African township; offered the carbon reductions as offsets; and then discovered that an energy company was distributing the same kind of light bulbs free to masses of customers, including their township, so the reduction would have happened anyway.

To accurately calculate the amount of credit for each of the above actions, the offset program must make a number of critical assumptions:

- What is the baseline of emissions for the existing facilities that would be retrofitted to reduce their energy consumption? Would they ultimately be retrofitted in any case, thus limiting the actual resulting reduction in GHG emissions?
- Is the development of the alternative energy source actually dependent on the external funding provided by the offset? Or is the alternative energy developer simply achieving another subsidy?
- How much extra energy (and GHG emissions) is required to construct the alternative energy facility? What period of time should this be amortized over? For example, the development of the California High Speed Rail Project is estimated to reduce energy consumption in the long run. However, the extra energy involved with construction is estimated to have a 40 year payback.

As such, the actual amount of mitigation provided by an offset program can be speculative, based upon the actual performance of the program.

While the above cited issues with offsets are problematic, even if they are successful, they are based upon the assumption that a 1:1 reduction in emissions will actually result in the same reduction in global CO₂ values. This static analysis fails to take into account the dynamic nature of energy consumption worldwide. When energy consumption (a proxy for GHG emissions) is reduced in one location, there are powerful economic reasons to assert that the same energy consumption (GHG emissions) will simply be shifted to another location.

There is a global marketplace for fossil fuel energy based upon a market between buyers and sellers. The sellers, those who own the sources and production of fossil fuel energy, have a powerful economic interest to keep and increase their income stream from the production of fossil fuels.

To the extent that the actions cited above as potential offset measures, in combination with other conservation measures, reduce the demand for fossil fuels in the countries where they are implemented, the owners of these fossil fuel supplies will still want to preserve and enhance their income as much as possible. And there is a large unmet need (unmet as defined by consumer actions) for increased energy consumption in developing countries. For example the average annual energy consumption of a citizen of China or sub-Saharan Africa, at 4.5 metric tons, is far less than that of the average US citizen, at 20 metric tons. To the extent that the US and other countries reduce energy consumption based upon energy efficiency measures, the owners of fossil fuel resources will seek to sell the same energy, perhaps at a lower price, to the less developed countries. If the energy is sold at a lower price, then more energy would need to be sold to generate the same income, and the resulting energy consumption and GHG emissions could actually increase.

There is uncertainty regarding the efficacy, reliability and legal standing of carbon off-sets at this time. For this reason, such mitigation is considered to be infeasible.

Response to Comment E-55. The commentor is correct in stating that the EIR must contain a “reasonable” [emphasis added] range of alternatives to the proposed project that avoid or lessen the significant impacts to the proposed project (Pub. Res. Code §21002; CEQA Guidelines §§ 15002(a)(3), 15021(a)(2), 15126.6(d)). According to CEQA Guidelines §15126.6(a) “[A]n EIR need not consider every conceivable alternative to a project. An EIR is not required to consider alternatives which are infeasible. The lead agency is responsible for selecting a range of project alternatives for examination and must publicly disclose its reasoning for selecting those alternatives. There is no ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of

reason. (Citizens of Goleta Valley v. Board of Supervisors (1990) 52 Cal.3d 553 and Laurel Heights Improvement Association v. Regents of the University of California (1988) 47 Cal.3d 376).”

The Draft EIR does include an analysis of a reasonable range of alternatives to the proposed project (Section 6.0 Alternatives, pages. 6-1 – 6-33) in compliance with CEQA. The Draft EIR discusses the No Project Alternative (Section 6.3.2.1) and an Off-Site Alternative (Section 6.3.2.4) as suggested by the commentor.

Response to Comment E-56. The commentor is misinterpreting the Draft EIR or has failed to understand that the proposed project is not a higher density mixed use commercial/residential project. The project analyzed in the Draft EIR is an industrial project (refer to Draft EIR Section 3.0 Project Description) which is consistent with the General Plan Designation of Business Park/Light Industrial. Zoning for the site and surrounding area in the City is governed by Specific Plan (SP) 208. SP 208, which is known as the Moreno Valley Industrial Area Plan, was originally adopted in 1989, amended in 2001 and 2002. The entire area surrounding the project site is zoned SP 208 which has planned the area for business park and industrial uses since 1989 (23 years). The area to the south in the City of Perris is also planned for industrial and commercial uses. Clearly, the Cities of Moreno Valley and Perris have planned this area for industrial/business park and commercial uses in their respective General Plans for years. The City has already determined the appropriate lands uses for the area and conducted the appropriate CEQA review for that determination. This project implements that prior determination consistent with the existing general plan and specific plan.

If the commentor is suggesting that a high density mixed use commercial/residential project be considered as an alternative to the proposed project, the Draft EIR Section 6.3.2.3, page 6-22 does include an analysis of Alternative 3 Mixed Use Commercial Office Center. A Mixed Commercial/Residential Alternative was analyzed in Section 6.2.3 and it was determined *[t]hat the mixed commercial/residential alternative would not meet the project objectives of providing new employment and revenue generation options in close proximity to local consumers to the same degree as the proposed project. The employment opportunities and economic benefits derived from the proposed project are superior to the Mixed Commercial/Residential Alternative. This alternative has been rejected because it would result in greater impacts and would not satisfy the basic City objectives for development of the project site.*

Also refer to Response to Comment D-96.

Response to Comment E-57. The Draft EIR does analyze the various alternatives impacts on greenhouse gas emissions (Table 6.G page 6-16) biological resources, water resources including water quality and water availability (Table 6.E page 6-16) and traffic (Table 6.C page 6-15). In addition, detailed analysis for each of the alternatives is proposed in Draft EIR Sections 6.3.1.1, 6.3.1.2, 6.3.1.3 and 6.3.1.4 on pages. 6-12 – 6-31 as it related to the environmental issues listed by the commentor. An agricultural alternative was not considered because the site has been planned by the City since 1987 for industrial land uses. In addition the current General Plan does not include any agricultural designations. The City allows agricultural uses in all land use designations as an interim use until such time as the land is developed per the vision identified in the General Plan. One of the goals stated in the City’s recent General Plan is the “...orderly conversion of agricultural lands.” Therefore, an agricultural use as an alternative is not a practical alternative that requires analysis. No further analysis is necessary and the comment does not change the conclusion in the Draft EIR.

Response to Comment E-58. This is the commentor’s opinion and is not relevant to the analysis in the Draft EIR. However, the Draft EIR, Section 3.0 Project Description, page 3-1, states that “*The proposed project site has been used historically for agricultural purposes but currently lies fallow. It*

was most recently used as a sod farm growing that ceased operating in August 2005.” The site has not been farmed over the last seven years.

Response to Comment E-59. A less dense alternative (which is to assume an alternative that considers a building of less square footage) is analyzed in the Draft EIR as Alternative 2. In this Alternative, warehouse uses would be reduced to 1,212,100 square feet on 71 acres. It was determined that Alternative 2 would be the environmentally superior alternative and it would have similar impacts as the proposed project on: agriculture and forestry resources, biological resources, cultural resources, geology and soils, hazards and hazardous materials, hydrology and water quality, mineral resources and recreation (Draft EIR Section 6.3.2.2 Alternative 2: Reduced Intensity , pages 6-17 – 6-22). It was concluded on page 6-21 that *[U]nder the Reduced Intensity Alternative, impacts related to short-term construction-related air quality would be similar to the proposed project as the same amount of land would be disturbed and the same mix of equipment would be utilized. Long-term operational-related air quality impacts would be reduced in magnitude when compared to the project but would remain significant and unavoidable. The decrease in warehouse uses would result in a reduction of permanent jobs that would be created. This alternative would have a reduced demand on public services and utilities and service systems. However, similar to the proposed project, the payment of fees and adherence to utility requirements would reduce these impacts to a less than significant level.*

Because of the decrease in vehicle trips achieved under this alternative, impacts to the operation of local roadways and intersections would be proportionally reduced from what was identified for the proposed project; however, long-term traffic impacts would remain significant and unavoidable. Construction-related noise would be similarly mitigated like the proposed project and would remain less than significant. Water use for this alternative would be less than the proposed project and would generate less wastewater and solid waste. Under this alternative, the proposed project objectives are met and warehouse uses would still be built, but on a smaller scale.

As stated above, the Reduced Intensity Alternative would reduce the intensity of some impacts of the proposed project. However; loss of farmland, long-term air quality, greenhouse gas emissions cumulative impacts, and long-term traffic impacts would remain significant and unavoidable. The Reduced Intensity Alternative is a reduction in actual size of the warehouse but the significant unavoidable impacts of the proposed project are not reduced to less than significant.

Additionally, the Reduced Intensity Alternative would not meet the following project objectives: “Provide a high density, high-quality large-scale industrial development to provide jobs for residents at a variety of income levels” and “Cluster industrial warehouse uses near efficient access points to the state highway system to reduce traffic congestion on surface streets and to reduce concomitant air pollutant emissions from vehicle sources reduces impacts to air quality, global climate change, and traffic.” This is due to the fact that reduced-intensity development patterns are in concept diametrically opposite of the highly dense form of development patterns that are characteristic of clustered development. Development of the project site in such an inefficient manner would result in negative effects such as sprawl leading to increased VMT and associated air pollution and greenhouse gas emissions.

Response to Comment E-60. The City has fully responded to the commentor’s concerns and comments and others who had submitted comments on the Draft EIR. The Final EIR is conformance with CEQA Guidelines §§ 15090, 15091, and 15132. In addition, the significant impacts of the proposed project have been analyzed in Section 4.1 through Section 4.5 in the Draft EIR and mitigation proposed for those impacts that were found to be significant. For those impacts for agriculture, air quality, greenhouse gas emissions, and traffic that were determined to be significant and unavoidable the City would have to adopt findings and a statement of overriding considerations

that the state the specific economic, legal, social technological, or other considerations, outweigh the significant unavoidable effects of the proposed project.

Response to Comment E-61. The City has included the Sierra Club on its mailing list for all future notices and documents regarding this project.

Response to Comment E-62. The commentor has attached various references. No response is required.

Moreno Valley, CA 92552

Notice of availability DEIR for the VIP Moreno Valley. Riv-215-PM 32.62

Dear Mr. Bradshaw,

We have completed our review for the above noted project which is a 1,616,133 square foot warehouse distribution building on a 71.13 net acre site. The building includes 268 dock high doors and 44,000 square feet of office area in four potential office locations. Located within the Moreno Valley Industrial Area Plan (SP 208) at the City’s southern boundary, between Perris Boulevard and Indian Street and between Grove View Road and the Perris Valley storm channel Tentative Parcel Map No. 36162 is proposed to combine four existing parcels into a single parcel for development of the 1.6 million square warehouse facilities.

1

As the owner and operator of the State Highway System (SHS), it is our responsibility to coordinate and consult with local jurisdictions when proposed development may impact our facilities. As the responsible agency under the California Environmental Quality Act (CEQA), it is also our responsibility to make recommendations to offset associated impacts with the proposed project. Although the project is under the jurisdiction of the City of Moreno Valley due to the Project’s potential impact to State facilities it is also subject to the policies and regulations that govern the SHS.

2

We recommend the following: however, additional comments maybe forth coming.

3

Traffic Forecasting

Appendix G- Traffic Study VIP Moreno Valley page 6, Under section “Existing Without Project Traffic Volumes” please use year 2007 for Caltrans AADT volume data which can be found online. This will keep the consistency in traffic volume projections.

4

Appendix G- Traffic Study VIP Moreno Valley page 7, Under section “Existing Without Project Traffic Volumes” please specify which year(s) have been used to determine the D and K factors derived from Caltrans data.

We appreciate the opportunity to offer comments concerning this project. If you have any questions regarding this letter, please contact Talvin Dennis at (909) 383-6908 or myself at (909) 383-4557 for assistance.

“Caltrans improves mobility across California”

Mr. Bradshaw

Community Planning/IGR-CEQA

"Caltrans improves mobility across California"

2.14 RESPONSE TO LETTER F

California Department of Transportation, District 8

Response to Comment F-1. The commentor has accurately summarized the general aspects of the proposed project.

Response to Comment F-2. The comment is introductory and states that the California Department of Transportation (Caltrans) is the owner and operator of the State Highway System as is a "responsible agency" pursuant to Public Resources Code Section 21070 for making recommendations to offset associated traffic impacts with the proposed project.

The comment is introductory in nature and outlines Caltrans' authority and role as a commenting agency. Caltrans' introduction in this comment is noted, and no further response is required.

Response to Comment F-3. Response to Comment F-3. The project Traffic Impact Analysis used 2009 Caltrans Annual Average Daily Traffic (AADT) volume data because it was the most current data available and was comparable to the 2007 AADT. In addition, 2007 counts for the intersection analysis were used because it was determined that the volumes in 2007 were significantly higher at some locations than in 2009 and would represent the worst-case scenario.

Response to Comment F-4. The project Traffic Impact Analysis used 2009 Caltrans data for K and D factors to be consistent with the 2009 Caltrans AADT volume data that was used in the analysis.

**SUBJECT: VIP Moreno Valley
Notice of Availability (NOA) of a
Draft Environmental Impact Report**

Dear Mr. Bradshaw:

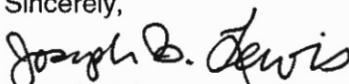

Thank you for the opportunity to review the Notice of Availability (NOA) for the above referenced project. The project proposes to develop approximately 1,616,133 square feet of distribution warehouse space on an approximately 71 acre site. The single building will be constructed with 264 vertical-lift dock-high roll-up doors on the long (north and south) sides of the building to allow access for the loading and unloading of products from diesel truck/trailers. The project is estimated to be constructed by the year 2013. Eastern Municipal Water District (EMWD) offers the following comments.

1

The subject project requires water, sewer and recycled water services from EMWD. The details of said service connection points will be further detailed in a separate document, known as EMWD's Plan of Service, which is still not yet developed by the project proponent. To that end, EMWD requires dialog with the project proponent, to develop the EMWD Plan of Service, as clarified in the attached letter.

2

Again, EMWD appreciates the opportunity to comment on this project. Please forward the Final Environmental Impact Report to the attention of Helen Stratton at the mailing address shown on page one. If you have questions concerning these comments, please feel free to contact Helen Stratton at 951 928-3777, Ext. 4545, or Eli Rodriguez at Ext. 4450.

Sincerely,

Joseph B. Lewis
Director of Engineering Services

Re. NOP of DEIR, VIP Moreno Valley, TPM 36162

Attn. Jeff Bradshaw, Associate Planner, City Of Moreno Valley

In order to receive water, sewer or recycled water service(s) from Eastern Municipal Water District (EMWD), the following information will be helpful to the project proponent:

EMWD requires beginning dialogue with the project proponent at an early stage in site design and development, via a one-hour complimentary Due Diligence meeting. To set up this meeting, the project proponent should complete a Project Questionnaire (form NBD-058) and submit to EMWD. To download this form or for additional information, please visit our "New Development Process" web page, under the "Businesses" tab, at www.emwd.org. This meeting will offer the following benefits:

1. Describe EMWD's development work-flow process
2. Identify project scope and parameters
3. Preliminary, high level review of the project within the context of existing infrastructure
4. Discuss potential candidacy for recycled water service

2

Following the Due Diligence meeting, to proceed with this project, a Plan Of Service (POS) will need to be developed by the developer's engineer, and reviewed/approved by EMWD prior to submitting improvement plans for Plan Check. The POS process will provide the following:

- 1- Technical evaluation of the project's preliminary design
- 2- Defined facility requirements, i.e. approved POS
- 3- Exception: for feasibility evaluation of a purchase acquisition, only a conceptual facilities assessment may be developed.

If you have questions or concerns, please do not hesitate to contact me.

Sincerely,

For

2.16 RESPONSE TO LETTER G

Eastern Municipal Water District

Response to Comment G-1. The commentor has accurately summarized the general aspects of the proposed project.

Response to Comment G-2. Eastern Municipal Water District is providing information to the City and applicant that the applicant must submit a Plan of Services prior to construction of the project. The attachment letter outlines what is required of the applicant prior to construction. The comment does not directly refer to the Draft EIR but is provided for informational purposes.

