- Response to Comment 62 in no way responds to the comment made, but appears to be the response to comment 61. Comment 62 raised the issue that the EIR and HRA failed to evaluate potential cumulative health risks from this Project and other projects in the vicinity; and failed to cite the accurate current risk in the project area according to the MATES Study of SCAQMD. According to SCAQMD’s MATES III study, the existing cancer risk in the project area is up to 497 in one million, well over levels disclosed in the EIR. (<http://www3.aqmd.gov/webappl/matesiii/>) This number does not include proposed or expected future projects that would be considered with an adequate cumulative impact evaluation.
- Response to Comment 66 is unresponsive to the comment made that the payment of in lieu fees shall be for the purpose of acquiring equivalent habitat.
- Response to Comment 67 is unresponsive to the comment made that preparation of a Habitat Mitigation and Monitoring Plan in the future defers mitigation without establishing that there is a practical reason for doing so.
- Response to Comment 69 is unresponsive to the comment made that the EIR fails to consider cumulative biological effects. Contrary to the response’s implications, it is the duty of the lead agency to provide an adequate environmental document including an evaluation of cumulative impacts.
- Response to Comment 73 fails to provide any reasoning or evidence that the preparation of a paleontological resource impact mitigation program does not improperly defer mitigation, particularly when it appears that many of the issues to be covered are already known. This Response also fails to respond to the remainder of the comment re: salvage.
- Response to Comment 79 is unresponsive to the comment made that the EIR itself, not the commenter acknowledges the Project may create an oversupply of warehousing so that overriding considerations and project benefits may not exist.

- Response to Comment 81 fails to account for the fact that noise will result from both the loading areas and internal truck operation. While loading area noise may be greater, accumulation of noise from both activities may be greater still.
- Response to Comment 83 is unresponsive to the comment made which considered noise increases over existing ambient levels and not exceedences of the Municipal Code Maximum levels. Increases over ambient levels should be measured at the property line to accurately predict noise impacts.
- Response to Comment 84 again confuses the City's two noise criteria- whether the Project would exceed noise standards or whether the Project would result in a substantial increase in ambient noise over existing levels. It is clear the Project would significantly increase noise above existing levels. The same is true for response to comments 85 through 87.
- Response to Comment 86 fails to respond to the issue raised regarding exceedences of General Plan noise levels for residences.
- Response to Comments 88 and 89 are unresponsive to the comment made. It is clear Project construction will significantly increase ambient noise levels and exceed the residential noise levels set out in the General Plan and that the EIR relies entirely on compliance with construction hours to reduce these impacts. Mitigation is inadequate, and this impact should be deemed significant.
- Response to Comment 90 fails to resolve the issue raised that Mitigation Measure 4.9.6.1D provides that construction may occur outside construction hours with City approval. Project construction noise impacts are not shown to be mitigated below a level of significance. The mitigation suggested in comment 91 should be implemented as the measures are not found to be infeasible and are plainly needed.
- Response to Comment 100 ignores the majority of the comment regarding inadequacy of DIF or TUMF funding where roadways are not scheduled for improvements and improvements may not timely occur. I concur with the City of Riverside's comment with that compliance in the TUMF may provide inadequate mitigation where the TUMF is based on the General Plan, and the Project requires a General Plan Amendment. Similar issues will likely result with DIF as well.
- Response to Comment 101 also fails to resolve or respond to the issue raised as trip generation is not the only influence on traffic or the need of the roadway system and as there is no evidence the prioritization, programming, and allocation of funding will be sufficient to make needed roadway improvements.
- Response to Comment 107 is unresponsive to the comment made that the listed potentially feasible mitigation for the project's significant air quality impacts must be adopted.
- Response to Comment 109 states that new state energy standards *now in effect* require 20% savings above 2008 Title 24 standards. This "mitigation" in the EIR is thus not mitigation at all but a legal requirement.
- Response to Comment 110 is unresponsive to the comment made. CEQA requires that mitigation be certain, enforceable, and not vague. MM 4.13.6.1.C fails to meet this requirement where it merely requires implementation of some strategy, however ineffectual.
- Cumulative GHG effects are improperly considered in the EIR, as noted at comment 112.

- Trip generation rates used for the Project are understate the Project's trip rate and misstate the vehicle mix. SCAQMD recommends a trip rate of 2.57 trips/1,000 sf and, more importantly, 40% trucks.

Additional Comments:

Not all feasible mitigation has been required as set out in great detail by EIR commenters. Many mitigation measures are incorporated in language only with no requirement that they ever be implemented with Project construction or operation. Numerous commenters noted the inadequacy and ineffectiveness of mitigation for transportation, air quality, greenhouse gases, biological resources, etc. Moreover, no mitigation has been required for impacts to/from aesthetics or agricultural resources.

It is feasible to require the additional mitigation of this Project including, but not limited to, those measures recommended by commenters in the FEIR and the following:

1. The building and site plan designs shall demonstrate that the project's energy efficiencies represent a 25% reduction from current Title 24 energy efficiency standard. The Project shall be built in compliance with the building and site plans.
2. Require by contract provision that Project tenant/purchaser implement compressed workweek schedules.
3. Require that all heavy trucks accessing the Project site are Smartway 1.25 (or 1.0) or greater.
4. Alternatively to the above, require by contract provision that Project tenant/ purchaser achieve at least 20 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of consolidated trips carried by SmartWay carriers until it reaches a minimum of 90 percent of all long-haul trips carried by SmartWay 1.0 or greater carriers.
5. Require that all heavy trucks accessing the Project site conform to CARB 2010 air quality standards or better.
6. Install catalytic converters on all gasoline-powered equipment.
7. Include 10% electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets.
8. Require by contract provision that Project tenant/ purchaser establish a carpool/vanpool program.
9. Require by contract provision that Project tenant/purchaser charge parking fees for single-occupancy vehicles.
10. Provide preferential parking for EV and CNG vehicles across at minimum of 10% of auto parking spaces in locations nearest to the Project entrances.
11. Install EV charging stations, including at least one Quickcharge unit, on the Project site.
12. Require use of electrical equipment (instead of gasoline-powered equipment) for landscape maintenance.

13. Diesel or gasoline powered yard trucks, hostlers, yard goats, and forklifts shall be prohibited. Only electric yard trucks, hostlers, yard goats, and forklifts shall be used.
14. Each facility operator shall provide regular sweeping of onsite parking and drive areas using street sweepers that comply with applicable SCAQMD Rules.
15. Each facility operator shall maintain a log of all trucks entering the facility to ensure that, on average, the daily truck fleet meets applicable air quality emission standards. This log shall be available for inspection by City staff at any time.
16. Each facility operator shall prohibit all vehicles from idling in excess of three minutes in all onsite areas.
17. Each facility operator shall ensure that onsite staff in charge of keeping the daily log and monitoring for excess idling will be trained and certified in diesel health effects and technologies, such as by requiring attendance at CARB-approved courses.
18. Each facility operator which upon occupancy does not already operate 2077 and newer trucks shall in good faith be required to apply for funding to replace or retrofit their trucks such as Carl Moyer, VIP, Prop 1B or similar funds. Should funds be awarded, the tenant shall be required to accept and use them.

