ROLL CALL

INTRODUCTIONS

PUBLIC COMMENTS ON MATTERS ON THE AGENDA WILL BE TAKEN UP AS THE ITEM IS CALLED FOR BUSINESS, BETWEEN STAFF'S REPORT AND CITY COUNCIL DELIBERATION (SPEAKER SLIPS MAY BE TURNED IN UNTIL THE ITEM IS CALLED FOR BUSINESS.)

PUBLIC COMMENTS ON MATTERS NOT ON THE AGENDA UNDER THE JURISDICTION OF THE CITY COUNCIL WILL BE HEARD PRIOR TO CITY COUNCIL REPORTS AND CLOSING COMMENTS. IN THE EVENT THAT THE AGENDA ITEM FOR SUCH PUBLIC COMMENTS HAS NOT BEEN CALLED BY 9:00 P.M., IT SHALL BE CALLED AS THE NEXT ITEM OF BUSINESS FOLLOWING THE CONCLUSION OF ANY ITEM BEING HEARD AT 9:00 P.M.

Those wishing to speak should submit a BLUE speaker slip to the Bailiff. There is a three-minute time limit per person. All remarks and questions shall be addressed to the presiding officer or to the City Council and not to any individual Council member, staff member or other person.

JOINT CONSENT CALENDARS (SECTIONS A-D)

All items listed under the Consent Calendars, Sections A, B, C, and D are considered to be routine and non-controversial, and may be enacted by one motion unless a member of the Council, Community Services District, City as Successor Agency for the Redevelopment Agency, Housing Authority or Board of Library Trustees, requests that an item be removed for separate action. The motion to adopt the Consent Calendars is deemed to be a separate motion by each Agency and shall be so recorded by the City Clerk. Items withdrawn for report or discussion will be heard after public hearing items.

A. CONSENT CALENDAR-CITY COUNCIL

A.1 ORDINANCES - READING BY TITLE ONLY
Recommendation: Waive reading of all Ordinances.

Recommendation:
1. Approve as submitted.

A.5 CITY COUNCIL REPORTS ON REIMBURSABLE ACTIVITIES (Report of: City Clerk's Department)

Recommendation:
1. Receive and file the Reports on Reimbursable Activities for the period of January 2 – 15, 2013.

A.6 APPROVAL OF PAYMENT REGISTER FOR OCTOBER, 2012
(Report of: Financial & Management Services Department)

Recommendation:

1. Adopt Resolution No. 2013-02, approving the Payment Register for the month of October, 2012 in the amount of $16,850,964.14.

   Resolution No. 2012-02

   A Resolution of the City Council of the City of Moreno Valley, California, Approving the Payment Register for the Month of October, 2012.

A.7 APPROVAL OF PAYMENT REGISTER FOR NOVEMBER, 2012
(Report of: Financial & Management Services Department)

Recommendation:

1. Adopt Resolution No. 2013-03, approving the Payment Register for the month of November, 2012 in the amount of $11,149,687.42.

   Resolution No. 2012-03

   A Resolution of the City Council of the City of Moreno Valley, California, Approving the Payment Register for the Month of November, 2012.

A.8 TRACT MAP 31129 – REDUCE FAITHFUL PERFORMANCE BOND AND ADOPT THE RESOLUTION AUTHORIZING ACCEPTANCE OF THE PUBLIC IMPROVEMENTS AS COMPLETE AND ACCEPTING LANDON ROAD, SAND DOLLAR WAY, WINDWARD COURT, CONCH LANE, TRADEWINDS PLACE, DOVER DRIVE, LEEWARD WAY, SLUMBER LANE, DUSTY COYOTE AVENUE, AND THE PORTIONS OF BRODIAEA AVENUE AND CACTUS AVENUE ASSOCIATED WITH THE PROJECT INTO THE CITY'S MAINTAINED STREET SYSTEM
(Report of: Community & Economic Development Department)

Recommendations

1. Adopt Resolution No. 2013-04 Authorizing the Acceptance of the Public Improvements within Tract Map 31129 as Complete and Accepting Landon Road, Sand Dollar Way, Windward Court, Conch Lane, Tradewinds Place, Dover Drive, Leeward Way, Slumber Lane, Dusty Coyote Avenue, and the Portions of Brodiaea Avenue and Cactus Avenue Associated with the Project into the City's Maintained Street System.

   Resolution No. 2013-04

A Resolution of the City Council of the City of Moreno Valley, California, Authorizing the Acceptance of the Public Improvements as Complete Within Tract Map 31129 and Accepting Landon Road, Sand Dollar Way, Windward Court, Conch Lane, Tradewinds Place, Dover Drive, Leeward Way, Slumber Lane, Dusty Coyote Avenue, and the Portions of Brodiaea Avenue and Cactus Avenue Associated with the Project into the City's Maintained Street System.

2. Authorize the City Engineer to execute the 90% reduction to the Faithful Performance Bond, exonerate the Material and Labor Bond in 90 days if there are no stop notices or liens on file with the City Clerk, and exonerate the final 10% of the Faithful Performance Bond in one year when all clearances are received.

A.9 AWARD CONSTRUCTION CONTRACT FOR THE BALLISTIC RESISTANT GLASS PROJECT FOR THE POLICE DEPARTMENT'S LOBBY PROJECT NO. JLL12/13-05
(Report of: Police Department)

Recommendations

1. Award the construction contract to Rasmussen Brothers Construction (RBC), Inc. 40441 Gavilan Mountain Road, Fallbrook, Ca. 92028. RBC Inc. submitted the lowest responsible bid, for the Moreno Valley Police Department Ballistic Resistant project for the lobby.

2. Authorize the City Manager to execute a contract with RBC Inc.

3. Authorize the issuance of a purchase order to RBC Inc. in the amount of $166,378.00 once the contract has been signed by all parties.

4. Authorize the Police Chief to execute any subsequent change orders to the contract with RBC Inc., up to but not to exceed the project contingency funds of $16,245.00.

5. Authorize the Financial & Administrative Services Director to record the Notice of Completion once the work is completed, accept the improvements into the City's maintained system, and release the retention to RBC Inc., if no claims are filed against the project.

A.10 AUTHORIZE THE SEVENTH AMENDMENT TO AGREEMENT FOR PROFESSIONAL CONSULTANT SERVICES WITH PARSONS TRANSPORTATION GROUP FOR SR-60/NASON OVERCROSSING AND SR-60/MORENO BEACH DRIVE IMPROVEMENTS, PHASES 1 AND 2 – PROJECT NOS. 802 0003 70 77-4821, 801 0038 70 77-4821, AND 801 0021 70 77-3003

(Report of: Public Works Department)

Recommendations

1. Approve the Seventh Amendment to the Agreement for Professional Consultant Services with Parsons Transportation Group Inc. (Parsons), 1133 Fifteenth Street NW, Washington, DC 20005-2701, to provide landscape and right-of-way design services for the SR-60/Nason Overcrossing project, provide design changes required for Caltrans approval of SR-60/Moreno Beach Drive Interchange Phase 1, and provide additional right-of-way services for SR-60/Moreno Beach Drive Interchange Phase 2.

2. Authorize the City Manager to execute the Seventh Amendment to Agreement for Professional Consultant Services with Parsons.

3. That the City Council as the Successor Agency, approve this action as a recognized payment obligation of the former Redevelopment Agency of the City of Moreno Valley, add it to the Recognized Obligation Payment Schedule, submit same to the Oversight Board for Approval, and authorize the City Manager to access agency funds only after Oversight Board and State Department of Finance approval.

4. Authorize Change Orders to increase Purchase Order Numbers 2013-00000892, 2013-00000788, and 2013-00000925 with Parsons Transportation Group totaling $257,505.00 to be funded from Account Numbers 4821-70-77-80002 ($117,175.00), 4821-70-77-80001 ($121,530.00) and 3003-70-77-80001 ($18,800.00), if and when the Seventh Amendment has been signed by all parties.

A.11 PA06-0017, P12-146 – APPROVAL OF PROPOSED RESOLUTION FOR THE VACATION OF A PORTION OF MARIPOSA AVENUE FROM PERRIS BOULEVARD TO 1,920 FEET EAST
(Report of: Community & Economic Development Department)

Recommendations

1. Adopt the Resolution No. 2013-09, vacating a portion of Mariposa Avenue.

   Resolution No. 2013-09

   A Resolution of the City Council of the City of Moreno Valley, California, Ordering the Vacation of a Portion of Mariposa Avenue from Perris Boulevard to 1,920 Feet East

2. Direct the City Clerk to certify said resolution and transmit a copy of

the resolution to the County Recorder's office for recording.

Report to City Council

TO: Mayor and City Council

FROM: Richard Teichert, Financial & Management Services Director

AGENDA DATE: January 22, 2013

TITLE: APPROVAL OF PAYMENT REGISTER FOR OCTOBER, 2012

RECOMMENDED ACTION

Recommendation:

1. Adopt Resolution No. 2013-02, approving the Payment Register for the month of October, 2012 in the amount of $16,850,964.14.

DISCUSSION

The payment register has been revised to incorporate additional data while still using a standard format from the City's new LOGOS General Ledger system. This revised format provides the following:

1. Lists all issued checks and electronic fund transfers (EFT) for the month, thus eliminating the need for a separate fund transfer register;
2. Created two categories for all payments:
    a. Category A: Checks/EFTs in the amount of $25,000 or greater; and
    b. Category B: Checks/EFTS under $25,000;
3. If a vendor was issued a check/EFT in the amount of $25,000 or greater, all checks issued to the vendor for the month are listed in Category A;
4. Lists all payments by vendor in alphabetical order;
5. Provides City and State information of vendor.

Staff continues to work on possible alternate sorting options and solutions as we become fully operational with the features of the new system.

FISCAL IMPACT

The disbursements itemized in the attached Payment Register are reflected in the FY 2012-13 budget. Therefore, there is no fiscal impact other than the expenditure of budgeted funds.

Report to City Council

TO: Mayor and City Council

FROM: Richard Teichert, Financial & Management Services Director

AGENDA DATE: January 22, 2013

TITLE: APPROVAL OF PAYMENT REGISTER FOR NOVEMBER, 2012

RECOMMENDED ACTION

Recommendation:

1. Adopt Resolution No. 2013-03, approving the Payment Register for the month of November, 2012 in the amount of $11,149,687.42.

DISCUSSION

The payment register has been revised to incorporate additional data while still using a standard format from the City's new LOGOS General Ledger system. This revised format provides the following:

1. Lists all issued checks and electronic fund transfers (EFT) for the month, thus eliminating the need for a separate fund transfer register;
2. Created two categories for all payments:
    a. Category A: Checks/EFTs in the amount of $25,000 or greater; and
    b. Category B: Checks/EFTS under $25,000;
3. If a vendor was issued a check/EFT in the amount of $25,000 or greater, all checks issued to the vendor for the month are listed in Category A;
4. Lists all payments by vendor in alphabetical order;
5. Provides City and State information of vendor.

Staff continues to work on possible alternate sorting options and solutions as we become fully operational with the features of the new system.

FISCAL IMPACT

The disbursements itemized in the attached Payment Register are reflected in the FY 2012-13 budget. Therefore, there is no fiscal impact other than the expenditure of budgeted funds.

RESOLUTION NO. 2013-03

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING THE PAYMENT REGISTER FOR THE MONTH OF NOVEMBER, 2012

WHEREAS, the Financial & Management Services Department has prepared and provided the Payment Register for the period November 1, 2012 through November 30, 2012, for review and approval by the City Council of the City of Moreno Valley; and

WHEREAS, it is in the best interest of the City that the referenced Payment Register be approved.

NOW, THEREFORE, IT IS HEREBY RESOLVED BY THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, that the Payment Register for the period November 1, 2012 through November 30, 2012, in the total amount of $11,149,687.42 is approved.

APPROVED AND ADOPTED this 22nd day of January, 2013.

Report to City Council

TO: Mayor and City Council

FROM: Ahmad Ansari, Public Works Director/City Engineer

AGENDA DATE: January 22, 2013

TITLE: TRACT MAP 31129 – REDUCE FAITHFUL PERFORMANCE BOND AND ADOPT THE RESOLUTION AUTHORIZING ACCEPTANCE OF THE PUBLIC IMPROVEMENTS AS COMPLETE AND ACCEPTING LANDON ROAD, SAND DOLLAR WAY, WINDWARD COURT, CONCH LANE, TRADEWINDS PLACE, DOVER DRIVE, LEEWARD WAY, SLUMBER LANE, DUSTY COYOTE AVENUE, AND THE PORTIONS OF BRODIAEA AVENUE AND CACTUS AVENUE ASSOCIATED WITH THE PROJECT INTO THE CITY'S MAINTAINED STREET SYSTEM

RECOMMENDED ACTION

Recommendations:

1. Adopt Resolution No. 2013-04 authorizing the acceptance of the public improvements within Tract Map 31129 as complete and accepting Landon Road, Sand Dollar Way, Windward Court, Conch Lane, Tradewinds Place, Dover Drive, Leeward Way, Slumber Lane, Dusty Coyote Avenue, and the portions of Brodiaea Avenue and Cactus Avenue associated with the project into the City's maintained street system.

2. Authorize the City Engineer to execute the 90% reduction to the Faithful Performance Bond, exonerate the Material and Labor Bond in 90 days if there are no stop notices or liens on file with the City Clerk, and exonerate the final 10% of the Faithful Performance Bond in one year when all clearances are received.

BACKGROUND

Tract Map 31129 is a 109-lot single family residential development located at the southwest corner of Cactus Avenue and Oliver Street that was conditionally approved requiring construction of certain public improvements. The public improvements included asphalt paving, curb, gutter, sidewalk, driveway approaches, landscaping, street lights, storm drain, sewer, and water work. Those improvements received on-going inspection during the construction process. Upon completion of the improvements, Community & Economic Development Department/Land Development performed an inspection, and a punch list was generated. The required corrective actions have been completed, and the improvements are now eligible for acceptance into the City's maintained street system.

DISCUSSION

The completed improvements have received a final inspection, and the improvements were completed in accordance with the approved plans and the standards of the City of Moreno Valley. In accordance with the Streets and Highway Code, the method for acceptance of improvements, per Section 1806, (a), and (b), is by action of the governing body, by resolution. It is therefore appropriate to accept those improvements into the City's maintained street system and to provide a 90% reduction to the Faithful Performance Bond of $3,690,000 issued by Safeco Insurance Company of America. Ninety days after City Council approves the Faithful Performance Bond reduction, the Material and Labor Bond will be exonerated by the City Engineer provided there are no stop notices or liens on file with the City Clerk. The remaining 10% of the bond will be held for the one-year guarantee and warranty period. At the end of the guarantee and warranty period the bond will be released by the City Engineer subject to completion of any defective work that may have appeared during this period.

ALTERNATIVES

1. Adopt the proposed Resolution authorizing the acceptance of the public improvements within Tract Map 31129 as complete and accepting Landon Road, Sand Dollar Way, Windward Court, Conch Lane, Tradewinds Place, Dover Drive, Leeward Way, Slumber Lane, Dusty Coyote Avenue, and the portions of Brodiaea Avenue and Cactus Avenue associated with the project into the City's maintained street system. Authorize the City Engineer to execute the 90% reduction to the Faithful Performance Bond, exonerate the Material and Labor Bond in 90 days if there are no stop notices or liens on file with the City Clerk, and exonerate the final 10% of the Faithful Performance Bond in one year when all clearances are received. *The required improvements have been completed according to City of Moreno Valley Standards and therefore should be included in the City's maintained street system.*

2. Do not adopt the proposed Resolution authorizing the acceptance of the public improvements within Tract Map 31129 as complete and accepting Landon Road,

Sand Dollar Way, Windward Court, Conch Lane, Tradewinds Place, Dover Drive, Leeward Way, Slumber Lane, Dusty Coyote Avenue, and the portions of Brodiaea Avenue and Cactus Avenue associated with the project into the City's maintained street system. Do not authorize the City Engineer to execute the 90% reduction to the Faithful Performance Bond, exonerate the Material and Labor Bond in 90 days if there are no stop notices or liens on file with the City Clerk, and exonerate the final 10% of the Faithful Performance Bond in one year when all clearances are received. *The required improvements have been completed according to City of Moreno Valley Standards and therefore should be included in the City's maintained street system.*

FISCAL IMPACT

The acceptance of these street improvements into the City's maintained street system will create an additional fiscal impact to the street maintenance program of the City (Fund 2000-Gas Tax, Fund 2001-Measure "A", and Fund 2008-NPDES. Fund 2000 is restricted to the construction and maintenance of streets and roadways. Fund 2001 is restricted for transportation projects only for the purposes of construction, maintenance and operation of streets and roadways. The County Service Area (CSA) levy collected from property owners support current NPDES Permit programs and reduce the level of General Fund support necessary to remain in compliance with unfunded federal mandates, as administered by the State. Funds collected from the CSA 2008 annual levy are restricted for use only within the Storm Water Management program).

RESOLUTION NO. 2013-04

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, AUTHORIZING THE ACCEPTANCE OF THE PUBLIC IMPROVEMENTS AS COMPLETE WITHIN TRACT MAP 31129 AND ACCEPTING LANDON ROAD, SAND DOLLAR WAY, WINDWARD COURT, CONCH LANE, TRADEWINDS PLACE, DOVER DRIVE, LEEWARD WAY, SLUMBER LANE, DUSTY COYOTE AVENUE, AND THE PORTIONS OF BRODIAEA AVENUE AND CACTUS AVENUE ASSOCIATED WITH THE PROJECT INTO THE CITY’S MAINTAINED STREET SYSTEM

WHEREAS, the City Engineer has determined that the public improvements constructed by D.R. Horton on Landon Road, Sand Dollar Way, Windward Court, Conch Lane, Tradewinds Place, Dover Drive, Leeward Way, Slumber Lane, Dusty Coyote Avenue, and the portions of Brodiaea Avenue and Cactus Avenue associated with the project were constructed according to the approved plans on file with the City of Moreno Valley; and

WHEREAS, the City Engineer has determined that those improvements were inspected during construction and were completed in an acceptable manner; and

WHEREAS, the City Engineer has requested that the City Council authorize the acceptance of said public improvements as complete within Tract Map 31129 and accept Landon Road, Sand Dollar Way, Windward Court, Conch Lane, Tradewinds Place, Dover Drive, Leeward Way, Slumber Lane, Dusty Coyote Avenue, and the portions of Brodiaea Avenue and Cactus Avenue associated with the project into the City’s maintained street system; and

WHEREAS, it is in accordance with Streets and Highway Code, Section 1806, (a) and (b), for City Council to perform this action by resolution.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS: that the public improvements within Tract Map 31129 are complete, and Landon Road, Sand Dollar Way, Windward Court, Conch Lane, Tradewinds Place, Dover Drive, Leeward Way, Slumber Lane, Dusty Coyote Avenue, and the portions of Brodiaea Avenue and Cactus Avenue associated with the project are accepted into the City’s maintained street system.

APPROVED AND ADOPTED this 22nd day of January, 2013.

Report to City Council

TO: Mayor and City Council

FROM: Joel Ontiveros, Chief of Police

AGENDA DATE: January 22, 2013

TITLE: AWARD CONSTRUCTION CONTRACT FOR THE BALLISTIC RESISTANT GLASS PROJECT FOR THE POLICE DEPARTMENT'S LOBBY PROJECT NO. JLL12/13-05

RECOMMENDED ACTION

Recommendations:

1. Award the construction contract to Rasmussen Brothers Construction (RBC), Inc. 40441 Gavilan Mountain Road, Fallbrook, Ca. 92028. RBC Inc. submitted the lowest responsible bid, for the Moreno Valley Police Department Ballistic Resistant project for the lobby.

2. Authorize the City Manager to execute a contract with RBC Inc.

3. Authorize the issuance of a purchase order to RBC Inc. in the amount of $166,378.00 once the contract has been signed by all parties.

4. Authorize the Police Chief to execute any subsequent change orders to the contract with RBC Inc., up to but not to exceed the project contingency funds of $16,245.00.

5. Authorize the Financial & Administrative Services Director to record the Notice of Completion once the work is completed, accept the improvements into the City's maintained system, and release the retention to RBC Inc., if no claims are filed against the project.

ADVISORY BOARD/COMMISSION RECOMMENDATION

On October 31, 2011, the Public Safety Committee reviewed the expenditure on this project, and their recommendation was to proceed and obtain City Council approval.

BACKGROUND

On June 25, 2012, the City Council approved the spending plan for the Ballistic Resistant Glass project in the Moreno Valley Police Department lobby to enhance employee safety. T.R. design was contracted to create the architectural design and engineering for the project. The resulting design and engineering plans were used in the formal bidding process.

DISCUSSION

This project is necessary to improve the safety for employees working at the Police Department. On January 23, 2011, shortly after 4:00 p.m., a person armed with a firearm entered the Detroit Police Department lobby and shot at the employees in the area. A total of four employees (a commander, two sergeants, and one officer) were injured by gunfire. It is not known why the gunman committed this violent act; but it is important to note that the Detroit Police lobby shooting is not an isolated incident. In early 2010, the Hemet Police Department became the target of multiple violent acts, including one act involving a firearm. In the interest of protecting our employees we respectfully request Council approve the listed RBC Inc. construction bid.

The project architectural design and engineering cost will total: $17,905.00. The recommended RBC Inc. base bid of $124,733 is to install ballistic glass in the Police Department lobby public reception area, and includes the replacement of the public reception counter top and the cabinets that will bear the weight of the ballistic glass. The RBC Inc. additive Bid 3A of $25,400.00 is for replacement of the Police Administration hallway standard glass double doors with ballistic glass double doors. Allowing for a 9.7% project cost contingency, the total project cost is $184,283. Of the $184,283, $84,283 will be covered by asset forfeiture funds.

Construction to be completed:

1. Install bullet resistant, U.L. Standard 752, design with appropriate framing and increased support structure.

2. Ballistic glass barrier to be located between the lobby counter top and ceiling.

3. Stainless steel top mount deal trays at all stations including handicap and one see through ballistic package tray at the handicap station.

4. One level IV double door and framing package to replace existing doorway leading to the Police Department Administrative offices.

5. Level IV ballistic glass protection for new counter area with one teller station where the front lobby officer sits.

6. New integrated Corian countertop at the original reception counter area.

7. Reception filing cabinets.

8. Reception counter cash drawers.

Formal bidding procedures have been followed in conformance with the Public Contract Code. The City Clerk opened the bids at 1:00 p.m., on December 17, 2012, for the subject project. The two (2) valid bids received are as follows:

Contractors:	Bid Amount
1. **Rasmussen Brothers Construction, Inc.**	**$124,733.00**
2. Norse Corporation	$172,149.00

Staff has reviewed the bid by Rasmussen Brothers Construction, Inc. (RBC) and finds it to be the lowest responsible bidder. No outstanding issues were identified through review of the references submitted by RBC.

ALTERNATIVES

1. Award the construction contract to Rasmussen Brothers Construction (RBC), Inc. 40441 Gavilan Mountain Road, Fallbrook, Ca. 92028, the lowest responsible bidder, for Moreno Valley Police Department Ballistic Glass Project, authorize the City Manager to execute a contract with RBC Inc. in the form attached hereto, authorize the issuance a purchase order to RBC Inc. in the amount of $166,378.00 (base bid 124,733.00, Additive Bid 3A ballistic glass double doors at $25,400.00, and a 9.7% project contingency of $16,245.00). When the contract has been signed by all parties, authorize the Police Chief to execute any change orders to the contract with RBC Inc., up to but not to exceed the purchase order contingency of $16,245.00 and authorize the Administrative Services Manager to record the Notice of Completion once the work is completed, accept the improvements into the City's maintained system, and release the retention to RBC Inc., if no claims are filed against the project. *This alternative will allow for much needed safety improvements to the Police Department*.

2. Do not award the construction contract to Rasmussen Brothers Construction (RBC), Inc., 40441 Gavilan Mountain Road, Fallbrook, Ca. 92028, the lowest responsible bidder, for Moreno Valley Police Department ballistic glass project. Provide staff with additional direction on how to proceed. *This alternative will delay the completion of much needed safety improvements to the Police Department*.

FISCAL IMPACT

No fiscal impact required. All funds are approved and available in the Police General Fund Account No. 1010-60-65-40010-660215.

SUMMARY

This project will provide ballistic glass protection at the Police Department public reception counter and the entrance to the Police Administration hallway. Staff recommends awarding the contract to RBC Inc., and authorizing the issuance of a purchase order in the amount of $166,378.00, inclusive of a 9.7% contingency when the agreement has been signed by all parties.

BIDDER'S BID

AND

OTHER DOCUMENTS

BIDDER'S BID

BID NO. JLL 12/13-05

BULLET RESISTANT MATERIAL & INSTALLATION
22850 Calle San Juan de los Lagos
Moreno Valley, CA 92553

TO THE HONORABLE MAYOR AND CITY COUNCIL of the City of Moreno Valley, California

From (Bidder) Rasmussen Brothers Construction, Inc

1. This Bid has been submitted to the:

Location: City Clerk, City of Moreno Valley
14177 Frederick Street
Moreno Valley, CA 92552

Mailing Location: City Clerk, City of Moreno Valley
P.O. Box 88005
Moreno Valley, CA 92552-0805

Date: **December 6, 2012**

Time: **Before 2:00 p.m.**

2. In compliance with the Notice Inviting Bids, the undersigned as Bidder hereby proposes to furnish all materials, equipment and all other labor and methods and do all things necessary for the proper construction and completion of the work, in strict and complete accord with the Agreement, Special Provisions (which includes the General Provisions and Technical Provisions), Plans, Specifications, and other Bid Documents now on file with the City of Moreno Valley at the prices set forth in the Bid Schedule herein for the work generally described for the said project.

3. The undersigned as Bidder, hereby declares that he or she has carefully examined the location of the proposed work generally described above and is familiar with the Special Provisions, Plans, Specifications and local conditions at the place the work is to be done and also understands that all labor, materials and equipment to be furnished, shall be for the prices bid, and that the undersigned has also checked figures set forth hereinafter in the Bid Schedule and understands that neither the City of Moreno Valley, the Moreno Valley Housing Authority, and the Moreno Valley Community Services District, nor any officer or employee therefore will be responsible for any misunderstandings, errors or omissions on the part of the undersigned in submitting this Bid.

4. The complete Contract includes all of the Bid Documents as if set forth in full herein, to wit, the Agreement, any and all Contract Change Orders issued after the execution of the Agreement, any and all addenda issued prior to the opening of the Bids, the Special Provisions, the Project Plans, the Standard Plans, the Standard Specifications, California Building Code, California Electrical Code, California Energy Code, California Fire Code, California Mechanical Code, California Plumbing Code, State of California Code of Regulations Title 24 Building Standards, American with Disabilities Act (ADA), other codes as applicable, reference Specifications, the Bidder's Bid, the Notice Inviting Bids, the Non-Collusion Affidavit, the Faithful Performance Bond, the Labor and Materials Payment Bond and insurance, all of which are essential parts of this Contract.

5. The undersigned further agrees that failure to execute and file the Agreement, the required Labor and Materials Payment Bond, Faithful Performance Bond, and/or Insurance Certificates to the City within fourteen (14) calendar days after the date of the receipt of the contract shall be sufficient cause for the annulment of the Award with forfeiture of the Bid guarantee pursuant to the provisions of Section 20172 of the Public Contract Code.

6. The undersigned further agrees to furnish to the City a "Labor and Materials Payment Bond" and a "Faithful Performance Bond" executed by a responsible corporate Surety, authorized to issue such Surety Bonds in the State of California and secured through an authorized agent with an office in California. Such Bonds shall be for one-hundred percent (100%) of the total Contract price. Bonds shall be issued by a Surety who is listed in the latest revision of U.S. Department of Treasure Circular 570.

7. In submitting a bid, the Bidder certifies to the City that he/she has trained his/her employees and subcontractors, if any, for Urban Runoff management and included sufficient sums in the bid price to cover such costs of said training (Regional Water Quality Control Board Order No. R8-2002-0011, NPDES No. CAS 618033 (Municipal Separate Storm Sewer System NPDES Permit), Section XI.I). The Contractor is responsible for all clean up and payment of all fines levied as a result of any illegal discharge (as defined in said NPDES permit) occurring as a result of the Contractor's work and/or operations.

8. **If the Bidder is making a change on the Bidder's Bid prior to submission of the bid, the Bidder is to line through the existing script, add the revision, and initial.**

9. **In submitting the bid, if the Bidder's Bid is transferred to another Bidder, the Bidder's bid shows any alterations of form, additions not called for, conditional or alternative bids uncalled for, or failing to provide required information except as allowed by law, the bid will be considered non-responsive and will be rejected.**

10. The Bidder shall set forth for each item of work, in clearly legible figures, an item price and a total for the item in the respective spaces provided for this purpose. In the case of unit basis items, the amount set forth under the "Total" column shall be the product of the unit price multiplied by the estimated quantity for the item.

11. In case of discrepancy between the unit price and the total set forth for the item, the unit price shall prevail, except however, that if the amount set forth as a unit price is ambiguous, unintelligible or uncertain for any cause, or if it is omitted, or in the case of unit basis items, is the same amount as the entry in the "Total" column, or in the case of lump sum items, is not the same amount as the entry in the "Total" column, then the amount set forth in the "Total" column for the item shall prevail in accordance with the following:

A As to the lump sum items, the amount set forth in the "Total" column shall be the same amount in the unit price column. Lump sum items are considered to be a unit of one.

B. As to unit basis items, the amount set forth in the "Total" column shall be divided by the estimated quantity for the item and the price thus obtained shall be the unit price.

12. The Bidder shall also set forth in clearly legible figures the "Total Bid Amount" in the spaces provided at the bottom of the Bid Schedule.

13. In case of discrepancy between the calculated sum of the "Total Cost" column and the number representing the cumulative total of the bid items, the calculated sum of the "Total Cost" column shall prevail over the number representing the cumulative total of the bid items.

14. In submitting the Bid, if the Bidder fails to provide or omits a cost for a bid line item, the Bid will be considered non-responsive and will be rejected.

15. The City reserves the right to reject any and all Bids and to waive any irregularity or informality in any Bid to the extent permitted by law.

16. In submitting the Bid, the Bidder offers and agrees that if the Bid is accepted, the Bidder shall guarantee that all work performed under this Contract fully meets the requirements thereof, as to quality of workmanship and materials furnished, for a period of one year from the date of acceptance of the work by the City Council.

17. In submitting the Bid, the Bidder is aware that this is a Public Works project requiring payments of prevailing wage rates. Certified Payrolls are required to be submitted weekly by the Contractor, subcontractor(s), and owner operator. Contract payments will be withheld for delinquent or inadequate Certified Payrolls (LC1771.5).

18. In submitting the Bid, the Bidder offers and agrees that if the Bid is accepted, the Bidder and its subcontractor(s) shall perform all work in accordance with the project Plans and Specifications, including all stipulations designed to meet diversified Federal Environmental, Architectural, and related laws and regulations.

19. In submitting the Bid, the Bidder offers and agrees that if the Bid is accepted, the Bidder and its subcontractor(s) shall allow all authorized Federal, State, County, and/or City officials access to the work area, fiscal, payroll, materials, and other relevant Contract records. All relevant records shall be retained for at least three years or longer as required by law from the date of the Notice of Completion.

20. In submitting the Bid, the Bidder offers and agrees that if the Bid is accepted, the Bidder shall display the Project Sign, post the Federal (if applicable) and State Wage Rate information, and the "Equal Employment Opportunity is...THE LAW..." poster, along with all other required posters in a visible location at the job site. The signs and posters shall be mounted in an acceptable manner and constructed as specified.

21. In submitting the Bid, the Bidder offers and agrees that if the Bid is accepted, the Bidder and subcontractor(s) shall comply with all laws, ordinances, and regulations applicable to the work. If the Contractor ascertains at any time that any of the requirements of the Contract are at variance with applicable law(s), ordinances, regulations, or building code requirements, he or she shall promptly notify the City of Moreno Valley, and shall not proceed with the work in question, except at his or her own risk, until the City's Representative has had an opportunity to determine the extent of the responsibility for the variance, and the appropriate actions to be undertaken.

22. NONCOLLUSION AFFADAVIT

STATE OF CALIFORNIA)
) SS
COUNTY OF)

(NAME) Michael Rasmussen
affiant being first duly sworn, deposes and says:

That he or she is Pres/CEO of
(sole owner, partner or other proper title)

Rasmussen Brothers Construction, Inc the party making the foregoing Bid
(Bidder/Contractor Name)

that the Bid is not made in the interest of, or on behalf of, any undisclosed person, partnership, company, association, organization, or corporation; that the Bid is genuine and not collusive or sham; that the Bidder has not directly or indirectly induced or solicited any other Bidder to put in a false or sham Bid, and has not directly or indirectly colluded, conspired, connived, or agreed with any Bidder or anyone else to put in a sham Bid, or that anyone shall refrain from bidding; that the Bidder has not in any manner, directly or indirectly sought by agreement, communication, or conference with anyone to fix the bid price of the Bidder or any other Bidder, or to fix any overhead, profit, or cost element of the bid price, or of that of any other Bidder, or to secure any advantage against the public body awarding the Contract of anyone interested in the proposed Contract; that all statements contained in the Bid are true; and, further, that the Bidder has not, directly or indirectly, submitted his or her bid price or any breakdown thereof, or the contents thereof, or divulged information or data relative thereto, or paid, and will not pay, any fee to any corporation, partnership, company associations, organization, bid depository, or to any member or agent thereof to effectuate a collusive or sham Bid. (Public Contract Code Section 7106).

23. RECEIPT OF ADDENDA NO(S). 1 IS HEREBY ACKNOWLEDGED. **BID MAY BE REJECTED IF ANY ISSUED ADDENDA IS NOT ACKNOWLEDGED.**

24. The Bidder Rasmussen Brothers Construction, Inc
(Contractors Name)

is a Corporation
(individual, partnership, or corporation)

If a corporation, incorporated under the laws of the State of California

If an individual, state individual's name. If a partnership, state names of all individuals, co-partners, composing the firm. If a corporation, state names of president, secretary, treasurer and chief executive officer thereof. If the bidder fails to provide the requested information, the bid will be considered non-responsive and will be rejected.

Michael Rasmussen, Pres/CEO/Sec/Treas.

25. The Bidder understands that if he or she fails to specify a subcontractor or if a bidder specifies more than one subcontractor for the same portion of work to be performed under the contract in excess of one half of one percent (0.5%) of the bidder's total bid, the bidder shall be deemed to have agreed to perform such portion himself or herself, and that he or she shall not be permitted to sublet or subcontract that portion of the work except as may be duly consented to by the City pursuant to the provisions of Section 4107, of the Public Contract Code (PCC 4106).

26. The Bidder understands that circumvention by a general contractor who bids as a prime contractor of the requirement under Section 4104 for him or her to list his or her subcontractors, by the device of listing another contractor who will in turn sublet portions constituting the majority of the work covered by the prime contract, shall be considered a violation of Chapter 4 "Subletting and Subcontracting" starting with Section 4100 of the Public Contract Code and shall subject that prime contractor to the penalties set forth in Section 4110 and 4111 of the Public Contract Code (PCC 4105).

27. In compliance with the provisions of the Public Contract Code, Section 4104, the undersigned Bidder herewith sets forth the name and location of the place of business of each subcontractor who will perform work or labor or render service to the prime Contractor in or about the construction of the work or improvement, or a subcontractor licensed by the State of California who, under subcontract to the prime Contractor, specially fabricates and installs a portion of the work or improvement according to detailed drawings contained in the Plans and Specifications, in an amount in excess of one-half of one percent (0.5%) of the prime Contractor's total bid, or in the case of Bids for the construction of streets, highways, including bridges, in excess of one-half of one percent (0.5%) of the prime Contractor's total bid or ten thousand dollars ($10,000), whichever is greater, and the portion of the work which will be done by each subcontractor. **The Bidder shall not list more than one subcontractor for the same portion of work.**

All additional information required by the City regarding any subcontractor who the Bidder is required to list under the Provisions of Sections 4104 and 4107 of the Public Contract Code, other than the subcontractor's name and location (city) of business or State Contractor's License number, may be submitted by the Bidder up to 24 hours after the deadline time and date for receipt of Bids. Failure to timely provide all required subcontractor information shall result in the Bid being determined non-responsive.

Bullet Resistant Material & Installation

FINANCIAL & ADMINISTRATIVE SERVICES DEPARTMENT
PURCHASING & FACILITIES DIVISION

November, 2012

Quotes Due By: Thursday, December 6, 2012
Before 2:00 PM

Send To:

City of Moreno Valley
Attn: City Clerk's Office
14177 Frederick Street
Moreno Valley, CA 92553

Questions are to be directed to: Jeremy Leslie, at purchasingdivision@moval.org

SUMMARY:

This project involves the hardening of the Public Safety Building's public lobby.

The Bid Documents contained herein includes the following:

- Notice Inviting Bids
- Documents associated with the Bidder's Bid
- Documents associated with the Agreement
- General Provisions
- Special Provisions
- Technical Provisions
- Drawings

The special Provisions contained herein supplement or modify the Standard Specifications for Public Works construction (Greenbook) latest edition. The Special Provisions include the General Provisions and Technical Provisions. The General Provisions have been arranged in the same subject numbering format that parallels the Standard Specifications with added subsections. The Technical Provisions are written to the subject as addressed Parts 2 through 6 of the Standard Specifications and the American Institute of Architects (AIA) Standards.

Each and every provision of law required to be inserted in the Bid Documents shall be deemed to be inserted therein, and the Bid Documents shall be read and enforced as though it were included therein.

NOTICE INVITING BIDS

BID NO. JLL 12/13-05

BULLET RESISTANT MATERIAL & INSTALLATION
22850 Calle San Juan de los Lagos
Moreno Valley, CA 92553

IN THE CITY OF MORENO VALLEY CALIFORNIA

1. PUBLIC NOTICE IS HEREBY GIVEN THAT

Sealed Bids will be received at the Office of the City Clerk, located at 14177 Frederick Street, Moreno Valley, California, 92552, on **Thursday, December 6, 2012, before 2 p.m.**, at which time they will be publicly opened and read in the City Hall Training Room, Room 201, for the work generally described as follows:

BULLET RESISTANT MATERIAL & INSTALLATION
22850 Calle San Juan de los Lagos
Moreno Valley, CA 92553

all to be performed in accordance with the Special Provisions, the Plans, the Standard Plans, the Standard Specification, Reference Specifications and other Bid Documents on file with the City of Moreno Valley, California.

A **mandatory** pre-bid conference and site-walk will be held on **Wednesday, November 28, 2012, at 9:00 a.m.** at the project site. Requests for subsequent inspections/walk-thrus of the facilities will not be granted. Those who attend will be able to hear all questions posed and related answers regarding this particular project. Prospective bidders planning to attend the job walk shall contact Jeremy Leslie, Purchasing & Facilities Division, at purchasingdivision@moval.org no later than Tuesday, November 27, 2012, at 4:00 p.m.

Contractors will be responsible for examining the physical conditions and surroundings of the proposed work and judging for themselves the extent to which these factors will influence the performance of the contract work. The Contractor shall not be relieved of liability under the Contract, nor shall the City be liable for any loss sustained by the Contractor as a result of any variance between conditions as referred to in the specifications and the actual condition revealed during the examination of the proposed work. No additional compensation or relief from any obligations of the Contract will be granted because of lack of knowledge of the work sites or conditions under which the work will be accomplished. Where applicable, and it is of the opinion of the Purchasing & Facilities Division Manager, a change order may be accepted when approved in writing.

Any questions or doubt as to the true meaning and intent of the Bid documents and specifications shall be brought to the attention of the City in writing. All questions regarding this Bid are to be directed to Jeremy Leslie. All questions and subsequent responses will be provided to all companies that have requested copies of the Bid. You may contact Jeremy Leslie by email at purchasingdivision@moval.org. All questions and responses shall become part of the final contract. The City will not be responsible for any other explanations or interpretations. No oral agreement or conversation with any officers, employees, or agents of

the City, either before or after execution of the Contract shall affect or modify any of the terms or obligations contained in any of the documents comprising said Contract. Requests for an interpretation shall be made in writing and delivered to the City at least five (5) business days before the opening of the Bids.

2. TIME OF COMPLETION

All work must be completed within **102** working days after the date of authorization specified in the Notice to Proceed and to diligently prosecute said work, including all awarded additive bids, corrective items of work, day to day thereafter, except as adjusted by subsequent Contract Change Orders.

3. OBTAINING BIDDING DOCUMENTS

Bidding documents and reference documents, including the Plans and Special Provisions but not including Standard Plans, Standard Specifications, or Reference Specifications, may be obtained as follows:

A. Delivery Service

Delivery service will be via Federal Express only. Address all requests for delivery service to:

City of Moreno Valley
Financial & Administrative Services Department
Purchasing Division
PO Box 88005
Moreno Valley CA 92552-0805

Bidding Documents

Cost Per CD..... $ 10
Shipping Per CD: ..... $ 5
Total Cost Per CD: ..... $ 15

B. In Person

Bidding documents may be purchased in person from the cashier in the Finance Department at the Moreno Valley City Hall, 14177 Frederick Street, Moreno Valley, CA 92553

Total Cost Per CD $10.00

Please note that the bidding documents will be provided on CD only. No paper copies will be provided. The printing of bidding documents will be left to the discretion of the Bidder.

All fees listed above are non-refundable. All checks shall be made payable to the City of Moreno Valley. Indicate Bid Number on check(s). For additional information regarding the purchase or

delivery of Bid Documents, please contact Jeremy Leslie at purchasingdivision@moval.org.

4. BID

All Bids are to be compared on the basis of the Engineer's estimate of the quantities of work to be done. No Bid will be accepted unless it is made on the Bidder's Bid forms furnished by the City.

5. STATE LICENSE

No Bid will be accepted from a Bidder who is not fully and properly licensed as a Contractor for the work to be done under the Contract in accordance with the Provisions of Chapter 9 of Division 3, Commencing with Section 7000 of the Business and Professions Code of the State of California, at the time the Bidder submits the Bid (B&P 7028.15). **The prime Contractor shall have a Class "A" or "B" Contractor's License. All subcontractors shall be properly licensed.**

6. OWNER'S RIGHT RESERVED

Within such limits as may be prescribed by law, the City Council of the City of Moreno Valley reserves the right to reject any and all Bids, to accept, reject or waive a minor variance in a Bid, to waive any informality in a Bid or accept the Bid or Bids that best serve the interests of the City.

7. WAGE RATES

This is a public works project requiring payment of prevailing wage rates. Pursuant to the Provision of Section 1773 of the Labor Code of the State of California, the City of Moreno Valley has obtained the general prevailing rates of per diem wages and the general prevailing rate for holiday and overtime work applicable to the work to be done. Said rates are on file with the City of Moreno Valley and copies will be made available to any interested party on request. These rates shall be the minimum wage rates for this project. The Contractor shall post a copy of said rates at the job site throughout the period of work on this project. The Contractor shall see that all employees of both the prime Contractor and subcontractors are being paid rates equal to or greater than the said rates.

8. PAYMENT RETENTION OPTION

Pursuant to California Public Contract Code Section 22300, the Contractor will be permitted the substitution of securities for any monies withheld by the City of Moreno Valley to ensure performance under Contract. At the request and expense of the Contractor, securities equivalent to the amount withheld shall be deposited with the City of Moreno Valley, or with the state or federally chartered bank as the escrow agent, who shall pay such monies to the Contractor after satisfactory completion of the Contract. Securities eligible for investment under this section shall include those listed in Section 16430 of the Government Code, bank or savings and loan certificates of deposit, interest-bearing demand deposit accounts, and standby letters of credit. The Contractor shall be the beneficial owner of any securities substituted for monies withheld and shall receive any dividends and interest thereon.

9. TECHNICAL INFORMATION

For technical information relating to the details of the proposed project and bidding requirements, please contact Jeremy Leslie in the City's Purchasing Division, at purchasingdivision@moval.org, 15670 Perris Blvd, Moreno Valley, California 92551.

AND

OTHER DOCUMENTS

BIDDER'S BID

BID NO. JLL 12/13-05

BULLET RESISTANT MATERIAL & INSTALLATION
22850 Calle San Juan de los Lagos
Moreno Valley, CA 92553

TO THE HONORABLE MAYOR AND CITY COUNCIL of the City of Moreno Valley, California

From (Bidder) _____

1. This Bid has been submitted to the:

Location: City Clerk, City of Moreno Valley
14177 Frederick Street
Moreno Valley, CA 92552

Mailing Location: City Clerk, City of Moreno Valley
P.O. Box 88005
Moreno Valley, CA 92552-0805

Date: December 6, 2012

Time: Before 2:00 p.m.

2. In compliance with the Notice Inviting Bids, the undersigned as Bidder hereby proposes to furnish all materials, equipment and all other labor and methods and do all things necessary for the proper construction and completion of the work, in strict and complete accord with the Agreement, Special Provisions (which includes the General Provisions and Technical Provisions), Plans, Specifications, and other Bid Documents now on file with the City of Moreno Valley at the prices set forth in the Bid Schedule herein for the work generally described for the said project.

3. The undersigned as Bidder, hereby declares that he or she has carefully examined the location of the proposed work generally described above and is familiar with the Special Provisions, Plans, Specifications and local conditions at the place the work is to be done and also understands that all labor, materials and equipment to be furnished, shall be for the prices bid, and that the undersigned has also checked figures set forth hereinafter in the Bid Schedule and understands that neither the City of Moreno Valley, the Moreno Valley Housing Authority, and the Moreno Valley Community Services District, nor any officer or employee therefore will be responsible for any misunderstandings, errors or omissions on the part of the undersigned in submitting this Bid.

4. The complete Contract includes all of the Bid Documents as if set forth in full herein, to wit, the Agreement, any and all Contract Change Orders issued after the execution of the Agreement, any and all addenda issued prior to the opening of the Bids, the Special Provisions, the Project Plans, the Standard Plans, the Standard Specifications, California Building Code, California Electrical Code, California Energy Code, California Fire Code, California Mechanical Code, California Plumbing Code, State of California Code of Regulations Title 24 Building Standards, American with Disabilities Act (ADA), other codes as applicable, reference Specifications, the Bidder's Bid, the Notice Inviting Bids, the Non-Collusion Affidavit, the Faithful Performance Bond, the Labor and Materials Payment Bond and insurance, all of which are essential parts of this Contract.

5. The undersigned further agrees that failure to execute and file the Agreement, the required Labor and Materials Payment Bond, Faithful Performance Bond, and/or Insurance Certificates to the City within fourteen (14) calendar days after the date of the receipt of the contract shall be sufficient cause for the annulment of the Award with forfeiture of the Bid guarantee pursuant to the provisions of Section 20172 of the Public Contract Code.

6. The undersigned further agrees to furnish to the City a “Labor and Materials Payment Bond” and a “Faithful Performance Bond” executed by a responsible corporate Surety, authorized to issue such Surety Bonds in the State of California and secured through an authorized agent with an office in California. Such Bonds shall be for one-hundred percent (100%) of the total Contract price. Bonds shall be issued by a Surety who is listed in the latest revision of U.S. Department of Treasure Circular 570.

7. In submitting a bid, the Bidder certifies to the City that he/she has trained his/her employees and subcontractors, if any, for Urban Runoff management and included sufficient sums in the bid price to cover such costs of said training (Regional Water Quality Control Board Order No. R8-2002-0011, NPDES No. CAS 618033 (Municipal Separate Storm Sewer System NPDES Permit), Section XI.I). The Contractor is responsible for all clean up and payment of all fines levied as a result of any illegal discharge (as defined in said NPDES permit) occurring as a result of the Contractor’s work and/or operations.

8. **If the Bidder is making a change on the Bidder’s Bid prior to submission of the bid, the Bidder is to line through the existing script, add the revision, and initial.**

9. **In submitting the bid, if the Bidder’s Bid is transferred to another Bidder, the Bidder’s bid shows any alterations of form, additions not called for, conditional or alternative bids uncalled for, or failing to provide required information except as allowed by law, the bid will be considered non-responsive and will be rejected.**

10. The Bidder shall set forth for each item of work, in clearly legible figures, an item price and a total for the item in the respective spaces provided for this purpose. In the case of unit basis items, the amount set forth under the "Total" column shall be the product of the unit price multiplied by the estimated quantity for the item.

11. In case of discrepancy between the unit price and the total set forth for the item, the unit price shall prevail, except however, that if the amount set forth as a unit price is ambiguous, unintelligible or uncertain for any cause, or if it is omitted, or in the case of unit basis items, is the same amount as the entry in the "Total" column, or in the case of lump sum items, is not the same amount as the entry in the "Total" column, then the amount set

forth in the "Total" column for the item shall prevail in accordance with the following:

A As to the lump sum items, the amount set forth in the "Total" column shall be the same amount in the unit price column. Lump sum items are considered to be a unit of one.

B. As to unit basis items, the amount set forth in the "Total" column shall be divided by the estimated quantity for the item and the price thus obtained shall be the unit price.

12. The Bidder shall also set forth in clearly legible figures the “Total Bid Amount” in the spaces provided at the bottom of the Bid Schedule.

13. In case of discrepancy between the calculated sum of the “Total Cost” column and the number representing the cumulative total of the bid items, the calculated sum of the “Total Cost” column shall prevail over the number representing the cumulative total of the bid items.

14. In submitting the Bid, if the Bidder fails to provide or omits a cost for a bid line item, the Bid will be considered non-responsive and will be rejected.

15. The City reserves the right to reject any and all Bids and to waive any irregularity or informality in any Bid to the extent permitted by law.

16. In submitting the Bid, the Bidder offers and agrees that if the Bid is accepted, the Bidder shall guarantee that all work performed under this Contract fully meets the requirements thereof, as to quality of workmanship and materials furnished, for a period of one year from the date of acceptance of the work by the City Council.

17. In submitting the Bid, the Bidder is aware that this is a Public Works project requiring payments of prevailing wage rates. Certified Payrolls are required to be submitted weekly by the Contractor, subcontractor(s), and owner operator. Contract payments will be withheld for delinquent or inadequate Certified Payrolls (LC1771.5).

18. In submitting the Bid, the Bidder offers and agrees that if the Bid is accepted, the Bidder and its subcontractor(s) shall perform all work in accordance with the project Plans and Specifications, including all stipulations designed to meet diversified Federal Environmental, Architectural, and related laws and regulations.

19. In submitting the Bid, the Bidder offers and agrees that if the Bid is accepted, the Bidder and its subcontractor(s) shall allow all authorized Federal, State, County, and/or City officials access to the work area, fiscal, payroll, materials, and other relevant Contract records. All relevant records shall be retained for at least three years or longer as required by law from the date of the Notice of Completion.

20. In submitting the Bid, the Bidder offers and agrees that if the Bid is accepted, the Bidder shall display the Project Sign, post the Federal (if applicable) and State Wage Rate information, and the “Equal Employment Opportunity is...THE LAW…” poster, along with all other required posters in a visible location at the job site. The signs and posters shall be mounted in an acceptable manner and constructed as specified.

21. In submitting the Bid, the Bidder offers and agrees that if the Bid is accepted, the Bidder and subcontractor(s) shall comply with all laws, ordinances, and regulations applicable to the work. If the Contractor ascertains at any time that any of the requirements of the Contract are at variance with applicable law(s), ordinances, regulations, or building code requirements, he or she shall promptly notify the City of Moreno Valley, and shall not proceed with the work in

question, except at his or her own risk, until the City's Representative has had an opportunity to determine the extent of the responsibility for the variance, and the appropriate actions to be undertaken.

that the Bid is not made in the interest of, or on behalf of, any undisclosed person, partnership, company, association, organization, or corporation; that the Bid is genuine and not collusive or sham; that the Bidder has not directly or indirectly induced or solicited any other Bidder to put in a false or sham Bid, and has not directly or indirectly colluded, conspired, connived, or agreed with any Bidder or anyone else to put in a sham Bid, or that anyone shall refrain from bidding; that the Bidder has not in any manner, directly or indirectly sought by agreement, communication, or conference with anyone to fix the bid price of the Bidder or any other Bidder, or to fix any overhead, profit, or cost element of the bid price, or of that of any other Bidder, or to secure any advantage against the public body awarding the Contract of anyone interested in the proposed Contract; that all statements contained in the Bid are true; and, further, that the Bidder has not, directly or indirectly, submitted his or her bid price or any breakdown thereof, or the contents thereof, or divulged information or data relative thereto, or paid, and will not pay, any fee to any corporation, partnership, company associations, organization, bid depository, or to any member or agent thereof to effectuate a collusive or sham Bid. (Public Contract Code Section 7106).

23. RECEIPT OF ADDENDA NO(S). _____ IS HEREBY ACKNOWLEDGED. **BID MAY BE REJECTED IF ANY ISSUED ADDENDA IS NOT ACKNOWLEDGED.**

24. The Bidder _____
(Contractors Name)

is a _____
(individual, partnership, or corporation)

If a corporation, incorporated under the laws of the State of _____

If an individual, state individual's name. If a partnership, state names of all individuals, co-partners, composing the firm. If a corporation, state names of president, secretary, treasurer and chief executive officer thereof. If the bidder fails to provide the requested information, the bid will be considered non-responsive and will be rejected.

25. The Bidder understands that if he or she fails to specify a subcontractor or if a bidder specifies more than one subcontractor for the same portion of work to be performed under the contract in excess of one half of one percent (0.5%) of the bidder's total bid, the bidder shall be deemed to have agreed to perform such portion himself or herself, and that he or she shall not be permitted to sublet or subcontract that portion of the work except as may be duly consented to by the City pursuant to the provisions of Section 4107, of the Public Contract Code (PCC 4106).

26. The Bidder understands that circumvention by a general contractor who bids as a prime contractor of the requirement under Section 4104 for him or her to list his or her subcontractors, by the device of listing another contractor who will in turn sublet portions constituting the majority of the work covered by the prime contract, shall be considered a violation of Chapter 4 "Subletting and Subcontracting" starting with Section 4100 of the Public Contract Code and shall subject that prime contractor to the penalties set forth in Section 4110 and 4111 of the Public Contract Code (PCC 4105).

27. In compliance with the provisions of the Public Contract Code, Section 4104, the undersigned Bidder herewith sets forth the name and location of the place of business of each subcontractor who will perform work or labor or render service to the prime Contractor in or about the construction of the work or improvement, or a subcontractor licensed by the State of California who, under subcontract to the prime Contractor, specially fabricates and installs a portion of the work or improvement according to detailed drawings contained in the Plans and Specifications, in an amount in excess of one-half of one percent (0.5%) of the prime Contractor's total bid, or in the case of Bids for the construction of streets, highways, including bridges, in excess of one-half of one percent (0.5%) of the prime Contractor's total bid or ten thousand dollars ($10,000), whichever is greater, and the portion of the work which will be done by each subcontractor. **The Bidder shall not list more than one subcontractor for the same portion of work.**

All additional information required by the City regarding any subcontractor who the Bidder is required to list under the Provisions of Sections 4104 and 4107 of the Public Contract Code, other than the subcontractor's name and location (city) of business or State Contractor's License number, may be submitted by the Bidder up to 24 hours after the deadline time and date for receipt of Bids. Failure to timely provide all required subcontractor information shall result in the Bid being determined non-responsive.

GENERAL PROVISIONS

SECTION 1 -- TERMS, DEFINITIONS, ABBREVIATIONS, UNITS OF MEASURE & SYMBOLS

1-1.1 GENERAL

The work embraced herein shall be done in accordance with the Special Provisions herein which amend, modify, or supplement the Standard Specifications and Sections I through 600 of the Standard Specifications for Public Works Construction, (Greenbook) current edition and the Standard Specifications (Greenbook) current edition.

1-2 DEFINITIONS

WORD(S)	DEFINITION
Acceptance, Final Acceptance	The formal action by the City Council accepting the work as complete.
Agency, City, Owner	The City of Moreno Valley, for which the work is being performed.
Bid Documents	The Contract Documents and Plans prepared by the City for bidding.
Bid Item	The item of work listed on the Bid Schedule.
CA Building Code	The latest edition adopted by the City of Moreno Valley of the CALIFORNIA BUILDING CODE BASED ON THE 2006 INTERNATIONAL BUILDING CODE, as published by the International Code Council, 5360 South Workman Mill Road, Whittier, California 90601; Builders Books, Inc., 8001 Canoga Avenue, Canoga Park, California 91304, Telephone 1-800-273-7375. The City does not endorse any bookstore, but has provided a source where the information may be obtained.
CA Electrical Code	The latest edition adopted by the City of Moreno Valley of the CALIFORNIA ELECTRICAL CODE BASED ON THE 2005 NATIONAL ELECTRICAL CODE as developed by the National Fire Protection Association, 1 Batterymarch Park, P.O. Box 9101, Quincy, MA 02269-9101.
CA Energy Code	The latest edition adopted by the City of Moreno Valley of the CALIFORNIA ENERGY CODE BASED ON THE 2007 ENERGY CODE, as published by the International Code Council.
CA Fire Code	The latest edition adopted by the City of Moreno Valley of the CALIFORNIA FIRE CODE BASED ON THE 2006 INTERNATIONAL FIRE CODE, as published by the International Code Council.
CA Mechanical Code	The latest edition adopted by the City of Moreno Valley of the CALIFORNIA MECHANICAL CODE BASED ON THE 2006 UNIFORM

	MECHANICAL CODE, as published by the International Association of Plumbing and Mechanical Officials.
CA Plumbing Code	The latest edition adopted by the City of Moreno Valley of the CALIFORNIA PLUMBING CODE BASED ON THE 2006 UNIFORM PLUMBING CODE, as published by the International Association of Plumbing and Mechanical Officials.
Contract Time	The number of calendar or working days stated in the Contract Documents for the completion of the work.
Detour	A temporary route for traffic (vehicular or pedestrian) around a closed portion of a road or travelway.
Drawings (Plans)	The part of the Contract Documents which show the characteristics and scope of the work to be performed and which have been prepared or approved by the City.
Field Order	A written order effecting a change in the work not involving an adjustment in the Contract price or an extension of the Contract time, issued by the City to the Contractor during construction.
Hazardous Material	(1) A substance or combination of substances, which because of its quantity, concentration, or physical, chemical or infectious characteristics, may either; a) Cause, or significantly contribute to an increase in mortality or an increase in serious irreversible or incapacitating reversible illness; or b) Pose a substantial present or potential hazard to human health or environment when improperly treated, stored, transported or disposed of or otherwise managed. (2) Unless expressly provided otherwise, the term “hazardous material" shall be understood to also include extremely hazardous material.
Liquidated Damages	The amount of money specified in the Agreement that the contractor shall forfeit and pay to the City for each day that completion of work is delayed beyond the specified time, including any extension of time for completion. The specified sum of money shall be deducted from any payments due, or to become due, to the contractor.
Major Contract Bid Item	The amount of a bid item that is 10% or greater of the total awarded bid amount.
Notice of Completion	A notice executed by the City and recorded with the County of Riverside Recorder giving formal notice of the completion of the work. The notice of completion contains the name of the contractor, location of work, and acceptance date.

Notice to Proceed	A written notice given by the City to the Contractor specifying the authorization date for the start of the contract time or confirming a date for the start of the contract time previously specified in the Agreement.
Reference Specification	Any specifications referred to in the Contract Documents other than Standard Specifications, including, but not limited to bulletins, standards, rules, methods of analysis or tests, codes, State Standard Specifications, and specifications of other agencies, engineering societies, or industrial associations referred to in the Contract Documents. These refer to the latest edition, including amendments in effect and published at the time for advertising the project or issuing the permit, unless otherwise specifically referred to by edition, volume, or date.
Shop Drawings	All drawings, diagrams, illustrations, brochures, schedules and other data which are prepared by the Contractor, a Subcontractor, manufacturer, supplier, or distributor, which illustrate how specific portions of the work shall be fabricated or installed.
Specification	Standard Specifications, Reference Specifications, Special Provisions, Addenda, Contract Change Orders, and Supplemental Agreements between the Contractor and the City. These refer to the latest edition including amendments in effect and published at the time and date the Bids are due unless otherwise specifically referred to by Edition, Volume, or Date.
Standard Plans	Standard Detail Drawings and/or instructions of the Engineering Division of the Public Works Department of the City of Moreno Valley, which drawings are also referred to as Standard Drawings.
Standard Specifications	The latest edition of the "GREENBOOK," STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, including all SUPPLEMENTAL AMENDMENTS, as prepared by Public Works Standards, Inc., published by Building News, Inc., 1612 South Clementine Street, Anaheim, California 92802. Telephone No. 714.517.0970. These refer to the latest edition including amendments in effect and published at the time and date the Bids are due, unless otherwise specifically referred to by Edition, Volume, or Date.
State Standard Plans	The latest edition of the Standard Plans of the State of California, Department of Transportation. These refer to the latest edition including amendments in effect and published at the time and date the Bids are due, unless otherwise specifically referred to by Edition, Volume, or Date.
State Standard	

Specifications	The latest edition of the Standard Specifications of the State of California, Department of Transportation. These refer to the latest edition including amendments in effect and published at the time and date the Bids are due, unless otherwise specifically referred to by Edition, Volume, or Date.
Technical Provisions	A part of the Contract Documents consisting of a written description of a technical nature of materials, equipment, construction system, standards, and workmanship. These provisions are amending, modifying, or supplementing Parts 2 through 6 (Sections 200 through 600 inclusive) of the latest edition of the "Greenbook," Standard Specifications for Public Works Construction including all supplement amendments, and include or amend another agency or utility specifications.

SECTION 2 -- SCOPE AND CONTROL OF THE WORK

2-1 AWARD AND EXECUTION OF CONTRACT

2-1.1 Scope of Project

The work to be done, in general, consists of furnishing to the satisfaction of the City, all labor, materials, tools, equipment, and incidentals unless otherwise specified to construct and complete the Contract in compliance with the Contract documents, to wit, the Agreement, any and all Contract Change Orders issued after the execution of the Agreement, any and all Addenda issued prior to the opening of the Bids, the Special Provisions (which includes the General Provisions and Technical Provisions), the project Plans, the Standard Plans, the Standard Specifications, Reference Specifications, the Americans with Disabilities Act (ADA), Uniform Building Code, National Electrical Code, Uniform Fire Code, Uniform Mechanical Code, Uniform Plumbing Code, State of California Code of Regulation Title 24, the Bidder's Bid, the Notice Inviting Bids, the Non-Collusion Affidavit, the Faithful Performance Bond, and the Labor and Material Payment Bond.

See BID SCHEDULE for details and options. Additive Bids are to be listed separately and NOT totaled at the bottom, as the City will select Additives as funding allows. The Contractor shall be responsible for taking and/or verifying measurements, regardless of the approximations provided herein. **All references to "bullet resistant material" are to be understood to be Level 4 material (able to withstand 30 caliber ammunition).**

The Base Bid includes the following (see Section 011000, Summary, of the Technical Specifications for details):

A. Remove the existing metal barrier, its framework, and the reception counter under it.
B. Supply and install bullet resistant material and framework along entire length of new reception counter, above and below the counter.
C. Install drywall with (5) vent grilles between the top of the barrier and the ceiling.
D. Replace the reception counter.

Additives to this project include:

A. Remove existing Gypsum board on two interior walls of LiveScan room and replace with bullet resistant material and new Gypsum board. (Additive 1)
B. Replace LiveScan and Interview room doors (connected to lobby) with bullet resistant doors. Install bullet resistant material and new Gypsum board over the top of two interior walls of LiveScan room. (Additive 2)
C. Replace North lobby/hallway doors and sidelite with bullet resistant doors and sidelite. (Additive 3A)
D. Replace South lobby/hallway doors and sidelite with bullet resistant doors and sidelite. (Additive 3B)
E. Remove existing Gypsum board on two lobby walls and replace with bullet resistant material and new Gypsum board. Replace Press Room door with bullet resistant door. (Additive 4)
F. Install bullet resistant material and new Gypsum board over the top of two lobby walls. (Additive 4A)
G. Remove existing Gypsum board on two interior walls of Press Room and replace with

bullet resistant material and new Gypsum board. (Additive 5)

H. Install bullet resistant material and new Gypsum board over the top of two interior walls of the Press Room. (Additive 5A)
I. Replace LiveScan room door (connected to Records area) with bullet resistant door. Remove existing Gypsum board on interior south wall of LiveScan room wall (adjacent to door connected to lobby) and replace with bullet resistant material and new Gypsum board. (Additive 6)
J. Install 18" x 30" bullet resistant windows in four (4) doors (two in LiveScan room, one in Public Interview room, and one in Press Room). (Additive 7)
K. Install 24" x 24" bullet resistant sidelite windows at two (2) doors (LiveScan room and Public Interview rooms connected to lobby). (Additive 8)

NOTE: **All work is to be performed AFTER NORMAL BUSINESS HOURS, which are Monday-Thursday, 7:30 a.m. to 5:30 p.m. and Fridays, 8:00 a.m. to 5:00 p.m.**

The Contractor shall be responsible for removing, packing and delivering all existing doors, metal barrier, and associated framework to the City's Corporate Yard at 15670 Perris Blvd., Moreno Valley after their removal. All such items shall remain the property of the City of Moreno Valley.

2-1.2 Law Enforcement Background Check

All employees working on the premises will be required to submit and pass a Law Enforcement Background – Criminal History Check. Forms will be provided to your employees.

2-1.3 Job Walk & Inspection of Site

When: **Wednesday, November 28 2012, beginning at 9:00 a.m.**

Where: Public Safety Building - Public Lobby
22850 Calle San Juan De Los Lagos
Moreno Valley, California 92553

The City desires to provide all interested parties with fair and equal access to all relevant City personnel and necessary information. At the same time, the City desires to keep disruption to the organization as a result of this process to a minimum. The City therefore shall conduct one walk-thru of the project site.

Prospective bidders planning to attend the job walk shall contact Jeremy Leslie, Purchasing & Facilities Division, at purchasingdivision@moval.org no later than Tuesday, November 27, 2012, at 4:00 p.m. Requests for subsequent job walks will not be granted. Those in attendance will hear all questions and responses.

Whether or not they attend the job walk, Contractors will be responsible for determining measurements, what material, tools, and work will be required; examining the physical conditions and surroundings of the proposed work; and judging for themselves the extent to which these factors will influence the performance of the contract work. The Contractor shall not be relieved of liability under the Contract, nor shall the City be liable for any loss sustained by the Contractor, as a result of any variance between conditions as referred to in the specifications and the actual condition revealed during the examination of the locations of the

proposed work. No additional compensation or relief from any obligations of the Contract will be granted because of lack of knowledge of the work site or conditions under which the work will be accomplished.

2-1.4 Certificates, Licenses & Permits

A. The Contractor shall obtain and incur all costs for certificates and licenses necessitated by his or her operations.

B. The Contractor shall apply for and obtain any required City permits; the City shall pay all related costs for such Moreno Valley permits only.

C. The Contractor shall, upon demand, present to the City all necessary certificates, licenses, and permits as required by Federal, State, and local regulation as necessary to perform the work and deliver materials provided to the City.

D. Prior to starting any work, the Contractor and any approved subcontractor shall obtain and maintain City of Moreno Valley business license(s) through the life of the Contract (at contractor's and/or subcontractor's expense).

The contractor who is awarded the bid must be licensed and bonded with the State of California Contractor's State License Board and must possess and maintain a valid license during the life of the contract. The classification shall be one of the following:

A – General Engineering Contractor
B – General Building Contractor

2-1.5 Insurance Requirements

The contractor who is awarded the bid must submit certificates of insurance, at its sole expense, to the City within fourteen (14) calendar days of being awarded the job.

Insurance coverage shall be maintained for the life of the contract. Minimum insurance requirements are as follows:

Insurance companies shall be rated (A Minus: VII—Admitted) or better in Best's Insurance Rating Guide and shall be legally licensed and qualified to conduct business in the State of California.

General Liability Insurance—to protect against loss from liability imposed by law for damages on account of bodily injury, including death, and/or property damage suffered or alleged to be suffered by any person or persons whomever, resulting directly or indirectly from any act or activities of the Contractor, Subcontractor, or any person acting for the Contractor or under its control or direction. Such insurance shall be maintained in full force and effect throughout the terms of the Agreement and any extension thereof in the minimum amounts provided below:

Bodily Injury	$1,000,000 per occurrence/ $2,000,000 aggregate
Property Damage	$500,000 per occurrence/ $500,000 aggregate

Liability and Property Damage Insurance coverage for owned and non-owned automotive

equipment operated on City of Moreno Valley (City), Community Services District (CSD), Moreno Valley Housing Authority (MVHA) premises. Such coverage limits shall not be less than $1,000,000 combined single limit.

Worker's Compensation Insurance—in such amounts as will fully comply with the laws of the State of California and which shall indemnify, insure and provide legal defense for the Contractor and the City, MVHA, and CSD against any loss, claim or damage arising from any injuries or occupational diseases happening to any worker employed by the Contractor in the course of carrying out the Agreement. This coverage may be waived if the Contractor is determined to be functioning as a sole proprietor and the city provided form "Exception to Worker's Compensation Coverage" is signed, notarized and attached to the Agreement

Certificate of Insurance and appropriate additional insured endorsement evidencing the above applicable insurance coverage shall be submitted to the City Risk Manager prior to the execution of the Agreement. The Certificate of Insurance or an appropriate binder shall bear an endorsement containing the following provisions:

> Solely as respect to services done by or on behalf of the named insured for the City of Moreno Valley, it is agreed that the City of Moreno Valley, the Moreno Valley Housing Authority, and the Moreno Valley Community Services District, their officers, employees and agents are included as additional insured under this policy and the coverage(s) provided shall be primary insurance and not contributing with any other insurance available to the City of Moreno Valley, the Moreno Valley Housing Authority, and the Moreno Valley Community Services District, its officers, employees and agents, under any third party liability policy.

The terms of the insurance policy or policies issued to provide the above coverage shall neither be amended to reduce the required insurance limits and coverages nor shall such policies be canceled by the carrier without thirty (30) days prior written notice by certified or registered mail of amendment or cancellation to the City, except that cancellation for non-payment of premium shall require ten (10) days prior written notice by certified or registered mail. In the event the insurance is canceled, the Contractor shall, prior to the cancellation date, submit to the Risk Manager new evidence of insurance in the amounts established.

2-1.6 Equipment and Safety Regulations

The work, labor, and materials which the Contractor proposes to furnish to the City must comply in all respects with the appropriate equipment and safety regulations of all Federal, State, and local regulatory commissions whether such equipment or safety features have been specifically outlined or required in these specifications or not. Contractor shall assume full responsibility for any violations and/or noncompliance with such regulations.

2-1.7 Owner's Rights Reserved

Within such limits as may be prescribed by law, the City reserves the right to reject any and all quotes; to accept, reject or waive a variance in a quote; to make no award; to issue subsequent requests for quotes; to waive any informality in a quote; or to accept the quote that best serve the interests of the City. The City reserves the right to accept part or all of the quoted items.

2-1.8 Bonds

The successful Contractor must submit a Faithful Performance Bond (see Exhibit 3 for sample) and a Labor & Materials Payment Bond (see Exhibit 2 for sample) within fourteen (14) calendar days of the award of the Contract. Failure to execute and furnish said documents within said fourteen (14) days shall be just cause for the annulment of the award and pursuit of an Agreement with the next responsive and responsible proposer that best meets the needs of the City.

2-1.9 Execution of Agreement

An Independent Contractor Agreement (see Exhibit 1 for sample) shall be signed by the successful Contractor in duplicate counterpart and returned, together with the completed Faithful Performance Bond, Labor & Materials Payment Bond, and all insurance certificate(s), within fourteen (14) calendar days after the date of the award of the Contract. In the event that the successful Contractor to whom the Contract is awarded defaults in executing the required Agreement or fails to submit the required documents to the City within fourteen (14) calendar days after the date of the Award of the Contract, acceptance of the Quote and award of the Contract may be considered null and void. The Contract may then be awarded to the next lowest responsible bidder.

This Request for Quote shall become part of the overall Contract Documents upon execution of the Independent Contractor Agreement by all parties.

2-1.10 Pre-Job Meeting

Prior to the beginning of the project, the Contractor will be required to meet with City representatives for the purpose of reviewing and discussing the Contract documents, specifications, instructions, procedures, work schedule, and timeline.

2-1.11 Examination of Site of Work, Bid Forms, Plans, Specifications, and Special Provisions

The Bidder is required to examine carefully the site of work, Bid forms and all other Contract documents for the work contemplated. The Submission of a Bidder's Bid shall be considered conclusive evidence that the Bidder has investigated and is satisfied as to the conditions to be encountered, as to the character, quality and scope of work to be performed and quantities of materials to be furnished and as to the requirements of all the above documents.

2-1.12 Estimated Quantities

The estimated quantities given in the Bid Schedule are approximate only, being given as a basis for the comparison of bids. The City does not, expressly or by implication, agree that the actual amount of work will correspond therewith, and reserves the right to increase or decrease the amount of any portion of the work, or to omit portions of the work, or delete any bid items of work, as may be deemed necessary or advisable by the City.

2-1.13 Interpretation of the Documents

Discrepancies in and omissions from the Special Provisions, the project Plans or other Contract documents, or questions as to their meaning shall, at once, be brought to the attention of the

City. Any interpretation of the documents will be made only by Addenda duly issued, and a copy of such Addenda will be mailed or delivered to each person or firm who is listed by the City as having received a set of such documents. The City will not be responsible for any other explanations or interpretations. No oral agreement or conversation with any officers, employees, or agents of the City, either before or after execution of the Contract, shall affect or modify any of the terms of obligations contained in any of the documents comprising said Contract.

2-1.14 Addenda

Any Addenda issued prior to the opening of the Bids shall be acknowledged in the Bidder's Bid and shall become a part of the Contract documents. Addenda shall be acknowledged by listing each individual Addendum numerically on the Bidder's Bid. If an Addendum or Addenda have been issued by the City and not acknowledged as being received by the Bidder, said Bid may be rejected as being non-responsive.

2-1.15 Bid Form and Submittal

Bidder's Bid shall be submitted on the City's forms included hereinbefore to the City Clerk of the City of Moreno Valley. If the Bidder's Bid is made by an individual, it shall be signed and his full name and post office address shall be given; if made by a partnership, it shall be signed with the partnership name by one of the partners, who shall sign his own name, and in addition, the name and address of each partner shall be give; if it is made by a corporation, it shall be signed by the president or vice-president, plus the secretary or assistant secretary, and the names and titles of all officers of the corporation shall be given.

If the Bidder is making a change on the Bidder’s Bid prior to submission of the bid, the Bidder is to line through the existing script, add the revision, and initial. The complete Bidder's Bid, of these Contract documents, shall be enclosed in a sealed envelope, addressed as follows, City Clerk, City of Moreno Valley, 14177 Frederick Street, P.O. Box 88005, Moreno Valley, California 92552-0805, endorsed with the Bidder's company name and address on the upper left corner, at the front of the envelope, the project number, name of project, hour and date of Bid opening as specified in Notice Inviting Bids and the words "SEALED BID, DO NOT OPEN WITH REGULAR MAIL".

Bidder's Bids not received by the City Clerk of the City of Moreno Valley by the time and date set forth in the Notice Inviting Bids, shall be declared late and returned unopened to the Bidder. The Bidder is solely responsible for the timely delivery of the "Bidders Bid."

2-1.16 Bid Guarantee

A Bid Bond will not be required for this project.

2-1.17 Withdrawal of Bidder's Bids

Any Bidder's Bid may be withdrawn prior to the time and date set forth in the Notice Inviting Bids for submission of Bids, provided that a request in writing, executed by the Bidder or his or her duly authorized representative for the withdrawal of such Bidder's Bid, is filed with the City Clerk prior to such time and date.

The withdrawal of a Bidder's Bid shall not in itself prejudice the right of a Bidder to file a new Bidder's Bid. No bid may be withdrawn or changed after the time noted for submission of Bids. The lowest Bidder may request relief of the Bid by submitting a written notice within five days after the opening of Bids. Whether or not to grant a request for withdrawal of a Bid is within the sole discretion of the City Council. Said written notice shall certify to the following:

A. A mistake was made.
B. Specifying in detail how the mistake occurred.
C. The mistake made the Bid materially different than he or she intended it to be.
D. The mistake was made in filling out the Bid and not due to error in judgment or to carelessness in inspecting the site of the work, or in reading the Plans or Specifications. (PCC 5101, 5103)

2-1.18 Disqualification of Bidders

More than one Bidder's Bid from an individual, a firm or partnership, a corporation or an association under the same or different name will not be considered. Reasonable grounds for believing that any Bidder has an interest in more than one Bidder's Bid, as a Bidder, will cause the rejection of all Bidder's Bids in which such Bidder is interested. If there is a reason for believing that collusion exists among the Bidders, none of the participants in such collusion will be considered in awarding the Contract. Bidder's Bids in which the prices obviously are unbalanced may be rejected. If the experience or financial background of the Bidder, as a Contractor, is inadequate or past performance has been unsatisfactory, his or her Bidder's Bid may be rejected.

No Bidder's Bid will be accepted from a Bidder who is not fully and properly licensed as a Contractor in accordance with the Provisions of Chapter 9 of Division 3 of the Business and Professions Code on the date and at the time of the submittal of the Bid for the work to be done by him or her. (B & P 7028.15)

2-1.19 Rejection of Bidder's Bids

Any Bid containing information which is subsequently proven false or improperly signed shall be considered non-responsive and shall be rejected by the City. A licensed Contractor shall not submit a bid to a public agency unless his or her Contractor's license number appears clearly on the Bid and the license expiration date is stated. Any Bid not containing this information or Bid containing information which is subsequently proven false shall be considered nonresponsive and shall be rejected by the City (B & P 7028.15 [e]).
A Bidder’s bid shall be rejected upon the occurrence of any of the following: the Bidder’s bid has been transferred to another Bidder; the Bidder’s bid shows any alterations of form, additions not called for, conditional or alternative bids uncalled for, or failing to provide required information except as allowed by law. If the Bidder is making a change to the Bidder’s bid to submission of the Bid, the Bidder is to line through the existing scripts, add the revision, and initial.

A Bidder’s bid maybe rejected if the Bidder’s bid has irregularities of any kind; however, the City reserves the right to reject any and all Bidder’s bids as well as to waive irregularities to the extent permitted by law. The List of References form is informational only and Contractors that have not worked on Public Works projects should state, "Have Not Worked Public Works Projects," and include other similar work.

2-1.20 Award of Contract

The lowest responsible Bidder will be determined by comparing the cumulative total of all base bid items, based on the City's estimate of quantities for the work to be done (PCC 20103.8b). The City reserves the right to select the total bid, or the base bid only.

The award, if made, will be within sixty (60) calendar days after the opening of the Bidder's Bids. In the event the award is not made within the sixty (60) day period, the Bidder may submit to the City claim(s) for additional costs incurred between the end of said sixty (60) day period and date of actual award. All reasonable claims will be considered, and any justifiable costs shall be granted to the Bidder as a Contract
Change Order to the Agreement.

The Bidder shall submit to the City, when requested and prior to the Award of Contract, a detailed financial statement and resume of previous work of a similar nature.

2-1.21 Return of Bid Guarantees

No Bid Bonds will be required for this project.

2-2 ASSIGNMENT

2-2.1 Contractor Indebtedness

Indebtedness incurred by or on behalf of the Contractor for any cause in connection with this work must be paid by the Contractor. The City, the Moreno Valley Housing Authority (MVHA), and the Moreno Valley Community Services District (CSD) have no obligation for any indebtedness or claim other than payments under terms of the Contract, and the Contractor shall not represent that he or she has any authority to create by such obligation on behalf of the City, the MVHA, and the CSD. The Contractor shall indemnify and hold harmless the City, the MVHA, the CSD, its officers, employees and agents from any loss, demand, damages, claims or actions arising from or in connection with said indebtedness.

2-3 SUBCONTRACTS

2-3.1 General

Pursuant to the provisions in Section 1777.1 of the Labor Code, the Labor Commissioner publishes and distributes a list of contractors ineligible to perform work as a subcontractor on a public works project. The City will check this list. This list of debarred contractors is available from the Department of Industrial Relations web site at
http://www.dir.ca.gov/dir/Labor_law/DLSE/Debar.html.

2-3.2 Additional Responsibility

If the Bid submitted by the Contractor fails to meet at least twenty-five (25) percent of the amount of work required with its own forces (based upon Contractor's submitted Bid costs), the Bid will be considered non-responsive and will be rejected with no further consideration. If after execution of the agreement the City discovers the Contractor is performing work amounting to less than twenty-five (25) percent of the Contracted amount, except for "Specialty Items," the

Contractor will be notified that he or she is in violation of the Contract and will have that portion subcontracted for which is less than twenty-five percent (25%) of the amount of work required to be performed by the Contractor deducted from payment to the Contractor. The deduction shall not exceed twenty-five (25) percent of the Contracted amount required to be performed by the Contractor. The Contractor will not be penalized by the City resulting from Contract Change Orders that increase subcontract items of work.

Subcontracts shall include Provisions that the Contract between the City and the Contractor is part of the subcontract and that all terms and Provisions of said Contract are incorporated in the subcontract. Subcontracts shall also contain certification by the subcontractor that said subcontractor is experienced in and qualified to do, and knowledgeable about, the subcontracted work. Copies of subcontracts shall be available to the City at the time any litigation against the City concerning the project is filed.

2-3.3 Status of Subcontractors

A. Contractor shall be fully responsible to the City for the acts and omissions of subcontractors and of persons employed by them, as the Contractor is for the acts and omissions of persons directly employed upon their work.
B. Contractor shall be responsible for the coordination of the trades, subcontractors, and material suppliers engaged upon their work.
C. Neither the City nor any representative of the City will undertake to settle any difference between the Contractor and subcontractors or between subcontractors.

2-4 CONTRACT BONDS

All bonds shall be submitted on the City's bond forms, a sample is included herein. Each bond shall be signed by both the Bidder and the Surety, with all signatures notarized and all acknowledgments attached thereto. The attorney-in-fact for a corporate Surety shall be registered as such in the State of California and file with each bond an original, notarized, corporately sealed, and effective dated Power of Attorney. Certified copies of the Power of Attorney are acceptable, providing they are contemporaneously signed, notarized, and corporately sealed.

The cost of all bonds, including premiums and incidentals, shall be included in the Contract lump sum price paid for mobilization, and no additional compensation will be allowed. When the Contract does not include a Contract pay item for mobilization, all bond costs shall be considered to be included in and distributed proportionately through all of the Contract items of work. In the event any Contract pay items are deleted or reduced in quantity or value, no payment will be made to the Contractor for the cost of any portion of the bonds.

2-5 PLANS AND SPECIFICATIONS

2-5.1.1 Standard Specifications

Except as otherwise specified on the Plans or in these Special Provisions, all work shall be in accordance with the Provisions of the latest edition of the “GREENBOOK,” STANDARD SPECIFICATION FOR PUBLIC WORKS CONSTRUCTION, including all Supplemental Amendments, as prepared by Public Works Standards, Inc., published by Building News, Inc., Anaheim, California, which Specifications are hereinafter referred to as the Standard

Specifications. Any reference to "Section" or "Subsection" in these Special Provisions shall refer to said Standard Specifications unless noted otherwise.

2-5.2.1 Traffic Signal Work

Except as otherwise specified on the Plans or in these General or Technical Provisions, all work relating to traffic signals and incidental illuminated street name signs and safety lighting, including all equipment, materials, components, and the installation thereof, shall be in accordance with the City's Technical Provisions for traffic signals, latest edition of the State Standard Plans and Section 86, of the latest edition of the State Standard Specifications. The order of precedence for said State Standard Plans shall be lower than that of the Special Provisions and Plans but higher than that of the Standard Plans and Specifications. The order of precedence for said Section 86, of the State Standard Specifications shall be lower than that of said State Standard Plans but not higher than that of the Standard Plans and Standard Specifications.

2-5.3 Submittals

2-5.3.1 General

Within fourteen (14) calendar days after the Award of Contract, the Contractor shall, at his or her expense, transmit by letter to the City for review and acceptance, working drawings, shop drawings, supporting information, and/or other available instructive and descriptive information from the manufacturer, when and as required by the Plans or Special Provisions, or requested by the City. Shop drawings will normally not be required for standard items in common use for which adequate manufacturers' literature is available. The Contractor shall consecutively number, thoroughly check, approve and sign each submittal and transmit the submittals by letter to the City for review. In the event that certain submittals are submitted without the Contractor's approval signature or are unacceptable to the City, they will be rejected by the City. The Contractor shall thereafter correct said submittals and resubmit. In the event that in the process of development of the submittals, it is discovered that there are defects and/or errors on the Plans resulting in conflict between said Plans and the submittals, or if the submittals show variation from the Plans and/or Contract requirements because of standard shop practice or other reasons, the Contractor shall thoroughly describe and explain said defects and/or conflicts in his or her transmittal letter to the City.

The City's review of the submittals will be for general design and arrangement only and shall not relieve the Contractor from responsibility for errors of any sort in the submittals or of the responsibility for executing the work in accordance with the Contract. The Contractor shall be solely responsible for the correctness of the submittals, for shop fits and field connections, and for the results obtained by use of such submittals. The Contractor shall verify and be fully responsible for all dimensions and job-site conditions affecting the work and shall be responsible for furnishing and installing the proper materials required by the Contract, whether or not indicated on the submittals when reviewed.

The Contractor will not be given an extension of contract time due to the failure of the Contractor to provide submittals as required by the Specifications in a timely manner.

2-9 SURVEYING

The Contractor shall preserve bench marks, survey monuments, survey stakes and points set for lines, grades or measurements of work in their proper places unless removal is authorized by the City. The Contractor shall provide all required survey work.

2-11 INSPECTION

Inspection of the work shall not relieve the Contractor of any of his obligations to fulfill the Contract.

Defective work shall be made good and unsuitable materials may be rejected, notwithstanding that such defective work and materials have been previously approved by the City or included in the quantities for progress payments. The inspector does not have authority to deviate from the plans and specifications and to obligate the city financially.

If any such work is concealed or performed without the prior inspection notice, then the work shall be subject to such tests or exposure as may be necessary to prove to the City that the materials used and the work done are in conformity with the plans and specifications, or may be removed and installed again at the discretion of the City. All labor, equipment and materials necessary for exposing, testing or complete removal, and installation or replacement shall be furnished by the Contractor at its expense. The Contractor shall replace, at its own expense, any materials or work damaged by exposure or testing.

Cost of rework inspection incurred by the City will be deducted from the Contractor's progress payments.

Rework inspection cost is as follows:

A. Contractor's failure to complete the Work within the Contract time stated in the Contract and any previously authorized extensions thereof.
B. Extra inspections required for Contractor's correction of defective work.
C. Overtime costs for acceleration of work done for Contractor's convenience.
D. All associated costs including travel.

SECTION 3 - CHANGES IN WORK

3-2 CHANGES INITIATED BY THE AGENCY

3-2.1 General

The City reserves the right to make changes in the work or eliminate any contract (bid) item of work without impairing the validity of the Contract. Such changes shall be made in accordance with any of the following methods:

A. By written modification of Contract (Supplemental Agreement or Contract Change Order) ordered by the City Council.
B. By written Contract Change Order, signed by the City Manager or Purchasing Facilities Manager in the amounts specified by City Policy.
C. All Contract modifications shall be signed by the Contractor.

Changes in the work made pursuant to this section, “Changes in Work” and extensions of completion time made necessary by reason thereof, shall in no way release any Guarantee given by the Contractor of the Contract let hereunder. The Sureties in excluding the Bonds on the Contract made pursuant to the General Conditions shall be deemed to have expressly agreed to any change increasing the cost of the work and to any extension for time made by reason thereof. Such changes in the work shall not relieve or release the Sureties of Bonds executed for the work.

Whenever a change is pending, the Contractor shall notify the City if it is necessary to halt other work in the area of the change that would be affected thereby, until such time as the change is authorized.

Any change to the Contract amount shall be in a lump sum mutually agreed to by the Contractor and the City, except that when, in the opinion of the City such basis is not feasible, the change to the Contract amount shall be determined as provided for in Subsection 3-3, “Extra Work,” of the Standard Specifications.

Each lump sum quotation from the Contractor shall be accompanied by sufficiently detailed estimates to permit verification of totals in accordance with Subsection 3-3.2, “Payment,” of the Standard Specifications.

When the work is to be done on a cost-plus-percentage basis, the Contractor shall submit daily work reports as required by the City showing all labor, material and equipment costs incurred, and upon completion of the work, a Summary of Costs, including overhead and profit, and in accordance with Subsection 3-3.2, “Payment,” of the Standard Specifications.

The signature of the City inspector on the daily reports does not obligate the City to payment of any or all items of work listed on the City issued daily work reports. The inspector’s signature just acknowledges receipt of the City issued daily work report.

3-2.2.2 Increases of More than 25 Percent

Should the actual quantity of a major item of work covered by a Contract Unit Price and constructed in conformance with the Plans and Specifications exceed the Bid quantity by more

than 25 percent, a Contract Change Order will be issued and payment for the quantity in excess of 25 percent of the Bid quantity will be made on the basis of the extension of contract with price adjustment in the Contract Unit Price mutually agreed to by the Contractor and the Agency, Subsection 3-2.4 “Agreed Prices”, of the Standard Specifications or at the option of the City, on the basis of Subsection 3-3 “Extra Work” of the Standard Specifications.

The Contractor will be paid at the contract unit price for minor bid items regardless if there is an increase in excess of twenty-five percent (25%) in the quantity listed in the bid.

3-2.2.3 Decreases of More than 25 Percent

Should the actual quantity of a major item of work covered by a Contract Unit Price, and constructed in conformance with the Plans and Specifications, be less than 75 percent of the Bid quantity, an adjustment in payment will not be made unless so requested in writing by the Contractor. If the Contractor so requests, a Contract Change Order will be issued and payment will be made on the basis of an adjustment in the Contract Unit Price mutually agreed to by the Contractor and the Agency, or at the option of the City, on the basis of Subsection 3-3 “Extra Work” of the Standard Specifications; however, in no case will payment be less than would be made for the actual quantity at the Contract Unit Price.

The Contractor will be paid at the Contract Unit Price for minor bid items regardless if there is a decrease in excess of twenty-five (25%) percent in the quantity listed in the bid.

3-3 EXTRA WORK

3-3.1 General

The Contractor shall not perform any extra work except upon written authorization from the City. Any change in work shall conform to the original drawings and Specifications insofar as they may apply without conflict to the conditions involved in the change.

3-3.2.2 Basis for Establishing Costs

The costs of labor will be the actual cost for wages prevailing locally for each craft or type of worker (including foreman when authorized by the City) performing the extra work at the time the extra work is done, plus, liability insurance, health and welfare, pension, vacation, apprenticeship funds, and other direct costs, as well as assessments or benefits required by lawful collective bargaining agreements.

To the actual wages, as defined above, will be added a labor surcharge set forth in the California Department of Transportation publication entitled “Labor Surcharge and Equipment Rental Rates,” which is in effect on the date upon which the work is accomplished and which is part of the contract. The labor surcharge shall constitute full compensation for all payments imposed by state and federal laws and for all other payments made to, or on behalf of the workers, other than actual wages, subsistence and travel paid to the workers. Labor surcharge includes Workers’ Compensation Insurance, Social Security, Medicare, Federal Unemployment, State Unemployment and State Training Taxes. If the Contractor does not furnish satisfactory evidence of the cost of the materials from the actual supplier thereof within a specified time period after the date of delivery of material, the City reserves the right to establish the cost of the materials at the lowest current wholesale prices at which the materials were available, in the

quantities concerned, delivered to the location of the work, less any discounts. Individual pieces of equipment or tools not listed in the Equipment Rental Rates having a replacement value of $200 or less, whether or not consumed by use, shall be considered to be small tools and no payment will be made therefore. The Contractor will be paid for the use of equipment at the rental rates listed for such equipment in the Department of Transportation publication entitled, "Labor Surcharge and Equipment Rental Rates," which is in effect on the date upon which the work is accomplished.

Move in and out, or minimum charges other than the hourly rate, shall not apply to equipment available from the force already on the job site. Equipment which is rented from a local equipment agency, other than Contractor-owned, the Contractor will be paid at the hourly rate shown on the rental agency invoice or agreement for the time used on extra work.

If a minimum equipment rental amount is required by the local equipment rental agency, the actual amount charged will be paid to the Contractor.

If it is deemed necessary by the City to use equipment not listed in the Labor Surcharge and Equipment Rental Rates publication, a suitable rental rate for that equipment will be established by the City. The Contractor may furnish any cost data that might assist the City in the establishment of the rental rate. If the rental rate established by the City is $10.00 per hour or less, the provisions above concerning rental of equipment from a local equipment agency shall apply.

Rental time will not be allowed while equipment is inoperative due to breakdowns. When owner operated equipment is used to perform extra work to be paid for on a force account basis, the Contractor will be paid for the equipment and operator as follows:

> Payment for the equipment will be made at the rental rates listed for such equipment in the Department of Transportation publication entitled "Labor Surcharge and Equipment Rental Rates," which is in effect on the date upon which the work is accomplished.
>
> Payment for the cost of labor will be made in conformance with the provisions in Subsection 3-3.2.2(a) "Labor" of the Standard Specifications as revised.

3-3.2.3 Markup

The markup for overhead and profit on work added to the Contract shall be according to the following schedule:

A. For work performed by the Contractor's force, the added cost for overhead and profit shall be no more than thirty-three percent (33%) to the cost of labor, fifteen percent (15%) to the cost of materials, and fifteen percent (15%) to the cost of equipment rentals.
B. For work performed by a subcontractor, the added cost for overhead and profit shall be no more than thirty-three percent (33%) to the cost of labor, fifteen percent (15%) to the cost of materials, and fifteen percent (15%) to the cost of equipment rentals, to which the Contractor may add up to five percent (5%) of the subcontractor's price of the work. The additional five percent (5%) mark-up shall reimburse the Contractor for additional administrative costs, and no other additional payment will be made by reason of performance of the extra work by a subcontractor.

C. For work performed by a sub-subcontractor, the added cost for overhead and profit shall be no more than thirty-three percent (33%) to the cost of labor, fifteen percent (15%) to the cost of materials, and fifteen percent (15%) to the cost of equipment rentals, to which subcontractor and General Contractor may add an up to an additional five percent (5%) each of the total price from the lower tier subcontractor. The maximum additional five percent (5%) mark-up shall reimburse the subcontractor and general Contractor for additional administrative costs, and no other additional payment will be made by reason of performance of the extra work by a subcontractor.

D. For work performed by special forces or other special services, the City and the Contractor, by agreement, will determine that a special service or an item of extra work cannot be performed by the forces of the Contractor or those of any of his subcontractors, such service or extra work item may be performed by a specialist. Invoices for such service or item of extra work on the basis of the current market price thereof may be accepted without complete itemization of labor, material, and equipment rental costs when it is impracticable and not in accordance with the established practice of the special service industry to provide such complete itemization.

   In those instances wherein a Contractor is required to perform extra work necessitating a fabrication or matching process in a fabrication or machine shop facilities away from the job site, the charges for that portion of the extra work performed in such facility may, by Agreement between the Contractor and City, be accepted as a specialist billing.

   To the specialist invoice price, less a credit to the City for any cash or trade discount offered or available, whether or not such discount may have been taken, will be added no more than fifteen percent (15%) for overhead and profit in lieu of the percentages provided above.

E. The cost of direct supervision, except when provided by working foremen whose time is included above, of Contract Change Order work when done exclusively and not in conjunction or at the same time of other work performed on the job and when approved in advance by the City including only payroll taxes, insurance, pension and direct costs for the labor of supervision, may be charged to the Contract Change Order. The cost of transportation, use of vehicle, and other costs incurred by supervision will not be allowed.

F. For added or deducted work by subcontractors, the Contractor shall furnish to the City, with the subcontractor's signed detailed estimate of the cost for labor, materials, and equipment, including the markup by such subcontractor for overhead and profit. The same requirement shall apply to subcontractors.

G. For added or deducted work furnished by a vendor or supplier, the Contractor shall furnish to the City a detailed estimate or quotation of the cost to the Contractor for such work, signed by such vendor or supplier.

H. Any change in the work involving both extras and credits shall show a net total cost, including subcontracts. Allowances for overhead and profit, as specified herein, shall be applied if the net total cost is an extra. The estimated cost of deductions shall be based on labor and material prices on the date the Contract was executed.

3-3.3 Daily Reports by Contractor

Material charges shall be substantiated by valid copies of vendor's invoices. Such invoices shall be submitted with the daily extra work reports, or if not available, they shall be submitted with subsequent daily extra work reports. The Contractor shall maintain Contractor's records in such a manner as to provide a clear account basis and the costs of other operations.

Daily extra reports shall be made on City daily work report forms. The daily extra reports shall describe in detail the work that was performed, location (station, etc.). Separate daily extra reports shall be submitted for work that is being performed for more than one location or for different tasks that occur on the same day.

The City will compare Inspector's records with the completed daily extra work reports furnished by the Contractor and make any necessary adjustments. When these daily extra work reports are agreed upon and signed by both parties, said reports shall become the basis of payment for the work performed.

3-3.4 Extension of Time

If the Contractor is delayed in completing the work by reasons of any change ordered by the City, the time for completion of work will be extended for a period equal to the number of days by which the entire project has been delayed because of such change. The Contractor will not be liable for liquidated damages for such period of time and shall have no claim for any other compensation for any such delay except as provided herein.

3-5 DISPUTED WORK

If unable to reach agreement under any of the foregoing procedures, the City may direct the Contractor to proceed with the work. Payment shall be made for such work as is later determined by negotiation between the parties or as is fixed by a court of law.

3-6 FORMAT FOR CHANGES IN WORK

3-6.1 General

A Contract Change Order will be issued for all changes in the work unless a supplemental agreement is made between the City and Contractor. The Contract Change Orders will be made on a City form and will contain a summary of all costs as supplied by the Contractor or agreed to by the City and Contractor.

The Contractor shall use City Contract Change Order report forms (as follows):

3-6.2(a) Change Order Summary Report
3-6.2(b) Labor Cost Report

SECTION 4 - CONTROL OF MATERIALS

4-1 MATERIALS AND WORKMANSHIP

4-1.1.1 Property Rights in Materials

Nothing in the Contract shall be construed as vesting in the Contractor any right, title, or interest in material used in the work after it has been attached or affixed to the work or the soil. All such material shall become the property of the City upon being so attached or affixed.

4-1.2 Protection of Work and Materials

Materials shall not be stored in the right-of-way unless written permission is given by the City.

4-1.4 Tests of Materials

Unless otherwise called for hereinafter in these Special Provisions, all testing will be performed by the City in such number and at such locations as deemed necessary by the City to ensure compliance with the Plans and Specifications; the cost of all initial testing will be borne by the City; the cost of all retesting will be borne by the Contractor, and the amount due the City for said retesting will be deducted from the Contractor's progress payments.

4-1.5 Certification

A Certification of Compliance shall be furnished prior to the use of any materials for which these Specifications or the Special Provisions require that a certificate be furnished. In addition, when so authorized in these Specifications or in the Special Provisions, the City may permit the use of certain materials or assemblies prior to sampling and testing if accompanied by a Certificate of Compliance. The certificate shall be signed by the manufacturer of the material or the manufacturer of assembled materials, and shall state that the materials involved comply in all respects with the requirements of the specifications.

A Certificate of Compliance shall be furnished with each lot of material delivered to the work and the lot so certified shall be clearly identified in the certificate.

All materials used on the basis of a Certificate of Compliance may be sampled and tested at any time. The fact that material is used on the basis of a Certificate of Compliance shall not relieve the Contractor of responsibility for incorporating material in the work which conforms to the requirements of the Plans and Specifications, and any material not conforming to the requirements will be subject to rejections, whether in place or not.
The City reserves the right to refuse to permit the use of material on the basis of a Certificate of Compliance.

4-1.6 Trade Names or Equals

The words **"or equal"** shall be interpreted to mean **"or approved as equal in the opinion of the City."**

Within ten (10) working days from the date of the Award of Contract, the Contractor shall, at his/her expense, submit a written request to the City for each desired substitution, accompanied

by complete descriptive information from the manufacturer, samples as requested by the City, complete detailed test results from a licensed independent testing laboratory of the City's choice if requested by the City, and if requested by the City, an evaluation report from a qualified licensed professional City, all for final evaluation by the City. If in the City's opinion, the requested substitution is of lesser quality or in variance with that specified, or if the information submitted is insufficient or incomplete, the requested substitution will be disallowed and the specified materials or equipment shall be furnished. No request for substitutions submitted, after the 10-day deadline specified hereinabove, will be considered.

The City may describe in the “Notice Inviting Bids,” in the Bidder’s Schedule, Specifications, Plans, or Request for Bids that a particular material, product, thing, or service is designated by specific brand or trade name in accordance with Section 3400 of the Public Contract Code for either of the following purposes:

A. In order that a field test or experiment may be made to determine the product’s suitability for future use; or
B. In order to match other products in use on a particular public improvement, either completed or in the course of completion.

4-1.11 State Specification No.

The State Specification number of material furnished on the Contract shall conform to the number specified in these Specifications or the Special Provisions for the material involved, except that material conforming to a later specification issue will be acceptable.

SECTION 5 – UTILITIES

5-1 LOCATION

When work is to be conducted in an area which is known, or reasonably known, to contain underground utilities or subsurface improvements, the Contractor shall contact Underground Service Alert of Southern California at least 2 working days, but not more than 14 calendar days in advance of any construction activity, which will or could damage or affect any underground utility or subsurface improvement, and obtain an inquiry identification number (CGC 4216). The Contractor shall delineate with white paint or other suitable markings the area to be excavated. The Contractor shall notify Underground Service Alert in the event of change in the project limits or change in original work previously shown on the Plans or indicated in the Specifications. When all work is completed, the Contractor shall remove all markings for underground utilities.

Subsurface installations are considered within 24 inches (600mm) horizontally on either side of the exterior surface of the subsurface installation (CGC 4216). When the subsurface installation markings are no longer reasonably visible, the Contractor shall notify Underground Service Alert to remark those subsurface installations which may be affected by excavation to the extent necessary (CGC 4216.3[c]).

5-5 DELAYS

In accordance with Section 4215, of the California Government Code, if such utilities have not been identified with reasonable accuracy in the Contract documents, the Contractor shall be compensated for the cost of protecting, removing, relocating, and repairing damage to main or trunk line utility facilities located on the job site, where not due to the failure of the Contractor to exercise reasonable care; and for the operating costs for equipment on the project necessarily idled during such work.

5-7 AGENCY TELEPHONE NUMBERS

The following list of individuals or entities, that may have facilities in the area to be improved hereunder is merely for the Contractor's information and may not be accurate or complete:

Time Warner Communications	951.549.3977
City of Moreno Valley Building & Safety Division	951.413.3350
City of Moreno Valley Electrical Utility…….	877.811.8700
City of Moreno Valley Purchasing & Facilities Division	951.413.3740
City of Moreno Valley, Public Works Department	951.413.3100
City of Moreno Valley Police Department	951.486.6700
City of Moreno Valley Technology Services Division	951.413.3410
Eastern Municipal Water District	951.928.3777
Moreno Valley Utilities (electrical)	877.811.8700

Verizon 800.483.4000
Waste Management 800.423.9986
Western Municipal Water District 951.789.5109

5-9 TEMPORARY ELECTRICAL SERVICE CONNECTION FOR CONSTRUCTION POWER

The Contractor shall apply for and pay all charges levied by the Moreno Valley Electric Utility (MVU) or Southern California Edison Company for rendering temporary electrical service to this project. MVU charges can be obtained by contacting customer service at 877.811.8700. SCE charges can be obtained by contacting Southern California Edison Company, 26100 Menifee Road, Romoland, California 92585, Phone 951.928.8288.

SECTION 6 - PROSECUTION, PROGRESS AND ACCEPTANCE OF THE WORK

6-1 CONSTRUCTION SCHEDULE AND COMMENCEMENT OF WORK

The Contractor's representative and the Contractor's principal subcontractors shall attend the City's preconstruction meeting. Other agencies and utilities involved in this project may also have separate preconstruction meetings; the contractor and applicable subcontractors are required to attend the agency/utility meetings.

The Contractor shall submit a proposed construction schedule (Gant Chart) for the entire work to the City for review and approval five (5) working days prior to the Pre-Construction Meeting and revised schedules thereafter as required by the City when the Contractor's activities differ or are expected to differ from the latest existing schedule. If the Contractor has not submitted a Construction Schedule upon the date to start work in the Notice to Proceed, the Contractor will not be allowed to start work and will not be granted additional time. The Contractor shall refer to the PROJECT SPECIFIC SCOPE OF WORK section in the Technical Provisions for any required or preferred sequence of work.

6-6 DELAYS AND EXTENSIONS OF TIME

6-6.1 General

Work will not be allowed on days predicted by the South Coast Air Quality Management District (SCAQMD) to be "Stage III" smog episode days. Notification will be given to the Contractor's representative by the City no later than 3:00 p.m. on the day preceding the predicted "Stage III" episode day. The Contractor will be entitled to an extension of time for such delays, but the Contractor will not be entitled to damages or additional payment due to such delays.

Work required to maintain the project site in a safe condition (including but not limited to maintenance of traffic control), shall be allowed on **all** days.

6-7 TIME OF COMPLETION

6-7.2 Working Day

Work shall be performed on all days outside of regular business hours; however the City will not pay any overtime wages. The work must be in keeping with all state and federal labor laws.

The following days have been designated as holidays by the City of Moreno Valley:

New Year's Day .....January 1
Martin Luther King, Jr. Day .....3rd Monday in January
President's Day .....3rd Monday in February
Memorial Day .....Last Monday in May
Independence Day .....July 4
Labor Day .....1st Monday in September
Thanksgiving .....4th Thursday in November
Day after Thanksgiving .....4th Friday in November
Christmas Eve .....December 24
Christmas Day .....December 25

If a holiday falls upon a Sunday, the following Monday shall be the day the holiday is observed, and if a holiday falls upon a Saturday, the preceding Friday shall be the day the holiday is observed.

6-7.3 Contract Time Accounting

The Contract time, commencement of work, and completion of work, including corrective items of work, shall be in accordance with Section 4 of the Agreement. Extensions of time, when granted by the City, will be in working days and will otherwise be in accordance with the Standard Specifications and given in writing by Contract Change Order.

6-7.4 Work Outside Regular Hours

The City's regular business hours are Monday through Thursday, from 7:30 a.m. to 5:30 p.m. and Fridays from 8:00 a.m. to 5:00 p.m. The Contractor shall perform all work outside of regular business hours, while keeping in compliance with all federal and state labor laws and regulations.

The facility must be accessible to the public each business day, complying with all ADA requirements.

All costs incurred for after-hour inspections, access, testing, or construction engineering shall be anticipated and included in the Contractor's bid.

6-8 COMPLETION, ACCEPTANCE, AND WARRANTY

6-8.1 Warranty of Work and Materials

The Contractor shall warranty that all work performed by him/her under this Contract fully meets the requirements thereof as to quality of workmanship and materials furnished. If any defects in materials or workmanship become evident within a period of one year from the date of the acceptance of the work by the City Council, the Contractor shall, at his or her own expense, make any repair or replacement necessary, including repair of settled backfill and resurfacing, pay administrative costs relative to inspection, testing, contract administration, and attorney fees to restore the work to full compliance with the Plans and Specifications.

Such repair and replacement shall be made promptly upon receipt of written notice from the City. If the Contractor fails to make such repair and replacement promptly, the City may cause the work to be done and the costs incurred thereby shall become the liability of the Contractor and his or her Surety.

If in the opinion of the City, defective work creates a dangerous condition or requires immediate correction or attention to prevent further loss to the City or to prevent interruption of operations of the City, the City will attempt to give the notice required by this article. If the Contractor cannot be contacted or does not comply with the City's request for correction within a reasonable time as determined by the City, the City may, notwithstanding the Provisions of this article, proceed to make such correction or provide such attention, and the costs of such correction or attention shall be charged against the Contractor. Such action by the City will not relieve the Contractor of the guarantees provided in this article or elsewhere in this Contract.

This article does not in any way limit the warranty on any item for which a longer warranty is specified or on any item for which a manufacturer gives a guarantee for a longer period, nor does it limit other remedies of the City in respect to latent defect, fraud implied warranties, or assigned claims. Warranty does not include items of maintenance with normal wear or items over which the Contractor has no control.

Payment for fulfilling the requirements of this section shall be considered to be included in the prices paid for the various Contract items of work and no additional compensation will be allowed therefore.

6-9 LIQUIDATED DAMAGES

Liquidated damages shall be in the amount as specified in the Agreement and shall be for each consecutive calendar day in excess of the time allowed under this Contract for the completion of the work, including corrective items of work as adjusted by the Contract Change Order. The amount of the liquidated damages shall be deducted from payments due the Contractor.

The Contractor will not be assessed liquidated damages for delay in completion of the project, when such delay was caused by the failure of the City or the Owner of a utility to provide for removal or relocation of an existing unknown utility facility.

SECTION 7 - RESPONSIBILITIES OF THE CONTRACTOR

7-1 THE CONTRACTOR'S EQUIPMENT AND FACILITIES

7-1.1 General

The Contractor's equipment and facilities shall meet all requirements of applicable ordinances and laws. The Contractor shall provide a hand washing facility. The Contractor shall comply with all applicable laws, ordinances, and regulations pertaining to public health and sanitation.

7-2.3 Prevailing Rates of Wages

The City has obtained from the Director of the Department of Industrial Relations the general prevailing rate for straight time, overtime and holiday work in the locality in which the work is to be performed for each craft, classification, or type of work known to be needed to execute the work, copies of which are on file with the City of Moreno Valley and are available to any interested party.

Notwithstanding Section 1771 of the Labor Code, the Contractor is not required to pay the general prevailing rate of per diem wages or the general prevailing rate of per diem wages for holiday and overtime work for any Public Works project of twenty-five thousand dollars ($25,000) or less when the project is for construction work, or for any Public Works project of fifteen thousand dollars ($15,000) or less when the project is for alteration, demolition, repair, or maintenance work (or adjusted limits set by the State of California). (LC Sec. 1771.5).

The Contractor shall forfeit to the City, as a penalty, $50.00 for each calendar day, or portion thereof, for each worker paid less than the per diem wage required by the Department of Industrial Relations for any work done under the Contract by him or her, or by any subcontractor under him or her in violation of the provisions of the California Labor Code. It is hereby stipulated that the Contractor shall comply with the provisions of California Labor Code, Section 1775. As used in this paragraph, the term "per diem wages" shall be deemed to include travel and subsistence payments which are required by California Labor Code, Section 1773.8, to be paid to each worker performing work under the Contract.

The Contractor shall post, in a location visible and accessible to all employees, all applicable prevailing wage rates, whether included herein or not, on a job site bulletin board to be supplied and installed by the Contractor. In the event there are no more than ten (10) employees on the job site at any one time, the Contractor may, in lieu of the above, keep a neat and clean copy of all applicable prevailing wage rates anywhere on the job site, provided that all employees are made aware of its existence and are given full and free access to said copy. The Contractor is required to submit weekly certified payrolls to the Project Manager.

7-2.4 Eight-Hour Day - Forty Hour Week Requirements

Pursuant to the Provisions of Sections 1810-1815, of the California Labor Code, eight hours of labor shall constitute a legal day's work and notwithstanding any stipulation inserted in any Contract pursuant to the requirements of said sections, work performed by employees of Contractors in excess of 8 hours per day, and 40 hours during any one week, shall be permitted upon public work upon compensation for all hours worked in excess of 8 hours per day at not less than one and one-half times the basic rate of pay.

The Contractor shall forfeit to the City, as a penalty, $25.00 for each calendar day, or portion thereof, for each worker paid less than one and one-half the basic rate for any overtime work done under the Contract by him/her or by any subcontractor under him.

7-2.5 Apprentices

This Contract shall not prevent the employment of properly indentured apprentices in accordance with Sections 1777.5, 1777.6, and 1777.7, of the California Labor Code. Pursuant to said Section 1777.6, neither the Contractor to whom the Contract is awarded, nor any subcontractor working under him or her shall refuse to accept otherwise qualified employees as indentured apprentices on the work performed hereunder, on the ground of race, creed, national origin, ancestry, color, sex or, except as provided in Section 3077 of the California Labor Code, on the grounds of age. Every qualified apprentice shall be paid the standard wage paid to apprentices under the regulations of the craft or trade in which he or she is employed and shall be employed only in the craft or trade to which he or she is indentured. All public works contracts of general contractors involving at least $30,000 or twenty (20) working days and on contracts of specialty contractors, not bidding for work through a general or prime Contractor, involving at least $2,000 or five (5) working days are subject to Sections 1777.5, 1777.6, and 1777.7, of the California Labor Code pertaining to the apprenticeship program.

If California Labor Code Section 1777.5 applies to this Contract, the Contractor and any subcontractors hereunder who employ workers in any apprenticeship craft or trade shall apply to the joint apprenticeship council administering applicable standards for a certificate approving the Contractor or subcontractor for the employment and training of apprentices. Upon issuance of this certificate, the Contractor and any subcontractor shall employ the number of apprentices provided for therein, as well as contribute to the fund to administer the apprenticeship program in each craft or trade in the area of the work.

It is hereby stipulated that the prime Contractor shall bear the sole responsibility for compliance with this Section and with Sections 1777.5, 1777.6, and 1777.7, of the California Labor Code in regard to all apprenticeship occupations.

7-2.6 Employment of Minors

The Contractor shall not employ or engage any minor under 16 years of age for the purpose of building or construction work of any kind (Title 8 CAC 11701, LC 1294). When minors between 16 and 18 years of age are employed or engaged in building or construction work, the Contractor must obtain Permits to Work and Permits to Employ Minors from school authorities in the school district in which the minor resides or attends school (ED 49110 to 49113, 49131, & 49160). Any Contractor that hires a minor, of 16 years of age or older, who is a high school graduate or who has been awarded a certificate of proficiency is exempt from the permit requirements (ED 49101).

The Contractor shall keep on file all Permits to Work and Permits to Employ, records showing the names, ages (dates of birth) and address of all minors employed, along with payroll records for at least three years (ED 49161, LC 1174, 1175, 1299). The minors' records are to be open at all times for inspection by school attendance officers, members of the Industrial Welfare Commission, and designees, probation officers, officers of the Superintendent at Public Instruction, and officers of the Division of Labor Standards Enforcement (ED 49164, 49181, LC

1174, 1299). The Contractor shall submit to the City a copy of Permits to Work and Permits to Employ or proof of graduation or certificate of proficiency before any minor is allowed to work.

Failure to comply with the provisions of the child labor laws may cause the imposition of criminal and civil sanctions.

7-2.7 Labor Non-Discrimination

"No discrimination shall be made in the employment of persons upon public works because of the race, religious creed, color, national origin, ancestry, physical disability, mental disability, medical condition, marital status, or sex of such persons, except as provided in Section 12940 of the Government Code, and every Contractor for public works violating this section is subject to all the penalties imposed for a violation of this chapter."

A. During the performance of this Contract, the Contractor and its subcontractors shall not unlawfully discriminate against any employee or applicant for employment because of race, religion, color, national origin, ancestry, physical disability, mental disability, medical condition, marital status, age (over 40) or sex. Contractors and subcontractors shall ensure that the evaluation and treatment of their employees and applicants for employment are free of such discrimination. Contractors and subcontractors shall comply with the provision of the Fair Employment and Housing Act (California Gov. Code (CGC), Section 12990 et seq.) and the applicable regulations promulgated thereunder (California Code of Regulations, Title 2, Section 7285.0 et seq.). The applicable regulations of the Fair Employment and Housing Commission implementing Government Code, Section 12990, set forth in Chapter 5, of Division 4, of Title 2, of the California Code of Regulations are incorporated into this Contract by reference and made a part hereof as if set forth in full. The Contractor and its subcontractors shall give written notice of their obligations under this clause to labor organizations with which they have a collective bargaining or other agreement.

B. This Contractor shall include the nondiscrimination and compliance provisions of this clause in all subcontracts to perform work under the Contract. These specifications are applicable to all state Contractors and subcontractors having a construction Contract or subcontract of $5,000, or more (CGC, 12990).

1. As used in the Specifications:

a. "Administrator" means Administrator, Office of Compliance Programs, California Department of Fair Employment and Housing, or any person to whom the Administrator delegates authority;

b. "Minority" includes:

1) Black (all persons having primary origins in any of the black racial groups of Africa, but not of Hispanic origin);

2) Hispanic (all persons of primary culture or origin in Mexico, Puerto Pico, Cuba, Central or South America or other Spanish derived culture or origin regardless of race);

3) Asian/Pacific Islander (all persons having primary origins in any of the original peoples of the Far East, Southeast Asia, the Indian Subcontinent or the Pacific Islands); and

4) American Indian/Alaskan Native (all persons having primary origins in any of the original peoples of North America and who maintain culture identification through tribal affiliation or community recognition).

2. Whenever the Contractor or any subcontractor subcontracts a portion of the work, it shall physically include in each subcontract of $5,000 or more, the nondiscrimination clause in this Contract directly or through incorporation by reference. Any subcontract for work involving a construction trade shall also include the Standard California Construction Contract Specifications, either directly or through incorporation by reference.
3. The Contractor shall implement the specific nondiscrimination standards provided in paragraph 6(a) through (e) of these Specifications.
4. Neither the provisions of any collective bargaining agreement, nor the failure by a union with whom the Contractor has a collective bargaining agreement, to refer either minorities or women, shall excuse the Contractor's obligations under these Specifications, Government Code, Section 12990, or the regulations promulgated pursuant thereto.
5. In order for the nonworking training hours of apprentices and trainees to be counted, such apprentices and trainees must be employed by the Contractor during the training period, and the Contractor must have made a commitment to employ the apprentices and trainees at the completion of their training, subject to the availability of employment opportunities.
Trainees must be trained pursuant to training programs approved by the U.S. Department of Labor or the California Department of Industrial Relations.
6. The Contractor shall take specific actions to implement its nondiscrimination program. The evaluation of the Contractor's compliance with these Specifications shall be based upon its effort to achieve maximum results from its actions. The Contractor must be able to demonstrate fully its efforts under steps (a) through (e) below.

a. Ensure and maintain a working environment free of harassment, intimidation, and coercion at all sites, and at all facilities at which the Contractor's employees are assigned to work. The Contractor shall specifically ensure that all foremen, superintendents, and other on-site supervisory personnel are aware of and carry out the Contractor's obligations to maintain such a working environment, with specific attention to minority or female individuals working at such sites or in such facilities.

b. Provide written notification within seven days to the director of DFEH when the union or unions with which the Contractor has a collective bargaining agreement has not referred to the Contractor a minority person or woman sent by the Contractor, or when the Contractor has other information that the union referral process has impeded the Contractor's efforts to meet its obligations.

c. Disseminate the Contractor's Equal Employment Opportunity Policy by providing notice of the policy to unions and training, recruitment and outreach programs and requesting their cooperation in assisting the Contractor to meet its obligations; and by posting the company policy on bulletin boards accessible to all employees at each location where construction work is performed.

d. Ensure all personnel making management and employment decisions regarding hiring, assignment, layoff, termination, conditions of work, training, rates of pay or other employment decisions, including all supervisory personnel, superintendents, general foremen, on-site foremen, etc., are aware of the Contractor's Equal Employment

Opportunity Policy and obligations, and discharge their responsibilities accordingly.

e. Ensure that seniority practices, job classifications, work assignments and other personnel practices, do not have a discriminatory effect by continually monitoring all personnel and employment related activities, to ensure that the equal employment related activities, the employment opportunity policy, and the Contractor's obligations under these Specifications are being carried out.

7. Contractors are encouraged to participate in voluntary associations that assist in fulfilling their Equal Employment Opportunity obligations. The efforts of a Contractor association, joint contractor-union, contractor-community, or other similar group of which the Contractor is a member and participant, may be asserted as fulfilling any one or more of its obligations under these Specifications provided that the Contractor actively participates in the group, makes every effort to assure that the group has a positive impact on the employment of minorities and women in the industry, ensures that the concrete benefits of the program are reflected in the Contractor's minority and female workforce participation, and can provide access to documentation which demonstrates the effectiveness of actions taken on behalf of the Contractor. The obligation to comply, however, is the Contractors.

8. The Contractor is required to provide equal employment opportunities for all minority groups, both male and female, and all women, both minority and non-minority. Consequently, the Contractor may be in violation of the Fair Employment and Housing Act (Gov. Code, Section 12990 et seq.) if a particular group is employed in a substantially disparate manner.

9. Establishment and implementation of a bona fide Affirmative Action Plan pursuant to Section 8104 (b) of this Chapter shall create a rebuttal presumption that a Contractor is in compliance with the requirements of Section 12990, of the Government Code and its implementing regulations.

10. The Contractor shall not use the nondiscrimination standards to discriminate against any person because of race, color, religion, sex, national origin, ancestry, physical disability, mental disability, medical condition, marital status, or age over 40.

11. The Contractor shall not enter into any subcontract with any person or firm decertified from state Contracts pursuant to Government Code Section 12990.

12. The Contractor shall carry out such sanctions and penalties for violation of these Specifications and the nondiscrimination clause, including suspension, termination and cancellation of existing subcontracts as may be imposed or ordered pursuant to Government Code Section 12990, and its implementing regulations by the awarding agency. Any Contractor who fails to carry out such sanctions and penalties shall be in violation of these Specifications and Government Code Section 12900.

13. The Contractor shall designate a responsible official to monitor all employment related activity to ensure that the company’s Equal Employment Opportunity Policy is being carried out, to submit reports relating to the Provisions hereof as may be required by OCP and to keep records. Records shall at least include for each employee the name, address, telephone numbers, construction trade, union affiliation, if any, employee identification number when assigned, social security number, race, sex, status, (e.g., mechanic, apprentice

trainee, helper, or laborer), dates of changes in status, hours worked per week in the indicated trade, rate of pay, and locations at which the work was performed. Records shall be maintained in any easily understandable and retrievable form; however, to the degree that existing records satisfy this requirement, the Contractor shall not be required to maintain separate records.

7-3 LIABILITY INSURANCE

Liability Insurance shall be in accordance with Section 6 of the Agreement. In respect to work performed under the Contract, Subsection 7-3, "Liability Insurance," of the Standard Specifications shall be deemed to have been deleted.

7-4 WORKERS' COMPENSATION INSURANCE

Workers' Compensation Insurance shall be provided by the Contractor as called for under Subsection 7-4, "Workers' Compensation Insurance," of the Standard Specifications. The Contractor shall furnish the City with a Certificate of Insurance with limits as established by the State of California.

7-5 PERMITS AND FEES

No work shall be started until the Contractor has obtained all necessary licenses and permits. Therefore, the Contractor shall obtain all permits and give all notices necessary and incident to the due and lawful prosecution of the work and to the preservation of the public health and safety. Fees will not be collected on those permits obtained from the City for City-owned projects.

7.5.1 Trench and Excavation Permits

Excavation shall not be started on any trench, vertical or sloping, that is five feet (5') or more in depth until the Contractor has obtained a permit from the State Division of Industrial Safety and submitted a copy of said permit to the City (LC6500). Upon demand by the City or the State Division of Industrial Safety or representatives thereof, the Contractor shall produce the permit.

7-5.2 National Pollutant

The Contractor shall provide National Pollutant Discharge Elimination System (NPDES) Permit training for Urban Runoff management to Contractor's employees and subcontractors, if any. Failure to provide Urban Runoff management training is a violation of Regional Water Quality Control Board Order No. R8-2002-0011, NPDES No. CAS 618033 (Municipal Separate Storm Sewer System NPDES Permit), Section XI.I, for each day of which such failure occurs, and shall in addition, be a breach of the contract with the City.

Contractor understands and agrees that NPDES Permit violations are grounds for enforcement action by the Environmental Protection Agency, and State/Regional Water Resources Control Board and the City, and may result in permit termination (stop work order), civil and criminal fines, and termination of contract. By submitting a bid, the Contractor certifies to the City that he/she has trained his/her employees and subcontractors, if any for Urban Runoff management and included sufficient sums in the bid price to cover such costs of said training.

The Contractor is responsible for all clean up and payment of all fines levied as a result of any illegal discharge (as defined in said NPDES Permit) occurring as a result of the Contractor's work and/or operations.

7-5.3 Right of Entry

The City will provide any required rights of entry at no cost to the Contractor for work on private property where shown on the Plans. Such rights of entry do not relieve the Contractor of the need to provide, at his or her cost, permits and insurance required of the Contractor by other agencies and organizations.

7-5.4 Licenses

The Contractor and subcontractors shall obtain and incur all costs for licenses necessitated by his or her operations. Prior to starting any work, the Contractor and subcontractors shall be required to have a City of Moreno Valley business license valid for at least the life of the Contract; subcontractors shall have business licenses valid for the time they are engaged in work under the Contract.

7-6 THE CONTRACTOR'S REPRESENTATIVE

The Contractor's representative shall give to the City a daily list of all labor, equipment, and materials used on the project for that day.

The Contractor's authorized representative shall be present at the site of the work at all times while work is actually in progress. Work by subcontractors will not be allowed in the absence of the contractor's authorized representative, unless previous arrangements are agreed to by the City. In the event a subcontractor attempts to perform work in the absence of the contractor's authorized representative, a STOP WORK NOTICE will be issued to the subcontractor.

When work is not in progress and during periods when work is suspended, arrangements acceptable to the City shall be made for any emergency work which may be required.

7-8 WORK SITE MAINTENANCE

7-8.1 General

When and as often as required by the City, the Contractor shall furnish and operate self-loading motorized street sweeper equipped with a functional water spray system, to keep paved areas affected by the work clean and dust free. If the sweeper fails to keep the paved areas clean and dust free then the Contractor shall provide the additional sweepers or stop the work until the paved areas are clean and dust free. The use of water resulting in mud on paved areas will be not permitted.
All clean-up costs shall be included in the various related items of work and no additional compensation will be allowed as a result of suspension of work for failure to comply with clean up orders.

Waste Management of the Inland Empire, A Division of USA Waste of California, Inc. (951.280.5400) has an exclusive franchise with the City for the collection, transportation,

recycling, composting, and disposal of solid waste, recyclable solid waste, green waste, special waste, and construction and demolition waste and for providing temporary bin/roll-off services for all commercial and residential premises within the City, pursuant to Moreno Valley Municipal Code, Chapter 6.02, “Refuse Collection, Transfer and Disposal.”

7-8.6.4 Dewatering

The Contractor shall maintain drainage within and through the work areas.

7-8.7 Flood Hazards and Dry Weather Flow
Special attention is directed to possible flood hazards, or nuisance water such as irrigation and other runoff.

The Contractor shall be responsible for all personal injuries and for all damages to any portion of the work occasioned by the above causes and the Contractor shall make good such injuries or damages at no cost to the City prior to the completion and acceptance of the work.

7-8.8 Vermin Control

At the time of acceptance, structures entirely constructed under the Contract shall be free of rodents, insects, vermin, and pests. Necessary extermination work shall be arranged and paid for by the Contractor as part of the Work within the Contract time, and shall be performed be a licensed exterminator in accordance with requirements of governing authorities. The Contractor shall be liable for injury to persons or property and responsible for the elimination of offensive odors resulting from exterminating operations.

7-8.9 Protection of the Work

7-8.9.1 The Contractor shall protect all work, materials, and equipment from damage from any cause whatever, and shall provide adequate and proper storage facilities during the progress of the work. He or she shall provide for the safety and good condition of all work until final acceptance of the work by the City, and shall replace all damaged or defective work, materials, and equipment before requesting final acceptance.

7-8.9.2 The Contractor is and shall be held responsible for the protection and correction of the work of all trades from smears, splashes, stains, or damages that might occur in the process of the work.

7-8.9.3 The Contractor shall remove graffiti from all work, materials, equipment, and signs within the project. Equipment, materials, or signs containing graffiti shall not be brought to the project. Any graffiti found on work, materials, equipment, or signs shall be cleaned or removed from the project within 24 hours from its discovery. The cost of graffiti removal shall be borne by the Contractor, and shall be considered as being included in the various Contract items.

7-8.10 Solid Waste Disposal and Recycling Report

7-8.10.1 The Contractor shall complete monthly Solid Waste Disposal and Recycling Reports and submit them to the City, as outlined in the Solid Waste Disposal and Recycling Report – Instructions. The cost of the reports shall be borne by the Contractor and shall be considered as being included in the various Contract items.

7-10 PUBLIC CONVENIENCE AND SAFETY

7-10.1.1 Traffic and Access

Traffic controls, including but not limited to, vehicular and pedestrian traffic controls, maintenance of vehicular and pedestrian access, detours, and street closures shall be in accordance with the Special Provisions; Traffic Control Plans; the current California MUTCD, Part 6, “Temporary Traffic Control”; the current "Work Area Traffic Control Handbook"; and Subsection 7-10, “Public Convenience and Safety” of the current "Standard Specifications for Public Works Construction," including all its subsequent amendments. Nothing in the Special Provisions shall be construed as relieving the Contractor from his or her responsibility to provide for the safety and convenience of traffic and the public during construction.

In the event of conflict, the order of precedence shall be as follows:

A. Special Provisions
B. Traffic Control Plans
C. California MUTCD (FHWA’s MUTCD 2006 Edition as amended for use in California), Part 6, “Temporary Traffic Control”
D. Work Area Traffic Control Handbook. (WATCH)
E. Standard Specifications

7-10.2 Storage of Equipment and Materials in Public Streets

Stockpiling or storage of materials on any public right-of-way or parking areas will not be permitted.

Materials spilled along or on said right-of-way or parking areas shall be removed completely and promptly.

All stockpile and storage areas shall be kept in a safe, neat, clean, and orderly fashion, and shall be restored to equal or better than original condition upon completion of the work. Whenever vehicles or equipment are parked on the shoulder of a roadway within six feet (6’) of a traffic lane, the shoulder area shall be closed with fluorescent traffic cones or portable delineators placed on a taper in advance of the parked vehicles or equipment, and along the edge of the pavement at twenty-five foot (25’) intervals to a point not less than twenty-five feet (25’) past the last vehicle or piece of equipment.

A minimum of nine (9) cones or portable delineators shall be used for the taper. A W20-1 (Road Work) or W21-5b (Shoulder Work) sign shall be mounted on a telescoping flag tree with flags.
The Contractor shall install temporary railing (Type K-Modified) between any lane carrying public traffic and any excavation, obstacle, or storage area when the following conditions exist:

A. Excavations - Any excavation the near edge of which is 12 feet or less from the edge of the lane, except:
    1. Excavations covered with sheet steel or concrete covers of adequate thickness to prevent accidental entry by traffic or the public.
    2. Excavations less than one foot deep.
    3. Trenches less than one foot wide for irrigation pipe or electrical conduit or excavations less than one foot in diameter.

4. Excavations parallel to the lane for the purpose of pavement widening or reconstruction.
5. Excavations in side slopes, where the slope is steeper than 4:1.
6. Excavations protected by existing barrier or railing.

B. Temporarily Unprotected Permanent Obstacles - Whenever the work includes the installation of a fixed obstacle together with a protective system, such as a sign structure together with protective railing, and the Contractor elects to install the obstacle prior to installing the protective system; or whenever the Contractor, for his convenience and with permission of the City, removes a portion of an existing protective railing at an obstacle and does not replace such railing complete in place during the same day.

C. Storage Areas - Whenever material or equipment is stored within 12 feet of the lane and such storage is not otherwise prohibited by the specifications.

7-10.3.1 Street Closures, Detours, Barricades

Street closures are usually not allowed on City streets however, the Contractor may request full street closure from the City Council. The Contractor shall submit a request for street closure to the City Council through the City of Moreno Valley Traffic Division. The Contractor shall notify the Police, Fire, Traffic, and Engineering Departments of, or serving, the City of Moreno Valley at least 48 hours in advance of closing, or partially closing, or of reopening, any street, alley or other public thoroughfare, and shall comply with their requirements in respect thereto. If the telephone numbers herein below are changed, the Contractor is not relieved of the responsibility of notifying said departments.

The following telephone numbers are listed to assist the Contractors in compliance with these requirements:

Fire Department non-emergency..... 951.486.6784
Fire Department Emergency.....……..911
Police Department non-emergency..... 951.486.6700
Police Department Emergency.....……911
Public Works Department (Traffic & Engineering) 951.413.3130
Public Works Department (Maintenance) 951.413.3160

In any site affected by peak hour traffic flows, no lane closure shall be allowed before 8:30 a.m. and after 4:00 p.m. unless permitted in writing by the City.

The Contractor shall submit a Traffic Control Plan signed by a Traffic Engineer to the City of Moreno Valley at or prior to the pre-construction meeting for approval by the Transportation Engineering Division.

7-10.4.1.1 Excavation and Shoring Plan

When required by Labor Code Section 6705, the Contractor shall submit, in advance of any excavation, a detailed Plan showing the design of shoring, bracing, shielding, sloping, or other Provisions to be made for worker protection from caving ground. No excavation shall be made until said detailed Plan is submitted by the Contractor and accepted by the City. The Contractor shall comply with all applicable requirements of said Section 6705, and as therein provided, no requirements of that Section shall be construed to impose tort liability on the City or on any employee or officer of the City.

7-10.4.3 Special Hazardous Substances and Processes

The Contractor shall take precautions not to spill or contaminate an area with hazardous material. Materials found to be hazardous substances pursuant to the Hazardous Substances Information and Training Act (commencing with Section 6360 of the California Labor Code), in general such as epoxy resins, motor oils, and petroleum derivatives are deemed to be hazardous substances and shall be disposed of properly. If any hazardous material is spilled or contaminates an area, the Contractor shall notify the Riverside County Department of Health, Environmental Health Division, and have the spill or contaminated area cleaned up at the Contractor's expense. The hazardous materials shall be disposed of in accordance with the laws governing said material at a State or United States Environmental Protection Agency approved treatment, storage or disposal facility, or recycling facility. The Contractor shall give the City a copy of the Uniform Hazardous Waste Manifest promptly after disposition of the hazardous material. This provision shall not be construed to affect or limit any other liability, duty or responsibility of the Contractor or other person with regard to safeguarding the health and safety of employees and other persons exposed to a toxic or hazardous material.

7-10.4.4 Emergency Phone Numbers

The following emergency phone numbers are listed for the convenience of the Contractor to assist in complying with these requirements:

The Contractor shall keep a list of emergency phone numbers on the job site. Whenever more than ten (10) employees are on the job site at any time, said list shall be posted on a bulletin board, to be supplied and installed on the job site by the Contractor, at his expense, in a location visible and accessible to all employees.

The City does not warrant the completeness or accuracy of the list or the numbers.

7-10-4.5 Safety Responsibility

The Contractor shall be solely and completely responsible for the condition of the premises on which the work is performed and for the safety of all persons and property on the site during performance of the Contract. This requirement shall not be limited to normal working hours, but shall apply continuously.

The Contractor shall provide the City with the Contractors Injury and Illness Prevention Program and a site program five (5) working days before the preconstruction meeting. The site Injury and Illness Prevention Program shall include the name and telephone number of the Project Safety Manager or Officer.

The Contractor shall correct all unsafe conditions immediately. The City will use the following guidelines when an unsafe condition is identified:

A. Imminent Hazard -- a condition that if not corrected would most likely result in an accident causing severe or permanently disabling injury or death. When an imminent condition is known to exist or when the Contractor either delays in correcting or permits repeated occurrences of a/the hazardous condition, the City will immediately order the Contractor to suspend the operations affected and not permit the work to resume until the condition has been corrected. The local Division of Industrial Safety office will be notified of the hazardous condition and of the action taken.

B. Dangerous Condition -- a condition that does not present an immediate danger to workers, or the public, but if not corrected could result in a disabling injury and possible death, or could develop into an imminent hazard. When a dangerous condition is known to exist, the City will notify the Contractor in writing of the conditions and allow a reasonable period for correcting the condition. If the City is not certain of the remedial measures proposed or taken by the Contractor, then the City or Caltrans construction safety coordinator shall be consulted. If the Contractor does not correct the dangerous condition or if the condition is deteriorating into an imminent hazard, the City will suspend the affected operations.

C. Minor or Non-Serious Condition -- conditions that could result in minor or less serious injuries, that are repetitive in nature, or that may be classified as a threat to health. When minor or non-serious conditions are known to exist, the City should advise the Contractor of the condition(s) and of the necessity for eliminating it. If the Contractor fails to correct

the problem or permits its repeated occurrence on subsequent operations, the City will suspend the affected operations.

The Contractor will not be allowed any additional compensation or extension of time for suspended operations due to unsafe conditions.

The Contractor shall immediately notify the City and document any observed defects or hazardous conditions in the vicinity of the project site prior to, during and after the project construction.

7-15.1 Payroll Records

The Contractor and all subcontractors of the Contractor shall keep accurate payroll records, showing the name, address, social security number, work classification, straight time and overtime hours worked each day and week, and the actual per diem wages paid to each journeyman, apprentice or worker employed by him. Such records shall be available to the Contractor's employees and their authorized representative(s) as regards to the employees' own payroll records, the City, the Division of Labor Standards Enforcement, and the Division of Apprenticeship Standards in compliance with Section 1776, of the California Labor Code. The Contractor shall submit weekly to the City, beginning within ten (10) days of the end of the first payroll period, certified copies of said payroll records, and upon notice shall, within ten (10) days, submit certified copies of said payroll records to the Division of Labor Standards Enforcement and the Division of Apprenticeship Standards. The Contractor shall cause an identical clause to be included in every subcontract for work under this Contract. The Contractor is responsible for ensuring compliance with Labor Code Section 1776. The Contractor shall allow the City, or Division of Labor Standards Enforcement and the Division of Apprenticeship Standards to conduct employee interviews.

Certified Payroll records shall be numbered consecutively and the last certified payroll record marked "final."

If there is a break where no work is performed, the Contractor shall submit a certified payroll numbered and marked "no work performed."

In accordance with Section 1771.5(b)(5), of the California Labor Code, the City will withhold Contract payments when the payroll records are delinquent or inadequate. Payments will be released after the City has received and reviewed the payroll records and finds the records to be in compliance with Labor Code Section 1776.

7-15.2 Owner-Operator Listing

The Contractor and subcontractors shall list all owner-operators on the project and certify owner-operator status by providing at least the following information:

A. Operator name as shown on all payrolls.
B. Business address of the owner-operator.
C. The owner-operator's social security number.
D. The truck/tractor license number, California identification truck number, weight, and number of axels. If equipment is used, the Contractor must provide a complete description of the equipment, make, model number, and include the dates the equipment was operated on the project.

E. Operator labor classification.
F. Hours worked by the owner-operator as reported on a daily basis.
G. Hourly rental rate paid for the owner-operator equipment.
H. Actual payments earned.

This information must be provided by the Contractor on the "Owner-Operator Listing" and "Owner-Operator Listing Statement of Compliance" forms. Certification will be accepted only from the Contractor or subcontractor employing the owner-operator. The City will not accept certified payrolls or an Owner-Operator Listing directly from the owner-operator unless that owner-operator is a licensed contractor, and is also an approved subcontractor or recognized lower tier subcontractor. The Contractor shall submit the "Owner-Operator Listing Statement of Compliance" form weekly to the City, beginning within ten (10) days of the end of the first week worked. If there is a temporary break in the work, then the Contractor shall submit an Owner-Operator Listing marked "no work performed." When the owner-operator is no longer needed, then the word "final" shall be placed above the name of the owner-operator.

The information shown on the "Owner-Operator Listing" will be used to determine the hourly wage rate due by deducting the prevailing equipment rental rate as set forth in the California Department of Transportation publication entitled "Labor Surcharge and Equipment Rental Rates" from the gross hourly rate shown on the owner-operator listing (without mark-up).

The determined hourly wage will be compared to the applicable craft or classification of the prevailing wage rate plus fringe benefits to determine compliance.
To differentiate an owner-operator from a contractor's employee the requirements used are as follows:
If review of payroll records show that deductions for social security taxes or state unemployment insurance taxes are withheld for the owner-operator, it is an indication that the operator is an employee rather than an independent contractor.
An employee interview of the owner-operator indicates that the owner-operator is in fact an employee.
Truck owner-operators should be the registered owner of the vehicle. The name of the driver should match the name of the registered owner on the Department of Motor Vehicle's registration.
If the legal owner is a firm or corporation, and the firm or corporation name is shown on the vehicle registration slip, the driver shall furnish evidence that they are leasing or purchasing the vehicle. If the owner-operator is unable to substantiate purchase or lease of the equipment, the City will disallow use of the owner-operator classification for this truck.
Insurance for the vehicle shall be carried in the driver's name. The California identification (CA) number issued by the California Highway Patrol (CHP) shall be in the driver's name.

If the equipment owner-operator owns, is leasing, or financing the equipment other than a truck, then the operator shall furnish such evidence. If the owner-operator is unable to substantiate that they own, are purchasing, or leasing the equipment, the City will disallow use of the owner-operator classification for the equipment. The Contractor must establish proof of ownership in cases where there is doubt as to the validity of the owner-operator designation.

7-16 RECORD DRAWINGS

At the beginning of the project, one bond copy or blueline print of each applicable drawing will be issued by the City for use in preparing record drawings.

Actual construction conditions shall be accurately and completely recorded on the bond copy or blueline prints as the project progresses. The contractor shall update the record drawings daily and review the record drawings with the inspector weekly. If the Contractor fails to update record drawings, the monthly progress payment will not be processed until the inspector is satisfied that the record drawings have been updated for the month the Contractor is requesting a progress payment. Upon completion of the work, the Contractor shall sign the record drawings and shall submit same to the City's Inspector for checking and approval. The 10% retention will not be released to the contractor until the record drawings (red line “As Built Drawings”) have been submitted to the City and approved. If the Contractor has not submitted an accurate copy of the record drawings within 30 calendar days of the construction completion date, the City reserves the right to obtain the necessary resources to prepare the record drawings and deduct all applicable costs incurred from the Contractor’s retention amount.

7-17 RIGHTS IN LAND AND IMPROVEMENTS

Nothing in these specifications shall be construed as allowing the Contractor to make any arrangements with any person to permit occupancy or use of any land, structure, or building within the limits of the contract for any purpose whatsoever, either with or without compensation, in conflict with any agreement between the City and any owner, former owner, or tenant of the land, structure, or building. The street right-of-way shall be used only for purposes that are necessary to perform the required work.

The contractor shall not occupy the right-of-way, or allow others to occupy the right-of-way, for purposes that are not necessary to perform the required work.

For the aforementioned uses on private or public property (outside the public right of way), the Contractor shall apply for a temporary use permit (TUP) from the City’s Planning Division. The Contractor shall not have use of the area until the TUP has been issued. Fees for the TUP of a City-owned facility will not be the responsibility of the contractor, but will be paid by the City.

The Contractor shall secure at his/her own expense any area required for plant sites, storage of equipment or materials, or for other purposes if sufficient area is not available to him/her within the contract limits, or at the sites designated on the plans outside the contract limits.

The City will provide rights of entry at no cost to the Contractor for the work on private property where shown on the plans. Such rights of entry do not relieve the Contractor of the need to provide, at his/her cost, permits and insurance required of the contractor by other agencies and organizations.

SECTION 8 -- FACILITIES FOR AGENCY PERSONNEL

Facilities for Agency Personnel will not be required on this project.

SECTION 9 -- MEASUREMENT AND PAYMENT

9-1 MEASUREMENT OF QUANTITIES FOR UNIT PRICE WORK

9-1.2.1 Final Pay Quantities for Unit Basis Items of Work

All items of work which are not designated on the Bid Schedule by the letters "F" or "L.S." or words "Final" or "Lump Sum", shall have final pay quantities measured and paid for in accordance with the Standard Specifications and Special Provisions.

9-2 LUMP SUM WORK

9-2.1 Progress Payments for Lump Sum Items of Work

The word "Complete" in the Estimated Quantities column of the Bid Schedule for a lump sum item of work shall mean that payment for that item will only be made after all work for that item has been completed. The % symbol in the Estimated Quantities column of the Bid Schedule for a lump sum item of work shall mean that progress payments for that item will be allowed.

9-2.2 Final Pay Quantities for Lump Sum Items of Work

When the estimated quantity for an item of work is designated on the Bid Schedule by the letters "L.S." or the words "Lump Sum," said estimated quantity shall be the final quantity for which payment for said item of work will be made, unless the dimensions of said work, as shown on the Plans, are revised by the City. If such dimensions are revised and such revisions result in an increase or decrease in the quantity of such work, the final payment for said lump sum item will be revised in proportion to the change in quantities and authorized by Contract Change Order.

The estimated quantity for a lump sum item of work shall be considered as approximate only and no guarantee is made that the actual final quantity will equal the estimated quantity. No allowance will be made if the actual final quantity does not equal the estimated quantity except as noted hereinabove.

9-2.3 Final Pay Quantities for Unit Basis Items of Work

When the estimated quantities for a specific portion of the work are designated on the Bid Schedule as final pay quantities with the letter "F," said estimated quantities shall be the final quantities for which payment for such specific portion of the work will be made, unless the dimensions of said portions of the work shown on the Plans are revised by the City. If such dimensions are revised and such revisions result in an increase or decrease in the quantities of such work, the final quantities for payment will be revised in the amount represented by the changes in the dimensions and authorized by Contract Change Order. The estimated quantities for such specific portion of the work shall be considered as approximate only, and no guarantee is made that the quantities which can be determined by computations, based on the details and

dimensions shown on the Plans, will equal the estimated quantities. No allowance will be made if the quantities based on computations do not equal the estimated quantities.

9-3 PAYMENT

9-3.1 General

For unit items of work, the estimated quantities listed on the Bid Schedule will not govern the final payment.

Warranty periods shall be in accordance with Subsection 6-8.1, “Warranty of Work and Materials,” of the Special Provisions.

In the event that one or more Stop Notices are filed with the City, an amount equal to 125% of the total of the amount(s) called for therein will be retained by the City until the demand(s) have been satisfied in accordance with applicable laws.

9-3.2 Partial and Final Payment

Except as otherwise provided for under Subsection 9-2.1, “Progress Payments for Lump Sum Items of Work,” hereinabove for L.S. items, the Contractor will be entitled to no more than one progress payment per month. Thirty days prior and prerequisite to each progress payment, the Contractor shall submit to the City a detailed estimate and invoice of the total quantity and value of work completed since the cut-off date for the previous progress payment. The City will make the final determination as to the actual quantity and value of work completed for which payment will be made. Ten percent (10%) of the value will be deducted from each progress payment and retained by the City until later released as specified hereinafter.

Before he or she shall be entitled to final payment of the retention withheld from the progress payments, the Contractor shall execute and file with the City a conditional or unconditional waiver and release, upon a form which complies with Section 3262, of the Civil Code, and which is acceptable to the City, releasing the City from all claims or liability relating to undisputed Contract amounts for work performed in relation to said amount. If pursuant to a conditional release, such release shall contain or have attached a list of all Contract amounts as to which a dispute exists.

The Contractor will be permitted the substitution of securities for any monies withheld by a public agency to ensure performance under the Contract. At the request and expense of the Contractor, securities equivalent to the amount withheld shall be deposited with the City, or with a state or federally chartered bank as the escrow agent, who shall pay such monies to the Contractor upon satisfactory completion of the Contract.

Securities eligible for investment shall include those listed in Section 16430 of the Government Code or bank or savings and loan certificates of deposit. The Contractor shall be the beneficial owner of any securities substituted for monies withheld and shall receive any dividend interest thereon. Such substitutions shall be conducted in accordance with Section 22300 of the Public Contract Code.

The final payment of the ten percent (10%) retention withheld from the progress payments shall not be due and payable until the expiration of at least 35 calendar days from the date of recording of the "Notice of Completion" with the County Recorder.

The amount of liquidated damages will be deducted from earned progress payments due the Contractor.

9-3.3 Delivered Materials

Unless included in the Bid Schedule, or unless otherwise called for in these General Provisions, no payment will be made for materials or equipment delivered but not yet incorporated in the work.

9-4 PROMPT PROGRESS PAYMENT TO SUBCONTRACTOR

The Contractor's attention is directed to the provisions of Section 7108.5 and 7108.6 of the Business and Professions Code concerning prompt payment to subcontractors and transportation charges submitted by dump truck drivers.

9-5 PROMPT PAYMENT OF WITHHELD FUNDS TO SUBCONTRACTORS

The Contractor shall return all monies withheld in retention from the subcontractor within 30 days after receiving payment for work satisfactorily completed, even if the other contract work is not completed and has not been accepted in conformance with Section 6, "Prosecution Progress and Acceptance of Work," of the Special Provisions. This requirement shall not be construed to limit or impair any contractual, administrative, or judicial remedies otherwise available to the Contractor or subcontractor in the event of a dispute involving late payment or nonpayment by the Contractor or deficient subcontract performance or noncompliance by a subcontractor.

EXHIBIT 1

City of Moreno Valley

INDEPENDENT CONTRACTOR AGREEMENT

This Agreement is made by and between the City of Moreno Valley, California, a municipal corporation, hereinafter referred to as the "City", and the following named independent contractor, hereinafter referred to as the "Contractor," based upon City policies and the following legal citations:

A. Government Code Section 53060 authorizes the engagement of persons to perform special services as independent contractors; and
B. The public interest, convenience, necessity and general welfare will be served by this Agreement.
C. This Agreement is made and entered into effective the date the City signs this Agreement.

1. **CONTRACTOR INFORMATION**:

Contractor's Name:
Address:
City: State: CA Zip: 92000
Business Phone: Fax No.
Other Contact Number:
Social Security Number:
Business License Number:
Federal Tax I.D. Number:

2. **CONTRACTOR SERVICES, FEES, AND RELEVANT DATES**:

A. The Contractor's scope of service is described in Exhibit "A" attached hereto and incorporated herein by this reference.
B. The City's responsibility, other than payment, is described in Exhibit "B" attached hereto and incorporated herein by this reference.
C. The Contractor's compensation shall not exceed $_____ in accordance with the Payment Terms shown in Exhibit "C", attached hereto, and incorporated herein by this reference.
D. The Agreement Starting Date is _____ and the Agreement Ending Date is June 30, 2012. This Agreement may be extended up to four (4) additional one-year periods upon both parties' written concurrence. The City acknowledges that it will not unreasonably withhold approval of the Contractor's requests for extensions of time in which to complete the work required. The Contractor shall not be responsible for performance delays caused by others or delays beyond the Contractor's reasonable control (excluding delays caused by non-performance or unjustified delay by

SAMPLE

Contractor, his/her/its employees, or subcontractors), and such delays shall extend the time for performance of the work by the Contractor.

3. **STANDARD TERMS AND CONDITIONS**:

A. Control of Work. Contractor is solely responsible for the content and sequence of the work, and will not be subject to control and direction as to the details and means for accomplishing the anticipated results of services. The City will not provide any training to Contractor or his/her/its employees.

B. Intent of Parties. Contractor is, and at all times shall be, an independent contractor and nothing contained herein shall be construed as making the Contractor or any individual whose compensation for services is paid by the Contractor, an agent or employee of the City, or authorizing the Contractor to create or assume any obligation or liability for or on behalf of the City, or entitling the Contractor to any right, benefit, or privilege applicable to any officer or employee of the City.

C. Subcontracting. Contractor may retain or subcontract for the services of other necessary contractors with the prior written approval of the City. Payment for such services shall be the responsibility of the Contractor. Any and all subcontractors shall be subject to the terms and conditions of this Agreement, with the exception that the City shall have no obligation to pay for any subcontractor services rendered. Contractor shall be responsible for paying prevailing wages where required by law [See California Labor Code Sections 1770 through 1777.7].

D. Services and Materials Conformance. All services and materials supplied by the Contractor shall conform to the specifications contained within this Agreement as well as to the applicable requirements of the City Ordinances, and all applicable State and Federal Laws. If delivery of the services or materials cannot be made exactly as specified and at the time and price shown, the Contractor shall immediately notify the City Facilities Division. Changes or variations shall not be made without advance City approval.

E. Inspections and Acceptance. Inspection and acceptance of services and/or materials will be accomplished by the City. Until final inspection and acceptance, and after any rejections, risk of loss will be on the Contractor unless loss results from the negligence of the City of Moreno Valley. Notwithstanding the requirements for any City inspection and test contained in specifications applicable to this Agreement, except where specialized inspections or tests are specified for performance solely by the City, the Contractor shall perform or have performed the inspections and tests required to substantiate that the services and materials provided under the Agreement conform to the drawings, specifications and contract requirements listed herein, including if applicable the technical requirements for the manufacturers' part numbers specified herein.

F. Manufacturer's Warranties. The Contractor shall provide documentation for manufacturer's warranties for services and/or materials furnished under this Agreement prior to acceptance by the City. The Contractor will provide the

SAMPLE

most favorable commercial warranties given to any customer for such services and materials and that the rights and remedies provided herein are in addition to and do not limit any rights afforded to the City by any other clause of this Agreement.

G. Contractor Warranties. The Contractor will provide warranty of workmanship, operation. and performance for a minimum of ninety (90) days or as specified in Exhibit A, Contractor's Scope of Services.

H. Default by Contractor. In case of default by the Contractor, the City reserves the right to procure the services and materials from other sources and to hold the Contractor responsible for any excess costs occasioned to the City thereby.

I. Legal Considerations. The Contractor shall comply with applicable federal, state, and local laws in the performance of this Agreement.

J. Contractor Indemnification. Contractor shall indemnify, defend, and hold the City of Moreno Valley (City), the Moreno Valley Housing Authority (MVHA), and the Moreno Valley Community Services District (CSD), their officers, agents and employees harmless from any and all claims, damages, losses, causes of action and demands, including reasonable attorney's fees and costs, incurred in connection with or in any manner arising out of Contractor's performance of the work contemplated by this Agreement. Acceptance of this Agreement signifies that the Contractor is not covered under the City's general liability insurance, employee benefits, or worker's compensation. It further establishes that the Contractor shall be fully responsible for such coverage.