From: [Noelle Ronan@fws.gov](mailto:Noelle_Ronan@fws.gov) [mailto:Noelle_Ronan@fws.gov]
Sent: Monday, June 04, 2012 4:00 PM
To: Jeffrey Bradshaw
Cc: Clandry@wrcrca.org; [Karin Cleary-Rose@fws.gov](mailto:Karin_Cleary-Rose@fws.gov)
Subject: VIP Moreno Valley Draft Environmental Impact Report (DEIR) [FWS-WRIV-12B0233-12CPA0244]

Mr. Bradshaw,
The City of Moreno Valley submitted the above-mentioned DEIR to identify the proposed project's direct, indirect, and cumulative environmental impacts, to discuss alternatives, and to propose mitigation measures that avoid, minimize, or offset significant environmental impacts. The Service is providing the following comments as they relate to the project's consistency with the Western Riverside County Multiple Species Conservation Plan (MSHCP).

Focused surveys for special status plants and burrowing owls were conducted on the project site in 2009. We typically prefer that surveys for sensitive species are updated (i.e., no more than 1 year old) to demonstrate that the project is consistent with the MSHCP. However; given the disturbed condition of the project site (e.g., annual disking), we acknowledge that the focused surveys for sensitive plants and burrowing owls are sufficient.

1

We appreciate the inclusion of mitigation measures (Mitigation Measure BIO-1 through BIO-4) to avoid or minimize impacts to birds protected by the Migratory Bird Treaty Act (MBTA) and burrowing owls. Mitigation Measure BIO-3 specifies that if nesting special status avian species or burrowing owls occupy an area of disturbance, no construction activity will take place within 500 feet of an active nest/burrow until it has been determined that it is no longer active and all juveniles have fledged. In addition, we recommend that a biological monitor be present to monitor the effects of construction on any active nests and to ensure that there is no encroachment into the 500 foot nest buffer zones.

2

Thank you for the opportunity to review the DEIR. If you have any questions or comments please contact me at 760-322-2070 ext. 215.

Noelle Ronan
Fish and Wildlife Biologist
U.S. Fish and Wildlife Service
Palm Springs Fish and Wildlife Office

Palm Springs, CA 92262
760-322-2070 ext. 215

2.18 RESPONSE TO LETTER H

United States Fish and Wildlife Service

Response to Comment H-1. The City concurs with the United States Fish and Wildlife Service's conclusion that the site is disturbed and that updated focused surveys for sensitive plants and the burrowing owl are not necessary even if the original surveys are now 3 years old.

Response to Comment H-2. The United States Fish and Wildlife Service concurs with the mitigation in the Draft EIR for the burrowing owl and recommends that a biological monitor be present during construction to monitor any active nests to ensure that there is no encroachment into the 500 foot nest buffer zone. The City concurs with this recommendation and mitigation Measure BIO-3 has been amended as follows:

***Mitigation Measure BIO-3:** If nesting special status avian or burrowing owl species are determined to occupy a proposed area of disturbance a biological monitor will be present during construction to ensure no construction activity shall take place within 500 feet of an active nest/burrow until it has been determined by the biological monitor that the nest/burrow is no longer active, and all juveniles have fledged the nest/burrow.*

Attention: JEFF BRADSHAW

Ladies and Gentlemen:

Re: PM 36162 (PA 09-0012) + PP 09-0009

The District does not normally recommend conditions for land divisions or other land use cases in incorporated cities. The District also does not plan check city land use cases, or provide State Division of Real Estate letters or other flood hazard reports for such cases. District comments/recommendations for such cases are normally limited to items of specific interest to the District including District Master Drainage Plan facilities, other regional flood control and drainage facilities which could be considered a logical component or extension of a master plan system, and District Area Drainage Plan fees (development mitigation fees). In addition, information of a general nature is provided.

The District has not reviewed the proposed project in detail and the following checked comments do not in any way constitute or imply District approval or endorsement of the proposed project with respect to flood hazard, public health and safety or any other such issue:

- No comment.
- This project would not be impacted by District Master Drainage Plan facilities nor are other facilities of regional interest proposed.
- This project involves District Master Plan facilities. The District will accept ownership of such facilities on written request of the City. Facilities must be constructed to District standards, and District plan check and inspection will be required for District acceptance. Plan check, inspection and administrative fees will be required.
- This project proposes channels, storm drains 36 inches or larger in diameter or other facilities that could be considered regional in nature and/or a logical extension of the adopted Master Drainage Plan. The District would consider accepting ownership of such facilities on written request of the City. Facilities must be constructed to District standards, and District plan check and inspection will be required for District acceptance. Plan check, inspection and administrative fees will be required.
- This project is located within the limits of the District's Area Drainage Plan for which drainage fees have been adopted; applicable fees should be paid by cashier's check or money order only to the Flood Control District or City prior to issuance of grading permits. Fees to be paid should be at the rate in effect at the time of issuance of the actual permit.
- An encroachment permit shall be obtained for any construction related activities occurring within District right of way or facilities. For further information, contact the District's encroachment permit section at 951.955.1266.
- The District's previous comments are still valid.

GENERAL INFORMATION

This project may require a National Pollutant Discharge Elimination System (NPDES) permit from the State Water Resources Control Board. Clearance for grading, recordation or other final approval should not be given until the City has determined that the project has been granted a permit or is shown to be exempt.

If this project involves a Federal Emergency Management Agency (FEMA) mapped flood plain, then the City should require the applicant to provide all studies, calculations, plans and other information required to meet FEMA requirements, and should further require that the applicant obtain a Conditional Letter of Map Revision (CLOMR) prior to grading, recordation or other final approval of the project, and a Letter of Map Revision (LOMR) prior to occupancy.

If a natural watercourse or mapped flood plain is impacted by this project, the City should require the applicant to obtain a Section 1602 Agreement from the California Department of Fish and Game and a Clean Water Act Section 404 Permit from the U.S. Army Corps of Engineers, or written correspondence from these agencies indicating the project is exempt from these requirements. A Clean Water Act Section 401 Water Quality Certification may be required from the local California Regional Water Quality Control Board prior to issuance of the Corps 404 permit.

Very truly yours,

MEKBIB DEGAGA

2.20 RESPONSE TO LETTER I

Riverside County Flood Control and Water Conservation District

Response to Comment I-1. The City acknowledged that the previous comments that were provided to the City during the NOP comment period are still valid and are provided in the second page of the response letter and included in Appendix A to the Draft EIR. The comments do not reflect the analysis in the Draft EIR and provide the City with facts that relate to the construction of the project and the project's responsibility to meet the Riverside County Flood Control and Water Conservation District's requirements.

Response to Comment I-2. The City acknowledges the project involves the District's Master Plan of Facilities. Refer to Response to Comment I-1.

Response to Comment I-3. The City acknowledges the project is located in the District's Perris Valley Area Drainage Plan and fees must be paid to the District by the project proponent prior to the issuance of grading permits. Refer to Response to Comment I-1.

Response to Comment I-4. The City acknowledges the project proponent is required to obtain an encroachment permit for any construction in the District's right of way or facilities. Refer to Response to Comment I-1.

Dear Jeff Bradshaw:

The State Clearinghouse submitted the above named Draft EIR to selected state agencies for review. On the enclosed Document Details Report please note that the Clearinghouse has listed the state agencies that reviewed your document. The review period closed on June 4, 2012, and the comments from the responding agency (ies) is (are) enclosed. If this comment package is not in order, please notify the State Clearinghouse immediately. Please refer to the project's ten-digit State Clearinghouse number in future correspondence so that we may respond promptly.

Please note that Section 21104(c) of the California Public Resources Code states that:

"A responsible or other public agency shall only make substantive comments regarding those activities involved in a project which are within an area of expertise of the agency or which are required to be carried out or approved by the agency. Those comments shall be supported by specific documentation."

These comments are forwarded for use in preparing your final environmental document. Should you need more information or clarification of the enclosed comments, we recommend that you contact the commenting agency directly.

This letter acknowledges that you have complied with the State Clearinghouse review requirements for draft environmental documents, pursuant to the California Environmental Quality Act. Please contact the State Clearinghouse at (916) 445-0613 if you have any questions regarding the environmental review process.

Sincerely,

Scott Morgan

2.22 RESPONSE TO LETTER J

California Governor's Office of Planning and Research, State Clearinghouse

Response to Comment J-1. The City recognizes the receipt of comments from State agencies and the State Clearinghouse's acknowledgement that it has complied with review requirements for environmental documents.

3. EIR ERRATA

Any corrections to the Draft Environmental Impact Report (EIR) text and figures generated either from responses to comments or independently by the City, are stated in this section of the Final EIR. The Draft EIR text and figures have not been modified to reflect these EIR modifications.

These EIR errata are provided to clarify, refine, and provide supplemental information for the Starcrest Distribution Facility Project Draft EIR. Changes may be corrections or clarifications to the text and figures of the original Draft EIR. Other changes to the EIR clarify the analysis in the EIR based upon the information and concerns raised by commentors during the public review period. None of the information contained in these EIR modifications constitutes significant new information or changes to the analysis or conclusions of the Draft EIR.

The information included in this EIR erratum that resulted from the public comment process does not constitute substantial new information that requires recirculation of the Draft EIR. The California Environmental Quality Act (CEQA) Guidelines, Section 15088.5, states in part:

- (a) A lead agency is required to recirculate an EIR when significant new information is added to the EIR after public notice is given of the availability of the draft EIR for public review under Section 15087 but before certification. As used in this section, the term “information” can include changes in the project or environmental setting as well as additional data or other information. New information added to an EIR is not “significant” unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project’s proponents have declined to implement. “Significant new information” requiring recirculation includes, for example, a disclosure showing that:
 - (1) A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.
 - (2) A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.
 - (3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project, but the project’s proponents decline to adopt it.
 - (4) The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.
- (b) Recirculation is not required where the new information added to the EIR merely clarifies or amplifies or makes insignificant modifications in an adequate EIR.

The changes to the Draft EIR included in these EIR modifications do not constitute “significant” new information because:

No new significant environmental impact would result from the project or from a new mitigation measure;

There is no substantial increase in the severity of an environmental impact that would result unless mitigation measures are adopted that reduce the identified significant impacts to a level of insignificance;

No feasible project alternative or mitigation measure considerably different from others previously analyzed has been proposed or identified that would clearly lessen the significant environmental impacts of the project; and

The Draft EIR is not fundamentally or basically inadequate or conclusory in nature such that meaningful public review and comment were precluded.

Therefore, recirculation of the Draft EIR is not required because the new information added to the EIR through these modifications clarifies or amplifies information already provided or makes insignificant modifications to the already adequate Draft EIR.

For simplicity, the EIR modifications contained in the following pages are in the same order as the information appears in the Draft EIR. Changes in text are signified by strikeouts (~~strikeouts~~) where text has been removed and by double underlining (underline) where text has been added. The applicable page numbers from the Draft EIR are also provided where necessary for easy reference.

Draft EIR, Section 1.0 Executive Summary, Table 1.B: VIP Moreno Valley - Environmental Summary, pages 1-11 through 1-41

Table 1.B: VIP Moreno Valley - Environmental Summary in the Draft EIR has been updated to be consistent with changes that have been made, as a result of the responses to comments. Changes have been made to mitigation measures for air quality, biological resources, cultural resources, geology and soils, hydrology and water quality. These changes to the Draft EIR do not result in a significant impact and has no material effect on the findings of the Draft EIR.

Table 1.B: VIP Moreno Valley - Environmental Summary

Thresholds of Significance	Significance Impact & Mitigation Measures	Level of Significance after Mitigation
AIR QUALITY		
<p>Construction Equipment Exhaust Emissions: Would the proposed project violate any AAQS or contribute to an existing or projected air quality violation; or expose sensitive receptors to pollutants?</p> <p>For construction operations, the applicable daily thresholds are:</p> <ul style="list-style-type: none"> - 75 pounds per day of ROC; - 100 pounds per day of NO_x; - 550 pounds per day of CO; - 150 pounds per day of PM₁₀; - 150 pounds per day of SO_x; and - 55 pounds per day of PM_{2.5}. 	<p>4.2.6.1B. Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall utilize power sources (e.g., power poles) or clean-fuel (<u>e.g., fuel other than diesel or gasoline</u>) generators where feasible. Contract specifications shall be included in the proposed project construction documents, which shall be reviewed by the City.</p> <p>4.2.6.1K Grading plans, construction specifications and bid documents shall also include the following notations:</p> <ul style="list-style-type: none"> • Off-road construction equipment shall utilize alternative fuels where feasible e.g., biodiesel fuel (a minimum of B20), natural gas (CNG), liquefied natural gas (LNG), propane, except for equipment where use of such fuels would void the equipment warranty; • Gravel pads shall be provided at all access 	<p>Significant and unavoidable</p>

	<p>carriers.</p> <ul style="list-style-type: none"> ○ Use of fleet vehicles conforming to 2010 air quality standards or better. ○ Installation of catalytic converters on gasoline-powered equipment. ○ Inclusion of electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets. ○ Establishment and use of carpool/vanpool programs, complemented by parking fees for single-occupancy vehicles. ○ Provision of preferential parking for EV and CNG vehicles. ○ Use of electrical equipment (instead of gasoline-powered equipment) for landscape maintenance. ○ Use of electric (instead of diesel or gasoline-powered) yard trucks. ○ Use of SmartWay 1.25 rated trucks. 	
BIOLOGICAL RESOURCES (FROM THE INITIAL STUDY [APPENDIX A])		
<p>Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?</p> <p>Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or state habitat conservation plan?</p>	<p>Mitigation Measure BIO-3: If nesting special status avian or burrowing owl species are determined to occupy a proposed area of disturbance <u>a biological monitor will be present during construction to ensure no construction activity shall take place within 500 feet of an active nest/burrow until it has been determined by the biological monitor that the nest/burrow is no longer active, and all juveniles have fledged the nest/burrow.</u></p>	Less Than Significant
CULTURAL RESOURCES (FROM THE INITIAL STUDY [APPENDIX A])		
<p>Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?</p>	<p>Mitigation Measure CUL-1: Prior to construction involving excavation four feet or more below existing surface grade, the construction contractor shall provide evidence that a qualified paleontologist has been retained, and that the paleontologist(s) shall be present during all grading and other significant ground-disturbing activities that</p>	Less Than Significant

Table 1.B: VIP Moreno Valley - Environmental Summary

Thresholds of Significance	Significance Impact & Mitigation Measures	Level of Significance after Mitigation
	<p>reach four feet or more below existing surface grade. If the paleontologist(s) do not find evidence for Pleistocene era deposits once the maximum excavation depth is reached, monitoring shall be discontinued. In the event fossiliferous deposits are encountered, the following measures shall be implemented:</p> <ul style="list-style-type: none"> • Monitoring shall be conducted by qualified paleontological monitor(s) of excavation in areas identified as likely to contain paleontological resources, including undisturbed older Pleistocene alluvium. Paleontological monitors shall be equipped to salvage fossils as they are unearthed, to avoid construction delays, and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. Monitors shall be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens. Monitoring may be reduced if the potentially fossiliferous units are determined upon exposure and examination by qualified paleontological personnel to have low potential to contain fossil resources. • Paleontological monitoring of any earthmoving will be conducted by a monitor, under direct guidance of a qualified paleontologist. Earthmoving in areas of the parcel where previously undisturbed sediments are buried, but not otherwise disturbed, will not be monitored. • If too few fossil remains are found after 50 percent of the planned for earthmoving has been completed, monitoring can be reduced or discontinued in those areas at the project paleontologist's direction. • Preparation of recovered specimens to a point of identification and permanent preservation, including washing of sediments to recover small invertebrates and vertebrates. • Identification and curation of specimens into a professional, fully accredited museum repository with permanent retrievable storage. The paleontologist must have a written repository agreement 	