As an important note, merely incorporating any of these feasible mitigation measures within the requirement that "lease/purchase documents shall identify that tenants are encouraged to promote the following" or requiring only a writing or notation without requiring compliance therewith immediately renders them uncertain, unenforceable, and ineffective.

Thank you for your consideration of these additional comments.

Sincerely,

Raymond W. Johnson

Subject: Warehouses in East Moreno Valley
Dear Sir:

I have lived in Moreno Valley for forty five years. I voted for incorporation under the threat of being annexed by Riverside. I have watched as our new city grew. The city is now blocked from expansion to the north by a natural boundary and residential occupancy. The cities of Riverside and Perris block expansion to the west and south. Now you want to limit future expansion by authorizing a warehouse project covering the entire eastern boundary of the city. This adventure dooms the city as a haven for transients and other undesirable elements of society not to mention the environmental impact. It will not encourage more lucrative development and investment by other ventures. I urge this project be abandoned. Much of our area is already devoted to warehouses which exist on all major streets both north/south and east/west. I do not believe any of the promises touted by council members or its developer who support the project.

Subject: Prologis Project and other warehouse/logistics projects

Dear Mr. Bradshaw,

I understand the Moreno Valley city planners intend to present their recommendation on the Prologis Project on 13 March 2014. I am unable to attend meetings to voice my position on Prologis. I want to take this opportunity in email form to do just that.

We have a perfectly good general plan that has let everyone know the zoning permitted in all areas of Moreno Valley. Based on the general plan many people have made decisions on when and where to make purchases of various types of parcels of land, etc. Just because the city council allowed Sketchers to be built should in no way mean other warehouses should be allowed to be built on the east side of Moreno Valley and especially if any such project would require any zoning changes from the general plan. I realize the city council can ignore the city planners, as they did with the Sketchers project if I recall that situation correctly.

I am adamantly opposed to building more of the behemoth warehouse/logistics building in Moreno Valley. We already have too many which are negatively impacting the environment. More to the point, the current members of logistics organizations advocate only building warehouses/logistic centers where rail lines can be used (as opposed to using trucks on streets and highways) to transport products to and from these warehouses. The reason is that the "logistics" industry is concerned about the very negative responses to the "older style" warehouse/logistics centers built to use the surface streets and highways from the general public and especially from people who live close to these centers who directly and personally experience the very real downside to these centers. In the case of Sketchers the possible number of new jobs for Moreno Valley people there just did NOT materialize, nor will it with any of the highly mechanized warehouse/logistics centers.

I would expect Prologis to be another highly mechanized center. I urge you to recommend NOT approving the Prologis Project as well as any other such logistics center on the east side of Moreno Valley as clearly there is no rail service there to be used. The current city council has a couple of members who may very well be removed when the voters have a chance to legally register their opinions very soon. One member was placed there in illegal contravention of the Brown Act according to my reading of that law. If nothing else this decision should be delayed until the membership of the city council is decided, because this is a very important decision that will affect this city for many years to come. Moreno Valley already has a very poor reputation as a city. I would hate to see our reputation further tarnished by expediting the Prologis Project under these adverse circumstances.

IT'S my opinion THAT Prologis Warehouse Corporation is looking to make A FAST BUCK AT THE EXPENSE OF THE CITIZENS OF MORENO VALLEY.

Skechers warehouse project was to produce 1000 new jobs AS stated by Moreno Valley officials. IT only employs roughly 600, & most of these employees came from the five smaller Skechers warehouses in Ontario, consolidating them in Moreno Valley.

THE CURRENT Freeway System IS Very congested, due to the wall to wall homes that developers were allow to construct now you want to increase the volume of traffic with large truck.

PLEASE remember that you are ALL Public Service employees working on behalf of the citizens of Moreno Valley

RECEIVED

AUG - 7 2012

CITY OF MORENO VALLEY
Planning Division

Dear Mr. Bradshaw

I am writing you concerning the various warehouse projects proposed for Moreno Valley. More to the point. I am writing to point out what I feel are errors made by the cities so called experts. I am neither for or against the projects. Build them or don't build. I don't care. What I don't like is to hear so called facts that I don't feel are accurate. I have enclosed a 2010 article about the Fontana logistics warehouses for you to read. It has a union slant to it but the facts on how the logistics warehouses are run is accurate. Only when the city has all the facts, pro & con, can it decide what is best for Moreno Valley.

Some time back my wife & I watched the city counsel meeting on TV. I didn't write down the names & dates but it was one of the meetings on the proposed Highland Fairview World Logistics Center. The first "expert" said the average logistics job pays around \$42,000.00 per year. This maybe true for the few people employed by the logistics company but not the majority of the workers, who in fact are low paid temps. As a rule logistics companies do not provide good blue collar jobs. Their whole reason for being is to drive down costs. Labor costs.

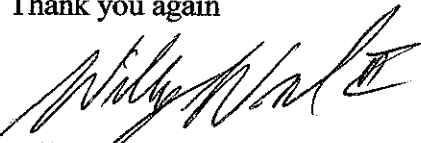

The second expert is the one I really take issue with. He is the professor from the University Of Redlands. Now let me say my step daughter just graduated from the University Of Redlands so I have great respect for the University. I do not feel the "expert" professor knows what he is talking about when he talks about Moreno Valley being the ideal location and how this ideal location will reduce truck traffic in the So. Cal. Area. Ontario and Fontana are ideal locations because of all the freeway access that surround those cities. From a truckers view point Moreno Valley is a bad location. One way in & one way out. The 60/215 freeway. He states in his presentation that trucks will come from the east to Moreno Valley to pickup loads and then return east never having to go into the So. Cal. area. This maybe true in a few cases but not in the majority. The reason is this. Most trucks come here loaded. Those loads will deliver in the So. Cal area. Not many loads deliver in the Banning area. So when these trucks are empty they will have to come up the 60/215 freeway to get to Moreno Valley. Pulling that hill, with all the other trucks, is not fun. Leaving heading east thru the hills in the bad lands is not fun. Traffic will be a mess on the 60/215 freeway for a number of other reasons. One, most trucks coming to any logistics warehouse come from the ports. Two, other trucks from UPS, Fedex, YRC, JB Hunt, Swift, ABF, Conway, Schneider, Knight, England and others that all have yards in the Inland basin will all be coming & leaving via the 60/215 freeway. The more warehouses you build in Moreno Valley the more truck traffic you will have on the 60/215 freeway. Not less as the "experts" would like you to believe. One way in and one way out. When a ship hits the port some large logistics warehouses can get 20, 30 or more containers a day and take back as many empty

containers to the ports. Once in the warehouse the goods must be sorted to fill orders & shipped out. Those trucks coming to pick up those orders will come from the Inland basin area to the west not from the east. And most like UPS & Fedex will return to their yards in the Inland area basin.