K. City Indemnification. The City agrees to indemnify, defend and save the Contractor and its officers, agents and employees harmless from any and all liability, claims, damages or injuries to any person, including injury to the City's, MVHA's and CSD's employees and all claims which arise from or are connected with the negligent performance or failure to perform the services or other obligations of the City under this Agreement, or are caused or claim to be caused by the negligent acts of the City, MVHA and CSD, their officers, agents or employees, or its subcontractor(s) or any person acting for the City or under its control or direction; provided, however, that this indemnification and hold harmless shall not include any claims arising from the negligence or willful misconduct of the Contractor, its officers, agent, employees, or subcontractors.

L. Insurance Requirements. Where determined applicable by the City, Contractor will comply with the following insurance requirements at its sole expense. Insurance companies shall be rated (A Minus: VII—Admitted) or better in Best's Insurance Rating Guide and shall be legally licensed and qualified to conduct business in the State of California:

General Liability Insurance—to protect against loss from liability imposed by law for damages on account of bodily injury, including death, and/or property damage suffered or alleged to be suffered by any person or persons whomever, resulting directly or indirectly from any act or activities of the

DRAFT

Contractor, subcontractor, or any person acting for the Contractor or under its control or direction. Such insurance shall be maintained in full force and effect throughout the terms of the Agreement and any extension thereof in the minimum amounts provided below:

Bodily Injury $1,000,000 per occurrence/ $2,000,000 aggregate
Property Damage $500,000 per occurrence/ $500,000 aggregate

Worker's Compensation Insurance—in such amounts as will fully comply with the laws of the State of California and which shall indemnify, insure and provide legal defense for both the Contractor and the City, MVHA, and CSD against any loss, claim or damage arising from any injuries or occupational diseases happening to any worker employed by the Contractor in the course of carrying out the Agreement. This coverage may be waived if the Contractor is determined to be functioning as a sole proprietor and the city provided form "Exception to Worker's Compensation Coverage" is signed, notarized and attached to this Agreement.

Liability and Property Damage Insurance coverage for owned and non-owned automotive equipment operated on City/CSD/MVHA premises. Such coverage limits shall not be less than $1,000,000 combined single limit.

A Certificate of Insurance and appropriate additional insured endorsement evidencing the above applicable insurance coverage shall be submitted to the City Risk Manager prior to the execution of this Agreement. The Certificate of Insurance or an appropriate binder shall bear an endorsement containing the following provisions:

Solely as respect to services done by or on behalf of the named insured for the City of Moreno Valley, it is agreed that the City of Moreno Valley, the Moreno Valley Housing Authority, and the Moreno Valley Community Services District, their officers, employees and agents are included as additional insured under this policy and the coverage(s) provided shall be primary insurance and not contributing with any other insurance available to the City of Moreno Valley, the Moreno Valley Housing Authority, and the Moreno Valley Community Services District, its officers, employees and agents, under any third party liability policy.

The terms of the insurance policy or policies issued to provide the above coverage shall neither be amended to reduce the required insurance limits and coverages nor shall such policies be canceled by the carrier without thirty (30) days prior written notice by certified or registered mail of amendment or cancellation to the City, except that cancellation for non-payment of premium shall require ten (10) days prior written notice by certified or registered mail. In the event the insurance is canceled, the Contractor shall, prior to the cancellation date, submit to the Risk Manager new evidence of insurance in

SAMPLE

the amounts established.

M. Intellectual Property. Any system or documents developed, produced or provided under this Agreement, including any intellectual property discovered or developed by Contractor in the course of performing or otherwise as a result of its work, shall become the sole property of the City unless explicitly stated otherwise in this Agreement. The Contractor may retain copies of any and all material, including drawings, documents, and specifications, produced by the Contractor in performance of this Agreement. The City and the Contractor agree that to the extent permitted by law, until final approval by the City, all data shall be treated as confidential and will not be released to third parties without the prior written consent of both parties.

N. Entire Agreement. This Agreement constitutes the entire agreement between the parties. There are no understandings, agreements, or representations of warranties, expressed or implied, not specified in this Agreement. This Agreement applies only to the current proposal as attached. This Agreement may be modified or amended only by a subsequent written Agreement signed by both parties. Assignment of this Agreement is prohibited without prior written consent.

O. Termination.

(a) The City may terminate this Agreement without cause by giving at least ten (10) days written notice to the Contractor. The written notice shall specify the date of termination. Upon receipt of such notice, the Contractor may continue work through the date of termination, provided that no work or service(s) shall be commenced or continued after receipt of the notice which is not intended to protect the interest of the City. The City shall pay the Contractor within thirty (30) days after receiving any invoice after the date of termination for all non-objected to services performed by the Contractor in accordance herewith through the date of termination.

(b) Either party may terminate this Agreement for cause. In the event the City terminates this Agreement for cause, the Contractor shall perform no further work or service(s) under the Agreement unless the notice of termination authorizes such further work.

P. Payment. Payments to the Contractor pursuant to this Agreement will be reported to Federal and State taxing authorities as required. The City will not withhold any sums from compensation payable to Contractor. Contractor is independently responsible for the payment of all applicable taxes. Where the payment terms provide for compensation on a time and materials basis, the Contractor shall maintain adequate records to permit inspection and audit of the Contractors time and materials charges under the Agreement. Upon reasonable notice, such records must be made available to the City's agent; however, nothing herein shall convert such records into public records. Such records shall be retained by the Contractor for three (3) years following completion of the services under the Agreement.

Q. Restrictions on City Employees. The Contractor shall not employ any City employee or official in the work performed pursuant to this Agreement. No

SAMPLE

officer or employee of the City shall have any financial interest in this Agreement in violation of federal, state, or local law.

R. Choice of Law and Venue. The laws of the State of California shall govern the rights, obligations, duties, and liabilities of the parties to this Agreement, and shall govern the interpretation of this Agreement. Any legal proceeding arising from this Agreement shall be brought in the appropriate court located in Riverside County, State of California.

S. Permits and Licenses. Contractor, at its sole expense, will obtain and maintain during the term of this Agreement, all necessary permits, licenses, and certificates that may be required in connection with the performance of services under this Agreement, including a City business license.

T. Notices. All communications to either party by the other party will be deemed made when received by such party at its respective name and address as follows:

If to CONTRACTOR:	If to CITY:
Vendor Name Address City CA 92000 Attention: Vendor Rep.	City of Moreno Valley PO Box 88005 Moreno Valley, CA 92552-0805 Attention: Purchasing & Facilities Division Manager

Any such written communications by mail will be conclusively deemed to have been received by the addressee upon deposit thereof in the United States Mail, postage prepaid and properly addressed as noted above. In all other instances, notices will be deemed given at the time of actual delivery. Changes may be made in the names or addresses of persons to whom notices are to be given by giving notice in the manner prescribed in this paragraph.

CONTRACTOR'S SCOPE OF SERVICES

A. This Agreement between the City of Moreno Valley and Vendor for the maintenance, replacement, and repair of _____ and components at various City of Moreno Valley facilities and sites on an as-needed basis to include labor, tax, trip charges, and materials for emergency and routine repairs.

B. Requests for service will be conveyed from the City via telephone, letter, or fax requesting an informal or formal quote or proposal. There is no minimum or maximum number of service calls.

C. Quotes and proposals must be prepared in accordance with the request for service and be submitted to the City prior to work being performed unless otherwise directed.

D. Work may include repair and/or replacement of _____.

E. All materials and completed work must meet local, county, state, and federal codes and regulations. The Contractor will apply for and obtain all necessary City permits.

F. Submission of Material Safety Data Sheets (MSDS) are mandatory for any supply or material used on the job or supplied in the course of this Agreement prior to receipt of or with the first shipment of hazardous material. Also, at any time the content of an MSDS is revised, the Contractor is required to provide new information relevant to the specific material.

G. The Contractor shall provide manufacturer's warranties and warranty workmanship, operation and performance as described within this Agreement.

SAMPLE

EXHIBIT B

CITY'S RESPONSIBILITIES

A. The City of Moreno Valley is responsible for providing access to work sites for contractor's employees assigned to the job.

B. Provide escorts at sites when require.

C. Fund all required City Permits.

D. A copy of the Notice Inviting Bids, the Bid or Request for Quotation, a copy of these General Conditions and the Specifications of the Bid or Request For Quote will remain on file with the City in accordance with applicable laws.

EXHIBIT C

TERMS OF PAYMENT

1. The Contractor's compensation shall not exceed $_____ in any given period of the Agreement unless modified by an Amendment signed by all parties.
   a. There shall be no charge for quotes or proposals.
   b. There shall be no charge for diagnostic testing.
   c. There shall be no trip charge imposed for any service call.
   d. There shall be no fuel surcharges assessed.
   e. There shall be no hazardous waste disposal fee imposed.
   f. There shall no minimum call-out requirement.
   g. Labor rates for work performed during routine business hours (Monday - Friday, between 8:00 a.m. and 5:00 p.m.) shall be $_____ per hour.
   h. Labor rates for work performed outside of routine business hours shall be $_____ per hour.
   i. Labor rates for emergency call-out work (when a response is required within two hours) shall be $_____ per hour.
   j. There shall be no more than a _____% markup above contractor's cost for parts.
   k. Parts shall be guaranteed for a minimum of one year.
   l. Labor shall be guaranteed for a minimum of one year.

2. The Contractor will obtain, and keep current during the term of this Agreement, the required City of Moreno Valley business license. Proof of a current City of Moreno Valley business license will be required prior to any payments by the City. Any invoice not paid because the proof of a current City of Moreno Valley business license has not been provided will not incur any fees, late charges, or other penalties. Complete instructions for obtaining a City of Moreno Valley business license are located at: http://www.moval.org/do_biz/biz-license.shtml

3. The City strongly prefers that the Contractor electronically submit invoices to the City along with documentation evidencing services completed to date. At no time will the City pay for more services than have been satisfactorily completed. The Contractor will submit all original invoices to Accounts Payable staff at AccountsPayable@moval.org. Accounts Payable questions can be directed to (951) 413-3073. Copies of invoices shall be submitted to the Purchasing & Facilities Division at mayrar@moval.org or calls directed to 951.413.3740.

4. The City strongly prefers that all payments made to the Contractor be via Automated Clearing House (ACH) Direct Deposit and that the required ACH Authorization form be completed prior to any payments by the City. Any invoice not paid because the completed ACH Authorization Form has not been provided will not incur any fees, late charges, or other penalties. The ACH Authorization Form is located at: http://www.moval.org/city_hall/forms.shtml#bf

SAMPLE

5. The minimum information required on all invoices is:

   A. Vendor Name, Mailing Address, and Phone Number
   B. Invoice Date
   C. Vendor Invoice Number
   D. City-provided Reference Number (e.g. Project, Activity)
   E. Detailed work hours by class title (e.g. Manager, Technician, or Specialist), services performed and rates, explicit portion of a contract amount, or detailed billing information that is sufficient to justify the invoice amount; single, lump amounts without detail are not acceptable.

6. The City shall pay the Contractor for all invoiced, authorized professional services within thirty (30) days of receipt of the invoice for same.

7. Sales and Use Taxes: Sales tax must be shown on the invoice as a separate item. On out-of-state purchases, the vendor must show his Use Tax Permit Number issued by the California State Board of Equalization, which authorizes him to charge and collect California sales tax.

8. Excise Tax: If federal excise tax is applicable to the transaction, it must be so stated and excluded from the price of the article. The City of Moreno Valley, as a governmental agency, is exempt from the payment of said tax and will issue an exemption certificate.

9. Miscellaneous Charges: Charges for transportation, containers, packing, etc, will not be allowed unless so specified in this order.

10. Assignment of Claims: Claims for monies due or to become due under this purchase order shall be assigned only pursuant to prior written consent of the City Manager or his designated representative.

PROJECT NO. XXXXXXXX

PROJECT TITLE
PROJECT ADDRESS, MORENO VALLEY

KNOW ALL MEN AND WOMEN BY THESE PRESENTS

THAT WHEREAS, the City Council of the City of Moreno Valley, State of California, known as "City", has awarded to XXXXXXXXX as Principal hereinafter designated as "Contractor" and have entered into a Contract Agreement whereby the Contractor agrees to construct or install and complete certain designated public improvements, which said Contract Agreement, dated _____, 2012, and identified as **Project No. XXXXXXX**, is hereby referred to and made a part hereof; and

WHEREAS, said Contractor under the terms of said Agreement is required to furnish a bond to secure the payment of claims of laborers, mechanics, materialmen, and other persons, as provided by law;

NOW, THEREFORE, we the undersigned Contractor and_____, as Surety are held and firmly bound unto the City of Moreno Valley, County of Riverside, in the penal sum of_____ dollars, ($XXXXX), lawful money of the United States, for which payment, well and truly to be made, we bind ourselves, our heirs, executors and administrators, successors and assigns, jointly and severally, firmly by these presents.

THE CONDITION OF THIS OBLIGATION IS SUCH, that if said Contractor, his or her or its heirs, executors, administrator, successors or assigns, or subcontractors, shall fail to pay any of the persons described in the State of California Civil Code, Section 3181, or amounts due under the Unemployment Insurance Code with respect to work or labor performed by any such claimant, or any amounts required to be deducted, withheld, and paid over to the Franchise Tax Board from the wages of employees of the Contractor and his or her subcontractors, pursuant to Section 13020, of the Unemployment Insurance Code, with respect to such work and labor, that the Surety or Sureties herein will pay for the same in an amount not exceeding the sum specified in this bond, otherwise the above obligation shall be void. In the event suit is brought upon this bond by the City or other person entitled to bring such an action and judgment is recovered, the Surety shall pay all costs incurred by the City in such suit, including a reasonable attorney fee to be fixed by the court.

This bond shall inure to the benefit of any of the persons described in the State of California Civil Code Section 3181, to give a right of action to such persons or their assigns in any suit brought upon this bond.

FAITHFUL PERFORMANCE BOND

(100% of Total Contract Amount)

PROJECT NO. XX-XXXXX

PROJECT NAME
PROJECT DESCRIPTION/LIMITS

KNOW ALL MEN AND WOMEN BY THESE PRESENTS:

THAT WHEREAS, the City Council of the City of Moreno Valley, State of California, known as "City," has awarded to _____, as Principal hereinafter designated as "Contractor" and have entered into a Contract Agreement whereby the Contractor agrees to construct or install and complete certain designated public improvements, which said Contract Agreement, dated _____, 20__, and identified as **Project No. xx-xxxxx**, is hereby referred to and made a part hereof; and

WHEREAS, said Contractor under the terms of said Contract Agreement is required to furnish a bond guaranteeing the faithful performance of said Contract Agreement;

NOW THEREFORE, we the undersigned Contractor and_____, as Surety, are held and firmly bound unto the City of Moreno Valley, County of Riverside in the penal sum of_____ dollars, ($_____), lawful money of the United States, to be paid to the said City or its certain attorney, its successors and assigns; for which payment, well and truly to be made, we bind ourselves, our heirs, executors and administrators, successors and assigns, jointly and severally, firmly by these presents.

THE CONDITION OF THIS OBLIGATION IS SUCH, that if the above bound Contractor, his or her or its heirs, executors, administrators, successors or assigns, shall in all things stand to and abide by, and well and truly keep and perform the covenants, conditions and provisions in said Contract Agreement and any alterations thereof made as therein provided, on his or her or their part, to be kept and performed at the time and in the manner therein specified, and in all respects according to their true intent and meaning, and shall indemnify and save harmless the City of Moreno Valley, its officers, agents and employees, as therein stipulated, then this obligation shall become null and void; otherwise it shall be and remain in full force and effect. In the event suit is brought upon this bond by the City and judgment is recovered, the Surety shall pay all costs incurred by the City in such suit, including a reasonable attorney fee to be fixed by the court.

The Surety hereby stipulates and agrees that no change, extension of time, alteration, or addition to the terms of the Contract Agreement or to the work to be performed thereunder, or the Provisions accompanying the same shall in any way affect its obligations on this bond, and it does hereby waive notice of any such change, extension of time, alteration or addition to the terms of the Contract Agreement or to the work or the Provisions.

CITY MANAGER	

Report to City Council

TO: Mayor and City Council and the City Council serving as the Successor Agency for the Community Redevelopment Agency of the City of Moreno Valley

FROM: Ahmad R. Ansari, P.E., Public Works Director/City Engineer

AGENDA DATE: January 22, 2013

TITLE: AUTHORIZE THE SEVENTH AMENDMENT TO AGREEMENT FOR PROFESSIONAL CONSULTANT SERVICES WITH PARSONS TRANSPORTATION GROUP FOR SR-60/NASON OVERCROSSING AND SR-60/MORENO BEACH DRIVE IMPROVEMENTS, PHASES 1 AND 2 – PROJECT NOS. 802 0003 70 77-4821, 801 0038 70 77-4821, AND 801 0021 70 77-3003

RECOMMENDED ACTION

Recommendations:

1. Approve the Seventh Amendment to the Agreement for Professional Consultant Services with Parsons Transportation Group Inc. (Parsons), 1133 Fifteenth Street NW, Washington, DC 20005-2701, to provide landscape and right-of-way design services for the SR-60/Nason Overcrossing project, provide design changes required for Caltrans approval of SR-60/Moreno Beach Drive Interchange Phase 1, and provide additional right-of-way services for SR-60/Moreno Beach Drive Interchange Phase 2.

2. Authorize the City Manager to execute the Seventh Amendment to Agreement for Professional Consultant Services with Parsons.

3. That the City Council as Successor Agency, approve this action as a recognized payment obligation of the former Redevelopment Agency of the City of Moreno Valley, add it to the Recognized Obligation Payment Schedule, submit same to the Oversight Board for Approval, and authorize the City Manager to access agency funds only after Oversight Board and State Department of Finance approval.

4. Authorize Change Orders to increase Purchase Order Numbers 2013-00000892, 2013-00000788, and 2013-00000925 with Parsons Transportation Group totaling $257,505.00 to be funded from Account Numbers 4821-70-77-80002 ($117,175.00), 4821-70-77-80001 ($121,530.00) and 3003-70-77-80001 ($18,800.00), if and when the Seventh Amendment has been signed by all parties.

BACKGROUND

On May 13, 2008, the City Council awarded an "Agreement for Professional Consultant Services" to Parsons for design, right-of-way engineering, and construction support services for the SR-60/Nason Overcrossing and the SR-60/Moreno Beach Interchange. The agreement covered the design of both interchanges as one construction project.

On January 13, 2009, the City Council reprioritized capital projects funded by Redevelopment Agency (RDA) bonds and allocated sufficient construction funds to the SR-60/Nason Overcrossing project, which required that the City request Caltrans approve splitting and re-validating both projects, which was completed in 2010.

On March 8, 2011, the City Council entered into a Cooperative Agreement with the Redevelopment Agency and again reprioritized projects. Funding was allocated to the SR-60/Moreno Beach project Phase 1 to build the freeway ramp alignments at the south side of the SR-60/Moreno Beach Drive Interchange and connect Eucalyptus Avenue to Moreno Beach Drive.

On June 14, 2011, the City Council approved the Fourth Amendment to Agreement for Parsons to provide for engineering and environmental services to split the SR-60/Moreno Beach Interchange into two stand-alone construction phases as well as to update the SR-60/Nason Overcrossing plans. Contract Amendments 1, 2, and 3 revised the scope of work within the approved contingency to address appraisal/excess land services, storm water grant application services, environmental re-validations and new Supplemental Project Reports to split Nason and Moreno Beach into two projects, new Caltrans pavement analysis requirements, and extended survey services.

On April 10, 2012, the Council approved the Fifth Amendment to Agreement for additional design, right-of-way work, utility coordination, and Caltrans documentation needed for the SR-60/Nason Overcrossing and SR-60/Moreno Beach Phase 1 projects. Caltrans approved the plans, and both projects were advertised. On August 28, 2012, the City Council awarded a construction contract to Powell Constructors Inc. for the SR-60/Moreno Beach Drive Phase 1 Improvements and construction is underway. On November 13, 2012, the Council awarded a construction contract to Riverside Construction Company, Inc. for the SR-60/Nason Street Overcrossing project.

SR-60/Moreno Beach Phase 2 consists of bridge replacement and north side improvements and is in the design and right-of-way acquisition stage. On August 28, 2012, the Council authorized eminent domain proceedings for four properties needed

for SR-60/Moreno Beach Phase 2. In December 2012, the City entered into the Sixth Amendment to Agreement for additional eminent domain related right-of-way phase work. The Sixth Amendment amended the scope of work within contingency funds.

DISCUSSION

The SR-60/Nason Overcrossing project replaces the bridge, constructs a new sound wall, and completes the ultimate improvements at this location. The SR-60/Moreno Beach Phase 1 improvements include reconstruction of the eastbound on- and off-ramps to SR-60, connection of the west leg of Eucalyptus Avenue to Moreno Beach Drive, and the addition of an eastbound auxiliary lane. The SR-60/Moreno Beach project Phase 2 will consist of remaining improvements including replacement of the overcrossing bridge, realignment of the two existing westbound ramps, addition of a new westbound on-ramp, raising the final grade along Moreno Beach Drive at the eastbound ramp intersection, and building the Caltrans-required drainage Line K-1 improvements in Ironwood Avenue. The City's Economic Development Plan identifies the projects as priority projects.

The scope of services outlined in Parsons' Seventh Amendment is needed to provide updated landscape designs for the SR-60/Nason Overcrossing project to conform to Caltrans' current maintenance policies, thereby lessening the potential maintenance burden on the City forces. The scope for SR-60/Nason also includes minor right-of-way documentation to convey parcels to Caltrans once the project is completed. The scope of services for the SR-60/Moreno Beach Drive Interchange Phase 1 project consists of design documentation that was required after approval of the Fifth Amendment to secure Caltrans approval for minor items during the advertisement process, finalizing plans for drainage Line K-1, updated survey for pole relocations completed in October 2012, and updated right of way plat documentation. The scope of services for the SR-60/Moreno Beach Phase 2 project provides for additional eminent domain-related right-of-way documentation to support the proceedings.

The recommended contract award is an action of the City Council acting as the Successor Agency of the former City of Moreno Valley Redevelopment Authority. The recommended actions are included on the Recognized Obligations Payment Schedule (ROPS) approved by the City Council acting as the Successor Agency on February 14, 2012. The Successor Agency Oversight Board approved the ROPS for the period January through June 2012 on May 23, 2012, which has subsequently been approved by the State Department of Finance (DOF). This ROPS approval includes "placeholder" line items representing the expenditure of bond proceeds for approval purposes. The Successor Agency approval of this contract is required to move forward toward complete approval and compliance with AB1x 26 law. The contract will be presented to the Successor Agency Oversight Board, along with an updated ROPS that will include the contractor listed as an enforceable obligation. After Oversight Board approval, the contract and updated ROPS will be sent to the DOF for review. There is a risk that the Oversight Board may not approve the contract or updated ROPS. In addition, the State Department of Finance (DOF) has the authority to challenge actions approved by the

Oversight Board within 10 days of the approved action. In light of the current process for approval of the contract and the updated ROPS, the property tax to pay the contracts being recommended has not been authorized to pay the contract obligations. The City Council by approving the recommended contract is assuming the risk that in the event tax increment is not approved to pay the contracts by the Oversight Board or through successful challenge by the State DOF, the City would be obligated to pay the contract commitments from alternative funding sources, most likely the City's General Fund.

ALTERNATIVES

1. Approve and authorize the recommended actions as presented in this staff report. *This recommendation will provide the updated landscape design and additional right-of-way conveyance services for the SR-60/Nason Overcrossing project, and allow for the design and right-of-way efforts needed to meet the requirements for Caltrans approval for the SR-60/Moreno Beach Drive Phase 1 and 2 projects. This alternative will continue to facilitate the timely construction of these needed improvements.*

2. Do not approve and authorize the recommended actions as presented in this staff report. *This alternative will not allow for Caltrans approval of the updated landscape design and additional right-of-way conveyance services for the SR-60/Nason Overcrossing, and increase the maintenance burden on City forces. This alternative could jeopardize the already-obtained Caltrans approval of the SR-60/Moreno Beach Drive Phase 1 project and adversely affect the construction process. This alternative would also stall the eminent domain process for the SR-60/Moreno Beach Drive Phase 2 project. This alternative will significantly delay the construction of these needed improvements.*

FISCAL IMPACT

The projects are currently funded using Successor Agency Tax Allocation Bonds (Fund 4821), Transportation Uniform Mitigation Fees (Fund 3003), Surface Transportation Program – Local (STPL) funds (Fund 2001), State-Local Partnership Program (SLPP) grant funds (Fund 2001), and Developer Impact Fee (DIF) Interchange Improvements Capital Projects funds (Fund 3311). These funds have been allocated for the SR-60/Nason Overcrossing and the SR-60/Moreno Beach Drive Interchange Improvements Phases 1 and 2 and cannot be utilized for operational activities. There is no impact to the General Fund.

The contract total is $5,835,033.86 ($3,387,611.00 for the original Agreement plus $49,667.00 for the First Amendment, $89,771.86 for the Second Amendment, $114,021.59 for the Third Amendment, $1,184,976.41 for the Fourth Amendment, $680,000.00 for the Fifth Amendment, $71,481.00 for the Sixth Amendment, and $257,505.00 for the Seventh Amendment). The First, Second, Third, and Sixth Amendments were funded from the contingency included in the original contract.

Change Orders totaling $257,505.00 will increase Purchase Order Numbers 2013-00000892, 2013-00000788, and 2013-00000925 with Parsons Transportation Group and will be funded from Account Numbers 4821-70-77-80002 ($117,175.00), 4821-70-77-80001 ($121,530.00) and 3003-70-77-80001 ($18,800.00).

CITY COUNCIL GOALS

ADVOCACY:

Develop cooperative intergovernmental relationships and be a forceful advocate of City policies, objectives and goals to appropriate external governments, agencies and corporations.

PUBLIC FACILITIES AND CAPITAL PROJECTS:

Ensure that needed public facilities, roadway improvements, and other infrastructure improvements are constructed and maintained.

POSITIVE ENVIRONMENT:

Create a positive environment for the development of Moreno Valley's future.

SUMMARY

Additional landscaping design, right-of-way work, minor utility coordination, and Caltrans documentation is needed for the SR-60/Nason Overcrossing and SR-60/Moreno Beach Drive Interchange Improvements. The consultant has submitted a proposal for $257,505.00 to perform this additional work. Staff recommends approval of the Seventh Amendment to Agreement for Professional Consultant Services with Parsons Transportation Group as well as an $257,505.00 increase to Purchase Order Numbers 2013-00000892 for SR-60/Nason Overcrossing, 2013-00000788 for SR-60/Moreno

Beach Phase 1, and 2013-00000925 for SR-60/Moreno Beach Phase 2 to be funded from Account Numbers 4821-70-77-80002 ($117,175.00), 4821-70-77-80001 ($121,530.00) and 3003-70-77-80001 ($18,800.00) respectively.

**SEVENTH AMENDMENT TO AGREEMENT
FOR PROFESSIONAL CONSULTANT SERVICES
PROJECT NOS. 802 0003 70 77, 801 0038 70 77, AND 801 0021 70 77**

This Seventh Amendment to Agreement is by and between the CITY of MORENO VALLEY, a municipal corporation, hereinafter referred to as "City," and Parsons Transportation Group, Inc., an Illinois corporation, hereinafter referred to as "Consultant." This Seventh Amendment to Agreement is made and entered into effective on the date the City signs this Amendment.

RECITALS:

Whereas, the City and Consultant entered into an Agreement entitled "Agreement for Professional Consultant Services," hereinafter referred to as "Agreement," dated May 22, 2008.

Whereas, the Consultant is providing consultant design services for State Route 60/Nason Street Overcrossing and Moreno Beach Drive Interchange Improvements.

Whereas, the Agreement was amended on May 4, 2009 to extend the professional consultant services in the First Amendment to Agreement for Professional Consultant Services.

Whereas, the Agreement was amended on September 10, 2009 to extend the professional consultant services in the Second Amendment to Agreement for Professional Consultant Services.

Whereas, the Agreement was further amended on June 20, 2010, to extend the professional consultant services in the Third Amendment to Agreement for Professional Consultant Services.

Whereas, the Agreement was again amended on June 21, 2011, to extend the professional consultant services in the Fourth Amendment to Agreement for Professional Consultant Services.

Whereas, the Agreement was again amended on June 30, 2012, to extend the professional consultant services in the Fifth Amendment to Agreement for Professional Consultant Services.

Whereas, the Agreement was amended again in December 2012, to extend the professional consultant services in the Sixth Amendment to Agreement for Professional Consultant Services.

Whereas, it is desirable to further amend the Agreement to expand the scope of the work to be performed by the Consultant as is more particularly described in Section 1 of this Seventh Amendment.

Whereas, the Consultant has submitted a Proposal dated January 1, 2013, for expansion of the scope of work to be performed. A copy of said Proposal is attached as “Exhibit A -- Seventh Amendment” and is incorporated herein by reference.

SECTION 1 AMENDMENT TO ORIGINAL AGREEMENT:

1.1 The Agreement termination date of **December 31, 2014,** is not extended by this Amendment.

1.2 Exhibit “B” to the Agreement is hereby amended by adding to the scope of work section described in “Exhibit A -- Seventh Amendment,” entitled "Engineering Services Amendment #7".

1.3 Exhibit “D” to the Agreement is hereby further amended by adding to the cost proposal section thereof described in “Exhibit A -- Seventh Amendment,” entitled "Engineering Services Amendment #7".

1.4 The City agrees to pay the Consultant and the Consultant agrees to receive a "Not-to-Exceed" fee of $257,505 in consideration of the Consultant's performance of the work set forth in "Exhibit A -- Seventh Amendment."

1.5 The total "Not to Exceed" fee for this contract is $5,835,033.86 ($3,387,611.00 for the original Agreement plus $49,667.00 for the First Amendment, $89,771.86 for the Second Amendment, $114,021.59 for the Third Amendment, $1,184,976.41 for the Fourth Amendment, $680,000.00 for the Fifth Amendment, $71,481.00 for the Sixth Amendment, and $257,505.00 for the Seventh Amendment).

SECTION 2

2.1 Except as otherwise specifically provided in this Amendment, all other terms and conditions of the Agreement shall remain in full force and effect.

Subject: ENGINEERING SERVICES AMENDMENT #7

Dear Marge:

Pursuant to your request, transmitted herewith is the cost proposal and scope of services to provide additional engineering services for the tasks listed below.

See **Attachment #1** which pertains to Nason Interchange Landscaping updates and Right of Way Transfer services.

See **Attachment #2** which includes the following items regarding Moreno Beach Phase 1:

Fact Sheet and NSSP tasks. Per the attached Cost Summary, the tasks addressed for this item include the development of a Design Exception Fact Sheet (Corner Stopping Sight Distance) and related design changes at the EB off ramp to Moreno Beach Drive – required in order to obtain Caltrans approval of the Moreno Beach Phase 1 PS&E package. In addition, this item includes additional coordination with Caltrans District and Headquarters design staff to obtain approval of Non-Standard Special Provisions (NSSP's) pursuant to specific City requirements and City standards being incorporated into a Caltrans-approved Bid Package. The total cost of this item is $40,025.

Updated R/W Plats for Eminent Domain process (by Associated Engineers/Parsons Brinckerhoff $7,905.

Survey Staking for SCE Pole Relocations at Pettit Street - (2) mobilizations at $1,800 each for a total of $3,600.

Updates to the Line K-1 Drainage Plans and to provide Construction phase support - $70,000.

See **Attachment #3** – which pertains to Moreno Beach Phase 2 Right-of-way Tasks. Note that the April 30, 2012 letter from OPC requests $73,800 for additional services – however $55,000 of this amount was included in Amendment #6, and hence, the amount requested per Amendment #7 is $18,800.

Attachment #1	$117,175	(Nason Total: $117,175)
Attachment #2	$40,025 $7,905 $3,600 $70,000	(Phase 1 Moreno Beach total: $121,530)
Attachment #3	$18,800	(Phase 2 Moreno Beach Total: $18,800)
Amendment Total:	$257,505	

If you have any questions, do not hesitate to contact me at 949-333-4535.
Respectfully,
PARSONS

David Speirs, PE
Project Manager

Subject: **ENGINEERING SERVICES for SR-60/Nason Street Overcrossing Landscaping Design Updates and Right-of-way Transfers**

Dear Marge:

Pursuant to your request, transmitted herewith is the cost proposal and scope of services to provide additional engineering services for the Nason Bridge Project which includes Landscape Design, Right-of-Way, Erosion Control Design and Project Management.

The scope of work consists of preparing three updated conceptual "planting and irrigation" designs, one "final planting and irrigation design (PS&E) based upon the "selected concept plan and to provide services to address plans/specifications/cost estimates and bid package support to address maintenance of existing temporary erosion control BMPs that will be in-place on the Nason interchange area prior to start of the Landscaping work. In addition, this estimate will include preparation of right-of-way transfer's documents regarding the city-owned parcels to be transferred to Caltrans upon conclusion of the Construction phase. Tatsumi & Partners will provide landscape design services and AE/PB will provide right-of-way design services. It is assumed that updated Preliminary Title Reports may be needed for the (6) parcels to be transferred to the State and hence we have estimated (6) at $600 each. Also, since it is not determined whether this task will be performed as a stand-alone contract, or as an amendment to the existing SR60/Nason Bridge Contract, we have included a contingency to address coordination, bid/advertise/award tasks – should the work be completed as a separate contract.

1A	Tasks by Parsons	$ 17,150
1B	Tasks by Tatsumi	$ 70,000
1C	Tasks by AE/PB	$ 16,425
1D	Updated Title Reports	$ 3,600
1E	Contingency	$ 10,000
	Amendment Total:	$117,175 ← ATTACH #1 (NASON)

If you have any questions, do not hesitate to contact me at 949-333-4535.

Respectfully,
PARSONS

Subject: Revised Proposal for Landscape Architectural Services – SR 60/Nason Irrigation Design Changes
TAP No.: 2004381.01.04 r2

Dear Dave,

As per our telephone conversation and your e-mailed message, I have revised our proposal for the above-referenced project. I'm assuming that we will also be updating the specs to the new 2010 format in the process.

SCOPE

- Develop three (3) color schematic design concepts. And 3 irrigation design concepts. The 3 schematic concepts shall emulate the look of the plans already developed and reflect high, medium, & low "levels of long term maintenance."
    - High level of long term maintenance: Essentially the existing "original" design – with some tweaks to materials
        - Prepare a conceptual cost estimate.
    - Low level of long term maintenance: Ground cover and single row of shrubs or small trees.
        - Prepare a conceptual cost estimate.
    - Medium level of long term maintenance: somewhere in between high and low.
        - Prepare a conceptual cost estimate.
- QA/QC Review

- Attend one (1) "Study Session" at City Council for Tatsumi staff to present the updated materials concepts.
- Attend one (1) meeting with Caltrans to present and discuss concepts.

- PS&E 95%, and Final Submittals)
  - Planting Plan – Based upon feedback received from the planting concepts, the Planting Legend and the planting plans will be developed.
    - Planting Plan.
    - Planting Legend.
    - Planting Details.
  - Irrigation Plan – Revised irrigation plans will be developed after the selection of a landscape concept made and approved by City and Caltrans.
    - Coversheet.
    - Irrigation Plans.
    - Irrigation Legend.
    - Irrigation Details.
    - Irrigation Quantity Sheets.
  - Planting and Irrigation Technical Specifications/Special Provisions will be prepared to Caltrans 2010 Standards.
  - Attend up to four (4) meetings with Caltrans:
    - To update and present revised concept.
    - To discuss/resolve review comments at 95%.
    - To resolve other items, if needed.
  - Planting and Irrigation Estimate of Probable Construction Costs.

- QA/QC Review

FEES

The proposed fee for services described in this Scope of Work is Seventy Thousand Dollars and No Cents ($70,000.00). Based on cost plus fixed fee.

ASSUMPTIONS

1. PARSONS will provide Tatsumi with CAD digital base plans and all electronic files necessary for completion of the project in either DWG. Or .DGN format, as well as other relevant project data.
2. PARSONS will provide any and all State, Federal, County, City, and Agency landscape standards.
3. PARSONS will provide any and all County, City, and Agency CADD standards.
4. PARSONS will prepare the "City Boilerplate Specifications" and Caltrans Contract specifications (Federal Trainee Program, etc.).
5. PARSONS will address the Specifications for SWPPP and maintaining temporary Erosion Control features.
6. All submittals will be electronic PDF format – no hard printed sets.
7. Tatsumi will not be required to obtain and/or pay for permits, licenses and necessary notices required by law that are associated with the performance of the Scope of Services and Project.

Please feel free to contact me regarding any adjustments to the proposed scope of work.

Respectfully,
Tatsumi and Partners, Inc.

City of Moreno Valley
State Route 60 / Moreno Beach – PHASE II
10-17-2012

SCOPE OF WORK – ADDITIONAL EFFORT

1.00 Control Survey and Base Data Review

No additional effort.

2.00 Aerial Topographic Mapping

No additional effort.

3.00 Design Data Surveys

No additional effort.

4.00 Utility Surveys and Mapping

No additional effort.

5.00 Right-of-Way Engineering – Project Close Out

Additional effort is summarized as follows:

- **5.1 Prepare RW Transfer Deeds for City to State Transfers** – prepare transfer deeds for Parcels 20783-1, 20785-1, 20787-1, 20791-1, 20792-1 and 20793-1. These parcels are assumed to currently be in possession of City of Moreno Valley; copies of those recorded acquisition documents will be provided to AE/PB. Preparation of Record Maps is assumed to be done by Caltrans and is not part of this scope.

- **5.2 Provide Survey and Aerial Mapping Documents** – our current RW Hardcopy Map will be provided, which is a record of our landnet survey. Aerial mapping files by AE/PB for this project will be provided and will include 3-D DGN and DTM files. All files in this task will be provided on a data CD.

- **5.3 Research and acquire fee title in Nason Street** - research disposition of fee title for the two portions of Nason Street north of SR-60 being mapped as a jurisdictional transfer from City to State. If fee title for either of these areas is found to be privately held, then acquisition of that fee needs to be made and acquisition document(s) will be prepared (assume no more than two acquisition documents). This scope does not include real property appraisals, valuation and negotiations with owners.

RE: Contract Amendment No. 5 to Subconsultant Agreement Number 647148-04
Amended Scope and Fee Schedule for Right of Way Services
City of Moreno Valley – Moreno Beach Drive Interchange Project
Project No. 0027(012)

Dear Mr. Speirs:

Pursuant to the City's request, we respectfully submit this Amendment to our contract for additional appraisal, acquisition/litigation support, and project management services to OPC's scope of work for the above-referenced project.

The request for this Amendment is supported by the decision to move forward with the potential filing of eminent domain actions on property owners where we have reached an impasse. Staff has been in negotiations with these owners for more than a year and a half. Our staff has been in discussion with the City's legal counsel on these matters and this scope of work was not included in previous amendments. In addition, to support this effort, new or updated appraisals, appraisal reviews, preliminary title reports, and litigation guarantees are necessary in order to allow legal counsel to have current information to support their litigation efforts.

Litigation support is more clearly defined as:

1. Preparing a letter for the clients' signature to eminent domain counsel requesting proceeding to condemnation.
2. Providing eminent domain counsel with available right of way maps and legal descriptions, preliminary title reports and title review documents, and information on how to contact each owner or interest holder.
3. Providing eminent domain counsel with a duplicate copy of the parcel file, together with a copy of the appraisal, offer to purchase, correspondence, acquisition contract, and deed as presented.
4. Converting preliminary title reports to litigation guarantees for eminent domain counsels' use. Title company fees (based on the value of the interest required) are additional.

The costs associated with these additional services described above are as follows and are based on the assumption that there are 5 owners: (Equitable Moreno Valley II Partnership, Chen, McGinness, Chado & Chado, and LTCH Investment). There will be an 8-week duration period (approx. to filing complaint):

Contract Amendment No. 5 to Subconsultant Agreement Number 647148-04 Amended Scope and Fee Schedule for Right of Way Services **PROPOSED FEES**	
Project Management	$5,000
Appraisals & Appraisal Reviews	$22,450
Preliminary Title Reports (Lawyers Title)	$2,000
Litigation Guarantees (Lawyers Title)	$9,350
Litigation Support – Right of Way	$35,000
Subtotal - Amount of Amendment No. 5	**$73,800**
Authorized Contract Amount	$419,150
TOTAL PROJECT BUDGET	**$492,950**

If you have any questions or concerns regarding the above, please do not hesitate to contact me at 951.683.2353.

Sincerely,

Overland, Pacific & Cutler, Inc.

Jerry Colburn, SR/WA
Principal/Vice President

Report to City Council

TO: Mayor and City Council

FROM: Ahmad R. Ansari, P.E., Public Works Director/City Engineer and Barry Foster, Community & Economic Development Director

AGENDA DATE: January 22, 2013

TITLE: PA06-0017, P12-146 – APPROVAL OF PROPOSED RESOLUTION FOR THE VACATION OF A PORTION OF MARIPOSA AVENUE FROM PERRIS BOULEVARD TO 1,920 FEET EAST

RECOMMENDED ACTION

Recommendations:

1. Adopt the Resolution No. 2013-09 vacating a portion of Mariposa Avenue.

2. Direct the City Clerk to certify said resolution and transmit a copy of the resolution to the County Recorder's office for recording.

ADVISORY BOARD/COMMISSION RECOMMENDATION

Not applicable

BACKGROUND

On August 23, 2007, the Planning Commission of the City of Moreno Valley approved PA06-0017, a Plot Plan for two distribution warehouse buildings totaling 569,200 square feet on approximately 28.64 acres. The project is located at the southeast corner of Perris Boulevard and Mariposa Avenue. The Perris Valley Storm Channel runs along the north property line. The project conditions of approval for the original project required the vacation of Mariposa Avenue in order to accommodate the project's proposed onsite improvements. The recently submitted amended plot plan will require the same condition of approval.

On November 12, 2008, the City Council approved the summary vacation of a 329-foot segment of Mariposa Avenue immediately east of this subject project.

City staff requires that the vacation be completed prior to building occupancy as per the conditions of approval. However, for the purpose of removing unwanted encumbrances from the project site in advance of the design drawings, the developer is requesting the vacation at this time. In addition, as part of the purchase and sales agreement between the private parties, the vacation of Mariposa Avenue is required in order for the exchange of property to move forward.

On November 27, 2012, the developer submitted P12-146 an Amended Plot Plan to revise the original project from two buildings to one building without increasing the project's overall square footage.

On January 17, 2013 the Planning Commission of the City of Moreno Valley made a finding that the vacation of Mariposa Avenue is in conformance with the General Plan and zoning requirements.

DISCUSSION

At present, the portion of Mariposa Avenue to be vacated is not improved. Utility Coordination Letters were sent to utility companies including those utility companies that have easements within the portion of the street to be vacated. There is a 10-foot wide Southern California Gas Company easement (Instrument No. 70043, Recorded on August 10, 1967) and a 10-foot wide General Telephone Company of California easement (Instrument No. 65044, recorded on July 26, 1967) located along the north property line of the project which is the north right-of-way line of Mariposa Avenue. In addition, Riverside County Flood Control and Water Conservation District (RCFC&WCD) owns fee right-of-way within the portion of Mariposa Avenue to be vacated as described and shown in the exhibits attached to the proposed resolution. The proposed vacation will continue to reserve the all existing easements and RCFC&WCD fee right-of-way.

Therefore, in accordance with the Streets & Highway Code, staff is recommending the vacation of Mariposa Avenue as described and shown in the exhibits attached to the proposed resolution for the following reasons: 1) the vacation would not cut off access to any adjacent properties; 2) the street has been impassable to vehicular traffic for over five years and no public money has been expended for maintenance during such period; and 3) the right-of-way is considered excess right-of-way and is not required for street purposes.

ALTERNATIVES

1. Adopt the proposed resolution, vacating a portion of Mariposa Avenue. *The said portion of excess right-of-way is no longer, nor will be in the future, useful for road or landscaping purposes.*

2. Do not adopt the proposed resolution, vacating a portion of Mariposa Avenue. *The said portion of excess right-of-way will remain as public right-of-way, although the right-of-way is no longer, nor will be in the future, useful for road, or landscaping purposes. This alternative would prohibit the developer from developing per the previously approved project entitlements.*

NOTIFICATION

Written notice of the intent to vacate Mariposa Avenue has been provided to the various utility companies, in addition to those businesses and residents within 300-feet of the project boundaries. The public has been notified by publication in the newspaper, the posting of a large-scale notice on the project site and through the agenda.

RESOLUTION NO. 2013-09

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, ORDERING THE VACATION OF A PORTION OF MARIPOSA AVENUE FROM PERRIS BOULEVARD TO 1,920 FEET EAST

WHEREAS, the City Council of the City of Moreno Valley, California, acquired right-of-way easements for road and public utility purposes on Mariposa Avenue; and

WHEREAS, a portion of this right-of-way is no longer, nor in the future will be, useful for road and public utility purposes; and

WHEREAS, no public improvements exist on said portion of right-of way; and

WHEREAS, no public money was expended for maintenance of said portion of right-of way,

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

Section 1

That pursuant to the provisions of Chapter 4, Part 3, of Division 9 of the Streets and Highways Code of the State of California, designated the "Public Streets, Highways, and Service Easements Vacation Law," the following described portion of right-of way is vacated and abandoned:

That said portion of Mariposa Avenue in the City of Moreno Valley, County of Riverside, State of California described in the attached legal description and illustrated on the plat, attached hereto and made a part hereof, marked Exhibits "A" and "B", respectively.

Excepting and reserving from the vacation any easement and fee right-of-way for existing public utilities and public service facilities, together with the right to maintain, operate, replace, remove or renew such facilities, pursuant to Section 8340 of the Streets and Highway Code.

Section 2

That pursuant to the provisions of Sections 831 of Title 3 and 1112 of Title 4, Part 2, Division 2 of the California Civil Code of the State of California, title to the above-described portion of Mariposa Avenue revert to the owner of the underlying fee thereof, free from use as an easement for drainage purposes except as noted in Section 1.

Section 3

That the City Clerk of the City of Moreno Valley, California, shall cause a certified copy of this Resolution to be recorded in the office of the Recorder for the County of Riverside, California.

APPROVED AND ADOPTED this 22nd day of January, 2013.

Report to City Council

TO: Mayor and City Council

FROM: Barry Foster, Community & Economic Development Director

AGENDA DATE: January 22, 2013

TITLE: A PUBLIC HEARING FOR THE MARCH BUSINESS CENTER, A PROPOSED MASTER PLOT PLAN (PA11-0002) AND FOUR PLOT PLANS (PA11-0003 THROUGH -0006) TO CONSTRUCT FOUR WAREHOUSE/INDUSTRIAL BUILDINGS TOTALING 1,484,407 SQUARE FEET, TENTATIVE PARCEL MAP NO. 35879 (PA11-0007) TO SUBDIVIDE A 75.05 GROSS ACRE SITE INTO FOUR PARCELS, AND A GENERAL PLAN AMENDMENT (PA11-0001) AND SPECIFIC PLAN AMENDMENT (P11-004) TO REALIGN KRAMERIA AVENUE IN THE GENERAL PLAN CIRCULATION ELEMENT AND MORENO VALLEY INDUSTRIAL AREA PLAN (SP208). THE PROJECT IS LOCATED AT THE SOUTHEAST CORNER OF HEACOCK STREET AND IRIS AVENUE IN THE "I" (INDUSTRIAL) LAND USE DISTRICT. THE APPLICANT IS WESTERN REALCO, LLC AND THE REPRESENTATIVE IS HOGLE-IRELAND INC.

RECOMMENDED ACTION

Recommendations: That the City Council:

1. **APPROVE** Resolution No. 2013-05 to **CERTIFY** an Environmental Impact Report (P11-005), including Statement of Overriding Considerations and the required Mitigation Monitoring Program attached as Exhibits A and B to the resolution for P11-004 (Specific Plan Amendment), PA11-0001 (General Plan Amendment), PA11-0002 through PA11-0006 (Master Plot Plan and Plot Plans) and PA11-0007 (Tentative Parcel Map No. 35879) pursuant to the California Environmental Quality Act (CEQA) Guidelines.

2. **APPROVE** Resolution No. 2013-06 for a General Plan Amendment (PA11-0001) and Specific Plan Amendment (P11-004) to amend the General Plan Circulation Element and Moreno Valley Industrial Area Plan (SP 208) to realign Krameria Street and change the designation from Arterial to Industrial Collector between Indian Avenue and Heacock Street.

3. **APPROVE** Resolution No. 2013-07 for a Master Plot Plan (PA11-0002) and Four Plot Plans (PA11-0003 through PA11-0006), to construct four warehouse/industrial buildings totaling 1,484,407 square feet in the I (Industrial) land use district, including conditions of approval.

4. **APPROVE** Resolution No. 2013-08 for Tentative Parcel Map No. 35879 (PA11-0007) to subdivide a 75.05 gross acre site into four individual parcels, including conditions of approval.

ADVISORY BOARD/COMMISSION RECOMMENDATION

On December 13, 2012, the Planning Commission conducted a public hearing on the proposed project. At said meeting, the Planning Commission deliberated on the project and at the conclusion of its deliberation voted 5-0-2 (absent) to recommend approval of the project to the City Council. The Commission agreed that the proposed project was an allowable land use, was consistent with the type and intensity of uses envisioned under the Moreno Valley Industrial Area Plan (SP 208), and was compatible with other uses in the vicinity, including the March Air Reserve Base to the west of the subject site.

Ian McMillian, representative with the Air Quality Management District, provided testimony as part of the public hearing regarding mitigation measures for this project and other recently approved warehouse/industrial projects in the City. The District provided a letter the day after the Planning Commission hearing which is discussed later in the staff report.

BACKGROUND

On September 25, 2009, the proposed industrial complex was originally approved by City Council. Based on litigation proceedings through the County of Riverside Superior Court of California and a writ of mandate decision on June 22, 2010, the project was rescinded by the City Council on October 12, 2010. Based upon court proceedings, the applicant has since prepared an Environmental Impact Report (EIR) to review potential construction noise impacts as directed by the court proceedings, as well as review other potential project related environmental impacts associated with the project.

On December 13, 2011, the City Council approved the construction contract for the Heacock Street Bridge over the Perris Valley Storm Drain lateral. The Heacock Street Bridge is located along Heacock Street, approximately 2,000 feet south of Iris Avenue. The improvements, which have been completed, improve access within the area of the proposed March Business Center project.

A number of discretionary actions are necessary to review and approve the proposed industrial complex. This includes a General Plan Amendment to amend the circulation element to realign and downgrade Krameria Avenue from a Minor Arterial to an

Industrial Collector between Indian Avenue to Heacock Street. For consistency purposes, the Specific Plan circulation plan for Krameria also will be amended. Tentative Parcel Map 35879 will take the existing five (5) parcels and create four (4) parcels for the proposed four (4) industrial buildings. Finally, the master plot plan and four (4) individual plot plans for a four building industrial complex establishes a common architectural and landscape development concept for the project, depicts the location of proposed circulation facilities, and depicts the relationship between proposed on-site structures.

DISCUSSION

The proposed industrial warehouse development, known as March Business Park, is compatible with the current zoning designation and the City's General Plan. The project also generally matches a prior approval at the site rescinded on October 12, 2010, to permit further environmental review. The project adheres to the buffer zone requirement and 300 foot proximity to a residential district established in the Moreno Valley Industrial Area Plan (SP No. 208). The features proposed by the project lying closest to the residential areas would consist of a parking lot for employee and visitor passenger cars, the primary office entry and office portion of the building on Parcel 1, and landscaping, which minimizes any associated impacts of the industrial project to the residential neighborhood located northeast of the project and across from Iris Avenue. Truck access and loading activities will be strictly prohibited within the buffer zone.

Zoning or land use designation established in the Moreno Valley Industrial Area Specific Plan for the subject site is I or "Industrial". Land uses proposed for the project are consistent with this zoning classification. Surrounding land uses and zoning allow for industrial land uses to the south, east, and north of the subject site. The March Air Reserve Base is located to the west of the subject site. Northeast of the site is zoned Residential Single-Family 10 (RS 10) and developed with a tract of small lot single-family homes that are approximately 20 years old. Although the nearest sensitive receptor (residence) is located approximately 115 feet northeast of the Project site across Iris Avenue, the nearest proposed truck bay from the northeast corner of Parcel Building 1 to the single-family home neighborhood is approximately 500 feet.

At the present time, the project developer has not identified any tenants proposed for the four proposed buildings or parcels. The overall industrial complex will primarily consist of industrial warehouse uses, with the smallest of the parcels likely slated for an industrial manufacturing use.

Design of the proposed industrial complex separates truck and employee traffic and restricts truck traffic on Iris Avenue, which is not a City-designated truck route. Truck access from the site to freeway (Interstate 215) will be from Heacock Street north to Cactus Avenue or via Heacock Street and San Michele Avenue to Indian Street south to Harley Knox Drive. In the future, additional access to the freeway will be available via Krameria Avenue to Indian Street and Heacock Street to Harley Knox Drive. Truck/trailer parking spaces and loading dock areas are screened from view of the

public right of way by a 14 feet high decorative screen wall. In addition, dense landscape and a berm will be provided adjacent to the walls for a softening affect.

Environmental Determination

The Final Environmental Impact Report recommends approximately 40 project specific and cumulative mitigation measures to reduce impacts related to air quality, biological resources, cultural resources, greenhouse gas emissions, hazards and hazardous materials, noise, and transportation/traffic. The California Environmental Quality Act (CEQA) requires that when a public agency completes an environmental document that includes measures to mitigate or avoid significant environmental effects, the public agency must adopt a Mitigation Monitoring Program (MMP) for the changes to the project that it has adopted or made a condition of project approval in order to mitigate or avoid significant environmental impacts. The appropriate reporting or monitoring plan must be designed to ensure compliance during project implementation. Monitoring will include: verification that each mitigation measure has been implemented, recordation of the actions taken to implement each mitigation measure; and retention of records in the project file. The City would be responsible for monitoring and implementing the mitigation measures included in this monitoring plan. Reporting established for each of the mitigation measures provides a record that the particular measure is being implemented.

The EIR analyzed 12 potential areas where significant environmental impacts could result from the development of the Project. Three of those areas, air quality, noise and traffic, were found to have significant and unavoidable environmental impacts after the imposition of all feasible mitigation measures. The remaining nine (9) areas: aesthetics, biological resources, cultural resources, geology/soils, greenhouse gas emissions, hazards and hazardous materials, hydrology/water quality, land use/planning, and utilities and service systems, were found to have either no significant and unavoidable environmental impacts or that the environmental impacts could be mitigated into a level of insignificance.

Since all potential environmental impacts of the project could not be mitigated to less than significant levels, a Statement of Overriding Considerations was prepared. The California Environmental Quality Act (CEQA) requires the decision making agency to balance the economic, legal, social, technological or other benefits of a proposed project against its unavoidable environmental risks when determining whether to approve the proposed project. If the benefits of a proposed project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered “acceptable”. The Statement of Overriding Consideration and corresponding findings are attached to the report for review and consideration.

A letter from the Air Quality Management District dated December 14, 2012, was submitted a day after the Planning Commission Public Hearing. The letter comments on mitigation feasibility for significant air quality impacts, adequacy of environmental analysis, cumulative impacts and onsite solar power generation. Specific mitigation, including such items as cleaner burning trucks meeting 2010 emission standards,

providing infrastructure for alternative fuels, and providing solar power on roofs to reduce reliance on fossil fuel burning power plants, are suggested by the Agency. Based on the issues raised in the letter, a response letter was provided by the preparer of the Environmental Impact Report, T&B Planning **(included under separate cover).**

ALTERNATIVES

1. Approve the proposed Resolution to certify an Environmental Impact Report (P11-005), including approval of Statement of Overriding Considerations and a required Mitigation Monitoring Program pursuant to the California Environmental Quality Act (CEQA) Guidelines and approve Resolutions for a General Plan Amendment (PA11-0001), Specific Plan Amendment (P11-004), Tentative Parcel Map No. 35879 (PA11-0007) and a Master Plot Plan (PA11-0002) and Four Plot Plans (PA11-0003 through PA11-0006), to amend the Circulation Element of the General Plan and Moreno Valley Industrial Area Plan (SP 208) to realign Krameria Avenue and subdivide a 75.05 gross acre site into four parcels and develop four (4) warehouse/industrial buildings totaling 1,484,407 square feet within the I (Industrial) land use district. **Staff recommends this alternative.**

2. Do not approve the proposed Resolution to certify an Environmental Impact Report (P11-005), including approval of Statement of Overriding Considerations and a required Mitigation Monitoring Program and do not approve Resolutions for a General Plan Amendment (PA11-0001), Specific Plan Amendment (P11-004), Tentative Parcel Map No. 35879 (PA11-0007) and a Master Plot Plan (PA11-0002) and Four Plot Plans (PA11-0003 through PA11-0006). **Staff does not recommend this alternative.**

FISCAL IMPACT

Not applicable

CITY COUNCIL GOALS

Not applicable

SUMMARY

The applicant is proposing a project that includes nine discretionary (9) components, including a General Plan amendment, Specific Plan amendment, tentative parcel map, master plot plan and four plot plans and an Environmental Impact Report that includes a 1,484,407 square foot industrial complex for an approximate 66 net (75 gross) acre site at the southeast corner of Iris Avenue and Heacock Street. The General Plan Amendment and Specific Plan Amendment will change the physical location and designation of the west end of Krameria Avenue from the Indian Street to Heacock Street. Based upon litigation proceedings, the applicant opted to prepare an Environmental Impact Report (EIR) to review potential construction noise impacts highlighted by the courts as well as other project related environmental impacts.

Overall, the proposed industrial warehouse development is compatible with the zone and the City's General Plan Land Use Map. The project meets or exceeds all Moreno Valley Industrial Area Specific Plan requirements; including buffer zone requirements within a 300 foot proximity to a residential district. The items proposed by the project lying closest to the residential areas would include an employee and visitor parking lot and office portion of the building on Parcel 1, and landscaping. All loading activities will be strictly prohibited within the buffer zone area. Design of the proposed industrial complex will separate truck and employee traffic and restrict truck traffic from Iris Avenue.

NOTIFICATION

Public notice of the proposed Municipal Code Amendment was published in the local newspaper and posted at the site on January 11, 2013.

REPRESENTATIVE: Hogle-Ireland Inc.

LOCATION: SE corner of Iris Avenue and Heacock Street.

PROPOSAL: A public hearing for the March Business Center, a proposed Master Plot Plan (PA11-0002) and four Plot Plans (PA11-0003 through 0006) to construct four warehouse/industrial buildings totaling 1,484,407 square feet, Tentative Parcel Map No. 35879 (PA11-0007) to subdivide a 75.05 gross acre site into four parcels, and a General Plan Amendment (PA11-0001) and Specific Plan Amendment (P11-004) to realign Krameria Avenue in the General Plan Circulation Element and Moreno Valley Industrial Area Plan (SP208). The project is located at the southeast corner of Heacock Street and Iris Avenue in the "I" (Industrial) land use district."

ENVIRONMENTAL DETERMINATION: An Environmental Impact Report (P11-005), Statement of Overriding Considerations and Mitigation Monitoring Program have been prepared for this project (SCH#2011061033). A draft document was circulated to the public (including interested parties/responsible agencies) for review from April 30, 2012 to June 13, 2012. The Final EIR is provided on the City's website at www.moval.org.

COUNCIL DISTRICT: 4

STAFF RECOMMENDATION: Recommend approval with mitigation to the City Council.

Any person interested in any listed proposal can contact the Community & Economic Development Department, Planning Division, at 14177 Frederick St., Moreno Valley, California, during normal business hours (7:30 a.m. to 5:30 p.m., Monday through Thursday), or may telephone (951) 413-3206 for further information. The associated documents will be available for public inspection at the above address.

In the case of Public Hearing items, any person may also appear and be heard in support of or opposition to the project or recommendation of adoption of the Environmental Determination at the time of the Hearing.

The City Council, at the Hearing or during deliberations, could approve changes or alternatives to the proposal.

If you challenge any of these items in court, you may be limited to raising only those items you or someone else raised at the Public Hearing described in this notice, or in written correspondence delivered to the City Council at, or prior to, the Public Hearing.

Attachment 2

RESOLUTION NO. 2013-05

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORINA CERTIFYING THE FINAL ENVIRONMENTAL IMPACT REPORT (P11-005), ADOPTIING THE FINDINGS AND STATEMENT OF OVERRIDING CONSIDERATIONS, AND APPROVING THE MITIGATION MONITORING PROGRAM FOR THE WESTERN REALCO MARCH BUSINESS CENTER PROJECT, GENERALLY LOCATED ON THE SOUTHEAST CORNER OF IRIS AVENUE AND HEACOCK STREET

WHEREAS, the project includes applications for Tentative Tract Map No. 35879 (PA11-0007), a Specific Plan Amendment (P11-004), General Plan Amendment (PA11-0001), and individual plot plans (PA11-0002 through PA11-0006). All are related but will be included in separate resolutions with individual findings and shall not be approved unless said Environmental Impact Report (P11-005) is certified and approved.

WHEREAS, a Draft Environmental Impact Report (DEIR) was initially prepared for this project. Said DEIR was initially circulated to the public and to responsible agencies for a 45 day review period on April 27, 2012, while the review period ended on June 13, 2012 The City published a Notice of Availability in the local newspaper (Press Enterprise), posted the Notice of Availability at the Riverside County Clerk's office, and distributed copies of the draft Final EIR to the State Clearinghouse, local agencies and other interested parties;

WHEREAS, since April 27, 2012, copies of the Draft EIR have been made available to the public at the City's offices, on the City's website and at the City's public library;

WHEREAS a Final EIR and responses to comments, has been completed and is being recommended for certification, prior to the approval of discretionary permits related to the project. The City has prepared responses to all comments received and have been included in the Final EIR.;

WHEREAS, on December 13, 2012, the Planning Commission of the City of Moreno Valley held a public hearing to consider the proposed project, which an approximate 1,484,407 square foot industrial warehouse complex consisting of four parcels of land, with ancillary and office uses, on an approximately 75.05 acre (66.93 net acre) portion of land located on the southeast corner of Moreno Beach Drive and Iris Avenue. At said meeting, the Planning Commission recommended certifying the final Environmental Impact Report adopting findings and statement of overriding considerations and approving the mitigation

monitoring program.

WHEREAS, on January *22*, 2013**,** the City Council conducted a public hearing to consider the proposed project and environmental documents;

WHEREAS, on January 22, 2013, the City Council approved the certification of the Final Environmental Impact Report (EIR) document adopted the findings and statement of overriding considerations and approved the mitigation monitoring program for March Business Park.

WHEREAS, the draft and final EIR concerning the proposed March Business Center Project were prepared in sufficient detail and duly circulated in compliance with the California Environmental Quality Act (CEQA), the State CEQA Guidelines and the City of Moreno Valley Rules and Procedures to Implement CEQA;

WHEREAS, the Final EIR recommended to the City Council includes all responses to comments thereon;

WHEREAS, the final EIR includes a review of potential impacts associated with the implementation of the March Business Park Project, including, but not limited air quality, noise and traffic. A statement of overriding considerations is provided for environmental impacts related to aesthetics, agriculture, air quality, noise as well as climate change and greenhouse gas emissions;

WHEREAS, a Mitigation Monitoring Program has been completed to ensure that all of the mitigation measures outlined in the final EIR are implemented, and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, the City Council of the City of Moreno Valley does hereby resolve as follows:

1. Certification of the final Environmental Impact Report (EIR) for the March Business Park Project on file with the Community and Development Department, incorporated herein by this reference, has been completed in compliance with the California Environmental Quality Act, that the City Council reviewed and considered the information contained in the final EIR and that the final EIR reflects the City's independent judgment and analysis; and

2. The City Council hereby adopts the Findings and Statement of Overriding Considerations regarding the final EIR for the March Business Park project, attached hereto as Exhibit A; and

3. The City Council hereby approves the Mitigation Monitoring Program and final EIR for the proposed March Business Park project, attached hereto as Exhibit B.

APPROVED and ADOPTED this 22nd day of January, 2013.

(SEAL)

Facts, Findings and Statement of Overriding Considerations Regarding the Environmental Effects of the Approval of the March Business Center Project (State Clearinghouse No. 2011061033)

I. INTRODUCTION

The City Council of Moreno Valley (the "Council") in approving the March Business Center project (the "Project"), makes the Findings described below and adopts the Statement of Overriding Considerations presented at the end of the Findings. The Findings are based upon the entire record before the Council, as described in Section III below, including the Environmental Impact Report ("EIR") prepared for the Project by the City, acting as lead agency under the California Environmental Quality Act ("CEQA").

II. PROJECT SUMMARY

A. PROJECT DESCRIPTION

The Project consists of the development of business center land uses in two phases: Phase 1, which will include a 1,103,003 square foot ("s.f.") warehouse and distribution building (Parcel 1). Phase 2 will include two warehouse and distribution buildings comprising 277,243 s.f. and 87,429 s.f. (Parcels 2 and 3, respectively) and a 16,732 s.f. light industrial building (Parcel 4). The Project will cover approximately 75.05 gross acres. The Project Site also includes 3.38 acres of land owned by the City that is dedicated public right-of-way for Heacock Street and Iris Avenue. The discretionary actions associated with the Project include a General Plan Amendment (PA11-0001), Specific Plan Amendment (P11-004), Tentative Parcel Map No. 35879 (PA11-0007), Master Plot Plan (PA11-0002), and four (4) individual Building Plot Plans (PA11-0003, PA11-0004, PA11-0005, and PA11-0006).

The Project Site is bound on the north by Iris Avenue, on the west by Heacock Street, on the east by the proposed alignment of Krameria Avenue and proposed Cosmos Street, and on the south by vacant land.

The Project requires a General Plan Amendment ("GPA") to modify the Circulation Element of the City of Moreno Valley General Plan to change the planned alignment and classification of a segment of Krameria Road between Heacock Street and proposed Cosmos Street. Under existing conditions, Krameria Avenue terminates east of the Project Site at Indian Avenue; however, the City's General Plan Circulation Element calls for Krameria Avenue to be extended to Heacock Street diagonally across the southern portion of the Project Site, meeting Heacock Street at an oblique angle. The GPA provides a 90-degree intersection where Krameria Avenue meets Heacock Street and provides a perpendicular connection between Heacock Street and proposed Cosmos Street to allow for a safer and more efficient local circulation system. In addition, the

General Plan Amendment downgrades the classification for the Krameria Avenue segment between Indian Avenue and Heacock Street from a "Minor Arterial (88-foot right-of-way)" to an "Industrial Collector (78-foot right-of-way).

The realignment and reclassification of Krameria Avenue through the Project Site also requires a Specific Plan Amendment ("SPA") to incorporate changes into the Moreno Valley Industrial Area Plan ("MVIAP"). The SPA changes the planned alignment of the on-site segment of Krameria Avenue and also changes the classification of the segment of Krameria Avenue between Indian Avenue and Heacock Street from a "Minor Arterial (88-foot right-of-way)" to an "Industrial Collector (78-foot right-of-way)."

Tentative Parcel Map No. 35879 ("TPM No. 35879") subdivides the 75.05-acre property into four (4) parcels. Parcel 1 comprises 55.43 gross acres (47.70 net acres); Parcel 2 encompasses 13.10 gross acres (11.76 net acres); Parcel 3 consists of 6.63 gross acres (5.93 net acres); and Parcel 4 comprises 1.89 gross acres (1.54 net acres). TPM No. 35879 dedicates land to the City of Moreno Valley for the widening of Iris Avenue, in addition to land area within the Project Site for the construction of Krameria Avenue and Cosmos Street. TPM No. 35879 also includes the vacation of two (2) planned roadway rights-of-way, including a portion of Krameria Avenue along the Project's southern boundary, and an un-named cul-de-sac street extending approximately 1,000 feet east from Heacock Street within Parcels 2 and 3 of TPM No. 35879. TPM No. 35879 also identifies the location and sizing of water and wastewater infrastructure, drainage facilities, and identifies the extent and amount of grading activities to be conducted on-site.

The Project also includes one (1) Master Plot Plan (PA11-0002) and four (4) individual Building Plot Plans (PA11-0003, PA11-0004, PA11-0005, and PA11-0006). The Master Plot Plan establishes a common architectural and landscape development concept for the entire Project, depicts the location of proposed circulation facilities, and depicts the relationship between proposed on-site structures. The individual Building Plot Plans provide site plans, including a detailed architectural and landscape design for Parcel 1 (PA11-0003), Parcel 2 (PA11-0004), Parcel 3 (PA11-0005), and Parcel 4 (PA11-0006). In total, the Plot Plans provide for a total of 1,484,407 s.f. of building area within the Project Site.

B. PROJECT OBJECTIVES

The objectives for the Project are to:

1. To develop an industrial business center in conformance with the land use designations applied to the property by the City of Moreno Valley General Plan and the Moreno Valley Industrial Area Plan (Specific Plan 208).

2. To develop a business center that can accommodate light industrial and warehouse distribution tenants within close proximity to regional transportation routes.

3. To develop a business center that is financially feasible to construct and operate.

4. To make efficient use of a property by achieving a minimum Project-wide floor area ratio (FAR) of 0.50.

5. To attract new businesses and jobs to the City of Moreno Valley, thereby providing a more equal jobs/housing balance both in the City and in Riverside County and reducing the need for members of the existing local workforce to commute outside the area for employment.

6. To modify the planned alignment of Krameria Avenue to enable efficient development of the Project Site and improve circulation and public safety within the area of the Moreno Valley Industrial Area Plan.

7. To develop a business center with an architectural design and operational characteristics that are complementary with existing and planned development in the immediate vicinity.

8. To construct a business center that incorporates energy efficiency and low water use principles in order to increase environmental quality during construction and operation.

III. ENIRONMENTAL REVIEW AND PUBLIC PARTICIPATION

The City has conducted an extensive environmental review of the Project to ensure that both the City's decision makers and the public are fully informed about potential significant environmental effects of the Project; to identify ways that environmental damage can be avoided or significantly reduced; to prevent significant, avoidable damage to the environment by requiring changes in the Project through the use of mitigation measures which have been found to be feasible; and to disclose to the public the reasons why the City has approved the Project in the manner chosen in light of the significant environmental effects which have been identified in the EIR. In order to do this, the City, as the lead agency under CEQA, has done all of the following:

1. Prepared and distributed an Initial Study/Notice of Preparation, dated June 2, 2011, a copy of which was circulated on June 13, 2011 through the State Clearinghouse to various state agencies for their comments;

2. Sent the Initial Study/Notice of Preparation, which contained the notice of a scoping meeting held on June 29, 2011, to each of the governmental agencies, organizations and individuals shown on the distribution list for the Notice of Preparation/Initial Study, Appendix A to the Draft EIR, on June 13, 2011;

3. Held a public scoping meeting on June 29, 2011, to solicit comments from the public on what should be analyzed in the EIR;

4. Sent a Notice of Completion and a copy of the Draft EIR to the State Clearinghouse on April 27, 2012;

5. Filed a Notice of Availability with the Riverside County Clerk on April 27, 2012, informing the public that the Draft EIR was available for public review for a 48-day period beginning on April 27, 2012, and ending on June 11, 2012;

6. Mailed the Notice of Availability to all organizations and individuals who had previously requested the Notice on April 27, 2012;

7. Mailed the Notice of Availability to all residents and property owners within 300 feet of the Project Site on April 27, 2012;

8. Provided copies of the Draft EIR to forty-seven (47) public agencies, organizations and individuals on April 27, 2012;

9. Placed copies of the Draft EIR on the City's website, at the City's Planning Department's public counter and at the public library located at 25480 Alessandro Boulevard on April 27, 2012;

10. Published the Notice of Availability on April 27, 2012, in the Press Enterprise, which is the newspaper of general circulation which has the largest circulation in the areas affected by the Project;

11. Proposed responses to comments on the Draft EIR received during and after the 45-day comment period on the Draft EIR, which have been included in the Final EIR;

12. Published a Notice on November 30, in the Press Enterprise, a newspaper of general circulation which has the largest circulation in the areas affected by the Project, that the City's Planning Commission would hold a public hearing on December 13, 2012 to consider the Final EIR and the Project in order to provide recommendations to the Council;

13. Sent copies of the Final EIR on November 29, 2012, to all public agencies, organizations, and individuals who had submitted comments;

14. Held a public hearing of the City's Planning Commission to consider adequacy of the Final EIR on December 13, 2012, and, at the conclusion of the hearing, recommended that the Council certify that the Final EIR had been prepared in full compliance with CEQA;

15. Published a notice on January 11, 2013, in the Press Enterprise a newspaper of general circulation which has the largest circulation in the areas affected by the Project, that the Council would hold a public hearing on January 22, 2013, to consider certification of the Final EIR has having been prepared in compliance with CEQA and the approval of the Project;

16. Mailed notice of the Council's hearing to all residents and property owners within 300 feet of the Project Site on January 11, 2013;

17. Sent notice of the Council's hearing to all organizations and individuals who had previously requested notification of anything having to do with the Project on January 11, 2013; and

18. Held a public hearing of the Council on January 22, 2013, and, after full consideration of all comments, written and oral, certified that the Final EIR had been completed in compliance with CEQA and approval of the Project.

All of the documents identified above and all of the documents which are required to be part of the record pursuant to Public Resources Code § 21167.6(e) are on file with the City's Community Development Department, Planning Division, located at 14177 Frederick Street, Moreno Valley, CA 92552-0805. Questions should be directed to Mark Gross, AICP, Senior Planner, in the Division.

A. INDEPENDENT JUDGMENT FINDING

Finding: The Final EIR for the Project reflects the City's and the Council's independent judgment and analysis.

Factual Basis for the Finding: The EIR was prepared by T&B Planning, Inc., a professional consulting firm hired and funded by the Project Applicant, but working under the supervision and direction of Planning Division staff of the City's Community Development Department. The EIR was also thoroughly reviewed by Michael Brandman Associates, an expert consultant firm hired and paid by the City with funding provided by the Project Applicant to provide independent peer review and assure the exercise of thorough and independent review and judgment by the City. The Council, as the City's final decision making body for the Project, received and reviewed the Final EIR and the comments, both written and oral, provided by public agencies and members of the public prior to certifying that the Final EIR complied with CEQA. The participation of City Staff in selection and approval of T&B Planning, Inc. and Michael Brandman Associates as the EIR Consultants, the professional qualifications and reputation of the EIR Consultants, the supervision and direction of the EIR Consultants by the City Staff, the thorough and independent review of the Draft and Final EIRs, including comments and responses to comments, by both the City Staff and Michael Brandman Associates and the review and careful consideration by the City

Council of the Final EIR, comments and responses to comments all conclusively show that the Final EIR is the product of and reflects the independent judgment and analysis of the City as the Lead Agency, and of the City Council as its governing body.

B. FINDING OF THE ABSENCE OF ANY NEED TO RECIRCULATE THE FINAL EIR

Finding: The Council finds that the Final EIR does not add significant new information to the Draft EIR that would require recirculation of the Project EIR.

Factual Basis for the Finding: The Council recognizes that the Final EIR incorporates information obtained and produced after the Draft EIR was completed and that the Final EIR contains additions, clarifications and minor modifications to the Draft EIR. The Council has reviewed and considered the Final EIR and all of the information contained in it and has determined that the new information added to the Final EIR does not involve a new significant environmental impact, a substantial increase in the severity of an environmental impact nor a feasible mitigation measure or an alternative considerably different from others previously analyzed that the Project applicant declined to adopt and that would clearly lessen the significant environmental impacts of the Project. No information provided to the Council indicates that the Draft EIR was inadequate or conclusory or that the public was deprived of a meaningful opportunity to review and comment on the Draft EIR.

C. GENERAL TREATMENT OF MITIGATION MEASURES

It is the Council's intention to adopt all mitigation measures recommended by the Final EIR. If a measure has been omitted from the Conditions of Approval, from the Findings or from the Mitigation Monitoring Program (the "MMP"), a copy of which is attached as Exhibit A and which is hereby adopted, that mitigation measure shall be deemed to be adopted pursuant to this paragraph.

In addition, all Conditions of Approval and the MMP repeating or rewording mitigation measures recommended in the Final EIR are intended to be substantially similar to the mitigation measures as stated in the Final EIR and are found to be equally effective in avoiding or lessening the identified environmental impact.

IV. ENVIRONMENTAL IMPACTS AND FINDINGS

Based on the Initial Study, Appendix A to the Draft EIR, and the responses to the Notice of Preparation, the EIR analyzed 12 potential areas where significant environmental impacts could result from the development of the Project. Three of those, air quality, noise and traffic, were found to have significant and unavoidable environmental impacts after the imposition of all feasible mitigation measures. The remaining nine (9) areas: aesthetics, biological resources, cultural resources, geology/soils, greenhouse gas emissions, hazards and hazardous materials, hydrology/water quality, land use/planning, and utilities and service systems, were found to have either no significant and unavoidable environmental impacts or that the environmental impacts could be mitigated into a level of insignificance. The description of each environmental area, the potential impacts and the feasible mitigation measures are set forth in Section 4.0 of the Draft EIR together with the changes and additions set forth in Section F.2.3 of the Final EIR.

A. IMPACTS IDENTIFIED IN THE EIR AS POTENTIALLY SIGNIFICANT THAT HAVE BEEN MITIGATED TO LESS THAN SIGNIFICANT

1. AIR QUALITY

a. Potential Significant Impact: Exposure of sensitive receptors to substantial pollutant concentrations (Threshold 4)

Finding: Construction of the Project has the potential to expose nearby sensitive receptors to substantial concentrations of fine particulate matter (10 microns or smaller) ("PM10") and fine particulate matter (2.5 microns or smaller) ("PM2.5"). Long-term operation of the Project will not expose nearby sensitive receptors to substantial pollutant concentrations.

Factual Basis for the Finding: As discussed on Pages 4.2-19 through 4.2-21 of the Draft EIR, and in the Project's Air Quality Impact Analysis and Mobile Source Health Risk Assessment (Draft EIR Appendices B1 and B2), Project-related long-term operational emissions will not exceed localized emissions thresholds established by the South Coast Air Quality Management District ("SCAQMD) and will therefore not expose sensitive receptors to substantial pollutant concentrations. The results of the Mobile Source Health Risk Assessment indicate that diesel particulate emissions generated during operation of the proposed Project also will not create a significant health risk to sensitive receptors in the vicinity of the Project Site.

Construction-related emissions of PM10 and PM2.5 will exceed the SCAQMD localized thresholds for 24-hour concentrations of particulate matter. Accordingly,

construction of the Project has the potential to expose nearby sensitive receptors to substantial concentrations of PM10 and PM2.5. However, incorporation of measures that reduce the amount of particulate matter (dust) generated during construction activities will reduce emissions of PM10 and PM2.5 to below the SCAQMD localized thresholds. Accordingly, Mitigation Measures 4.2-1 and 4.2-2, as set forth in the MMP attached as Exhibit A, have been imposed as conditions of approval of the Project.

2. BIOLOGICAL RESOURCES

a. Potential Significant Impact: Substantial adverse effect on federally and California protected and special-status plant and wildlife (Threshold 1)

Finding: The Project Site contains suitable habitat for the burrowing owl and nesting migratory birds, which could be adversely affected associated with development of the Project. The imposition of Mitigation Measures 4.3-1 through 4.3-3 require pre-construction species surveys, no habitat clearing during the nesting season if the site is occupied, and requirements to follow Western Riverside County Multiple Species Habitat Conservation Plan ("MSHCP") requirements and California Department of Fish and Game protocol for occupied habitat will reduce the impacts to less than significant.

Factual Basis for the Finding: As discussed on Pages 4.3-15 and 4.3-16 of the Draft EIR, and in the Project's Biological Resources Report (Draft EIR Appendix C), the Project Site contains suitable habitat for the burrowing owl and nesting migratory birds. Burrowing owls, if present on the Project Site just prior to the start of construction, could be directly impacted by Project construction activities. If the Project Site is occupied, the Project has the potential to directly or indirectly impact migratory birds. However, pre-construction species surveys of the Project Site, avoidance of clearing and grading activities during the nesting season if the Site is occupied, and requirements to follow Western Riverside County MSHCP requirements and California Department of Fish and Game protocol for occupied habitat will ensure that the impacts will be less than significant. Accordingly, Mitigation Measures 4.3-1 through 4.3-3, as set forth in the MMP attached as Exhibit A, have been imposed as conditions of approval of the Project.

B. IMPACTS IDENTIFIED IN THE EIR AS BEING SIGNIFICANT AND UNAVOIDABLE EVEN AFTER THE IMPOSITION OF ALL FEASIBLE MITIGATION MEASURES

1. AIR QUALITY

a. Significant Unavoidable Impact: Violation of air quality standard, contribution to air quality violation, or cumulatively considerable net increase of a criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard (Thresholds 2 and 3)

Finding: Construction of Phase 1 of the Project will exceed the SCAQMD regional threshold for oxides of nitrogen ("NOx"). In addition, the South Coast Air Basin ("SCAB") does not attain state criteria for NOx concentrations. NOx also is a precursor for ozone, and the SCAB is identified as a federal and state non-attainment area for ozone. Accordingly, the Project's emissions of NOx during Phase 1 of construction will exceed the SCAQMD regional threshold for this pollutant and will result in a net increase of a criteria pollutant for which the Project region is in non-attainment, which represents a significant and unavoidable impact. In addition, long-term operation of the Project will exceed the SCAQMD regional thresholds for volatile organic compound ("VOC") and NOx emissions. Furthermore, the SCAB is a designated non-attainment area for NOx concentrations and for ozone concentrations (NOx is a precursor for ozone). The Project will be required to implement Mitigation Measures MM 4.2-1 through MM 4.2-3, MM 4.2-10, and Mitigation Measures MM 4.6-2 and MM 4.6-5 to reduce near-term construction-related emissions, which require the use of California Air Resources Board ("CARB") Tier III certified equipment or better for certain pieces of construction equipment; the use of "Zero-Volatile Compounds" paints and/or High Pressure Low Volume Applications, or the use of materials that do not require paint; posting of signage with contact information for dust complaints; the use of B20 bio-diesel fuel (if available) and minimization of diesel or gasoline powered electric generators during construction; and requirements to achieve 8% energy efficiency beyond that required by the 2008 California Building Code Title 24 requirements. In addition, the Project will be required to implement Mitigation Measures MM 4.2-4 through MM 4.2-10 and MM 4.6-3 through 4.6-10 as set forth the MMP to reduce long-term emissions to the greatest possible extent. These mitigation measures require the use of signage to minimize diesel truck-related emissions; the provision of adequate truck stacking at gates; signage indicating the location of the City's truck routes; the notification of future tenants of the availability of grant funding from available funding sources for truck retrofit and replacement; notification of future tenants about the availability of alternatively fueled cargo handling equipment; compliance with SCAQMD Rule 403 requirements; the use of

drought tolerant plants and water-efficient irrigation techniques; the use of United States Environmental Protection Agency ("USEPA") Certified WaterSense labeled or equivalent faucets, high-efficiency toilets, and water-conserving shower heads (if showers are proposed);; a reduction in energy consumption of 8% beyond the 2008 California Building Code Title 24 requirements; the use of light emitting diodes in traffic signals constructed as part of the Project; measures to reduce the generation of solid waste; the provision of parking spaces reserved for carpools or vanpools; the provision of electric vehicle charging stations; and measures to encourage carpooling by future tenants. Mitigation Measures MM 4.2-1 through MM 4.2-10 and Mitigation Measures MM 4.6-2 through MM 4.6-10 as set forth in the MMP have been imposed as conditions of approval for the Project. However, even with the imposition of the required mitigation, the Project's near-term emissions of NOx during Phase 1 of Project construction and long-term emissions of VOCs and NOx under long-term operation would not be reduced to a level below significant. There are no additional feasible mitigation measures that will avoid or substantially lessen emission of NOx during construction or emission of VOCs and NOx during long-term operation to a level below significant while still attaining most of the basic objectives of the Project.

Factual Basis for the Finding: As discussed on Pages 4.2-17 through 4.2-19 of the Draft EIR, and in the Project's Air Quality Impact Analysis (Draft EIR Appendix B1), construction and long-term operation of the Project will result in emissions of pollutants, including NOx and VOCs. The SCAQMD has established regional significant thresholds to determine whether the emission of any criteria pollutants will have a significant effect on regional air quality.

Construction activities associated with Phase 1 of the Project will result in the emission of 208.12 pounds per day of NOx, which exceeds the SCAQMD's regional threshold of 100 pounds per day. Emissions of all other criteria pollutants (VOCs, carbon monoxide ["CO"], oxides of sulfur ["SOx"], and PM2.5 and PM10) will not exceed the SCAQMD regional thresholds during construction activities associated with Phase 1, and none of the regional thresholds will be exceeded during the construction of Phase 2. Requiring the use of CARB Tier III certified equipment or better for certain pieces of construction equipment; the use of "Zero-Volatile Compounds" paints and/or High Pressure Low Volume Applications, or the use of materials that do not require paint; posting of signage with contact information for dust complaints; the use of B20 bio-

diesel fuel (if available) and minimization of diesel or gasoline powered electric generators during construction; and requirements to achieve 8% energy efficiency beyond that required by the 2008 California Building Code Title 24 requirements, will reduce near-term impacts due to emissions of criteria area pollutants to the greatest practical extent.

Under long-term operating conditions, emissions of VOCs and NOx are estimated to comprise 113.25 and 708.11 pounds per day, respectively, which will exceed the SCAQMD regional thresholds of 55 and 55 pounds per day (for VOCs and NOx, respectively) during both winter and summer months. Requiring the use of signage to minimize diesel truck-related emissions; the provision of adequate truck stacking at gates; signage indicating the location of the City's truck routes; the notification of future tenants of the availability of grant funding from available funding sources for truck retrofit and replacement; notification of future tenants about the availability of alternatively fueled cargo handling equipment; compliance with SCAQMD Rule 403 requirements; the use of drought tolerant plants and water-efficient irrigation techniques; the use of solar panels to supply energy to onsite office areas; the use of USEPA Certified WaterSense labeled or equivalent faucets, high-efficiency toilets, and water-conserving shower heads (if showers are proposed); a reduction in energy consumption of 8% beyond the 2008 California Building Code Title 24 requirements; the use of light emitting diodes in traffic signals constructed as part of the Project; measures to reduce the generation of solid waste; the provision of parking spaces reserved for carpools or vanpools; the provision of two (2) electric vehicle charging stations; and measures to encourage carpooling by future tenants will reduce long-term impacts due to emissions of criteria area pollutants to the greatest practical extent. Incorporation of the measures described above will substantially lessen the Project's long-term emissions of VOCs and NOx but will not avoid the impact. Additionally, because specific Project design features pursuant to MM 4.6-3 will be identified at the time of Project implementation, it is not possible to determine whether the required mitigation will reduce emissions to less than significant.

Mitigation Measures MM 4.2-1 through MM 4.2-10 and Mitigation Measures MM 4.6-2 through MM 4.6-10, as set forth in the MMP attached as Exhibit A, have been imposed as conditions of approval of the Project. However, there are no additional, feasible mitigation measures that would avoid or substantially lessen the emissions of NOx and VOCs to less than significant and that would feasibly attain most of the basic objectives of the Project. CEQA requires that mitigation measures must be fully enforceable, feasible, and have an essential nexus and proportionality to the impact. The City added two (2) mitigation measures to the Final EIR in response to measures suggested by the South Coast Air Quality Management District (AQMD). Other measures suggested by the AQMD were considered by the City but were found to be infeasible for the Project Applicant to implement and/or for the City of Moreno Valley to enforce. Specific to the AQMD's suggestion that the City limit truck access only to trucks meeting 2010 engine standards, the City acknowledged that federal and state agencies regulate and enforce vehicle emission standards and determined that it is not feasible for the City of Moreno Valley's staff to effectively enforce a prohibition on trucks from entering the March Business Center property that are otherwise permitted to operate in California and access other properties in the city, region, and state. And, even if the City were to apply such a restriction, it would merely displace emissions from engines older than 2010 to another location in the South Coast Air Basin where the restriction does not apply, thereby resulting in no improvement to regional air quality. Furthermore, the AQMD did not provide any credible evidence to show that an engine restriction measure is feasible for a project proponent to implement. Specific to the AQMD's suggestion that alternative fuels infrastructure be provided, the proposed Project is not a fuel terminal and no fueling is proposed on the property, so the suggestion that it incorporate alternative fuels infrastructure is not germane to the Project. Two alternative fueling stations (compressed natural gas) are open to the public in Moreno Valley, one of which is located approximately one mile from the Project site on Indian Street, south of Nandina Avenue. Vehicle operators accessing the Project will have access to this alternative fuel source a very short distance away and

there would be no measurable environmental benefit to duplicating alternative fuel infrastructure at the Project site. Specific to the AQMD's suggestion that the Project demonstrate and implement advanced technologies, there is no mechanism by which the City of Moreno Valley can feasibly or legally require that private enterprises use advanced and emerging emissions reduction technologies in their daily operations above and beyond that required by state and federal regulations. Additionally, the City of Moreno Valley does not have the staffing resources to enforce the demonstration and implementation of continually advancing technologies by private enterprises. Generally, operators of warehouse projects such as the proposed Project gain emission reduction benefits from proven and commercially available technologies that emerge from demonstration projects such as the San Pedro Bay Ports' Technology Advancement Program (TAP). TAP advancements at the ports related to heavy duty vehicles have the potential to be realized at the Project as they apply to trucks accessing the project site from the ports. Specific to the AQMD's suggestion that the City require tenants to apply for funding to retrofit and replace older trucks, there is no mechanism by which the City of Moreno Valley can feasibly or legally require that private enterprises apply for and use grant funds or funds from other like sources. Additionally, the City does not have the staffing resources to feasibly and effectively enforce such a requirement. As state and federal emission regulations and restrictions at the San Pedro Bay Ports become more stringent, it is expected that older trucks will diminish from warehousing truck fleets without additional restrictions imposed by local governments on project-by-project bases. In response to the AQMD's suggestion to incentivize the use of newer engines if mandatory restrictions are not feasible, the City added Mitigation Measure MM 4.2-7 to the Final EIR to encourage such action by private enterprise. Specific to the AQMD's suggestion to require all onsite holsters to be alternatively fueled, there is no mechanism by which the City of Moreno Valley can feasibly or legally require that private enterprises use alternative fuels in their onsite operations. Additionally, the City does not have the staffing resources to feasibly and effectively enforce such a requirement. In response to the AQMD's

suggestion to incentivize the use of alternatively fueled handling equipment if mandatory restrictions are not feasible, the City added Mitigation Measure MM 4.2-8 to the Final EIR to encourage such action by private enterprise. As previously mentioned, an alternative fuels (compressed natural gas) fueling station open to the public is located approximately one mile from the Project site. Specific to the AQMD's suggestion to provide electric hookups for 100% of refrigerated trucks visiting the site, the Project does not propose refrigerated warehousing, so this recommendation is not germane to the Project. Lastly, specific to the AQMD's suggestion to provide solar power on roofs, the Project proposes to include roof mounted solar panels to meet the electrical needs of all office areas. The City placed a condition of approval on the project (P36) to ensure panel installation for this purpose.

Operational emissions of VOCs and NOx associated with the Project are predominantly from off-site mobile source emissions that are beyond the control of the Project Applicant, future Project tenants, and the City of Moreno Valley. Local governments have no authority to enact vehicle emission standards, require vehicles to meet engine standards above the standards required by federal and state law, nor limit the number of miles that vehicles travel between their origins and destinations. Imposing daily limitations on the number of vehicles entering the Project is not required and such a limitation could have unintended adverse consequences, such as trucks stacking up outside the facility until after midnight waiting to enter. No other feasible mitigation measures are available that would avoid or lessen the Project's operational VOC and NOx emissions impact.

2. NOISE

a. Significant Unavoidable Impact: Short-term generation of noise levels in excess of local standards and/or a substantial permanent or periodic increase in ambient noise levels (Thresholds 2 and 3)

Finding: During construction of the Project, noise levels associated with Project construction activities will exceed levels given in the City of Moreno Valley Noise Ordinance. The Project will be required to implement Mitigation Measure MM 4.10-1 and MM 4.10-2, which require notes on future grading

plans (limiting the hours of construction activities, requiring construction equipment to include properly operating and maintained mufflers, requiring placement of stationary construction equipment away from the northeastern corner of the site, requiring equipment staging areas to occur at a minimum distance of 1,105 feet away from the northeastern property boundary, and requiring adherence to City-approved construction haul routes), and the preparation of Construction Haul Route exhibits prior to grading or building permit issuance. Mitigation Measures MM 4.10-1 and MM 4.10-2 have been imposed as conditions of approval for the Project. The required mitigation will substantially reduce construction-related noise levels; however, the identified mitigation will not avoid the impact or reduce the impacts to less than significant, and no additional feasible mitigation measures are available.

Factual Basis for the Finding: As discussed on Pages 4.10-10 through 4.10-16 of the Draft EIR, and in the Project's Noise Report and Supplemental Construction Noise Analysis (Draft EIR Appendices I1 and I2), temporary and intermittent noise levels will occur during daytime hours up to 79.9 A-weighted decibels ("dBA") when measured at a distance of 200 feet, which exceeds the City of Moreno Valley's Noise Ordinance standard of 65 dBA Leq at 200 feet. Existing sensitive receptors (residential homes) located northeast of the Project Site will be impacted by temporary construction noise when construction activities occur on the Project Site within 905 feet of the northeastern corner of the property boundary. Additionally, in the event that Project construction activities occur simultaneously with construction activities on adjacent properties to the north or east, cumulative construction-related noise levels could be in excess of 79.9 dBA when measured at a distance of 200 feet. Requiring notes on future grading plans (limiting the hours of construction activities, requiring construction equipment to include properly operating and maintained mufflers, requiring placement of stationary construction equipment away from the northeastern corner of the site, requiring equipment staging areas to occur at a minimum distance of 1,105 feet away from the northeastern property boundary, and requiring adherence to City-approved construction haul routes), and the preparation of Construction Haul Route exhibits prior to grading or building permit issuance will reduce construction-related noise impacts to the greatest practical extent. Mitigation Measures MM 4.10-1 and MM 4.10-2, as set forth in the MMP, have been imposed as conditions of approval of the Project. Additional mitigation requiring

temporary construction noise barriers was considered, but was determined to be infeasible because such barriers will interfere with construction activities, will fail to reduce to less than significant levels near-term construction-related noise impacts, and will elongate the duration of construction activities (thereby extending the time that other adverse construction-related effects would occur). Therefore, there are no feasible mitigation measures which will avoid or substantially reduce construction-related noise levels to less than significant.

3. TRANSPORTATION/TRAFFIC

a. Significant Unavoidable Impact: Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system (Threshold 1).

Finding: Implementation of the Project will result in significant direct impacts to the intersection of Heacock Street at Iris Avenue, the intersection of Heacock Street at Gentian Avenue, the roadway segment of Heacock Street from Gentian Avenue to Iris Avenue, and the segment of Cactus Avenue between Veterans Way and Frederick Street. The Project also will result in cumulative impacts at six roadway segments under Opening Year 2016 conditions, at 16 roadway segments and 13 intersections under Horizon Year 2016 conditions, and at one roadway segment under General Plan Buildout Conditions. Mitigation Measures MM 4.11-1 through MM 4.11-4, as set forth in the MMP, have been identified to reduce the Project's direct and cumulative impacts; however, direct impacts to the roadway segment of Cactus Avenue west of Frederick Street, and cumulative impacts to four intersections and one roadway segment, will remain significant and unavoidable even after the implementation of the required mitigation measures.

Factual Basis for the Finding: As discussed on Pages 4.11-12 through 4.11-24 of the Draft EIR, and in the Project's Traffic Impact Analysis (Draft EIR Appendix J), traffic generated by the Project will degrade the existing level of service ("LOS") at the intersection of Heacock Street and Iris Avenue from LOS C to LOS F, will degrade the existing LOS at the intersection of Heacock Street at Gentian Avenue from LOS C in the AM peak hour and LOS D in the PM peak hour to LOS F during both peak hours, will degrade the existing LOS along the roadway segment of Cactus Avenue between Veterans Way and Frederick

Street from LOS D to LOS E, and will contribute to an existing LOS F on Heacock Street between Gentian Avenue and Iris Avenue. Impacts to the intersections of Heacock Street at Iris Avenue and Heacock Street at Gentian Avenue represent direct impacts of the Project because the Project will contribute more than 50 peak hour trips to these intersections and these intersections will operate at a deficient LOS. The roadway segment of Cactus Avenue between Veterans Way and Frederick Street will be directly impacted by the Project because Project-related traffic will degrade the existing LOS along this roadway segment to below the City of Moreno Valley's significance threshold of LOS D. Impacts to the segment of Heacock Street between Gentian Avenue and Iris Avenue are considered a significant direct impact because this is the only segment of Cactus Avenue not improved to three (3) travel lanes in the westbound direction under existing conditions, and the westbound travel lanes are necessary to ensure an acceptable LOS.

In addition, the Project will contribute to a deficient LOS at six roadway segments under Opening Year 2016 conditions, at 16 roadway segments and 13 intersections under Horizon Year 2016 conditions, and at one roadway segment under General Plan Buildout Conditions; impacts to these facilities represent significant cumulative impacts of the Project.

Mitigation Measures MM 4.11-1 through MM 4.11-4, as set forth in the MMP, have been identified to reduce these significant direct and cumulative effects to the maximum practical extent by requiring the installation of a traffic signal at the intersection of Heacock Street/Gentian, construction of improvements at the intersection of Heacock Street and Iris Avenue (consisting of a traffic signal and the provision of two northbound through lanes and one northbound right turn lane), and the contribution of funds to future fair-share funding programs (if such programs are available at the time of building permit application). Mitigation Measures MM 4.11-1 through MM 4.11-4, as set forth in the MMP, have been imposed as conditions of approval of the Project.

Implementation of the required mitigation will reduce to less than significant the Project's direct impacts to

the intersection of Heacock Street at Iris Avenue, the intersection of Heacock Street at Gentian Avenue, and the roadway segment of Heacock Street from Gentian Avenue to Iris Avenue. Although improvements to the roadway segment of Cactus Avenue west of Frederick Street already are planned as part of Plot Plan PA08-0072, and even though improvements to this roadway segment to provide for three westbound travel lanes will be in place prior to occupancy permits, the planned improvements were not in place at the time the Project's Notice of Preparation was distributed for public review; accordingly, impacts to the roadway segment of Cactus Avenue west of Frederick Street in the Opening Year 2016 analysis scenario are considered significant and unavoidable even after the imposition of mitigation. Because the necessary improvement is already planned to occur and the impact will be negated once the planned improvement is constructed, there are no feasible mitigation measures to be imposed upon the Project which will reduce impacts to this roadway segment in the 2016 Opening Year scenario to less than significant.

Implementation of the required mitigation will reduce the Project's cumulative impacts to below a level of significance, with exception of impacts to four intersections and one roadway segment. Although Mitigation Measures MM 4.11-3 and MM 4.11-4 require the Project to participate in a funding program(s) to address the Project's fair share towards cumulative impacts to these intersections and roadway segment, there is no assurance that the City of Moreno Valley and/or the City of Perris will identify a funding program(s) for these intersections and roadway segment prior to the issuance of building permits, and even if the funding programs are established it cannot be assured that the required improvements will be constructed prior to the Project's occupancy under Opening Year 2016 or Horizon Year 2016 conditions. There is not a proportional nexus to the impact to require the Project to construct full improvements to the impacted intersections and roadway segment in the City of Moreno Valley. The City of Moreno Valley is not authorized to require roadway improvements in the City of Perris, nor would there be a proportional nexus to require the Project to construct the required improvement to the impacted intersection in the City of

Perris. For these reasons, mitigation measures beyond contribution to a fee program, if established, are not feasible because there lacks proportionality to the impacts. There are no other feasible mitigation measures that will reduce cumulative impacts to four intersections and one roadway segment to less than significant.

b. Significant Unavoidable Impact: Conflict with an applicable congestion management program (Threshold 2).

Finding: Implementation of the Project will result in near-term cumulatively considerable contributions to impacts on four segments of Interstate 215 (I-215). There are no feasible mitigation measures that will reduce these impacts to less than significant.

Factual Basis for the Finding: Under Horizon Year (2016) conditions, and with the inclusion of background traffic volumes from cumulative development projects, the following freeway mainline segments will operate at LOS F, which is below the acceptable LOS E: I-215 southbound, south of Cactus Avenue; I-215 southbound, north of Harley Know Boulevard; I-215 southbound, south of Harley Knox Boulevard; and I-215 northbound, south of Cactus Avenue. Although the addition of Project traffic will not cause the deficiency in the projected LOS at these locations, Project traffic will cumulatively contribute to the unacceptable LOS; as such, Project traffic will contribute to a cumulatively significant impact at these locations. Caltrans currently has plans for the widening of these segments of I-215 to relieve the projected deficiencies; however, there is no schedule or funding in place for the planned improvements, and the City cannot be assured that the improvements will be in place prior to occupancy of the Project. Under long-term conditions, and with the completion of the planned improvements, impacts to these freeway segments will not occur. Mitigation is not feasible because there are no funding programs currently in place to which the Project can contribute funds for the improvements needed to relieve the projected deficiencies on I-215. The City of Moreno Valley is not authorized to require freeway improvements, nor would there be a proportional nexus to require the Project to construct improvements to I-215. Because a fee program for impacts to I-215 is not

established by Caltrans and because physical improvements to I-215 would lack proportionality to the cumulative impact, there are no other feasible mitigation measures that will reduce cumulative impacts freeway mainlines.

V. PROJECT ALTERNATIVES

A. ALTERNATIVE SITES

Finding: There exists no feasible and available alternative site for the Project which would avoid or substantially lessen the significant impacts of the Project while allowing for the feasible attainment of most of the Project's basic objectives.

Factual Basis for the Finding: As discussed on pages 6-5 and 6-6 of the Draft EIR, the land uses included as part of the Project are consistent with the Business Park/Light Industrial and Commercial land use designations applied to the property by the City of Moreno Valley General Plan and as further detailed by the Industrial and Industrial Support Areas designations applied to the property by the Moreno Valley Industrial Area Plan. Thus, it can reasonably be assumed that development ultimately would occur in conformance with the applicable land use designations, whether by the Project applicant or by others in the future. Regardless, a review of available properties within the region identified eight properties that are identified for industrial development in the I-215 corridor within the City of Moreno Valley and nearby locations within the City of Riverside and the City of Perris. However, the Project applicant does not own or control any properties within the City of Moreno Valley or immediately surrounding area that are of similar size as the proposed Project Site, and there are no suitable vacant sites available for sale by the current property owners. Furthermore, the Project Site is fully disturbed, is not located within an area targeted for biological conservation, and is fully surrounded by developed lands or lands planned for development by the Moreno Valley General Plan. Few other properties in the City of Moreno Valley and western Riverside County would offer less developmental and environmental constraints, or fewer environmental impacts than the Project Site. Development of the Project in an alternative location

would have similar impacts as would occur with implementation of the Project. Therefore, there are no reasonably feasible and available alternative sites that would meet the Project's basic objectives while avoiding or substantially lessening the significant unavoidable impacts of the Project.

B. NO PROJECT ALTERNATIVE

Finding: The No Project Alternative is environmentally superior to the Project but would not attain any of the objectives for the Project.

Factual Basis for the Finding: As discussed on pages 6-6 through 6-10 of the Draft EIR, leaving the Project Site in its current condition would avoid or lessen all of the Project's significant environmental effects. However, none of the Project's objectives would be met by this alternative.

C. VACANT LOT/BUSINESS CENTER ALTERNATIVE

Finding: Development of the site under this alternative would allow for the construction of approximately 762,800 square feet (s.f.) of building area (49% less building area than the Project), including 554,486 s.f. of high cube warehouse, 174,858 s.f. of warehouse, and 33,464 s.f. of light industrial land uses. No construction activities would occur within 1,100 feet of the property's northeastern corner, with exception of frontage improvements to Iris Avenue. This alternative would not result in increased impacts to any environmental issue area in comparison to the Project and would reduce the severity of the Project's environmental effects, but implementation of this alternative would not completely avoid the Project's significant and unavoidable effects to air quality, noise, or transportation/traffic. In addition, although this alternative would meet some of the Project's objectives, it would meet those objectives to a lesser degree than the proposed Project due to the 49% reduction in building space. Specifically, this alternative would attract a fewer number of jobs to the City of Moreno Valley, would not fully implement the Industrial land use designation applied to the property by the City's General Plan, would result in a business center that is less financially feasible to construct and operate, and would fail make efficient use of the property by providing a floor area ratio (FAR) of only 0.25 as compared to the objective to provide a 0.5 FAR or greater.

Factual Basis for the Finding: As discussed on pages 6-10 through 6-15 of the Draft EIR, implementation of the Vacant Lot/Business Center Alternative would reduce, but would not completely avoid, the Project's significant environmental effects. Moreover, this alternative would not result in a reduction in demand for industrial business park space

in western Riverside County; thus, it is likely that the reduced level of environmental impact achieved through this alternative would be displaced to another property rather than avoided. The reduction of 28 acres worth of industrial development within Moreno Valley also would fail to generate as much tax revenue or as many jobs for the local community as compared to the Project. Additionally, although this alternative would meet most of the Project's basic objectives, it would meet them to a lesser degree than the proposed Project due to the reduction in building area. Specifically, this alternative would attract a fewer number of jobs to the City of Moreno Valley, would not fully implement the Industrial land use designation applied to the property by the City's General Plan, would result in a business center that is less financially feasible to construct and operate, and would fail make efficient use of the property by providing a floor area ratio (FAR) of only 0.25 as compared to the objective to provide a 0.5 FAR or greater. The land use designations applied to the property by the City of Moreno Valley General Plan and the Moreno Valley Industrial Area Plan would not be realized on 28 acres of the property, and the Project applicant would be precluded from realizing a reasonable rate of return on the 28 acres. Furthermore, the permanent 28-acre vacant lot that would result from implementation of this alternative represents an inefficient use of land that is not justified by the need to avoid near-term impacts associated with noise. The permanent establishment of a vacant lot on 28 acres of the site also would conflict with the General Plan's Ultimate Goal No. I, which promotes "…an orderly and balanced land use pattern that accommodates a range of residential, cultural, recreational, business and employment opportunities," and Community Development Element Goal No. 2.1, which promotes, "A pattern of land uses, which organizes future growth…and which promotes the rational utilization of presently underdeveloped and undeveloped parcels."

D. SMALL BUILDING ALTERNATIVE

Finding: Developing the Project Site with 1,316,404 s.f. of building space, including 30 to 40 light industrial buildings ranging in size from 10,000 s.f. to 50,000 s.f. on Parcel 1, would increase the duration of the Project's near-term significant unavoidable noise impact affecting nearby sensitive receptors, would create additional impacts and more severe impacts associated with air quality,

greenhouse gas emissions, noise, and traffic due to the generation of a 120% increase in vehicle trips, and would not reduce or avoid any of the Project's other significant environmental effects. This alternative also would fail to meet the Project's objective to achieve a 0.5 floor area ratio (FAR) or higher, would be less effective in meeting the Project's objective to accommodate warehouse distribution land uses on site, and would be less effective than the proposed Project in creating new jobs.

Factual Basis for the Finding: As discussed on pages 6-15 through 6-19 of the Draft EIR, the environmental impacts of the small building alternative would be the same or increased in comparison to the Project. This alternative would result in an increase in the Project's significant and unavoidable environmental impacts due to near-term construction noise (due to an increase in duration of construction activities affecting nearby sensitive receptors), near- and long-term air quality (due to the increased duration of construction activities and the 120% increase in ADT associated with this alternative), and transportation/traffic (due to increased ADT), and also would result in increased, but less than significant, impacts to greenhouse gas emissions. Also, the small building alternative would prevent achieving some of the Project's basic objectives. In particular, this alternative would not achieve a 0.5 FAR, as it would result in an FAR of only 0.45. This alternative also would be less effective in meeting the Project's objective to accommodate warehouse distribution land uses on-site, and would be less effective than the Project in creating jobs.

VI. STATEMENT OF OVERRIDING CONSIDERATIONS

As set forth in Section IV. above, most of the Project's impacts on the environment will either be insignificant or, through the imposition of mitigation measures as conditions of approval of the Project, can be reduced to less than significant. However, as set forth in subsection IV.B. above, impacts to air quality, noise, and transportation/traffic will remain significant and unavoidable even after the imposition of all feasible mitigation measures. Further, as set forth in Section V. above, there are no feasible alternatives to the Project which would mitigate or avoid those environmental impacts while still attaining all of the Project's basic objectives. Nevertheless, as set forth below, the Council has determined that the benefits which will accrue from the development of the Project outweigh the significant and unavoidable impacts which the Project will produce.

A. AIR QUALITY

Finding: Notwithstanding the significant unavoidable impacts to air quality discussed in subsection IV.B.1, above, implementation of the City of Moreno Valley General Plan and Specific Plan No. 208, the development of otherwise unusable vacant land, the creation of jobs and a multiplier effect that will create secondary jobs to support the Project and those who work in it, which will further the City's efforts to achieve a community with a healthy and diversified economic base and provides ample employment opportunities for the citizens of Moreno Valley, and the fact that the Project will be Leadership in Energy and Environmental Design ("LEED") certified, which will demonstrate the City's commitment to green technology, constitutes benefits which outweigh the unavoidable adverse environmental impacts to air quality. Each of the benefits, individually, constitutes a sufficient basis for approving the Project notwithstanding the significant and unavoidable impact on air quality that will result.

Factual Basis for the Finding: As set forth in the Project Objectives on pages 3-1 and 3-2 of the Draft EIR and in the description of the Project provided on pages 3-2 through 3-20 of the Draft EIR, approval of the Project will allow the conversion of a vacant site into a job and revenue producing facility. Applying average employment density factors reported by the Southern California Association of Governments in their publication *"Employment Density Study Report,"* (SCAG 2001), implementation of the Project is anticipated to result in the creation of up to 2,560 new, recurring jobs, which also will improve the regional jobs-housing balance, thereby reducing the need for Western Riverside County residents to commute longer distances to work. It will allow for the implementation of Light Industrial land uses in conformance with the City of Moreno Valley General Plan and Moreno Valley Industrial Area Plan, and will assist the City in achieving numerous General Plan Goals, including, but not limited to, Ultimate Goal No. IV. (to achieve a community which "Enjoys a healthy economic climate that benefits both residents and businesses"), and Community Development Objective 2.5 ("Promote a mix of industrial uses which provide a sound and diversified economic base and ample employment opportunities for the citizens of Moreno Valley with the establishment of industrial activities that have good access to the regional transportation system, accommodate the personal needs of workers and business visitors, and which meets the service needs of local businesses.").

B. NOISE

Finding: Notwithstanding the significant unavoidable impacts to noise discussed in subsection IV.B.1, above, implementation of the City of Moreno Valley General Plan and Specific Plan No. 208, the development of otherwise unusable vacant land, the creation of jobs and a multiplier effect that will create secondary jobs to support the Project and those who work in it, the demonstration that which will further the City's efforts to achieve a community with a healthy and diversified economic base and provides ample employment opportunities for the citizens of Moreno Valley, and the fact that the Project will be LEED certified, which will demonstrate the City's commitment to green technology, constitutes benefits which outweigh the unavoidable adverse environmental impacts to noise. Each of the benefits, individually, constitutes a sufficient basis for approving the Project notwithstanding the significant and unavoidable noise impact that will result.

Factual Basis for the Finding: As set forth in the Project Objectives on pages 3-1 and 3-2 of the Draft EIR and in the description of the Project provided on pages 3-2 through 3-20 of the Draft EIR, approval of the Project will allow the conversion of a vacant site into a job and revenue producing facility. Applying average employment density factors reported by the Southern California Association of Governments in their publication "Employment Density Study Report," (SCAG 2001), implementation of the Project is anticipated to result in the creation of up to 2,560 new, recurring jobs, which also will improve the regional jobs-housing balance, thereby reducing the need for Western Riverside County residents to commute longer distances to work. It will allow for the implementation of Light Industrial land uses in conformance with the City of Moreno Valley General Plan and Moreno Valley Industrial Area Plan, and will assist the City in achieving numerous General Plan Goals, including, but not limited to, Ultimate Goal No. IV. (to achieve a community which "Enjoys a healthy economic climate that benefits both residents and businesses"), and Community Development Objective 2.5 ("Promote a mix of industrial uses which provide a sound and diversified economic base and ample employment opportunities for the citizens of Moreno Valley with the establishment of industrial activities that have good access to the regional transportation system, accommodate the personal needs of workers and business visitors, and which meets the service needs of local businesses.").

C. TRANSPORTATION/TRAFFIC

Finding: Notwithstanding the significant unavoidable impacts to transportation/traffic discussed in subsection IV.B.1, above, implementation of the City of Moreno Valley General Plan and Specific Plan No. 208, the development of otherwise unusable vacant land, the creation of jobs and a multiplier effect that will create secondary jobs to support the Project and those who work in it, the demonstration that which will further the City's efforts to achieve a community with a healthy and diversified economic base and provides ample employment opportunities for the citizens of Moreno Valley, and the fact that the Project will be LEED certified, which will demonstrate the City's commitment to green technology, constitutes benefits which outweigh the unavoidable adverse environmental impacts to transportation/traffic. Each of the benefits, individually, constitutes a sufficient basis for approving the Project notwithstanding the significant and unavoidable impact on transportation/traffic that will result.

Factual Basis for the Finding: As set forth in the Project Objectives on pages 3-1 and 3-2 of the Draft EIR and in the description of the Project provided on pages 3-2 through 3-20 of the Draft EIR, approval of the Project will allow the conversion of a vacant site into a job and revenue producing facility. Applying average employment density factors reported by the Southern California Association of Governments in their publication "Employment Density Study Report," (SCAG 2001), implementation of the Project is anticipated to result in the creation of up to 2,560 new, recurring jobs, which also will improve the regional jobs-housing balance, thereby reducing the need for Western Riverside County residents to commute longer distances to work. It will allow for the implementation of Light Industrial land uses in conformance with the City of Moreno Valley General Plan and Moreno Valley Industrial Area Plan, and will assist the City in achieving numerous General Plan Goals, including, but not limited to, Ultimate Goal No. IV. (to achieve a community which "Enjoys a healthy economic climate that benefits both residents and businesses"), and Community Development Objective 2.5 ("Promote a mix of industrial uses which provide a sound and diversified economic base and ample employment opportunities for the citizens of Moreno Valley with the establishment of industrial activities that have good access to the regional transportation system, accommodate the personal needs of workers and business visitors, and which meets the service needs of local businesses.").

The Moreno Valley City Council hereby declares that, pursuant to CEQA Guidelines Section 15093, the City Council has balanced the benefits of the proposed Project against any significant and unavoidable environmental impacts in determining whether to approve the proposed Project. If the benefits of the proposed Project outweigh the unavoidable adverse environmental impacts, those impacts are considered "acceptable."

The City Council hereby declares that the EIR has identified and discussed significant effects that may occur as a result of the Project. With the adoption and implementation of the mitigation measures discussed in the EIR, these impacts can be mitigated to a level of less than significant except for the unavoidable and significant impacts discussed in subsection IV.B herein.

The City Council hereby declares that it has made a reasonable and good faith effort to eliminate or substantially mitigate the potential impacts resulting from the Project.

The City Council hereby declares that to the extent any mitigation measures recommended to the City are not incorporated, such mitigation measures are infeasible because they would impose restrictions on the Project that would prohibit the realization of specific economic, social, and other benefits that this City Council finds outweigh the unmitigated impacts.

The City Council further finds that except for the Project, all other alternatives set forth in the EIR are infeasible because they would prohibit the realization of the Project objectives and/or specific economic, social or other benefits that this City Council finds outweigh any environmental benefits of the alternatives or the other alternatives do not substantively reduce the severity of unavoidable and significant impacts.

The City Council hereby declares that, having reduced the adverse significant environmental effects of the Project, to the extent feasible by adopting the proposed mitigation measures, having considered the entire administrative record on the Project and having weighed the benefits of the Project against its unavoidable significant impact after mitigation, the City Council has determined that the social, economic and environmental benefits of the Project outweigh the potential unavoidable significant impacts and render those potential significant impacts acceptable based on the following considerations:

1. The Project will provide development consistent with the General Plan and in conformance with Specific Plan No. 208, municipal standards, codes and policies;

2. The Project provides development that improves and maximizes economic viability of a vacant site by transitioning the Project site into a productive use;

3. The Project creates additional employment-generating opportunities for the City of Moreno Valley and surrounding communities; and

4. The Project provides adequate infrastructure and public amenities, including upgrading and widened streets, traffic signal upgrades and utility improvements.

As the CEQA Lead Agency for the proposed action, the City of Moreno Valley has reviewed the Project description and the alternatives presented in the EIR, and fully understands the Project and Project alternatives proposed for development. Further, the City Council finds that all potential adverse environmental impacts and all feasible mitigation measures to reduce the impacts from the Project have been identified in the Draft EIR, the Final EIR, and public testimony. The Council also finds that a reasonable range of alternatives was considered in the EIR and this document, and finds that approval of the Project is appropriate.

This City Council has identified economic and social benefits and important policy objectives which result from implementing the Project. The Council has balanced these substantial social and economic benefits against the unavoidable significant adverse effects of the Project. Given the substantial social and economic benefits that will accrue from the Project, this Council finds that the benefits identified herein override the unavoidable environmental effects.

The City Council hereby declares that the benefits provided to the public through approval and implementation of the Project outweighs the identified significant adverse environmental impacts of the Project that cannot be mitigated. The City Council finds that each of the Project benefits outweighs the unavoidable adverse environmental impacts identified in the EIR and, therefore, finds those impacts to be acceptable.

VII. CERTIFICATION OF THE FINAL ENVIRONMENTAL IMPACT REPORT

The Moreno Valley City Council finds that it has reviewed and considered the Final EIR in evaluating the Project, that the Final EIR is an accurate and objective statement that fully complies with CEQA and the CEQA Guidelines, and that the Final EIR reflects the independent judgment of the City Council.

The City Council declares that no new significant information as defined by CEQA Guidelines Section 15088.5 has been received by the City Council after the circulation of the Draft EIR that would require recirculation. All of the information added to the Final EIR merely clarifies, amplifies or makes insignificant modifications to an already adequate Draft EIR pursuant to CEQA Guidelines Section 15088.5(b).

The City Council hereby certifies the EIR based on the following findings and conclusions:

A. FINDINGS

1. WESTERN RIVERSIDE COUNTY MULTIPLE SPECIES HABITAT CONSERVATION PLAN COMPLIANCE

The Project is in conformance with the conservation requirements of the Western Riverside County Multiple Species Conservation Plan (MSHCP) in that:

1. The Project site is located within the MSHCP Criteria Area, but is not located within any Cell Groups; therefore, a Habitat Acquisition and Negotiation Strategy (HANS) application is not required to be submitted to the Riverside Conservation Authority (RCA).

2. Pursuant to Section 6.1.2 of the MSHCP, an assessment of potentially significant effects on Riparian/Riverine Areas and Vernal Pools is required if such resources are identified on the Project site or will impacted by the Project. The Project will impact 0.06 off-site acre of the Perris Valley Storm Drain Channel (PVSD) to construct two drainage outlets. The PVSD is considered a MSHCP riverine feature, though the portion that will be directly impacted by the Project does not support any riparian habitat. The EIR discloses that there will be no adverse hydrologic effects to downstream biological features as a result of the Project. As such, the Project will not impact biological functions and values as it pertains to riparian habitat and a Determination of Biologically Equivalent or Superior Preservation (DBESP) is not required

3. Pursuant to Section 6.1.3 of the MSHCP, habitat assessments and/or focused surveys for certain Narrow Endemic plant species are required for properties within mapped survey areas. The Project site is not located in a mapped survey area.

4. Pursuant to Section 6.1.4 of the MSHCP, projects in close proximity to the MSHCP Conservation Area are required to incorporate mechanisms to address indirect effects to the MSHCP Conservation Area. The Project site is not located in close proximity to the MSHCP Criteria Area or any MSHCP Preserve.

5. Pursuant to Section 6.3.2 of the MSHCP, habitat assessments and/or focused surveys for certain additional plant and animal species are required for properties within mapped survey areas. The Project site is partially located in a survey area for western burrowing owl and required surveys were conducted. Pre-construction surveys of the Project site and avoidance of clearing and grading activities during the nesting season are required. If the site is occupied, Mitigation Measures 4.3-1 through 4.3-3, as set forth in the MMP attached as Exhibit A, have been imposed as conditions of approval of the Project in accordance with the MSHCP.

2. CEQA COMPLIANCE

As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the Findings and supporting documentation. The City Council determines that the Findings contain a complete and accurate reporting of the environmental impacts and mitigation measures associated with the Project, as well as complete and accurate reporting of the unavoidable impacts and benefits of the Proposed Project as detailed in the Statement of Overriding Considerations. The City Council finds that the EIR was prepared in compliance with CEQA and that the City Council complied with CEQA's procedural and substantive requirements.

3. SIGNIFICANT UNAVOIDABLE IMPACTS/STATEMENT OF OVERRIDING CONSIDERATIONS

The Project will have significant adverse impacts even following adoption of all feasible mitigation measures which are required by the City Council. The following significant environmental impacts have been identified in the Final EIR and will require mitigation but cannot be mitigated to a level of insignificance as set forth in subsection IV.B of these Findings: Air Quality - Violation of air quality standard, contribution to air quality violation, or cumulatively considerable net increase of a criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard (Thresholds 2 and 3); Noise - Short-term generation of noise levels in excess of local standards and/or a substantial permanent or periodic increase in ambient noise levels (Thresholds 2 and 3); Transportation/Traffic - Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system (Threshold 1); and Transportation/Traffic - Conflict with an applicable congestion management program (Threshold 2).

The City Council has eliminated or substantially reduced environmental impacts where feasible and the City Council determines that the remaining unavoidable significant adverse impacts are acceptable due to the reasons set forth in the preceding Statement of Overriding Considerations.

4. CONCLUSIONS

a. All potentially significant environmental impacts from implementation of the proposed Project have been identified in the EIR and, with the implementation of the mitigation measures defined herein and set forth in the MMP, will be mitigated to a less-than-significant level, except for the impacts identified in subsection IV.B herein.

b. Other reasonable alternatives to the proposed Project that could feasibly achieve the basic objectives of the proposed Project have been considered and rejected in favor of the proposed Project.

c. Environmental, economic, social and other considerations and benefits derived from the development of the proposed Project override and make infeasible any alternatives to the proposed Project or further mitigation measures beyond those incorporated into the proposed Project.

INTRODUCTION

CEQA Requirements

The California Environmental Quality Act (CEQA) requires that when a public agency completes an environmental document that includes measures to mitigate or avoid significant environmental effects, the public agency must adopt a Mitigation Monitoring Program (MMP) for the changes to the project that it has adopted or made a condition of project approval in order to mitigate or avoid significant environmental impacts. The appropriate reporting or monitoring plan must be designed to ensure compliance during project implementation (Public Resources Code §21081.6).

The Planning Division would coordinate the project monitoring of the mitigation measures with each applicable department or division, while various City departments/divisions would be responsible for monitoring and verifying compliance of specific mitigation measures (see the Mitigation Monitoring and Reporting Summary Table beginning on page 6). The City of Moreno Valley Public Works Department (City) would coordinate monitoring of the implementation of all mitigation measures for the project. Monitoring will include: 1) verification that each mitigation measure has been implemented; 2) recordation of the actions taken to implement each mitigation measure; and 3) retention of records in the project file.

Program Objectives

The objectives of the MMP for the proposed March Business Center Project (the "Project") include the following:

- To provide assurance and documentation that mitigation measures are implemented as planned;
- To collect analytical data to assist City administration in its determination of the effectiveness of the adopted mitigation measures;
- To report periodically regarding project compliance with mitigation measures, performance standards and/or other conditions; and
- To make available to the public, upon request, the City record of compliance with project mitigation measures.

Overview of the Project

The Project consists of a proposal to develop a 75.05-acre property with business center land uses. The principal discretionary actions required of the City of Moreno Valley to implement the proposed Project include the adoption of a General Plan Amendment (PA11-0001) and Specific Plan Amendment (P11-004), approval of Tentative Parcel Map No. 35879 (PA11-0007), a Master Plot Plan (PA11-0002) and four (4) individual Building Plot Plans (PA11-0003, PA11-0004, PA11-0005, and PA11-0006), and certification of this EIR (P11-005).

Tentative Parcel Map No. 35879 (TPM No. 35879) proposes to subdivide the 75.05-acre property into four (4) parcels, designates areas of public road dedication, and identifies the size

and location of needed water, sewer, drainage, and utility infrastructure. Developable parcels would range in size from 1.89 gross acres (1.54 net acres) to 53.43 gross acres (47.67 net acres).

The proposed realignment and reclassification of Krameria Avenue through the Project site would require an amendment to the Moreno Valley Industrial Area Plan (Specific Plan 208). The proposed Specific Plan Amendment (P11-004) would change the planned alignment of the on-site segment of Krameria Avenue and would change the classification of the segment of Krameria Avenue between Indian Avenue and Heacock Street from a "Minor Arterial (88-foot right-of-way)" to an "Industrial Collector (78-foot right-of-way)," as would similarly occur under the proposed General Plan Amendment.

The Master Plot Plan (PA11-0002) establishes a common architectural and landscape development concept for the entire Project, depicts the location of proposed circulation facilities, and depicts the relationship between proposed on-site structures. The individual Building Plot Plans provide site plans, including a detailed architectural and landscape design for Parcel 1 (PA11-0003), Parcel 2 (PA11-0004), Parcel 3 (PA11-0005), and Parcel 4 (PA11-0006). The Project Applicant anticipates that Parcels 1, 2, and 3 would primarily be occupied by warehouse distribution uses, while Parcel 4 would be occupied by light industrial uses. The net parcel size, total building area, and floor area ratio (FAR) of each proposed parcel and building are summarized in the following March Business Center Statistical Summary table.

March Business Center Statistical Summary

PARCEL	NET PARCEL SIZE	TOTAL BUILDING AREA	FAR[1]
1	2,077,688 s.f.	1,103,003 s.f.	0.53
2	512,072 s.f.	277,243 s.f.	0.54
3	258,479 s.f.	87,429 s.f.	0.34
4	67,144 s.f.	16,732 s.f.	0.25
Total	**2,915,383 s.f.**	**1,484,407 s.f.**	**0.51**

[1] Floor Area Ratio (FAR) is calculated by dividing the maximum building square footage by the net square footage of the parcel on which the building is located. Total FAR is calculated by dividing the total square footage of all buildings by the total net square footage of the parcels on which they would be located.
Source: PA11-0002, PA11-0003, PA11-0004, PA-0005, and PA11-0006 prepared by Bastien and Associates, Inc., August 17, 2011.

Organization of the Mitigation Monitoring Program

The following describes the sections of this MMP:

- **Introduction** - Provides an overview of CEQA's monitoring and reporting requirements, program objectives, the project for which the program has been prepared, and the manner in which the mitigation monitoring program has been organized.

- **MMP** - Describes the City entities responsible for implementation of the mitigation monitoring plan, the plan scope, procedures for monitoring and reporting, public availability of documents, the process for making changes to the program, types of

mitigation measures, and the manner in which monitoring will be coordinated to ensure implementation of mitigation measures.

- **Mitigation Monitoring and Reporting Summary** - Outlines the impacts and mitigation measures, responsible entities, and the timing for monitoring and reporting for each mitigation measure included in this MMP.

DESCRIPTION OF PLAN

Mitigation Monitoring Procedures

This MMP delegates responsibilities for monitoring the project, and allows responsible City entities flexibility and discretion in determining how best to monitor implementation. Monitoring procedures will vary according to the type of mitigation measure. The timing for monitoring and reporting is described in the monitoring and reporting summary table, below. Adequate monitoring requires demonstration of monitoring procedures and implementation of mitigation measures.

In order to enhance the effectiveness of the monitoring program, the City will utilize existing systems where appropriate. For instance, with any major construction project, the administration generally has at least one inspector assigned to monitor project construction. These inspectors are familiar with a broad range of regulatory issues and will provide first line oversight for much of the monitoring program.

Responsibilities of the City include identification of typical mitigation measure-related issues such as noisy equipment, dust, safety problems, etc. Any problems are generally corrected through directions to the contractors or through other appropriate, established mechanisms. Internal reporting procedures are already in place to document any problems and to address broader implementation issues.

Reporting Procedures

The City would be responsible for monitoring and implementing the mitigation measures included in this monitoring plan. Reporting establishes a record that a mitigation measure is being implemented and generally involves the following steps:

- The City distributes reporting forms to the appropriate City Department (as indicated on the Mitigation Monitoring and Reporting forms) or employs the office's existing reporting process for verification of compliance.
- Responsible entities verify compliance by signing the monitoring and reporting form and/or documenting compliance using their own internal procedures when monitoring is triggered.
- Responsible entities provide the City with verification that monitoring has been conducted and ensure, as applicable, that mitigation measures have been implemented.

The reporting forms prepared by the City would document the implementation status of mitigation measures of the project. Progress reports describe the monitoring status of all project mitigation measures. The City will keep records of Project reporting forms and periodic status reports.

The City would also be responsible for assisting their contractor with reporting responsibilities to ensure that they understand their charge and complete their reporting procedures accurately and on schedule.

Public Availability

All monitoring reporting forms, summaries, data sheets, and correction instructions related to the Mitigation Monitoring Program for March Business Center would be available for public review upon request at the City of Moreno Valley Department of Public Works offices during normal business hours.

Program Changes

If minor changes are required to the MMP, they would be made in accordance with CEQA and would be permitted after further review by the City. Such changes could include reassignment of monitoring and reporting responsibilities and/or redesign to make any appropriate improvements. No change would be permitted unless the Mitigation Monitoring Program continues to satisfy the requirements of Public Resources Code §21081.6.

Types of Mitigation Measures Being Monitored

The Final Environmental Impact Report for the March Business Center Project is a "project specific" and "cumulative" evaluation as defined in the CEQA Guidelines.

The Final Environmental Impact Report recommends 39 project specific and cumulative mitigation measures to reduce impacts related to air quality, biological resources, cultural resources, greenhouse gas emissions, hazards and hazardous materials, noise, and transportation/traffic. Compliance with these mitigation measures will be accomplished through administrative controls over project planning and implementation. Monitoring would be accomplished as described previously under "Reporting Procedures" through verification and certification by personnel.

In general, implementation of the MMP will require the following actions:

- Appropriate mitigation measures would be included in construction documents.
- Departments with reporting responsibilities would review the Final Environmental Impact Report, which provides general background information on the reasons for including specified mitigation measures.
- Problems with or exceptions to compliance would be addressed by the City as appropriate.
- Periodic meetings may be held during project implementation to report on compliance with mitigation measures.

Mitigation Monitoring and Reporting Summary

Mitigation Measure	Responsible Party	Verification of Compliance	Timing	Start Date	Finish Date	Monitoring	
						Date	Monitor
Air Quality							
MM 4.2-1 Prior to grading permit issuance, the City shall verify that the following notes are included on the grading plan: "The contractor shall utilize California Air Resources Board (CARB) Tier III certified equipment or better for all off-road diesel-powered construction equipment greater than 50 horsepower." "Any emissions controls device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level 3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations, with the exception that afterburners are not required." "During construction activity, truck idling shall be limited to five minutes or less." "The contractor shall implement temporary traffic control during construction pursuant to the requirements of the California Manual on Uniform Traffic Control Devices." "The contractor shall assure that mass grading shall be limited to no more than 6.5 acres per day. The contractor shall maintain a log of daily mass grading activities, which shall be provided to the City upon request."	Project Applicant/ Developer	City of Moreno Valley Land Development Division	Prior to the issuance of grading permit(s)				
MM 4.2-2 Prior to issuance of each grading and building permit, the Project applicant or construction contractor shall prepare an exhibit for review by the City depicting the location of proposed equipment staging areas. The City shall review the proposed location(s) to ensure the staging areas are located at least 300-feet away from sensitive receptors and 1,105 feet from the northeastern corner of the Project site's property boundary as measured from the Iris Avenue right-of-way, as required by Mitigation Measure MM 4.10-1.	Project Applicant/ Developer	City of Moreno Valley Planning Division and Land Development Division	Prior to the issuance of grading permit(s) and building permits				
MM 4.2-3 The Project applicant shall use "Zero-Volatile Organic Compounds" paints (no more than 150 grams of VOC per liter) and/or High Pressure Low	Project Applicant/ Developer	SCAQMD, City of Moreno Valley Planning Division and	Prior to issuance of building permit(s). During construction				

Mitigation Measure	Responsible Party	Verification of Compliance	Timing	Start Date	Finish Date	Monitoring	
						Date	Monitor
Volume (HPLV) applications consistent with South Coast Air Quality Management District Rule 1113. Alternatively, the applicant shall use building materials that do not require painting or are pre-painted. Painting products and materials compliant with these requirements shall be noted on building plans.		Building Division	activities and ongoing during long-term operation				
MM 4.2-4 Prior to the issuance of each building permit, the City shall ensure that building plans require the placement of signs at truck access gates, loading docks, and truck parking areas to identify applicable California Air Resources Board (CARB) anti-idling regulations. At a minimum each sign shall include: 1) instructions for truck drivers to shut off engines when not in use; 2) instructions for drivers of diesel trucks to restrict idling to no more than three (3) minutes; and 3) telephone numbers of the building facilities manager and the CARB to report violations.	Project Applicant/ Developer	City of Moreno Valley Land Development Division and Building and Safety Division	Prior to the issuance of building permits				
MM 4.2-5 Prior to the issuance of each building permit, the City shall review the parking lot striping and security gating plan to ensure the site design allows adequate truck stacking at gates to prevent queuing of trucks outside the facility.	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division and Planning Division	Prior to the issuance of building permits				
MM 4.2-6 Prior to the issuance of occupancy permits, the applicant shall provide evidence that a sign has been installed at each exit driveway, providing directional information to the City's truck route. Text on the sign shall read "To Truck Route" with a directional arrow.	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division	Prior to the issuance of occupancy permits				
MM 4.2-7 Prior to the issuance of occupancy permits, the Project's property owner shall provide documentation to the Planning Division verifying that a provision is included in the building's lease agreement that informs tenants using a vehicle fleet older than 2007 about the availability of grant funding from available funding sources for truck retrofit and replacement.	Project Applicant/ Developer	City of Moreno Valley Planning Division	Prior to the issuance of occupancy permits				
MM 4.2-8 Prior to the issuance of occupancy permits, the Project's property owner shall provide documentation to the Planning Division verifying that a provision is included in the building's lease agreement that informs tenants about the availability of alternatively fueled cargo handling equipment. Compliance with SCAQMD Rule 403, "Fugitive Dust," is a mandatory requirement listed above as Project Requirement PR 4.2-2. The SCAQMD made specific recommendations regarding this Project	Project Applicant/ Developer	City of Moreno Valley Planning Division, SCAQMD	Prior to the issuance of occupancy permits				

Mitigation Measure	Responsible Party	Verification of Compliance	Timing	Start Date	Finish Date	Monitoring	
						Date	Monitor
related to SCAQMD Rule 403 compliance, which are listed below in Mitigation Measures MM 4.2-9 and MM 4.2-10.							
MM 4.2-9 Prior to grading permit issuance, the City shall verify that the following notes are listed on the grading plan: "Apply non-toxic soil stabilizers according to manufacturers' specifications to all inactive construction areas (previously graded areas inactive for ten days or more)." "All trucks hauling dirt, sand, soil, or other loose materials shall be covered." "Streets shall be swept at the end of each day if visible soil is carried onto adjacent paved public roads. Refer to SCAQMD Rule 1186.1, 'Less-Polluting Street Sweepers.' " "The construction contractor shall monitor wind speed by use of an anemometer. The contractor shall suspend all excavating and grading operations when instantaneous wind speeds exceed 25 miles per hour."	Project Applicant/ Developer, Project Construction Manager	City of Moreno Valley Land Development Division	Prior to grading permit issuance				
MM 4.2-10 Prior to the start of grading, the construction contractor shall post a sign at the property's frontage with Heacock Street and at the property's frontage with Iris Avenue stating the name and phone number of an individual to be contacted to resolve dust complaints. These signs shall remain posted on the property until grading is complete.	Project Construction Manager	City of Moreno Valley Land Development Division	Prior to the start of grading permit(s)				
Biological Resources							
MM 4.3-1 Within 30 days prior to grading, a qualified biologist shall conduct a survey of the property and make a determination regarding the presence or absence of the burrowing owl. The determination shall be documented in a report and shall be submitted, reviewed, and accepted by the Planning Division of the Community & Economic Development Department prior to the issuance of a grading permit and subject to the following provisions: a) In the event that the pre-construction survey identifies no burrowing owls on the property, a grading	Project Biologist	City of Moreno Valley Planning Division	Prior to the issuance of grading permit(s) and within 30 days prior to grading				

Mitigation Measure	Responsible Party	Verification of Compliance	Timing	Start Date	Finish Date	Monitoring	
						Date	Monitor
permit may be issued without restriction. b) In the event that the pre-construction survey identifies the presence of three (3) or more mating pairs of burrowing owl, the grading permit shall not be issued and the requirements of MSCHP Species-Specific Conservation Objective 6 for the burrowing owl shall be followed. MSHCP Species-Specific Conservation Objective 6 for the burrowing owl prohibits the take of active nests and allows passive relocation to be conducted by a qualified biologist outside of the breeding season. Passive relocation shall include the required use of one-way doors to exclude owls from the site and the collapsing of burrows). Passive relocation shall follow CDFG relocation protocol and shall only occur between September 15 and February 1. c) In the event that the pre-construction survey identifies the presence of at least one individual but less than three (3) mating pairs of burrowing owl, then prior to the issuance of a grading permit and prior to the commencement of ground-disturbing activities on the property, the qualified biologist shall passively relocate any burrowing owls, including the required use of one-way doors to exclude owls from the site and the collapsing of burrows. Passive relocation shall follow CDFG relocation protocol and shall only occur between September 15 and February 1.							
MM 4.3-2 Prior to the issuance of any grading permits, the Planning Division shall review grading plans to ensure that the following note is included on the plans: "No more than 30 days prior to commencement of ground-disturbing activities on site, a qualified biologist shall conduct pre-construction presence/absence surveys in accordance with the MSHCP Burrowing Owl Survey Instructions requirements and as required by MSHCP Objective 6 for the burrowing owl. If owls are determined to be present, grading shall not commence between February 1 and September 15. Between September 15 and February 1, grading may commence only after the qualified biologist has passively relocated the owls following CDFG protocol."	Project Applicant/ Developer	City of Moreno Valley Planning Division	Prior to the issuance of grading permit(s)				

Mitigation Measure	Responsible Party	Verification of Compliance	Timing	Start Date	Finish Date	Monitoring	
						Date	Monitor
MM 4.3-3 As a condition of approval for all grading permits, vegetation clearing and ground disturbance shall be prohibited during the migratory bird nesting season (February 1 through September 15), unless a migratory bird nesting survey is completed in accordance with the following requirements: a) A nesting bird survey shall be conducted by a qualified biologist within three (3) days prior to initiating vegetation clearing or ground disturbance. b) A copy of the nesting bird survey results report shall be provided to the City of Moreno Valley. If the results of the nesting bird survey identify the presence of active nests on the property, then the qualified biologist shall provide the City of Moreno Valley Planning Division with a copy of maps showing the location of all nests and an appropriate buffer zone around each nest sufficient to protect the nest from direct and indirect impact. The size and location of all buffer zones, if required, shall be subject to review and approval by the Planning Division and shall be no less than a 300-foot radius around the nest for migratory birds and a 500-foot radius around the nest for raptors. The nests and buffer zones shall be field checked weekly by a qualified biological monitor. The approved buffer zone shall be marked in the field with construction fencing, within which no vegetation clearing or ground disturbance shall commence until the qualified biologist and City Planning Division verify that the nests are no longer occupied and the juvenile birds can survive independently from the nests.	Project Biologist	City of Moreno Valley Planning Division	Prior to the issuance of grading permit(s)				
MM 4.3-4 Prior to the issuance of grading permits, and in accordance with the California Fish and Game (CDFG) Code, the Project shall obtain a Section 1602 Streambed Alteration Agreement from the California Department of Fish and Game (CDFG) for impact to 0.06-acre of CDFG jurisdictional area in the Perris Valley Storm Drain Channel. As part of the Agreement, the Project Applicant may acquire credits for the impact at a minimum 1:1 ratio from an approved in-lieu fee program or mitigation land bank.	Project Applicant/ Developer, CDFG	City of Moreno Valley Planning Division	Prior to the issuance of grading permit(s)				
MM 4.3-5 Prior to the issuance of grading permits, and in accordance with the Clean Water Act, the Project shall obtain a Section 404 Permit from the U.S. Army Corps of Engineers (Corps) and a Section 401	Project Applicant/ Developer, Corps, RWQCB	City of Moreno Valley Planning Division	Prior to the issuance of grading permit(s)				

Mitigation Measure	Responsible Party	Verification of Compliance	Timing	Start Date	Finish Date	Monitoring	
						Date	Monitor
Permit from the Regional Water Quality Control Board (RWQCB) for impact to 0.05-acre of Corps and RWQCB jurisdictional area in the Perris Valley Storm Drain Channel. As part of the Permits, the Project Applicant may acquire credits for the impact at a minimum 1:1 ratio from an approved in-lieu fee program or mitigation land bank							
Cultural Resources							
MM 4.4-1 Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a qualified professional archaeological monitor has been retained by the Applicant to conduct monitoring of all mass grading and trenching activities and has the authority to halt and redirect earthmoving activities in the event that suspected archeological resources are unearthed during Project construction.	Project Applicant/ Developer, Project Construction Manager, Project Archaeologist	City of Moreno Valley Land Development Division and Planning Division	Prior to the issuance of a grading permit				
MM 4.4-2 Prior to the issuance of a grading permit, the Applicant shall provide evidence to the City of Moreno Valley that appropriate Native American representative(s) [shall be allowed to monitor and have received a minimum of 30 days advance notice of all mass grading and trenching activities. Prior to grading permit issuance, appropriate local Native American representative(s) shall be notified in writing by the applicant of the pending grading activities. During grading and trenching operations, a professional archaeological monitor shall observe all mass grading and trenching activities. If the monitor suspects that an archaeological resource may have been unearthed, the monitor shall immediately halt and redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. If the monitor determines that the suspected resource is potentially significant, the archaeologist shall notify the appropriate Native American Tribe(s)and invite a tribal representative to consult on the resource evaluation. In consultation with the appropriate Native American Tribe(s), the archaeological monitor shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2. If the resource is significant, Mitigation Measure MM 4.4-3	Project Applicant/Project Archeologist	City of Moreno Valley Land Development Division and Planning Division	Prior to the issuance of a grading permit and during grading and trenching operations				

Mitigation Measure	Responsible Party	Verification of Compliance	Timing	Start Date	Finish Date	Monitoring	
						Date	Monitor
shall apply.							
MM 4.4-3 If a significant archaeological resource(s) is discovered on the property, ground disturbing activities shall be suspended 100 feet around the resource(s). The archaeological monitor and a representative of the appropriate Native American Tribe(s), the Project Applicant, and the City Planning Division shall confer regarding mitigation of the discovered resource(s). A treatment plan shall be prepared and implemented by the archaeologist to protect the identified archaeological resource(s) from damage and destruction. The landowner shall relinquish ownership of all archaeological artifacts that are of Native American origin found on the Project site to the culturally affiliated Native American tribe for proper treatment and disposition. A final report containing the significance and treatment findings shall be prepared by the archaeologist and submitted to the City Planning Division, the appropriate Native American tribe(s), and the Eastern Information Center.	Project Archeologist	City of Moreno Valley Planning Division	During grading and trenching operations				
MM 4.4-4 Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan: "If any suspected archaeological resources are discovered during ground-disturbing activities, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call a qualified archaeologist to the site to assess the significance of the find.	Project Applicant/ Developer, Project Construction Manager, Project Archaeologist	City of Moreno Valley Land Development Division and Planning Division	Prior to issuance of a grading permit				
MM 4.4-5 Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan: "If any suspected paleontological resources are discovered during ground-disturbing activities, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call a qualified paleontologist to the site to assess the significance of the find. A qualified paleontologist shall evaluate the suspected resource. If the paleontologist determines that the find is not unique, construction shall be permitted to proceed. However, if the paleontologist determines that further information is needed to evaluate	Project Applicant/ Developer, Project Construction Manager, Project Paleontologist	City of Moreno Valley Land Development Division and Planning Division	Prior to issuance of a grading permit				

Mitigation Measure	Responsible Party	Verification of Compliance	Timing	Start Date	Finish Date	Monitoring	
						Date	Monitor
significance, the City of Moreno Valley shall be notified and a treatment plan shall be prepared and implemented in consultation with the City to protect the identified paleontological resource(s) from damage and destruction."							
MM 4.4-6 If human remains are encountered, California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to California Public Resources Code Section 5097.98(b), remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made by the Coroner. If the Riverside County Coroner determines the remains to be Native American, the California Native American Heritage Commission must be contacted within 24 hours. The Native American Heritage Commission must then immediately notify the "most likely descendants" of receiving notification of the discovery. The most likely descendants shall then make recommendations within 48 hours, and engage in consultations concerning the treatment of the remains as provided in Public Resources Code §5097.98.	Project Construction Manager; Riverside County Coroner	City of Moreno Valley Land Development Division and Planning Division	Ongoing during grading, earthwork, and trenching activities				
Greenhouse Gas Emissions							
MM 4.6-1 The Project's construction drawings shall be designed to achieve certification under the U.S. Green Building Council's Leadership in Energy and Environmental Design (LEED) program. Prior to issuance of a building permit, the applicant shall provide a letter from a qualified LEED consultant verifying that proposed building design features are adequate to seek LEED certification. Following final building inspection, the Project applicant shall seek LEED Certification pursuant to the procedures set forth by the Green Building Certification Institute.	Project Applicant/ Developer	City of Moreno Valley Planning Division and Building and Safety Division	Prior to issuance of building permits and following final building inspection				
MM 4.6-2 Prior to the issuance of grading and building permits, the Planning Division and the Land Development Division shall review grading plans and building plans to ensure that the following notes are specified: "With the exception of equipment used for asphalt paving, trenching, and off-site improvements, all diesel-powered construction equipment shall use B20 biodiesel fuel (comprising a minimum of 20% biodiesel) for the duration of construction activities.	Project Applicant/ Developer	City of Moreno Valley Planning Division and Land Development Division	Prior to issuance of grading and building permits				

Mitigation Measure	Responsible Party	Verification of Compliance	Timing	Start Date	Finish Date	Monitoring	
						Date	Monitor
Any construction equipment whose warranty would be voided upon the use of B20 biodiesel fuel shall be exempt from this requirement. The Building and Safety Division may exempt additional pieces of equipment from this requirement upon written request from the Project applicant documenting a valid technical, economic, or physical reason why the use of B20 biodiesel fuel cannot be used. This requirement shall only apply if B20 biodiesel fuel is available within 15 roadway miles from the Project site at the time construction activities commence." "During Project construction, existing electrical power sources (e.g., power poles) shall be provided for electric construction tools including saws, drills and compressors, to minimize the need for diesel or gasoline powered electric generators."							
MM 4.6-3 Prior to the approval of building permits, the Planning Division shall review landscaping plans to ensure that the following components are included: a) Landscaping palette emphasizing drought tolerant plants; and b) Use of water-efficient irrigation techniques.	Project Applicant/ Developer	City of Moreno Valley Planning Division	Prior to approval of building permits				
MM 4.6-4 The Project's mechanical/electrical /plumbing (MEP) plans shall specify U.S. EPA Certified WaterSense labeled or equivalent faucets, high-efficiency toilets (HETs), and water-conserving shower heads (if showers are proposed). Prior to the approval of building permits, the Building and Safety Division shall review the plans to ensure that these features are specified, as appropriate.	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division	Prior to the approval of building permits				
MM 4.6-5 Prior to the issuance of building permits, the Project applicant shall submit energy usage calculations to the Planning Division showing that the Project is designed to achieve 8% efficiency beyond the 2008 California Building Code Title 24 requirements. Example of measures that reduce energy consumption include, but are not limited to, the following (it being understood that the items listed below are not all required and merely present examples; the list is not all-inclusive and other features that reduce energy consumption also are acceptable): a) Increase in insulation such that heat transfer and thermal bridging is minimized; b) Limit air leakage through the structure and/or	Project Applicant/ Developer	City of Moreno Valley Planning Division and Building and Safety Division	Prior to the issuance of building permits				

Mitigation Measure	Responsible Party	Verification of Compliance	Timing	Start Date	Finish Date	Monitoring	
						Date	Monitor
within the heating and cooling distribution system; c) Use of energy-efficient space heating and cooling equipment; d) Installation of electrical hook-ups at loading dock areas; e) Installation of dual-paned or other energy efficient windows; f) Use of interior and exterior energy efficient lighting that exceeds the 2008 California Title 24 Energy Efficiency performance standards; g) Installation of automatic devices to turn off lights where they are not needed; h) To the extent they are compatible with Moreno Valley Municipal Code §9.17.030, Landscape and Irrigation Design Standards, the incorporation of shade-producing trees, particularly those that shade buildings and paved surfaces such as streets and parking lots; i) Application of a paint and surface color palette that emphasizes light and off-white colors that reflect heat away from buildings; j) Design of buildings with "cool roofs" using products certified by the Cool Roof Rating Council, and/or exposed roof surfaces using light and off-white colors; k) Design of buildings to accommodate photo-voltaic solar electricity systems or the installation of photo-voltaic solar electricity systems; l) Installation of ENERGY STAR-qualified energy-efficient appliances, heating and cooling systems, office equipment, and/or lighting products; and/or m) Other measures incorporated as part of the LEED Certification process.							
MM 4.6-6 Prior to the approval of street improvement plans, the Transportation Engineering Division shall ensure that all traffic lights installed as part of the Project will utilize Light Emitting Diodes.	Project Applicant/ Developer	City of Moreno Valley Department of Public Works (Transportation Engineering Division)	Prior to approval of street improvement plans				
MM 4.6-7 The Project shall comply with the following requirements to reduce the generation of solid waste during construction and under long-term operating conditions:	Project Applicant/ Developer	City of Moreno Valley Public Works Department Recycling Team, City of Moreno Valley	Prior to the issuance of grading permits, during construction, and prior to the issuance of

						Date	Monitor
a) Prior to the issuance of grading permits, a Waste Management Plan (WMP) addressing construction activity wastes shall be prepared by the Project Applicant and submitted to the Public Works Department and Building and Safety Division for review and approval. The WRP must conform to City requirements specified in Municipal Code Section 8.80.030, which requires that at least 50 percent of all construction and demolition debris be reused, recycled, or otherwise diverted from disposal in a landfill. During grading and construction, the Project Applicant shall recycle and reuse the required percentage of materials, and keep records of the tonnage or other measurements approved by the City that can be converted to tonnage amounts. Prior to issuance of an occupancy permit, the Project Applicant shall provide evidence (i.e., receipts, weight tags, or other type of acceptable verifications) to the Public Works Department to demonstrate Project compliance with the approved WRP. Evidence must clearly identify the amount of waste disposed and materials recycled. b) Recycling shall occur during Project operational activities in accordance with all applicable solid waste and recycling requirements of the City of Moreno Valley Public Works Department. Prior to the issuance of building permits, the Building and Safety Division shall review building plans to ensure that the locations and dimensions of recyclable collection enclosures and loading areas are specified on the building plans in conformance with City requirements and City Municipal Code Chapter 6.02 "Refuse Collection, Transfer and Disposal." Prior to the issuance of occupancy permits, the Land Development Division shall conduct a field inspection to ensure that the recyclable collection enclosures and loading areas are in place and ready for use		Building and Safety Division City of Moreno Valley Public Works Department Recycling Team, City of Moreno Valley Building and Safety Division	occupancy permits Prior to the issuance of building permits and prior to the issuance of occupancy permits				
MM 4.6-8 Prior to the issuance of building permits, the Planning Division shall review building plans to ensure that a minimum of two (2) parking spaces for each building will be reserved for carpools and vanpools. Prior to the issuance of occupancy permits, the Planning Division shall conduct a field inspection to ensure that a minimum of two (2) parking spaces for each building are marked as reserved for carpools and	Project Applicant/ Developer	City of Moreno Valley Planning Division	Prior to the issuance of building permits and prior to the issuance of occupancy permits

						Date	Monitor
vanpools.							
MM 4.6-9 Prior to the issuance of building permits for Parcel 1, the Planning Division and Building and Safety Division shall review building plans to ensure that a minimum of two (2) electric vehicle charging stations will be provided. Prior to the issuance of occupancy permits for Parcel 1, the Planning Division and Building and Safety Division shall conduct a field inspection to verify that the electric vehicle charging stations are in place and operable.	Project Applicant/ Developer	City of Moreno Valley Planning Division and Building and Safety Division	Prior to the issuance of building permits for Parcel 1 and prior to the issuance of occupancy permits for Parcel 1				
MM 4.6-10 Prior to the issuance of occupancy permit, the Project's property owner shall provide documentation to the Planning Division verifying that a provision is included in the building's lease agreement which stipulates that tenants of the building shall encourage carpooling and transit ridership by on-site employees.	Project Applicant/ Property Owner	City of Moreno Valley Planning Division	Prior to the issuance of occupancy permits				
Hazards and Hazardous Materials							
MM 4.7-1 Prior to grading permit issuance, the City shall verify that the Project's Grading Plan indicates: a) the location of all groundwater monitoring wells to be preserved in place; b) the method used to flag, stake, or otherwise identify the location of the groundwater monitoring wells in the field; and c) any required grading procedures or precautions to be taken in the vicinity of the monitoring well locations.	Project Applicant/ Developer	City of Moreno Valley Land Development Division	Prior to the issuance of grading permit(s)				
MM 4.7-2 Prior to the issuance of grading permits, the City of Moreno Valley Land Development Division shall ensure that the Project's required Stormwater Pollution Prevention Plan (SWPPP) includes emergency procedures for accidental hazardous materials releases during construction. The procedures shall include necessary personal protective equipment, spill containment procedures, and training of workers to respond to accidental spills/releases.	Project Applicant/ Developer	City of Moreno Valley Land Development Division	Prior to the issuance of grading permit(s)				
Noise							
MM 4.10-1 Prior to the issuance of any building or grading permits, the City of Moreno Valley Land Development division and Building and Safety Division shall review building and grading plans to ensure that the following notes are included: a) All construction activities, including but not limited to haul truck deliveries, shall be limited to	Project Applicant/ Developer, Project Construction Manager	City of Moreno Valley Land Development Division and Building and Safety Division	Prior to the issuance of grading permit(s) and building permit(s)

						Date	Monitor
between the hours of 7:00 a.m. and 8:00 p.m. b) Construction contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers, consistent with manufacturers' standards. c) All stationary construction equipment shall be placed in such a manner so that emitted noise is directed away from the construction site's north and east property boundaries. d) Equipment staging shall be located at a minimum distance of 1,105 feet from the northeastern corner of the Project site's property boundary, as measured from the Iris Avenue right-of-way. e) All haul truck deliveries shall be limited to approved haul routes. Should alternate routes be necessary, haul trucks shall not use roadways that pass noise-sensitive land uses or residential dwellings unless approved by the City of Moreno Valley.							
MM 4.10-2 Prior to the issuance of any building or grading permits, the Project applicant shall prepare a Construction Haul Route exhibit identifying all public and private roadways that will be used for haul truck deliveries. The Construction Haul Route exhibit shall explicitly prohibit the use of Iris Avenue. The Construction Haul Route exhibit shall be subject to review and approval by the Building and Safety Division. Once approved, copies of the Construction Haul Route exhibit shall be provided to all construction contractors, and all construction contractors shall ensure that haul truck deliveries utilize only City-approved haul routes. Should alternate routes be necessary, haul trucks shall not use roadways that pass noise-sensitive land uses or residential dwellings unless prior approval is granted by the City of Moreno Valley.	Project Applicant/ Developer	City of Moreno Valley Land Development Division, Building, Safety Division and Transportation Engineering Division	Prior to the issuance of grading permit(s) and building permits				
Transportation/Traffic							
MM 4.11-1 Prior to issuance of the Project's first occupancy permit, a traffic signal (programmed under the City of Moreno Valley DIF) shall be installed at the intersection of Heacock Street/Gentian Avenue.	Project Applicant/ Developer	City of Moreno Valley Public Works Department (Transportation Engineering Division)	Prior to the issuance of the first (1st) occupancy permit				
MM 4.11-2 Prior to issuance of the first occupancy permit, the following improvements shall be in place at	Project Applicant/ Developer	City of Moreno Valley Public Works	Prior to the issuance of the first (1st)				

Mitigation Measure	Responsible Party	Verification of Compliance	Timing	Start Date	Finish Date	Monitoring	
						Date	Monitor
the intersection of Heacock Street/Iris Avenue: a) Traffic signal b) Northbound: two through lanes c) Northbound: one right turn lane		Department (Transportation Engineering Division)	occupancy permit				
MM 4.11-3 In the event that the City of Moreno Valley and/or the City of Perris establish a fair-share funding program(s) for improvements to any of the following intersections or immediately adjacent roadway segments that contribute to the intersection's level of service, then prior to the issuance of building permits, the Project shall contribute a fair-share payment to the funding program to address the Project's cumulative impacts to the following facilities: a) Intersection of Heacock Street/Cactus Avenue (Project's fair-share contribution is 6.4%); b) Intersection of Indian Street/San Michele Road (Project's traffic contribution is 5.8%); c) Intersection of Indian Street/Nandina Avenue (Project's traffic contribution is 7.5%); d) Intersection of Indian Street/Harley Knox Blvd (Project's traffic contribution is 5.4%).	Project Applicant/ Developer	City of Moreno Valley Land Development Division and Public Works Department (Transportation Engineering Division)	Prior to the issuance of building permits				
MM 4.11-4 In the event that the City of Moreno Valley establishes a fair-share funding program for improvements to Indian Street between Iris Avenue and Gentian Avenue prior to the issuance of building permits, the Project shall contribute a fair-share payment to the City-established funding program to address the Project's cumulative impacts at General Plan buildout.	Project Applicant/ Developer	City of Moreno Valley Land Development Division and Public Works Department (Transportation Engineering Division)	Prior to the issuance of building permits

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY APPROVIING A GENERAL PLAN AMENDMENT (PA11-0001) AND SPECIFIC PLAN AMENDMENT (P11-004) TO AMEND THE GENERAL PLAN CIRCULATION ELEMENT AND SPECIFIC PLAN NO. 208 TO MODIFY THE DESIGN AND CLASSIFICATION OF AN UNDEVELOPED SEGMENT OF KRAMERIA AVENUE BETWEEN INDIAN AVENUE AND HEACOCK STREET FROM A MINOR ARTERIAL (88 FOOT RIGHT OF WAY) TO AN INDUSTRIAL COLLECTOR (78 FOOT RIGHT OF WAY)

WHEREAS, the applicant, Hogle Ireland Inc, and representative, Western Realco LLC has filed an application for the approval of a Specific Plan Amendment (P11-004) and General Plan Amendment (PA11-0001) as provided in the title of this report for an approximately 1,484,407 square foot industrial warehouse complex consisting on an approximately 75.05 acre (66.93 net acre) portion of land located on the southeast corner of Iris Avenue and Heacock Street.