Table 1.B: VIP Moreno Valley - Environmental Summary

Thresholds of Significance	Significance Impact & Mitigation Measures	Level of Significance after Mitigation
	<p>in hand prior to the initiation of mitigation activities.</p> <ul style="list-style-type: none"> Preparation of a report of findings with and appended itemized inventory of specimens. The report and report and inventory, when submitted to the City of Moreno Valley along with confirmation of the curation of recovered of recovered specimens into an established, accredited museum repository, will signify completion of the program to mitigate impacts to paleontological resources. 	
GEOLOGY AND SOILS (FROM THE INITIAL STUDY [APPENDIX A])		
<p>Be located on expansive soil, as defined in Table 18-a-B of the Uniform Building Code (1994), creating substantial risks to life or property?</p>	<p>Mitigation Measure GEO-1: Prior to the issuance of grading permits, any existing low density soils and/or saturated soils shall be removed to competent natural soil under the inspection of the Soils Engineering Firm. After the exposed surface has been cleansed of debris and/or vegetation, it shall be scarified until it is uniform in consistency, brought to the proper moisture content and compacted to a minimum of 90 percent relative compaction (in accordance with ASTM: D-1557). In any area where a transition between fill and native soil or between bedrock and soil are encountered, additional excavation beneath foundations and slabs will be necessary in order to provide uniform support and avoid differential settlement of the structure.</p> <p>The on-site soils or approved import soils may be utilized for the compacted fill, provided they are free of any deleterious materials and shall not contain any rocks, brick, asphaltic concrete, concrete, or other hard materials greater than eight inches in maximum dimensions. Any import soil must be approved by the Soils Engineering firm a minimum of 24 hours prior to importation to the site.</p> <p>The approved fill soils shall be placed in layers not in excess of six inches in thickness. Each lift shall be uniform in thickness and thoroughly blended. The fill soils shall be brought to within 2 percent of the optimum moisture content, unless otherwise specified by the Soils Engineering firm. Each lift shall be compacted to a minimum of 90 percent relative compaction (in accordance with ASTM: D-1557) and approved prior to the</p>	Less Than Significant

Table 1.B: VIP Moreno Valley - Environmental Summary

Thresholds of Significance	Significance Impact & Mitigation Measures	Level of Significance after Mitigation
	<p>placement of the next layer of soil. Compaction tests shall be obtained at the discretion of the Soils Engineering firm but to a minimum of one test for every 500 cubic yards placed and/or for every two feet of compacted fill placed.</p> <p>The minimum relative compaction shall be obtained in accordance with accepted methods in the construction industry. The final grade of the structural areas shall be in a dense and smooth condition prior to placement of slabs-on-grade or pavement areas. No fill soils shall be placed, spread, or compacted during unfavorable weather conditions. When the grading is interrupted by heavy rains, compaction operations shall not be resumed until approved by the Soils Engineering firm.</p> <p><u>It should be noted that the above measure may be modified by the Final Geotechnical or Soils Report.</u></p> <p>Mitigation Measure GEO-2: Prior the issuance of grading permits, the project proponent shall inform the project engineers, architects, owner, maintenance personnel, and other interested parties of the Expansive Soil Guidelines provided in the project's geotechnical analysis [<u>Geotechnical Engineering Investigation Proposed Industrial Development Southwest Corner of Perris Boulevard and Grove View Road Moreno Valley, California, NorCal Engineering, March 7, 2007</u>]. The recommendations identified in the project's Expansive Soil Guidelines shall be reviewed and considered <u>implemented</u> by the project engineers, architects, owner, maintenance personnel, and other interested parties to determine <u>in the</u> applicable design guidelines. Applicable design guidelines shall be included and implemented in the project's grading plans.</p>	
GREENHOUSE GAS EMISSIONS AND CLIMATE CHANGE		
<p>Would the proposed project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?</p>	<p>4.3.6.1A Prior to the issuance of building permits, the project applicant shall provide evidence to the City of Moreno Valley that building features have been incorporated in building plans as required by Title 24 of the California Code of Regulations. These features include but are not limited to the</p>	<p>Less than Significant</p>

Table 1.B: VIP Moreno Valley - Environmental Summary

Thresholds of Significance	Significance Impact & Mitigation Measures	Level of Significance after Mitigation
	<p>following:</p> <ul style="list-style-type: none"> • Exterior windows <u>in the office areas</u> shall utilize window treatments for efficient energy conservation. <p>4.3.6.1B Prior to the issuance of building permits, the project applicant shall provide evidence to the City of Moreno Valley that the following measures have been be incorporated into the design and construction of the project:</p> <ul style="list-style-type: none"> • Use <u>Encourage use of</u> locally produced and/or manufactured building materials for at least 10 percent of the construction materials used for the project. • Use <u>Encourage use of</u> “Green Building Materials,” such as those materials that are resource efficient, and recycled and manufactured in an environmentally friendly way, for at least 10 percent of the project. • Maximize the use of electricity from the power grid by replacing diesel- or gasoline-powered equipment <u>where feasible</u>. This would reduce GHG emissions because electricity can be produced more efficiently at centralized power plants. • Design the project building to exceed the <u>2008</u> California Building Code’s (CBC) Title 24 energy standard <u>by 20%</u>, including, but not limited to, any combination of the following: <ul style="list-style-type: none"> • Incorporate ENERGY STAR or better rated windows, space heating and cooling equipment, light fixtures, appliances, or other applicable electrical equipment <u>in the office areas</u>. • Provide a landscape and development plan for the project that takes advantage of shade, prevailing winds, and landscaping. <u>The landscaping plan shall be prepared by a registered landscape architect who will consider the following:</u> 	

Table 1.B: VIP Moreno Valley - Environmental Summary

Thresholds of Significance	Significance Impact & Mitigation Measures	Level of Significance after Mitigation
	<ul style="list-style-type: none"> ○ <u>Plant at least 50 percent low-ozone forming potential (Low-OFP) trees and shrubs, preferably native, drought-resistant species, to meet city/county landscaping requirements.</u> ○ <u>Plant Low-OFP, native, drought-resistant, tree and shrub species, 20% in excess of that already required by city or county ordinance. Consider roadside, sidewalk, and driveway shading.</u> ● <u>Install electrical outlets on the exterior walls of the warehouse/office building (and perhaps parking lots) to promote the use of electric landscape maintenance equipment.</u> <p>4.3.6.1C Prior to the issuance of occupancy permits, the project applicant shall provide evidence to the City of Moreno Valley that the following measures have been be incorporated into the operation of the project:</p> <ul style="list-style-type: none"> ● The project applicant shall use less than 3,900 <u>low</u> Global Warming Potential (GWP) hydrofluorocarbon (HCF) refrigerants or natural refrigerants (ammonia, propane, carbon dioxide [CO2]) for refrigeration and fire suppression equipment. ● Provide vegetative or man-made exterior wall shading devices for east-, south-, and west facing walls with windows <u>in the office areas.</u> 	

HYDROLOGY AND WATER QUALITY (FROM THE INITIAL STUDY [APPENDIX A])

<p>Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner that would result in substantial erosion or siltation on site or off site?</p>	<p>Mitigation Measure HYD-05: Prior to grading plan approval and the issuance of a grading permit by the City, the project proponent shall receive approval from the City of Moreno Valley, a Final Hydrologic and Hydraulic Analysis based on the City's existing drainage requirements. submit a detailed grading plan and drainage report, with supporting engineering calculations, to the City Engineer for review and approval. The plan and report shall incorporate relevant requirements identified by the City and/or site specific geotechnical investigations. The plan and</p>	<p>Less Than Significant</p>

	<p>report shall provide evidence that the storm drainage system would be adequate to convey water for the 100-year storm event from the project site and that the post development flows exiting the proposed project site are less than or equal to pre-development flows.</p>	

Draft EIR, Section 2.2.4 Technical Reports, Page 2-4.

There was a topographical error in this section of the Draft EIR indicating the incorrect date on the air quality and noise studies. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the Draft EIR.

2.2.4 Technical Reports

Various technical reports have been prepared to assess specific issues that may result from the construction and operation of the proposed project. As relevant, information from these technical reports has been incorporated into the Draft EIR. The technical reports and other information included as appendices to this EIR include the following:

Appendix A: *Initial Study, NOP, and NOP Comment Letters, August 2011.*

Appendix B: Initial Study Technical Reports

- Appendix B-1: *General Habitat Assessment, 71± Site (APNs: 316-210-071, -073, -075, -076), Moreno Valley, Riverside County California, Ecological Sciences, Inc., August 1, 2010.*
- Appendix B-2: *Jurisdictional Survey and MSHCP Riparian/Riverine/Vernal Pools Evaluation, 71± Site (APNs: 316-210-071, -073, -075, -076), Moreno Valley, Riverside County California, Ecological Sciences, Inc., November 1, 2009.*
- Appendix B-3: *Focused Surveys for Selected Criteria Area and Narrow Endemic Plant Species, 71± Site (APNs: 316-210-071, -073, -075, -076), Moreno Valley, Riverside County California, Ecological Sciences, Inc., November 9, 2009.*
- Appendix B-4: *Focused Western Burrowing Owl Survey, 71± Site (APNs: 316-210-071, -073, -075, -076), Moreno Valley, Riverside County California, Ecological Sciences, Inc., November 11, 2009.*
- Appendix B-5: *Phase I Cultural Resources Assessment and Paleontological Records Review Perris Boulevard Project, Moreno Valley, Riverside County, California, Michael Brandman Associates, March 22, 2007.*
- Appendix B-6: *Geotechnical Engineering Investigation Proposed Industrial Development Southwest Corner of Perris Boulevard and Grove View Road Moreno Valley, California, NorCal Engineering, March 7, 2007.*
- Appendix B-7: *Phase I Environmental for the Evaluation of Potentially Hazardous Materials, Centec Engineering, February 23, 2007.*

- Appendix B-8: *Preliminary Hydrology Report and Hydraulic Analysis for PA09-004, VIP Moreno Valley, SWC Perris Boulevard and Grove View Road*, Robert A. Bebensee, R.C.E., March 27, 2009.
- Appendix B-9: *Preliminary Water Quality Management Plan, for PA09-0004 VIP Moreno Valley, SWC Perris Boulevard and Grove View Road*, Robert A. Bebensee, R.C.E., July 24, 2009.
- Appendix B-10: *Water Supply Assessment for City of Moreno Valley Plot Plan Application PA09-004*, Eastern Municipal Water District, January 20, 2010.

Appendix G: *Traffic Study VIP Moreno Valley*, LSA Associates, Inc., ~~January~~ April 9, 2012.

Draft EIR, Section 2.5.2 Biological Resources, Page. 2-9.

The last sentence in paragraph 3 has been deleted because jurisdictional delineation was prepared for the proposed project (Jurisdictional Survey and MSHCP Riparian/Riverine/Vernal Pools Evaluation, 71± Site (APNs: 316-210-071, -073, -075, -076), Moreno Valley, Riverside County California, Ecological Sciences, Inc., November 1, 2009). Therefore the sentence was deleted because it was an error. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the EIR.

Thirty-one species in western Riverside County have special status under the Federal Endangered Species Act (FESA) and/or the California Endangered Species Act (CESA). These include species that are listed as “endangered” or “threatened” under the FESA or that have been “proposed” or are “candidates” for such listing. These also include species that are listed as “endangered,” “threatened,” or “rare” under the CESA or that have been petitioned (i.e., are “candidates”) for listing. The Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) provides for the long-term survival of protected and sensitive species by designating a contiguous system of habitat to be added to existing public/quasi-public lands. The Plan includes an impact fee collected by the 16 member cities and other local agencies, including the City of Moreno Valley, used to acquire these lands. Depending on the location of a private or public development project, certain biological studies may be required to comply with the MSHCP. The MSHCP defines two distinct consistency processes for development projects based on their location within the MSHCP Plan Area, with separate processes for projects located outside of Criteria Areas and those within a Criteria Area. Through implementation of these requirements, development projects are found to be consistent with the MSHCP, and impacts to covered species are considered less than significant. The project site is not located within an MSHCP Criteria Area, but is located in an area requiring habitat assessments for burrowing owl (*Athene cunicularia*), five Narrow Endemic Plant Species (NEPS), and nine Criteria

Area Plant Species (CAPS). ~~A Jurisdictional Delineation is required to assess potential jurisdiction of the ditch running north/south through the center of the project site.~~

Draft EIR, Section 2.5.2 Biological Resources, Page 2-10.

Consistent with the comments provided by Letter H (Fish and Wildlife Service), the text in Draft EIR of Mitigation Measure BIO-3 is amended. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the EIR

Mitigation Measure BIO-3: If nesting special status avian or burrowing owl species are determined to occupy a proposed area of disturbance a biological monitor will be present during construction to ensure no construction activity shall take place within 500 feet of an active nest/burrow until it has been determined by the biological monitor that the nest/burrow is no longer active, and all juveniles have fledged the nest/burrow.

Draft EIR, Section 2.5.3 Cultural Resources, Page 2-13.

Consistent with the comments provided by Letter D (Johnson & Sedlack), the text in Draft EIR of Mitigation Measure CUL-1 is amended. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the EIR.

Mitigation Measure CUL-1: Prior to construction involving excavation four feet or more below existing surface grade, the construction contractor shall provide evidence that a qualified paleontologist has been retained, and that the paleontologist(s) shall be present during all grading and other significant ground-disturbing activities that reach four feet or more below existing surface grade. ~~If the paleontologist(s) do not find evidence for Pleistocene era deposits once the maximum excavation depth is reached, monitoring shall be discontinued.~~ In the event fossiliferous deposits are encountered, the following measures shall be implemented:

- Monitoring shall be conducted by qualified paleontological monitor(s) of excavation in areas identified as likely to contain paleontological resources, including undisturbed older Pleistocene alluvium. Paleontological monitors shall be equipped to salvage fossils as they are unearthed, to avoid construction delays, and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. Monitors shall be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens. Monitoring may be reduced if the potentially fossiliferous units are determined upon exposure and examination by qualified paleontological personnel to have low potential to contain fossil resources.
- Paleontological monitoring of any earthmoving will be conducted by a monitor, under direct guidance of a qualified paleontologist. Earthmoving in areas of the parcel where previously undisturbed sediments are buried, but not otherwise disturbed, will not be monitored.
- ~~If too few fossil remains are found after 50 percent of the planned for earthmoving has been completed, monitoring can be reduced or discontinued in those areas at the project paleontologist's direction.~~
- Preparation of recovered specimens to a point of identification and permanent preservation, including washing of sediments to recover small invertebrates and vertebrates.
- Identification and curation of specimens into a professional, fully accredited museum repository with permanent retrievable storage. The paleontologist must have a written repository agreement in hand prior to the initiation of mitigation activities.

- Preparation of a report of findings with and appended itemized inventory of specimens. The report and report and inventory, when submitted to the City of Moreno Valley along with confirmation of the curation of recovered of recovered specimens into an established, accredited museum repository, will signify completion of the program to mitigate impacts to paleontological resources.

Draft EIR, Section 2.4.4 Geology and Soils, Page 2-16.

Consistent with the comments provided by Letter D (Johnson & Sedlack), the text in Draft EIR of Mitigation Measure GEO-2 is amended for clarification purposes. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the EIR.

Mitigation Measure GEO-1: Prior to the issuance of grading permits, any existing low density soils and/or saturated soils shall be removed to competent natural soil under the inspection of the Soils Engineering Firm. After the exposed surface has been cleansed of debris and/or vegetation, it shall be scarified until it is uniform in consistency, brought to the proper moisture content and compacted to a minimum of 90 percent relative compaction (in accordance with ASTM: D-1557). In any area where a transition between fill and native soil or between bedrock and soil are encountered, additional excavation beneath foundations and slabs will be necessary in order to provide uniform support and avoid differential settlement of the structure.

The on-site soils or approved import soils may be utilized for the compacted fill, provided they are free of any deleterious materials and shall not contain any rocks, brick, asphaltic concrete, concrete, or other hard materials greater than eight inches in maximum dimensions. Any import soil must be approved by the Soils Engineering firm a minimum of 24 hours prior to importation to the site.

The approved fill soils shall be placed in layers not in excess of six inches in thickness. Each lift shall be uniform in thickness and thoroughly blended. The fill soils shall be brought to within 2 percent of the optimum moisture content, unless otherwise specified by the Soils Engineering firm. Each lift shall be compacted to a minimum of 90 percent relative compaction (in accordance with ASTM: D-1557) and approved prior to the placement of the next layer of soil. Compaction tests shall be obtained at the discretion of the Soils Engineering firm but to a minimum of one test for every 500 cubic yards placed and/or for every two feet of compacted fill placed.