After you review all this information if you agree with what I have said and still plan to build all there warehouses I have one suggestion. One most truck drivers will hate me for but one I feel needs to be done. This suggestion will involve contacting CalTrans and dealing with them will be harder then dealing with the people of Moreno Valley. What I suggest is a restricted truck lane coming up (east) the 60/215 freeway. Cal Trans built the truck bypass at the top of the hill. At the 60/215 split. But they did not restrict the trucks to the right lane to force them to use the truck by pass. A "trucks must stay in the right lane. No passing" lane restriction would go a long way to helping traffic in the long run. This restriction should run from the MLK off ramp up to the truck bypass. Right now a truck going 45 mph up the hill can pass a slower truck even if he later moves back over to use the truck bypass. The more trucks you have the more this will cause traffic problems. Heck, right now the old 60 east sign at the top of the hill still has a "trucks ok lane" on it. Which can be confusing. That needs to be removed as well as adding the lane restriction. Any cost for signs, painting, and any lane realignment should be picked and paid for by the different warehouse projects under consideration now and in the future. The same idea of a lane restriction can be used leaving Moreno Valley going down the hill with a speed restriction. But without a truck bypass for trucks merging from the 215 north to the 60 west this probably would not work.

Thank you for your time. I have lived in Moreno Valley for 26 years. I have been driving a truck for a living for 36 years. I have driven long haul & local. I have been a member of the Teamsters Union for 27 years. I work for YRC Freight and have been with them for 20 years. So I would like to think I know a little about the transportation industry. At least from the end where the truck meets the dock.

Thank you again

Willy Wohlford

Meetcha Dating with a twist.

Holding WAL-MART ACCOUNTABLE

HAROLD MEYERSON | September 6, 2010

Nobody, it seems, is responsible for the conditions of work in the warehouses of Fontana -- even though warehouse work is mainly what Fontana has to offer. The Los Angeles exurb is part of California's Inland Empire, which boasts the world's largest concentration of warehouses, to which thousands of trucks make a daily 70-mile trek from the ports of Long Beach and Los Angeles, carrying Asian-made goods for market. Thousands more trucks depart daily from Fontana, carrying those goods, re-sorted and repackaged, to Wal-Marts, Targets, Loews, and Home Depots up to a thousand miles away. Close to 90,000 people work in those warehouses. But no one is responsible for the conditions of their work.

Homero Lovato loaded trucks for several years in one of the many warehouses containing goods bound for Wal-Mart's shelves. With one other worker, he loaded three or four truckloads a day, making \$42.50 per truckload. Even before unemployment began to skyrocket, he says, the terms of work were hard and degrading: "If people get sick, they have to stay on the job. If people have to go to the bathroom, they have to wait until the break." It was, he says, a rush job, with workers frequently falling behind the loading schedules and then racing to finish their tasks.

Workers in other Fontana warehouses tell similar stories. Blanca Cortes, who worked in quality control at a warehouse for UPS Mail Innovations, a nonunion subsidiary of United Parcel Service, once fainted on the job when she was six months pregnant. The warehouse wasn't air-conditioned even though temperatures in Fontana frequently exceed 100 degrees. "There were about 10 faintings that year," she recalls. "They wouldn't even buy a fan." Olga Romero, who worked in a warehouse that shipped shoes to Wal-Mart, also remembers the heat -- and the cold. "It would be over 100 in the summer and in the 40s in the winter," she says. "Something's wrong when you have to work with a couple of jackets."

Fontana's warehouse workers never made a decent wage, even when the economy was robust. Cortes made \$9.50 an hour with no benefits, until she was replaced last year by a new hire who was paid \$7 an hour. In their 2008 book, *Getting The Goods: Ports, Labor and the Logistics Revolution*, Edna Bonacich and Jake B. Wilson report that direct hires at Fontana's Target warehouses started at \$12.80 an hour and could work their way up to \$17, while temps started at \$8.50 and maxed out at \$12. (Of course, these figures date from the bubble years. Today, unemployment in the Fontana area is close to 15 percent.) And by one estimate, 53,000 of the 90,000 Fontana warehouse workers -- even though they may hold down the same job year after year -- are temps.

When you drive through Fontana on Interstates 10 or 15, it doesn't seem hard to tell whose warehouse is whose. One warehouse has hundreds of Wal-Mart trucks lined up at its bays; another, hundreds of Home Depot trucks. But, as far as Wal-Mart, Home Depot, and the law are concerned, these are not the companies' warehouses.

The warehouses, in fact, are part of an elaborate system enabling Wal-Mart and its competitors to keep their prices low and their revenues high by depressing wages and labor costs all along their supply chains -- and to protect outfits like Wal-Mart from responsibility for working conditions. The giant retailers that have come to dominate much of the American economy don't own many of the hundreds of warehouses in Fontana or anyplace else.

In Fontana, the warehouses are owned by local commercial realtors and operated by logistics companies. But the logistics companies don't formally employ a majority of the warehouse workers, either. Rather, the workers are employed by some of the region's 270 temp agencies. The way a famously demanding employer like Wal-Mart ensures that the warehouses are running as it sees fit is to contract with a few large logistics companies (Wal-Mart likes Exel, a British firm), which in turn contract with a few large temp agencies (Exel likes Staffmark).

Thus are the goods moved with dispatch, while workers receive low pay, no benefits, can't readily join a union, and can be let go at a moment's notice. There is a situation that the workers themselves -- almost entirely Hispanic, largely immigrant, and between a quarter to 40 percent of them, in the assessment of one union organizer, undocumented -- cannot easily remedy. And there is a

situation for which their real employers -- the Targets, the Sears, and above all the Wal-Marts -- can and do deny all responsibility.

The warehouse workers of Fontana constitute a key link in both the global supply chain and the American political economy. For the American labor movement to experience a rebirth and American workers to enjoy a rising share of the nation's wealth, it's imperative that unions make gains among America's new working class and its dominant and standard-setting employer: Wal-Mart. And the road to a unionized Wal-Mart runs straight through Fontana: Shut down the temp warehouses, and Wal-Mart's shelves will soon be bare.

Last year, the Change to Win labor federation waged an ambitious campaign to organize Fontana's warehouse workers, a campaign it then wound down after local unemployment soared and Congress failed to pass the Employee Free Choice Act. But Change to Win has not given up on Fontana, much less Wal-Mart, and is looking at ways that the government can help the warehouse workers ease their plight.