WHEREAS, the project also includes applications for an Environmental Impact Report (EIR) (P11-004), a tentative parcel map (PA11-0007) and individual plot plans (PA11-0002 through PA11-0006). All are related, but will be included in additional resolutions with individual findings**.**

WHEREAS, on December 13, 2012 the Planning Commission of the City of Moreno Valley held a meeting to consider the application and provide a recommendation to City Council. At said meeting, the Planning Commission recommended approval of the General Plan Amendment, Specific Plan Amendment and project to the City Council.

WHEREAS, on January 22, 2013, the City Council of the City of Moreno Valley conducted a public meeting to consider the application and amendments. At said meeting, the City Council approved the General Plan Amendment and Specific Plan Amendment.

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

WHEREAS, there is hereby imposed on the subject development project certain fees, dedications, reservations and other exactions pursuant to state law and City ordinances.

WHEREAS, pursuant to Government Code Section 66020(d)(1), **NOTICE IS HEREBY GIVEN** that this project is subject to certain fees, dedications, reservations and other exactions as provided herein.

NOW, THEREFORE, BE IT HEREBY FOUND, DETERMINED AND RESOLVED by the City Council of the City of Moreno Valley as follows:

A. This City Council hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this City Council during the above-referenced meeting on January 22, 2013, including written and oral staff reports, and the record from the public hearing, this City Council hereby specifically finds as follows:

1. **Conformance with General Plan Policies –** The proposed use is consistent with the General Plan, and its goals, objectives, policies and programs.

   FACT: The proposed General Plan and Specific Plan amendments include modification of the design and classification of an undeveloped segment of Krameria Avenue to accommodate the development and to downgrade the roadway classification of Krameria Avenue between Indian Avenue and Heacock Street from a minor arterial (88 foot right of way) to an Industrial Collector (78 foot right of way). The proposed industrial land use is consistent with the BP (Business Park) land use district in the General Plan, while the proposed General Plan amendment for the proposed development would not cause an inconsistency of land use.

   The project would include conditions and mitigation measures for the lessening of proposed environmental impacts including noise air quality and traffic (however, not all below significant levels) based on the analysis and recommendations contained in the Final Environmental Impact Report (EIR) and corresponding Statement of Overriding Considerations. Said conditions of approval and mitigation measures have been included to address specific requirements and assist in providing compatibility of land uses, including, but not limited to site improvements and aesthetic enhancements.

2. **Conformance with Zoning Regulations –** The proposed use complies with all applicable zoning and other regulations

FACT: The proposed project, consisting of various industrial uses requires General Plan and Specific Plan Amendments to allow modifications to an undeveloped segment of Krameria Avenue. No land use amendments are proposed for this project. The proposed project, including the proposed changes to Krameria Avenue, conforms with all applicable zoning regulations and conforms with the I or Industrial zoning district requirements within Specific Plan No. 208 which would allow for a variety of industrial land uses.

The project will also include mitigation measures for the lessening of proposed environmental impacts including aesthetics, agriculture, noise, air quality, climate change (however, not below significant levels) based on the analysis and recommendations contained in the Final Environmental Impact Report (EIR) and corresponding Statement of Overriding Considerations. Said conditions of approval and mitigation measures have been included to address specific requirements and assist in providing compatibility of land uses, including, but not limited to site improvements and aesthetic enhancements.

3. **Health, Safety and Welfare –** The proposed use will not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the vicinity.

FACT: An Environmental Impact report (EIR) has been prepared for the overall project, including the proposed project. Findings and a Statement of Overriding Considerations have been prepared for said project to deal with impacts related to noise, air quality and traffic. Said EIR is required to be certified and approved as a part of the proposed project. Said document is accompanied by a Mitigation Monitoring Program, which will ensure the completion of required mitigation measures for the project. The project site is surrounded by Iris Avenue and Heacock Street, and primarily vacant industrial land to the north, east and south, a residential subdivision northeast of the project site and the March Air Reserve Base to the west.

Specific mitigation measures have been provided to lessen the impacts (but not all below significant levels) for public health, safety and the welfare of surrounding properties and improvements in the vicinity of the project. Other mitigation measures throughout the EIR reduce the remaining environmental impacts noted in the EIR to less than significant levels.

With mitigation measures imposed for items including noise, air quality and traffic, the environmental impacts from the proposed project and use will be significantly reduced but still considered as significant and unavoidable, thereby requiring a statement of overriding considerations. Said mitigation measures included with the project will lessen environmental impacts on any existing or future properties within the general vicinity of the proposed development and project and reduce impacts to public health, safety and welfare.

BE IT FURTHER RESOLVED that the City Council **HEREBY APPROVES** Resolution No. 2013-____, **APPROVING** the General Plan Amendment (PA11-0001) and Specific Plan Amendment (P11-004) for the modification of the design and classification of an undeveloped segment of Krameria Avenue between Indian Avenue and Heacock Street from a minor arterial (88 foot right of way) to an Industrial Collector (78 foot right of way), as documented in Exhibit A and B, attached to this resolution, and based on the affirmative recommendation of the Adoption and Certification of the Environmental Impact Report Mitigation Monitoring Program and Statement of Overriding Considerations .

APPROVED and ADDOPTED this 22nd day of January, 2013.

b. Divided Major Arterials

Divided major arterials will consist of a 110-foot right-of-way width and an 86-foot curb-to-curb width, with a raised median and two travel lanes in each direction. Bicycle/parking lanes and sidewalks shall be provided per City Standards. Divided major arterials planned for the Project area include:
Perris Boulevard

c. Major Arterials

Major arterials will consist of a 100-foot right-of-way width and a 76-foot curb-to-curb width, with two travel lanes in each direction. Bicycle/parking lanes and sidewalks shall be provided per City Standards. Major arterials planned for the Project area include:

Kitching Street
Heacock Street
Iris Avenue
San Michele Avenue

d. Minor Arterials

Minor arterials within and surrounding the site have a planned right-of-way width of 88 feet and a curb-to-curb width of 64 feet. Two travel lanes are planned in each direction. Bicycle/parking lanes and sidewalks shall be provided per City Standards. Minor arterials planned for the construction and improvement within the Project site include:

Krameria Avenue (Kitching Street to Indian Street)
Nandina Avenue (Indian Street to ~~Kitching St.~~ Perris Blvd.)
Indian Street

e. Collector Streets

Internal Industrial/Commercial Collector roadways within Project sub-areas are planned for a 78-foot right-of-way and a curb-to-curb width of 56 feet. A six-foot (6') public sidewalk is included within the parkway width on both sides of the road. These roadways provide loop circulation within the Project sub-areas and

allow for access to land uses.
Krameria Avenue (Indian Street to Heacock Street)

f. Local Streets and Cul de Sacs

Local streets within the Project area provide internal circulation to individual industrial or business park uses. Sidewalks shall be provided in the public right-of-way in accordance with City standards.
Proposed Cosmos Street

g. Truck Routes

The Public Works Department has established truck routes for the City. The only currently approved routes in the Project area are Perris Boulevard and a portion of Heacock Street. With the implementation of funded improvements to San Michele Avenue and Indian Street, these streets along with additional portions of Heacock Street should be considered for inclusion in the City's approved truck route list.

h. Pedestrian Paths and Bikeways

The Project Development Plan provides a trail system for non-vehicular traffic within the Project area. The system consists of two components: pedestrian sidewalks and bikeways.

Pedestrian Sidewalks: A sidewalk system throughout the Area Plan shall be located in all street rights-of-ways and shall be developed in accordance with City standards.

Where pedestrian pathways are proposed, an additional three (3) foot width of sidewalk shall be provided.

Bikeways: A Class II or III bikeway shall be provided on arterials in accordance with the City's General Plan Circulation Element, as illustrated on Map IV-2.

i. Parking

Off-street parking will be provided in lots associated with each building or building complex. On-street parking will be permitted on major arterials within and surrounding the Project site as outlined in the City's Development Code.

Kitching Street
Heacock Street
Iris Avenue
San Michele Avenue

Minor Arterials (88' ROW)

Krameria Avenue (between Kitching and Indian Street)
Nandina Avenue (between Indian St. & ~~Kitching St~~. Perris Blvd.)
Indian Street

Industrial Collector (78' ROW):
Krameria Avenue (between Indian Street and Heacock Street)

Infrastructure and Public Facilities: The Project Development Plan includes master plans for water, sewer, and drainage facilities capable of providing an adequate level of service to the Project land uses. The proposed water system includes the appropriate fire flow requirements for the Project. Waste collection service will be arranged through the private collection companies that service the area.

Infrastructure will be phased to provide service to Project land uses as development occurs and through the use of collected mitigation/impact fees.

RESOLUTION NO. 2013-07

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY CALIFORNIA APPROVING PA11-0002 THROUGH PA11-0006 (MASTER PLOT PLAN AND FOUR INDIVIDUAL PLOT PLANS) FOR AN APPROXIMATE 1,484,407 SQUARE FOOT INDUSTRIAL WAREHOUSE COMPLEX WITH ANCILLARY AND OFFICE USES ON AN APPROXIMATELY 75.05 GROSS ACRE (66.93 NET ACRE) PORTION OF LAND GENERALLY LOCATED ON THE SOUTHEAST CORNER OF IRIS AVENUE AND HEACOCK STREET

WHEREAS, the applicant, Hogle Ireland Inc, and representative, Western Realco LLC has filed an application for the approval of PA11-0002 through PA11-0006 (Master and Individual Plot Plans) consisting of an approximately 1,484,407 square foot industrial warehouse complex consisting of four parcels of land, with ancillary and office uses, on an approximately 75 acre (67 net acre) portion of land located on the southeast corner of Moreno Beach Drive and Iris Avenue

WHEREAS, the project also includes applications for an Environmental Impact Report (EIR) under P11-005, a Specific Plan Amendment (P11-004), General Plan Amendment (PA11-0001) and Tentative Tract Map No. 35879 (PA11-0007). All of the discretionary applications are related but will be provided in additional resolutions with individual findings.

WHEREAS, on December 13, 2012, the Planning Commission of the City of Moreno Valley held a public meeting to consider and provide a recommendation on the application. At said meeting, the Planning Commission recommended the project and plot plans to the City Council for approval.

WHEREAS, on January 22, 2013, the City Council of the City of Moreno Valley held a public meeting to consider and approve the application

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

WHEREAS, there is hereby imposed on the subject development project certain fees, dedications, reservations and other exactions pursuant to state law and City ordinances;

WHEREAS, pursuant to Government Code Section 66020(d)(1), **NOTICE IS HEREBY GIVEN** that this project is subject to certain fees, dedications, reservations and other exactions as provided herein.

NOW, THEREFORE, BE IT HEREBY FOUND, DETERMINED AND RESOLVED by the City Council of the City of Moreno Valley as follows:

A. This Planning Commission hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this City Council during the above-referenced meeting on January 22, 2013, including written and oral staff reports, and the record from the public hearing, this Planning Commission hereby specifically finds as follows:

1. **Conformance with General Plan Policies –** The proposed use is consistent with the General Plan, and its goals, objectives, policies and programs.

   FACT: The project proposes approximately 1,484,407 square feet of warehouse and manufacturing uses on approximately 75 acres of land area (approximately 67 net acres of land), to include four separate industrial buildings including Parcel 1- 47.42 acres and a 1,103,003 square feet building, Parcel 2 – 11.77 acres and a 277,243 square foot building, Parcel 3 – 5.95 acre parcel and a 87,429 square foot building and Parcel 4 – 1.54 acre parcel and a 16,732 square foot building. The proposal is consistent with the General Plan land use designation of BP or Business Park, which allows for a variety of industrial related land uses from office and business park uses to warehouse and manufacturing uses.

   Greater compatibility of the proposed land use with surrounding land uses in the general vicinity of the project will be achieved by project design, mitigation and conditions of approval. For example, dense landscape and proposed fourteen (14) foot screen walls used for screening purposes will allow for necessary compatibility of the intended industrial warehouse use with any surrounding commercial, business park or residential properties in the general vicinity that would be developed in the future.

2. **Conformance with Zoning Regulations –** The proposed use complies with all applicable zoning and other regulations.

   FACT: The proposed project conforms with all applicable zoning regulations and conforms with the I or Industrial zoning district

requirements within Specific Plan No. 208 which would allow for a variety of industrial land uses. Various conditions of approval have also been included to address specific requirements, including but not limited to site improvements and aesthetic enhancements.

3. **Health, Safety and Welfare –** The proposed use will not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the vicinity.

FACT: An Environmental Impact report (EIR) has been prepared for the overall project, including the proposed General Plan and Specific Plan amendments. Findings and a Statement of Overriding Considerations has been prepared for said project to review impacts related to aesthetics, agriculture, air quality, noise as well as climate change and greenhouse gas emissions. Said EIR is required to be certified and approved as a part of the proposed project. Said document is also accompanied by a Mitigation Monitoring Program, which ensures the completion of required mitigation measures for the project. The project site is surrounded by Iris Avenue and Heacock Street, and primarily vacant industrial land to the north, east and south, a residential subdivision northeast of the project site and the March Air Reserve Base to the west.

Specific mitigation measures have been provided to lessen the impacts (but not all below significant levels) for public health, safety and the welfare of surrounding properties and improvements in the vicinity of the project. Other mitigation measures throughout the EIR reduce the remaining environmental impacts noted in the EIR to less than significant levels**.**

With the above mitigation measures imposed for air quality, noise and traffic**,** any environmental impacts from the proposed project and use will be significantly reduced but are still considered as significant and unavoidable, thereby requiring a statement of overriding considerations. Said mitigation measures included with the project will lessen environmental impacts on any existing or future properties within the general vicinity on the proposed development and project and reduce impacts to public health, safety and welfare.

4. Location, Design and Operation – The location, design and operation of the proposed project will be compatible with existing and planned land uses in the vicinity.

FACT: Surrounding land uses include the March Air Reserve Base to the west, vacant industrial land across Iris Avenue to the north, vacant industrial land to the east and south. The closest single-family residential land uses lie to the northeast of the site across Iris Avenue. The location, design and operation of the proposed project will be compatible with existing and planned land uses in the general vicinity with proposed mitigation measures, conditions of approval and design of the plot plan and architecture of the buildings. For example, dense landscape and proposed fourteen (14) foot high screen walls provided for screening purposes will allow for necessary compatibility of the use with any surrounding properties in the general vicinity that would be developed in the future.

The location, design and operation of the proposed project will be compatible with existing and planned land uses with mitigation measures imposed for noise, air quality, and traffic. Said mitigation measures included with the project will lessen environmental impacts on any existing or future properties within the general vicinity of the proposed development and project, reduce impacts to public health, safety and welfare, and provide greater compatibility of land uses between the proposed project and surrounding properties in the general vicinity.

C. FEES, DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

1. Impact, mitigation and other fees are due and payable under currently applicable ordinances and resolutions. These fees may include but are not limited to: Development impact fee, Stephens Kangaroo Habitat Conservation fee, Underground Utilities in lieu Fee, Area Drainage Plan fee, Bridge and Thoroughfare Mitigation fee (Future) and Traffic Signal Mitigation fee. The final amount of fees payable is dependent upon information provided by the applicant and will be determined at the time the fees become due and payable.

Unless otherwise provided for by this resolution, all impact fees shall be calculated and collected at the time and in the manner provided in Chapter 3.32 of the City of Moreno Valley Municipal Code or as so provided in the applicable ordinances and resolutions. The City expressly reserves the right to amend the fees and the fee calculations consistent with applicable law.

2. DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

The adopted Conditions of Approval for PA11-0002 through PA11-0006 (Plot Plans) incorporated herein by reference, may include dedications, reservations, and exactions pursuant to Government Code Section 66020 (d) (1).

3. The City expressly reserves the right to establish, modify or adjust any fee, dedication, reservation or other exaction to the extent permitted and as authorized by law.

Pursuant to Government Code Section 66020(d)(1), NOTICE IS FURTHER GIVEN that the 90 day period to protest the imposition of any impact fee, dedication, reservation, or other exaction described in this resolution begins on the effective date of this resolution and any such protest must be in a manner that complies with Section 66020(a) and failure to timely follow this procedure will bar any subsequent legal action to attack, review, set aside, void or annul imposition.

Your right to protest the fees, dedications, reservations, or other exactions does not apply to planning, zoning, grading, or other similar application processing fees or service fees in connection with this project and it does not apply to any fees, dedication, reservations, or other exactions of which you have been given a notice similar to this nor does it revive challenges to any fees for which the Statute of Limitations has previously expired.

BE IT FURTHER RESOLVED that the City Council **HEREBY APPROVES** Resolution No. 2013-____, **APPROVING** PA11-0002 through PA11-0006 (Master and Individual Plot Plans) for a 1,484,407 square foot industrial warehouse complex consisting of four parcels of land, with ancillary and office uses, on an approximately 75.05 gross acre portion of land based on the affirmative recommendation of the Adoption and Certification of the Environmental Impact Report Mitigation Monitoring Program and Statement of Overriding Considerations, subject to the attached conditions of approval included as Exhibit A.

APPROVED and ADOPTED this 22nd day of January, 2013.

COMMUNITY & ECONOMIC DEVELOPMENT DEPARTMENT

Planning Division

For questions regarding any Planning condition of approval, please contact the Planning Division at (951) 413-3206.

GENERAL CONDITIONS

P1. This approval shall expire three years after the approval date of this project unless used or extended as provided for by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever. Use means the beginning of substantial construction contemplated by this approval within the three-year period, which is thereafter pursued to completion, or the beginning of substantial utilization contemplated by this approval. (MC 9.02.230)

P2. This project is located within Specific Plan No. 208. The provisions of the specific plan, the design manual, their subsequent amendments, and the Conditions of Approval shall prevail unless modified herein. (MC 9.13)

P3. The site shall be developed in accordance with the approved plans on file in the Community & Economic Development Department - Planning Division, the Municipal Code regulations, General Plan, and the conditions contained herein. Prior to any use of the project site or business activity being commenced thereon, all Conditions of Approval shall be completed to the satisfaction of the Planning Official. (MC 9.14.020)

P4. The developer, or the developer's successor-in-interest, shall be responsible for maintaining any undeveloped portion of the site in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)

P5. All landscaped areas shall be maintained in a healthy and thriving condition, free from weeds, trash and debris. (MC 9.02.030)

P6. Any signs indicated on the submitted plans are not included with this approval. Any signs, whether permanent (e.g. wall, monument) or temporary (e.g. banner, flag), proposed for this development shall be designed in conformance with the sign provisions of the Development Code or approved sign program, if applicable, and shall require separate application and approval by the Planning Division. No signs are permitted in the public right of way. (MC 9.12)

P7. (GP) All site plans, grading plans, landscape and irrigation plans, fence/wall plans, lighting plans and street improvement plans shall be coordinated for consistency with this approval.

Special Conditions

P8. **The site has been approved for an industrial/warehouse complex. A change or modification shall require separate approval.**

Prior to Issuance of Grading Permits

P9. (GP) If potential historic, archaeological, or paleontological resources are uncovered during excavation or construction activities at the project site, work in the affected area will cease immediately and a qualified person (meeting the Secretary of the Interior's standards (36CFR61)) shall be consulted by the applicant to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, prehistoric, or paleontological resource. Determinations and recommendations by the consultant shall be implemented as deemed appropriate by the Community & Economic Development Director, in

consultation with the State Historic Preservation Officer (SHPO) and any and all affected Native American Tribes before any further work commences in the affected area.

If human remains are discovered, no further disturbance shall occur until the County Coroner has made necessary findings as to origin. If the County Coroner determines that the remains are potentially Native American, the California Native American Heritage Commission shall be contacted within a reasonable timeframe to identify the "most likely descendant." The "most likely descendant" shall then make recommendations, and engage in consultations concerning the treatment of the remains (California Public Resources Code 5097.98). (GP Objective 23.3, CEQA).

P10. (GP) Prior to issuance of grading permits, the developer shall pay the applicable Stephens' Kangaroo Rat (SKR) Habitat Conservation Plan mitigation fee. (Ord)

P11. (GP) Prior to approval of any grading permit, the developer shall submit for review and approval of a tree plan to the Planning Division. The plan shall identify all mature trees (4 inch trunk diameter or larger) on the subject property and City right-of-way. Using the grading plan as a base, the plan shall indicate trees to be relocated, retained, and removed. Replacement trees shall be shown on the plan, be a minimum size of 24 inch box, and meet a ratio of three replacement trees for each mature tree removed or as approved by the **Planning Official**. (GP Objective 4.4, 4.5, DG)

P12. **(GP) Prior to approval of any grading permits, final median enhancement/landscape/irrigation plans shall be submitted to the Planning Division, and Public Works Department – Special Districts for review and approval by each division. (GP - Circulation Master Plan) Timing of installation shall be determined by PW- Special Districts.**

P13. **(GP) Prior to approval of any grading permits, plans for any security gate system shall be submitted to the Planning Division for review and approval.**

P14. **(GP) Prior to the issuance of any grading permits and prior to any physical disturbance of any natural drainage course, for any area determined to contain riparian vegetation, the applicant shall obtain a stream bed alteration agreement or permit (401 and or 404 permits), or a written waiver of the requirement for such an agreement or permit, from both the California Department of Fish and Game and the U.S. Army Corps of Engineers. Written verification of such a permit or waiver shall be provided to the Planning Division and the Public Works Department - Land Development Division. (CEQA, State and Federal codes)**

P15. **(GP) Within thirty (30) days prior to any grading or other land disturbance, a pre-construction survey for Burrowing Owls shall be conducted pursuant to the established guidelines of Multiple Species Habitat Conservation Plan.**

P16. **(GP) Prior to issuance of any grading permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein. A mitigation monitoring fee, as provided by City ordinance, shall be paid by the applicant within 30 days of project approval. No City permit or approval shall be issued until such fee is paid. (CEQA)**

P17. **(GP) Decorative pedestrian pathways across circulation aisles/paths shall be provided throughout the development to connect industrial buildings with parking and the public right-of-way. The pathways shall be shown on the precise grading plan. (GP Objective 46.8, DG)**

P18. **(GP) Prior to the issuance of building permits, the site plan shall show enhanced decorative paving for all driveway ingress/egress locations of the project.**

P19. **(GP) Prior to issuance of grading permits, the developer shall submit wall/fence plans to the Planning Division for review and approval as follows:**

- **A. A 3 foot high decorative wall, solid hedge or berm shall be placed in any setback areas between a public right of way and a parking lot for screening.**
- **B. Any proposed retaining walls shall also be decorative in nature, while the combination of retaining and other walls on top shall not exceed the height requirement.**
- **C. Proposed screening walls for truck loading areas and required loading docks shall also include decorative block walls with pilasters with a height up to fourteen (14) feet to fully screen trucks.**
- **D. Include solid decorative fencing for screening purposes with landscape within 100 feet of a public right of way, including areas adjacent to the existing channel subject to the approval by the Planning Official.**

PRIOR TO BUILDING PERMITS

P20. (BP) Prior to issuance of building permits, the Planning Division shall review and approve the location and method of enclosure or screening of transformer cabinets, commercial gas meters and back flow preventers as shown on the final working drawings. Location and screening shall comply with the following criteria: transformer cabinets and commercial gas meters shall not be located within required setbacks and shall be screened from public view either by architectural treatment or landscaping; multiple electrical meters shall be fully enclosed and incorporated into the overall architectural design of the building(s); back-flow preventers shall be screened by landscaping. (GP Objective 43.30, DG)

P21. (BP) Prior to issuance of building permits, screening details shall be addressed on plans for roof top equipment and trash enclosures submitted for Planning Division review and approval. All equipment shall be completely screened so as not to be visible from public view, and the screening shall be an integral part of the building. For trash enclosures, landscaping shall be included on at least three sides. The trash enclosure, including any roofing, shall be compatible with the architecture for the buildings. (GP Objective 43.6, DG)

P22. (BP) Prior to issuance of building permits, two copies of a detailed, on-site, computer generated, point-by-point comparison lighting plan, including exterior building, parking lot, and landscaping lighting, shall be submitted to the Planning Division for review and approval. The lighting plan shall be generated on the plot plan and shall be integrated with the final landscape plan. The plan shall indicate the manufacturer's specifications for light fixtures used and shall include style, illumination, location, height and method of shielding. The lighting shall be designed in such a manner so that it does not exceed 0.5 foot candles illumination beyond at the property line. The lighting level for all parking lots or structures shall be a minimum coverage of one foot-candle of light with a maximum of eight foot-candles. After the third plan check review for lighting plans, an additional plan check fee will apply. (MC 9.08.100, DG)

P23. (BP) Prior to issuance of building permits, the developer or developer's successor-in-interest shall pay all applicable impact fees, including but not limited to Transportation Uniform Mitigation fees (TUMF), Multi-species Habitat Conservation Plan (MSHCP) mitigation fees, and the City's adopted Development Impact Fees. (Ord)

P24. (BP) Prior to issuance of any building permits, final landscaping and irrigation plans shall be submitted for review and approved by the Planning Division. After the third plan check review for landscape plans, an additional plan check fee shall apply. The plans shall be prepared in accordance with the City's Landscape Standards and shall include:

A. **A three (3) foot high decorative wall, solid hedge or berm shall be placed in any setback areas between a public right of way and a parking lot for screening.**

B. **Finger and end planters with required step outs and curbing shall be provided every 12 parking stalls as well as at the terminus of each aisle.**

C. **Diamond planters shall be provided every 3 parking stalls.**

D. **Drought tolerant landscape shall be used. Sod shall be limited to gathering areas.**

E. **Street trees shall be provided every 40 feet on center in the right of way or as approved within conditions of approval below containing sight line distance requirements.**

F. **On-site trees shall be planted at an equivalent of one (1) tree per thirty (30) linear feet of the perimeter of a parking lot and per thirty linear feet of a building dimension for the portions of the building visible from a parking lot or right of way. Trees may be massed for pleasing aesthetic effects.**

G. **Enhanced landscaping shall be provided at all driveway entries and street corner locations**

H. **The review of all utility boxes, transformers etc. shall be coordinated to provide adequate screening from public view.**

I. **Landscaping on three sides of any trash enclosure.**

J. **All site perimeter and parking lot landscape and irrigation shall be installed prior to the release of certificate of any occupancy permits for the site or pad in question (master plot plan).**

P25. **Prior to the issuance of building permits, landscape and irrigation plans for areas maintained by the Owner's Association (water quality basins or areas) shall be submitted to the Planning Division. All landscape plans shall be approved prior to the release of any building permits for the site. The plans shall be prepared in accordance with the City's Landscape Development Guidelines. Landscaping is required for the sides and or slopes of all water quality basin and drainage areas, while a hydro seed mix with irrigation is acceptable for the bottom of any basin areas. All detention basins shall include trees, shrubs and groundcover up to the concreted portion of the basin. A solid decorative wall with pilasters, tubular steel fence with pilasters or other fence or wall approved by the Planning Official is required to secure all water quality and detention basins.**

P26. **(BP) Prior to the issuance of building permits, the master site plan shall include landscape for trash enclosures to include landscape on three sides, and final elevation plans for trash enclosures shall be provided that include**

decorative enhancements such as an enclosed roof and other decorative features that are consistent with the architecture of the proposed buildings on the site, subject to the approval of the Planning Division.

P27. (BP) Prior to the issuance of building permits, adjustments shall be made to Parcel 4 to include one required finger planter on the southern elevation of the site or other enhanced landscaping and diamond planters every 3 parking stalls along the channel on the northeast side of the site to the satisfaction of the Planning Official. In addition, vine pockets shall be provided adjacent to the proposed chain link fence and parking stalls adjacent to the channel on the northeast side of Parcel 4.

P28. (BP) Prior to the issuance of building permits, additional trees on all street sides of projects at the required one tree per 40 foot requirement on Iris Avenue, Heacock Street, Krameria Avenue and Cosmos Street shall be provided on the final landscape plans. Trees shall be placed in right of way locations where they are currently void on conceptual landscape plans (within sight line locations) at a larger spacing requirement, with remaining required trees provided in the setback area immediately adjacent to the right of way as approved by the Planning Division and Transportation Division of Public Works.

P29. (BP) Prior to the issuance of building permits, all cross-hatched areas on individual site plans not being used for access purposes shall include additional truck/trailer spaces where applicable as approved by the Planning Official.

P30. (BP) Prior to the issuance of building permits, all required bicycle racks shall be placed outside of fenced areas or a proportional mixture can occur inside and outside of fenced areas to the satisfaction of the Planning Official.

P31. (BP) Prior to the issuance of building permits, all buildings shall either include internal downspouts or external downspouts that are integrated into the architecture and painted to match the building, including those that are shown to be perpendicular to the right of way on Buildings 3 and 4 within view of public rights of way, subject to the approval of the Planning Official.

P32. (BP) Prior to the issuance of building permits, wiring for future trash compactors shall not be placed in required truck/trailer parking stalls.

PRIOR TO CERTIFICATE OF OCCUPANCY

P33. (CO) Prior to issuance of Certificates of Occupancy or building final, the required landscaping and irrigation shall be installed. (DC 9.03.040)

P34. (CO) Prior to the issuance of Certificates of Occupancy or building final, all required and proposed fences and walls shall be constructed according to the approved plans on file in the Planning Division. (MC 9.080.070).

P35. (BP/CO) Prior to issuance of Certificate of Occupancy or building final, installed landscaping and irrigation shall be inspected by the Planning Division. All on-site and common area landscaping shall be installed in accordance with the City's Landscape Standards and the approved project landscape plans and all site clean-up shall be completed. All site perimeter and parking lot landscape and irrigation shall be installed prior to the release of certificate of any occupancy permits for the site or pad in question (master plot plan).

P36. (CO) Prior to issuance of a certificate of occupancy or building final, the project shall install a photovoltaic array (solar panels) or other source of renewable energy generation on-site, or otherwise acquire energy from the local utility that has been generated by renewable resources, to meet the project's office electricity needs.

OTHER CONDITIONS NOT TIED TO GRADING, BUILDING OR OCCUPANCY

P37. Loading or unloading activities shall be conducted from the truck bays or designated loading areas only and shall not be allowed within the 300 foot buffer area established within the Industrial Area Specific Plan No. 208.

Mitigation Measures

P38. MM 4.2-1 Prior to grading permit issuance; the City shall verify that the following notes are included on the grading plan:

"The contractor shall utilize California Air Resources Board (CARB) Tier III certified equipment or better for all off-road diesel-powered construction equipment greater than 50 horsepower."

"Any emissions controls device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level

3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations, with the exception that afterburners are not required."

"During construction activity, truck idling shall be limited to five minutes or less."

"The contractor shall implement temporary traffic control during construction pursuant to the requirements of the California Manual on Uniform Traffic Control Devices."

"The contractor shall assure that mass grading shall be limited to no more than 6.5 acres per day. The contractor shall maintain a log of daily mass grading activities, which shall be provided to the City upon request."

P39. MM 4.2-2 Prior to issuance of each grading and building permit, the Project applicant or construction contractor shall prepare an exhibit for review by the City depicting the location of proposed equipment staging areas. The City shall review the proposed location(s) to ensure the staging areas are located at least 300-feet away from sensitive receptors and 1,105 feet from the northeastern corner of the Project site's property boundary as measured from the Iris Avenue right-of-way, as required by Mitigation Measure MM 4.10-1.

P40. MM 4.2-3 The Project applicant shall use "Zero-Volatile Organic Compounds" paints (no more than 150 grams of VOC per liter) and/or High Pressure Low Volume (HPLV) applications consistent with South Coast Air Quality Management District Rule 1113. Alternatively, the applicant shall use building materials that do not require painting or are pre-painted. Painting products and materials compliant with these requirements shall be noted on building plans.

P41. MM 4.2-4 Prior to the issuance of each building permit, the City shall ensure that building plans require the placement of signs at truck access gates, loading docks, and truck parking areas to identify applicable California Air Resources Board (CARB) anti-idling regulations. At a minimum each sign shall include: 1) instructions for truck drivers to shut off engines when not in use; 2) instructions for drivers of diesel trucks to restrict idling to no more than three (3) minutes; and 3) telephone numbers of the building facilities manager and the CARB to report violations.

P42. MM 4.2-5 Prior to the issuance of each building permit, the City shall review the parking lot striping and security gating plan to ensure the site design allows adequate truck stacking at gates to prevent queuing of trucks outside the facility.

P43. MM 4.2-6 Prior to the issuance of occupancy permits, the applicant shall provide evidence that a sign has been installed at each exit driveway, providing directional information to the City's truck route. Text on the sign shall read "To Truck Route" with a directional arrow.

P44. MM 4.2-7 Prior to the issuance of occupancy permits, the Project's property owner shall provide documentation to the Planning Division verifying that a provision is included in the building's lease agreement that informs tenants using a vehicle fleet older than 2007 about the availability of grant funding from available funding sources for truck retrofit and replacement.

P45. MM 4.2-8 Prior to the issuance of occupancy permits, the Project's property owner shall provide documentation to the Planning Division verifying that a provision is included in the building's lease agreement that informs tenants about the availability of alternatively fueled cargo handling equipment.

P46. MM 4.2-9 Prior to grading permit issuance, the City shall verify that the following notes are listed on the grading plan:

"Apply non-toxic soil stabilizers according to manufacturers' specifications to all inactive construction areas (previously graded areas inactive for ten days or more)."

"All trucks hauling dirt, sand, soil, or other loose materials shall be covered."

"Streets shall be swept at the end of each day if visible soil is carried onto adjacent paved public roads. Refer to SCAQMD Rule 1186.1, 'Less-Polluting Street Sweepers.' "

"The construction contractor shall monitor wind speed by use of an anemometer. The contractor shall suspend all excavating and grading operations when instantaneous wind speeds exceed 25 miles per hour."

P47. MM 4.2-10 Prior to the start of grading, the construction contractor shall post a sign at the property's frontage with Heacock Street and at the property's

frontage with Iris Avenue stating the name and phone number of an individual to be contacted to resolve dust complaints. These signs shall remain posted on the property until grading is complete.

P48. MM 4.3-1 Within 30 days prior to grading, a qualified biologist shall conduct a survey of the property and make a determination regarding the presence or absence of the burrowing owl. The determination shall be documented in a report and shall be submitted, reviewed, and accepted by the Planning Division of the Community & Economic Development Department prior to the issuance of a grading permit and subject to the following provisions:

a) In the event that the pre-construction survey identifies no burrowing owls on the property, a grading permit may be issued without restriction.

b) In the event that the pre-construction survey identifies the presence of three (3) or more mating pairs of burrowing owl, the grading permit shall not be issued and the requirements of MSCHP Species-Specific Conservation Objective 6 for the burrowing owl shall be followed. MSHCP Species-Specific Conservation Objective 6 for the burrowing owl prohibits the take of active nests and allows passive relocation to be conducted by a qualified biologist outside of the breeding season. Passive relocation shall include the required use of one-way doors to exclude owls from the site and the collapsing of burrows). Passive relocation shall follow CDFG relocation protocol and shall only occur between September 15 and February 1.

c) In the event that the pre-construction survey identifies the presence of at least one individual but less than three (3) mating pairs of burrowing owl, then prior to the issuance of a grading permit and prior to the commencement of ground-disturbing activities on the property, the qualified biologist shall passively relocate any burrowing owls, including the required use of one-way doors to exclude owls from the site and the collapsing of burrows. Passive relocation shall follow CDFG relocation protocol and shall only occur between September 15 and February 1.

P49. MM 4.3-2 Prior to the issuance of any grading permits; the Planning Division shall review grading plans to ensure that the following note is included on the plans:

"No more than 30 days prior to commencement of ground-disturbing activities on site, a qualified biologist shall conduct pre-construction presence/absence surveys in accordance with the MSHCP Burrowing Owl Survey Instructions requirements and as required by MSHCP Objective 6 for the burrowing owl. If owls are determined to be present, grading shall not commence between February 1 and September 15. Between September 15 and February 1, grading may commence only after the qualified biologist has passively relocated the owls following CDFG protocol."

P50. MM 4.3-3 As a condition of approval for all grading permits, vegetation clearing and ground disturbance shall be prohibited during the migratory bird nesting season (February 1 through September 15), unless a migratory bird nesting survey is completed in accordance with the following requirements:

a) A nesting bird survey shall be conducted by a qualified biologist within three (3) days prior to initiating vegetation clearing or ground disturbance.

b) A copy of the nesting bird survey results report shall be provided to the City of Moreno Valley. If the results of the nesting bird survey identify the presence of active nests on the property, then the qualified biologist shall provide the City of Moreno Valley Planning Division with a copy of maps showing the location of all nests and an appropriate buffer zone around each nest sufficient to protect the nest from direct and indirect impact. The size and location of all buffer zones, if required, shall be subject to review and approval by the Planning Division and shall be no less than a 300-foot radius around the nest for migratory birds and a 500-foot radius around the nest for raptors. The nests and buffer zones shall be field checked weekly by a qualified biological monitor. The approved buffer zone shall be marked in the field with construction fencing, within which no vegetation clearing or ground disturbance shall commence until the qualified biologist and City Planning Division verify that the nests are no longer occupied and the juvenile birds can survive independently from the nests.

P51. MM 4.3-4 Prior to the issuance of grading permits, and in accordance with the California Fish and Game (CDFG) Code, the Project shall obtain a Section 1602 Streambed Alteration Agreement from the California Department of Fish and Game (CDFG) for impact to 0.06-acre of CDFG jurisdictional area in the

Perris Valley Storm Drain Channel. As part of the Agreement, the Project Applicant may acquire credits for the impact at a minimum 1:1 ratio from an approved in-lieu fee program or mitigation land bank.

P52. MM 4.3-5 Prior to the issuance of grading permits, and in accordance with the Clean Water Act, the Project shall obtain a Section 404 Permit from the U.S. Army Corps of Engineers (Corps) and a Section 401 Permit from the Regional Water Quality Control Board (RWQCB) for impact to 0.05-acre of Corps and RWQCB jurisdictional area in the Perris Valley Storm Drain Channel. As part of the Permits, the Project Applicant may acquire credits for the impact at a minimum 1:1 ratio from an approved in-lieu fee program or mitigation land bank

P53. MM 4.4-1 Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a qualified professional archaeological monitor has been retained by the Applicant to conduct monitoring of all mass grading and trenching activities and has the authority to halt and redirect earthmoving activities in the event that suspected archeological resources are unearthed during Project construction.

P54. MM 4.4-2 Prior to the issuance of a grading permit, the Applicant shall provide evidence to the City of Moreno Valley that appropriate Native American representative(s) shall be allowed to monitor and have received a minimum of 30 days advance notice of all mass grading and trenching activities. Prior to grading permit issuance, appropriate local Native American representative(s) shall be notified in writing by the Applicant of the pending grading activities. During grading and trenching operations, a professional archaeological monitor shall observe all mass grading and trenching activities. If the monitor suspects that an archaeological resource may have been unearthed, the monitor shall immediately halt and redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. If the monitor determines that the suspected resource is potentially significant, the archaeologist shall notify the appropriate Native American Tribe(s) and invite a tribal representative to consult on the resource evaluation. In consultation with the appropriate Native American Tribe(s), the archaeological monitor shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code

Section 21083.2. If the resource is significant, Mitigation Measure MM 4.4-3 shall apply.

P55. MM 4.4-3 If a significant archaeological resource(s) is discovered on the property, ground disturbing activities shall be suspended 100 feet around the resource(s). The archaeological monitor and a representative of the appropriate Native American Tribe(s), the Project Applicant, and the City Planning Division shall confer regarding mitigation of the discovered resource(s). A treatment plan shall be prepared and implemented by the archaeologist to protect the identified archaeological resource(s) from damage and destruction. The landowner shall relinquish ownership of all archaeological artifacts that are of Native American origin found on the Project site to the culturally affiliated Native American tribe for proper treatment and disposition. A final report containing the significance and treatment findings shall be prepared by the archaeologist and submitted to the City Planning Division, the appropriate Native American tribe(s), and the Eastern Information Center.

P56. MM 4.4-4 Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan:

"If any suspected archaeological resources are discovered during ground-disturbing activities, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call a qualified archaeologist to the site to assess the significance of the find."

P57. MM 4.4-5 Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan:

"If any suspected paleontological resources are discovered during ground-disturbing activities, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call a qualified paleontologist to the site to assess the significance of the find. A qualified paleontologist shall evaluate the suspected resource. If the paleontologist determines that the find is not unique, construction shall be permitted to proceed. However, if the paleontologist determines that further information is needed to evaluate significance, the City of Moreno Valley shall be notified and a treatment plan shall be prepared and implemented in consultation with the City to protect the identified paleontological resource(s) from damage and destruction."

P58. MM 4.4-6 If human remains are encountered, California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to California Public Resources Code Section 5097.98(b), remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made by the Coroner. If the Riverside County Coroner determines the remains to be Native American, the California Native American Heritage Commission must be contacted within 24 hours. The Native American Heritage Commission must then immediately notify the "most likely descendants" of receiving notification of the discovery. The most likely descendants shall then make recommendations within 48 hours, and engage in consultations concerning the treatment of the remains as provided in Public Resources Code §5097.98.

P59. MM 4.6-1 The Project's construction drawings shall be designed to achieve certification under the U.S. Green Building Council's Leadership in Energy and Environmental Design (LEED) program. Prior to issuance of a building permit, the applicant shall provide a letter from a qualified LEED consultant verifying that proposed building design features are adequate to seek LEED certification. Following final building inspection, the Project applicant shall seek LEED Certification pursuant to the procedures set forth by the Green Building Certification Institute.

P60. MM 4.6-2 Prior to the issuance of grading and building permits, the Planning Division and the Land Development Division shall review grading plans and building plans to ensure that the following notes are specified:

"With the exception of equipment used for asphalt paving, trenching, and off-site improvements, all diesel-powered construction equipment shall use B20 biodiesel fuel (comprising a minimum of 20% biodiesel) for the duration of construction activities. Any construction equipment whose warranty would be voided upon the use of B20 biodiesel fuel shall be exempt from this requirement. The Building and Safety Division may exempt additional pieces of equipment from this requirement upon written request from the Project applicant documenting a valid technical, economic, or physical reason why the use of B20 biodiesel fuel cannot be used. This requirement shall only apply if B20 biodiesel fuel is available within 15 roadway miles from the Project site at the time construction activities commence."

"During Project construction, existing electrical power sources (e.g., power poles) shall be provided for electric construction tools including saws, drills and compressors, to minimize the need for diesel or gasoline powered electric generators."

P61. **MM 4.6-3 Prior to the approval of building permits, the Planning Division shall review landscaping plans to ensure that the following components are included:**

a) Landscaping palette emphasizing drought tolerant plants; and

b) Use of water-efficient irrigation techniques.

P62. **MM 4.6-4 The Project's mechanical/electrical /plumbing (MEP) plans shall specify U.S. EPA Certified WaterSense labeled or equivalent faucets, high-efficiency toilets (HETs), and water-conserving shower heads (if showers are proposed). Prior to the approval of building permits, the Building and Safety Division shall review the plans to ensure that these features are specified, as appropriate.**

P63. **MM 4.6-5 Prior to the issuance of building permits, the Project applicant shall submit energy usage calculations to the Planning Division showing that the Project is designed to achieve 8% efficiency beyond the 2008 California Building Code Title 24 requirements. Example of measures that reduce energy consumption include, but are not limited to, the following (it being understood that the items listed below are not all required and merely present examples; the list is not all-inclusive and other features that reduce energy consumption also are acceptable):**

P64. **a) Increase in insulation such that heat transfer and thermal bridging is minimized;**

b) Limit air leakage through the structure and/or within the heating and cooling distribution system;

c) Use of energy-efficient space heating and cooling equipment;

d) Installation of electrical hook-ups at loading dock areas;

e) Installation of dual-paned or other energy efficient windows;

f) Use of interior and exterior energy efficient lighting that exceeds the 2008 California Title 24 Energy Efficiency performance standards;

g) Installation of automatic devices to turn off lights where they are not needed;

h) To the extent they are compatible with Moreno Valley Municipal Code §9.17.030, Landscape and Irrigation Design Standards, the incorporation of shade-producing trees, particularly those that shade buildings and paved surfaces such as streets and parking lots;

i) Application of a paint and surface color palette that emphasizes light and off-white colors that reflect heat away from buildings;

j) Design of buildings with "cool roofs" using products certified by the Cool Roof Rating Council, and/or exposed roof surfaces using light and off-white colors;

k) Design of buildings to accommodate photo-voltaic solar electricity systems or the installation of photo-voltaic solar electricity systems;

l) Installation of ENERGY STAR-qualified energy-efficient appliances, heating and cooling systems, office equipment, and/or lighting products; and/or

m) Other measures incorporated as part of the LEED Certification process.

P65. MM 4.6-6 Prior to the approval of street improvement plans, the Transportation Engineering Division shall ensure that all traffic lights installed as part of the Project will utilize Light Emitting Diodes.

P66. MM 4.6-7 The Project shall comply with the following requirements to reduce the generation of solid waste during construction and under long-term operating conditions:

a) Prior to the issuance of grading permits, a Waste Management Plan (WMP) addressing construction activity wastes shall be prepared by the Project Applicant and submitted to the Public Works Department and Building and Safety Division for review and approval. The WRP must conform to City requirements specified in Municipal Code Section 8.80.030, which requires that at least 50 percent of all construction and

demolition debris be reused, recycled, or otherwise diverted from disposal in a landfill. During grading and construction, the Project Applicant shall recycle and reuse the required percentage of materials, and keep records of the tonnage or other measurements approved by the City that can be converted to tonnage amounts. Prior to issuance of an occupancy permit, the Project Applicant shall provide evidence (i.e., receipts, weight tags, or other type of acceptable verifications) to the Public Works Department to demonstrate Project compliance with the approved WRP. Evidence must clearly identify the amount of waste disposed and materials recycled.

b) Recycling shall occur during Project operational activities in accordance with all applicable solid waste and recycling requirements of the City of Moreno Valley Public Works Department. Prior to the issuance of building permits, the Building and Safety Division shall review building plans to ensure that the locations and dimensions of recyclable collection enclosures and loading areas are specified on the building plans in conformance with City requirements and City Municipal Code Chapter 6.02 "Refuse Collection, Transfer and Disposal." Prior to the issuance of occupancy permits, the Land Development Division shall conduct a field inspection to ensure that the recyclable collection enclosures and loading areas are in place and ready for use

P67. MM 4.6-8 Prior to the issuance of building permits, the Planning Division shall review building plans to ensure that a minimum of two (2) parking spaces for each building will be reserved for carpools and vanpools. Prior to the issuance of occupancy permits, the Planning Division shall conduct a field inspection to ensure that a minimum of two (2) parking spaces for each building are marked as reserved for carpools and vanpools.

P68. MM 4.6-9 Prior to the issuance of building permits for Parcel 1, the Planning Division and Building and Safety Division shall review building plans to ensure that a minimum of two (2) electric vehicle charging stations will be provided. Prior to the issuance of occupancy permits for Parcel 1, the Planning Division and Building and Safety Division shall conduct a field

inspection to verify that the electric vehicle charging stations are in place and operable.

P69. MM 4.6-10 Prior to the issuance of occupancy permit, the Project's property owner shall provide documentation to the Planning Division verifying that a provision is included in the building's lease agreement which stipulates that tenants of the building shall encourage carpooling and transit ridership by on-site employees.

P70. MM 4.7-1 Prior to grading permit issuance, the City shall verify that the Project's Grading Plan indicates: a) the location of all groundwater monitoring wells to be preserved in place; b) the method used to flag, stake, or otherwise identify the location of the groundwater monitoring wells in the field; and c) any required grading procedures or precautions to be taken in the vicinity of the monitoring well locations.

P71. MM 4.7-2 Prior to the issuance of grading permits, the City of Moreno Valley Land Development Division shall ensure that the Project's required Stormwater Pollution Prevention Plan (SWPPP) includes emergency procedures for accidental hazardous materials releases during construction. The procedures shall include necessary personal protective equipment, spill containment procedures, and training of workers to respond to accidental spills/releases.

P72. MM 4.10-1 Prior to the issuance of any building or grading permits, the City of Moreno Valley Land Development division and Building and Safety Division shall review building and grading plans to ensure that the following notes are included:

a) All construction activities, including but not limited to haul truck deliveries, shall be limited to between the hours of 7:00 a.m. and 8:00 p.m.

b) Construction contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers, consistent with manufacturers' standards.

c) All stationary construction equipment shall be placed in such a manner so that emitted noise is directed away from the construction site's north and east property boundaries.

d) Equipment staging shall be located at a minimum distance of 1,105 feet from the northeastern corner of the Project site's property boundary, as measured from the Iris Avenue right-of-way.

e) All haul truck deliveries shall be limited to approved haul routes. Should alternate routes be necessary, haul trucks shall not use roadways that pass noise-sensitive land uses or residential dwellings unless approved by the City of Moreno Valley.

P73. MM 4.10-2 Prior to the issuance of any building or grading permits, the Project applicant shall prepare a Construction Haul Route exhibit identifying all public and private roadways that will be used for haul truck deliveries. The Construction Haul Route exhibit shall explicitly prohibit the use of Iris Avenue. The Construction Haul Route exhibit shall be subject to review and approval by the Building and Safety Division. Once approved, copies of the Construction Haul Route exhibit shall be provided to all construction contractors, and all construction contractors shall ensure that haul truck deliveries utilize only City-approved haul routes. Should alternate routes be necessary, haul trucks shall not use roadways that pass noise-sensitive land uses or residential dwellings unless prior approval is granted by the City of Moreno Valley.

P74. MM 4.11-1 Prior to issuance of the Project's first occupancy permit, a traffic signal (programmed under the City of Moreno Valley DIF) shall be installed at the intersection of Heacock Street/Gentian Avenue.

P75. MM 4.11-2 Prior to issuance of the first occupancy permit, the following improvements shall be in place at the intersection of Heacock Street/Iris Avenue:

a) Traffic signal

b) Northbound: two through lanes

c) Northbound: one right turn lane

P76. MM 4.11-3 In the event that the City of Moreno Valley and/or the City of Perris establish a fair-share funding program(s) for improvements to any of the following intersections or immediately adjacent roadway segments that contribute to the intersection's level of service, then prior to the issuance of

building permits, the Project shall contribute a fair-share payment to the funding program to address the Project's cumulative impacts to the following facilities:

a) Intersection of Heacock Street/Cactus Avenue (Project's fair-share contribution is 6.4%);

b) Intersection of Indian Street/San Michele Road (Project's traffic contribution is 5.8%);

c) Intersection of Indian Street/Nandina Avenue (Project's traffic contribution is 7.5%);

d) Intersection of Indian Street/Harley Knox Blvd (Project's traffic contribution is 5.4%).

P77. MM 4.11-4 In the event that the City of Moreno Valley establishes a fair-share funding program for improvements to Indian Street between Iris Avenue and Gentian Avenue prior to the issuance of building permits, the Project shall contribute a fair-share payment to the City-established funding program to address the Project's cumulative impacts at General Plan buildout.

Building and Safety Division

B1. The above project shall comply with the current California Codes (CBC, CEC, CMC and the CPC) as well as city ordinances. All new projects shall provide a soils report as well. Plans shall be submitted to the Building Department as a separate submittal. The 2010 edition of the California Codes became effective for all permits issued after January 1, 2011.

B2. Prior to final inspection, all plans will be placed on a CD Rom for reference and verification. Plans will include "as built" plans, revisions and changes. The CD will also include Title 24 energy calculations, structural calculations and all other pertinent information. It will be the responsibility of the developer and or the building or property owner(s) to bear all costs required for this process. The CD will be presented to the Building and Safety Division for review prior to final inspection and building occupancy. The CD will become the property of the Moreno Valley Building and Safety Division at that time. In addition, a site plan showing the path of travel from public right of way and building to building access with elevations will be required.

B3. (BP) Prior to the issuance of a building permit, the applicant shall submit a properly completed "Waste Management Plan" (WMP), as required, to the Compliance Official (Building Official) as a portion of the building or demolition permit process.

SCHOOL DISTRICT

S1. (BP) Prior to issuance of building permits, the developer shall provide to the Community Development Director a written certification by the affected school district that either: (1) the project has complied with the fee or other exaction levied on the project by the governing board of the district, pursuant to Government Code Section 65996; or (2) the fee or other requirement does not apply to the project.

UNITED STATES POSTAL SERVICE

PO1. (BP) Prior to the issuance of building permits, the developer shall contact the U.S. Postal Service to determine the appropriate type and location of mailboxes.

POLICE DEPARTMENT

Note: All Special conditions are in bold lettering. All other conditions are standard to all or most development projects

Standard Conditions

PD1. Prior to the start of any construction, temporary security fencing shall be erected. The fencing shall be a minimum of six (6) feet high with locking, gated access and shall remain through the duration of construction. Security fencing is required if there is: construction, unsecured structures, unenclosed storage of materials and/or equipment, and/or the condition of the site constitutes a public hazard as determined by the Public Works Department. If security fencing is required, it shall remain in place until the project is completed or the above conditions no longer exist. (DC 9.08.080)

PD2. (GP) Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following:

a. The name (if applicable) and address of the development.

b. The developer's name, address, and a 24-hour emergency telephone number. (DC 9.08.080)

PD3. (CO) Prior to the issuance of a Certificate of Occupancy, an Emergency Contact information Form for the project shall be completed at the permit counter of the Community and Economic Development Department - Building Division for routing to the Police Department. (DC 9.08.080)

PD4. Addresses needs to be in plain view visi ble from the street and visible at night. It needs to have a backlight, so the address will reflect at night or a lighted address will be sufficient.

PD5. All exterior doors in the rear and the front of the buildings need an address or suite number on them.

PD6. All rear exterior doors should have an overhead low sodium light or a light comparable to the same.

PD7. The exterior of the building should have high-pressure sodium lights and or Metal halide lights installed and strategically placed throughout the exterior of the building. The parking lots should have adequate lighti ng to insure a safe environment for customers and or employees.

PD8. All landscape cover should not exceed over 3' from the ground in the parking lot.

PD9. Bushes that are near the exterior of the building should not exceed 4' and should not be planted directly in front of the buildings or walkways.

PD10. Trees, which exceed 20', should have a 7' visibility from the ground to the bottom half of the tree. This is sothat patrons or employeescan view the whole parking lot while parking their vehicles in the parking lot.

PD11. Window coverings shall comply with the city ordinance.

PD12. No loitering signs shall be posted in plain view throughout the building.

PD13. A monument address is to be located in front of the main entrance.

PD14. Landscape screening is to be located no cl oser than six feet from the covered parking spaces.

PD15. Sufficient lighting is to be provided over all mailbox areas.

CITY OF MORENO VALLEY
CONDITIONS
Case No: PA11-0001 TO PA11-007, P11-004 AND 005
APN: 316-020-001, 006, 007, 028, 010
DATE: 10/08/12

FIRE PREVENTION BUREAU

1. **Still pending the completion of attached fire flow letter, the fire flow letter provided was not for the parcel fronting this project, but for the parcel adjacent to it. Fire flow shall be taken from the street that it fronts. Fire flow letter and improvements shall be completed prior to grading permit approval.**
2. **The following Standard Conditions shall apply.**

With respect to the conditions of approval, the following fire protection measures shall be provided in accordance with Moreno Valley City Ordinances and/or recognized fire protection standards:

F1. Final fire and life safety conditions will be addressed when the Fire Prevention Bureau reviews building plans. These conditions will be based on occupancy, use, California Building Code (CBC), California Fire Code (CFC), and related codes, which are in force at the time of building plan submittal.

F2. The Fire Prevention Bureau is required to set a minimum fire flow for the remodel or construction of all commercial buildings per CFC Appendix B and Table B105.1. The applicant/developer shall provide documentation to show there exists a water system capable of delivering ___4000_ GPM for__4_ hour(s) duration at 20-PSI residual operating pressure. The required fire flow may be adjusted during the approval process to reflect changes in design, construction type, or automatic fire protection measures as approved by the Fire Prevention Bureau. Specific requirements for the project will be determined at time of submittal. (CFC 508.3, Appendix B and MVMC 8.36.100 Section D) . **The 50% reduction in fire flow was granted for the use of fire sprinklers throughout the facility. The reduction shall only apply to fire flow, hydrant spacing shall be per the fire flow requirements listed in CFC Appendix B and C.**

F3. Industrial, Commercial, Multi-family, Apartment, Condominium, Townhouse or Mobile Home Parks. A combination of on-site and off-site super fire hydrants (6" x 4" x 2 ½" x 2 ½") and super enhanced fire hydrants (6" x 4" x 4" x 2 ½") shall not be closer than 40 feet and more than 150 feet from any portion of the building as measured along approved emergency vehicular travel ways. The required fire flow shall be available from any adjacent fire hydrant(s) in the system. Where new water mains are extended along streets where hydrants are not needed for protection of structures or similar fire problems, super or enhanced fire hydrants as determined by the fire code official shall be provided at spacing not to exceed 500 feet of frontage for transportation hazards. (CFC 508.5.7 & MVMC 8.36.050 Section O and 8.36.100 Section E)

F4. Maximum cul-de-sac or dead end road length shall not exceed 660 feet. The Fire Chief, based on City street standards, shall determine minimum turning radius for fire apparatus based upon fire apparatus manufacture specifications. (CFC 503.1)

F5. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.1 and 503.2.5)

F6. Prior to issuance of Building Permits, the applicant/developer shall provide the Fire Prevention Bureau with an approved site plan for Fire Lanes and signage. (MVMC 8.36.050 and CFC 501.3)

F7. Prior to construction and issuance of building permits, all locations where structures are to be built shall have an approved Fire Department emergency vehicular access road (all weather surface) capable of sustaining an imposed load of 80,000 lbs. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4 and MVMC 8.36.050 Section A)

F8. Prior to construction and issuance of Building Permits, fire lanes and fire apparatus access roads shall have an unobstructed width of not less than twenty–four (24) or thirty (30) feet as approved by the Fire Prevention Bureau and an unobstructed vertical clearance of not less the thirteen (13) feet six (6) inches. (CFC 503.2.1.1 and MVMC 8.36.050)

F9. Prior to construction, all roads, driveways and private roads shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.050)

F10. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4 and MVMC 8.36.050 Section A)

F11. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.3 and MVMC 8.36.050)

F12. Prior to building construction, dead end roadways and streets which have not been completed shall have a turnaround capable of accommodating fire apparatus. (CFC 503.2.5 and MVMC 8.36.050)

F13. Prior to issuance of Building Permits, the applicant/developer shall participate in the Fire Impact Mitigation Program. (Fee Resolution as adopted by City Council)

F14. Prior to issuance of Building Permits, the applicant/developer shall furnish one copy of the water system plans to the Fire Prevention Bureau for review. Plans shall:

a) Be signed by a registered civil engineer or a certified fire protection engineer;

b) Contain a Fire Prevention Bureau approval signature block; and
c) Conform to hydrant type, location, spacing of new and existing hydrants and minimum fire flow required as determined by the Fire Prevention Bureau.

After the local water company signs the plans, the originals shall be presented to the Fire Prevention Bureau for signatures. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

Existing fire hydrants on public streets are allowed to be considered available. Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are established to prevent obstruction of such roads. (CFC 508.1 and MVMC 8.36.100)

F15. Prior to issuance of Certificate of Occupancy or Building Final, "Blue Reflective Markers" shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 510.1)

F16. Prior to issuance of Certificate of Occupancy or Building Final, all commercial buildings shall display street numbers in a prominent location on the street side and rear access locations. The numerals shall be a minimum of twelve (12) inches in height for buildings and six (6) inches in height for suite identification on a contrasting background. Unobstructed lighting of the address(s) shall be by means approved by the Fire Prevention Bureau and Police Department. In multiple suite centers (strip malls), businesses shall post the name of the business on the rear door(s). (CFC 505.1)

F17. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9)

F18. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire alarm system monitored by an approved Underwriters Laboratory listed central station based on a requirement for monitoring the sprinkler system, occupancy or use. Fire alarm panel shall be accessible from exterior of building in an approved location. Plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9 and MVMC 8.36.070)

F19. Prior to issuance of a Certificate of Occupancy or Building Final, a "Knox Box Rapid Entry System" shall be provided. The Knox-Box shall be installed in an accessible location approved by the Fire Chief. The Knox-Box shall be supervised by the alarm system and all exterior security emergency access gates shall be electronically operated and be provided with Knox key switches for access by emergency personnel. (CFC 506.1)

F20. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall be responsible for obtaining underground and/or above ground tank permits for the storage of combustible liquids, flammable liquids, or any other hazardous materials from both the County of Riverside Community Health Agency Department of Environmental Health and the Fire Prevention Bureau. (CFC 3401.4 and 2701.5)

F21. Prior to issuance of Certificate of Occupancy, approval shall be required from the County of Riverside Community Health Agency (Department of Environmental Health) and Moreno Valley Fire Prevention Bureau to maintain, store, use, handle materials, or conduct processes which produce conditions hazardous to life or property, and to install equipment used in connection with such activities. (CFC 2701.5)

F22. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer must submit a simple plot plan, a simple floor plan, and other plans as requested, each as an electronic file in .dwg format, to the Fire Prevention Bureau. Alternate file formats may be acceptable with approval by the Fire Chief.

F23. The angle of approach and departure for any means of Fire Department access shall not exceed 1 ft drop in 20 ft (0.3 m drop in 6 m), and the design limitations of the fire apparatus of the Fire Department shall be subject to approval by the AHJ. (CFC 503.2.7 and MVMC 8.36.050 Section I)

F24. Prior to issuance of the building permit for development, independent paved access to the nearest paved road, maintained by the City shall be designed and constructed by the developer within the public right of way in accordance with City Standards. (MVMC 8.36.050)

F25. Prior to construction, "private" driveways over 150 feet in length shall have a turn-around as determined by the Fire Prevention Bureau capable of accommodating fire apparatus. Driveway grades shall not exceed 12 percent. (CFC 503 and MVMC 8.36.050)

F26. Complete plans and specifications for fire alarm systems, fire-extinguishing systems (including automatic sprinklers or standpipe systems), clean agent systems (or other special types of automatic fire-extinguishing systems), as well as other fire-protection systems and appurtenances thereto shall be submitted to the Moreno Valley Fire Prevention Bureau for review and approval prior to system installation. Submittals shall be in accordance with CFC Chapter 9 and associated accepted national standards.

F27. A permit is required to maintain, store, use or handle materials, or to conduct processes which produce conditions hazardous to life or property, or to install equipment used in connection with such activities. Such permits shall not be construed as authority to violate, cancel or set aside any of the provisions of this code. Such permit shall not take the place of any license required by law. Applications for permits shall be made to the Fire Prevention Bureau in such form and detail as prescribed by the Bureau. Applications for permits shall be accompanied by such plans as required by the Bureau. Permits shall be kept on

the premises designated therein at all times and shall be posted in a conspicuous location on the premises or shall be kept on the premises in a location designated by the Fire Chief. Permits shall be subject to inspection at all times by an officer of the fire department or other persons authorized by the Fire Chief in accordance with Appendix Chapter 1 and MVMC 8.36.100.

F28. Approval of the safety precautions required for buildings being constructed, altered or demolished shall be required by the Fire Chief in addition to other approvals required for specific operations or processes associated with such construction, alteration or demolition. (CFC Chapter 14 & CBC Chapter 33)

F29. Prior to issuance of Certificate of Occupancy, permits are required to store, dispense, use or handle hazardous material. Each application for a permit shall include a hazardous materials management plan (HMMP). The location of the HMMP shall be posted adjacent to (other) permits when an HMMP is provided. The HMMP shall include a facility site plan designating the following:

a) Storage and use areas;
b) Maximum amount of each material stored or used in each area;
c) Range of container sizes;
d) Locations of emergency isolation and mitigation valves and devises;
e) Product conveying piping containing liquids or gases, other than utility-owned fuel gas lines and low-pressure fuel gas lines;
f) On and off positions of valves for valves which are of the self-indicating type;
g) Storage plan showing the intended storage arrangement, including the location and dimensions of aisles. The plans shall be legible and approximately to scale. Separate distribution systems are allowed to be shown on separate pages; and
h) Site plan showing all adjacent/neighboring structures and use.

NOTE: Each application for a permit shall include a hazardous materials inventory statement (HMIS).

F30. Before a Hazardous Materials permit is issued, the Fire Chief shall inspect and approve the receptacles, vehicles, buildings, devices, premises, storage spaces or areas to be used. In instances where laws or regulations are enforceable by departments other than the Fire Prevention Bureau, joint approval shall be obtained from all departments concerned. (CFC Appendix H)

F31. Construction or work for which the Fire Prevention Bureau's approval is required shall be subject to inspection by the Fire Chief and such construction or work shall remain accessible and exposed for inspection purposes until approved. (CFC Section 106)

F32. The Fire Prevention Bureau shall maintain the authority to inspect, as often as necessary, buildings and premises, including such other hazards or appliances designated by the Fire Chief for the purpose of ascertaining and causing to be corrected any conditions which would reasonably tend to cause fire or contribute to its spread, or any violation of the purpose or provisions of this code and of any other law or standard affecting fire safety. (CFC Section 106)

F33. Permit requirements issued, which designate specific occupancy requirements

FIRE FLOW LETTER

for a particular dwelling, occupancy, or use, shall remain in effect until such time as amended by the Fire Chief. (CFC Section 104)

F34. In accordance with the California Fire Code Appendix Chapter 1, where no applicable standards or requirements are set forth in this code, or contained within other laws, codes, regulations, ordinances or bylaws adopted by the jurisdiction, compliance with applicable standards of the National Fire Protection Association or other nationally recognized fire safety standards as are approved shall be deemed as prima facie evidence of compliance with the intent of this code as approved by the Fire Chief. (CFC Section 102.7)

F35. Any alterations, demolitions, or change in design, occupancy and use of buildings or site will require plan submittal to the Fire Prevention Bureau with review and approval prior to installation. (CFC Appendix Chapter 1)

F36. Emergency and Fire Protection Plans shall be provided when required by the Fire Prevention Bureau. (CFC Section 105)

F37. Prior to Certificate of Occupancy all locations where medians are constructed and prohibit vehicular ingress/egress into or away from the site, provisions must be made to construct a median-crossover at all locations determined by the Fire Marshal and the City Engineer. Prior to the construction, design plans will be submitted for review and approval by the City Engineer and all applicable inspections conducted by Land Development Division.

F38. Prior to construction, all traffic calming designs/devices must be approved by the Fire Marshal and City Engineer.

Date:	10/08/12	**Address:**	
Case Number:	**PA11-0001 TO PA11-007, P11-004 AND 005**	**A.P.N.:**	**316-020-001, 006, 007, 028, 010**

This is certification the water system is capable of meeting the following required fire flows as determined by the California Fire Code Appendix B.

Based on the information provided on the above referenced case. The fire flow required for this project will be ___4000_ G.P.M. for duration of _4_-HOURS measured at 20-psi residual pressure.

The required fire flow may be adjusted during the approval process to reflect changes in design, construction type or automatic fire protection measures as approved by the Fire Prevention Bureau.

CITY OF MORENO VALLEY
COMMUNITY & ECONOMIC DEVELOPMENT - LAND DEVELOPMENT DIVISION
CONDITIONS OF APPROVAL
PA11-0007 / TPM 35879 – Four Parcel Industrial Warehouse Subdivision
APN 316-020-032, 316-020-033, 316-020-034, 316-020-035, 316-020-036

Note: All Special Conditions are in **Bold** lettering and follow the standard conditions.

COMMUNITY & ECONOMIC DEVELOPMENT – LAND DEVELOPMENT DIVISION

The following are the Community & Economic Development Department – Land Development Division Conditions of Approval for this project and shall be completed at no cost to any government agency. All questions regarding the intent of the following conditions shall be referred to the Community & Economic Development Department – Land Development Division.

General Conditions

LD1. (G) The developer shall comply with all applicable City ordinances and resolutions including the City's Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). (MC 9.14.010)

LD2. (G) If the project involves the subdivision of land, maps may be developed in phases with the approval of the City Engineer. Financial security shall be provided for all improvements associated with each phase of the map. The boundaries of any multiple map increment shall be subject to the approval of the City Engineer. The City Engineer may require the dedication and construction of necessary utilities, streets or other improvements outside the area of any particular map, if the improvements are needed for circulation, parking, access, or for the welfare or safety of the public. (MC 9.14.080, GC 66412 and 66462.5)

LD3. (G) It is understood that the tentative map correctly shows all existing easements, traveled ways, and drainage courses, and that their omission may require the map or plans associated with this application to be resubmitted for further consideration. (MC 9.14.040)

LD4. (G) In the event right-of-way or offsite easements are required to construct offsite improvements necessary for the orderly development of the surrounding area to meet the public health and safety needs, the developer shall make a good faith effort to acquire the needed right-of-way in accordance with the Land Development Division's administrative policy. In the event that the developer is unsuccessful, he shall enter into an agreement with the City to acquire the necessary right-of-way or offsite easements and complete the improvements at such time the City acquires the right-of-way or offsite easements which will permit the improvements to be made. The developer shall be responsible for all costs associated with the right-of-way or easement acquisition. (GC 66462.5)

LD5. (G) If improvements associated with this project are not initiated within two years of the date of approval of the Public Improvement Agreement, the City Engineer may require that the improvement cost estimate associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the Public Improvement Agreement or issuance of a permit.

LD6. (G) The developer shall monitor, supervise and control all construction and construction supportive activities, so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:

a. Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.

b. Observance of working hours as stipulated on permits issued by the Public Works Department.

c. The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.

d. All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements shall be adhered to during the grading operations.

Violation of any condition or restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedies as noted in the City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.

LD7. (G) The developer shall protect downstream properties from damage caused by alteration of drainage patterns, i.e., concentration or diversion of flow. Protection shall be provided by constructing adequate drainage facilities, including, but not limited to, modifying existing facilities or by securing a drainage easement. (MC 9.14.110)

LD8. (G) Public drainage easements, when required, shall be a minimum of 25 feet wide and shall be shown on the map and plan, and noted as follows: "Drainage Easement – no structures, obstructions, or encroachments by land fills are allowed." In addition, the grade within the easement area shall not exceed a 3:1 (H:V) slope, unless approved by the City Engineer.

LD9. (G) A detailed drainage study shall be submitted to the City Engineer for review and approval at the time of any improvement or grading plan submittal. The study shall be prepared by a registered civil engineer and shall include existing and proposed hydrologic conditions. Hydraulic calculations are required for all drainage control devices and storm drain lines. (MC 9.14.110). Prior to approval of the related improvement or grading plans, the developer shall submit the

approved drainage study, on compact disk, in (.pdf) digital format to the Land Development Division of the Community and Economic Development Department.

LD10. (G) Prior to final map approval, commencing applicable street improvements, or obtaining the first building permit, the developer shall enter into a Development Impact Fee (DIF) Improvement Credit Agreement to secure credit and reimbursement for the construction of applicable arterial street, traffic signal, and/or interchange improvements. If the developer fails to complete this agreement prior to the timing as specified above, no credits or reimbursements will be given. The applicant shall pay Arterial Streets, Traffic Signals, and Interchange Improvements development impact fees adopted by the City Council by resolution. (Ord. 695 § 1.1 (part), 2005) (MC 3.38.030, .040, .050)

LD11. (G) Prior to final map approval, commencing applicable street improvements, or obtaining the first building permit, the developer shall enter into a Transportation Uniform Mitigation Fee (TUMF) Improvement Credit Agreement to secure credit and reimbursement for the construction of applicable improvements. If the developer fails to complete this agreement by the timing as specified above, no credits or reimbursements will be given for any work. Prior to approval of the TUMF Improvement Credit Agreement, an approved engineer's cost estimate and street improvement plan are required.

LD12. (G) The final conditions of approval issued by the Planning Division subsequent to Planning Commission approval shall be photographically or electronically placed on mylar sheets and included in the Grading and Street Improvement plan sets on twenty-four (24) inch by thirty-six (36) inch mylar and submitted with the plans for plan check. These conditions of approval shall become part of these plan sets and the approved plans shall be available in the field during grading and construction.

Prior to Grading Plan Approval or Grading Permit

LD13. (GPA) Prior to approval of the grading plans, plans shall be drawn on twenty-four (24) inch by thirty-six (36) inch mylar and signed by a registered civil engineer and other registered/licensed professional as required.

LD14. (GPA) Prior to approval of grading plans, the developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:

a. The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines shall be located at the top of slopes.

b. Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.

c. A grading permit shall be obtained from th e Communi ty and Eco nomic Development Department Land Development Division prior to commencement of any grading out side of the City maintained road rig ht-of-way.

d. All improve ment plans are substan tially complete and appropriate cle arance and at-risk letters are provided to the City. (MC 9.14.030)

e. The developer shall sub mit a soils a nd geologic report to the Community and Economic Developme nt Department – Land Develop ment Division. The report shall address the soil's stability and geological conditions of the site.

LD15. (GPA) Prior to grading plan approval, the developer shall select and implemen t treatment control best management practice s (BMPs) that are medium to highly effective for treating Pollutants of Co ncern (POC) for the proj ect. Projects where National Pollution Discharge Eliminati on System (NPDES) mandate s water quality treatment control best management pra ctices (BMPs) shall be designed per the City of Moreno Valley guidelines or as approved by the City Engineer.

LD16. (GPA) Prior to approval of the grading plans for projects that will result in discharges of storm water associa ted with const ruction with a soil distur bance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's I dentification number (W DID#) from the State Water Quality Control Board (SW QCB). The WDID# sh all be note d on the grading plans prior to issuance of the first grading permit.

LD17. (GPA) Prior to the grad ing plan approval, or is suance of a building permit, if a grading permit is not required, the Developer s hall submit two (2) copies of the final project-specific Wat er Quality M anagement Plan (WQMP) for revie w by the City Engineer that :

a. Addresses Site Desig n Best Management Practices (BMPs) such as minimizing impervious areas, maxi mizing permeability, minimizes directly connected impervious areas to the City's street and storm drain systems, and conserves natural areas;

b. Incorporates Source Control BMPs and provides a detaile d descriptio n of their implementation;

c. Incorporates Treatment Control BM Ps and provides info rmation regarding design considerations;

d. Describes t he long-term operation and mainte nance requirements for BMPs requiring maintenance; and

e. Describes the mechanism for funding the long-term operation and maintenance of the BMPs.

A copy of the final WQMP templat e can be ob tained on th e City's Website or by conta cting the L and Develo pment Di vision of the Community and Economic Development Department.

LD18. (GPA) Prior to the grading plan approval, or issuance of a building permit, if a grading permit is not required, the Developer shall record a "Stormwater Treatment Device and Control Measure Access and Maintenance Covenant," to provide public notice of the requirement to implement the approved final project-specific WQMP and the maintenance requirements associated with the WQMP.

A boilerplate copy of the "Stormwater Treatment Device and Control Measure Access and Maintenance Covenant," can be obtained by contacting the Land Development Division of the Community and Economic Development Department.

LD19. (GPA) Prior to the grading plan approval, or issuance of a building permit, if a grading permit is not required, the Developer shall secure approval of the final project-specific WQMP from the City Engineer. The final project-specific WQMP shall be submitted at the same time of grading plan submittal. The approved final WQMP shall be submitted to the Storm Water Program Manager on compact disk(s) in Microsoft Word format prior to grading plan approval.

LD20. (GPA) Prior to the grading plan approval, or issuance of a building permit as determined by the City Engineer, the approved final project-specific WQMP shall be incorporated by reference or attached to the project's Storm Water Pollution Prevention Plan as the Post-Construction Management Plan.

LD21. (GPA) Prior to grading plan approval, the developer shall prepare a Storm Water Pollution Prevention Plan (SWPPP) in conformance with the state's Construction Activities Storm Water General Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request. The SWPPP shall be submitted to the Storm Water Program Manager on compact disk(s) in Microsoft Word format.

LD22. (GPA) Prior to the approval of a grading plan, the developer shall comply with the rules and regulations of FEMA and City Ordinance 8.12.190 for development within a flood hazard area (defined as Zones A, AE, AH, A0 and A99).

a. For developments less required to submit a CLOMR-F/LOMR-F, the City requires the following prepared by a licensed civil engineer or land surveyor:

i. Prior to issuance of a grading permit, a Floodplain Development Permit (available from the City).
ii. A CLOMR-F (residential structures) unless otherwise approved by the City Engineer.
iii. Determination of BFE. Machinery and equipment servicing the structures shall be designed to be located above the BFE. For habitable structures, the lowest floor must be certified to be a minimum of one foot above the BFE; non-residential structures must be additionally dry floodproofed; for qualified non-habitable structures, the lowest floor must be wet floodproofed to one foot minimum above BFE.
iv. Prior to issuance of individual building permits, an elevation certificate shall be approved by the City.

v. Prior to issuance of first building permit for residential structures, submittal of LOMR-F package with appropriate fees to FEMA, unless otherwise approved by the City Engineer.
vi. Prior to issuance of individual certificate of occupancy, a final elevation/floodproof certificate (dependent on type of structure(s)).
vii. Prior to ninety percent reduction of public improvement securities, a LOMR-F approved by FEMA shall be submitted to the City.

LD23. (GPA) Prior to the approval of the grading plans, the developer shall pay applicable remaining grading plan check fees.

LD24. (GPA/MA) Prior to the later of either grading plan or final map approval, resolution of all drainage issues shall be as approved by the City Engineer.

LD25. (GP) Prior to issuance of a grading permit, or building permit when a grading permit is not required, for projects that require a project-specific Water Quality Management Plan (WQMP), a project-specific final WQMP (F-WQMP) shall be approved. Upon approval, a WQMP Identification Number is issued by the Storm Water Management Section and shall be noted on the rough grading plans as confirmation that a project-specific F-WQMP approval has been obtained.

LD26. (GP) Prior to issuance of a grading permit, if the fee has not already been paid prior to map approval or prior to issuance of a building permit if a grading permit is not required, the developer shall pay Area Drainage Plan (ADP) fees. The developer shall provide a receipt to the City showing that ADP fees have been paid to Riverside County Flood Control and Water Conservation District. (MC 9.14.100)

LD27. (GP) Prior to issuance of a grading permit, security, in the form of a cash deposit (preferable), letter of credit, or performance bond shall be required to be submitted as a guarantee of the completion of the grading required as a condition of approval of the project.

LD28. (GP) Prior to issuance of a grading permit, the developer shall pay the applicable grading inspection fees.

Prior to Map Approval or Recordation

LD29. (MA) Prior to approval of the map, the developer shall submit a copy of the Covenants, Conditions and Restrictions (CC&Rs) to the Land Development Division for review and approval. The CC&Rs shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project.

LD30. (MA) Prior to approval of the map, all street dedications shall be irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer. All dedications shall be free of all encumbrances as approved by the City Engineer.

LD31. (MA) Prior to approval of the map, security shall be required to be submitted as a guarantee of the completion of the improvements required as a condition of approval of the project. A public improvement agreement will be required to be executed.

LD32. (MR) Prior to recordation of the map, if the developer chooses to construct the project in construction phases, a Construction Phasing Plan for the construction of on-site public and private improvements shall be reviewed and approved by the City Engineer.

LD33. (MR) Prior to recordation of the map, the developer shall submit the map, on compact disks, in (.dxf) digital form at to the Land Development Division of the Community and Economic Development Department.

Prior to Improvement Plan Approval or Construction Permit

LD34. (IPA) Prior to approval of the improvement plans, the improvement plans shall be drawn on twenty-four (24) inch by thirty-six (36) inch mylar and signed by a registered civil engineer and other registered/licensed professional as required.

LD35. (IPA) Prior to approval of the improvement plans, the developer shall submit clearances from all applicable agencies, and pay all outstanding plan check fees. (MC 9.14.210)

LD36. (IPA) All public improvement plans prepared and signed by a registered civil engineer in accordance with City standards, policies and requirements shall be approved by the City Engineer in order for the Public Improvement Agreement and accompanying security to be executed.

LD37. (IPA) Prior to approval of the improvement plans, securities and a public improvement agreement shall be required to be submitted and executed as a guarantee of the completion of the improvements required as a condition of approval of the project.

LD38. (IPA) The street improvement plans shall comply with all applicable City standards and the following design standards throughout this project:

a. Corner cutbacks in conformance with City Standard 208 shall be shown on the final map or, if no map is to be recorded, offered for dedication by separate instrument.

b. Lot access to major thoroughfares shall be restricted except at intersections and approved entrances and shall be so noted on the final map. (MC 9.14.100)

c. The minimum centerline and flow line grades shall be one percent unless otherwise approved by the City Engineer. (MC 9.14.020)

d. All street intersections shall be at ninety (90) degrees plus or minus five (5) degrees per City Standard No. 706A, or as approved by the City Engineer. (MC 9.14.020)

LD39. (IPA) Prior to approval of the improvement plans, the plans shall be based upon a centerline profile, extending beyond the project boundaries a minimum distance of 300 feet at a grade and alignment approved by the City Engineer. Design plan and profile information shall include the minimum 300 feet beyond the project boundaries.

LD40. (IPA) Prior to approval of the improvement plans, the plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three years old and recently slurry sealed streets less than one year old. Pavement cuts for trench repairs may be allowed for emergency repairs or as specifically approved in writing by the City Engineer.

LD41. (IPA) Prior to approval of the improvement plans, the developer is required to bring any existing access ramps adjacent to and fronting the project to current ADA (Americans with Disabilities Act) requirements. However, when work is required in an intersection that involves or impacts existing access ramps, those access ramps in that intersection shall be retrofitted to comply with current ADA requirements, unless approved otherwise by the City Engineer.

LD42. (IPA) Prior to approval of the improvement plans, drainage facilities with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided. (MC 9.14.110)

LD43. (IPA) Prior to the approval of the improvement plans, the hydrology study shall show that the 10-year storm flow will be contained within the curb and the 100-year storm flow shall be contained within the street right-of-way. In addition, one lane in each direction shall not be used to carry surface flows during any storm event for street sections equal to or larger than a minor arterial. When any of these criteria is exceeded, additional drainage facilities shall be installed. (MC 9.14.110 A.2)

LD44. (IPA) The project shall be designed to accept and properly convey all off-site drainage flowing onto or through the site. All storm drain design and improvements shall be subject to review and approval of the City Engineer. In the event that the City Engineer permits the use of streets for drainage purposes, the provisions of the Development Code will apply. Should the quantities exceed the street capacity or the use of streets be prohibited for drainage purposes, as in the case where one travel lane in each direction shall not be used for drainage conveyance for emergency vehicle access on streets classified as minor arterials and greater, the developer shall provide adequate facilities as approved by the Community and Economic Development Department – Land Development Division. (MC 9.14.110)

LD45. (CP) All work performed within the City right-of-way requires a construction permit. As determined by the City Engineer, security may be required for work within the right-of-way. Security shall be in the form of a cash deposit or other

approved means. The City Engineer may require the execution of a public improvement agreement as a condition of the issuance of the construction permit. All inspection fees shall be paid prior to issuance of construction permit. (MC 9.14.100)

LD46. (CP) Prior to issuance of a construction permit, all public improvement plans prepared and signed by a registered civil engineer in accordance with City standards, policies and requirements shall be approved by the City Engineer.

LD47. (CP) Prior to issuance of construction permits, the developer shall submit all improvement plans on compact disks, in (. dxf) digital format to the Land Development Division of the Community and Economic Development Department.

LD48. (CP) Prior to issuance of construction permits, the developer shall pay all applicable inspection fees.

Prior to Building Permit

LD49. (BP) Prior to issuance of building permits, the map shall be recorded. (MC 9.14.090)

LD50. (BP) Prior to issuance of a building permit (excluding model homes), an approval by the City Engineer is required of the water quality control basin(s). The developer shall provide certification to the line, grade, flow test and system invert elevations.

LD51. (BP) Prior to issuance of a building permit, all pads shall meet pad elevations per approved plans as noted by the setting of “Blue-top” markers installed by a registered land surveyor or licensed engineer.

Prior to Certificate of Occupancy

LD52. (CO) Prior to issuance of a certificate of occupancy, the parcel map shall be recorded.

LD53. (CO) Prior to issuance of the last certificate of occupancy or building final, the developer shall pay all outstanding fees.

LD54. (CO) Prior to issuance of a certificate of occupancy, this project is subject to requirements under the current permit for storm water activities required as part of the National Pollutant Discharge Elimination System **(NPDES)** as mandated by the Federal Clean Water Act. In compliance with Proposition 218, the developer shall agree to approve the City of Moreno Valley NPDES Regulatory Rate Schedule that is in place at the time of certificate of occupancy issuance. Following are the requirements:

a. Select one of the following options to meet the financial responsibility to provide storm water utilities services for the required continuous operation,

maintenance, monitoring system evaluations and enhancements, remediation and/or replacement, all in accordance with Resolution No. 2002-46.

i. Participate in the mail ballot proceeding in compliance with Proposition 218, for the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule and pay all associated costs with the ballot process; or

ii. Establish an endowment to cover future City costs as specified in the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule.

b. Notify the Special Districts Division of the intent to request building permits 90 days prior to their issuance and the financial option selected. The financial option selected shall be in place prior to the issuance of certificate of occupancy. (California Government Code & Municipal Code)

LD55. (CO) The City of Moreno Valley has an adopted Development Impact Fee (DIF) nexus study. All projects unless otherwise exempted shall be subject to the payment of the DIF prior to issuance of occupancy. The fees are subject to the provisions of the enabling ordinance and the fee schedule in effect at the time of occupancy.

LD56. (CO) The City of Moreno Valley has an adopted area wide Transportation Uniform Mitigation Fee (TUMF). All projects unless otherwise exempted shall be subject to the payment of the TUMF prior to issuance of occupancy. The fees are subject to the provisions of the enabling ordinance and the fee schedule in effect at the time of occupancy.

LD57. (CO) Prior to issuance of a certificate of occupancy or building final, the developer shall construct all public improvements in conformance with applicable City standards, except as noted in the Special Conditions, including but not limited to the following applicable improvements:

a. Street improvements including, but not limited to: pavement, base, curb, gutter, cross gutter, spandrel, sidewalk, drive approaches, pedestrian ramps, bus turn outs, street lights, signing, striping, landscaping and irrigation, medians, pavement tapers/transitions and traffic control devices as appropriate.

b. Storm drain facilities including, but not limited to: storm drain pipe, storm drain laterals, catch basins and local depressions.

c. Sewer and water systems including, but not limited to: sanitary sewer, potable water and recycled water.

d. Under grounding of existing and proposed utility lines less than 115,000 volts. **All overhead utilities less than 115,000 volts within and along the project boundary will be required to be placed underground and all power poles removed.**

LD58. (CO) Prior to issuance of a certificate of occupancy or building final, all existing and new utilities adjacent to and on-site shall be placed underground in accordance with City of Moreno Valley ordinances. (MC 9.14.130)

LD59. (CO) Prior to issuance of a certificate of occupancy or building final, in order to treat for water quality the sub-area tributary to the basin, the Developer must comply with the following:

a. The water quality basin and all associated treatment control BMPs and all hardware per the approved civil drawing must be constructed, certified and approved by the City Engineer including, but not limited to, piping, forebay, aftbay, trash rack, etc.) Landscape and irrigation plans are not approved for installation at this time.

b. Provide the City with an Engineer's Line and Grade Certification.

c. Perform and pass a flow test per City test procedures.

LD60. (CO) Prior to issuance of a certificate of occupancy or building final for any Commercial/Industrial facility, whichever occurs first, the owner may have to secure coverage under the State's General Industrial Activities Storm Water Permit as issued by the State Water Resources Control Board.

LD61. (CO) Prior to issuance of a certificate of occupancy or building final, the applicant shall ensure the following, pursuant to Section XII. I. of the 2010 NPDES Permit:

a. Field verification that structural Site Design, Source Control and Treatment Control BMPs are designed, constructed and functional in accordance with the approved Final Water Quality Management Plan (WQMP)

b. Certification of best management practices (BMPs) from a state licensed civil engineer. An original WQMP BMP Certification shall be submitted to the City for review and approval.

<u>Prior to Acceptance of Streets into the City Maintained Road System</u>

LD62. (AOS) Aggregate slurry, as defined in Section 203-5 of Standard Specifications for Public Works Construction, may be required just prior to the end of the one-year warranty period of the public streets at the discretion of the City Engineer. If slurry is required, the developer/contractor must provide a slurry mix design submittal for City Engineer approval. The latex additive shall be Ultra Pave 70 (for anionic – per project geotechnical report) or Ultra Pave 65 K (for cationic – per project geotechnical report) or an approved equal. The latex shall be added at the emulsion plant after weighing the asphalt and before the addition of mixing water. The latex shall be added at a rate of two to two-and-one-half (2 to 2½) parts to one-hundred (100) parts of emulsion by volume. Any existing striping shall be removed prior to slurry application and replaced per City standards.

SPECIAL CONDITIONS

LD63. After obtaining entitlements, this project will be required to submit design plans for plan review (Rough Grading Plans, Precise Grading Plans Street Improvement Plans, Signing and Striping Plans, Traffic Control Plans, Traffic Signal Plans, Storm Drain Plans, Sewer and Water Plans, Final Parcel Map, and other plans to the Land Development Division. All engineering (Land Development) type plans shall be drawn on 24"x36" sheet size and use title block per City Standard 708.

LD64. (GPA) Prior to rough grading plan approval, this project shall demonstrate, via a final drainage study, that either the downstream facilities are capable of handling this development's increased runoff or that the increased runoff resulting from the development of this site is mitigated. Unless the downstream facilities are adequate, during no storm event shall the flow leaving the site in the developed condition be larger than that of the pre-developed condition. The drainage study shall analyze the following events: 1, 3, 6 and 24-hour duration events for the 2, 5, 10 and 100-year storm events. The applicant understands that additional detention measures, beyond those shown on the tentative map and preliminary drainage study, may be required.

LD65. (GPA) Prior to precise grading plan approval, this project shall meet all FEMA (Federal Emergency Management Agency) and City requirements for building in a 100 year flood zone (Zone A and Zone AO). This project shall submit for review and approval to FEMA a CLOMR-F (conditional letter of map revision based on fill). All requirements, as set forth by FEMA shall be adhered to, particularly the completion and submittal of FEMA application form MT-1, as well as all City Ordinance 8.12.130 requirements. The CLOMR-F shall be approved by FEMA prior to precise grading plan. The LOMR-F shall be acquired by FEMA after construction. The developer shall contact FEMA for CLOMR-F / LOMR-F requirements. As an alternative to the submittal of a CLOMR-F / LOMR-F, the developer may opt to flood proof the building per all City department requirements and City Ordinance 8.12.170 and as approved by FEMA. See FEMA Technical Bulletins TB 1-93, TB 3-93, and TB 7-93. Website: http://www.fema.gov/ Ph: 1-877-336-2627

LD66. (GPA) Prior to precise grading plan approval, the developer shall submit for review and approval a final soils report including site grading recommendations, especially pertaining to any import/fill relating to the CLOMR-F / LOMR-F requirement.

LD67. (GPA) Prior to precise grading plan approval, the grading plans shall clearly demonstrate that drainage is properly collected and conveyed. The plans shall show all necessary on-site and off-site drainage improvements to properly collect and convey drainage entering, within and leaving the project. This may include, but not be limited to on-site and perimeter drainage improvements to properly convey drainage within and along the project site, and downstream off-site improvements. The developer will be required to obtain the necessary permission for offsite construction including easements, including an encroachment permit for the

connection(s) to the Riverside County Flood Control and Water Conservation District (RCFC&WCD) channel.

LD68. (GPA) Prior to precise grading plan approval, emergency overflow areas shall be shown at all applicable drainage improvement locations in the event that the drainage improvement fails or exceeds full capacity. This may include, but not be limited to, an emergency spillway in the basins and an emergency overflow at any sump catch basin location. Alternatively, the engineer may submit for review and approval oversized catch basin inlets, or other acceptable design, as approved by the City Engineer.

LD69. (GPA) Prior to precise grading plan approval, the plans shall clearly demonstrate that all applicable recommendations from the geotechnical investigation prepared by NorCal Engineering on January 3, 2007 (NorCal Project Number 13461-06), and/or any subsequent report, have been adhered to including, but not limited to, grading operation procedures, structural section design, slab design, wall design, etc.

LD70. (GPA) Prior to precise grading plan approval, the grading plans shall show any proposed trash enclosure as dual bin trash enclosures, one bin for trash and one bin for recyclables. The trash enclosure shall be per City Standard Plan 627, modified to include a fully covered, solid roof.

LD71. (GPA) Prior to precise grading plan approval, the grading plans shall clearly show that the parking lot conforms to City standards. The parking lot shall be 5% maximum, 1% minimum for AC pavement, 0.50% for PCC, 2% maximum at or near any disabled parking stall and travel way. Ramps, curb openings and travel paths shall all conform to current ADA standards as outlined in Department of Justice's "ADA Standards for Accessible Design", Excerpt from 28 CFR Part 36. (www.usdoj.gov).

LD72. (GPA) Prior to precise grading plan or improvement plan approval, as applicable, the plans shall show all driveway approaches where truck movements are anticipated to be constructed City Standard Plan 118C, modified. The driveways shall transition from an 8" curb height to a 0" curb height at the conventional right-of-way 12' behind the curb line, or as approved by the City Engineer. There shall be 4' wide pedestrian sidewalk area at 2% maximum behind the conventional right-of-way. A 4-foot pedestrian right-of-way dedication shall be made on the final parcel map PM 35879.

LD73. (GPA) Prior to precise grading plan approval, the plans shall show roof drains directed to a landscaped area rather than being routed directly to the parking lot. Alternatively, roof drain flows can be directed to private storm drains which will connect to the treatment control best management practice.

LD74. (IPA) Prior to improvement plan approval, this developer shall acquire the required clearances and permits from all applicable agencies, particularly RCFC&WCD.

LD75. (IPA) Prior to improvement plan approval, additional catch basins may be required by the City Engineer along project perimeter streets where street grades are less than 1%. Spacing, sizing and location shall be determined per the final drainage study as approved by the City Engineer.

LD76. (MA) Prior to parcel map approval, the map shall show the following:

a. A 20' street right-of-way dedication on the south side of Iris Avenue along this project's north frontage to ensure a centerline to south right-of-way distance of 50' for an Arterial, City Standard 104A, except where right-of-way has already been dedicated per Instrument No. 2009-0228079 on May 7, 2009.

b. A 78' street right-of-way dedication, 39' north and south of proposed future Krameria Avenue centerline between Cosmos Street and Heacock Street, south of Parcel 1, to ensure a right-of-way distance of 78' for an Industrial Collector Street, City Standard 106.

c. A 39' west-half, street right-of-way dedication and half-width cul-de-sac at the northern terminus of Cosmos Street along this project's east frontage to ensure a centerline to west right-of-way distance of 39' for an Industrial Collector Street, City Standard 106 and City Standard 123.

d. Additional right-of-way for the east half of the Cosmos Street cul-de-sac bulb shall be secured from the adjacent property owner by separate instrument, unless the parcel map for the easterly, adjacent project records first.

e. An additional 10' of right-of-way on the east side of Heacock Street and the south side of Iris Avenue necessary for proposed bus turnouts, as required by the City's Transportation Department, per City Standard 121.

f. A 4' pedestrian right-of-way dedication behind all driveway approaches per City Standard 118C.

g. Corner cutbacks per City Standard 208 to accommodate 50-foot required curb returns at the intersections of Heacock Street and Krameria Avenue and Heacock Street and Iris Avenue.

h. A 1.5' sidewalk easement behind the right-of-way on the east side of Heacock Street where the sidewalk is to be curb-separated

i. A 2' sidewalk easement behind the right-of-way on the south side of Iris Avenue where the sidewalk is to be curb-separated.

j. Two 25' easements for storm drain purposes, shown as Proposed Easement Note "B" on the tentative parcel map, one coinciding with the southerly drive aisle and the other along the westerly drive aisle within Parcel 2. All public storm drain easements shall be a minimum of 25' in width.

k. A 15' easement for sanitary sewer purposes, shown as Proposed Easement Note "A" on the tentative parcel map, coinciding with the westerly drive aisle within Parcel 2.

l. The vacation of existing Krameria Avenue 44' of right-of-way along the south property line of Parcels 2 and 4.

m. The vacation of an unnamed cul-de-sac street 60-foot right-of-way traversing proposed Parcels 2 and 3 as shown on the tentative parcel map.

LD77. (MA) Prior to parcel map approval, the Developer shall guarantee the construction of the following improvements by entering into a public improvement agreement and posting security. The improvements shall be completed prior to occupancy of the first building or as otherwise determined by the City Engineer.

a. Heacock Street, Arterial, City Standard 104A modified (100' RW / 76' CC) shall be constructed to full-width along the entire project's west frontage. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk (modified to be curb-separated with the back of walk 1.5' behind the traditional right-of-way) (east side only), raised median at the south leg of its intersection with Iris Avenue, a guardrail on the west side of Heacock Street as required by the City Engineer, driveway approaches, bus turnout, drainage structures, any necessary offsite improvement transition/joins to existing, streetlights, pedestrian ramps, and dry and wet utilities. This project shall coordinate closely with the City's current CIP (Capital Improvement Project) Heacock Street Improvement Project for the design and construction of Heacock Street. The Capital Project Division's main line is (951) 413-3130.

b. Iris Avenue, Arterial, City Standard 104A (100' RW / 76' CC) shall be constructed to half-width plus an additional 18' north of the construction/proposed centerline, along the entire project's north frontage. A 20' right-of-way dedication on the south side of the street, along the project's north property line except where right-of-way has been previously dedicated per Instrument No. 2009-0228079 on May 7, 2009, shall be shown on the parcel map. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk (modified to be curb-separated with the back of walk 2' behind the traditional right-of-way), bus turnout, raised median on the east leg of its intersection with Heacock Street, driveway approaches, drainage structures, any necessary offsite improvement transition/joins to existing, streetlights, pedestrian ramps, and dry and wet utilities.

c. Cosmos Street, Industrial Collector, City Standard 106 (78' RW / 56' CC) shall be constructed to half-width plus an additional 18' east of the centerline, along the entire project's east frontage. A 39' right-of-way dedication on the west side of the street and additional right-of-way

required for the proposed cul-de-sac at the street's northerly end, along the project's east property line, shall be shown on the parcel map. The 18' of right-of-way on the east side of the centerline including additional right-of-way for the cul-de-sac bulb shall be acquired if not already dedicated by the adjacent property. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, drainage structures, any necessary offsite improvement transition/joins to existing, streetlights, pedestrian ramps, and dry and wet utilities. The cul-de-sac at the north end of the Cosmos Street terminus shall be constructed per City Standard 123.

d. Krameria Avenue, Industrial Collector, City Standard 106 (78' RW / 56' CC) shall be constructed to full-width, along the entire project's southerly property line of Parcel 1. A 78' right-of-way dedication shall be shown on the parcel map. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, drainage structures, streetlights, pedestrian ramps, and dry and wet utilities.

e. Driveway approaches shall be constructed per City Standard No. 118C, modified. The parcel map shall show an additional 4-foot right-of-way dedication behind driveway approaches. No decorative pavers shall be placed within the public right-of-way.

f. Pavement core samples of existing pavement may be taken and findings submitted to the City for review and consideration of a lesser width of pavement improvements. The City will determine the adequacy of the existing pavement structural section. If the existing pavement section is found to be adequate, then a lesser width than that specified above for street pavement improvements may be allowed, as approved by the City Engineer. If the existing pavement section is found to be inadequate, the Developer shall construct the streets to the limits as listed above.

g. All curb returns and driveway aprons where truck movements are expected shall have a radius of 50' minimum. This shall include the curb return at the southeast corner of Heacock Street and Iris Avenue, both curb returns at the "T" intersection of Heacock Street and proposed Krameria Avenue and all driveways along Heacock Street, Krameria Avenue, and Cosmos Street, or as otherwise directed by the City's Transportation Division.

LD78. (MA) Prior to parcel map approval, written permission must be obtained from off-site property owner(s) for all off-site grading and easements. All on-site and off-site easements shall be shown on the final map. This shall include, but not be limited to, the proposed driveway which straddles this project's southeast corner of APN 316-020-028 and the off-site property to the south, APN 316-100-036.

LD79. (MA) Prior to parcel map approval, this project shall submit for review a reciprocal access agreement between Parcel 2 and the off-site property

south of Parcel 2, APN 316-100-036, if the intention is for reciprocal access amongst parcels, else this project shall submit for review and approval an access easement from off-site APN 316-100-036 in favor of this project's Parcel 2, via separate instrument.

LD80. (BP) Prior to issuance of a building permit, the final parcel map shall record including easement and right-of-way dedications and street vacations proposed therein.

LD81. (OC) Prior to occupancy permit issuance, all overhead utility lines less than 115,000 volts fronting or within the entire project site boundary shall be placed underground per Section 9.14.130C of the City Municipal Code.

LD82. In accordance with the City of Moreno Valley standards, the Double Ring Infiltrometer field testing method shall be utilized to perform in-situ percolation testing in the location of proposed infiltration area treatment control Best Management Practice (BMP) and the results included in the Final WQMP.

LD83. The Preparer shall provide complete and documented calculations for the proposed treatment control BMPs.

LD84. The Applicant shall prepare and submit for approval a Project Specific Final Water Quality Management Plan (F-WQMP) for PA11-0007 formerly PA07-0151 -March Business Center. The F-WQMP shall be consistent with the approved P-WQMP and in full conformance with the document; "Riverside County Water Quality Management Plan for Urban Runoff" dated July 24, 2006. The F-WQMP shall be submitted and approved prior to application for and issuance of grading or building permits. At a minimum, the F-WQMP shall include the following: Site Design BMPs; Source Control BMPs; Treatment Control BMPs; Operation and Maintenance requirements for BMPs; and sources of funding for BMP implementation.

LD85. The Applicant shall select and implement treatment control BMPs that are medium to highly effective for treating Pollutants of Concern (POC) for the project. POC include project pollutants associated with a 303(d) listing or a Total Maximum Daily Load (TMDL) for receiving waters. Project pollutants of concern include: sediment/turbidity, nutrients, organic compounds, oxygen demanding substances, and pathogens (bacteria and viruses). Exhibit C of the document, "Riverside County Water Quality Management Plan for Urban Runoff" dated July 24, 2006 shall be consulted for determining the effectiveness of proposed treatment BMPs.

LD86. The Applicant has proposed to incorporate the use of catch basin 'filter inserts and infiltration basins with underdrain systems. Final design details of these filtration and infiltration systems must be provided in the first submittal of the F-WQMP. The size of the treatment control BMP is to be determined using the procedures set forth in Exhibit C of the Riverside County Guidance Document. The Applicant acknowledges that more area than currently shown on the plans may be required to treat site runoff as required by the WQMP Guidance.

LD87. The Applicant shall substantiate the applicable Hydrologic Condition of Concern (HCOC) (WQMP Section IV) in the F-WQMP. The HCOC designates that the project will comply with Condition A; therefore, the condition must be addressed in the F-WQMP.

LD88. The Applicant shall, prior to building or grading permit closeout or the issuance of a certificate of occupancy, demonstrate:

a. That all structural BMPs have been constructed and installed in conformance with the approved plans and specifications;

b. That all structural BMPs described in the F-WQMP have been implemented in accordance with approved plans and specifications;

c. That the Applicant is prepared to implement all non-structural BMPs included in the F-WQMP, conditions of approval, and building/grading permit conditions; and

d. That an adequate number of copies of the approved F-WQMP are available for the future owners/occupants of the project.

10.08.12 Revised

PUBLIC WORKS DEPARTMENT

Special Districts Division

Note: All Special Conditions, Modified Conditions, or Clarification of Conditions are in bold lettering. All other conditions are standard to all or most development projects.

Acknowledgement of Conditions

The following items are Special Districts' Conditions of Approval for projects **PA11-0002 through PA11-0006**; these projects shall be completed at no cost to any Government Agency. All questions regarding Special Districts' Conditions including but not limited to, intent, requests for change/ modification, variance and/or request for extension of time shall be sought from the Special Districts Division of the Public Works Department 951.413.3480 or by emailing specialdistricts@moval.org.

General Conditions

SD-1 The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services Districts Zones A (Parks & Community Services) and C (Arterial Street Lighting). All assessable parcels therein shall be subject to annual Zone A and Zone C charges for operations and capital improvements.

SD-2 Plans for parkway, median, slope, and/or open space landscape areas designated on the tentative map or in these Conditions of Approval for incorporation into Moreno Valley Community Services District **Zone M**, shall be prepared and submitted in accordance with the *City of Moreno Valley Public Works Department Landscape Design Guidelines*. Contact the Special Districts Division of the Public Works Department to obtain copies of this document.

SD-3 The developer, or the developer's successors or assignees shall be responsible for all parkway and/or median landscape maintenance for a period of one (1) year as per the *City of Moreno Valley Public Works Department Landscape Design Guidelines,* or until such time as the District accepts maintenance responsibilities.

SD-4 Any damage to existing landscape areas maintained by the Moreno Valley Community Services District due to project construction shall be repaired/replaced by the developer, or developer's successors in interest, at no cost to the Moreno Valley Community Services District.

SD-5 Plan check fees for review of parkway/median landscape plans for improvements that shall be maintained by the Moreno Valley Community Services District are due upon the first plan submittal. (MC 3.32.040)

SD-6 Inspection fees for the monitoring of landscape installation associated with Moreno Valley Community Services District maintained parkways/medians are due prior to the required pre-construction meeting. (MC 3.32.040)

SD-7 Streetlight Authorization forms, for all streetlights that are conditioned to be installed as part of this project, must be submitted to the Special Districts Division for approval, prior to streetlight installation. The Streetlight Authorization form can be obtained from the utility company providing electric service to the project, either Moreno Valley Utility or Southern California Edison.

Prior to Building Permit Issuance

SD-8 (BP) This project has been identified to be included in the formation of a Community Facilities District (Mello-Roos) for **Public Safety** services, including but not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. The property owner(s) shall not protest the formation; however, they retain the right to object to the rate and method of maximum special tax. In compliance with Proposition 218, the developer shall agree to approve the mail ballot proceeding (special election) for either formation of the CFD or annexation into an existing district that may already be established. The Developer must notify Special Districts of intent to request building permits 90 days prior to their issuance. (California Government Code)

SD-9 (BP) This project is conditioned to provide a funding source for the capital improvements and/or maintenance for the **Heacock St. and Iris Ave.** median landscape. In order for the Developer to meet the financial responsibility to maintain the defined service, one of the options as outlined below shall be selected. The Developer must notify Special Districts of intent to request building permits 90 days prior to their issuance and the financial option selected to fund the continued maintenance.

a. Participate in a ballot proceeding for **improved median maintenance** and pay all associated costs with the ballot process and formation costs, if any. Financing may be structured through a Community Services District zone, Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the city; or
b. Establish an endowment to cover the future maintenance costs of the landscaped area.

The financial option selected shall be in place prior to the issuance of certificate of occupancy.

SD-10 *Commercial* (BP) If Land Development, a Division of the Community and Economic Development Department, requires this project to supply a funding source necessary to provide, but not limited to, stormwater utilities services for the monitoring of on site facilities and performing annual inspections of the affected areas to ensure compliance with state mandated stormwater regulations, the developer must notify Special Districts 90 days prior to the City's issuance of a building permit and the financial option selected to fund the continued maintenance. (California Government Code)

SD-11 (BP) Prior to the issuance of the first building permit for this project, the developer shall pay Advanced Energy fees for all applicable Zone B (Residential Street Lighting) and/or Zone C (Arterial Street Lighting and Intersection Lighting) streetlights required for this development. Payment shall be made to the City of Moreno Valley, as collected by the Land Development Division, based upon the Advanced Energy fee rate in place at the time of payment, as set forth in the current Listing of City Fees, Charges and Rates, as adopted by City Council.

The developer shall provide a receipt to the Special Districts Division showing that the Advanced Energy fees have been paid in full for the number of streetlights to be accepted into the CSD Zone B and/or Zone C programs. Any change in the project which may increase the number of streetlights to be installed will require payment of additional Advanced Energy fees at the then current fee.

SD-12 (BP) Prior to release of building permit, the developer, or the developer's successors or assignees, shall record with the County Recorder's Office a **Covenant of Assessments** for each assessable parcel therein, whereby the developer covenants the existence of the Moreno Valley Community Services District, its established benefit zones, and that said parcel(s) is

(are) liable for payment of annua l benefit zone charges and the appropriate National Poll utant Discharge Eliminat ion System (NPDES) maximum regulatory rate schedule when due. A copy of the recorded Covenant of Assess ments shall be submitted to the S pecial Districts Division. For a copy of the Cov enant of Assessments form, please contact Special Districts, phone 951.413.3480.

SD-13 (BP) Final median, parkway, slope, and/or open space landscape/irrigation plans for those areas designated on the tentative map or in these Conditions of Approv al for inc lusion into Community Service s District shall be rev iewed and approved by the Community and Economic Development Department–Planning Division, and the Public Works Department–Special Districts and Transportation Divisions prior to the issuance of the first Building Permit.

Prior to Certificate of Occupancy

SD-14 (CO) All parkway and/or median landscaping specified in the t entative map or in t hese Conditi ons of Approval shall be constructed prior to the issuance of the Certificate of Occupancy/Building Final for the **1st building** for this project.

SD-15 (CO) Landscape and irrigation plans for parkway, median, slope, and/or open spac e landsc ape areas designated for incorporation into Moreno Valley Co mmunity Services Dis trict shall be placed on compact disk (CD) in pdf format. The CD shall include "As Built" plans, revisions, and changes. The CD will become the proper ty of the City of Moreno Valley and the Moreno Valley Community Services District.

CITY OF MORENO VALLEY

CONDITIONS OF APPROVAL
PA11-0001 through 0007
Proposal for four industrial buildings totaling approximately 1.5 million square feet located on the southeast corner of Heacock Street and Iris Avenue.

Note: All Special conditions are in bold lettering. All other conditions are standard to all or most development projects.

Transportation Engineering Division – Conditions of Approval

Based on the information contained in our standard review process we recommend the following conditions of approval be placed on this project:

GENERAL CONDITIONS

TE1. Conditions of approval may be modified if project is phased or altered from any approved plans.

TE2. Cul-de-sacs shall be designed and cons tructed per City Standard Plan No. 123 and/or 124.

TE3. Iris Avenue is classified as an Arterial (100'RW/76'CC) per City Standard Plan No. 104A. Design/construction shall include the following:

- **A Class III Bikeway shall be provided along Iris Avenue.**
- **Traffic Signal Interconnect shall be installed along Iris Avenue per City Standard Plan No. 421.**
- **A raised median shall be constructed from Heacock Street to approximately 50 feet east of the westernmost driveway.**

TE4. Heacock Street is classified as an Arterial (100' RW/76' CC) per City Standard Plan No. 104A, modified as necessary due to the MARB perimeter. Design/construction shall include the following:

- **A Class III Bikeway shall be provided along Heacock Street.**
- **Traffic Signal Interconnect shall be installed along Heacock Street per City Standard Plan No. 421.**
- **A raised landscape median shall be constructed on the south leg of the Heacock Street/Iris Avenue intersection (approximately 50 to 100 feet in length).**
- **A northbound right turn lane at the Heacock Street/Iris Avenue intersection.**
- **Metal Beam Guardrail shall be installed as required by the City Engineer.**

TE5. Krameria Avenue is reclassified as an Industrial Collector (78'RW/56'CC) per City Standard Plan No. 106.

TE6. "A" Street is designated as an Industrial Collector (78'RW/56'CC) per City Standard Plan No. 106.

PRIOR TO GRADING PERMIT

TE7. (GP) Prior to issuance of a grading permit, the project applicant shall submit an engineer's cost estimate for a raised landscape median along Iris Avenue (from 50' east of the westernmost driveway to the eastern property boundary) for the City Engineer's approval.

TE8. (GP) Prior to issuance of a grading permit, the project applicant shall submit conceptual striping plans for improvements identified in conditions TE13 and TE14 for the City Traffic Engineer's approval.

PRIOR TO IMPROVEMENT PLAN APPROVAL OR CONSTRUCTION PERMIT

TE9. Driveways shall conform to Section 9.11.080, and Table 9.11.080-14 of the City's Development Code – Design Guidelines and City of Moreno Valley Standard No. 118C for commercial driveway approach. Driveways wider than City standards (maximum of 40 feet) shall be constructed as an intersection with access ramps per City Standard 214A, including any necessary signing and markings, as determined by the City Traffic Engineer.

TE10. Prior to the final approval of the street improvement plans, a signing and striping plan shall be prepared per City of Moreno Valley Standard Plans - Section 4 for all streets with a cross section of 66'/44' and wider.

TE11. Prior to issuance of a construction permit, construction traffic control plans prepared by a qualified, Registered Civil or Traffic engineer may be required.

TE12. Sight distance at driveways and on streets shall conform to City of Moreno Valley Standard No. 125 A, B, and C at the time of preparation of final grading, landscape, and street improvements.

TE13. Prior to the final approval of the street improvement plans, the project applicant shall design the intersection of Heacock Street and Krameria Avenue to provide the following geometrics:

Northbound: One through lane, one shared through/right turn lane
Southbound: One left turn lane, two through lanes
Eastbound: NA
Westbound: One left turn lane, one right turn lane

NOTE: All curb return radii shall be 50 feet.

TE14. Prior to the final approval of the street improvement plans, the project applicant shall design the intersection of Heacock Street and Iris Avenue to provide the following geometrics:

Northbound: Two through lanes, one right turn lane
Southbound: Two left turn lanes, one through lane
Eastbound: NA
Westbound: Two left turn lanes, one right turn lane

NOTE: All curb return radii shall be 50 feet. Design shall include a raised landscape median on the south leg of the intersection. The median shall be approximately 50 to 100 feet in length. A raised landscape median shall also be required on the east leg of the intersection to a point approximately 50 feet east of the westernmost driveway.

TE15. Prior to final approval of the street improvement plans, the project applicant shall design a bus bay per City Standard Plan No. 121 for eastbound Iris Avenue, east of Heacock Street as well as northbound Heacock Street, north of Krameria Avenue.

PRIOR TO BUILDING PERMIT

TE16. (BP) Prior to issuance of a building permit, traffic signal plans shall be prepared by a registered civil or electrical engineer and shall be submitted to the City Traffic Engineer for the following intersections:

- **Heacock Street at Iris Avenue,**
- **Heacock Street at Krameria Street,**
- **Heacock Street at Gentian Avenue (roadway transitions on the south leg may be necessary to align lanes through intersection).**

TE17. (BP) Prior to issuance of a Building Permit, the project applicant shall pay all fair-share contributions per the FEIR Mitigation Measures 4.11-3 and 4.11-4.

TE18. (BP) Prior to issuance of a building permit, the project applicant shall make a fair-share contribution in the amount of $42,805 to the City of Moreno Valley for the construction of a traffic signal at Perris Boulevard and Suburban Lane. As this traffic signal is not in any existing fee program, payment of DIF and/or TUMF are not considered satisfaction of this obligation.

TE19. (BP) Prior to issuance of a building permit, the project applicant shall pay to the City of Moreno Valley 50 percent of the estimated cost for a raised median along Iris Avenue (from 50' east of the westernmost driveway to the eastern property boundary) as established by condition TE7. As this raised median is not in any existing fee program, payment of DIF and/or TUMF are not

considered satisfaction of this obligation. The raised median will be constructed at a future date when warranted.

PRIOR TO CERTIFICATE OF OCCUPANCY OR BUILDING FINAL

TE20. (CO) Prior to issuance of a certif icate of occupancy, all approved signing and striping shall be installed per current City Standards and the approved plans.

TE21. (CO) Each gated entrance shall be provided with the following, or as approved by the City Traffic Engineer:

a) A storage lane with a minimum of 75 feet queuing length for entering traffic.
b) Appropriate signing and striping.

All of these features must be kept in working order.

TE22. (CO) Prior to the issuance of a certificate of occupancy, the project applicant shall construct the traffic signals identified in TE16. Construction shall be completed per the approved plans and coordinated with the street improvements.

TE23. (CO) Prior to issuance of a certificate of occupancy, the project applicant shall construct the intersection/roadway improvements identified in TE13, TE14, and TE15 per the approved plans.

TE24. (CO) Prior to the issuance of a certificate of occupancy for the project, driveway access at the following locations will be installed as follows:

- **Westernmost Iris Avenue driveway: Right-in, right-out access restricted by means of a raised median.**
- **Center and Easternmost Iris Avenue driveways: Full access, restricted to right-in, right-out access in the future when a raised median is warranted.**
- **Heacock Street Driveways: Full Access.**
- **Krameria Avenue Driveways: Full access.**
- **"A" Street Driveways: Full Access.**

NOTE: All truck driveways shall have curb return radii of 50 feet.

PRIOR TO ACCEPTANCE OF STREETS INTO THE CITY-MAINTAINED ROAD SYSTEM

TE25. Prior to the acceptance of streets intothe City-maintained road system, all approved traffic control and signing and striping shall be installed per current City Standards and the approved plans.

CITY OF MORENO VALLEY
CONDITIONS OF APPROVAL
Case No: PA11- 0001 through PA11 – 0007, P11- 004, and P11-005
APN: 316-020-032 through 036

PUBLIC WORKS DEPARTMENT

Moreno Valley Utility

Note: All Special Conditions, Modified Conditions, or Clarification of Conditions are in bold lettering. All other conditions are standard to all or most development projects.

Acknowledgement of Conditions

The following items are Moreno Valley Utility's Conditions of Approval for project(s) PA11-0001 through PA11–0007, P11-004, and P11-005; this project shall be completed at no cost to any Government Agency. All questions regarding Moreno Valley Utility's Conditions including but not limited to, intent, requests for change/modification, variance and/or request for extension of time shall be sought from Moreno Valley Utility (the Electric Utility Division) of the Public Works Department 951.413.3500. The applicant is fully responsible for communicating with Moreno Valley Utility staff regarding their conditions.

PRIOR TO RECORDATION OF FINAL MAP

MVU-1 (R) For single family subdivisions, a three foot easement along each side yard property line shall be shown on the final map and offered for dedication to the City of Moreno Valley for public utility purposes, unless otherwise approved by the City Engineer. If the project is a multi-family development, townhome, condominium, apartment, commercial or industrial project, and it requires the installation of electric distribution facilities within common areas, a non-exclusive easement shall be provided to Moreno Valley Utility to include all such common areas. All easements shall include the rights of ingress and egress for the purpose of operation, maintenance, facility repair, and meter reading.

PRIOR TO ISSUANCE OF BUILDING PERMIT

MVU-2 (BP) **City of Moreno Valley Municipal Utility Service – Electrical Distribution**: Prior to issuance of building permit, the developer shall submit a detailed engineering plan showing design, location and schematics for the utility system to be approved by the City Engineer. In accordance with Government Code Section 66462, the Developer **shall** execute an agreement with the City providing for the installation, construction, improvement and dedication of the utility system following recordation of final map and concurrent with trenching operations and other subdivision improvements so

long as said agreement incorporates the approved engineering plan and provides financial security to guarantee completion and dedication of the utility system.

The Developer **shall** coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to the City, or the City's designee, all utility infrastructure (including but not limited to conduit, equipment, vaults, ducts, wires, switches, conductors, transformers, resistors, amplifiers, and "bring-up" facilities including electrical capacity to serve the identified development and other adjoining/abutting/ or benefiting projects as determined by Moreno Valley Utility) – collectively referred to as "utility system" (to and through the development), along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and /or delivery of any and all "utility services" to each lot and unit within the Tentative Map. For purposes of this condition, "utility services" shall mean electric, cable television, telecommunication (including video, voice, and data) and other similar services designated by the City Engineer. "Utility services" shall not include sewer, water, and natural gas services, which are addressed by other conditions of approval. Properties within development will be subject to an electrical system capacity charge and that contribution will be collected prior to issuance of building permits.

The City, or the City's designee, shall utilize dedicated utility facilities to ensure safe, reliable, sustainable and cost effective delivery of utility services and maintain the integrity of streets and other public infrastructure. Developer shall, at developer's sole expense, install or cause the installation of such interconnection facilities as may be necessary to connect the electrical distribution infrastructure within the project to the Moreno Valley Utility owned and controlled electric distribution system. Alternatively, developer may cause the project to be included in or annexed to a community facilities district established or to be established by the City for the purpose of financing the installation of such interconnection and distribution facilities. The project shall be deemed to have been included in or annexed to such a community facilities district upon the expiration of the statute of limitations to any legal challenges to the levy of special taxes by such community facilities district within the property. The statute of limitations referred to above will expire 30 days after the date of the election by the qualified electors within the project to authorize the levy of special taxes and the issuance of bonds.

MVU-3 This project may be subject to a Reimbursement Agreement. The project may be responsible for a proportionate share of costs associated with electrical distribution infrastructure previously installed that directly benefits the project. The project may be subject to a system wide capacity charge in addition to the referenced reimbursement agreement. Payment(s) shall be required prior to issuance of building permit(s).

RESOLUTION NO. 2013-08

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY CALIFORNIA RECOMMENDING APPROVAL OF PA11-0007 (TENTATIVE PARCEL MAP NO. 35879) FOR FOUR SEPARATE BUILDABLE PARCELS CONSISTING OF A PROPOSED INDUSTRIAL WAREHOUSE AND MANUFACTURING DEVELOPMENT COMPLEX (1,484,407 SQUARE FEET) ON AN APPROXIMATE 75.05 GROSS ACRE (66.93 NET ACRE) SITE LOCATED ON THE SOUTHEAST CORNER OF IRIS AVENUE AND HEACOCK STREET

WHEREAS, the applicant, Hogle-Ireland Inc. and representative Western Realco LLC., has filed an application for Tentative Parcel Map No. 35879 consisting of the subdivision of an approximate 75.05 acre site to include four separate industrial buildings including Parcel 1- 47.42 acres and a 1,103,003 square feet building, Parcel 2 – 11.77 acres and a 277,243 square foot building, Parcel 3 – 5.95 acre parcel and a 87,429 square foot building and Parcel 4 – 1.54 acre parcel and a 16,732 square foot building.

WHEREAS, the project also includes applications for an Environmental Impact Report (EIR) under P11-005, a Specific Plan Amendment (P11-004), General Plan Amendment (PA11-0001), and individual plot plans (PA11-0002 through PA11-0006). All are related but will be included in separate resolutions with individual findings.

WHEREAS, on December 13, 2013, the Planning Commission of the City of Moreno Valley held a public meeting to consider and provide a recommendation on the application. At said meeting, the Planning Commission recommended Tentative Parcel Map No. 35879 to the City Council for approval.

WHEREAS, on January 22, 2013, the City Council of the City of Moreno Valley held a public meeting to consider the application. At said meeting, the City Council approved Tentative Parcel Map No, 35879.

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

WHEREAS, there is hereby imposed on the subject development project certain fees, dedications, reservations and other exactions pursuant to state law and City ordinances.

WHEREAS, pursuant to Government Code Section 66020(d)(1), **NOTICE IS HEREBY GIVEN** that this project is subject to certain fees, dedications, reservations and other exactions as provided herein.

NOW, THEREFORE, BE IT FOUND, DETERMINED AND RESOLVED by the City Council of the City of Moreno Valley as follows:

A. This City Council hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this City Council during the above-referenced meeting on January 22, 2013, **i**ncluding written and oral staff reports, and the record from the public hearing, this Planning Commission hereby specifically finds as follows:

1. **Conformance with General Plan Policies –** The proposed use is consistent with the General Plan, and its goals, objectives, policies and programs.

FACT: The applicant has proposed Tentative Parcel Map No. 35879 to subdivide an approximate 75 acre site into four (4) separate buildable parcels for various industrial related uses. The map would be consistent with a proposed General Pan amendment and amendment to Specific Plan No. 208 to modify the design and classification of an undeveloped segment of Krameria Avenue to accommodate the development and to downgrade the roadway classification of Krameria Avenue between Indian Avenue and Heacock Street from a minor arterial (88 foot right of way) to an Industrial Collector (78 foot right of way). The proposed industrial land use is consistent with the BP (Business Park) land use district in the General Plan, while the proposed General Plan amendment for the proposed development would not cause an inconsistency of land use.

2. The site of the proposed land division is physically suitable for the type of development and proposed density of development.

FACT: The proposed subdivision has been designed in accordance with the City Zoning Ordinance and the State Subdivision Map Act. The proposed subdivision of vacant land complies with the Specific Plan and Map Act in that all lots meet the minimum buildable size, all lots upon which development will take place will provide access to and from dedicated public streets and all lots conform to development standards within the Municipal Code.

3. Health, Safety and Welfare – The proposed use will not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the vicinity.

FACT: An Environmental Impact report (EIR) has been prepared for the overall project, including the proposed Tentative Parcel Map, Change of Zone, Specific Plan Amendment and Plot Plans. Findings and a Statement of Overriding Considerations has been prepared for said project to deal with impacts that cannot be reduced to less than significant levels. Said EIR is required to be certified and approved as a part of the proposed project. Said EIR is also accompanied by a Mitigation Monitoring Program, which will ensure the completion of required mitigation measures for the project. The project site is surrounded by Iris Avenue and Heacock Street, and primarily vacant industrial land to the north, east and south, a residential subdivision northeast of the project site and the March Air Reserve Base to the west.

The project would include conditions and mitigation measures for the lessening of proposed environmental impacts. Mitigation measures have been provided to minimize any potential environmental impacts, including air quality, biological resources, cultural resources, greenhouse gas emissions, hazardous materials, noise, and transportation/traffic. Mitigation measures for air quality, noise and transportation/traffic would not be reduced to less than significant levels in some cases based on the analysis and recommendations contained in the Final Environmental Impact Report (EIR) and corresponding Statement of Overriding Considerations. Said conditions of approval and mitigation measures have been included to address specific requirements and assist in providing compatibility of land uses, including, but not limited to site improvements and aesthetic enhancements. Said mitigation measures included with the project will lessen environmental impacts on any existing or future properties within the general vicinity of the proposed development and project and reduce impacts to public health, safety and welfare.

4. The design of the proposed land division or type of improvements will not conflict with easements, acquired by the public at large, for access through, or use of, property within the proposed land division.

FACT: There are no conflicts with easements on the subject site. The City Engineer has appropriately placed conditions of approval for Tentative Parcel Map No. 35879 regarding various project improvements.

5. The design of the proposed land division or the type of improvements is not likely to cause substantial environmental damage or substantially and unavoidably injure fish or wildlife or their habitat or cause serious health problems.

FACT: Pursuant to the California Environmental Quality Act (CEQA) guidelines, An Environmental Impact Report (EIR) has been prepared for the overall project, including the proposed General Plan amendment, Specific Plan Amendment, Tentative Parcel Map and various plot plans. Findings and a Statement of Overriding Considerations have been prepared for said project to deal with impacts related to air quality, noise and traffic/transportation. Said EIR is required to be certified and approved as a part of the proposed project. The EIR document is also accompanied by a Mitigation Monitoring Program, which will ensure the completion of required mitigation measures for the project. The project site is surrounded by Iris Avenue and Heacock Street, and primarily vacant industrial land to the north, east and south, a residential subdivision northeast of the project site and the March Air Reserve Base to the west.

With mitigation measures imposed for air quality, biological resources, cultural resources, greenhouse gas emissions, hazardous materials, noise, and transportation/traffic, said impacts from the proposed project and use will be significantly reduced but still considered as significant and unavoidable, thereby requiring a statement of overriding considerations and not mitigated to less than significant levels. Said mitigation measures included with the project will lessen environmental impacts on any existing or future properties within the general vicinity of the proposed development and project and reduce impacts to public health, safety and welfare.

6. The effect of the proposed housing needs of the region were considered and balanced against the public service needs of the residents of Moreno Valley and available fiscal and environmental resources.

FACT: The proposed map meets the intent of the General Plan if the proposed general plan amendment (PA11-0001) is approved. The map will provide for a variety of industrial and land use

opportunities, supporting the economic base of the City. Proximity to existing development allows for contiguous development and infrastructure. The project does not exceed the planned density or the associated public service demand as envisioned by the Moreno Valley General Plan. The project does not exceed a threshold, which would create potential significant impacts to fiscal resources. The project will supplement the City's fiscal resources by paying applicable impact fees for public facilities Additionally, future development within the four buildable parcels will pay Community Services District fees, property tax, sales tax, utility tax and other taxes and fees that will be used to provide landscape maintenance as well as police, fire and other public services.

7. The design of the land division provides, to the extent feasible, for future passive or natural heating and cooling opportunities in the subdivision.

FACT: The size, configuration and orientation of the lots in this land division allow solar access for passive heating and opportunities for placement of shade trees and other vegetation for cooling.

C. FEES, DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

1. FEES

Impact, mitigation and other fees are due and payable under currently applicable ordinances and resolutions. These fees may include but are not limited to: Development impact fee, Stephens Kangaroo Habitat Conservation fee, Underground Utilities in lieu Fee, Area Drainage Plan fee, Bridge and Thoroughfare Mitigation fee (Future) and Traffic Signal Mitigation fee. The final amount of fees payable is dependent upon information provided by the applicant and will be determined at the time the fees become due and payable.

Unless otherwise provided for by this resolution, all impact fees shall be calculated and collected at the time and in the manner provided in Chapter 3.32 of the City of Moreno Valley Municipal Code or as so provided in the applicable ordinances and resolutions. The City expressly reserves the right to amend the fees and the fee calculations consistent with applicable law.

2. DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

The adopted Conditions of Approval for PA11-0007 incorporated herein by reference, may include dedications, reservations, and exactions pursuant to Government Code Section 66020 (d) (1).

3. The City expressly reserves the right to establish, modify or adjust any fee, dedication, reservation or other exaction to the extent permitted and as authorized by law.

Pursuant to Government Code Section 66020(d)(1), NOTICE IS FURTHER GIVEN that the 90 day period to protest the imposition of any impact fee, dedication, reservation, or other exaction described in this resolution begins on the effective date of this resolution and any such protest must be in a manner that complies with Section 66020(a) and failure to timely follow this procedure will bar any subsequent legal action to attack, review, set aside, void or annul imposition.

Your right to protest the fees, dedications, reservations, or other exactions does not apply to planning, zoning, grading, or other similar application processing fees or service fees in connection with this project and it does not apply to any fees, dedication, reservations, or other exactions of which you have been given a notice similar to this nor does it revive challenges to any fees for which the Statute of Limitations has previously expired.

BE IT FURTHER RESOLVED that the City Council **HEREBY APPROVES** Resolution No. 2013-_____, **APPROVING** PA11-0007 (Tentative Tract Map No. 35879) for the subdivision of approximately 75.05 gross acres of land into four (4) separate buildable parcels for various warehouse and manufacturing buildings based on the affirmative recommendation of the Adoption and Certification of the Environmental Impact Report Mitigation Monitoring Program and Statement of Overriding Considerations, subject to the attached conditions of approval included as Exhibit A.

APPROVED and ADOPTED this 22nd day of January, 2013.

CITY CLERK

(SEAL)

CITY OF MORENO VALLEY
CONDITIONS OF APPROVAL
FOR
TENTATIVE PARCEL MAP No. 35879
Case No: PA011-0007
A.P.N.: 316-020-032 through 036

Approval Date: _____
Expiration Date: _____

The following conditions are attached for the following departments:

_x_ Planning (P), including School District (S), Post Office (PO), Building (B)
_x_ Fire Prevention Bureau (F)
_x_ Public Works, Land Development (LD)
_x_ Public Works, Special Districts (SD)
_x_ Public Works – Transportation (TE)
___ Parks & Community Services (PCS)
_x_ Police (PD)
_x_ Moreno Valley Utilities
___ Other (Specify or Delete)

Note: All Special conditions are in bold lettering. All other conditions are standard to all or most development projects. (Include only those that apply)

COMMUNITY & ECONOMIC DEVELOPMENT DEPARTMENT

Planning Division

GENERAL CONDITIONS

P1. This approval shall comply with all app licable requirements of the City of Moreno Valley Municipal Code.

Timing Mechanisms for Conditions (see abbreviation at beginning of affected condition):

R - Map Recordation	GP - Grading Permits	CO - Certificate of Occupancy or building final
WP - Water Improvement Plans	BP - Building Permits	P - Any permit

Governing Document (see abbreviation at the end of the affected condition):

GP - General Plan	MC - Municipal Code	CEQA - California Environmental Quality Act
Ord - Ordinance	DG - Design Guidelines	Ldscp - Landscape Development Guidelines and Specs
Res - Resolution	UFC - Uniform Fire Code	UBC - Uniform Building Code
	SBM - Subdivision Map Act	

P2. This tentative map shall expire three years after the approval date of this tentative map unless extended as provided by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever in the event the applicant or any successor in interest fails to properly file a final map before the date of expiration. (MC 9.02.230, 9.14.050, 080)

P3. The site shall be developed in accordance with the approved tentative map on file in the Community Development Department -Planning Division, the Municipal Code regulations, General Plan, and the conditions contained herein. (MC 9.14.020)

P4. A drought tolerant, low water using landscape palette shall be utilized throughout the tract to the extent feasible.

P5. All undeveloped portions of the site shall be maintained in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)

P6. All landscaped areas shall be maintained in a healthy and thriving condition, free from weeds, trash and debris. (MC 9.02.030)

P7. (BP) Enhanced architectural treatments shall be included on the approved plans for all homes having side and/or reverse front ages to public streets or open space areas.

P8. All site plans, grading plans, landscape and irrigation plans, and street improvement plans shall be coordinated for consistency with this approval.

PRIOR TO GRADING

P9. (GP) Prior to approval of any grading permit, the developer shall submit a tree plan to the Planning Division for review and approval. The plan shall identify all mature trees (4 inch trunk diameter or larger) on the subject property and City right-of-way. Using the grading plan as a base, the plan shall indicate trees to be relocated, retained, and removed. Replacement trees shall be: shown on the plan; be a minimum size of 24 inch box; and meet a ratio of three replacement trees for each mature tree removed or as approved by the Community Development Director or designee. (GP Objective 4.4, 4.5, DG)

P10. (GP) Prior to issuance of grading permits, the developer shall pay the applicable Stephens' Kangaroo Rat (SKR) Habitat Conservation Plan mitigation fee. (Ord)

P11. (GP) Prior to the issuance of grading permits, final erosion control landscape and irrigation plans for all cut or fill slopes over 3 feet in height shall be submitted to the Planning Division for review and approval for the phase in process. The plans shall be designed in accordance with the slope erosion plan as required by the City Engineer for that phase. Man-made slopes greater than 10 feet in height shall be "land formed" to conform to the natural terrain and shall be landscaped and stabilized to minimize visual scarring. (GP Objective 1.5, MC 9.08.080, DG)

P12. (GP) If potential historic, archaeological, or paleontological resources are uncovered during excavation or construction activities at the project site, work in the affected area will cease immediately and a qualified person (meeting the Secretary of the Interior's standards (36CFR61)) shall be consulted by the applicant to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, prehistoric, or paleontological resource. Determinations and recommendations by the consultant shall be implemented as deemed appropriate by the Community Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all affected Native American Tribes before any further work commences in the affected area.

If human remains are discovered, work in the affected area shall cease immediately and the County Coroner shall be notified. If it is determined that the remains are potentially Native American, the California Native American Heritage Commission and any and all affected Native American Indians tribes such as the Morongo Band of Mission Indians or the Pechanga Band of Luiseno Indians shall be notified and appropriate measures provided by State law shall be implemented.
(GP Objective 23.3, DG, CEQA).

P13. (GP) Prior to the issuance of grading permits, a pre-construction Burrowing Owl survey shall be completed with written documentation provided to the Planning Division. The survey shall be completed in accordance with the Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Area.

P14. **(GP) Prior to issuance of grading permits, plans for any security gate system shall be submitted to the Planning Division for review and approval.**

P15. **A qualified archaeologist and or tribal monitors from any affected Native American Indian tribes shall be present during grading to evaluate and recommend appropriate actions for any archaeological deposits exposed by construction activity. The monitoring archaeologist shall be empowered to halt grading in the vicinity of an exposed archaeological deposit until that deposit can be fully evaluated. The consultant (i.e. archaeologist) shall consult with any and all affected Native American Indian tribes in the area on any Treatment Plan prepared for the project.**

P16. **(GP) Prior to the issuance of grading permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein. A mitigation monitoring fee, as provided by City ordinance, shall be paid by the applicant within 30 days of project or tentative map approval. No City permit or approval shall be issued until such fee is paid. (CEQA)**

P17. **(GP) Prior to issuance of grading permits for individual parcels, the developer shall submit wall/fence plans to the Planning Division for review and approval for fourteen (14) foot high solid decorative perimeter wall with pilasters and a cap or other decorative embelishments along the eastern and western boundaries adjacent to right of way areas to screen all truck loading activities. (MC 9.08.070*)***

P18**. (GP) Prior to issuance of grading permits, landscape plans (trees, shrubs and groundcover) for basins maintained by an HOA or other private entity shall be submitted to the Planning Division for review and approval for the sides and/or slopes. A hydroseed mix w/irrigation is acceptable for the bottom of all the basin areas. All detention basins shall include trees, shrubs and groundcover up to the concreted portion of the basin. A solid decorative wall with pilasters, tubular steel fence with pilasters or other fence or wall approved by the Community and Economic Development Director is required to secure all water quality and detention basins more than 18 inches in depth.**

PRIOR TO RECORDATION OF FINAL MAP

P19. (R) Prior to final map recordation, subdivision phasing (including any proposed common open space or improvement phasing, if applicable), shall be subject to the Planning Division approval. Any proposed phasing shall provide for adequate vehicular access to all lots in each phase as determined by the City Transportation Engineer or designee and shall substantially conform to all intent and purpose of the subdivision approval. (MC 9.14.080)

P20. (R) Prior to recordation of the final map, any required final median enhancement/landscape/irrigation plans shall be reviewed and approved by the Planning Division, and Public Works Department - Special Districts Administration for review and approval by each division. (GP - Circulation Master Plan)

P21. (R) Prior to recordation of the final subdivision map, the developer shall submit for review and approval the following documents to the Planning Division which shall demonstrate that the project will be developed and maintained in accordance with the intent and purpose of the approval:

a. The document to convey title
b. Deed restrictions, easements, or Covenants, Conditions and Restrictions to be recorded

The approved documents shall be recorded at the same time that the subdivision map is recorded. The documents shall contain provisions for general maintenance of the site, joint access to proposed parcels, open space use restrictions, water quality basins, lighting, landscaping and common area use items such as general building maintenance and public seating areas. The approved documents shall also contain a provision, which provides that they may not be terminated and/or substantially amended without the consent of the City and the developer's successor-in-interest. (MC 9.14.090)

In addition, the following deed restrictions and disclosures shall be included within the document and grant deed of the properties:

- **The developer and association shall promote the use of native plants and trees and drought tolerant species to the extent feasible.**

- **(R) All lots designated for open space and or detention basins, shall be included as an easement to, and maintained by a Homeowners Association (HOA) or other private maintenance entity. All reverse frontage landscape areas shall also be maintained by the onsite HOA. Language to this effect shall be included and reviewed within the required Covenant Conditions and Restrictions (CC&Rs) prior to the approval of the final map.**

- **Maintenance of any and all common facilities.**

PRIOR TO BUILDING PERMIT

P22. (BP) Prior to issuance of building permits, the developer or developer's successor-in-interest shall pay all applicable impact fees, including but not limited to Transportation Uniform Mitigation fees (TUMF), Multi-species Habitat Conservation Plan (MSHCP) mitigation fees, and the City's adopted Development Impact Fees. (Ord)

P23. (BP) Prior to issuance of building permits **for individual parcels**, final front and street side yard landscape and irrigation plans, point by point lighting plans, slope landscape plans and basin landscape plans, shall be approved.

P24. (BP) Prior to issuance of building permits, landscape plans (trees, shrubs and groundcover) for basins maintained by an HOA, or other private entity, shall be approved for the sides and or slopes of all water quality basins and drainage areas. A solid decorative wall with pilasters, tubular steel fence with pilasters or other fence or wall approved by the Planning Official is required to secure all water quality and detention basins more than 18 inches in depth.

PRIOR TO CERTIFICATE OF OCCUPANCY

P25. (CO) Prior to the issuance of Certificates of Occupancy or building final, slope landscape and irrigation shall be installed. Landscaping on lots not yet having development shall be maintained by the developer weed and disease free. (MC 9.03.040)

P26. (CO) Prior to the issuance of Certificates of Occupancy or building final, all required and proposed fences and walls shall be constructed per the approved plans on file in the Planning Division. (MC 9.080.070)

P27. (CO) For a basin maintained by an HOA or other private entity, landscape (trees, shrubs and groundcover) and irrigation shall be installed, and maintained by the HOA or other private entity.

Building and Safety Division

B-1 The above project shall comply with the current California Codes (CBC, CEC, CMC and the CPC) as well as all other city ordinances. All new projects shall provide a soils report. Plans shall be submitted to the Building Department as a separate submittal.

B-2 Prior to final inspection, all plans will be placed on a CD Rom for reference and verification. Plans will include "as built" plans, revisions and changes. The CD will also include Title 24 energy calculations, structural calculations and all other pertinent information. It will be the responsibility of the developer and or the building or property owner(s) to bear all costs required for this process. The CD will be presented to the Building Department for review prior to final inspection and building occupancy. The CD will become the property of the Moreno Valley Building Department at that time *(applies only to commercial, industrial, and multi-family projects).*

B-3 All projects that will be serviced by a private sewage disposal system shall obtain approval from the Riverside County Environmental Health Department prior to submitting plans to the Building Department.

B-4 (BP) Prior to the issuance of a building permit, the applicant shall submit a properly completed "Waste Management Plan" (WMP), as required, to the Compliance Official (Building Official) as a portion of the building or demolition permit process.

SCHOOL DISTRICT

S-1. (BP) Prior to issuance of building permits, the developer shall provide to the Community Development Director a written certification by the affected school district that either: (1) the project has complied with the fee or other exaction levied on the project by the governing board of the district, pursuant to Government Code Section 65996; or (2) the fee or other requirement does not apply to the project.

UNITED STATES POSTAL SERVICE

PO-1. (BP) Prior to the issuance of building permits, the developer shall contact the U.S. Postal Service to determine the appropriate type and location of mailboxes.

POLICE DEPARTMENT

Note: All Special conditions are in bold lettering. All other conditions are standard to all or most development projects

Standard Conditions

PD1. Prior to the start of any construction, temporary security fencing shall be erected. The fencing shall be a minimum of six (6) feet high with locking, gated access and shall remain through the duration of construction. Security fencing is required if there is: construction, unsecured structures, unenclosed storage of materials and/or equipment, and/or the condition of the site constitutes a public hazard as determined by the Public Works Department. If security fencing is required, it shall remain in place until the project is completed or the above conditions no longer exist. (DC 9.08.080)

PD2. (GP) Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following:

a. The name (if applicable) and address of the development.

b. The developer's name, address, and a 24-hour emergency telephone number. (DC 9.08.080)

PD3. (CO) Prior to the issuance of a Certificate of Occupancy, an Emergency Contact information Form for the project shall be completed at the permit counter of the Community Development Department - Building Division for routing to the Police Department. (DC 9.08.080)

CITY OF MORENO VALLEY
CONDITIONS
Case No: PA11-0001 TO PA11-007, P11-004 AND 005
APN: 316-020-001, 006, 007, 028, 010
DATE: 10/08/12

FIRE PREVENTION BUREAU

1. **Still pending the completion of attached fire flow letter, the fire flow letter provided was not for the parcel fronting this project, but for the parcel adjacent to it. Fire flow shall be taken from the street that it fronts. Fire flow letter and improvements shall be completed prior to grading permit approval.**
2. **The following Standard Conditions shall apply.**

With respect to the conditions of approval, the following fire protection measures shall be provided in accordance with Moreno Valley City Ordinances and/or recognized fire protection standards:

F1. Final fire and life safety conditions will be addressed when the Fire Prevention Bureau reviews building plans. These conditions will be based on occupancy, use, California Building Code (CBC), California Fire Code (CFC), and related codes, which are in force at the time of building plan submittal.

F2. The Fire Prevention Bureau is required to set a minimum fire flow for the remodel or construction of all commercial buildings per CFC Appendix B and Table B105.1. The applicant/developer shall provide documentation to show there exists a water system capable of delivering ___4000_ GPM for__4_ hour(s) duration at 20-PSI residual operating pressure. The required fire flow may be adjusted during the approval process to reflect changes in design, construction type, or automatic fire protection measures as approved by the Fire Prevention Bureau. Specific requirements for the project will be determined at time of submittal. (CFC 508.3, Appendix B and MVMC 8.36.100 Section D) . **The 50% reduction in fire flow was granted for the use of fire sprinklers throughout the facility. The reduction shall only apply to fire flow, hydrant spacing shall be per the fire flow requirements listed in CFC Appendix B and C.**

F3. Industrial, Commercial, Multi-family, Apartment, Condominium, Townhouse or Mobile Home Parks. A combination of on-site and off-site super fire hydrants (6" x 4" x 2 ½" x 2 ½") and super enhanced fire hydrants (6" x 4" x 4" x 2 ½") shall not be closer than 40 feet and more than 150 feet from any portion of the building as measured along approved emergency vehicular travel ways. The required fire flow shall be available from any adjacent fire hydrant(s) in the system. Where new water mains are extended along streets where hydrants are not needed for protection of structures or similar fire problems, super or enhanced fire hydrants as determined by the fire code official shall be provided at spacing not to exceed 500 feet of frontage for transportation hazards. (CFC 508.5.7 & MVMC 8.36.050 Section O and 8.36.100 Section E)

F4. Maximum cul-de-sac or dead end road length shall not exceed 660 feet. The Fire Chief, based on City street standards, shall determine minimum turning radius for fire apparatus based upon fire apparatus manufacture specifications. (CFC 503.1)

F5. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.1 and 503.2.5)

F6. Prior to issuance of Building Permits, the applicant/developer shall provide the Fire Prevention Bureau with an approved site plan for Fire Lanes and signage. (MVMC 8.36.050 and CFC 501.3)

F7. Prior to construction and issuance of building permits, all locations where structures are to be built shall have an approved Fire Department emergency vehicular access road (all weather surface) capable of sustaining an imposed load of 80,000 lbs. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4 and MVMC 8.36.050 Section A)

F8. Prior to construction and issuance of Building Permits, fire lanes and fire apparatus access roads shall have an unobstructed width of not less than twenty–four (24) or thirty (30) feet as approved by the Fire Prevention Bureau and an unobstructed vertical clearance of not less the thirteen (13) feet six (6) inches. (CFC 503.2.1.1 and MVMC 8.36.050)

F9. Prior to construction, all roads, driveways and private roads shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.050)

F10. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4 and MVMC 8.36.050 Section A)

F11. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.3 and MVMC 8.36.050)

F12. Prior to building construction, dead end roadways and streets which have not been completed shall have a turnaround capable of accommodating fire apparatus. (CFC 503.2.5 and MVMC 8.36.050)

F13. Prior to issuance of Building Permits, the applicant/developer shall participate in the Fire Impact Mitigation Program. (Fee Resolution as adopted by City Council)

F14. Prior to issuance of Building Permits, the applicant/developer shall furnish one copy of the water system plans to the Fire Prevention Bureau for review. Plans shall:

a) Be signed by a registered civil engineer or a certified fire protection engineer;

b) Contain a Fire Prevention Bureau approval signature block; and
c) Conform to hydrant type, location, spacing of new and existing hydrants and minimum fire flow required as determined by the Fire Prevention Bureau.