The minimum relative compaction shall be obtained in accordance with accepted methods in the construction industry. The final grade of the structural areas shall be in a dense and smooth condition prior to placement of slabs-on-grade or pavement areas. No fill soils shall be placed, spread, or compacted during unfavorable weather conditions. When the grading is interrupted by heavy rains, compaction operations shall not be resumed until approved by the Soils Engineering firm.

It should be noted that the above measure may be modified by the Final Geotechnical or Soils Report.

Mitigation Measure GEO-2: Prior the issuance of grading permits, the project proponent shall inform the project engineers, architects, owner, maintenance personnel, and other interested parties of the Expansive Soil Guidelines provided in the project's geotechnical analysis [Geotechnical Engineering Investigation Proposed Industrial Development Southwest Corner of Perris Boulevard and Grove View Road Moreno Valley, California, NorCal Engineering, March 7, 2007]. The recommendations identified in the project's Expansive Soil Guidelines shall be ~~reviewed and considered-~~ implemented by the project engineers, architects, owner, maintenance personnel, and other interested parties ~~to determine~~ in the applicable design guidelines. Applicable design guidelines shall be included and implemented in the project's grading plans.

Draft EIR, Section 2.5.6 Hydrology and Water Quality Hydrology, Page. 2-24.

Mitigation Measure HYD-05 has been revised to clarify the finalization of the Hydrologic and Hydraulic Analysis. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the EIR.

To reduce the flows to below or equal to pre-development conditions, the anticipated on-site flows would be routed to the water quality features such as vegetated swales, clarifiers, and sand filters to reduce flows leaving the site to pre-development flow rates. While the increase in impervious surfaces attributable to the proposed project would contribute to a greater volume and higher velocity of storm water flows, the proposed project's drainage system would accept and accommodate runoff that would result from project construction at or below pre-project conditions. Therefore, the post-development flows generated on the project site would not exceed the capacity of the planned storm water drainage systems. Although adherence to the City's drainage requirements, which includes the preparation of drainage sizing calculations, is required of all applicable development within the City, the incorporation of this requirement as Mitigation Measure HYD-05 is designed to track both standard requirements and mitigation measures as part of the project's MMRP. To ensure that long-term drainage capacity issues are reduced to a less than significant level, Mitigation Measure HYD-05 has been identified. With adherence to this mitigation measure, impacts associated with this issue are less than significant.

Mitigation Measure HYD-05: Prior to grading plan approval and the issuance of a grading permit by the City, the project proponent shall receive approval from the City of Moreno Valley, a Final Hydrologic and Hydraulic Analysis based on the City's existing drainage requirements. ~~submit a detailed grading plan and drainage report, with supporting engineering calculations, to the City Engineer for review and approval. The plan and report shall incorporate relevant requirements identified by the City and/or site-specific geotechnical investigations. The plan and report shall provide evidence that the storm drainage system would be adequate to convey water for the 100-year storm event from the project site and that the post-development flows exiting the proposed project site are less than or equal to pre-development flows.~~

Draft EIR, Section 2.7 Cumulative Projects, Table 2.C, Page 34

There was a topographical error in Table 2.C of the Draft EIR indicating the incorrect map number. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the Draft EIR.

AM-67	Eucalyptus Industrial Park	East of Moreno Beach Drive, west of Quincy channel, south of SR-60	2,244,638 SF of high cube warehouse uses

Draft EIR Section 4.2 Air Quality, Page 4.2-1

There was a topographical error in this section of the Draft EIR indicating the incorrect date on the air quality, health risk assessment and traffic studies. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the Draft EIR.

4.2 AIR QUALITY

This section analyzes the proposed project's potential air quality impacts based on the comprehensive *Air Quality Analysis* contained in Appendix D-1 (LSA Associates, Inc. ~~December 2011~~ March 2012) and the *Health Risk Assessment* (LSA Associates, Inc. ~~December 2011~~ March 2012) contained in Appendix D-2 to this EIR. The air quality analysis evaluates potential air quality impacts and mitigation measures by examining the short-term construction and long-term operational impacts associated with the project and by evaluating the effectiveness of mitigation measures incorporated as part of the project design. Additionally, the analysis provides a discussion of the proposed project, the physical setting of the project area, and the air quality regulatory framework. Modeled air quality levels are based upon vehicle data and project trip generation included in the project's Traffic Study (LSA Associates, Inc. ~~November 2011~~ January 2012, Appendix G of EIR) and peak turn volumes generated for the proposed project combined with emission factors from the California Air Resources Board (ARB). The evaluation was prepared in accordance with appropriate standards, utilizing procedures and methodologies in the South Coast Air Quality Management District (SCAQMD) *CEQA Air Quality Handbook* (SCAQMD 1993). Air quality data posted by the ARB and the U.S. Environmental Protection Agency (EPA) Web sites are included to document the local air quality environment.

Draft EIR Section 4.2.5.5, Operational-Acute Health Risk Impacts Page 4.2-18

Consistent with the comments provided by Letter D (Johnson & Sedlack), the text in Draft EIR Section 4.2.5.5, Page 4.2-18 is amended to refer the reader back to the previous section (4.2.5.4) to further substantiate the conclusions identified in Section 4.2.5.5. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the EIR.

4.2.5.5 Operational-Acute Health Risk Impacts

Threshold	Would the proposed project expose sensitive receptors to substantial pollutant concentrations?
-----------	--

Exposure to diesel exhaust can have immediate health effects, such as irritation of the eyes, nose, throat, and lungs, and it can cause coughs, headaches, light headedness, and nausea. In studies with human volunteers, diesel exhaust particles made people with allergies more susceptible to the materials to which they are allergic, such as dust and pollen. Exposure to diesel exhaust also causes inflammation in the lungs, which may aggravate chronic respiratory symptoms and increase the frequency or intensity of asthma attacks. However, according to the rulemaking on *Identifying Particulate Emissions from Diesel-Fueled Engines as a Toxic Air Contaminant* (ARB 1998), the available data from studies of humans exposed to diesel exhaust are not sufficient for deriving an acute non-cancer health risk guidance value. While the lung is a major target organ for diesel exhaust, studies of the gross respiratory effects of diesel exhaust in exposed workers have not provided sufficient exposure information to establish a short-term non-cancer health risk guidance value for respiratory effects. As previously identified in Section 4.2.5.4, none of the criteria pollutant emissions would exceed localized thresholds during the operation of the proposed project. Therefore, the proposed project would not have a significant impact on localized operational pollutant levels and no mitigation measures would be required. Similarly ~~Therefore~~, the potential for short-term acute exposure from diesel exhaust are considered to be less than significant and no mitigation is required.

Draft EIR Section 4.2.6.1 Construction Emissions, Page 4.2-19

Consistent with the comments provided by Letter D (Johnson & Sedlack), the text at Draft EIR Section 4.2.6.1, Page 4.2-19 is amended to clarify that the proceeding analysis evaluates all construction emissions. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the EIR.

4.2.6.1 Construction Equipment Exhaust Emissions

Draft EIR Section 4.2.6.1 Construction Emissions, Table 4.2.I, Page 4.2-20.

Consistent with the comments provided by Letter D (Johnson & Sedlack), the data in Table 4.2.I in Draft EIR Section 4.2.6.1, Page 4.2-20 is amended to correct typographical errors in the Draft EIR. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the EIR.

Table 4.2.I: Short-Term Regional Construction Emissions

Construction Phase	Pollutant Emissions (lbs/day)							
	ROG	NO _x	CO	SO ₂	Fugitive PM ₁₀	Exhaust PM ₁₀	Fugitive PM _{2.5}	Exhaust PM _{2.5}

Draft EIR Section 4.2.6.1, Construction Emissions Page 4.2-21.

Consistent with the comments provided by Letter D (Johnson & Sedlack), the text at Mitigation Measure 4.2.6.1B in Draft EIR Section 4.2.6.1, Page 4.2-21 is amended to clarify that clean-fuel means fuel other than diesel or gasoline. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the EIR.

4.2.6.1B. Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall utilize power sources (e.g., power poles) or clean-fuel (e.g., fuel other than diesel or gasoline) generators where feasible. Contract specifications shall be included in the proposed project construction documents, which shall be reviewed by the City.

Draft EIR Section 4.2.6.1, Construction Emissions Page 4.2-23.

Consistent with the comments provided by Letter D (Johnson & Sedlack), the Mitigation Measures have been added to Draft EIR Section 4.2.6.1, Page 4.2-23 to further reduce construction air quality impacts. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the EIR.

4.2.6.1K Grading plans, construction specifications and bid documents shall also include the following notations:

- Off-road construction equipment shall utilize alternative fuels where feasible e.g., biodiesel fuel (a minimum of B20), natural gas (CNG), liquefied natural gas (LNG), propane, except for equipment where use of such fuels would void the equipment warranty;
- Gravel pads shall be provided at all access points to prevent tracking of mud onto public roads;
- Install and maintain trackout control devices at all access points where paved and unpaved access or travel routes intersect;
- The contractor or builder shall designate a person or person(s) to monitor the dust control program and to order increased watering, as necessary, to prevent transport of dust off site;
- The contractor or builder shall post a publicly visible sign with the telephone number and person to contact regarding dust complaints. The contact person shall take corrective action within 24 hours;
- High pressure injectors shall be provided on diesel construction equipment where feasible;
- Engine size of construction equipment shall be limited to the minimum practical size;
- Substitute gasoline-powered for diesel-powered construction equipment where feasible;
- Use electric construction equipment where feasible;
- Install catalytic converters on gasoline-powered equipment where feasible;
- Ride-sharing program for the construction crew shall be encouraged and shall be supported by contractor(s) via incentives or other inducement;

- Documentation shall be provided to the City of Moreno Valley indicating that construction workers have been encouraged to carpool or otherwise reduce VMT to the greatest extent practical, including providing information on available park and ride programs;
- Lunch vendor services shall be ~~provided~~ permitted onsite during construction to minimize the need for offsite vehicle trips;
- All forklifts used during construction and in subsequent operation of the project shall be electric or natural gas powered.
- Suspend use of all construction equipment operations during second stage smog alerts.

4.2.6.1N. When materials are transported off-site, all material shall be covered, effectively wetted to limit visible dust emissions, and at least six inches of freeboard space from the top of the container shall be maintained.

4.2.6.1O. All streets shall be swept at least once a day using SCAQMD Rule 1186 certified street sweepers utilizing reclaimed water trucks if visible soil materials are carried to adjacent streets.

4.2.6.1P. Any vegetative cover to be utilized onsite shall be planted as soon as possible to reduce the disturbed area subject to wind erosion. Irrigation systems required for these plants shall be installed as soon as possible to maintain good ground cover and to minimize wind erosion of the soil.

4.2.6.1Q. Provide temporary traffic controls such as a flag person, during all phases of construction to maintain smooth traffic flow.

4.2.6.1R All roadways, driveways, sidewalks, etc., should be completed as soon as possible. In addition, building pads should be laid as soon as possible after grading unless seeding or soil binders are used.

4.2.6.1S Implement activity management techniques including a) development of a comprehensive construction management plan designed to minimize the number of large construction equipment operating during any given time period; b) scheduling of construction truck trips during non-peak hours to reduce peak hour emissions; c) limitation of the length of construction work-day period; and d) phasing of construction activities.

4.2.6.1T Reroute construction trucks away from congested streets and sensitive receptor areas.

Draft EIR Section 4.2.6.3 Long Term Operation Omissions, Page 4.2-25

Consistent with the comments provided by Letter D (Johnson & Sedlack), the text in Impact 4.2.6.1 in Draft EIR Section 4.2.6.3, Page 4.2-25 is amended to clarify the impact statement. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the EIR.

Impact 4.2.6.3: Implementation of the proposed project may ~~exceed~~ have the potential to exceed applicable daily thresholds for operational activities.

Draft EIR Section 4.2.6.3 Long Term Operation Omissions, Page 4.2-27

Consistent with the comments provided by Letter D (Johnson & Sedlack), the Mitigation Measures have been amended and added to Draft EIR Section 4.2.6.3, Page 4.2-27 to further reduce construction air quality impacts. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the EIR.

4.2.6.3A Prior to issuance of the first building permit, building and site plan designs shall ensure that the project's energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of 20 percent. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and reviewed and approved by the City. Any combination of design features, including but not limited to the following list, may be used to fulfill this requirement provided that the total increase in energy efficiency meets or exceeds 20 percent:

- ~~Buildings shall e~~ Exceed California Title 24 Energy Efficiency performance standards for water heating and space heating and cooling, as deemed acceptable by the City.
- Increase in insulation such that heat transfer and thermal bridging is minimized.
- Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.
- Incorporate dual-paned or other energy efficient windows.
- Incorporate energy efficient space heating and cooling equipment.
- ~~Interior Use interior~~ and exterior energy efficient lighting which exceeds the California Title 24 Energy Efficiency performance standards ~~shall be installed~~, as deemed acceptable by the City. ~~Automatic Use automatic~~ devices to turn off lights when they are not needed ~~shall be implemented~~.
- To the extent that they are compatible with landscaping guidelines established by the City, use shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and buildings ~~shall be planted~~ at the project site.
- ~~Paint Use paint~~ and a surface color palette for the project shall emphasize light and off-white colors which reflect heat away from the buildings.
- ~~All buildings shall be designed to accommodate renewable energy sources, such as photovoltaic solar electricity systems, appropriate to their architectural design.~~
- Install a photovoltaic array (solar panels) or other source of renewable energy generation on-site, or otherwise acquire energy from the local utility that has been generated by renewable resources, to meet the project's office electricity needs.
- ~~To r~~Reduce energy demand associated with potable water conveyance, ~~the project shall implement using~~ the following:
 - Landscaping palette emphasizing drought-tolerant plants;
 - Use of water-efficient irrigation techniques; and,
 - U.S. EPA Certified WaterSense labeled for equivalent faucets, high-efficiency toilets (HETs), and water-conserving shower heads.
- ~~The project shall p~~Provide secure, weather-protected, on-site bicycle storage/parking.
- ~~The project shall p~~Provide on-site showers (one for males and one for females). ~~L~~Provide lockers for employees shall be provided.