It's not an easy task. By the standard of common sense, the tens of thousands of full-time warehouse workers who are employed by temp agencies are misclassified. Clarissa Lua, who worked alongside Blanca Cortes at UPS Mail Innovations, went through 10 staffing agencies in the five years she worked there. Or rather, the agencies went through her, since UPS, not she, switched her agencies. At each agency the job was always the same: "Sometimes we didn't even know which agency we worked for," she said.

Like millions of American workers, Lua was a perma-temp, trapped in a work arrangement common not only to bottom-feeders like Wal-Mart but to such presumably high-end employers as Microsoft. So while unionists and other worker advocates are asking President Barack Obama's Department of Labor and Middle Class Task Force to remedy misclassification violations at major employers, it's tricky to apply that remedy to warehouse workers unless they can be shown to be permanent workers misclassified as temps. Neither can the government deny contracts to the middlemen -- the logistics firms or employment agencies -- for these companies don't have government contracts.

Instead, the unions are asking the government for two things: First, to enforce the Fair Labor Standards Act (FLSA) rigorously inside the warehouses, tallying and fining them for violations of minimum-wage and maximum-hours laws. And second, to hold accountable not the temp agencies or the logistics companies or the local real-estate companies but, rather, the big-box retailers -- the companies that structured and benefit from this byzantine system.

"At the very least," one union official says, the Department of Labor can "enforce the FLSA on warehouse workers not being paid for overtime. The temp agencies can fudge on this by not listing hours-worked on their paychecks." In fact, at the direction of Labor Secretary Hilda Solis, the department hired 250 new wage and hour investigators last year, an increase that brings the Wage and Hour Division, after years of neglect, close to its all-time high.

"The department is willing to spend more on enforcement: It's asking for \$25 million more in the president's 2011 budget," another union official says. "The question is where they'll focus their resources. They haven't yet said they're going after the biggest offenders. They need to go after Wal-Mart and FedEx, not some bodega owners."

There's a precedent for targeting the retailers who design and control the supply chains. In 1996, at the direction of Labor Secretary Robert Reich (yes, *our* Robert Reich), the Wage and Hour Division began a "No Sweat" campaign, which held retailers responsible for the sweatshop wages and conditions its inspectors had found in the small garment factories (chiefly in Los Angeles) that turn out their products. When the contractors and subcontractors who employed the seamstresses were unable to come up with money for the back-pay settlements that the division had ordered them to make, the Labor Department held the retailers -- in this case, Macy's -- liable for the payments. To persuade Macy's to settle with the workers, Reich threatened to seize the Macy's-bound garments they had sewn, under the "hot goods" provision of the FLSA that permits the department to take goods produced under conditions prohibited by the act. Macy's settled, and, with Target, then signed an agreement taking responsibility to see that the working conditions all along their supply chains conformed to the FLSA's standards.

"Invoking 'hot goods' is the nuclear option," one union staffer says. "But we want Labor to be open to using it. We want them to go after the top of the food chain."

Going after the top of the chain to improve working conditions should fit comfortably within President Obama's stated economic goals, paramount among which is reversing the long-term decline of jobs and worker compensation in America. An administration trying to bolster green jobs and green manufacturing cannot remain indifferent to jobs in the service and retail sectors, which employ far more people than manufacturing and construction combined.

Raising the Wal-Mart wage -- and the Wal-Mart wage is paid not just to the company's direct employees but to many of its competitors' employees and, in one form or another, to all those who work along its, and its competitors', supply chains -- is a key step in re-creating the broadly shared prosperity America once enjoyed. To that end, the president supported the Employee Free Choice Act. To that end -- all the more because EFCA failed to become a law -- he should support enforcement actions that compel Wal-Mart to become a more responsible employer.

Wal-Mart is not the only company at the top of its respective food chain, of course. Another is FedEx, which as a point of both law and common sense looks to be misclassifying its 30,000 "ground drivers," who pick up and deliver packages that are not shipped by air, as independent contractors, not eligible for benefits, though their routes, hours, pay, and vacations are all determined by FedEx. The Teamsters union, which represents truck drivers at rival UPS, was stymied by the hostility of the George W. Bush administration (FedEx CEO Fred Smith is a Republican mega-donor). So the Teamsters over the past decade succeeded in getting roughly 30 state attorneys general to investigate FedEx's misclassification of drivers.

With a number of those attorneys general closing in, FedEx has shifted its employment model in several states -- not to one in which it finally assumes responsibility for its workers, however, but to a system of "super contractors" who purchase multiple routes and then hire drivers who travel them -- all under FedEx's careful, if unacknowledged, supervision. Organized labor wants the administration to build on the work of the state attorneys general, to determine on its own that FedEx is misclassifying 30,000 employees, and then to declare that violations of labor law -- such as misclassification -- constitute grounds to reduce or terminate its business with companies guilty of such practices. (See "A Long Haul" by David Bensman and Molly Greenberg, Page A9.)

In taking on the Wal-Marts and FedExes, of course, the administration would be challenging some of the most powerful institutions in the land. Then again, in the America that Obama has pledged to rebuild, someone should always be responsible for the conditions of work.

Officials seek comments on warehouses

Comments are being accepted on a proposal for massive project in Moreno Valley

BY LORA HINES
STAFF WRITER
lhines@pe.com

Public comments are being accepted on a draft environmental impact report for proposed 2.2 million square-foot warehouse project in Moreno Valley that officials began discussing about five years ago.

City planning officials recently released the report for the proposed ProLogis Eucalyptus Industrial Park Project, which would consist of six warehouses south of Highway 60 and east of the Moreno Valley Auto Mall. Residents, state and local agencies and community and environmental groups have until Sept. 4 to submit comments on the report.

ProLogis, a San Francisco-based international warehouse developer, bought more than 125 acres in the 3000 block of Eucalyptus Avenue more than five years ago. Almost all of it will be used for the project, which will require amendments to the city's general plan and zoning requirements.

WAREHOUSE

CONTINUED FROM A8

agencies, residents and environmental groups about concerns with the proposed project, including increased traffic, pollution and its proximity to schools.

The report states the project could affect areas such as air and water quality, animal habitat, Native American prehistoric sites, drainage and traffic.

Resident Marti Orth was among those who submitted comment about the proposed project in 2008. She said she is as opposed to it now as she was then, but she believes her opinion will have little effect on the City Council, which will decide whether to approve the project later this year.

"I think it's a forgone conclusion," said Orth, a resident of more than 40 years. "First, decisions are made. Then they ask for opinions."