After the local water company signs the plans, the originals shall be presented to the Fire Prevention Bureau for signatures. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

Existing fire hydrants on public streets are allowed to be considered available. Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are established to prevent obstruction of such roads. (CFC 508.1 and MVMC 8.36.100)

F15. Prior to issuance of Certificate of Occupancy or Building Final, "Blue Reflective Markers" shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 510.1)

F16. Prior to issuance of Certificate of Occupancy or Building Final, all commercial buildings shall display street numbers in a prominent location on the street side and rear access locations. The numerals shall be a minimum of twelve (12) inches in height for buildings and six (6) inches in height for suite identification on a contrasting background. Unobstructed lighting of the address(s) shall be by means approved by the Fire Prevention Bureau and Police Department. In multiple suite centers (strip malls), businesses shall post the name of the business on the rear door(s). (CFC 505.1)

F17. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9)

F18. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire alarm system monitored by an approved Underwriters Laboratory listed central station based on a requirement for monitoring the sprinkler system, occupancy or use. Fire alarm panel shall be accessible from exterior of building in an approved location. Plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9 and MVMC 8.36.070)

F19. Prior to issuance of a Certificate of Occupancy or Building Final, a "Knox Box Rapid Entry System" shall be provided. The Knox-Box shall be installed in an accessible location approved by the Fire Chief. The Knox-Box shall be supervised by the alarm system and all exterior security emergency access gates shall be electronically operated and be provided with Knox key switches for access by emergency personnel. (CFC 506.1)

F20. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall be responsible for obtaining underground and/or above ground tank permits for the storage of combustible liquids, flammable liquids, or any other hazardous materials from both the County of Riverside Community Health Agency Department of Environmental Health and the Fire Prevention Bureau. (CFC 3401.4 and 2701.5)

F21. Prior to issuance of Certificate of Occupancy, approval shall be required from the County of Riverside Community Health Agency (Department of Environmental Health) and Moreno Valley Fire Prevention Bureau to maintain, store, use, handle materials, or conduct processes which produce conditions hazardous to life or property, and to install equipment used in connection with such activities. (CFC 2701.5)

F22. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer must submit a simple plot plan, a simple floor plan, and other plans as requested, each as an electronic file in .dwg format, to the Fire Prevention Bureau. Alternate file formats may be acceptable with approval by the Fire Chief.

F23. The angle of approach and departure for any means of Fire Department access shall not exceed 1 ft drop in 20 ft (0.3 m drop in 6 m), and the design limitations of the fire apparatus of the Fire Department shall be subject to approval by the AHJ. (CFC 503.2.7 and MVMC 8.36.050 Section I)

F24. Prior to issuance of the building permit for development, independent paved access to the nearest paved road, maintained by the City shall be designed and constructed by the developer within the public right of way in accordance with City Standards. (MVMC 8.36.050)

F25. Prior to construction, "private" driveways over 150 feet in length shall have a turn-around as determined by the Fire Prevention Bureau capable of accommodating fire apparatus. Driveway grades shall not exceed 12 percent. (CFC 503 and MVMC 8.36.050)

F26. Complete plans and specifications for fire alarm systems, fire-extinguishing systems (including automatic sprinklers or standpipe systems), clean agent systems (or other special types of automatic fire-extinguishing systems), as well as other fire-protection systems and appurtenances thereto shall be submitted to the Moreno Valley Fire Prevention Bureau for review and approval prior to system installation. Submittals shall be in accordance with CFC Chapter 9 and associated accepted national standards.

F27. A permit is required to maintain, store, use or handle materials, or to conduct processes which produce conditions hazardous to life or property, or to install equipment used in connection with such activities. Such permits shall not be construed as authority to violate, cancel or set aside any of the provisions of this code. Such permit shall not take the place of any license required by law. Applications for permits shall be made to the Fire Prevention Bureau in such form and detail as prescribed by the Bureau. Applications for permits shall be accompanied by such plans as required by the Bureau. Permits shall be kept on

the premises designated therein at all times and shall be posted in a conspicuous location on the premises or shall be kept on the premises in a location designated by the Fire Chief. Permits shall be subject to inspection at all times by an officer of the fire department or other persons authorized by the Fire Chief in accordance with Appendix Chapter 1 and MVMC 8.36.100.

F28. Approval of the safety precautions required for buildings being constructed, altered or demolished shall be required by the Fire Chief in addition to other approvals required for specific operations or processes associated with such construction, alteration or demolition. (CFC Chapter 14 & CBC Chapter 33)

F29. Prior to issuance of Certificate of Occupancy, permits are required to store, dispense, use or handle hazardous material. Each application for a permit shall include a hazardous materials management plan (HMMP). The location of the HMMP shall be posted adjacent to (other) permits when an HMMP is provided. The HMMP shall include a facility site plan designating the following:

a) Storage and use areas;
b) Maximum amount of each material stored or used in each area;
c) Range of container sizes;
d) Locations of emergency isolation and mitigation valves and devises;
e) Product conveying piping containing liquids or gases, other than utility-owned fuel gas lines and low-pressure fuel gas lines;
f) On and off positions of valves for valves which are of the self-indicating type;
g) Storage plan showing the intended storage arrangement, including the location and dimensions of aisles. The plans shall be legible and approximately to scale. Separate distribution systems are allowed to be shown on separate pages; and
h) Site plan showing all adjacent/neighboring structures and use.

NOTE: Each application for a permit shall include a hazardous materials inventory statement (HMIS).

F30. Before a Hazardous Materials permit is issued, the Fire Chief shall inspect and approve the receptacles, vehicles, buildings, devices, premises, storage spaces or areas to be used. In instances where laws or regulations are enforceable by departments other than the Fire Prevention Bureau, joint approval shall be obtained from all departments concerned. (CFC Appendix H)

F31. Construction or work for which the Fire Prevention Bureau's approval is required shall be subject to inspection by the Fire Chief and such construction or work shall remain accessible and exposed for inspection purposes until approved. (CFC Section 106)

F32. The Fire Prevention Bureau shall maintain the authority to inspect, as often as necessary, buildings and premises, including such other hazards or appliances designated by the Fire Chief for the purpose of ascertaining and causing to be corrected any conditions which would reasonably tend to cause fire or contribute to its spread, or any violation of the purpose or provisions of this code and of any other law or standard affecting fire safety. (CFC Section 106)

F33. Permit requirements issued, which designate specific occupancy requirements

FIRE FLOW LETTER

for a particular dwelling, occupancy, or use, shall remain in effect until such time as amended by the Fire Chief. (CFC Section 104)

F34. In accordance with the California Fire Code Appendix Chapter 1, where no applicable standards or requirements are set forth in this code, or contained within other laws, codes, regulations, ordinances or bylaws adopted by the jurisdiction, compliance with applicable standards of the National Fire Protection Association or other nationally recognized fire safety standards as are approved shall be deemed as prima facie evidence of compliance with the intent of this code as approved by the Fire Chief. (CFC Section 102.7)

F35. Any alterations, demolitions, or change in design, occupancy and use of buildings or site will require plan submittal to the Fire Prevention Bureau with review and approval prior to installation. (CFC Appendix Chapter 1)

F36. Emergency and Fire Protection Plans shall be provided when required by the Fire Prevention Bureau. (CFC Section 105)

F37. Prior to Certificate of Occupancy all locations where medians are constructed and prohibit vehicular ingress/egress into or away from the site, provisions must be made to construct a median-crossover at all locations determined by the Fire Marshal and the City Engineer. Prior to the construction, design plans will be submitted for review and approval by the City Engineer and all applicable inspections conducted by Land Development Division.

F38. Prior to construction, all traffic calming designs/devices must be approved by the Fire Marshal and City Engineer.

Date:	10/08/12	**Address:**	
Case Number:	**PA11-0001 TO PA11-007, P11-004 AND 005**	**A.P.N.:**	**316-020-001, 006, 007, 028, 010**

This is certification the water system is capable of meeting the following required fire flows as determined by the California Fire Code Appendix B.

Based on the information provided on the above referenced case. The fire flow required for this project will be ___4000_ G.P.M. for duration of _4_-HOURS measured at 20-psi residual pressure.

The required fire flow may be adjusted during the approval process to reflect changes in design, construction type or automatic fire protection measures as approved by the Fire Prevention Bureau.

CITY OF MORENO VALLEY
COMMUNITY & ECONOMIC DEVELOPMENT - LAND DEVELOPMENT DIVISION
CONDITIONS OF APPROVAL
PA11-0007 / TPM 35879 – Four Parcel Industrial Warehouse Subdivision
APN 316-020-032, 316-020-033, 316-020-034, 316-020-035, 316-020-036

Note: All Special Conditions are in **Bold** lettering and follow the standard conditions.

COMMUNITY & ECONOMIC DEVELOPMENT – LAND DEVELOPMENT DIVISION

The following are the Community & Economic Development Department – Land Development Division Conditions of Approval for this project and shall be completed at no cost to any government agency. All questions regarding the intent of the following conditions shall be referred to the Community & Economic Development Department – Land Development Division.

General Conditions

LD1. (G) The developer shall comply with all applicable City ordinances and resolutions including the City's Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). (MC 9.14.010)

LD2. (G) If the project involves the subdivision of land, maps may be developed in phases with the approval of the City Engineer. Financial security shall be provided for all improvements associated with each phase of the map. The boundaries of any multiple map increment shall be subject to the approval of the City Engineer. The City Engineer may require the dedication and construction of necessary utilities, streets or other improvements outside the area of any particular map, if the improvements are needed for circulation, parking, access, or for the welfare or safety of the public. (MC 9.14.080, GC 66412 and 66462.5)

LD3. (G) It is understood that the tentative map correctly shows all existing easements, traveled ways, and drainage courses, and that their omission may require the map or plans associated with this application to be resubmitted for further consideration. (MC 9.14.040)

LD4. (G) In the event right-of-way or offsite easements are required to construct offsite improvements necessary for the orderly development of the surrounding area to meet the public health and safety needs, the developer shall make a good faith effort to acquire the needed right-of-way in accordance with the Land Development Division's administrative policy. In the event that the developer is unsuccessful, he shall enter into an agreement with the City to acquire the necessary right-of-way or offsite easements and complete the improvements at such time the City acquires the right-of-way or offsite easements which will permit the improvements to be made. The developer shall be responsible for all costs associated with the right-of-way or easement acquisition. (GC 66462.5)

LD5. (G) If improvements associated with this project are not initiated within two years of the date of approval of the Public Improvement Agreement, the City Engineer may require that the improvement cost estimate associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the Public Improvement Agreement or issuance of a permit.

LD6. (G) The developer shall monitor, supervise and control all construction and construction supportive activities, so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:

a. Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.

b. Observance of working hours as stipulated on permits issued by the Public Works Department.

c. The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.

d. All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements shall be adhered to during the grading operations.

Violation of any condition or restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedies as noted in the City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.

LD7. (G) The developer shall protect downstream properties from damage caused by alteration of drainage patterns, i.e., concentration or diversion of flow. Protection shall be provided by constructing adequate drainage facilities, including, but not limited to, modifying existing facilities or by securing a drainage easement. (MC 9.14.110)

LD8. (G) Public drainage easements, when required, shall be a minimum of 25 feet wide and shall be shown on the map and plan, and noted as follows: "Drainage Easement – no structures, obstructions, or encroachments by land fills are allowed." In addition, the grade within the easement area shall not exceed a 3:1 (H:V) slope, unless approved by the City Engineer.

LD9. (G) A detailed drainage study shall be submitted to the City Engineer for review and approval at the time of any improvement or grading plan submittal. The study shall be prepared by a registered civil engineer and shall include existing and proposed hydrologic conditions. Hydraulic calculations are required for all drainage control devices and storm drain lines. (MC 9.14.110). Prior to approval of the related improvement or grading plans, the developer shall submit the

approved drainage study, on compact disk, in (.pdf) digital format to the Land Development Division of the Community and Economic Development Department.

LD10. (G) Prior to final map approval, commencing applicable street improvements, or obtaining the first building permit, the developer shall enter into a Development Impact Fee (DIF) Improvement Credit Agreement to secure credit and reimbursement for the construction of applicable arterial street, traffic signal, and/or interchange improvements. If the developer fails to complete this agreement prior to the timing as specified above, no credits or reimbursements will be given. The applicant shall pay Arterial Streets, Traffic Signals, and Interchange Improvements development impact fees adopted by the City Council by resolution. (Ord. 695 § 1.1 (part), 2005) (MC 3.38.030, .040, .050)

LD11. (G) Prior to final map approval, commencing applicable street improvements, or obtaining the first building permit, the developer shall enter into a Transportation Uniform Mitigation Fee (TUMF) Improvement Credit Agreement to secure credit and reimbursement for the construction of applicable improvements. If the developer fails to complete this agreement by the timing as specified above, no credits or reimbursements will be given for any work. Prior to approval of the TUMF Improvement Credit Agreement, an approved engineer's cost estimate and street improvement plan are required.

LD12. (G) The final conditions of approval issued by the Planning Division subsequent to Planning Commission approval shall be photographically or electronically placed on mylar sheets and included in the Grading and Street Improvement plan sets on twenty-four (24) inch by thirty-six (36) inch mylar and submitted with the plans for plan check. These conditions of approval shall become part of these plan sets and the approved plans shall be available in the field during grading and construction.

Prior to Grading Plan Approval or Grading Permit

LD13. (GPA) Prior to approval of the grading plans, plans shall be drawn on twenty-four (24) inch by thirty-six (36) inch mylar and signed by a registered civil engineer and other registered/licensed professional as required.

LD14. (GPA) Prior to approval of grading plans, the developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:

a. The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines shall be located at the top of slopes.

b. Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.

c. A grading permit shall be obtained from th e Communi ty and Eco nomic Development Department Land Development Division prior to commencement of any grading out side of the City maintained road rig ht-of-way.

d. All improve ment plans are substan tially complete and appropriate cle arance and at-risk letters are provided to the City. (MC 9.14.030)

e. The developer shall sub mit a soils a nd geologic report to the Community and Economic Developme nt Department – Land Develop ment Division. The report shall address the soil's stability and geological conditions of the site.

LD15. (GPA) Prior to grading plan approval, the developer shall select and implemen t treatment control best management practice s (BMPs) that are medium to highly effective for treating Pollutants of Co ncern (POC) for the proj ect. Projects where National Pollution Discharge Eliminati on System (NPDES) mandate s water quality treatment control best management pra ctices (BMPs) shall be designed per the City of Moreno Valley guidelines or as approved by the City Engineer.

LD16. (GPA) Prior to approval of the grading plans for projects that will result in discharges of storm water associa ted with const ruction with a soil distur bance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's I dentification number (W DID#) from the State Water Quality Control Board (SW QCB). The WDID# sh all be note d on the grading plans prior to issuance of the first grading permit.

LD17. (GPA) Prior to the grad ing plan approval, or is suance of a building permit, if a grading permit is not required, the Developer s hall submit two (2) copies of the final project-specific Wat er Quality M anagement Plan (WQMP) for revie w by the City Engineer that :

a. Addresses Site Desig n Best Management Practices (BMPs) such as minimizing impervious areas, maxi mizing permeability, minimizes directly connected impervious areas to the City's street and storm drain systems, and conserves natural areas;

b. Incorporates Source Control BMPs and provides a detaile d descriptio n of their implementation;

c. Incorporates Treatment Control BM Ps and provides info rmation regarding design considerations;

d. Describes t he long-term operation and mainte nance requirements for BMPs requiring maintenance; and

e. Describes the mechanism for funding the long-term operation and maintenance of the BMPs.

A copy of the final WQMP templat e can be ob tained on th e City's Website or by conta cting the L and Develo pment Di vision of the Community and Economic Development Department.

LD18. (GPA) Prior to the grading plan approval, or issuance of a building permit, if a grading permit is not required, the Developer shall record a "Stormwater Treatment Device and Control Measure Access and Maintenance Covenant," to provide public notice of the requirement to implement the approved final project-specific WQMP and the maintenance requirements associated with the WQMP.

A boilerplate copy of the "Stormwater Treatment Device and Control Measure Access and Maintenance Covenant," can be obtained by contacting the Land Development Division of the Community and Economic Development Department.

LD19. (GPA) Prior to the grading plan approval, or issuance of a building permit, if a grading permit is not required, the Developer shall secure approval of the final project-specific WQMP from the City Engineer. The final project-specific WQMP shall be submitted at the same time of grading plan submittal. The approved final WQMP shall be submitted to the Storm Water Program Manager on compact disk(s) in Microsoft Word format prior to grading plan approval.

LD20. (GPA) Prior to the grading plan approval, or issuance of a building permit as determined by the City Engineer, the approved final project-specific WQMP shall be incorporated by reference or attached to the project's Storm Water Pollution Prevention Plan as the Post-Construction Management Plan.

LD21. (GPA) Prior to grading plan approval, the developer shall prepare a Storm Water Pollution Prevention Plan (SWPPP) in conformance with the state's Construction Activities Storm Water General Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request. The SWPPP shall be submitted to the Storm Water Program Manager on compact disk(s) in Microsoft Word format.

LD22. (GPA) Prior to the approval of a grading plan, the developer shall comply with the rules and regulations of FEMA and City Ordinance 8.12.190 for development within a flood hazard area (defined as Zones A, AE, AH, A0 and A99).

a. For developments less required to submit a CLOMR-F/LOMR-F, the City requires the following prepared by a licensed civil engineer or land surveyor:

i. Prior to issuance of a grading permit, a Floodplain Development Permit (available from the City).
ii. A CLOMR-F (residential structures) unless otherwise approved by the City Engineer.
iii. Determination of BFE. Machinery and equipment servicing the structures shall be designed to be located above the BFE. For habitable structures, the lowest floor must be certified to be a minimum of one foot above the BFE; non-residential structures must be additionally dry floodproofed; for qualified non-habitable structures, the lowest floor must be wet floodproofed to one foot minimum above BFE.
iv. Prior to issuance of individual building permits, an elevation certificate shall be approved by the City.

v. Prior to issuance of first building permit for residential structures, submittal of LOMR-F package with appropriate fees to FEMA, unless otherwise approved by the City Engineer.
vi. Prior to issuance of individual certificate of occupancy, a final elevation/floodproof certificate (dependent on type of structure(s)).
vii. Prior to ninety percent reduction of public improvement securities, a LOMR-F approved by FEMA shall be submitted to the City.

LD23. (GPA) Prior to the approval of the grading plans, the developer shall pay applicable remaining grading plan check fees.

LD24. (GPA/MA) Prior to the later of either grading plan or final map approval, resolution of all drainage issues shall be as approved by the City Engineer.

LD25. (GP) Prior to issuance of a grading permit, or building permit when a grading permit is not required, for projects that require a project-specific Water Quality Management Plan (WQMP), a project-specific final WQMP (F-WQMP) shall be approved. Upon approval, a WQMP Identification Number is issued by the Storm Water Management Section and shall be noted on the rough grading plans as confirmation that a project-specific F-WQMP approval has been obtained.

LD26. (GP) Prior to issuance of a grading permit, if the fee has not already been paid prior to map approval or prior to issuance of a building permit if a grading permit is not required, the developer shall pay Area Drainage Plan (ADP) fees. The developer shall provide a receipt to the City showing that ADP fees have been paid to Riverside County Flood Control and Water Conservation District. (MC 9.14.100)

LD27. (GP) Prior to issuance of a grading permit, security, in the form of a cash deposit (preferable), letter of credit, or performance bond shall be required to be submitted as a guarantee of the completion of the grading required as a condition of approval of the project.

LD28. (GP) Prior to issuance of a grading permit, the developer shall pay the applicable grading inspection fees.

Prior to Map Approval or Recordation

LD29. (MA) Prior to approval of the map, the developer shall submit a copy of the Covenants, Conditions and Restrictions (CC&Rs) to the Land Development Division for review and approval. The CC&Rs shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project.

LD30. (MA) Prior to approval of the map, all street dedications shall be irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer. All dedications shall be free of all encumbrances as approved by the City Engineer.

LD31. (MA) Prior to approval of the map, security shall be required to be submitted as a guarantee of the completion of the improvements required as a condition of approval of the project. A public improvement agreement will be required to be executed.

LD32. (MR) Prior to recordation of the map, if the developer chooses to construct the project in construction phases, a Construction Phasing Plan for the construction of on-site public and private improvements shall be reviewed and approved by the City Engineer.

LD33. (MR) Prior to recordation of the map, the developer shall submit the map, on compact disks, in (.dxf) digital form at to the Land Development Division of the Community and Economic Development Department.

Prior to Improvement Plan Approval or Construction Permit

LD34. (IPA) Prior to approval of the improvement plans, the improvement plans shall be drawn on twenty-four (24) inch by thirty-six (36) inch mylar and signed by a registered civil engineer and other registered/licensed professional as required.

LD35. (IPA) Prior to approval of the improvement plans, the developer shall submit clearances from all applicable agencies, and pay all outstanding plan check fees. (MC 9.14.210)

LD36. (IPA) All public improvement plans prepared and signed by a registered civil engineer in accordance with City standards, policies and requirements shall be approved by the City Engineer in order for the Public Improvement Agreement and accompanying security to be executed.

LD37. (IPA) Prior to approval of the improvement plans, securities and a public improvement agreement shall be required to be submitted and executed as a guarantee of the completion of the improvements required as a condition of approval of the project.

LD38. (IPA) The street improvement plans shall comply with all applicable City standards and the following design standards throughout this project:

a. Corner cutbacks in conformance with City Standard 208 shall be shown on the final map or, if no map is to be recorded, offered for dedication by separate instrument.

b. Lot access to major thoroughfares shall be restricted except at intersections and approved entrances and shall be so noted on the final map. (MC 9.14.100)

c. The minimum centerline and flow line grades shall be one percent unless otherwise approved by the City Engineer. (MC 9.14.020)

d. All street intersections shall be at ninety (90) degrees plus or minus five (5) degrees per City Standard No. 706A, or as approved by the City Engineer. (MC 9.14.020)

LD39. (IPA) Prior to approval of the improvement plans, the plans shall be based upon a centerline profile, extending beyond the project boundaries a minimum distance of 300 feet at a grade and alignment approved by the City Engineer. Design plan and profile information shall include the minimum 300 feet beyond the project boundaries.

LD40. (IPA) Prior to approval of the improvement plans, the plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three years old and recently slurry sealed streets less than one year old. Pavement cuts for trench repairs may be allowed for emergency repairs or as specifically approved in writing by the City Engineer.

LD41. (IPA) Prior to approval of the improvement plans, the developer is required to bring any existing access ramps adjacent to and fronting the project to current ADA (Americans with Disabilities Act) requirements. However, when work is required in an intersection that involves or impacts existing access ramps, those access ramps in that intersection shall be retrofitted to comply with current ADA requirements, unless approved otherwise by the City Engineer.

LD42. (IPA) Prior to approval of the improvement plans, drainage facilities with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided. (MC 9.14.110)

LD43. (IPA) Prior to the approval of the improvement plans, the hydrology study shall show that the 10-year storm flow will be contained within the curb and the 100-year storm flow shall be contained within the street right-of-way. In addition, one lane in each direction shall not be used to carry surface flows during any storm event for street sections equal to or larger than a minor arterial. When any of these criteria is exceeded, additional drainage facilities shall be installed. (MC 9.14.110 A.2)

LD44. (IPA) The project shall be designed to accept and properly convey all off-site drainage flowing onto or through the site. All storm drain design and improvements shall be subject to review and approval of the City Engineer. In the event that the City Engineer permits the use of streets for drainage purposes, the provisions of the Development Code will apply. Should the quantities exceed the street capacity or the use of streets be prohibited for drainage purposes, as in the case where one travel lane in each direction shall not be used for drainage conveyance for emergency vehicle access on streets classified as minor arterials and greater, the developer shall provide adequate facilities as approved by the Community and Economic Development Department – Land Development Division. (MC 9.14.110)

LD45. (CP) All work performed within the City right-of-way requires a construction permit. As determined by the City Engineer, security may be required for work within the right-of-way. Security shall be in the form of a cash deposit or other

approved means. The City Engineer may require the execution of a public improvement agreement as a condition of the issuance of the construction permit. All inspection fees shall be paid prior to issuance of construction permit. (MC 9.14.100)

LD46. (CP) Prior to issuance of a construction permit, all public improvement plans prepared and signed by a registered civil engineer in accordance with City standards, policies and requirements shall be approved by the City Engineer.

LD47. (CP) Prior to issuance of construction permits, the developer shall submit all improvement plans on compact disks, in (. dxf) digital format to the Land Development Division of the Community and Economic Development Department.

LD48. (CP) Prior to issuance of construction permits, the developer shall pay all applicable inspection fees.

Prior to Building Permit

LD49. (BP) Prior to issuance of building permits, the map shall be recorded. (MC 9.14.090)

LD50. (BP) Prior to issuance of a building permit (excluding model homes), an approval by the City Engineer is required of the water quality control basin(s). The developer shall provide certification to the line, grade, flow test and system invert elevations.

LD51. (BP) Prior to issuance of a building permit, all pads shall meet pad elevations per approved plans as noted by the setting of “Blue-top” markers installed by a registered land surveyor or licensed engineer.

Prior to Certificate of Occupancy

LD52. (CO) Prior to issuance of a certificate of occupancy, the parcel map shall be recorded.

LD53. (CO) Prior to issuance of the last certificate of occupancy or building final, the developer shall pay all outstanding fees.

LD54. (CO) Prior to issuance of a certificate of occupancy, this project is subject to requirements under the current permit for storm water activities required as part of the National Pollutant Discharge Elimination System **(NPDES)** as mandated by the Federal Clean Water Act. In compliance with Proposition 218, the developer shall agree to approve the City of Moreno Valley NPDES Regulatory Rate Schedule that is in place at the time of certificate of occupancy issuance. Following are the requirements:

a. Select one of the following options to meet the financial responsibility to provide storm water utilities services for the required continuous operation,

maintenance, monitoring system evaluations and enhancements, remediation and/or replacement, all in accordance with Resolution No. 2002-46.

i. Participate in the mail ballot proceeding in compliance with Proposition 218, for the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule and pay all associated costs with the ballot process; or

ii. Establish an endowment to cover future City costs as specified in the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule.

b. Notify the Special Districts Division of the intent to request building permits 90 days prior to their issuance and the financial option selected. The financial option selected shall be in place prior to the issuance of certificate of occupancy. (California Government Code & Municipal Code)

LD55. (CO) The City of Moreno Valley has an adopted Development Impact Fee (DIF) nexus study. All projects unless otherwise exempted shall be subject to the payment of the DIF prior to issuance of occupancy. The fees are subject to the provisions of the enabling ordinance and the fee schedule in effect at the time of occupancy.

LD56. (CO) The City of Moreno Valley has an adopted area wide Transportation Uniform Mitigation Fee (TUMF). All projects unless otherwise exempted shall be subject to the payment of the TUMF prior to issuance of occupancy. The fees are subject to the provisions of the enabling ordinance and the fee schedule in effect at the time of occupancy.

LD57. (CO) Prior to issuance of a certificate of occupancy or building final, the developer shall construct all public improvements in conformance with applicable City standards, except as noted in the Special Conditions, including but not limited to the following applicable improvements:

a. Street improvements including, but not limited to: pavement, base, curb, gutter, cross gutter, spandrel, sidewalk, drive approaches, pedestrian ramps, bus turn outs, street lights, signing, striping, landscaping and irrigation, medians, pavement tapers/transitions and traffic control devices as appropriate.

b. Storm drain facilities including, but not limited to: storm drain pipe, storm drain laterals, catch basins and local depressions.

c. Sewer and water systems including, but not limited to: sanitary sewer, potable water and recycled water.

d. Under grounding of existing and proposed utility lines less than 115,000 volts. **All overhead utilities less than 115,000 volts within and along the project boundary will be required to be placed underground and all power poles removed.**

LD58. (CO) Prior to issuance of a certificate of occupancy or building final, all existing and new utilities adjacent to and on-site shall be placed underground in accordance with City of Moreno Valley ordinances. (MC 9.14.130)

LD59. (CO) Prior to issuance of a certificate of occupancy or building final, in order to treat for water quality the sub-area tributary to the basin, the Developer must comply with the following:

a. The water quality basin and all associated treatment control BMPs and all hardware per the approved civil drawing must be constructed, certified and approved by the City Engineer including, but not limited to, piping, forebay, aftbay, trash rack, etc.) Landscape and irrigation plans are not approved for installation at this time.

b. Provide the City with an Engineer's Line and Grade Certification.

c. Perform and pass a flow test per City test procedures.

LD60. (CO) Prior to issuance of a certificate of occupancy or building final for any Commercial/Industrial facility, whichever occurs first, the owner may have to secure coverage under the State's General Industrial Activities Storm Water Permit as issued by the State Water Resources Control Board.

LD61. (CO) Prior to issuance of a certificate of occupancy or building final, the applicant shall ensure the following, pursuant to Section XII. I. of the 2010 NPDES Permit:

a. Field verification that structural Site Design, Source Control and Treatment Control BMPs are designed, constructed and functional in accordance with the approved Final Water Quality Management Plan (WQMP)

b. Certification of best management practices (BMPs) from a state licensed civil engineer. An original WQMP BMP Certification shall be submitted to the City for review and approval.

<u>Prior to Acceptance of Streets into the City Maintained Road System</u>

LD62. (AOS) Aggregate slurry, as defined in Section 203-5 of Standard Specifications for Public Works Construction, may be required just prior to the end of the one-year warranty period of the public streets at the discretion of the City Engineer. If slurry is required, the developer/contractor must provide a slurry mix design submittal for City Engineer approval. The latex additive shall be Ultra Pave 70 (for anionic – per project geotechnical report) or Ultra Pave 65 K (for cationic – per project geotechnical report) or an approved equal. The latex shall be added at the emulsion plant after weighing the asphalt and before the addition of mixing water. The latex shall be added at a rate of two to two-and-one-half (2 to 2½) parts to one-hundred (100) parts of emulsion by volume. Any existing striping shall be removed prior to slurry application and replaced per City standards.

SPECIAL CONDITIONS

LD63. After obtaining entitlements, this project will be required to submit design plans for plan review (Rough Grading Plans, Precise Grading Plans Street Improvement Plans, Signing and Striping Plans, Traffic Control Plans, Traffic Signal Plans, Storm Drain Plans, Sewer and Water Plans, Final Parcel Map, and other plans to the Land Development Division. All engineering (Land Development) type plans shall be drawn on 24"x36" sheet size and use title block per City Standard 708.

LD64. (GPA) Prior to rough grading plan approval, this project shall demonstrate, via a final drainage study, that either the downstream facilities are capable of handling this development's increased runoff or that the increased runoff resulting from the development of this site is mitigated. Unless the downstream facilities are adequate, during no storm event shall the flow leaving the site in the developed condition be larger than that of the pre-developed condition. The drainage study shall analyze the following events: 1, 3, 6 and 24-hour duration events for the 2, 5, 10 and 100-year storm events. The applicant understands that additional detention measures, beyond those shown on the tentative map and preliminary drainage study, may be required.

LD65. (GPA) Prior to precise grading plan approval, this project shall meet all FEMA (Federal Emergency Management Agency) and City requirements for building in a 100 year flood zone (Zone A and Zone AO). This project shall submit for review and approval to FEMA a CLOMR-F (conditional letter of map revision based on fill). All requirements, as set forth by FEMA shall be adhered to, particularly the completion and submittal of FEMA application form MT-1, as well as all City Ordinance 8.12.130 requirements. The CLOMR-F shall be approved by FEMA prior to precise grading plan. The LOMR-F shall be acquired by FEMA after construction. The developer shall contact FEMA for CLOMR-F / LOMR-F requirements. As an alternative to the submittal of a CLOMR-F / LOMR-F, the developer may opt to flood proof the building per all City department requirements and City Ordinance 8.12.170 and as approved by FEMA. See FEMA Technical Bulletins TB 1-93, TB 3-93, and TB 7-93. Website: http://www.fema.gov/ Ph: 1-877-336-2627

LD66. (GPA) Prior to precise grading plan approval, the developer shall submit for review and approval a final soils report including site grading recommendations, especially pertaining to any import/fill relating to the CLOMR-F / LOMR-F requirement.

LD67. (GPA) Prior to precise grading plan approval, the grading plans shall clearly demonstrate that drainage is properly collected and conveyed. The plans shall show all necessary on-site and off-site drainage improvements to properly collect and convey drainage entering, within and leaving the project. This may include, but not be limited to on-site and perimeter drainage improvements to properly convey drainage within and along the project site, and downstream off-site improvements. The developer will be required to obtain the necessary permission for offsite construction including easements, including an encroachment permit for the

connection(s) to the Riverside County Flood Control and Water Conservation District (RCFC&WCD) channel.

LD68. (GPA) Prior to precise grading plan approval, emergency overflow areas shall be shown at all applicable drainage improvement locations in the event that the drainage improvement fails or exceeds full capacity. This may include, but not be limited to, an emergency spillway in the basins and an emergency overflow at any sump catch basin location. Alternatively, the engineer may submit for review and approval oversized catch basin inlets, or other acceptable design, as approved by the City Engineer.

LD69. (GPA) Prior to precise grading plan approval, the plans shall clearly demonstrate that all applicable recommendations from the geotechnical investigation prepared by NorCal Engineering on January 3, 2007 (NorCal Project Number 13461-06), and/or any subsequent report, have been adhered to including, but not limited to, grading operation procedures, structural section design, slab design, wall design, etc.

LD70. (GPA) Prior to precise grading plan approval, the grading plans shall show any proposed trash enclosure as dual bin trash enclosures, one bin for trash and one bin for recyclables. The trash enclosure shall be per City Standard Plan 627, modified to include a fully covered, solid roof.

LD71. (GPA) Prior to precise grading plan approval, the grading plans shall clearly show that the parking lot conforms to City standards. The parking lot shall be 5% maximum, 1% minimum for AC pavement, 0.50% for PCC, 2% maximum at or near any disabled parking stall and travel way. Ramps, curb openings and travel paths shall all conform to current ADA standards as outlined in Department of Justice's "ADA Standards for Accessible Design", Excerpt from 28 CFR Part 36. (www.usdoj.gov).

LD72. (GPA) Prior to precise grading plan or improvement plan approval, as applicable, the plans shall show all driveway approaches where truck movements are anticipated to be constructed City Standard Plan 118C, modified. The driveways shall transition from an 8" curb height to a 0" curb height at the conventional right-of-way 12' behind the curb line, or as approved by the City Engineer. There shall be 4' wide pedestrian sidewalk area at 2% maximum behind the conventional right-of-way. A 4-foot pedestrian right-of-way dedication shall be made on the final parcel map PM 35879.

LD73. (GPA) Prior to precise grading plan approval, the plans shall show roof drains directed to a landscaped area rather than being routed directly to the parking lot. Alternatively, roof drain flows can be directed to private storm drains which will connect to the treatment control best management practice.

LD74. (IPA) Prior to improvement plan approval, this developer shall acquire the required clearances and permits from all applicable agencies, particularly RCFC&WCD.

LD75. (IPA) Prior to improvement plan approval, additional catch basins may be required by the City Engineer along project perimeter streets where street grades are less than 1%. Spacing, sizing and location shall be determined per the final drainage study as approved by the City Engineer.

LD76. (MA) Prior to parcel map approval, the map shall show the following:

a. A 20' street right-of-way dedication on the south side of Iris Avenue along this project's north frontage to ensure a centerline to south right-of-way distance of 50' for an Arterial, City Standard 104A, except where right-of-way has already been dedicated per Instrument No. 2009-0228079 on May 7, 2009.

b. A 78' street right-of-way dedication, 39' north and south of proposed future Krameria Avenue centerline between Cosmos Street and Heacock Street, south of Parcel 1, to ensure a right-of-way distance of 78' for an Industrial Collector Street, City Standard 106.

c. A 39' west-half, street right-of-way dedication and half-width cul-de-sac at the northern terminus of Cosmos Street along this project's east frontage to ensure a centerline to west right-of-way distance of 39' for an Industrial Collector Street, City Standard 106 and City Standard 123.

d. Additional right-of-way for the east half of the Cosmos Street cul-de-sac bulb shall be secured from the adjacent property owner by separate instrument, unless the parcel map for the easterly, adjacent project records first.

e. An additional 10' of right-of-way on the east side of Heacock Street and the south side of Iris Avenue necessary for proposed bus turnouts, as required by the City's Transportation Department, per City Standard 121.

f. A 4' pedestrian right-of-way dedication behind all driveway approaches per City Standard 118C.

g. Corner cutbacks per City Standard 208 to accommodate 50-foot required curb returns at the intersections of Heacock Street and Krameria Avenue and Heacock Street and Iris Avenue.

h. A 1.5' sidewalk easement behind the right-of-way on the east side of Heacock Street where the sidewalk is to be curb-separated

i. A 2' sidewalk easement behind the right-of-way on the south side of Iris Avenue where the sidewalk is to be curb-separated.

j. Two 25' easements for storm drain purposes, shown as Proposed Easement Note "B" on the tentative parcel map, one coinciding with the southerly drive aisle and the other along the westerly drive aisle within Parcel 2. All public storm drain easements shall be a minimum of 25' in width.

k. A 15' easement for sanitary sewer purposes, shown as Proposed Easement Note "A" on the tentative parcel map, coinciding with the westerly drive aisle within Parcel 2.

l. The vacation of existing Krameria Avenue 44' of right-of-way along the south property line of Parcels 2 and 4.

m. The vacation of an unnamed cul-de-sac street 60-foot right-of-way traversing proposed Parcels 2 and 3 as shown on the tentative parcel map.

LD77. (MA) Prior to parcel map approval, the Developer shall guarantee the construction of the following improvements by entering into a public improvement agreement and posting security. The improvements shall be completed prior to occupancy of the first building or as otherwise determined by the City Engineer.

a. Heacock Street, Arterial, City Standard 104A modified (100' RW / 76' CC) shall be constructed to full-width along the entire project's west frontage. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk (modified to be curb-separated with the back of walk 1.5' behind the traditional right-of-way) (east side only), raised median at the south leg of its intersection with Iris Avenue, a guardrail on the west side of Heacock Street as required by the City Engineer, driveway approaches, bus turnout, drainage structures, any necessary offsite improvement transition/joins to existing, streetlights, pedestrian ramps, and dry and wet utilities. This project shall coordinate closely with the City's current CIP (Capital Improvement Project) Heacock Street Improvement Project for the design and construction of Heacock Street. The Capital Project Division's main line is (951) 413-3130.

b. Iris Avenue, Arterial, City Standard 104A (100' RW / 76' CC) shall be constructed to half-width plus an additional 18' north of the construction/proposed centerline, along the entire project's north frontage. A 20' right-of-way dedication on the south side of the street, along the project's north property line except where right-of-way has been previously dedicated per Instrument No. 2009-0228079 on May 7, 2009, shall be shown on the parcel map. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk (modified to be curb-separated with the back of walk 2' behind the traditional right-of-way), bus turnout, raised median on the east leg of its intersection with Heacock Street, driveway approaches, drainage structures, any necessary offsite improvement transition/joins to existing, streetlights, pedestrian ramps, and dry and wet utilities.

c. Cosmos Street, Industrial Collector, City Standard 106 (78' RW / 56' CC) shall be constructed to half-width plus an additional 18' east of the centerline, along the entire project's east frontage. A 39' right-of-way dedication on the west side of the street and additional right-of-way

required for the proposed cul-de-sac at the street's northerly end, along the project's east property line, shall be shown on the parcel map. The 18' of right-of-way on the east side of the centerline including additional right-of-way for the cul-de-sac bulb shall be acquired if not already dedicated by the adjacent property. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, drainage structures, any necessary offsite improvement transition/joins to existing, streetlights, pedestrian ramps, and dry and wet utilities. The cul-de-sac at the north end of the Cosmos Street terminus shall be constructed per City Standard 123.

d. Krameria Avenue, Industrial Collector, City Standard 106 (78' RW / 56' CC) shall be constructed to full-width, along the entire project's southerly property line of Parcel 1. A 78' right-of-way dedication shall be shown on the parcel map. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, drainage structures, streetlights, pedestrian ramps, and dry and wet utilities.

e. Driveway approaches shall be constructed per City Standard No. 118C, modified. The parcel map shall show an additional 4-foot right-of-way dedication behind driveway approaches. No decorative pavers shall be placed within the public right-of-way.

f. Pavement core samples of existing pavement may be taken and findings submitted to the City for review and consideration of a lesser width of pavement improvements. The City will determine the adequacy of the existing pavement structural section. If the existing pavement section is found to be adequate, then a lesser width than that specified above for street pavement improvements may be allowed, as approved by the City Engineer. If the existing pavement section is found to be inadequate, the Developer shall construct the streets to the limits as listed above.

g. All curb returns and driveway aprons where truck movements are expected shall have a radius of 50' minimum. This shall include the curb return at the southeast corner of Heacock Street and Iris Avenue, both curb returns at the "T" intersection of Heacock Street and proposed Krameria Avenue and all driveways along Heacock Street, Krameria Avenue, and Cosmos Street, or as otherwise directed by the City's Transportation Division.

LD78. (MA) Prior to parcel map approval, written permission must be obtained from off-site property owner(s) for all off-site grading and easements. All on-site and off-site easements shall be shown on the final map. This shall include, but not be limited to, the proposed driveway which straddles this project's southeast corner of APN 316-020-028 and the off-site property to the south, APN 316-100-036.

LD79. (MA) Prior to parcel map approval, this project shall submit for review a reciprocal access agreement between Parcel 2 and the off-site property

south of Parcel 2, APN 316-100-036, if the intention is for reciprocal access amongst parcels, else this project shall submit for review and approval an access easement from off-site APN 316-100-036 in favor of this project's Parcel 2, via separate instrument.

LD80. (BP) Prior to issuance of a building permit, the final parcel map shall record including easement and right-of-way dedications and street vacations proposed therein.

LD81. (OC) Prior to occupancy permit issuance, all overhead utility lines less than 115,000 volts fronting or within the entire project site boundary shall be placed underground per Section 9.14.130C of the City Municipal Code.

LD82. In accordance with the City of Moreno Valley standards, the Double Ring Infiltrometer field testing method shall be utilized to perform in-situ percolation testing in the location of proposed infiltration area treatment control Best Management Practice (BMP) and the results included in the Final WQMP.

LD83. The Preparer shall provide complete and documented calculations for the proposed treatment control BMPs.

LD84. The Applicant shall prepare and submit for approval a Project Specific Final Water Quality Management Plan (F-WQMP) for PA11-0007 formerly PA07-0151 -March Business Center. The F-WQMP shall be consistent with the approved P-WQMP and in full conformance with the document; "Riverside County Water Quality Management Plan for Urban Runoff" dated July 24, 2006. The F-WQMP shall be submitted and approved prior to application for and issuance of grading or building permits. At a minimum, the F-WQMP shall include the following: Site Design BMPs; Source Control BMPs; Treatment Control BMPs; Operation and Maintenance requirements for BMPs; and sources of funding for BMP implementation.

LD85. The Applicant shall select and implement treatment control BMPs that are medium to highly effective for treating Pollutants of Concern (POC) for the project. POC include project pollutants associated with a 303(d) listing or a Total Maximum Daily Load (TMDL) for receiving waters. Project pollutants of concern include: sediment/turbidity, nutrients, organic compounds, oxygen demanding substances, and pathogens (bacteria and viruses). Exhibit C of the document, "Riverside County Water Quality Management Plan for Urban Runoff" dated July 24, 2006 shall be consulted for determining the effectiveness of proposed treatment BMPs.

LD86. The Applicant has proposed to incorporate the use of catch basin 'filter inserts and infiltration basins with underdrain systems. Final design details of these filtration and infiltration systems must be provided in the first submittal of the F-WQMP. The size of the treatment control BMP is to be determined using the procedures set forth in Exhibit C of the Riverside County Guidance Document. The Applicant acknowledges that more area than currently shown on the plans may be required to treat site runoff as required by the WQMP Guidance.

LD87. The Applicant shall substantiate the applicable Hydrologic Condition of Concern (HCOC) (WQMP Section IV) in the F-WQMP. The HCOC designates that the project will comply with Condition A; therefore, the condition must be addressed in the F-WQMP.

LD88. The Applicant shall, prior to building or grading permit closeout or the issuance of a certificate of occupancy, demonstrate:

a. That all structural BMPs have been constructed and installed in conformance with the approved plans and specifications;

b. That all structural BMPs described in the F-WQMP have been implemented in accordance with approved plans and specifications;

c. That the Applicant is prepared to implement all non-structural BMPs included in the F-WQMP, conditions of approval, and building/grading permit conditions; and

d. That an adequate number of copies of the approved F-WQMP are available for the future owners/occupants of the project.

CITY OF MORENO VALLEY
CONDITIONS OF APPROVAL
Case No: PA11-0007 (TPM 35879)
APNs: 316-020-032, -033, -034, -035, and -035
10.08.12 Revised

PUBLIC WORKS DEPARTMENT

Special Districts Division

Note: All Special Conditions, Modified Conditions, or Clarification of Conditions are in bold lettering. All other conditions are standard to all or most development projects.

Acknowledgement of Conditions

The following items are Special Districts' Conditions of Approval for project **PA11-0007**; this project shall be completed at no cost to any Government Agency. All questions regarding Special Districts' Conditions including but not limited to, intent, requests for change/modification, variance and/or request for extension of time shall be sought from the Special Districts Division of the Public Works Department 951.413.3480 or by emailing specialdistricts@moval.org.

General Conditions

SD-1 The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services Districts Zones A (Parks & Community Services) and C (Arterial Street Lighting). All assessable parcels therein shall be subject to annual Zone A and Zone C charges for operations and capital improvements.

SD-2 Plans for parkway, median, slope, and/or open space landscape areas designated on the tentative map or in these Conditions of Approval for incorporation into Moreno Valley Community Services District **Zone M**, shall be prepared and submitted in accordance with the *City of Moreno Valley Public Works Department Landscape Design Guidelines*. Contact the Special Districts Division of the Public Works Department to obtain copies of this document.

SD-3 The developer, or the developer's successors or assignees shall be responsible for all parkway and/or median landscape maintenance for a period of one (1) year as per the *City of Moreno Valley Public Works Department Landscape Design Guidelines,* or until such time as the District accepts maintenance responsibilities.

SD-4 Any damage to existing landscape areas maintained by the Moreno Valley Community Services District due to project construction shall be

repaired/replaced by the developer, or developer's successors in interest, at no cost to the Moreno Valley Community Services District.

SD-5 Plan check fees for review of parkway/median landscape plans for improvements that shall be maintained by the Moreno Valley Community Services District are due upon the first plan submittal. (MC 3.32.040)

SD-6 Inspection fees for the monitoring of landscape installation associated with Moreno Valley Community Services District maintained parkways/medians are due prior to the required pre-construction meeting. (MC 3.32.040)

SD-7 Streetlight Authorization forms, for all streetlights that are conditioned to be installed as part of this project, must be submitted to the Special Districts Division for approval, prior to streetlight installation. The Streetlight Authorization form can be obtained from the utility company providing electric service to the project, either Moreno Valley Utility or Southern California Edison.

Prior to Recordation of Final Map

SD-8 (R) This project has been identified to be included in the formation of a Community Facilities District (Mello-Roos) for **Public Safety** services, including but not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. The property owner(s) shall not protest the formation; however, they retain the right to object to the rate and method of maximum special tax. In compliance with Proposition 218, the developer shall agree to approve the mail ballot proceeding (special election) for either formation of the CFD or annexation into an existing district that may already be established. The Developer must notify Special Districts of intent to record final map 90 days prior to City Council action authorizing recordation of the map. (California Government Code)

SD-9 (R) This project is conditioned to provide a funding source for the capital improvements and/or maintenance for the **Heacock St. and Iris Ave.** median landscape. In order for the Developer to meet the financial responsibility to maintain the defined service, one of the options as outlined below shall be selected. The Developer must notify Special Districts of intent to record final map 90 days prior to City Council action authorizing recordation of the map and the financial option selected to fund the continued maintenance.

a. Participate in a ballot proceeding for **improved median maintenance** and pay all associated costs with the ballot process and formation costs, if any. Financing may be

structured through a Community Services District zone, Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the city; or

b. Establish an endowment to cover the future maintenance costs of the landscaped area.

The financial option selected shall be in place prior to the issuance of certificate of occupancy.

SD-10 *Commercial* (R) If Land Development, a Division of the Community and Economic Development Department, requires this project to supply a funding source necessary to provide, but not limited to, stormwater utilities services for the monitoring of on site facilities and performing annual inspections of the affected areas to ensure compliance with state mandated stormwater regulations, the developer must notify Special Districts of intent to record final map 90 days prior to City Council action authorizing recordation of the map and the financial option selected to fund the continued maintenance. (California Government Code)

SD-11 (R) Prior to recordation of the final map, the developer, or the developer's successors or assignees, shall record with the County Recorder's Office a **Covenant of Assessments** for each assessable parcel therein, whereby the developer covenants the existence of the Moreno Valley Community Services District, its established benefit zones, and that said parcel(s) is (are) liable for payment of annual benefit zone charges and the appropriate National Pollutant Discharge Elimination System (NPDES) maximum regulatory rate schedule when due. A copy of the recorded Covenant of Assessments shall be submitted to the Special Districts Division. For a copy of the Covenant of Assessments form, please contact Special Districts, phone 951.413.3480.

Prior to Building Permit Issuance

SD-12 (BP) Prior to the issuance of the first building permit for this project, the developer shall pay Advanced Energy fees for all applicable Zone B (Residential Street Lighting) and/or Zone C (Arterial Street Lighting and Intersection Lighting) streetlights required for this development. Payment shall be made to the City of Moreno Valley, as collected by the Land Development Division, based upon the Advanced Energy fee rate in place at the time of payment, as set forth in the current Listing of City Fees, Charges and Rates, as adopted by City Council.

The developer shall provide a receipt to the Special Districts Division showing that the Advanced Energy fees have been paid in full for the

number of streetlights to be accepted into the CSD Zone B and/or Zone C programs. Any change in the project which may increase the number of streetlights to be installed will require payment of additional Advanced Energy fees at the then current fee.

SD-13 (BP) Final median, parkway, slope, and/or open space landscape/irrigation plans for those areas designated on the tentative map or in these Conditions of Approval for inclusion into Community Services District shall be reviewed and approved by the Community and Economic Development Department–Planning Division, and the Public Works Department–Special Districts and Transportation Divisions prior to the issuance of the first Building Permit.

Prior to Certificate of Occupancy

SD-14 (CO) All parkway and/or median landscaping specified in the tentative map or in these Conditions of Approval shall be constructed prior to the issuance of the Certificate of Occupancy/Building Final for the **1st building** for this project.

SD-15 (CO) Landscape and irrigation plans for parkway, median, slope, and/or open space landscape areas designated for incorporation into Moreno Valley Community Services District shall be placed on compact disk (CD) in pdf format. The CD shall include "As Built" plans, revisions, and changes. The CD will become the property of the City of Moreno Valley and the Moreno Valley Community Services District.

CITY OF MORENO VALLEY

CONDITIONS OF APPROVAL
PA11-0001 through 0007
Proposal for four industrial buildings totaling approximately 1.5 million square feet located on the southeast corner of Heacock Street and Iris Avenue.

Note: All Special conditions are in bold lettering. All other conditions are standard to all or most development projects.

Transportation Engineering Division – Conditions of Approval

Based on the information contained in our standard review process we recommend the following conditions of approval be placed on this project:

GENERAL CONDITIONS

TE1. Conditions of approval may be modified if project is phased or altered from any approved plans.

TE2. Cul-de-sacs shall be designed and cons tructed per City Standard Plan No. 123 and/or 124.

TE3. Iris Avenue is classified as an Arterial (100'RW/76'CC) per City Standard Plan No. 104A. Design/construction shall include the following:

- **A Class III Bikeway shall be provided along Iris Avenue.**
- **Traffic Signal Interconnect shall be installed along Iris Avenue per City Standard Plan No. 421.**
- **A raised median shall be constructed from Heacock Street to approximately 50 feet east of the westernmost driveway.**

TE4. Heacock Street is classified as an Arterial (100' RW/76' CC) per City Standard Plan No. 104A, modified as necessary due to the MARB perimeter. Design/construction shall include the following:

- **A Class III Bikeway shall be provided along Heacock Street.**
- **Traffic Signal Interconnect shall be installed along Heacock Street per City Standard Plan No. 421.**
- **A raised landscape median shall be constructed on the south leg of the Heacock Street/Iris Avenue intersection (approximately 50 to 100 feet in length).**
- **A northbound right turn lane at the Heacock Street/Iris Avenue intersection.**
- **Metal Beam Guardrail shall be installed as required by the City Engineer.**

TE5. Krameria Avenue is reclassified as an Industrial Collector (78'RW/56'CC) per City Standard Plan No. 106.

TE6. "A" Street is designated as an Industrial Collector (78'RW/56'CC) per City Standard Plan No. 106.

PRIOR TO GRADING PERMIT

TE7. (GP) Prior to issuance of a grading permit, the project applicant shall submit an engineer's cost estimate for a raised landscape median along Iris Avenue (from 50' east of the westernmost driveway to the eastern property boundary) for the City Engineer's approval.

TE8. (GP) Prior to issuance of a grading permit, the project applicant shall submit conceptual striping plans for improvements identified in conditions TE13 and TE14 for the City Traffic Engineer's approval.

PRIOR TO IMPROVEMENT PLAN APPROVAL OR CONSTRUCTION PERMIT

TE9. Driveways shall conform to Section 9.11.080, and Table 9.11.080-14 of the City's Development Code – Design Guidelines and City of Moreno Valley Standard No. 118C for commercial driveway approach. Driveways wider than City standards (maximum of 40 feet) shall be constructed as an intersection with access ramps per City Standard 214A, including any necessary signing and markings, as determined by the City Traffic Engineer.

TE10. Prior to the final approval of the street improvement plans, a signing and striping plan shall be prepared per City of Moreno Valley Standard Plans - Section 4 for all streets with a cross section of 66'/44' and wider.

TE11. Prior to issuance of a construction permit, construction traffic control plans prepared by a qualified, Registered Civil or Traffic engineer may be required.

TE12. Sight distance at driveways and on streets shall conform to City of Moreno Valley Standard No. 125 A, B, and C at the time of preparation of final grading, landscape, and street improvements.

TE13. Prior to the final approval of the street improvement plans, the project applicant shall design the intersection of Heacock Street and Krameria Avenue to provide the following geometrics:

Northbound: One through lane, one shared through/right turn lane
Southbound: One left turn lane, two through lanes
Eastbound: NA
Westbound: One left turn lane, one right turn lane

NOTE: All curb return radii shall be 50 feet.

TE14. Prior to the final approval of the street improvement plans, the project applicant shall design the intersection of Heacock Street and Iris Avenue to provide the following geometrics:

Northbound: Two through lanes, one right turn lane
Southbound: Two left turn lanes, one through lane
Eastbound: NA
Westbound: Two left turn lanes, one right turn lane

NOTE: All curb return radii shall be 50 feet. Design shall include a raised landscape median on the south leg of the intersection. The median shall be approximately 50 to 100 feet in length. A raised landscape median shall also be required on the east leg of the intersection to a point approximately 50 feet east of the westernmost driveway.

TE15. Prior to final approval of the street improvement plans, the project applicant shall design a bus bay per City Standard Plan No. 121 for eastbound Iris Avenue, east of Heacock Street as well as northbound Heacock Street, north of Krameria Avenue.

PRIOR TO BUILDING PERMIT

TE16. (BP) Prior to issuance of a building permit, traffic signal plans shall be prepared by a registered civil or electrical engineer and shall be submitted to the City Traffic Engineer for the following intersections:

- **Heacock Street at Iris Avenue,**
- **Heacock Street at Krameria Street,**
- **Heacock Street at Gentian Avenue (roadway transitions on the south leg may be necessary to align lanes through intersection).**

TE17. (BP) Prior to issuance of a Building Permit, the project applicant shall pay all fair-share contributions per the FEIR Mitigation Measures 4.11-3 and 4.11-4.

TE18. (BP) Prior to issuance of a building permit, the project applicant shall make a fair-share contribution in the amount of $42,805 to the City of Moreno Valley for the construction of a traffic signal at Perris Boulevard and Suburban Lane. As this traffic signal is not in any existing fee program, payment of DIF and/or TUMF are not considered satisfaction of this obligation.

TE19. (BP) Prior to issuance of a building permit, the project applicant shall pay to the City of Moreno Valley 50 percent of the estimated cost for a raised median along Iris Avenue (from 50' east of the westernmost driveway to the eastern property boundary) as established by condition TE7. As this raised median is not in any existing fee program, payment of DIF and/or TUMF are not

considered satisfaction of this obligation. The raised median will be constructed at a future date when warranted.

PRIOR TO CERTIFICATE OF OCCUPANCY OR BUILDING FINAL

TE20. (CO) Prior to issuance of a certif icate of occupancy, all approved signing and striping shall be installed per current City Standards and the approved plans.

TE21. (CO) Each gated entrance shall be provided with the following, or as approved by the City Traffic Engineer:

a) A storage lane with a minimum of 75 feet queuing length for entering traffic.
b) Appropriate signing and striping.

All of these features must be kept in working order.

TE22. (CO) Prior to the issuance of a certificate of occupancy, the project applicant shall construct the traffic signals identified in TE16. Construction shall be completed per the approved plans and coordinated with the street improvements.

TE23. (CO) Prior to issuance of a certificate of occupancy, the project applicant shall construct the intersection/roadway improvements identified in TE13, TE14, and TE15 per the approved plans.

TE24. (CO) Prior to the issuance of a certificate of occupancy for the project, driveway access at the following locations will be installed as follows:

- **Westernmost Iris Avenue driveway: Right-in, right-out access restricted by means of a raised median.**
- **Center and Easternmost Iris Avenue driveways: Full access, restricted to right-in, right-out access in the future when a raised median is warranted.**
- **Heacock Street Driveways: Full Access.**
- **Krameria Avenue Driveways: Full access.**
- **"A" Street Driveways: Full Access.**

NOTE: All truck driveways shall have curb return radii of 50 feet.

PRIOR TO ACCEPTANCE OF STREETS INTO THE CITY-MAINTAINED ROAD SYSTEM

TE25. Prior to the acceptance of streets intothe City-maintained road system, all approved traffic control and signing and striping shall be installed per current City Standards and the approved plans.

CITY OF MORENO VALLEY
CONDITIONS OF APPROVAL
Case No: PA11- 0001 through PA11 – 0007, P11- 004, and P11-005
APN: 316-020-032 through 036

PUBLIC WORKS DEPARTMENT

Moreno Valley Utility

Note: All Special Conditions, Modified Conditions, or Clarification of Conditions are in bold lettering. All other conditions are standard to all or most development projects.

Acknowledgement of Conditions

The following items are Moreno Valley Utility's Conditions of Approval for project(s) PA11-0001 through PA11–0007, P11-004, and P11-005; this project shall be completed at no cost to any Government Agency. All questions regarding Moreno Valley Utility's Conditions including but not limited to, intent, requests for change/modification, variance and/or request for extension of time shall be sought from Moreno Valley Utility (the Electric Utility Division) of the Public Works Department 951.413.3500. The applicant is fully responsible for communicating with Moreno Valley Utility staff regarding their conditions.

PRIOR TO RECORDATION OF FINAL MAP

MVU-1 (R) For single family subdivisions, a three foot easement along each side yard property line shall be shown on the final map and offered for dedication to the City of Moreno Valley for public utility purposes, unless otherwise approved by the City Engineer. If the project is a multi-family development, townhome, condominium, apartment, commercial or industrial project, and it requires the installation of electric distribution facilities within common areas, a non-exclusive easement shall be provided to Moreno Valley Utility to include all such common areas. All easements shall include the rights of ingress and egress for the purpose of operation, maintenance, facility repair, and meter reading.

PRIOR TO ISSUANCE OF BUILDING PERMIT

MVU-2 (BP) **City of Moreno Valley Municipal Utility Service – Electrical Distribution**: Prior to issuance of building permit, the developer shall submit a detailed engineering plan showing design, location and schematics for the utility system to be approved by the City Engineer. In accordance with Government Code Section 66462, the Developer **shall** execute an agreement with the City providing for the installation, construction, improvement and dedication of the utility system following recordation of final map and concurrent with trenching operations and other subdivision improvements so

long as said agreement incorporates the approved engineering plan and provides financial security to guarantee completion and dedication of the utility system.

The Developer **shall** coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to the City, or the City's designee, all utility infrastructure (including but not limited to conduit, equipment, vaults, ducts, wires, switches, conductors, transformers, resistors, amplifiers, and "bring-up" facilities including electrical capacity to serve the identified development and other adjoining/abutting/ or benefiting projects as determined by Moreno Valley Utility) – collectively referred to as "utility system" (to and through the development), along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and /or delivery of any and all "utility services" to each lot and unit within the Tentative Map. For purposes of this condition, "utility services" shall mean electric, cable television, telecommunication (including video, voice, and data) and other similar services designated by the City Engineer. "Utility services" shall not include sewer, water, and natural gas services, which are addressed by other conditions of approval. Properties within development will be subject to an electrical system capacity charge and that contribution will be collected prior to issuance of building permits.

The City, or the City's designee, shall utilize dedicated utility facilities to ensure safe, reliable, sustainable and cost effective delivery of utility services and maintain the integrity of streets and other public infrastructure. Developer shall, at developer's sole expense, install or cause the installation of such interconnection facilities as may be necessary to connect the electrical distribution infrastructure within the project to the Moreno Valley Utility owned and controlled electric distribution system. Alternatively, developer may cause the project to be included in or annexed to a community facilities district established or to be established by the City for the purpose of financing the installation of such interconnection and distribution facilities. The project shall be deemed to have been included in or annexed to such a community facilities district upon the expiration of the statute of limitations to any legal challenges to the levy of special taxes by such community facilities district within the property. The statute of limitations referred to above will expire 30 days after the date of the election by the qualified electors within the project to authorize the levy of special taxes and the issuance of bonds.

MVU-3 This project may be subject to a Reimbursement Agreement. The project may be responsible for a proportionate share of costs associated with electrical distribution infrastructure previously installed that directly benefits the project. The project may be subject to a system wide capacity charge in addition to the referenced reimbursement agreement. Payment(s) shall be required prior to issuance of building permit(s).

PLANNING COMMISSION STAFF REPORT

Cases:	PA11-0001(General Plan Amendment) PA11-0002-PA11-0006 (Master and 4 Plot Plans) PA011-0007 (Tentative Parcel Map No. 35879) P11-004 (Specific Plan Amendment) P11-005 (Environmental Impact Report)
Date:	December 13, 2012
Applicant:	Western RealCo
Representative:	Hogle-Ireland, Inc.
Location:	Southeast corner of Iris Avenue and Heacock Street
Proposal:	A General Plan Amendment (PA11-0001), Specific Plan Amendment (P11-004), Tentative Parcel Map No. 35879 (PA11-0007) and a Master Plot Plan (PA11-0002) and Four Plot Plans (PA11-0003 through PA11-0006), to amend the Circulation Element of the General Plan and Moreno Valley Industrial Area Plan (SP 208) to realign Krameria Avenue and subdivide a 75.05 gross acre (66.91 net acre) portion of land into four separate parcels to include four (4) individual industrial buildings totaling 1,484,407 square feet within the I (Industrial) land use district.
Recommendation:	Approval

SUMMARY

The applicant, Western RealCo, is requesting the approval of a tentative parcel map, master plot plan and four plot plans. Both a General Plan and Specific Plan Amendment are required for the realignment and reclassification of Krameria Avenue and will amend the Circulation Element of the General Plan and the Moreno Valley Industrial Specific Plan (SP 208).

BACKGROUND

The project was originally approved by City Council on September 25, 2009. Based on litigation proceedings through the County of Riverside Superior Court of California and a writ of mandate decision on June 22, 2010, the project was rescinded by the City Council on October 12, 2010. Based upon court proceedings, the applicant opted to prepare an Environmental Impact Report (EIR) to review potential construction noise impacts and further review project related environmental impacts as a whole.

On December 13, 2011, the City Council approved the authorization of the construction contract for the Heacock Street Bridge over the Perris Valley Storm Drain lateral. The construction of this project was recently completed and accepted by the City. The Heacock Street Bridge is located along Heacock Street, approximately 2,000 feet south of Iris Avenue. Said improvements along Heacock Street will improve access within the area of the proposed March Business Center project.

PROJECT DESCRIPTION

This proposed project includes nine (9) applications/components, including a General Plan amendment, Specific Plan amendment, tentative parcel map, master plot plan and four plot plans for approximately 66 net acres at the southeast corner of Iris Avenue and Heacock Street. The project proposes an industrial complex with four buildings (1,103,003 sq ft, 16,732 sq ft, 87,429 sq ft and 277,243 sq ft for a total of 1,484,407 sq ft). The proposed uses are consistent with the type and intensity of use envisioned under the Moreno Valley Industrial Area Plan (SP 208) and the Industrial land use district of the General Plan. The project also generally matches a prior approval at the site rescinded on October 12, 2010, to permit further environmental review. The following summarizes the discretionary components of the project:

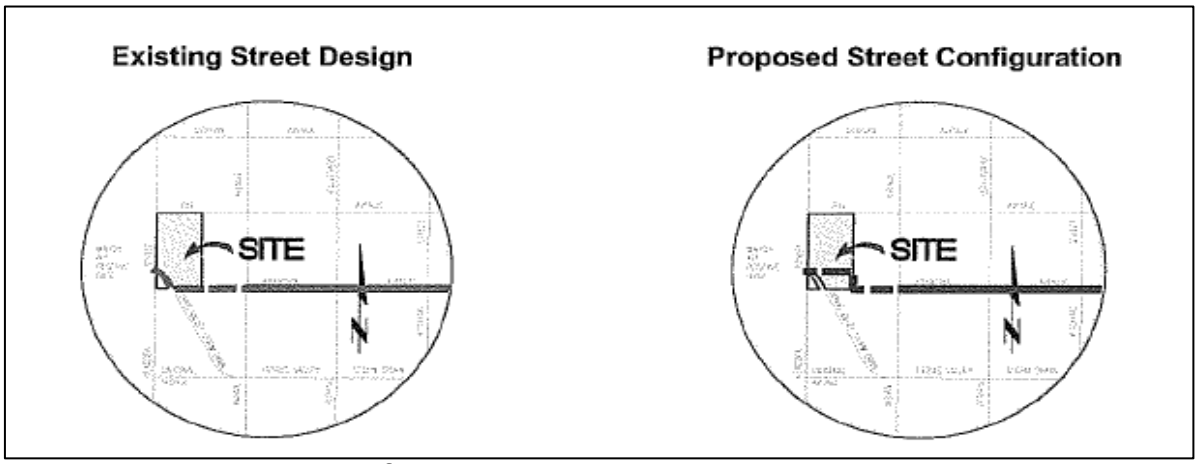
General Plan Amendment

The proposed General Plan Amendment will consist of amending the Circulation Element in regards to Krameria Avenue. The proposed change to Krameria Avenue's design includes:

- Changing the proposed physical location of the west end of Krameria Avenue from the east property line of the project site (future Cosmos Street) to Heacock Street;

- Changing the designation of Krameria Avenue from Indian Avenue to Heacock Street from Minor Arterial to Industrial Collector.

Currently, Krameria Avenue is constructed on the east side of Indian Avenue. The City's General Plan Circulation Element shows Krameria Avenue as ultimately being constructed to Heacock Street. The proposed amendment to the circulation element would remove the existing curvilinear design from future Cosmos Street to Heacock Street and replace it with a straight design (see diagram below).



The proposed realigning of Krameria Avenue will enable project to develop the site more efficiently while creating a functional and safe circulation system. The existing design has the potential of promoting high vehicle speeds from Indian Avenue to Heacock Street. With the proposed design, a vehicle driving down the proposed Krameria Street will be required to make a left or right turn onto future Cosmos Street, slowing down its speed, thus creating a safer environment. The redesign would also reduce the likelihood of mixing industrial truck traffic with residential commuter traffic.

Specific Plan Amendment

For consistency purposes, the Specific Plan also will be amended to change the location of Krameria Avenue between Indian Street and Heacock Street as well as change the designation from Minor Arterial to Industrial Collector. The Moreno Valley Industrial Specific Plan (SP 208) document will be revised accordingly to include all text changes as follows (Proposed deletions are shown as stricken text and additions are underlined):

Proposed text changes to Specific Plan No. 208 are as follows:

On Page IV-7, Section d. (Minor Arterials), the Moreno Valley Industrial Specific Plan (SP 208) minor arterials will include the following:

- Nandina Avenue (between Indian Street to ~~Kitching Street~~ <u>Perris Boulevard</u>)
- Indian Street

On Page IV-8, Section e. (Collector Streets), the Moreno Valley Industrial Specific Plan (SP 208) minor arterials will include the following:

Collector streets planned for the construction and improvement within the Project site include:

- Krameria Avenue (Indian Street to Heacock Street)

On Page V-14, under Minor Arterials (88' ROW):

- Nandina Avenue (between Indian Street to ~~Kitching Street~~ Perris Boulevard)
- Indian Street

On Page V-14, under Industrial Collector (78' ROW)

- Krameria Avenue (between Indian Street and Heacock Street)

In addition, diagrams or maps in the Specific Plan would be modified to the proposed standards mentioned above, including the Noise Contour Map, Circulation Map, Compatible Use Districts and Bikeways and Pedestrian Ways diagrams.

Tentative Parcel Map

Tentative Parcel Map 35879 will take the existing five (5) parcels and create four (4) parcels for the proposed four (4) from industrial buildings the existing five parcels. The applicant has proposed Tentative Parcel Map No. 35879 to subdivide an approximate 75 acre site into four (4) separate buildable parcels for various industrial related uses.

The proposed subdivision has been designed in accordance with the City Zoning Ordinance and the State Subdivision Map Act. The proposed subdivision of vacant land complies with the Specific Plan and Map Act in that all lots meet the minimum buildable size, all lots upon which development will take place will provide access to and from dedicated public streets and all lots conform to development standards within the Municipal Code.

Master Plot Plan & Plot Plans

The master plot plan proposes a four building industrial complex for the four designated parcels. Buildings 1 through 4 will also include individual plot plan reviews of each building within the master plot plan. The Master Plot Plan (PA11-0002) establishes a common architectural and landscape development concept for the entire Project, depicts the location of proposed circulation facilities, and depicts the relationship between proposed on-site structures.

The following information includes a breakdown of parcels, parcel and building sizes and proposed uses:

PARCEL	NET PARCEL SIZE	TOTAL BUILDING AREA	PROPOSED USE
1	2,077,688 s.f.	1,103,003 s.f.	Warehousing
2	512,072 s.f.	277,243 s.f.	Warehousing
3	258,479 s.f.	87,429 s.f.	Warehousing
4	67,144 s.f.	16,732 s.f.	Manufacturing
Total	**2,915,383 s.f.**	**1,484,407 s.f.**	**N/A**

Proposed uses for individual parcels include primarily industrial warehouse related activities for Parcels/Buildings 1 through 3. Parcel 1 is the largest industrial warehouse use at approximately 2,077,688 square feet. Parcel/Building 4 includes a very small building and parcel where space will likely limit the site an industrial manufacturing use. Currently, there are no specific uses or tenants proposed for any of the four buildings/parcels.

Site

The site is currently zoned Industrial (I) under Specific Plan 208 Moreno Valley Industrial Area Plan (SP208I). The project site is currently vacant and relatively flat. The project is located at the southeast corner of Iris Avenue and Heacock Street.

Surrounding Area

Surrounding areas within immediate proximity to the subject site are zoned predominately for industrial development. The zoning surrounding the proposed project site is Industrial (I) under Specific Plan 208 Moreno Valley Industrial Area Plan (SP208I) to the south, east, and north. Northeast of the site is zoned Residential Single-Family 10 (RS 10) and developed with a tract of small lot single-family homes that are approximately 20 years old. Although the nearest sensitive receptor (residence) is located approximately 115 feet northeast of the Project site across Iris Avenue, the nearest proposed truck bay is set back from the northeast corner of Parcel 1/Building 1 to the single-family home neighborhood and is approximately 500 feet away from the nearest residence.

The project is located directly west of another industrial complex (Iris Avenue/Indian Street project) that was approved by the City Council on July 8, 2008. The Iris Avenue/Indian Street project approval included future “A” Street, which will run along the eastern property boundary of this proposed project. Directly north of the project is a proposed industrial complex.

The project adheres to the buffer zone requirement and 300 foot proximity to a residential district established in the Moreno Valley Industrial Area Plan (SP No. 208) and will not allow for any outdoor storage or loading activities in the designated area. The features proposed by the Project closest to the residential areas or 300 feet from the residential neighborhood across from Iris Avenue would consist of a parking lot for passenger cars, the primary entry and office portion of the building on Parcel 1, and landscaping, which minimizes any associated impacts from the industrial project. Overall, the proposed industrial warehouse development is compatible with the current zone and the City’s General Plan Land Use Map.

Access/Parking

The project has been designed to separate truck and employee traffic and to restrict truck traffic from Iris Avenue. Truck access from the site to freeway (Interstate 215) will be from Heacock Street north to Cactus Avenue or via Nandina Avenue to Indian Street and Harley Knox Avenue from the south. In the future, additional access to the freeway will be available via Krameria Avenue to Indian Street and Heacock Street to Harley Knox Avenue.

Future employees in Building 1 will be able to access the project from three automobile only access driveways off of Iris Avenue and two driveways off of Krameria Avenue. Other employee only access points include one off of Krameria Avenue into Building 3 and one off of future Cosmos Street for Building 2. Employee parking will be included for Building 4 off a shared truck/automobile driveway (limited truck activity) Trucks will have access to the site from three driveways along Heacock Street (two for Building 1 and the one shared driveway for Building 4). Truck access to Buildings 2 and 3 will be included from two individual driveways off Krameria Avenue. Building 1 will also have truck access from future Cosmos Street (two driveways).

Parking for the industrial complex is consistent with what was approved for the original project back in 2010. The proposed industrial development will meet the required minimum vehicular parking standards for office, warehouse and distribution uses. The project as a whole provides 678 vehicular parking stalls, of which 418 parking spaces are provided for Parcel 1,132 parking stalls provided for Parcel 2, 86 stalls provided for Parcel 3 and 42 stalls provided for Parcel 4. Together, the four buildings exceed the minimum vehicular parking requirements for a warehouse/office use. There are 228 truck bays and 181 truck/trailer parking stalls for the site. Although the ratio does not actually meet a one (1) truck/trailer parking stall for every dock door, the project was originally approved for 181 truck/trailer parking stalls and the designated stalls should adequately service the industrial complex.

All proposed truck/trailer parking spaces and loading dock areas are screened from view of the public right of way by a 14 feet high decorative screen wall. The standard parking spaces will not be enclosed by a screen wall. Additional dense landscape will be provided adjacent to the screen walls to further soften their appearance.

Design/Landscaping

The project's architectural and landscape design conforms to all development standards of Specific Plan No. 208 "Industrial" zone as required within the Moreno Valley Municipal Code.

All four buildings being proposed are of concrete tilt-up construction with the two largest being rectangular in shape. The smaller two buildings have an angled wall along their frontage with the existing Riverside County Flood Control Channel. All the buildings are approximately 36 feet in height and the more decorative architectural features of the building reaching heights between 38 and 45 feet. The buildings have the same architectural style as was previously approved and are using neutral earth tone colors with a darker accent color. The buildings are predominantly rectangular in

shape with flat roofs, and the proposed windows have a greenish reflective glazing finish. The more decorative architectural features of the buildings are located at entrances to the offices. The building wall heights vary to make the buildings less monotonous. The project is also providing concrete tilt-up walls along Heacock Street, Iris Avenue, Krameria Avenue and Proposed Cosmos Street so that the loading docks are not visible from the public right of way. The proposed screen walls will be 14 feet in height to fully screen trucks and trailers, and will match the architecture of the buildings.

The proposed project also conforms to the requirements of the City's Design Guidelines. The project is conditioned, so that landscape plans be prepared in accordance with the City's Landscape Development Guidelines and Specifications which includes street trees and enhanced landscaping at street corners and entries in the project.

REVIEW PROCESS

The first staff review of this project took place at the Pre-PRSC meeting on February 8, 2011. Project revisions were submitted in August 2011. A second Pre-PRSC review of the project was conducted on September 13, 2011. A third two week internal review of the project was conducted between September 25, 2012 and October 9, 2012. The project was scheduled for Planning Commission after all identified issues had been addressed and the final Environmental Impact Report (EIR) was completed and able to be distributed to the public.

ENVIRONMENTAL

An initial study was prepared to support the recommend environmental finding that an Environmental Impact Report (EIR) is appropriate for this project. In reviewing the environmental aspects of the proposed Industrial warehouse complex and the writ of mandate decision made by the County of Riverside Superior Court back in 2010, it was determined that an Environmental Impact Report (EIR) with an emphasis on construction noise was appropriate. In addition, the site was re-evaluated and other applicable environmental studies were prepared to compliment the EIR.

A Notice of Preparation for the EIR was issued June 9, 2011, and a public meeting to receive input on the issues to be covered by the EIR was held at City Hall on June 29, 2011. Subsequent to that meeting, draft environmental documents were prepared by the applicant's consultant T&B Planning and submitted to the City and its peer consultant for review. After City review of the draft environmental documents and revisions to address City questions and concerns, per California Environmental Quality Act (CEQA) Guidelines, the Draft EIR was circulated for a 45-day public review period. Notice of completion and availability of the Draft EIR was documented with a starting date of April 27, 2012, with the 45-day plus review period ending on June 13, 2012. To facilitate increased input, the City accepted comments well past the 45-day review period. The Draft EIR was sent to numerous State and local agencies and interested parties and was available to the public at the library and via the City's website, while comment letters were provided during the 45-day review period. Eleven (11) comment

letters were received during the draft review period and included in the EIR process. Responses to all of these comments are included in the Final version of the EIR.

The Final EIR, including Responses to Comments and related final documents were mailed to all commenting parties on November 28, 2012, to allow for their review prior to Planning Commission hearing. This notice period slightly exceeds the minimum notice period of 10 days as provided for in CEQA. As was the case with the Draft EIR, the Final EIR was provided for public review at City Hall, the City Library and posted on the City's website.

The EIR analyzed 12 potential areas where significant environmental impacts could result from the development of the Project. Three of those, air quality, noise and traffic, were found to have significant and unavoidable environmental impacts after the imposition of all feasible mitigation measures. The remaining nine (9) areas: aesthetics, biological resources, cultural resources, geology/soils, greenhouse gas emissions, hazards and hazardous materials, hydrology/water quality, land use/planning, and utilities and service systems, were found to have either no significant and unavoidable environmental impacts or that the environmental impacts could be mitigated into a level of insignificance.

The Final Environmental Impact Report recommends approximately 40 project specific and cumulative mitigation measures to reduce impacts related to air quality, biological resources, cultural resources, greenhouse gas emissions, hazards and hazardous materials, noise, and transportation/traffic. The California Environmental Quality Act (CEQA) also requires that when a public agency completes an environmental document that includes measures to mitigate or avoid significant environmental effects, the public agency must adopt a Mitigation Monitoring Program (MMP) for the changes to the project that it has adopted or made a condition of project approval in order to mitigate or avoid significant environmental impacts. The appropriate reporting or monitoring plan must be designed to ensure compliance during project implementation. Monitoring will include: verification that each mitigation measure has been implemented, recordation of the actions taken to implement each mitigation measure; and retention of records in the project file. The City would be responsible for monitoring and implementing the mitigation measures included in this monitoring plan. Reporting established for each of the mitigation measures provides a record that the particular measure is being implemented.

Although impacts to air quality, noise and transportation/traffic cannot be reduced to less than significant levels, the California Environmental Quality Act (CEQA) allows for statement of overriding considerations and findings to be considered. CEQA requires the decision making agency to balance the economic, legal, social, technological or other benefits of a proposed project against its unavoidable environmental risks when determining whether to approve the proposed project. This would include project benefits such as the creation of jobs or other beneficial project features versus project impacts that cannot be mitigated to less than significant levels. If the benefits of a proposed project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered "acceptable". The Statement of Overriding Consideration and corresponding findings are attached to the report and EIR resolution as Attachment 2 for review and consideration.

The Planning Commission will have the opportunity to take public testimony on the EIR and project and forward a recommendation to City Council. Before the proposed project can be approved, the City Council will have the opportunity to review the final environmental document, receive public testimony and either certify or reject the EIR and subsequent Statement of Overriding Considerations and Mitigation Monitoring Program.

NOTIFICATION

Public notice was sent to all property owners of record within 300' of the project. The public hearing notice for this project was also posted on the project site and published in the local newspaper.

STAFF RECOMMENDATION

Staff recommends that the Planning Commission take the following action:

APPROVE Resolution Nos. 2012-33, 2012-34, 2012-35, and 2012-36 and thereby **RECOMMEND** that the City Council:

1. **CERTIFY** the Environmental Impact Report, including Statement of Overriding Considerations and the required Mitigation Monitoring Program (P11-005) for P11-004 (Specific Plan Amendment), PA11-0001 (General Plan Amendment), PA11-0002-PA11-0006 (Master Plot Plan and Individual Plot Plans) and PA11-0007 (Tentative Parcel Map No. 35879) pursuant to the California Environmental Quality Act (CEQA) Guidelines;

2. **APPROVE** PA11-0007(Tentative Parcel Map 35879), PA11-0002 (Master Plot Plan), PA11-0003 through PA11-0006 (Plot Plans), PA11-0001 (General Plan Amendment) and P11-004 (Specific Plan Amendment) to subdivide a 75.05 gross acre (66.93 net acre) portion of land into four separate parcels to include four (4) individual industrial buildings totaling 1,484,407 square feet within the I (Industrial) land use district as well as a General Plan Amendment and Specific Plan Amendment to amend the circulation element of the General Plan to realign Krameria Avenue, subject to all mitigation measures within the EIR, as well as findings included in the attached resolutions and conditions of approval, attached as Exhibit A and B to the map and plot plan resolutions.

be coming that are proposing massive areas of one use and there needs to be a lot of consideration for mixing up some uses so that the City does not become a one business town; a one type of job town and that is a valid concern I have and a lot of people I know have in Moreno Valley.

Another thing is I'm going to be trying to be making inroads with you and with Council is that the City needs to create some development standards that have merit. The Specific Plan for one of the project tonight really has no design standards in it at all. It has a couple of wishes and that is about it. There is very little in there. There are so many things that can be done that can better enhance a project and if you have an organization where that is what they really strive for, even if you don't have it written down, they'll push the development to bring that to the community, but if you don't have anybody pushing it, then you have to have it completely written out. It has to be spelled out up front so when developers come to your City they see what standards you are expecting and that is what they design to and from there you are still going to have to work with them to get what you want or at least get something that everybody is pleased with, but I spent a lot of time looking at stuff in this City and it has saddened me from the perspective that I live in this community and when I drive around, I don't see the kind of nice stuff that I've seen in other cities and I definitely don't see the kind of stuff that I used to work on in places where I did planning too. Thank you very much.

CHAIR VAN NATTA – Thank you for your comments. I see no other Speaker Slips and I will now close the Public Hearing portion and we will go on to our first Public Hearing Item and our Case Planner for this is Mark Gross. Would you please make your presentation?

PUBLIC HEARING ITEMS

1. Case Number:	**PA11-0001**	**General Plan Amendment**
	PA11-0002	**Master Plot Plan**
	PA11-0003 – PA11-0006	**Plot Plans**
	PA11-0007	**Tentative Parcel Map 35879**
	P11-004	**Specific Plan Amendment**
	P11-005	**Environmental Impact Report**

Case Planner: Mark Gross

SENIOR PLANNER GROSS – Yes good evening Chair Van Natta and members of the Planning Commission. I'm Mark Gross, Senior Planner here to provide a brief report on the industrial project for Western RealCo known as March Business Center. The Applicant and Representative Hogle-Ireland is the

Representative and they are proposing a project that includes nine discretionary components.

There is a General Plan Amendment, Specific Plan Amendment, a Tentative Parcel Map, Master Plot Plan and four Plot Plans as well as the Environmental Impact Report for an approximate 66 net; 75 gross acre site and that is located on the southeast corner of Iris and Heacock Street. Now the project proposes an industrial complex with four buildings that total 1,484,407 square feet of building area. The General Plan Amendment and Specific Plan Amendment that is being proposed will change the physical location of the west end of Krameria Avenue from the east property line of the project to Heacock Street and change the designation of Krameria from Indian to Heacock from Minor Arterial to Industrial Collector. Now the project itself is consistent with the type and intensity of uses that are envisioned and allowed under the Moreno Valley Industrial Area Plan which is Specific Plan 208.

The project was originally approved by City Council back in 2009 and there was some litigation on that and through the County of Riverside Superior Court review the project was rescinded in October 12th, 2010 and the Applicant has prepared an Environmental Impact Report to review potential construction noise impacts and what was directed by the courts and at the same time the document does review other potential project related environmental impacts. Now the project meets specific buffer zone requirements. In this case through the Specific Plan established a 300 foot buffer to a residential district and again that is established in the Industrial Area Plan and that will not allow for any outdoor storage or loading in that particular area. Now the features proposed within and closest to the residential buffer zone and neighborhood across from Iris Avenue would consist of an entry and you would have a vehicle parking lot; the office portion of the building on parcel one and landscape. All of these items will minimize the associated project impacts. Now the nearest truck bay is set back from the northeast corner of parcel one, because parcel one is the closest to the residential neighborhood and that is setback approximately 500 feet away from the nearest residence. Now overall the proposed industrial warehouse development is compatible, not only with the zone, but also with the General Plan Land Use Map.

The project has been designed to separate truck and employee traffic and restrict truck traffic from Iris Avenue. Now we have the drawings up on the wall and you will be able to better see and those are in color. Now the truck access from the site to Highway 215 will be primarily from Heacock Street north to Cactus Avenue. In the future you'd have additional access to the freeway that would be available via Krameria to Indian Street and Heacock to Harley Knox. Now the building elevations and again back onto the far wall, are consisting of tilt-up concrete construction and have the same architectural style pretty much as was previously approved with neutral earth-tone colors and then some darker accent type colors. The buildings include varying wall heights which are predominantly

rectangular in shape with flat roofs and the windows have reflective glazing finish. The decorative architectural features of the building are located primarily at the entrances to the offices and you will also have decorative concrete tilt-up screen walls that will be located all around the project; that would include Heacock, Iris, Krameria and future Cosmos Street that will have the screening and that will actually screen the loading activities from public view.

Now just briefly to touch on the Environmental Impact Report that was prepared for the project, it is indicating potentially significant impacts either individually or cumulatively on air quality, noise and traffic that could not be reduced to less than significant levels with proposed mitigation and are considered significant and unavoidable. Now all other environmental impacts evaluated in the EIR are considered to be less than significant or can be adequately mitigated below significant thresholds. Now the California Environmental Quality Act does allow for allow for a Statement of Overriding Considerations and Findings to be provided and does require the decision making body such as the Planning Commission which will be recommending to Council to balance the economic, legal, social, technological or other benefits of the project against the unavoidable environmental risks.

Now if the benefits of the project outweigh these adverse environmental effects, the adverse environmental effects may be in this considered and Staff did receive through the process 11 comment letters with the original Draft Environmental Impact Report and there were specific responses to those comments provided in the Final Environmental Impact Report. All responsible agencies, interested parties, and property owners of record within 300 feet of the project were provided a public notice of the hearing and in addition we posted on the property itself in two different areas and published in the local newspaper. There was a copy of the Final EIR that was included on the City's website. We also provided that at City Hall and the Public Library where the public could come in and take a look at the document. And so we did mention that the EIR was included again on the website, City Hall, Public Library and also responsible agencies and commenting agencies and organizations as well as interested parties were notified because they did ask to be include on a mailing list and we did provide all of that information to them. Staff did receive a letter from Johnson and Sedlack and an email from the Sierra Club and each of those were provided to the Planning Commission well before this meeting via email that you had a chance to take a look at. We also have hard copies as well of those documents.

That pretty much concludes Staff's verbal report on the project. We do have in-house Staff from various departments along with the representative Michael Bradman Associates. They were the peer consultant to the City that assisted in the review of the Environmental document. They are all basically available here in the audience. Now we also have representatives from Western RealCo and Hogle-Ireland here this evening that represent the project and they would be able to answer questions on the project later on in the Hearing process. At this time

what I'd like to do is introduce Tracy Zinn who is the principal from T & B Planning who was the preparer of the Environmental Impact Report to provide a synopsis of some of the environmental issues related to the written correspondence and to elaborate further on the prepared document.

SPEAKER ZINN – Good evening Commissioners. As Mark mentioned, my name is Tracy Zinn with the firm T & B Planning and I was the primary author of the Environmental Impact Report. The EIR before you tonight represents a full and complete analysis of the proposed project as required by the California Environmental Quality Act. It objectively and thoroughly discloses the information necessary to allow the City to make a fully informed decision about this project's environmental effects and in many instances as you'll hear me describe, the analysis in many cases overstates the impacts of this project to further ensure that all potential effects are more than adequately disclosed for your consideration and mitigated to the extent feasible.

As Mark also mentioned, the Draft EIR's public review process resulted in the City receiving; I have 12 Mark said; 11 comment letters which were formally responded to in writing and all of those written responses are contained in the Final EIR. The comments were given serious consideration and as a result changes were made between the time the Draft EIR was published and the Final EIR that is before you this evening. Those changes are numerated on pages, Final EIR 3 thru 10 in the documentation and those included changes to seven mitigation measures and the addition of twelve additional mitigation measures as a result of that public process. But tonight I was asked by the City to specifically respond to the comments raised in letters that were submitted to you two days ago. The letters were very lengthy as you know, you have them in front of you, so I'm not going to go through point by point response to every comment letter as we would be here all evening if that was the case. Instead I'm going to address the issues on a topical basis, but if you have any specific questions or would like a specific response on anything that I don't cover feel free to ask.

I'm going to start with traffic. The project is calculated to generate 2,419 daily vehicle trips and that consists both of passenger vehicles and trucks; not the 4,400 trips that were cited in the Johnson and Sedlack letter. ITE rates were used, which is a long accepted practice under CEQA to calculate the number of trips generated by a project. Also the average truck distance that was used in the analysis is 61 miles, which is a long average. As far as the circulation of the traffic signs, they are going to be posted at every exit driveway directing truck traffic to the City's designated truck route, so the trucks are expected to travel north and south on Heacock and according to the analysis and the trip distribution, no trucks are expected to travel east on Iris. There is really no where for them to be attracted to or to go to in that direction. Overall, about 30 percent of passenger cars are expected to go in that direction, but no trucks.
Also, as you'll see on the plans, proposed Cosmos Street is designed as a cul-de-sac to limit the number of vehicles going in that direction onto Iris. The Traffic

Study appended to the EIR follows the City's report preparation guideline which requires the study of the geographic area where this project would generate 50 or more peak hour trips at intersections. There are comments made in the letter before you that the Traffic Study should have considered a larger geographic area, particularly out near SR 60, but a larger study area is really not warranted in this case because that 50 peak hour trip threshold is not exceeded by this project on any intersection north of Cactus. So there is really no basis to do that even if that area was studied, this project would not have a significant impact because 50 trips at peak hour is the criteria used. There was also a comment in traffic that more cumulative projects should be studied.

This Environmental Impact Report considered 52 projects that are pending in the area, which is quite a big number and input on which projects it considered was provided by this City, by Riverside County, by the City of Perris, by the City of Riverside. We did all of that outreach. It also considered a 2 percent ambient growth rate, so considering more projects again would not have resulted in any different conclusion than was reached in this EIR. Also the traffic analysis assumes that every trip generated by this project is a brand new trip and not a redistributed trip which is likely the case, so again the analysis is solid and the impacts are likely over-stated. Do you want to ask questions by topic area or do you just want me to keep going?

CHAIR VAN NATTA – I think we can make notes and you can finish

SPEAKER ZINN – Okay…Regarding the comments that were provided on air quality, green house gas emissions and energy efficiency, this project is proposed to be energy efficient and is required to be built to California State Building Code Cal Green Standards, which really mandates energy efficiency for all new construction and at higher levels than ever before. And that is the case throughout the State of California, so a large majority of the features that were bullet pointed on the two and half pages that were in the Johnson letter are already incorporated into this project, either through regulatory mandates, project design features or mitigation measures.

The EIR does conclude as Mark mentioned, significant and unavoidable air quality impact for NOX and VOC emissions, which comes mostly from mobile sources, so the trucks coming and cars; passenger cars coming to and from the site and through the EIR process we considered a multitude of measures to mitigate those impacts to the greatest extent feasible and the City vetted the feasibility of every mitigation measure that was suggested. In the comment letters provided by AQMD and others through that public review process and many of those were repeated in the letter that is before and responses to those are provided in the Final EIR. I have a couple of examples of those, but I'm going to skip over them and if you have questions I can answer those.
Okay the next topic I'm going to address is the Health Risk Assessment. Comments were made in the letter regarding the EIR's analysis of health risk.

The EIR does disclose a mobile health risk assessment that studies the maximum exposed individual from operation of this project and at the point of maximum impact, what the analysis assumed is an individual only 115 feet from the property line, which is very close and even in that instance the significance of the impact is less than significant at 3.7 persons in one million effected, where the significance criteria is 10 and it assumes 70 years of exposure 24 hours a day, 7 days a week and so I'd like to point out that the modeling done in the analysis also doesn't take into account the mitigation measures and 70 years, 24 hours a day, 7 days a week assumes that every truck accessing the site would be idling for 15 minutes, where that is not really the case. The regulatory mandates and the mitigation measures in this EIR are going to restrict onsite idling to three minutes, so the analysis is definitely over stated. In no way did this EIR under estimate the health risk associated with this project as was suggested in the letter that you have.

One more point; an argument was made in the letter about the cumulative health risk; so not just from this project, but from this project in addition to every other project in the area and some documentation was cited in that letter. That is not new information to us or this process or the City, the study that was the primary document cited is referenced in our technical appendices and the information that we have documented is consistent with known health risk in the Air Base. Alright, just a couple of notes on some other subject areas; there was a comment made on cultural resources and a suggestion that Native American monitoring was not being done to the extent necessary. We've been in regular contact with the Pechanga Tribe pursuant to the SB18 consultation requirement about monitoring the site. Pechanga agrees with the mitigation and has no objection and we confirmed that in an email with them today. Comments were made regarding biology and specifically impacts to the Burrowing Owl. The MSHCP addresses these impacts on a regional basis and this complies with all applicable MSHCP policies. The site is not targeted for conservation and really has no long term conservation value for the species. The issue was whether or not the Owl should be passively relocated or actively relocated and based on discussion and recommendation with a biologist, the recommendation is to passively relocate at this site. There are enough vacant properties around and the species ability to migrate; we don't believe there is going to be any unmitigated impact associated with that technique. I'll briefly touch on noise. As Mark mentioned, construction noise was the only topic area, but the court required it be re-studied in more thorough detail through the Environmental Impact Report.

Again we very thoroughly evaluated construction noise and used the City of Moreno's Municipal Code, which establishes a noise level limit of a distance of 200 feet from the property line and the conclusion is during construction of this property of this project or really any project in the City using the criteria that we applied, you do result in a significant unmitigated impact. All mitigation measures that could possibly mitigate that impact again were thoroughly vetted and found to be infeasible, therefore there is a significant unmitigated noise impact and a

Statement of Overriding Considerations would be required. I have a lot more, but I think I'm going to stop there because my comments are lengthy already, but we have gone through the letters. We have responses to hopefully any question you may ask. I'll be available to answer those. Thank you.

CHAIR VAN NATTA – Okay, do the Commissioners have question of Staff or of Ms. Zinn?

COMMISSIONER RAMIREZ – I've got one

CHAIR VAN NATTA – Okay, go ahead Commissioner Ramirez

COMMISSIONER RAMIREZ – What has been the biggest challenge in dealing with the residents in the area? Have you heard any complaints in regards to this project?

PLANNING OFFICIAL TERELL – Oh I think we can probably answer that. I'll defer over to Mark.

SENIOR PLANNER GROSS – Yes actually on this project we didn't receive any comments; any telephone calls from the residents at all. Again, we did… this was in the newspaper; a 300 foot radius; this was on the site; all around on both sides, so we have not received any letters or calls from the neighborhood.

COMMISSIONER RAMIREZ – How about the School District? Did the School District show any concern regarding the proximity?

SENIOR PLANNER GROSS – No, they did not. We didn't receive a call on that and actually they were always notified of course with the process.

COMMISSIONER RAMIREZ – Okay and we do not anticipate any truck traffic travelling east and west on either Krameria or Iris? Is that correct?

PLANNING OFFICIAL TERELL – Yes, neither one of those streets is a designated truck route, so there is no right for a truck to travel that way and as Ms. Zinn said, there is no attraction; there is no reason for them to go that way, but they are not dedicated truck routes.

COMMISSIONER RAMIREZ – In the event that trucks do take that as a route, could they be held accountable?

PLANNING OFFICIAL TERELL – Yes

COMMISSIONER RAMIREZ – Great, thank you

CHAIR VAN NATTA – Is there anyone else?

COMMISSIONER GIBA – I have a few things as usual. Traffic… this whole report; believe it or not I went through a lot of it. There are over 1,500 pages of report. It was exhaustive. It was extensive and you folks did do a lot of work toward mitigation and some of these things are probably not as like you said, they're just nothing more you can do than what you have done. The location of the site I think is appropriate for this type of project because it is right next to the March Air Force Base, so you are using Heacock as primary artery for moving and I think the last time we had this discussion about the cumulative impact, your only sites from what I can see for getting onto that 215 Freeway at this time is down Heacock to Cactus where another very large warehouse project is going to be built. I notice your timeline on this is 2016. Am I correct? Is this supposed to be completed by 2016… about four years from now? That seems to be the same timeline as the other project that is coming down the pipe, so you've got two different projects coming into the same arteries, at the same time, within the same timeframe.

You also mentioned that there were phases, so I was going to ask you about your phases of construction and how soon those are going to be done and what timeframe those will take and evolved, but I have here in front of me your routing for that. I appreciate Commissioner Carlos' question on that one. I was concerned about the only routes coming out from Iris going east/west up Iris because you do have the residential area here on Iris and then you do have a Junior High School here right on the corner of Indian and Iris, so any vehicle; any trucks or vehicles travelling on that route, I would not suspect that would be… like you said, nobody has heard, but then again your whole project is kind of to the west of that housing project, so they may not have even considered the fact that that was there and you have now confirmed that trucks are not going to go up Iris, but that they'll stay on Heacock. What was curious to me was that you have the route going from Krameria that you are building the roads. Right now there is nothing there now, so when we're saying that there is a Krameria, there is a dirt road with a four wheel drive, if it is really a road, which means you are going to construct a road called Krameria. Am I correct?

SPEAKER ZINN – Correct

COMMISSIONER GIBA – But Krameria comes out at Indian, which is right there in a whole residential area, so what is the intent to go all the way to Indian if we have no reason to be going that way?

PLANNING OFFICIAL TERELL – The boundaries in the industrial area north of the Perris Valley Storm Drain goes from Indian over to Heacock, so long term, Indian will be constructed, there will be a bridge constructed across the channel on Indian to go to the south, so they'll be some opportunity for trucks to go south on Indian from this project or the adjacent approved project, but still the project was designed primarily to carry folks and trucks over to Heacock as the long term preferred route and Heacock is in design for extension down to Harley Knox

Boulevard, so long term the City's intent and the intent of the Specific Plan is to encourage trucks to go to Heacock to Harley Knox and over to the freeway, which is for lack of a better word the path of least resistance, but in the interim until that is built Indian is the major route that they'll need to take to Harley Knox and Indian and Heacock are both truck routes in the industrial area. When you get out of the industrial area going north they are not truck routes, so the only trucks that could go say from Krameria, they would need to go south because otherwise they are only allowed to make what we call local deliveries, so a truck coming to this project or the already approved project to the east would need to be coming to that project and access to both this project and the project to the east are off of either Krameria or Cosmos, so there are no truck accesses off of Indian or Iris for either this project or the already approved project to the east.

COMMISSIONER GIBA – Okay, so the residential area that is already there shouldn't experience any truck traffic in that area. Indian doesn't go all the way through yet. You haven't completed Indian all the way through anyway, so that is not done.

PLANNING OFFICIAL TERELL – Correct

COMMISSIONER GIBA – And Cosmos is basically just a cul-de-sac; a dead end to accommodate the loading of the trucks on that side. Am I correct on that?

SPEAKER ZINN – Correct

COMMISSIONER GIBA – Please be patient with me…When I went through your mitigations and we were talking about some of these; your impact on Heacock Street and Gentian Avenue for instance and this cumulative effect and all these traffic reports you are taking are from peak hours and my concern is and I brought this up the last time and actually we've gone through three of these providing and they are all loading into Harley Knox. There are all loading into Cactus. They are loading into Heacock; all these projects. They are coming into fruition pretty near the same time, so that concerns me for the quality of life the continued accumulative effect of the traffic and the trucks and all of the things that are going on.

As we keep trying to build these, there is some point and I mentioned that last time that we are starting to achieve a maximum limit of what we should be doing wisely and this is what concerned me when I see this. Mitigation 1.1; the following improvement is necessary to reduce the project's direct impact to less than significant; install a traffic signal. That's it on that specific one. I don't read anything through here as I kept going through here on install a traffic signal… construct a northbound throughway… I don't see anything about restricting traffic movement from high peak hours as we continue to keep loading all this traffic. There are areas and I've seen them before where trucks and movement of trucks are not allowed to be moving at high peak hours, but under peak hours or in the

middle of peak hours so that we don't improve that congestion, but I'm not seeing that in the mitigation, I'm seeing traffic signals; you make a left turn here; make a right turn here. Is that feasible and is that wise to actually restrict movement as we keep building these things and if we do keep continuing to approve them, we need to start restricting the time and movement for some of these so that we don't congest those areas. If everybody is moving at the same time, you are going to start having problems and I think we should start thinking about that now and not later. So that's another concern and question that I have.

PLANNING OFFICIAL TERELL – I'd like to see if maybe Michael Lloyd could respond to that. Obviously we can't restrict an individual project to when they can drive and it would be very hard to manage that, but I'll defer to…

COMMISSIONER GIBA – But can you restrict the movement on a specific street for a specific time because it is within the boundaries of cities.

PLANNING OFFICIAL TERELL – Well again I'm going to defer to Michael Lloyd. My sense is how would you stop one vehicle from travelling during peak hours and everybody else gets to travel at that time that is located in the City, so…

SENIOR TRAFFIC ENGINEER LLOYD – Good evening Chair and Commissioners. My name is Michael Lloyd, Transportation Engineering Division. So it sounds like we've got two questions here that I'd like to answer. One is the timing issue and the second is more specifically I think Heacock and Gentian in terms of the mitigation.

COMMISSIONER GIBA – Not just Heacock and Gentian, you've have all of those. You've got the Iris movement; you've got the Gentian; you've got the Harley Knox; you've got all the way to Cactus and all the streets that those trucks can run alongside of March Air Force Base.

SENIOR TRAFFIC ENGINEER LLOYD – Okay and so if you would like I can kind of run through some updates in terms of progress on projects that would address I think those concerns and I can also talk about Heacock and Gentian more specifically if you would like. First off, with regards to the timing issue, I agree with John's assessment that it would be difficult to condition this project specifically for truck traffic usage on our streets within certain timeframes. How would we enforce it? How would we distinguish; let's say we put officers out; they've been notified; you need to enforce this condition for us. How do they distinguish trucks utilizing Heacock? Are they coming from this project? Are they coming from other projects, so it would be a challenge from an enforcement standpoint and just from a legal standpoint, I'm not an expert here, but I'm not sure that we have a right to restrict it? I think maybe what you're thinking of are turning restrictions that maybe you've seen in communities where you've seen signs that say no right turns between the hours of 7 and 9 am. That is not specific to a vehicle type. That is not specific to a location from where that trip is

coming from. That is basically an all out restriction stating no turn movements whatsoever by anybody within this timeframe, so those are options that can be considered. I don't know if they apply at any locations that were studied specifically for this project. If you had any ideas, we would certainly entertain them, but nothing was vetted out during the study analysis that suggested we needed to restrict turning movements in that manner. Hopefully that addresses the timing issue. Specifically dealing with project impacts whether it be Cactus or Harley Knox or Heacock.

As I mentioned in our previous meeting a couple of weeks ago, there were concerns about the cumulative effects; the impacts to Cactus Avenue and as I mentioned there, it was a timing issue; kind of the chicken or the egg type of question. Does this project come first or does the project next door come first. The analysis assumes all projects come on all at the same time, so that is kind of the worst case analysis. Obviously in the real world that is not the way things happen, but efforts are being made and are under way specifically for Cactus to get the additional eastbound third lane in so that we can get a full six lane section from the Interstate all the way over to Heacock. Grants are being pursued. I don't know if we have received word yet or not whether we received it or not. If we haven't received word, we should know soon, however that would provide a significant amount of funding so that the project can move forward. The project has been designed and completed. The right of way has been pursued and I think is complete with the Base. Obviously it is a Federal Agency, so it is a lengthy process but I think we've either completed that or near completion, so those are two big hurdles getting over and getting a project delivered.

The next is obviously securing the funding and we are under way getting the funding wrapped up. With regards to Heacock, John mentioned we're getting started with the design so that we can get the connection made to Harley Knox Avenue, so that is early in the process, so we've still got some time there to make that connection more efficient, however there are connections from Heacock to Harley Knox that this project will use as well as other projects to the south we'll utilize and that is utilizing Indian Street to connect to Harley, so there is that avenue to get back to the freeway utilizing Harley Knox. With regards to Harley Knox, the City of Perris started design on their portion of the road. It is outside of our control, but again that is the cooperative effort and staying in touch with each other to know what is happening and that is underway and ongoing. I think the design is wrapped up at this point and they are pursuing funding just as we are for Cactus, so the efforts are there. The progress is being made and again I can't sit here and guarantee that we'll have all these improvements in place by the time that this development will be completed, however every effort is being made to make sure they are put in place in a timely manner. That is what I can update you on.

COMMISSIONER GIBA – Michael, thank you very much. I'm compelled to ask those kinds of questions because I didn't see that and I don't know what know

what the ramifications; the legal ramifications; maybe you can respond to that, but I was just thinking that maybe that is one other thing you could do is restrict all truck traffic to a specific time and I don't know what the legal ramifications are, I just throw it out there as a means for you folks to and like you said if you have another idea, I was thinking is it possible to change the timeframe for these trucks or at least work with the community; the business at large and say can we ask you to suggest that you bring your trucks in before 8 and after 9 or whatever to move the traffic and that is something the City can probably have a relationship with. There is nothing wrong with having a relationship with your businesses and us saying help us out. This will help us mitigate this situation as it continues to build out. That is how I look at it. I mean we're partners here.

You know it is not just them and just us, it is us together you know and so we can all work together and make it easier for the community and the safety because we do have schools down there. You are talking about… the people that moved in down there, if they were like me and I moved here 30 years ago, there was nothing here. I didn't know what they were going to build when I bought my house and I'm quite sure when this big, huge empty lot was there they might have thought well good I'll get a supermarket next to my house and not a warehouse, so a lot of these people don't even realize what is coming their way and by the way that 1,000 feet is a good idea.. thank you Mr. Hague... because they are not always being notified of what is going on and I wasn't always involved either with the City, so I think for me I'm compelled to ask those kinds of questions to keep you kind of Johnny on the spot. For phase one, when did you intend to finish it? I just want to know.

SPEAKER ZINN – Okay, just to be clear, I'm not representing the Applicant. I am the EIR preparer, but I believe phase one is the larger building on the north side of the property.

COMMISSIONER GIBA Okay, that's the big one; right? Maybe my questions aren't appropriate.

PLANNING OFFICIAL TERELL – Well if we can answer them we will, if not we'll defer them to the Applicant, but the other thing that is very key about… every project from a single family house to a big warehouse creates traffic; every new project and I think we are very fortunate in Western Riverside County that all the cities in the County got together and created the TUMF; The Uniform Mitigation Financing which provides for these regional improvements and even local improvements which the City itself has its Development Impact Fee that takes the impacts of every project and extracts either an ounce or a pound of flesh, depending on the size of the project to make up for their fair share of the regional improvements within the City of Moreno Valley and so every new project both creates, but we're fortunate in Western Riverside County and the City of Moreno Valley, they also provide resources to address those impacts relating to

transportation, so there are direct impacts like a traffic signal, because this project by itself creates the need for a traffic signal…

COMMISSIONER GIBA – And I noticed the list

PLANNING OFFICIAL TERELL – Right…then this project creates one percent at this intersection and a half percent at that intersection and they will pay a very large fee so that the City and really other communities in Western Riverside County can incrementally provide those major improvements, so everybody pays their fair share. The alternative to that would be the last person on the boat basically has to pay for everything and that has not been proven as very successful way of doing things and Michael may want to add on to this, that is why the impact fee payment is seen as addressing those very small pieces of other regional improvements, because that actually creates the resources to correct those problems, either concurrent with or hopefully relatively shortly after a project is built and it may be that the most serious issue is not at Cactus and the freeway but maybe it is Redlands and the freeway. I'm just using that as an example and so the money goes there and does the most critical improvement first and then goes down the list of priorities and there is a rather arcane system of how projects are picked and things like that, but that is how we get at those... If more projects are built at the same time that may actually be a good thing because it will be creating more resources at the same time to address a particular pressure point.

COMMISSIONER GIBA – Well this site would be what I would consider the better site that I've seen so far for this construction, but I was also curious just as a curiosity why you called it a business site rather than just a warehouse. I mean it's primarily warehouse.

SPEAKER ZINN – I can let the Applicant address that…

PLANNING OFFICIAL TERELL – That's marketing I think

COMMISSIONER GIBA - That's what I was looking at because if somebody was to see that or hear that, or they are building a business site; no it's not, it's primarily warehouse and it would have been nice if would have just said that.

PLANNING OFFICIAL TERELL – It's a very large business

COMMISSIONER GIBA – It's a very large business, right… Anyway and then the other thing was we had just received this information on air quality and I think you might have mentioned it and they had a list of requiring cleaner burning trucks if it isn't achievable. I just got this right now, so maybe you can address those.

PLANNING OFFICIAL TERELL – Yes the one page; I provided that to you… Ian MacMillan is here from the South Coast Air Quality Management District and

those are actually his remarks, but he did provide a copy so that you would have it you know when he makes his remarks and certainly Tracy has a copy of those as well, so she would be able to respond, but that is some additional testimony you'll receive when you have the public hearing.

COMMISSIONER GIBA – That's really all I had because this traffic stuff bugs me.

CHAIR VAN NATTA – Really

COMMISSIONER GIBA – Yes really, it does

CHAIR VAN NATTA – Okay, another other questions from Commissioners? Commissioner Crothers or Commissioner Baker, is there anything you wanted to ask? I did have a question or comment about the noticing. When I'm looking at the amount of vacant land that is around this site, how many residential properties were noticed when you went with your 300 feet?

PLANNING OFFICIAL TERELL – I'll ask Mark to get that information out. There would be some residences to the northeast of the project and that would be the ones that would be noticed within the 300 feet. Again that is why we use… only two forms of notice are required. We use all three to hopefully maximize that. As was mentioned, the State minimum is 300 feet. That is what we have in our Code and certainly you know that is something that could be discussed, but we as Staff don't pick and choose from project to project who gets 300 feet and who gets 500 feet. It is a City standard which we abide by and amazingly sometimes we notice for 300 feet and everybody knows about it and sometimes we notice to 300 feet and nobody knows about it and I think people are being very genuine about their comments and why that happens I can't tell you. I think some projects just generate more buzz and really the buzz if want to get people involved in the process, it is really the buzz that does that, as when you had your residential project a couple of weeks ago, we noticed and provided signs to let certain people know and other people driving by would know, but it was kind of a game of telephone where people told people and that's how more people got involved and that is a great thing and one way to do that to maybe change the standard, but again I think as Staff we are not in a position to do that.

CHAIR VAN NATTA – I can see in this particular project that a lot of the residential properties that are nearby that if there was noticing on this project, they wouldn't necessarily be driving by it because there is no place for them to go south on Heacock there, but back to my question how many residential properties were noticed?

SENIOR PLANNER GROSS – Well in this case there was only about 12 or so. I think what we captured which was on that… the closest of course to the property itself.

CHAIR VAN NATTA – Yes the northeast corner

SENIOR PLANNER GROSS – Yes and that's what…

CHAIR VAN NATTA – Would there be a way of rewriting that requirement as far as the City goes to say from 300 to 1,000 feet until a minimum of x number of people are notified or something like that, so when you have a project that is surrounded by a bunch of vacant land and nobody gets noticed because they are not within 300 feet, it doesn't mean they aren't going to be impacted by it.

PLANNING OFFICIAL TERELL – Well I guess could you do that? Yes you could do that. That is kind of interim process because we'd have to continue running labels until we got to a number and that's a little bit labor intensive. I'm not sure that just because somebody lives 600 feet across a barren field, they are not any more impacted than somebody that lives 600 feet across a tract of homes and I think if you were going to change the standard, I'd encourage you to just change the standard so it is always 400 feet or it is always 500 feet and not make a distinction based on the number of people that get noticed because as an example, if we had a project in the middle of a rural area where there were no people around, do we really want to notice people that are a mile away to get to a minimum number, so I think it is a good thing and maybe a point of discussion you might want to have in a future agenda just to talk about it and we could certainly do a query of other communities and see what other communities are doing and give you some perspective on it, but I think it is a good idea.

CHAIR VAN NATTA – Okay, I think that would be a good thing to do and I'd like to see some further research on that because the 300 feet on more than one case that we've that seen just has not been… I mean 300 feet is not very far at all and people not much further than 300 feet are going to be greatly impacted. The other question that I had in following what Commissioner Giba was talking about and that is Heacock north from the project to Cactus abuts a number of residential neighborhoods there and a number of them that use Heacock to take their kids to High School or some of the other schools or going to commercial areas and so forth, other than talking about the possibility of putting in one traffic signal, I didn't see anything else about what would be done to maybe make traffic flow a little bit easier along that section from Iris to Cactus along Heacock so that the residents of those neighborhoods who are using Heacock to reach their schools or work or whatever would not be severely impacted by the trucks on that road.

PLANNING OFFICIAL TERELL – I don't know if Michael had some response to that but I think that's why we look at the traffic along that area which was looked at and there weren't any direct impacts. There may be cumulative impacts but that is an area having driven it many times, there is a lot of capacity there right now and it may in fact be some information that is totally unrelated to this project,

as an example a turning movement or something that might actually relate more to the commuter traffic of which there is a very large amount on Heacock and dealing with that; meaning the City looking at something it can do. This project from what we have; the evidence we have, does not appear to create that constriction, so I'll defer to either Tracy or Michael on that.

CHAIR VAN NATTA – Well I think the constriction is definitely there especially when you are going up and trying to turn left onto Cactus or if you are going up further to turn onto Alessandro. The constriction is definitely there.

PLANNING OFFICIAL TERELL – It is usually at the intersections; yes

CHAIR VAN NATTA – Whether it is a matter of adding another turn lane or something like that to… Does Mr. Lloyd have any comment on that?

PLANNING OFFICIAL TERELL – Yes, again I don't know if Michael does, but that is the type of cumulative larger scale improvements that would be covered by either the City's Development Impact Fee or the TUMF and those are things that would be looking at. Obviously adding a third lane on Cactus going east is going to help as well at the intersection.

SENIOR TRAFFIC ENGINEER LLOYD – Good evening Chair. I'm Michael Lloyd with Transportation Engineering. As John alluded to, yes there are planned improvements for Cactus specifically. The additional third eastbound lane should provide some additional capacity which will help there. Once that additional capacity on the ground is provided and we re-time our traffic signals to more efficiently allot the green times, so that they are not so maxed out because there is not enough capacity on the ground, so that is one benefit that will come once those improvements are put on the ground, is a more efficient traffic signal timing. A second thing that will happen at some point in time is once all our traffic signals along Heacock are synchronized so that once you get the green light say when the traffic signal is put in at Iris and you receive a green light at Iris and you travel north on Heacock towards Cactus or Alessandro, if you travel the speed limit you should hit it every traffic signal from thereon and get the green light unless you are wanting to make a left turn you might have to wait to make the left turn, but that is in the works as well. The Traffic Engineering Division is currently working on what we call our ITS Master Plan, which is our Intelligent Transportation System. A component of that is synchronizing the traffic signals within the City; so that is underway. There is also planned improvements if you kind of expand the scope as you suggested up to Alessandro, additional lanes are planned along Alessandro and once those lanes are put in, again signal re-timing will help provide a more efficient green time so that people can get through the intersection more easily. So that would be my response.

CHAIR VAN NATTA – Okay thank you. Or there any more questions?

COMMISSIONER BAKER – I have one question for Michael. Hey on this and I want to make sure that talking about this street… on Heacock going south where you know we are doing the bridge expansion there and from what I remember that Heacock is getting improved north to a certain… Is that beyond Iris or just up to Iris there or am I mistaken?

SENIOR TRAFFIC ENGINEER LLOYD – Sure, the most recent capital improvement project that the City undertook was to install the storm drain bridge crossing which is actually adjacent to this project, so that is complete and it did include some new street improvements to get the lanes to line up with the new bridge and that project is complete. There is a second phase to that project which the funding; we are still pursuing the funding. That would put in the additional lanes from Iris south down to San Michele and as you probably noticed as you drove through there, a lot of the improvements are in but there are sections where there are some pieces missing and that capital project would fill out the roadway from curb to curb so that we would have a consistent roadway through that section. South of San Michele Road is the project that we've talked about and we recently put it back into our circulation element and we've initiated designs, so that is lagging, but we are pursuing that project as well.

COMMISSIONER BAKER – Okay. The area Michael I was talking about just north of Iris, there is a little jog in the road that is really tough to deal with and I go through there all the time. Is there anything we can do about that because that could be a bigger problem than any of that?

SENIOR TRAFFIC ENGINEER LLOYD – I agree with you and depending on the action specific to this project they are conditioned to put in a traffic signal at Heacock and Iris and as part of that improvement they would align the lanes so that jog would be removed.

COMMISSIONER BAKER – So that is part of our motion tonight. It makes sense to me.

SENIOR TRAFFIC ENGINEER LLOYD – This project would be required to do that.

COMMISSIONER BAKER – Yes I think and looking at it from my standpoint and I agree with what these gentlemen are saying, but you know you have to look at the finite deal coming out of the shoot there. If you don't have a straight line from point A to B, it doesn't make any difference on the traffic. We've got to get that straightened out. The traffic signal there at Iris and Heacock will help a bunch. You know that's just my comment on the traffic; okay, but if that is included and I don't know if you guys are aware of that or not but we've got a jog in the road which is real problem right now. Okay, thank you.

CHAIR VAN NATTA – Okay with no more questions from the Commissioners, I'm going to open the Public Hearing and do we have a representative of the Applicant who would like to give us some comments?

PLANNING OFFICIAL TERELL – Yes the Applicant had asked to do a power point presentation as well, so we'll lower the screen there so that they can do that.

CHAIR VAN NATTA – And will there be popcorn and sodas?

PLANNING OFFICIAL TERELL – Our budget can't afford theater prices

APPLICANT EDWARDS – Good evening. My name is Gary Edwards. I'm a principal with Western RealCo. I can't tell if the slide is open or not. Pam Steel of Hogle-Ireland is going to give the presentation, but I just wanted to take a moment and introduce you to Western RealCo, the firm that is the developer on the project. It is a 40 year old firm. I've been with it for 25 years, so obviously we have a longevity that is very unusual I think in the development business and we've enjoyed a lot of success. That success is basically and I think some of the slide is up now. About 15 million square feet we've built over the last 40 years throughout California and Nevada; primarily in Southern California where we've dealt with some of the major cities, which I think are listed up there as well. We also have; I think it's there; with all the projects we've done and we talked about the business point term; the Commissioners mentioned it, but we do have a variety of very high quality tenants in our business parks and I think that goes to the quality of the projects that we bring into these different cities.

As Mr. Gross mentioned, we've been before you three years ago on this very same similar project… some of the tenants are lost at the bottom I guess and that was approved through a Mitigated Negative Declaration as we've discussed as Mrs. Innes talked about. We are before you now with a full, very robust, highly vetted EIR that looks at this project and significantly more thoroughly and I guess the last comment that I'll make is as I mentioned, we've developed a lot of cities in Southern California. We're very excited to be part of Moreno Valley. We're excited about this project and we're hopeful of your approval on it. I'm here to answer any questions after the presentation by Pam. We also have the architect in the audience who can answer any questions as well. Thank you.

SPEAKER STEEL – Good evening Madam Chair and Commissioners. My name is Pam Steel with Hogle-Ireland and most of the first part of my presentation Mark Gross has covered very well, so I'll go through it very quickly, but just to reiterate the project is in the City's Industrial Area Specific Plan right across the street from March Air Reserve Base and it is zoned for this industrial use and we think that the City has very wisely kept this industrial zoning across from the March Air Reserve Base because the impacts of the Base would have on any other type of development. Next slide… the four buildings are of varying

sizes ranging from 1.1 million square foot large building on the north side to the very small on parcel 4, under 17 hundred square foot building. This allows for a variety of use types. You asked why it was called a business center, because there are a variety of types of businesses that could locate here. Everything from the large warehouse distribution to the smaller industrial business park type use on parcel 4, so we don't want to limit our marketing opportunity as you said. Just roughly throughout the project and with the City and with the EIR, transportation type uses were studied and of course there are the City's streets and those are a very important part of the circulation but also sidewalks will be constructed all around the site on all of the public streets.

The project provides 35 spaces for bicycle parking for those employees that live close enough that they like to bicycle to work and we are providing two bus turnouts; one on Heacock and I didn't bring a clicker. I apologize and you see the one on Heacock there and then one down here on Iris, so that there are a variety of modes of transportation for the project site and for the area. We also will be providing two electrical vehicle charging stations on the site as well. Going to the architecture of the buildings from the view from Iris Avenue, as you can see and was mentioned before, Iris Avenue does not have dock doors facing it. It has very nice elevations with varied roof heights with a lot of articulation and color on those elevations on the two highly articulated office areas on the northeast and northwest corners are an attractive look along Iris. The colors as Mark mentioned, earth tones with accents in a red oak and the green glazing in the glass, which frankly was worked through the last time we were here with the Planning Commission with Staff and then Planning Commission even wanted a brighter reddish oak color, so that was added to project.

Additionally each entry has a silver anodized metal canopy treatment for more articulation and then the next slide we go to the Heacock elevation and along Heacock are the dock doors, but they will be screened as Mark Gross mentioned by the screen walls and the screen walls shown along the bottom, it is also of a concrete tilt-up construction with the same type of articulation and reveals and color so that there is a nice façade along Heacock. The architectural theme was developed with significant input as a I said from the City and the Planning Commission to develop a show piece in this is a very important corner of these two streets; these two major streets in the City. The screen wall will be 14 feet in height to fully screen the truck activities, but that is on the dock side. On the street side there will be a berm up to so that you only see 8 feet of that screen wall, so it won't be this monumental screen wall visually. It will be just an 8 foot screen wall with that landscaping and then the next slide shows the small building and how the architecture is continued throughout the business park to show or to have a consistent aesthetic look. The top slide is the side that you'd see from Heacock Street and then the slide in the middle is the view that you would see if you were travelling north along Heacock.

On the next slide, this was mentioned a little bit by John Terell as the contributions that the project will make to the City; 12.6 million dollars plus in contributions for impact fees and for beneficial construction in street, sidewalks and traffic signals as well as property tax to pay for City services. Impacts were specially noted in the fees and the combined through the City's Development Impact Fees to the traffic signal contribution that we are making in addition to the traffic signal that we are constructing and the TUMF fees; the regional wide; those fees are over 4.08 million dollars, so even though that is not the major topic that you use for consideration, it just underscores the various significant mitigation for these types of impacts. The next slide just very briefly covers that we did an environmental review which Tracy Zinn covered in much more detail. I'll just go to the final slide and to reiterate the project has four buildings of varying sizes and it will provide benefits to the community as well as the company we hope and the project will be designed to meet LEED Silver standards which include such things as solar panels on the roof, cool roof technology, recharging stations and energy efficient lighting. We are here to answer questions should you have any more and we appreciate your attention and would like to ask for your approval at the end of the public hearing.

COMMISSIONER GIBA – Do you have any specific tenants already assigned to those buildings?

APPLICANT EDWARDS – No we do not

COMMISSIONER GIBA - Do you have any ideas to whom you may be pursuing or anything that you would be willing to share so that we can kind of get an idea what the future might hold for us. You had some really quality organizations that you've built for in the past, so obviously your marketing is pretty good and I can appreciate that, so I was curious and I'm sure the City would be curious when this is built out, what can we expect from the tenants or who we are going to get.

APPLICANT EDWARDS – I would love to be able to announce that we have a tenant in tow that we are negotiating with certain tenants. Based on the process that we have been through without having a more defined delivery time frame it is hard to be able enter into those negotiations, but as we move through this process, I think we will be able to entice some early interest, but at this point I do not have anybody in tow. Those tenants that we represent; some we built specifically for their use and many of those were speculative projects we built; high quality projects and attracted those tenants, so while we always love having a tenant identified if we can, we think if we build a good quality project to use the vernacular, they will come. We've found that to be true.

COMMISSIONER GIBA – Thank you

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR FOSTER – Commissioner Giba I'd like to comment on that too as just a follow up to what Mr.

Edwards said, as I mentioned last time, probably 90 percent of all the industrial buildings are developed on a speculative basis. In Moreno Valley the only two that we've done that were not spec buildings were Sketchers and Walgreen's, so there are about 18 users out there looking at opportunities in this area and they range from 500,000 square feet up to close to 2 million square feet, so there are definitely users, but as Mr. Edwards said in this environment they want all the risk taken away, so they want to see a fully approved entitled project before they really pursue any serious lease negotiations.

COMMISSIONER GIBA – Thank you Barry for that clarification.

CHAIR VAN NATTA – Okay, thank you very much. We do have some Speaker Slips on the subject and the first one we'll hear from is Ian MacMillan

SPEAKER MACMILLAN – Good evening Honorable Commissioners. My name is Ian MacMillan and I am a Program Supervisor with the South Coast Air Quality Management District (AQMD). I'm here tonight to express AQMD Staff concern with the lack of mitigation measures the City has taken to regards to warehouse projects within its jurisdiction, including the March Business Center. While these newer, larger warehouses have the potential to be more efficient than older facilities and millions of square feet of new warehousing proposed within Moreno Valley will still need to be served by thousands of heavy duty diesel trucks every day.

The residents in our region currently experience the worst air quality in the Nation and we have a very serious challenge to meet the Federally required ozone standards on time Heavy duty diesel trucks emit a variety of harmful pollutants including ultrafine particles, diesel particulate matter which is a known carcinogen and nitrogen oxides or NOX. NOX emissions are a primary contributor to ozone and fine particulate matter and heavy duty diesel trucks are the largest source of NOX emissions in our region. Even after more stringent State Air Resources Board tailpipe regulations are met, our region will still need to reduce its total NOX emissions by an additional 65 percent by 2023. This is not an insignificant challenge. We note that the March Business Center, NOX emissions are 10 times higher than significant thresholds.

What is concerning to AQMD Staff is that while the City is actively expanding its role of a centre of warehouse operations, it is not advancing any measures to reduce the air quality impacts from the trucks serving those warehouses. In responses to recent AQMD Staff comment letters on this project and others the lead agencies have stated that they have no ability to reduce emissions from trucks. We disagree. Several other lead agencies in the region have found ways to either require or incentivize lower emitting trucks faster than are required by regulation.

This is an important and I want to repeat it. Several other lead agencies and businesses in the region have found ways to either require or incentivize lower emitting trucks faster than are required by regulation. These measures have included requiring cleaner burning trucks such as those meeting or exceeding 2010 standards. If this isn't achievable, finding an alternative phase-in schedule to introduce newer trucks faster than regulatory standards, providing infrastructure for alternative fuel, for example electric wiring for trucks for potential future electrical trucks that will be coming on in the next several years or natural gas fueling stations, implementing advance technology demonstration and add implementation programs, requiring tenants to apply for funding to retrofit and replace these older, dirtier trucks.

There also appears to be mitigation opportunities onsite that have not been pursued including requiring all on site houslers to be alternatively fueled, providing enough electrical hookups for 100 percent of any refrigerated trucks visiting the site to plug in their transportation refrigeration units which are all diesel powered and I understand that solar is part of this project, but for many other projects it has not been included, so providing solar power on roofs helps to reduce reliance on fossil fuel burning power plants. We understand the need for more warehousing to meet the growth of trade and the need of trucks to serve those warehouses, however we must look to find ways to reduce the impact of this growth, especially given the already unacceptable air quality in our region today. As a lead agency approving projects that increase heavy duty truck traffic in our region, we look to you to find ways to encourage and introduce zero and near zero emission technologies that are needed to achieve our air quality mandates. We look forward to working with your City to successfully meet these challenges in an equitable way. I'm available for questions if you have any.

CHAIR VAN NATTA – Thank you

PLANNING OFFICIAL TERELL – I did want to point out I think that the Commissioners may be aware that certainly for the public at large is that every new large warehouse has been required to provide either solar power for it's office, which is a primary electrical need for most of these facilities or by alternative energy credits, because having no power is generated in Moreno Valley other than maybe through solar panels, so most of that is coming from someplace else and that mitigation measure is intend to have that power come from clean energy as opposed to say a coal power plant in Los Angeles, so there is that standing mitigation measure that City itself applies to every new large warehouse project and that has been our policy for the last five years. Very few have actually chosen to build solar panels on the roof, but they all have been required to provide the alternative energy credits and they provide evidence to Staff that they have done that. So I just wanted to provide that clarification because obviously regionally, air quality is a regional issue and we want to take that seriously and obviously if we can do more we certainly encourage the Planning Commission to provide us that direction.

CHAIR VAN NATTA – Thank you

COMMISSIONER CROTHERS – I have a question John. In this letter it says that you know requiring cleaner burning trucks such as those meeting 2010 standards. Is that something that we've ever done or have required of a new warehouse business coming in?

PLANNING OFFICIAL TERELL – We have not done that and we do not control the tenants in these buildings. We are dealing with a developer who is building these and although I'm not saying it hasn't been or can't be done, it is very difficult for us to implement a project where we are regulating future tenants and therefore we have not done it. On certain projects and I believe Sketchers may be one where the tenant was known, they had agreed to try to use cleaner burning vehicles from their contractors, so I believe in that project there were some mitigation measure to that effect, but again we have hesitate to make it a standard because of the ability for our limited Staff to keep ahead of actually monitoring that type of mitigation measure. We focused on mitigation measures that are feasible and feasible has to do with it, it is a negotiation with applicants and that is feasible to monitor with limited resources.

COMMISSIONER CROTHERS – Okay and is it possible to offer an incentive for businesses that come in that are willing to use cleaner burning trucks or you know to actually install the solar panels instead of just buying the credits, like are able to do that as a City to encourage greener businesses to come here or businesses to be greener while they are?

PLANNING OFFICIAL TERELL – Obviously Edison which services a large portion of the community and the City's Utility does provide similar incentives to encourage green energy. As far as the City being able to offer incentives for further action, the City has a structural deficit in its operating budget, so I don't believe that that is a feasible measure for the City to pursue. Can we require others to do it? Again it is the process of how do we monitor that. Again we are asking a developer basically to require his future tenant to do something and the ability to monitor that I would think is very difficult to do. There was another point in your question that I don't think I covered. Oh yes about the solar… building the solar panels as opposed to buying the credits… I'm not sure why one is better than the other. Basically we are trying to maximize the amount of alternative energy in the Southern California region and if it is cheaper to buy credits, then is it in the best interest of the City to require they build solar panels or wind power. We are trying to provide opportunities to provide the most efficient delivery of additional alternative energy.

COMMISSIONER CROTHERS – Okay and then…

PLANNING OFFICIAL TERELL – Oh by the way, all of our newer projects that does the require the structure to built in such a way that it accommodate future

solar because I think we all believe that solar will become more and more feasible as time goes by. It wouldn't be feasible if we didn't build the buildings to accept those solar panels when it is feasible.

COMMISSIONER CROTHERS – Okay and I don't know if this is for your or for the developer, but our standards such cleaner burning trucks and you know the green requirements or suggestions, are they encouraged in talks when you guys talk to a business that is coming in. Are those kinds of standards encouraged you know in the case where we can't give an incentive? Are they encouraged in the talks when businesses are planning to come here? Are they even discussed when you know how when businesses are coming in and I don't know if that is a developer question or a City question?

PLANNING OFFICIAL TERELL – It is probably both, but again if they are served by our City Utility there are programs that provide incentives and certainly most businesses aren't shy about asking about those and our utility is not shy about making that information available. We also; lots of people, individuals that have houses all the way to retail businesses and large industrial businesses come in and want to put solar panels in on what we call after market as they are already there and they want to put them on. All of our reviews of that in the City of Moreno Valley are administrative. They are done at our lowest fee category and therefore we do encourage people who want to come and say they want to do this so what is necessary. It is a very process here to do that; a review and we certainly do encourage people to do it. We don't have extraordinary architectural requirements. We don't require as many places do that solar panels be screened from public view, so we do try to encourage them and there is more and more of that activity every day.

COMMISSIONER CROTHERS – Okay, thank you.

PLANNING OFFICIAL TERELL – But again it is also a question for the Applicant

CHAIR VAN NATTA – Okay we'll go onto the next speaker who is…

COMMISSIONER GIBA – May I ask a question… again a short one.

CHAIR VAN NATTA – Sure go ahead

COMMISSIONER GIBA – I did want to ask Mr. MacMillan and you mentioned in your letter other lead agencies and businesses, could you reveal to us what those lead agencies and businesses are so I have some references to who and what you are speaking about.

SPEAKER MACMILLAN – Sure, the County of Riverside, City of Banning, Port of Los Angeles, Port of Long Beach, City of LA. Recently there have been a few businesses that have done clean truck programs including 99 Cent Warehouse.

I believe UPS has done some of that as well. I believe there are others, I don't have a full list right now but those are some off the top of my head.

COMMISSIONER GIBA – Okay, thank you. I just wanted to know what they were and just following on what the Commissioner said, has the Applicant… I started to speak of this letter on the too soon point. Have you considered some of these concerns and if they're not, have you considered adding them in or doing something with them on behalf of the concerns from AQMD? I don't know what you have done on this list. I know you were alluding to some of it has been done, but I don't want to put you on the spot.

SPEAKER ZINN – I'll answer in perspective for what is documented in the Environmental Impact Report and if Mr. Edwards wants to add anything he can. All of the recommendations that were made by the Air District through their formal comment letter in the Draft EIR were addressed. The ones that could be incorporated were added to the EIR and some of those are the 12 that I mentioned that were added between the Draft and the Final. A few of those that in discussions with the City, it was clear that the City would not be able to enforce because they were tenant negotiations or things that the tenants would implement. There were a few measures that were added to the EIR that requires in lease agreements that the information about clean fuel technologies etc. is disclosed to tenants so that they at least are informed of the availability of that type of technology by the Applicant and that is a City requirement and in the EIR and it will be done.

There are some recommendations in the Air District's formal letter in the Draft EIR that simply aren't feasible to implement or to enforce, some of which were to restrict the number of trucks coming to the site to a certain number. Well I mean practically that is not possible because what do you do when you have reached the maximum number of trips if it is ever met and is unlikely it would be met. What would you do? Would you turn the trucks away at the gate and where would they go. They'd probably park on a street and idle and create more impacts in the community than if you just let the access the site, but again it is very unlikely that any cap would be met.

I wanted to address the comment about the 2010 standards. As far as I know the Ports have the requirement for 2007 standards. Probably a regional effort would be to address truck standards at the Port, so all the trucks accessing every warehouse would be meeting the same standard. Again my understanding is that the Port is instituting 2007 standards and not 2010, so to restrict a single development project in the City of Moreno Valley to 2010 standards that exceed regulation where trucks coming from the Port don't have to meet that, it really puts a big limitation on this project that other projects aren't constrained with. So I don't know if the Applicant wants to add anything, but from EIR perspective that is what is documented in our responses.

COMMISSIONER GIBA – Thank you I just wanted to give you the opportunity to respond to some of these publicly.

SPEAKER ZINN – Thank you

CHAIR VAN NATTA – Okay Mr. MacMillan did you want to respond to that?

SPEAKER MACMILLAN – Just very quickly… One point I think you really should consider and we didn't mention anything here tonight. It was going to be in a written comment letter we were going to submit tomorrow is this issue about the number of trucks visiting the site. If you believe or if the Applicant believes that the number of trucks has a possibility to exceed what is in the EIR analysis, then this EIR is deficient, but if there is a thought that the environmental impact would be greater than what is analyzed here then CEQA requires you analyze that maximum impact. I understand that if it is a reasonable thought that maybe there is a reasonable analysis in here, then that is great, but if there is a possibility as was being argued here and it was argued in our response to comments, that the environmental impact might be greater that what is being disclosed, in our view at least that is a deficient analysis. So that's all, I'm sorry.

CHAIR VAN NATTA – Thank you. Okay we are going on to our next Speaker; George Hague.

SPEAKER HAGUE – George Hague, resident of Moreno Valley speaking on behalf of the Sierra Club. I appreciate you very much giving Mr. MacMillan the time you did and allowing him to come back and answer questions. That is very important for this City and for the health of the residents and the health of the workers that are at the warehouse and the fact that our County is doing this; neighboring City of Banning is doing this, shows that when you decide to vote in favor of overriding considerations, that you really truly understand that there are other things that could and should be done on this project to make it better for the residents of this City and hopefully you will take that into your thoughts as you do this. It is also possible for one of you to vote no, even though you know the other four or maybe the other three will vote yes. It is something that you should seriously consider and pass along the word that there are residents in this City very concerned about this City not doing everything possible with these projects to protect the health, safety and welfare of the residents and it would show that at least there are some people representing residents of this City that sometimes do not feel they are being represented.

Solar… this entire roof should be covered with solar. They are industrializing the desert…Right now just covering the habitat. Right now huge transmission lines are being built all over the place. We don't need a lot of that. If we could cover all these warehouses with solar and have what you call distributed energy, this City would be so far ahead and it is something to seriously consider and make it happen. Also solar will keep the price where it is. They talk about comparing the

price between now and also purchasing it elsewhere. It will keep it at this price. I mentioned in my letter the Elementary School being south. That's incorrect, it is north, but it is along a truck route. Heacock is not just a truck route within this business park; it goes all the way up to State Route 60. You've got three Elementary Schools and one Middle School along that path and there are within 1,000 feet. They are going to be realizing the impacts of not only this project but other projects you have approved and will approve in this park unless you somehow change that and their playgrounds are right next to Heacock in some cases. Their classrooms are within the 1,000 feet. Hopefully you will take that into consideration. I was glad he was here and made a presentation because his letter last time was basically in many ways the same thing and yet there was no response to that.

CHAIR VAN NATTA – You have 30 seconds sir

SPEAKER HAGUE – Well let me just say I hope you enjoyed the pictures of the Burrowing Owls if you clicked on that link. Those are critters that are in our community. We are very fortunate to have Burrowing Owls in this area. In San Jacinto Wildlife if you have never visited there, please do. You don't always get to see them but you are very fortunate when you do, so do everything you can to protect the Habitat. This is a raptor foraging habitat. We are in a very special valley that is known worldwide for 20 plus species of raptors in our area and we continually nickel and dime their foraging habitat and it is making it very difficult on these special critters. Thank you very much.

CHAIR VAN NATTA – Thank you. We have one final speaker slip here and it is for Tom Thornsley.

SPEAKER THORNSLEY – I get three minute, right?

CHAIR VAN NATTA – Yes

SPEAKER THORNSLEY - It means 30 seconds a topic. Okay I picked on you last week because of the variance, this week I want to pick on you about parking first for just a moment. If you go to page 10, paragraph 3, there is an analysis about the parking as to whether or not they meet the parking. Now forgive me, I didn't have a good size plan to look at but I didn't know whether each site alone can meet its parking standards. You technically can't fudge what your Code says. If your Code says you can have x number of parking stalls for x number of square feet, you are obligated to design for it. If you maybe not want to have all of them put in but you have space reserved to accommodate it, that I can see as an acceptable thing as long as it is in the conditions that when they are needed they are made. But in your truck bays here you are deficient about 50 parking spaces away from the bays according to this and there is a reference to 181 spaces were provided in the old plan. The old plan is out the window and this is the only plan that applies. I don't know whether the old 181 number related to

just the size of those buildings at that time or whether or not there was a deficiency back then, so you've got to stop not doing what your Code says you should do.

Another issue I have with the project and a lot of other ones and forgive me, I have to accept this project because it is meeting what minimal standards we have for this area, but I want you guys to start being aware of things because there are other projects that I think need to be better addressed. But like all of your driveway access points coming in off of the streets, every one of them comes in straight towards cars where they are parked and so those are typical conflict points for people entering all the driveways. Most of those when you design a site you should be trying to leave that area devoid of parking stalls so you don't have people trying to back out at the same time people are coming into stalls and as part of one of the few things in the Specific Plan that does address watching out for circulation conflicts. Because these are spec buildings, they are always built at a minimal. The plaza points for the entry of this are just to me very insufficient. If this was a known user and they were coming in, they would showcase themselves. They make a grand entry. They would have a plaza that gets you to the front door. Here you got a pavement area no bigger than from me to you and the width of about eight or ten parking stalls. That's it. It is not at all a statement for these buildings and it is being consistent on everything I've seen for quite a long time in the City.

CHAIR VAN NATTA – You have 30 seconds.

SPEAKER THORNSLEY – Okay, things like you're landscaping, there is not really a good standard in the City. The combined total of landscaping meets a certain percentage but some sights are very, very woefully short because they are the sites that don't have detention basins. Another thing about some of your perimeter landscaping; any landscaping on the north side of these giant walls, knowing they are so narrow, they are so heavily shadowed it will be very hard for most plants to grow.

CHAIR VAN NATTA – Thank you very much for your comments.

SPEAKER THORNSLEY – Thanks

CHAIR VAN NATTA – Okay seeing no other Speaker Slips and no one else at the podium, I'm going to close the Public Hearing…

PLANNING OFFICIAL TERELL – Oh before you do that, the Applicant does have the ability or the opportunity to a rebuttal should they want to.

CHAIR VAN NATTA – Oh I'm sorry… Okay, I'm going to undo that and does the Applicant want to respond to any of the comments that were made?

APPLICANT EDWARDS – No we're fine thanks.

CHAIR VAN NATTA – Okay, thank you. The Public Hearing is closed. Okay do we have comments from our Commissioners regarding the presentations that you heard this evening?

COMMISSIONER GIBA – I just wanted to say that I really appreciated all feedback and input because the community at large needs to understand how these projects are put together and I appreciate the applicant going into the detail they did. I appreciate Mr. Hague with what he has to say and it doesn't fall on deaf ears. Neither does it fall on deaf ears Tom for your information. Thank you MD. Thank you very much and any other people that would have come out, it would have been very nice, so maybe we can find a way to communicate to the rest of the people in areas as Meli brought up, but other than that to me this is one of the better sites I've seen, especially because of the proximity to the airport, there is nothing on the other side. It is designed for that specific purpose and I think with the exceptions of other peoples exceptions, the Environmental Impact Report was very detailed and believe it or not, I looked through a lot of it and so there are some things in life that we can't always mitigate, but jobs are something that is also important in the City too, so that's only what I had to share.

COMMISSIONER BAKER – One question Ian and I'm not trying to harp on this, but you mentioned the City of Banning and I've got a friend that works in the City of Banning and I want to look into this. Do you have a name so that I could contact the City of Banning? I want to find out what these guys are doing to mitigate this and then the City of Long Beach. I've got a friend that works there. Is that one of your other deals? And the Port Authority I know a guy there.

SPEAKER MACMILAN – Sure, I can give them now or after

COMMISSIONER BAKER - So I'm trying to… it is so easy to self serve this stuff and I want to know some fact and figures of what is going on. I mean I don't know if it applies here in the City of Moreno Valley and I'm not picking on you at all but it is so easy self serving to come out with that kind of information and no way to back it up and I'm getting to the point here that I'm going to start backing some of this stuff up. That's my job.

SPEAKER MACMILLAN – I'd be more than happy to provide any of those details to you either tonight or another time.

COMMISSIONER BAKER – Okay, I appreciate that; okay.

CHAIR VAN NATTA – Commissioner Ramirez, any comments or debate?

COMMISSIONER RAMIREZ – Just my biggest concern is the traffic; trucks headed either east or west again or Krameria or Iris. I know a truck can very

easily say I'm going to take Iris and then take that all the way to Redlands or Moreno Beach and go that route. Secondary; keeping trucks off of Heacock going north of Cactus as well. I think if we can eliminate that, like Commissioner Giba said, we need jobs in Moreno Valley. The site is ideal for something like this and yes we do need to improve our standards. Perhaps we should have a study session on what we can do to improve on what it is that we are approving or disapproving here, but aside from that, I think the project is suitable for the area, so I'm going to go ahead and vote for it.

COMMISSIONER BAKER – You know I've got one other comment I'd like to make. Real quick on this… the jobs is a big deal, but the big thing here for City is we need to increase this tax base. We are in a deficit going on and you know residential parcels and roof tops are not getting it. Like it was pointed out to me on house, the tax I pay, it doesn't even cover the fire protection for my parcel that I own, so then it has to come from somewhere else, so that is an issue we need to look at here and whether we like these large rooftops or businesses or not, unfortunately the way the economic situation is right now, I see no way of getting around it and the other thing that kind of bothers me on this is when we put the Master Plan together and I was here 28 years ago or 25 when you did that, no one seemed to real be concerned about the traffic there. We've known that is going to be an Industrial Park from the get go, so like the other Commissioner says, it is set to go, so we've just got to work through the traffic deal. I live along Perris Boulevard and we've been 25 years getting that major arterial done; right Michael? I mean it has been a big project and you can't just go down there indiscriminately; I imagine we are charging that at large to the City; the improvements; right, and you have to watch the mill rate and that too from my background in City Government; correct?

SENIOR TRAFFIC ENGINEER LLOYD – The Perris project that you are referring to is south of Cactus to southerly the City limits and it is currently funded with TUMF funding, so it is our mutual funding at work.

COMMISSIONER BAKER – And that money is not going to be there forever; right?

SENIOR TRAFFIC ENGINEER LLOYD – That is correct

COMMISSIONER BAKER – Okay, good enough. The other thing that I want to state is when I worked for a city in Central Kansas; we used a lot of industrial revenue bonds to lure like people like Reynolds Aluminum in what we did there to get them into a small town like that is we had to wipe the taxes off for 10 years. I don't know if that happens here in California; maybe not, but the incentive was that to come into town, to get them to show up, you had to give them a tax incentive. We are not doing that here; right; okay, so I think we are just darn fortunate these companies and developers want to show up in Moreno Valley and want to do business.

I think we still need like George Hague says, we still need to set the standard pretty high, but you know the deal is we have a Planning Department here that handles that. They are trained to do that. We're not trained Planners up here. All we are is lay people. Some of us have the ability to have some experience in construction or whatever, but you know my point is the four years I've been up on this Planning Commission, I've always kind of put that in the Planners corner; not trying to second guess what they are doing and I'm not trying… it's like preaching to a choir here really, but this is what we pay those boys or guys and gals, so that is my opinion and I am in favor of this project. I think we need to move forward with it and let it be so. That's all I've got Meli.

CHAIR VAN NATTA – Okay, now I get to talk. Well I think once; with all due respect of what you just said I think our job up here as Planning Commissioners is to oversee the Planning Department and to make sure that they are doing their job and that they are responsive to what the needs of the community is and everything like that. There'd be no reason for us up here if all we were going to do was rubber stamp what they have come up with and there have been times we have sent them back to the drawing board and said we don't like that; fix it and that is what we are here for.

But I have a couple of comments on things that were said earlier today. Someone mentioned, well this was supposed to be more of a business park with smaller buildings and so forth and they commented on what was done with Sketchers and that they preferred the look of when you driving down the 91 freeway the series of buildings that are there around the Tyler Mall area where you have got different individual businesses and they all have the freeway frontage. Well I'm sorry, I don't think that is any more attractive than what we have with Sketchers out on the east end of town, but the main thing that we are looking at here is we are looking at land use and we're looking at the economic needs of what is going on in our area here and now and we have people who are willing to build these larger warehouses because that's what they feel they are going to be able to get tenants for and believe me if there were tenants out there where you could build those 50,000 square foot warehouses one after an another or businesses in a business park one after another and you had tenants for those and tenants were lined up looking for that type of properties, that is what the developers would be building. They are building to where there is a demand and the demand at this point is for this type of building. What we would like to see and what we've seen here is a very attractive set of buildings, built in an area of town that is ideally suited for this type of building.

Now as far as the truck traffic; yes, there is going to be truck traffic and yes we all know diesel fumes in great amounts can be harmful to our health and so forth and there are mitigation factors in there and the State and Federal Government are coming down on the new trucks being built and there are emission standards and everything else like that. I don't think we can solve all of the problems with emissions in regulating what happens on one building here. We can look at it as

has been done in the Environmental Impact Report in a cumulative effect of what is going to happen with all the projects that are on the boards to be approved or have already been approved and to make whatever arrangements we have to make and the traffic flow to accommodate that and so forth, but I don't think it would make any sense at all to come to this developer and say we want you to put some stringent regulations on whoever your future tenant is and tell them that they have to replace all their trucks. Notwithstanding the fact that when you do have a tenant for this type of a property, it is isn't their trucks necessarily that are bringing and delivering and taking away product from the warehouse, it is trucks that belong to subcontractors and other companies who are delivering product to them and they don't always have control over what trucks are being used.

So that is my little ramp there. All in all, I think this is a well thought out project. It is attractive. It is in an area of town that it needs to be in. I'm satisfied with the information that we got about what is being done for the traffic flow. I'm not concerned about the trucks driving where they are not supposed to because that is going to be an enforcement issue afterwards that is out of our control and the approval at this point and I think it is a good project and I don't see any reason why not to certify and approve it. So does somebody want to make a motion?

COMMISSIONER GIBA – I'll make a motion.

CHAIR VAN NATTA – Okay

COMMISSIONER GIBA – So, I make a motion that we **APPROVE** Resolution No's 2012-33, 2012-34, 2012-35 and 2012-36 and thereby **RECOMMEND** that the City Council:

1. **CERTIFY** the Environmental Impact Report, including Statement of Overriding Considerations and the required Mitigation Monitoring Program (P11-005) for P11-004 (Specific Plan Amendment), PA11-0001 (General Plan Amendment), PA11-0002-PA11-0006 (Master Plot Plan and Individual Plot Plans) and PA11-0007 (Tentative Parcel Map No. 35879) pursuant to the California Environmental Quality Act (CEQA) Guidelines; and,

2. **APPROVE** PA07-0151 (Tentative Parcel Map 35879), PA07-0152 (Master Plot Plan), PA07-0153, PA07-0154, PA07-0155 and PA07-0156 (Plot Plans), PA08-0057 (General Plan Amendment) and P08-060 (Specific Plan Amendment) to subdivide a 75.05 gross acre (66.93 net acres) portion of land into four separate parcels to include four (4) individual industrial buildings totaling 1,484,407 square feet within the I (Industrial) Land Use District as well as a General Plan Amendment and Specific Plan Amendment to amend the Circulation Element of the General Plan to realign Krameria Avenue, subject to all mitigation measures within the EIR, as well as findings included in the attached Resolutions and Conditions of Approval, attached as Exhibits A and B to the Map and Plot Plan Resolutions.

COMMISSIONER BAKER – Okay I'll second that

CHAIR VAN NATTA – Okay, we have a motion and a second. All in favor?

Opposed – 0

Motion carries 5 – 0, with one absent (Vice Chair Salas)

CHAIR VAN NATTA – Can we have Staff wrap up please?

PLANNING OFFICIAL TERELL – Yes due to the inclusion of a Specific Plan Amendment and a General Plan Amendment for Circulation, this item shall automatically be forwarded to the City Council for final review and action.

CHAIR VAN NATTA – Okay, we're going to take a five minute break right now. Welcome back from break.

2. Case Number: P12-102 Amended Master Plot Plan
P12-103 Amended Plot Plan
P12-130 Amended Plot Plan

Case Planner: Julia Descoteaux

CHAIR VAN NATTA – We're now going to look at the second item on our Agenda. The Applicant is Kaiser Permanente and the Case Planner is Julia Descoteaux. Go ahead.

ASSOCIATE PLANNER DESCOTEAUX – Good evening Chair Van Natta and members of the Planning Commission. I'm Julia Descoteaux, Associate Planner and before you this evening is Application P12-102, an Amended Master Plot Plan and P12-103, an Amended Plot Plan. Application P12-130 was an Amended Plot Plan that we have removed from the item. It is on the Agenda but we have removed it from the Item as we are still in discussions with the Applicant regarding that Application. So the projects before you are an Amended Plot Plan which will allow an 8,229 square foot expansion to the existing Hospital at the Emergency Room entrance. The expansion will include not only an interior remodel, but the location of a MRI facilities trailer providing diagnostic services in addition to those provided in the existing Hospital. The Master Site Plan is required to update the Hospital Campus to include the expansion and the MRI trailer. The project is located within the Community Commercial Zone within the Medical Use Overlay District. The purpose of the Medical Use Overlay District is to implement the General Plan goal of creating a Medical Corridor by limiting land uses to those that support and/or are compatible with the City's two Hospitals.