- ~~The project will e~~ Establish a Transportation Management Association (TMA). The TMA will coordinate with other TMAs within the City to encourage and coordinate carpooling among building occupants. The TMA will advertise its services to building occupants, and offer transit and/or other incentives to reduce GHG emissions. A plan will be submitted by the TMA to the City within two months of project completion that outlines the measures implemented by the TMA, as well as contact information.
- ~~The project shall p~~ Provide preferential parking for carpools ~~and vanpool, vanpools or other alternative fuel vehicles~~. Locations and configurations of proposed preferential parking for carpools and vanpools are subject to review and approval by the City. Prior to final site plan approval, delineate preferential parking for carpools and vanpools ~~shall be delineated~~ on the project site plan.
- ~~The project shall p~~ Provide at least two electric vehicle charging stations. Locations and configurations of proposed charging stations are subject to review and approval by the City. Prior to issuance of the first building permit, delineate stub outs for charging stations ~~shall be indicated~~ on the project building plans.
- Implement compressed workweek schedules;
- Achieve at least 20% per year (as a percentage of previous percentage, not total trips) increase in percentage of consolidated trips carried by SmartWay carriers until it reaches a minimum of 90% of all long haul trips carried by SmartWay 1.0 or greater carriers.
- Achieve at least 15% per year (as a percentage of previous percentage, not total trips) increase in percentage of long haul trips carried by SmartWay carriers until it reaches a minimum of 85% of all consolidator trips carried by SmartWay 1.0 or greater carriers.
- Use of fleet vehicles conforming to 2010 air quality standards or better.
- Installation of catalytic converters on gasoline-powered equipment.
- Inclusion of electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets;
- Establishment and use of carpool/vanpool programs, complemented by parking fees for single-occupancy vehicles;
- Provision of preferential parking for EV and CNG vehicles;
- Use of electrical equipment (instead of gasoline-powered equipment) for landscape maintenance;
- Use of electric (instead of diesel or gasoline-powered) yard trucks;
- Use of SmartWay 1.25 rated trucks.
- Provide a display case or kiosk displaying transportation information including the RTA bus schedule in a prominent area accessible to employees.
- Use landscape maintenance companies that use battery powered or electric equipment or contract only with commercial landscapers who operate with equipment that complies with the most recent California Air Resources Board certification standards, or standards adopted no more than three years prior to date of use or any combination of these two themes.
- ~~Lease/purchase documents shall identify that tenants are encouraged to promote the following:~~
 - ~~Implementation of compressed workweek schedules.~~
 - ~~SmartWay partnership;~~

- ~~○ Achievement of at least 20 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of consolidated trips carried by SmartWay carriers until it reaches a minimum of 90 percent of all long haul trips carried by SmartWay 1.0 or greater carriers.~~
- ~~○ Achievement of at least 15 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of long haul trips carried by SmartWay carriers until it reaches a minimum of 85 percent of all consolidator trips carried by SmartWay 1.0 or greater carriers.~~
- ~~○ Use of fleet vehicles conforming to 2010 air quality standards or better.~~
- ~~○ Installation of catalytic converters on gasoline-powered equipment.~~
- ~~○ Inclusion of electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets.~~
- ~~○ Establishment and use of carpool/vanpool programs, complemented by parking fees for single-occupancy vehicles.~~
- ~~○ Provision of preferential parking for EV and CNG vehicles.~~
- ~~○ Use of electrical equipment (instead of gasoline-powered equipment) for landscape maintenance.~~
- ~~○ Use of electric (instead of diesel or gasoline-powered) yard trucks.~~
- ~~○ Use of SmartWay 1.25-rated trucks.~~

Draft EIR, Section 4.2.7.1 Short-Term Air Quality Impacts, Page 4.2-25

Consistent with the comments provided by Letter D (Johnson & Sedlack), the text in Draft EIR Section 4.2.7.1, Page 4.2-25 is amended to clarify that the short-term and long-term air quality impacts are cumulative. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the EIR.

4.2.7.1 Short-Term Air Quality Impacts

The cumulative area for air quality impacts is the Basin. The implementation of the project would contribute criteria pollutants to the area during project construction. A number of individual projects in the area may be under construction simultaneously with the proposed project. Depending on construction schedules and actual implementation of projects in the area, generation of fugitive dust and pollutant emissions during construction would result in substantial short-term increases in air pollutants. However, each project would be required to comply with the SCAQMD's standard construction measures. In addition, implementation of the AQMP will result in improved air quality levels in the future and full attainment of national and state ambient air quality standards, resulting in less than significant cumulative impacts from all short-term and long-term air pollution sources. Therefore, cumulative impacts associated with short-term air quality impacts would be less than significant.

Draft EIR Section 4.3.6.1 Greenhouse Gas Emissions and Climate Change, Page 4.3-24 and 25

The Mitigation Measures in the Draft EIR Section 4.3.6.1, Page 4.3-24 and 25 have been clarified. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the EIR.

- 4.3.6.1A** Prior to the issuance of building permits, the project applicant shall provide evidence to the City of Moreno Valley that building features have been incorporated in building plans as required by Title 24 of the California Code of Regulations. These features include but are not limited to the following:
- Exterior windows in the office areas shall utilize window treatments for efficient energy conservation.

Draft EIR Section 4.3.6.1 Greenhouse Gas Emissions and Climate Change, Page 4.3-25

Consistent with the comments provided by Letter D (Johnson & Sedlack), the Mitigation Measures have been added to Draft EIR Section 4.3.6.1, Page 4.2-25 to further reduce greenhouse gas emissions. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the EIR.

- 4.3.6.1B** Prior to the issuance of building permits, the project applicant shall provide evidence to the City of Moreno Valley that the following measures have been be incorporated into the design and construction of the project:
- ~~Use~~ Encourage use of locally produced and/or manufactured building materials for at least 10 percent of the construction materials used for the project.
 - ~~Use~~ Encourage use of "Green Building Materials," such as those materials that are resource efficient, and recycled and manufactured in an environmentally friendly way, for at least 10 percent of the project.
 - Maximize the use of electricity from the power grid by replacing diesel- or gasoline-powered equipment where feasible. This would reduce GHG emissions because electricity can be produced more efficiently at centralized power plants.
 - Design the project building to exceed the 2008 California Building Code's (CBC) Title 24 energy standard by 20%, including, but not limited to, any combination of the following:
 - Incorporate ENERGY STAR or better rated windows, space heating and cooling equipment, light fixtures, appliances, or other applicable electrical equipment in the office areas.
 - Provide a landscape and development plan for the project that takes advantage of shade, prevailing winds, and landscaping. The landscaping plan shall be prepared by a registered landscape architect who will consider the following:
 - Plant at least 50 percent low-ozone forming potential (Low-OFP) trees and shrubs, preferably native, drought-resistant species, to meet city/county landscaping requirements.

- Plant Low-OFP, native, drought-resistant, tree and shrub species, 20% in excess of that already required by city or county ordinance. Consider roadside, sidewalk, and driveway shading.
- Install electrical outlets on the exterior walls of the warehouse/office building (and perhaps parking lots) to promote the use of electric landscape maintenance equipment.

Draft EIR, Section 4.3.6.1 Greenhouse Gas Emissions and Climate Change, Page 4.3-26, Mitigation Measure 4.3.6.1C

Consistent with the comments provided by Letter D (Johnson & Sedlack), the text for the conclusion of Impact 4.3.6.1 in Draft EIR Section 4.2.6.3, Page 4.3-16 is amended to clarify the impact statement. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the EIR.

4.3.6.1C Prior to the issuance of occupancy permits, the project applicant shall provide evidence to the City of Moreno Valley that the following measures have been be incorporated into the operation of the project:

- The project applicant shall use ~~less than 3,900 low~~ low Global Warming Potential (GWP) ~~hydrofluorocarbon (HCF)~~ refrigerants or natural refrigerants (ammonia, propane, carbon dioxide [CO₂]) for refrigeration and fire suppression equipment.
- Provide vegetative or man-made exterior wall shading devices for east-, south-, and west facing walls with windows in the office areas.

Level of Significance After Mitigation. The mitigation measures identified above would contribute to a reduction in GHG emissions from energy, mobile, and water usage sources. With implementation of the identified mitigation measures, the proposed project's GHG emissions are reduced. As described above, project-related GHG emissions are not confined to a particular air basin but are dispersed worldwide. Consequently, it is speculative to determine how project-related GHG emissions would contribute to global climate change and how global climate change may impact the State. Therefore, project-related GHG emissions are not project-specific impacts to global warming but are instead the project's contribution to this cumulative impact. As stated previously, project-related GHG emissions and their contribution to global climate change impacts in the State are less than significant ~~and less than cumulatively considerable on a project specific basis~~ because: (1) the project's impacts alone would not cause or significantly contribute to global climate change, and (2) the project has no substantial effect on consumption of fuels or other energy resources, especially fossil fuels that contribute to GHG emissions when consumed. However, project-related GHG emissions and their contribution to global climate change impacts are considered to be cumulatively considerable.

Draft EIR Section 4.4 Noise, Page 4.4-1

There was a topographical error in this section of the Draft EIR indicating the incorrect date on the noise study. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the Draft EIR.

4.4 NOISE

This analysis is intended to satisfy the City's requirements for a project-specific noise impact analysis by examining the short-term and long-term noise impacts of the proposed project on sensitive uses adjacent to the proposed project site and by evaluating the effectiveness of mitigation measures incorporated as part of the project design. This includes the potential for the proposed project to result in impacts associated with a substantial temporary and/or permanent increase in ambient noise levels in the vicinity of the project area; exposure of people to excessive noise levels, groundborne vibration, or groundborne noise levels. The analysis contained in this section is based on a comprehensive *Noise Impact Analysis* contained in Appendix E (LSA Associates, Inc., ~~December 2011~~ March 2012), which examines existing ambient noise conditions and project-related impacts.

Draft EIR, Section 5.4 Consistency With Local And Regional Plans, Page 5-12

A new table (Table 5.D: Compass Growth Vision Report Consistency) has been added as a response to a comment received on the Draft EIR. This change to the Draft EIR does not result in a significant impact and has no material effect on the findings of the EIR.

Compass Growth Vision. The Compass Growth Vision plan provides a framework for local and regional decision-making regarding growth, transportation, land use, and economic development. The framework includes principles and a specific set of strategies intended to achieve and improve a quality of life that promotes and sustains for future generations the region's mobility, livability, and prosperity. The main objective of the Compass Growth Vision is to manage the forecast growth while improving future living conditions for all people within the SCAG area, including live, work, and play activities. The following discussion includes the principles within the Compass Growth Vision plan and their association to the proposed project.

Principle 1: Improve mobility for all residents.

Principle 2: Foster livability in all communities.

Principle 3: Enable prosperity for all people.

Principle 4: Promote sustainability for future generations.

The proposed project is consistent with the four principles identified above (refer to Table 5.D). ~~The nature of the proposed project allows the transport of commodities from a single area rather than multiple areas, minimizing vehicle trip generation. The proposed project supports the prosperity for all people by providing employment opportunities close to existing housing within the City of Moreno Valley. The proposed project is located in an area that is already developed with urban uses and where existing infrastructure (freeway, sewer, electrical, water, etc.) is accessible. During the construction of the project and as needed throughout the process, necessary utility and roadway improvements will be installed or extended to the project site from adjacent existing facilities. The utility and roadway improvements will facilitate future growth in the surrounding area. The development of the proposed project is consistent with the land use vision for the site and will augment existing services available in the City and region.~~

Table 5.D: Compass Growth Vision Report Consistency

Policy	Consistency Analysis
<p><u>Principle 1: Improve mobility for all residents.</u></p> <ul style="list-style-type: none"> • <u>Encourage transportation investments and land use decisions that are mutually supportive.</u> • <u>Locate new housing near existing jobs and new jobs near existing housing.</u> • <u>Promote a variety of travel choices.</u> 	<p><u>The project is consistent with this principle.</u></p> <p><u>The actions associated with implementation of the proposed project would allow for warehousing uses to be clustered around other industrial and commercial uses and would encourage a reduction of vehicle miles traveled within the City.</u></p> <p><u>Implementation of the project would create approximately 646 jobs. Existing housing is located approximately 1 mile to the north and 2 miles to the south of the project site. The project is consistent with this portion of Principle 1.</u></p> <p><u>There are a number of transit-oriented strategies that could be implemented by the proposed project to encourage alternate modes of travel, including informational strategies, incentives, and services. (Refer to Mitigation Measure 4.2.6.3A).</u></p>
<p><u>Principle 2: Foster livability in all communities.</u></p> <ul style="list-style-type: none"> • <u>Promote developments which provide a mix of uses.</u> • <u>Promote “people scaled, “walkable communities.</u> • <u>Support the preservation of stable, single-family neighborhoods.</u> 	<p><u>The project is consistent with the applicable portions of this principle.</u></p> <p><u>The proposed project is a warehousing project and does not include any residential uses. Therefore, the project is not considered to be a mixed use project and this portion of Principle 2 is not applicable to the project.</u></p> <p><u>The project site is located in an industrial warehouse area. The project would include sidewalks so that the opportunity of being walkable within this warehouse area is possible. Therefore, the project is consistent with this portion of Principle 2.</u></p> <p><u>The proposed project is a warehousing project and does not include any residential uses. Therefore this portion of Principle 2 is not applicable to the project.</u></p>
<p><u>Principle 3: Enable prosperity for all people.</u></p> <ul style="list-style-type: none"> • <u>Provide in each community a variety of housing types to meet the housing needs of all income levels.</u> • <u>Support educational opportunities that promote balanced growth.</u> • <u>Ensure environmental justice regardless of race, ethnicity, or income class.</u> • <u>Support local and state fiscal policies that</u> 	<p><u>Based on the information provided below, this principle is not applicable to the project.</u></p> <p><u>The proposed project is a warehousing project and does not include any residential or educational uses. Therefore this portion of Principle 3 is not applicable to the project.</u></p> <p><u>The project site is vacant and the project located in an area identified for industrial and commercial uses. Therefore, this issue not applicable to the project.</u></p> <p><u>The supporting of local and state fiscal policies and the encouragement of civic engagement is at the City level not the</u></p>

Table 5.D: Compass Growth Vision Report Consistency

Policy	Consistency Analysis
<p><u>encourage balanced growth.</u></p> <ul style="list-style-type: none"> • <u>Encourage civic engagement.</u> 	<p><u>project level. Therefore, this portion of the principle is not applicable to the project.</u></p>
<p><u>Principle 4: Promote sustainability for future generations.</u></p> <ul style="list-style-type: none"> • <u>Focus development in urban centers and existing cities.</u> • <u>Develop strategies to accommodate growth that uses resources efficiently, eliminate pollution and significantly reduce waste.</u> • <u>Utilize “green” development techniques.</u> 	<p><u>The project is consistent with this principle.</u></p> <p><u>The proposed project is located in an area that is already developed with urban uses and where existing infrastructure (freeway, sewer, electrical, water, etc.) is accessible.</u></p> <p><u>Mitigation Measure 4.3.1.6B requires the project to implement various sustainability strategies and “green” development techniques that uses resources efficiently, eliminates pollution, and reduces waste.</u></p>

4. MITIGATION MONITORING AND REPORTING PROGRAM

4.1 INTRODUCTION

This Mitigation Monitoring and Reporting Program has been prepared for use in implementing mitigation for the:

VIP Moreno Valley Project

The program has been prepared in compliance with State law and the Environmental Impact Report (EIR) (State Clearinghouse No. 2011081084) prepared for the project by the City of Moreno Valley.

The California Environmental Quality Act (CEQA) requires adoption of a reporting or monitoring program for those measures placed on a project to mitigate or avoid adverse effects on the environment (Public Resource Code Section 21081.6). The law states that the reporting or monitoring program shall be designed to ensure compliance during project implementation.

The monitoring program contains the following elements:

- 1) The mitigation measures are recorded with the action and procedure necessary to ensure compliance. In some instances, one action may be used to verify implementation of several mitigation measures.
- 2) A procedure for compliance and verification has been outlined for each action necessary. This procedure designates who will take action, what action will be taken and when, and to whom and when compliance will be reported.
- 3) The program has been designed to be flexible. As monitoring progresses, changes to compliance procedures may be necessary based upon recommendations by those responsible for the program. As changes are made, new monitoring compliance procedures and records will be developed and incorporated into the program.

This Mitigation Monitoring and Reporting Program includes mitigation identified in the Initial Study and the Final EIR.

4.2 MITIGATION MONITORING AND RESPONSIBILITIES

As the Lead Agency, the City of Moreno Valley is responsible for ensuring full compliance with the mitigation measures adopted for the proposed project. The City will monitor and report on all mitigation activities. Mitigation measures will be implemented at different stages of development throughout the project area. In this regard, the responsibilities for implementation have been assigned to the Applicant, Contractor, or a combination thereof. If during the course of project implementation, any of the mitigation measures identified herein cannot be successfully implemented, the City shall be immediately informed, and the City will then inform any affected responsible agencies. The City, in conjunction with any affected responsible agencies, will then determine if modification to the project is required and/or whether alternative mitigation is appropriate.

4.3 MITIGATION MONITORING AND REPORTING PROGRAM CHECKLIST

Project File Name: VIP Moreno Valley Project

Applicant:

Vogel Engineers, Inc.