On Wednesday, July 25, city manager Henry Garcia told hundreds of Inland area officials and business owners that warehouse development and health care will be Moreno Valley's job growth focus areas because they have the most potential to employ the city's primarily blue-collar workforce.

Orth said residents have little reason to believe that the proposed project will bring as many jobs as officials claimed because the Skechers warehouse didn't.

"I don't know why (ProLogis) would be any better," she said.

Skechers had employed about 1,000 people in five smaller warehouses in Ontario before consolidating and moving to Moreno Valley. Moreno Valley officials and project supporters

promised that Skechers warehouse would bring more than 1,000 jobs. It employs about 600 people.

City officials have said they expect the number of employees to increase as the economy improves.

Comments about the ProLogis project are to be sent to associate city planner Je Bradshaw, Moreno Valley Planning Division, 141 Frederick St., Moreno Valley 92553 or send e-mail to je.freyb@moval.org.

STAFF ARTIST

proposed, ProLogis officials estimated the project could cost as much as \$150 million to develop and would create between 1,000 and 1,500 jobs. No one from the corporation could be reached Thursday, July 26, to offer a cost or job update or comment on the project.

According to the draft environmental impact report, the poor economy in 2008 stalled the project. ProLogis recently decided to pursue the process, the report states.

City planning official John Terrell said there is nothing unusual about the project or its potential impacts that have delayed it.

In March 2008, city planning officials received 25 responses from state and local

Draft Environmental Impact Report**

4.12 NOISE

This section of the EIR is intended to satisfy the City's requirements for a project-specific noise impact analysis by examining the short-term and long-term noise impacts of the proposed project on sensitive uses adjacent to the proposed project area and by evaluating the effectiveness of mitigation measures. This includes the potential for the proposed project to result in impacts associated with a substantial temporary and/or permanent increase in ambient noise levels in the vicinity of the project area; exposure of people to excessive noise levels, groundborne vibration, or groundborne noise levels.

CEQA requires an analysis of the proposed project's impacts on the existing environment; not an analysis on the existing environment's impacts on the proposed project. The occasional blow downs that occur at the Southern California Gas Company (SCGC) are part of the existing conditions and have been part of the existing conditions for years. Thus, for purposes of clarity, it should be noted that the impact analysis below goes beyond the requirements of CEQA and provided as part of an analysis to ensure worker safety. All mitigation measures imposed in this analysis are the responsibility of future developers and not SCGC.

For the reader's reference, this EIR and each of the technical reports and analyses contained herein have been written to address a series of planning entitlements, which affect several separate, adjacent and related properties. The overall project site covers 3,918 acres in the Rancho Belago area of the City of Moreno Valley. It includes 3,814 acres of land, which is the subject of various entitlements, plus 104 acres of land affected by off-site improvements needed to support the proposed development. The proposed entitlements are summarized below.

A General Plan Amendment is proposed covering 3,814 acres, which redesignates approximately 71 percent of the area (2,710 acres) for logistics warehousing and the remaining 29 percent (1,104 acres) for permanent open space and public facilities. The following elements of the General Plan are included in the proposed Amendment: Community Development (land use); Circulation; Parks, Recreation, and Open Space; Safety; Conservation; and the General Plan Goals and Objectives.

A new Specific Plan will be adopted to govern development of the World Logistics Center for the 2,710 acres. A separate zoning amendment will also be processed and adopted to rezone 1,104 acres for open space and public facilities uses and to incorporate the Specific Plan into the City's Zoning Map.

In addition to the General Plan Amendment, Specific Plan, and Zone Change, the project includes a Tentative Parcel Map covering 1,539 acres (property owned by the project applicant, Highland Fairview) within the project site. This subdivision map is for financing purposes only and will not confer any development rights to the property owner.

The project includes pre-annexation zoning for an 85-acre parcel of land within the project area.

Finally, a Development Agreement between the City and Highland Fairview (the project applicant) is included as one of the project entitlements. The details of all the project entitlements are included in Section 3.4 of the EIR, *Project Characteristics*. The environmental impacts of all of these entitlements on the entire project area are addressed in this EIR and the accompanying technical reports and analyses.

The analysis contained in this section is based on the following technical study prepared for the proposed project:

- *Noise Assessment for the World Logistic Center Specific Plan*, Mestre Greve Associates, January 24, 2013 (Appendix K of this EIR); and

World Logistics Center Project

Draft Environmental Impact Report

In addition to these project-specific technical studies, the analysis contained in this section is also based on the following reference documents:

- *California Noise Insulation Standards*, California Code of Regulations, Title 24, Part 2, §3501;
- *Highway Traffic Noise Prediction Model (FHWA-RD-77-108)*, Federal Highway Administration (FHWA);
- *City of Moreno Valley General Plan*, City of Moreno Valley, July 2006;
- *Moreno Valley Municipal Code*, City of Moreno Valley, current through Ordinance 836 and the February 2012 code supplement; and
- *State of California General Plan Guidelines*, Governor's Office of Planning and Research, October 2003, pages 249 and 250.