4.10.4 Cumulative Impact Analysis 4.10-17
4.10.5 Applicable Project Requirements 4.10-21
4.10.6 Significance of Impacts Before Mitigation 4.10-21
4.10.7 Mitigation 4.10-22
4.10.8 Significance of Impacts After Mitigation 4.10-23

4.11 Transportation/Traffic 4.11-1
4.11.1 Study Area Description 4.11-1
4.11.2 Existing Conditions 4.11-2
4.11.3 Basis for Determining Significance 4.11-6
4.11.4 Impact Analysis 4.11-12
4.11.5 Cumulative Impact Analysis 4.11-30
4.11.6 Applicable Project Requirements 4.11-32
4.11.7 Significance of Impacts Before Mitigation 4.11-148
4.11.8 Mitigation 4.11-149
4.11.9 Significance of Impacts After Mitigation 4.11-149

4.12 Utilities and Service Systems 4.12-1
4.12.1 Existing Conditions 4.12-1
4.12.2 Basis for Determining Significance 4.12-5
4.12.3 Impact Analysis 4.12-5
4.12.4 Cumulative Impact Analysis 4.12-12
4.12.5 Applicable Project Requirements 4.12-14
4.12.6 Significance of Impacts Before Mitigation 4.12-14
4.12.7 Mitigation 4.12-15

5.0 Mandatory CEQA Topics 5-1
5.1 Significant Environmental Effects Which Cannot Be Avoided if the Proposed Project is Implemented 5-1
5.2 Significant Irreversible Environmental Changes Which Would Be Caused by the Proposed Project Should It Be Implemented 5-4
5.3 Growth-Inducing Impacts of the Proposed Project 5-5
5.4 Effects Found Not to Be Significant as Part of the Initial Study Process 5-7
5.4.1 Agricultural Resources 5-8
5.4.2 Mineral Resources 5-8
5.4.3 Population and Housing 5-8
5.4.4 Public Services 5-9
5.4.5 Recreation 5-10

6.0 Alternatives to the Proposed Project 6-1
6.1 Alternatives Under Consideration 6-2

Section Name and Number — Page

6.2 Alternatives Considered and Rejected 6-3
6.3 Alternatives Analysis 6-5
6.3.1 Alternative 1 – No Project Alternative 6-5
6.3.2 Alternative 2 – Vacant Lot/Business Center Alternative 6-9
6.3.3 Alternative 3 – Commercial/Services Alternative 6-14

7.0 References 7-1
7.1 EIR Preparers 7-1
7.2 Documents Incorporated by Reference 7-1
7.3 Documents and Websites Consulted 7-3
7.4 Persons Consulted/Written or Verbal Communication 7-9
7.5 Documents Appended to this EIR 7-9

EIR Technical Appendices (bound separately)

A: Initial Study, Notice of Preparation, and Written Comments on the NOP
B1: Air Quality Impact Analysis
B2: Mobile Source Health Risk Assessment
C: Biological Resources Report
D: Cultural Resources Report
E: Geotechnical Investigation
F: Greenhouse Gas Analysis
G1: Phase I Environmental Assessment
G2 Addendum to Phase I Environmental Assessment
H1: Hydrology Report
H2: Water Quality Management Plan
I1: Noise Report
I2: Supplemental Construction Noise Analysis
J: Traffic Impact Analysis
K1: Water Supply Assessment
K2: Supplement to Water Supply Assessment
L: Written Correspondence

ACRONYMS

Acronym	Definition
§	Section
µg/m^3	micrograms (one-millionth of a gram) per cubic meter
AB	Assembly Bill
ACOE	Army Corps of Engineers
ADP	Area Drainage Plan
ADT	Average Daily Traffic
AF	acre-feet
AFY	acre-feet per year
AICUZS	Air Installation Compatible Use Zone Study
a.m.	Ante Meridiem (between the hours of midnight and noon)
AMSL	above mean sea level
APN	Assessor Parcel Number
APS	alternative planning strategy
APZ	Accident Potential Zone
AQMP	Air Quality Management Plan
ARB	Air Reserve Base
AST	above-ground storage tank
AWS	All-Way Stop
BMPs	best management practices
BP	Business Park/Light Industrial land use designation
C	Capacity -or- Commercial land use designation
C_2F_6	hexafluoroethane
C_2H_6	ethane
C&D	Construction and Demolition
CAA	Federal Clean Air Act
CAAQS	California Ambient Air Quality Standards
CadnaA	Computer Aided Noise Abatement computer program
CalEEMod™	California Emissions Estimator Model™
CalEPA	California Environmental Protection Agency
CalGreen	California Green Building Standards Code
CalTech	California Institute of Technology
Caltrans	California Department of Transportation
CAPSSA	Criteria Area Plant Species Survey Area
CARB	California Air Resources Board
CBSC	California Building Standards Code
CAT	Climate Action Team
CCR	California Code of Regulations
CDFG	California Department of Fish and Game
CEC	California Energy Commission
CEDD	California Employment Development Department
CEQA	California Environmental Quality Act

Acronym	Definition
CESA	California Endangered Species Act
CETAP	Community & Environmental Transportation Acceptability Process
CFC	chlorofluorocarbon
CFR	Code of Federal Regulations
CGS	California Geological Survey
CF_4	tetrafluoromethane
Ch.	Chapter
CH_4	methane
CHP	combined heat and power
CIWMP	Countywide Integrated Waste Management Plan
CMP	Congestion Management Plan
CNDDB	California Natural Diversity Database
CNEL	Community Noise Equivalent Level
CNPS	California Native Plant Society
CO	carbon monoxide
COG	council of governments
COHb	carboxyhemoglobin
CO_2	carbon dioxide
CO_2e	carbon dioxide equivalent
Corps	United States Army Corps of Engineers
CPUC	California Public Utilities Commission
CSS	Cross-Street Stop
CWA	Clean Water Act
CWC	California Water Code
CWC	Clean Water Code
CZ	Clear Zone
dB	decibel
dBA	A-weighted decibel
DBESP	Determination of Biologically Equivalent or Superior Alternative
DEH	Department of Environmental Health
DIF	Development Impact Fee
DTSC	Department of Toxic Substances Control

S.0 EXECUTIVE SUMMARY

S.1 INTRODUCTION

The California Environmental Quality Act (CEQA), Public Resources Code §21000, et seq. requires that before a public agency makes a decision to approve a project that could have one or more adverse effects on the physical environment, the agency must inform itself about the project's potential environmental impacts, give the public an opportunity to comment on the environmental issues, and take feasible measures to avoid or reduce potential harm to the physical environment.

This Environmental Impact Report (EIR), having California State Clearinghouse No. 2011061033, has been prepared in accordance with CEQA Guidelines Article 9, §15120 to §15132, to evaluate the potential environmental impacts associated with planning, constructing, and operating the proposed March Business Center Project (herein, the Project). This EIR does not recommend either approval or denial of the proposed Project; rather, it is a source of impartial information regarding potential impacts that the Project may cause to the physical environment. The Draft EIR will be available for public review for a period of 45 days. After consideration of public comment, the City of Moreno Valley will consider certifying the Final EIR and adopting required findings in conjunction with Project approval. In the case that there are any adverse environmental impacts that cannot be fully mitigated, the City of Moreno Valley must adopt a Statement of Overriding Considerations, stating why the Project is being approved despite its unavoidable impacts.

This Executive Summary has been prepared in accordance with CEQA Guidelines §15123. This EIR includes a description of the proposed Project and evaluates the physical environmental impacts that could result from planning, constructing, and operating the Project. The scope of this EIR has been determined to cover 12 subject areas through the completion of an Initial Study prepared by the City of Moreno Valley pursuant to CEQA Guidelines §15063, and in consideration of public comment received by the City in response to this EIR's Notice of Preparation (NOP). The Initial Study, NOP, and written comments received by the City in response to the NOP, are attached to this EIR *Technical Appendix A*. As determined by the Initial Study and in consideration of public comment on the NOP, the 12 environmental subject areas that could be reasonably and significantly affected by the Project are analyzed herein, including:

1. Aesthetics
2. Air Quality
3. Biological Resources
4. Cultural Resources
5. Geology & Soils
6. Greenhouse Gas Emissions
7. Hazards and Hazardous Materials
8. Hydrology and Water Quality
9. Land Use and Planning
10. Noise
11. Transportation/Traffic
12. Utilities and Service Systems

Refer to Section 4.0, Environmental Analysis, for a full account and analysis of the subject matters listed above. As mentioned, the scope of this EIR includes these 12 subject areas as determined through the completion of an Initial Study pursuant to CEQA Guidelines §15063, and in consideration of public comment to this EIR's NOP. Subject areas for which the Initial Study concluded that impacts would be clearly less than significant and that do not warrant further analysis in this EIR are addressed in Subsection 5.4, Effects Found Not to Be Significant as Part of the Initial Study Process. For each of the 12 subject areas analyzed in Section 4.0, this EIR describes: 1) the physical conditions that existed at the approximate time this EIR's NOP was filed with the California

State Clearinghouse (June 2011); 2) discloses the type and magnitude of potential environmental impacts resulting from Project planning, construction, and operation; and 3) if warranted, recommends feasible mitigation measures that would reduce or avoid any significant adverse environmental impacts that the Project may cause. A summary of the Project's significant environmental impacts and the mitigation measures imposed by the City of Moreno Valley to lessen or avoid those impacts is included in this Executive Summary as Table S-2, *Mitigation Monitoring and Reporting Program*.

This EIR also discusses alternatives to the proposed Project. Alternatives are studied that would attain most of the Project objectives while avoiding or substantially lessening the proposed Project's significant environmental effects. A full discussion of Project alternatives is found in EIR Section 6.0, Alternatives.

S.2 PROJECT OVERVIEW

S.2.1 LOCATION AND REGIONAL SETTING

The Project site consists of 75.05 acres in the southern portion of the City of Moreno Valley, Riverside County, California (see Figure 3-1, *Regional Map*). From a regional perspective, the Project site is located to the north of the City of Perris, to the southeast of the City of Riverside, and to the south, east, and west of unincorporated areas in Riverside County. Regional access to the site is provided via I-215, which is located approximately 1.4 miles to the west of the site, and SR-60, which is located approximately 3.6 miles to the north of the site. Refer to Subsection 2.1 for more information about the Project's regional setting.

At the local scale, the Project site is located immediately south of Iris Avenue, east of Heacock Street, and about 1,300 feet west of Indian Avenue, as illustrated on Figure 3-2, Vicinity Map, and Figure 3-3, USGS Topographic Map. As shown on these exhibits, a majority of the site is located immediately north of the Perris Valley Channel, with the exception of approximately 1.84 acres located southwest of the Channel. Refer to Subsection 2.2 for more information about the Project's local setting.

S.2.2 PROJECT OBJECTIVES

The primary objective of the proposed Project is to develop an industrial business center on the Project site in conformance with the land use designations applied to the property by City of Moreno Valley General Plan and the Moreno Valley Industrial Area Plan (Specific Plan 208), as well as comply to the greatest feasible extent with other applicable City of Moreno Valley standards, codes, and policies. The following is a list of specific objectives sought by the proposed Project.

A. To develop an industrial business center in conformance with the land use designations applied to the property by the City of Moreno Valley General Plan and the Moreno Valley Industrial Area Plan (Specific Plan 208).

B. To develop a business center that can accommodate light industrial and warehouse distribution tenants within close proximity to regional transportation routes.

C. To develop a business center that is financially feasible to construct and operate.

D. To make efficient use of a property by achieving a minimum Project-wide floor area ratio (FAR) of 0.50.

E. To attract new businesses and jobs to the City of Moreno Valley, thereby providing a more equal jobs/housing balance both in the City and in Riverside County and reducing the need for members of the existing local workforce to commute outside the area for employment.

F. To modify the planned alignment of Krameria Avenue to enable efficient development of the Project site and improve circulation and public safety within the area of the Moreno Valley Industrial Area Plan.

G. To develop a business center with an architectural design and operational characteristics that are complementary with existing and planned development in the immediate vicinity.

H. To construct a business center that incorporates energy efficiency and low water use principles in order to increase environmental quality during construction and operation.

S.2.3 PROJECT DESCRIPTION SUMMARY

The Project consists of a proposal to develop a 75.05-acre property with business center land uses. The principal discretionary actions required of the City of Moreno Valley to implement the proposed Project include the adoption of a General Plan Amendment (PA11-0001) and Specific Plan Amendment (P11-004), approval of Tentative Parcel Map No. 35879 (PA11-0007), a Master Plot Plan (PA11-0002) and four (4) individual Building Plot Plans (PA11-0003, PA11-0004, PA11-0005, and PA11-0006), and certification of this EIR (P11-005). Additional discretionary and administrative actions that would be necessary to implement the proposed Project are listed in Table 3-4, *Matrix of Project Approvals/Permits*, in EIR Section 3.0.

A brief description of the proposed discretionary approvals associated with the Project is provided in the following subsections.

A. Tentative Parcel Map No. 35879

Tentative Parcel Map No. 35879 (TPM No. 35879) proposes to subdivide the 75.05-acre property into four (4) parcels, as depicted on Figure 3-4, Tentative Parcel Map No. 35879. In addition, TPM No. 35879 designates areas of public road dedication and improvement, and identifies the size and location of needed water, sewer, drainage, and utility infrastructure. According to TPM No. 35879, earthwork and grading activities would occur in one phase across the entire 75.05-acre property, and would result in approximately 111,030 cubic yards of cut and 159,957 cubic yards of fill. Developable parcels would range in size from 1.89 gross acres (1.54 net acres) to 53.43 gross acres (47.67 net acres). Additionally, two (2) roadway rights-of-way that were previously offered to the City of Moreno Valley but that were never accepted by the City for public use are proposed to be vacated as part of TPM No. 35879

B. Plot Plans PA11-0002, -0003, 0004, -0005, AND -0006

One (1) Master Plot Plan and four (4) individual Building Plot Plans are proposed as part of the Project. The Master Plot Plan (PA11-0002) establishes a common architectural and landscape development concept for the entire Project, depicts the location of proposed circulation facilities, and depicts the relationship between proposed on-site structures, as illustrated on Figure 3-11, *March Business Center Master Plot Plan*. The individual Building Plot Plans provide site plans, including a detailed architectural and landscape design for Parcel 1 (PA11-0003), Parcel 2 (PA11-0004), Parcel 3 (PA11-0005), and Parcel 4 (PA11-0006). Plot plans for Parcels 1 through 4 are presented on Figures 3-12 through 3-15. Table S-1, *March Business Center Stat istical Summary*, summarizes the net

parcel size, total building area, and floor area ratio (FAR) of each proposed parcel and building. The Project Applicant anticipates that Parcels 1, 2, and 3 would primarily be occupied by warehouse distribution uses, while Parcel 4 would be occupied by light industrial uses.

Table S-1 March Business Center Statistical Summary

PARCEL	NET PARCEL SIZE	TOTAL BUILDING AREA	FAR[1]
1	2,077,688 s.f.	1,103,003 s.f.	0.53
2	512,072 s.f.	277,243 s.f.	0.54
3	258,479 s.f.	87,429 s.f.	0.34
4	67,144 s.f.	16,732 s.f.	0.25
Total	**2,915,383 s.f.**	**1,484,407 s.f.**	**0.51**

[1] Floor Area Ratio (FAR) is calculated by dividing the maximum building square footage by the net square footage of the parcel on which the building is located. Total FAR is calculated by dividing the total square footage of all buildings by the total net square footage of the parcels on which they would be located.
Source: PA11-0002, PA11-0003, PA11-0004, PA-0005, and PA11-0006 prepared by Bastien and Associates, Inc., August 17, 2011.

C. General Plan Amendment PA11-0001

A General Plan Amendment (PA11-0001) is proposed as part of the Project to modify the Circulation Element of the City of Moreno Valley General Plan. The proposed modifications to the Circulation Element would consist of changes to the planned alignment and classification of a segment of Krameria Road between Heacock Street and proposed Cosmos Street. Under existing conditions, Krameria Avenue terminates east of the Project site at Indian Avenue; however, the City's General Plan Circulation Element calls for Krameria Avenue to be extended to Heacock Street diagonally across the southern portion of the Project site, meeting Heacock Street at an oblique angle. The Project proposes a different alignment for Krameria Avenue, as depicted on Figure 3-19, *Proposed Modifications to Krameria Avenue Alignment*. The intended purpose of this change is to provide a 90-degree intersection where Krameria Avenue meets Heacock Street and to provide a perpendicular connection between Heacock Street and proposed Cosmos Street to allow for more safe and efficient local circulation system. In addition, the proposed General Plan Amendment would downgrade the classification for the Krameria Avenue segment between Indian Avenue and Heacock Street from a "Minor Arterial (88-foot right-of-way)" to an "Industrial Collector (78-foot right-of-way)."

D. Specific Plan Amendment P11-004

In addition to the General Plan Amendment described above, the proposed realignment and reclassification of Krameria Avenue through the Project site would require an amendment to the Moreno Valley Industrial Area Plan (Specific Plan 208). The proposed Specific Plan Amendment (P11-004) would change the planned alignment of the on-site segment of Krameria Avenue as described above in Section S.2.3.C. The proposed Specific Plan Amendment also would change the classification of the segment of Krameria Avenue between Indian Avenue and Heacock Street from a "Minor Arterial (88-foot right-of-way)" to an "Industrial Collector (78-foot right-of-way)," as would similarly occur under the proposed General Plan Amendment.

S.3 EIR PROCESS

As a first step in complying with the procedural requirements of CEQA for an EIR, an Initial Study was prepared by the City of Moreno Valley to determine whether any aspect of the proposed Project,

either individually or cumulatively, may cause a significant adverse effect on the physical environment (refer to EIR *Technical Appendix A*). For this Project, the Initial Study indicated that this EIR should focus on the 12 environmental subject areas listed above in Subsection S.1. After completion of the Initial Study, the City filed a NOP with the California Office of Planning and Research (State Clearinghouse) to indicate that an EIR would be prepared. In turn, the Initial Study and NOP were distributed for a 30-day public review period, which began on June 12, 2011 and ended on July 12, 2011.

Written comments on the scope of the EIR were received during those 30 days, and were considered by the City during the preparation of this EIR. In addition, and Pursuant to CEQA Guidelines §15082(c)(1), an advertised public meeting (called a scoping session) was held on June 29, 2011 at the Moreno Valley City Hall. After considering public comments on the NOP and during the scoping session, there were no comments received that warranted an expansion of the scope of the EIR beyond the 12 environmental issue areas listed in Subsection S.1.

This EIR is being circulated for review and comment by the public and other interested parties, agencies, and organizations for a 45-day review period. During the 45-day public review period, public notices announcing availability of the Draft EIR will be mailed to interested parties, advertisements will be posted in the local newspaper, and copies of the Draft EIR and its Technical Appendices will be available for review at the locations indicated in the public notices.

After the close of the 45-day Draft EIR public comment period, responses to written comments on the environmental effects of the proposed Project will be prepared and published. The Final EIR will then be considered for certification by the City of Moreno Valley Planning Commission and City Council during public hearing. The Planning Commission and City Council will review and consider the Final EIR prior to deciding to approve, approve with revision, or reject the proposed Project. Approval of the proposed Project would be accompanied by the adoption of written findings and a statement of overriding considerations for any significant unavoidable environmental impacts identified in the Final EIR. In addition, the City must adopt a Mitigation, Monitoring, and Reporting Program (MMRP), which describes the process to ensure implementation of the mitigation measures identified in the Final EIR to reduce or avoid significant impacts on the physical environment. The MMRP, which is included as Table S-2 in this EIR, will ensure CEQA compliance during Project construction and operation.

S.4 AREAS OF CONTROVERSY AND ISSUES TO BE RESOLVED

CEQA Guidelines §15123(b)(2) requires that areas of controversy known to the Lead Agency (City of Moreno Valley) be identified in the Executive Summary. The Lead Agency is aware of one issue of controversy:

- Near-term construction-related noise impacts that could affect nearby sensitive receptors (existing residences) located to the northeast of the proposed Project.

Regarding issues to be resolved, this EIR addresses the environmental issues that are known by the City and that are identified in the Initial Study prepared for the Project (refer to Appendix A of this EIR). Eleven (11) written comment letters were received by the City on this EIR's NOP, copies of which are also included in Appendix A. Environmental topics raised in written comment to the NOP are primarily related to the issue areas of transportation/traffic, hazards and hazardous materials,

cultural resources, flood hazards, public services, air quality, and impacts associated with diesel exhaust emissions. Refer to Table 1-2, *Summary of NOP Comments*, in Section 1.0 of this EIR.

S.5 ALTERNATIVES TO THE PROPOSED PROJECT

In compliance with CEQA Guidelines §15126.6, an EIR must describe a range of reasonable alternatives to the Project or to the location of the Project. Each alternative must be able to feasibly attain most of the Project's objectives and avoid or substantially lessen the Project's significant effects on the environment. A detailed description of each alternative evaluated in this EIR, as well as an analysis of the potential environmental impacts associated with each alternative, is provided in Section 6.0, Alternatives to the Proposed Project. Also described in Section 6.0 is a list of alternatives that were considered but rejected from further analysis. The alternatives considered by this EIR include those listed below.

S.5.1 ALTERNATIVE 1 – NO PROJECT ALTERNATIVE

The No Project Alternative is included in the alternatives analysis as required pursuant to CEQA Guidelines §15126.6(e), which requires evaluation of an alternative that considers what would reasonably be expected to occur on the property in the foreseeable future if the Project were not approved, based on current plans and consistent with available infrastructure and community services. For purposes of analysis in this EIR, the No Project Alternative assumes that the Project site would be left in its existing condition. The proposed Project implements the City of Moreno Valley General Plan and the Moreno Valley Industrial Area Plan (Specific Plan 208). If the Project were not approved, it is reasonable to expect that the property would remain vacant for the foreseeable future.

S.5.2 ALTERNATIVE 2 – VACANT LOT/BUSINESS CENTER ALTERNATIVE

The Vacant Lot/Business Center Alternative considers development of the site in a way that would reduce or avoid near-term impacts during the Project's construction phase. Under this Alternative, no construction activities would occur on site within 1,100 feet of the property's northeastern corner, creating a distance between construction activities and sensitive receptors (residential homes) located to the northeast. However, and pursuant to City requirements, construction activities associated with frontage improvements along Iris Avenue still would be required. This Alternative was selected for consideration by the Lead Agency because two (2) of the Project's significant unavoidable impacts (noise and air quality) would occur during the construction phase; reducing the extent of construction activity by increasing the distance between construction and sensitive receptors has the potential to reduce or avoid these significant impacts. Under this alternative, the northeastern quadrant of the property would remain vacant and no construction activities would occur in this area, with exception of frontage improvements to Iris Avenue. The resulting building area on the Project's proposed Parcel 1 would be reduced and building space on the property as a whole would be lowered to approximately 762,800 s.f.

S.5.3 ALTERNATIVE 3 – SMALL BUILDING ALTERNATIVE

The Small Building Alternative considers developing Parcel 1 with 30 to 40 light industrial buildings that would range in size from 10,000 s.f. to 50,000 s.f. Buildings on Parcels 2 through 4 would be identical to the proposed Project. This Alternative assumes the construction of 1,316,404 s.f. of building space over the entire 75.05-acre property and construction of the same circulation system improvements as proposed by the Project (frontage improvements to Iris Avenue and Heacock Street,

construction of Cosmos Street, and construction of a segment of Krameria Avenue through the site). Due to the increase in the number of buildings proposed on Parcel 1, construction on Parcel 1 would occur over 4 phases (or 5 phases for the entire Project site), and would take approximately eight to twelve years to complete (as compared to approximately four years for the proposed Project). This Alternative was selected for consideration by the Lead Agency to determine if any of the Project's near-term construction or long-term operational significant impacts could be reduced or avoided by constructing smaller buildings on the Parcel 1 while maintaining consistency with the property's Industrial designation of the Moreno Valley Industrial Area Plan.

S.6 SUMMARY OF IMPACTS, PROJECT REQUIREMENTS, MITIGATION MEASURES, AND CONCLUSIONS

S.6.1 EFFECTS FOUND NOT TO BE SIGNIFICANT

The scope of this EIR includes 12 subject areas as determined through the completion of an Initial Study prepared by the City of Moreno Valley pursuant to CEQA Guidelines §15063 and CEQA Statute §21002.1(e), as well as consideration of public comments received by the City on this EIR's NOP and during the June 29, 2011 scoping session. The Initial Study, NOP, and public comments received in response to the NOP, are attached to this EIR as *Technical Appendix A*. Subject areas for which the Initial Study concluded that impacts would be clearly less than significant and that do not warrant further analysis in this EIR include: agricultural resources, mineral resources, population and housing, public services, and recreation. The EIR addresses these topics in EIR Subsection 5.4, Effects Found Not to be Significant as Part of the Initial Study Process.

S.6.2 IMPACTS OF THE PROPOSED PROJECT

Table S-2, *Mitigation, Monitoring, and Reporting Program*, provides a summary of the proposed Project's environmental impacts, as required by CEQA Guidelines §15123(a). Also presented are the Project's design features and mandatory project requirements that would serve to reduce or avoid impacts, as well as the mitigation measures imposed on the Project by the City of Moreno Valley to further avoid adverse environmental impacts or to reduce their level of significance.

Table S-2 Mitigation, Monitoring, and Reporting Program

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
4.1 Aesthetics					
Applicable Project Requirements					
	PR 4.1-1 The Project is required to comply with City of Moreno Valley Ordinance No. 359, which addresses artificial lighting and glare.	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division	Prior to the issuance of building permits	
	PR 4.1-2 The Project is required to comply with all applicable development regulations and design standards of the- Moreno Valley Industrial Area Plan, including standards related to the design of artificial lighting contained within Section III, *Development Standards and Gu idelines*, and Section IV, *Development Framework*.	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division	Prior to the issuance of building permits	
Summary of Impacts					
Threshold 1: The Project would not significantly impact a scenic vista. The Project site does not contain any scenic vistas, nor does it offer unique views of any visually prominent features; therefore, impacts to scenic vistas would be less than significant.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
Threshold 2: The Project has no potential to damage scenic resources within a scenic highway corridor. The Project site is not located within the viewshed of a scenic highway and the Project site does not contain any scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings.	Mitigation is not required.	N/A	N/A	N/A	No Impact
Threshold 3: The Project would not substantially degrade the existing visual character or quality of the site or its surrounding areas during Project construction or operation. Although the proposed Project would result in a change to the existing visual character of the site (i.e., from undeveloped land to a light industrial business center), the Project incorporates a number of site design, rchitectural, and landscaping elements onsistent with the requirements of the MVIAP that would ensure the provision of a igh quality development.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
Threshold 4: The Project would not create substantial light or glare. Compliance with the MVIAP requirements for lighting and mandatory compliance with City of Moreno Valley Ordinance No. 359 would ensure less than significant impacts associated with light and glare affecting day or nighttime views in the area.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
4.2 Air Quality					
Applicable Project Requirements					
	PR 4.2-1 The Project is required to comply with the provisions of South Coast Air Quality Management District Rule 402, "Nuisance."	Project Construction Manager, Project Tenants	South Coast Air Quality Management District (SCAQMD)	During construction activities and ongoing during long-term operation	
	PR 4.2-2 The Project is required to comply with the provisions of South Coast Air Quality Management District Rule 403, "Fugitive Dust."	Project Construction Manager	SCAQMD	During construction activities	
	PR 4.2-3 The Project is required to comply with the provisions of South Coast Air Quality Management District Rule 431.2, "Sulfur Content of Liquid Fuels."	Project Construction Manager, Project Tenants	SCAQMD	During construction activities and ongoing during long-term operation	
	PR 4.2-4 The Project is required to comply with the provisions of South Coast Air Quality Management District Rule 1113, "Architectural Coatings."	Project Construction Manager, Project Tenants	City of Moreno Valley Building and Safety Division, SCAQMD	During construction activities and ongoing during long-term operation	
	PR 4.2-5 The Project is required to comply with the provisions of South Coast Air Quality Management District Rule 1186, "PM10 Emissions from Paved and Unpaved Roads, and Livestock Operations."	Project Construction Manager	SCAQMD	During construction activities	
	PR 4.2-6 The Project is required to comply with the provisions of South Coast Air Quality Management District Rule 1186.1, "Less-Polluting Street Sweepers."	Project Construction Manager	SCAQMD	During construction activities	
	PR 4.2-7 The Project is required to comply with California Code of Regulations Title 13, Division 3, Chapter 1, Article 4.5, Section 2025, "Regulation to Reduce Emissions of Diesel Particulate Matter, Oxides of Nitrogen and Other Criteria Pollutants, from In-Use Heavy-Duty Diesel-Fueled Vehicles."	Project Construction Manager, Project Tenants	SCAQMD	During construction activities and ongoing during long-term operation	
	PR 4.2-8 The Project is required to comply with California Code of Regulations Title 13, Division 3, Chapter 10, Article 1, Section 2485, "Airborne Toxic Control Measure to Limit Diesel-Fueled Commercial Motor Vehicle Idling."	Project Tenants	SCAQMD	Ongoing during long-term operation	

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
Summary of Impacts					
Threshold 1: The proposed Project would not conflict with or obstruct implementation of the SCAQMD AQMP.	Mitigation is not required.	N/A	N/A	N/A	No Impact
Thresholds 2 and 3: Emissions during Phase 1 of Project construction would violate the SCAQMD regional threshold for NO_X. In addition, long-term operation of the Project is projected to exceed SCAQMD regional thresholds for VOC and NO_X emissions. Near- and long-term emissions of NO_X also would contribute to an existing air quality violation in the SCAB (i.e., non-attainment status for ozone) because NO_X is a precursor for ozone. As such, Project-related emissions would violate SCAQMD air quality standards and contribute to the non-attainment status of a criteria pollutant (i.e., ozone).	**MM 4.2-1** Prior to grading permit issuance, the City shall verify the following note is included on the grading plan: "During construction activity, the contractor shall utilize California Air Resources Board (CARB) Tier III certified equipment or better for the following pieces of equipment: Graders, Rubber Tired Dozers, and Scrapers."	Project Applicant/ Developer	City of Moreno Valley Land Development Division	Prior to the issuance of grading permit(s)	Significant Unavoidable Direct and Cumulative Impact
	MM 4.2-2 Prior to issuance of each grading and building permit, the Project applicant or construction contractor shall prepare an exhibit for review by the City depicting the location of proposed equipment staging areas. The City shall review the proposed location(s) to ensure the staging areas are located at least 300-feet away from sensitive receptors and 1,105 feet from the northeastern corner of the Project site's property boundary as measured from the Iris Avenue right-of-way, as required by Mitigation Measure MM 4.10-1.	Project Applicant/ Developer	City of Moreno Valley Land Development Division	Prior to the issuance of grading permit(s) and building permits	
	MM 4.2-3 The Project applicant shall use "Zero-Volatile Organic Compounds" paints (no more than 150 grams of VOC per liter) and/or High Pressure Low Volume (HPLV) applications consistent with South Coast Air Quality Management District Rule 1113. Alternatively, the applicant shall use building materials that do not require painting or are pre-painted. Painting products and materials compliant with these requirements shall be noted on building plans.	Project Applicant/ Developer	SCAQMD	During construction activities and ongoing during long-term operation	
	MM 4.2-4 Prior to the issuance of each building permit, the City shall ensure that building plans require the placement of signs at truck access gates, loading docks, and truck parking areas to identify applicable California Air Resources Board (CARB) anti-idling regulations. At a minimum each sign	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division	Prior to the issuance of building permits	

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
	shall include: 1) instructions for truck drivers to shut off engines when not in use; 2) instructions for drivers of diesel trucks to restrict idling to no more than three (3) minutes; and 3) telephone numbers of the building facilities manager and the CARB to report violations.				
	MM 4.2-5 Prior to the issuance of each building permit, the City shall review the parking lot striping and security gating plan to ensure the site design allows adequate truck stacking at gates to prevent queuing of trucks outside the facility.	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division	Prior to the issuance of building permits	
	MM 4.2-6 Prior to the issuance of occupancy permits, the applicant shall provide evidence that a sign has been installed at each exit driveway, providing directional information to the City's truck route. Text on the sign shall read "To Truck Route" with a directional arrow.	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division	Prior to the issuance of occupancy permits	
	** Refer to MM 4.6-1 through MM 4.6-10 in Subsection 4.6, Greenhouse Gas Emissions, which also reduce impacts associated with Air Quality Thresholds 2 and 3.*				
Threshold 4: The Project would expose nearby sensitive receptors to substantial concentrations of localized particulate matter (PM_{10} and $PM_{2.5}$) during construction. Long-term operation of the Project would not expose nearby sensitive receptors to substantial pollutant concentrations of any criteria pollutant or diesel particulate matter.	MM 4.2-1 through MM 4.2-6 (above) and MM 4.6-5 and MM 4.6-8 in Subsection 4.6, Greenhouse Gas Emissions, apply to Air Quality Threshold 4.	Refer to MM 4.2-1 through MM 4.2-6 and MM 4.6-5 and MM 4.6-8	Refer to MM 4.2-1 through MM 4.2-6 and MM 4.6-5 and MM 4.6-8	Refer to MM 4.2-1 through MM 4.2-6 and MM 4.6-5 and MM 4.6-8	Less than Significant Impact with Mitigation (Short-Term) and Less than Significant Impact (Long Term; Before and After Mitigation)
Threshold 5: Although near-term construction activities could produce odors associated with construction equipment exhaust, the application of asphalt, and the application of architectural coatings, standard construction requirements would minimize odor impacts to less than significant levels. Odors associated with long-term operation of the proposed Project would not significantly impact nearby sensitive receptors.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
4.3 Biological Resources					
Applicable Project Requirements					
	PR 4.3-1 The proposed Project shall comply with City of Moreno Valley Municipal Code Title 3, Chapter 3.48, *Western Riverside County Multiple Species Habitat Conservation Plan Fee Program*, which requires a per-acre local development mitigation fee that will assist in providing revenue to acquire and preserve vegetation communities and natural areas within the city and western Riverside County which are known to support threatened, endangered or key sensitive populations of plant and wildlife species.	Project Applicant/ Developer	City of Moreno Valley Planning Division	Prior to the issuance of grading permit(s)	
	PR 4.3-2 The Project shall comply with City of Moreno Valley Municipal Code Title 3, Chapter 8.60, *Threatened and Endangered Species*, which requires a per-acre local development mitigation fee pursuant to the City's adopted "The Habitat Conservation Plan for the Stephens' Kangaroo Rat in Western Riverside County, California" and as established pursuant to Fee Resolution 89-92.	Project Applicant/ Developer	City of Moreno Valley Planning Division	Prior to the issuance of grading permit(s)	
Summary of Impacts					
Threshold 1: The proposed Project has the potential to directly and cumulatively impact burrowing owls that may be present on the site at the time development occurs. The Project also has the potential to directly and cumulatively impact nesting birds that may be present on site if construction activities were to occur during the nesting season.	**MM 4.3-1** Prior to the issuance of any grading permits, the Planning Division shall review grading plans to ensure that the following note is included on the plans: "No more than 30 days prior to commencement of ground-disturbing activities on site, a qualified biologist shall conduct pre-construction presence/absence surveys in accordance with the MSHCP Burrowing Owl Survey Instructions requirements and as required by MSHCP Objective 6 for the burrowing owl. In the event that pre-construction surveys identify the presence of any burrowing owls, then prior to commencement of ground-disturbing activities on site, and pursuant to Objective 6 of the MSHCP burrowing owl objectives, a qualified biologist shall passively relocate any burrowing owls present on site following protocols approved by the MSHCP, CDFG, and USFWS, including the required use of one-way doors to exclude owls from the site and collapsing of burrows.	Project Applicant/ Developer	City of Moreno Valley Planning Division	Prior to the issuance of grading permit(s)	Less than Significant Impact with Mitigation

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
	Owl relocation shall occur between September 15th and February 1st to avoid the nesting season. The "take" of any active nests during the breeding season shall be prohibited pursuant to the Migratory Bird Treaty Act and California Fish and Game Code. Ground disturbing activities authorized by this permit shall not occur until a report documenting the findings of the pre-construction survey has been prepared and approved by the Planning Division. The report shall identify the results of the pre-construction survey and provide documentation and evidence (e.g., photographs) of any passive relocation efforts that have occurred. No ground-disturbing activities may proceed unless the final report, as approved by the Planning Division, concludes that burrowing owls are no longer present on the property." **MM 4.3-2** As a condition of approval for all grading permits, vegetation clearing and ground disturbance shall be prohibited during the migratory bird nesting season (February 1 through September 15), unless a migratory bird nesting survey is completed in accordance with the following requirements: a) A nesting bird survey shall be conducted by a qualified biologist within three (3) days prior to initiating vegetation clearing or ground disturbance. b) A copy of the nesting bird survey results report shall be provided to the City of Moreno Valley. If the results of the nesting bird survey identify the presence of active nests on the property, then the qualified biologist shall provide the City of Moreno Valley Planning Division with a copy of maps showing the location of all nests and an appropriate buffer zone around each nest sufficient to protect the nest from direct and indirect impact. The size and location of all buffer zones, if required, shall be subject to review and approval by the Planning Department. The approved buffer zone shall be marked in the field with construction	Project Biologist	City of Moreno Valley Planning Division	Prior to the issuance of grading permit(s)	

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
	fencing, within which no vegetation clearing or ground disturbance shall commence until the qualified biologist and City Planning Department verify that the nests are no longer occupied and the juvenile birds can survive independently from the nests.				
Threshold 2: The Project would not have a substantial adverse effect on any riparian habitat or other sensitive natural community. Although the proposed Project would impact 0.05-acre of MSHCP riverine area in the off-site Perris Valley Storm Drain Channel (as well as 0.05-acre of Corps and RWQCB jurisdictional area and 0.06-acre of CDFG jurisdictional area), this area is an unvegetated streambed. As such, there would be no loss of functions and values of riparian habitat or substantial effect on a sensitive natural community.	Impacts to CDFG, Corps, and RWQCB would not be significant due to standard regulatory requirements requiring the acquisition of a Section 1602 Streambed Alteration Agreement, Section 401 Permit, and Section 404 Permit. As part of these permits, the following mitigation measures will be required: **MM 4.3-3** Prior to the issuance of grading permits, and in accordance with the California Fish and Game (CDFG) Code, the Project shall obtain a Section 1602 Streambed Alteration Agreement from the California Department of Fish and Game (CDFG) for impact to 0.06-acre of CDFG jurisdictional area in the Perris Valley Storm Drain Channel. As part of the Agreement, the Project Applicant may acquire credits for the impact at a minimum 1:1 ratio from an approved in-lieu fee program or mitigation land bank. **MM 4.3-4** Prior to the issuance of grading permits, and in accordance with the Clean Water Act, the Project shall obtain a Section 404 Permit from the U.S. Army Corps of Engineers (Corps) and a Section 401 Permit from the Regional Water Quality Control Board (RWQCB) for impact to 0.05-acre of Corps and RWQCB jurisdictional area in the Perris Valley Storm Drain Channel. As part of the Permits, the Project Applicant may acquire credits for the impact at a minimum 1:1 ratio from an approved in-lieu fee program or mitigation land bank.	 Project Applicant/ Developer, CDFG Project Applicant/ Developer, Corps, RWQCB	 City of Moreno Valley Planning Division City of Moreno Valley Planning Division	 Prior to the issuance of grading permit(s) Prior to the issuance of grading permit(s)	Less than Significant Impact (Before and After Mitigation)
Threshold 3: There are no federally protected wetlands on the Project site. A Section 404 Permit is required for the Project's off-site impact to 0.05-acre of Corps jurisdictional area, but this area is not a wetland.	Mitigation is not required.	N/A	N/A	N/A	No Impact
Threshold 4: The Project would not substantially interfere with the movement of	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
ny resident or migratory fish or wildlife species, would not impact a wildlife corridor, nor impede the use of a nursery site.					
Threshold 5: The Project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.	Mitigation is not required.	N/A	N/A	N/A	No Impact
Threshold 6: The Project is subject to the Western Riverside County MSHCP and would not conflict with any applicable MSHCP provision.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
4.4 Cultural Resources					
Applicable Project Requirements					
	PR 4.4-1 The Project is required to comply with CA Public Resources Code §5097.98, "Native American Historical, Cultural, and Sacred Sites."	Project Applicant/ Developer	City of Moreno Valley Planning Division	Ongoing during grading, earthwork, and trenching activities	
	PR 4.4-2 The Project is required to comply with California Health and Safety Code, §7050.5. "Disturbance of Human Remains."	Project Construction Manager	City of Moreno Valley Planning Division	Ongoing during grading, earthwork, and trenching activities	
Summary of Impacts					
Threshold 1: The Project would not impact a historic resource. No historic sites are present on the Project site; therefore, no historic sites could be altered or destroyed by construction or operation of the proposed Project.	Mitigation is not required.	N/A	N/A	N/A	No Impact
Threshold 2: The Project would not impact any known or recorded archaeological resources. There is a low likelihood for unearthing archaeological resources that meet the definition of a significant resource given in California Code of Regulations during Project construction.	**MM 4.4-2** Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan: "If any suspected archaeological resources are discovered during ground-disturbing activities, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call a qualified archaeologist to the site to assess the significance of the find. A qualified archaeologist shall evaluate the suspected resource. If the archaeologist determines that the find does not meet the CEQA standards of cultural significance given in the California Code of Regulations §15064.5, construction shall be permitted to proceed. However, if the archaeologist determines that further information is needed to evaluate significance, the City of Moreno Valley	Project Applicant/ Developer, Project Construction Manager, Project Archaeologist	City of Moreno Valley Land Development Division and Planning Division	Ongoing during grading, earthwork, and trenching activities	Less than Significant Impact (Before and After Mitigation)

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
	shall be notified and a treatment plan shall be prepared and implemented in consultation with the City and the culturally affiliated Native American tribe and in accord with Public Resources Code §21083.2. The landowner shall relinquish ownership of all archaeological artifacts that are of Native American origin found on the Project site to the culturally affiliated Native American tribe for proper treatment and disposition."				
Threshold 3: The Project would not impact any known paleontological resource. There is a low likelihood for unearthing unique paleontological resources, sites, and geologic features during Project construction.	**MM 4.4-3** Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan: "If any suspected paleontological resources are discovered during ground-disturbing activities, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call a qualified paleontologist to the site to assess the significance of the find. A qualified paleontologist shall evaluate the suspected resource. If the paleontologist determines that the find is not unique, construction shall be permitted to proceed. However, if the paleontologist determines that further information is needed to evaluate significance, the City of Moreno Valley shall be notified and a treatment plan shall be prepared and implemented in consultation with the City. Discovered fossils or samples of such fossils collected by the paleontologist shall be cleaned and prepared to allow for identification. Specimens recovered shall be donated to a qualified scientific institution for preservation and study. Examples of qualified institutions include, but are not limited to, the San Bernardino County Museum (Redlands, California) or the Western Center for Archaeology and Paleontology (Hemet, California)."	Project Applicant/ Developer, Project Construction Manager, Project Paleontologist t	City of Moreno Valley Land Development Division and Planning Division	Ongoing during grading, earthwork, and trenching activities	Less than Significant Impact (Before and After Mitigation).
Threshold 4: No human remains have been discovered at the Project site and no human remains are known to be buried beneath the surface of the site. If human remains are uncovered during ground disturbing construction activities and are determined to be of Native American decent, compliance	**MM 4.4-4** If human remains are discovered during earthwork or other construction activities, work in the affected area shall cease immediately and the Riverside County Coroner shall be notified. The remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made by the Coroner. If	Project Construction Manager; Riverside County Coroner	City of Moreno Valley Land Development Division and Planning Division	Ongoing during grading, earthwork, and trenching activities	Less than Significant Impact (Before and After Mitigation)

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
with California Public Resources Code §5097.98, Health and Safety Code Sections 8010-801, and a condition imposed by the City of Moreno Valley to require compliance to those provisions would reduce the potential impact to below a level of significance.	the Riverside County Coroner determines the remains to be Native American, the California Native American Heritage Commission must be contacted within 24 hours. The Native American Heritage Commission must then immediately notify the "most likely descendants" of receiving notification of the discovery. The most likely descendants shall then make recommendations within 48 hours, and engage in consultations concerning the treatment of the remains as provided in Public Resources Code §5097.98, "Native American Historical, Cultural, and Sacred Sites."				
4.5 Geology and Soils					
Applicable Project Requirements					
	PR 4.5-1 Structures are required to be constructed in accordance with the City of Moreno Valley Building Code (City of Moreno Ordinance No. 816) and California Code of Regulations, Title 24, Part 2, the California Green Building Standards Code, which provides minimum standards for building design.	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division	Prior to the issuance of building permits	
	PR 4.5-2 All grading and earthwork activities are required to be performed in accordance with all applicable requirements of the City of Moreno Valley grading and excavation code (City of Moreno Valley Ordinance No. 586).	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division and Land Development Division	Prior to the issuance of grading permit(s) and building permits	
	PR 4.5-3 The Project is required to obtain coverage under the General Permit for Discharges of Stormwater Associated with Construction Activity (Construction General Permit, 99-08-DWQ). The Permit will require the preparation and implementation of a Stormwater Pollution Prevention Plan and implementation of Best Management Practices.	Project Applicant/ Developer	Santa Ana Regional Water Quality Control Board	Prior to the issuance of grading permit(s)	
	PR 4.5-4 During grading and construction activities, the construction contractor(s) are required to comply with the requirements of SCAQMD Rule 403, Fugitive Dust.	Project Construction Manager	SCAQMD	During construction activities	
	PR 4.5-5 The Project is required by the City of Moreno Valley to comply with all recommendations given in its geotechnical study (*Technical Appendix E* to this EIR).	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division and Land Development Division	Prior to the issuance of grading permit(s) and building permits.	

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
Summary of Impacts					
Threshold 1: The Project would not expose people or structures to substantial adverse seismic risks. There are no known active or potentially active faults on the Project site or trending toward the Project site. On-site soils are relatively stable. The risk of liquefaction is low. There is no risk of landslide. As with all properties within the Southern California region, the Project site is subject to seismic ground shaking associated with earthquakes. However, mandatory compliance with local and state ordinances and building codes would ensure that on-site structures are developed as required to attenuate the risk to life or property to less than significant levels.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
Threshold 2: The Project would not result in substantial soil erosion or loss of topsoil. Soils on the site would be exposed to water and wind erosion during grading and site development, but with the application of mandatory regulatory requirements, including the preparation and implementation of a WQMP, a SWPPP, and compliance to applicable City ordinances, erosion impacts on and off site would not be substantial and less than significant.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
Threshold 3: The Project would not cause geologic unit or soil instability. There is no potential for the Project to cause rockfalls, landslides, or lateral spreading. Although soils on the site have the potential for soil shrinkage and settlement, any potential adverse effects associated with such conditions would be less than significant with mandatory compliance with the recommendations provided within the Project geotechnical study, including requirements to remove and re-compact areas where such soil conditions exist.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
Threshold 4: The Project would not be located on expansive soils. Near surface soils on the Project site possess a very low expansion potential.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
Threshold 5: The Project would not install septic tanks or alternative wastewater disposal systems. Accordingly, no impact would occur associated with soil compatibility for waste disposal systems.	Mitigation is not required.	N/A	N/A	N/A	No Impact
4.6 Greenhouse Gas Emissions					
Applicable Project Requirements					
	PR 4.6-1 The Project is required to comply with mandatory regulatory requirements imposed by the State of California and the South Coast Air Quality Management District aimed at the reduction of air quality emissions. Those that are applicable to the Project and that would assist in the reduction of Project-related GHG emissions include, but are not limited to the following: a) Global Warming Solutions Act of 2006 (AB32). b) Regional GHG Emissions Reduction Targets/Sustainable Communities Strategies (SB 375). c) California Code of Regulations Title 13, Division 3 addressing diesel exhaust emissions. Specifically, Chapter 1, Article 4.5, §2025, "Regulation to Reduce Emissions of Diesel Particulate Matter, Oxides of Nitrogen and Other Criteria Pollutants, from In-Use Heavy-Duty Diesel-Fueled Vehicles" and Chapter 10, Article 1, §2485, "Airborne Toxic Control Measure to Limit Diesel-Fueled Commercial Motor Vehicle Idling." d) California Code of Regulations Title 24 (California Building Code), which establishes energy efficiency requirements for new construction. e) California Code of Regulations Title 20 (Appliance Energy Efficiency Standards), which establishes energy efficiency requirements for appliances.	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division	Prior to the issuance of building permits and ongoing during long-term operation	

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
	f) South Coast Air Quality Management District Rule 1118 "PM10 Emissions from Paved and Unpaved Roads, and Livestock Operations," and Rule 1186.1 "Less Polluting Street Sweepers."				
	PR 4.6-2 Prior to the issuance of building permits, the Building and Safety Division shall ensure that the project plans provide for on-site bicycle storage, pursuant to City of Moreno Valley Municipal Code §9.11.060.B, *Off-street bicycle parking requirements*. This requirement encourages non-vehicular transportation thereby potentially reducing mobile source emissions.	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division	Prior to the issuance of building permits	N/A
Summary of Impacts					
Thresholds 1 and 2: The proposed Project would have a less than significant direct impact on global climate change and the Project's contribution of greenhouse gas emissions would be less than cumulatively considerable. The Project complies with all applicable CARB Scoping Plan and 2006 CAT Report GHG reduction measures. There are no other applicable plans, policies, or regulations that have been adopted for the purpose of reducing the Project's emissions of greenhouse gases.	Although Project-related GHG emissions are evaluated as less than significant on both a direct and cumulative basis, the following measures are recommended to ensure that Project-related emissions of GHGs are reduced to the maximum practical extent: **MM 4.6-1** The Project's construction drawings shall be designed to achieve certification under the U.S. Green Building Council's Leadership in Energy and Environmental Design (LEED) program. Prior to issuance of a building permit, the applicant shall provide a letter from a qualified LEED consultant verifying that proposed building design features are adequate to seek LEED certification. Following final building inspection, the Project applicant shall seek LEED Certification pursuant to the procedures set forth by the Green Building Certification Institute.	Project Applicant/ Developer	City of Moreno Valley Planning Division and Building and Safety Division	Prior to approval of building permits and following final building inspection	Less than Significant Impact
	MM 4.6-2 Prior to the issuance of grading and building permits, the Planning Division and the Land Development Division shall review grading plans and building plans to ensure that the following notes are specified: "With the exception of equipment used for asphalt paving, trenching, and off-site improvements, all diesel-powered construction equipment shall use B20 biodiesel fuel (comprising a minimum of 20% biodiesel) for the duration of construction activities. Any construction equipment whose warranty would be voided upon the use of B20 biodiesel fuel shall be exempt from this requirement. The Building and	Project Applicant/ Developer	Planning Division and Land Development Division	Prior to the issuance of grading and building permits	

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
	Safety Division may exempt additional pieces of equipment from this requirement upon written request from the Project applicant documenting a valid technical, economic, or physical reason why the use of B20 biodiesel fuel cannot be used. This requirement shall only apply if B20 biodiesel fuel is available within 15 roadway miles from the Project site at the time construction activities commence." "During Project construction, existing electrical power sources (e.g., power poles) shall be provided for electric construction tools including saws, drills and compressors, to minimize the need for diesel or gasoline powered electric generators."				
	MM 4.6-3 Prior to the approval of building permits, the Planning Division shall review landscaping plans to ensure that the following components are included: a) Landscaping palette emphasizing drought tolerant plants; and b) Use of water-efficient irrigation techniques.	Project Applicant/ Developer	City of Moreno Valley Planning Division	Prior to the approval of building permits	
	MM 4.6-4 The Project's mechanical/electrical /plumbing (MEP) plans shall specify U.S. EPA Certified WaterSense labeled or equivalent faucets, high-efficiency toilets (HETs), and water-conserving shower heads (if showers are proposed). Prior to the approval of building permits, the Building and Safety Division shall review the plans to ensure that these features are specified, as appropriate.	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division	Prior to the approval of building permits	
	MM 4.6-5 Prior to the issuance of building permits, the Project applicant shall submit energy usage calculations to the Planning Division showing that the Project is designed to achieve 8% efficiency beyond the 2008 California Building Code Title 24 requirements. Example of measures that reduce energy consumption include, but are not limited to, the following (it being understood that the items listed below are not all required and merely present examples; the list is not all-inclusive and other features that reduce energy consumption also are acceptable): a) Increase in insulation such that heat transfer	Project Applicant/ Developer	City of Moreno Valley Planning Division and Building and Safety Division	Prior to the issuance of building permits	

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
	and thermal bridging is minimized; b) Limit air leakage through the structure and/or within the heating and cooling distribution system; c) Use of energy-efficient space heating and cooling equipment; d) Installation of electrical hook-ups at loading dock areas; e) Installation of dual-paned or other energy efficient windows; f) Use of interior and exterior energy efficient lighting that exceeds the 2008 California Title 24 Energy Efficiency performance standards; g) Installation of automatic devices to turn off lights where they are not needed; h) To the extent they are compatible with Moreno Valley Municipal Code §9.17.030, Landscape and Irrigation Design Standards, the incorporation of shade-producing trees, particularly those that shade buildings and paved surfaces such as streets and parking lots; i) Application of a paint and surface color palette that emphasizes light and off-white colors that reflect heat away from buildings; j) Design of buildings with "cool roofs" using products certified by the Cool Roof Rating Council, and/or exposed roof surfaces using light and off-white colors; k) Design of buildings to accommodate photo-voltaic solar electricity systems or the installation of photo-voltaic solar electricity systems; l) Installation of ENERGY STAR-qualified energy-efficient appliances, heating and cooling systems, office equipment, and/or lighting products; and/or m) Other measures incorporated as part of the LEED Certification process.				
	MM 4.6-6 Prior to the approval of street improvement plans, the Transportation Engineering Division shall ensure that all traffic lights installed as part of the Project will utilize Light Emitting Diodes.	Project Applicant/ Developer	City of Moreno Valley Department of Public Works (Transportation Engineering Division)	Prior to the approval of street improvement plans	

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
	MM 4.6-7 The Project shall comply with the following requirements to reduce the generation of solid waste during construction and under long-term operating conditions:				
	a) Prior to the issuance of grading permits, a Waste Management Plan (WMP) addressing construction activity wastes shall be prepared by the Project Applicant and submitted to the Public Works Department and Building and Safety Division for review and approval. The WRP must conform to City requirements specified in Municipal Code Section 8.80.030, which requires that at least 50 percent of all construction and demolition debris be reused, recycled, or otherwise diverted from disposal in a landfill. During grading and construction, the Project Applicant shall recycle and reuse the required percentage of materials, and keep records of the tonnage or other measurements approved by the City that can be converted to tonnage amounts. Prior to issuance of an occupancy permit, the Project Applicant shall provide evidence (i.e., receipts, weight tags, or other type of acceptable verifications) to the Public Works Department to demonstrate Project compliance with the approved WRP. Evidence must clearly identify the amount of waste disposed and materials recycled.	Project Applicant/ Developer	City of Moreno Valley Public Works Department Recycling Team, City of Moreno Valley Building and Safety Division	Prior to the issuance of grading permits, during construction, and prior to the issuance of occupancy permits	
	b) Recycling shall occur during Project operational activities in accordance with all applicable solid waste and recycling requirements of the City of Moreno Valley Public Works Department. Prior to the issuance of building permits, the Building and Safety Division shall review building plans to ensure that the locations and dimensions of recyclable collection enclosures and loading areas are specified on the building plans in conformance with City requirements and City Municipal Code Chapter 6.02 "Refuse Collection, Transfer and Disposal." Prior to the issuance of occupancy permits, the Land Development Division shall conduct a field inspection to ensure that the recyclable collection enclosures and loading areas are in place and ready for use.	Project Applicant/ Developer	City of Moreno Valley Public Works Department Recycling Team, City of Moreno Valley Building and Safety Division and Land Development Division	Prior to the issuance of building permits and prior to the issuance of occupancy permits	

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
	MM 4.6-8 Prior to the issuance of building permits, the Planning Division shall review building plans to ensure that a minimum of two (2) parking spaces for each building will be reserved for carpools and vanpools. Prior to the issuance of occupancy permits, the Planning Division shall conduct a field inspection to ensure that a minimum of two (2) parking spaces for each building are marked as reserved for carpools and vanpools.	Project Applicant/ Developer	City of Moreno Valley Planning Division	Prior to the issuance of building permits and prior to the issuance of occupancy permits	
	MM 4.6-9 Prior to the issuance of building permits for Parcel 1, the Planning Division and Building and Safety Division shall review building plans to ensure that a minimum of two (2) electric vehicle charging stations will be provided. Prior to the issuance of occupancy permits for Parcel 1, the Planning Division and Building and Safety Division shall conduct a field inspection to verify that the electric vehicle charging stations are in place and operable.	Project Applicant/ Developer	City of Moreno Valley Planning Division and Building and Safety Division	Prior to the issuance of building permits for Parcel 1 and prior to the issuance of occupancy permits for Parcel 1	
	MM 4.6-10 Prior to the issuance of occupancy permit, the Project's property owner shall provide documentation to the Planning Division verifying that a provision is included in the building's lease agreement which stipulates that tenants of the building shall encourage carpooling and transit ridership by on-site employees. ** Refer to MM 4. 2-1 through MM 4.2-6 in Subsection 4.2, Air Quality, which also reduce greenhouse gas emissions.*	Project Applicant/Property Owner	City of Moreno Valley Planning Division	Prior to the issuance of occupancy permits	
4.7 Hazards and Hazardous Materials					
Applicable Project Requirements					
	PR 4.7-1 The Project is required to comply with all federal, state, and local hazardous materials regulations, as overseen and enforced by the California Department of Toxic Substances Control, the Riverside County Department of Environmental Health and the Moreno Valley Fire Department.	Project Construction Manager, Project Tenants	Riverside County Department of Environmental Health, City of Moreno Valley Fire Department	During construction activities and ongoing during long-term operation	N/A
	PR 4.7-2 Groundwater monitoring wells requiring removal shall be abandoned in accordance with the State of California Well Standards (Department of Water Resources Bulletins 74-81 & 74-90).	Project Applicant/ Developer	City of Moreno Valley Land Development Division, Santa Ana Regional Water Quality Control Board	Prior to the issuance of grading permit(s)	N/A

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
	PR 4.7-3 New groundwater monitoring water wells shall be constructed in accordance with the State of California Well Standards (Department of Water Resources Bulletins 74-81 & 74-90).	Project Applicant/ Developer	City of Moreno Valley Land Development Division, Santa Ana Regional Water Quality Control Board	During construction activities	N/A
	PR 4.7-4 If underground storage tanks are discovered during the Project's grading operation, the tanks shall be removed in accordance with the State of California Underground Storage Tank Regulations (California Code of Regulations Title 23, Division 3, Chapter 16) under the oversight of the Riverside County Department of Environmental Health, Local Oversight Program.	Project Construction Manager	Riverside County Department of Environmental Health	During construction activities	N/A
	PR 4.7-5 In the event that any subsurface hazardous materials or potentially hazardous materials are found during grading, the suspected hazardous materials are required to be properly disposed of in accordance with federal, state and Riverside County Department of Environmental Health requirements.	Project Construction Manager	Riverside County Department of Environmental Health	During construction activities	N/A
	PR 4.7-6 Per the requirements Riverside County Department of Environmental Health and the CA Health and Safety Code (HSC), Chapter 6.95, Sections 25500 - 25532, a Hazardous Materials Business Emergency Plan must be prepared by any future business on the Project site that handles a hazardous material or a mixture containing a hazardous material in quantities equal to or greater than a weight of 500 pounds, total volume of 55 gallons, 200 cubic feet (at standard temperature and pressure) for compressed gas, or any radioactive material Extremely Hazardous Substance or Waste, any amount of a Regulated Substance, or any amount of an Acutely Hazardous Material.	Project Tenants	Riverside County Department of Environmental Health, City of Moreno Valley Fire Department	Ongoing during long-term operation	N/A
	PR 4.7-7 The Project is required to comply with the following standard condition of approval imposed by the City of Moreno Valley: "Prior to issuance of a Certificate of Occupancy or Building Final, a 'Knox Box Rapid Entry System' shall be provided. The Knox-Box shall be installed in an accessible location approved by the Fire Chief. The Knox-Box shall be supervised by the alarm system and all exterior security emergency access gates shall be electronically operated and be provided with Knox key switches for access by emergency	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division, City of Moreno Valley Fire Department	Prior to final building inspection	N/A

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
	personnel."				
	PR 4.7-8 The Project is required to comply with the following standard condition of approval imposed by the City of Moreno Valley: "Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall be responsible for obtaining underground and/or above ground tank permits for the storage of combustible liquids, flammable liquids, or any other hazardous materials from both the County of Riverside Community Health Agency Department of Environmental Health and the Fire Prevention Bureau."	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division, City of Moreno Valley Fire Department	Prior to final building inspection	N/A
	PR 4.7-9 The Project is required to comply with the following standard City of Moreno Valley requirement: "Prior to issuance of Certificate of Occupancy, permits are required to store, dispense, use or handle hazardous material; to conduct processes which produce conditions hazardous to life or property; or to install equipment used in connection with such activities. Such permits shall not be construed as authority to violate, cancel or set aside any of the provisions of this code. Such permit shall not take the place of any license required by law. Applications for permits shall be made to the Fire Prevention Bureau in such form and detail as prescribed by the Bureau. Applications for permits shall be accompanied by such plans as required by the Bureau. Each application for a permit shall include a hazardous materials management plan (HMMP). The HMMP shall be posted adjacent to (other) permits when an HMMP is provided. The HMMP shall include a facility site plan designating the following: a) Storage and use areas; b) Maximum amount of each material stored or used in each area; c) Range of container sizes; d) Locations of emergency isolation and mitigation valves and devises; e) Product conveying piping containing liquids or gases, other than utility-owned fuel gas lines and low-pressure fuel gas lines; f) On and off positions of valves for valves which are of the self-indicating type;	Project Applicant/ Developer, Project Tenants	Riverside County Department of Environmental Health, City of Moreno Valley Building and Safety Division, City of Moreno Valley Fire Department	Prior to issuance of certificate of occupancy and ongoing during long-term operation	N/A

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
	g) Storage plan showing the intended storage arrangement, including the location and dimensions of aisles. The plans shall be legible and approximately to scale. Separate distribution systems are allowed to be shown on separate pages; and h) Site plan showing all adjacent/neighboring structures and use. Each application for a permit also shall include a hazardous materials inventory statement (HMIS). Permits issued by the Fire Prevention Bureau shall be kept on the premises designated therein at all times and shall be posted in a conspicuous location on the premises or shall be kept on the premises in a location designated by the Fire Chief. Permits shall be subject to inspection at all times by an officer of the fire department or other persons authorized by the Fire Chief."				
Summary of Impacts					
Thresholds 1 and 2: During Project operation and with mandatory compliance to federal, state and local regulations, the proposed Project would not create a significant hazard to the public or the environment due to routine transport, use, disposal, or upset of hazardous materials.	Although impacts would be less than significant, the following mitigation measures are recommended as precautions during the Project's construction process. **MM 4.7-1** Prior to grading permit issuance, the City shall verify that the Project's Grading Plan indicates: a) the location of all groundwater monitoring wells to be preserved in place; b) the method used to flag, stake, or otherwise identify the location of the groundwater monitoring wells in the field; and c) any required grading procedures or precautions to be taken in the vicinity of the monitoring well locations. **MM 4.7-2** Prior to the issuance of grading permits, the City of Moreno Valley Land Development Division shall ensure that the Project's required Stormwater Pollution Prevention Plan (SWPPP) includes emergency procedures for accidental hazardous materials releases during construction. The procedures shall include necessary personal protective equipment, spill containment procedures, and training of workers to respond to accidental spills/releases.	Project Applicant/ Developer Project Applicant/ Developer	City of Moreno Valley Land Development Division City of Moreno Valley Land Development Division	Prior to the issuance of grading permit(s) Prior to the issuance of grading permit(s)	Less than Significant Impact (Before and After Mitigation)

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
Threshold 3: Although the Project site is located approximately 0.25 mile from the nearest school facility (Rainbow Ridge Elementary School), mandatory compliance with applicable federal, state, and local regulations, including regulations and permitting requirements from the MVFD, would ensure that operation of the proposed Project would not expose school students or staff to significant effects associated with the emissions or handling of hazardous or acutely hazardous materials, substances, or waste.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
Threshold 4: The Project site is not listed on any list of hazardous materials compiled pursuant to Government Code §65962.5.	Mitigation is not required.	N/A	N/A	N/A	No Impact
Threshold 5: The Project site is located with the influence area of March ARB/ IPA, but is not located in areas subject to crash hazards associated with airport operations. The Project does not propose any features that would be considered hazardous to airport operations.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
Threshold 6: The Project site is not located in the vicinity of a private airstrip or heliport and, therefore, has no potential to cause a safety impact to these facilities.	Mitigation is not required.	N/A	N/A	N/A	No Impact
Threshold 7: The Project would not impair or physically interfere with an adopted emergency response plan or emergency evacuation plan. No emergency facilities exist on the Project site, and the site does not serve as an emergency evacuation route.	Mitigation is not required.	N/A	N/A	N/A	No Impact
Threshold 8: The Project would not expose people or structures to a significant wildfire risk. The Project site is not located in close proximity to wildland fire hazard areas. The Project would develop a vacant site, thereby reducing the risk for wildfire on the property. The Project is subject to review and approval y the MVFD to ensure that features have een incorporated within the development to ddress potential fire hazards.	Mitigation is not required.	N/A	N/A	N/A	No Impact

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
4.8 Hydrology and Water Quality					
Applicable Project Requirements					
	PR 4.8-1 The Project is required to obtain coverage under the General Permit for Discharges of Stormwater Associated with Construction Activity (Construction General Permit, 99-08-DWQ). The Permit will require the preparation and implementation of a Stormwater Pollution Prevention Plan and implementation of Best Management Practices.	Project Applicant/ Developer	Santa Ana Regional Water Quality Control Board	Prior to the issuance of grading permit(s)	N/A
	PR 4.8-2 The Project is required to comply with the City of Moreno Valley's standard condition of approval requiring the Project to comply with all recommendations given in its Water Quality Management Plan (Technical Appendix H2 to this EIR).	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division and Land Development Division	Prior to the issuance of grading permit(s) and building permits	N/A
	PR 4.8-3 The Project is required to construct four (4) on-site infiltration/detention basins as indicated on the Project's proposed Tentative Parcel Map and Plot Plans.	Project Applicant/ Developer	City of Moreno Valley Land Development Division	Prior to the issuance of grading permit(s)	N/A
	PR 4.8-4 The Project is required to construct all buildings at elevations higher than the base flood elevation as indicated on the Project's Proposed Tentative Parcel Map and Plot Plans.	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division, City of Moreno Valley Land Development Division	Prior to the issuance of building permits	N/A
Summary of Impacts					
Threshold 1: The proposed Project would not violate any water quality standards or waste discharge requirements on a direct or cumulative basis. The Project is required to prepare a SWPPP to address construction-related water quality issues, and would be required to comply with a site-specific WQMP and its associated BMPs.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
Threshold 2: The proposed Project proposes no potable water wells and would not substantially impact the availability of potable groundwater in the Project area.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
Threshold 3: The proposed Project would generally maintain the existing drainage pattern of the site, would have no effect on the courses of any streams or rivers, and would not result in substantial erosion or siltation on or off site.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
Threshold 4: There would be no significant increases in flood hazard. The proposed Project would generally maintain the existing drainage pattern of the site, would have no effect on the courses of any streams or rivers, and would not result in a substantial increase in the rate of surface runoff in a manner which would result in increased flood hazards on or off site.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
Threshold 5: The proposed Project would not create or contribute runoff which would exceed the capacity of existing or planned stormwater drainage systems, nor would the Project provide substantial additional sources of polluted runoff.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
Threshold 6: There are no other components of the proposed Project with a potential to substantially degrade water quality.	Mitigation is not required.	N/A	N/A	N/A	No Impact
Threshold 7: The proposed Project does not involve the construction of residential housing and therefore would not place housing in a flood area.	Mitigation is not required.	N/A	N/A	N/A	No Impact
Threshold 8: Although the Project would redirect flood flows on site (i.e., away from proposed structures), such changes would not result in increased flood hazards to any off-site properties.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
Threshold 9: The Project site is not subject to flood hazards associated with the failure of a levee or a dam.	Mitigation is not required.	N/A	N/A	N/A	No Impact
Threshold 10: The Project site is not subject to hazards associated with seiches, tsunamis, or mudflow.	Mitigation is not required.	N/A	N/A	N/A	No Impact
4.9 Land Use and Planning					
Applicable Project Requirements					
	PR 4.9-1 The Project is required to comply with all Conditions of Approval issued by the City of Moreno Valley associated with the Project's permit applications (*i.e.*, PA11-0001, PA11-0002, PA11-0003, PA11-0004, PA11-0005, PA11-0006, PA11-0007, and P11-004)	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division, City of Moreno Valley Community and Economic Development Department (Land Development Division and Planning Division)	Prior to the issuance of grading permit(s) and building permits, and prior to final building inspection	N/A

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
Summary of Impacts					
Threshold 1: The proposed Project would not result in the physical division of any established communities.	Mitigation is not required.	N/A	N/A	N/A	No Impact
Threshold 2: The proposed Project would not conflict or adversely affect the implementation of with any applicable plan, policy, or regulation adopted for the purpose of avoiding or reducing environmental effects.	Mitigation is not required.	N/A	N/A	N/A	No Impact
Threshold 3: The proposed Project would not conflict with or adversely affect the implementation of the Western Riverside County MSHCP, nor any other habitat conservation plans or natural community conservation plans.	Mitigation is not required.	N/A	N/A	N/A	No Impact
4.10 Noise					
Applicable Project Requirements					
	PR 4.10-1 The Project is required to comply with the City of Moreno Valley Noise Ordinance (Moreno Valley Municipal Code Chapter 11.80).	Project Construction Manager, Project Tenants	City of Moreno Valley Code and Neighborhood Services Division	During construction activities and ongoing during long-term operation	N/A
Summary of Impacts					
Thresholds 1, 3, and 4: During construction of the Project, noise levels associated with Project construction activities would exceed levels given in the City of Moreno Valley Noise Ordinance. Existing sensitive receptors (residential homes) located northeast of the Project site would be impacted by temporary and intermittent construction noise when construction activities occur on the Project site within 1,105 feet of the northeastern corner of the property boundary. Additionally, in the event that Project construction activities occur simultaneously with construction activities on adjacent properties to the north or east, cumulative construction-related noise levels could be in excess of 79.9 dBA when measured at a distance of 200 feet from the property boundary. Under long-term operating conditions, the Project would not generate traffic-related or	**MM 4.10-1** Prior to the issuance of any building or grading permits, the City of Moreno Valley Building and Safety Division shall review building and grading plans to ensure that the following notes are included: a) All construction activities, including but not limited to haul truck deliveries, shall be limited to between the hours of 7:00 a.m. and 8:00 p.m. b) Construction contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers, consistent with manufacturers' standards. c) All stationary construction equipment shall be placed in such a manner so that emitted noise is directed away from the construction site's north and east property boundaries. d) Equipment staging shall be located at a minimum distance of 1,105 feet from the northeastern corner of the Project site's property	Project Applicant/ Developer, Project Construction Manager	City of Moreno Valley Land Development Division	Prior to the issuance of grading permit(s)	Significant Unavoidable Direct and Cumulative Impact (Short Term)

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
stationary noise levels above the standards given in the City of Moreno Valley Noise Ordinance or in any adjacent jurisdiction's General Plan. Long-term impacts would be less than significant.	boundary, as measured from the Iris Avenue right-of-way. e) All haul truck deliveries shall be limited to approved haul routes. Should alternate routes be necessary, haul trucks shall not use roadways that pass noise-sensitive land uses or residential dwellings unless approved by the City of Moreno Valley. **MM 4.10-2** Prior to the issuance of any building or grading permits, the Project applicant shall prepare a Construction Haul Route exhibit identifying all public and private roadways that will be used for haul truck deliveries. The Construction Haul Route exhibit shall explicitly prohibit the use of Iris Avenue. The Construction Haul Route exhibit shall be subject to review and approval by the Building and Safety Division. Once approved, copies of the Construction Haul Route exhibit shall be provided to all construction contractors, and all construction contractors shall ensure that haul truck deliveries utilize only City-approved haul routes. Should alternate routes be necessary, haul trucks shall not use roadways that pass noise-sensitive land uses or residential dwellings unless prior approval is granted by the City of Moreno Valley.	Project Applicant/ Developer	City of Moreno Valley Land Development Division and Building and Safety Division	Prior to the issuance of grading permit(s) and building permits	
Threshold 2: Near-term construction activities and long-term operation of the proposed Project would not expose persons to or generate excessive groundborne vibration or groundborne noise levels.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
Threshold 5: The Project site is located within the influence area of the March Air Reserve Base (MARB) and its 60dBA noise contour, which is an acceptable noise level for the Project's proposed land uses. As such, the Project would not expose people to excessive noise levels associated with the operation of an airport.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
Threshold 6: There are no private airstrips in the vicinity of the Project site; as such, the Project has no potential to expose people residing or working in the area to excessive noise levels associated with operation of a private airstrip.	Mitigation is not required.	N/A	N/A	N/A	No Impact

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
4.11 Transportation/Traffic					
Applicable Project Requirements					
	PR 4.11-1 The Project will construct roadway improvements (including but not limited to parkway, landscaping, and sidewalk improvements) along its frontage with Iris Avenue and Heacock Street as described in the City of Moreno Valley's Conditions of Approval for Tentative Parcel Map No. 35879 (PA11-0007), Master Plot Plan PA11-0002, and individual Building Plot Plans PA11-0003, PA11-0004, PA11-0005, and PA11-0006.	Project Applicant/ Developer	City of Moreno Valley Land Development Division	Prior to the issuance of the first (1st) occupancy permit	N/A
	PR 4.11-2 The Project will construct improvements to Cosmos Drive (including but not limited to parkway, landscaping, and sidewalk improvements) as described in the City of Moreno Valley's Conditions of Approval for Tentative Parcel Map No. 35879 (PA11-0007), Master Plot Plan PA11-0002, and individual Building Plot Plans PA11-0003, PA11-0004, PA11-0005, and PA11-0006.	Project Applicant/ Developer	City of Moreno Valley Land Development Division	Prior to the issuance of the first (1st) occupancy permit	N/A
	PR 4.11-3 The Project will construct improvements to Krameria Avenue (including but not limited to parkway, landscaping, and sidewalk improvements) as described in the City of Moreno Valley's Conditions of Approval for Tentative Parcel Map No. 35879 (PA11-0007), Master Plot Plan PA11-0002, and individual Building Plot Plans PA11-0003, PA11-0004, PA11-0005, and PA11-0006.	Project Applicant/ Developer	City of Moreno Valley Land Development Division	Prior to the issuance of the first (1st) occupancy permit	N/A
	PR 4.11-4 The Project will construct intersection improvements at each Project Driveway as described in the City of Moreno Valley's Conditions of Approval for Tentative Parcel Map No. 35879 (PA11-0007), Master Plot Plan PA11-0002, and individual Building Plot Plans PA11-0003, PA11-0004, PA11-0005, and PA11-0006.	Project Applicant/ Developer	City of Moreno Valley Land Development Division	Prior to the issuance of the first (1st) occupancy permit	N/A
	PR 4.11-5 The Project shall comply with the City of Moreno Valley Development Impact Fee (DIF), which requires the payment of a fee to the City to reduce traffic congestion by installing intersection improvements. The following DIF-funded intersection improvements are applicable:	Project Applicant/ Developer	City of Moreno Valley Department of Public Works (Transportation Engineering Division), City of Moreno Valley Land Development Division	Prior to the issuance of building permits	N/A

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
	a) Frederick Street/Cactus Avenue (one eastbound through lane) b) Heacock Street/Gentian Avenue (install traffic signal) c) Heacock Street/Iris Avenue (install traffic signal, one northbound through lane, and one westbound right turn lane with overlap phasing) d) Heacock Street/Krameria Avenue (install traffic signal, one southbound left turn lane, one westbound left turn lane, and one westbound right turn lane) e) Heacock Street/San Michel Road (one southbound left turn lane and one westbound right turn lane with overlap phasing) f) Indian Street/Nandina Avenue (one northbound through lane and one southbound through lane)				
	PR 4.11-6 The Project shall participate in funding of off-site transportation improvements through the payment of Transportation Uniform Mitigation Fees (TUMF). The following TUMF-funded intersection improvements are applicable: a) I-215 Southbound Ramps/Cactus Avenue (one eastbound free right lane, one westbound left turn lane) b) I-215 Southbound Ramps/Harley Knox Blvd. (two southbound left turn lanes, one westbound left turn lane) c) I-215 Northbound Ramps/Cactus Avenue (one northbound right turn lane, one eastbound through turn lane, one westbound through lane, one westbound through lane, one westbound right turn lane) d) I-215 Northbound Ramps/Harley Knox Blvd (one northbound right turn lane, one eastbound left turn lane, one eastbound through lane, one	Project Applicant/ Developer	City of Moreno Valley Department of Public Works (Transportation Engineering Division)	Prior to the issuance of building permits	N/A

	westbound through lane, two westbound right turn lanes) e) Frederick Street/Cactus Avenue (one westbound through lane and one eastbound through lane) f) Heacock Street/Krameria Avenue (one northbound through lane) g) Indian Street/Harley Knox Blvd. (one eastbound through lane)				
	PR 4.11-7 On-site direction signing and striping is required to be installed in conjunction with detailed construction plans for the Project and as approved by the City of Moreno Valley. The on-site signing and striping plans shall be subject to review and approval by the Planning Division, and shall clearly indicate the location of service area docks and public parking areas.	Project Applicant/ Developer	City of Moreno Valley Department of Public Works (Transportation Engineering Division)	Prior to the issuance of building permits	N/A
	PR 4.11-8 All final grading, landscaping, and street improvement plans are required to provide sight distance standards in accordance with City of Moreno Valley and California Department of Transportation (Caltrans) standards.	Project Applicant/ Developer	City of Moreno Valley Land Development Division	Prior to the issuance of building permits	N/A
	PR 4.11-9 The minimum number of vehicle and bicycle parking spaces specified by the City of Moreno Valley Municipal Code is required to be provided.	Project Applicant/ Developer	City of Moreno Valley Department of Public Works (Transportation Engineering Division), City of Moreno Valley Planning Division	Prior to the issuance of building permits	N/A
	PR 4.11-10 Space for a future transit stop will provided via an easement provided by the Project on the eastbound side of Iris Avenue as described in the City of Moreno Valley's Conditions of Approval for Tentative Parcel Map No. 35879 (PA11-0007).	Project Applicant/ Developer	City of Moreno Valley Land Development Division	Prior to the approval of the Final Map for Tentative Parcel Map No. 35879	N/A
	PR 4.11-11 All construction hauling vehicles shall use the City-approved truck route. Alternative routes used by vehicles hauling construction equipment, materials, or earth must receive prior approval by the City of Moreno Valley.	Project Applicant/ Developer	City of Moreno Valley Land Development Division and Building and Safety Division	Prior to the issuance of grading permit(s) and building permits	

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
Summary of Impacts					
Threshold 1: The proposed Project would directly and cumulatively impact the existing and planned roadway network by contributing traffic to facilities that would operate at deficient levels of service.	**MM 4.11-1** Prior to issuance of the Project's first occupancy permit, a traffic signal (programmed under the City of Moreno Valley DIF) shall be installed at the intersection of Heacock Street/Gentian Avenue	Project Applicant/ Developer	City of Moreno Valley Public Works Department (Transportation Engineering Division)	Prior to the issuance of the first (1st) occupancy permit	Significant Unavoidable Direct and Cumulative Impact
	MM 4.11-2 Prior to issuance of the first occupancy permit, the following improvements shall be in place at the intersection of Heacock Street/Iris Avenue: a) Traffic signal b) Northbound: two through lanes c) Northbound: one right turn lane	Project Applicant/ Developer	City of Moreno Valley Land Development Division and Building and Safety Division	Prior to the issuance of the first (1st) occupancy permit	
	MM 4.11-3 In the event that the City of Moreno Valley and/or the City of Perris establish a fair-share funding program(s) for improvements to any of the following intersections or immediately adjacent roadway segments that contribute to the intersection's level of service, then prior to the issuance of building permits, the Project shall contribute a fair-share payment to the funding program to address the Project's cumulative impacts to the following facilities: a) Intersection of Heacock Street/Cactus Avenue (Project's fair-share contribution is 6.4%); b) Intersection of Indian Street/San Michele Road (Project's traffic contribution is 5.8%); c) Intersection of Indian Street/Nandina Avenue (Project's traffic contribution is 7.5%); d) Intersection of Indian Street/Harley Knox Blvd (Project's traffic contribution is 5.4%).	Project Applicant/ Developer	City of Moreno Valley Land Development Division and Building and Safety Division	Prior to the issuance of the first (1st) building permit	
	MM 4.11-4 In the event that the City of Moreno Valley establishes a fair-share funding program for improvements to Indian Street between Iris Avenue and Gentian Avenue prior to the issuance of building permits, the Project shall contribute a fair-share payment to the City-established funding program to address the Project's cumulative impacts at General Plan buildout.	Project Applicant/ Developer	City of Moreno Valley Land Development Division and Building and Safety Division	Prior to the issuance of the first (1st) building permit	

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
Threshold 2: The proposed Project would make a short-term cumulatively considerable contribution to impacts on four (4) I-215 freeway segments until such time as the planned widening of I-215 is complete.	The proposed Project would make a short-term cumulatively considerable contribution to impacts on four (4) I-215 freeway segments until such time as the planned widening of I-215 is complete. I-215 is under the jurisdiction of Caltrans and there is no feasible mitigation available to reduce or avoid the Project's contribution of traffic to I-215.	N/A	N/A	N/A	Significant Unavoidable Cumulative Impact (Short-Term)
Threshold 3: There is no potential for the Project to change air traffic levels or create substantial air traffic safety risks.	Mitigation is not required.	N/A	N/A	N/A	No Impact
Threshold 4: No transportation safety hazards would be introduced as a result of the proposed Project's design.	Mitigation is not required.	N/A	N/A	N/A	No Impact
Threshold 5: Adequate emergency access would be provided to the Project site.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
Threshold 6: The proposed Project is consistent with adopted policies and programs regarding public transit, bicycle, and pedestrian facilities. The Project is designed to reduce all potential transportation mode conflicts.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
4.12 Utilities and Service Systems					
Applicable Project Requirements					
	PR 4.12-1 The Project is required to comply with all applicable provisions of the City of Moreno Valley Municipal Code Chapter 6.02 "Refuse Collection, Transfer and Disposal" and Chapter 8.80 "Recycling and Diversion of Construction and Demolition Waste."	Project Construction Manager, Project Tenants	City of Moreno Valley Building and Safety Division, City of Moreno Valley Department of Public Works (Administration/Solid Waste and Recycling Division)	During construction activities, prior to the issuance of building permits, and ongoing during long-term operation	N/A
	PR 4.12-2 The Project is required to install water and wastewater conveyance facilities in accordance with the California Green Building Standards Code and to the requirements of the Eastern Municipal Water District.	Project Applicant/ Developer	City of Moreno Valley Building and Safety Division	Prior to the issuance of building permits	N/A
	** Project Requirements PR 4.3-2 and P R 4.3-3 specified in Subse ction 4.3, Biological Resources, and Mitigation Measures MM 4.6-3, MM 4.6-4 and MM 4.6-7 in Subsection 4.6, Greenhouse Gas Emissions, also apply to Utilities and Service Systems.*				

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
Summary of Impacts					
Threshold 1: The Project would not exceed wastewater treatment requirements of the Santa Ana RWQCB. Wastewater treatment and collection services would be provided by EMWD and EMWD is required to operate all of its treatment facilities in accordance with applicable waste treatment and discharge standards and requirements set forth by the RWQCB. The proposed Project would not install or use septic systems or alternative wastewater treatment systems.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
Threshold 2: Water would be conveyed to the site through EMWD's existing water line network. Wastewater would be conveyed from the site through EMWD's existing wastewater collection network and treated at existing EMWD treatment facilities. With the exception of water and sewer conveyance lines that would be installed during the Project's construction, the Project would not require the construction of any new water or wastewater systems that have the potential to cause significant environmental effects. No new or expanded capacities or entitlements would be required.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
Threshold 3: Stormwater would be collected on the Project site by an on-site drainage system installed during the Project's construction. With the exception of stormwater conveyance facilities and detention basins that would be installed during the Project's construction, the Project would not require the construction of any new stormwater drainage facilities that have the potential to cause significant environmental effects.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
Threshold 4: Sufficient water supplies are available to service the Project. EMWD would service the Project based on planned nd existing water supplies as documented in s Urban Water Management Plan and a ater supply assessment prepared for the roject.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact

THRESHOLD	PROJECT REQUIREMENTS (PR) AND MITIGATION MEASURES (MM)	RESPONSIBLE PARTY	MONITORING PARTY	IMPLEMENTATION STAGE	LEVEL OF SIGNIFICANCE
Threshold 5: EMWD would provide wastewater treatment services to the Project site via the Moreno Valley Regional Water Reclamation Facility and the Perris Valley Regional Water Reclamation Facility. Both of these facilities have adequate capacity to service the Project and no new or expanded facilities would be needed.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
Threshold 6: There is adequate capacity available at the El Sobrante, Badlands, and Lamb Canyon landfills to accept the Project's solid wastes. Landfill capacity would not be exceeded as a result of the proposed Project.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact
Threshold 7: The Project would comply with all applicable federal, state, and local statutes and regulations related to solid waste disposal, reduction, and recycling.	Mitigation is not required.	N/A	N/A	N/A	Less than Significant Impact

1.0 INTRODUCTION

1.1 PURPOSES OF CEQA AND THIS EIR

As stated by CEQA Guidelines §15002, the basic purposes of CEQA are to:

- Inform governmental decision makers and the public about the potential, significant environmental effects of proposed [government actions (including the discretionary approval of development projects)];

- Identify the ways that environmental damage can be avoided or significantly reduced;

- Prevent significant, avoidable damage to the environment by requiring changes in projects through the use of alternatives or mitigation measures when the governmental agency finds the changes to be feasible; and

If a project will be approved involving significant environmental effects,

- Disclose to the public the reasons why a governmental agency approved the project in the manner the agency chose.

This Environmental Impact Report (EIR, P11-005) is an informational document prepared by the City of Moreno Valley to evaluate the physical environmental effects that could be caused by constructing and operating the March Business Center Project (hereafter, the "Project"). The Project proposes governmental approvals of a General Plan Amendment (PA11-0001), Specific Plan Amendment (P11-004), Tentative Parcel Map No. 35879 (PA11-0007), Master Plot Plan (PA11-0002), four (4) individual Building Plot Plans (PA11-0003, PA11-0004, PA11-0005, and PA11-0006), and other related discretionary and administrative actions that are required to construct and operate the Project described in this EIR.

The Project is proposed on a 75.05-acre property located at the southeast corner of Heacock Street and Iris Avenue in the City of Moreno Valley, Riverside County, California. The City of Moreno Valley's Specific Plan 208, titled "Moreno Valley Industrial Area Plan" (MVIAP), designates the property for development as "Industrial." The northwestern corner of the property located within an "Industrial Support Area" overlay that allows for commercial or industrial support land uses to be located within 300 feet of key roadway intersections, including Iris Avenue/Heacock Street at the property's northwestern corner. The City of Moreno Valley's General Plan Land Use Map, which is intended to reflect the land use designations applied to the site by Specific Plan 208, designates the property for development with "Business Park/Light Industrial (BP)" land uses, with the northwestern corner of the property designated as "Commercial." The General Plan's designation of the northwestern portion of the site as "Commercial" is intended to correspond to the Specific Plan's "Industrial Support Area" overlay designation. Consistent with these land use designations, the property's zoning designation is Industrial (I).

The proposed Project is consistent with the property's land use designations as applied by the City of Moreno Valley General Plan and the Moreno Valley Industrial Area Plan (Specific Plan 208), as well as the property's zoning designation. CEQA Guidelines §15183(a) mandates that projects which are

consistent with the development density established by existing zoning, community plan, or general plan policies for which an EIR was certified, shall not require additional environmental review, except as might be necessary to examine whether there are project-specific significant effects which are peculiar to the project or its site. In this case, the subject property was evaluated as part of an EIR certified in 1989 for Specific Plan 208 (State Clearinghouse Number 1988080813) and as part of the City's General Plan Program EIR certified in 2006 (State Clearinghouse Number 2000091075). Therefore, as mandated by CEQA Guidelines §15183(a), this EIR focuses on project-specific effects that are peculiar to the proposed March Business Center project and its 75.05-acre property.

An Initial Study was prepared by the City of Moreno Valley pursuant to CEQA Guidelines §15063 to determine if the Project could have a significant effect on the environment. The Initial Study determined that implementation of the Project has the potential to result in significant environmental effects, and a Project EIR, as defined by CEQA Guidelines §15161, is required. As stated in CEQA Guidelines §15161, a Project EIR should "…focus primarily on the changes in the environment that would result from the development project," and "…examine all phases of the project including planning, construction, and operation."

Accordingly, and in conformance with CEQA Guidelines §15121(a), the purposes of this EIR are to: (1) disclose information by informing public agency decision makers and the public generally of the significant environmental effects associated with all phases of the Project, (2) identify possible ways to minimize or avoid those significant effects, and (3) to describe a reasonable range of alternatives to the Project that would feasibly attain most of the basic Project objectives but would avoid or substantially lessen its significant environmental effects.

1.2 SUMMARY OF THE PROJECT EVALUATED BY THIS EIR

For purposes of this EIR, the term "Project" refers to the discretionary actions required to implement the March Business Center as proposed and all of the activities associated with its implementation, including planning, construction, and ongoing operation. In summary, the Project proposes the construction and operation of a business center with up to 1,484,407 square feet (s.f.) of building space, as well as surface parking areas and drive aisles, loading docks, roadway improvements, utility infrastructure, landscaping, water quality/detention basins, and other site improvements.

The Project proposes the following discretionary actions, which are under consideration by the City of Moreno Valley:

- **General Plan Amendment (PA11-0001)** proposes to amend the Circulation Element of the City of Moreno Valley General Plan to modify the design and classification of an undeveloped segment of Krameria Avenue that is designated by the General Plan to traverse through the Project site.

- **Specific Plan Amendment (P11-004)** proposes to amend the Moreno Valley Industrial Area Plan (Specific Plan 208) to modify the design and classification of an undeveloped segment of Krameria Avenue that is designated by the Specific Plan to traverse through the Project site.

- **Tentative Parcel Map No. 35879 (PA11-0007)** proposes to subdivide the 75.05-acre Project site into four (4) parcels to accommodate the development and operation of a business park,

and would provide for roadway improvements (including dedication of public right-of-way to the City of Moreno Valley) and installation of utility infrastructure, water quality/detention basins, and other site improvements.

- **Master Plot Plan (PA11-0002) & Individual Plot Plans (PA11-0003, -0 004, -0005, and –0006)** provide a land use plan, architectural plans, and landscape design for each of the four (4) buildings that are proposed to be constructed on the Project site. A maximum of 1,484,407 s.f. of building area is proposed to be provided on the site.

Refer to EIR Section 3.0, Project Description, for a detailed description of the proposed Project, including a listing of permits and actions that would be required of the City of Moreno Valley as well as other agencies and authorities.

1.3 PROJECT HISTORY

The proposed Project site is located within the geographical limits of the City of Moreno Valley's Moreno Valley Industrial Area Plan (Specific Plan 208). The Moreno Valley Industrial Area Plan was originally referred to as the Oleander Specific Plan when first approved by the City in 1989; but, was renamed as the Moreno Valley Industrial Area Plan in 2001 after the plan was amended to expand the Specific Plan boundaries. The Moreno Valley Industrial Area Plan was amended again in 2002 in order to consolidate the "Business Park," "Mixed Use," "Light Industry," and "Heavy Industrial" land use designations of the original Specific Plan within a single "Industrial" land use classification.

The Project site was the subject of previous environmental review under CEQA as part of an EIR certified in 1989 for the Oleander Specific Plan (SCH No. 1988080813). The Project site also was evaluated as part of the City of Moreno Valley's General Plan Program EIR (SCH No. 2000091075), certified July 11, 2006.

In 2008, an application was submitted to the City of Moreno Valley to develop the Project site as an business center, consistent with the property's General Plan and Specific Plan land use designations and zoning designation of Industrial (I). The application, which consisted of a General Plan Amendment (PA08-0057), Specific Plan Amendment (P08-060), Tentative Parcel Map (PA07-0151), Master Plot Plan (PA07-0152), and four (4) individual Building Plot Plans (PA07-0153, PA07-0154, PA07-0155, PA07-0156) was approved by the Moreno Valley City Council on August 25, 2009 (hereafter, the "prior project"). In June 2010, the approval was rescinded in response to judgment entered in an action entitled *Residents for a Livable Moreno Valley v. City of Moreno Valley*, Riverside County Superior Court, Case No. RIC 536464 (hereafter, the "Action").

A Mitigated Negative Declaration (MND) was prepared by the City of Moreno Valley pursuant to CEQA Guidelines Article 6 (§§15070 though 15075) that supported the City's decision to approve the prior project. The MND concluded that although development of the site as proposed by the prior project would have resulted in significant environmental effects, all of those effects could be mitigated to below established thresholds of significance. On September 18, 2009, the Action was filed in Riverside County Superior Court to challenge approval of the prior project pursuant to the MND. In June 2010, the Court entered judgment and issued a peremptory writ of mandate in the Action, directing the City of Moreno Valley to set aside its approval of the prior project and the

MND on the ground that there was substantial evidence that construction noise resulting from the prior project would pose a significant impact on the environment.

This EIR evaluates a newly-submitted set of applications for development of the Project site, as described in detail in Section 3.0, Project Description. The currently proposed Project is nearly identical in design to the prior project that was rescinded. The proposed Project's physical layout and development intensity remain unchanged from the prior project approval; the only differences are relatively minor, technical changes to conform to newly-updated City plans and standards (*e.g.*, modified net parcel acreages, roadway cross-section details, landscaping plans).

This EIR represents a full and complete analysis of the proposed Project as required by CEQA. In Section 4.0, Environmental Analysis, some of the methodologies and conclusions differ from those previously presented in the MND to take into account, but not limited to: 1) a baseline environmental setting of June 2011 (the date this EIR's Notice of Preparation (NOP) was released for public review), 2) input from the public about the environmental issues of concern as identified in responses to the NOP; 3) the availability of new technical studies and information applicable to the Project, the Project site, and/or the environmental resources potentially affected by the Project; 4) amendments to the State CEQA Guidelines; 5) amendments to and adoption of state and federal regulations pertaining directly or indirectly to the environmental resources potentially affected by the Project; 6) the release of updated computer models for calculating air quality emissions (California Emissions Estimating Model™ (CALEEMod™, 2011) and traffic distribution (Syncro Version 7, Build 759) impacts; and 7) additions to CEQA case law.

1.4 LEGAL AUTHORITY

This EIR has been prepared in accordance with all criteria, standards, and procedures of CEQA (California Public Resource Code Section 21000 *et seq.*) and the CEQA Guidelines (California Code of Regulations, Title 14, Division 6, Chapter 3, Section 15000 *et seq.*).

Pursuant to CEQA §21067 and CEQA Guidelines Article 4 and §15367, the City of Moreno Valley is the Lead Agency under whose authority this EIR has been prepared. "Lead Agency" refers to the public agency that has the principal responsibility for carrying out or approving a project. Serving as the Lead Agency and before taking action to approve the Project, the City of Moreno Valley has the obligation to: (1) ensure that this EIR has been completed in accordance with CEQA; (2) review and consider the information contained in this EIR as part of its decision making process; (3) make a statement that this EIR reflects the City of Moreno Valley's independent judgment; (4) ensure that all significant effects on the environment are eliminated or substantially lessened where feasible; and, if necessary (5) make written findings for each unavoidable significant environmental effect stating the reasons why mitigation measures or project alternatives identified in this EIR are infeasible and citing the specific benefits of the proposed Project that outweigh its unavoidable adverse effects (CEQA Guidelines §§15090 through 15093).

Pursuant to CEQA Guidelines §§15040 through 15043, and upon completion of the CEQA review process, the City of Moreno Valley will have the legal authority to do any of the following:

- Approve the proposed Project;

- Require feasible changes in any or all activities involved in the Project in order to substantially lessen or avoid significant effects on the environment;

- Disapprove the Project, if necessary, in order to avoid one or more significant effects on the environment that would occur if the Project was approved as proposed; or

- Approve the Project even through the Project would cause a significant effect on the environment if the City makes a fully informed and publicly disclosed decision that: 1) there is no feasible way to lessen the effect or avoid the significant effect; and 2) expected benefits from the Project will outweigh significant environmental impacts of the Project.

This EIR fulfills the CEQA environmental review requirements for the proposed General Plan Amendment (PA11-0001), Specific Plan Amendment (P11-004), Tentative Parcel Map No. 35879 (PA11-0007), Master Plot Plan (PA11-0002), four (4) individual Building Plot Plans (PA11-0003, PA11-0004, PA11-0005, and PA11-0006) and all other governmental discretionary and administrative actions related to the Project.

This EIR is an informational document intended for use by the City of Moreno Valley decision makers, Trustee and Responsible agencies, and members of the general public in evaluating the physical environmental effects of the proposed Project. As mandated by CEQA Guidelines §15183(a), this EIR focuses on the specific environmental effects that are peculiar to the proposed Project and its property, because designation of the property for industrial/business park development was previously and adequately evaluated in accordance with CEQA by two prior EIRs (an EIR certified in 1989 for Specific Plan 208 (State Clearinghouse Number 1988080813) and the City's General Plan Program EIR certified in 2006 (State Clearinghouse Number 2000091075)). As such, that analysis does not need to be repeated.

1.5 RESPONSIBLE AND TRUSTEE AGENCIES

Section 21104 of the California Public Resource Code requires that all EIRs be reviewed by state responsible and trustee agencies (see also CEQA Guidelines §15082 and §15086(a)). As defined by CEQA Guidelines §15381, "the term 'Responsible Agency' includes all public agencies other than the Lead Agency which have discretionary approval power over the project." A Trustee Agency is defined in CEQA Guidelines §15386 as "a state agency having jurisdiction by law over natural resources affected by a project which are held in trust for the people of the State of California."

For the proposed Project, Table 1-1, *Responsible and Trustee Agencies*, lists the agencies that are identified as Responsible and/or Trustee Agencies with respect to the environmental resources potentially affected by the proposed Project. The table also identifies the action or discretionary decision each agency is required to make associated with the Project.

Table 1-1 Responsible and Trustee Agencies

AGENCY	ENVIRONMENTAL RESOURCE	ACTION/DECISION
Responsible Agencies		
U.S. Army Corps of Engineers	Jurisdictional wetlands and waterways	Issuance of a Section 404 Permit pursuant to the Clean Water Act.
Trustee Agencies		
California Department of Fish and Game	Jurisdictional wetlands and waterways	Issuance of a Section 1602 Streambed Alteration Agreement pursuant to the Fish and Game Code.
Santa Ana Regional Water Quality Control Board	Jurisdictional wetlands and waterways and protection of water resources (water quality)	Issuance of a Section 401 Permit pursuant to the Clean Water Act. Issuance of National Pollution Discharge Elimination System (NPDES) Permit to ensure that during and after construction, on-site water flows do not result in siltation, other erosional actions, or degradation of surface or subsurface water quality.

1.6 EIR SCOPE, FORMAT, AND CONTENT

1.6.1 EIR SCOPE

As a first step in complying with the procedural requirements of CEQA, an Initial Study was prepared by the City of Moreno Valley to preliminarily identify the environmental issue areas that may be adversely impacted by the Project. Following completion of the Initial Study, the City filed a NOP with the California Office of Planning and Research (State Clearinghouse) to indicate that an EIR would be prepared to evaluate the Project's potential to impact the environment. The NOP was filed with the State Clearinghouse and distributed to Responsible Agencies, Trustee Agencies, and other interested parties on June 13, 2011, for a 30-day public review period. The objective of distributing the NOP for public review was to solicit responses to assist the City in identifying the full scope and range of potential environmental concerns associated with the Project so that these issues could be fully examined in this EIR. In addition, a publicly noticed EIR Scoping Meeting was held at the Moreno Valley City Hall on June 29, 2011, which provided members of the general public an additional opportunity to comment on the scope and range of potential environmental concerns to be addressed in this EIR.

As a result of the Initial Study and in consideration of all comments received by the City on the NOP and during the Scoping Meeting, this EIR evaluates the Project's potential to cause adverse effects to the following environmental issue areas:

- Aesthetics
- Air Quality
- Biological Resources
- Cultural Resources
- Geology/Soils
- Greenhouse Gas Emissions
- Hazards & Hazardous Materials
- Hydrology/Water Quality
- Land Use/Planning
- Noise
- Transportation/Traffic
- Utilities/Service Systems

The Initial Study, NOP, public review distribution list, and written comments received by the City during the 30-day NOP public review period are provided in *Technical Appendix A* to this EIR. Substantive issues raised in response to the NOP are summarized below in Table 1-2, *Summary of NOP Comments*. The purpose of this table is to present the primary environmental issues of concern raised during the NOP review period. The table is not intended to list every comment received by the City during the NOP review period. Regardless of whether or not a comment is listed in the table, all applicable comments received in responses to the NOP and at the EIR Scoping Meeting are addressed in this EIR.

Table 1-2 Summary of NOP Comments

• Potential project-related impacts to circulation facilities located in the City of Riverside.
• Potential exposure of the Project site to adverse noise and safety impacts and potential land use compatibility issues with March Air Reserve Base.
• Potential impacts to wells used to monitor the March Air Reserve Base groundwater plume.
• Potential impacts to sensitive cultural resources that may be present beneath the property's surface.
• Potential exposure of people and/or structures on the Project site to hazards associated with the 100-year floodplain.
• Potential impacts to public services, in consideration of financial issues facing government agencies.
• Potential impacts to the State highway system and other regionally significant roadways.
• Potential impacts on air quality and to human health resulting from Project construction and anticipated operation (including direct and indirect effects from Project traffic).

The issue of near-term construction-related noise is identified by the Lead Agency as an area of controversy associated with the proposed Project. In consideration of all comments received in response to the NOP, the City of Moreno Valley has identified no additional areas of controversy raised by agencies and/or the public.

1.6.2 EIR FORMAT AND CONTENT

This EIR contains all of the information required to be included in an EIR as specified by the CEQA Statutes and Guidelines (California Public Resources Code, Section 21000 *et. seq.* and California Code of Regulations, Title 14, Chapter 5). CEQA requires that an EIR contain, at a minimum, certain specified content. Table 1-3, *Location of CEQA Required Topics*, provides a quick reference in locating the CEQA-required sections within this document.

Table 1-3 Location of CEQA-Required Topics

CEQA REQUIRED TOPIC	CEQA GUIDELINES REFERENCE	LOCATION IN THIS EIR
Table of Contents	§15122	Table of Contents
Summary	§15123	Section S.0
Project Description	§15124	Section 3.0
Environmental Setting	§15125	Section 2.0
Consideration and Discussion of Environmental Impacts	§15126	Section 4.0
Significant Environmental Effects Which Cannot be Avoided if the Proposed Project is Implemented	§15126.2(b)	Section 4.0 & Subsection 5.1
Significant Irreversible Environmental Changes Which Would be Caused by the Proposed Project Should it be Implemented	§15126.2(c)	Subsection 5.2
Growth-Inducing Impact of the Proposed Project	§15126.2(d)	Subsection 5.3
Consideration and Discussion of Mitigation Measures Proposed to Minimize Significant Effects	§15126.4	Section 4.0 & Table S-1
Consideration and Discussion of Alternatives to the Proposed Project	§15126.6	Section 6.0
Effects Not Found to be Significant	§15128	Subsection 5.4
Organizations and Persons Consulted	§15129	Section 7.0 & Technical Appendices
Discussion of Cumulative Impacts	§15130	Section 4.0

In summary, the content and format of this EIR is as follows:

- **Section 1.0, Introduction,** provides introductory information about the CEQA process and the responsibilities of the City of Moreno Valley, serving as the Lead Agency for this EIR.

- **Section 2.0, Environmental Setti ng,** describes the environmental setting, including descriptions of the Project site's physical conditions and surrounding context. The existing setting is defined as the condition of the Project site and surrounding area at the date this EIR's NOP was released for public review (June 13, 2011).

- **Section 3.0, Project Description,** serves as the EIR's Project Description for purposes of CEQA and contains a level of specificity commensurate with the level of detail proposed by the Project, including the summary requirements pursuant to CEQA Guidelines §15123.

- **Section 4.0, Environmental Analysis**, provides an analysis of potential direct, indirect, and cumulative impacts that may occur with implementation of the proposed Project. A conclusion concerning significance is reached for each discussion; mitigation measures are presented as warranted. The environmental changes identified in Section 4.0 and throughout this EIR are referred to as "effects" or "impacts" interchangeably. The CEQA Guidelines also identify the terms "effects" and "impacts" as being synonymous (CEQA Guidelines §15358). In the environmental analysis subsections of Section 4.0, the existing conditions are disclosed that are pertinent to the subject area being analyzed, accompanied by a specific analysis of physical impacts that may be caused by implementation of the proposed Project. The analyses are based in part upon technical reports that are appended to this EIR. Information also is drawn from other sources of analytical materials that directly or indirectly relate to the proposed Project and cited in Section 7.0, References. Where the analysis demonstrates that a physical adverse environmental effect may or would (without undue speculation) occur, feasible mitigation measures are recommended to reduce or avoid the significant effect. In most cases, implementation of the mitigation measures would reduce the adverse environmental impact to below a level of significance. If mitigation measures are not available or feasible to reduce an identified impact to below a level of significance, the environmental effect is identified as a significant and unavoidable adverse impact, for which a statement of overriding considerations would need to be adopted by the City of Moreno Valley pursuant to CEQA §15093.

- **Section 5.0, Other CE QA Considerations**, includes specific topics that are required by CEQA. These include a summary of the Project's significant and unavoidable environmental effects, a discussion of the significant and irreversible environmental changes that would occur should the Project be implemented, as well as potential growth-inducing impacts of the proposed Project. Section 5.0 also includes a discussion of the potential environmental effects that were found not be significant during this EIR's Initial Study and NOP process and that, therefore, do not require a detailed evaluation in this EIR.

- **Section 6.0, Project Al ternatives,** describes and evaluates alternatives to the proposed Project that could reduce or avoid the Project's adverse environmental effects. CEQA does not require an EIR to consider every conceivable alternative to the Project but rather to consider a reasonable range of alternatives that will foster informed decision making and public participation. A range of three (3) alternatives is presented in Section 6.0.

- **Section 7.0, References,** cites all reference sources used in preparing this EIR and lists the agencies and persons that were consulted in preparing this EIR. Section 7.0 also lists the persons who authored or participated in preparing this EIR.

- **Technical Appendices.** CEQA Guidelines §15147 states that the "information contained in an EIR shall include summarized…information sufficient to permit full assessment of significant environmental impacts by reviewing agencies and members of the public," and that the "placement of highly technical and specialized analysis and data in the body of an EIR shall be avoided." Therefore, the detailed technical studies, reports, and supporting documentation that were used in preparing this EIR are bound separately as Technical Appendices. The Technical Appendices are available for review at the City of Moreno Valley Community and Economic Development Department, Planning Division, 14177

Frederick Street, Moreno Valley, California, 92552, during the City's regular business hours or can be requested in electronic form by contacting the City. The individual technical studies, reports, and supporting documentation that comprise the Technical Appendices are as follows:

A: Initial Study, Notice of Preparation, and Written Comments on the NOP
B1: Air Quality Impact Analysis
B2: Mobile Source Health Risk Assessment
C: Biological Resources Report
D: Cultural Resources Report
E: Geotechnical Investigation
F: Greenhouse Gas Analysis
G1: Phase I Environmental Assessment
G2 Addendum to Phase I Environmental Assessment
H1: Hydrology Report
H2: Water Quality Management Plan
I1: Noise Report
I2: Supplemental Construction Noise Analysis
J: Traffic Impact Analysis
K1: Water Supply Assessment
K2: Supplement to Water Supply Assessment
L: Written Correspondence

- **Documents Incorporated by Refe rence.** CEQA Guidelines §15150 allows for the incorporation "by reference all or portions of another document…[and is] most appropriate for including long, descriptive, or technical materials that provide general background but do not contribute directly to the analysis of a problem at hand." Documents, analyses, and reports that are incorporated into this EIR by reference are listed in Section 7.0, References, of this EIR. The purpose of incorporation by reference is to assist the Lead Agency in limiting the length of an EIR. Where this EIR incorporates a document by reference, the document is identified in the body of the EIR, citing the appropriate section(s) of the incorporated document and describing the relationship between the incorporated part of the referenced document and this EIR.

2.0 ENVIRONMENTAL SETTING

2.1 REGIONAL SETTING AND LOCATION

The 75.05-acre Project site is located in the City of Moreno Valley, in western Riverside County, California. Western Riverside County abuts San Bernardino County to the northeast, Orange County to the west and San Diego County to the south. The site's location in a regional context is shown on Figure 3-1, *Regional Map*, in Section 3.0, Project Description.

Riverside County is located in an urbanizing area of southern California commonly referred to as the Inland Empire. The Inland Empire is an approximate 28,000 square mile region comprising San Bernardino County, Riverside County, and the eastern tip of Los Angeles County. According to the Southern California Association of Governments (SCAG), this region is a fast-growing metropolitan area with large amounts of available land for future growth (SCAG, 2008a, 59-68). According to U.S Census data, the 2010 population of Riverside County was 2,189,641 (U.S. Census Bureau, 2011). SCAG forecast models predict that the population of Riverside County will grow to approximately 3.59 million persons (an approximate 1.4 million person increase) by the Year 2035 (SCAG, 2008b).

Unincorporated areas of Riverside County in the vicinity of the Project site include the unincorporated communities of Woodcrest and Mead Valley to the west and southwest, the unincorporated communities of Reche Canyon and Pigeon Pass to the north, and the unincorporated community of Lakeview and rugged terrain known as the "Badlands" to the east. The Project site is generally located to the north and northeast of the City of Perris and to the southeast of the City of Riverside. Additionally, the March Air Reserve Base (ARB) is located immediately west of the site, west of Heacock Street.

The Project site's relationship to regional aspects of land use, traffic, air quality, hydrology, and geology, among other physical environmental conditions, are identified in Section 4.0, Environmental Analysis, of this EIR.

2.2 LOCAL SETTING AND LOCATION

The Project site is located within the southern portion of the City of Moreno Valley. The property is rectangular-shaped and located immediately east of Heacock Street, approximately 1,300 feet west of Indian Street, and immediately south of Iris Avenue. A majority of the 75.05-acre site is located north of the Perris Valley Channel, with the exception of 1.84 acres of the site located to the southwest of the Channel. Figure 3-2, *Vicinity Map*, in Section 3.0, Project Description, depicts the specific location of the Project site. The property encompasses Assessor Parcel Numbers (APNs) 316-020-032, 316-020-033, 316-020-034, 316-020-035, 316-020-036 and occupies a portion of Section 30, Township 3 South, Range 3 West of the San Bernardino Base and Meridian.

Land within the southwestern portion of the City, including the Project site, is located with an area subject to the City's adopted Moreno Valley Industrial Area Plan (Specific Plan 208). Property in the Area Plan's boundaries was once rural in nature, but over the past decade has been transitioning into an important industrial and economic center for the City, as called for by the Area Plan. Several large-scale industrial and warehouse buildings have been developed and there are several approved development projects in this area that are pending construction. West of the Project site is the March Air Reserve Base (ARB), which was established as a military airport in 1918 and operated as March

Air Force Base until 1996 when it was transitioned to a reserve base. Today, the property contains an airfield, military uses, aviation-related uses, and areas designated for civilian development called the March Inland Port Airport (IPA). Subsection 2.3, below, describes the conditions surrounding the Project site in more detail.

2.3 SURROUNDING LAND USES AND DEVELOPMENT

Figure 2-1, *Surrounding Land Uses and Development*, illustrates the existing land uses and land use designations in the vicinity of the Project site. To the west of the Project site is Heacock Street, beyond which is the March ARB/IPA, which is governed by the March Joint Powers Authority (JPA). The JPA has the same land use authorities over the properties under its jurisdiction as would any city or other municipal government. Interstate 215 (I-215) is located west of the March ARB/IPA, about 1.4 miles west of the Project site.

Immediately abutting the Project site to the east is a rectangular-shaped parcel of vacant land comprising about 72 acres that is approved for industrial development by the City of Moreno Valley (Indian Business Park, PA07-0079, PA07-0080, PA07-121, P07-0093, and PA08-0018). As of June 2011 (when the NOP for this EIR was released for public review), construction of the Indian Business Park had not begun; however, this parcel is expected to be developed as approved, containing 1,560,046 s.f. of building area for business park/light industrial uses. East of the future Indian Business Center (east of Indian Street) are detached single-family residences, two (2) schools (Rainbow Ridge Elementary School and March Middle School) and three (3) churches (Imani Praise Fellowship, New Light Missionary Baptist Church, and the Strong Tower Church of God in Christ). Further to the east (east of Perris Boulevard) are two (2) additional schools (Val Verde Academy and Morning Dove Christian Academy).

To the north of the Project site is Iris Avenue, north of which are two vacant, undeveloped parcels that are approved by the City of Moreno Valley for future development as industrial and residential land uses. The land immediately north of the Project site and Iris Avenue is approved for the development of the Moreno Valley Industrial Park (PA07-0035, PA07-0039, and PA08-0021), which includes the development of an approximately 31-acre site with up to 619,127 square feet of building area for business park/light industrial uses. Immediately north of the approved but yet undeveloped Moreno Valley Industrial Park is a vacant parcel approved for the development of 135 detached, single-family homes (TM34748; located at the southeast corner of Gentian Avenue and Heacock Street). North of Iris Avenue and diagonal from the Project site's northeastern corner is an existing development of detached single-family homes, separated from Iris Avenue by a solid block wall.

Properties to the immediate south and southeast of the Project site are undeveloped and are designated by the Moreno Valley General Plan and the Moreno Valley Industrial Area Plan for business park/light industrial land uses. Two (2) existing industrial/warehouse buildings are located approximately 0.15-mile south of the Project site.

2.4 PLANNING CONTEXT

Provided in this subsection is a description of the Project site's land use designations, as applied by planning documents adopted by the City of Moreno Valley. Refer to Subsection 4.9, Land Use and Planning, for a more thorough discussion of the Project site's planning context, including a discussion of applicable local and regional plans.

2.4.1 CITY OF MORENO VALLEY GENERAL PLAN

The City of Moreno Valley's prevailing planning document is its General Plan, dated July 11, 2006. As depicted on Figure 2-2, *Existing General Plan Land Use Designations*, the City's General Plan designates a majority of the Project site for Business Park/Light Industrial (BP) land uses. The northwest corner of the site is designated for Commercial (C) land uses. The Business Park/Light Industrial land use designation calls for employee intensive uses, including manufacturing, research and development, warehousing and distribution, as well as office and support commercial activities, with a building intensity up to 1.0 floor area ratio (FAR). The Commercial land use designation calls for local retail and service commercial activities, with a building intensity up to 1.0 FAR. A more detailed discussion of the Project's relationship to the General Plan is provided in Subsection 4.9, Land Use and Planning.

2.4.2 MORENO VALLEY INDUSTRIAL AREA PLAN (SPECIFIC PLAN 208)

The Project site is located within the geographic boundaries of the Moreno Valley Industrial Area Plan (Specific Plan 208). As stated in the Area Plan, the Moreno Valley Industrial Area Plan "establishes development regulations and design standards that will ensure quality development which will positively contribute to the City's industrial employment base…" (City of Moreno Valley, 2002 I-4). The Moreno Valley Industrial Area Plan designates a majority of the subject property for Industrial land uses. The northwestern corner of the site is designated as an Industrial Support Area (see Figure 2-3, *Moreno Valley Industrial Area Plan Map*). The Industrial designation provides for a wide range of industrial land uses, while the Industrial Support Area provides for services to support industrial services without affecting the integrity of lands available for industrial uses.

2.4.3 ZONING

The development regulations and design standards contained within the Moreno Valley Industrial Area Plan (Specific Plan 208) supersede the zoning standards contained in the City's Municipal Code. The Area Plan applies the "Industrial (I)" zoning designation to the proposed Project site, which permits a wide range of industrial and industrial/business related support uses. As shown on Figure 2-3, the Moreno Valley Industrial Area Plan also designates the northeastern corner of the Project site as part of a "300' Residential Buffer," which requires the maintenance of a 300-foot buffer between industrial and residential land uses, although permitted uses may encroach into this buffer zone as necessary to maintain the integrity of industrial uses. Refer to the Moreno Valley Industrial Area Plan (Specific Plan 208), Section III, Development Standards and Guidelines, for more information. The Moreno Valley Industrial Area Plan is herein incorporated by reference pursuant to CEQA Guidelines §15150 and is available for review at the physical location indicated in Subsection 7.2, Documents Incorporated by Reference.

2.5 EXISTING PHYSICAL SITE CONDITIONS

Pursuant to CEQA Guidelines §15125, the physical environmental condition for purposes of establishing the setting of an EIR is the environment as it existed at the time the EIR's NOP was released for public review. The NOP for this EIR was released for public review on June 13, 2011, and the following subsections provide a description of the Project site's physical environmental condition as of that approximate date. More information regarding the Project's site's environmental setting is provided in the various subsections of Section 4.0, Environmental Analysis.

2.5.1 LAND USE

The area surrounding the Project site, as described previously in Subsection 2.3, is characterized by undeveloped fields and developed lands. The Project site is not used for agricultural production and is not located in an agricultural area. There are no Williamson Act Contract lands or Agricultural Preserves located on the site or in the surrounding area.

The Project site is undeveloped and routinely maintained (*i.e.*, disked) as required by the Riverside County Fire Marshall to remove vegetation from the site to reduce the risk of fire. A horse track and a small structure or residence were previously located in the northwestern portion of the subject property; however, both of these features have been removed from the site. The former locations of these features are visible on Figure 2-3, *Aerial Photograph*. Also visible on the photograph is a segment of the Perris Valley Channel that extends through the southwestern corner of the Project site. This reach of the Perris Valley Channel consists of a trapezoidal concrete-lined facility near Heacock Street and transitions to an earthen channel approximately 150 feet east of the roadway. The Channel is enclosed by chain-link fencing. The Channel is considered not-a-part of the Project site.

Refer to Subsection 4.9, Land Use and Planning, for a more thorough discussion of the Project site's existing land use setting.

2.5.2 TOPOGRAPHY AND AESTHETICS

The Project site is generally flat, with the exception of an earthen mound and a small berm located in the northern portion of the property. Topographic elevations range from a high point of approximately 1,502 feet above mean sea level (AMSL) to a low point of approximately 1,488 feet AMSL, resulting in a maximum topographic relief of approximately 14 feet. Aesthetically, the Project site is characterized as a flat, vacant parcel. There are no unique topographic or aesthetic features present on the property. Figure 2-5, *Topographic Map*, depicts the Project site's existing topographic conditions.

Refer to Subsection 4.1, Aesthetics, for a more thorough discussion of the Project site's existing topographic and aesthetic setting.

2.5.3 GEOLOGY

As documented in the Project's geotechnical report (*Technical Appendix E* to this EIR), the Project site is located within the Peninsular Range Geomorphic Province, which is a prominent natural geomorphic province that extends from the Santa Monica Mountains approximately 900 miles south to the tip of Baja California, Mexico, and is bounded to the east by the Colorado Desert. The Peninsular Range is characterized by steep, elongated ranges and valleys that generally trend northwesterly. More specifically, the Project site is situated within the Perris Block unit, which is an eroded mass of Cretaceous and older crystalline and metamorphic rock.

Based on geological investigations of the Project site conducted by NorCal Engineering (refer to *Technical Appendix E* of this EIR), the earth materials on the site consist of topsoil and alluvium, underlain by bedrock. Topsoil generally consists of dry to damp and loose silty sands to sandy silts with intermixed organics (i.e., roots of surface vegetation) to an average depth of 12 to 16 inches. Beneath the topsoil there is undisturbed alluvium consisting of medium dense/stiff and damp to moist

silty and clayey sands to sandy silts. No groundwater was encountered during subsurface soil borings conducted by NorCal. Based on information available from Eastern Municipal Water District's (EMWD's) West San Jacinto Groundwater Basin Management Plan 2009 Annual Report, groundwater is known to occur at depths of approximately 44 feet below the existing ground surface (EMWD 2010).

The Project site is not located within an active Alquist-Priolo earthquake zone or a City-designated fault hazard zone, meaning that no active faults are mapped or known to exist on the Project site or in the immediate surrounding area (*Technical Appendix E* 5-6). The nearest known active fault is the San Jacinto Valley section of the San Jacinto Fault zone (Casa Loma Fault) located approximately eight (8) miles east of the Project site.

Refer to Subsection 4.5, Geology and Soils, for a more thorough discussion of the Project site's existing geologic setting.

2.5.4 HYDROLOGY

The Project site is located in the Santa Ana River watershed, which drains a 2,650 square-mile area and is the principal surface flow water body within the region (SAWPA, 2010 Ch. 3). The San Jacinto River drains the area in the vicinity of the Project site. It starts in the San Jacinto Mountains (approximately 30 miles southeast of the proposed Project site), runs westerly through the City of Canyon Lake, and typically discharges into Lake Elsinore. In wet years, the San Jacinto River will overflow the lake and connect with the Santa Ana River through the Temescal Wash (SAWPA, 2010 Ch. 3).

As documented in the Project's hydrology report (*Technical Appendix H1* to this EIR) and water quality management plan (*Technical Appendix H2* to this EIR), the Perris Valley Storm Drain Channel traverses the southwestern corner of the Project site and conveys drainage towards the southeast and south towards the San Jacinto River. Under existing conditions, the Perris Valley Channel splits the Project site into two separate drainage areas. The majority of the Project site is located north of the Channel and flows are directed in a southerly direction, with flows discharging at a point approximately 260 feet west of the southwestern corner of the Project site. The portion of the Project site located southwest of the Channel generally drains towards the southeast, and discharges at the southeast corner of the property. Flows from both portions of the site are conveyed to the Perris Valley Channel. Flows are then conveyed by the Perris Valley Channel to the San Jacinto River.

Refer to Subsection 4.8, Hydrology and Water Quality, for a more thorough discussion of the Project's site existing hydrologic setting.

2.5.5 AIR QUALITY AND CLIMATE

The Project site is located in the 6,745-square-mile South Coast Air Basin (SCAB), which includes portions of Los Angeles, Riverside, and San Bernardino Counties, and all of Orange County. The SCAB is bound by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The SCAB is within the jurisdiction of South Coast Air Quality Management District (SCAQMD), the agency charged with bringing air quality in the SCAB into conformity with federal and state air quality standards. The SCAB is currently not in attainment of state and/or federal standards established for Ozone (O_3) one-hour and eight-hour, particulate

matter (PM_{10} and $PM_{2.5}$), and Nitrogen Oxides (NO_X), and also not in attainment for Lead (Pb) in Los Angeles County (CARB, 2011).

As documented in the Project's air quality report (*Technical Appendix B1* to this EIR), although the climate of the SCAB can be characterized as semi-arid, the air near the land surface is quite moist on most days because of the presence of a marine layer. More than 90% of the SCAB's rainfall occurs from November through April. Temperatures during the year range from an average minimum of 47°F in January to over 100°F maximum in the summer. During the late autumn to early spring rainy season, the SCAB is subjected to wind flows associated with the traveling storms moving through the region from the northwest. This period also brings five to ten periods of strong, dry offshore winds, locally termed "Santa Anas" each year.

Refer to Subsection 4.2, Air Quality, and Subsection 4.6, Greenhouse Gas Emissions, for a more thorough discussion of the Project's site existing air quality and climate setting.

2.5.6 BIOLOGICAL RESOURCES

The Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) is a comprehensive, multi-jurisdictional Habitat Conservation Plan (HCP) focusing on the conservation of sensitive plant and animal species and their associated habitats in western Riverside County. The City of Moreno Valley approved the MSHCP on January 13, 2004. The MSHCP identifies a Criteria Area, in which habitat conservation efforts are targeted. The Project site is not located with the Criteria Area, as shown on Figure 2-6, *MSHCP Criteria Areas*. As such, the site is not targeted for open space conservation as part of the regional plan for habitat conservation (Riverside County, 2003c, Vol. 1 Ch. 3).

According to biological field surveys conducted on the Project site in 2011 (refer to *Technical Appendix C*), the property is comprised of disturbed/developed land and ruderal vegetation. One special-status plant (smooth tarplant, *Centromadia pungens* ssp. *laevis*) was detected, as well as two special-status animals (the western burrowing owl (*Athene cunicularia hypugaea*) and the California horned lark (*Eremophila alpestris actia*)). Adjacent properties surrounding the site are comprised of undeveloped disked fields with ruderal vegetation and developed lands.

Refer to Subsection 4.3, Biological Resources, for a more thorough discussion of the Project's site existing biological setting.

2.5.7 CULTURAL RESOURCES

According to Figure 5.10-3 of the Moreno Valley General Plan Final EIR, mountainous areas in the eastern portion of the City, known as the Badlands have the greatest potential for encountering paleontological resources in Moreno Valley (City of Moreno Valley, 2006b). The Project site is not located in close proximity to the Badlands and is characterized by the City's General Plan as having a low potential for containing paleontological resource deposits. There are no known paleontological resources located on or beneath the surface of the Project site, and their potential for discovery is low.

From an archaeological perspective, prehistory within the Project area is defined by six cultural periods: Early Man Period, Paleo-Indian Period, Pinto Period, Gypsum Period, Saratoga Springs Period, and Shoshonean Period. Each of these cultural periods is discussed in Subsection 4.4,

Cultural Resources. In summary, human habitation of southern California dates back to approximately 13,000 years ago. Over a series of cultural periods, the area transitioned from a hunting and gathering society, to settlements of small groups of people, to large occupations near natural water sources, to formations of distinct ethnographic groups. Research indicates that the Project site is located within the traditional cultural territory of the Cahuilla Indians (Jones & Stokes 2008 10), although correspondence received by the City of Moreno Valley from Luiseno tribes as part of the Project's SB18 Native American consultation process contends that the Project site is within the traditional use area of Luiseno tribes (Ontiveros, 2011a; Hoover, 2011b). Although no archaeological resources are known to be present on the Project site, resources have the potential to exist below the surface and be discovered during the Project's ground disturbing construction activities (Jones & Stokes 2008 15).

Historically, the Project site is not known to have historical significance to the region. The Perris Valley Storm Drain Channel is the only structure that is present on the site (Horowitz, 2011). It was built sometime between 1945 and 1967 (likely in the 1950s when this type of reclamation work was common) and is a typical earth and concrete lined drainage channel. It possesses no distinctive features and is not identified as being eligible for the California Register of Historic Resources.

Refer to Subsection 4.4, Cultural Resources, for a more thorough discussion of the Project's site existing cultural setting.

2.5.8 TRANSPORTATION

I-215, Interstate 15 (I-15), State Route 60 (SR-60) and State Route 91 (SR-91) are major vehicular travel routes in the region of the Project site. The Project site is located approximately 1.5 miles east of I-215, about midway between the Cactus Avenue and Harley Knox Boulevard interchanges (which are depicted on EIR Figure 4.11-12). From the Cactus Avenue interchange, I-215 connects with I-15 approximately 24 roadway miles to the south and connects with SR-60 approximately 2.5 roadway miles to the north.

The Project site is located immediately south of Iris Avenue, east of Heacock Street, and about 1,300 feet west of Indian Street. Vehicular movement in the vicinity of the Project site is primarily composed of passenger vehicles. A review of traffic count data revealed that trucks represent between 0% and 12% of the overall vehicle mix at various intersections around the Project site (Urban Crossroads 2011f 45). The City of Moreno Valley's designated truck route includes Cactus Avenue, Frederick Street, Heacock Street, San Michele Road, Nandina Avenue, and Indian Street south of San Michele Road.

Regarding other forms of transportation, field observations indicated that there is nominal pedestrian and bicycle activity in the area (Urban Crossroads 2011f 45). The Riverside Transit Agency (RTA) operates bus services along Cactus Avenue, Indian Street, John F. Kennedy Drive, Iris Avenue and Krameria Avenue through various routes (Routes 11, 19 and 20). There is currently no commuter rail service in the City of Moreno Valley, but a route is planned along the west side of I-215 called the Perris Valley Line, with a planned station at Alessandro Boulevard, approximately 4.6 roadway miles from the Project site (RCTC, n.d.). East of the Project site is the March ARB/IPA, at which the airport is used by military and government aircraft with limited use by civilian aircraft. Although air cargo service was discontinued in 2008, the March ARB/IPA Joint Land Use Study (March JPA, 2010 Ch. 2), discloses the potential for increased general aviation use.

Refer to Subsection 4.11, Transportation, for a more thorough discussion of the Project's site existing transportation setting.

2.5.9 NOISE

Primary sources of noise in the Project vicinity include vehicle noise, aircraft noise, and noise from construction and operational activities associated with development. To determine the existing acoustical setting of the Project site, 24-hour measurements were taken in the Project study area by Urban Crossroads, Inc. at three (3) locations on June 15 and 16, 2011. These locations included: 1) along Indian Avenue approximately 1,350 feet east of the Project site; 2) north of Iris Avenue approximately 100 feet from the northeast corner of the Project site; and 3) approximately 650 feet south of the southwest corner of the Project site in the flight path of March AFB. Measured hourly noise levels ranged from 52.7 to 77.3 decibels (dBA Leq), resulting in Community Noise Equivalent Levels (CNELs) ranging from 64.7 CNEL to 70.5 CNEL (Urban Crossroads 2011d Ch. 5).

Refer to Subsection 4.8, Noise, for a more thorough discussion of the Project's site existing noise setting.

2.5.10 UTILITIES AND SERVICE SYSTEMS

The Project site is located in the service area of Eastern Municipal Water District (EMWD) for domestic water and sewer service. EMWD manages the domestic water supply and delivery service within its 555 square mile service area, including the City of Moreno Valley, all or portions of six other cities, and a portion of unincorporated Riverside County. As documented in EMWD's 2010 Urban Water Management Plan, EMWD has four sources of water supply: imported water from the Metropolitan Water District (MWD), recycled water, local groundwater production, and desalted groundwater (EMWD, 2011 Ch. 3). EMWD has an adopted Water Shortage Contingency Plan (EMWD Ordinance 117.2) that applies regulations and restrictions on the delivery of and consumption of water during water shortages. Regarding sewer collection and treatment, EMWD collects and treats all of the wastewater collected in its service area to tertiary standards. Treated wastewater is disposed of by means of customer sales, discharge to Temescal Creek, and through percolation and evaporation while stored in EMWD ponds (EMWD, 2011, Ch. 3). Solid waste collection and disposal in the Project area is conducted by Waste Management of the Inland Empire, a division of Waste Management, Inc. Landfills that have the potential of receiving solid waste from the Project site include the El Sobrante Landfill, the Badlands Sanitary Landfill, and the Lamb Canyon Sanitary Landfill (Ross 2011).

Refer to Subsection 4.12, Utilities and Service Systems, for a more thorough discussion of the Project's site existing setting in relation to utilities and public services.

3.0 PROJECT DESCRIPTION

This section provides all of the information required by CEQA Guidelines §15124, including a description of the Project's precise location and boundaries; a statement of the Project's objectives; a description of the Project's technical, economic, and environmental characteristics; and a description of the intended uses of this EIR including a list of the government agencies that are expected to use this EIR in their decision-making processes, a list of the permits and approvals that are required to implement the Project, and a list of related environmental review and consultation requirements .

This EIR (P11-005) analyzes the physical environmental effects associated with all components of the Project, including planning, construction, and ongoing operation. Governmental approvals requested from the City of Moreno Valley to implement the Project include a General Plan Amendment (PA11-0001), Specific Plan Amendment (P11-004), Tentative Parcel Map No. 35879 (PA11-0007), Master Plot Plan (PA11-0002), and four (4) individual Building Plot Plans (PA11-0003, PA11-0004, PA11-0005, and PA11-0006). These applications, as submitted to the City of Moreno Valley by the Project Applicant, are herein incorporated by reference pursuant to CEQA Guidelines §15150 and are available for review at the physical location indicated in Subsection 7.2, Documents Incorporated by Reference. All other discretionary and administrative approvals that would be required of the City of Moreno Valley or other governmental agencies are also within the scope of the Project analyzed in this EIR.

In summary, the March Business Center would provide 1,484,407 square feet (s.f.) of building space on the subject property, as well as surface parking areas and drive aisles, loading docks, roadway improvements, utility infrastructure, landscaping, water quality/detention basins, and other site improvements. A complete description of the Project is provided in this Section 3.0.

3.1 PROJECT LOCATION

The Project site consists of 75.05 acres in the southern portion of the City of Moreno Valley, Riverside County, California (see Figure 3-1, *Regional Map*). From a regional perspective, the Project site is located to the north of the City of Perris, to the southeast of the City of Riverside, and to the south, east, and west of unincorporated areas in Riverside County. Regional access to the site is provided via I-215, which is located approximately 1.4 miles to the west of the site, and SR-60, which is located approximately 3.6 miles to the north of the site. Refer to Subsection 2.1 for more information about the Project's regional setting.

At the local scale, the Project site is located immediately south of Iris Avenue, east of Heacock Street, and about 1,300 feet west of Indian Avenue, as illustrated on Figure 3-2, *Vicinity Map*, and Figure 3-3, *USGS Topographic Map*. As shown on these exhibits, a majority of the site is located immediately north of the Perris Valley Channel, with the exception of approximately 1.84 acres located southwest of the Channel. Refer to Subsection 2.2 for more information about the Project's local setting.

STATEMENT OF OBJECTIVES

The primary objective of the proposed Project is to develop an industrial business center on the Project site in conformance with the land use designations applied to the property by City of Moreno Valley General Plan and the Moreno Valley Industrial Area Plan (Specific Plan 208), as well as

comply to the greatest feasible extent with other applicable City of Moreno Valley standards, codes, and policies. The following is a list of specific objectives sought by the proposed Project.

A. To develop an industrial business center in conformance with the land use designations applied to the property by the City of Moreno Valley General Plan and the Moreno Valley Industrial Area Plan (Specific Plan 208).

B. To develop a business center that can accommodate light industrial and warehouse distribution tenants within close proximity to regional transportation routes.

C. To develop a business center that is financially feasible to construct and operate.

D. To make efficient use of a property by achieving a minimum Project-wide floor area ratio (FAR) of 0.50.

E. To attract new businesses and jobs to the City of Moreno Valley, thereby providing a more equal jobs/housing balance both in the City and in Riverside County and reducing the need for members of the existing local workforce to commute outside the area for employment.

F. To modify the planned alignment of Krameria Avenue to enable efficient development of the Project site and improve circulation and public safety within the area of the Moreno Valley Industrial Area Plan.

G. To develop a business center with an architectural design and operational characteristics that are complementary with existing and planned development in the immediate vicinity.

H. To construct a business center that incorporates energy efficiency and low water use principles in order to increase environmental quality during construction and operation.

3.2 PROJECT'S COMPONENT PARTS

The Project consists of a proposal to develop a 75.05-acre property with business center land uses. The principal discretionary actions required of the City of Moreno Valley to implement the proposed Project include the adoption of a General Plan Amendment (PA11-0001) and Specific Plan Amendment (P11-004), approval of Tentative Parcel Map No. 35879 (PA11-0007), a Master Plot Plan (PA11-0002) and four (4) individual Building Plot Plans (PA11-0003, PA11-0004, PA11-0005, and PA11-0006), and certification of this EIR (P11-005). Additional discretionary and administrative actions that would be necessary to implement the proposed Project are listed in Table 3-4, *Matrix of Project Approvals/Permits*, at the end of this EIR Section.

A detailed description of the proposed discretionary approvals associated with the Project is provided in the following subsections.

3.2.1 TENTATIVE PARCEL MAP NO. 35879

A. General Description

Tentative Parcel Map No. 35879 (TPM No. 35879) proposes to subdivide the 75.05-acre property into four (4) parcels, as depicted on Figure 3-4, *Tentative Parcel Map No. 35879*. In addition, TPM No. 35879 designates areas of public road dedication and identifies the size and location of needed water, sewer, drainage, and utility infrastructure. Developable parcels would range in size from 1.89 gross acres (1.54 net acres) to 53.43 gross acres (47.67 net acres). A summary of the parcel sizes proposed by TPM No. 35879 is provided on Table 3-1, *TPM No. 35879 Statistical Summary*.

Table 3-1 TPM No. 35879 Statistical Summary

PARCEL NUMBER	GROSS ACREAGE	NET ACREAGE
1	53.43	47.70
2	13.10	11.76
3	6.63	5.93
4	1.89	1.54
Total	**75.05***	**66.93**

*The Project site includes 3.38 acres of land located within public right-of-ways owned by the City of Moreno Valley for Heacock Street and Iris Avenue.
Source: TPM No. 35879 prepared by Thienes Engineering, May 23, 2011.

B. Public Roadway Dedications and Improvements

The existing public street network servicing and abutting the Project site consists of Heacock Street to the west and Iris Avenue to the north. The Project site includes 3.38 acres of land owned by the City of Moreno Valley that is dedicated public right-of-way for Heacock Street and Iris Avenue. As part of TPM No. 35879, additional land would be dedicated to the City of Moreno Valley for the widening of Iris Avenue. Additionally, the Project would dedicate land area within the Project site for the construction of Krameria Avenue and Cosmos Street. Public roadway dedications and improvements that are proposed as part of the Project are described below and depicted on Figure 3-5, *Circulation Plan*.

- **Heacock Street.** Heacock Street is a north-south oriented roadway located along the Project site's western boundary. Under existing conditions, this segment of Heacock Street is constructed as a two-lane roadway within a 118.5-foot right-of-way. The proposed Project would improve Heacock Street from Iris Avenue to the north side of the bridge over the Perris Valley Channel and from the south side of the bridge to the southern Project boundary to its ultimate full-width section as an Arterial roadway. The proposed Project would improve Heacock Street as will be required by the final conditions of approval for the proposed Project and applicable City of Moreno Valley standards.

- **Iris Avenue.** Iris Avenue is an east-west oriented roadway located along the northern boundary of the Project site. Under existing conditions, this segment of Iris Avenue is constructed as a two-lane road with an 80-foot wide right-of-way. The proposed Project would widen the Iris Avenue public right-of-way along the northern Project frontage (south side of the street) by an additional 20 feet to provide the ultimate half-width of the Arterial roadways will be required by the final conditions of approval for the proposed Project and applicable City of Moreno Valley standards. The Project would offer a sidewalk easement to

the City for the portion of the sidewalk that extends outside of the public right-of-way along the Project's frontage.

- **Krameria Avenue.** Krameria Avenue would be constructed as a north-south roadway from the southeast corner of the Project site to an intersection with proposed Cosmos Street, and as an east-west roadway between Heacock Street and proposed Cosmos Street. As described in further detail in EIR Subsections 3.2.3 and 3.2.4, a General Plan Amendment and a Specific Plan Amendment would be required for the proposed configuration of Krameria Avenue. The east-west segment of Krameria Avenue between Heacock Street and proposed Cosmos Street would be improved to the full-width standard of an Industrial Collector roadway as part of the Project. The north-south segment of Krameria Avenue between Cosmos Street and the southeast corner of the Project site would be improved as an Industrial Collector. The Project would dedicate land to the City of Moreno Valley to accommodate Krameria Avenue. The proposed Project would improve Krameria Avenue as will be required by the final conditions of approval for the proposed Project and applicable City of Moreno Valley standards.

- **Cosmos Street.** Cosmos Street is a proposed on-site north-south roadway that would provide secondary access to the eastern portion of the Project site. Cosmos Street would begin approximately 870 feet north of the Project's southeastern boundary and would extend north approximately 1,485 feet, where it is designed to terminate as a cul-de-sac internal to the Project site and abutting the eastern boundary of the subject property (as depicted on Figure 3-4). Cosmos Street is proposed as an Industrial Collector roadway. The proposed Project would dedicate and improve Cosmos Street as will be required by the final conditions of approval for the proposed Project and applicable City of Moreno Valley standards.

A complete description of other Project-required transportation improvements is provided in EIR Section 4.11, *Transportation and Traffic*.

C. *Public Right-of-Way Vacations*

Planned public rights-of-way (or portions thereof) that were previously offered to a city, county, or other government agency but that are no longer needed for public purposes can be "vacated" by the government body. As part of the Project, two (2) roadway rights-of-way that were previously offered to the City of Moreno Valley but that were never accepted by the City for public use are proposed to be vacated as part of TPM No. 35879. These rights-of-way are also known by the term "paper streets" because their alignments exist only on maps, with no physical attributes constructed on the landscape.

As shown on Figure 3-6, *Street Vacations*, the Krameria Avenue "paper street" located along the Project's southern boundary is proposed to be vacated. In addition, an un-named cul-de-sac "paper street" that extends approximately 1,000 feet east from Heacock Street and traverses proposed Parcels 2 and 3 of proposed TPM No. 35879 would be vacated. Proposed street vacations would occur as part of the Final Map for TPM No. 35879.

D. Water and Wastewater Conveyance Facilities

❑ Water Service

Water service would be provided to the Project by EMWD. Under pre-development conditions, water service is available to the Project site via 8-inch line and 18-inch main installed beneath Iris Avenue and a 20-inch main installed beneath Heacock Street. As depicted on Figure 3-7, *Conceptual Water Plan*, the Project proposes to construct a 12-inch public water main beneath Cosmos Street, which would connect to the existing 18-inch water main beneath Iris Avenue. In addition, the Project proposes two connection points to the existing 20-inch water line beneath Heacock Street. All proposed water facilities would be designed in accordance with EMWD standards and would require review and approval by EMWD prior to their installation. The locations of proposed fire hydrants also are shown on Figure 3-7, which require review and approval by the Riverside County Fire Department prior to installation. Additional information about the Project's water system can be found in EIR Subsection 4.12, Utility and Service Systems. Refer to EIR Subsection 3.2.5, Project Construction and Operational Characteristics, for a discussion of the Project's projected daily potable water demand.

❑ Wastewater Service

Wastewater conveyance and treatment service to the Project site would be provided by EMWD. Under pre-development conditions, wastewater service is available to the Project site via an 8-inch sewer main installed beneath Iris Avenue and a 30-inch sewer main installed beneath Heacock Street (the line beneath Heacock Street diverts to the southeast at the Perris Valley Channel and runs parallel to the channel along the southern Project boundary).

As illustrated on Figure 3-7, *Conceptual Sewer Plan*, the proposed Project would install a 10-inch public sewer main beneath the east-west segment of Krameria Avenue that is proposed to be constructed through the Project site. This sewer main would collect wastewater flows from Parcels 1, 2, and 3 by gravity flow. A second 10-inch sewer main would branch off from the line beneath Krameria Avenue along the boundary between Parcels 2 and 3 and would convey wastewater flows to the existing 30-inch sewer main at the southern boundary of the Project site (north of the Perris Valley Channel).

In order to provide wastewater service for Parcel 4, the Project would install a new 8-inch sewer line beneath the existing developed Heacock Street right-of-way. The new sewer main beneath Heacock Street would travel from the southwestern corner of the Project site south to Cardinal Avenue (approximately 1,400 feet in length) where it would connect to an existing sewer main with adequate available capacity to serve the Project. The wastewater conveyance lines proposed to be installed off site would be installed beneath existing paved public roadways rights-of-ways. All proposed sewer facilities would be designed in accordance with EMWD standards and would require review and approval by EMWD prior to their installation. Additional information about the Project's wastewater collection facilities is provided in Subsection 4.12, Utility and Service Systems.

E. Drainage Plan

The Project's drainage system would consist of underground storm drain pipes and detention basins installed on the property. The system is designed to collect and treat stormwater runoff and discharge treated flows into the Perris Valley Channel, a regional flood control facility. The drainage system for the Project is depicted on Figure 3-9, *Drainage Plan*. Stormwater flows from Parcels 1-4

would be captured and routed to one of four (4) detention basins. Two (2) detention basins would be located on Parcel 1, one (1) detention basin would be located on Parcel 3, and one (1) detention basin would be located on Parcel 4. In addition to stormwater drainage functions, these basins also would provide water quality functions. The detention basins would be designed to treat and temporarily detain stormwater runoff to ensure that post-development discharge from the site is less than, or equal to, pre-development conditions. Drainage flows would be conveyed from the on-site detention basins to the ultimate discharge points at the Perris Valley Channel via a network of storm drain conduits that would vary in size. Runoff flows originating from on-site public streets would be captured by a system of storm drains installed within Iris Avenue, Heacock Street, Krameria Avenue, and Cosmos Street and would be routed to the Perris Valley Channel via a network of storm drain conduits that would vary in size.

Off-site improvements would be required at the Project's outlets to the Perris Valley Channel to ensure adequate operation of the proposed drainage system. Proposed off-site improvements within the Perris Valley Channel would include the construction of a head wall and flap gate at the Project's two discharge points. In addition, rip-rap would be installed at the Project's outlets to the Perris Valley Channel to preclude scour and erosion.

The Riverside County Flood Control and Water Conservation District (RCFCWCD) is responsible for approving all proposed storm drain improvements to ensure property facility sizing and construction, as well as consistency with the applicable local drainage plan. Additional information about the Project's drainage facilities is provided in Subsection 4.8, Hydrology and Water Quality.

F. Earthwork and Grading

As shown on Figure 3-9, *Conceptual Grading Plan*, earthwork and grading would occur over the entire 75.05-acre Project site. No area of the site would be left undisturbed. According to TPM No. 35879, earthwork and grading activities would occur in one phase and would result in approximately 111,030 cubic yards of cut and 159,957 cubic yards of fill. Depths of grading would extend to approximately 3.5 feet, except in the areas of proposed detention basins, which would be excavated to depths of approximately ten feet. Although the earthwork quantities are imbalanced by 48,927 cubic yards, no import of earth materials is anticipated due to the requirement to over-excavate and compact on-site soils (Thienes Engineering, 2011). The Project site is relatively flat and proposed grading would not create manufactured slopes except around the proposed detention basins. As shown on TPM No. 35879, the manufactured slopes that would be created around the on-site detention basins would be up to 10 feet in height with a maximum gradient of 4:1.

3.2.2 PLOT PLANS PA11-0002, -0003, 0004, -0005, AND -0006

One (1) Master Plot Plan and four (4) individual Building Plot Plans are proposed as part of the Project. The Master Plot Plan (PA11-0002) establishes a common architectural and landscape development concept for the entire Project, depicts the location of proposed circulation facilities, and depicts the relationship between proposed on-site structures, as illustrated on Figure 3-11, *March Business Center Master Plot Plan*. The individual Building Plot Plans provide site plans, including a detailed architectural and landscape design for Parcel 1 (PA11-0003), Parcel 2 (PA11-0004), Parcel 3 (PA11-0005), and Parcel 4 (PA11-0006). Plot plans for Parcels 1 through 4 are presented on Figure 3-12 through Figure 3-15.

CONCEPTUAL GRADING PLAN

B. General Description

As shown on Figure 3-11, four (4) buildings are proposed to be constructed on the Project site. Table 3-2, *March Business Center Statistical Summary*, summarizes the net parcel size, total building area, and floor area ratio (FAR) of each proposed parcel and building. The buildings are designed to range in size from approximately 16,732 s.f. to 1,103,003 s.f. with a minimum FAR of approximately 0.25 and a maximum FAR of approximately 0.54. The FAR for the total Project site would be approximately 0.51. The Project Applicant anticipates that Parcels 1, 2, and 3 would primarily be occupied by warehouse distribution uses, while Parcel 4 would be occupied by light industrial uses (Western Realco, 2011a). Although the Moreno Valley Industrial Area Plan (MVIAP) designates an "Industrial Support Area" overly on the northwestern portion of the site, which allows the construction of industrial support uses within 300 feet of the Iris Avenue/Heacock Street intersection, the Project Applicant has elected not to include industrial support uses as part of the Project.

Table 3-2 March Business Center Statistical Summary

PARCEL	NET PARCEL SIZE	TOTAL BUILDING AREA	FAR[1]
1	2,077,688 s.f.	1,103,003 s.f.	0.53
2	512,072 s.f.	277,243 s.f.	0.54
3	258,479 s.f.	87,429 s.f.	0.34
4	67,144 s.f.	16,732 s.f.	0.25
Total	**2,915,383 s.f.**	**1,484,407 s.f.**	**0.51**

1: Floor Area Ratio (FAR) is calculated by dividing the maximum building square footage by the net square footage of the parcel on which the building is located. Total FAR is calculated by dividing the total square footage of all buildings by the total net square footage of the parcels on which they would be located.
Source: PA11-0002, PA11-0003, PA11-0004, PA-0005, and PA11-0006 prepared by Bastien and Associates, Inc., August 17, 2011.

C. Parking and Loading

The Master Plot Plan and the individual Building Plot Plans depict the number and location of parking spaces (including trailer parking) and loading bays for each of the proposed structures. As summarized on Table 3-2, *March Business Center Parking Summary*, the proposed Project would include 678 automobile parking spaces (including 21 spaces accessible to persons with disabilities) The proposed Project also would provide truck trailer parking spaces and loading bays that would be used for loading, unloading, and short-term parking (as illustrated on Figure 3-11). The proposed Project also would provide bicycle parking in compliance with the City of Moreno Valley Municipal Code Section 9.11, which requires bicycle parking to be provided for 5% of required vehicle parking. The parking provided on the site would meet or exceed the City of Moreno Valley's vehicular and bicycle parking requirements established by Chapter 9.11 of the City of Moreno Valley Municipal Code. Truck check-in points and driveways would be positioned interior to the business park to create interior stacking distances to minimize the potential for trucks to stack onto public streets when entering the Project site.

D. Architecture

Figure 3-16, *March Business Center Conceptual Elevations* , depicts the conceptual architectural elevations of proposed architecture for the Project. The proposed buildings would be constructed with a maximum height up to 45 feet; however, architectural projections may exceed 45 feet in

Table 3-3 March Business Center Parking Summary

PARCEL	AUTOMOBILE PARKING	ACCESSIBLE PARKING
1	418	10
2	132	5
3	86	4
4	42	2
Total	**678**	**21**

Source: PA11-0002, PA11-0003, PA11-0004, PA-0005, and PA11-0006 prepared by Bastien and Associates, Inc., August 17, 2011.

height. The buildings would be constructed with concrete tilt-up panels and green, low-reflective glass. Articulated building elements including parapets and clear anodized aluminum canopies and mullions would be provided as decorative elements. The color palette for the exterior architecture is proposed to include earth-toned colors, including beige, light brown, medium brown, and burnt red.

As depicted on Figure 3-12 through Figure 3-15, the Project would provide solid concrete screen walls (up to 14 feet in height) to screen truck parking and loading dock areas from public view. The concrete screen walls would be constructed with a finish and color that complements the color palette for proposed structures on site. Fencing also would be provided to delineate property boundaries; 6-foot high wrought iron fencing would be provided in areas visible from public viewing areas while 6-foot tall chain link fencing would be provided in areas not visible from public viewing areas.

The interior of each building is designed to provide a main floor and office space. The larger buildings have the potential to be partitioned for multiple tenant use.

E. Conceptual Landscape Plan

A conceptual landscape plan has been prepared for the Project as part of the Plot Plan applications and is depicted on Figure 3-17 and Figure 3-18, *March Business Center Conceptual Landscape Plan*. The landscape plan indicates that trees, shrubs, and groundcovers are proposed to be planted along street frontages (within the public right-of-way), at building entries and driveways, in and around detention basins, along proposed screen walls and fencing, and along the perimeter of the site. In addition, 6-foot tall landscaped berms would be provided in front of proposed on-site concrete screen walls to reduce the perceived height of the screen walls. Landscaping is estimated to cover approximately 11% of the Project site (approximately 7.4 acres). Proposed landscaping would be ornamental in nature, except within detention basins where plant materials would be selected to serve water quality functions. Prior to the issuance of building permits for the development of individual lots, future development proposals would be required to submit planting and irrigation plans to the City of Moreno Valley for review and approval. The plans would be required to comply with Chapter 9.17 of the City of Moreno Valley Municipal Code, which establishes requirements for landscape design, automatic irrigation system design, and water-use efficiency.

3.2.3 GENERAL PLAN AMENDMENT PA11-0001

A General Plan Amendment (PA11-0001) is proposed as part of the Project to modify the Circulation Element of the City of Moreno Valley General Plan. The proposed modifications to the Circulation Element would consist of changes to the planned alignment and classification of a segment of Krameria Road between Heacock Street and proposed Cosmos Street. Under existing conditions,

Krameria Avenue terminates east of the Project site at Indian Avenue; however, the City's General Plan Circulation Element calls for Krameria Avenue to be extended to Heacock Street diagonally across the southern portion of the Project site, meeting Heacock Street at an oblique angle. The Project proposes a different alignment for Krameria Avenue, as depicted on Figure 3-19, *Proposed Modifications to Krameria Avenue Alignment*. The intended purpose of this change is to provide a 90-degree intersection where Krameria Avenue meets Heacock Street and to provide a perpendicular connection between Heacock Street and proposed Cosmos Street to allow for a more safe and efficient local circulation system. In addition, the proposed General Plan Amendment would downgrade the classification for the Krameria Avenue segment between Indian Avenue and Heacock Street from a "Minor Arterial (88-foot right-of-way)" to an "Industrial Collector (78-foot right-of-way).

3.2.4 SPECIFIC PLAN AMENDMENT P11-004

In addition to the General Plan Amendment described above, the proposed realignment and reclassification of Krameria Avenue through the Project site would require an amendment to the Moreno Valley Industrial Area Plan (Specific Plan 208). The proposed Specific Plan Amendment (P11-004) would change the planned alignment of the on-site segment of Krameria Avenue as described above in Section 3.2.3 and shown on Figure 3-19. The proposed Specific Plan Amendment also would change the classification of the segment of Krameria Avenue between Indian Avenue and Heacock Street from a "Minor Arterial (88-foot right-of-way)" to an "Industrial Collector (78-foot right-of-way)," as would similarly occur under the proposed General Plan Amendment.

3.2.5 PROJECT CONSTRUCTION AND OPERATIONAL CHARACTERISTICS

A. Construction Details

The Project Applicant indicated that the proposed Project would be constructed over two (2) phases (Western Realco, 2011a). Phase 1 would include mass grading of the entire Project site, installation of the master underground utility system (including off-site connections), fine site grading for Parcels 1-4, and construction of the proposed building on Parcel 1 (including utility and service connections). Phase 1 of construction is estimated to take approximately 12 months to complete. Phase 2 of construction would include developing the proposed buildings on Parcels 2-4 and connecting them to the underground utility system. Construction of Phase 2 would commence approximately 12 months following the completion of Phase 1. Phase 2 would take approximately 10 months to construct. Construction equipment is expected to operate on the Project site eight (8) hours per day. The types and numbers of heavy equipment expected to be used during Project construction activities are listed in the air quality technical report attached to this EIR as *Technical Appendix B1*. For purposes of evaluation in this EIR, it is assumed that the building on Parcel 1 would be occupied in the Year 2014/2015 and the buildings on Parcels 2, 3, and 4 would be occupied in the Year 2016 or later.