Date:

June 2012

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
AIR QUALITY						
4.2.6.1A Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall place construction equipment staging areas at least 200 feet away from sensitive receptors. Contract specifications shall be included in the proposed project construction documents, which shall be reviewed by the City.	City of Moreno Valley Engineering and Building and Safety Planning Division	Prior to Grading and during grading operations.	Prior to Issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order
4.2.6.1B Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall utilize power sources (e.g., power poles) or clean-fuel (e.g., fuel other than diesel or gasoline) generators where feasible. Contract specifications shall be included in the proposed project construction documents, which shall be reviewed by the City.	City of Moreno Valley Engineering and Building and Safety Planning Division	Prior to Grading	Prior to Issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order
4.2.6.1C Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall utilize California Air Resources Board (CARB) Tier II Certified equipment or better during the rough/mass grading phase for the following pieces of equipment: rubber-tired dozers and scrapers. Contract	City of Moreno Valley Engineering and Building and Safety Planning Division	Prior to Grading	Prior to Issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
specifications shall be included in the proposed project construction documents, which shall be reviewed by the City.						
4.2.6.1D All clearing, grading, earthmoving, or excavation activities shall cease when winds exceed 25 mph per SCAQMD guidelines in order to limit fugitive dust emissions.	City of Moreno Valley Engineering and Building and Safety Planning Division	Throughout construction	During grading	Review of construction documents and on-site inspection		Issuance of a Stop Work Order
4.2.6.1E The contractor shall ensure that all disturbed unpaved roads and disturbed areas within the project are watered at least three times daily during dry weather. Watering, with complete coverage of disturbed areas, shall occur at least three times a day, preferably in the mid-morning, afternoon, and after work is done for the day.	City of Moreno Valley Engineering and Building and Safety Planning Division	Throughout construction	During Construction	On-site inspection		Issuance of a Stop Work Order
4.2.6.1F The contractor shall ensure that traffic speeds on unpaved roads and project site areas are reduced to 15 miles per hour or less to reduce PM10 and PM2.5 fugitive dust haul road emissions. Speed limit signs (15 mph maximum) shall be posted at entry points to the project site, and along any unpaved roads providing access to or within the project site and/or any unpaved designated on-site travel routes.	City of Moreno Valley Engineering and Building and Safety Planning Division	Throughout construction	During Construction	On-site inspection		Issuance of a Stop Work Order
4.2.6.1G Groundcover shall be replaced, and/or non-toxic soil stabilizers shall be applied (according to manufacturers' specifications) to any inactive	City of Moreno Valley Engineering and Building and Safety	Throughout construction	During Construction	On-site inspection		Issuance of a Stop Work Order

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
construction areas (previously graded areas inactive for ten days or more).	Planning Division					
4.2.6.1H The contractor shall minimize pollutant emissions by maintaining equipment engines in good condition and in proper tune according to manufacturer's specifications and during smog season (May through October) by not allowing construction equipment to be left idling for more than five minutes (per California law).	City of Moreno Valley Engineering and Building and Safety	Throughout construction	During Construction	On-site inspection		Issuance of a Stop Work Order
4.2.6.1I The contractor shall ensure use of low-sulfur diesel fuel in construction equipment as required by the California Air Resources Board (CARB) (diesel fuel with sulfur content of 15 ppm by weight or less).	City of Moreno Valley Engineering and Building and Safety	Throughout construction	During Construction	On-site inspection		Issuance of a Stop Work Order
4.2.6.1J If available, the project applicant shall use "Low-Volatile Organic Compounds" paints, coatings, and solvents with a VOC content lower than required under Rule 1113 (not to exceed 150 grams/liter; 1.25 pounds/gallon). High Pressure Low Volume (HPLV) applications of paints, coatings, and solvents shall be consistent with South Coast Air Quality Management District Rule 1113. Alternatively, the project applicant shall use materials that do not require painting or are pre-painted.	City of Moreno Valley Engineering and Building and Safety Planning Division	Throughout construction	During Construction	On-site inspection		Issuance of a Stop Work Order
4.2.6.1K Grading plans, construction specifications and bid documents shall	City of Moreno Valley Engineering	Prior to Grading and during	Prior to Issuance of Grading Permit	Review of construction		Withhold Grading Permit

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
<p>also include the following notations:</p> <ul style="list-style-type: none"> • Off-road construction equipment shall utilize alternative fuels where feasible e.g., biodiesel fuel (a minimum of B20), natural gas (CNG), liquefied natural gas (LNG), propane, except for equipment where use of such fuels would void the equipment warranty; • Gravel pads shall be provided at all access points to prevent tracking of mud onto public roads; • Install and maintain trackout control devices at all access points where paved and unpaved access or travel routes intersect; • The contractor or builder shall designate a person or person(s) to monitor the dust control program and to order increased watering, as necessary, to prevent transport of dust off site; • The contractor or builder shall post a publicly visible sign with the telephone number and person to contact regarding dust complaints. The contact person shall take corrective action within 24 hours; • High pressure injectors shall be provided on diesel construction equipment where feasible; • Engine size of construction 	<p>and Building and Safety Planning Division</p>	<p>grading operations.</p>		<p>documents and on-site inspection</p>		<p>or Issuance of a Stop Work Order</p>

<p>avoid differential settlement of the structure.</p> <p>The on-site soils or approved import soils may be utilized for the compacted fill, provided they are free of any deleterious materials and shall not contain any rocks, brick, asphaltic concrete, concrete, or other hard materials greater than eight inches in maximum dimensions. Any import soil must be approved by the Soils Engineering firm a minimum of 24 hours prior to importation to the site.</p> <p>The approved fill soils shall be placed in layers not in excess of six inches in thickness. Each lift shall be uniform in thickness and thoroughly blended. The fill soils shall be brought to within 2 percent of the optimum moisture content, unless otherwise specified by the Soils Engineering firm. Each lift shall be compacted to a minimum of 90 percent relative compaction (in accordance with ASTM: D-1557) and approved prior to the placement of the next layer of soil. Compaction tests shall be obtained at the discretion of the Soils Engineering firm but to a minimum of one test for every 500 cubic yards placed and/or for every two feet of compacted fill placed.</p> <p>The minimum relative compaction shall be obtained in accordance with accepted methods in the construction industry. The final grade of the structural areas shall be in a dense and smooth condition prior to</p>

HYDROLOGY AND WATER QUALITY						
Mitigation Measure HYD-01: Prior to grading plan approval and the issuance of a grading permit by the City, the project proponent shall provide evidence to the City that a Notice of Intent (NOI) with the Regional Water Quality Control Board has been filed to be covered under the State NPDES General Construction Permit for discharge of stormwater associated with construction activities.	City of Moreno Engineering	Prior to grading	Prior to the Issuance of Grading Permits	Submittal of copy of Notice of Intent to City filed with the RWQCB		Withhold Grading Permits
Mitigation Measure HYD-02: Prior to grading plan approval and the issuance of a grading permit by the City, the project proponent shall submit to the State Water Quality Control Board, a Storm Water Pollution Prevention Plan (SWPPP). The SWPPP shall include a surface water control plan and erosion control plan citing specific measures to control on-site and off-site erosion during the entire grading and construction period. Additionally, the SWPPP shall identify structural and nonstructural BMPs to control sediment and non-visible discharges from the site. BMPs to be implemented in the SWPPP may include but shall not be limited to the following: Sediment discharges from the site may be controlled by the following: gravel bags, silt fences, straw wattles and temporary debris basins (if deemed necessary), and other discharge	City of Moreno Engineering	Prior to grading	Prior to the Issuance of Grading Permits	Review and approval of SWPPP		Withhold Grading Permits

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non- Compliance
<p>control devices. The construction and condition of the BMPs will be periodically inspected during construction, and repairs will be made when necessary as required by the SWPPP.</p> <p>Materials that have the potential to contribute non-visible pollutants to stormwater must not be placed in drainage ways and must be contained, elevated, and placed in temporary storage containment areas.</p> <p>All loose piles of soil, silt, clay, sand, debris, and other earthen material shall be protected in a reasonable manner to eliminate any discharge from the site. Stockpiles will be surrounded by silt fences.</p> <p>The SWPPP will include inspection forms for routine monitoring of the site during the construction phase to ensure NPDES compliance.</p> <p>Additional BMPs and erosion control measures will be documented in the SWPPP and utilized if necessary.</p> <p>The SWPPP will be kept on site for the entire duration of project construction and will also be available to the local RWQCB for inspection at any time.</p> <p>In the event that it is not feasible to implement the above BMPs, the City of Moreno Valley can make a determination</p>						

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
that other BMPs will provide equivalent or superior treatment either on or off site.						
<p>Mitigation Measure HYD-03: Prior to the issuance of grading permits, the project proponent shall provide evidence to the City that the following provisions have been added to construction contracts for the project:</p> <ul style="list-style-type: none"> The Construction Contractor shall be responsible for performing and documenting the application of BMPs identified in the SWPPP. Weekly inspections shall be performed on sediment control measures called for in the SWPPP. Monthly reports shall be maintained by the Contractor and submitted to the City for inspection. In addition, the Contractor will also be required to maintain an inspection log and have the log on site to be reviewed by the City of Moreno Valley and the representatives of the Regional Water Quality Control Board. 	City of Moreno Engineering	During grading and construction	Prior to Grading	Review of construction documents and on-site inspection		Withhold Grading Permit
<p>Mitigation Measure HYD-04: Prior to grading plan approval and the issuance of a grading permit by the City, the project proponent shall receive approval from the City of Moreno Valley for a Final Water Quality Management Plan (F-WQMP). The F-WQMP shall specifically identify pollutants of concern, site design, source control, and treatment control BMPs that</p>	City of Moreno Engineering	Prior to grading	Prior to Issuance of Grading Permit	Submittal of WQMP to City for review and approval		Withhold Grading Permit

Construction Noise Handbook

3.0 Effects of Construction Noise Handbook

3.1 Introduction

RCNM Version 1.1

Construction noise in the community may not pose a health risk or damage peoples' sense of hearing, but it can adversely affect peoples' quality of life. To some degree, construction noise can be a contributing factor to the degradation of someone's health in that it can cause people to be irritated and stressed and can interrupt their ability to sleep - all of which may lead to higher blood pressure, anxiety, and feelings of animosity toward the people or agencies responsible for producing the noise.

Measurement

In fact, several of the traditional definitions of "noise" (i.e. unwanted or undesirable sound) can be associated with construction noise. Construction noise can be

Noise Barriers considered to:

- be too loud;
- be impulsive;

Noise Compatible Planning

- contain annoying pure tones;
- occur unexpectedly;

Regulation and Guidance occur at undesirable times of day; and/or

- interrupt people's activities.

Tire Pavement Noise

Traffic Noise Model Construction noise has the potential to disturb people at home in their residences, in office buildings or retail businesses, in public institutional buildings, at locations of religious services, while attending sporting events, or when on vacation.

EXECUTIVE SUMMARY

The Air Toxics "Hot Spots" Information and Assessment Act (AB 2588, Connelly) was enacted in September 1987. Under this Act, stationary sources of air pollution are required to report the types and quantities of certain substances their facilities routinely release into the air. The goals of the Air Toxics "Hot Spots" Act are to collect emission data, identify facilities having localized impacts, ascertain health risks posed by those facilities, notify nearby residents of significant risks and reduce emissions from significant sources.

The Technical Support Document for Cancer Potency Factors (TSD) contains cancer unit risks and potency factors for 107 of the 201 carcinogenic substances or groups of substances for which emissions must be quantified in the Air Toxics Hot Spots program. These unit risks are used in the cancer risk assessment of facility emissions.

The purposes of this revision to the TSD is to provide updated calculation procedures used to derive the estimated unit risk and cancer potency factors, and to describe the procedures used to consider the increased susceptibility of infants and children compared to adults to carcinogens. This updates cancer risk assessment methods originally laid out in the California Department of Health Services' Guidelines for Chemical Carcinogen Risk Assessment (CDHS, 1985), and more recently summarized in the previous Hot Spots technical support document Part II (OEHHA, 2005a). Summaries of cancer potency factors and the underlying data are provided in Appendix A and B. [these did not undergo revision and are not included in this review package.]

The procedures used to consider the increased susceptibility to carcinogens of infants and children as compared to adults include the use of age-specific weighting factors in calculating cancer risks from exposures of infants, children and adolescents, to reflect their anticipated special sensitivity to carcinogens

This document is one part of the Air Toxics Hot Spots Program Risk Assessment Guidelines. The other documents originally included in the Guidelines are Part I: Technical Support Document for the Determination of Acute Toxicity Reference Exposure Levels for Airborne Toxicants; Part III: Technical Support Document for Determination of Noncancer Chronic Reference Exposure Levels; Part IV: Technical Support Document for Exposure Assessment and Stochastic Analysis; Part V: Air Toxic Hot Spots Program Risk Assessment Guidelines. As a part of the same revision process which led to production of this revised TSD on cancer potencies, the original TSDs for Acute and Chronic Reference Exposure Levels have been replaced with a new unified TSD for Acute, 8-hour and Chronic Reference Exposure Levels.

The major changes to the TSD include the following:

- Based on the OEHHA analysis of the potency by lifestage at exposure, OEHHA proposes weighting cancer risk by a factor of 10 for exposures that occur from birth to 2 years of age, and by a factor of 3 for exposures that occur from 2 years through 15 years of age. We propose to apply this weighting factor to all carcinogens, regardless of purported mechanism of action, unless chemical-specific data exist to the contrary. In cases where

there are adequate data for a specific carcinogen of potency by age, we would use the data to make any adjustments to risk.

- OEHHA proposes to use the Benchmark Dose method to compute potency factors rather than the more traditional linearized multistage model (LMS), although the LMS will still be used in some instances. The BMDL model essentially uses an empirical fit to the data (usually best with the multistage model), and then extrapolates with a straight line from the 95 % lower confidence limit of the BMD (BMDL) to zero. This method is simpler and does not assume any underlying theoretical mechanisms at the low dose range. The BMDL method results in very similar estimates of potency as the LMS method.
- OEHHA will use scaling based on body weight to the $\frac{3}{4}$ power, rather than to the $\frac{2}{3}$ power.
- OEHHA's evaluations of the carcinogenicity of chemicals generally follow the guidelines laid out by IARC for identification and classification of potential human carcinogens, which are described in detail in the most recent revision of the *Preamble* to the IARC monographs series (IARC, 2006).

PREFACE

The Air Toxics "Hot Spots" Information and Assessment Act (AB 2588, Connelly) was enacted in September 1987. Under this Act, stationary sources are required to report the types and quantities of certain substances their facilities routinely release into the air. The goals of the Air Toxics "Hot Spots" Act are to collect emission data, identify facilities having localized impacts, ascertain health risks posed by those facilities, notify nearby residents of significant risks and reduce emissions from significant sources.

The Technical Support Document for Cancer Potency Factors (TSD) contains cancer unit risks and potency factors for 107 of the 201 carcinogenic substances or groups of substances for which emissions must be quantified in the Air Toxics Hot Spots program. These unit risks are used in risk assessment of facility emissions. The TSD provides updated calculation procedures used to derive the estimated unit risk and cancer potency factors, and procedures to consider early-life susceptibility to carcinogens. Summaries of cancer potency factors and the underlying data are provided in Appendix A and B. [these did not undergo revision and are not included in this review package.]

In this document, OEHHA is responding to the requirements of the 1999 Children's Environmental Health Protection Act, (SB25, Escutia) by revising the procedures for derivation and application of cancer potency factors to take account of general or chemical-specific information which suggests that children may be especially susceptible to certain carcinogens (OEHHA, 2001a). The revised cancer potency derivation procedures described will not be used to impose any overall revisions of the existing cancer potencies, although they do reflect updated methods of derivation. However, individual cancer potency values will be reviewed as part of the ongoing re-evaluation of health values mandated by SB 25, and revised values will be listed in updated versions of the appendices to this document as necessary. The revisions also include the use of weighting factors in calculating cancer risks from exposures of infants, children and adolescents, to reflect their anticipated special sensitivity to carcinogens. Similar legal mandates to update risk assessment methodology and cancer potencies apply to the OEHHA program for development of Public Health Goals (PHGs) for chemicals in drinking water, and Proposition 65 No Significant Risk Levels (NSRLs). The NSRLs may also be revised to reflect concerns for children's health. Revising these numbers will require the originating program to reconsider the value in an open public process. For example, OEHHA would need to release any revised potency factors for public comment and review by the Scientific Review Panel on Toxic Air Contaminants (SRP) prior to adoption under the TAC program. The procedures for outside parties to request reevaluation of cancer potency values by the programs which originated those values are listed in Appendix G.