4.12.1 Existing Setting

4.12.1.1 Background

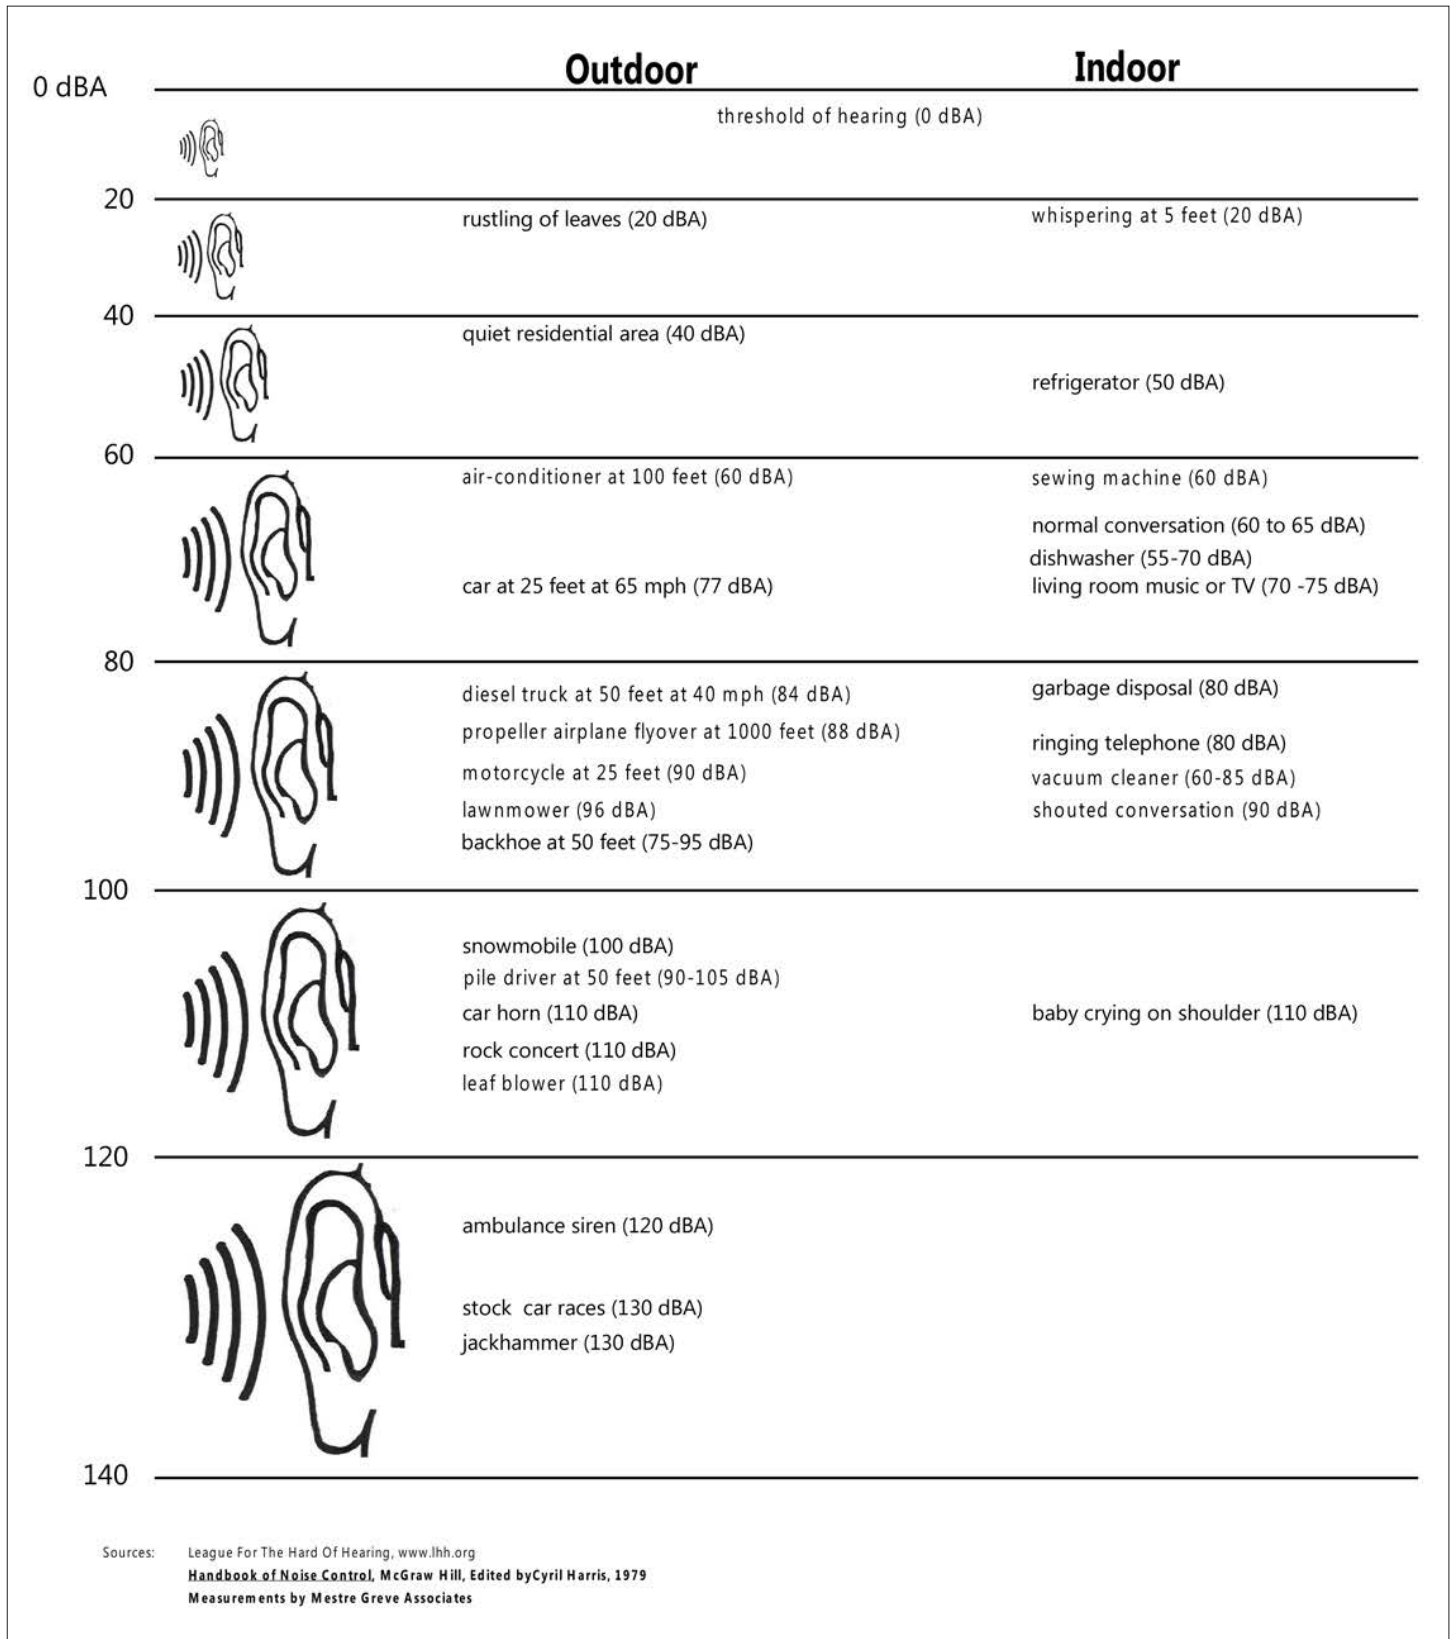

Characteristics of Noise. To the human ear, sound is technically described in terms of its loudness (amplitude) and pitch (frequency). Pitch is generally an annoyance, while loudness can affect our ability to hear. Noise is usually defined as unwanted sound; it consists of any sound that may produce physiological or psychological damage and/or interfere with communication, work, rest, recreation, and sleep.

Measurement of Noise. The standard unit of measurement of the loudness of sound is the decibel (dB). Decibels are based on a logarithmic scale. The logarithmic scale compresses the wide range in sound levels resulting in a more usable range of sound level values, similar to the Richter scale used to measure earthquakes. To humans, a sound 10 dB higher than another is considered to be twice as loud; a sound 20 dB higher than another is considered four times as loud; etc. Typical daily sounds in the environmental range from 30 dB (very quiet) to 100 dB (very loud).