One (1) groundwater monitoring well is located within the north-central portion of the Project site and three (3) monitoring wells are located near the perimeter of the Project site (near the eastern, southeastern, and southwestern boundaries of the Project site, respectively). These groundwater monitoring wells are used by the Department of the Air Force to monitor groundwater contamination levels resulting from historical contamination at the March Air Reserve Base. Two (2) of the wells would be relocated as part of the Project's construction activities, in accordance with authorizations issued by the Department of the Air Force. The relocation process includes the abandonment of the

existing wells and the construction of new wells. As of the writing of this EIR, it was anticipated that the replacement wells would be drilled in accessible and appropriate locations near the existing wells. The two (2) other existing monitoring wells located near the perimeter of the site would be preserved in place, and would be protected from damage during grading and construction activities.

B. Operational Details

At the time this EIR was prepared, the future tenants of the Project site were unknown. For the purpose of analysis in this document, the future uses on site are assumed to be any of those uses permitted by the Moreno Valley Industrial Area Plan's "Industrial" designation. Furthermore, this EIR assumes the Project would be operational 24 hours per day. The Project Applicant estimates that Parcels 1-3 would be primarily occupied by warehouse distribution land uses and Parcel 4 would be primarily occupied by light industrial land uses (Western Realco, 2011a). The buildings are not designed to accommodate tenants that require warehouse refrigeration. Business operations would be conducted within enclosed buildings, with the exception of traffic movement, parking, and the loading and unloading of trucks at designated loading bays.

Because tenants of the Project's buildings are not yet known, the number of jobs that the Project would generate cannot be precisely determined; therefore, for purposes of analysis within this EIR, employment estimates have been calculated using data and average employment density factors reported by the Southern California Association of Governments in their publication *"Employment Density Study Report,"* (SCAG 2001). Using this data, the proposed Project is expected to create approximately 2,560 new, recurring jobs. (Refer to Subsection 5.3, Growth-Inducing Impacts of the Proposed Project, for more information about the Project's employment estimate calculations.)

According to a Water Supply Assessment prepared for the Project by EMWD (*Technical Appendix L* to this EIR), the business park uses proposed by the Project are estimated to result in a demand for approximately 46,851 gallons of potable water per day (or about 52.5 acre-feet per year). The Project also is estimated to result in an average daily demand of 113,696 gallons per day of wastewater treatment capacity (based on EMWD's wastewater generation factor of 1,700 gallons per day per acre for light industrial land uses).

3.3 STANDARD REQUIREMENTS AND CONDITIONS OF APPROVAL

The proposed General Plan Amendment (PA11-0001), Specific Plan Amendment (P11-004), Tentative Parcel Map No. 35879 (PA11-0007), Master Plot Plan (PA11-0002), and four (4) Building Plot Plans (PA11-0003, PA11-0004, PA11-0005, and PA11-0006) and their technical aspects have been reviewed in detail by various City of Moreno Valley departments. These departments are responsible for reviewing land use applications for compliance with City codes and regulations. These departments also were responsible for reviewing this EIR (P11-005) for technical accuracy and compliance with CEQA. The City of Moreno Valley departments responsible for technical review include:

- Planning Division of Community & Economic Development Department
- Building and Safety Division of Community & Economic Development Department
- Land Development Division of Community & Economic Development Department
- Transportation Engineering Division of Public Works Department
- Special Districts Division of Public Works Department
- Fire Prevention Bureau

- Moreno Valley Utility

Review of the development applications (*i.e.*, PA11-0001, PA11-0002, PA11-0003, PA11-0004, PA11-0005, PA11-0006, PA11-0007, and P11-004) by the City Departments listed above will result in the production of a comprehensive set of draft Conditions of Approval that will be available for public review prior to consideration of the proposed Project by the Moreno Valley City Council. These conditions will be considered by the City Council in conjunction with their consideration of PA11-0001, PA11-0002, PA11-0003, PA11-0004, PA11-0005, PA11-0006, PA11-0007, and P11-004. If approved, the Project will be required to comply with all imposed Conditions of Approval.

Conditions of Approval and other applicable regulations, codes, and requirements that the Project is required to comply with and that result in the reduction or avoidance of an environmental impact are specified in each subsection of Chapter 4.0, *Environmental Analysis*. These are referred to as "Project Requirements" throughout this EIR.

3.4 SUMMARY OF REQUESTED ACTIONS

The City of Moreno Valley has primary approval responsibility for the proposed Project. As such, the City is serving as the Lead Agency for this EIR pursuant to CEQA Guidelines §15050. (The role of the Lead Agency was previously described in more detail in Section 1.4 of this EIR.) The City Planning Commission will consider the Project's requested discretionary permit applications and approvals and make advisory recommendations to the Moreno Valley City Council. The City Council will have final authority over approval, approval with changes, or denial of the requested actions that are within the City's jurisdiction. The City will consider the information contained in this EIR and this EIR's Administrative Record in its decision-making processes. Upon approval of the Project and certification of this EIR, the City would conduct administrative reviews and grant ministerial permits and approvals to implement Project requirements and conditions of approval. A list of the primary actions under City jurisdiction is provided in Table 3-4, *Matrix of Project Approvals/Permits*.

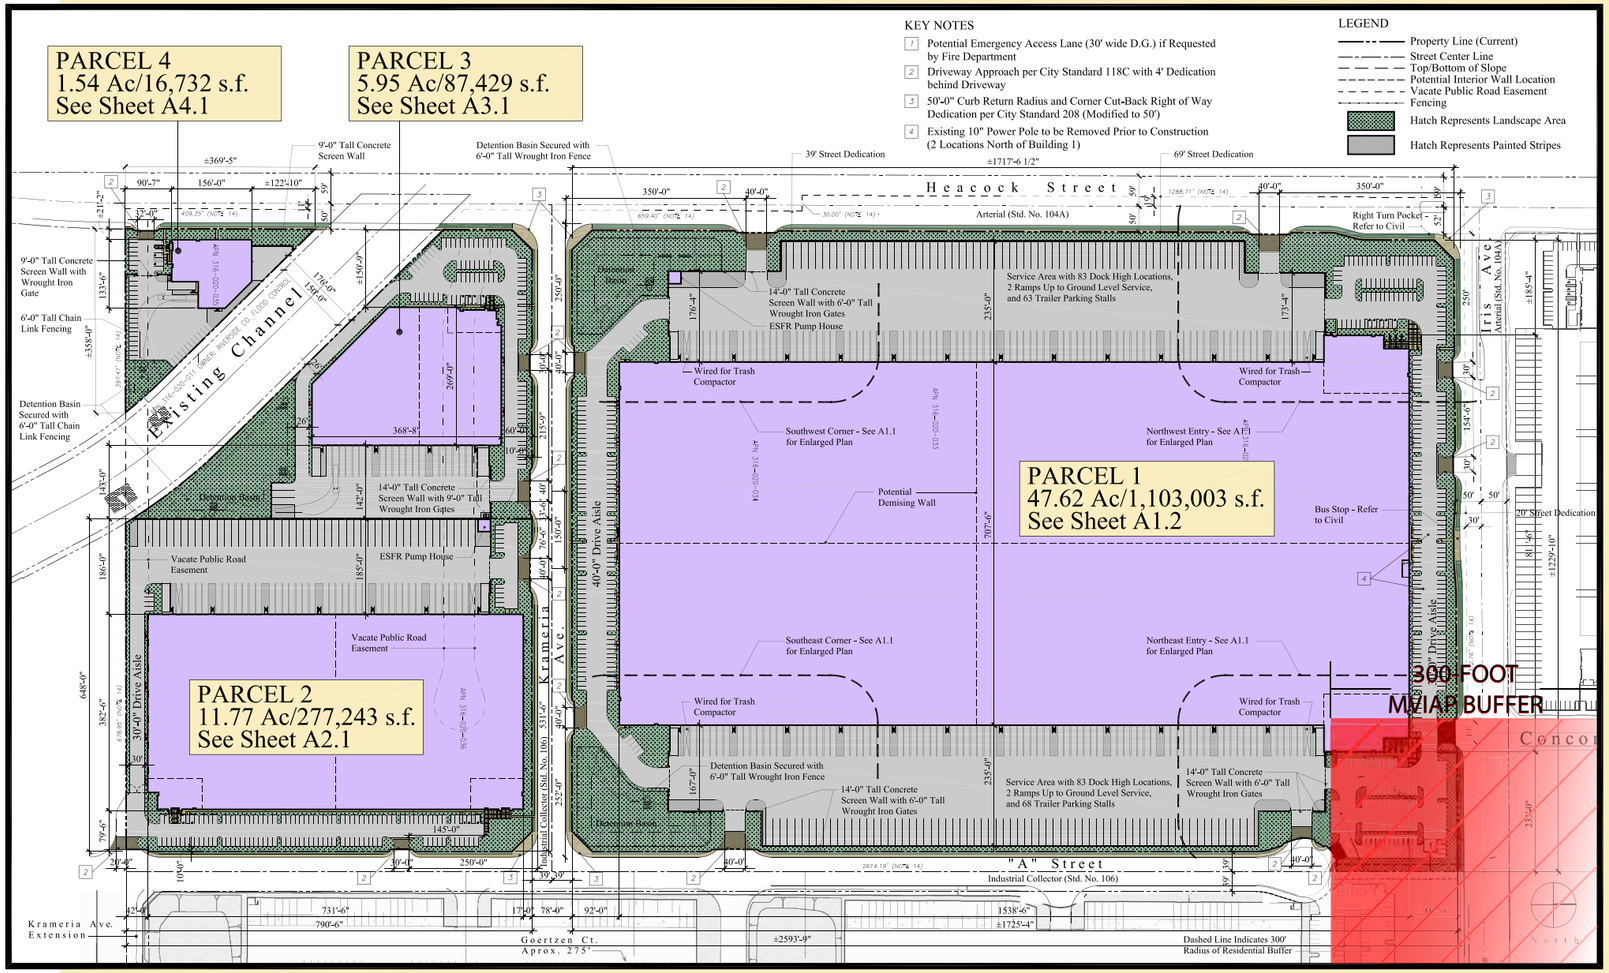
3.5 RELATED ENVIRONMENTAL REVIEW AND CONSULTATION REQUIREMENTS

Subsequent to approval of the General Plan Amendment PA11-0001, Specific Plan Amendment P11-004, Tentative Parcel Map No. 35879 (PA11-0007), Master Plot Plan PA11-0002, and four (4) Plot Plans (PA11-0003, PA11-0004, PA11-0005, and PA11-0006) by the City of Moreno Valley, additional discretionary and/or administrative actions would be necessary to implement the proposed Project. Table 3-4, *Matrix of Project Approvals/Permits*, lists the agencies that are expected to use this EIR and provides a summary of the subsequent actions associated with the Project. This EIR covers all federal, state, local government and quasi-government approvals which may be needed to construct or implement the Project, whether or not they are explicitly listed in Table 3-4, or elsewhere in this EIR (CEQA Guidelines Section 15124(d)).

Table 3-4 Matrix of Project Approvals/Permits

PUBLIC AGENCY	APPROVALS AND DECISIONS
City of Moreno Valley	
Proposed Project – City of Moreno Valley Discretionary Approvals	
City of Moreno Valley Planning Commission	• Provide recommendations to the City of Moreno Valley City Council whether to approve the General Plan Amendment PA11-0001, Specific Plan Amendment P11-004, Tentative Parcel Map No. 35879 (PA11-0007), Master Plot Plan PA11-0002) and Plot Plans PA11-0003, PA11-0004, PA11-0005, and PA11-0006. • Provide recommendations to the City of Moreno Valley City Council regarding certification of this EIR.
City of Moreno Valley City Council	• Approve or deny General Plan Amendment PA11-0001. • Approve, conditionally approve, or deny Specific Plan Amendment P11-004. • Approve, conditionally approve, or deny Tentative Parcel Map No. 35879 (PA11-0007). • Approve, conditionally approve, or deny Master Plot Plan PA11-0002. • Approve, conditionally approve, or deny Plot Plan PA11-0003. • Approve, conditionally approve, or deny Plot Plan PA11-0004. • Approve, conditionally approve, or deny Plot Plan PA11-0005. • Approve, conditionally approve, or deny Plot Plan PA11-0006. • Reject or certify this EIR along with appropriate CEQA Findings (P11-005).
Subsequent City of Moreno Valley Discretionary and Ministerial Approvals	
City of Moreno Valley Subsequent Implementing Approvals	• Approve Final Maps, parcel mergers, lot line adjustments, or parcel consolidations, as may be appropriate. • Approve Conditional or Temporary Use Permits, if required. • Issue Grading Permits. • Issue Building Permits. • Approve Road Improvement Plans. • Issue Encroachment Permits. • Accept public right-of-way dedications. • Approve street vacations.
Other Agencies – Subsequent Approvals and Permits	
Riverside County Flood Control and Water Conservation District	• Approvals for on- and off-site drainage infrastructure.

PUBLIC AGENCY	APPROVALS AND DECISIONS
Eastern Municipal Water District	• Approvals for the construction of on- and off-site water and sewer infrastructure.
Santa Ana Regional Water Quality Control Board	• Issuance of a Construction Activity General Construction Permit. • Issuance of a National Pollution Discharge Elimination System Permit. • Issuance of a Section 401 Permit pursuant to the Clean Water Act.
California Department of Fish and Game	• Issuance of a Section 1602 Streambed Alteration Agreement pursuant to the Fish and Game Code.
U.S. Army Corps of Engineers	• Issuance of a Section 404 Permit pursuant to the Clean Water Act.
U.S. Department of the Air Force	• Approval for relocation of two groundwater monitoring wells.



MASTERPLAN SUMMARY

PARCEL 1		
Site Area	47.62 Acres	2,074,200 s.f.
Building Area		1,103,003 s.f.
Site Coverage		53.18%
Parking Required (2.5% Office/97.5% Warehouse)		400 Spaces
Parking Provided		418 Spaces
Parking Ratio		.38/1,000
Landscape Area	9.60%	199,214 s.f.
PARCEL 2		
Site Area	11.77 Acres	512,545 s.f.
Building Area		277,243 s.f.
Site Coverage		54.09%
Parking Required (4% Office/95% Warehouse)		131 Spaces
Parking Provided		132 Spaces
Parking Ratio		.48/1,000
Landscape Area	7.12%	36,475 s.f.

Site Area	5.95 Acres	259,110 s.f.
Building Area		87,429 s.f.
Site Coverage		33.74%
Parking Required (10% Office/90% Warehouse)		75 Spaces
Parking Provided		86 Spaces
Parking Ratio		.98/1,000
Landscape Area	23.21%	60,143 s.f.
PARCEL 4		
Site Area	1.54 Acres	67,328 s.f.
Building Area		16,732 s.f.
Site Coverage		24.85%
Parking Required (25% Office/75% Manufacturing)		42 Spaces
Parking Provided		42 Spaces
Parking Ratio		2.51/1,000
Landscape Area	22.11%	14,887 s.f.
MASTERPLAN TOTALS		
Site Area	66.88 Acres	2,913,183 s.f.
Building Area		1,484,407 s.f.
Site Coverage		50.95%
Landscape Area	10.67%	310,719 s.f.

General Notes

1. For Property Line Information, Refer to Conceptual Grading Plan.
2. For Grade Elev's and Contour Lines, Refer to Conceptual Grading Plan.
3. All Lighting to Conform with Municipal Standards.
4. All Signage and Graphics to Conform with Municipal Standards.
5. All Parking Stalls shall be 9' x 18' and Double Striped.
6. All Landscape Fingers shall have Minimum Interior Dim of 5' wide by 16' long, Exclusive of Curbs, Step Outs and Other Hard Surfaces.
7. For all Landscape Fingers and End Planters adjacent to a Park. Stall, a 12" Conc Stepout, in addition to the required Curbs, Shall be Provided.
8. Each Gated Entrance shall be Provided with Presence Loop Detectors (or other device) within 1 or 2 feet of the Gate.
9. Trash enclosures shall be designed per modified City standards to include a fully covered roof over the enclosure and accommodate two trash bins, one for trash and the other for recyclables.
10. All Roofs to be Class-A
11. Series 3200 Knox Boxes to be Installed at all Gate Locations and Entry Doors
12. Utility Purveyors:
    Water: Eastern Municipal Water District, 909-928-6111
    Sewer: Eastern Municipal Water District, 909-928-6111
    Gas: Southern California Gas Company-Redlands, 562-699-7411
    Electrical: SCE-Santa Ana
    Telephone: Verizon-Hemet, 951-929-9412
    Cable: Time Warner Comm.-Ontario, 909/951-929-9412
13. Subject Site is Zoned "I" (Industrial)
    Specific Plan "SP-208" (Oleander Specific Plan)
14. PL Distances provided for Reference Only - Refer to Civil Drawings for Property Line Bearings and Distances and for Horizontal Control
15. FEMA Flood Zone Designations are X-Unshaded, X-Shaded, AO, and AH - Refer to Tentative Parcel Map for Additional Information
16. See Sheet A0.2 for Typical Street Sections
17. All offsite Street Improvements shall have Smooth Transitions at the Projects Boundary

Legal Description

The land referred to hereon is situated in the State of California, County of Riverside, City of Moreno Valley, described as follows:

Lot(s) 12 and 13 in block 2 of Riverside Alfalfa Acres, in the City of Moreno Valley, in the County of Riverside, State of California, as shown by map on file in book 8 page(s) 21, of maps, records of Riverside County, California;

Excepting therefrom that portion conveyed to the Riverside County Flood Control and Water Conservation District, by deed recorded may 8, 1953 in book 1470 page 215 and re-recorded may 13, 1955 in book 1737 page 140, both of official records of Riverside County, California;

Also excepting therefrom the westerly 30 feet as conveyed to the County of Riverside, by deed recorded July 8, 1974 as instrument no. 84961 of official records of Riverside County, California;

Also excepting therefrom that portion conveyed to the Riverside County Flood Control and Water Conservation District, by deed recorded march 15, 1995 as instrument no. 79418 and re-recorded April 4, 1995 as instrument no. 102439 of official records of Riverside County, California.

Lot(s) 4 and 5 in block 2 of Riverside Alfalfa Acres, in the City of Moreno Valley, in the County of Riverside, State of California, as shown by map on file in book 8 page(s) 21, of maps, records of Riverside County, California.

4.0 ENVIRONMENTAL ANALYSIS

4.0.1 SUMMARY OF EIR SCOPE

In accordance with CEQA Guidelines §§15126 - 15126.4, this EIR Section 4.0, Environmental Analysis, provides analyses of potential direct, indirect, and cumulative impacts that could occur from planning, constructing, and operating the proposed Project.

In compliance with the procedural requirements of CEQA, an Initial Study was prepared to determine the scope of environmental analysis for this EIR. Public comment on the scope was considered in the form of written comments received by the City of Moreno Valley in response to the NOP issued for this EIR and oral comments provided by members of the public at the EIR scoping meeting held on June 29, 2011, at the Moreno Valley City Hall. Taking all known information and public comments into consideration, 12 primary environmental subject areas are evaluated in this Section 4.0, as listed below and presented alphabetically by subsection. Each subsection evaluates several specific subject matters related to the general topic of the subsection. The title of each subsection is not limiting; therefore, refer to each subsection for a full account of the subject matters addressed therein.

4.1 Aesthetics
4.2. Air Quality
4.3 Biological Resources
4.4 Cultural Resources
4.5 Geology and Soils
4.6 Greenhouse Gas Emissions
4.7 Hazards and Hazardous Materials
4.8 Hydrology and Water Quality
4.9 Land Use and Planning
4.10 Noise
4.11 Transportation/Traffic
4.12 Utilities and Service Systems

Five (5) environmental subjects were determined by the City to have no potential to be significantly impacted by the Project, as concluded by the Project's Initial Study (included in *Technical Appendix A* to this EIR) and after consideration of all comments received by the City on the scope of this EIR and documented in the City's administrative record. These five (5) subjects are discussed briefly in Section 5.0, Other CEQA Considerations, and include: agriculture resources, mineral resources, population/housing, public services, and recreation.

4.0.2 SCOPE OF CUMULATIVE EFFECTS ANALYSIS

CEQA requires that an EIR contain an assessment of the cumulative impacts that may be associated with a proposed project. As noted in CEQA Guidelines §15130(a), "an EIR shall discuss cumulative impacts of a project when the project's incremental effect is cumulatively considerable." "A cumulative impact consists of an impact which is created as a result of the combination of the project evaluated in the EIR together with other projects creating related impacts" (CEQA Guidelines §15130(a)(1)). As defined in CEQA Guidelines §15355:

'Cumulative Impacts' refers to two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts.

(a) The individual effects may be changes resulting from a single project or a number of separate projects.

(b) The cumulative impact from several projects is the change in the environment which results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects. Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time.

CEQA Guidelines §15130(b) describes two acceptable methods for identifying a study area for purposes of conducting a cumulative impact analysis. These two approaches include: "1) a list of past, present, and probable future projects producing related or cumulative impacts, including if necessary, those projects outside the control of the agency ['the list of projects approach'], or 2) a summary of projections contained in an adopted general plan or related planning document, or in a prior environmental document which has been adopted or certified, which described or evaluated regional or area wide conditions contributing to the cumulative impact ['the summary of projections approach']."

The summary of projections approach is used in this EIR, except for the evaluation of cumulative traffic impact. The analysis of cumulative traffic impacts uses the list of project approach, as is required to be used by the City of Moreno Valley Transportation Engineering Division's Traffic Impact Analysis Preparation Guide (August 2007).

Using the summary of projections approach, the cumulative study area includes the City of Moreno Valley, the City of Perris, the City of Riverside, and the Harvest Valley/Winchester Area Plan (HVWAP), Lakeview/Nuevo Area Plan (LNAP), and the Mead Valley Area Plan (MVAP), all of which are part of the Riverside County General Plan. These three cities and the three Riverside County Area Plans encompass portions of western Riverside County that have similar environmental characteristics as the Project area. The selected study area encompasses the Perris Valley, which is largely bounded by prominent topographic landforms, such as Reche Canyon to the north, the Badlands to the east, and the Lakeview Mountains to the southeast. This study area exhibits similar characteristics in terms of climate, geology, and hydrology, and therefore is also likely to have similar biological characteristics and cultural resources. This study area also encompasses the service areas of the Project's primary public service and utility providers. Areas outside of this study area either exhibit topographic, climatological, or other environmental circumstances that are different from those of the Project area, or are simply too far from the proposed Project site to be cumulatively considerable.

Environmental impacts associated with the buildout of the Riverside County General Plan were evaluated in a Program-level EIR certified by Riverside County in 2003 (SCH No. 2002051143). The Riverside County General Plan EIR is herein incorporated by reference, and is available for review at the County of Riverside Transportation and Land Management Agency Planning Department, 4080 Lemon Street, 12th Floor, Riverside CA 92502. Likewise, the environmental impacts associated with the buildout of the City of Perris General Plan were evaluated in a Program-level EIR that was certified by the Perris City Council on April 26, 2005 (SCH No. 2004031135). The City of Perris General Plan EIR is also incorporated by reference, and is available for review at

the City of Perris Department of Community Development, 135 North "D" Street, Perris CA 92570. Finally, the environmental impacts associated with the buildout of the City of Riverside General Plan was evaluated in a Program-level EIR that was certified by the Riverside City Council in November 2007 (SCH No. 2004021108). The City of Riverside General Plan EIR is also incorporated by reference, and is available for review at the City of Riverside Community Development Department, Planning Division, 3900 Main Street, Riverside, CA 92522.

A specific cumulative study area was established to assess the cumulative effect of the Project's impacts to traffic and transportation, as required by the City of Moreno Valley Transportation Engineering Division's Traffic Impact Analysis Preparation Guide (August 2007) and in consultation with the City of Moreno Valley Community & Economic Development Department, Planning Division, and Transportation Engineering Division. The cumulative study area for traffic generally includes approved and pending development projects within a three (3)-mile radius of the Project site, as well as several large, traffic-intensive projects falling just beyond a three (3)-mile radius of the Project site. As such, the cumulative impact analysis of traffic impacts in EIR Subsection 4.11 analyzes 51 other past, present, and reasonably foreseeable projects within this study area. This methodology presents a more reasonable approach to cumulative traffic analysis than the General Plan projection approach by recognizing development projects that actually have the potential to contribute traffic to the same intersections, roadway segments, and/or freeway segments as the proposed Project and have the potential to be made fully operational during a similar timeframe as the proposed Project. Specific development projects included in the traffic impact cumulative analysis are listed in Table 4-4 of the Project's Traffic Impact Analysis (refer to *Technical Appendix K*).

4.0.3 IDENTIFICATION OF IMPACTS

Subsections 4.1 through 4.12 of this EIR evaluate the 12 environmental subjects warranting detailed analysis, as determined by this EIR's Initial Study. The format of discussion is standardized as much as possible in each section for ease of review. The environmental setting is discussed first, followed by a discussion of the Project's potential environmental impacts based on specified thresholds of significance used as criteria to determine whether potential environmental effects are significant. The thresholds of significance used in this EIR are based on the thresholds presented in CEQA Guidelines Appendix G and as applied by the City of Moreno Valley to create the Project's Initial Study Checklist (included in *Technical Appendix A* to this EIR). The thresholds are intended to assist the reader of this EIR in understanding how and why this EIR reaches a conclusion that an impact would or would not occur, is significant, or is less than significant. As required by CEQA Guidelines §15126.2(a), impacts are identified as direct, indirect, cumulative, short-term, long-term, on-site, and/or off-site impacts of the proposed Project.

A summarized "impact statement" is provided in each subsection following the analysis. The following terms are used to describe the level of significance as related to the physical conditions within the area affected by the proposed Project:

- No Impact: An adverse change in the physical environment would not occur.

- Less Than Significant Impact: An adverse change in the physical environment would occur but the change would not be substantial or potentially substantial and would not exceed the threshold(s) of significance presented in this EIR.

- Significant Impact: A substantial or potentially substantial adverse change in the physical environment would occur and would exceed the threshold(s) of significance presented in this EIR, requiring the consideration of mitigation measures.

Each subsection also includes a listing of the applicable regulatory criteria (laws, policies, regulations) that the Project is required to comply with (if any). If impacts are identified as significant, the regulatory criteria are followed by a list of feasible mitigation measures that could be applied to either avoid the impact or to reduce the magnitude of the impact. The following terms are used to describe the level of significance following the application of recommended mitigation measures:

- Less Than Significant Impact With Mitigation: A substantial or potentially substantial adverse change in the physical environment would occur that would exceed the threshold(s) of significance presented in this EIR; however, the impact can be avoided or reduced to a less than significant level through the application of feasible mitigation measures.

- Significant and Unavoidable Impact: A substantial or potentially substantial adverse change in the physical environment would occur that would exceed the threshold(s) of significance presented in this EIR. Feasible mitigation measures are either not available or would not be fully effective in avoiding or reducing the impact to below a level of significance.

For any impact identified as significant and unavoidable, the City of Moreno Valley would be required to adopt a statement of overriding considerations pursuant to CEQA Guidelines §15093 in order to approve the Project despite its significant impact(s) to the environment. The statement of overriding considerations would list the specific economic, legal, social, technological, and other benefits of the Project, supported by substantial evidence in the Project's administrative record, that outweigh the unavoidable impacts.

4.1 AESTHETICS

This subsection describes the aesthetic qualities and visual resources present on the Project site and in the site's vicinity. This subsection also analyzes the potential impacts that the Project could have on these resources.

In particular, descriptions of existing visual characteristics, both on site and in the vicinity of the Project site, are provided. Potential aesthetic impacts resulting from implementing the proposed Project are based in part on a site visit and site photographs collected by T&B Planning, Inc. in January 2011 (Horowitz 2011), analysis of aerial photography (Eagle Aerial 2010), Project application materials submitted to the City of Moreno Valley and described in Section 3.0 of this EIR, and information provided in reports appended to this EIR. This subsection also is based in part on information contained in the Conservation Element of the City of Moreno Valley General Plan (Moreno Valley 2006a Ch. 7, 7-12 – 14), and the Aesthetics section of the certified Final Program EIR prepared for the General Plan (SCH No. 2000091075) (Moreno Valley 2006b Sec. 5.11, 5.11-1 – 5.11-6).

4.1.1 EXISTING CONDITIONS

The Project site encompasses 75.05 acres in the City of Moreno Valley. The site is located south of Iris Avenue and east of Heacock Street. The Perris Valley Channel bisects the southern portion of the Project site, with 1.84 acres located south of the Channel and 73.21 acres located north of the Channel. The eastern boundary of the site occurs approximately 1,300 feet west of Indian Street. Topographically, the site ranges in elevation from approximately 1,502 feet above mean sea level (AMSL) in the northwest corner of the site to a low point of approximately 1,488 feet AMSL in the southeast corner of the site, with an overall topographic relief of approximately 14 feet. Thus, the site is perceived as relatively flat or gently sloping to the south under existing conditions. No trees or large rock outcroppings are located on the property.

Pursuant to CEQA Guidelines §15125, the physical environmental condition for purposes of establishing the setting on an EIR is the environment as it existed at the time the EIR's NOP was released for public review. The NOP for this EIR was released on June 13, 2011. As of that date, the Project site consisted of undeveloped land that has been routinely disked, with several dirt pathways located throughout the site (mostly near the Project boundaries). In addition, the Perris Valley Channel bisects the site near the southwestern Project boundary. This segment is designed as a trapezoidal channel with concrete side slopes and bottom near Heacock Street that transitions to a natural channel to the east. The Channel serves as a regional stormwater facility. Evidence of a former horse track that was previously present on the site can be seen from aerial photos of the site; the track no longer exists. Several utility poles also occur along the site's northern boundary (i.e., adjacent to Iris Avenue). Figure 2-4, *Aerial Photograph*, depicts the existing conditions of the Project site.

Due to the lack of development on the site under existing conditions, the Project site does not produce any source of artificial light. Artificial light sources do occur in the Project vicinity, most notably along Heacock Street and Iris Avenue, as well as existing lighting associated with the March ARB to the west and the existing residential uses located northeast of the Project site (Horowitz 2011).

Mt. Palomar Observatory, located in the northern portion of San Diego County, has noted that the continued urbanization of southwestern Riverside County reduces the usefulness of the observatory due to emission of lighting from streetlights, automobiles, residences, and businesses (CalTech n.d.). This type of lighting condition is known as "skyglow." Properties located within a 45-mile radius of the Mount Palomar Observatory are considered to have the potential to contribute to lighting impacts at the observatory. Although the City of Moreno Valley General Plan does not address the Mt. Palomar Observatory, the proposed Project site is identified by the Riverside County General Plan as being located within a 45-mile distance of the facility, which is referred to as "Zone B" of the "Mt. Palomar Nighttime Lighting Policy Area" (Riverside County 2003a, Reche Canyon/Badlands Area Plan 33). Figure 4.1-1, *RCIP Mt. Palomar Nighttime Lighting Policy Area* , shows the proposed Project site in relation to Zone B.

The City of Moreno Valley General Plan includes policies related to development along "Scenic Routes," in addition to policies related to "View Corridors" (Moreno Valley 2006a 9-37 & 9-38). However, as shown on Figure 4.1-2, *Moreno Valley Major Scenic Resources*, the proposed Project site is not located within close proximity to any designated scenic route or view corridor.

To illustrate the existing visual conditions of the Project site in more detail, a photographic inventory has been prepared. Figure 4.1-3, *Site Photos Key Map*, depicts the locations of five (5) vantage point photographs, each of which are described below. These photographs, shown on Figure 4.1-4 and Figure 4.1-5, provide a representative visual inventory of the site's visual characteristics as seen from surrounding public viewing areas.

- Site Photo 1 (Figure 4.1-4): Site Photo 1 was taken from the northeastern Project boundary, looking southwest, south, and southeast along the Project's eastern boundary. Site Photo 1 depicts the Project site in the right half of the photo, while the left half of the photo depicts the property located immediately east of the Project site. As shown from this location, the Project site consists of relatively flat vacant land that has recently been disked, with ground-level vegetation occurring throughout. Along the left- and right-hand sides of this photo, disturbed and un-vegetated land and Iris Avenue are visible. Along the horizon in the left hand portion of the photo (i.e., looking off site), the hills associated with the Badlands are visible, although no prominent topographic features are visible along the horizon above the proposed Project site.

- Site Photo 2 (Figure 4.1-4): Site Photo 2 was taken from the Project's northwestern boundary, at the intersection of Iris Avenue at Heacock Street, and shows views towards the south and east. As with Site Photo 1, views of the Project site from this location depict a relatively flat site that has been recently disked with sparse ground-level vegetation. In the foreground along the left and right hand sides of the photo, disturbed un-vegetated land along the alignments of Iris Avenue and Heacock Street are visible, as are both of these roadways. In the left-hand portion of the photo in the middle ground is an existing utility pole. Along the horizon in the distance in the left portion of the photograph, the hills associated with the Badlands are visible.

FIGURE 4.1-5
Site Photos 4 and 5

- Site Photo 3 (Figure 4.1-4): Site Photo 3 was taken from the Project's western boundary, just south of the Perris Valley Channel along Heacock Street, looking north, east, and south toward the proposed Project site. From this location, the Perris Valley Channel is clearly visible in the foreground. At this location, the Perris Valley Channel is concrete lined, and transitions to a natural channel further east. Heacock Street is visible along the extreme right- and left-hand portions of the photo. In the middle ground, beyond the Perris Valley Channel, an existing dirt trail and undeveloped land with ground-level vegetation are visible. Along the horizon, the hills associated with the Badlands are visible. In the right-hand portion of this photo in the distance is an existing off-site industrial warehouse facility. Distant views of the San Bernardino Mountains and Mount San Gorgonio also are visible along the horizon.

- Site Photo 4 (Figure 4.1-5): Site Photo 4 was taken from the Project's southwestern boundary along Heacock Street, looking north, east, and south. As shown, the Project site again appears as undeveloped land that has recently been disked, with some ground-level vegetation. Along the left- and right-hand portions of this photo, Heacock Street and the un-vegetated road edge are clearly visible. In the distance, the Perris Valley Channel also is visible. Towards the right-hand portion of the photo in the distance is an existing off-site industrial warehouse facility. Along the horizon in the distance are the hills associated with the Badlands. Distant views of the San Bernardino Mountains and Mount San Gorgonio also are visible along the horizon.

- Site Photo 5 (Figure 4.1-5): Site Photo 5 was taken at the southeastern Project boundary looking northwest. The Project site is visible in the foreground of this photo as relatively flat, undeveloped land that was recently disked. In the foreground of the photo, an existing dirt path, likely associated with the Perris Valley Channel, is visible. Some debris is visible in the left-hand portion of the photograph in the foreground along the property boundary and immediately off site. Along the horizon in the left-center portion of the photo, buildings associated with the March ARB are visible. Along the horizon in the right-center portion of the photo, several existing residential developments can be seen, beyond which are hillsides associated with the Badlands and the Box Spring Mountains. Several existing off-site groves of trees also can be seen in the distance along the horizon in the extreme right-hand portion of the photo.

4.1.2 BASIS FOR DETERMINING SIGNIFICANCE

The proposed Project would result in a significant impact to aesthetics if the Project or any Project-related component would:

1. *Have a substantial adverse effect on a scenic vista;*

2. *Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway;*

3. *Substantially degrade the existing visual character or quality of the site and its surroundings; or*

4. *Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area.*

4.1.3 IMPACT ANALYSIS

Threshold 1: Would the Project have a substantial adverse effect on a scenic vista?

As shown on Figure 2-5, Figure 4.1-4, and Figure 4.1-5, the Project site is a flat, vacant parcel of land and does not contribute to a scenic vista under existing conditions. Although distant views of the San Bernardino Badlands, and Box Spring Mountains and Mount San Gorgonio are available along the horizon from portions of the Project site and surrounding area, construction and operation of the Project as proposed, with the development of four buildings measuring up to 45.3 feet in height from the finished development pad would not substantially or adversely affect scenic views of these topographic features from off-site public viewing locations. Therefore, implementation of the proposed Project would result in a less than significant impact on scenic vistas.

Threshold 2: Would the Project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

As depicted on Figure 4.1-2, the proposed Project site is not located within close proximity to any designated Scenic Routes, including scenic highways. The nearest Scenic Route to the Project site occurs along Sunnymead Boulevard, which is located approximately 3.5 miles north of the Project site. As shown on Figure 4.1-4 and Figure 4.1-5, under existing conditions the property does not contain any scenic resources, such as trees, rock outcroppings, or historic buildings. Accordingly, implementation of the proposed Project would not substantially damage any scenic resources within a state scenic highway corridor, and a significant impact would not occur.

Threshold 3: Would the Project substantially degr ade the existing visual character or quality of the site and its surroundings?

- *Construction-Related Activities*

As described in Subsection 3.3.6(A) of this EIR, the proposed Project would be constructed in two (2) phases. Phase 1 would include site preparation, all mass grading and utility installation, and construction of the proposed building on Parcel 1. Phase 2 would include construction of the proposed buildings on Parcels 2, 3, and 4. Phase 1 is estimated to last approximately 12 months and Phase 2 is estimated to last approximately 10 months. Heavy equipment would be used, which would be visible to the immediately surrounding areas during the temporary construction period. Except for the use of cranes during building construction and lifts during painting of the buildings' exterior walls, the construction equipment is expected to be low in height and not substantially visible to the surrounding area. All Project-related construction activities would occur during daytime hours as required by the City of Moreno Valley Municipal Code Chapter 11.80 and would be temporary in nature. All construction equipment would be removed from the Project site following completion of the Project's construction activities.

The temporary visibility of construction equipment and activities would not substantially degrade the visual character of the surrounding area. To the immediate south, west, and north of the Project site is March ARB (west), a vacant parcel and large industrial warehouse facility (south), and a vacant parcel approved for development of the future Moreno Valley Industrial Park (north). These parcels are industrial in nature or are vacant and planned for industrial development. The temporary

visibility of construction activities and equipment would not be substantially degrading to their industrial character.

To the east of the Project site is a vacant parcel approved for the development of Indian Business Park (PA07-0079, PA07-0080, PA07-212, PA07-0093, and PA08-0018), beyond which is a neighborhood of single-family residences, east of Indian Street. To the northeast of the Project site, north of Iris Avenue, is another neighborhood of single family detached homes. As can be seen on the aerial photograph presented as Figure 2-4, the front yards of surrounding residential uses are oriented away from the proposed Project site. Residences northeast of Iris Avenue are separated from Iris Avenue and the Project site by a solid block wall and a landscaped parkway planted with mature trees. Residences east of Indian Avenue are separated from the Project site by a solid block wall and a vacant parcel approved as the Indian Business Park. Moreover, under existing conditions, views from these existing residential neighborhoods to the west/southwest already are located in a visual environment that is partially characterized by industrial/warehouse facilities and March ARB. Temporary construction activities associated with the proposed Project, therefore, would not substantially degrade the aesthetic character or quality of the surrounding area, resulting in a less than significant aesthetic impact.

- *Project Buildout*

At buildout of the proposed Project, views of the site from the surrounding area would change from that of a predominately vacant and undeveloped site to a developed site containing business park/light industrial land uses. As part of the Project and as more fully described in EIR Section 3.0, the Project would result in the construction of four (4) buildings on the property ranging in size from 16,732 s.f. to 1,103,003 s.f. All of the proposed buildings would consist of conventional concrete tilt-up construction. Example building elevations are depicted on EIR Figure 3-16, *March Business Center Conceptual Elevations*. In addition to building construction, the site also would contain surface parking areas and drive aisles, loading docks, screen walls (measuring up to 14.0 feet in height), landscaped berms, roadway improvements, traffic controls, utility infrastructure, landscaping, water quality/detention basins, and other site improvements.

In order to determine if the proposed Project would substantially degrade the existing visual character or quality of the site and its surroundings, an analysis of the representative site photo locations was conducted. The visual character of the Project site would be altered, as described below, for the location of Site Photos 1 through 5 as representative conditions. Refer also to the conceptual building elevations (EIR Figure 3-16), the individual Plot Plans (Figures 3-12 through 3-15), and the Conceptual Landscape Plan (Figure 3-17 and 3-18) for a description of the Project's site design, architecture, and landscape plans.

- Site Photo 1 (see Figure 4.1-4): Site Photo 1 depicts views from the northeastern corner of the Project site looking east, south, and west, and affords direct views of the site's eastern and northern boundaries. As shown on EIR Figure 3-12, this portion of the Project site is proposed for development with Building 1, which is the largest of the four buildings proposed as part of the Project. With buildout of the proposed Project, foreground views from this location would include an employee/visitor parking area and landscaping, beyond which Building 1 would clearly be visible. As shown on Figure 3-16, Building 1 would consist of a tilt-up concrete building with enhanced architectural treatments occurring at the corners on the north half of the building. The enhanced architectural treatments at the

corners of the building would include off-set planes, variable heights, and the use of glazing to enhance the appearance of the building. To the right of the employee/visitor parking area and Building 1 would be a drive aisle. Both the employee/visitor parking area and drive aisle would include landscaping (trees, shrubs, and groundcover). To the left of the employee/ visitor parking area would be a series of docking bays that would be screened from public view by 14-foot tall screen walls, which in turn would be partially obscured from public viewing areas by landscaped berms measuring six feet in height. Along the perimeter of the Project site (right-hand and center of Photo 1), streetscape improvements associated with Iris Avenue and Cosmos Street would be visible, which would include a parkway that accommodates a sidewalk and landscaping (groundcover/shrubs).

- Site Photo 2 (see Figure 4.1-4): Site Photo 2 depicts views from the northwestern corner of the Project site looking south and east, and affords direct views of the site's western and northern boundaries. With buildout of the proposed Project, views from this location would be similar to those described above for Site Photo 1. The northwest corner of Building 1 would be clearly visible from this location, with the center of the view dominated by the architecturally-enhanced corner of the building (refer to Figure 3-16). In the foreground, an employee/visitor parking area would be visible, which would be enhanced with landscaping (groundcover, shrubs, and trees). To the left of Building 1 and the employee/parking area would be a drive aisle with parking that also would be landscaped. To the right of Building 1 and the employee/visitor parking area would be a loading dock area, which would be screened from view by 14-foot tall screen walls. Between the screen walls and Heacock Street would be a six-foot tall landscaped berm, which would help reduce the visual prominence of the screen wall. Along the left- and right-hand portions of the view, Heacock Street and Iris Avenue would be visible, including the construction of additional travel lanes and streetscape improvements along the Project's perimeter. Entries from Iris Avenue and Heacock Street also would be visible from this location, which would feature landscaping (ornamental trees) and enhanced paving.

- Site Photo 3 (see Figure 4.1-4): Site Photo 3 depicts views from the western Project boundary, just south of the Perris Valley Channel, looking north, east, and south along the western site boundary. With buildout of the proposed Project, this location would afford close-up views of Building 3 and Building 4 (refer to Figure 3-11), while portions of site improvements to Parcels 1 and 2 would be visible in the distance. From this location looking northeast (i.e., left-center portion of Site Photo 3), the western and southwestern faces of Building 3 would be clearly visible beyond the Perris Valley Channel and the existing chain link fencing at the perimeter of the channel. Distant views of the San Bernardino Mountains and Mount San Gorgonio would be obstructed or partially obstructed from this location due to close proximity to development associated with Buildings 3 and 4. The northwestern portion of the building would feature architectural treatments (Figure 3-16), including off-set planes, variable heights of architectural details, use of glazing, and variable colors. The southwestern portion of the building façade would appear as a typical tilt-up concrete structure with little architectural variation. To the left of Building 3, an employee/visitor parking area would be visible, along with the trees, shrubs, and groundcover proposed along the perimeter of the parking area and within the center median. Looking east from this location, distant views would be obstructed by a proposed 9-foot tall screen wall that would be constructed to screen views of the loading bays associated with Building 4. In front of the screen wall, enhanced landscaping would be provided, including magnolia and jacaranda

trees in front of the screen wall, in addition to shrubs and groundcover. Looking south and southwest from this location, and to the right of the 9-foot screen wall, Building 4 would be clearly visible. As shown on Figure 3-16, the western face of Building 4 would include an architecturally-enhanced façade, including the use of glazing, off-set planes, and variation in color. The area between Building 4 and Heacock Street would be improved with decorative landscaping, including trees, shrubs, and groundcover, in addition to streetscape improvements along Heacock Street.

- Site Photo 4 (see Figure 4.1-5): Site Photo 4 depicts views from the southwestern corner of the proposed Project site looking south, east, and north along the western and southern property lines of the site. Views from this location looking northeast would be dominated by development on Parcel 4. Looking east, a small employee/visitor parking area would be visible in the foreground, beyond which a 9-foot screen wall could be seen. Along the southern property line, a 6-foot tall chain link fence also would be visible, although this chain link fence would be partially screened by the planting of trees along the southern property line. Beyond the employee/visitor parking area and looking northeast, the southern and western facades of Building 4 would be clearly visible. As shown on Figure 3-16, the southwestern corner of Building 4 would feature enhanced architectural treatments, including off-setting planes, a canopy, variable colors, and the use of glazing. At the far left of this view, streetscape improvements associated with Heacock Street would be visible, including street trees, shrubs, groundcovers, and a curb-separated sidewalk. Distant views of the San Bernardino Mountains and Mount San Gorgonio would be obstructed or partially obstructed from this location due to close proximity to development proposed on Parcel 4.

- Site Photo 5 (see Figure 4.1-5): Site Photo 5 depicts views from the southeastern corner of the proposed Project site looking west, northwest, and north along the eastern and southern property lines of the site. With buildout of the proposed Project, views from this location would be dominated by Building 2. In the near-ground, a driveway access into Parcel 2 would be visible, which would feature enhanced paving and landscaping (i.e., decorative trees and groundcover). In the left-hand portion of the view, a 6-foot wrought iron gate would be visible to the left of Building 2, with a 6-foot wrought iron fence that transitions to a 6-foot chain link fence along the southern property line. In the center of this view, the southwestern corner Building 2 would be clearly visible, which would include enhanced architectural treatments including off-setting planes, use of glazing, and variable colors. To the right of Building 2 would be a drive aisle with employee/visitor parking. This parking area would be landscaped with a variety of trees, shrubs, and groundcover. In the right-hand portion of the view, streetscape improvements along realigned Krameria Avenue would be visible, including a curb-adjacent sidewalk and street trees with shrubs and groundcover.

As indicated in the above descriptions, buildout of the proposed Project would change the existing visual character of the Project site from undeveloped land to that of a business park/light industrial development consisting of four buildings and associated improvements. Although the aesthetic changes would be substantial compared to existing conditions, the Project incorporates a number of features intended to soften the visual prominence of the Project. In addition to enhanced architectural treatments and use of landscaping, the Project also incorporates 9- to 14-foot tall screening walls to screen loading and docking bays from public view. The visual prominence of these screening walls would be reduced through the incorporation of 6-foot tall berms in front of the 14-foot walls, and the installation of landscaping (trees, shrubs, and groundcover) in front of the

walls. These visual features of the proposed development would help ensure a high-quality visual character for the site, consistent with the aesthetic character called for by the City of Moreno Valley's Moreno Valley Industrial Area Plan (MVIAP) (City of Moreno Valley 2002). Therefore, based on the foregoing analysis, implementation of the proposed Project would not result in any significant adverse impacts to the visual character or quality of the Project site.

With respect to the visual character and quality of the surrounding area, the proposed Project would be visually compatible with the existing industrial warehousing use to the south of the Project site, and would be similar in character to proposed business park/light industrial uses proposed in the undeveloped portions of the MVIAP (i.e., to the north, east and southeast). The proposed Project also would not conflict with the existing visual character of the adjacent March ARB, which features buildings and structures associated with industrial and/or airport operations.

Land uses to the northeast of the Project site (i.e., northeast of the intersection of Concord Way and Iris Avenue) and to the east of the Project site (i.e., east of Indian Street) consist of existing residential uses, which exhibit the greatest potential to be impacted by the visual quality/character of the proposed Project. The location of Site Photo 1 depicts a representative viewpoint for these existing residential neighborhoods. As described above, views from the location of Site Photo 1 would include the landscaped employee/visitor parking area at the northeast corner of the Project, the northeast corner of Building 1, and the 14-foot screen wall with a 6-foot berm in front of the screen wall where it is planned to abut the public right-of-way. This portion of the Project site would be treated with decorative landscaping, including the use of trees, shrubs, and groundcover, which would serve to soften the visual prominence of the screen wall, parking area, and Building 1. Based on these design features, the Project would be constructed to the aesthetic quality called for by the MVIAP and would not degrade the visual character of its surroundings. Additionally, note that the residences located east of Indian Street would not have a direct view of the Project after construction of the Indian Business Park (PA07-0079, PA07-0080, PA07-212, PA07-0093, and PA08-0018), which is approved by the City of Moreno Valley to occur directly east of the Project site, between the proposed Project and the residences east of Indian Street.

As noted previously, implementation of the proposed Project would represent a substantial change to the existing visual character of the site. However, and as can be seen on the aerial photograph presented as Figure 2-4, the front yards of all of the existing residential uses are oriented away from the proposed Project site, or would not have direct views of the Project site due to intervening development or solid screen walls. Moreover, under existing conditions, views from these existing residential neighborhoods to the west/southwest already are located in a visual environment that is partially characterized by industrial/warehouse facilities and by buildings and facilities associated with the March ARB. In addition, land use compatibility was addressed as part of the MVIAP (City of Moreno Valley 2002), which notes that "…the presence of a road [e.g., Iris Avenue and Indian Street]…acts as a significant buffer" and serves to address land use compatibility issues between the residential uses and proposed business park/light industrial land uses within the Area Plan. The MVIAP also specifies a "300' Residential Buffer," as shown on EIR Figure 2-3, which requires the maintenance of a 300-foot buffer between industrial and residential buildings; light industrial buildings proposed on site would not occur in the buffer zone. Therefore, in conclusion, based on the limited visibility of the site from individual residences, the generally higher quality buildings and landscaping elements proposed by the Project, and the presence of intervening major roadways that would serve as visual separators, implementation of the proposed Project would have a less than significant impact to the visual character of existing residential neighborhoods.

Threshold 4: Would the Project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area

The MVIAP includes standards for lighting within the Area Plan as follows:

> *Exterior light fixtures shall be designed and placed so as not to provide light spillage on adjacent properties or public rights-or-way. The use of "full cut off' fixtures should be used adjacent to the MARB/MIP to reduce nighttime glare towards the flight line* (City of Moreno Valley, 2002).

In addition, City Ordinance No. 359 addresses light and glare, and requires the following:

> *No operation, activity, sign or lighting fixture shall create illumination which exceeds 0.5 footcandles minimum maintained on any adjacent property, whether the illumination is direct or indirect light from the source. All lighting shall be designed to project downward and shall not create glare on adjacent properties* (City of Moreno Valley n.d.).

The proposed Project has been designed to adhere to the requirements of both Ordinance No. 359 and the MVIAP, and future implementing projects (i.e., building permits) would be required to demonstrate compliance with these standards. Compliance would ensure that the proposed Project does not produce substantial amounts of light or glare affecting the day or nighttime views of adjacent properties.

With respect to daytime glare impacts that could result from reflective building materials, the proposed Project would involve the construction and operation of four buildings. The majority of the exterior building surfaces would consist of tilt-up concrete construction that does not include any materials with a potential to produce substantial amounts of glare. Along the visually prominent corners of each of the buildings, enhanced architecture would be provided, including the use of glazing (glass). While glazing has a potential to result in glare effects, such effects would not adversely affect the daytime views of any surrounding properties, including motorists along adjacent roadways and the March ARB because the glass would not be mirrored. Additionally, not only would areas proposed for glazing be limited to the corners of and main entrances to the buildings, but such glazing would be screened from public view by the screen walls and landscaping proposed along the Project's perimeter. Accordingly, significant daytime glare impacts would not occur.

As noted previously, the proposed Project site is located within a 45-mile radius of the Mount Palomar Observatory. Although not addressed by the City of Moreno Valley's General Plan, any development Project within a 45-mile radius of the observatory that would add artificial light sources has the potential to contribute to skyglow effects, which could adversely affect operations at the observatory. An individual development project such as the proposed Project that is located approximately 43 miles from the observatory and required to comply with City of Moreno Valley Ordinance No. 359 to prevent light spillage and use full cut off' fixtures has no potential to directly impact nighttime observations at the observatory.

4.1.4 CUMULATIVE IMPACT ANALYSIS

As noted under the discussion of Threshold 1, the Project site does not offer any prominent scenic vistas under existing conditions. Views from the Project area to the Badlands Mountains and Box

Spring Mountains are available in the Project area, but such views are available throughout the City of Moreno Valley. Additionally, and as shown on Figure 4.1-2, the City of Moreno Valley General Plan General Plan does not identify any scenic routes or view corridors within close proximity of the Project site. With buildout of the proposed Project and other developments within the Project's viewshed, which would include buildout of the MVIAP and surrounding areas, there would be no significant adverse impact to any existing scenic vistas. This conclusion is consistent with the City of Moreno Valley's General Plan EIR (City of Moreno Valley 2006b 5.11-5), which concluded that buildout of the City in accordance with its General Plan would not have any significant direct or cumulative impact to local or regional aesthetics with enforcement of the City's General Plan and Specific Plans. As previously stated (and more thoroughly discussed in Subsection 4.9, Land Use and Planning), the proposed Project is consistent with the City's General Plan and MVIAP (Specific Plan 208). Accordingly, a cumulatively significant impact to scenic vistas would not occur with buildout of the proposed Project.

As noted under the analysis of Threshold 2, the Project site is not located within close proximity to any designated Scenic Routes and does not contain any scenic resources under existing conditions, including, but not limited to, trees, rock outcroppings, and historic buildings. Therefore, the proposed Project has no potential directly impact a scenic resource or to contribute to a cumulatively significant scenic resource impact.

With respect to visual quality and character of the site and surrounding area, under cumulative conditions the geographic area of the MVIAP would be fully built-out with business park/light industrial land uses. As with the proposed Project, uses within the MVIAP would be subject to the development regulations and design standards contained in the MVIAP. Mandatory compliance to these development regulations and design standards would ensure that the business park/light industrial development within the remaining undeveloped portions of the MVIAP would incorporate high quality building materials, site design, and landscaping so as to minimize the potential for adverse effects associated with visual quality and character (City of Moreno Valley 2002). Moreover, the greatest potential for impacts to visual quality/character that could result from construction or buildout of the MVIAP is potential impacts to the existing residential neighborhoods located to the northeast and east of the MVIAP area. However, and as noted above under the analysis of Threshold 3, under existing conditions these residential areas are oriented away from the Project site. Additionally, with buildout of the MVIAP, existing westward views from these residential areas would change from that of an open field beyond which is the March ARB, to that of a business park/light industrial development with perimeter landscaping. The buildings that would be constructed on the Project site and within the MVIAP would display the aesthetic qualities required by the MVAIP and which have been incorporated into the proposed Project's design as described in Section 3.0, Project Description. As such, the Project would not considerably contribute to an adverse cumulative impact to the existing visual character or quality of the Project site or its surroundings.

With respect to potential cumulative light and glare impacts, City of Moreno Valley Ordinance No. 359 prohibits lighting from impacting adjacent properties, and sets a limit of 0.5 footcandles on the maximum amount of "spill over" lighting that can directly or indirectly affect adjacent properties (City of Moreno Valley n.d.). Similarly, the County of Riverside and cities in the surrounding area enforce light pollution regulations (Riverside County Ord. 655, City of Perris Zoning Ord. Sec. 19.01 *et. seq*., City of Riverside Municipal Code Sec. 19.590.070). As noted previously, the proposed Project site is located within a 45-mile radius of the Mount Palomar Observatory. Although not

addressed by the City's General Plan, the proposed Project nonetheless has the potential to contribute to skyglow effects when considered in the context of other developments within the City of Moreno Valley. As noted above, all development with artificial light sources located within the City of Moreno Valley are required to comply with Ordinance No. 359. The restriction on "spill over" lighting enforced by Ordinance No. 359 also has the effect of minimizing light and glare that would create skyglow. Additionally, development projects with artificial light sources in surrounding jurisdictions would be required to comply with the light reduction requirements applicable in their respective jurisdiction. Therefore, because City of Moreno Valley Ordinance No. 359 and the light control regulations of other jurisdictions within the 45-mile radius of the Observatory would minimize the amount of skyglow that could affect nighttime operations at the observatory, and the proposed Project is mandated to comply with the City's Ordinance No. 359, the Project's contribution to skyglow impacts to the Mt. Palomar Observatory are determined to be less than cumulatively considerable.

4.1.5 APPLICABLE PROJECT REQUIREMENTS

The following is a list of requirements and/or conditions to which the Project would be required to adhere. Compliance with these measures was assumed throughout the above analysis of aesthetics.

PR 4.1-1 The Project is required to comply with City of Moreno Valley Ordinance No. 359, which addresses artificial lighting and glare.

PR 4.1-2 The Project is required to comply with all applicable development regulations and design standards of the Moreno Valley Industrial Area Plan, including standards related to the design of artificial lighting contained within Section III, *Development Standards and Guidelines*, and Section IV, *Development Framework*.

4.1.6 SIGNIFICANCE OF IMPACTS BEFORE MITIGATION

Threshold 1: Less than Significant Impact. The Project would not significantly impact a scenic vista. The Project site does not contain any scenic vistas, nor does it offer unique views of any visually prominent features; therefore, impacts to scenic vistas would be less than significant.

Threshold 2: No Impact. The Project has no potential to damage scenic resources within a scenic highway corridor. The Project site is not located within the viewshed of a scenic highway and the Project site does not contain any scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings. Accordingly, a significant impact to scenic resources within a state scenic highway has no potential to occur.

Threshold 3: Less than Significant Impact. The Project would not substantially degrade the existing visual character or quality of the site or its surrounding areas during Project construction or operation. Although the proposed Project would result in a change to the existing visual character of the site (i.e., from undeveloped land to a light industrial business center), the Project incorporates a number of site design, architectural, and landscaping elements consistent with the requirements of the MVIAP that would ensure the provision of a high quality development. Impacts would be less than significant.

Threshold 4: Less than Significant Impact. The Project would not create substantial light or glare. Compliance with the MVIAP requirements for lighting and mandatory compliance with City of

Moreno Valley Ordinance No. 359 would ensure less than significant impacts associated with light and glare affecting day or nighttime views in the area.

4.1.7 MITIGATION

Impacts would not be significant; therefore, mitigation measures would not be required.

4.2 AIR QUALITY

This subsection is based on two technical studies that were prepared by Urban Crossroads, Inc. to evaluate the Project's potential to adversely affect local and regional air quality. These studies include the following: 1) "March Business Center Air Quality Impact Analysis" (October 31, 2011), which is included as *Technical Appendix B1* to this EIR (Urban Crossroads 2011a); and 2) "March Business Center Mobile Source Health Risk Assessment" (October 31, 2011), which is included as *Technical Appendix B2* to this EIR (Urban Crossroads 2011b). In addition, information used to support the analysis in this subsection was obtained from the City of Moreno Valley General Plan (Moreno Valley 2006a).

4.2.1 EXISTING CONDITIONS

A. Atmospheric Setting

The Project site is located in the South Coast Air Basin (SCAB, or "Basin") which is within the jurisdiction of the South Coast Air Quality Management District (SCAQMD). The SCAB encompasses approximately 6,745 square miles and includes Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino counties. The SCAB is bound by the Pacific Ocean to the west; the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east, respectively; and the San Diego County line to the south (Urban Crossroads 2011a 12).

B. Regional Climate and Meteorology

The regional climate – temperature, wind, humidity, precipitation, and the amount of sunshine – has a substantial influence on air quality. The distinctive climate of the SCAB is determined by its terrain and geographical location, which comprises a coastal plain connected to broad valleys and low hills and surrounded by the Pacific Ocean and high mountains. The annual average temperatures throughout the SCAB vary from the low to middle 60s, measured in degrees Fahrenheit. Inland areas in the SCAB, like where the Project site is located, show more variability in annual minimum and maximum temperatures than coastal areas within the SCAB due to a decreased marine influence (Urban Crossroads 2011a 12-13).

The climate of the SCAB is characterized as semi-arid; however, the air near the land surface is quite moist on most days because of the presence of a marine layer. This shallow layer of sea air is an important modifier of SCAB climate. Humidity restricts visibility in the SCAB and the relative high humidity also heightens the conversion of sulfur dioxide to sulfates. The marine layer provides an environment for that conversion process, especially during the spring and summer months. The annual average relative humidity within the SCAB is 71% along the coast and 59% inland (Urban Crossroads 2011a 13).

Due to its generally clear weather, about three-quarters of available sunshine is received in the SCAB. The remaining one-quarter is absorbed by clouds. The ultraviolet portion of this abundant radiation is a key factor in photochemical reactions. On the shortest day of the year there are approximately 10 hours of possible sunshine, and on the longest day of the year there are approximately 14 1/2 hours of possible sunshine (Urban Crossroads 2011a 13).

Dominant airflows provide the driving mechanism for transport and dispersion of air pollution, as the direction and speed of wind patterns determines the horizontal dispersion and transport of the air pollutants. During the late autumn to early spring rainy season, the SCAB is subjected to wind flows

associated with the traveling storms moving through the region from the northwest. This period also brings five to ten periods of strong, dry offshore winds, locally termed "Santa Anas" each year. During the dry season, which coincides with the months of maximum photochemical smog concentrations, the wind flow is bimodal, typified by a daytime onshore sea breeze and a nighttime offshore drainage wind. Summer wind flows are created by the pressure differences between the relatively cold ocean and the unevenly heated and cooled land surfaces that modify the general northwesterly wind circulation over southern California. Nighttime drainage begins with the radiational cooling of the mountain slopes. Heavy, cool air descends the slopes and flows through the mountain passes and canyons as it follows the lowering terrain toward the ocean. Another characteristic wind regime in the SCAB is the "Catalina Eddy," a low level cyclonic (counter-clockwise) flow centered over Santa Catalina Island which results in an offshore flow to the southwest. On most spring and summer days, some indication of an eddy is apparent in coastal sections. In the Project area, the prevailing winds move predominately from the northwest to the southeast and southeast to northwest (Urban Crossroads 2011a 13-15)

In the SCAB, there are two distinct temperature inversion structures that control vertical mixing of air pollution. During the summer, warm high-pressure descending (subsiding) air is undercut by a shallow layer of cool marine air. The boundary between these two layers of air is a persistent marine subsidence/inversion. This boundary prevents vertical mixing which effectively acts as an impervious lid to pollutants over the entire SCAB. The mixing height for the inversion structure is normally situated 1,000 to 1,500 feet above mean sea level (Urban Crossroads 2011a 14).

A second inversion-type forms in conjunction with the drainage of cool air off the surrounding mountains at night followed by the seaward drift of this pool of cool air. The top of this layer forms a sharp boundary with the warmer air aloft and creates nocturnal radiation inversions. These inversions occur primarily in the winter, when nights are longer and onshore flow is weakest. They are typically only a few hundred feet above mean sea level. These inversions effectively trap pollutants, such as NO_X and CO from vehicles, as the pool of cool air drifts seaward. Winter is therefore a period of high levels of primary pollutants along the coastline (Urban Crossroads 2011a 14).

C. Air Quality Pollutants and Associated Health Effects

The federal government and State of California have established maximum permissible concentrations for common air pollutants that may pose a risk to human health or would otherwise degrade air quality and adversely affect the environment. These regulated air pollutants are referred to as "criteria pollutants." An overview of the common criteria air pollutants in the SCAB, their sources, and associated effects to human health are summarized on the following pages.

- Carbon Monoxide (CO) is a colorless, odorless gas produced by the incomplete combustion of carbon-containing fuels, such as gasoline or wood. CO concentrations tend to be the highest in the winter during the morning, when little to no wind and surface-based inversions trap the pollutant at ground levels. CO is emitted directly from internal combustion engines; therefore, motor vehicles operating at slow speeds are the primary source of CO in the SCAB. The highest ambient CO concentrations are generally found near congested transportation corridors and intersections (Urban Crossroads 2011a 18).

  CO combines with hemoglobin to produce carboxyhemoglobin (COHb), which interferes with the transport of oxygen throughout the body. The most common symptoms associated with CO

poisoning include headache, nausea, vomiting, dizziness, fatigue, and weakness. Exposure to CO can also result in chest pain. Individuals most at risk to the effects of CO include fetuses, patients with diseases involving heart and blood vessels, and patients with chronic oxygen deficiency (Urban Crossroads 2011a 21).

- Sulfur Dioxide (SO_2) is a colorless, extremely irritating gas or liquid. It enters the atmosphere as a pollutant mainly as a result of burning high sulfur-content fuel oils and coal and from chemical processes occurring at chemical plants and refineries. When SO_2 oxidizes in the atmosphere, it forms sulfates (SO_4). Collectively, these pollutants are referred to as sulfur oxides (SO_X) (Urban Crossroads 2011a 19).

  SO_2 is a respiratory irritant to people afflicted with asthma. After a few minutes exposure to low levels of SO_2, asthma sufferers can experience breathing difficulties, including airway constriction, resistance to air flow, and reduction in breathing capacity. Although healthy individuals do not exhibit similar acute breathing difficulties in response to SO_2 exposure at low levels, animal studies suggest that very high levels of exposure can cause lung edema (fluid accumulation), lung tissue damage, and sloughing off of cells lining the respiratory tract (Urban Crossroads 2011a 25).

- Nitrogen Oxides (NO_X) consist of nitric oxide (NO), nitrogen dioxide (NO_2) and nitrous oxide (N_2O) and are formed when nitrogen (N_2) combines with oxygen (O_2). Their lifespan in the atmosphere ranges from one to seven days for nitric oxide and nitrogen dioxide, to 170 years for nitrous oxide. Nitrogen oxides are typically created during combustion processes, and are major contributors to smog formation and acid deposition. NO_2 absorbs blue light, resulting in a brownish-red cast to the atmosphere and reduced visibility. Of the nitrogen oxide compounds, NO_2 is the most abundant in the atmosphere. As ambient concentrations of NO_2 are related to traffic density, commuters in heavy traffic may be exposed to higher concentrations of NO_2 than those indicated by regional monitoring stations (Urban Crossroads 2011a 19).

  Population-based studies suggest that an increase in acute respiratory illness, including infections and respiratory symptoms in children (not infants), is associated with long-term exposure to NO_X. Short-term exposure to NO_X can result in resistance to air flow and airway contraction in healthy subjects. Exposure to NO_X can result in larger decreases in lung functions in individuals with asthma or chronic obstructive pulmonary diseases (e.g., chronic bronchitis, emphysema), as these individual are more susceptible to the effects of NO_X than healthy individuals (Urban Crossroads 2011a 24-25).

- Ozone (O_3) is a highly reactive and unstable gas that is formed when volatile organic compounds (VOCs) and nitrogen oxides (NO_X) – both byproducts of internal combustion engine exhaust – undergo slow photochemical reactions in the presence of sunlight. Ozone concentrations are generally highest during the summer months when direct sunlight, warm temperatures, and light wind conditions are favorable to the formation of this pollutant (Urban Crossroads 2011a 19).

  Short-term exposure (lasting for a few hours) to ozone at levels typically observed in southern California can result in breathing pattern changes, reduction of breathing capacity, increased susceptibility to infections, inflammation of the lung tissue, and some immunological changes. Individuals exercising outdoors, children, and people with preexisting lung disease, such as asthma and chronic pulmonary lung disease, are considered to be the most susceptible sub-groups

for ozone effects. An increased risk for asthma has been found in children who participate in multiple sports and live in communities with high ozone levels (Urban Crossroads 2011a 21).

- Particulate Matter is a major air pollutant consisting of tiny solid or liquid particles of soot, dust, smoke, fumes, and aerosols. Particles less than 10 microns or smaller (PM_{10}) easily become airborne and can reduce visibility. Particles less than 2.5 microns or smaller ($PM_{2.5}$) are formed in the atmosphere by sulfates or nitrates, a byproduct of primary gaseous emissions of SO_2 and NO_X (Urban Crossroads 2011a 19-20).

  Elevated ambient concentrations of fine particulate matter (PM_{10} and $PM_{2.5}$) have been linked to respiratory infections, number and severity of asthma attacks, and increased hospital admissions. In recent years, some studies have reported an association between long-term exposure to air pollution dominated by fine particles and increased mortality, reduction in life-span, and an increased mortality from lung cancer. Daily fluctuations in $PM_{2.5}$ concentration levels have also been related to hospital admissions for acute respiratory conditions in children, to a decrease in respiratory lung volumes in normal children, and to increased medication use in children and adults with asthma. Recent studies show lung function growth in children is reduced with long-term exposure to particulate matter. The elderly, people with pre-existing respiratory or cardiovascular disease, and children appear to be more susceptible to the effects of high levels of PM_{10} and $PM_{2.5}$ (Urban Crossroads 2011a 24).

- Volatile Organic Compounds (VOCs) and Reactive Organic Gasses (ROGs) are hydrocarbon compounds (any compound containing various combinations of hydrogen and carbon atoms) that exist in the ambient air. Both VOCs and ROGs are precursors to ozone and contribute to the formation of smog through atmospheric photochemical reactions. VOCs and ROGs have different levels of reactivity; that is, they do not react at the same speed or do not form ozone to the same extent when exposed to photochemical processes. VOCs often have an odor, including such common VOCs as gasoline, alcohol, and the solvents used in paints (Urban Crossroads 2011a 20).

  Odors generated by VOCs can irritate the eye, nose, and throat, which can reduce respiratory volume. In addition, studies have shown that the VOCs that cause odors can stimulate sensory nerves to cause neurochemical changes that might influence health, for instance, by compromising the immune system (Urban Crossroads 2011a 26).

- Lead (Pb) is a heavy metal that is highly persistent in the environment. Historically, the primary source of lead in the air was emissions from vehicles burning leaded gasoline. As a result of the removal of lead from gasoline, there have been no violations at any of the SCAQMD's regular air monitoring stations since 1982. Currently, emissions of lead are largely limited to stationary sources such as lead smelters (Urban Crossroads 2011a 20).

  Exposure to low levels of lead can adversely affect the development and function of the central nervous system, leading to learning disorders, distractibility, inability to follow simple commands, and lower intelligence quotient. In adults, increased lead levels are associated with increased blood pressure. Lead poisoning can cause anemia, lethargy, seizures, and death. Fetuses, infants, and children are more sensitive than others to the adverse effects of lead exposure (Urban Crossroads 2011a 25-26).

D. Existing Air Quality

The quality of the air is measured based upon ambient air quality standards. These standards are the levels of air quality that are considered safe, with an adequate margin of safety, to protect the public health and welfare. National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS) currently in effect, as well health effects of each pollutant regulated under these standards are shown in Table 4.2-1, *State and National Criteria Pollutant Standards, Effects, and Sources*.

The determination of whether a region's air quality is healthful or unhealthful is determined by comparing contaminant levels in ambient air samples to the state and federal standards presented in Table 4.2-1. The air quality in a region is considered to be in attainment by the state if the measured ambient air pollutant levels for ozone (O_3), carbon monoxide (CO), sulfur dioxide (SO_2), nitrogen dioxide (NO_2), inhalable particulate matter (PM_{10}), and fine particulate matter ($PM_{2.5}$) are not equaled or exceeded at any time in any consecutive three-year period; and the federal standards (other than O_3, PM_{10}, $PM_{2.5}$, and those based on annual averages or arithmetic mean) are not exceeded more than once per year. The ozone standard is attained when the fourth highest eight-hour concentration in a year, averaged over three years, is equal to or less than the standard. For PM_{10}, the 24-hour standard is attained when 99% of the daily concentrations, averaged over three years, are equal to or less than the standard (Urban Crossroads 2011a 15).

❑ Regional Air Quality

The SCAQMD monitors levels of various criteria air pollutants at 40 permanent monitoring stations throughout its jurisdiction. In 2009, the most recent year for which detailed data is available, the federal and state standards for ozone PM_{10} and $PM_{2.5}$ were exceeded on at least one day at most monitoring locations within the SCAB. Measured levels of NO_2, SO_2, CO, sulfates and lead within the SCAB did not exceed Federal and state standards in 2009 (Urban Crossroads 2011a 18). The attainment status for criteria pollutants within the SCAB is summarized on Table 4.2-2, *Attainment Status of Criteria Air Pollutants in the South Coast Air Basin (SCAB)*.

❑ Local Air Quality

The nearest long-term air quality monitoring station to the Project site for ozone and PM_{10} is the Redlands monitoring station, located approximately 13.3 miles northeast of the Project site. The nearest long-term air quality monitoring station to the Project site for CO, NO_2, and $PM_{2.5}$ is the San Bernardino monitoring station, located approximately 15.5 miles northwest of the Project site. The San Bernardino monitoring station was utilized in lieu of the Redlands monitoring station only in instances where data was not available from the Redlands site (i.e., long-term CO, NO_2, and $PM_{2.5}$ concentration levels). Data for SO_2 concentrations has been omitted, as attainment of applicable federal and state for this criteria pollutant is routinely met in the SCAB and there are few monitoring stations that measure SO_2 concentrations (Urban Crossroads 2011a 18). Table 4.2-3, *Project Area Air Quality Monitoring Summary*, provides a summary of ambient air quality conditions in the general vicinity of the Project site over the most recent three (3)-year period for which air quality data is available (i.e., 2007-2009).

Table 4.2-1 State and National Criteria Pollutant Standards, Effects, and Sources

POLLUTANT	AVERAGING TIME	STATE STANDARD	NATIONAL STANDARD	HEALTH AND ATMOSPHERIC EFFECTS	MAJOR SOURCES
Ozone	1 hour 8 hours	0.09 ppm 0.07 ppm1	--- 0.075 ppm	High concentrations can directly affect lungs, causing irritation. Long-term exposure may cause damage to lung tissue.	Formed when reactive organic gases (ROG) and nitrogen oxides (NO_X) react in the presence of sunlight. Major sources include on-road motor vehicles, solvent evaporation, and commercial / industrial mobile equipment.
Carbon Monoxide	1 hour 8 hours	20 ppm 9.0 ppm	35 ppm 9 ppm	Classified as a chemical asphyxiant, carbon monoxide interferes with the transfer of fresh oxygen to the blood and deprives sensitive tissues of oxygen.	Internal combustion engines, primarily gasoline-powered motor vehicles.
Nitrogen Dioxide	1 hour Annual Avg.	0.18 ppm 0.030	--- 0.053 ppm	Irritating to eyes and respiratory tract. Colors atmosphere reddish-brown.	Motor vehicles, petroleum refining operations, industrial sources, aircraft, ships, and railroads.
Sulfur Dioxide	1 hour 3 hours 24 hours	0.25 ppm --- 0.04 ppm	75 ppb --- ---	Irritates upper respiratory tract; injurious to lung tissue. Can yellow the leaves of plants, destructive to marble, iron, and steel. Limits visibility and reduces sunlight.	Fuel combustion, chemical plants, sulfur recovery plants, and metal processing.
Inhalable Particulate Matter (PM-10)	24 hours Annual Avg.	50 µg/m3 20 µg/m3	150 µg/m3 ---	May irritate eyes and respiratory tract, decreases in lung capacity, cancer and increased mortality. Produces haze and limits visibility.	Dust and fume-producing industrial and agricultural operations, combustion, atmospheric photochemical reactions, and natural activities (e.g., wind-raised dust and ocean sprays).
Fine Particulate Matter (PM-2.5)	24 hours Annual Avg.	--- 12 µg/m3	35 µg/m3 15 µg/m3	Increases respiratory disease, lung damage, cancer, and premature death. Reduces visibility and results in surface soiling.	Fuel combustion in motor vehicles, equipment, and industrial sources; residential and agricultural burning; Also, formed from photochemical reactions of other pollutants, including NO_X, sulfur oxides, and organics.
Lead	Monthly Ave. Quarterly Rolling 3-Month Avg.	1.5 µg/m3 --- ---	--- 1.5 µg/m3 0.15 µg/m3	Disturbs gastrointestinal system, and causes anemia, kidney disease, and neuromuscular and neurological dysfunction.	Present source: lead smelters, battery manufacturing & recycling facilities. Past source: combustion of leaded gasoline.
Hydrogen Sulfide	1 hour	0.03 ppm	No National Standard	Nuisance odor (rotten egg smell), headache, and breathing difficulties (higher concentrations)	Geothermal Power Plants, Petroleum Production and refining
Sulfates	24 hour	25 $\mu g/m^3$	No National Standard	Breathing difficulties, aggravates asthma, reduced visibility	Produced by the reaction in the air of SO_2.
Visibility Reducing Particles	8 hour	Light extinction of 0.23/km; visibility of 10 miles or more	No National Standard	Reduces visibility, reduced airport safety, lower real estate value, discourages tourism.	See PM_{10}/$PM_{2.5}$.

NOTE: ppm = parts per million; $\mu g/m^3$ = micrograms per cubic meter.
1. This concentration was approved by the Air Resources Board on April 28, 2005 and became effective May 17, 2006.
Source: Urban Crossroads 2011a, Table 2-1.

Table 4.2-2 Attainment Status of Criteria Pollutants in the South Coast Air Basin (SCAB)

CRITERIA POLLUTANT	STATE DESIGNATION	FEDERAL DESIGNATION
Ozone - 1hour standard	Nonattainment	No Standard
Ozone - 8 hour standard	Nonattainment	Extreme Nonattainment[1]
PM_{10}	Nonattainment	Serious Nonattainment
$PM_{2.5}$	Nonattainment	Nonattainment
Carbon Monoxide	Attainment	Attainment/Maintenance
Nitrogen Dioxide	Nonattainment[2]	Attainment/Maintenance
Sulfur Dioxide	Attainment	Attainment
Lead	Attainment/Nonattainment[3]	Attainment/Nonattainment[4]
All others	Attainment/Unclassified	Attainment/Unclassified

1. The USEPA approved re-designation from Severe 17 to Extreme Nonattainment on May 5, 2010 to be effective June 4, 2010.
2. The SCAB was reclassified from attainment to nonattainment for nitrogen dioxide on March 25, 2010.
3. Los Angeles County portion of the SCAB was reclassified from attainment to nonattainment for lead on March 25, 2010; the remainder of the SCAB is in attainment of the State Standard.
4. The Los Angeles County portion of the SCAB is classified as nonattainment; the remainder of the SCAB is in attainment of the State Standard.

Source: Urban Crossroads 2011a, Table 2-2.

❑ Air Quality Conditions at Project Site

The Project site is vacant under existing conditions and, therefore, does not generate quantifiable emissions. Maintenance activities at the Project site (i.e., disking) may generate temporary fugitive dust emissions (PM_{10} and $PM_{2.5}$); however, since detailed information is not available and given the infrequent and intermittent nature of site maintenance activities, temporary fugitive dust emissions that may be generated during site maintenance activities cannot be accurately calculated and would be speculative in nature. Absent additional information, existing air quality conditions at the Project site would likely be similar to local ambient conditions (presented in Table 4.2-3).

E. Applicable Environmental Regulations

The following is a brief description of the federal, state, and local environmental laws and related regulations governing air quality emissions.

❑ Federal Regulations

The U.S. Environmental Protection Agency (EPA) is responsible for setting and enforcing the NAAQS for O_3, CO, NO_X, SO_2, PM_{10}, and lead. The U.S. EPA has jurisdiction over emissions sources that are under the authority of the federal government including aircraft, locomotives, and emissions sources outside state waters (Outer Continental Shelf). The U.S. EPA also establishes emission standards for vehicles sold in states other than California. Automobiles sold in California must meet the stricter emission requirements of the CARB.

The Federal Clean Air Act (CAA) was first enacted in 1955 and has been amended numerous times in subsequent years (1963, 1965, 1967, 1970, 1977, and 1990). The CAA establishes the federal air quality standards, the National Ambient Air Quality Standards (NAAQS), and specifies future dates for achieving compliance. The CAA also mandates that states submit and implement State Implementation Plans (SIPs) for local areas not meeting these standards. These plans must include pollution control measures that demonstrate how the standards will be met.

Table 4.2-3 Project Area Air Quality Monitoring Summary

POLLUTANT	STANDARD	YEAR		
		2007	2008	2009
Ozone (O_3)[a]				
Maximum 1-Hour Concentration (ppm)	--	0.139	0.142	0.125
Maximum 8-Hour Concentration (ppm)	--	0.116	0.114	0.108
Number of Days Exceeding State 1-Hour Standard	> 0.09 ppm	66	65	53
Number of Days Exceeding State 8-Hour Standard	> 0.07 ppm	88	94	88
Number of Days Exceeding Federal 1-Hour Standard	> 0.12 ppm	4	4	1
Number of Days Exceeding Federal 8-Hour Standard	> 0.075 ppm	73	77	67
Number of Days Exceeding Health Advisory	≥ 0.15 ppm	0	0	0
Carbon Monoxide (CO)[b]				
Maximum 1-Hour Concentration (ppm)	--	4	7	3
Maximum 8-Hour Concentration (ppm)	--	2.1	2	1.8
Number of Days Exceeding State 1-Hour Standard	> 20 ppm	0	0	0
Number of Days Exceeding Federal / State 8-Hour Standard	> 9.0 ppm	0	0	0
Number of Days Exceeding Federal 1-Hour Standard	> 35 ppm	0	0	0
Nitrogen Dioxide (NO_2)[b,c]				
Maximum 1-Hour Concentration (ppm)	--	0.07	0.09	0.08
Annual Arithmetic Mean Concentration (ppm)	--	0.0206	0.0258	0.0200
Number of Days Exceeding State 1-Hour Standard	> 0.18[c] ppm	0	0	0
Inhalable Particulates (PM_{10})[a]				
Maximum 24-Hour Concentration (µg/m^3)	--	120	85	80
Number of Samples	--	57	45	58
Number of Samples Exceeding State Standard	> 50 µg/m^3	32	35	9
Number of Samples Exceeding Federal Standard	> 150 µg/m^3	0	0	0
Ultra-Fine Particulates ($PM_{2.5}$)[b]				
Maximum 24-Hour Concentration (µg/m^3)	--	68.6	43.0	42.2
Annual Arithmetic Mean (µg/m^3)	--	18.1	13.4	13.4
Number of Samples Exceeding Federal 24-Hour Standard	> 35[d] µg/m^3	8	4	2

a Perris Monitoring Station (SRA 24) data.
b Metropolitan Riverside County 2 (SRA 32/Magnolia) data.
c Metropolitan Riverside County 1 (SRA 23/Rubidoux) data only for year 2007.
d CARB has revised the NO_2 1-hour state standard from 0.25 ppm to 0.18 ppm, effective March 20, 2008.
e U.S. EPA has revised the federal 24-hour $PM_{2.5}$ standard from 65 µg/m^3 to 35 µg/m^3, effective December 17, 2006.
Source: Urban Crossroads 2011a, Table 2-3.

The 1990 amendments to the CAA, that identify specific emission reduction goals for areas not meeting the NAAQS, require a demonstration of reasonable further progress toward attainment and incorporate additional sanctions for failure to attain or to meet interim milestones. The sections of the CAA most directly applicable to the development of the Project site include Title I (Non-Attainment Provisions) and Title II (Mobile Source Provisions).

Title I provisions were established with the goal of attaining the NAAQS for the following criteria pollutants: O_3, NO_2, SO_2, PM_{10}, CO, $PM_{2.5}$, and lead. The NAAQS were amended in July 1997 to include an additional standard for O_3 and to adopt a NAAQS for $PM_{2.5}$. Table 4.2-1 provides the NAAQS within the SCAB.

Mobile source emissions are regulated in accordance with Title II provisions. These provisions require the use of cleaner burning gasoline and other cleaner burning fuels such as methanol and

natural gas. Automobile manufacturers are also required to reduce tailpipe emissions of hydrocarbons and nitrogen oxides (NO_X). NO_X is a collective term that includes all forms of nitrogen oxides (NO, NO_2, NO_3) which are emitted as byproducts of the combustion process.

❑ California Regulations

The California Air Resources Board (CARB), which became part of the California EPA in 1991, is responsible for ensuring implementation of the California Clean Air Act (AB 2595), responding to the federal CAA, and for regulating emissions from consumer products and motor vehicles. The California CAA mandates achievement of the maximum degree of emissions reductions possible from vehicular and other mobile sources in order to attain the state ambient air quality standards by the earliest practical date. The CARB established the California Ambient Air Quality Standards (CAAQS) for all pollutants for which the federal government has NAAQS and, in addition, established standards for sulfates, visibility, hydrogen sulfide, and vinyl chloride. However at this time, hydrogen sulfide and vinyl chloride are not measured at any monitoring stations in the SCAB because they are not considered to be a regional air quality problem. Generally, the CAAQS are more stringent than the NAAQS.

Local air quality management districts, such as the SCAQMD, regulate air emissions from commercial and light industrial facilities. All air pollution control districts have been formally designated as being in attainment or non-attainment for each CAAQS (refer to Table 4.2-2).

Serious non-attainment areas are required to prepare air quality management plans that include specified emission reduction strategies in an effort to meet clean air goals. However, air basins may use alternative emission reduction strategy that achieves a reduction of less than 5% per year under certain circumstances.

❑ Air Quality Management Planning

The Project site is located within the jurisdiction of the South Coast Air Quality Management District (SCAQMD). The SCAQMD was created by the 1977 Lewis Presley Air Quality Management Act, which merged four (4) county air pollution control bodies into one regional district. Pursuant to the Act, the SCAQMD is responsible for bringing air quality within the areas under its jurisdiction into conformity with federal and state air quality standards.

Currently, the NAAQS and CAAQS are exceeded in most parts of the SCAB. In response, and in conformance with California Health & Safety Code §40702 et seq. and the California Clean Air Act, the SCAQMD has adopted an Air Quality Management Plan (AQMP) to plan for the regional improvement of air quality. AQMPs are updated regularly in order to more effectively reduce emissions and accommodate growth. Each version of the plan is an update of the previous plan and has a 20-year horizon with a revised baseline. The SCAQMD Governing Board adopted its most recent AQMP on June 1, 2007. SCAQMD is in the process of developing its newest AQMP for the SCAB, the 2012 AQMP. The 2012 AQMP was not available for public review as of the writing of this EIR.

4.2.2 BASIS FOR DETERMINING SIGNIFICANCE

The proposed Project would result in a significant impact to air quality if the Project or any Project-related component would:

1. *Conflict with or obstruct implementation of the applicable air quality plan;*

2. *Violate any air quality standard or contribute substantially to an existing or projected air quality violation;*

3. *Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors);*

4. *Expose sensitive receptors to substantial pollutant concentrations; or*

5. *Create objectionable odors affecting a substantial number of people.*

Within the context of the above threshold considerations, emissions generated by a development project would be significant under Thresholds 2 and 3 if they exceeded the regional thresholds established by the SCAQMD for criteria pollutants and would be significant pursuant to Threshold 4 if they exceeded the localized thresholds established by the State of California and the SCAQMD for criteria pollutants. The criteria applicable to the proposed Project are summarized in Table 4.2-4, *Regional and Localized Thresholds for Criteria Pollutants*. Pursuant to SCAQMD guidance, any project in the SCAB with daily emissions that would exceed any of the thresholds summarized in Table 4.2-4 would be considered as having a significant impact to air quality on both a direct (individual) and cumulative basis (Urban Crossroads 2011a 29-30).

Table 4.2-4 Regional and Localized Thresholds for Criteria Pollutants

POLLUTANT	CONSTRUCTION	OPERATIONAL
Maximum Daily Emissions (Regional Thresholds)		
NO_X	100 lbs/day	55 lbs/day
VOC	75 lbs/day	55 lbs/day
PM_{10}	150 lbs/day	150 lbs/day
$PM_{2.5}$	55 lbs/day	55 lbs/day
SO_X	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day
Lead	3 lbs/day	3 lbs/day
Ambient Air Quality for Criteria Pollutants (Localized Thresholds)		
NO_2 (1-hour average)	0.18 ppm	0.18 ppm
PM_{10} (24-hour average)	10.40 µg/m^3	2.50 µg/m^3
$PM_{2.5}$ (24-hour average)	10.40 µg/m^3	2.50 µg/m^3
CO (1-hour average)	20 ppm	20 ppm
CO (8-hour average)	9 ppm	9 ppm

NOTE: ppm = parts per million; µg/m3 = micrograms per cubic meter.
Source: Urban Crossroads 2011a, Table 3-1, pp. 45 & 48.

In addition, pursuant to the thresholds established by the SCAQMD, any project that would emit toxic air contaminants, like diesel particulate matter, and expose receptor populations to an incremental cancer risk of greater than 10 in one million would be evaluated as having a significant impact to air quality under Threshold 4 (Urban Crossroads 2011b 18).

4.2.3 IMPACT ANALYSIS

A. Methodology for Estimating Project-Related Construction Emissions

❑ Maximum Daily Emissions

The California Emissions Estimator Model™ (CalEEMod™), released by the SCAQMD on February 3, 2011, was used to estimate emissions of criteria pollutants NO_X, VOC, PM_{10}, $PM_{2.5}$, SO_X, and CO, associated with construction activities proposed by the Project. Construction-related emissions would be expected from the following construction activities:

- Site Preparation
- Grading
- Paving
- Building Construction
- Architectural Coatings (Painting)
- Construction Workers Commuting

The assumptions for each phase of Project construction was input into the CalEEMod™ model using anticipated construction characteristics (e.g., construction activities, equipment list) and a schedule provided by the Project Construction Manager and Applicant. In addition, information provided by the Project Architect and Applicant was used to quantify the amount of surface area to be painted, which was input into the CalEEMod™ model to calculate VOC emissions associated with the application of architectural coatings (Urban Crossroads 2011a 31-32). Table 4.2-5, *Construction Equipment Assumptions*, summarizes the list of equipment that was assumed in the analysis of construction-related emissions, based on the information provided by the Project Construction Manager and Applicant. In all instances where construction information was not provided and/or not available, the analysis utilizes the default CalEEMod™ model assumptions (Urban Crossroads 2011a 31).

Refer to Appendix B of the Air Quality Impact Analysis (*Technical Appendix B1* to this EIR) for more details on the methodology and assumptions utilized to estimate Project-related construction emissions.

❑ Localized Emissions

Localized emissions associated with Project-related construction activities were estimated and evaluated in accordance with SCAQMD's *Final Localized Significance Threshold Methodology* . The Redlands Source Receptor Area (SRA) was utilized as the as the baseline for ambient air quality. In accordance with SCAQMD guidance for "large" projects (i.e., projects over five acres in size), the Industrial Source Complex-Short Term (ISCST3) dispersion model was utilized to estimate localized pollutant concentrations. The ISCST3 model relied on meteorological conditions from the Redlands monitoring station, as the Redlands station is the closest monitoring station to the Project site for which meteorological data is available. Based on information provided by the Project Construction

Table 4.2-5 Construction Equipment Assumptions

OPERATION	WATER TRUCKS	SCRAPER	GRADER	RUBBER TIRED DOZER	TRACTOR/LOADER/BACKHOE	EXCAVATOR	PAVERS	PAVING EQUIPMENT	ROLLERS	FORKLIFT	CRANES	AIR COMPRESSOR	GENERATOR SET	WELDER	AERIAL LIFTS
Phase I															
Site Preparation	2			3	4										
Mass Grading	2	5	1	2	2	2									
Building Construction					3					3	2		1	3	3
Paving							2	2	2

Phase II															
Building Construction					3					3	2		3	3	
Paving							2	2	2						
Painting												3			2

Source: Urban Crossroads 2011a, Table 3-2.

Manager and Applicant (see Appendix B of the Air Quality Impact Analysis, EIR *Technical Appendix B1*), the ISCST3 model assumed that a maximum of 6.5 acres would be simultaneously graded on the Project site during peak construction activities. Potential sources of construction-related emissions and receptor locations were quantified using the methodology and equations established by SCAQMD (Urban Crossroads 2011a 41-44). Refer to Pages 41 through 44 of the Project's Air Quality Impact Analysis (*Technical Appendix B1* to this EIR) for a detailed explanation of the model inputs and equations used in the analysis of construction-related localized emissions.

B. Methodology for Estimating Project-Related Operational Emissions

❑ Maximum Daily Emissions

The California Emissions Estimator Model™ (CalEEMod™), released by the SCAQMD on February 3, 2011, was used to estimate emissions of criteria pollutants, NO_X, VOC, PM_{10}, $PM_{2.5}$, SO_X, and CO, associated with long-term operation of the proposed Project. Operational emissions would be expected from the following primary sources:

- Vehicles
- Combustion Emissions associated with Natural Gas and Electricity
- Fugitive Dust related to Vehicular Travel
- Landscape Maintenance Equipment
- Architectural Coatings (Painting)

Trip characteristics from the Project's Traffic Impact Analysis (*Technical Appendix J* to this EIR) were utilized to estimate Project-related operational vehicular emissions. It should be noted that the Project's traffic study presents the total Project vehicle trips in terms of Passenger Car Equivalents

(PCEs) in an effort to recognize and acknowledge the effects of heavy vehicles at the study area intersections. For purposes of the air quality study the PCE trips were not used, rather to be more representative of actual emissions, the actual number of passenger cars (including light trucks) and heavy trucks were used in the analysis. The vehicle fleet mix, in terms of actual vehicles, as derived from the traffic study for the Project is comprised of approximately 47.6% passenger cars (1,152 passenger cars) and approximately 52.4% total trucks (1,267 trucks) (Urban Crossroads 2011a 34). The total traffic generation in vehicles is 2,419 per day. The proposed Project was input as one land-use for simplicity in the CalEEMod™ emissions inventory model. The total traffic generation in vehicles was divided by the total number of square feet for the Project to derive the trip generation rate for input into the modeling program. For analysis purposes, the total 2,419 vehicles (1,152 passenger cars + 1,267 trucks) is divided by the total square footage for all buildings (1,484,410 square feet) to derive an aggregate trip generation rate (1.63 trips per thousand square feet) for input into the model. Similarly, total truck trips (by axle) were summed for all land uses; the total sum of all trucks was then divided by each category of trucks (by axle) to determine axle-specific truck percentage for the Project as a whole. The distribution of passenger cars was apportioned in accordance with the CalEEMod™ model default distribution and is summarized on Table 4.2-6, *Passenger Car Percentage Breakdown*. The distribution of truck traffic was apportioned in accordance with the CARB's *Assessment of Heavy-Duty Gasoline and Diesel Vehicles in California*, and is summarized on Table 4.2-7, *Heavy Duty Truck Percentage Breakdown*.

Table 4.2-6 Passenger Car Percentage Breakdown

VEHICLE CLASS	PERCENTAGE OF VEHICLES
Light-Duty Autos	55%
Light-Duty Trucks	8%
Light-Duty Trucks	25%
Medium-Duty Trucks	12%

Source: Urban Crossroads 2011a, Table 3-4.

Table 4.2-7 Heavy Duty Truck Percentage Breakdown

VEHICLE CLASS	PERCENTAGE OF VEHICLES
Light Heavy Duty Trucks	4.6%
Light Heavy Duty Trucks	1.3%
Medium Heavy Duty Trucks	45.2%
Heavy Heavy Duty Trucks	48.8%

Source: Urban Crossroads 2011a, Table 3-5.

The Air Quality Impact Analysis (*Technical Appendix B1*) for the Project utilized a conservative approach for estimating long-term operational emissions associated with vehicle use. Per the SCAQMD 1993 CEQA Handbook, a one-way trip length of 17 miles was assumed for passenger car trips. For heavy duty trucks, the one-way trip length was derived using a formula that assumed that 50% of all Project-related heavy duty trucks would travel to Port of Los Angeles/Long Beach (approximately 78 miles from the Project site), and the remaining 50% of all Project-related heavy duty trucks would be distributed equally to one of the following locations at far edges of the SCAB: Banning Pass (approximately 27 miles from the Project site); San Diego County

Line (approximately 46 miles from the Project site); Cajon Pass (approximately 42 miles from the Project site); and Downtown Los Angeles (approximately 64 miles from the Project site). Using this formula, the average Project-related one-way heavy duty truck trip would be 61 miles. Weighting the average trip length by the Project's estimated vehicle fleet mix resulted in an average weighted one-way trip length of 40.52 miles. The weighted one-way trip used in the evaluation of the Project's operational emissions is higher than the recommended values of the SCAQMD and Southern California Association of Governments (SCAG) and likely overstates the Project's long-term impact (Urban Crossroads 2011a 34-37).

Using the vehicle mix one-way trip length described above, the Project's operational vehicular emissions were derived from vehicle miles traveled (VMT). VMT for a given project is calculated by multiplying the total number of vehicle trips to/from the project site by the average trip length (in miles). This likely results in the over-estimation and double-counting of emissions for distribution warehouse centers like the proposed Project because the proposed land use is likely to attract (divert) existing vehicle trips that are already on the circulation system as opposed to generating new trips. The method of estimating VMT for use in calculating vehicle emissions is highly speculative and likely overstates the potential impact of the Project. Distribution centers such as this Project are developed to facilitate more efficient distribution of goods, and likely result in an overall reduction in regional VMT by heavy duty freight trucks. Thus, development of this Project will not create 1,267 new daily truck trips within the region, as is assumed in the analysis. Most, if not all, of those truck trips will exist within this region either with or without the proposed Project – they will just travel to different destinations. There are no known methodologies for estimating the net effect of redistributed truck trips on freight truck vehicle miles within the region.

Project-related long-term operational emissions associated with the usage of natural gas and electricity, fugitive dust related to vehicular travel, operation of landscape maintenance equipment, and the application of architectural coatings were estimated using CalEEMod™ model defaults.

Please refer to Appendix B of the Air Quality Impact Analysis (*Technical Appendix B1* to this EIR) for more details on the methodology and assumptions utilized to estimate Project-related operational emissions.

❑ Localized Significance

Localized emissions associated with long-term operation of the Project were estimated and evaluated using the SCREEN3 model. The SCREEN3 model utilizes algorithms and dispersion screening techniques in accordance with the EPA's *Screening Procedures for Est imating the Air Quality Impact of Stationary Sources* to estimate localized emissions from point, area, and volume stationary sources. Localized emissions were quantified using the methodology and equations established by the EPA (Urban Crossroads 2011a 46-47). Refer to Pages 46 and 47 of the Project's Air Quality Impact Analysis (*Technical Appendix B1* to this EIR) for a detailed explanation of the model inputs and equations used in the analysis of construction-related localized emissions.

A CO "Hot Spot" Analysis was not performed to evaluate the effect of Project-related vehicular emissions on localized concentrations of CO at intersections in the vicinity of the Project site. CO "Hot Spots" are typically associated with idling vehicles at extremely busy intersections (i.e., intersections with an excess of 100,000 vehicle trips per day) in areas with unusual meteorological and topographical conditions. At Project buildout, the busiest intersection in the Project vicinity would attract approximately 60,400 vehicle trips per day, which is well below the threshold typically

associated with CO "Hot Spots." In addition, there are no unique topographical or meteorological conditions in the Project vicinity that could contribute to the formation of a CO "Hot Spots." Furthermore, the SCAB has been designated as an attainment area for CO since 2007 and all areas within the SCAB are modeled to achieve applicable federal and state CO concentration standards. Therefore, Project-related vehicular emissions are not anticipated to result in a substantial contribution of CO concentrations at intersections in the vicinity of the Project site and a CO "Hot Spot" analysis is not warranted (Urban Crossroads 2011a 48-49).

C. Methodology for Estimating Project-Related Diesel Particulate Emissions

Diesel particulate emissions were estimated using the 2007 version of the Emission FACtor model (EMFAC) developed by the CARB. EMFAC 2007 is a mathematical model that was developed to calculate emission rates from motor vehicles that operate on highways, freeways, and local roads in California and is commonly used by the CARB for projections of changes in future emissions from on-road mobile sources. The EMFAC 2007 model quantifies annual diesel particulate exposure for different receptor populations using a variety of factors including vehicle activity, vehicle speed, temperature and relative humidity (Urban Crossroads 2011b 11-13). Refer to Pages 11 through 16 of the Project's Mobile Source Health Risk Assessment (*Technical Appendix B2* to this EIR) for a detailed description of the model inputs and equations used in the estimation of Project-related diesel particulate emissions.

The effect of Project-related diesel particulate emissions was quantified in accordance with the SCAQMD's *Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis*. Pursuant to SCAQMD's recommendations, the ISCST3 model, which uses a steady state Gaussian plume model to estimate ground level effects of emissions from emissions sources, was used to evaluate the significance of Project-related diesel particulate emissions (Urban Crossroads 2011b 17). Refer to Pages 17 and 18 of the Project's Mobile Source Health Risk Assessment (*Technical Appendix B2* to this EIR) for a detailed description of the model inputs and equations used in the estimation of average particulate concentrations associated with operations at the Project site.

Health risks associated with exposure to diesel particulate emissions are defined in terms of the probability of developing cancer as a result of exposure to a chemical at a given concentration. The cancer risk probability is determined through a series of equations to calculate unit risk factor, cancer potency factor, and chronic daily intake. The equations and input factors utilized in the Project analysis were obtained from the California Environmental Protection Agency, Office of Environmental Health Hazard (Urban Crossroads 2011b 18-19). Refer to Pages 18 through 20 of the Project's Mobile Source Health Risk Assessment (*Technical Appendix B2* to this EIR) for a detailed description of the variable inputs and equations used in the estimation of receptor population health risks associated with operations at the Project site.

Threshold 1: Would the Project conflict with or obstruct implementation of the applicable air quality plan?

The 2007 SCAQMD AQMP, which is the applicable air quality plan for the Project area, projects long-term air quality conditions for the SCAB. The air quality conditions presented in the 2007 AQMP are based in part on the growth forecasts that were used as inputs for the regional transportation model. The growth forecasts utilized in the 2007 AQMP are based on the growth

projections identified by SCAG in its 2004 Regional Transportation Plan (RTP). The RTP assumed that development in the various incorporated and unincorporated areas within the SCAB would occur in accordance with the adopted general plans for these areas. In addition, the air quality conditions presented in the 2007 AQMP are based on the assumption that future development projects would implement strategies to reduce emissions generated during the construction and operational phases of development. Accordingly, if a proposed project is consistent with these growth forecasts, and if available emissions reduction strategies are implemented as effectively as possible on a project-specific basis, then the project would be considered to be consistent with the AQMP.

The SCAQMD has established criteria for determining consistency with the AQMP. These criteria are defined in Chapter 12, Sections 12.2 and 12.3 of the SCAQMD CEQA Air Quality Handbook and are discussed below.

- ***Consistency Criterion No. 1:*** *The proposed project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.*

Consistency Criterion No. 1 refers to violations of the CAAQS and NAAQS. As evaluated under Threshold 4 (below), the Project would not exceed localized significance thresholds for any criteria pollutant during construction (after mitigation) or during long-term operation. Accordingly, localized emissions would not contribute substantially to an existing or potential future violation or delay the attainment of air quality standards.

As discussed under Thresholds 2 and 3 (below), the Project is anticipated to exceed regional threshold criteria for NO_X during short-term construction activities and long-term operational activities. The Project's long-term emissions of VOCs also are projected to exceed regional threshold criteria. However, the proposed Project would be consistent with the adopted land use designations for the subject property as applied by the City of Moreno Valley General Plan and the Moreno Valley Industrial Area Plan (Specific Plan 208). Therefore, the Project is evaluated as being consistent with the growth forecast utilized in the 2007 AQMP and the emissions that would be generated by the Project are assumed to be accounted for in the AQMP. Thus, the Project's regional emissions would not contribute substantially to an existing or potential future violation or delay the attainment of air quality standards.

- ***Consistency Criterion No. 2:*** *The proposed project will not exceed the assumptions in the AQMP in 2011 or increments based on the years of project buildout phase.*

The growth forecasts used in the AQMP to project future emissions levels are based in part on land use data provided by lead agency general plan documentation. Projects that propose to increase the intensity of use on a subject property may result in higher traffic volumes than accounted for in the applicable local general plan, thereby resulting in increased stationary area source emissions and/or vehicle source emissions when compared to the AQMP assumptions. If however, a project does not exceed the growth projections in the applicable local general plan, then the project is considered to be consistent with the growth assumptions in the AQMP.

The prevailing planning document for the proposed Project site is the City of Moreno Valley General Plan. The City of Moreno Valley General Plan Land Use Map designates a majority of the Project

site for Business Park/Light Industrial (BP) land uses. The northwest corner of the site is designated for Commercial (C) land uses. The Business Park/Light Industrial land use designation calls for employee intensive uses, including manufacturing, research and development, warehousing and distribution, as well as office and support commercial activities, with a building intensity up to 1.0 floor area ratio (FAR). The Commercial land use designation calls for local retail and service commercial activities, with a building intensity up to 1.0 FAR. Similarly, the Moreno Valley Industrial Area Plan calls for a majority of the site to be developed as Industrial with the northwestern corner, coinciding with the General Plan's Commercial designation, designated as Industrial Support Area. As discussed in EIR Subsection 4.9, Land Use and Planning, the proposed Project would be consistent with the General Plan for the subject property. Even if an argument could be made that the AQMP assumed development of the Project site's northwestern corner with commercial land uses, developing this area as proposed by the Project would decrease intensity on the subject property, as compared to the General Plan assumptions, which would decrease projected traffic and associated air emissions at the Project site. As such, the proposed Project would not exceed the assumptions of the AQMP. The Project is consistent with the AQMP and no impact due to inconsistency with the AQMP would occur.

Threshold 2:	***Would the Project violate any air quality standard or contribute substantially to an existing or projected air quality violation?***
Threshold 3:	***Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?***

❑ Construction Emissions

For purposes of analysis, it is assumed that construction of Phase 1 of the Project would occur in Year 2013 and construction of Phase 2 would occur in the Year 2014. In the event that construction activities occur at a later date, emissions associated with construction vehicle exhaust would be less than disclosed in this subsection as the analysis year increases due to implementation of mandatory regulatory requirements and vehicle fleet turnover contained in the EMFAC 2007 model (Urban Crossroads 2011c 40). The estimated maximum daily construction emissions associated with each phase of Project construction are presented in Table 4.2-8, *Construction-Related Emissions Summary (Pounds per Day)*. Detailed construction-related emissions model outputs are presented in Appendix A of the Air Quality Impact Analysis (*Technical Appendix B1* to this EIR).

As shown, the Project is projected to exceed the SCAQMD regional criteria pollutant threshold for emissions of NO_X during the first phase of construction. In addition, the SCAB does not attain state criteria for NO_X concentrations, as previously presented in Table 4.2-2. In addition, NO_X is a precursor for ozone, and the SCAB is identified as a federal and state non-attainment area for ozone (see Table 4.2-2). Accordingly, the Project's emissions of NO_X during Phase 1 of construction would violate the SCAQMD regional threshold for this pollutant and would result in a considerable net increase of a criteria pollutant for which the Project region is in non-attainment. This impact is evaluated as significant on a direct and cumulative basis and mitigation would be required.

Table 4.2-8 Construction-Related Emissions Summary (Pounds per Day)

YEAR	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
2013	67.03	208.12	103.51	0.22	81.00	15.46
2014	63.50	63.30	83.40	0.16	14.14	4.14
Maximum Daily Emissions	**67.03**	**208.12**	**103.51**	**0.22**	**81.00**	**15.46**
SCAQMD Regional Threshold	75	100	550	150	150	55
Significant?	**NO**	**YES**	**NO**	**NO**	**NO**	**NO**

Source: Urban Crossroads 2011a, Table 3-3.

❑ Operational Emissions

Project-related operational emissions are summarized in Table 4.2-9, *Operational Emissions Summary (Pounds per Day)*. Detailed construction-related emissions model outputs are presented in Appendix A of the Air Quality Impact Analysis (*Technical Appendix B1* to this EIR).

As presented in Table 4.2-9, long-term emissions associated with the Project would violate the SCAQMD regional criteria for VOCs and NO_X. Furthermore, the SCAB is a designated non-attainment area for NO_X concentrations and for ozone concentrations (NO_X is a precursor for ozone) as described above. Accordingly, the Project's long-term emissions of NO_X would result in a considerable net increase of a criteria pollutant for which the Project region is in non-attainment (i.e. NO_X and ozone). These impacts are evaluated as significant on a direct and cumulative basis and mitigation would be required.

Emissions of VOC and NO_X are the result of mobile source emissions (vehicles traveling to and from the Project site). The estimation of mobile source emissions are highly speculative and controls for mobile source emissions are not within the purview of the Project Applicant, future tenants of the Project, or the City of Moreno Valley. The on-site area sources of air pollution that are within the direct control of the Project Applicant and future tenants of the Project are below the significance thresholds. To reduce the Project's energy needs and fossil fuel consumption, and thereby reduce air emissions, the Project Applicant has committed to design the Project's buildings using the United States Green Building Council's LEED 2009 "Core and Shell Development Rating System" and meet the minimum requirements to achieve LEED Silver status. Official LEED certification may or may not occur (and is not required by the City of Moreno Valley), but the Project would be designed to meet Silver eligibility requirements. Because the design features are not yet selected, and cannot be precisely determined until tenants are identified and interior space design occurs, it is not possible to calculate the air emission reductions associated with LEED Silver design features at this time. It is unlikely that the significant VOC and NO_X impacts identified above would be substantially reduced because these impacts are primarily caused by mobile source emissions, which are outside of the control of the Project Applicant, future Project tenants, and the City of Moreno Valley. Some reduction of VOC area-source emissions could occur, however, from LEED features.

Table 4.2-9 Operational Emissions Summary (Pounds per Day)

OPERATIONAL ACTIVITIES	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Peak Operational Emissions (Summer)						
Area Source Emissions	35.04	0	0	0	0	0

Source: Urban Crossroads 2011a, Table 3-6.

Threshold 4: Would the Project expose se nsitive receptors to substantial pollutant concentrations?

During both construction and long-term operation, the Project has the potential to expose nearby sensitive receptors to substantial pollutant concentrations. The following provides an analysis based on the applicable localized significance thresholds established by the State of California and SCAQMD.

❑ Construction-Related Localized Emissions

Table 4.2-10, *Localized Significance Summary – Construction*, presents the estimated localized emissions associated with Project construction. Detailed construction-related localized emissions model outputs are presented in Appendix A of the Air Quality Impact Analysis (*Technical Appendix B1* to this EIR).

As shown in Table 4.2-10, emissions of PM_{10} and $PM_{2.5}$ would exceed localized thresholds for 24-hour concentrations of particulate matter. Accordingly, construction of the Project has the potential to expose nearby sensitive receptors to substantial concentrations of PM_{10} and $PM_{2.5}$, which is evaluated as a significant impact for which mitigation would be required.

❑ Operational Localized Emissions Estimates

- **Criteria Pollutant Emissions**

Table 4.2-11, *Localized Significance Summary – Operations*, presents the results of the long-term localized significance threshold analysis. Detailed operational localized emissions model outputs are presented in Appendix A of the Air Quality Impact Analysis (*Technical Appendix B1* to this EIR).

Table 4.2-10 Localized Significance Summary - Construction

CONSTRUCTION	CO		NO_2	PM_{10}	$PM_{2.5}$
	AVERAGING TIME				
	1-HOUR	8-HOUR	1-HOUR	24-HOURS	
Peak Day Localized Emissions	0.67	0.25	0.06	16.01	12.47

Total Concentration	**7.03**	**2.12**	**0.09**	**0.06**	**0.03**
SCAQMD Localized Significance Threshold	20	9	0.18	2.50	2.50
Significant?	**NO**	**NO**	**NO**	**NO**	**NO**

Note: PM_{10} and $PM_{2.5}$ concentrations are expressed in $\mu g/m^3$. CO and NO_2 concentrations are expressed in ppm.
Source: Urban Crossroads 2011a, Table 3-9

Results of the analysis indicate that estimated Project-related long-term operational emissions would not exceed localized emissions thresholds established by the SCAQMD. Accordingly, under long-term operating conditions, the proposed Project would not expose any sensitive receptors to substantial Project-related pollutant concentrations. Impacts would be less than significant.

- **Diesel Particulate Emissions**

The proposed Project would generate/attract diesel trucks, which emit diesel particulate matter. Diesel particulate matter is known to be associated with increased hazards to health, including cancer. To evaluate the Project's potential to expose nearby sensitive receptors to substantial amounts of diesel particulate matter during long-term operation, a Mobile Source Health Risk Assessment was prepared for the proposed Project (included as *Technical Appendix B2* to this EIR).

The results of the Mobile Source Health Risk Assessment indicate that diesel particulate emissions generated during operation of the proposed Project would not create a significant health risk to sensitive receptors in the vicinity of the Project site. Detailed air dispersion model outputs and risk calculations are presented in Appendices B and C, respectively, of the Mobile Source Health Risk Assessment (*Technical Appendix B2* to this EIR). At the point of maximum impact, the maximum

increase in cancer risk is estimated to be 4.59 in one million for nearby residents (based on a 70 year exposure rate), 4.62 in one million for employees at the Project site (based on a 40 year exposure rate), and 1.14 in one million for nearby school children (based on a nine (9) year exposure rate). The level of risk fpr each sensitive receptor class (i.e., residents, workers, school children) would not exceed the SCAQMD significance threshold of 10 in one million. Therefore, long-term operation of the Project would not expose any sensitive receptors to substantial concentrations of diesel particulate emissions and impacts would be less than significant.

Threshold 5: Would the Project create objectionable odors affecting a substantial number of people?

Land uses generally associated with odor complaints include:

- Agricultural uses (livestock and farming)
- Wastewater treatment plants
- Food processing plants
- Chemical plants
- Composting operations
- Refineries
- Landfills
- Dairies
- Fiberglass molding facilities

The Project could produce odors during proposed construction activities resulting from construction equipment exhaust, application of asphalt, and/or the application of architectural coatings; however, standard construction practices would minimize the odor emissions and their associated impacts. Furthermore, any odors emitted during construction would be temporary, short-term, and intermittent in nature, and would cease upon the completion of the respective phase of construction. In addition, construction activities on the Project site would be required to comply with SCAQMD Rule 402, which prohibits the discharge of odorous emissions that would create a public nuisance. Accordingly, the proposed Project would not create objectionable odors affecting a substantial number of people during construction, and short-term impacts are evaluated as less than significant.

During long-term operation, the proposed Project would include light industrial and warehouse distribution land uses, which are not typically associated with objectionable odors. The temporary storage of refuse associated with the proposed Project's long-term operational use could be a source of odor; however, Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the City's solid waste regulations, thereby precluding any potential impact. Furthermore, the proposed Project would be required to comply with SCAQMD Rule 402, which prohibits the discharge of odorous emissions that would create a public nuisance, during long-term operation. As such, long-term operation of the proposed Project would not create objectionable odors affecting a substantial number of people.

4.2.4 CUMULATIVE IMPACT ANALYSIS

The proposed Project proposes to implement the Moreno Valley General Plan and Moreno Valley Industrial Area Plan land use designations applied to the Project site. As such, the Project would be

consistent with the growth forecasts used in the SCAQMD's AQMP to predict future air quality conditions in the SCAB. Accordingly, emissions that would be generated by the Project are assumed to be accounted for in the AQMP. Accordingly, the Project would not conflict with or obstruct the implementation of the SCAQMD on a cumulative basis.

The City of Moreno Valley General Plan EIR (Moreno Valley 2006 Sec. 5.3) concluded that buildout of the City would result in an unavoidable long-term air quality impact, even with implementation of all state-mandated air quality regulations. As such, there is a cumulative air quality impact identified in the Project's study area. As indicated in the analysis of Thresholds 2 and 3 in Subsection 4.2.3 above, the Project would exceed SCAQMD criteria pollutant standards for emissions of NO_X during construction. Under long-term operation, the Project's emissions of VOCs and NO_X also would exceed the SCAQMD criteria pollutant standards. In addition, the SCAB is classified as being a non-attainment area of ozone, for which NO_X is a precursor, under both federal and state criteria. When considered with emissions that can reasonably be assumed from other development within the cumulative study area, including buildout of the City of Moreno Valley, the Project's construction-related emissions of NO_X and operational emissions of NO_X and VOCs would represent a cumulatively considerable contribution to an existing air quality violation and cumulative impact, requiring mitigation.

Construction of the proposed Project would exceed localized significance thresholds for PM_{10} and $PM_{2.5}$ in the short-term during Phase 1 of the Project's construction activities. Concentrations of particulate matter (PM_{10} and $PM_{2.5}$) could substantially increase if construction activities were to occur simultaneous with construction activities on adjacent properties. Thus, implementation of the Project could expose nearby sensitive receptors to substantial concentrations of criteria pollutants. The Project's localized emissions of particulate matter (PM_{10} and $PM_{2.5}$) during construction are evaluated as cumulatively considerable and mitigation would be required.

Long-term operation of the Project would not exceed localized significance thresholds for any criteria pollutant. In addition, Project-related operational emissions of diesel particulates would not result in significant mobile-source health risks to any nearby sensitive receptors. Under long-term operating conditions, Project emissions would be well below SCAQMD's localized significance and carcinogenic exposure thresholds. Therefore, it is reasonable to conclude that even when combined with localized emissions from future developments within close proximity to the Project site, such emissions would not exceed SCAQMD thresholds. Accordingly, long-term operation of the Project would not expose nearby sensitive receptors to substantial localized pollutant concentrations, and a cumulative considerable impact would not occur.

As indicated in the analysis of Threshold 6 in Subsection 4.2.3 above, there are no components of the proposed Project's construction or long-term operation that would result in the exposure of a substantial number of sensitive receptors to objectionable odors. There also are no odor emitters in the Project's cumulative study area which, when combined with Project-related odors, could affect a substantial number of people. Accordingly, a cumulatively significant impact would not occur.

4.2.5 APPLICABLE PROJECT REQUIREMENTS

The following is a list of requirements and/or conditions to which the Project would be required to adhere. Compliance with these measures was assumed throughout the above analysis of air quality impacts.

PR 4.2-1 The Project is required to comply with the provisions of South Coast Air Quality Management District Rule 402, "Nuisance."

PR 4.2-2 The Project is required to comply with the provisions of South Coast Air Quality Management District Rule 403, "Fugitive Dust."

PR 4.2-3 The Project is required to comply with the provisions of South Coast Air Quality Management District Rule 431.2, "Sulfur Content of Liquid Fuels."

PR 4.2-4 The Project is required to comply with the provisions of South Coast Air Quality Management District Rule 1113, "Architectural Coatings."

PR 4.2-5 The Project is required to comply with the provisions of South Coast Air Quality Management District Rule 1186, "PM_{10} Emissions from Paved and Unpaved Roads, and Livestock Operations."

PR 4.2-6 The Project is required to comply with the provisions of South Coast Air Quality Management District Rule 1186.1, "Less-Polluting Street Sweepers."

PR 4.2-7 The Project is required to comply with California Code of Regulations Title 13, Division 3, Chapter 1, Article 4.5, Section 2025, "Regulation to Reduce Emissions of Diesel Particulate Matter, Oxides of Nitrogen and Other Criteria Pollutants, from In-Use Heavy-Duty Diesel-Fueled Vehicles."

PR 4.2-8 The Project is required to comply with California Code of Regulations Title 13, Division 3, Chapter 10, Article 1, Section 2485, "Airborne Toxic Control Measure to Limit Diesel-Fueled Commercial Motor Vehicle Idling."

4.2.6 SIGNIFICANCE OF IMPACTS BEFORE MITIGATION

Threshold 1: No Impact. The proposed Project would not conflict with or obstruct implementation of the SCAQMD AQMP.

Thresholds 2 and 3: Significant Direct and Cumulative Impact (Short-Term and Long-Term). Emissions during Phase 1 of Project construction would violate the SCAQMD regional threshold for NO_X. In addition, long-term operation of the Project is projected to exceed SCAQMD regional thresholds for VOC and NO_X emissions. Near- and long-term emissions of NO_X also would contribute to an existing air quality violation in the SCAB (i.e., non-attainment status for ozone) because NO_X is a precursor for ozone. As such, Project-related emissions would violate SCAQMD air quality standards and contribute to the non-attainment status of a criteria pollutant (i.e., ozone), and these impacts are evaluated as significant on a direct and cumulative basis.

Threshold 4: Significant Direct and Cumulative Impact (Short-Term). The Project would expose nearby sensitive receptors to substantial concentrations of localized particulate matter (PM_{10} and $PM_{2.5}$) during construction. This impact is evaluated as significant on a direct and cumulative basis. Long-term operation of the Project would not expose nearby sensitive receptors to substantial pollutant concentrations of any criteria pollutant or diesel particulate matter. As such, a less than significant impact would occur during long-term operation of the Project.

Threshold 5: Less than Significant Impact. Although near-term construction activities could produce odors associated with construction equipment exhaust, the application of asphalt, and the application of architectural coatings, standard construction requirements would minimize odor impacts to less than significant levels. Odors associated with long-term operation of the proposed Project would not significantly impact nearby sensitive receptors.

4.2.7 MITIGATION

MM 4.2-1 Prior to grading permit issuance, the City shall verify the following note is included on the grading plan:

"During construction activity, the contractor shall utilize California Air Resources Board (CARB) Tier III certified equipment or better for the following pieces of equipment: Graders, Rubber Tired Dozers, and Scrapers."

MM 4.2-2 Prior to issuance of each grading and building permit, the Project applicant or construction contractor shall prepare an exhibit for review by the City depicting the location of proposed equipment staging areas. The City shall review the proposed location(s) to ensure the staging areas are located at least 300-feet away from sensitive receptors and 1,105 feet from the northeastern corner of the Project site's property boundary as measured from the Iris Avenue right-of-way, as required by Mitigation Measure MM 4.10-1.

MM 4.2-3 The Project applicant shall use "Zero-Volatile Organic Compounds" paints (no more than 150 grams of VOC per liter) and/or High Pressure Low Volume (HPLV) applications consistent with South Coast Air Quality Management District Rule 1113. Alternatively, the applicant shall use building materials that do not require painting or are pre-painted. Painting products and materials compliant with these requirements shall be noted on building plans.

Although Project-related diesel particulate emissions are evaluated as less than significant on both a direct and cumulative basis, the following mitigation measures have been identified to further reduce the Project's less than significant impact due to diesel particulate emissions. The following mitigation measures shall be made a condition of the Project's approval by the City of Moreno Valley:

MM 4.2-4 Prior to the issuance of each building permit, the City shall ensure that building plans require the placement of signs at truck access gates, loading docks, and truck parking areas to identify applicable California Air Resources Board (CARB) anti-idling regulations. At a minimum each sign shall include: 1) instructions for truck drivers to shut off engines when not in use; 2) instructions for drivers of diesel trucks to restrict idling to no more than three (3) minutes; and 3) telephone numbers of the building facilities manager and the CARB to report violations.

MM 4.2-5 Prior to the issuance of each building permit, the City shall review the parking lot striping and security gating plan to ensure the site design allows adequate truck stacking at gates to prevent queuing of trucks outside the facility.

MM 4.2-6 Prior to the issuance of occupancy permits, the applicant shall provide evidence that a sign has been installed at each exit driveway, providing directional information to the City's truck route. Text on the sign shall read "To Truck Route" with a directional arrow.

In addition, Mitigation Measures MM 4.6-1 through MM 4.6-10 in Subsection 4.6, Greenhouse Gas Emissions, and Project Requirements PR 4.11-10 and 4.11-11 in Subsection 4.11, Transportation/ Traffic, also are applicable to the reduction of air quality impacts.

4.2.8 SIGNIFICANCE OF IMPACTS AFTER MITIGATION

Thresholds 2 and 3: Significant Direct and Cumulative Impact. Implementation of Mitigation Measures MM 4.2-1 through MM 4.2-3 and Mitigation Measures MM 4.6-2 and MM 4.6-5 in Section 4.6, Greenhouse Gas Emissions, would reduce Project emissions of NO_X during Phase 1 of construction; however, these emissions would remain above the SCAQMD regional threshold for NO_X. Emissions of NO_X during Phase 1 of Project construction also would cumulatively contribute to an existing air quality violation in the SCAB (i.e., ozone concentrations), as well as cumulatively contribute to the net increase of a criteria air pollutant for which the SCAB is in non-attainment (i.e., federal and state ozone concentrations). Accordingly, the Project's emissions of NO_X during Phase 1 of construction represent a short-term significant and unavoidable impact on both a direct and cumulative basis.

Operational emissions of VOCs and NO_X are projected to remain above regional pollutant thresholds during long-term operation of the Project, primarily from mobile source emissions that are beyond the control of the Project Applicant, future Project tenants and the City of Moreno Valley. The Project Applicant will incorporate design features into the Project to reduce long-term emissions of criteria area pollutants (see Mitigation Measures MM 4.2-4 through MM 4.2-6 and MM 4.6-3 through MM 4.6-10 in Section 4.6, Greenhouse Gas Emissions) to the greatest feasible extent. It is likely that incorporation of these features would reduce the Project's long-term emissions of VOCs and/or NO_X but because specific Project design features pursuant to MM 4.6-3 have not been identified at this time, the Project's Air Quality Impact Analysis (*Technical Appendix B1*) did not take credit for potential emissions reductions that may occur with implementation of such features. As such, it is concluded that the Project's long-term emissions of VOCs and NO_X would directly violate SCAQMD air quality standards. In addition, the Project's long-term emissions of NO_X would cumulatively contribute to an existing air quality violation in the SCAB (i.e., ozone concentrations), as well as cumulatively contribute to the net increase of a criteria air pollutant for which the SCAB is in non-attainment (i.e., federal and state ozone concentrations). Accordingly, the Project's long-term emissions of VOCs and NO_X are evaluated as a significant and unavoidable impact on the Project on both a direct and cumulative basis.

Threshold 4: Less than Significant Impact with Mitigation. Implementation of Mitigation Measures MM 4.2-1 and MM 4.2-2 would reduce localized PM_{10} and $PM_{2.5}$ concentrations below SCAQMD significance thresholds. Accordingly, with implementation of Mitigation Measures MM 4.2-1, MM 4.2-2, and MM 4.6-2, impacts to sensitive receptors associated with the proposed Project-related construction emissions would be reduced to below a level of significance.

4.3 BIOLOGICAL RESOURCES

This subsection assesses the Project's potential to impact sensitive biological resources that may be present on site or within off-site improvement areas. As previously described in EIR Section 3.0, *Project Description*, off-site improvement areas associated with the proposed Project include a portion of the Perris Valley Channel and an approximately 1,400 linear foot segment of Heacock Street located south of the Project site. The analysis in this subsection is based in part on information contained in a site-specific technical report titled, "Biological Technical Report for the March Business Center Project," prepared by Glenn Lukos Associates, Inc., and dated September 12, 2011. This report is provided as *Technical Appendix C* to this EIR. The Biological Technical Report also includes a Focused Burrowing Owl Survey, Jurisdictional Delineation Report, and Jurisdictional Delineation Impact Analysis, which are provided as Appendices C, D, and E (respectively) to the Biological Technical Report (and are included within *Technical Appendix C* to this EIR).

4.3.1 EXISTING CONDITIONS

A. Scope and Methodology

❑ Scope and Methodology for the General Biological Resources Assessment

Biologists/Regulatory Specialists from Glenn Lukos Associates, Inc. (GLA) conducted site-specific biological surveys, including focused burrowing owl surveys, of the Project site and in the Project's off-site improvement areas on April 6, May 13, May 23, June 30, July 25, August 1 and August 4, 2011. Methods of study also included a review of relevant literature and a Geographical Information System (GIS)-based impact analysis. GLA assessed resources within the Project's impact areas using methodologies and accepted scientific and technical standards and survey guideline requirements issued by the U.S. Fish and Wildlife Service (USFWS), the California Department of Fish and Game (CDFG), the California Native Plant Society (CNPS), and the Western Riverside County MSHCP (GLA 2011 1-2).

The field studies also focused on a number of primary objectives that would satisfy the special provisions of the MSHCP and also comply with CEQA requirements, including: (1) general reconnaissance surveys and vegetation mapping; (2) general wildlife surveys; (3) habitat assessments and surveys for special-status plants (including species with applicable MSHCP survey requirements; (4) habitat assessments and focused surveys for special-status animals (including species with applicable MSHCP survey requirements); and (5) assessments for areas subject to the jurisdiction of the U.S. Army Corps of Engineers (Corps) jurisdiction pursuant to Section 404 of the Clean Water Act, and CDFG jurisdiction pursuant to Division 2, Chapter 6, Section 1600 of the California Fish and Game Code. Observations of plant and wildlife species were recorded during each of the above mentioned survey efforts (GLA 2011 2).

Please refer to the Biological Technical Report (*Technical Appendix C* Section 2.0) for a detailed description of the scope and methodology used for the general biological resources assessment.

❑ Jurisdictional Delineation Scope and Methodology

In addition to field surveys conducted for the general biological assessment, regulatory specialists of GLA examined the Project site and off-site improvement areas on March 1 and 16, 2011, to determine the limits of (1) Corps jurisdiction pursuant to Section 404 of the Clean Water Act (CWA), (2) Regional Water Quality Control Board (RWQCB) jurisdiction pursuant to Section 401 of the

CWA and Section 13260 of the California Water Code (CWC), and (3) CDFG jurisdiction pursuant to Division 2, Chapter 6, Sections 1600-1616 of the Fish and Game Code (GLA 2011 Appdx D 1-2).

Prior to beginning the field delineation a 200-scale color aerial photograph, a 200-scale topographic base map of the property, and a USGS topographic map were examined to determine the locations of potential areas of Corps, RWQCB, and CDFG jurisdiction. Suspected jurisdictional areas were field checked for the presence of definable channels and/or wetland vegetation, soils and hydrology. Suspected wetland habitats on the site were evaluated using the methodology set forth in the U.S. Army Corps of Engineers 1987 Wetland Delineation Manual (Wetland Manual) and the 2008 Regional Supplement to the Corps Wetland Delineation Manual: Arid West Region Version 2.0 (Arid West Supplement). Lateral limits of non-wetland waters were identified using field indicators of an Ordinary High Water Mark (OHWM). While in the field, jurisdiction areas were recorded onto a 200-scale color aerial photograph using visible landmarks. Other data were recorded onto wetland data sheets (GLA 2011 Appdx D 2).

B. Existing Vegetation Communities

Two vegetation/land use types are present on the Project Site; ruderal and disturbed/developed. Table 4.3-1, *Summary of Vegetation Types/Land Uses*, provides a summary of vegetation acreages for the proposed Project Site. Figure 4.3-1, *Vegetation Map*, provides a vegetation map for the Project site. A detailed description of each vegetation/land use type is provided below (GLA 2011 21).

Table 4.3-1 Summary of Vegetation Types/Land Uses

VEGETATION	ACREAGE
Ruderal	73.96
Disturbed/Developed	1.09
Total	**75.05**

Source: GLA 2011, Table 4-1.

- **Ruderal Areas**. The majority of the Project site consists of fallow fields that are disked/mowed on an annual basis, and supports a predominance of ruderal vegetation and annual grasses, both of which are suited to disturbed sites. Common vegetation identified on site includes summer mustard (*Brassica geniculata*), common goldfields (*Lasthenia californica*), common fiddleneck (*Amsinkia menziessii* var. *intermedia*), cultivated barley (*Hordeum vulgare*), wild oat (*Avena fatua*), red brome (*Bromus madritensis* ssp. rubens), and Russian thistle (*Salsola tragus*).

- **Disturbed**. Approximately 1.09 acres of the Project site consists of disturbed areas, including a dirt access road that cuts through the southern portion of the site, and bare areas along Iris Avenue.

FIGURE 4.3-1
Vegetation Map

C. *Special Status Plants*

The Project site was evaluated for the presence of special status plant species. The Biological Technical Report (*Technical Appendix C* Table 4-2) provides a list of the special-status plants there evaluated for potential occurrence on the Project site. Plant species were considered based on a number of factors, including: 1) species identified by the California Natural Diversity Database (CNDDB) as occurring (either currently or historically) on or in the vicinity of the Project site, 2) Western Riverside County MSHCP survey areas, and 3) any other special-status plants that are known to occur within the vicinity of the property, or for which potentially suitable habitat occurs on the Project site.

❑ Narrow Endemic and Criteria Area Plants

The Project site does not occur within the Western Riverside County MSHCP Narrow Endemic Plant Species Survey Area (NEPSSA) or Criteria Area Plant Species Survey Area (CAPSSA). Therefore, there is no requirement per the MSHCP to conduct focused surveys for any of the NEPPSA or CAPSSA target species on the Project site (GLA 2011 24).

❑ Special-Status Plants Observed On Site

During biological surveys, one special-status plant (smooth tarplant, *Centromadia pungens* ssp. *laevis*) was detected on the site, as shown on Figure 4.3-1. However, due to routine disking of the site for required fire fuel management, it was not possible for GLA biologists to accurately determine the size of the population (GLA 2011 21). Smooth tarplant is a CNPS List 1B.1 species and is a CAPSSA species under the MSHCP. However, the Project site is not within any of the MSHCP survey areas for Criteria Area Plants. As such, there are no avoidance and/or mitigation requirements for the smooth tarplant if the species is found to occur on the property and would be impacted. Impacts to the smooth tarplant are covered and mitigated for through the Project's participation in and compliance with the Western Riverside County MSHCP (GLA 2011 24).

D. *Special-Status Animals*

The Project site was evaluated for the presence of special status animal species. The Biological Technical Report (*Technical Appendix C* Table 4-3) provides a list of special-status animals that were evaluated for their potential to occur on the Project site, including MSHCP Covered Species with additional survey requirements. Species were evaluated based on a number of factors, including: 1) species identified by the CNDDB as occurring (either currently or historically) on or in the vicinity of the property, 2) MSHCP species survey areas applicable to the property, and 3) any other special-status animals that are known to occur within the vicinity of the property, or for which potentially suitable habitat occurs on the site.

❑ Special-Status Animals Observed On Site

Two special-status animals were detected within the Project site during the biological field surveys, including the western burrowing owl (*Athene cunicularia hypugaea*) and the California horned lark (*Eremophila alpestris actia*). These two species, as well as other species that have the potential to occur but that were not detected during field surveys, are discussed below.

- *Burrowing Owl (Athene cunicularia hypugaea)*

The Biological Technical Report (*Technical Appendix C* 28-30) provides a detailed description of the borrowing owl species. In summary, the burrowing owl is designated as a CDFG California Species of Special Concern. It breeds from southern provinces of Canada, south through eastern Washington, central Oregon, and California to Baja California, east to western Minnesota, northwestern Iowa, eastern Nebraska, central Kansas, Oklahoma, eastern Texas, and Louisiana, and south to central Mexico. The winter range is much the same as the breeding range, except that most burrowing owls apparently vacate the northern areas of the Great Plains and Great Basin in the winter. The burrowing owl winters south regularly to El Salvador.

In California, burrowing owls are restricted to the central valley extending from Redding south to the Grapevine, east through the Mojave Desert and west to San Jose, the San Francisco Bay area, the outer coastal foothills area which extend from Monterey south to San Diego and the Sonoran desert. It is a resident in the open areas of the lowlands over much of the Southern California region.

The burrowing owl occurs in shortgrass prairies, grasslands, lowland scrub, agricultural lands (particularly rangelands), prairies, coastal dunes, desert floors, and some artificial, open areas as a year-long resident. They may also use areas such as, but not limited to, golf courses, cemeteries, road allowances within developed areas, airports, vacant lots, fairgrounds, abandoned buildings, and irrigation ditches. They require large open expanses of sparsely vegetated areas on gently rolling or level terrain with an abundance of active small mammal burrows. As a critical habitat feature need, they require the use of rodent or other burrows for roosting and nesting cover. They may also dig their own burrow in soft, friable soil (as found in Florida) and may also use pipes, culverts, and nest boxes where burrows are scarce. The mammal burrows are modified and enlarged. One burrow is typically selected for use as the nest; however, satellite burrows are usually found within the immediate vicinity of the nest burrow within the defended territory of the owl.

One burrowing owl family group (including at least four juveniles) was detected on the Project site during field surveys. The family group was first detected on July 28, 2011 by GLA biologists while mapping smooth tarplant. Four burrowing owls were observed at a single burrow (western burrow) located approximately 88 meters (290 feet) east of Heacock Street and 55 meters (180 feet) south of Iris Avenue. Two more burrowing owls were detected at a burrow complex comprised of four burrows located approximately 134 meters (440 feet) south of Iris Avenue at the eastern property boundary (GLA 2011 29). Figure 4.3-2, *Burrowing Owl Location Map*, depicts the locations of the burrowing owls that were observed on site.

During the fourth focused owl survey (August 1, 2011), one adult and one juvenile burrowing owl were detected at the western burrow, and one juvenile owl was detected at the eastern burrow complex. The adult owl (presumably male based on appearance) appeared to have a USFWS aluminum band and green color band on its left leg. Because the burrowing owls were detected late in the breeding season, a fifth focused survey was conducted on August 4, 2011. During the August 4th survey, the banded adult and three juveniles were detected at the western burrow, and one juvenile was briefly detected at the eastern burrow complex (GLA 2011 29).

The western burrow complex is comprised of a single large (one-foot wide) excavated burrow. The burrow and adjacent area exhibited evidence of burrowing owl occupation including cast pellets; however, there was no indication of nesting material at or near the burrow entrance. Although the

entrances to the burrows are larger than ground squirrel burrows, the two areas are extremely difficult to see from ground level (GLA 2011 29-30).

The eastern burrow complex is composed of four burrows that are located immediately adjacent to the eastern property boundary. Three of the burrows appear to have been excavated by ground squirrels or rabbits. Three of the four burrows exhibited owl sign including cast pellets and feathers. Although there was no sign of nesting material at or near the burrow entrances, it is probable that a burrowing owl pair nested at this complex based on the amount of pellets and feathers (GLA 2011 30).

- *California Horned Lark (Eremophila alpestris actia)*

The Biological Technical Report (*Technical Appendix C* 30) provides a detailed description of the California horned lark. In summary, the species does not have a federal or state designation; however this species is on the State Watch List. Additionally, the California horned lark is a covered species under the MSHCP. The horned lark has a holarctic distribution, ranging from the Arctic south to central Asia and Mexico with outlying populations in Morocco and Colombia. In general, the northernmost populations are migratory, moving south during the winter into remaining areas of the breeding range.

The California horned lark is a common to abundant resident in a variety of open habitats, usually where trees and large shrubs are absent. Range-wide, California horned larks breed in level or gently sloping shortgrass prairie, montane meadows, "bald" hills, open coastal plains, fallow grain fields, and alkali flats. Within Southern California, California horned larks breed primarily in open fields, (short) grasslands, and rangelands. Grasses, shrubs, forbs, rocks, litter, clods of soil, and other surface irregularities provide cover.

During habitat assessments conducted on the Project site, the California horned was observed in the ruderal/disked areas of the property. The California horned lark is a MSHCP covered species, indicating that any impacts to this species are covered by the MSHCP and mitigation for such impacts would not be required (GLA 2011 30).

❑ **Special-Status Animals with a Potential to Occur On Site**

Other special-status animals have some potential to occur at the Project site, but were not observed during biological surveys. These include the coastal western whiptail, orange-throated whiptail, ferruginous hawk, loggerhead shrike, and the San Diego black tailed jackrabbit. Refer to the Biological Technical Report (*Technical Appendix C* Sec. 4.3.2) for a detailed description of these species and their habitats.

E. Nesting Birds

The Project site supports low to medium height herbaceous vegetation with the potential to support nesting birds. Although no migratory birds were observed on the property, there is a potential that migratory bird species could use the property (GLA 2011 34). The Migratory Bird Treaty Act (MBTA) and CDFG Code prohibit impacts to nesting birds.

Source: Glenn Lukos (09-15-11)

Not to Scale

FIGURE 4.3-2
Burrowing Owl Location Map

F. Raptor Foraging Habitat

The Project site consists mostly of flat open fields with low-growing ruderal vegetation and annual grasses that can be utilized by raptors for foraging. There are no nesting opportunities for raptors on the site (GLA 2011 34).

G. MSHCP Riparian/Riverine Areas and Vernal Pools

The proposed Project includes an off-site impact area within the adjacent Perris Valley Channel, where the Project proposes to install a drainage outlet. This off-site area includes approximately 95 linear feet of the Channel, of which approximately 0.05 acre is considered to be a MSHCP riverine area, but does not support any riparian/wetland vegetation (GLA 2011 34). The Project site does not contain any MSHCP vernal pools.

H. Jurisdictional Waters

The off-site Perris Valley Channel contains areas within the jurisdictions of the Corps, CDFG, and the RWQCB. The Project's off-site impact area in the Channel to install drainage outlets (totaling 95 linear feet) contains approximately 0.05 acre of Corps and RWQCB jurisdiction, none of which supports jurisdictional wetlands, and 0.07 acre of CDFG jurisdiction (GLA 2011 34). Figure 4.3-3, *Jurisdictional Delineation Map*, depicts the locations of the jurisdictional areas on site, which also are described below.

❑ Corps Jurisdiction

Corps jurisdiction within the off-site Channel that bisects the Project site totals 1.57 acres, none of which consists of jurisdictional wetlands, and includes 940 linear feet of ephemeral streambed. There is no Corps jurisdiction within the Project site and outside of the Channel. The Channel is an improved, ephemeral drainage feature, which accepts urban runoff from areas around March ARB and in the City of Moreno Valley (GLA 2011 Appdx D 12).

The segment of the Channel that bisects the Project site enters the study area from an existing culvert/bridge beneath Heacock Street along the western Project boundary and flows from north/ northwest to southeast for 940 linear feet as it bisects the property. The Channel ultimately discharges into the San Jacinto River, which is a tributary to Canyon Lake. Canyon Lake is a tributary to the downstream segment of the San Jacinto River, which in turn is a tributary of Lake Elsinore. Lake Elsinore empties into Alberhill Creek/Temescal Wash, which is a tributary of the Santa Ana River, which ultimately discharges to the Pacific Ocean, a Traditional Navigable Water (TNW). The Perris Valley Channel is an incised, somewhat improved, flood control channel with partially improved side slopes and a soft-bottom channel. The Channel supports an OHWM ranging in width from 19 to 100 feet and is evidenced by water marks, presence of litter and debris, changes in soil characteristics, wracking, and shelving. No vegetation is present within the Channel under existing conditions; therefore, no delineation data pits were necessary as no potential wetland areas are present (GLA 2011 Appx D 12).

Source: Glenn Lukos (09-15-11)

Not to Scale

FIGURE 4.3-3
Jurisdictional Delineation Map

❑ Regional Water Quality Control Board Jurisdiction

The Perris Valley Channel is a Corps jurisdictional water subject to regulation pursuant to Section 401 and 404 of the CWA and does not need to be addressed separately by the RWQCB pursuant to Section 13260 of the CWC (i.e., the Porter-Cologne Act) (GLA 2011 Appdx D 12).

❑ CDFG Jurisdiction

CDFG jurisdiction associated with the segment of the Perris Valley Channel that bisects the Project site totals 2.51 acres, none of which consists of vegetated riparian habitat, and includes 940 linear feet of ephemeral streambed. No areas of CDFG jurisdiction are present on the Project site and outside the limits of the Channel.

I. Regulatory Setting

The proposed Project is subject to state and federal regulations associated with a number of regulatory programs. These programs often overlap and were developed to protect natural resources, including: state and federally listed plants and animals; aquatic resources including rivers and creeks, ephemeral streambeds, wetlands, and areas of riparian habitat; other special-status species which are not listed as threatened or endangered by the state or federal governments; and other special-status vegetation communities. Provided below is an overview of the federal, state, and regional laws, regulations, and requirements that apply to the proposed Project. For more information, refer to *Technical Appendix C.*

❑ State and/or Federally Listed Plants and Animals

- *State of California Endangered Species Act*

California's Endangered Species Act (CESA) provides definitions for endangered species, threatened species, and candidate species of California. Listed endangered and threatened species are protected by the CESA and candidate species may be afforded temporary protection as though they were already listed as threatened or endangered at the discretion of the Fish and Game Commission. Article 3, Sections 2080 through 2085, of the CESA addresses the taking of threatened, endangered, or candidate species by stating "No person shall import into this state, export out of this state, or take, possess, purchase, or sell within this state, any species, or any part or product thereof, that the commission determines to be an endangered species or a threatened species, or attempt any of those acts, except as otherwise provided." Under the CESA, "take" is defined as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." Exceptions authorized by the state to allow "take" require permits or memoranda of understanding and can be authorized for endangered species, threatened species, or candidate species for scientific, educational, or management purposes and for take incidental to otherwise lawful activities. Sections 1901 and 1913 of the California Fish and Game Code provide that notification is required prior to disturbance.

- *Federal Endangered Species Act*

The Federal Endangered Species Act of 1973 provides definitions for endangered species and threatened species of the U.S. Under provisions of Section 9(a)(1)(B) of the FESA it is unlawful to "take" any listed species. "Take" is defined in Section 3(18) of FESA: "...harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct." Further, the USFWS, through regulation, has interpreted the terms "harm" and "harass" to include certain types of habitat modification that result in injury to, or death of species as forms of "take." These

interpretations, however, are generally considered and applied on a case-by-case basis and often vary from species to species. In a case where a property owner seeks permission from a federal agency for an action that could affect a federally listed plant and animal species, the property owner and agency are required to consult with USFWS. Section 9(a)(2)(b) of the FESA addresses the protections afforded to listed plants.

- *State and Federal Take Authorizations for Listed Species*

Federal or state authorizations of impacts to or incidental take of a listed species by a private individual or other private entity would be granted in one of the following ways:

- Section 7 of the FESA stipulates that any federal action that may affect a species listed as threatened or endangered requires a formal consultation with USFWS to ensure that the action is not likely to jeopardize the continued existence of the listed species or result in destruction or adverse modification of designated critical habitat. 16 U.S.C. 1536(a)(2).
- In 1982, the FESA was amended to give private landowners the ability to develop Habitat Conservation Plans (HCPs) pursuant to Section 10(a) of the FESA. Upon development of an HCP, the USFWS can issue incidental take permits for listed species where the HCP specifies at minimum, the following: (1) the level of impact that will result from the taking, (2) steps that will minimize and mitigate the impacts, (3) funding necessary to implement the plan, (4) alternative actions to the taking considered by the applicant and the reasons why such alternatives were not chosen, and (5) such other measures that the Secretary of the Interior may require as being necessary or appropriate for the plan.
- Sections 2090-2097 of the California Endangered Species Act (CESA) require that the state lead agency consult with CDFG on projects with potential impacts on state-listed species. These provisions also require CDFG to coordinate consultations with USFWS for actions involving federally listed as well as state-listed species. In certain circumstances, Section 2080.1 of the California Fish and Game Code allows CDFG to adopt the federal incidental take statement or the 10(a) permit as its own based on its findings that the federal permit adequately protects the species under state law.

- *Take Authorizations Pursuant to the MSHCP*

The Western Riverside County MSHCP, a regional HCP, was adopted on June 17, 2003, and an Implementing Agreement (IA) was executed between the USFWS, CDFG, and participating entities. The intent of the MSHCP is to preserve native vegetation and meet the habitat needs of multiple species, rather than focusing preservation efforts on one species at a time. As such, the MSHCP is intended to streamline review of individual projects with respect to the species and habitats addressed in the MSHCP, and to provide for an overall Conservation Area that would be of greater benefit to biological resources than would result from a piecemeal regulatory approach. The MSHCP provides coverage (including take authorization for listed species) for special-status plant and animal species, as well as mitigation for impacts to sensitive species.

Through agreements with the USFWS) and the CDFG, the MSHCP designates 146 special-status animal and plant species that receive some level of coverage under the plan. Of the 146 "Covered Species" designated under the MSHCP, the majority of these species have no additional survey/conservation requirements. In addition, through project participation with the MSHCP, the MSHCP provides mitigation for project-specific impacts to Covered Species so that the impacts

would be reduced to below a level of significance pursuant to CEQA. As noted above, project-specific survey requirements exist for species designated as "Covered Species not yet adequately conserved" (Volume I, Section 6.1.2 of the MSHCP document). As the MSHCP's survey requirements relate to the Project site, surveys are required on the Project site for the western burrowing owl.

❑ Regulations Related to Jurisdictional Waters and Wetlands

- *Army Corps of Engineers*

Pursuant to Section 404 of the CWA, the Corps regulates the discharge of dredged and/or fill material into waters of the United States. The term "waters of the United States" is defined in Corps regulations at 33 CFR Part 328.3(a). In the absence of wetlands, the limits of Corps jurisdiction in non-tidal waters, such as intermittent streams, extend to the OHWM which is defined at 33 CFR 328.3(e). Two decisions that have clarified the definition of Corps jurisdiction are "Solid Waste Agency of Northern Cook County v. United States Army Corps of Engineers, et al." and "Rapanos v. United States and Carabell v. United States," which are summarized in the Biological Technical Report. For more information, refer to Appendix D to the Biological Technical Report (*Technical Appendix C* to this EIR).

Corps Preliminary Jurisdictional Determination

A *Corps Preliminary Jurisdictional Determination Form* may be used to concede Corps jurisdiction where all streambeds within a project area are considered Corps jurisdictional waters. The project would be able to move forward pursuant to Corps Regulatory Guidance Letter (RGL) 08-02, issued on June 26, 2008, which allows the Corps to issue preliminary jurisdictional determinations (Preliminary JD) for a project. A Preliminary JD allows a project to move forward by setting aside/voluntarily waiving questions regarding CWA jurisdiction over drainages on site in the interest of allowing expeditiously obtaining a Section 404 Permit.

As stated in RGL 08-02:

> *While a landowner, permit applicant, or other affected party can elect to request and obtain an approved JD, he or she can also decline to request an approved JD, and instead obtain a Corps individual or general permit authorization based on either a preliminary JD, or, in appropriate circumstances (such as authorizations by non-reporting nationwide general permits), no JD whatsoever. The Corps will determine what form of JD is appropriate for any particular circumstance based on all the relevant factors, to include, but not limited to, the applicant's preference, what kind of permit authorization is being used (individual permit versus general permit), and the nature of the proposed activity needing authorization.*

A copy of the Corps' Preliminary JD form for the Project site is attached as Appendix A to the Jurisdictional Delineation report contained within Appendix D to the Biological Technical Report (*Technical Appendix C* to this EIR).

Wetlands Definition Pursuant to Section 404 of the Clean Water Act

The term "wetlands" (a subset of "waters of the United States") is defined at 33 CFR 328.3(b) as "those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support...a prevalence of vegetation typically adapted for life in saturated soil conditions." In 1987 the Corps published a manual to guide its field personnel in determining jurisdictional wetland boundaries. The methodology set forth in the 1987 Wetland Delineation Manual and the Arid West Supplement generally require that, in order to be considered a wetland, the vegetation, soils, and hydrology of an area exhibit at least minimal hydric characteristics. While the manual and Supplement provide great detail in methodology and allow for varying special conditions, a wetland should normally meet each of the following three criteria:

- More than 50% of the dominant plant species at the site must be typical of wetlands (i.e., rated as facultative or wetter in the National List of Plant Species that Occur in Wetlands);
- Soils must exhibit physical and/or chemical characteristics indicative of permanent or periodic saturation (e.g., a gleyed color, or mottles with a matrix of low chroma indicating a relatively consistent fluctuation between aerobic and anaerobic conditions); and
- Whereas the 1987 Manual requires that hydrologic characteristics indicate that the ground is saturated to within 12 inches of the surface for at least 5% of the growing season during a normal rainfall year, the Arid West Supplement does not include a quantitative criteria with the exception for areas with "problematic hydrophytic vegetation", which require a minimum of 14 days of ponding to be considered a wetland.

- *Regional Water Quality Control Board*

Section 13260 of the CWC (i.e., the Porter-Cologne Act)

Clean Water Act Section 401 requires federal agencies to obtain a Water Quality Certification from the Regional Water Quality Control Board before issuing permits that would result in increased pollutant loads to a water body. A Section 401 certification can be issued only if increased pollutant loads would not cause or contribute to exceedances of water quality standards. Subsequent to the decision in "Solid Waste Agency of Northern Cook County v. United States Army Corps of Engineers, et al.," the Chief Counsel for the State Water Resources Control Board issued a memorandum that addressed the effects of that decision on the Section 401 Water Quality Certification Program.

> *California's right and duty to evaluate certification requests under section 401 is pendant to (or dependent upon) a valid application for a section 404 permit from the Corps, or another application for a federal license or permit. Thus if the Corps determines that the water body in question is not subject to regulat ion under th e COE's 40 4 program, for instance, no application for 401 certification will be required…*

For more information about the memorandum, refer to Appendix D to the Biological Technical Report, (*Technical Appendix C* to this EIR).

- *California Department of Fish and Game*

Pursuant to Division 2, Chapter 6, Section 1602 of the California Fish and Game Code, the CDFG regulates all diversions, obstructions, or changes to the natural flow or bed, channel, or bank of any river, stream, or lake, which supports fish or wildlife. CDFG jurisdiction within altered or artificial waterways is based upon the value of those waterways to fish and wildlife. The CDFG Legal Advisor has prepared the following opinion:

- Natural waterways that have been subsequently modified and which have the potential to contain fish, aquatic insects and riparian vegetation will be treated like natural waterways...
- Artificial waterways that have acquired the physical attributes of natural stream courses and which have been viewed by the community as natural stream courses, should be treated by [CDFG] as natural waterways...
- Artificial waterways without the attributes of natural waterways should generally not be subject to Fish and Game Code provisions...

Thus, CDFG jurisdictional limits closely mirror those of the Corps. Exceptions are CDFG's exclusion of isolated wetlands (those not associated with a river, stream, or lake), the addition of artificial stock ponds and irrigation ditches constructed on uplands, and the addition of riparian habitat supported by a river, stream, or lake regardless of the riparian area's federal wetland status.