Appendices A and B provide previously adopted Cal/EPA values which were included in the previous version of the TSD for Cancer Potency Factors (OEHHA, 2005a). Cal/EPA values were developed under the Toxic Air Contaminant (TAC) program, the PHG program, the Proposition 65 program, or in some cases specifically for the Air Toxics Hot Spots program. All the Cal/EPA values are submitted for public comments and external peer review prior to adoption by the program of origin. In the future, new values developed by the Toxic Air

Contaminants or Hot Spots programs or other suitable sources will be added as these are approved.

Some U.S. EPA IRIS cancer unit risk values were adopted under the previous versions of these guidelines, and these values will continue to be used unless and until revised by Cal/EPA. U.S. EPA has recently revised its cancer risk assessment guidelines (U.S. EPA, 2005a). Some of the recommended changes in methodology could result in slightly different potency values compared to those calculated by the previous methodology, although in practice a number of the recommendations (for example, the use of $3/4$ power of the body weight ratio rather than $2/3$ power for interspecies scaling) have been available in draft versions of the revised policy for some time and appear in many more recent assessments. U.S. EPA has stated that cancer potency values listed in IRIS will not be revisited solely for the purpose of incorporating changes in cancer potency value calculation methods contained in the revised cancer risk assessment guidelines. U.S. EPA has also issued supplementary guidelines on assessing cancer risk from early-life exposure (U.S. EPA, 2005b).

OEHHA uses a toxic equivalency factor procedure for dioxin-like compounds, including polychlorinated dibenzo-*p*-dioxins, dibenzofurans and polychlorinated biphenyls (PCBs). The Toxicity Equivalency Factor scheme (TEF_{WHO-97}) developed by the World Health Organization/European Center for Environmental Health (WHO-ECEH) is used for determining cancer unit risk and potency values for these chemicals where individual congener emissions are available (Appendix C).

This document is one part of the Air Toxics Hot Spots Program Risk Assessment Guidelines. The other documents originally included in the Guidelines are Part I: Technical Support Document for the Determination of Acute Toxicity Reference Exposure Levels for Airborne Toxicants; Part III: Technical Support Document for Determination of Noncancer Chronic Reference Exposure Levels; Part IV: Technical Support Document for Exposure Assessment and Stochastic Analysis; Part V: Air Toxic Hot Spots Program Risk Assessment Guidelines. As a part of the same revision process which led to production of this revised TSD on cancer potencies, the original TSDs for Acute and Chronic Reference Exposure Levels have been replaced with a new unified TSD for Acute, 8-hour and Chronic Reference Exposure Levels.

APPENDICES

Appendix A. A lookup table containing unit risk and cancer potency values.

Appendix B. Chemical-specific summaries of the information used to derive unit risk and cancer potency values.

Appendix C. A description of the use of toxicity equivalency factors for determining unit risk and cancer potency factors for polychlorinated dibenzo-*p*-dioxins, dibenzofurans and dioxin-like polychlorinated biphenyls.

Appendix D. A listing of Toxic Air Contaminants identified by the California Air Resources Board.

Appendix E. Descriptions of the International Agency for Research on Cancer (IARC) and U.S. Environmental Protection Agency (U.S. EPA) carcinogen classifications.

Appendix F. An asbestos quantity conversion factor for calculating asbestos concentrations expressed as 100 fibers/m³ from asbestos concentrations expressed as µg/m³.

Appendix G. Procedures for revisiting or delisting cancer potency factors by the program of origin.

Appendix H. Exposure routes and studies used to derive cancer unit risks and slope factors.

Appendix I. “Assessing susceptibility from early-life exposure to carcinogens”: Barton *et al.*, 2005 (from *Environmental Health Perspectives*).

Appendix J. “In Utero and Early Life Susceptibility to Carcinogens: The Derivation of Age-at-Exposure Sensitivity Measures” – conducted by OEHHA’s Reproductive and Cancer Hazard Assessment Branch.

Appendix K. Additions and corrections from prior document versions.

INTRODUCTION

The Technical Support Document (TSD) for Describing Available Cancer Potency Factors provides technical information support for the Air Toxics Hot Spots Program Risk Assessment Guidelines. The TSD consists of 12 sections:

1. The TSD introduction.
2. A description of the methodologies used to derive the unit risk and cancer potency values listed in the lookup table.
3. A lookup table containing unit risk and cancer potency values. (Appendix A)
4. Chemical-specific summaries of the information used to derive unit risk and cancer potency values. (Appendix B).
5. A description of the use of toxicity equivalency factors for determining unit risk and cancer potency factors for polychlorinated dibenzo-*p*-dioxins, dibenzofurans and dioxin-like polychlorinated biphenyls (Appendix C).
6. A listing of Toxic Air Contaminants identified by the California Air Resources Board (Appendix D).
7. Descriptions of the International Agency for Research on Cancer (IARC) and U.S. Environmental Protection Agency (U.S. EPA) carcinogen classifications (Appendix E).
8. An asbestos quantity conversion factor for calculating asbestos concentrations expressed as 100 fibers/m³ from asbestos concentrations expressed as µg/m³ (Appendix F).
9. Procedures for revisiting or delisting cancer potency factors by the program of origin (Appendix G).
10. Exposure routes and studies used to derive cancer unit risks and slope factors (Appendix H).
11. "Assessing susceptibility from early-life exposure to carcinogens": Barton *et al.*, 2005 (from *Environmental Health Perspectives*) (Appendix I).
12. "In Utero and Early Life Susceptibility to Carcinogens: The Derivation of Age-at-Exposure Sensitivity Measures" – conducted by OEHHA's Reproductive and Cancer Hazard Assessment Branch (Appendix J)

SELECTION OF CANCER POTENCY VALUES

The Office of Environmental Health Hazard Assessment (OEHHA) has developed a number of cancer potencies for use in the Toxic Air Contaminants and Air Toxics Hot Spots programs. This document also provides summaries of cancer potency factors which were originally developed for other California Environmental Protection Agency (Cal/EPA) programs, or by the U.S. EPA. These were reviewed for accuracy, reliance on up-to-date data and methodology, and applicability in the context of the Air Toxics Hot Spots program. Values found appropriate were adopted after public and peer review rather than devoting the resources necessary for a full *de novo* assessment. Thus, cancer potency values (CPF) included in the Technical Support Document (TSD) for Cancer Potency Factors were from the following sources:

1. Toxic Air Contaminant documents
2. Standard Proposition 65 documents
3. U.S.EPA Integrated Risk Information Systems (Office of Health and Environmental Assessment, U.S.EPA)
4. Expedited Proposition 65 documents
5. Other OEHHA assessments , for example for the drinking water program.

All the cancer potency value sources used generally follow the recommendations of the National Research Council on cancer risk assessment (NRC, 1983, 1994). All Cal/EPA program documents undergo a process of public comment and scientific peer review prior to adoption, although the procedures used vary according to the program. The publication procedure for Toxic Air Contaminant documents includes a public comment period and review by the Scientific Review Panel on Toxic Air Contaminants (SRP) before identification of a Toxic Air Contaminant by the Air Resources Board of the California Environmental Protection Agency (Cal/EPA). Furthermore, a petition procedure is available to initiate TAC document review and revision if appropriate because of new toxicity data. Documents developed for the Air Toxics Hot Spots program similarly undergo public comment and peer review by the SRP before adoption by the Director of OEHHA. The standard Proposition 65 document adoption procedure includes a public comment and external peer review by the Proposition 65 Carcinogen Identification Committee. The expedited Proposition 65 document adoption procedure included a public comment period. Risk assessments prepared for development of Public Health Goals (PHGs) for chemicals in drinking water are subject to two public comment periods before the final versions and responses to comments are published on the OEHHA Web site. PHG documents may also receive external peer review. Documents from U.S. EPA's Integrated Risk Information System (IRIS) receive external peer review and are posted on the Internet for public viewing during the external peer review period, and any public comments submitted are considered by the originating office. Additionally, public comment may be solicited during the document posting period. Future preference for use of developed cancer potency factors/unit risks will be done on a case by case basis. Preference will be given to those assessments most relevant to inhalation exposures of the California population, to the most recent derivations using the latest data sets and scientific methodology, and to those having undergone the most open and extensive peer review process.

CANCER RISK ASSESSMENT METHODOLOGIES

This section describes in general the methodologies used to derive the cancer unit risk and potency factors listed in this document. As noted in the Preface to this document, no new cancer unit risks or potency factors were developed for this document. All of the values contained here were previously developed in documents by Cal/EPA or U.S. EPA. Following the recommendations of the National Academy of Sciences (NRC, 1983), Cal/EPA and U.S. EPA have both used formalized cancer risk assessment guidelines, the original versions of which (California Department of Health Services, 1985; U.S. EPA, 1986) were published some time ago. Both these guidelines followed similar methodologies.

In the twenty years since these original guidelines were published there have been a number of advances in the methodology of cancer risk assessment. There have additionally been considerable advances in the quantity of data available not only from animal carcinogenesis bioassays and epidemiological studies, but also from mechanistic studies of carcinogenesis and related phenomena. Some of these advances have been incorporated into newer risk assessments by both agencies on a more or less *ad hoc* basis. There has also been an ongoing effort to provide updated risk assessment guidance documents. In 1995, U.S. EPA released for public comment the "Proposed and Interim Guidelines for Carcinogen Risk Assessment", which was the first of several drafts released for public comment. Many risk assessments appearing since then have used elements of the recommendations contained in that document, in spite of its draft status. A final version of the U.S. EPA's revised cancer risk assessment guidelines has now been released (U.S. EPA, 2005a). Although these new guidelines incorporate a number of substantial changes from their predecessors (U.S. EPA, 1986; 1995), U.S. EPA has stated that cancer potency values listed in IRIS will not be revisited solely for the purpose of incorporating changes in cancer potency value calculation methods.

Cal/EPA has not produced a revised cancer risk assessment guideline document to replace the original version (DHS, 1985). Rather, Cal/EPA has relied on incorporating new data and methodologies as these became available, and described the methods used on a case by case basis in the individual risk assessment documents where these went beyond the original guidance. However, this revision of the TSD for cancer potencies provides a convenient opportunity to summarize the current status of the methodology used by OEHHA for the air toxics programs, and also to highlight points of similarity to, and difference from, the recommendations of U.S. EPA (2005a).

In this document, OEHHA intends to follow the recommendations of the NRC (1994) in describing a set of clear and consistent principles for choosing and departing from default cancer risk assessment options. NRC identified a number of objectives that should be taken into account when considering principles for choosing and departing from default options. These include, "protecting the public health, ensuring scientific validity, minimizing serious errors in estimating risks, maximizing incentives for research, creating an orderly and predictable process, and fostering openness and trustworthiness". The OEHHA cancer risk methodologies discussed in this document are intended to generally meet those objectives cited above.

Hazard Identification

This section will describe: 1) how weight of evidence evaluations are used in hazard evaluation; 2) guidelines for inferring causality of effect; 3) the use of human and animal carcinogenicity data, as well as supporting evidence (e.g. genetic toxicity and mechanistic data); 4) examples of carcinogen identification schemes.

Evaluation of Weight of Evidence

In evaluating the range of evidence on the toxicity and carcinogenicity of a compound, mixture or other agent, a “weight-of-evidence” approach is generally used to describe the body of evidence on whether or not exposure to the agent causes a particular effect. Under this approach, the number and quality of toxicological and epidemiological studies, as well as the consistency of study results and other sources of data on biological plausibility, are considered. Diverse and sometimes conflicting data need to be evaluated with respect to possible explanations of differing results. Consideration of methodological issues in the review of the toxicological and epidemiological literature is important in evaluating associations between exposure to an agent and animal or human health effects. This aspect of the evaluation process has received particular emphasis with respect to epidemiological data, where concerns as to the statistical and biological significance and reliability of the data and the impacts of confounding and misclassification are pressing. Such concerns are also relevant to some extent in the interpretation of animal bioassay data and mechanistic studies. Although the test animals, laboratory environment and characterization of the test agent are usually much better controlled than the equivalent parameters in an epidemiological study, the small sample size can be problematic. In addition, there are uncertainties associated with extrapolation of biological responses from test animal species to humans.

Criteria for Causality

There has been extensive discussion over the last two centuries on causal inference. This has been particularly with regard to epidemiological data, but is also relevant to interpretation of animal studies. Most epidemiologists utilize causal inference guidelines based on those proposed by Bradford Hill (1971). OEHHA has relied on these and on recommendations by IARC (2006), the Institute of Medicine (2004), the Surgeon General’s Reports on Smoking (U.S. DHHS, 2004) and standard epidemiologic texts (e.g. Lilienfeld and Lilienfeld, 1980; Rothman and Greenland, 1998). The criteria for determination of causality used by OEHHA have been laid out in various risk assessment documents. The summary below is adapted from the Health Effects section of the document prepared to support the identification of environmental tobacco smoke (ETS) as a Toxic Air Contaminant (OEHHA, 2005b).

1. *Strength of Association.* A statistically significant strong association, which is easier to detect if there is a high relative risk, between a factor and a disease is often viewed as an important criterion for inferring causality because, all other things being equal, a strong and statistically significant association makes alternative explanations for the disease less likely. However, as discussed in Rothman and Greenland (1998), the fact that a relative risk is small in magnitude does not exclude a casual association between the risk factor

and the outcome in question. Since it is more difficult to detect (i.e., reach statistical significance) a small magnitude risk, ~~they are it is~~ just as likely to ~~be causal~~ indicate causality as a larger magnitude risks.

When assessing all evidence, it is important to consider the strength of the study design (particularly controlling for confounding variables, obtaining an unbiased sample, measurement error) and the level of statistical significance (i.e., the ability to exclude a Type I [false positive] error). The power of the study to detect biologically meaningful effects (i.e., the risk of a Type II [false negative] error) is important in considering studies that do not reach traditional (i.e., $P < .05$) statistical significance, particularly if the biological endpoint is serious. If the outcome is serious and the study small (i.e., low power), a larger P value (e.g., $P < .10$) may be adequate evidence for identifying an effect.

There are a number of examples of statistically significant, small magnitude associations that are widely accepted as causal, such as causal links between air pollution and cardiovascular/pulmonary mortality and between second-hand smoke exposure and various cancers and heart disease. From a public health perspective, even a small magnitude increase in risk for a common disease can mean large numbers of people affected by the health outcome when exposure is frequent and widespread, as measured by the population attributable risk or attributable fraction. Small magnitude of association must not be confused with statistical significance, which is much more important.

2. *Consistency of Association.* If several investigations find an association between a factor and a disease across a range of populations, geographic locations, times, and under different circumstances, then the factor is more likely to be causal. Consistency argues against hypotheses that the association is caused by some other factor(s) that varies across studies. Unmeasured confounding is an unlikely explanation when the effect is observed consistently across a number of studies in different populations.

Associations that are replicated in several studies of the same design or using different epidemiological approaches or considering different sources of exposure and in a number of geographical regions are more likely to represent a causal relationship than isolated observations from single studies (IARC, 2006). If there are inconsistent results among investigations, possible reasons are sought, such as adequacy of sample size or control group, methods used to assess exposure, or range in levels of exposure. The results of studies judged to be rigorous are emphasized over those of studies judged to be methodologically less rigorous. For example, studies with the best exposure assessment are more informative for assessing the association between ETS and breast cancer than studies with limited exposure assessment, all else being equal.

3. *Temporality.* Temporality means that the factor associated with causing the disease occurs in time prior to development of the disease. The adverse health effect should occur at a time following exposure that is consistent with the nature of the effect. For example, respiratory irritation immediately following exposure to an irritant vapor is temporally consistent, whereas ~~effects-irritation~~ noted only years later may not be. On the other hand, tumors, noted immediately following exposure, might be temporally

inconsistent with a causal relationship, but tumors arising after a latency period of months (in rodents) or years (in rodents or humans) would be temporally consistent.