Since the human ear is not equally sensitive to sound at all frequencies, a special frequency-dependent rating scale has been devised to relate noise to human sensitivity. The A-weighted decibel (dBA) scale performs this compensation by discriminating against frequencies in a manner approximating the sensitivity of the human ear. Community noise levels are measured in terms of the dBA. Figure 4.12.1 shows examples of various noises sources and their typical dBA noise level.

There are two categories of noise that are measured to characterize noise conditions: single event noise and community, or cumulative, noise. Single event measurements describe the noise levels from an individual event such as a passing airplane or a heavy-duty truck. Cumulative measurements average the total noise in a community over a specific time period, which is typically 1 or 24-hours. The noise impact analysis performed for this EIR is based on assessment of both single event noise and community or cumulative, noise.

Several rating scales have been developed for measurement of community noise. These account for: (1) the parameters of noise that have been shown to contribute to the effects of noise on humans; (2) the variety of noises found in the environment; (3) the variations in noise levels that occur as a person moves through the environment; and (4) the variations associated with the time of day. They are designed to account for the known health effects of noise on people described previously. Based on these effects, the observation has been made that the potential for a noise to affect people is

LSA

FIGURE 4.12.1

World Logistics Center Project
 Environmental Impact Report
 Typical A-Weighted Noise Levels

THIS PAGE INTENTIONALLY LEFT BLANK

dependent on the total acoustical energy content of the noise. A number of noise scales have been developed to account for this observation. Two of the predominant noise scales are the Equivalent Noise Level (L_{eq}) and the Community Noise Equivalent Level (CNEL). L_{eq} is the sound level corresponding to a steady-state sound level containing the same total energy as a time-varying signal over a given sample period. L_{eq} is the “energy” average noise level during the time period of the sample. L_{eq} can be measured for any time period, but is typically measured for 1 hour. This 1-hour noise level can also be referred to as the Hourly Noise Level (HNL). It is the energy sum of all the events and background noise levels that occur during that time period.

CNEL is the predominant rating scale now in use in California for land use noise compatibility assessment. The CNEL scale represents a time weighted 24-hour average noise level based on the dBA. Time weighted refers to the inclusion of penalties for noise that occurs during certain noise-sensitive time periods. The evening time period (7 p.m. to 10 p.m.) penalizes noises by 5 dBA, while nighttime (10 p.m. to 7 a.m.) noises are penalized by 10 dBA, reflecting people’s increased sensitivity to noise during these time periods. A CNEL noise level may be reported as a CNEL of 60 dBA, 60 dBA CNEL, or simply 60 CNEL.

$L(\%)$ is a statistical method of describing noise which accounts for variance in noise levels throughout a given measurement period. $L(\%)$ is a way of expressing the noise level exceeded for a percentage of time in a given measurement period. For example, since 5 minutes is 25 percent of 20 minutes, $L(25)$ is the noise level that is equal to or exceeded for five minutes in a twenty-minute measurement period. It is $L(\%)$ that is used for most Noise Ordinance standards. For example most daytime County, State and City noise ordinances use a standard of 55 dBA for 30 minutes per hour, or an $L(50)$ level of 55 dBA. In other words, the noise ordinance may state that no noise level should exceed 55 dBA for more than fifty percent of a given period.

The maximum noise level (L_{max}) is the highest exponential time averaged sound level that occurs during a stated time period. The noise levels discussed in this analysis for short-term noise impacts are specified in terms of maximum levels denoted by L_{max} , which reflects peak noise conditions and addresses the annoying aspects of intermittent noise. It is often used together with another noise scale, or noise standards in terms of percentile noise levels, in noise ordinances for enforcement purposes. For example, the L_{10} noise level represents the noise level exceeded 10 percent of the time during a stated period. The L_{50} noise level represents the median noise level. Half the time the noise level exceeds this level, and half the time it is less than this level. The L_{90} noise level represents the noise level exceeded 90 percent of the time and is considered the background noise level during a monitoring period. For a relatively constant noise source, the L_{eq} and L_{50} are approximately the same.

Fundamentals of Groundborne Vibration. Vibration refers to groundborne noise and perceptible motion of the earth. Similar to noise, vibration is transmitted in noise-like waves through the earth and solid objects.

There are several ways to categorize vibration sources. One way is to divide vibration into natural sources (e.g., earthquakes, volcanic eruptions, sea waves, and landslides) and human sources (e.g., explosions, machinery, traffic, trains, and construction equipment). Similar to noise sources, vibration sources can also be described as continuous (e.g., operating factory machinery) or transient (e.g., explosions).

As with noise, ground vibrations can be described by amplitude and frequency. Vibration amplitude is characterized by its displacement, velocity, and acceleration. Displacement is the distance that soil particles travel from their original location as a result of vibration, as measured in inches or millimeters. Velocity is the speed of the soil particles measured in inches per second or millimeters per second. Acceleration is the acceleration of the soil particles measured in inches per second per second or millimeters per second per second. Particle velocity is the most commonly used vibration

World Logistics Center Project
Draft Environmental Impact Report

attribute used to describe vibration. Table 4.12.A presents the human reaction to various levels of peak particle velocity. Vibrations also vary in frequency. Traffic vibrations generally range in frequencies from 10 to 30 hertz (Hz), and tend to average around 15 Hz. As a point of reference, city buses often generate frequencies around 3 Hz at high vehicle speeds, due to their suspension systems.

Table 4.12.A: Human Reaction to Typical Vibration Levels

Vibration Level Peak Particle Velocity (inches/second)	Human Reaction
0.0059–0.0188	Threshold of perception, possibility of intrusion.
0.0787	Vibrations readily perceptible.
0.0984	Level at which continuous vibrations begin to annoy people.
0.1968	Vibrations annoying to people in buildings.
0.3937–0.5905	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges.

Source: Caltrans 1992.

Groundborne vibration is almost exclusively a concern inside buildings and is rarely perceived as a problem outdoors, where the motion may be discernable. However, without the effects associated with the shaking of a building, there is less adverse reaction. Building vibration may be perceived by the occupants as motion of building surfaces, rattling of items on shelves or hanging on walls, or as a low-frequency rumbling noise. Building damage is not a factor for normal projects, with the occasional exception of blasting and pile driving during construction or mining. Annoyance from vibration often occurs when the vibration exceeds the threshold of perception by up to 10 decibels. This is an order of magnitude below the damage threshold for normal buildings.

Typical sources of groundborne vibration are construction activities (e.g., blasting, pile driving, and operating heavy-duty earthmoving equipment), steel-wheeled trains, and occasional traffic on rough roads. Problems with groundborne vibration and noise from these sources are usually localized to within about 100 feet of the vibration source, although there are examples of groundborne vibration causing interference out to distances greater than 200 feet, as described in the FTA Transit Noise and Vibration Impact Assessment (FTA, May 2006). When roadways are smooth, vibration from traffic, even heavy trucks, is rarely perceptible.