4.3.2 BASIS FOR DETERMINING SIGNIFICANCE

Environmental impacts to biological resources are assessed using impact significance threshold criteria, which reflect the policy statement contained in CEQA, §21001(c) of the California Public Resources Code. Accordingly, the State Legislature has established it to be the policy of the State of California to:

> *"Prevent the elimination of fish or wildlife species due to man's activities, ensure that fish and wildlife populations do not drop below self-perpetuating levels, and preserve for future generations representations of all plant and animal communities..."*

In the development of thresholds of significance for impacts to biological resources, CEQA provides guidance primarily in §15065, Mandatory Findings of Significance, and the CEQA Guidelines, Appendix G, Environmental Checklist Form. CEQA Guidelines §15065(a) states that a project may have a significant effect where:

> *"The project has the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or wildlife community, reduce the number or restrict the range of an endangered, rare, or threatened species, ..."*

Therefore, for the purpose of analysis in this EIR, the proposed Project would result in a significant impact to biological resources if the Project or any Project-related component would:

1. *Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional*

plans, policies, or regulations, or by the California Department of Fish and Game or U. S. Fish and Wildlife Service;

2. *Have a substantially adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U. S. Wildlife Service;*

3. *Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means;*

4. *Interfere substantially with the movement of any resident or migratory fish or wildlife species or with established native resident migratory wildlife corridors, or impede the use of native wildlife nursery sites;*

5. *Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; or*

6. *Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, other approved local, regional, or state habitat conservation plan.*

4.3.3 IMPACT ANALYSIS

Threshold 1:	***Would the Project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U. S. Fish and Wildlife Service?***

- *Impacts to Vegetation/Land Use Types*

As indicated previously in Table 4.3-1, the Project site consists only of Ruderal and Disturbed/Developed habitat. Neither of these habitat types is considered habitat for any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations (GLA 2011 37). As such, Project impacts to 73.96 acres of Ruderal habitat and 1.09 acre of Disturbed/Developed habitat would be less than significant and mitigation would not be required.

- *Impacts to Special-Status Plants*

The proposed Project would impact one special-status plant (smooth tarplant) by removal of the species from the Project site. Although the smooth tarplant is a MSHCP Criteria Area Plant, the Project site does not occur within the CAPSSA; therefore, there are no avoidance or mitigation requirements applicable to the smooth tarplant population on the Project pursuant to the MSHCP (GLA 2011 37). Impacts to smooth tarplant are potentially significant, but are reduced to below a level of significance with the Project's mandatory participation and compliance with the MSHCP.

- *Impacts to Special-Status Animals*

The Project has the potential to impact special-status animals. The Project would eliminate actual or potential live-in habitat for the burrowing owl, California horned lark, coastal western whiptail, orange-throated whiptail, and the San Diego black-tailed jackrabbit. In addition, the Project would eliminate foraging habitat on the Project site for the loggerhead shrike, ferruginous hawk, and other

raptors. Impacts to special-status animals are potentially significant; however, only the burrowing owl has project-specific mitigation requirements pursuant to the MSHCP (GLA 2011 37). Impacts to the California horned lark, coastal western whiptail, orange-throated whiptail, San Diego black-tailed jackrabbit, loggerhead shrike, ferruginous hawk, and other raptors would be less than significant as there are no avoidance or mitigation requirements specified by the MSHCP that would apply to the proposed Project, and because adequate habitat for the long-term conservation of these species would be provided through implementation of the MSHCP Conservation Areas. The Project's impacts to these species would be reduced to below a level of significance with the Project's mandatory participation and compliance with the MSHCP.

Objective 5 of the MSHCP species-specific conservation objectives for the burrowing owl states that for sites that are outside of the Criteria Area (such as the proposed Project site), at least 90% of the area with long-term conservation value shall be conserved on site if the site (including adjacent areas) supports three or more pairs of burrowing owls, supports greater than 35 acres of suitable habitat, and is non-contiguous with MSHCP Conservation Area lands. The Project site is not located within the Criteria Area and does support three or more pairs of burrowing owls; thus, the 90-percent conservation requirement does not apply to the Project and burrowing owls may be relocated from the site pursuant to MSHCP Objectives 5 and 6 (GLA 2011 37). A significant impact could occur if burrowing owls located on the Project site are not relocated pursuant to MSHCP Objectives 5 and 6 for this species. Project impacts to burrowing owls that may be present on the site prior to grading of the Project site for development represents a significant impact for which mitigation would be required.

- *Impacts to Nesting Birds*

Vegetation clearing and grading associated with the Project has the potential to impact nesting birds if these activities are conducted during the nesting season (GLA 2011 38). Impacts to nesting birds, including burrowing owls, are prohibited by the Migratory Bird Treaty Act and California Fish and Game Code, and therefore represent potentially significant impacts for which mitigation would be required.

- *Indirect Impacts to Special-Status Biological Resources*

The Project would not result in significant indirect impacts to special-status biological resources. The Project is not located adjacent to the MSHCP Conservation Area; therefore, the Project is not required to implement measures pursuant to the MSHCP Urban Wildland Interface Guidelines specified in Volume I, Section 6.1.4 of the MSHCP (GLA 2011 38). There are no other components of the proposed Project that could indirectly impact special status biological resources. Accordingly, a significant indirect impact to candidate, sensitive, or special status species would not occur.

Threshold 2:	***Would the Project have a substantially adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Wildlife Service?***

Off-site improvements within the Parris Valley Storm Drain Channel proposed as part of the Project would impact 0.05 acre of Corps jurisdiction, none of which consists of jurisdictional USFWS wetlands; 0.05 acre of RWQCB jurisdiction, none of which consists of jurisdictional wetlands; and

would result in permanent impacts to 0.06 acre of CDFG jurisdiction, none of which contains vegetated riparian habitat (GLA 2011 38).

Of these areas subject to impact, approximately 0.05-acre is classified as unvegetated MSHCP riverine areas. *Volume 1, Section 6.1.2* of the MSHCP states that unavoidable impacts to MSHCP Riverine Areas shall be mitigated such that the lost functions and values as they relate to Covered Species are replaced as set forth under the Determination of Biologically Equivalent or Superior Preservation (DBESP) requirements. However, the Project's minor impact (0.05-acre) to unvegetated streambed would not result in a loss of functions and values as it relates to MSHCP Covered Species. As such, Project impacts to 0.05 acre of MSHCP riverine areas represents a less than significant impact that is not subject to the DBESP requirements; accordingly, the impact would be less than significant and mitigation would not be required (GLA 2011 38). Project impacts to jurisdictional areas are discussed below.

- *U.S. Army Corps of Engineers Jurisdiction*

The segment of the Perris Valley Channel that bisects the Project site contains 1.57 acres of Corps jurisdiction, none of which consists of jurisdictional wetlands, and 940 linear feet of streambed. The proposed Project would permanently impact 0.05-acre of Corps jurisdiction, none of which consists of jurisdictional wetlands (GLA 2011 38). A total of a 95 linear feet of streambed would be permanently disturbed. Table 4.3-2, *Permanent Impacts to Corps Jurisdiction*, depicts permanent impacts to Corps jurisdiction, while Figure 4.3-4, *Jurisdictional Impact*, graphically depicts the location and extent of impacts to Corps jurisdictional areas. Project impacts to 0.05-acre of Corps jurisdictional areas (95 linear feet) would require the issuance of a Section 404 permit from the Corps, which is identified as a Project Requirement in Subsection 4.3.5. There would be no adverse effects on any riparian habitat or other sensitive natural community regulated by the Corps.

Table 4.3-2 Permanent Impacts to Corps Jurisdiction

DRAINAGE FEATURE(S)	TOTAL CORPS JURISDICTION (ACRES)	LENGTH OF DRAINAGE (FEET)	TOTAL PERMANENT IMPACTS TO CORPS JURISDICTION (ACRES)	LINEAR-FOOT IMPACTS (FEET)
Perris Valley Channel	1.57	940	0.05	95
Total	**1.57**	**940**	**0.05**	**95**

Source: GLA 2011 Appdx E, Table One.

- *Regional Water Quality Control Board Jurisdiction*

The segment of the Perris Valley Channel that bisects the Project site contains 1.57 acres of RWQCB jurisdiction, none of which consists of jurisdictional wetlands, and 940 linear feet of streambed. The Project, as proposed, would permanently impact 0.05-acre of RWQCB jurisdiction, none of which consists of jurisdictional wetlands. A total of a 95 linear feet of streambed would be permanently disturbed (GLA 2011 Appdx E 2). Table 4.3-3, *Permanent Impacts to RWQCB Jurisdiction*, depicts Project impacts to RWQCB jurisdictional areas, which also are presented graphically on Figure 4.3-4. Project impacts to 0.05-acre of RWQCB jurisdictional areas would require a permit from the RWQCB, which is identified as a Project Requirement in Subsection 4.3.5. There would be no

adverse effects on any riparian habitat or other sensitive natural community regulated by the RWQCB.

Table 4.3-3 Permanent Impacts to RWQCB Jurisdiction

DRAINAGE FEATURES	TOTAL REGIONAL BOARD JURISDICTION (ACRES)	LENGTH OF DRAINAGE (FEET)	TOTAL PERMANENT IMPACTS TO REGIONAL BOARD JURISDICTION (ACRES)	LINEAR-FOOT IMPACTS (FEET)
Perris Valley Channel	1.57	940	0.05	95
Total	**1.57**	**940**	**0.05**	**95**

Source: GLA 2011 Appdx E, Table Two.

- *Impacts to CDFG Jurisdiction*

The segment of the Perris Valley Channel that bisects the Project site contains a total of 2.51 acres of CDFG jurisdiction, none of which consist of vegetated riparian habitat, and 940 linear feet of streambed. The Project, as proposed, would temporarily impact 0.01-acre of CDFG jurisdiction, none of which consists of vegetated riparian habitat, and permanently impact 0.06-acre of CDFG jurisdiction, none of which consists of vegetated riparian habitat (GLA 2011 Appdx E 2-3). The Project also would result in permanent impacts to 95 linear feet of streambed. Table 4.3-4, *Temporary Impacts to CDFG Jurisdiction*, summarizes the Project's temporary impacts to CDFG jurisdiction and Table 4.3-5, *Permanent Impacts to CDFG*, summarizes the Project's permanent impacts to CDFG jurisdiction. Impacts to CDFG jurisdictional areas also are depicted on Figure 4.3-4. The proposed Project's temporary impacts to 0.01-acre of CDFG jurisdictional areas and permanent impacts to 0.06-acre of CDFG jurisdictional areas would require a permit from the CDFG, which is identified as a Project Requirement in Subsection 4.3.5. There would be no adverse effects on any riparian habitat or other sensitive natural community regulated by the CDFG.

Table 4.3-4 Temporary Impacts to CDFG Jurisdiction

DRAINAGE FEATURES	TOTAL CDFG JURISDICTION (ACRES)	LENGTH OF DRAINAGE (FEET)	TOTAL TEMPORARY IMPACT TO CDFG JURISDICTION (ACRES)	LINEAR-FOOT IMPACTS (FEET)
Perris Valley Channel	2.51	940	0.01	N/A*
Total	**2.51**	**940**	**0.01**	**N/A***

*Temporary linear-foot impacts to CDFG jurisdiction would not occur because the temporary impact area is inclusive of the permanent linear-foot impact area (refer to Table 4.3-5).

Total	**2.51**	**940**	**0.06**	**95**

Source: GLA 2011 Appdx E, Table Four.

Threshold 3: Would the Project have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) throug h direct removal, filling, hydrological interruption, or other means?

As indicated previously in Subsection 4.3.1H, no federally protected wetlands or riparian areas are located on the property or in the Project's off-site impact area; therefore, direct impacts to federally protected wetlands and riparian areas have no potential to occur (GLA 2011 38). With issuance of a required U.S. Army Corps of Engineers Section 404 Permit for the Project's 0.05-acre impact to 95 linear feet of jurisdictional streambed (discussed above under Threshold 3), the Project would not have a substantial adverse effect on any federally protected wetlands through direct removal, filling, hydrological interruption, or other means.

Threshold 4: Would the Project interfere sub stantially with t he movement of any resident or migratory fish or wildli fe species or w ith established native resident migratory wildlife corridors, or impede the use of native wildlife nursery sites?

As noted previously, although the Project site occurs within the MSHCP Plan Area, it is not located within or adjacent to any areas proposed for conservation, including areas identified as proposed or existing linkages (including constrained linkages). The MSHCP Reserve Area was designed to ensure the establishment and/or preservation of wildlife movement corridors, and because the Project site is not located in areas targeted for conservation for such purposes, Project implementation would not interfere substantially with the movement of any wildlife species. Additionally, there are no native wildlife nursery sites in close proximity to the proposed Project, and areas surrounding the site include areas of urban development or areas planned for urban development that do not facilitate wildlife movement. Accordingly, the Project would not result in any impacts to wildlife movement corridors or native wildlife nursery sites.

Threshold 5: Would the Project conflict with a ny local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

EIR Subsection 4.9, Land Use and Planning, provides an extensive analysis of the proposed Project's consistency with all applicable local and regional policies, and concludes that the Project would not result in any significant conflicts with any policies related to the protection of biological resources. In addition, the proposed Project would be required to comply with CEQA and the mandatory payment of MSHCP fees pursuant to Title 3, Chapter 3.48 of the City's Municipal Code. Although the City of Moreno Valley's Landscape Ordinance requires that "all mature trees on a site with 4" calipers or greater in place shall be retained and preserved," the proposed Project would not conflict

with the Landscape Ordinance requirements because no such trees exist on the site. The City of Moreno Valley does not have any additional ordinances in place protecting biological resources. Therefore, a significant impact would not occur.

Threshold 6: Would the Project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, other approved local, regional, or state habitat conservation plan?

The following is an analysis of the proposed Project's compliance with the Western Riverside County MSHCP's Reserve Assembly Requirements as well as other applicable MSHCP requirements pursuant to the following sections of the MSHCP: Section 6.1.2, *Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools*; Section 6.1.3, *Protection of Narrow Endemic Plant Species*; Section 6.1.4, *Guidelines Pertaining to the Urban/Wildland Interface*; and Section 6.3.2, *Additional Survey Needs and Procedures*.

❒ Project Relation to Reserve Assembly

The Project site occurs within the overall Plan Area of the MSHCP, and as such the Project is required to abide by any applicable survey and/or conservation requirements. As indicated in the discussion below, all surveys required by the MSHCP have been conducted on the proposed Project site and off-site improvement areas. However, the Project site does not occur within the MSHCP Criteria Area. As such, the Project is not required to set aside conservation lands pursuant to the MSHCP, and the Project is not subject to the Habitat Evaluation and Acquisition Negotiation Strategy (HANS) process, or Joint Project Review (JPR). Accordingly, the proposed Project would not conflict with the MSHCP Reserve Assembly requirements (GLA 2011 40).

❒ Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools

As discussed under Threshold 2, above, the proposed Project would permanently impact 0.05-acre of MSHCP Riverine Areas associated with the Project's proposed off-site drainage improvements within the Perris Valley Channel. *Volume 1, Section 6.1.2* of the MSHCP states that unavoidable impacts to MSHCP Riverine Areas shall be mitigated such that the lost functions and values as they relate to Covered Species are replaced as set forth under the DBESP requirements. However, the Project's minor impacts to unvegetated streambed would not result in a loss of functions and values as it relates to MSHCP Covered Species. As such, Project impacts to 0.05-acre of MSHCP riverine areas represents a less than significant impact that is not subject to the DBESP requirements; accordingly, the proposed Project would comply with *Volume 1, Section 6.1.2* of the MSHCP and a significant impact would not occur (GLA 2011 40).

❒ Protection of Narrow Endemic Plants

Section 6.1.3 of the MSHCP requires that within the Narrow Endemic Plant Species Survey Area (NEPSSA), site-specific focused surveys for Narrow Endemic Plant Species will be required for all public and private projects where appropriate soils and habitat are present. The Project site and off-site improvement areas are not located within the NEPSSA; therefore, focused surveys are not required for any of the Narrow Endemic Plants on the Project site. Accordingly, the proposed Project would not conflict with Volume I, Section 6.1.3 of the MSHCP, and a significant impact would not occur (GLA 2011 40).

❒ Guidelines Pertaining to the Urban/Wildland Interface

The MSHCP Urban/Wildland Interface Guidelines are intended to address indirect effects associated with locating development in proximity to the MSHCP Conservation Area. As the MSHCP Conservation Area is assembled, development is expected to occur adjacent to the Conservation Area and edge effects with the potential to adversely affect biological resources within the Conservation Area are required to be evaluated. Edge effects are identified in the MSCHP as: Drainage; Toxics; Lighting; Noise; Invasive Species; Barriers; and Grading/Land Development. The Project site does not occur within or adjacent to the MSCHP Criteria Area or existing Conservation Area, or any Public/Quasi-Public lands. As such, the proposed Project would not have the potential to create indirect effects on the MSHCP Conservation Area and is not be subject to the Urban/Wildland Interface Guidelines (GLA 2011 41). The Project, therefore, is consistent with Section 6.1.4 of the MSHCP.

❒ Additional Survey Needs and Procedures

MSHCP Section 6.3.2 identifies that in addition to the Narrow Endemic Plant Species addressed in Section 6.1.3, additional surveys may be needed for other certain plant and animal species in conjunction with MSHCP implementation in order to achieve full coverage for these species. Within areas of suitable habitat, focused surveys are required for additional plant species if a project site occurs within a designated CAPSSA, or special animal species survey area (i.e., burrowing owl, amphibians, and mammals). Of these, the Project site only occurs within the MSHCP burrowing owl survey area (GLA 2011 41).

As discussed above under the analysis of Threshold 1, implementation of the proposed Project would result in the loss of occupied burrowing owl habitat. However, since the Project site supports fewer than three owl pairs, the MSHCP requirements allow for the owls to be relocated from the site prior to commencement of construction activities pursuant to Objectives 5 and 6 of the MSHCP objectives for the burrowing owl.

4.3.4 CUMULATIVE IMPACT ANALYSIS

This cumulative impact analysis considers development of the proposed Project in conjunction with other development projects in the vicinity of the Project site and resulting from full General Plan buildout in the City of Moreno Valley and other jurisdictions in the region within the boundaries of the Western Riverside County MSHCP.

Implementation of the proposed Project would result in permanent ground disturbance to the 75.05-acre Project site, an off-site impact in the Perris Valley Channel to construct a drainage outlet, and additional off-site impacts within the Heacock Street public right-of-way for the installation of sewer line improvements. The primary effects of the proposed Project, when considered with the build out of long range plans in the region, would be the cumulative loss of vacant land that can support habitat for sensitive species. With respect to special-status species, although habitat offered on the Project site (ruderal vegetation and disturbed/developed vegetation) is of substantially lesser quality than habitat that is found in undisturbed natural areas, it still provides open spaces for foraging, refuge, nesting, and areas that can be used for species reproduction.

Anticipated cumulative impacts have been addressed within the region by the Western Riverside County MSHCP. The MSHCP, as currently adopted, addresses 146 “Covered Species” that represent a broad range of habitats and geographical areas within Western Riverside County,

including threatened and endangered species and regionally- or locally-sensitive species that have specific habitat requirements and conservation and management needs. The MSHCP addresses biological impacts for take of Covered Species within the MSHCP area. Impacts to Covered Species and establishment and implementation of a regional conservation strategy and other measures included in the MSHCP are intended to address the federal, state, and local mitigation requirements for these species and their habitats. Specifically, Section 4.4 of the MSHCP states that:

> *The MSHCP was specifically designed to cover a large geographical area so that it would protect numerous endangered species and habitats throughout the region. It is the projected cumulative effect of future development that has required the preparation and implementation of the MSHCP to protect multiple habitats and multiple endangered species.*

It goes on to state that:

> *The LDMF [Local Development Mitigation Fee] is to be charged throughout the Plan Area to all future development within the western part of the County and the Cities in order to provide a coordinated conservation area and implementation program that will facilitate the preservation of biological diversity, as well as maintain the region's quality of life.*

The reason for the imposition of the Mitigation Fee over the entire region is that the loss of habitat for endangered species is a regional problem resulting from the cumulative impacts of continuing development throughout all of the jurisdictions in Western Riverside County. Finally, Section 5.1 of the MSHCP states that:

> *It is anticipated that new development in the Plan Area will fund not only the mitigation of the impacts associated with its proportionate share of regional development, but also the impacts associated with the future development of more than 332,000 residential units and commercial and industrial development projected to be built in the Plan Area over the next 25 years.*

As the construction of buildings, infrastructure, and all alterations of the land within areas that are outside of the Criteria Area are permitted under the MSHCP (see MSHCP Section 2.3.7.1), cumulative impacts to biological resources with the exception of MSHCP non-covered species would be less than significant provided that the terms of the MSHCP are fully implemented (MSHCP Final EIR/EIS, Section 4.4.1.6). The MSHCP database has been consulted for the proposed Project and the recommended focused surveys (for the western burrowing owl) have been conducted. The Project is required to pay the required MSHCP mitigation fees per the City of Moreno Valley Municipal Code Title 3, Chapter 3.48. The Project would comply with the requirements of the MSHCP and, thus, would not conflict with its adopted policies. Accordingly, because the Project complies with the MSHCP, would pay the required MSHCP mitigation fee, and would have less than significant impacts to MSHCP non-covered species, the proposed Project's contribution to cumulative impacts would be less than significant.

As indicated under the discussion and analysis of Threshold 1 in Subsection 4.3.3, the Project site does not contain any habitat for any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations. Accordingly, the Project would not result in any cumulatively significant impacts to sensitive species as a result of habitat loss.

Although the Project would impact one special status plant (smooth tarplant), the Project site does not occur within the MSHCP's CAPSSA, indicating that the species is not targeted for conservation in the Project area and would be conserved instead as part of the assemblage of the MSHCP Reserve System. Since the proposed Project and all other developments within the cumulative study area would be required to comply with the MSHCP, Project impacts to special-status plants are evaluated as less than significant on a cumulative basis.

Regarding special-status animals, the Project would eliminate actual or potential live-in habitat for the burrowing owl, California horned lark, coastal western whiptail, orange-throated whiptail, and the San Diego black-tailed jackrabbit. In addition, the Project would eliminate foraging habitat for the loggerhead shrike, ferruginous hawk, and other raptors. With exception of the burrowing owl, none of these species has project-specific mitigation requirements pursuant to the MSHCP. As the proposed Project and other cumulative developments would be required to comply with the MSHCP, Potential Project-related impacts to California horned lark, coastal western whiptail, orange-throated whiptail, San Diego black-tailed jackrabbit, loggerhead shrike, ferruginous hawk, and other raptors are concluded to be less than significant on a cumulative basis because adequate habitat for these species would be accommodated through the MSHCP Reserve System. The burrowing owl is fairly ubiquitous within the Project vicinity; as such, it is reasonable to conclude that impacts to habitat for this species are occurring throughout the cumulative study area. As such, prior to mitigation, the proposed Project's impacts to burrowing owls that may be located on the site are evaluated as cumulatively significant and mitigation would be required.

Similarly, the proposed Project has the potential to impact nesting birds if construction activities occur during the nesting season. Impacts to nesting birds, including burrowing owls, are prohibited by the Migratory Bird Treaty Act and California Fish and Game Code. As nesting birds, including the burrowing owl, occur throughout the Project's cumulative study area, and because the Project has the potential to result in significant impacts to nesting birds, the Project also would result in a cumulatively significant impact to nesting birds prior to mitigation.

The proposed Project would result in impacts to jurisdictional areas, including impacts to 0.05-acre of Corps jurisdiction, 0.05-acre of RWQCB jurisdiction, and 0.06-acre of CDFG jurisdiction (including 0.01-acre of temporary impact to CDFG jurisdiction). Impacts to jurisdictional areas require the issuance of permits from the Corps, RWQCB and CDFG. With issuance of the required permits, cumulative impacts are reduced to below levels of significance. The Project would not impact any wetlands or riparian areas; thus, the Project does not have the potential to contribute to cumulatively significant wetland and riparian impacts.

As indicated under the discussion and analysis of Threshold 4 in Subsection 4.3.3, the proposed Project would not significantly impact wildlife movement corridors because such corridors already are accommodated by the MSHCP and the Project site is not targeted for conservation as part of any proposed or existing linkages by the MSHCP. In addition, there are no native wildlife nursery sites within the Project vicinity. While Western Riverside County is becoming increasingly urbanized, which could restrict wildlife movement, the MSHCP, and the Conservation Areas established therein, was developed with several goals that specifically support wildlife movement. Accordingly, cumulative impacts to wildlife movement are less than significant. As concluded by the MSHCP's Final EIR/EIS, *"The MSHCP provides for the movement of native resident and migratory species and for genetic flow identified for Covered Species. Therefore, impacts related to cores and linkages resulting from the Plan are considered less than significant."* (MSHCP Final EIR/EIS, Section 4.1.5)

Accordingly, the proposed Project would not result in any cumulatively significant impacts to wildlife movement corridors or native wildlife nursery sites.

The proposed Project would not conflict with any local policies or ordinances protecting biological resources; accordingly, a cumulatively significant impact due to a conflict with such local policies or ordinances would not occur.

As discussed under the analysis of Threshold 6 in Subsection 4.3.3, the proposed Project would be fully consistent with the all applicable MSHCP requirements, including the MSHCP's Reserve Assembly requirements, MSHCP policies pertaining to narrow endemic plants, MSHCP requirements for the Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools, and requirements related to Urban/Wildland interface. As such, cumulative impacts due to a conflict with these the MSHCP would not occur.

4.3.5 APPLICABLE PROJECT REQUIREMENTS

The following is a list of requirements and/or conditions to which the Project would be required to adhere. Compliance with these measures was assumed throughout the above analysis of impacts to biological resources.

PR 4.3-1 The Project shall comply with City of Moreno Valley Municipal Code Title 3, Chapter 3.48, *Western Riverside County Multiple Species Habitat Conservati on Plan Fee Program*, which requires a per-acre local development mitigation fee that will assist in providing revenue to acquire and preserve vegetation communities and natural areas within the city and western Riverside County which are known to support threatened, endangered or key sensitive populations of plant and wildlife species.

PR 4.3-2 The Project shall comply with City of Moreno Valley Municipal Code Title 3, Chapter 8.60, *Threatened and Endangered Species*, which requires a per-acre local development mitigation fee pursuant to the City's adopted "The Habitat Conservation Plan for the Stephens' Kangaroo Rat in Western Riverside County, California" and as established pursuant to Fee Resolution 89-92.

4.3.6 SIGNIFICANCE OF IMPACTS BEFORE MITIGATION

Threshold 1: Significant Direct and Cumulative Impact. The Project has the potential to directly and cumulatively impact burrowing owls that may be present on the site at the time development occurs. The Project also has the potential to directly and cumulatively impact nesting birds that may be present on the site if construction activities were to occur during the nesting season.

Threshold 2: Less than Significant Impact. The Project would not have a substantial adverse effect on any riparian habitat or other sensitive natural community. Although the proposed Project would impact 0.05-acre of MSHCP riverine area in the off-site Perris Valley Storm Drain Channel (as well as 0.05-acre of Corps and RWQCB jurisdictional area and 0.06-acre of CDFG jurisdictional area), this area is an unvegetated streambed. As such, there would be no loss of functions and values of riparian habitat or substantial effect on a sensitive natural community.

Threshold 3: No Impact. There are no federally protected wetlands on the Project site. A Section 404 Permit is required for the Project's off-site impact to 0.05-acre of Corps jurisdictional area, but this area is not a wetland.

Threshold 4: Less than Significant Impact. The Project would not substantially interfere with the movement of any resident or migratory fish or wildlife species, would not impact a wildlife corridor, nor impede the use of a nursery site.

Threshold 5: No Impact. The Project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

Threshold 6: Less than Significant Impact. The Project is subject to the Western Riverside County MSHCP and would not conflict with any applicable MSHCP provision.

4.3.7 MITIGATION

MM 4.3-1 Prior to the issuance of any grading permits, the Planning Division of the Community & Economic Development Department shall review grading plans to ensure that the following note is included on the plans:

> "No more than 30 days prior to commencement of ground-disturbing activities on site, a qualified biologist shall conduct pre-construction presence/absence surveys in accordance with the MSHCP Burrowing Owl Survey Instructions requirements and as required by MSHCP Objective 6 for the burrowing owl.
>
> In the event that pre-construction surveys identify the presence of any burrowing owls, then prior to commencement of ground-disturbing activities on site, and pursuant to Objective 6 of the MSHCP burrowing owl objectives, a qualified biologist shall passively relocate any burrowing owls present on site following protocols approved by the MSHCP, CDFG, and USFWS, including the required use of one-way doors to exclude owls from the site and collapsing of burrows.
>
> Owl relocation shall occur between September 15th and February 1st to avoid the nesting season. The "take" of any active nests during the breeding season shall be prohibited pursuant to the Migratory Bird Treaty Act and California Fish and Game Code.
>
> Ground disturbing activities authorized by this permit shall not occur until a report documenting the findings of the pre-construction survey has been prepared and approved by the Planning Division of the Community & Economic Development Department. The report shall identify the results of the pre-construction survey and provide documentation and evidence (e.g., photographs) of any passive relocation efforts that have occurred. No ground-disturbing activities may proceed unless the final report, as approved by the Planning Division, concludes that burrowing owls are no longer present on the property."

MM 4.3-2 As a condition of approval for all grading permits, vegetation clearing and ground disturbance shall be prohibited during the migratory bird nesting season (February 1

through September 15), unless a migratory bird nesting survey is completed in accordance with the following requirements:

a) A nesting bird survey shall be conducted by a qualified biologist within three (3) days prior to initiating vegetation clearing or ground disturbance.

b) A copy of the nesting bird survey results report shall be provided to the City of Moreno Valley. If the results of the nesting bird survey identify the presence of active nests on the property, then the qualified biologist shall provide the City of Moreno Valley Planning Division with a copy of maps showing the location of all nests and an appropriate buffer zone around each nest sufficient to protect the nest from direct and indirect impact. The size and location of all buffer zones, if required, shall be subject to review and approval by the Planning Department. The approved buffer zone shall be marked in the field with construction fencing, within which no vegetation clearing or ground disturbance shall commence until the qualified biologist and City Planning Department verify that the nests are no longer occupied and the juvenile birds can survive independently from the nests.

Impacts to CDFG, Corps, and RWQCB would not be significant due to standard regulatory requirements requiring the acquisition of a Section 1602 Streambed Alteration Agreement, Section 401 Permit, and Section 404 Permit. As part of these permits, the following mitigation measures will be required:

MM 4.3-3 Prior to the issuance of grading permits, and in accordance with the California Fish and Game (CDFG) Code, the Project shall obtain a Section 1602 Streambed Alteration Agreement from the California Department of Fish and Game (CDFG) for impact to 0.06-acre of CDFG jurisdictional area in the Perris Valley Storm Drain Channel. As part of the Agreement, the Project Applicant may acquire credits for the impact at a minimum 1:1 ratio from an approved in-lieu fee program or mitigation land bank.

MM 4.3-4 Prior to the issuance of grading permits, and in accordance with the Clean Water Act, the Project shall obtain a Section 404 Permit from the U.S. Army Corps of Engineers (Corps) and a Section 401 Permit from the Regional Water Quality Control Board (RWQCB) for impact to 0.05-acre of Corps and RWQCB jurisdictional area in the Perris Valley Storm Drain Channel. As part of the Permits, the Project Applicant may acquire credits for the impact at a minimum 1:1 ratio from an approved in-lieu fee program or mitigation land bank.

4.3.8 SIGNIFICANCE OF IMPACTS AFTER MITIGATION

Threshold 1: Less than Significant Impact with Mitigation. Implementation of Mitigation Measure MM 4.3-1 would ensure that potential impacts to the burrowing owl are reduced to a level below significant. Implementation of Mitigation Measure MM 4.3-2 would ensure that any nesting birds that may be present on the site are avoided during the nesting season, and would therefore reduce the Project's direct and cumulative impacts to nesting birds to a level below significant.

4.4 CULTURAL RESOURCES

This Subsection 4.4 is based on a cultural resources investigation conducted by Jones & Stokes Associates. The cultural resources report, titled "Cultural Resources Survey Report for the March Business Center Project" (dated April 2008; revised March 2012), is included as *Technical Appendix D* to this EIR. Information used to support the analysis in this Subsection also was obtained from the Cultural Resources section (Section 5.10, pp. 5.10-1 – 16) of the certified Final Program EIR prepared for the City of Moreno Valley General Plan (SCH No. 2000091075), dated July 2006 (Moreno Valley 2006b), the property's Phase I Environmental Assessment report dated December 2006 (*Technical Appendix G1*), the Project's Geotechnical Investigation dated January 3, 2007 (*Technical Appendix E*), as well as correspondence received by the City of Moreno Valley as part of Native American consultation efforts conducted in compliance with California Government Code Section 65352.3.

4.4.1 EXISTING CONDITIONS

A. General Prehistory Description

The Project site is located in the southwestern portion of the City of Moreno Valley, California. Prehistory within the Project area is defined by six cultural periods: Early Man Period, Paleo-Indian Period, Pinto Period, Gypsum Period, Saratoga Springs Period, and Shoshonean Period. Each of these cultural periods is briefly described below and documented in *Technical Appendix D*.

- Early Man Period. The Early Man Period is generally characterized as a hunting tradition and is thought to date from approximately 12,000 years ago to as far back as 50,000 years ago. Various geologic and experimental dating methods have been used to provide these extreme temporal assignments, although most have failed to withstand scientific scrutiny and it appears likely that humans first arrived in southern California no earlier than 13,000 years ago.

- Paleo-Indian Period. The Paleo-Indian Period began approximately 12,000 years ago and persisted until approximately 7,000 years ago. Paleo-Indian Period artifacts are associated with the highly mobile hunter-gatherer society that dominated during this period.

- Pinto Period. The Pinto Period ranged from approximately 7,000 years ago to 4,000 years ago. This period is marked by a gradual transition from wet pluvial conditions to arid desert conditions during the terminal Pleistocene and Early Holocene. Pinto-series projectile points, crudely made with stemmed or basally notched dart points, are the most distinctive artifact type of the Pinto Period. Other artifacts found at Pinto Period sites include large leaf-shaped knives, thick split cobble choppers and scrapers, scraper-planes, and small milling slabs and manos. Most known Pinto Period sites consist of small surface deposits of lithic artifacts that are suggestive of temporary, and perhaps seasonal, occupation by small groups of people.

- Gypsum Period. The Gypsum Period ranged from approximately 4,000 years ago to approximately AD 500. This period coincides with a period of increased moisture in the region, which allowed for more extensive occupation of the desert regions. In addition, periods of drought within this era seem to have resulted in human adaptations to more

arid conditions, rather than a retreat from the deserts. Large occupation sites are usually located adjacent to permanent natural water sources, such as perennial springs or larger streams. Technologically, the artifact assemblage of this period is similar to that of the Pinto Period; new tools were added either as innovations or as borrowed cultural items. Late in the Gypsum Period, Rose Spring arrow points appear in the archaeological record, reflecting the spread of the bow and arrow technology from the Great Basin and the Colorado River region. Other artifact types characteristic of this period include leaf-shaped arrow points, rectangular-based knives, flake scrapers, T-shaped drills, milling slabs and manos, as well as core/cobble tool assemblages such as scraper planes, large choppers, and hammerstones. Shaft smoothers, incised slate and sandstone tablets and pendants, bone awls, *Olivella* shell beads, and *Haliotis* beads and ornaments are also found.

- Saratoga Springs Period. The Saratoga Springs Period spanned from approximately AD 500 to AD 1200. This period is, in large part, a continuation of the developments that began during the Gypsum Period, such as increasing adaptation to the arid environment in the deserts and an increase in trade relations. Regional environmental conditions became much wetter, a development known as the Little Pluvial. Variations in regional cultural adaptations during the Saratoga Springs Period also become apparent. Trade with the Pacific and Gulf Coastal populations appears to have been extensive, and was one driving force that led to the gradual expansion of Patayan cultural traits further west in to the mountains of the Peninsular Range as well as into the inland valleys and coastal regions of southern California. Lake Cuhuilla is believed to have refilled the Coachella Valley around AD 500, and was the focus of cultural activities such as exploitation of fish, waterfowl, and wetland resources during this period. Desert people, speaking Shoshonean languages, may have moved into southern California at this time.

- Shoshonean Period. The Shoshonean Period began in approximately AD 1200 and lasted into the 1800s. During this period there appears to have been a continuation of the technological developments from the earlier Saratoga Springs Period. However, regional developments indicate that the formation of distinct ethnographic groups become clearer. During this period, Lake Cahuilla began to dry, and the large Patayan populations occupying its shores began moving westward. Subsequently, Spanish exploration and establishment of the Mission system during the late 1700s mark the end of prehistoric lifeways.

B. General Ethnography Description

As reported in *Technical Appendix D* and confirmed in research conducted by Bean (Bean 1978 575-87), the Project site lies on the edge of the traditional cultural territory of the Cahuilla Indians (Jones & Stokes 2008 10). Correspondence received by the City of Moreno Valley from the Morongo Band of Mission Indians (Dancy 2011) also indicates that the site may be within Cahuilla/Serrano territory. The Cahuilla practiced a lifeway based on hunting, collecting, and harvesting. Trading of resources also was an important component of Cahuilla society. Acorns were a major food staple, but the roots, leaves, seeds, and fruit of many other plants also were used. To gather and prepare these food resources, the Cahuilla had an extensive inventory of equipment, including bows and arrows, traps, nets, disguises, blinds, throwing sticks, slings, spears, hooks, and fish poisons. Shelters were often

made of brush, fan palm fronds, or arrowweed. In prehistoric times they were dome-shaped, but later tended to be rectangular (Jones & Stokes 2008).

Luiseño tribes assert that the Project site is within traditional Luiseño territory (Duro 2011, Hoover 2011b 5-9), instead of Cahuilla territory. Luiseño history originates in the present-day City of Temecula, from which the Luiseño people spread out, establishing villages in the area (Hoover 2011b 3). Like other Native American groups in Southern California, the Luiseño caught and collected seasonally available food resources and led a semi-sedentary lifestyle. Luiseño subsistence was based primarily on seeds like acorns, grass seed, manzanita, sunflower, sage, chia, and pine nuts, as well as game animals such as deer, rabbit, jackrabbit, wood rat, mice, antelope, and many types of birds.

Considering the information contained in *Technical Appendix D* and correspondence received by the City of Moreno Valley from Native American tribes as part of the government-to-government consultation process required by SB18 (California Government Code §65352.1; "Traditional Tribal Places"), the City has identified a disagreement among experts regarding the Project site's traditional Native American tribal affiliation. Some experts assert that the property is within traditional Cahuilla territory (Jones & Stokes 2007 10, Dancy 2011, Bean 1978 575-87), while other experts assert that the property is within traditional Luiseño territory (Duro 2011, Hoover 2011b 5-9). A third expert asserts that the property was a shared use area that was used for ongoing trade between the Cahuilla and Luiseño (Ontiveros 2011a). This EIR acknowledges that Native American territorial boundaries were somewhat fluid and changed through time, which could be the cause of the disagreement among experts. Additionally, the City of Moreno Valley's General Plan EIR identifies the City as being occupied by both Luiseno and Cahuilla peoples (City of Moreno Valley, 2006b 5.10-6). As such, the analysis in this EIR treats the Project site as a traditional shared use area between the Cahuilla and Luiseño tribes.

C. *Description of the Native American Consultation Process*

In accordance with California Government Code Section 65352.3, local governments are required to conduct consultation with California Native American tribes that are on the contact list maintained by the Native American Heritage Commission (NAHC) before adopting or amending a city or county general plan. The proposed Project involves an amendment to the City's General Plan to change the alignment and classification of Krameria Avenue; accordingly, consultation was conducted pursuant to CEQA Guidelines §15083, "Early Public Consultation," which states that "the Lead Agency may also consult directly with any person or organization it believes will be concerned with the environmental effects of the project." Because there is a potential for subsurface archaeological resources to be discovered at the Project site, the City conducted early public consultation with local Native American tribes.

Jones & Stokes initiated consultation efforts in 2007 (as part of the "prior project" discussed in Subsection 1.3) by contacting the NAHC to obtain their sacred lands file (SLF) and a list of Native American representatives for the Project area. A response was received from the NAHC on October 19, 2007 stating that a search of the SLF database did not yield any sacred lands or traditional cultural properties within the Project area. Upon recommendation from the NAHC, 11 Native American tribes were contacted on October 23, 2007. On November 1, 2007, Darrell Hill of the Soboba Band of Luiseño Indians responded requesting that the Soboba Band of Luiseño Indians receive copies of all archaeological and/or cultural resources documents, and further requested that

the City consult with Native American tribes. On November 29, 2007, John Gomez of the Ramona Band of Cahuilla replied and stated that the Project area is within the traditional territory of the Cahuilla People, and expressed concern over the protection, proper, and lawful treatment of unique and irreplaceable cultural resources that may be exposed during construction activities. Mr. Gomez also requested copies of the cultural resources reports prepared for the site (Jones & Stokes 13). No response was received from the Pechanga Tribe or other tribes.

In March 2011, consultation efforts were re-initiated by the City of Moreno Valley for the proposed Project. On February 1, 2011, the Morongo Band of Mission Indians responded, stating that the Project site may be located within the Cahuilla/Serrano traditional use area and requested that the Morongo Band be contacted if any human remains or Native American cultural resources are discovered during Project construction and development (Dancy 2011). The Soboba Band of Luiseño Indians responded on February 28, 2011, indicating that the Project site was used as a shared use area in ongoing trade between the Luiseño and Cahuilla tribes. The Soboba Band requested to be a lead consulting tribal entity for the Project and to be engaged in monitoring of ground-disturbing construction activities (Ontiveros 2011a). The Soboba Band sent an identical correspondence in response to this EIR's Notice of Preparation (NOP) (Ontiveros 2011b). Additionally in response to the NOP, a letter was received from the NAHC confirming that no Native American cultural resources were identified in the SLF search and identifying the same 11 Native American tribes for consultation that were contacted in 2007. Correspondence in response to the NOP also was received from the Rincon Band of Luiseño Indians (Duro 2011) requesting that Native American monitors be present during ground disturbing construction activities and from the Pechanga Band of Luiseño Mission Indians (Hoover 2011b), asserting that the Project site is within Luiseño territory and requesting consultation and notification of hearings.

D. General History Description

As documented in *Technical Appendix D,* European settlement of California began with the founding of Mission San Diego de Alcala in 1769. The first known European exploration in Riverside County was in 1772 by a party led by Captain Pedro Fages. In 1776, Juan Bautista de Anza crossed the area en-route to Mission San Gabriel. The founding of Mission San Gabriel in 1771 (Los Angeles County), San Juan Capistrano in 1776 (Orange County), and San Luis Rey in 1798 (San Diego County) had a profound effect on the Native American populations located in and around the Project area. The mission fathers of Mission San Gabriel and Mission San Luis Rey gradually began colonizing the interior valleys in what is now western Riverside County. During this period, Native American populations became increasingly sedentary, learned use of the Spanish language, and converted to Christianity. They provided the labor force for the missions and their ranchos. Some Cahuillas worked seasonally for the Spaniards and lived for the remainder of the year in their villages.

Mexico, including California, won independence from Spain in 1821. A decree of secularization followed in 1834, and the once thriving missions began to be abandoned. After secularization, large land grants were made to individuals in the area that is now western Riverside County.

The acquisition of California by the United States at the end of the Mexican-American War in 1848 and the discovery of gold in 1850 brought many Euro-Americans into California and promoted further cultural changes. The process of surveying and mapping the area began in 1852, when Henry

Washington and a small party of surveyors ascended the San Bernardino Mountains and established the San Bernardino Base and Meridian.

In 1859, the first U.S. Post Office in what would become Riverside County was established at John Magee's store on Temecula Rancho. With the completion of the transcontinental railroad in 1869, land speculators, developers, and colonists began arriving into Southern California. Orange trees were first planted in Riverside County in 1871. The trees thrived in the Southern California climate and the navel orange industry grew rapidly, supported by extensive irrigation projects. By 1882, there were more than half a million citrus trees in California, almost half of which were in Riverside County. On May 9, 1893, Riverside County officially formed from portions of San Bernardino County and San Diego County.

Moreno Valley saw population growth in the years following the construction of the Bear Valley Dam in 1883. Frank E. Moreno, for whom the city is named, constructed the dam to provide a reliable water source to citrus farmers. In 1891, litigation regarding ownership of the dam caused a water shortage that forced agriculturalists out of Moreno Valley. Population was sparse until 1918 when the United States constructed March Field for pilot training. March Air Reserve Base is located directly west of the Project site. Between 1918 and 1922, the base was used primarily to train fighter pilots of the Army Air Corps. This base was closed in 1922. It reopened in 1927 to become a fully-operational Army Air Force Base, and later a major B-52 bomber base after formation of the U.S Air Force in 1947. The base brought jobs and people into Moreno Valley and was the primary impetus for growth in the communities of Moreno, Sunnymead, and Edgemont. In 1984, the three communities were incorporated as the City of Moreno Valley. March Air Force Base was downgraded to an Air Reserve Base in 1993 as a result of recommendations from the 1993 Defense Base Realignment and Closure Commission (March JPA 2010 2-1).

E. Historical Resources

As documented in *Technical Appendix D*, historic period maps depict two structures on Project site by 1942, 10 structures by 1980 including a running track for horses, and the Perris Valley Storm Drain Channel by 1980. The 10 structures and the running track were subsequently demolished and removed, and the area plowed for agricultural use. The Perris Valley Storm Drain Channel remains in place. The Channel, built between 1945 and 1967—likely in the 1950s when this type of reclamation work was common—is a typical earth and concrete lined drainage channel. It possesses no distinctive features and is not identified as being eligible for the California Register of Historic Resources.

F. Archaeological Resources

Jones & Stokes Associates conducted an intensive pedestrian survey of the Project site on October 24 and 25, 2007 (Jones & Stokes 2008 *ii,* 14). A literature and records search also was conducted at the Eastern Information Center, University of California, Riverside. The record search included a review of all available cultural resource survey and excavation reports and site records for an area within a one-mile radius of the Project area. The results of this literature and records search indicate that one archaeological study was previously conducted within the Project area. In addition, five surveys were conducted within a half-mile radius of the Project area. No cultural resources were identified within the Project area; however, one isolated prehistoric stone artifact was identified within a half-mile radius of the site. This artifact was recorded as a pestle, artifact No. 33-15301, and was identified approximately 0.5-mile northeast of the Project site (Jones & Stokes 2008 13).

No archaeological resources were identified during the surface survey conducted by Jones & Stokes in October 2007. One Jones & Stokes archaeologist walked the entire surface area along 15-meter transects, and ground visibility was high due to the routine disking of the site. During the field survey, the race track and a structure once located on the northeastern corner of the property were noted as having been removed from the site. The only traces left of the structure noted during the field surveys were a utility pole, small chunks of wood, and one modern porcelain toilet (Jones & Stokes 2008 14).

G. Paleontological Resources

According to the City of Moreno Valley General Plan Final EIR, the City of Moreno Valley contains sedimentary rock units with potential to contain significant nonrenewable paleontological (fossil) resources. These sedimentary units are referred to as the Mt. Eden Formation and the San Timoteo Formation (City of Moreno Valley 2006b 5.10-10).

The Mt. Eden Formation is described as being primarily reddish sandstone and dark green and brown clay with local reddish fanglomerate and conglomerate. The age of the fossils contained in the Formation and the dark reddish brown coloration distinguish the Mt. Eden formation from the younger, green to gray, tan and red weathering of the San Temoteo Formation. Fossilized fauna include cricetine rodent, horse and proboscidean (extinct animals related to elephants) (City of Moreno Valley 2006b 5.10-10).

The San Timoteo Formation is a widespread deposit of sands, gravels, and clays that extends northward from the foothills of the San Jacinto Mountains for a distance of nearly 20 miles. The San Timoteo Formation contains fossils of land animals and plant species, and represents sediments deposited from about 3.5 to 0.7 million years ago during Late Pliocene to middle Pleistocene time. The presence of non-marine fossils within a sequence of rocks spanning such a long time has lead to several studies of the depositional environments and paleontology of the formation (California Department of Conservation 2002a).

According to Figure 5.10-3 of the Moreno Valley General Plan Final EIR (City of Moreno Valley 2006b 5.10-11), the Project area is characterized as having a "Low" potential for containing paleontological resource deposits. This is because the Project site, as with most of the City of Moreno Valley, is covered with recent alluvium. These sediments overlie fossiliferous sedimentary units of the Mt. Eden Formation and the San Timoteo Formation. Excavation to depths normal for development generally would not penetrate recent alluvial sediments to encounter fossiliferous deposits. Areas within the City that are thought to have the greatest potential for encountering paleontological resources occur in the hills in the east end of the City, in an area known as the Badlands. The proposed Project site is not located in close proximity to this portion of the City.

4.4.2 BASIS FOR DETERMINING SIGNIFICANCE

The proposed Project would result in a significant impact to cultural resources if the Project or any Project-related component would:

1. *Cause a substantial adverse change i n the significance of a historical resource as defined in California Code of Regulations, Section 15064.5;*

2. *Cause a substantial adverse change in the significance of an archaeological resource as defined in California Code of Regulations, Section 15064.5;*

3. *Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature; or*

4. *Disturb any human remains, including those interred outside of formal cemeteries.*

4.4.3 IMPACT ANALYSIS

Threshold 1: Would the Project cause a substantial adverse change in the significance of a historical resource as defined in California Code of Regulations, Section 15064.5?

No historic sites or historic resources are present on the Project site (Jones & Stokes 2008 13). Although the Project site formerly contained a horse running track and several structures, all buildings previously present on site have since been removed. Accordingly, there are no resources on the property that qualify as historic resources pursuant to California Code of Regulations, Section 15064.5.

Additionally, Figure 5.10-1 of the City's General Plan Final EIR, *Locations of Listed Historic Resource Inventory Structures*, depicts the location of known historic properties within the City. According to this exhibit, the nearest historic property to the proposed Project is located at 21874 Bay Avenue, or approximately 3.1 miles northwest of the Project site (City of Moreno Valley 2006b 5.10-3).

Therefore, because no historic sites or resources are present on the Project site, construction and operation of the Project would not cause a substantial adverse change in the significance of a historic resource. The Project would have no impact on historic resources.

Threshold 2: Would the Project cause a substantial adverse change in the significance of an archaeological resource as defined in California Code of Regulations, Section 15064.5?

Based on the results of a field surveys and record searches conducted for the Project area by Jones & Stokes, the Project site does not contain any known archaeological resources (Jones & Stokes 13-16). Jones and Stokes conducted an intensive pedestrian survey of the Project site over two days in October 2007. As part of the pedestrian survey, one Jones & Stokes archaeologist assessed the site for archaeological resources by walking the entirety of the subject property along 15 meter transects. No archaeological resources were discovered on the Project site. Furthermore, a comprehensive records search conducted by Jones & Stokes concluded that the Project site does not contain any known, previously recorded archaeological resources (Jones & Stokes 2008 13-16). Accordingly, implementation of the proposed Project would not result in a substantial adverse change in the significance of any known archaeological resources, as defined in California Code of Regulations Section 15064.5.

An evaluation of Project's potential to impact previously undiscovered resources that may be present beneath the surface of the property was also considered. As previously summarized in Section 2.0,

Environmental Setting, and discussed in detail in Subsection 4.5, Geology and Soils, the subject property contains damp, loose, disturbed top soils to depths of 12 to 16 inches (NorCal 2006 3). The disturbance of the topsoil on the subject property has been continual since the early 1900s. Based on a review of historical aerial photograph data, the southern portion of the property was used as pasture lands and the northern portion of the property was used as dwellings and possibly agriculture as early as 1938 (SCS Engineers 2006 7-9). Between 1953 and 1967, the northern half of the property was developed with up to 10 structures, including stables and a training center for race horses, complete with a racetrack. By the end of the 1980s, most of the corrals, barns and other buildings had been removed. Since removal of the structures, the entire property has been routinely disked, to depths of about 18 inches. No archaeological resources have been previously identified in the top 18 inches of disturbed soil and the potential to discover unknown resources in those 18 inches is very low.

According to the Moreno Valley General Plan EIR, the subject property is not a part of any known village complex and "the vast majority of archaeological locations in the City are milling stations where bedrock metates (more or less flat grinding surfaces), commonly referred to as 'slicks,' and bedrock mortars are found. Naturally, these locations are generally situated around valley edges where suitable rock outcrops occur" (Moreno Valley 2006b 5.10-6). The Project site is not located on a valley edge and does not contain any rock outcrops. Additionally, a comprehensive records search conducted by Jones & Stokes concluded that only one (1) isolated prehistoric stone artifact (a pestle) was identified within a half-mile radius of the Project site (Artifact No. 33-15301, approximately 0.5-mile northeast of the Project site) (Jones & Stokes 2008 13). This information indicates that the potential for resources to be located beneath the site's surface is low. Correspondence received by the City of Moreno Valley as part of the government-to-government consultation process required by SB18 (California Government Code Section 65352.1; "Traditional Tribal Places"), however, opines that there is not enough information to accurately identify the potential for subsurface resources (Hoover 2011b 9).

The maximum depth of proposed grading shown on the Project's grading plans is 42 inches (3.5 feet), except in proposed detention basin areas that would require limited, deeper excavations to approximately 10 feet in depth. Therefore, the potential for discovery of previously unknown archaeological resources, if present, would be limited to detention basin areas and a 24-inch zone between the 18 inches of top soils that have previously been disturbed and the 42-inch maximum depth of grading.

There is a low likelihood of uncovering subsurface archaeological resources on the subject property during Project-related grading and/or ground disturbing construction activities given: 1) there is no evidence that the property was part of an archaeological village complex; 2) the property does not have the same characteristics of other locations in the City of Moreno Valley where milling slicks, bedrock mortars, and other significant archaeological resources have been discovered; 3) no archaeological resources were discovered on the site during an intensive pedestrian survey; 4) there has been prior and continued disturbance of near-surface soils on the subject property; and 5) the potential zone of discovery is limited to a 24-inch zone and detention basin areas. As such, impacts are less than significant because the Project would not cause a substantial adverse change in the significance of an archaeological resource; no known resources exist at the site and potential for discovery of a resource that meets the definition of a significant resource given in California Code of Regulations Section 15064.5 is low.

Threshold 3: Would the Project directly or indirectly destroy a unique paleontological resource or site or unique geological feature?

No unique geologic features are present on the Project site (NorCal 2006). According to the City of Moreno Valley General Plan Final EIR, the Project site is considered to have a low potential for containing paleontological resources (City of Moreno Valley 2006b 5.10-11). The Project area primarily consists of recent alluvial sediments, which do not often reveal paleontological sites and resources because they are generally too young to contain fossils

As previously summarized in Section 2.0, Environmental Setting, and discussed in detail in Subsection 4.5, Geology and Soils, the subject property contains damp, loose, disturbed top soils to depths of 12 to 16 inches (NorCal 2006 3). The entire property has been routinely disked, to depths of about 18 inches. No paleontological resources have been previously identified on the property. The maximum depth of proposed grading shown on the Project's grading plans is 42 inches (3.5 feet), except in the areas of proposed detention basins that would require limited, deeper excavations to approximately 10 feet in depth. Fossiliferous deposits underlying the alluvial sediments and 18 inches of previously disturbed surface soils on the Project site are not likely to be encountered during grading of the proposed Project site because grading would not extend to the depth of those deposits. As such, impacts are less than significant because the Project would not directly or indirectly destroy a unique paleontological resource or site or geologic feature; no known resources exist at the site and potential for discovery unique resources, sites, and features is low.

Threshold 4: Would the Project disturb any human remains, including those interred outside of formal cemeteries?

The Project site does not contain a cemetery and no known formal cemeteries are located within the immediate site vicinity. Field surveys conducted on the Project site did not identify the presence of any human remains and no human remains are known to exist beneath the surface of the site (Jones & Stokes 2008 13).

As previously disclosed, the entire property has been routinely disked, to depths of about 18 inches. The maximum depth of proposed grading shown on the Project's grading plans is 42 inches (3.5 feet), except in the areas of proposed detention basins that would require limited, deeper excavations. Although there is not a probable likelihood for human remains to be present in the Project's subsurface disturbance areas, it is acknowledged that human remains have the potential to be discovered during any ground disturbing activities.

The California Native American Graves Protection and Repatriation Act of 2001 (California Health and Safety Code Sections 8010-8011) strives to ensure that all California Indian human remains and cultural items are treated with dignity and respect. If human remains are unearthed during Project construction, the construction contractor would be required by law to comply with California Health and Safety Code, Section 7050.5 "Disturbance of Human Remains." According to Section 7050.5(b) and (c), if human remains are discovered, the County Coroner must be contacted and if the Coroner recognizes the human remains to be those of a Native American, or has reason to believe that they are those of a Native American, the Coroner is required to contact, by telephone within 24 hours, the Native American Heritage Commission (NAHC). Pursuant to California Public Resources Code Section 5097.98, whenever the NAHC receives notification of a discovery of Native American

human remains from a county coroner, the NAHC is required to immediately notify those persons it believes to be most likely descended from the deceased Native American. The descendants may, with the permission of the owner of the land, or his or her authorized representative, inspect the site of the discovery of the Native American human remains and may recommend to the owner or the person responsible for the excavation work means for treatment or disposition, with appropriate dignity, of the human remains and any associated grave goods. The descendants shall complete their inspection and make recommendations or preferences for treatment within 48 hours of being granted access to the site. According to Public Resources Code Section 5097.94(k), the NAHC is authorized to mediate disputes arising between landowners and known descendents relating to the treatment and disposition of Native American human burials, skeletal remains, and items associated with Native American burials.

In addition, Conditions of Approval will be imposed on the proposed Project and will require the following: "If human remains are discovered, work in the affected area shall cease immediately and the County Coroner shall be notified. If it is determined that the remains are potentially Native American, the California Native American Heritage Commission and any and all affected Native American Indians tribes shall be notified and appropriate measures provided by State law shall be implemented (GP Objective 23.3, DG, CEQA)."

With mandatory compliance to California Health and Safety Code Section 7050.5, Public Resources Code 5097.98, and the Project's Conditions of Approval, any potential impacts to human remains of Native American descent would be less than significant and mitigation is not required.

4.4.4 CUMULATIVE IMPACT ANALYSIS

This cumulative impact analysis considers development of the proposed Project in conjunction with other development projects in the vicinity of the Project site resulting from full General Plan buildout in the City of Moreno Valley and other jurisdictions in the region identified in Subsection 4.0.2.

Record searches and field surveys of the Project area indicate the absence of significant historical sites and resources; therefore, the Project has no potential to contribute towards a significant cumulative impact to historical sites and resources.

Regarding archaeological resources, the cumulative study area includes the Native American traditional use areas of the Luiseno and Cahuilla tribes. As discussed above under the analysis of Threshold 2, a record search and field survey conducted for the Project site indicate that no unique or important archaeological resources are known to exist on the Project site. Additionally, there is a low potential for archaeological resources to be unearthed during Project-related construction activities. The Project, therefore, would not contribute to a significant cumulative archaeological impact.

Similarly, and as indicated above under the discussion of Threshold 3, there are no known paleontological resources on the Project site and the likelihood of their discovery is low. Thus, the Project would not contribute to a significant cumulative paleontological impact to fossiliferous deposits in the Mt. Eden and Temoteo Formations geologic formations.

Human burials are subject to specific regulatory protection, and their treatment is governed by provisions of the Public Resources Code and the Heath and Safety Code, applicable across the State

of California. These requirements are imposed on individual development projects within the City of Moreno Valley through a standard condition of project approval. Consequently, all projects that encounter burials would be required to provide appropriate treatment. Because appropriate treatment of human remains is required by law and the City's standard conditions of approval, there would not be a cumulative impact associated with the disturbance of Native American burials.

4.4.5 APPLICABLE PROJECT REQUIREMENTS

The following is a list of requirements and/or conditions to which the Project would be required to adhere. Compliance with these measures was assumed throughout the above analysis of cultural resources.

PR 4.4-1 The Project is required to comply with California Public Resources Code Section 5097.98, "Native American Historical, Cultural, and Sacred Sites."

PR 4.4-2 The Project is required to comply with California Health and Safety Code, Section 7050.5. "Disturbance of Human Remains."

4.4.6 SIGNIFICANCE OF IMPACTS BEFORE MITIGATION

Threshold 1: No Impact. The Project would not impact a historic resource. No historic sites are present on the Project site; therefore, no historic sites could be altered or destroyed by construction or operation of the proposed Project.

Threshold 2: Less than Significant Impact. The Project would not impact any known or recorded archaeological resources. There is a low likelihood for unearthing archaeological resources that meet the definition of a significant resource given in California Code of Regulations during Project construction.

Threshold 3: Less than Significant Impact. The Project would not impact any known paleontological resource. There is a low likelihood for unearthing unique paleontological resources, sites, and geologic features during Project construction.

Threshold 4: Less than Significant Impact. No human remains have been discovered at the Project site and no human remains are known to be buried beneath the surface of the site. If human remains are uncovered during ground disturbing construction activities and are determined to be of Native American decent, compliance with California Public Resources Code Section 5097.98, Health and Safety Code Sections 8010-801, and a condition imposed by the City of Moreno Valley to require compliance to those provisions would reduce the potential impact to below a level of significance.

4.4.7 MITIGATION

Although cultural resources impacts would be less than significant, the following mitigation measures are recommended to ensure the proper treatment of unknown resources in the unlikely event that resources are unearthed during the Project's construction process.

MM 4.4-1 Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan:

> "If any suspected archaeological resources are discovered during ground-disturbing activities, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call a qualified archaeologist to the site to assess the significance of the find.
>
> A qualified archaeologist shall evaluate the suspected resource. If the archaeologist determines that the find does not meet the CEQA standards of cultural significance given in the California Code of Regulations Section 15064.5, construction shall be permitted to proceed. However, if the archaeologist determines that further information is needed to evaluate significance, the City of Moreno Valley shall be notified and a treatment plan shall be prepared and implemented in consultation with the City and the culturally affiliated Native American tribe and in accord with Public Resources Code Section 21083.2. The landowner shall relinquish ownership of all archaeological artifacts that are of Native American origin found on the Project site to the culturally affiliated Native American tribe for proper treatment and disposition."

MM 4.4-2 Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan:

> "If any suspected paleontological resources are discovered during ground-disturbing activities, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call a qualified paleontologist to the site to assess the significance of the find.
>
> A qualified paleontologist shall evaluate the suspected resource. If the paleontologist determines that the find is not unique, construction shall be permitted to proceed. However, if the paleontologist determines that further information is needed to evaluate significance, the City of Moreno Valley shall be notified and a treatment plan shall be prepared and implemented in consultation with the City. Discovered fossils or samples of such fossils collected by the paleontologist shall be cleaned and prepared to allow for identification. Specimens recovered shall be donated to a qualified scientific institution for preservation and study. Examples of qualified institutions include, but are not limited to, the San Bernardino County Museum (Redlands, California) or the Western Center for Archaeology and Paleontology (Hemet, California)."

MM 4.4-3 If human remains are discovered during earthwork or other construction activities, work in the affected area shall cease immediately and the Riverside County Coroner shall be notified. The remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made by the Coroner. If the Riverside County Coroner determines the remains to be Native American, the California Native American Heritage Commission must be contacted within 24 hours. The Native American Heritage Commission must then immediately notify the "most

likely descendants" of receiving notification of the discovery. The most likely descendants shall then make recommendations within 48 hours, and engage in consultations concerning the treatment of the remains as provided in Public Resources Code Section 5097.98, "Native American Historical, Cultural, and Sacred Sites."

4.5 GEOLOGY AND SOILS

This subsection assesses the existing surface and subsurface geologic conditions and features of the Project site and determines the potential for impacts associated with these features. The analysis is based in part on information contained in the report titled "Geotechnical Investigation Proposed Heacock Business Center Development, Southeast Corner of Iris Avenue and Heacock Street, Moreno Valley, California," prepared by NorCal Engineering and dated January 3, 2007. The geotechnical investigation is provided as *Technical Appendix E* to this EIR. In addition, information used to support the analysis in this subsection was obtained from the Geology and Soils section (Section 5.6, pp. 5.6-1 – 5.6-12) of the certified Final Program EIR prepared for the City of Moreno Valley General Plan (SCH No. 2000091075), dated July 2006 (Moreno Valley 2006b).

4.5.1 EXISTING CONDITIONS

A. Regional Geology

The Project site is located within the Peninsular Range Geomorphic Province, a prominent natural geomorphic province that extends from the Santa Monica Mountains approximately 900 miles south to the tip of Baja California, Mexico, and is bounded on the east by the Colorado Desert. The Peninsular Range is characterized by steep, elongated ranges and valleys that generally trend northwesterly (California Department of Conservation 2002b). More specifically, the Project site is situated within the Perris Block unit, which is an eroded mass of Cretaceous and older crystalline and metamorphic rock. Thin sedimentary, metamorphic, and volcanic units locally mantle the bedrock with alluvial deposits filling in the lower valley and drainage areas. The Perris Block is bounded by the San Jacinto fault zone to the northeast, the Elsinore fault zone to the southwest, the east-west compressional faults of the Transverse Ranges Physiographic Province to the north, and to the southeast by the poorly defined northern edge of the Temecula Basin (City of Moreno Valley 2006b 5.6-1).

B. Site Geologic Units

Based on a field exploration and observations conducted by NorCal Engineering and a review of pertinent literature, the subsurface materials within the Project site are comprised of alluvial deposits that overlie granitic bedrock (NorCal 2007 3). Each of these units is discussed below.

❑ Fill/Topsoil

Disturbed top soils generally classified as silty sands to sandy silts with intermixed organics (*i.e.*, roots of surface vegetation) were encountered across the majority of the site to depths of 12 to 16 inches. These soils were generally noted to be dry to damp and loose (NorCal 2007 3).

Subsurface borings discovered a high concentration of asphaltic concrete, concrete, rock, and other debris near the ground surface in an approximately 350 foot by 200 foot area in the northern portion of the Project site. Native soils were encountered beneath the fill materials. It is assumed that the encountered fill materials may have served as a foundation for the structures that were previously located on the Project site (NorCal 2007 3).

❑ Alluvium

Native, undisturbed alluvial soils generally classified as silty and clayey sands to sandy silts were encountered beneath the upper disturbed and fill soils. The native soils were observed to be medium

dense/stiff and damp to moist. Alluvial soils on-site vary in thickness from approximately five (5) to 17 feet (NorCal 2007 3).

- **Granitic Bedrock**

Subsurface borings conducted by NorCal Engineering during the property's field investigation were terminated in depth before encountering bedrock; however, due to the regional geologic characteristics of the area it is assumed that the site is underlain by granitic bedrock (NorCal 2007 3). Furthermore, Moreno Valley General Plan FEIR Figure 5.6-1, *Geology*, indicates that the Project site is underlain by granitic bedrock (City of Moreno Valley 2006b 5.6-2).

C. Site Topography

The Project site is generally flat and ranges in elevation from a high point of approximately 1,502 feet above mean sea level (AMSL) in the northwest corner of the site to a low point of approximately 1,488 feet AMSL in the southeast corner of the site, with an overall topographic relief of approximately 14 feet. There are no unique topographic features or steep natural or manufactured slopes present on the property. Figure 2-5, *Topographic Map*, illustrates the Project site's existing topographic conditions.

D. Surface Water and Groundwater

No seepage or standing water was observed on the ground surface during site investigations, and no groundwater was encountered during subsurface soil borings. Based on a review of groundwater data by NorCal Engineering, it was estimated that regional groundwater occurs at depths of 50 feet below existing ground surface (NorCal 2007 3).

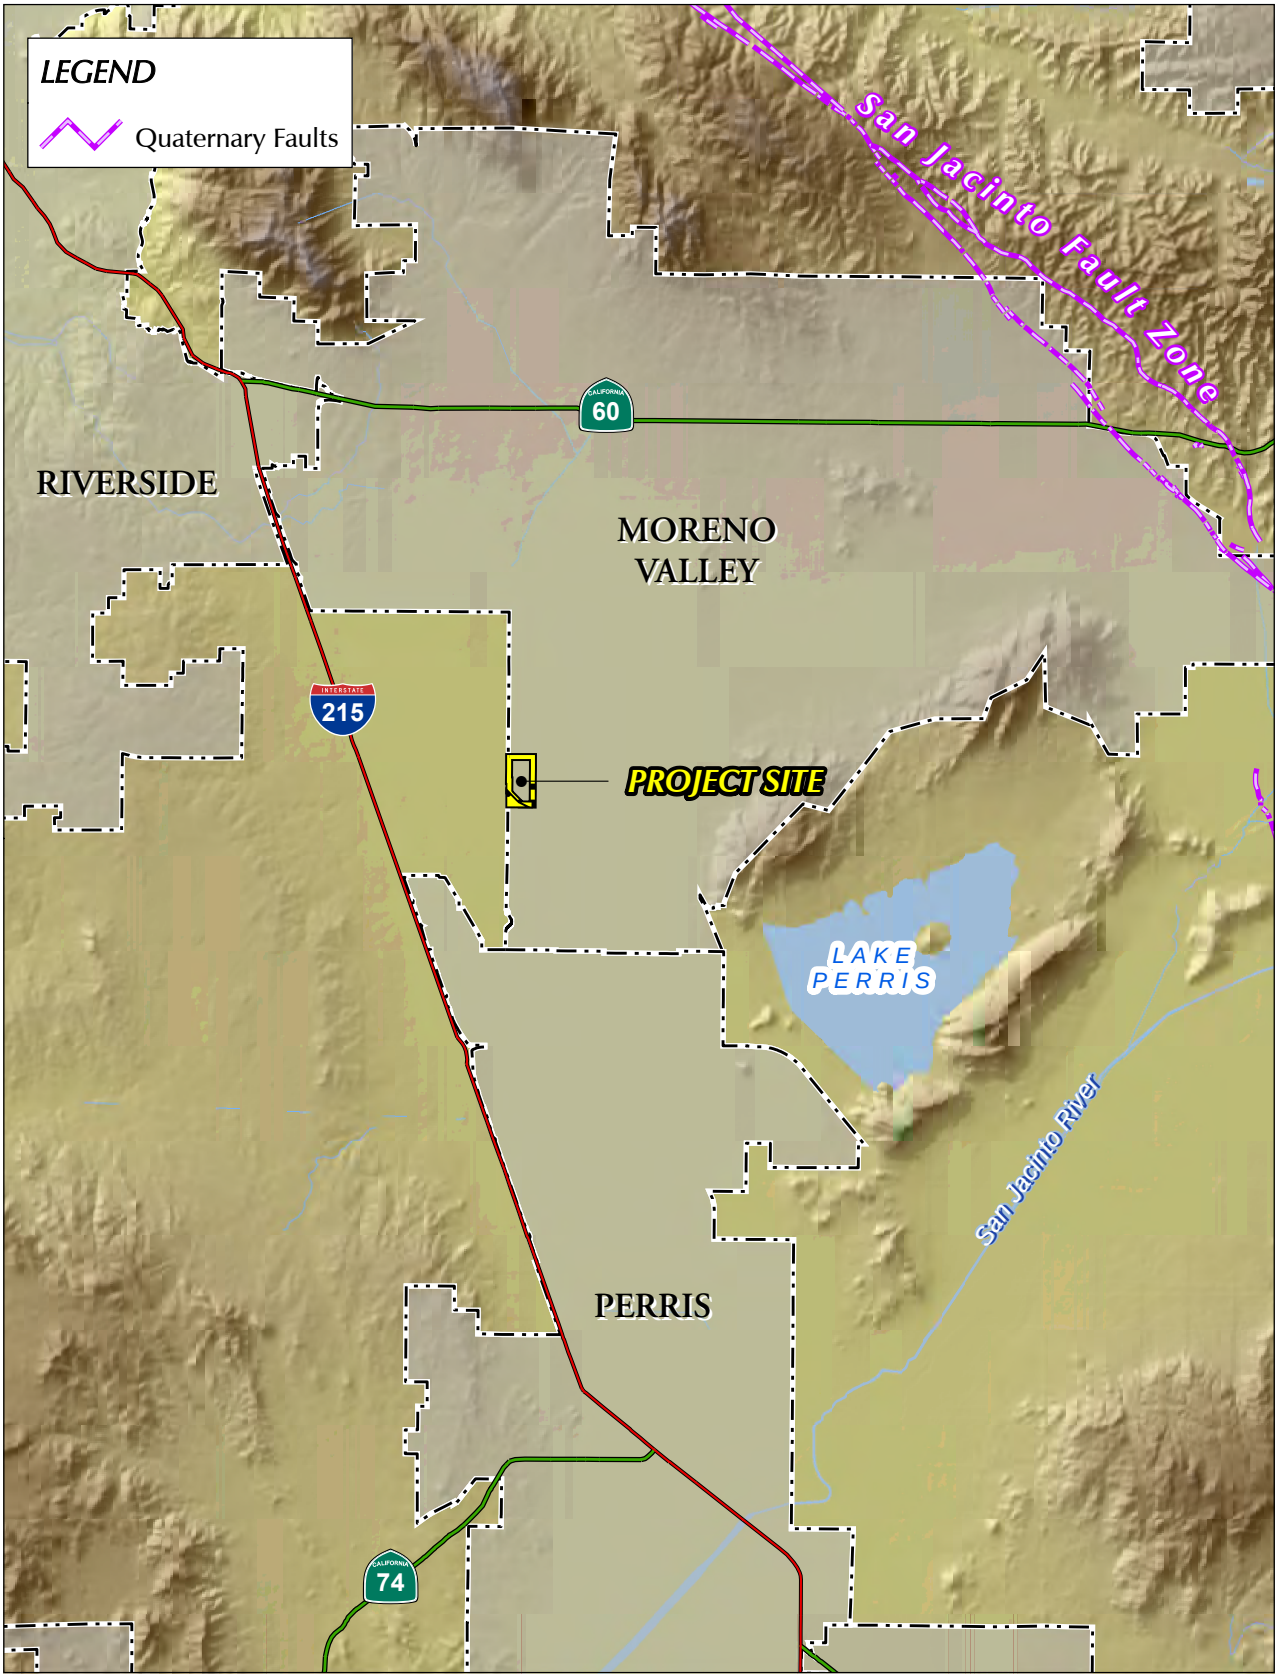
E. Faulting and Seismicity

The geologic structure of the Southern California area is dominated by northwest-trending faults associated with the San Andreas Fault system. The San Andreas Fault system includes several major branches, including San Jacinto and Elsinore faults, as well as numerous minor branches. The San Andreas Fault, Elsinore, and San Jacinto faults are known to have ruptured the ground surface during historic seismic events.

Figure 4.5-1, *Earthquake Fault Zones*, depicts the known, active earthquake faults within the vicinity of the Project site. An active fault is defined by the California Geological Survey as one which has experienced surface displacement within the Holocene Epoch (roughly the last 11,000 years). As depicted on Figure 4.5-1, the nearest known active fault is the San Jacinto Valley section of the San Jacinto Fault zone (Casa Loma Fault), which is located approximately eight (8) miles east of the Project site (California Department of Conservation 2010). There are no active or potentially active faults occurring on the Project site and the site does not lie within an identified Alquist-Priolo Earthquake Fault Zone or within a City-designated fault zone (City of Moreno Valley 2006b 5.6-4, NorCal 2007 5).

F. Seismic Hazards

Secondary hazards associated with ground shaking associated with earthquakes include surface rupture, ground failure, unstable soils and slopes (liquefaction). Each of these hazards is briefly described on the following pages.



Source: RCTLMA (2011), USGS

Figure 4.5-1
Earthquake Fault Zones

❑ Surface Rupture

Surface rupture can occur along pre-existing, known active fault traces; however, surface rupture also can splay or 'step from' known active faults or rupture along unidentified fault traces. No faulting was observed by NorCal Engineering during their field investigations of the Project site (NorCal 2007 5). As shown on Figure 4.5-1, no known faults are mapped trending through or toward the site. Therefore, there is no potential for surface rupture on the Project site.

❑ Liquefaction

Liquefaction is a phenomenon in which loose, saturated, relatively cohesion-less soil deposits lose shear strength during strong ground motions, which causes the soil to behave as a viscous liquid. Liquefaction is generally limited to the upper 50 feet of subsurface soils. Research and historical data indicate that loose granular soils below a near-surface groundwater table are most susceptible to liquefaction, while the stability of most clayey material is not adversely affected by vibratory motion. Therefore, in order for the potential effects of liquefaction to be manifested at the ground surface, soils generally must be granular, loose to medium dense, relatively saturated near the ground surface and subjected to a sufficient magnitude and duration of ground shaking. According to Moreno Valley General Plan FEIR Figure 5.6-2, *Seismic Hazards*, the Project site is not located within a potential liquefaction zone (City of Moreno Valley 2006b 5.6-5). In addition, based on NorCal Engineering's review of relevant literature, as well as a review of the subsurface exploration data and the estimated depth of groundwater at the Project site (>50 feet), the liquefaction potential at the Project site is determined to be low (NorCal 2007 6).

❑ Unstable Soils and Slopes

The Project site is generally flat and does not contain any steep natural or manufactured slopes. As such, the site is not susceptible to seismically induced landslides and rockfalls.

G. Slope and Soil Instability Hazards

❑ Soil Erosion

Erosion is the process by which the upper layers of the surface (such as soils) are worn and removed by the movement of water or wind. Soils with characteristics such as low permeability and/or low cohesive strength are more susceptible to erosion than those soils having higher permeability and cohesive strength. Additionally, the slope gradient on which a given soil is located also contributes to the soil's resistance to erosive forces. Because water is able to flow faster down steeper gradients, the steeper the slope on which a given soil is located, the more readily it will erode. The soils series on the Project site range from fair to good and poor to fair stability, which corresponds to a minimal to significant potential to water erosion (City of Moreno Valley 2006b 5.6-3).

Wind erosion can damage land and natural vegetation by removing soil from one place and depositing it in another. It mostly affects dry, sandy soils in flat, bare areas, but wind erosion may occur wherever soil is loose, dry, and finely granulated. Under the existing conditions, the Project site has potential to contribute windblown soil and sand because the site does not contain vegetative cover; the site is routinely disked and contains areas of loose and dry topsoil conditions (GLA 2011).

❑ Subsidence Potential

Subsidence is a gradual settling or sudden sinking of the ground surface. The principal causes of subsidence are aquifer-system compaction, drainage of organic soils, underground mining, and natural compaction. Laboratory testing of soil samples taken from the site by NorCal Engineering indicated that the site's near-surface fill soils are subject to consolidation when exposed to load (weight) increases. Therefore, the subject property has potential for shrinkage and subsidence (NorCal 2007 9).

❑ Expansive Soil Potential

Expansive soils are soils that exhibit cyclic shrink and swell patterns in response to variations in moisture content. Based on expansion index testing of soil samples taken from the Project site, it was determined that the site's soils have a very low expansion potential (NorCal 2007 15).

❑ Landslide Potential

The Project site and immediately surrounding properties are flat to gently sloping and contain no steep natural or manufactured slopes; thus, there is no potential for landslides to occur on or immediately adjacent to the site.

4.5.2 APPLICABLE ENVIRONMENTAL REGULATIONS

A. Alquist-Priolo Earthquake Fault Zoning Act (CA Pub. Res. Code §2621 et Seq.)

The Alquist-Priolo Special Studies Zone Act was signed into law in 1972 and renamed the Alquist-Priolo Earthquake Fault Zoning Act in 1994. The primary purpose of the Alquist-Priolo Act is to mitigate the hazard of fault rupture by prohibiting the location of structures for human occupancy across the trace of an active fault.

B. Seismic Hazards Mapping Act (CA Pub. Res. Code §2690 et Seq.)

The Seismic Hazards Mapping Act of 1990 is a statewide seismic hazard mapping and technical advisory program in California to assist cities and counties in fulfilling their responsibilities for protecting the public health and safety from the effects of strong ground shaking, liquefaction, landslides, or other ground failure and other seismic hazards caused by earthquakes. The California Geologic Survey (CGS) is the principal Sate implementing agency which has mapped out seismic zones requiring the completion of site-specific geotechnical investigations prior to construction of a project.

C. California Building Standards Code, Title 24

The California Building Standards Code (CCR, Title 24), also known as the CBSC or the "California Green Building Standards Code (CalGreen) that went into effect on January 1, 2011 is the standard from which California buildings derive appropriate building design standards. The International Building Code (IBC) used by the International Conference of Building Officials establishes design and construction standards for buildings and facilities. The CBSC incorporates the IBC as well as other uniform codes into its code standards.

D. South Coast Air Quality Management District, Rule 403

The South Coast Air Quality Management District (SCAQMD) is responsible for enforcing air pollution control measures in the South Coast Air Basin, within which the Project site is located. Rule 403 addresses blowing dust from construction sites and is applicable to the Project due to its potential to result in wind erosion during grading and construction activities.

E. Federal Water Pollution Control Act (Clean Water Act)

The Federal Water Pollution Control Act (also known as the Clean Water Act (CWA)) is the principal federal statute that addresses water resources. The provision of the CWA applicable to geology and soils is CWA Section 402, which applies to all construction sites of over one acre in size and, in part, serves to control the potential impacts of erosion. CWA Section 402 authorizes the National Pollutant Discharge Elimination System (NPDES) permit program that covers point sources of pollution discharging to a water body. The NPDES program requires operators of construction sites one acre or larger to prepare a Stormwater Pollution Prevention Plan (SWPPP) and obtain authorization to discharge stormwater under an NPDES construction stormwater permit.

F. Applicable Local Ordinances

❑ Moreno Valley Ordinance No. 359

In cases where a proposed project falls within an earthquake fault zone as shown on the maps prepared by the State Geologist, this ordinance requires compliance with all of the provisions of the Alquist-Priolo Act and the adopted policies and criteria of this ordinance.

❑ Moreno Valley Ordinance No. 568

Ordinance No. 568 would apply to the proposed Project and requires that all earth moving or grading operations requiring a grading permit also have an approved erosion control plan. The erosion control plan shall be submitted to the City Engineer for approval concurrent with the grading permit and/or grading plan submittal. The erosion control plan shall include details of protective measures necessary to protect adjoining public or private property from damage by erosion, flooding, or mud and/or debris deposits which may originate from the site or result from proposed grading operations.

❑ Moreno Valley Ordinance No. 586

Ordinance No. 586 would apply to the proposed Project and establishes standards and requirements for grading permits. This ordinance requires a soils engineering and engineering geology report (geotechnical report) be prepared for all grading projects. Recommendations contained in the approved geotechnical report are required to be incorporated into the grading plans and specifications and shall become conditions of the grading permit for the project.

❑ Moreno Valley Ordinance No. 816

Ordinance No. 816 would apply to the proposed Project and requires that all projects comply with California Building Codes and the International Building Codes. The City's Building and Safety Division is responsible for providing technical expertise in reviewing and enforcing the Building Code. These codes establish site-specific investigation requirements, construction standards, and inspection procedures to ensure that development does not pose a threat to the health, safety, and welfare of the public. The Building Code contains minimum baseline standards to guard against unsafe development.

4.5.3 BASIS FOR DETERMINING SIGNIFICANCE

The proposed Project would result in a significant impact to geology and soils if the Project or any Project-related component would:

1. *Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:*
   - i. *Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault;*
   - ii. *Strong seismic ground shaking;*
   - iii. *Seismic-related ground failure, including liquefaction; or*
   - iv. *Landslides.*
2. *Result in substantial soil erosion or the loss of topsoil;*
3. *Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse;*
4. *Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property; or*
5. *Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water.*

4.5.4 IMPACT ANALYSIS

Threshold 1: Would the Project expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:

- ***i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault;***
- ***ii. Strong seismic ground shaking;***
- ***iii. Seismic-related ground failure, including liquefaction; or***
- ***iv. Landslides?***

❑ **Rupture of Known Earthquake Fault**

There are no known active or potentially active faults on the Project site or trending toward the Project site. In addition, the Project site is not located within a mapped Alquist-Priolo Earthquake Fault Zone (NorCal 2007 5). The closest active fault to the Project site is the San Jacinto Valley section of the San Jacinto Fault zone (Casa Loma Fault), which is located approximately eight (8) miles east of the Project site (California Department of Conservation 2010). There are no other conditions on-site or in the surrounding area that provide evidence of any other faults that could impact the Project site. Accordingly, the proposed Project would not expose people or structures to

potential adverse effects, including the risk of loss, injury or death, involving the rupture of a known earthquake fault. No impact would occur and mitigation is not required.

❑ Strong Seismic Ground Shaking

The Project site is located in a seismically active area of Southern California and is expected to experience moderate to severe ground shaking during the lifetime of the Project. This risk is not considered substantially different than that of other similar properties in the southern California area. As a mandatory condition of Project approval, the Project would be required to construct proposed structures in accordance with the CBC (Title 24) and the City of Moreno Valley Building Code. The CBC and the City of Moreno Valley Building Code have been designed to preclude significant adverse effects associated with strong seismic ground-shaking. In addition, the proposed Project would be required to adhere to the site-specific earthwork and geotechnical design recommendations contained within the Project's geotechnical report (refer to *Technical Appendix E*). With mandatory compliance with standard and site-specific design and construction measures, potential adverse impacts would be less than significant and the Project would not expose people or structures to substantial adverse effects, including loss, injury or death, involving seismic ground shaking. No adverse impacts would occur and mitigation would not be required.

❑ Seismic-Related Ground Failure

Based on the NorCal Engineering's review of the subsurface exploration data from the Project site, as well as a review of relevant literature, the liquefaction potential of the Project site is determined to be very low to low. In addition, the Project site is not identified within a City-designated liquefaction zone (City of Moreno Valley 2006b 5.6-5). As noted previously, the site would be designed in accordance with the latest applicable seismic safety guidelines, including the standard requirements of the CBSC and City of Moreno Valley Building Code, as well as the site-specific recommendations contained within the Project geotechnical report, which are anticipated to further reduce the risk of seismic-related ground failure. As such, significant impacts associated with seismic-related ground failure and/or liquefaction hazards would not occur and mitigation would not be required.

❑ Landslides

The Project site is relatively flat, as is the surrounding area. There are no hillsides or steep slopes on-site or in the vicinity of the Project site. Accordingly, the Project would be located within an area with low potential for landslides, and development on the subject property would not expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving landslides. Impacts would be less than significant and mitigation would not be required.

Threshold 2: Would the Project result in substantial soil erosion or the loss of topsoil?

❑ Temporary Construction-Related Activities

The Project site is subject to some wind and water erosion under existing conditions, due to its sparse vegetative cover. Proposed grading activities would expose underlying soils at the Project site, which would increase erosion susceptibility during grading and construction activities. Exposed soils, along with any fill materials being stockpiled on the site for use in the grading operation, would be subject to erosion during rainfall events or high winds due to the removal of stabilizing vegetation and exposure of these erodible materials to wind and water. Erosion by water would be greatest

during the first rainy season after grading (before landscaping becomes established). Erosion by wind would be highest during periods of high wind speeds. The property is generally flat and erosion potential is not substantial.

Pursuant to the requirements of the State Water Resources Control Board, the Project applicant is required to obtain a National Pollutant Discharge Elimination System (NPDES) permit for construction activities. The NPDES permit is required for all projects that include construction activities, such as clearing, grading, and/or excavation that disturb at least one acre of total land area. This NPDES Permit requires the Project applicant to prepare and submit to the City for approval a Project-specific Storm Water Pollution Prevention Plan (SWPPP) and Water Quality Management Plan (WQMP). The SWPPP and WQMP must identify and implement an effective combination of erosion control and sediment control measures (*i.e.*, Best Management Practices) to reduce or eliminate discharge to surface water from storm water and non-storm water discharges. Adherence to the requirements noted in the Project's required WQMP (refer to *Technical Appendix I*) and site-specific SWPPP would ensure that potential construction-related impacts associated with water erosion would be less than significant.

During grading and other construction activities involving soil exposure or the transport of earth materials, City of Moreno Valley Ordinance No. 568, which establishes requirements for the control of erosion during construction (including wind erosion), would apply to the Project. In addition, requirements for the reduction of particulate matter in the air would apply, which are discussed in EIR Subsection 4.2, *Air Quality*, and addressed by SCAQMD Rule 403. With mandatory compliance to these regulatory requirements, the potential for wind erosion impacts would be less than significant.

❑ Long-Term Operational Activities

Following construction, wind and water erosion on the Project site would be minimized, as the areas disturbed during construction would be landscaped or covered with impervious surfaces and drainage would be controlled through a storm drain system. As discussed in detail in EIR Subsection 4.8, *Hydrology and Water Quality*, the Project would not increase the rate or amount of runoff leaving the site, as compared to existing conditions. As part of the Project, the City is requiring the construction of stormwater facilities (such as detention basins) to reduce flows to pre-development conditions. As discussed in Subsection 4.8, construction of detention/water quality basins on the site would ensure that post-development rates and amounts of runoff are similar to those occurring under existing conditions. Accordingly, implementation of the proposed Project would not increase the risk of siltation or erosion in stormwater discharged from the Project site. In addition, the WQMP for the Project (refer to *Technical Appendix I*) requires post-construction measures to ensure ongoing erosion protection. Compliance with the WQMP would be required as a condition of Project approval and long-term maintenance of on-site water quality features would be required. Therefore, implementation of the proposed Project would not significantly increase the risk of erosion on or off site in the long term. Impacts would be less than significant and mitigation would not be required.

Threshold 3: Would the Project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

The Project site is flat and gently sloping and contains no substantial natural or manmade slopes. Based on the geotechnical investigation prepared by NorCal Engineering, there is no evidence of on-site landslides on or near the Project site, nor are there any exposed boulders that could result in rockfall hazards. Slopes constructed as part of the Project's proposed detention basins would be engineered for long term stability. Accordingly, impacts associated with landslides and rockfall hazards would be less than significant.

Ground subsidence refers to the sudden sinking or gradual downward settling and compaction of soil and other surface material with little or no horizontal motion. Based on laboratory testing of subsurface soils from the Project site, NorCal Engineering determined that the near surface soils have potential for shrinkage and subsidence. However, the Project's geotechnical report indicates that the site's shrinkage and subsidence potential would be attenuated through removal of near surface soils down to competent materials and replacement with properly compacted fill, which is included as a recommendation in the Project geotechnical report (NorCal 2007 9). The proposed Project would be required to incorporate the recommendations contained within the Project geotechnical report into the grading plan to implement the Project, pursuant to Moreno Valley Ordinance No. 586. The City of Moreno Valley Community Development Department (Land Development Division) would enforce Ordinance No. 586 during future review of implementing plans and permits, and would incorporate the recommendations contained within the Project's geotechnical report (*Technical Appendix E*) into the conditions of approval for the implementing grading plan. Accordingly, with mandatory compliance with the earthwork recommendations provided in the Project geotechnical report, impacts due to shrinkage or subsidence would be less than significant.

Finally, lateral spreading is primarily associated with liquefaction hazards, and occurs when the ground slides on a buried liquefied layer, potentially resulting in damage to structures placed above such layers. As noted above under the discussion of Threshold 1, the potential for liquefaction at the site is considered low based on a site-specific analysis conducted by NorCal Engineering (NorCal 2007 6). Accordingly, impacts associated with lateral spreading would not occur.

Threshold 4: Would the Project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

The results of soil testing conducted by NorCal Engineering indicate that near surface soils possess a very low expansion potential. The majority of the site's near surface soils consist of silty sands and sandy silts that generally possess a very low expansion potential and exhibit relatively good to moderate shear strength characteristics. No special design considerations related to expansive soils would be warranted for the Project (NorCal 2007 15). Accordingly, the proposed Project would not be located on expansive soil and would not create a substantial risk to life or property. Impacts would be less than significant and mitigation would not be required.

Threshold 5: ***Would the Project have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?***

Sewer service is available to the Project site under pre-development conditions, and the Project proposes to connect to an existing sewer line adjacent to and north of the Perris Valley Storm Drain Channel (adjacent to the southern portion of the Project site, see Figure 3-8, *Conceptual Sewer Plan*). The Project also would connect to existing sewer conveyance infrastructure located off site, near the intersection of Heacock Street and Cardinal Avenue. The Project would not install septic tanks or alternative wastewater disposal systems on the Project site. Accordingly, no impact would occur.

4.5.5 CUMULATIVE IMPACT ANALYSIS

As noted in the foregoing analysis of the Project's direct impacts, all potential Project-specific impacts related to geology and soils would be below the threshold of significance identified Subsection 4.5.3 through conformance with the geotechnical recommendations contained within the Project geotechnical report (*Technical Appendix E*) and compliance with standard regulatory requirements as part of the Project's design.

With exception of erosion hazards, potential geologic and soils effects are inherently restricted to the areas proposed for development and would not contribute to cumulative impacts associated with other existing, planned, or proposed development. That is, issues including fault rupture, seismic ground shaking, liquefaction, landslides, and expansive soils would involve effects to (and not from) the proposed development, and are specific to on-site conditions. Accordingly, addressing these potential hazards for the proposed development would involve using measures to conform to existing requirements, and/or site-specific design and construction efforts that have no relationship to, or impact on, off-site areas. Because of the site-specific nature of these potential hazards and the measures to address them, there would be no connection to similar potential issues or cumulative effects to or from other properties.

As discussed under Threshold 2, during both near-term construction and long-term operation, measures would be incorporated into the Project's design to ensure that significant erosion hazards do not occur. Other developments within the cumulative study area would be required to comply with similar requirements, such as the need to obtain an NPDES permit and mandatory compliance with the resulting SWPPPs and WQMPs. All development projects in the cumulative study area identified in Subsection 4.0.2 also would be required to demonstrate that measures have been incorporated to ensure that development does not result in substantial increases in the amount or rate of runoff, which could in turn increase soil erosion. All projects in the cumulative study area also would be required to comply with Moreno Valley Ordinance No. 568 and SCAQMD Rule 403, which would preclude wind-related erosion hazards during construction. Therefore, because the Project would not result in significant erosion impacts, and because other projects within the cumulative study area would be subject to similar requirements to control erosion hazards during construction and long-term operation, cumulative impacts associated with wind and water erosion hazards are evaluated as less than significant.

4.5.6 APPLICABLE PROJECT REQUIREMENTS

The following is a list of requirements and/or conditions that the Project would be required to adhere to. Compliance with these measures was assumed throughout the above analysis of impacts related to geology and soils.

PR 4.5-1 Structures are required to be constructed in accordance with the City of Moreno Valley Building Code (City of Moreno Ordinance No. 816) and California Code of Regulations, Title 24, Part 2, the California Green Building Standards Code, which provides minimum standards for building design.

PR 4.5-2 All grading and earthwork activities are required to be performed in accordance with all applicable requirements of the City of Moreno Valley grading and excavation code (City of Moreno Valley Ordinance No. 586).

PR 4.5-3 The Project is required to obtain coverage under the General Permit for Discharges of Stormwater Associated with Construction Activity (Construction General Permit, 99-08-DWQ). The Permit will require the preparation and implementation of a Stormwater Pollution Prevention Plan and implementation of Best Management Practices.

PR 4.5-4 During grading and construction activities, the construction contractor(s) are required to comply with the requirements of SCAQMD Rule 403, Fugitive Dust.

PR 4.5-5 The Project is required by the City of Moreno Valley to comply with all recommendations given in its geotechnical study (*Technical Appendix E* to this EIR).

4.5.7 SIGNIFICANCE OF IMPACTS BEFORE MITIGATION

Threshold 1: Less than Significant Impact. The Project would not expose people or structures to substantial adverse seismic risks. There are no known active or potentially active faults on the Project site or trending toward the Project site. On-site soils are relatively stable. The risk of liquefaction is low. There is no risk of landslide. As with all properties within the Southern California region, the Project site is subject to seismic ground shaking associated with earthquakes. However, mandatory compliance with local and state ordinances and building codes would ensure that on-site structures are developed as required to attenuate the risk to life or property to less than significant levels.

Threshold 2: Less than Significant Impact. The Project would not result in substantial soil erosion or loss of topsoil. Soils the site would be exposed to water and wind erosion during grading and site development, but with the application of mandatory regulatory requirements, including the preparation and implementation of a WQMP, a SWPPP, and compliance to applicable City ordinances, erosion impacts on and off site would not be substantial and less than significant.

Threshold 3: Less than Significant Impact. The Project would not cause geologic unit or soil instability. There is no potential for the Project to cause rockfalls, landslides, or lateral spreading. Although soils on the site have the potential for soil shrinkage and settlement, any potential adverse effects associated with such conditions would be less than significant with mandatory compliance

with the recommendations provided within the Project geotechnical study, including requirements to remove and re-compact areas where such soil conditions exist.

Threshold 4: Less than Significant Impact. The Project would not be located on expansive soils. Near surface soils on the Project site possess a very low expansion potential.

Threshold 5: No Impact. The Project would not install septic tanks or alternative wastewater disposal systems. Accordingly, no impact would occur associated with soil compatibility for waste disposal systems.

4.5.8 MITIGATION

Impacts would not be significant; therefore, mitigation measures would not be required.

4.6 GREENHOUSE GAS EMISSIONS

This subsection assesses the Project's potential to generate greenhouse gas emissions that could contribute to Global Climate Change and its associated environmental effects. The analysis in this subsection is based in part on information contained in the report titled, "March Business Center Greenhouse Gas Analysis," prepared by Urban Crossroads, Inc. and dated October 31, 2011 and included as *Technical Appendix F* to this EIR.

4.6.1 EXISTING CONDITIONS

A. Introduction to Global Climate Change

Global Climate Change (GCC) is defined as the change in average meteorological conditions on the earth with respect to temperature, precipitation, and storms. Debate exists within the scientific community regarding the extent to which GCC is occurring naturally or as a result of human activity. Some data suggests that GCC has occurred naturally over the course of thousands or millions of years, as in the case of an ice age. However, other scientists believe that the climate shift taking place since the industrial revolution (1900) is occurring at a quicker rate and magnitude than in the past (Urban Crossroads 2011c 13).

Scientific evidence suggests that GCC is the result of increased concentrations of greenhouse gases (GHGs) in the earth's atmosphere. These gases include water vapor, CO_2 (carbon dioxide), N_2O (nitrous oxide), CH_4 (methane), hydrofluorocarbons, perfluorocarbons and sulfur hexafluoride. These particular gases are important due to their residence time (duration they stay) in the atmosphere, which ranges from 10 years to more than 100 years. These gases allow solar radiation into the Earth's atmosphere, but prevent radioactive heat from escaping, thus warming the earth's atmosphere. These gases that trap heat in the atmosphere are referred to collectively in this EIR as GHGs, which are released into the atmosphere by both natural and anthropogenic (human) activity. Without the natural greenhouse gas effect, the Earth's average temperature would be approximately 61° Fahrenheit (F) cooler than it is currently (Urban Crossroads 2011c 13-15).

An individual project like the proposed March Business Center cannot generate enough GHG emissions to make a discernible change in global climate. However, the proposed Project may participate in the potential for GCC through incremental contribution of GHGs when considered in combination with other worldwide sources of GHGs (Urban Crossroads 2011c 13).

B. Greenhouse Gases

Emissions of CO_2, N_2O, and CH_4 (carbon dioxide, nitrous oxide and methane) are the focus of evaluation in this subsection because these gasses are the primary contributors to GCC from development projects. Although other substances such as fluorinated gases also contribute to GCC, sources of fluorinated gases are not well defined and no accepted emissions factors or methodology exist to accurately calculate these gases (Urban Crossroads 2011c 16).

Greenhouse gases have varying global warming potential (GWP) values; GWP values represent the potential of a gas to trap heat in the atmosphere. Carbon dioxide is used as the reference gas for GWP, and thus has a GWP of 1. The atmospheric lifetime and GWP of selected greenhouse gases are summarized in Table 4.6-1, *Global Warming Potentials (GWP) and Atmospheric Lifetime of Select GHGs*. As shown in the table below, GWP ranges from 1 for carbon dioxide to 23,900 for sulfur hexafluoride (Urban Crossroads 2011c 16).

Table 4.6-1 Global Warming Potentials (GWP) and Atmospheric Lifetime of Select GHGs

GAS	ATMOSPHERIC LIFETIME (YEARS)	GWP (100 YEAR TIME HORIZON)
Carbon Dioxide (CO_2)	50-200	1
Methane ($CH_{4)}$	12 ± 3	21
Nitrous Oxide (N_2O)	120	310
HFC-23	264	11,700
HFC-134a	14.6	1,300
HFC-152a	1.5	140
PFC: Tetrafluoromethane (CH_4)	50,000	6,500
PFC: Hexafluoroethane (C_2F_6)	10,000	9,200
Sulfur Hexafluoride (SF_6)	3,200	23,900

Source: Urban Crossroads 2011c, Table 2-2.

Provided below is a description of the various gases that contribute to GCC. For more information about these gasses and their associated human heath effects, refer to *Technical Appendix F*, pages 12-21 and the reference sources cited therein.

- Water Vapor. Water vapor (H_2O) is the most abundant, important, and variable greenhouse gas in the atmosphere. Water vapor is not considered a pollutant; in the atmosphere it maintains a climate necessary for life. Changes in its concentration are primarily considered to be a result of climate feedbacks related to the warming of the atmosphere rather than a direct result of industrialization. The feedback loop in which water is involved is critically important to projecting future climate change.

  As the temperature of the atmosphere rises, more water is evaporated from ground storage (rivers, oceans, reservoirs, soil). Because the air is warmer, the relative humidity can be higher (in essence, the air is able to 'hold' more water when it is warmer), leading to more water vapor in the atmosphere. As a GHG, the higher concentration of water vapor is then able to absorb more thermal indirect energy radiated from the Earth, thus further warming the atmosphere. The warmer atmosphere can then hold more water vapor and so on and so on. This is referred to as a "positive feedback loop." The extent to which this positive feedback loop will continue is unknown as there are also dynamics that hold the positive feedback loop in check. As an example, when water vapor increases in the atmosphere, more of it will eventually also condense into clouds, which are more able to reflect incoming solar radiation, thereby allowing less energy to reach the Earth's surface and heat it up. There are no human health effects from water vapor itself; however, when some pollutants come in contact with water vapor, they can dissolve and the water vapor can then act as a pollutant-carrying agent.

- Carbon Dioxide. Carbon dioxide (CO_2) is an odorless and colorless GHG that is emitted from natural and manmade sources. Natural sources include: the decomposition of dead organic matter; respiration of bacteria, plants, animals and fungus; evaporation from oceans; and volcanic outgassing. Manmade sources include: the burning of coal, oil, natural gas, and wood. Since the industrial revolution began in the mid-1700s, the sort of human activity that increases CO_2 emissions has increased dramatically. As an example, prior to the industrial revolution, CO_2 concentrations were fairly stable at 280 parts per million (ppm). Today, they are around 370

ppm, an increase of more than 30%. Exposure to CO_2 in high concentrations can cause human health effects, but outdoor levels are not high enough to adversely affect human health.

- Methane. Methane (CH_4) is an extremely effective absorber of radiation, though its atmospheric concentration is less than CO_2 and its lifetime in the atmosphere is brief (10-12 years), compared to other GHGs. Methane has both natural and anthropogenic sources. It is released as part of the biological processes in low oxygen environments, such as in swamplands or in rice production (at the roots of the plants). Over the last 50 years, human activities such as growing rice, raising cattle, using natural gas, and mining coal have added to the atmospheric concentration of methane. Other anthropocentric sources include fossil-fuel combustion and biomass burning. No human health effects are known to occur from exposure to methane

- Nitrous Oxide. Nitrous oxide (N_2O), also known as laughing gas, is a colorless greenhouse gas that can cause dizziness, euphoria, and sometimes slight hallucinations. In small doses, it is considered harmless. However, in some cases, heavy and extended use can cause Olney's Lesions (brain damage). Concentrations of nitrous oxide began to rise in the atmosphere at the beginning of the industrial revolution. In 1998, the global concentration was 314 parts per billion (ppb). Nitrous oxide is produced by microbial processes in soil and water, including those reactions which occur in fertilizer containing nitrogen. In addition to agricultural sources, some industrial processes (fossil fuel-fired power plants, nylon production, nitric acid production, and vehicle emissions) also contribute to its atmospheric load. It is used as an aerosol spray propellant, (e.g., in whipped cream bottles). It is also used in potato chip bags to keep chips fresh. It is used in rocket engines and in race cars. Nitrous oxide can be transported into the stratosphere, be deposited on the Earth's surface, and be converted to other compounds by chemical reaction.

- Chlorofluorocarbons. Chlorofluorocarbons (CFCs) are gases formed synthetically by replacing all hydrogen atoms in methane or ethane (C_2H_6) with chlorine and/or fluorine atoms. CFCs are nontoxic, nonflammable, insoluble and chemically unreactive in the troposphere (the level of air at the Earth's surface). CFCs have no natural source, but were first synthesized in 1928. They were used for refrigerants, aerosol propellants and cleaning solvents. Due to the discovery that they are able to destroy stratospheric ozone, a global effort to halt their production was undertaken and was extremely successful, so much so that levels of the major CFCs are now remaining steady or declining. However, their long atmospheric lifetimes mean that some of the CFCs will remain in the atmosphere for over 100 years.

- Hydrofluorocarbons. Hydrofluorocarbons (HFCs) are synthetic, man-made chemicals that are used as a substitute for CFCs. Out of all GHGs, they are one of three groups with the highest global warming potential. The HFCs with the largest measured atmospheric abundances are (in order), HFC-23 (CHF_3), HFC-134a (CF_3CH_2F), and HFC-152a (CH_3CHF_2). Prior to 1990, the only significant emissions were of HFC-23. HFC-134a emissions are increasing due to its use as a refrigerant. The U.S. EPA estimates that concentrations of HFC-23 and HFC-134a are now about 10 parts per trillion (ppt) each; and that concentrations of HFC-152a are about 1 ppt. No human health effects are known to result from exposure to HFCs, which are manmade for applications such as automobile air conditioners and refrigerants.

- Perfluorocarbons. The two primary sources of perfluorocarbons (PFCs) are aluminum production and semiconductor manufacture PFCs have stable molecular structures and do not

break down through chemical processes in the lower atmosphere. Because of this, PFCs have very long lifetimes, between 10,000 and 50,000 years. Two common PFCs are tetrafluoromethane (CF_4) and hexafluoroethane (C_2F_6). The U.S. EPA estimates that concentrations of CF_4 in the atmosphere are over 70 ppt. No health effects are known to result from exposure to PFCs.

- Sulfur Hexafluoride. Sulfur hexafluoride (SF_6) is an inorganic, odorless, colorless, nontoxic, nonflammable gas. It also has the highest GWP of any gas evaluated (23,900). The U.S. EPA indicates that concentrations in the 1990s were about 4 ppt. In high concentrations in confined areas, the gas presents the hazard of suffocation because it displaces the oxygen needed for breathing. Sulfur hexafluoride is used for insulation in electric power transmission and distribution equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas for leak detection.

C. *Greenhouse Gas Emissions Inventories*

❑ Global

Worldwide anthropogenic (man-made) GHG emissions are tracked by the Intergovernmental Panel on Climate Change for industrialized nations (referred to as Annex I nations) and developing nations (referred to as Non-Annex I nations). Man-made GHG emissions data for Annex I nations are available through 2009. Man-made GHG emissions data for Non-Annex I nations are available through 2007. For the Year 2009, the sum of GHG emissions totaled approximately 40,084 million metric tones of carbon dioxide equivalent ($MMTCO_2e$). Emissions from the top five countries and the European Union accounted for approximately 65% of the total global GHG emissions, according to the most recently available data (see Table 4.6-2, *Top GHG Producer Countries and the European Union*). The GHG emissions in more recent years may differ from the inventories presented in Table 4.6-2; however, the data is representative of currently available inventory data (Urban Crossroads 2011c 13-15).

Table 4.6-2 Top GHG Producer Countries and the European Union

EMITTING COUNTRIES	GHG EMISSIONS ($MMTCO_2E$)
China	6,703
United States	6,608
European Union	8,338
Russian Federation	2,159
India	1,410
Japan	1,209
Total	**26,427**

Source: Urban Crossroads 2011c, Table 2-1.

❑ United States

As noted in Table 4.6-2, the United States was the number two producer of GHG emissions in 2009. The primary greenhouse gas emitted by human activities in the United States was carbon dioxide (CO_2), representing approximately 83% of the total GHGs. Carbon dioxide from fossil fuel combustion, the largest source of United States GHG emissions, accounted for approximately 78% of the country's 2009 GHG emissions (Urban Crossroads 2011c 14).

❑ State of California

The California Air Resources Board (CARB) compiles GHG inventories for the State of California. Based upon the 2008 GHG inventory data (i.e., the latest year for which data are available), California emitted 474 $MMTCO_2e$ including emissions resulting from imported electrical power. Based on the CARB inventory data and GHG inventories compiled by the World Resources Institute, California's total statewide GHG emissions rank second in the United States (Texas is number one) with emissions of 417 $MMTCO_2e$, excluding emissions related to imported power (Urban Crossroads 2011c 15).

California's rate of growth of greenhouse gas emissions is slowing. Despite a population increase of 16% between 1990 and 2004, and based on a review of GHG inventories for those years, California had significantly slowed the rate of growth of GHG emissions. This is in part due to the implementation of energy efficiency programs as well as adoption of strict emission controls (Urban Crossroads 2011c 16). These types of controls have been maintained in California and strengthened with additional controls imposed since 2004.

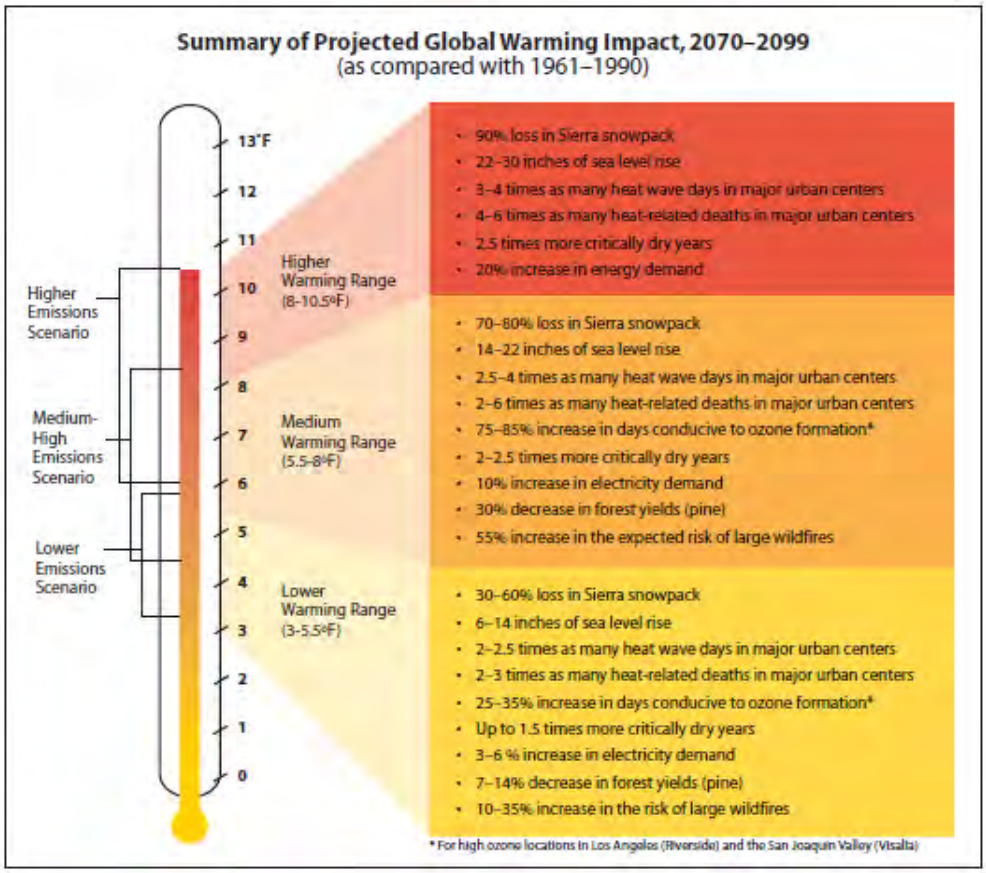
D. Effects of Climate Change in California

The California Environmental Protection Agency (CalEPA) published a report titled "Scenarios of Climate Change in California: An Overview" (Climate Scenarios report) in February 2006, that is generally instructive about the statewide impacts of global warming. The Climate Scenarios report uses a range of emissions scenarios developed by the Intergovernmental Panel on Climate Change (IPCC) to project a series of potential warming ranges (i.e., temperature increases) that may occur in California during the 21st century: lower warming range (3.0-5.5^{o}F); medium warming range (5.5-8.0^{o}F); and higher warming range (8.0-10.5^{o}F). The Climate Scenarios report then presents an analysis of future climate in California under each warming range, that while uncertain, present a picture of the impacts of global climate change trends in California (Urban Crossroads 2011c 20).

In addition, most recently on August 5, 2009, the State's Natural Resources Agency released a public review draft of its "California Climate Adaptation Strategy" report that details many vulnerabilities arising from climate change with respect to matters such as temperature extremes, sea level rise, wildfires, floods and droughts and precipitation changes. This report responds to the Governor's Executive Order S-13-2008 that called on state agencies to develop California's strategy to identify and prepare for expected climate impacts (Urban Crossroads 2011c 20-21).

According to the reports, substantial temperature increases arising from increased GHG emissions worldwide could result in a variety of impacts to the people, economy, and environment of California, with the severity of the impacts depending upon actual future emissions of GHGs and associated warming. Figure 4.6-1, *Summary of Projected Global Warming Impact , 2070-2099*, presents the potential impacts of global warming.

Figure 4.6-1 Summary of Projected Global Warming Impact, 2070-2099



Source: Urban Crossroads 2011c, Figure 1.

Under the emissions scenarios of the Climate Scenarios and California Climate Adaption Strategy reports, the impacts of global warming in California have the potential to include, but are not limited to, the following areas. For more information, refer to *Technical Appendix F*, pages 12-21 and the reference sources cited therein.

❑ Public Health

The potential human health effects related directly to GHG emissions (including carbon dioxide, methane, and nitrous oxide as they relate to development projects such as the proposed Project) are still being debated in the scientific community. The contribution that these GHGs make to GCC have the potential to cause adverse effects to human health in various ways. Higher temperatures may increase the frequency, duration, and intensity of conditions conducive to air pollution formation. For example, days with weather conducive to ozone formation could increase from 25 to 35% under the lower warming range, to 75% to 85% under the medium warming range. In addition, local air quality standards could be violated and air quality could be further compromised by increases in wildfires. In addition, under the higher warming range scenario, there could be up to 100 more days per year with temperatures above 90°F in Los Angeles and 95°F in Sacramento by 2100. Poor air quality and rising temperatures could increase human health effects and death associated with dehydration, heat stroke/exhaustion, heart attack, stroke, and respiratory distress. Scientists also purport that higher ambient temperatures would increase disease survival rates and

result in more widespread disease. Shifts in weather patterns, potentially resulting in devastating droughts and food shortages in some areas, also could affect the human population.

❑ Water Resources

A vast network of man-made reservoirs and aqueducts captures and transports water throughout the state from northern California rivers and the Colorado River. The current distribution system relies on Sierra Nevada snowpack to supply water during the dry spring and summer months. Rising temperatures, potentially compounded by decreases in precipitation, could severely reduce spring snowpack, increasing the risk of summer water shortages. Additionally, if temperatures continue to increase, more precipitation could fall as rain instead of snow, and the snow that does fall could melt earlier, reducing the Sierra Nevada spring snowpack by as much as 70% to 90%. The loss of snowpack could pose challenges to water managers, hamper hydropower generation, and adversely affect winter tourism. The State's water supplies are also at risk from rising sea levels. An influx of salt water could degrade California's estuaries, wetlands, and groundwater aquifers and be a major threat to the quality and reliability of water within the southern edge of the Sacramento/San Joaquin River Delta – a major fresh water supply.

❑ Agriculture

Increased temperatures could cause widespread changes to the agriculture industry reducing the quantity and quality of agricultural products statewide. California farmers could face water shortages. Crops may grow faster and be more susceptible to pests and disease outbreaks due to higher atmospheric temperatures. Faster plant growth could worsen the quantity and quality of yield for some crops such as wine grapes, fruit, and nuts. Although higher CO_2 levels can stimulate plant production and increase plant water-use efficiency, there may still be a water shortage for the agricultural industry. In addition, continued global climate change could shift the ranges of existing invasive plants and weeds and alter competition patterns with native plants.

❑ Forests and Landscapes

Global climate change has the potential to intensify the current threat to forests and landscapes by increasing the risk of wildfire and altering the distribution and character of natural vegetation. If temperatures rise into the medium warming range, the risk of large wildfires in California could increase by as much as 55%, which is almost twice the increase expected if temperatures stay in the lower warming range. However, since wildfire risk is determined by a combination of factors, including precipitation, winds, temperature, and landscape and vegetation conditions, future risks will not be uniform throughout the state. Continued global climate change also has the potential to alter natural ecosystems and biological diversity, including a decrease in forest productivity, as a result of increasing temperatures.

❑ Rising Sea Levels

Rising sea levels, more intense coastal storms, and warmer water temperatures could increasingly threaten the state's coastal regions. Under the higher warming range scenario, sea level is anticipated to rise 22 to 35 inches by 2100. Elevations of this magnitude would inundate low-lying coastal areas with salt water, accelerate coastal erosion, threaten vital levees and inland water systems, and disrupt wetlands and natural habitats. Under the lower warming range scenario, sea level could rise 12 to 14 inches.

E. Regulatory Setting

Below is an account of the regulatory programs, policies, laws, and regulations that are applicable to GHG emissions and GLC in California. For more information, refer to *Technical Appendix F*, pages 22-33 and the reference sources cited therein.

❑ International Regulation and the Kyoto Protocol

In 1988, the United Nations established the Intergovernmental Panel on Climate Change to evaluate the impacts of global warming and to develop strategies that nations could implement to curtail global climate change. In 1992, the United States joined other countries around the world in signing the United Nations' Framework Convention on Climate Change (UNFCCC) agreement with the goal of controlling greenhouse gas emissions. As a result, the Climate Change Action Plan was developed to address the reduction of GHGs in the United States. The Plan currently consists of more than 50 voluntary programs for member nations to adopt.

The Kyoto protocol is a treaty made under the UNFCCC and was the first international agreement to regulate GHG emissions. Some have estimated that if the commitments outlined in the Kyoto protocol are met, global GHG emissions could be reduced an estimated 5% from 1990 levels during the first commitment period of 2008-2012. Notably, while the United States is a signatory to the Kyoto protocol, Congress has not ratified the Protocol and the United States is not bound by the Protocol's commitments. In December 2009, international leaders from 192 nations met in Copenhagen to address the future of international climate change commitments post-Kyoto.

❑ Federal Regulation and the Clean Air Act

Coinciding with the 2009 meeting of international leaders in Copenhagen, on December 7, 2009, the U.S. Environmental Protection Agency (EPA) issued an Endangerment Finding under §202(a) of the Clean Air Act, opening the door to federal regulation of GHGs. The Endangerment Finding notes that GHGs threaten public health and welfare and are subject to regulation under the Clean Air Act. To date, the EPA has not promulgated regulations on GHG emissions, but it has begun to develop them.

Previously the EPA had not regulated GHGs under the Clean Air Act because it asserted that the Act did not authorize it to issue mandatory regulations to address GCC and that such regulation would be unwise without an unequivocally established causal link between GHGs and the increase in global surface air temperatures. In Massachusetts v. Environmental Protection Agency et al. (127 S. Ct. 1438 [2007]), however, the U.S. Supreme Court held that GHGs are pollutants under the Clean Air Act and directed the EPA to decide whether the gases endangered public health or welfare. The EPA had also not moved aggressively to regulate GHGs because it expected Congress to make progress on GHG legislation, primarily from the standpoint of a cap-and-trade system. However, proposals circulated in both the House of Representative and Senate have been controversial and it may be some time before the U.S. Congress adopts major climate change legislation. The EPA's Endangerment Finding paves the way for federal regulation of GHGs with or without Congress.

Although global climate change did not become an international concern until the 1980s, efforts to reduce energy consumption began in California in response to the oil crisis in the 1970s, resulting in the incidental reduction of greenhouse gas emissions. In order to manage the state's energy needs and promote energy efficiency, AB 1575 created the California Energy Commission (CEC) in 1975.

❑ Title 24 Energy Standards

The California Energy Commission (CEC) first adopted Energy Efficiency Standards for Residential and Nonresidential Buildings (California Code of Regulations, Title 24, Part 6) in 1978 in response to a legislative mandate to reduce energy consumption in the state. Although not originally intended to reduce GHG emissions, increased energy efficiency, and reduced consumption of electricity, natural gas, and other fuels would result in fewer GHG emissions from residential and nonresidential buildings subject to the standard. The standards are updated periodically to allow for the consideration and inclusion of new energy efficiency technologies and methods. The latest revisions were adopted in 2008 and became effective on January 1, 2010.

Part 11 of the Title 24 Building Standards Code is referred to as the California Green Building Standards Code (CALGreen Code). The purpose of the CALGreen Code is to "improve public health, safety and general welfare by enhancing the design and construction of buildings through the use of building concepts having a positive environmental impact and encouraging sustainable construction practices in the following categories: (1) Planning and design; (2) Energy efficiency; (3) Water efficiency and conservation; (4) Material conservation and resource efficiency; and (5) Environmental air quality." The CALGreen Code is not intended to substitute or be identified as meeting the certification requirements of any green building program that is not established and adopted by the California Building Standards Commission (CBSC). Unless otherwise noted in the regulation, all newly constructed buildings in California are subject of the requirements of the CALGreen Code.

❑ California Assembly Bill No. 1493 (AB 1493)

AB 1493 requires CARB to develop and adopt the nation's first greenhouse gas emission standards for automobiles. The Legislature declared in AB 1493 that global warming was a matter of increasing concern for public health and environment in California. Further, the legislature stated that technological solutions to reduce greenhouse gas emissions would stimulate the California economy and provide jobs.

To meet the requirements of AB 1493, CARB approved amendments to the California Code of Regulations (CCR) adding GHG emission standards to California's existing motor vehicle emission standards in 2004. Amendments to CCR Title 13 Sections 1900 (CCR 13 1900) and 1961 (CCR 13 1961) and adoption of §1961.1 (CCR 13 1961.1) require automobile manufacturers to meet fleet average GHG emission limits for all passenger cars, light-duty trucks within various weight criteria, and medium-duty passenger vehicle weight classes beginning with the 2009 model year. Emission limits are further reduced each model year through 2016.

In December 2004 a group of car dealerships, automobile manufacturers, and trade groups representing automobile manufacturers filed suit against CARB to prevent enforcement of CCR 13 1900 and CCR 13 1961 as amended by AB 1493 and CCR 13 1961.1 (*Central Valley Chrysler-Jeep et al. v. Catherine E. Witherspoon, in her official capacity as Executive Director of the California Air Resources Board, et al.*). The suit, heard in the U.S. District Court for the Eastern District of California, contended that California's implementation of regulations that in effect regulate vehicle fuel economy violates various federal laws, regulations, and policies. In January 2007, the judge hearing the case accepted a request from the State Attorney General's office that the trial be postponed until a decision is reached by the U.S. Supreme Court on a separate case addressing GHGs. In the Supreme Court Case, *Massachusetts vs. EPA*, the primary issue in question is whether

the federal CAA provides authority for U.S. EPA to regulate CO_2 emissions. In April 2007, the U.S. Supreme Court ruled in Massachusetts' favor, holding that GHGs are air pollutants under the CAA. On December 11, 2007, the judge in the Central Valley Chrysler-Jeep case rejected each plaintiff's arguments and ruled in California's favor. On December 19, 2007, the U.S. EPA denied California's waiver request. California filed a petition with the Ninth Circuit Court of Appeals challenging U.S. EPA's denial on January 2, 2008.

The Obama administration subsequently directed the USEPA to re-examine their decision. On May 19, 2009, challenging parties, automakers, the State of California, and the federal government reached an agreement on a series of actions that would resolve these current and potential future disputes over the standards through model year 2016. In summary, the USEPA and the U.S. Department of Transportation agreed to adopt a federal program to reduce GHGs and improve fuel economy, respectively, from passenger vehicles in order to achieve equivalent or greater greenhouse gas benefits as the AB 1493 regulations for the 2012–2016 model years. Manufacturers agreed to ultimately drop current and forego similar future legal challenges, including challenging a waiver grant, which occurred on June 30, 2009. The State of California committed to (1) revise its standards to allow manufacturers to demonstrate compliance with the fleet-average GHG emission standard by "pooling" California and specified State vehicle sales; (2) revise its standards for 2012–2016 model year vehicles so that compliance with USEPA-adopted GHG standards would also comply with California's standards; and (3) revise its standards, as necessary, to allow manufacturers to use emissions data from the federal CAFE program to demonstrate compliance with the AB 1493 regulations. Both of these programs are aimed at light-duty auto and light-duty trucks.

❑ Executive Order S-3-05

Executive Order S-3-05, which was signed by Governor Schwarzenegger in 2005, proclaims that California is vulnerable to the impacts of climate change. It declares that increased temperatures could reduce the Sierra's snow pack, further exacerbate California's air quality problems, and potentially cause a rise in sea levels. To combat those concerns, the Executive Order established total greenhouse gas emission targets. Specifically, emissions are to be reduced to the 1990 level by 2020, and to 80% below the 1990 level by 2050. The Executive Order directed the Secretary of the California Environmental Protection Agency (CalEPA) to coordinate a multi-agency effort to reduce greenhouse gas emissions to the target levels. The Secretary also is required to submit biannual reports to the Governor and state Legislature describing: (1) progress made toward reaching the emission targets; (2) impacts of global warming on California's resources; and (3) mitigation and adaptation plans to combat these impacts. To comply with the Executive Order, the Secretary of the CalEPA created a Climate Action Team (CAT) made up of members from various state agencies and commission. CAT released its first report in March 2006. The report proposed to achieve the targets by building on voluntary actions of California businesses, local government and community actions, as well as through state incentive and regulatory programs.

❑ California Assembly Bill 32 (AB 32)

In September 2006, Governor Schwarzenegger signed AB 32, the California Climate Solutions Act of 2006. AB 32 requires that statewide GHG emissions be reduced to 1990 levels by the year 2020. This reduction is to be accomplished through an enforceable statewide cap on GHG emissions that will be phased in starting in 2012. To effectively implement the cap, AB 32 directs CARB to develop and implement regulations to reduce statewide GHG emissions from stationary sources. AB 32 specifies that regulations adopted in response to AB 1493 should be used to address GHG

emissions from vehicles. However, AB 32 also includes language stating that if the AB 1493 regulations cannot be implemented, then CARB should develop new regulations to control vehicle GHG emissions under the authorization of AB 32.

AB 32 requires that CARB adopt a quantified cap on GHG emissions representing 1990 emissions levels and disclose how it arrives at the cap; institute a schedule to meet the emissions cap; and develop tracking, reporting, and enforcement mechanisms to ensure that the state achieves reductions in GHG emissions necessary to meet the cap. AB 32 also includes guidance to institute emissions reductions in an economically efficient manner and conditions to ensure that businesses and consumers are not unfairly affected by the reductions.

In November 2007, CARB completed its estimates of 1990 GHG levels. Net emission 1990 levels were estimated at 427 MMTs (emission sources by sector were: transportation – 35%; electricity generation – 26%; industrial – 24%; residential – 7%; agriculture – 5%; and commercial – 3%). Accordingly, 427 MMTs of CO_2 equivalent was established as the emissions limit for 2020. For comparison, CARB's estimate for baseline GHG emissions was 473 MMT for 2000 and 532 MMT for 2010. "Business as usual" conditions (without the 30% reduction to be implemented by CARB regulations) for 2020 were projected to be 596 MMTs.

In December 2007, CARB approved a regulation for mandatory reporting and verification of GHG emissions for major sources. This regulation covered major stationary sources such as cement plans, oil refineries, electric generating facilities/providers, and co-generation facilities, which comprise 94% of the point source CO_2 emissions in the State.

On December 11, 2008, CARB adopted a scoping plan to reduce GHG emissions to 1990 levels. The Scoping Plan's recommendations for reducing GHG emissions to 1990 levels by 2020 include emission reduction measures, including a cap-and-trade program linked to Western Climate Initiative partner jurisdictions, green building strategies, recycling and waste-related measures, as well as Voluntary Early Actions and Reductions. Implementation of individual measures must begin no later than January 1, 2012, so that the emissions reduction target can be fully achieved by 2020.

Table 4.6-3, *Scoping Plan GHG Reduction Measures Toward 2020 Target*, shows the proposed reductions from regulations and programs outlined in the Scoping Plan. While local government operations were not accounted for in achieving the 2020 emissions reduction, local land use changes are estimated to result in a reduction of 5 $MMTCO_2e$, which is approximately 3% of the 2020 GHG emissions reduction goal. In recognition of the critical role local governments will play in successful implementation of AB 32, CARB is recommending GHG reduction goals of 15% of 2006 levels by 2020 to ensure that municipal and community-wide emissions match the state's reduction target. According to the Measure Documentation Supplement to the Scoping Plan, local government actions and targets are anticipated to reduce vehicle miles by approximately 2% through land use planning, resulting in a potential GHG reduction of 2 MMTCO2e (or approximately 1.2% of the GHG reduction target).

Table 4.6-3 Scoping Plan GHG Reduction Measures Toward 2020 Target

RECOMMENDED REDUCTION MEASURES	REDUCTIONS COUNTED TOWARD 2020 TARGET OF 169 MMT CO_2E	PERCENTAGE OF STATEWIDE 2020 TARGET
Cap and Trade Program and Associated Measures		
California Light-Duty Vehicle GHG Standards	31.7	19%
Energy Efficiency	26.3	16%
Renewable Portfolio Standard (33% by 2020)	21.3	13%
Low Carbon Fuel Standard	15	9%
Regional Transportation-Related GHG Targets[1]	5	3%
Vehicle Efficiency Measures	4.5	3%
Goods Movement	3.7	2%
Million Solar Roofs	2.1	1%
Medium/Heavy Duty Vehicles	1.4	1%
High Speed Rail	1.0	1%
Industrial Measures	0.3	0%
Additional Reduction Necessary to Achieve Cap	34.4	20%
Total Cap and Trade Program Reductions	**146.7**	**87%**
Uncapped Sources/Sectors Measures		
High Global Warming Potential Gas Measures	20.2	12%
Sustainable Forests	5	3%
Industrial Measures (for sources not covered under cap and trade program)	1.1	1%
Recycling and Waste (landfill methane capture)	1	1%
Total Uncapped Sources/Sectors Reductions	**27.3**	**16%**
Total Reductions Counted toward 2020 Target	**174**	**100%**
Other Recommended Measures – Not Counted toward 2020 Target		
State Government Operations	1.0 to 2.0	1%
Local Government Operations	To Be Determined[2]	NA
Green Buildings	26	15%
Recycling and Waste	9	5%
Water Sector Measures	4.8	3%
Methane Capture at Large Dairies	1	1%
Total Other Recommended Measures – Not Counted toward 2020 Target	**42.8**	**NA**

1. Reductions represent an estimate of what may be achieved from local land use changes. It is not the SB 375 regional target.
2. According to the Measure Documentation Supplement to the Scoping Plan, local government actions and targets are anticipated to reduce vehicle miles by approximately 2% through land use planning, resulting in a potential GHG reduction of 2 million metric tons of CO_2e (or approximately 1.2% of the GHG reduction target). However, these reductions were not included in the Scoping Plan reductions to achieve the 2020 Target.

Source: Urban Crossroads 2011c, Table 2-3. MMTons CO_2e: million metric tons of CO_2e.

❑ California Senate Bill No. 1368 (SB 1368)

In 2006, the State Legislature adopted Senate Bill 1368 (SB 1368), which was subsequently signed into law by the Governor. SB 1368 directs the California Public Utilities Commission (CPUC) to adopt a greenhouse gas emission performance standard (EPS) for the future power purchases of California utilities. SB 1368 seeks to limit carbon emissions associated with electrical energy consumed in California by forbidding procurement arrangements for energy longer than five years from resources that exceed the emissions of a relatively clean, combined cycle natural gas power plant. Due to the carbon content of its fuel source, a coal-fired plant cannot meet this standard because such plants emit roughly twice as much carbon as natural gas, combined cycle plants. Accordingly, the new law will effectively prevent California's utilities from investing in, otherwise financially supporting, or purchasing power from new coal plants located in or out of the State. Thus, SB 1368 will lead to dramatically lower greenhouse gas emissions associated with California

energy demand, as SB 1368 will effectively prohibit California utilities from purchasing power from out of state producers that cannot satisfy the EPS standard required by SB 1368.

❑ Senate Bill 97 (SB 97)

Pursuant to the direction of SB 97, OPR released preliminary draft CEQA Guideline amendments for greenhouse gas emissions on January 8, 2009, and submitted its final proposed guidelines to the Secretary for Natural Resources on April 13, 2009. The Natural Resources Agency adopted the Guideline amendments and they became effective on March 18, 2010.

Of note, the new guidelines state that a lead agency shall have discretion to determine whether to use a quantitative model or methodology, or in the alternative, rely on a qualitative analysis or performance based standards. CEQA Guideline § 15064.4(a) state that "[a] lead agency shall have discretion to determine, in the context of a particular project, whether to: (1) Use a model or methodology to quantify greenhouse gas emissions resulting from a project, and which model or methodology to use… ; or (2) Rely on a qualitative analysis or performance based standards."

CEQA emphasizes that the effects of greenhouse gas emissions are cumulative, and should be analyzed in the context of CEQA's requirements for cumulative impacts analysis (See CEQA Guidelines §15130[f]). Section 15064.4(b) of the CEQA Guidelines provides direction for lead agencies for assessing the significance of impacts of greenhouse gas emissions. The CEQA Guideline amendments do not identify a threshold of significance for greenhouse gas emissions, nor do they prescribe assessment methodologies or specific mitigation measures. Instead, they call for a "good-faith effort, based on available information, to describe, calculate or estimate the amount of greenhouse gas emissions resulting from a project." The amendments encourage lead agencies to consider many factors in performing a CEQA analysis and preserve lead agencies' discretion to make their own determinations based upon substantial evidence.

❑ Executive Order S-01-07

On January 18, 2007 California Governor Schwarzenegger, through Executive Order S-01-07, mandated a statewide goal to reduce the carbon intensity of California's transportation fuel by at least 10% by 2020. The order also requires that a California specific Low Carbon Fuel Standard be established for transportation fuels.

❑ Senate Bills 1078 and 107 and Executive Order S-14-08

SB 1078 (Chapter 516, Statutes of 2002) requires retail sellers of electricity, including investor-owned utilities and community choice aggregators, to provide at least 20% of their supply from renewable sources by 2017. SB 107 (Chapter 464, Statutes of 2006) changed the target date to 2010. In November 2008 Governor Schwarzenegger signed Executive Order S-14-08, which expands the state's Renewable Energy Standard to 33% renewable power by 2020.

❑ Senate Bill 375 (SB 375)

SB 375, signed in September 2008 (Chapter 728, Statutes of 2008), aligns regional transportation planning efforts, regional GHG reduction targets, and land use and housing allocation. SB 375 requires metropolitan planning organizations (MPOs) to adopt a sustainable communities strategy (SCS) or alternative planning strategy (APS) that will prescribe land use allocation in that MPO's regional transportation plan. CARB, in consultation with MPOs, will provide each affected region

with reduction targets for GHGs emitted by passenger cars and light trucks in the region for the years 2020 and 2035. These reduction targets will be updated every eight (8) years but can be updated every four (4) years if advancements in emissions technologies affect the reduction strategies to achieve the targets. CARB is also charged with reviewing each MPO's SCS or APS for consistency with its assigned targets. If MPOs do not meet the GHG reduction targets, transportation projects will not be eligible for funding programmed after January 1, 2012.

❑ CARB's Preliminary Draft Staff Proposal for Interim Significance Thresholds

Separate from its Scoping Plan approved in December of 2008, CARB issued a Staff Proposal in October 2008, as its first step toward developing recommended statewide interim thresholds of significance for GHGs that may be adopted by local agencies for their own use. CARB staff's objective in this proposal is to develop a threshold of significance that will result in the vast majority (approximately 90% statewide) of GHG emissions from new industrial projects being subject to CEQA's requirement to impose feasible mitigation. The proposal does not attempt to address every type of project that may be subject to CEQA, but instead focuses on common project types that, collectively, are responsible for substantial GHG emissions – specifically, industrial, residential, and commercial projects. CARB is developing these thresholds in these sectors to advance climate objectives, streamline project review, and encourage consistency and uniformity in the CEQA analysis of GHG emissions throughout the state. These draft thresholds are under revision in response to comments. There is currently no timetable for finalized thresholds at this time.

As currently proposed by CARB, the threshold consists of a quantitative threshold of 7,000 metric tons (MT) of CO_2e per year for operational emissions (excluding transportation), and performance standards for construction and transportation emissions. These performance standards have not yet been developed. CARB's proposal was not final at the time that the NOP for this EIR was released for public review (June 2011) and thus cannot be applied to the Project. Further, CARB's proposal sets forth draft thresholds for industrial projects that have high operational stationary GHG emissions, such as manufacturing plants, or uses that utilize combustion engines. Mobile source emissions are not addressed. The GHG emissions that would be emitted by the Project evaluated in this EIR would be mostly from mobile sources, and as such, the CARB proposal is not applicable to the Project.

❑ South Coast Air Quality Management District Recommendations for Significance Thresholds

In April 2008, the South Coast Air Quality Management District (SCAQMD), in order to provide guidance to local lead agencies on determining the significance of GHG emissions identified in CEQA documents, convened a "GHG CEQA Significance Threshold Working Group." The goal of the working group is to develop and reach consensus on an acceptable CEQA significance threshold for GHG emissions that would be utilized on an interim basis until CARB (or some other state agency) develops statewide guidance on assessing the significance of GHG emissions under CEQA.

Initially, SCAQMD staff presented the working group with a significance threshold that could be applied to various types of projects: residential; non-residential; industrial; etc. However, the threshold is still under development. In December 2008, staff presented the SCAQMD Governing Board with a significance threshold for stationary source projects where it is the lead agency. This threshold uses a tiered approach to determine a project's significance, with 10,000 metric tons of carbon dioxide equivalent ($MTCO_2e$) as a screening numerical threshold for stationary sources.

In September 2010, the Working Group released additional revisions which recommended a threshold of 3,500 $MTCO_2e$ for residential projects, 1,400 $MTCO_2e$ for commercial projects, and 3,000 $MTCO_2e$ for mixed use projects; additionally, the working group identified project-level efficiency target of 4.8 $MTCO_2e$ per service population as a 2020 target and 3.0 $MTCO_2e$ per service population as a 2035 target. The recommended plan-level target for 2020 was 6.6 $MTCO_2e$ and the plan level target for 2035 was 4.1 $MTCO_2e$. The SCAQMD has not announced when staff is expecting to present a finalized version of these thresholds to the Governing Board. The SCAQMD has also adopted Rules 2700, 2701, and 2702 that address GHG reductions; however, these rules are currently applicable to boilers and process heaters, forestry, and manure management projects that have no applicability to the Project evaluated in this EIR.

- **City of Moreno Valley**

The City of Moreno Valley does not have any official policies or goals addressing GHG or climate change. However, a number of implementing policies contained within the City's General Plan will result in the indirect reduction in City-wide GHG emissions through reductions in vehicle trips, vehicle miles traveled, and energy use. A discussion of the Project's consistency with these policies is provided in Subsection 4.9, Land Use and Planning.

The City of Moreno Valley is preparing a Climate Action Plan (CAP) to address GHG emissions; however, the CAP was not available for public review at the time the NOP for this EIR was released for public review (June 2011).

4.6.2 BASIS FOR DETERMINING SIGNIFICANCE

In order to assess the significance of a proposed Project's environmental impacts it is necessary to identify quantitative or qualitative thresholds which, if exceeded, would constitute a finding of significance. As discussed above in Subsection 4.6.1, while Project-related GHG emissions can be estimated, the direct impacts of such emissions on climate change and global warming cannot be determined on the basis of available science. There is no evidence at this time that would indicate that the emissions from a project the size of the proposed Project would directly or indirectly affect global climate change.

AB 32 states, in part, that "[g]lobal warming poses a serious threat to the economic well-being, public health, natural resources, and the environment of California." Because global warming is the result of GHG emissions, and GHGs are emitted by innumerable sources worldwide, the proposed Project would not result in a direct impact to global warming; rather, Project-related impacts to global climate change only could be significant on a cumulative basis. Therefore, the analysis below focuses on the Project's potential to contribute to GCC in a cumulatively considerable way.

The CEQA Guidelines indicate that a project would result in a significant impact on climate change if a project were to:

1. *Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; or*
2. *Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases.*

Since AB 32 is the primary plan, policy or regulation adopted in the State of California to reduce GHG emissions, the proposed Project would have a significant impact if it does not comply with the regulations developed under AB 32. Neither the City of Moreno Valley nor the SCAQMD has adopted a threshold of significance for determining the cumulative significance of a project's GHG emissions on GCC. Therefore, for purposes of analysis within this subsection, the significance of the proposed Project's GCC impacts is based upon whether or not the Project can demonstrate compliance with the CARB Scoping Plan prepared in response to California Assembly Bill 32 (AB 32) and the State of California's Climate Action Team Report (2006), prepared in response to the California Governor's Executive Order S-3-05. This approach is consistent with past practice in the City of Moreno Valley.

4.6.3 IMPACT ANALYSIS

A. Methodology for Estimating Project-Related Greenhouse Gas Emissions

CEQA Guidelines §15064.4(b)(1) states that a lead agency may use a model or methodology to quantify greenhouse gas emissions associated with a project. On February 3, 2011, the SCAQMD released the California Emissions Estimator Model (CALEEMOD) Emissions Inventory Model™. The purpose of this model is to estimate air quality and GHG emissions from direct and indirect sources and quantify applicable air quality and GHG reductions achieved from mitigation measures. As such, the February 2011 CALEEMOD™ was used for estimating Project-related emissions. The CalEEMod™ model includes GHG emissions from the following source categories: construction, area, energy, mobile, waste, water (Urban Crossroads 2011c 40).

A full life-cycle analysis (LCA) is not included in the Project's Greenhouse Gas Analysis (*Technical Appendix F*) due to the lack of consensus guidance on LCA methodology. Life-cycle analysis (i.e., assessing economy-wide GHG emissions from the processes in manufacturing and transporting all raw materials used in the project development and infrastructure) depends on emission factors or econometric factors that are not well established for all processes. At this time a LCA would be extremely speculative and thus has not been prepared (Urban Crossroads 2011c 40).

❑ Methodology for Estimating Project-Related Construction Emissions

Construction activities associated with the proposed Project would result in emissions of CO_2 and CH_4 from the following construction activities:

- Site Preparation
- Grading
- Paving
- Building Construction
- Architectural Coatings (Painting)
- Construction Workers Commuting

Based on information about the Project's anticipated construction characteristics and schedule as supplied by the Project Engineer and Applicant, the approximate construction scheduling for each phase of construction was input into the CalEEMod™ model and defaults for all other assumptions were utilized. Please refer to Appendix B of the Greenhouse Gas Analysis (included within *Technical Appendix F* to this EIR) for more details on the construction emissions estimate methodology. Refer also to the specific detailed modeling inputs/outputs contained in Appendix A of the Greenhouse Gas Analysis (included within *Technical Appendix F* to this EIR). A detailed summary of construction

equipment assumptions by phase that were used as model inputs is provided on Table 4.6-4, *Construction Equipment Assumptions*. Equipment estimates were provided by the Project Engineer and Applicant as well as model defaults in the CalEEMod™ model. Construction emissions for construction worker vehicles traveling to and from the project site, as well as vendor trips (construction materials delivered to the project site), also were estimated based on information from the Project Engineer and Applicant and the CalEEMod™ model. Refer to Appendix B of the Greenhouse Gas Analysis (included within *Technical Appendix F* to this EIR) for more details (Urban Crossroads 2011c 37).

Table 4.6-4 Construction Equipment Assumptions

Operation	Water Trucks	Scraper	Grader	Rubber Tired Dozer	Tractor/Loader/Backhoe	Excavator	Pavers	Paving Equipment	Rollers	Forklift	Cranes	Air Compressor	Generator Set	Welder	Aerial Lifts
Phase I															
Site Preparation	2			3	4										
Mass Grading	2	5	1	2	2	2									
Building Construction					3					3	2		1	3	3
Paving							2	2	2						
Painting												3			2
Phase II															
Building Construction					3					3	2		3	3	
Paving							2	2	2						
Painting												3			2

Source: Urban Crossroads 2011c, Table 3-1.

In accordance with SCAQMD recommendations, the Project's construction phase GHG emissions were quantified and amortized over the life of the Project. To amortize the emissions over the life of the Project per the recommended SCAQMD methodology, the total GHG emissions associated with the Project's proposed construction activities was calculated, divided by the project life span default (i.e., 30 years), and then adding that number to the annual operational phase GHG emissions. As such, construction emissions were amortized over a 30 year period and added to the annual operational phase GHG emissions (Urban Crossroads 2011c 37).

❑ Methodology for Estimating Project-Related Operational Emissions

Operational activities associated with the proposed Project would result in emissions of CO_2, CH_4, and N_2O from the following primary sources, each of which is discussed below:

- Building Energy Use
- Water Supply, Treatment and Distribution
- Solid Waste
- Mobile Source Emissions
- Building Energy Use

GHGs are emitted from buildings as a result of activities for which electricity and natural gas are typically used as energy sources. Combustion of any type of fuel emits CO_2 and other GHGs directly into the atmosphere; these emissions are considered direct emissions associated with a building. GHGs are also emitted during the generation of electricity from fossil fuels; these emissions are considered to be indirect emissions. Unless otherwise noted, CalEEMod™ default parameters were used (Urban Crossroads 2011c 40).

- *Water Supply, Treatment and Distribution*

Indirect GHG emissions result from the production of electricity used to convey, treat and distribute water and wastewater. The amount of electricity required to convey, treat and distribute water depends on the volume of water as well as the sources of the water.

Water use information contained in the Project's Water Supply Assessment prepared by Eastern Municipal Water District (*Technical Appendix K* to this EIR) was utilized to estimate the indoor and outdoor water use as well as the amount of reclaimed water. It was assumed that the difference between the potable water supply and the amount of waste water represented the potable outdoor water supply. The Project is estimated to result in a demand for approximately 46,851 gallons of potable water per day (or approximately 52.5 acre-feet per year). The Project is estimated to result in an average daily demand of 113,696 gallons per day of wastewater treatment capacity. Model defaults were utilized for all other analysis parameters (Urban Crossroads 2011c 40).

- *Solid Waste*

The Project would result in the generation and disposal of solid waste. A large percentage of this waste will be diverted from landfills by a variety of means, through adherence to mandatory requirements for reducing the amount of waste generated, recycling, and/or composting. Waste not diverted would be disposed of at a landfill. GHG emissions from landfills are associated with the anaerobic breakdown of material. Using solid waste generation rates for light industrial/warehouse uses reported by CalRecycle, GHG emissions associated with the disposal of solid waste associated with the proposed Project were calculated by the CalEEMod model. For all other parameters, the model defaults were utilized (Urban Crossroads 2011c 41).

- *Mobile Source Emissions*

GHG emissions would also result from mobile sources associated with the Project, including daily operation of motor vehicles by visitors, employees, and customers.

Trip characteristics available from the report, *March Business Center Traffic Impact Analysis* (*Technical Appendix J* to this EIR) were utilized in the GHG analysis. It should be noted that the Project's traffic study presents the total Project vehicle trips in terms of Passenger Car Equivalents (PCEs) in an effort to recognize and acknowledge the effects of heavy vehicles at the study area intersections. The PCE trips were not used for the purposes of quantifying GHG emissions; rather, to be more representative of actual emissions, the actual number of passenger cars (including light trucks) and heavy trucks were used in the analysis. The vehicle fleet mix, in terms of actual vehicles, as derived from the traffic study for the Project is comprised of approximately 47.6% passenger cars (1,152 passenger cars) and approximately 52.4% total trucks (1,267 trucks). The total traffic generation in vehicles is 2,419 per day (Urban Crossroads 2011c 40).

It should also be noted that operational emissions evaluation is based on a conservative an analysis year of 2016 (Project buildout). This analysis year was selected because it is the most conservative from an emissions generating standpoint; emissions from vehicles would decrease as the analysis year increases due to implementation of mandatory regulatory requirements and vehicle fleet turnover contained in the EMFAC 2007 model (Urban Crossroads 2011c 40).

A technical deficiency inherent in calculating the projected mobile source vehicle emissions associated with any project is related to the estimation of trip length and vehicle miles traveled (VMT). VMT for a given project is calculated by the total number of vehicle trips the project would generate multiplied by average trip length. This method of estimating VMT for use in calculating vehicle emissions likely results in the over-estimation and double-counting of emissions because for a distribution warehouse business center such as the proposed Project, the land use is likely to attract (divert) existing vehicle trips that are already on the circulation system as opposed to generating new trips. As such, the proposed Project would merely redistribute existing mobile emissions. Accordingly, the use of models that measure overall emissions can overstate emission levels without acknowledging that some level of emissions associated with the project under study would still occur in the region regardless of whether the Project is built. As such, the estimation of GHG emissions associated with the proposed Project and disclosed herein assumes a VMT value that very likely overestimates the actual impact of the Project (Urban Crossroads 2011c 41).

In the last five (5) years, the SCAQMD has provided numerous comments on the trip length for warehouse/distribution and industrial land use projects. The SCAQMD asserts that the model-default trip length in CalEEMod™ and the URBan EMISsions (URBEMIS) 2007 model (version 9.2.4) would underestimate emissions. The SCAQMD asserts that for warehouse/distribution center and industrial land use projects, most of the heavy-duty trucks would be hauling consumer goods, often from the Ports of Long Beach and Los Angeles (POLA and POLB) and/or to destinations outside of California. The SCAQMD states that for this reason, the model default trip length (approximately 12.6 miles) would not be representative of activities at like facilities. The SCAQMD generally recommends the use of a 40-mile one-way trip length (Urban Crossroads 2011c 41). In addition, SCAG maintains a regional transportation model. In its most recent (2008) transportation validation for the 2003 Regional Model, SCAG indicates the average internal truck trip length for the SCAG region (which includes the proposed Project site) is 5.92 miles for Light Duty Trucks, 13.06 miles for Medium Duty Trucks, and 24.11 miles for Heavy Duty Trucks (Urban Crossroads 2011c 42). To maintain consistency with the analysis approach utilized for other EIR projects within the City of Moreno Valley and in order to provide for the most conservative analysis scenario, the following approach has been utilized in calculating emissions associated with vehicles accessing the proposed Project.

For passenger car trips, a one-way trip length of 17 miles was assumed as contained in the SCAQMD CEQA Handbook for Riverside County for the year 2010 (this trip length was used in lieu of the CalEEMod™ model defaults because it is a longer trip length). For heavy duty trucks, an average trip length was derived from distances from the Project site to the far edges of the South Coast Air Basin (SCAB) as follows. It is appropriate to stop the VMT calculation at the boundary of the SCAB because any activity beyond that boundary would be speculative, and because the selected approach is consistent with professional industry practice (Urban Crossroads 2011c 42-43).

- Project site to the Port of Los Angeles/Long Beach: 78 miles;
- Project site to Banning Pass: 27 miles;

- Project site to San Diego County line: 46 miles;
- Project site to Cajon Pass: 42 miles;
- Project site to downtown Los Angeles: 64 miles.

Assuming that 50% of all delivery trips will travel to and from the Project and the Port of Los Angeles/Long Beach, and the remainder as distribution trips to all other locations, the average truck trip length is calculated as 61 miles. An overall weighted-average trip length for the Project was calculated using the percentage of trips associated with passenger cars (including light duty trucks) versus heavy trucks, the passenger car trip length of 17 miles and truck trip length of 61 miles was utilized. The resulting weighted average trip length of 40.52 miles was entered into the CalEEMod™ model calculations (Urban Crossroads 2011c 43).

For analysis purposes heavy truck trips include all light HD trucks through heavy HD trucks (Vehicle classes 5-8). The percentages have been apportioned according to data provided in a 1985 CARB document for converting number of axles to vehicle class. The passenger cars include light duty auto through medium duty trucks (vehicle classes 1-4), proportional to the default CalEEMod distribution for the SCAQMD (Urban Crossroads 2011c 43). For more information, tables calculating percentage of trips by vehicle class are shown in *Technical Appendix F*.

Threshold 1: ***Would the Project generate greenho use gas emissions, either directly or indirectly, that may have a significant impact on the environment?***

Threshold 2: ***Would the Project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?***

A summary of the proposed Project's projected annual operational GHG emissions, including the amortized construction emissions, is provided in Table 4.6-5, *Total Annual Project Greenhouse Gas Emissions*. The operational GHG emissions for the Project, including the amortized construction emissions, are estimated to be 36,547.50 MT per year (Urban Crossroads 2011c 44).

As indicated in §15064(b) of the State CEQA Guidelines, the determination of significance of greenhouse gases is not "ironclad;" rather, the "determination of whether a project may have a significant effect on the environment calls for a "careful judgment" by the City "based to the extent possible on scientific and factual data." The City of Moreno Valley has not adopted a numeric threshold of significance for emissions of greenhouse gases.

Table 4.6-5 Total Annual Project Greenhouse Gas Emissions

EMISSION SOURCE	EMISSIONS (METRIC TONS PER YEAR)			
	CO_2	CH_4 (CO_2E)	N_2O(CO_2E)	Total CO_2E
Annual construction-related emissions amortized over 30 years	85.45	0.16	--	85.61
Energy	1,473.47	1.26	9.3	1,482.67
Mobile Sources	33,061.49	14.49	--	33,076.05
Waste	777.96	965.58	--	1,743.46
Water Usage	143.80	11.13	6.2	159.68
Total CO_2e (All Sources)	**36,547.50**			

Source: Urban Crossroads 2011c, Table 3-4.