4. *Coherence and Biological Plausibility.* A causal interpretation cannot conflict with what is known about the biology of the disease. The availability of experimental data or mechanistic theories consistent with epidemiological observations strengthens conclusions of causation. For example, the presence of known carcinogens in tobacco smoke supports the concept that exposure to tobacco smoke could cause increased cancer risk. Similarly, if the mechanism of action for a toxicant is consistent with development of a specific disease, then coherence and biological plausibility can be invoked. It should be noted that our understanding of the biology of disease, and therefore biological plausibility, changes in light of new information which is constantly emerging from molecular biology (including epigenetics), and from new clinical and epidemiological investigations revealing effects influenced by genetic polymorphisms, pre-existing disease, and so forth.
5. *Dose-Response.* A basic tenet of toxicology is that increasing exposure or dose generally increases the response to the toxicant. While dose-response curves vary in shape and are not necessarily always monotonic, an increased gradient of response with increased exposure makes it difficult to argue that the factor is not associated with the disease. To argue otherwise necessitates that an unknown factor varies consistently with the dose of the substance and the response under question. While increased risk with increasing levels of exposure is considered to be a strong indication of causality, absence of a graded response does not exclude a causal relationship (IARC, 2006).

The dose-response curves for specific toxic effects may be non-monotonic. Under appropriate circumstances, where the dose response shows saturation, the effect of exposures could be nearly maximal, with any additional exposure having little or no effect. In some instances, a response is seen strongly in susceptible subpopulations, and the dose-response is masked by mixing susceptible and non-susceptible individuals in a sample. Further, there are examples of U-shaped or inverted U-shaped dose-response curves, (e.g., for endocrine disrupters) (Almstrup et al., 2002; Lehmann et al., 2004). Finally, timing of exposure during development may mask an overall increase in risk with increasing dose.

6. *Specificity.* Specificity is generally interpreted to mean that a single cause is associated with a single effect. It may be useful for determining which microorganism is responsible for a particular disease, or associating a single carcinogenic chemical with a rare and characteristic tumor (e.g., liver angiosarcoma and vinyl chloride, or mesothelioma and asbestos). However, the concept of specificity is not helpful when studying diseases that are multifactorial, or toxic substances that contain a number of individual constituents, each of which may have several effects and/or target sites.
7. *Experimental evidence.* While experiments are often conducted over a short period of time or under artificial conditions (compared to real-life exposures), experiments offer the opportunity to collect data under highly controlled conditions that allow strong causal conclusions to be drawn. Experimental data that are consistent with epidemiological

results strongly support conclusions of causality. There are also “natural experiments” that can be studied with epidemiological methods, such as when exposure of a human population to a substance declines or ceases; if the effect attributed to that exposure decreases, then there is evidence of causality. One example of this is the drop in heart disease death and lung cancer risk after smoking cessation.

It should be noted that the causal criteria are guidelines for judging whether a causal association exists between a factor and a disease, rather than hard-and-fast rules. Lilienfeld and Lilienfeld (1980) note that “*In medicine and public health, it would appear reasonable to adopt a pragmatic concept of causality. A causal relationship would be recognized to exist whenever evidence indicates that the factors form part of the complex of circumstances that increases the probability of the occurrence of disease and that a diminution of one or more of these factors decreases the frequency of that disease. After all, the reason for determining the etiological factors of a disease is to apply this knowledge to prevent the disease.*” [Rothman and Greenland \(2005\) discuss the complexities of causation and the use of rules and deductive methods in causal inference. They also concur with Bradford Hill and others that a determination of causality is a pragmatic conclusion rather than an absolute verdict, and advocate that these criteria should be seen as “deductive tests of causal hypotheses”.](#)

Data sources

Human studies: epidemiology, ecological studies and case reports

The aim of a risk assessment for the California Air Toxics programs is to determine potential impact on human health. Ideally therefore, the hazard identification would rely on studies in humans to demonstrate the nature and extent of the hazard. However, apart from clinical trials of drugs, experimental studies of toxic effects in human subjects are rarely undertaken or justifiable. Pharmacokinetic studies using doses below the threshold for any toxic effect have been undertaken for various environmental and occupational agents, but are not usually regarded as appropriate for suspected carcinogens.

The human data on carcinogens available to the risk assessor therefore mostly consist of epidemiological studies of existing occupational or environmental exposures. It is easier to draw reliable inferences in situations where both the exposures and the population are substantial and well-defined, and accessible to direct measurement rather than recall. Thus, many important findings of carcinogenicity to humans are based on analysis of occupational exposures. Problems in interpretation of occupational epidemiological data include simultaneous exposure to several different known or suspected carcinogens, imprecise quantification of exposures and confounding exposures such as active or passive tobacco smoking. The historical database of occupational data has a bias towards healthy white adult males. Thus, the hazard analysis of these studies may not accurately characterize effects on women, infants, children or the elderly, or on members of minority ethnic groups. Nevertheless, the analysis of occupational epidemiological studies, [including meta-analyses](#), has proved an important source for unequivocal identification of human carcinogens.

Epidemiological evidence may also be obtained where a substantial segment of a general population is exposed to the material of interest in air, drinking water or food sources. Rigorous

cohort and case-control studies may sometimes be possible, in which exposed individuals are identified, their exposure and morbidity or mortality evaluated, and compared to less exposed but otherwise similar controls. More often at least the initial investigation is a cross-sectional study, where prevalence of exposures and outcomes is compared in relatively unexposed and exposed populations. Such studies are hypothesis-generating, but are important sources of information nevertheless, and can often also justify more costly and labor-intensive follow-up cohort and/or case-control studies.

The clinical medical literature contains many case reports where a particular health outcome is reported along with unusual exposures that might have contributed to its occurrence. These reports typically describe a single patient or a small group, and have no statistical significance. They are nevertheless useful as indications of possible associations that deserve follow-up using epidemiological methods, and as supporting evidence, addressing the plausibility of associations measured in larger studies.

Animal studies

Although the observation of human disease in an exposed population can provide definitive hazard identification, adequate data of this type are not always available. More often, risk estimates have to be based on studies in experimental animals, and extrapolation of these results to predict human toxicity. The animals used are mostly rodents, typically the common laboratory strains of rat and mouse.

Rats and mice have many similarities to humans. Physiology and biochemistry are similar for all mammals, especially at the fundamental levels of xenobiotic metabolism, DNA replication and DNA repair that are of concern in identifying carcinogens. However, there are also several important differences between rodents and humans. Rodents, with a short life span, have differences in cell growth regulation compared to longer-lived species such as the human. For instance, whereas laboratory investigations have suggested that mutations in two regulatory genes (*e.g.* H-ras and p-53) are sometimes sufficient to convert a rodent cell to a tumorigenic state, many human cancers observed clinically have seven or eight such mutations. In addition, cultured normal human cells have a very stable karyotype, whereas cultured rodent cells readily undergo tetraploidization and then aneuploidization in cell culture. Further, cultured human cells senesce and rarely undergo spontaneous immortalization (frequency is 10^{-7} or less), whereas cultured rodent cells readily undergo immortalization at frequencies on the order of 10^{-3} . The use of genomics to study chemical carcinogenesis is relatively new, but the differences at present appear to be a matter of degree rather than kind.

Differences in regulation of cell division are another likely reason for variation between species in the site of action of a carcinogen, or its potency at a particular site. A finding of carcinogenesis in the mouse liver, for instance, is a reasonably good indicator of potential for carcinogenesis at some site in the human, but not usually in human liver (Huff, 1999). The mouse liver (and to a lesser extent that of the rat) is a common site of spontaneous tumors. It is also relatively sensitive to chemical carcinogenesis. The human liver is apparently more resistant to carcinogenesis; human liver tumors are unusual except when associated with additional predisposing disease, such as hepatitis B or alcoholic cirrhosis, or exposure to aflatoxin B1, or simultaneous exposure to hepatitis B virus and aflatoxin B1. Conversely, other

tumor sites are more sensitive in the human than in experimental animals. Interspecies variation in site and sensitivity to carcinogenesis may also arise from differences in pharmacokinetics and metabolism, especially for carcinogens where metabolic activation or detoxification is important. This variability may cause important differences in sensitivity between individuals in a diverse population such as humans. Variability between individuals in both susceptibility and pharmacokinetics or metabolism is probably less in experimental animal strains that are bred for genetic homogeneity.

Animal carcinogenesis studies are often designed to maximize the chances of detecting a positive effect, and do not necessarily mimic realistic human exposure scenarios. Thus extrapolation from an experimentally accessible route to that of interest for a risk assessment may be necessary. Even for studies by realistic routes such as oral or inhalation, doses may be large compared to those commonly encountered in the environment, in order to counter the limitation in statistical power caused by the relatively small size of an animal experiment. Whereas the exposed population of an epidemiological study might number in the thousands, a typical animal study might have fifty individuals per exposure group. With this group size any phenomenon with an incidence of less than about 5% is likely to be undetectable. Statistically significant results may be obtained even with groups as small as ten animals per dose group, when incidence of a tumor that is rare in the controls approached 100% in a treated group. The consensus experimental design for animal carcinogenesis studies, which has evolved over the last 50 years of investigation, is represented by the protocol used by the U.S. National Toxicology Program (NTP) for studies using oral routes (diet, gavage or drinking water) or inhalation. These carcinogenesis bioassays usually involve both sexes of an experimental species, and most often two species. NTP has standardized the use of the C57BlxC3H F₁ hybrid mouse, and the Fischer 344 rat as the standard test species, although NTP has announced plans to substitute use of the Wistar Han rat for the Fisher 344 rat. There is now an extensive database of background tumor incidences, normal physiology, biochemistry, histology and anatomy for these strains, which aids in the interpretation of pathological changes observed in experiments. Nevertheless, there is enough variation in background rates of common tumors that the use of concurrent controls is essential for hazard identification or dose-response assessment. "Historical control" data are mainly used to reveal anomalous outcomes in the concurrent controls. The fact that a significantly elevated incidence of a tumor relative to the concurrent control group is within the range of historical controls at that site for the test sex and strain is not necessarily grounds for dismissing the biological significance of the finding.

Groups of fifty animals of each sex and species are used, with control groups, and several dose groups, the highest receiving the maximum tolerated dose (MTD). Recent study designs have emphasized the desirability of at least three dose levels covering a decade with "logarithmic" spacing (*i.e.* MTD, 1/2 MTD or 1/3 MTD, and 1/10 MTD). This extended design is aimed at providing better dose-response information, and may contribute important additional information, such as mechanistic insights, for the hazard identification phase.

Supporting evidence: genetic toxicity, mechanistic studies

Investigators have developed additional data sources that can support or modify the conclusions of animal carcinogenesis bioassays, and provide information on mechanisms of action of agents suspected of being carcinogenic based on epidemiological studies or animal bioassays.

Genetic damage in exposed organisms includes both gene mutations (point or frameshift), and larger scale effects such as deletions, gene amplification, sister-chromatid exchanges, translocations and loss or duplication of segments or whole chromosomes. These genetic effects of chemical exposures are deleterious in their own right. In addition, since carcinogenesis results from somatic mutations and similar genetic alterations, agents that cause genetic damage generally have carcinogenic potential. Conversely, many known carcinogens are also known to be genotoxic, although there is also a significant class of carcinogens that are not directly genotoxic according to the usual tests. These latter agents presumably work by some other mechanism, such as methylation of tumor suppressor genes or demethylation of cellular proto-oncogenes, although recent genetic studies have shown that even tumors induced by these agents may show mutations, deletions or amplification of growth regulatory genes.

Experimental procedures to demonstrate and measure genetic toxicity may involve exposure of intact animals, and examination of genetic changes in, for example, bone marrow cells (or cells descended from these e.g. the micronucleus test, which detects remnants of chromosomal fragments in immature erythrocytes), mutations in flies (*Drosophila*), or appearance of color spots in the coat of mice. However, many tests have employed single celled organisms or mammalian cells in culture. The best known of these tests is the *Salmonella* reverse mutation assay, popularly known as the Ames test after its inventor. This is representative of a larger class of tests for mutagenic activity in prokaryotic organisms (bacteria), which necessarily only look at gene-level mutations. Similar tests in eukaryotic microorganisms (yeasts, *Aspergillus*) and cultured mammalian cells also detect chromosomal effects. Many tests using microorganisms *in vitro* involve addition of activating enzymes (e.g. liver postmitochondrial supernatant – “S9”) to mimic the metabolism of promutagenic chemicals *in vivo*. Another type of test examines the induction in mammalian cells of morphological transformation or anchorage-independent growth. These two chemically induced, *in vitro* changes are considered two of the many changes that fibroblastic cells must undergo on their route to neoplastic transformation (tumorigenicity). These various genetic tests contribute different information, which may be used to amplify and confirm conclusions drawn from human studies or animal bioassays, or to draw conclusions in the absence of epidemiological or bioassay data. In the latter case they have also been used in prioritizing agents for further evaluation by means of bioassays.

Carcinogen Identification schemes

Some regulatory programs, such as California’s Safe Drinking Water and Toxics Enforcement Act (“Proposition 65”) and various activities of the U.S. EPA, require that explicit lists of substances having the potential to act as human carcinogens be maintained. Other such lists are developed by non-regulatory research organizations, such as the U.S. National Toxicology Program and the International Agency for Research on Cancer (IARC), an international program of the World Health Organization. The California air toxics programs do not have any statutory requirement to “identify” carcinogens. The requirement instead is to identify hazardous substances as Toxic Air Contaminants, and to determine whether or not a threshold concentration, below which no adverse effects are expected, is likely to exist:

HEALTH AND SAFETY CODE, Division 26 (Air Resources), § 39660.

(2) *The evaluation shall also contain an estimate of the levels of exposure that may cause or contribute to adverse health effects. If it can be established that a threshold of adverse health effects exists, the estimate shall include both of the following factors:*

(A) *The exposure level below which no adverse health effects are anticipated.*

(B) *An ample margin of safety that accounts for the variable effects that heterogeneous human populations exposed to the substance under evaluation may experience, the uncertainties associated with the applicability of the data to human beings, and the completeness and quality of the information available on potential human exposure to the substance. In cases in which there is no threshold of significant adverse health effects, the office shall determine the range of risk to humans resulting from current or anticipated exposure to the substance.*

In practice however this requirement amounts to the need to establish whether or not a substance is carcinogenic. Any such effects are clearly harmful. Whereas the great majority of non-cancer health effects of chemicals are regarded as having a threshold, the default assumption for carcinogens is that there is no threshold (as described below). OEHHA follows the guidelines laid out by IARC for identification and classification of potential human carcinogens, which are described in detail in the most recent revision of the *Preamble* to the IARC monographs series (IARC, 2006). The IARC Monograph series provides evaluations of the carcinogenicity of individual substances or commonly occurring mixtures. The evaluation guidelines used are similar to those used by other scientific or regulatory authorities, including U.S.EPA.

The data inputs to hazard identification for carcinogens are human epidemiological studies, animal bioassays, along with supporting evidence such as mechanistic and genotoxicity data and structure-activity comparisons. IARC also assembles data on the structure and identity of the agent. The list of agents considered includes specific chemicals and also complex mixtures, occupational and lifestyle factors, physical and biological agents, and other potentially carcinogenic exposures.

IARC evaluations determine the quality of evidence for both animal and human evidence as falling into one of four categories: sufficient evidence of carcinogenicity, limited evidence of carcinogenicity, inadequate evidence of carcinogenicity and evidence suggesting lack of carcinogenicity. Stringent requirements for data quality are imposed. In view of their crucial importance, these definitions are quoted directly from the *Preamble* (IARC 2006):

“(a) Carcinogenicity in humans

Sufficient evidence of carcinogenicity: The Working Group considers that a causal relationship has been established between exposure to the agent and human cancer. That is, a positive relationship has been observed between the exposure and cancer in studies in which chance, bias and confounding could be ruled out with reasonable confidence. A statement that there is *sufficient evidence* is followed by a separate sentence that identifies the target organ(s) or tissue(s) where an increased risk of cancer was observed in humans. Identification of a specific target organ or tissue does not preclude the possibility that the agent may cause cancer at other sites.

Limited evidence of carcinogenicity: A positive association has been observed between exposure to the agent and cancer for which a causal interpretation is considered by the Working Group to be credible, but chance, bias or confounding could not be ruled out with reasonable confidence.

Inadequate evidence of carcinogenicity: The available studies are of insufficient quality, consistency or statistical power to permit a conclusion regarding the presence or absence of a causal association between exposure and cancer, or no data on cancer in humans are available.