As previously noted, CARB does not have an adopted numerical threshold of significance for projects like the proposed March Business Center. Further, CARB's current proposal sets forth draft thresholds for industrial projects that have high operational stationary GHG emissions, such as manufacturing plants or uses that utilize combustion engines, and does not address mobile source emissions. Similarly, the SCAQMD thresholds are currently in draft form and are not adopted. Nevertheless, comparison of the GHG emissions from the Project's area sources (construction, energy, waste, and water usage) indicates that the Project's emissions from such sources would be well below the proposed CARB and SCAQMD thresholds for stationary sources. With regard to GHG emissions from mobile sources, as discussed above, the estimation of the Project's impact on mobile source GHG emissions is highly speculative, because the methodology to quantify mobile source GHG emissions assumes that all of the vehicle trips to and from the Project site would be new, rather than redistributed vehicle trips from other areas. No methods or models exist to estimate the Project's net contribution to regional or global vehicle miles traveled. Because the estimation of the Project's contribution to mobile source GHG emissions is highly speculative, and based on the absence of applicable thresholds for mobile source GHG emissions, use of a quantitative threshold of significance is not meaningful. Accordingly, a qualitative analysis is used to determine significance, based on consistency with regional and state GHG plans.

As previously indicated and consistent with past practice in the City of Moreno Valley, the significance of the Project's GCC impacts is based upon whether or not the Project can demonstrate compliance with the CARB Scoping Plan and the State of California's Climate Action Team Report (2006). The analysis below sets out the factual basis for the City's determination regarding the effect of Project-related greenhouse gases. The analysis is specific to this Project, and may not necessarily apply to other projects within the City of Moreno Valley.

❑ Consistency with the CARB Scoping Plan

AB 32 requires California to reduce its GHG emissions to 1990 levels by the Year 2020, which correlates to an approximate reduction of 29% below business as usual. CARB identified reduction measures to achieve this goal as set forth in the CARB Scoping Plan. Thus, projects that are consistent with the CARB Scoping Plan are also consistent with AB 32's mandate to reduce GHG emissions.

The proposed Project would generate GHG emissions from a variety of sources which would all emit CO_2, CH_4 and N_2O. GHGs could also be indirectly generated by incremental electricity consumption and waste generation from the proposed Project. Table 4.6-6, *Recommended Actions for Climate Change Scoping Plan*, presents the 39 Recommended Actions (qualitative measures) identified to date by CARB in its Climate Change Proposed Scoping Plan. Of the 39 measures identified, those that would be considered to be applicable to the Project would primarily be those actions related to transportation, electricity and natural gas use, green building design and industrial uses. Consistency of the Project with these measures is evaluated by each source-type measure below. Table 4.6-6 identifies which CARB Recommended Actions applies to the Project, and of those, whether the Project is consistent therewith. A discussion of how the Project is consistent with each applicable CARB Recommended Action also is provided.

- *Transportation*

CARB's Scoping Plan identifies nine transportation-related recommended actions. Action T-1 concerns improvements to light-duty vehicle technology for the purposes of reducing GHG emissions. This action focuses on legislating improved controls for vehicle manufacturers and would not generally be considered applicable to the proposed Project. Implementation of the Pavley standards is dependent on implementation by the State on vehicle fuel economy standards. Implementation of such a standard is not within the purview of this Project. Therefore, the proposed Project would not conflict with measures concerning the Pavley standards.

Action T-2 concerns implementation of a low carbon fuel standard. To reduce the carbon intensity of transportation fuels, CARB is developing a Low Carbon Fuel Standard (LCFS), which would reduce the carbon intensity of California's transportation fuels by at least 10% by 2020 as called for by Governor Schwarzenegger in Executive Order S-01-07. LCFS will incorporate compliance mechanisms that provide flexibility to fuel providers in how they meet the requirements to reduce greenhouse gas emissions. Implementation of such a standard is not within the purview of this Project. Therefore, the proposed Project would not conflict with measures concerning the use of low carbon fuels.

Action T-3 addressees regional transportation targets for reducing GHG emissions. SB 375 requires CARB to develop, in consultation with metropolitan planning organizations (MPOs), passenger vehicle greenhouse gas emissions reduction targets for 2020 and 2035. It sets forth a collaborative process to establish these targets, including the appointment by CARB of a Regional Targets Advisory Committee to recommend factors to be considered and methodologies for setting greenhouse gas emissions reduction targets. SB 375 also provides incentives – relief from certain CEQA requirements for development projects that are consistent with regional plans that achieve the targets. Implementation of such a standard is not within the purview of this Project. Therefore, the proposed Project would not conflict with measures concerning SB375.

Action T-4 is concerned with vehicle efficiency measures. The California Integrated Waste Management Board (CIWMB) with various partners continues to conduct a public awareness campaign to promote sustainable tire practices. CARB is pursuing a regulation to ensure that tires are properly inflated when vehicles are serviced. In addition, CEC in consultation with CIWMB is developing an efficient tire program focusing first on data gathering and outreach, then on potential adoption of minimum fuel-efficient tire standards, and lastly on the development of consumer information requirements for replacing tires. CARB is also pursuing ways to reduce engine load via lower friction oil and reducing the need for air conditioner use. CARB is actively engaged in the regulatory development process for the tire inflation component of this measure. Implementation of such a standard is not within the purview of this Project. Therefore, the proposed Project would not conflict with applicable measures.

Table 4.6-6 Recommended Actions for Climate Change Scoping Plan

ID #	SECTOR	STRATEGY NAME	APPLICABLE TO PROJECT?	WILL PROJECT CONFLICT WITH IMPLEMENTATION?
T-1	Transportation	Pavley I and II – Light-Duty Vehicle GHG Standards	NO	NO
T-2	Transportation	Low Carbon Fuel Standard (Discrete Early Action)	NO	NO
T-3	Transportation	Regional Transportation-Related GHG Targets	NO	NO
T-4	Transportation	Vehicle Efficiency Measures	NO	NO
T-5	Transportation	Ship Electrification at Ports (Discrete Early Action)	NO	NO
T-6	Transportation	Goods-movement Efficiency Measures	NO	NO
T-7	Transportation	Heavy Duty Vehicle Greenhouse Gas Emission Reduction Measure – Aerodynamic Efficiency (Discrete Early Action)	NO	NO
T-8	Transportation	Medium and Heavy-Duty Vehicle Hybridization	NO	NO
T-9	Transportation	High Speed Rail	NO	NO
E-1	Electricity and Natural Gas	Increased Utility Energy efficiency programs More stringent Building and Appliance Standards	YES	NO
E-2	Electricity and Natural Gas	Increase Combined Heat and Power Use by 30,000GWh	NO	NO
E-3	Electricity and Natural Gas	Renewable Portfolio Standard	NO	NO
E-4	Electricity and Natural Gas	Million Solar Roofs	YES	NO
CR-1	Electricity and Natural Gas	Energy Efficiency	YES	NO
CR-2	Electricity and Natural Gas	Solar Water Heating	NO	NO
GB-1	Green Buildings	Green Buildings	YES	NO
W-1	Water	Water Use Efficiency	YES	NO
W-2	Water	Water Recycling	NO	NO
W-3	Water	Water System Energy Efficiency	YES	NO
W-4	Water	Reuse Urban Runoff	NO	NO
W-5	Water	Increase Renewable Energy Production	NO	NO
W-6	Water	Public Goods Charge (Water)	NO	NO
I-1	Industry	Energy Efficiency and Co-benefits Audits for Large Industrial Sources	YES	NO
I-2	Industry	Oil and Gas Extraction GHG Emission Reduction	NO	NO
I-3	Industry	GHG Leak Reduction from Oil and Gas Transmission	NO	NO
I-4	Industry	Refinery Flare Recovery Process Improvements	NO	NO
I-5	Industry	Removal of Methane Exemption from Existing Refinery Regulations	NO	NO
RW-1	Recycling and Waste Management	Landfill Methane Control (Discrete Early Action)	NO	NO
RW-2	Recycling and Waste Management	Additional Reductions in Landfill Methane – Capture Improvements	NO	NO
RW-3	Recycling and Waste Management	High Recycling/Zero Waste	NO	NO
F-1	Forestry	Sustainable Forest Target	NO	NO
H-1	High Global Warming Potential Gases	Motor Vehicle Air Conditioning Systems (Discrete Early Action)	NO	NO
H-2	High Global Warming Potential Gases	SF_6 Limits in Non-Utility and Non-Semiconductor Applications (Discrete Early Action)	NO	NO
H-3	High Global Warming Potential Gases	Reduction in Perflourocarbons in Semiconductor Manufacturing (Discrete Early Action)	NO	NO
H-4	High Global Warming Potential Gases	Limit High GWP Use in Consumer Products (Discrete Early Action, Adopted June 2008)	NO	NO
H-5	High Global Warming Potential Gases	High GWP Reductions from Mobile Sources	NO	NO
H-6	High Global Warming Potential Gases	High GWP Reductions from Stationary Sources	NO	NO
H-7	High Global Warming Potential Gases	Mitigation Fee on High GWP Gases	NO	NO
A-1	Agriculture	Methane Capture at Large Dairies	NO	NO

Source: Urban Crossroads 2011c, Table 3-5.

Action T-5 addresses electrification of ships at ports and is not applicable to the proposed Project. Therefore, the proposed Project would not conflict with this measure.

Action T-6 also primarily addresses port operations and is not applicable to the proposed Project. Therefore, the proposed Project would not conflict with this measure.

Action T-7 requires existing trucks/trailers to be retrofitted with the best available technology and/or CARB-approved technology. Implementation of such a standard is not within the purview of the proposed Project since various trucks fleets from numerous commercial entities may access the site. Therefore, the proposed Project would not conflict with this measure.

Action T-8 focuses on hybridization of medium- and heavy-duty vehicles. The implementation approach to Action T-8 is to adopt a regulation and/or incentive program that reduces GHG emissions by encouraging hybrid technology as applied to vocational applications that have significant urban, stop-and-go driving, idling, and power take-off operations in their duty cycle. Such applications include parcel delivery trucks and vans. Implementation of such a standard is not within the purview of the proposed Project since various trucks fleets from numerous commercial entities may access the site. Therefore, the proposed Project would not conflict with this measure.

Action T-9 concerns implementation of a high speed rail system. A high speed rail (HSR) system is part of the state-wide strategy to provide more mobility choice and reduce greenhouse gas emissions. This measure supports implementation of plans to construct and operate a HSR system between northern and southern California. As planned, the HSR is a 700-mile-long rail system capable of speeds in excess of 200 miles per hour on dedicated, fully-grade separated tracks with state-of-the-art safety, signaling and automated rail control systems. The system would serve the major metropolitan centers of California in 2030 and is projected to displace between 86 and 117 million riders from other travel modes in 2030. The proposed Project would not conflict with implementation of a HSR system.

- *Electricity and Natural Gas*

Action E-1/CR-1, together with Action GB-1 (Green Building), aims to reduce electricity demand by increased efficiency of Utility Energy Programs and adoption of more stringent building and appliance standards. The primary focus on GHG reduction in the real estate sector is through the implementation of green building measures, including principally LEED standards. To reduce the Project's energy needs and fossil fuel consumption, and thereby reduce GHG emissions, the Project Applicant has committed to achieve certification of the March Business Center Project under the U.S. Green Building Council's LEED program. Following final building inspection, the Project Applicant will seek LEED Certification pursuant to the procedures set forth by the Green Building Certification Institute. Because the design features are not yet selected, and cannot be precisely determined until tenants are identified and interior space design occurs, it is not possible to calculate the GHG emission reductions associated with LEED Silver design features at this time. The proposed Project would incorporate energy efficient measures in its site and building designs, would achieve LEED Silver, and would comply with these Climate Change Scoping Plan Actions

Action E-2 encourages an increase in the use of combined heat and power (CHP) use, or co-generation, facilities. California has supported CHP for many years, but market and other barriers continue to keep CHP from reaching its full market potential. Increasing the deployment of efficient CHP will require a multi-pronged approach that includes addressing significant barriers and

instituting incentives or mandates where appropriate. Implementation of such a standard is not within the purview of the proposed Project; therefore, the proposed Project would not conflict with this measure.

Action E-3 concerns Renewable Portfolio Standards for utilities and does not apply to development projects; therefore, the proposed Project would not conflict with the recommended measure.

Action E-4 strives to promote solar generated electricity. Because all buildings would be designed to accommodate renewable energy sources, such as photovoltaic solar electricity systems, appropriate to their architectural design, the proposed Project would not conflict with the recommended measure.

Action CR-2 strives to promote solar water heaters (SWH). CARB recommends that California pursue approaches with the goal of developing a viable SWH industry for 2020 and beyond. Implementation of such a standard is not within the purview of the proposed Project; therefore, the proposed Project would not conflict with this measure.

- *Water Use*

Implementation of all but two of the Recommended Actions related to water use are not within the purview of the proposed Project. The two measures that apply are measures W-1 (Water Use Efficiency) and W-3 (Water System Energy Efficiency). The landscape design of the proposed Project would feature water-efficient plant materials and a water-efficient automatic irrigation system (as previously described in Subsection 3.3.3.D, *Conceptual Landscape Plan*). Accordingly, the proposed Project would provide for water-efficient development and would not conflict with the implementation of Scoping Plan Actions W-1 and W-3.

- *Industrial Use*

All but one of the Recommended Actions related to industrial use are specific to oil and gas extraction, refining and transmission, and are not applicable to the proposed Project. The remaining Action, Action I-1, recommends energy efficiency and co-benefits audits for large emitters of GHGs (i.e., uses that produce in excess of 0.5 $MMTCO_2E$ per year). The proposed Project would not generate in excess of 0.5 $MMTCO_2e$ per year and would not be subject to energy efficiency audits. Therefore, the proposed Project would not conflict with any of the Industrial Use Action Items of the Scoping Plan.

❑ Consistency with GHG Emission Reduction Strategies Set Forth in the 2006 CAT Report

Table 4.6-7, *Project Compliance with Applicable 2006 CAT Report Greenhouse Gas Emissions Reduction Strategies*, summarizes the emission reduction strategies set forth in the 2006 CAT Report along with an explanation as to how the Project is consistent therewith. Table 4.6-7 also notes whether the strategy is applicable to the Project:

Although implementation of the CAT strategies would reduce GHG emissions to the extent possible, it is not possible to specifically quantify the reduction in GHG that will result from implementation of CAT strategies and programs. However, a project that is consistent with CAT strategies is consistent with the strategies suggested to reduce California's emissions to the levels proposed by Executive Order S-3-05 and AB 32.

Table 4.6-7 Project Compliance with Applicable 2006 CAT Report Greenhouse Gas Emissions Reduction Strategies

STRATEGY	PROJECT COMPLIANCE
California Air Resource Board	
Vehicle Climate Change Standards AB 1493 (Pavley) required the state to develop and adopt regulations that achieve the maximum feasible and cost-effective reduction of climate change emissions emitted by passenger vehicles and light duty trucks. Regulations were adopted by CARB in September 2004.	Not Applicable.
Other Light Duty Vehicle Technology New standards would be adopted to phase in beginning in the 2017 model.	
Heavy-Duty Vehicle Emission Reduction Measures Increased efficiency in the design of heavy-duty vehicles and an education program for the heavy-duty vehicle sector.	
Diesel Anti-Idling In July 2004, the CARB adopted a measure to limit diesel-fueled commercial motor vehicle idling.	Compliant. Heavy-duty diesel trucks that access the project site would be required to limit idling to no more than five minutes.
Hydrofluorocarbon Reduction 1) Ban retail sale of HFC in small cans; 2) Require that only low GWP refrigerants be used in new vehicular systems; 3) Adopt specifications for new commercial refrigeration; 4) Add refrigerant leak-tightness to the pass criteria for vehicular Inspection and Maintenance programs; 5) Enforce federal ban on releasing HFCs.	Not Applicable.
Transportation Refrigeration Units (TRUs) , Off-Road Electrification, Port Electrification Strategies to reduce emissions from TRUs, increase off-road electrification, and increase use of shore-side/port electrification.	Not Applicable. The Project uses will be unrefrigerated and therefore TRUs would not be accessing the site.
Alternative Fuels: Biodiesel Blends CARB would develop regulations to require the use of 1% to 4% biodiesel displacement of California diesel fuel.	Not Applicable.
Reduced Venting and Leaks in Oil and Gas Systems Rule considered for adoption by the Air Pollution Control Districts for improved management practices.	Not Applicable.
Hydrogen Highway The California Hydrogen Highway Network (CA H_2 Net) is a State initiative to promote the use of hydrogen as a means of diversifying the sources of transportation energy.	Not Applicable.
Integrated Waste Management Board	
Achieve 50% Statewide Recycling Goal Achieving the State's 50% waste diversion mandate as established by the Integrated Waste Management Act of 1989, (AB 939, Sher, Chapter 1095, Statutes of 1989), will reduce climate change emissions associated with energy intensive material extraction and production as well as methane emission from landfills. A diversion rate of 48% has been achieved on a statewide basis. Therefore, a 2% additional reduction is needed.	Compliant. Project design includes provisions for tenants to recycle. In accordance with the California Solid Waste Reuse and Recycling Act of 1991 (Cal Pub Res. Code § 42911), the Project would provide adequate areas for collecting and loading recyclable materials where solid waste is collected. Per City of Moreno Valley requirements, the collection areas are required to be shown on construction drawings and be in place before occupancy permits are issued.
Zero Waste - High Recycling Additional recycling beyond the State's 50% recycling goal.	
Department of Forestry	
Forest Management Strategies for storing more carbon through forest	Not applicable.

Table 4.6-7 Project Compliance with Applicable 2006 CAT Report Greenhouse Gas Emissions Reduction Strategies

STRATEGY	PROJECT COMPLIANCE
management activities can involve a range of management activities such as increasing either the growth of individual trees, the overall age of trees prior to harvest, or dedicating land to older age trees.	
Forest Conservation Conservation projects are designed to minimize/prevent the climate change emissions that are associated with the conversion of forestland to non-forest uses by adding incentives to maintain an undeveloped forest landscape.	Not applicable.
Fuels Management/Biomass Large, episodic, unnaturally hot fires are an increasing trend on California's wild lands because of decades of fire suppression activities, sustained drought, and increasing insect, disease, and invasive plans infestations. Actions taken to reduce wildfire severity through fuel reduction and biomass development would reduce climate change emissions from wildfire, increase carbon sequestration, replace fossil fuels, and provide significant economic development opportunities.	Not applicable.
Urban Forestry A new statewide goal of planting 5 million trees in urban areas by 2020 would be achieved through the expansion of local urban forestry programs.	Compliant. The implementation of the proposed Project will result in the planting of additional trees and vegetation at the project site.
Afforestation/Reforestation Projects Reforestation projects focus on restoring native tree cover on lands that were previously forested and are now covered with other vegetative types.	Not applicable.
Department of Water Resources	
Water Use Efficiency Approximately 19% of all electricity, 30% of all natural gas, and 88 million gallons of diesel are used to convey, treat, distribute and use water and wastewater. Increasing the efficiency of water transport and reducing water use would reduce GHG emissions.	Compliant. The Project would implement U.S. EPA Certified WaterSense labeled or equivalent faucets and high-efficiency toilets (HETs), and implement water-conserving shower heads to the extent feasible.
California Energy Commission (CEC)	
Building Energy Efficiency Standards in Place an d in Progress Public Resources Code 25402 authorizes the CEC to adopt and periodically update its building energy efficiency standards (that apply to newly constructed buildings and additions to and alterations to existing buildings).	Compliant. Project would be compliant with the California Code of Regulations, Title 24 (Energy Efficiency Standards for Residential and Nonresidential Buildings) as in effect at the time of Project construction.
Appliance Energy Efficiency Standards in Place an d in Progress Public Resources Code 25402 authorizes the Energy Commission to adopt and periodically update its appliance energy efficiency standards (that apply to devices and equipment using energy that are sold or offered for sale in California).	Compliant. Appliances purchased for use in the Project would be consistent with all applicable energy efficiency standards.
Fuel-Efficient Replacement Tires & Inflation Programs State legislation (Chapter 912, Statues of 2001) directed the Energy Commission to investigate and to recommend ways to improve fuel efficiency of vehicle tires. The bill established a statewide program to encourage the production and use of more fuel efficient tires.	Not Applicable.

Table 4.6-7 Project Compliance with Applicable 2006 CAT Report Greenhouse Gas Emissions Reduction Strategies

STRATEGY	PROJECT COMPLIANCE
Cement Manufacturing Cost-effective reductions to reduce energy consumption and to lower carbon dioxide emissions in the cement industry.	Not Applicable.
Municipal Utility Strategies Includes energy efficiency programs, renewable portfolio standard, combined heat and power, and transitioning away from carbon-intensive generation.	Not Applicable.
Alternative Fuels: non-Petroleum Fuels Increasing the use of non-petroleum fuels in California's transportation sector, as recommended in the CEC's 2003 and 2005 Integrated Energy Policy Reports.	Not Applicable.
Business Transportation and Housing	
Smart Land Use and Intelligent Transportation Systems (ITS) Smart land use strategies encourage jobs/housing proximity, promote transit-oriented development, and encourage high-density residential/commercial development along transit corridors. ITS is the application of advanced technology systems and management strategies to improve operational efficiency of transportation systems and movement of people, goods and services. Governor Schwarzenegger is finalizing a comprehensive 10-year strategic growth plan with the intent of developing ways to promote, through state investments, incentives and technical assistance, land use, and technology strategies that provide for a prosperous economy, social equity, and a quality environment.	Compliant. The proposed Project would place development in close proximity to a transportation corridor and near homes which can limit worker commute trips.
Measures to Improve Transportation Energy Efficiency Builds on current efforts to provide a framework for expanded and new initiatives including incentives, tools and information that advance cleaner transportation and reduce climate change emissions.	Compliant. The proposed Project promotes fuel conservation through design features, which encourage employee carpooling and public transportation use. Easements for future bus stops are shown on the Project's Tentative Parcel Map.
Department of Food and Agriculture	
Conservation tillage/cover crops Conservation tillage and cover crops practices are increasingly being used by California farmers for a variety of reasons, including improved soil tilth, improved water use efficiency, reduced tillage requirements, saving labor and fuel, and reduced fertilizer inputs.	Not Applicable.
Enteric Fermentation Cattle emit methane from digestion processes. Changes in diet could result in a reduction in emissions.	Not Applicable.
State and Consumer Services Agency	Not Applicable.
Green Buildings Initiative Green Building Executive Order, S-20-04 (CA 2004), sets a goal of reducing energy use in public and private buildings by 20% by the year 2015, as compared with 2003 levels.	Compliant. By qualifying for LEED Silver certification, the Project is expected to reduce energy use compared to business as usual (e.g., 2005 Title 24 Standards). Additionally, the Project is required to comply with the mandatory provisions of the California Green Building Standards Code (CALGreen) pursuant to the California Code of Regulations, Title 24, which became effective on January 1, 2011.
Public Utilities Commission (PUC)	
Accelerated Renewable Portfolio Standard The Governor has set a goal of achieving 33% renewables in	Not Applicable.

Table 4.6-7 Project Compliance with Applicable 2006 CAT Report Greenhouse Gas Emissions Reduction Strategies

STRATEGY	PROJECT COMPLIANCE
the State's resource mix by 2020. The joint PUC/Energy Commission September 2005 Energy Action Plan II (EAP II) adopts the 33% goal.	
California Solar Initiative Installation of 1 million solar roofs or an equivalent 3,000 MW by 2017 on homes and businesses; increased use of solar thermal systems to offset the increasing demand for natural gas; use of advanced metering in solar applications; and creation of a funding source that can provide rebates over 10 years through a declining incentive schedule.	Compliant. By qualifying for LEED Silver certification, the Project is anticipated to accommodate renewable energy sources, such as photovoltaic solar energy systems, as is economically and physically feasible.
Investor-Owned Utility This strategy includes energy efficiency programs, combined heat and power initiative, and electricity sector carbon policy for investor owned utility.	Not Applicable.

Source: Urban Crossroads 2011c, Table 3-6.

B. Level of Significance Prior to Mitigation

As indicated previously in EIR Subsection 4.6.2, neither the City of Moreno Valley nor the SCAQMD have adopted a threshold of significance for determining the cumulative significance of a Project's GHG emissions on global climate change. In the absence of a quantitative threshold of significance, and for purposes of analysis within this section, the applicable threshold of significance is whether or not the Project would be consistent with the CARB Scoping Plan and the 2006 CAT Report.

Based on the analysis provided above, the Project would generate GHG emissions amounting to approximately 36,547.50 MT per year (of which 33,076.05 MT are based on the speculative estimate of mobile source emissions (refer to Table 4.6-5)). However, and as indicated in Table 4.6-6 and Table 4.6-7, the Project is consistent with, or otherwise would not conflict with, the CARB Scoping Plan recommended measures and actions and the GHG emission reduction strategies set forth in the 2006 CAT Report.

Because the proposed Project would be consistent with both the CARB Scoping Plan and the 2006 CAT Report, Project-related GHG emissions would not be substantial and would not directly or indirectly result in a significant impact on the environment. This conclusion reflects a conservative analysis of Project-related impacts as the analysis presented previously in this subsection does not credit the Project for a reduction of GHG emissions that would result from implementation of Project design features. Therefore, the proposed Project would not result in a significant impact to the environment as a result of Project-related GHG emissions.

In addition, there are currently no plans, policies, or regulations that are applicable to the proposed Project and that have been adopted for the purpose of reducing the emissions of greenhouse gases. Although there are no applicable plans, policies, or regulations that are applicable to the proposed Project, the Project would nonetheless be consistent with the CARB Scoping Plan and the 2006 CAT Report strategies for reducing GHG emissions. Therefore, the proposed Project would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases, and a significant impact would not occur.

4.6.4 CUMULATIVE IMPACT ANALYSIS

Global Climate Change occurs as the result of global emissions of GHGs. An individual project proposal does not have the potential to result in significant GCC-related effects in the absence of cumulative sources of GHGs. The CEQA Guidelines also emphasize that the effects of greenhouse gas emissions are cumulative, and should be analyzed in the context of CEQA's requirements for cumulative impacts analysis (See CEQA Guidelines §15130[f]).

Accordingly, the Project-specific impact analysis provided in EIR Subsection 4.6.3 reflects a cumulative impact analysis of the Project's GHG emissions, and concludes that since the proposed Project would comply with all applicable GHG-reduction strategies set forth by the CARB Scoping Plan and 2006 CAT Report, the proposed Project's GHG emissions would not be cumulatively considerable. In addition, the analysis in EIR Subsection 4.6.3 demonstrates that the proposed Project would not conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing GHGs. Therefore, Project-related emissions of GHGs would be less than significant on both a direct and cumulative basis.

4.6.5 APPLICABLE PROJECT REQUIREMENTS

The following is a list of requirements and/or conditions to which the Project would be required to adhere. Compliance with these measures was assumed throughout the above analysis of effects associated with Project-related GHG emissions.

PR 4.6-1 The Project is required to comply with mandatory regulatory requirements imposed by the State of California and the South Coast Air Quality Management District aimed at the reduction of air quality emissions. Those that are applicable to the Project and that would assist in the reduction of Project-related GHG emissions include, but are not limited to the following:

a) Global Warming Solutions Act of 2006 (AB32).

b) Regional GHG Emissions Reduction Targets/Sustainable Communities Strategies (SB 375).

c) California Code of Regulations Title 13, Division 3 addressing diesel exhaust emissions. Specifically, Chapter 1, Article 4.5, §2025, "Regulation to Reduce Emissions of Diesel Particulate Matter, Oxides of Nitrogen and Other Criteria Pollutants, from In-Use Heavy-Duty Diesel-Fueled Vehicles" and Chapter 10, Article 1, §2485, "Airborne Toxic Control Measure to Limit Diesel-Fueled Commercial Motor Vehicle Idling."

d) California Code of Regulations Title 24 (California Building Code), which establishes energy efficiency requirements for new construction.

e) California Code of Regulations Title 20 (Appliance Energy Efficiency Standards), which establishes energy efficiency requirements for appliances.

f) South Coast Air Quality Management District Rule 1118 "PM10 Emissions from Paved and Unpaved Roads, and Livestock Operations," and Rule 1186.1 "Less Polluting Street Sweepers."

PR 4.6-2 Prior to the issuance of building permits, the Building and Safety Division shall ensure that the project plans provide for on-site bicycle storage, pursuant to City of Moreno Valley Municipal Code §9.11.060.B, *Off-street bicycle parking requirements*. This requirement encourages non-vehicular transportation thereby potentially reducing mobile source emissions.

4.6.6 SIGNIFICANCE OF IMPACTS BEFORE MITIGATION

Thresholds 1 and 2: Less than Significant Impact. The proposed Project would have a less than significant direct impact on global climate change and the Project's contribution of greenhouse gas emissions would be less than cumulatively considerable. The Project complies with all applicable CARB Scoping Plan and 2006 CAT Report GHG reduction measures. There are no other applicable plans, policies, or regulations that have been adopted for the purpose of reducing the Project's emissions of greenhouse gases.

4.6.7 MITIGATION MEASURES

Although Project-related GHG emissions are evaluated as less than significant on both a direct and cumulative basis, the following measures are recommended to ensure that Project-related emissions of GHGs are reduced to the maximum practical extent. Additionally, Mitigation Measures MM 4.2-1 through MM 4.2-6 in Subsection 4.2, Air Quality, and Project Requirement PR 4.11-10 in Subsection 4.11, Transportation/ Traffic, also reduce greenhouse gas emissions.

MM 4.6-1 The Project's construction drawings shall be designed to achieve certification under the U.S. Green Building Council's Leadership in Energy and Environmental Design (LEED) program. Prior to issuance of a building permit, the applicant shall provide a letter from a qualified LEED consultant verifying that proposed building design features are adequate to seek LEED certification. Following final building inspection, the Project Applicant shall seek LEED Certification pursuant to the procedures set forth by the Green Building Certification Institute.

MM 4.6-2 Prior to the issuance of grading and building permits, the Planning Division and the Land Development Division shall review grading plans and building plans to ensure that the following notes are specified:

> "With the exception of equipment used for asphalt paving, trenching, and off-site improvements, all diesel-powered construction equipment shall use B20 biodiesel fuel (comprising a minimum of 20% biodiesel) for the duration of construction activities. Any construction equipment whose warranty would be voided upon the use of B20 biodiesel fuel shall be exempt from this requirement. The Building and Safety Division may exempt additional pieces of equipment from this requirement upon written request from the Project applicant documenting a valid technical, economic, or physical reason why the use of B20 biodiesel fuel cannot be used. This requirement shall only

apply if B20 biodiesel fuel is available within 15 roadway miles from the Project site at the time construction activities commence."

"During Project construction, existing electrical power sources (e.g., power poles) shall be provided for electric construction tools including saws, drills and compressors, to minimize the need for diesel or gasoline powered electric generators."

MM 4.6-3 Prior to the approval of building permits, the Planning Division shall review landscaping plans to ensure that the following components are included:

a) Landscaping palette emphasizing drought tolerant plants; and

b) Use of water-efficient irrigation techniques.

MM 4.6-4 The Project's mechanical/electrical/plumbing (MEP) plans shall specify U.S. EPA Certified WaterSense labeled or equivalent faucets, high-efficiency toilets (HETs), and water-conserving shower heads (if showers are proposed). Prior to the approval of building permits, the Building and Safety Division shall review the plans to ensure that these features are specified, as appropriate.

MM 4.6-5 Prior to the issuance of building permits, the Project applicant shall submit energy usage calculations to the Planning Division showing that the Project is designed to achieve 8% efficiency beyond the 2008 California Building Code Title 24 requirements. Example of measures that reduce energy consumption include, but are not limited to, the following (it being understood that the items listed below are not all required and merely present examples; the list is not all-inclusive and other features that reduce energy consumption also are acceptable):

a) Increase in insulation such that heat transfer and thermal bridging is minimized;

b) Limit air leakage through the structure and/or within the heating and cooling distribution system;

c) Use of energy-efficient space heating and cooling equipment;

d) Installation of electrical hook-ups at loading dock areas;

e) Installation of dual-paned or other energy efficient windows;

f) Use of interior and exterior energy efficient lighting that exceeds the 2008 California Title 24 Energy Efficiency performance standards;

g) Installation of automatic devices to turn off lights where they are not needed;

h) To the extent they are compatible with Moreno Valley Municipal Code §9.17.030, *Landscape and Irrigation Design Standards*, the incorporation of shade-producing trees, particularly those that shade buildings and paved surfaces such as streets and parking lots;

i) Application of a paint and surface color palette that emphasizes light and off-white colors that reflect heat away from buildings;

j) Design of buildings with "cool roofs" using products certified by the Cool Roof Rating Council, and/or exposed roof surfaces using light and off-white colors;

k) Design of buildings to accommodate photo-voltaic solar electricity systems or the installation of photo-voltaic solar electricity systems;

l) Installation of ENERGY STAR-qualified energy-efficient appliances, heating and cooling systems, office equipment, and/or lighting products; and/or

m) Other measures incorporated as part of the LEED Certification process.

MM 4.6-6 Prior to the approval of street improvement plans, the Transportation Engineering Division shall ensure that all traffic lights installed as part of the Project will utilize Light Emitting Diodes.

MM 4.6-7 The Project shall comply with the following requirements to reduce the generation of solid waste during construction and under long-term operating conditions:

a) Prior to the issuance of grading permits, a Waste Management Plan (WMP) addressing construction activity wastes shall be prepared by the Project Applicant and submitted to the Public Works Department and Building and Safety Division for review and approval. The WRP must conform to City requirements specified in Municipal Code Section 8.80.030, which requires that at least 50 percent of all construction and demolition debris be reused, recycled, or otherwise diverted from disposal in a landfill. During grading and construction, the Project Applicant shall recycle and reuse the required percentage of materials, and keep records of the tonnage or other measurements approved by the City that can be converted to tonnage amounts. Prior to issuance of an occupancy permit, the Project Applicant shall provide evidence (i.e., receipts, weight tags, or other type of acceptable verifications) to the Public Works Department to demonstrate Project compliance with the approved WRP. Evidence must clearly identify the amount of waste disposed and materials recycled.

b) Recycling shall occur during Project operational activities in accordance with all applicable solid waste and recycling requirements of the City of Moreno Valley Public Works Department. Prior to the issuance of building permits, the Building and Safety Division shall review building plans to ensure that the locations and dimensions of recyclable collection enclosures and loading areas are specified on the building plans in conformance with City requirements and City Municipal Code Chapter 6.02 "Refuse Collection, Transfer and Disposal." Prior to the issuance of occupancy permits, the Land Development Division shall conduct a field inspection to ensure that the recyclable collection enclosures and loading areas are in place and ready for use.

MM 4.6-8 Prior to the issuance of building permits, the Planning Division shall review building plans to ensure that a minimum of two (2) parking spaces for each building will be

reserved for carpools and vanpools. Prior to the issuance of occupancy permits, the Planning Division shall conduct a field inspection to ensure that a minimum of two (2) parking spaces for each building are marked as reserved for carpools and vanpools.

MM 4.6-9 Prior to the issuance of building permits for Parcel 1, the Planning Division and Building and Safety Division shall review building plans to ensure that a minimum of two (2) electric vehicle charging stations will be provided. Prior to the issuance of occupancy permits for Parcel 1, the Planning Division and Building and Safety Division shall conduct a field inspection to verify that the electric vehicle charging stations are in place and operable.

MM 4.6-10 Prior to the issuance of occupancy permits, the Project's property owner shall provide documentation to the Planning Division verifying that a provision is included in the building's lease agreement which stipulates that tenants of the building shall encourage carpooling and transit ridership by on-site employees.

4.7 HAZARDS AND HAZARDOUS MATERIALS

The information and analysis presented in this subsection is based in part on two site-specific technical studies that were prepared by SCS Engineers to determine the presence or absence of hazardous materials on the Project site. The first report is titled "Phase I Environmental Assessment, 24015 Iris Avenue" (dated December 2006), and the second report is titled "Addendum to Phase I Environmental Assessment Report for Property Located at 24015 Iris Avenue" (May 12, 2011). These reports are included as *Technical Appendices G1* and *G2* to this EIR, respectively.

This subsection also is based on information contained in the Safety Element of the City of Moreno Valley General Plan (Chapter 6, pp. 6-1 – 6-30), dated July 2006 (Moreno Valley 2006a), and the Hazards section (Section 5.5, pp. 5.5-1 – 5.5-16) of the certified Final Program EIR prepared for the General Plan (SCH No. 2000091075), dated July 2006 (Moreno Valley 2006b). Additionally, information was obtained from the adopted Riverside County Airport Land Use Compatibility Plan (1986) and the proposed update to that plan for March ARB/IPA called the "March ARB/IPA Joint Land Use Study" (March JPA 2010), as well as the "Air Installation Compatible Use Zone Study for March ARB" prepared by the Department of the Air Force in 1005 (Air Force 2005).

4.7.1 EXISTING CONDITIONS

A. Definition of Toxic Substances and Hazardous Waste

For the purposes of this EIR, the term "toxic substance" is defined as a substance which, because of its quantity, concentration, or physical, chemical, or infectious characteristics, may present an unreasonable risk of injury to human health or the environment. Toxic substances include chemical, biological, flammable, explosive, and radioactive substances.

"Hazardous material" is defined as a substance which, because of its quantity, concentration, or physical, chemical, or infectious characteristics, may: 1) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, disposed of, or otherwise mismanaged; or 2) cause or contribute to an increase in mortality or an increase in irreversible or incapacitating illness. Hazardous waste is defined in the California Code of Regulations, Title 22, Section 66261.3. The characteristics of hazardous waste are Ignitability (66261.21), Corrosivity (66261.22), Reactivity (66261.23), and Toxicity (66261.24). Certain wastes are called "Listed Wastes" and are found in the California Code of Regulations, Title 22, Sections 66261.30 through 66261.35. Wastes appear on the lists because of their known hazardous natures or because the processes that generate them are known to produce hazardous wastes (which are often complex mixtures).

B. Historical Review, Regulatory Records Review, and Field Reconnaissance

❑ Historical Review

SCS Engineers conducted a review of various sources of information to determine the historical use of the Project site, including a review of USGS topographic maps, historical aerial photographs, and a search of the EDR-Sanborn® collection of maps. Please refer to *Technical Appendix G1* of this EIR for a detailed description of the results of this research. Based on this review, SCS Engineers conclude that the northern portion of the Project site was used for dwellings and possibly agriculture as early as 1938. Between 1953 and 1967, the northern half of the Project site was developed with stables and a training center for race horses, complete with a racetrack. Large areas of the Project

site appear to have been used for pasture. By the end of the 1980s, most of the corrals, barns and other buildings on the Project site had been removed. The most recent aerial photograph available from 2010 (refer to Figure 2-4, *Aerial* Photograph) shows the horse track as being overgrown and no longer used. The southern half of the Project site appears to have been either vacant and undeveloped, or used for pasture over its history (SCS Engineers 2006 7-9).

❑ Regulatory Records Review

A database search for sites listed on various federal and state databases within one (1) mile of the Project site was obtained by SCS Engineers from EDR Environmental Information. A detailed description of the results of this review is provided in *Technical Appendix G1* to this EIR. The proposed Project site was not identified in any federal or state databases, indicating the site is not known by the federal or state government to pose any concerns to the environment.

The only site of potential concern within one mile of the Project site is the March ARB, located to the west of Heacock Street and in immediate proximity to the Project site. Ten records of contamination were identified associated with the March ARB, although some sites may be listed on more than one database.

March AFB has been used for aircraft maintenance and repair, refueling operations, and training activities since 1918. Beginning in 1980, efforts began to identify and clean up hazardous waste sites on the base. Eventually, forty-four separate sites within the base were identified as contaminated sites. These included fire training areas, landfills, underground tank installations, an engine test cell, and recorded spills. The identified areas of contamination included three zones of groundwater contamination (SCS Engineers 2006 10-11).

Continued investigations determined that the contamination had migrated off base and impacted private wells down-gradient (i.e., southeast) of the base. Groundwater wells on the base and contaminated wells off base were shut down in the late 1980s. Based on maps included in Appendix D to the Phase I ESA (EIR *Technical Appendix G1*), groundwater beneath the northern edge and southern half of the Project site appears to have been impacted by these plumes. There is no evidence that any activities on the Project site may have contributed to this contamination (SCS Engineers 2006 11).

By the early 1990s, most of the source areas of the contamination on the March ARB had been remediated. A contaminated groundwater interception and treatment system was in operation to remove volatile organic compounds (VOCs) such as TCE and PCE from the groundwater and prevent their further migration off base (SCS Engineers 2006 11).

Remedial efforts are ongoing. The most recent information suggests that attempt to remediate groundwater beneath the base and prevent its continued migration off base have largely been successful. However, no attempt has been made to clean up contaminated groundwater off base. In the absence of continued action from March ARB, this groundwater will eventually be remediated by natural attenuation. However, until natural processes succeed in removing the contaminants, the groundwater beneath the Project site will likely remain contaminated (SCS Engineers 2006 11). Based on the reported depth to groundwater below the Project site (i.e., approximately 44 feet below the ground surface (EMWD 2010)), the prevailing lithology (fine grain sediments), and the opinion

of SCS Engineers, there is no significant potential for vapor intrusion into future buildings on the Project site due to the March ARB plume (SCS Engineers 2006 11).

The EDR database did not identify any landfills within one mile of the Project site. Several landfills once associated with the March ARB are within one mile of the Project site, although these landfills have been excavated and removed to another disposal site beyond one mile from the Project site (SCS Engineers 2006 12).

❑ Field Reconnaissance

An inspection of the proposed Project site and surrounding area was conducted by SCS Engineers on December 20, 2006 (SCS Engineers 2006 1). Appendix B to the Phase I Environmental Site Assessment (EIR *Technical Appendix G1*) includes a sketch map and photographs of the Project site. During the field survey conducted in 2006, SCS Engineers observed one well on the site along the center fence line, approximately 650 feet east of Heacock Street and 1,030 feet south of Iris Avenue (SCS Engineers 2006 5). A subsequent survey by the Project's civil engineer located three (3) additional wells along the perimeter of the Project site (adjacent to the eastern, southeastern and southwestern boundaries of the Project site). These wells are used by the Department of the Air Force to monitor groundwater contamination levels resulting from historical contamination at the March ARB facility. During the 2006 field survey, SCS Engineers also observed an unidentified monument cover along Heacock Street, just to the south of the Perris Valley Storm Drain Channel (SCS Engineers 2006 5).

SCS Engineers also identified a small single-story dwelling in the north-central portion of the Project site, which was identified as having the potential to contain asbestos since the structure was constructed prior to 1938, when use of asbestos was common in the construction of buildings. A raised concrete foundation also was noted near the dwelling. Subsequent to 2006 and prior to release of the NOP for this EIR, the single-story structure on-site was demolished. SCS Engineers surveyed the Project site again on May 11, 2011, and inspected the former location of the structure. SCS Engineers observed small amounts of construction debris (e.g., concrete, bricks, wood) at the structure's former location; however, no asbestos containing materials were observed. Furthermore, the Project site is routinely disked. If any asbestos containing materials had been present at the former location of the structure, they would have been incorporated within the soil matrix during disking activities and would pose no health risk (SCS Engineers 2011).

No above-ground storage tanks (ASTs) or evidence of underground storage tanks (USTs), including vents, pipes, dispensers, fill ports, etc., were observed on the site. However, as the site has been occupied since at least 1938, it is possible that USTs associated with agricultural use were developed on-site prior to the need for permits for such facilities (SCS Engineers 2006 6).

C. *Airport Hazards*

The Project site is located east of Heacock Street, which separates the property from the March ARB/IPA. In 2010, the March Joint Powers Authority (JPA) prepared a Joint Land Use Study for the March ARB/IPA, which identifies land use recommendations within the airport's safety zones (March JPA 2010). That study is in draft form and a NOP for its required EIR was not yet prepared at the time the NOP for this EIR was released for public review. The Joint Land Use Study, which is proposed to ultimately replace the existing 1984 Riverside County Airport Land Use Plan (RCALUP) for March ARB, is discussed in this EIR with acknowledgement that it is not an

approved plan. Although the 1984 RCALUP is based on data that is 20 years old and does not reflect current operating conditions at the facility, the 1984 RCALUP is nonetheless the adopted County airport plan for the March ARB and evaluated as such in this EIR.

The 1984 RCALUP identifies the Project site as being located within Safety Zone Area 2. The RCALUP identifies that lands located within Area 2 are required to provide for an avigation easement to fully disclose the existing and future airport operations in the vicinity to future owners. There are no other land use restrictions or safety issues identified for Safety Zone Area 2 in the RCALUP (Riverside County Airport Land Use Commission 1986) applicable to the Project site.

Pursuant to the March Air Reserve Base Air Installation Compatible Use Zone Study (AICUZ) commissioned by the United States Air Force (Department of the Air Force 2005 3-3), and as depicted on Figure 6-5, Air Crash Hazards, of the Moreno Valley General Plan (City of Moreno Valley 2006a) the Project site is not located within or adjacent to any areas that are subject to air crash hazards. Similarly, the proposed Joint Use Study for March ARB/IPA identifies the Project site as being located in proposed "Zone D," which is not within a crash hazard zone but would require an avigation easement to disclose the airport's operational characteristics to property owners (March JPA 2010 Ch. 3).

D. Wildland Fire Hazards

❑ Fire Hazard Potential

According to Figure 5.5-2 of the City of Moreno Valley General Plan EIR (City of Moreno Valley 2006b 5.5-5), the Project site and surrounding vicinity are not identified as being located within a "Substantial Fire Risk" or "Very High Fire Risk" area. Areas subject to wildland fire hazards occur at the north and east ends of the City of Moreno Valley, in addition to open space lands located northerly of Lake Perris. The closest area to the proposed Project site identified as being subject to wildland fire hazards occurs approximately 2.5 miles east of the Project site within the open space areas located north of Lake Perris. Annual disking occurs on the Project site as required by the Fire Department to clear vegetative cover to reduce the risk of fire.

❑ Moreno Valley Fire Department

Fire service to the Project area is provided by the Moreno Valley Fire Department (MVFD). The MVFD operates six fire stations with six paramedic engine companies and three aerial truck companies, a Fire Prevention Bureau for planning and inspections, along with Emergency Services and Volunteer Programs. The MVFD provides fire suppression, emergency medical rescue, hazardous materials response, planning and inspections for businesses, and hazard reduction abatement to the citizens of Moreno Valley.

The proposed Project site is located approximately 1.25 roadway miles southwest of MVFD Station No. 65 (Kennedy Park), which is located at 15111 Indian Street provides primary fire protection services to the Project area. Secondary fire protection services is provided by MVFD Station 91 (College Park), located approximately 2.2 roadway miles from the Project site at 16110 Lasselle Street.

E. Applicable Environmental Regulations

Various government organizations share responsibility for the safe disposal of contaminants, toxic wastes, and the clean-up of hazardous substance spills. On a federal level, The National Priority List (NPL) is the Environmental Protection Agency's (EPA's) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund program. Superfund is the federal government's program to clean-up the nation's uncontrolled hazardous waste sites. The Superfund clean-up process begins with site discovery or notification to EPA of possible releases of hazardous substances. Once discovered, sites are entered into the Comprehensive Environmental Response, Compensation, and Liability Information System. The EPA then evaluates the potential for a release of hazardous substances from the site through established steps in the Superfund cleanup process. State and regional agencies have asked local governments to participate in the establishment of disposal sites, uniform handling practices, and regulations to ensure adequate toxic substance waste disposal and spill clean-up.

In California, the Department of Toxic Substances Control (DTSC) is charged with the protection of Californians from exposure to hazardous wastes. DTSC operates programs to deal with improper hazardous waste management and to prevent releases of hazardous waste by ensuring that those who generate, handle, transport, store, and dispose of wastes do so properly. DTSC also takes enforcement actions against those who fail to manage hazardous wastes appropriately. DTSC regulates hazardous waste in California primarily under the authority of the federal Resource Conservation and Recovery Act of 1976, and the California Health and Safety Code.

Most local hazardous waste programs are managed through the Riverside County Department of Environmental Health (DEH), which manages the collection of household hazardous waste. Businesses that transport or dispose of wastes are required to use a licensed hazardous waste hauler to collect and transport their waste. Any person who transports hazardous waste in a vehicle must have a valid registration issued by the DTSC (DTSC 2007).

4.7.2 BASIS FOR DETERMINING SIGNIFICANCE

The proposed Project would result in a significant impact to hazards and hazardous materials if the Project or any Project-related component would:

1. *Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials;*

2. *Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment;*

3. *Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school;*

4. *Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result would it create a significant hazard to the public or the environment;*

5. *For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area;*

6. *For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area;*

7. *Impair implementation of, or physically interfere with an adopted emergency response plan or emergency evacuation plan; or*

8. *Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands.*

4.7.3 IMPACT ANALYSIS

Threshold 1:	***Would the Project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?***
Threshold 2:	***Would the Project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?***

❑ **Impacts Analysis for Existing Site Conditions**

The north-central portion of the Project site contains small amounts of construction debris (e.g., concrete, bricks, wood). The construction debris is the remnants of a single-story dwelling that was constructed on the site prior to 1938 and was demolished sometime between 2006 and 2011. Based on a field survey conducted by SCS Engineers in 2011, the construction debris present on the subject property includes no hazardous materials. No asbestos containing materials were observed among the construction debris (SCS Engineers 2011). No other potentially hazardous materials were observed on the Project site (SCS Engineers 2006 12-13).

Groundwater beneath much of the Project site is thought to be contaminated due to historic operations at the March ARB. Groundwater contamination includes the presence of VOCs, which can migrate into nearby buildings under certain circumstances. However, due to the depth to groundwater below the Project site (i.e., 150 feet below the ground surface), the prevailing lithology (fine grain sediments), and the expert opinion of SCS Engineers, there is no significant potential for vapor intrusion into future buildings on the Project site due to the March ARB plume (SCS Engineers 2006 13). Moreover, due to remediation measures undertaken at the March ARB to address groundwater contamination, water quality beneath the Project site is expected to improve over time (SCS Engineers 2006 13). Accordingly, contaminated groundwater beneath the Project site does not pose a significant hazard to the Project site's environment or to members of the public who would be employed by or visit the Project.

One (1) groundwater monitoring well is located within the central portion of the Project site and three (3) additional monitoring wells are located near the perimeter of the Project site. The existing monitoring well in the central portion of the Project site and one (1) of the wells near the perimeter of the site would be relocated as part of the proposed Project's construction activities. The monitoring

well relocation procedure would involve the abandonment of two existing wells and the drilling of two new monitoring wells. The replacement wells would be drilled in an appropriate and accessible location on the Project site as approved by the USAF. The abandonment of the existing monitoring wells and the construction of the new monitoring wells would be required to occur in accordance with applicable State of California well standards to preclude the release of hazardous materials (i.e., contaminated groundwater). With mandatory compliance to State standards, no substantial adverse impacts are anticipated from relocating the on-site monitoring wells. With mandatory adherence to State well standards, it is highly unlikely and not reasonably foreseeable that the monitoring wells would release contaminated groundwater. A significant hazard to the public or the environment would not be created and impacts would be less than significant.

❑ Temporary Construction-Related Activities

As described in Subsection 3.3.5(A) of this EIR, the proposed Project would be constructed in two (2) phases. Phase 1 would include site preparation, all mass grading and utility installation, and construction of the proposed building on Parcel 1. Phase 2 would include construction of the proposed buildings on Parcels 2, 3, and 4. Phase 1 is estimated to last approximately 12 months and Phase 2 is estimated to last approximately 10 months. Heavy equipment would be used, which would be fueled and maintained by substances such as oil, diesel fuel, gasoline, hydraulic fluid, and other liquid materials that would be considered hazardous if improperly stored or handled. In addition, materials such as paints, roofing materials, solvents, and other substances typically used in building construction would be located on the Project site during construction.

Improper use, storage, or transportation of hazardous materials could result in accidental releases or spills, potentially posing health risks to workers, the public, and the environment. This is a standard risk on all construction sites, and there would be no greater risk for improper handling, transportation, or spills associated with the proposed Project than would occur on any other similar construction site. Accidental spills that pose a significant hazard to the public or the environment would be highly unlikely and not reasonably foreseeable; as such, impacts would be less than significant.

❑ Long-Term Operation

As discussed in EIR Section 3.0, the future tenants that would occupy buildings on the Project site are not yet identified. Future uses on-site are assumed to be any of those uses permitted by the Moreno Valley Industrial Area Plan's (MVIAP) "Industrial" designation. For purposes of analysis within this EIR, it is anticipated that Parcels 1-3 would be primarily occupied by warehouse distribution land uses and Parcel 4 would be primarily occupied by light industrial land uses. Uses permitted in the MVIAP Industrial designation include specific types of industrial and manufacturing services and commercial uses. A complete list of permitted and conditionally permitted uses can be found in Section III of the MVIAP document (Moreno Valley 2002 III-1).

Based on the list of permitted uses contained in the MVIAP's Industrial zone, it is possible that hazardous materials could be used during the course of a future tenant's daily operations. State and Federal Community-Right-to-Know laws allow the public access to information about the amounts and types of chemicals in use at local businesses. Laws also are in place that require businesses to plan and prepare for possible chemical emergencies. Any business that occupies a building on the Project site and that handles hazardous materials (as defined in Section 25500 of California Health and Safety Code, Division 20, Chapter 6.95) will require a permit from the Riverside County

Department of Environmental Health (DEH) Hazardous Materials Management Division (HMM) in order to register the business as a hazardous materials handler. Such businesses also are required to comply with California's Hazardous Materials Release Response Plans and Inventory Law, which requires immediate reporting to the Riverside County DEH and the State Office of Emergency Services regarding any release or threatened release of a hazardous material, regardless of the amount handled by the business. In addition, any business handling at any one time, greater than 500 pounds of solid, 55 gallons of liquid, or 200 cubic feet of gaseous hazardous material, is required, under Assembly Bill 2185 (AB 2185), to file a Hazardous Materials Business Emergency Plan (HMBEP). A HMBEP is a written set of procedures and information created to help minimize the effects and extent of a release or threatened release of a hazardous material. The intent of the HMBEP is to satisfy federal and state Community Right-To-Know laws and to provide detailed information for use by emergency responders.

If businesses that use or store hazardous materials occupy the Project, the business owners and operators would be required to comply with all applicable federal, state, and local regulations to ensure proper use, storage, use, emission, and disposal of hazardous substances. With mandatory regulatory compliance, the Project is not expected to pose a significant hazard to the public or the environment through the routine transport, use, storage, emission, or disposal of hazardous materials, nor would the Project increase the potential for accident conditions which could result in the release of hazardous materials into the environment.

In addition, standard conditions of approval will be imposed on the Project by the MVFD, which requires future occupants to obtain a permit, "…to maintain, store, use, or handle materials, or to conduct processes which produce conditions hazardous to life or property, or to install equipment used in connection with such activities," and further notes that inspection of the premises by the Fire Chief may occur at any time in accordance with Moreno Valley Municipal Code (MVMC) Section 8.36.100. A separate condition of approval identified by the MVFD further requires permits be obtained prior to Certificate of Occupancy for any uses that would, "…store, dispense, use, or handle hazardous materials…" and requires applications for such permits to be accompanied by a Hazardous Materials Management Plan (HMMP) to identify operational procedures that would minimize or attenuate the potential for hazards to the environment.

With mandatory regulatory compliance, along with mandatory compliance with the Project's conditions of approval that will require the preparation of site-specific HMMPs and permits for any uses that may maintain, store, use, or handle hazardous materials, potential hazardous materials impacts associated with long-term operation of the Project are regarded as less than significant and mitigation is not required.

Threshold 3: Would the Project emit hazard ous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

The nearest school facility is Rainbow Ridge Elementary School, located 0.25-mile east of the Project site. Although the existing elementary school uses and buildings would be separated from the Project site by a distance of more than 0.25 mile, the western boundary of the school site and the eastern boundary of the proposed Project site are located at a distance of approximately 0.25 mile; accordingly, for purposes of analysis under this threshold, it is assumed that the Rainbow Ridge

Elementary School facility occurs within 0.25 mile of the Project site. There are no other existing or proposed school facilities within 0.25 mile of the Project site.

The potential for the Project to emit or handle hazardous or acutely hazardous materials is addressed above under Thresholds 1 and 2. As noted, if businesses that use, store, or emit hazardous materials occupy the Project site, the business owners and operators would be required to comply with all applicable federal, state, and local regulations to ensure proper use, storage, and disposal of hazardous substances. Moreover, and as will be required by the Project's conditions of approval, such uses also would be subject to additional review and approval by the MVFD, including requirements to obtain permits for uses that may result in the storage, use, or handling of hazardous materials, along with requirements for the preparation of a HMMP to identify operational procedures that would minimize or attenuate the potential for hazards to the environment.

There are no special requirements that pertain to hazardous materials handling near schools. Federal, state, and local laws require all businesses classified as "Hazardous Materials Handlers" by the Riverside County Department of Environmental Health to prepare an HMBEP. A Hazardous Materials Handler is identified as any facility storing more than 55 gallons, 500 pounds or 200 cubic feet of a hazardous material or hazardous waste at any one time. For acutely or extremely hazardous materials, these amounts are less. All handlers are required to disclose their inventory of hazardous materials in the form of an HMBEP. With mandatory regulatory compliance, the Project would not pose a significant hazard to schools. Federal, state, and local laws strictly regulate the storage and use of hazardous materials.

Due to the distance between the Project site and the nearest elementary school, along with federal and state laws and requirements and Project-specific conditions of approval addressing the potential for using or storing hazardous materials, the potential for the Project to adversely impacts schools by the emission or handling of hazardous materials is less than significant and mitigation is not required.

Threshold 4: ***Would the Project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?***

According to the Phase I ESA conducted for the Project site (SCS Engineers 2006 9-10) and a review of the State of California Department of Toxic Substances Control EnviroStor database, the Project site is not located on or included on any list of hazardous materials sites complied pursuant to California Government Code Section 65962.5. Therefore, no impact would occur.

Threshold 5: ***For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?***

The Project site is located east of Heacock Street, which separates the property from the adjacent March ARB/IPA. According to the March Air Reserve Base AICUZ (July 2006), the proposed Project site is located outside of the crash zones associated with the March ARB, indicating that the Project site is not subject to any significant safety hazards associated with the March ARB facility. According to the governing 1984 RCALUP the proposed Project site is located within Safety Zone

Area 2, which is not identified as an area subject to substantial safety hazards associated with airport operations but that requires an avigation easement. Similarly, the pending update to the 1984 RCALUP prepared by the March JPA in 2010 identifies the Project site in proposed "Zone D," which is not within a crash hazard zone but would require an avigation easement to disclose the airport's operational characteristics to property owners (March JPA 2010 Ch. 3). The Project would be required to provide for an avigation easement to fully disclose the existing and future airport operations in the vicinity, but no restrictions on use of the site for light industrial/warehouse development is identified by the RCALUP. The draft March JPA/IPA Joint Land Use Study states that property within proposed Zone D should not contain tall objects, electronic forms of interference, or land uses that attract birds such as certain farm crops, water bodies, and flood control facilities that hold water for more than 48 hours (March JPA 2010 Ex. 3-4, Zone D). In addition, all detention basins proposed on the site are designed to contain a bottom of sandy loam soils (24-inches deep) with 18 inches of rock underneath. A sub-drain system also is designed within the rock portion of the basin. According to Thienes Engineering, with these components that promote infiltration and filtration through the sandy loam, the basins will drain within the required 48 hours, and would therefore not attract birds that could interfere with March ARB airport operations or pose a safety hazard for aircraft (Weil 2012).

Therefore, based on a review of the 1984 RCALUP, the 2010 draft March JPA/IPA Joint Land Use Study and the March Air Reserve Base AICUZ, the proposed Project site would not be subject to safety hazards associated with operations at the nearby March ARB. Accordingly, a significant impact would not occur.

Threshold 6: For a project within the vicinity of a private airstrip or heliport, would the Project result in a safety hazard for people residing or working in the Project area?

The Project site is located approximately 7.6 miles north of the privately-owned public use Perris Valley Airport, and the Project site is located well outside of the Perris Valley Airport Influence Area. The northern limits of the Airport Influence Area for this facility extend to just southerly of Nuevo Road, or approximately 5.6 miles south of the Project site. There are no heliports in the Project vicinity. Because the Project site is not located within the Airport Influence Area for any private airstrips or heliports, the safety of employees and visitors on the Project site would not be affected by private airstrips or heliports, and no impacts would occur with implementation of the proposed Project.

Threshold 7: Would the Project impair implementation of or physically interfere with an adopted emergency response plan or an emergency evacuation plan?

The Project site does not contain any emergency facilities nor does it serve as an emergency evacuation route (City of Moreno Valley 2006a 6-1-6-12), so there is no potential for the Project to adversely affect an emergency response or evacuation plan. During construction and at Project buildout, the proposed Project would be required to maintain adequate emergency access for emergency vehicles. As part of the City's discretionary review process for Tentative Parcel Map No. 35879, the MVFD conducted a review to ensure that appropriate emergency ingress and egress would be available to and from each parcel and building to ensure public safety, and determined that the development as proposed would not substantially impede emergency response times in the local

area. Accordingly, implementation of the proposed Project would not impair implementation of or physically interfere with an adopted emergency response plan or an emergency evacuation plan, and no impacts would occur.

Threshold 8: Would the Project expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

Lands surrounding the Project site generally consist of undeveloped lands that are routinely subject to disking, improved roadways, urban (residential) development, light industrial development, and the March ARB facility. According to Figure 5.5-2 of the City of Moreno Valley General Plan EIR (City of Moreno Valley 2006b), the Project site is located approximately 2.5 miles westerly of the nearest areas subject to wildland fire hazards. The Project site is buffered from open space lands located northerly of Lake Perris by urban development, consisting primarily of medium density residential developments located along Lasselle Street.

Implementation of the proposed Project would result in converting the primarily undeveloped condition of the site to industrial business center land uses. The low wildfire hazard on the site would be further reduced by the complete removal of flammable vegetation and the construction of structures in accordance with the Uniform Fire Code administered by the MVFD. The Project proposes parking and drive aisles on the perimeter of all on-site structures along with irrigated landscaped areas. In addition, and as noted above, the Project site is not located in close proximity to any lands subject to wildland fire hazards.

As standard conditions of Project approval, the City will require the Project to install fire hydrants and supply appropriate water pressure per the requirements of the MVFD (refer to Figure 3-7, *Conceptual Water Plan,* for approximate location of fire hydrants). The MVFD will conduct a review of future buildings on-site for compliance with the California Building Code (CBC), California Fire Code (CFC) and other related codes which are in force at the time.

Therefore, because the Project site is not located within or in close proximity to areas subject to wildland fire hazards, would incorporate design features that would minimize the potential for fire hazards on-site, and would be subject to future review by the MVFD for compliance with all applicable fire protection laws, ordinances, and requirements, the Project would not expose people or structures to risk of loss, injury, or death related to wildfires. Accordingly, no impacts would occur.

4.7.4 CUMULATIVE IMPACT ANALYSIS

As discussed above under Thresholds 1 and 2, implementation of the proposed Project would involve the construction of uses in conformance with the MVIAP's "Industrial" zoning designation. Although the end users are not presently known, if businesses that use or store hazardous materials occupy the Project, the business owners and operators would be required to comply with all applicable federal, state, and local regulations to ensure proper use, storage, and disposal of hazardous substances. Such uses also would be subject to additional review and permitting requirements by the MVFD. Similarly, any other developments in the area proposing the construction of uses with the potential for use, storage, or transport of hazardous materials also would be required to comply with applicable federal, state, and local regulations, and such uses would be

subject to additional review and permits from their applicable fire department. Therefore, the potential for release of toxic substances or hazardous materials into the environment, either through accidents or due to routine transport, use, or disposal of such materials, would be reduced to a less than significant cumulative level. Accordingly, the Project's potential to contribute to a cumulatively significant hazardous materials impact would be less than significant.

The Project site is located within one-half mile of an elementary school. As stated above, the Project would be required to comply with numerous federal, state, and local regulations regarding the use, storage, transport, and disposal of hazardous materials and all businesses located in the State of California are subjected to the same strict requirements. With mandatory regulatory compliance, the Project would not cumulatively contribute to a significant hazards/hazardous materials impact on any public or private schools.

Based on a site-specific ESA conducted for the site, it was concluded that the site does not contain any recognized environmental concerns and the site is not located on the list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. Because the site does not contain recognized environmental concerns, there is no potential for contributing to the release of hazardous materials into the environment due to existing site conditions. If hazardous materials happened to be encountered beneath the surface of the site during grading or construction, the materials would be handled and disposed of in accordance with regulatory requirements and the Project's mitigation requirements (refer to Subsection 4.7.7). Therefore, the Project would not contribute to a cumulatively significant hazardous materials impact associated with the potential presence of existing hazardous materials or substances.

As discussed above under Threshold 5, although the Project site is located in close proximity to the March ARB, the site is not identified as being subject to hazards associated with operations at the March ARB. If other developments are proposed within the March ARB/IPA influence area, such developments would be required to demonstrate compatibility with airport operations, as identified in the 1984 RCALUP and the March ARB AICUZ. Because other developments within the March ARB/IPA influence zone cannot be implemented if they are not compatible with these documents, a cumulatively significant impact associated with airport hazards would not occur.

The proposed Project site is not located within close proximity of any private airstrips, and therefore has no potential to result in cumulatively significant impacts associated with such facilities.

The Project site does not contain any emergency facilities nor does it serve as an emergency evacuation route; therefore, there is no potential for the Project to contribute to any cumulative impacts regarding emergency management planning.

As discussed above under the analysis of Threshold 8, the Project site is not located within or in close proximity to areas identified as being subject to wildland fire hazards by the Moreno Valley General Plan. Furthermore, as the surrounding area develops, lands that are currently vacant would be developed in a manner consistent with jurisdictional requirements for fire protection, and would generally decrease the fire hazard potential in the local area. As such, within the cumulative context of the Project vicinity, fire hazards are anticipated to decline overtime, and cumulatively significant impacts associated with wildland fire hazards would not occur.

4.7.5 APPLICABLE PROJECT REQUIREMENTS

The following is a list of requirements and/or conditions to which the Project would be required to adhere. Compliance with these measures was assumed throughout the above analysis of hazards and hazardous materials.

PR 4.7-1 The Project is required to comply with all federal, state, and local hazardous materials regulations, as overseen and enforced by the California Department of Toxic Substances Control, the Riverside County Department of Environmental Health and the Moreno Valley Fire Department.

PR 4.7-2 Groundwater monitoring wells requiring removal shall be abandoned in accordance with the State of California Well Standards (Department of Water Resources Bulletins 74-81 & 74-90).

PR 4.7-3 New groundwater monitoring water wells shall be constructed in accordance with the State of California Well Standards (Department of Water Resources Bulletins 74-81 & 74-90).

PR 4.7-4 If underground storage tanks are discovered during the Project's grading operation, the tanks shall be removed in accordance with the State of California Underground Storage Tank Regulations (California Code of Regulations Title 23, Division 3, Chapter 16) under the oversight of the Riverside County Department of Environmental Health, Local Oversight Program.

PR 4.7-5 In the event that any subsurface hazardous materials or potentially hazardous materials are found during grading, the suspected hazardous materials are required to be properly disposed of in accordance with federal, state and Riverside County Department of Environmental Health requirements.

PR 4.7-6 Per the requirements Riverside County Department of Environmental Health and the California Health and Safety Code (HSC), Chapter 6.95, Sections 25500 - 25532, a Hazardous Materials Business Emergency Plan must be prepared by any future business on the Project site that handles a hazardous material or a mixture containing a hazardous material in quantities equal to or greater than a weight of 500 pounds, total volume of 55 gallons, 200 cubic feet (at standard temperature and pressure) for compressed gas, or any radioactive material Extremely Hazardous Substance or Waste, any amount of a Regulated Substance, or any amount of an Acutely Hazardous Material.

PR 4.7-7 The Project is required to comply with the following standard condition of approval imposed by the City of Moreno Valley: "Prior to issuance of a Certificate of Occupancy or Building Final, a 'Knox Box Rapid Entry System' shall be provided. The Knox-Box shall be installed in an accessible location approved by the Fire Chief. The Knox-Box shall be supervised by the alarm system and all exterior security emergency access gates shall be electronically operated and be provided with Knox key switches for access by emergency personnel."

PR 4.7-8 The Project is required to comply with the following standard condition of approval imposed by the City of Moreno Valley: "Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall be responsible for obtaining underground and/or above ground tank permits for the storage of combustible liquids, flammable liquids, or any other hazardous materials from both the County of Riverside Community Health Agency Department of Environmental Health and the Fire Prevention Bureau."

PR 4.7-9 The Project is required to comply with the following City of Moreno Valley requirement: "Prior to issuance of Certificate of Occupancy, permits are required to store, dispense, use or handle hazardous material; to conduct processes which produce conditions hazardous to life or property; or to install equipment used in connection with such activities. Such permits shall not be construed as authority to violate, cancel or set aside any of the provisions of this code. Such permit shall not take the place of any license required by law. Applications for permits shall be made to the Fire Prevention Bureau in such form and detail as prescribed by the Bureau. Applications for permits shall be accompanied by such plans as required by the Bureau. Each application for a permit shall include a hazardous materials management plan (HMMP). The HMMP shall be posted adjacent to (other) permits when an HMMP is provided. The HMMP shall include a facility site plan designating the following:

a) Storage and use areas;
b) Maximum amount of each material stored or used in each area;
c) Range of container sizes;
d) Locations of emergency isolation and mitigation valves and devises;
e) Product conveying piping containing liquids or gases, other than utility-owned fuel gas lines and low-pressure fuel gas lines;
f) On and off positions of valves for valves which are of the self-indicating type;
g) Storage plan showing the intended storage arrangement, including the location and dimensions of aisles. The plans shall be legible and approximately to scale. Separate distribution systems are allowed to be shown on separate pages; and
h) Site plan showing all adjacent/neighboring structures and use.

Each application for a permit also shall include a hazardous materials inventory statement (HMIS). Permits issued by the Fire Prevention Bureau shall be kept on the premises designated therein at all times and shall be posted in a conspicuous location on the premises or shall be kept on the premises in a location designated by the Fire Chief. Permits shall be subject to inspection at all times by an officer of the fire department or other persons authorized by the Fire Chief."

4.7.6 SIGNIFICANCE OF IMPACTS BEFORE MITIGATION

Thresholds 1 and 2: Less than Significant Impact. During Project operation and with mandatory compliance to federal, state and local regulations, the proposed Project would not create a significant

hazard to the public or the environment due to routine transport, use, disposal, or upset of hazardous materials.

Threshold 3: Less than Significant Impact. Although the Project site is located approximately 0.25 mile from the nearest school facility (Rainbow Ridge Elementary School), mandatory compliance with applicable federal, state, and local regulations, including regulations and permitting requirements from the MVFD, would ensure that operation of the proposed Project would not expose school students or staff to significant effects associated with the emissions or handling of hazardous or acutely hazardous materials, substances, or waste. Accordingly, impacts to schools are evaluated as less than significant.

Threshold 4: No Impact. The Project site is not listed on any list of hazardous materials compiled pursuant to Government Code Section 65962.5.

Threshold 5: Less than Significant Impact. The Project site is located with the influence area of March ARB/ IPA, but is not located in areas subject to crash hazards associated with airport operations. The Project does not propose any features that would be considered hazardous to airport operations. Accordingly, the Project would pose a less than significant impact to operations at the March ARB.

Threshold 6: No Impact. The Project site is not located in the vicinity of a private airstrip or heliport and, therefore, has no potential to cause a safety impact to these facilities.

Threshold 7: No Impact. The Project would not impair or physically interfere with an adopted emergency response plan or emergency evacuation plan. No emergency facilities exist on the Project site, and the site does not serve as an emergency evacuation route.

Threshold 8: No Impact. The Project would not expose people or structures to a significant wildfire risk. The Project site is not located in close proximity to wildland fire hazard areas. The Project would develop a vacant site, thereby reducing the risk for wildfire on the property. The Project is subject to review and approval by the MVFD to ensure that features have been incorporated within the development to address potential fire hazards. As such, a significant impact due to wildland fire hazards would not occur.

4.7.7 MITIGATION

Although hazardous materials impacts would be less than significant, the following mitigation measures are recommended as precautions during the Project's construction process.

MM 4.7-1 Prior to grading permit issuance, the City shall verify that the Project's Grading Plan indicates: a) the location of all groundwater monitoring wells that will be preserved in place; b) the method used to flag, stake, or otherwise identify the location of the groundwater monitoring wells in the field; and c) any required grading procedures or precautions to be taken in the vicinity of the monitoring well locations.

MM 4.7-2 Prior to the issuance of grading permits, the City of Moreno Valley Land Development Division shall ensure that the Project's required Stormwater Pollution Prevention Plan (SWPPP) includes emergency procedures for accidental hazardous

materials releases during construction. The procedures shall include necessary personal protective equipment, spill containment procedures, and training of workers to respond to accidental spills/releases.

4.8 HYDROLOGY AND WATER QUALITY

The analysis in this subsection is based on a report prepared by Thienes Engineering, entitled, "Preliminary Hydrology Calculations for March Commerce Center," dated March 20, 2008, and included as *Technical Appendix H1* to this EIR.

The Project site is located within the boundary of two of the Riverside County Flood Control and Water Conservation District's (RCFCWCD's) Master Drainage Plans (MDP): the Perris Valley MDP, which applies to the portion of the Project site located southwest of the Perris Valley Storm Drain Channel (i.e., proposed Parcel 4), and the Sunnymead MDP, which applies to the remaining portion of the Project site. Hydrology information in this subsection, therefore, also was obtained from the Perris Valley MDP and the Sunnymead MDP (RCFCWCD 1991), which are herein incorporated by reference and available for public review at physical location and website address given in Section 7.0, References. The relationship of the proposed Project to the MDPs is further explained in this subsection.

With respect to water quality, the Project site is located within the jurisdiction of the Santa Ana Regional Water Quality Control Board (RWQCB). Water quality information for this subsection was obtained from the Santa Ana RWQCB's Santa Ana River Basin Water Quality Control Plan (updated February 2008) and the Integrated Regional Water Management Plan (IRWMP) for the Santa Ana River Watershed (also referred to as "One Water One Watershed," dated November 16, 2010), prepared by the Santa Ana Watershed Project Authority. These documents are herein incorporated by reference and are available for public review at the physical locations and website addresses given in Section 7.0, References. Information in this subsection also relies on a report prepared by Thienes Engineering entitled "*Preliminary Water Quality Management Plan (WQMP) for March Business Center,*" dated August 12, 2008, and included as *Technical Appendix H2* to this EIR.

4.8.1 EXISTING CONDITIONS

A. Regional Hydrology

The Project site is located in the Santa Ana River watershed, which drains a 2,650 square-mile area and is the principal surface flow water body within the region (SAWPA 2010 Ch. 3). The San Jacinto River drains the area in the vicinity of the Project site. It starts in the San Jacinto Mountains (approximately 30 miles southeast of the proposed Project site), runs westerly through the City of Canyon Lake, and typically discharges into Lake Elsinore. In wet years, the San Jacinto River will overflow the lake and connect with the Santa Ana River through the Temescal Wash (SAWPA 2010 Ch. 3).

The Project site's location within the Santa Ana River Watershed is depicted on Figure 4.8-1, *Santa Ana River Watershed Map*.

B. Site Hydrology

As documented in the Project's hydrology report (*Technical Appendix H1* to this EIR) and water quality management plan (*Technical Appendix H2* to this EIR), the Perris Valley Storm Drain Channel traverses the southwestern corner of the Project site and conveys drainage towards the southeast and south towards the San Jacinto River. Under existing conditions, the Perris Valley Channel splits the Project site into two separate drainage areas. The majority of the Project site is

located north of the Channel and flows are directed in a southerly direction, with flows discharging at a point approximately 260 feet west of the southeastern corner of the Project site. The portion of the Project site located southwest of the Channel generally drains towards the southeast, and discharges at the southeast corner of the property. Flows from both portions of the site are conveyed to the Perris Valley Channel. Flows are then conveyed by the Perris Valley Channel to the San Jacinto River. Figure 4.8-2, *Existing Conditions Hydrology Map*, depicts the drainage pattern of the site under existing conditions.

C. Perris Valley and Sunnymead Master Drainage Plans

The RCFCWCD has prepared a number of Master Drainage Plans (MDPs) within the San Jacinto River Watershed, which were created to identify master-planned drainage and flood control facilities that are needed to safely convey the runoff of 100-year frequency storms. As previously noted, the portion of the Project site located southerly of the Perris Valley Channel (i.e., proposed Parcel 4) is located within the Perris Valley MDP, as shown on Figure 4.8-3, *Perris Valley Master Drainage Plan*, while the northern portion of the site is located in the Sunnymead MDP, as shown on Figure 4.8-4, *Sunnymead Master Drainage Plan*. The Perris Valley MDP was completed in May 1987 and revised in 1991, while the Sunnymead MDP was completed in October 1978. The Perris Valley Area Drainage Plan (ADP) and the Sunnymead ADP are the financing mechanisms for the planned facilities identified in the Perris Valley and Sunnymead MDPs, respectively.

The MDPs address the current and future drainage needs of the Project area and specify facilities capable of economically relieving flooding problems within the plan areas. The MDPs and ADPs include estimates of facility capacity, sizes, and costs. The ADPs act as a financing mechanism used to offset taxpayer costs for planned master drainage facilities by imposing fees on new development within the ADP areas. The Sunnymead ADP identifies two drainage lines along Iris Avenue and Heacock Street (Lines B-19 and B, respectively), in addition to the Perris Valley Channel (referred to as Line A in the ADP). Of these facilities, Line B-19 has been constructed in association with improvements to Iris Avenue and Heacock Street, and Line A (Perris Valley Channel) also is constructed through the Project site. Line B (Heacock Channel) has not been constructed and consists of an unimproved, dirt lined channel with rip rap. `

D. Flooding and Dam Inundation

According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) No. 06065C 0765 G, dated August 28, 2008, the majority of the site located northerly of the Perris Valley Storm Drain Channel occurs within a designated Special Flood Hazard Zone. Flood Zones identified on the site (Zones AH and AO) indicate that the majority of the northern portion of the Project site is subject to flood depths of 1 to 3 feet (usually areas of ponding or sheet flow on sloping terrain). Additionally, the Perris Valley Storm Channel also is identified as Zone D, which is defined as areas in which flood hazards are undermined but possible. The southwestern portion of the Project site (i.e., proposed Parcel 4) is located within Flood Zone X (Shaded), indicating areas of moderate flood hazard (greater than 0.2% annual chance), usually consisting of the area between the limits of the 100-year and 500-year floods. Zone X (Shaded) also is used to designate base floodplains of lesser hazards, such as areas protected by levees from 100-year flood, or shallow flooding areas with average depths of less than one foot or drainage areas less than one square mile.. The FEMA FIRM for the Project area is depicted on Figure 4.8-5, *FEMA Flood Insurance Rate Map*.

LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

ZONE A	No Base Flood Elevations determined.
ZONE AE	Base Flood Elevations determined.
ZONE AH	Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
ZONE AO	Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
ZONE AR	Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
ZONE A99	Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
ZONE V	Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
ZONE VE	Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X — Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

ZONE X — Areas determined to be outside the 0.2% annual chance floodplain.

ZONE D — Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

1% annual chance floodplain boundary

FEMA Flood Insurance Rate Map

The City of Moreno Valley General Plan Figure 6-4, *Flood Hazards,* depicts areas subject to flood hazards or dam inundation. Information depicted on General Plan Figure 6-4 reflects the same information identified on the FEMA FIRM map for the area. General Plan Figure 6-4 also shows that the proposed Project area is not subject to hazards associated with dam inundation. The nearest area to the Project site subject to dam inundation hazards occurs south of Oleander Avenue and along portions of Evans Road located northerly of Oleander Avenue.

E. Water Quality

The California Porter-Cologne Water Quality Control Act (Section 13000 ("Water Quality") et seq., of the California Water Code), and the Federal Water Pollution Control Act Amendment of 1972 (also referred to as the Clean Water Act (CWA)) require that comprehensive water quality control plans be developed for all waters within the State of California. In order to accomplish this, the California State Water Resources Control Board divided the state into planning regions and the present system of nine RWQCBs. The Project site and vicinity are located in the San Jacinto River sub-watershed, which is within the purview of the Santa Ana RWQCB. The Santa Ana RWQCB covers the upper and lower Santa Ana River watersheds, the San Jacinto River watershed, and several other small drainage areas. The Santa Ana RWQCB's Santa Ana River Basin Water Quality Control Plan (as amended in 2004 and updated in February 2008 to incorporate an updated total dissolved solids (TDS) and Nitrogen Management Plan) is the governing water quality plan for the region, which sets forth goals and objectives for protecting water quality within the region (Santa Ana RWQCB 2008).

The Santa Ana Basin is a group of connected inland subbasins and open coastal basins that are drained by surface streams flowing generally southwestward to the Pacific Ocean. The United States Geological Survey (USGS) has determined that the quality of surface and groundwater in the Santa Ana Basin becomes progressively poorer as water moves along the hydraulic flow-paths toward the Pacific Ocean. The highest water quality is typically found in tributaries flowing from surrounding mountains and groundwater recharged by these streams (USGS, n.d.).

The San Jacinto River sub-watershed, in which the Project site is located, encompasses an area of over 750 square miles. Runoff from the Project site under existing conditions sheet-flows generally towards the south and southeast and then to the Perris Valley Storm Drain Channel that discharges into the San Jacinto River, located approximately 7.6 miles south of the site. The San Jacinto River flows into Canyon Lake and Lake Elsinore, approximately 12.5 and 15.25 miles southwest of the Project site, respectively. Lake Elsinore has virtually no overflow, but on rare occasions during large storm events, the lake will overflow to Temescal Creek, which flows to the Santa Ana River (San Jacinto River Watershed Council 2007).

The CWA requires all states to conduct water quality assessments of their water resources to identify water bodies that do not meet water quality standards. The Santa Ana River Basin Water Quality Control Plan (Santa Ana RWQCB 2008) reports that the most serious problem in the Santa Ana River Basin is the buildup of dissolved minerals, or salts, in the ground and surface waters. Sampling and computer modeling of groundwater showed that the levels of dissolved minerals (also called total dissolved solids (TDS) were reported to exceed water quality objectives or were projected to do so in the future unless appropriate controls were implemented. Nitrogen levels in the Santa Ana River, largely in the form of nitrate, also were projected to exceed objectives. These high levels of TDS and nitrate adversely affect the beneficial uses of ground and surface waters (Santa Ana RWCQB, 2004 Watershed Management Initiative (WMI), Chapter 2).

Lake Elsinore and Canyon Lake, the terminal points for the San Jacinto River, are impaired waters located downstream from the Project site. The Santa Ana RWQCB placed Lake Elsinore and Canyon Lake on the 303(d) list of impaired waters in 1994. Canyon Lake is impaired due to nutrients and pathogens. Lake Elsinore has water quality impairments due to nutrients, organic enrichment, low dissolved oxygen, PCBs, sedimentation and siltation, and toxicity from unknown sources. The IRWMP prepared for the San Jacinto River Watershed (San Jacinto River Watershed Council 2007) reports that excess nutrients from development and agriculture in the watershed delivered to these lakes contributes to significant algae growth, which causes depletion of dissolved oxygen and results in occasional massive fish kills. The IRWMP (pages 33-46) lists several studies that have been performed to assess potential sources of nutrients and bacteria in the San Jacinto watershed, changes in water quality over time, and the impact of various best management practices (BMPs) to reduce pollutant loading or improve lake water quality, and summarizes historic trends of pollutant levels based on those studies. Refer to the IRWMP (San Jacinto River Watershed Council 2007 33-46) (incorporated herein by reference and available at the website address given in Section 7.0, References), for detailed water quality information.

F. Groundwater

In the San Jacinto Watershed, all of the streams and rivers are ephemeral, meaning that surface water flows in them only during and immediately after a rainfall event. Generally, the majority of the area's rainfall is absorbed into the ground. When there is heavy rainfall and the ground becomes too saturated, then the water begins to flow into the streams and rivers.

The San Jacinto River Watershed area has a substantial amount of groundwater in storage, estimated by the IRWMP to be 1.45 million acre-feet (AF) (San Jacinto River Watershed Council 2007 47). The IRWMP reports that historical groundwater levels in individual wells show a complex system with conditions that vary across the area. Water levels in some wells have historically dropped, while others are rising. These conditions are a result of local historical groundwater production and recharge near water wells. Changing water levels affect the amount of groundwater in storage and can change the direction of groundwater flow, potentially to the detriment of groundwater quality (San Jacinto River Watershed Council 2007 47-54).

The Project site lies within the Perris North Groundwater Management Zone, as shown in Figure 4.8-6. Groundwater quality in the Perris North Groundwater Management Zone is monitored by Eastern Municipal Water District (EMWD). EMWD monitors ground water quality because it draws brackish (high TDS) water from wells and operates desalination facilities that remove salts. Demineralized groundwater produced from the desalination facilities contributes to EMWD's potable water supply system. The operation of these groundwater desalters to extract and treat groundwater is an important component of the salt management system in the groundwater basin (EMWD 2010).

During EMWD's 2008-09 annual groundwater quality monitoring effort, a total of 43 water quality samples were collected from wells in the Perris North Groundwater Management Zone (EMWD 2010). Table 4.8-1 depicts a marginal decrease in the high and low TDS levels from 2008 to 2009.

	2009	23	1,740	251	24.0	ND

TDS = Total Dissolved Solids in mg/L (milligrams per liter).
NO_3-N = Nitrogen oxide levels in mg/L.
Source: EMWD 22010. West San Jacinto Groundwater Basin Management Plan 2009 Annual Report, Table 2. November 2010.

No potable water wells are located on or adjacent to the Project site under existing conditions. However, the Project site does contain several groundwater monitoring wells. These groundwater monitoring wells were constructed on site to monitor groundwater contamination associated with the March Air Reserve Base (ARB). Groundwater beneath the site is thought to be affected by plumes of polluted groundwater from the March ARB, although there is no evidence that any activities on the Project site may have contributed to this contamination (SCS Engineers 2006). According to EMWD's West San Jacinto Groundwater Basin Management Plan 2009 Annual Report, groundwater elevations beneath the Project site occur at an elevation of approximately 1,460 feet AMSL, indicating that groundwater beneath the site occurs approximately 44 feet below the ground surface during the spring. Refer to EIR Subsection 4.9, Hazards and Hazardous Materials, for additional information about the groundwater monitoring wells located on the property.

G. Applicable Policies and Regulations

Within California, three agencies (the U.S. Army Corps of Engineers (ACOE), the California Department of Fish and Game (CDFG), and the Regional Water Quality Control Board (RWQCB)) regulate activities within inland streams, wetlands, and riparian areas. Any development proposal that involves impacts to drainage courses, streams, or wetlands through filling, stockpiling, conversion to a storm drain, channelization, bank stabilization, road or utility crossing, or any other modifications to water resources, would require permits from the ACOE, CDFG, and/or the Santa Ana RWQCB. Additionally, the County of Riverside Department of Environmental Health (DEH) and the Santa Ana RWQCB regulate the use of groundwater.

❑ Federal Policies and Regulations

The Federal Water Pollution Control Act (also known as the Clean Water Act (CWA)) is the principal federal statute that addresses water resources. The statute employs a variety of regulatory and non-regulatory tools to reduce direct pollutant discharges into waterways, finance municipal wastewater treatment facilities, and manage polluted runoff. The broad goal is to restore and maintain the chemical, physical, and biological integrity of the nation's waters so that they can support "the protection and propagation of fish, shellfish, and wildlife and recreation in and on the water."

The CWA requires all states to conduct water quality assessments of their water resources and identify water bodies that do not meet water quality standards. The Environmental Protection Agency (EPA) publishes recommended water quality criteria. States are not required to adopt the exact criteria, but state standards must be approved by the EPA and provide the same level of protection as EPA's standards. In California, water quality standards are established by the nine RWQCBs. The Project site is located in the Santa Ana region, and the Santa Ana RWQCB's Santa

Ana River Basin Water Quality Control Plan (Santa Ana RWQCB 2008) is applicable to the Project site and vicinity.

The provision of the CWA applicable to the proposed Project is as follows, which applies to all construction sites of over one acre in size:

- CWA Section 401 (requires federal agencies to obtain a Water Quality Certification from states, territories, and Indian tribes before issuing permits that would result in increased pollutant loads to a water body. A Section 401 certification can be issued only if increased pollutant loads would not cause or contribute to exceedances of water quality standards).
- CWA Section 402 (authorizes the National Pollutant Discharge Elimination System (NPDES) permit program that covers point sources of pollution discharging to a water body. The NPDES program also requires operators of construction sites one acre or larger to prepare a Stormwater Pollution Prevention Plan (SWPPP) and obtain authorization to discharge stormwater under an NPDES construction stormwater permit).
- CWA Section 404 (administered by the U.S. ACOE and regulates the placement of dredged or fill materials into wetlands and other Waters of the United States); and

❑ State Policies and Regulations

The California Water Code (including the Porter-Cologne Water Quality Control Act (Division 7)) is the principal state law regulating water quality in California. The Porter-Cologne Water Quality Control Act establishes a comprehensive program to protect water quality and the beneficial uses of water, and applies to both surface and groundwater. The State Water Resources Control Board adopts statewide water quality control plans and its nine RWQCBs are required to develop and adopt regional water quality control plans ("basin plans") that conform to state water quality policy. As mentioned above, the Project site is located in the Santa Ana region. The Santa Ana RWQCB's Santa Ana River Basin Water Quality Control Plan (Santa Ana RWQCB 2008) is applicable to the Project site; it designates beneficial uses of water bodies to be protected and establishes water quality objectives.

In summary, the California Water Code contains provisions that regulate water and its use. Division 7 covers water quality protection and management. The Health and Safety Code provides for protection of ground and surface waters from hazardous waste and other toxic substances. The Harbors and Navigation Code provides regulations designed to prevent the unauthorized discharge of waste from vessels into surface waters. The Fish and Game Code has provisions to prevent unauthorized diversions of any surface water and discharge of any substance that may be deleterious to fish, plant, animal, or bird life. The Food and Agriculture Code provides for the protection of groundwater which may be used for drinking water supplies.

4.8.2 BASIS FOR DETERMINING SIGNIFICANCE

The proposed Project would result in a significant impact to hydrology and water quality if the Project or any Project-related component would:

1. *Violate any water quality standards or waste discharge requirements;*
2. *Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of preexisting nearby wells would drop to a*

level which would not support existing land uses or planned uses for which permits have been granted);

3. *Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on or off site;*

4. *Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate of surface runoff in a manner which would result in flooding on- or off site;*

5. *Create or contribute runoff which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff;*

6. *Otherwise substantially degrade water quality;*

7. *Place housing within a 100-year floodplain, as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map;*

8. *Place within a 100-year flood hazard area structures which would impede or redirect flood flows;*

9. *Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam; or*

10. *Expose people or structures to a significant risk of loss, injury or death involving inundation by seiche, tsunami, or mudflow.*

4.8.3 IMPACT ANALYSIS

Threshold 1: Would the Project violate any water quality standards or waste discharge requirements?

Water bodies that do not meet water quality standards are placed on a list of impaired waters pursuant to the requirements of Section 303(d) of the CWA. The Project's stormwater would flow via the Perris Valley Channel to Reach 3 of the San Jacinto River, which in turn discharges into Canyon Lake (also known as Reach 2 of the San Jacinto River). From Canyon Lake, flows are conveyed via Reach 1 of the San Jacinto River where it discharges into Lake Elsinore. As indicated in Section II of *Technical Appendix H2*, Reaches 1 and 3 of the San Jacinto River are not an impaired water body on the RWQCB's Section 303(d) list. However, Canyon Lake (Reach 2 of the San Jacinto River) and Lake Elsinore are identified as impaired waters on the Section 303(d) list. Canyon Lake is impaired due to nutrients and pathogens. Lake Elsinore has water quality impairments due to nutrients, organic enrichment/low dissolved oxygen, PCBs, sedimentation and siltation, and toxicity from unknown sources.

The Project's Water Quality Management Plan (WQMP) contained as *Technical Appendix H2* has been prepared in accordance with City requirements to identify pollutants of concern and identify means to reduce their discharge into urban runoff. The following pollutants carried by water leaving the Project site have the potential to be discharged in the site's urban runoff and be carried to the San

Jacinto River, Canyon Lake, and Lake Elsinore. Pollutants could contribute to impairments of Canyon Lake and Lake Elsinore and place the San Jacinto River at greater risk of becoming impaired:

- Nutrients: Primary sources of nutrients in runoff are fertilizers and eroded soils (sediment). Landscaped areas would be added on the site that would need to be maintained and fertilized, thereby increasing the potential for nutrient increases in runoff. Water quality filtration that would occur in the four detention/infiltration basins on site would assist in fertilizer removal. The detention/infiltration basins would include extended/dry detention basins with grass lining and extended/dry detention basins with impervious lining. These detention/infiltration basins would be subject to routine maintenance required by the Riverside County Flood Control and Water Conservation District to ensure on-going effectiveness of the treatment. Additionally, the WQMP (refer to *Technical Appendix H2*) also incorporates Source Control BMPs, which are intended to help reduce the amount of runoff from landscaped areas that could contribute nutrients to receiving waters. Such BMPs require the use of reducers or shutoff valves for irrigation equipment to reduce the potential for excessive runoff due to broken sprinkler heads, and also requires the use of timers to avoid over watering that could result in nutrient-loaded runoff. With mandatory adherence to the source and treatment control BMPs specified in the Project's WQMP, impacts associated with fertilizer use in landscaped areas would be below a level of significance and no mitigation would be required.

  With buildout of the Project, the amount of bare soil exposed to runoff would be substantially reduced as compared to existing conditions. Specifically, according to the Project's proposed Plot Plans, approximately 89.5% (rounded to nearest half-percent) of the site would comprise impervious surface areas at buildout, with the remaining 10.5% composed of landscaped areas. There would be no area of bare soil; thus, development of the site as proposed by the Project would result in a substantial reduction in the amount of sedimentation in runoff from the site as compared to existing conditions. Temporary increases of sediment volume in runoff could occur during the Project's grading and construction when bare soils are exposed. However, in accordance with the mandatory requirements of CWA Section 402, Project grading and construction activities are required to obtain coverage under the General Permit for Discharges of Stormwater Associated with Construction Activity (Construction General Permit Order 2009-0009-DWQ). This permit requires the development and implementation of a Stormwater Pollution Prevention Program (SWPPP), which must list BMPs to control sediment during construction; therefore, due to mandatory compliance with Construction General Permit Order 2009-0009-DWQ, sedimentation/ nutrient impacts during construction would be less than significant, and no mitigation would be required beyond what is already identified in the Project-specific WQMP.

- Pathogens: Pathogens (bacteria and viruses) are proliferated by the transport of animal or human fecal wastes into water bodies. There are no substantial sources of pathogens on site under existing conditions, and no substantial sources of pathogens would be introduced with buildout of the proposed Project. The proposed Project would not increase the potential for untreated human fecal waste to reach water bodies, as the Project would include the construction of a sanitary sewer system that would convey Project wastewater to EMWD facilities for treatment and disposal. The Project is proposed as a business park/light industrial development; it is therefore assumed that domestic pets or animals would not frequently visit the site. It is also assumed that pet owners would collect and properly

dispose of pet fecal matter, should pets be present on the property. Moreover, any fecal matter deposited in outdoor areas of the Project site and picked up in surface water would be subject to treatment by the on-site infiltration/detention basins, which would serve to reduce the amount of pathogens present in Project runoff. Because fecal wastes would not be a frequent occurrence on the Project site and/or would otherwise be treated by the on-site infiltration/detention basins, impacts associated with pathogens would be less than significant and no mitigation would be required.

- Organic Enrichment/Low Dissolved Oxygen: Dissolved oxygen is the amount of oxygen dissolved in water. When nutrient loads in a body of water increase, it can result in increased biological activity (e.g., algal blooms) which in turn can deplete water of oxygen. This process also could occur as a result in increased water temperature. As discussed under the analysis of impacts due to nutrients, above, human and pet wastes are not anticipated in Project runoff, and any nutrients in Project runoff would otherwise be treated by the on-site infiltration/detention basins. Additionally, there is no component of the proposed Project that would result in an increase in temperature in any receiving water. Accordingly, impacts associated with organic enrichment/low dissolved oxygen are evaluated as less than significant, and no mitigation would be required.

- Organic Compounds: PCBs (polychlorinated biphenyls) are a class of organic compounds generated by industrial activity. PCB production has been banned since the 1970s; therefore, the proposed Project would not generate PCBs.

- Sediment and Siltation: As noted above under the discussion of nutrients, buildout of the proposed Project would result in a substantial decrease in the amount of exposed soils as compared to existing conditions, which would result in a substantial decrease in the amount of sediment and siltation in Project runoff. Sedimentation in Project runoff would further be treated by the Project's infiltration/detention basins. During construction, mandatory compliance with General Permit Order 2009-0009-DWQ would ensure that sedimentation/siltation in runoff is reduced to less than significant levels. Therefore, with compliance with the WQMP and a SWPPP required by General Permit Order 2009-0009-DWQ, Project impacts associated with sediment/siltation in runoff would not be significant, and no mitigation would be required.

Based on the analysis presented above, mandatory compliance with the Project's WQMP, in addition to compliance with Construction General Permit Order 2009-0009-DWQ, would ensure that all potential pollutants of concern are minimized or otherwise appropriately treated prior to being discharged into receiving waters. Therefore, implementation of the proposed Project would not violate any water quality standards or waste discharge requirements, and impacts would therefore be less than significant. No mitigation would be required.

Threshold 2: ***Would the Project substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of preexisting nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?***

The proposed Project would be served with potable water by the EMWD, and no potable groundwater wells are proposed as part of the Project. The EMWD has indicated its ability to serve the proposed Project in light of past, present, and future commitments (*Technical Appendices K1 and K2*). Therefore, implementation of the proposed Project would not deplete groundwater supplies, and a significant impact would not occur.

Development of Project would increase impervious surface coverage on the site, which would in turn reduce the amount of infiltration of runoff into groundwater basins. However, and as noted in the City's General Plan EIR (Page 5.7-12), "the impact of an incremental reduction in groundwater would not be significant as domestic water supplies are not reliant on groundwater as a primary source." In addition, groundwater beneath the Project site is thought to be contaminated by the March ARB (refer to Subsection 4.9, Hazards and Hazardous Materials), and therefore does not serve as a source of potable water under existing conditions. Furthermore, the Project incorporates four infiltration/detention basins, which would allow some runoff from the Project site to infiltrate into the groundwater basin beneath the site. With buildout of the Project, it is not anticipated that the local groundwater levels would be affected. Therefore, impacts to groundwater supplies and recharge would not be significant, and mitigation would not be required.

Threshold 3: ***Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on or off site?***

Figure 4.8-2 depicts the hydrologic characteristics of the proposed Project site under existing conditions. As shown, under existing conditions the drainage from the northern portions of the site are conveyed in a generally north-south alignment, and this runoff discharges along the southern Project boundary in the eastern portion of the site. Runoff in the southwestern corner of the site (i.e., southwest of the Perris Valley Storm Drain Channel) is in a generally northwest to southeast orientation, and discharges in the southeastern corner of proposed Parcel 4. All site runoff is conveyed to the Perris Valley Channel under existing conditions.

With buildout of the proposed Project, the site's hydrological characteristics would change, as depicted on Figure 4.8-7, *Proposed Conditions Hydrology Map*. A total of four infiltration/detention basins would be constructed on the site, with two basins located northerly of proposed Krameria Avenue, one basin along the southeastern corner of Parcel 3, and one smaller basin at the southeastern corner of Parcel 4. Flows from the infiltration/detention basins all would be conveyed via the site's proposed storm drain system and would discharge directly into the Perris Valley Storm Channel. Outlets into the Perris Valley Channel would be constructed with rip rap to control the velocity of flows. (Refer to Subsection 4.4 of this EIR, Biological Resources, for an analysis of potential impacts to the Channel).

Not to Scale

FIGURE 4.8-7
Proposed Conditions Hydrology Map

-892-

Thus, with buildout of the proposed Project, runoff from the Project site would continue to be conveyed to the Perris Valley Storm Drain Channel, and the site's general drainage pattern would be maintained. Additionally, all site runoff would be treated by the four on-site infiltration/detention basins, which have a "high/medium" effectiveness for treating sediment/turbidity and nutrients. Moreover, the Project proposed drainage plan would have no effect on the course of any streams or rivers. Therefore, with buildout of the proposed Project site, there would be no significant alteration of the site's existing drainage pattern and there would not be any significant increases in the rates of erosion or siltation on or off site. No mitigation would be required.

Threshold 4: ***Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate of surface runoff in a manner which would result in flooding on or off site?***

As discussed above under the analysis of Threshold 3, and as shown on Figure 4.8-2 and Figure 4.8-7, the Project's proposed drainage plan would generally maintain the site's existing drainage pattern. Implementation of the proposed Project also would not result in changes to the course of any streams or rivers.

Table 4.8-2 and Table 4.8-3 present the results of the hydrologic analyses that were completed for the proposed Project site (refer to *Technical Appendix H1* for more detail). Both rational method and flood hydrograph analyses were completed for the 100-year storm conditions, for both existing and proposed conditions. The results indicate that approximately 6.86 acre-feet of storage would be required in the three infiltration/detention basins located in the north portion of the site and approximately 0.17 acre-feet of storage would be required in the infiltration/detention basin within Parcel 4.

As detailed in *Technical Appendix H1*, by allowing one-foot for freeboard, the proposed Project's Conceptual Grading Plan accommodates infiltration/detention basins with a capacity of 1.53 acre feet, 2.22 acre feet, and 3.04 acre feet, for a total of 6.79 acre-feet, in the north portion of the site, while the infiltration/detention basin in Parcel 4 has been designed to accommodate 0.20 acre-feet of storage. Final designs for grading would be identified as part of future implementing projects, and would be accompanied by detailed technical analysis of the ultimate storage requirement to be accommodated by the infiltration/detention basins. Therefore, with buildout of the proposed Project the rate and volume of runoff from the Project site would be very similar to the rates and volumes that occur under existing conditions. As a result, implementation of the proposed Project would not result in an increase in potential for flooding of off-site properties.

Table 4.8-2 Pre- and Post-Development Conditions Hydrologic Summary – Parcels 1 through 3

Source: Thienes Engineering, Technical Appendix H1.

With respect to the potential for flooding on site, the proposed Project site is identified by FEMA as being located in an area subject to flooding (for the portion of the site located northerly of the Perris Valley Channel). Flood elevations identified by FEMA indicate the potential for flood depths ranging from 1 to 3 feet throughout the majority of proposed Parcels 1 through 3 during a 100-year storm event. However, the proposed Project site has been designed such that all building pads would be above the water surface elevation identified by FEMA. The Conceptual Grading Plan included as part of the Project's Tentative Parcel Map identifies all of the base flood elevations on site, and demonstrates in each case that the finished floor and pad elevation would be above the base flood elevations. Specifically, all buildings proposed on the site would be located approximately 1.1 to 2.0 feet above the water surface elevation. During final engineering, an updated HEC-RAS study (ACOE's Hydrologic Engineering Center's River Analysis System software) would be required to verify that all pad elevations are located at least one foot above flood water surface elevations (Weil 2012). Therefore, the design of the proposed Project would not result in an increase in the potential for flood hazards on site, and the Project has been designed such that no structure on site would be subject to flooding. Impacts due to increased flood hazards on site would therefore be less than significant.

Threshold 5: Would the Project create or contribute runoff which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

As discussed under the analysis of Threshold 4, the proposed Project has been designed so as to ensure that post-development runoff rates and volumes closely resemble those that occur under existing conditions. In addition, runoff from the Project site under existing conditions is conveyed to the Perris Valley Storm Drain Channel, which has sufficient capacity to handle runoff generated by the proposed Project site (assuming development of the Project's proposed infiltration/detention basins that are designed to reduce the rate and volume of runoff from the site). Because the Perris Valley Storm Drain Channel has sufficient capacity to convey runoff from the Project site under existing conditions, and since the rate and volume of runoff would not substantially increase with buildout of the proposed Project, the Project would not create or contribute runoff which would exceed the capacity of any existing or planned stormwater drainage system.

As discussed under the analysis of Threshold 1, the proposed Project would be required to comply with the Project's WQMP (*Technical Appendix H2*), which identifies BMPs to be incorporated into the Project to ensure that long-term operation of the proposed Project does not result in substantial amounts of polluted runoff. As indicated under Threshold 1, the proposed BMPs have been identified to address pollutants of concern within receiving waters (including Canyon Lake and Lake Elsinore, both of which are identified as impaired waters). During construction, the Project also would be required to comply with Construction General Permit Order 2009-0009-DWQ, which would reduce sedimentation in runoff during grading and construction of the proposed Project. Therefore, with mandatory compliance with the Project's BMPs and Construction General Permit Order 2009-0009-DWQ, the proposed Project would not create or contribute substantial additional sources of polluted runoff, and impacts would be less than significant. No mitigation is required.

Threshold 6: Would the Project otherwise substantially degrade water quality?

As discussed in detail under the analysis of Threshold 1, mandatory compliance with the Project's BMPs and Construction General Permit Order 2009-0009-DWQ would reduce to a level below significant the Project's potential to generate substantial amounts of polluted runoff, including runoff containing pollutants of concern for downstream impaired waters. Other than runoff from the site, there are no other known sources of pollutants that could impact or degrade water quality. Accordingly, a significant impact would not occur and mitigation is not required.

Threshold 7: Would the Project place housing within a 100-year floodplain, as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?

The proposed Project consists of a proposed business park/light industrial facility. Residential uses are not proposed as part of the Project. The proposed Project also would not result in an increase in the potential for off-site flooding (as discussed under Threshold 4). Accordingly, the proposed Project would not place housing, either on or off site, within a 100-year floodplain, and a significant impact would not occur.

Threshold 8: Would the Project place within a 100-year flood hazard area structures which would impede or redirect flood flows?

Under existing conditions, the majority of the site located northerly of the Perris Valley Storm Drain Channel occurs within a FEMA designated Special Flood Hazard Zone. Flood Zones identified on site (Zones AH and AO) indicate that the majority of the northern portion of the Project site is subject to flood depths of 1 to 3 feet (usually areas of ponding or sheet flow on sloping terrain). The proposed Conceptual Grading Plan included as part of the Project's Tentative Parcel Map has been designed such that all three of the proposed buildings northerly of the Perris Valley Channel would be constructed at an elevation that is higher than the base flood elevation. Thus, as a result of the proposed Project, some flood flows would be redirected around the proposed structures and would be concentrated within other portions of the Project site, particularly within proposed parking areas. However, the Project's Conceptual Grading Plan also has been designed such that elevations within the areas proposed for parking would be lower than occurs under existing conditions, thereby accommodating flood flows on site. As a result, the Project would not result in increased flood hazards to off-site properties. Although the Project would result in the redirection of flood flows on site (i.e., away from proposed structures), this proposed redirection of flows would not result in a significant adverse impact to the environment. No mitigation would be required.

Threshold 9: Would the Project expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?

As discussed under Thresholds 4 and 8, the proposed Project has been designed such that on-site structures would not be subject to inundation by flood flows. Additionally, flood flows on site are estimated by FEMA to comprise only a depth of 1 to 3 feet, which would not pose a substantial safety risk to people on the Project site. The Moreno Valley General Plan Figure 6-4, Flood Hazards, depicts areas within the City that are subject to failure of a dam (i.e., the Perris Reservoir), and indicates that the proposed Project site and surrounding areas are not subject to dam inundation hazards (Moreno Valley 2006a). Accordingly, there would be no significant risk of loss, injury, or death associated with the failure of a dam. In addition, there are no levees within the Project vicinity, indicating there is no potential for risk of loss, injury, or death associated with failure of a levee. The proposed Project would not expose people or structures to a significant risk of loss, injury, or death involving flooding, including flooding as a result of the failure of a levee or dam.

Threshold 10: Would the Project expose people or structures to a significant risk of loss, injury or death involving inundation by seiche, tsunami, or mudflow?

The proposed Project site is located approximately 40 miles from the nearest portion of the Pacific Ocean, which is the only body of water within the region capable of producing tsunamis. Additionally, the site is separated from the Pacific Ocean by the Santa Ana Mountains. Accordingly, there is no potential for the site to be affected by a tsunami, and no impact would occur.

Seiches are a temporary disturbance or oscillation in the water level of a body of water (e.g., lake), which can result in inundation of lands surrounding the body of water. Seiches with the potential for inundating surrounding lands with flood waters are most frequently caused by seismic activity. The

proposed Project site is not located in close proximity to any bodies of water capable of producing a seiche. The nearest body of water is the Perris Reservoir, located approximately 3.0 miles southeast of the proposed Project site.

Lands surrounding the proposed Project site are generally characterized as flat, and there are no prominent topographic landforms within the Project vicinity. According to the Project's geotechnical report (*Technical Appendix E*) slope stability in the Project area is not a concern. Accordingly, the proposed Project site is not subject to any mudflow hazards.

In conclusion, the proposed Project would not expose people or structures to a significant risk of loss, injury, or death involving inundation by seiche, tsunami, or mudflow. There is no potential for those impacts to occur and mitigation is not required.

4.8.4 CUMULATIVE IMPACT ANALYSIS

- **Water Quality (Thresholds 1 and 6)**

The Project site is located in the San Jacinto River sub-watershed, which includes two bodies of water that are listed on the CWA Section 303(d) list: Lake Elsinore and Canyon Lake. During construction of the Project or any other developments within the cumulative study area, there is a potential for short-term erosion and sedimentation impacts to receiving waters. However, pursuant to the NPDES permit for construction activities and requirements pursuant to Construction General Permit Order 2009-0009-DWQ, the Project and all cumulative developments would be required to prepare and implement site-specific SWPPPs that would identify potential on-site pollutants and identify and implement an effective combination of erosion control and sediment control measures to reduce or eliminate discharge of pollutants to surface water from stormwater and non-stormwater discharges. With compliance to these mandatory regulatory requirements, the Project's contribution to water quality impairments during Project construction would not be cumulatively considerable and no mitigation would be required.

As discussed in detail under the analysis of Threshold 1, a Project-specific WQMP has been prepared to identify pollutants of concern within the Project's watershed and to identify specific BMPs to address those pollutants. The Project's WQMP identifies the need for four (4) infiltration/detention basins on site, which, when combined with other site design features (e.g., providing for permeable areas for infiltration of site runoff), would ensure that runoff from the site does not contribute substantial amounts of pollutants of concern to receiving waters. Other developments within the watershed would similarly be required to prepare site-specific WQMPs and to incorporate BMPs into site design as necessary to ensure that runoff does not contribute to existing water quality violations. With implementation of the Project as designed, including four infiltration/detention basins, and mandatory compliance to the Project's WQMP (*Technical Appendix H2*), the Project's contribution to water quality degradation would not be cumulatively considerable and no mitigation would be required.

There are no other components of the proposed Project that have the potential to substantially degrade water quality; as such, the proposed Project would have no potential to cumulatively contribute to water quality impacts beyond what is discussed and evaluated above.

❑ Groundwater Quality and Recharge (Threshold 2)

As discussed under the analysis of Threshold 2, above, the proposed Project would be served with potable water by EMWD. The EMWD has indicated an ability to serve the proposed Project in light of its past, present, and anticipated future commitments (refer to *Technical Appendices K1 and K2*). Thus, the proposed Project would not deplete groundwater supplies, and would therefore have no potential to cumulatively contribute to adverse impacts associated with groundwater supplies.

Although the proposed Project would increase the amount of impervious surfaces on site, the Project incorporates four infiltration/detention basins that would allow some runoff from the site to infiltrate into the groundwater basin. Additionally, and as previously noted, the City's General Plan EIR (Moreno Valley 2006b) evaluated potential impacts to the groundwater basins beneath the City and concluded that, with buildout of the General Plan, the incremental reduction in groundwater would not be significant as domestic water supplies within the City are not reliant on groundwater as a primary source. Furthermore, groundwater beneath the proposed Project site is thought to be contaminated due to operations at the adjacent March ARB, indicating that groundwater beneath the proposed Project site is not suitable as a source of potable water (refer to Subsection 4.7, Hazards and Hazardous Materials).

Based on these factors, the proposed Project would not result in cumulatively considerable impacts associated with depletion of groundwater supplies or substantial interference with groundwater recharge.

❑ Erosion and Siltation (Threshold 3)

As discussed under the analysis of Threshold 3, the Project's proposed drainage plan would generally maintain the existing drainage patterns of the site, and all drainage would continue to discharge into the Perris Valley Storm Drain Channel as occurs under existing conditions. Additionally, all site runoff would be treated by the Project's four proposed on-site infiltration/detention basins, which as indicated in *Technical Appendix H2* have a "high/medium" effectiveness for treating sediment/turbidity and nutrients. The proposed Project also would have no effect on the course of any stream or river. Accordingly, due to the design of the proposed Project, there is no potential for the Project to make a cumulatively considerable impact associated with substantial alterations to the existing drainage pattern of the site or area which could result in substantial erosion or siltation on or off site.

❑ Flood Hazards (Thresholds 4, 7, 8, 9)

As discussed under the analysis of Threshold 4, the proposed Project would generally maintain the existing drainage pattern of the site. The proposed Project would not affect the course of any streams or rivers. In addition, the proposed Project's Conceptual Grading Plan calls for the installation of four infiltration/detention basins that have been designed to ensure that peak flood volumes and flows are substantially similar to those that occur under existing conditions. Accordingly, because the Project would not result in any potential for increase in flood potential either on or off site, the Project has no potential to contribute to a cumulatively considerable impact associated with flooding.

As discussed under Threshold 7, the Project does not involve the construction of residential uses, nor would the Project increase flood hazards on off-site properties such that residential structures could

be impacted by floods. Accordingly, the Project has no potential to contribute to the flooding of residential properties.

As more fully described under the analysis of Threshold 8, the proposed Project would place several buildings (i.e., Buildings 1, 2, and 3) within an identified flood hazard area. These structures have the potential to interfere with flood flows. However, as shown on the Conceptual Grading Plan, areas proposed for buildings would be increased in elevation to ensure buildings on site are not subject to flood hazards, while adjacent parking areas would be lowered in elevation both to facilitate site grading and to provide additional capacity on site for the redirected flood flows. As a result, the Project would not result in increased flood hazards to off-site properties. Since flood hazards in the surrounding areas would remain unchanged with Project implementation, the Project has no potential to make a cumulatively considerable contribution to flood hazard impacts.

As discussed under the analysis of Threshold 9, the Project site has no potential to be impacted by the failure of a levee or a dam; as such, the Project has no potential to make a cumulatively considerable impact that may be associated with such failures.

❑ Stormwater Drainage System Capacity (Threshold 5)

As discussed under the analysis of Threshold 5, the Project's drainage system has been designed to ensure that post-development runoff volumes and velocities closely resemble those that occur under existing conditions. All flows from the site would be discharged directly into the Perris Valley Storm Drain Channel, as occurs under existing conditions. The Channel has been designed to accommodate flows from the proposed Project site in addition to flows from other properties within the cumulative study area. Since the proposed Project would not substantially increase the amount or velocity of runoff entering the Perris Valley Channel as compared to existing conditions, the Project has no potential to contribute runoff to this facility that could result in an excedance of capacity. A cumulatively significant impact would therefore not occur.

❑ Other Hazards (Threshold 10)

As indicated under the analysis of Threshold 10, the proposed Project site is not subject to hazards associated with seiches, tsunamis, or mudflows. There are no components of the proposed Project that would increase the potential for seiches, tsunamis, or mudflows. Accordingly, the Project has no potential to make a cumulatively considerable contribution to these type of impacts.

4.8.5 APPLICABLE PROJECT REQUIREMENTS

The following is a list of requirements and/or conditions to which the Project would be required to adhere. Compliance with these measures was assumed throughout the above analysis of impacts to hydrology and water quality.

PR 4.8-1 The Project is required to obtain coverage under the General Permit for Discharges of Stormwater Associated with Construction Activity (Construction General Permit, 99-08-DWQ). The Permit will require the preparation and implementation of a Stormwater Pollution Prevention Plan and implementation of Best Management Practices.

PR 4.8-2 The Project is required to comply with the City of Moreno Valley's standard condition of approval requiring the Project to comply with all recommendations given in its Water Quality Management Plan (*Technical Appendix H2* to this EIR).

PR 4.8-3 The Project is required to construct four (4) on-site infiltration/detention basins as indicated on the Project's proposed Tentative Parcel Map and Plot Plans.

PR 4.8-4 The Project is required to construct all buildings at elevations higher than the base flood elevation as indicated on the Project's Proposed Tentative Parcel Map and Plot Plans. During final engineering, an updated HEC-RAS study is required by the City of Moreno Valley to verify that all pad elevations are located at least one foot above flood water surface elevations (Weil 2012).

4.8.6 SIGNIFICANCE OF IMPACTS BEFORE MITIGATION

Threshold 1: Less than Significant Impact. The proposed Project would not violate any water quality standards or waste discharge requirements on a direct or cumulative basis. The Project is required to prepare a SWPPP to address construction-related water quality issues, and would be required to comply with a site-specific WQMP and its associated BMPs.

Threshold 2: Less than Significant Impact. The proposed Project proposes no potable water wells and would not substantially impact the availability of potable groundwater in the Project area.

Threshold 3: Less than Significant Impact. The proposed Project would generally maintain the existing drainage pattern of the site, would have no effect on the courses of any streams or rivers, and would not result in substantial erosion or siltation on or off site.

Threshold 4: Less than Significant Impact. There would be no significant increases in flood hazard. The proposed Project would generally maintain the existing drainage pattern of the site, would have no effect on the courses of any streams or rivers, and would not result in a substantial increase in the rate of surface runoff in a manner which would result in increased flood hazards on or off site.

Threshold 5: Less than Significant Impact. The proposed Project would not create or contribute runoff which would exceed the capacity of existing or planned stormwater drainage systems, nor would the Project provide substantial additional sources of polluted runoff.

Threshold 6: No Impact. There are no other components of the proposed Project with a potential to substantially degrade water quality.

Threshold 7: No Impact. The proposed Project does not involve the construction of residential housing and therefore would not place housing in a flood area.

Threshold 8: Less than Significant Impact. Although the Project would redirect flood flows on site (i.e., away from proposed structures), such changes would not result in increased flood hazards to any off-site properties.

Threshold 9: No Impact. The Project site is not subject to flood hazards associated with the failure of a levee or a dam.

Threshold 10: No Impact. The Project site is not subject to hazards associated with seiches, tsunamis, or mudflow.

4.8.7 MITIGATION

As concluded in the foregoing analysis, implementation of the proposed Project would not result in any significant impacts to hydrology/water quality; accordingly, mitigation would not be required.

4.9 LAND USE AND PLANNING

This subsection discusses compliance of the proposed Project with applicable land use and planning policies adopted by the City of Moreno Valley and other governing agencies for the purpose of reducing adverse effects on the physical environment.

The proposed Project (described in Section 3.0, Project Description) is consistent with the property's land use designations as applied by the City of Moreno Valley General Plan and the Moreno Valley Industrial Area Plan (Specific Plan 208), as well as the property's zoning designation. CEQA Guidelines §15183(a) mandates that projects which are consistent with the development density established by existing zoning, community plan, or general plan policies for which an EIR was certified, shall not require additional environmental review, except as might be necessary to examine whether there are project-specific significant effects which are peculiar to the project or its site. In this case, the subject property was evaluated as part of an EIR certified in 1989 for Specific Plan 208 (State Clearinghouse Number 1988080813) and as part of the City's General Plan Program EIR certified in 2006 (State Clearinghouse Number 2000091075). This subsection analyzes the Moreno Valley General Plan policies in detail, to show that development of the Project's proposed land uses were considered by the General Plan and, as such, analyzed in the City of Moreno Valley's General Plan EIR. Project compliance with land use and planning policies adopted by other agencies for purposes of reducing adverse effects on the physical environment area is analyzed as well. Reference sources for the plans and policies discussed below are included in Section 7.0, References.

4.9.1 EXISTING CONDITIONS

A. Existing Land Use and Development

Refer to Section 2.0, Environmental Setting, for a full description of existing on-site and off-site surrounding land uses. In summary, the Project site is a 75.05-acre vacant parcel of land, mostly containing ruderal vegetation that is routinely disced for fire fuel management. West of the Project site is the March Air Reserve Base (ARB). Other lands surrounding the Project site, including the Project site itself, are located in the City of Moreno Valley and are subject to the City's adopted Moreno Valley Industrial Area Plan (Specific Plan 208). Several large-scale industrial and warehouse buildings have been developed in this area and there are several approved development projects in this area that are pending construction.

Immediately abutting the Project site to the east is a rectangular-shaped parcel of vacant land comprising about 72 acres that is approved for industrial development by the City of Moreno Valley (Indian Business Park, PA07-0079, PA07-0080, PA07-121, P07-0093, and PA08-0018). To the north of the Project site is Iris Avenue, north of which are two vacant, undeveloped parcels that are approved by the City of Moreno Valley for future development as the Moreno Valley Industrial Park (PA07-0035, PA07-0039, and PA08-0021) and a residential subdivision (TM34748; located at the southeast corner of Gentian Avenue and Heacock Street). North of Iris Avenue and diagonal from the Project site's northeastern corner is an existing development of detached single-family homes, separated from Iris Avenue by a solid block wall. Properties to the immediate south and southeast of the Project site are undeveloped and are designated by the Moreno Valley General Plan and the Moreno Valley Industrial Area Plan for business park/light industrial land uses. Two (2) existing industrial/warehouse buildings are located approximately 0.15-mile south of the Project site.

B. Applicable Land Use and Planning Policies

❑ City of Moreno Valley General Plan

The City of Moreno Valley General Plan (July 11, 2006) is a policy document that reflects the City's vision for the future of Moreno Valley. The General Plan is organized into seven separate elements, including: Community Development; Economic Development; Parks, Recreation and Open Space; Circulation; Safety; Conservation; and Housing. Each element is associated with a series of policies to guide the City's vision for future development. The following is a summary of the City General Plan Elements.

Community Development Element

The Community Development Element functions as a land use guide for future development in the City. It identifies the general distribution, general location, and extent of land uses, such as housing, business, industry, open space, recreation, floodplains, and public facilities. These designations are reflected on the General Plan Land Use Map, which are applied on a parcel-by-parcel basis throughout the City. The Community Development Element also provides standards for residential density and non-residential intensity. It governs how land is to be used; therefore, many of the issues and policies contained in other elements of the General Plan are linked in some degree to this element.

The City of Moreno Valley General Plan designates the majority of the Project site for "Business Park/Light Industrial" land uses, while the northwestern corner of the site, at the intersection of Iris Avenue and Heacock Street, is designated for "Commercial" land uses. Refer to Figure 2-1, *Surrounding Land Uses and Development,* in Section 2.0, Environmental Setting. Lands to the north, east, southeast, and south are similarly designated for "Business Park/Light Industrial" land uses, while lands to the northeast are designated as residential at a maximum density of five homes per acre ("Residential: Max 5 du/ac (R5)"). (Moreno Valley 2006a, Ch. 2)

Economic Development Element

The Economic Development Element is an Element that is intended to be added to the General Plan in the future following completion of an Economic Development Strategy, which is presently being conducted in conjunction with the City Council. At present, there is no policy guidance provided by the General Plan's Economic Development Element. (Moreno Valley 2006a, Ch. 3)

Parks, Recreation and Open Space Element

The Parks, Recreation and Open Space Element includes specific policies related to open space preservation, outdoor recreation and recreation facilities, and trails. The Project site is not designated as an open space or park area by the City of Moreno Valley General Plan. (Moreno Valley 2006a, Ch. 4)

Circulation Element

The purpose of the Circulation Element is to develop a safe, efficient, environmentally and financially sound, integrated vehicular circulation system. It also is intended to provide for safe and adequate non-vehicular transportation, including pedestrian, bicycle, and public

transportation systems. Figure 9-1 of the Circulation Element identifies the long-term vehicular circulation facilities planned throughout the City. As shown on Figure 9-1 of the General Plan, both Iris Avenue and Heacock Street are identified for development as "Arterial (100-foot right-of-way)," while Krameria Avenue is identified for improvement as a "Minor Arterial (88-foot right-of-way)." The Circulation Element also depicts level of service (LOS) standards for Circulation Element roadways throughout the City. Figure 9-4 of the Circulation Element, *Bikeway Plan*, identifies the location of planned bicycle facilities throughout the City, and identifies the portions of Heacock Street and Iris Avenue abutting the Project site for Class III bike lanes, which are defined in the General Plan as routes that are "designated bikeways, not striped, and are shared with vehicles." The Circulation Plan also identifies the location of existing and proposed trails throughout the City, although there are no existing or proposed trail facilities located in the Project area (Moreno Valley 2006a, Ch. 5).

Safety Element

The goal of the Safety Element is to assist the City in achieving acceptable levels of protection from natural and man-made hazards to life, health, and property, and to ensure that emergency services in the City are adequate to meet the City's needs during both minor emergencies and major catastrophic situations (Moreno Valley 2006a, Ch. 6).

Conservation Element

The Conservation Element is intended to achieve the wise use of natural resources within the City and immediate environs. Issues addressed by the Conservation Element include erosion, water quality and supply, biological resources and associated habitat, energy conservation, historical/archaeological resources, visual quality, and solid waste and recycling (Moreno Valley 2006a, Ch. 7).

Housing Element

The Housing Element identifies and establishes the City's policies with respect to meeting the needs of existing and future residents of the City. Specific components of the Housing Element, which also are requirements of state law, include the following: an assessment of housing needs and inventory; an analysis and program for preserving assisted housing developments; a statement of community goals, quantified objectives, and policies relative to the maintenance, preservation, improvement, and development of housing; and a program which sets forth a five-year schedule of actions that the City is undertaking, or intends to undertake to implement the policies set forth in the Housing Element (Moreno Valley 2006a, Ch. 8).

The proposed Project's consistency with the goals, objectives, policies, and programs given in the City of Moreno Valley General Plan is discussed below in Subsection 4.9.3.

❑ Moreno Valley Industrial Area Plan (Specific Plan 208)

The Project site is located within the Moreno Valley Industrial Area Plan (MVIAP) Specific Plan 208 (SP 208) boundaries, which encompasses approximately 1,540 acres in the southwestern portion of the City of Moreno Valley. The MVIAP is the planning and regulatory document for all development within the Area Plan boundaries. Its development regulations and design guidelines are

intended to ensure quality development that will contribute to the City's industrial employment base, while ensuring compatibility with adjacent land uses and the City of Moreno Valley General Plan (Moreno Valley 2002).

As shown on Figure 2-5, *Moreno Valley Industrial Area Plan Map*, SP 208 designates the majority of the proposed Project site for "Industrial" development, while the northwestern corner of the Project site is designated for "Industrial Support Areas." The Industrial designation is intended to cover a wide range of industrial and industrial/business related support uses. The Industrial Support Areas are intended to allow industrial/business support services, such as food service, gas stations, office supply, and day care. A complete description of allowable uses, development standards, and guidelines associated with the site's "Industrial" and "Industrial Support Areas" designations is provided in Section III of the MVIAP (Moreno Valley 2002 III).

As also shown on Figure 2-5, the MVIAP identifies the northeastern corner of the proposed Project site as part of a "300' Residential Buffer," which is intended to provide a buffer between residential districts abutting the MVIAP industrial uses, while also maintaining the integrity of lands available for industrial uses (Moreno Valley 2002 III-2).

Section IV of the MVIAP, Development Framework, specifies planned roadway improvements. The MVIAP designates Iris Avenue and Heacock Street as "Major Arterials (100-foot right-of-way)," and designates Krameria Avenue as a "Minor Arterial (88-foot right-of-way)" (Moreno Valley 2002 IV-6 &7).

Additionally, the MVIAP identifies specific goals and objectives related to land use compatibility, urban design, and public facilities and services. Guidelines are provided related to urban design, urban form, landscape design, special corridors, open space/trails, and entries. In addition, the MVIAP provides development standards related to drainage and flood control, water and wastewater, and public services, and includes policies related to implementation of the MVIAP. The proposed Project's consistency with the applicable portions of the MVIAP is discussed below in Subsection 4.9.3.

❑ City of Moreno Valley Zoning Ordinance

Development of the Project site is regulated by the MVAIP (SP208), described above, which applies the "Industrial (I)" zoning designation to the proposed Project site. Specific Plans (including SP 208) are addressed in Chapter 9.13 of the City of Moreno Valley Municipal Code. The "Industrial (I)" designation applied by the MVIAP and codified in City Municipal Code Chapter 9.05 permits a wide range of industrial and industrial/business related support uses, including light manufacturing and storage and distribution of facilities. Lands immediately adjacent to the Project site on the north, east, southeast, and south also are designated as "Industrial (I)" as part of the MVIAP. The March Air Reserve Base, located west of the Project site, is not subject to Moreno Valley zoning regulations. Lands located northeasterly of the Project site are zoned by the City of Moreno Valley as "Suburban Residential (R5)," which allows for residential development on common sized suburban lots (i.e., single-family residential or mobile homes at densities of up to five (5) dwelling units per net acre).

The City of Moreno Valley's Zoning Ordinance is contained as Title 9 of the City of Moreno Valley Municipal Code. The proposed Project's consistency with the applicable portions of the Title 9 is discussed below in Subsection 4.9.3.

❑ Riverside County Multiple Species Habitat Conservation Plan

The Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) is a comprehensive, multi-jurisdictional Habitat Conservation Plan (HCP) focusing on conservation of species and their associated habitats in Western Riverside County. The MSHCP is one of several large, multi-jurisdictional habitat planning efforts in southern California with the overall goal of maintaining biological and ecological diversity within a rapidly urbanizing region. The purpose of the MSHCP is to allow Riverside County and its cities to better control local land use decisions and maintain a strong economic climate in the region while addressing the requirements of the state and federal Endangered Species Acts (Riverside County 2003b.)

The Project site is located in a portion of Riverside County that is planned for long-term development. As shown on Figure 2-6, *MSHCP Criteria Areas*, no portion of the Project site or surrounding area is identified for conservation by the MSHCP. The nearest lands proposed for conservation under the MSHCP occur south of Cajalco Road and west of I-215 (within the Mead Valley Area Plan), approximately 3.25 miles southwest of the Project site within unincorporated Riverside County.

Although the Project site is not designated for conservation under the MSHCP, the MSHCP does include certain policies requiring additional surveys and possibly conservation of resources it targets for conservation. According to the Western Riverside County MSHCP Conservation Summary Report Generator[1], the Project site is subject only to MSHCP survey requirements for the Burrowing Owl. The proposed Project's consistency with the MSHCP is discussed generally below in Subsection 4.9.3 and in detail in Subsection 4.3, Biological Resources.

❑ SCAQMD Air Quality Management Plan

California Health & Safety Code §40702 et seq., the California Clean Air Act, requires that an Air Quality Management Plan (AQMP) be developed and then updated every three years for air basins with non-attainment status. The Project site is located in the South Coast Air Basin, which has non-attainment status for ozone (O_3) and particulate matter (PM_{10} and $PM_{2.5}$). The South Coast Air Quality Management District (SCAQMD) Governing Board adopted its most recent AQMP on June 1, 2007. Every three years, the SCAQMD prepares a plan for air quality improvement within the AQMD area boundaries. Each iteration of the plan is an update of the previous plan and has a 20-year horizon with a revised baseline. The SCAQMD is preparing an update to the 2007 AQMD document, but that update had not been released for public review at the time of this EIR's NOP (June 2011).

The AQMP is a plan for the regional improvement of air quality. Projects such as the proposed Project relate to the air quality planning process through the growth forecasts that were used as inputs into the regional transportation model. If a proposed project is consistent with these growth forecasts, and if all available emissions reduction strategies are implemented as effectively as possible on a project-specific basis, then the project is consistent with the AQMP. The proposed

[1] Available on-line at: http://www.rctlma.org/online/content/rcip_report_generator.aspx.

Project's consistency with the AQMP is discussed generally below in Subsection 4.9.3 and in more detail in Subsection 4.2, Air Quality.

❑ SCAG Regional Transportation Plan and Regional Comprehensive Plan

The Southern California Association of Governments (SCAG) is a regional agency established pursuant to California Government Code §6500, also referred to as the Joint Powers Authority law. SCAG is designated as a council of governments (COG), a Regional Transportation Planning Agency (RTPA), and a Metropolitan Planning Organization (MPO). SCAG serves as an area-wide clearinghouse for regionally significant projects. SCAG reviews the consistency of local plans, projects, and programs with regional plans. Guidance provided by this review process is intended to assist local agencies and project sponsors to take actions that contribute to the attainment of regional goals and policies.

If a development project meets the CEQA Guidelines Section 15206(b)(2)(E) definition of a project having statewide, regional, or area-wide significance, then the project is required to be reviewed for consistency with regional plans. Because the proposed Project proposes more than 650,000 s.f. of non-residential floor space, the Project meets the definition of a project with regional significance and requires a consistency evaluation with regional plans. The applicable SCAG policy documents identified for evaluation include the Regional Comprehensive Plan (RCP) and the Regional Transportation Plan (RTP). This EIR evaluates Project consistency with the 2008 RCP and RTP, which were the applicable SCAG planning documents at the time the NOP for this EIR was released for public review (June 2011). Since that time, SCAG released a 2012 Draft RTP/SCS; however, because that document was not available nor approved in June 2011, the 2008 RCP and RTP are applicable for evaluation purposes in this EIR.

The 2008 RCP is a regional plan that is intended as a holistic, strategic plan for defining and solving inter-related housing, traffic, water, air quality, and other regional challenges. The RTP's guiding principals are to: 1) improve mobility for all residents; 2) foster livability in all communities; 3) enable prosperity for all people; and 4) promote sustainability for future generations (SCAG 2008c). The proposed Project's consistency with the RCP is discussed below in Subsection 4.9.3.

The 2008 RTP presents a regional transportation vision for the region through the year 2035. Goals of the RTP are to: 1) maximize mobility and accessibility for all people and goods in the region; 2) ensure travel safety and reliability for all people and goods in the region; 3) preserve and ensure a sustainable transportation system; 4) maximize productivity of the transportation system; 5) protect the environment, improve air quality, and promote energy efficiency; 6) encourage land use and growth patterns that complement the transportation investments and improve the cost-effectiveness of expenditures; and 7) maximize the security of the transportation system (SCAG 2008b). Performance measures and funding strategies also are included to ensure that the adopted goals are achieved through implementation. The proposed Project's consistency with the RTP is discussed generally below in Subsection 4.9.3 and in more detail in Subsection 4.11, Transportation and Traffic.

❑ Riverside County Airport Land Use Plan for the March Air Reserve Base

The Riverside County Airport Land Use Commission (RCALUC) is the local airport land use commission for airports within Riverside County, and pursuant to the California State Aeronautics Act (Public Utility Code §21670 et seq.) is tasked with preparing and adopting an airport land use

compatibility plan, and for reviewing proposed plans, regulations, and other actions of local agencies and airport operators for consistency with the plan.

The Project site is located adjacent and east of the March Air Reserve Base, which is owned and operated by the United States Air Force (USAF). An updated compatibility plan for the March Air Reserve Base is currently under consideration by the RCALUC, and in the interim has made available a 2005 compatibility map designating lands surrounding the airport into three distinct zones. The proposed Project site is located within Compatibility Zone II, which is identified as an area that is subject to airport-related noise, but is not an area that is prone to safety issues associated with airport operations. The proposed Project's consistency with the Riverside County Airport Land Use Plan for the March Air Reserve Base (ARB) is discussed below in Subsection 4.9.3.

- **USAF March Air Reserve Base Air Installation Compatibility Use Zone Study**

In 2005, the USAF prepared the March ARB Air Installation Compatibility Use Zone Study (AICUZS), which incorporates an extensive analysis of the effects of aircraft noise, accident potential, and compatible land use and development for lands surrounding the March ARB. Figures 3-1 and 3-2 of the AICUZS depict areas surrounding the airport that are subject to noise zones or accident potential zones. The proposed Project site is located outside of the 60 dBA CNEL contour, indicating that the Project site is not subject to substantial amounts of aircraft-related noise. (Air Force 2005)

For accident potential, the AICUZS identifies three distinct zones: Clear Zone (CZ), which is the area closest to the runways and has the highest potential for accidents; Accident Potential Zone (APZ) I, which is an area beyond the CZ which possesses a high potential for accidents; and APZ II, which is an area beyond APZ I with measurable potential for accidents. According to Figures 3-1 and 3-2 of the AICUZS, the proposed Project site is not located within or adjacent to the CZ, APZ I, or APZ II zones, thereby indicating that the proposed Project site is not subject to any measurable potential for accidents (Air Force 2005).

4.9.2 BASIS FOR DETERMINING SIGNIFICANCE

The proposed Project would result in a significant impact to land use and planning if the Project or any Project-related component would:

1. *Physically divide an established community;*

2. *Conflict with an applicable land use plan, policy or regulation of an agency with jurisdiction over the project (including, but not limited to, the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect; or*

3. *Conflict with any applicable habitat conservation plan or natural community conservation plan.*

4.9.3 IMPACT ANALYSIS

Threshold 1: Would the proposed Project physically divide an established community?

The Project site is vacant under existing conditions. Development of a business center with light industrial and warehouse distribution buildings on the Project site would not physically disrupt or divide the arrangement of an established community. The proposed Project site is located in a developing area of the City that is designated for industrial development by the City's General Plan and Moreno Valley Industrial Area Plan. The Project site is proposed to be developed with a business center in accordance with its assigned General Plan and zoning designations. Properties adjacent to the Project site have either been developed or are planned for development. Immediately abutting the Project site to the east is a vacant parcel that is approved for industrial development as Indian Business Park. To the north of the Project site is Iris Avenue, north of which is a vacant parcel approved for development as the Moreno Valley Industrial Park. West of the Project site is March Air Reserve Base and to the south is vacant land designated for additional industrial development.

Buildout of the Project site as proposed, including the proposed construction of Krameria Avenue between Indian Avenue and Heacock Street, would improve local connectivity. The Perris Valley Channel bisects the site and surrounding properties and serves as a physical divider in the community. Implementation of the Project on either side of the existing channel would not divide a community, but it is acknowledged that the existing channel physically divides the Project. The Project site does not provide access to established communities and would not isolate any established communities or residences from neighboring communities. No impact would occur.

Threshold 2: Would the proposed Project conflict with an applicable land use plan, policy or regulation of an agency with jurisdiction over the project (including, but not limited to, the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?

Subsection 4.9.1 described the land use planning and policy documents that are applicable to the proposed Project. Provided below is a discussion of the Project's consistency with those policy documents.

❑ City of Moreno Valley General Plan

The City of Moreno Valley General Plan designates the majority of the Project site for "Business Park/Light Industrial" land uses, while the northwestern corner of the site, at the intersection of Iris Avenue and Heacock Street, is designated for "Commercial" land uses. No detailed descriptions of these land uses are given and the area designated as "Commercial" is described as "Industrial Support Area" in the MVIAP (discussed below). The March Business Center would provide 1,484,407 square feet (s.f.) of building space for an industrial business center on the subject property that is consistent with these General Plan land use designations. Tenants of the proposed buildings have not yet been identified.

A General Plan Amendment (PA11-0001) is proposed as part of the Project to modify the Circulation Element of the City of Moreno Valley General Plan. The proposed modifications to the Circulation

Element would consist of changes to the planned alignment and classification of a segment of Krameria Road between Heacock Street and proposed Cosmos Street, as described in Subsection 3.3.4. The intended purpose of this change is to improve the planned circulation network by providing a 90-degree intersection where Krameria Avenue meets Heacock Street and to provide a perpendicular connection between Heacock Street and proposed Cosmos Street to allow for more safe and efficient local circulation system. The proposed General Plan Amendment is an inherent part of the proposed Project and is evaluated throughout this EIR. No adverse environmental impacts specifically attributable to the General Plan Amendment have been identified.

Table 4.9-1, *Moreno Valley General Plan Policy Consistency Analysis*, provides a detailed analysis of the proposed Project's consistency with all applicable goals, objectives and policies of the General Plan. As shown in Table 4.9-1, the proposed Project would not conflict with any applicable goal, objective, or policy of the General Plan. The Project is determined to be consistent with the General Plan and there would be no adverse impact.

❑ Moreno Valley Industrial Area Plan

The MVIAP identifies the site for development with Industrial land uses over most of the site, with exception of the northwestern corner that is designated as Industrial Support Areas. The Project proposes to develop the site as an industrial business park as described in Section 3.0, Project Description. The land use proposed by the Project is consistent with the Industrial designation, as well as the Industrial Support Areas designation that occurs within 300 feet of the intersection of Heacock Street and Iris Avenue. As indicated in the MVIAP's Industrial Land Use Table (refer to Section III.D of the MVIAP), light and medium warehouse distribution facilities such as are proposed by the Project are permitted within Industrial Support Areas. In addition, the Project does not propose any uses within Parcel 1 that are prohibited by the MVIAP, such as petroleum product storage. The MVIAP also does not specify any uses that are required within the Industrial Support Areas (such as commercial land uses); therefore, land uses proposed for Parcel 1 would be fully consistent with the MVIAP's land use designations.

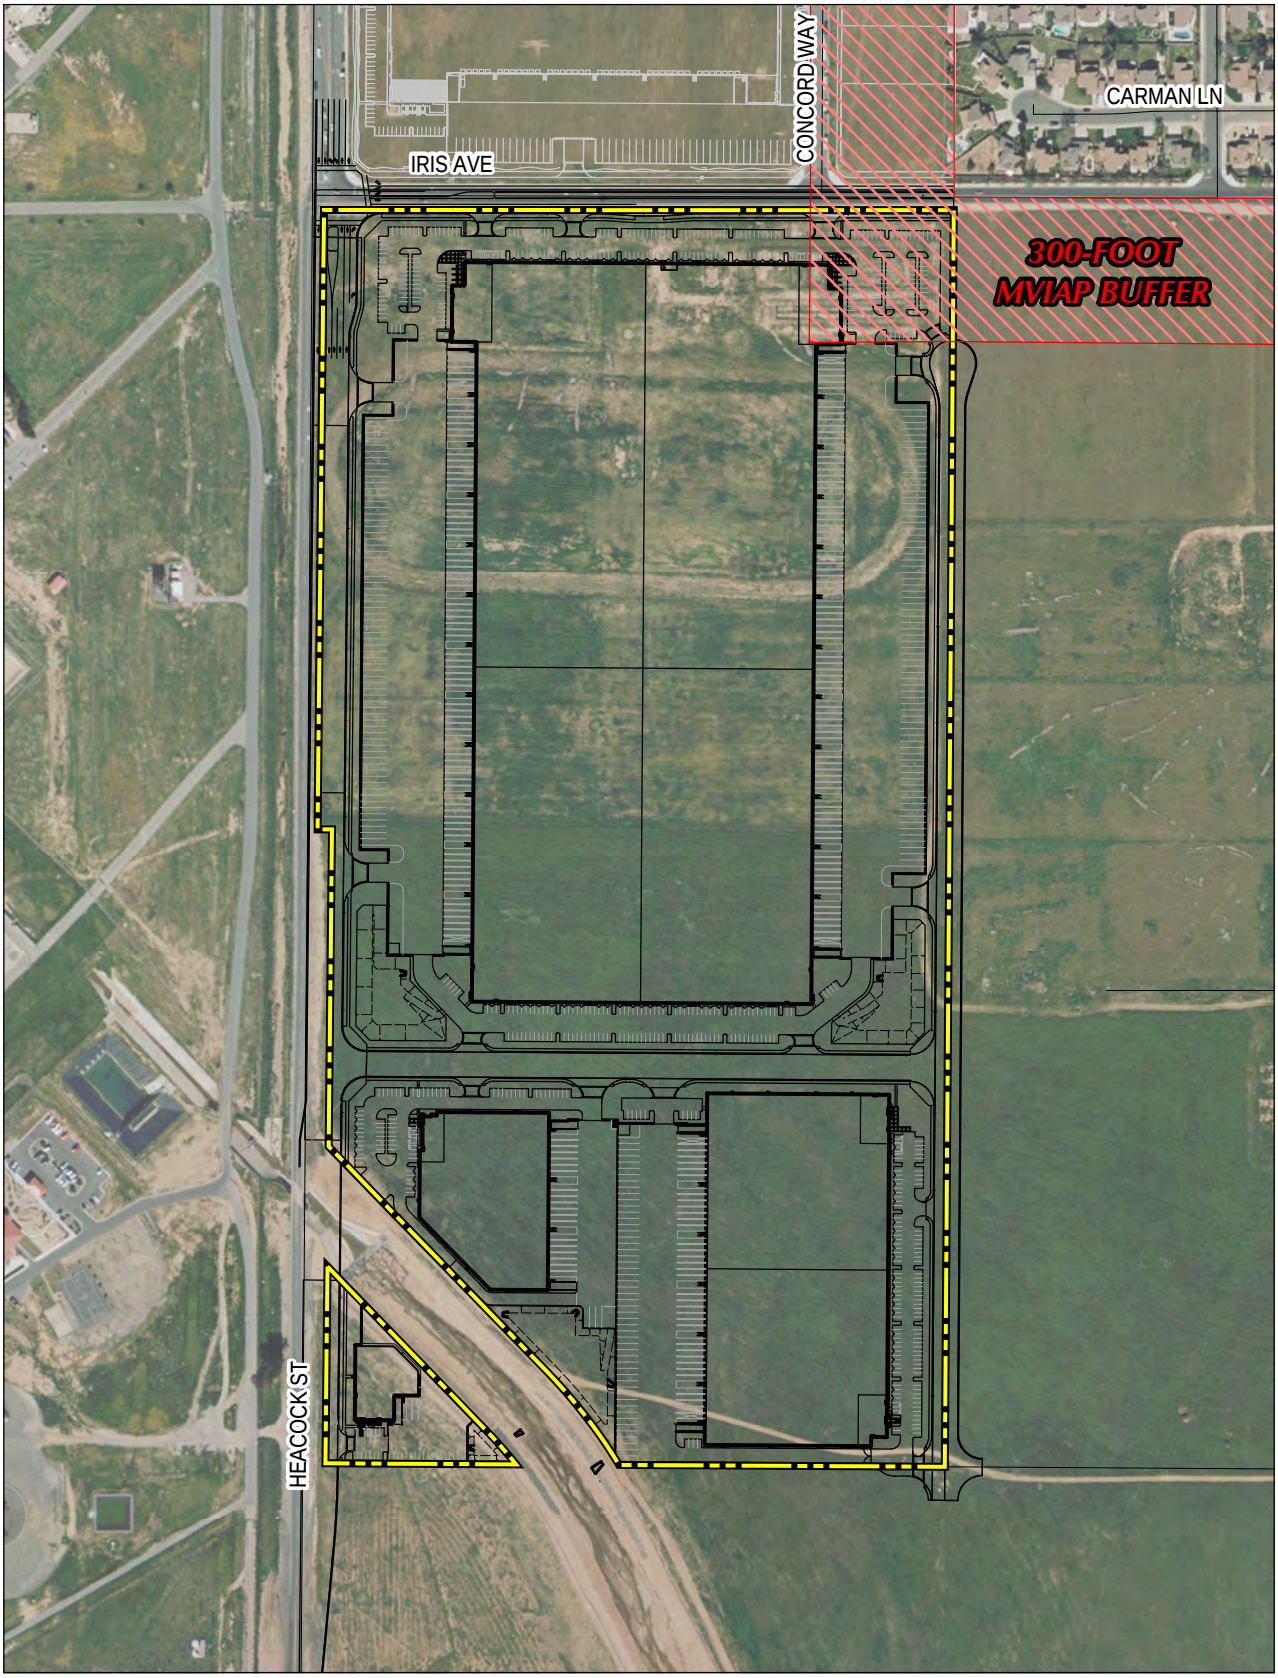
The MVIAP also includes a requirement related to the location of industrial land uses within close proximity of residential districts, which is listed under the subheading, "300 Foot Proximity to Residential District." The relationship of the proposed Project site to nearby residential uses located to the northeast is depicted on Figure 4.9-1, *MVIAP 300-Foot Residential Buffer*. Although the proposed Project would introduce development within the 300-foot buffer zone, the proposed features in this zone would consist of a parking lot for passenger cars, the primary entry and office portion of the building on Parcel 1, and landscaping. MVIAP's criteria for the 300-foot buffer zone specifically notes, "[w]here parcels exceed 300 feet in depth from a major arterial, permitted uses may extend beyond this distance so as not to affect the integrity of industrial uses, if the development proposal is part of an integrated industrial or business park" (Moreno Valley 2002 III-2). The proposed Project site abuts two arterial roadways (Heacock Street and Iris Avenue), and proposed Parcel No. 1 is designed to be 1,212 feet in depth. The placement of a passenger car parking lot, landscaping, and the main entry and office portion of the building on Parcel 1 in the 300-foot buffer zone, as depicted on Figure 4.9-1, retains the integrity of proposed industrial uses on the site. Because the proposed development is part of an integrated industrial business center, the proposed Project would not conflict with the MVIAP's "300 Foot Proximity to Residential District" criteria.

In addition, the City of Moreno Valley Planning Department conducted a thorough review of the proposed Project for consistency with applicable development requirements specified by the MVIAP, and determined that the proposed Project is consistent with the MVIAP, assuming approval of the Project's development applications as designed (*i.e.*, PA11-0001, PA11-0002, PA11-0003, PA11-0004, PA11-0005, PA11-0006, PA11-0007, and P11-004) and the associated Conditions of Approval that will be prepared by the City. If approved, the Project will be required to comply with all imposed Conditions of Approval. The Project is determined to be consistent with the land use designation and applicable policies of the MVAIP and there would be no adverse impact.

Similar to the General Plan Amendment described above, the proposed realignment and reclassification of Krameria Avenue through the Project site would require an amendment to the MVIAP. The intended purpose of this change is to improve the planned circulation network by providing a 90-degree intersection where Krameria Avenue meets Heacock Street and to provide a perpendicular connection between Heacock Street and proposed Cosmos Street to allow for more safe and efficient local circulation system. The proposed Specific Plan Amendment is an inherent part of the proposed Project is evaluated throughout this EIR. No adverse environmental impacts specifically attributable to the Specific Plan Amendment have been identified.

❑ Western Riverside County MSHCP

As indicated in Subsection 4.9, Biological Resources, the Project site is not designated for conservation under the MSHCP; however, the MSHCP does include certain policies related to the Burrowing Owl that are applicable to the proposed Project. As concluded under the analysis of Threshold 6 in EIR Section 4.3, Biological Resources, the proposed Project would be consistent with the MSHCP's Reserve Assembly Requirements, as well as other applicable MSHCP requirements pursuant to the following sections of the MSHCP: Section 6.1.2, Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools; Section 6.1.3, Protection of Narrow Endemic Plant Species; Section 6.1.4, Guidelines Pertaining to the Urban/Wildland Interface; and Section 6.3.2, Additional Survey Needs and Procedures. Therefore, a significant impact due to a conflict with the MSHCP would not occur.



Source: RCTLMA (2011), Eagle Aerial (2008), Thienes Eng.

Figure 4-9.1

Moreno Valley Industrial Area Plan 300-ft. Residential Buffer

❑ **SCAQMD Air Quality Management Plan**

An analysis of the proposed Project's consistency with the SCAQMD Air Quality Management Plan is provided in EIR Subsection 4.2, Air Quality, under the analysis of Threshold 1. As concluded in EIR Subsection 4.2, the proposed Project would be fully consistent with the SCAQMD Air Quality Management Plan. No impacts would occur.

❑ **SCAG Regional Transportation Plan**

An analysis of the proposed Project's consistency with SCAG's Regional Transportation Plan is provided in Table 4.9-2, *Project Consistency with SCAG Regional Transp ortation Goals*. As indicated in Table 4.9-2, the proposed Project would not conflict with any of SCAG's Regional Transportation Goals. No impacts would occur.

❑ **SCAG Compass/Growth Visioning Principles**

An analysis of the proposed Project's consistency with SCAG's Compass/Growth Visioning Principles is provided in Table 4.9-3, *Project Consistency with SCAG Co mpass/Growth Visioning Principles*. As indicated in Table 4.9-3, the proposed Project would not conflict with any of SCAG's Compass/Growth Visioning Principles. No impacts would occur.

❑ **Riverside County Airport Land Use Plan for the March Air Reserve Base**

The proposed Project site is located within Compatibility Zone II of the March Air Reserve Base, which is identified as an area that is subject to substantial airport-related noise, but is not an area that is prone to safety issues associated with airport operations. An analysis of potential impacts to the Project from operations at the adjacent March ARB associated with aircraft noise is provided in EIR Section 4.10, *Noise*, which concludes that such impacts would not be significant. Accordingly, the Project would be consistent with the land use restrictions identified in the Riverside County Airport Land Use Plan for the March ARB. No impacts would occur.

❑ **USAF March Air Reserve Base Air Installation Compatibility Use Zone Study**

The proposed Project site is located outside of the 60 dBA CNEL contour of the March Air Reserve Base and is not identified within the CZ, APZI, or APZ II zones. Accordingly, the Project site is not subject to any land use restrictions associated with the USAF March ARB AICUZS. The proposed Project is therefore consistent with the USAF March ARB AICUZS. No impacts would occur.

As indicated in the above analysis, the proposed Project would not conflict with any applicable land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating any environmental effects. Accordingly, a no adverse impact to land use and planning would occur.

Threshold 3: Would the proposed Proj ect conflict with any applicable habitat conservation plan or natural community conservation plan?

The only applicable habitat conservation plan or natural community conservation plan within the Project area is the Western Riverside County MSHCP. As indicated in the analysis of the Project's consistency with the MSHCP under Threshold 2 and in Subsection 4.4, Biological Resources, the proposed Project would be fully consistent with the MSHCP's policies. Accordingly, there would be