Factors that influence groundborne vibration and noise include the following:

- *Vibration Source:* Vehicle suspension, wheel types and condition, track/roadway surface, track support system, speed, transit structure, and depth of vibration source.
- *Vibration Path:* Soil type, rock layers, soil layering, depth to water table, and frost depth.
- *Vibration Receiver:* Foundation type, building construction, and acoustical absorption.

Among the factors listed above, there are significant differences in the vibration characteristics when the source is underground versus at ground surface. In addition, soil conditions are known to have a strong influence on the levels of groundborne vibration. Among the most important factors are the stiffness and internal damping of the soil and the depth to bedrock. Vibration propagation is more efficient in stiff clay soils than in loose sandy soils, and shallow rock seems to concentrate the vibration energy close to the surface and can result in groundborne vibration problems at a great distance from the track. Factors such as layering of the soil and depth to water table can have significant effects on the propagation of groundborne vibration. Soft, loose, sandy soils tend to attenuate more vibration energy than hard, rocky materials. Vibration propagation through groundwater is more efficient than through sandy soils.

4.12.1.2 Sensitive Land Uses in the Project Vicinity

Certain land uses are considered more sensitive to noise than others. Examples include residential areas, educational facilities, hospitals, childcare facilities, and senior housing. The project vicinity and Specific Plan area are characterized by a mix of developed and undeveloped properties. Developed properties in the vicinity include an industrial/warehouse building in Moreno Valley to the northwest (Skechers) and several residential neighborhoods along Redlands Boulevard along the western boundary of the project site. An area of the City known as “Old Moreno” is situated near the southwest portion of the project site, around the intersection of Redlands and Alessandro Boulevards. The homes along Merwin Street, east of Redlands Boulevard, constitute the closest sensitive receptors to the project site (i.e., they are adjacent to the property).

4.12.1.3 Existing Noise Measurements

Existing noise levels in the vicinity of the proposed project are used establish baseline noise levels in key areas. Noise measurements within the project site and in the surrounding area were taken. The noise measurement locations were selected to provide coverage of the project’s potential noise impact area. The noise measurement locations are shown Figure 4.12.2.

Noise measurements were taken at sixteen sites in the project vicinity during the daytime hours (between 7 a.m. and 10 p.m.) and during nighttime hours (between 10 p.m. and 7 a.m.). For each measurement site and time period, noise levels were measured for 15 minutes and calibrated to ensure that the measured sound level readings were accurate. The measurements were used to calculate existing L_{eq} , L_{min} , L_{max} , $L_{1.7}$, $L_{8.3}$, L_{25} and L_{50} values for the measurement locations. Table 4.12.B shows the results for the daytime measurements, and Table 4.12.C shows the nighttime measurements.

Table 4.12.B: Existing Daytime Noise Measurements (dBA)

4.12.1.4 Existing Traffic Noise Environment

The primary existing noise sources in the project area are transportation facilities. Traffic on SR-60, Redlands Boulevard, Theodore Street, Gilman Springs Road, and other local streets is the dominant source contributing to the ambient noise levels in the project vicinity. Noise from motor vehicles is generated by engine vibrations, the interaction between the tires and the road, and the exhaust system. Table 4.12.D identifies the existing (2012) traffic noise levels adjacent to roadway segments in the project vicinity.

Table 4.12.D: Existing Traffic Noise Levels (dBA)

Roadway Segment	CNEL (dBA) at 100 feet
Alessandro Boulevard (Lasselle Street and Morrison Street)	55.5
Alessandro Boulevard (Morrison Street to Nason Street)	56.8
Alessandro Boulevard (Nason Street to Oliver Street)	64.4
Cactus Avenue (Nason Street to Oliver Street)	64.3
Cactus Avenue (Oliver Street to Moreno Beach Drive)	58.2
Cactus Avenue (Redlands Boulevard to Street D)	50.2
Cactus Avenue (west of Redlands Boulevard)	57.5

4.12.1.5 Existing SDG&E and SCGC Facilities

The proposed World Logistics Center Specific Plan area is currently occupied by one San Diego Gas and Electric Company (SDG&E) compressor station and two Southern California Gas Company (SCGC) facilities. These facilities are located within the boundaries of the Specific Plan as shown in previously referenced Figure 4.12.2. The SDG&E compressor station recompresses natural gas received from interstate gas pipelines and delivers the gas to Southern California via transmission pipelines. The two SCGC facilities contain flow valve and metering equipment facilities. The southern SCGC facility contains a maintenance functions as well. All of these facilities contain gas pipeline blow-down equipment. This equipment includes exhaust stacks that vent the high pressure gas into the atmosphere occur during emergencies, scheduled maintenance, and annual testing of the blow-down systems.

The SDG&E and SCGC facilities produce noise from three different sources that could affect future development within the proposed project: 1) the operation of the compressor station; 2) blow-down events at the compressor station; and 3) blow-down events at the SCGC facilities. The blow-down events generate infrequent high noise levels for relatively short periods. The compressor station generates a relatively constant noise level, although noise levels vary slightly when the compressors are turned on and off when the gas is conveyed to the transmission pipelines.

The SDG&E compressors are the primary source of operational noise generated by the compressor station. The facility contains two sets of three reciprocating natural gas combustion engines and one set of four natural gas-fired turbines, for a total of ten compressors with power ranging from 995 to 3,400 horsepower. The compressors are located within noise attenuation structures and are equipped

World Logistics Center Project

Draft Environmental Impact Report

with intake and exhaust silencers. The facility routinely operates at maximum capacity 24 hours per day. It is anticipated that demand on the compressor station will increase in the future to the point where the facility operates 24 hours a day, year round.

The CNEL levels for the SDG&E compressor station presented in Figure 4.12.3 are based on a worst-case assumption that the compressor station is in full operation 24 hours a day. Figure 4.12.4 presents the average (L_{eq}) noise levels generated by the compressor station during full operation. Both the CNEL and L_{eq} metrics are used to assess the noise impacts from the facility.

There are several blow-down points within the SDG&E compressor station. As stated previously, these blow-down points allow for the release of pressurized gas during emergencies, scheduled maintenance, and annual testing. Blow-down events at the compressor station vent gas and last between 30 and 90 seconds. The maximum sound levels (L_{max} dBA) generated by the blow-down events is presented in Figure 4.12.5.

There are blow-down points in the SCGC facilities. Blow-down events at the SCGC facilities vent gas from miles of pipeline and are much longer than those at the compressor station, and can last up to 90 minutes. Approximately four blow-down events occur annually at the SCGC facilities. L_{max} noise levels (dBA) are shown in in Figure 4.12.6. The noise level will be at or near the L_{max} level during the entire blow-down event. It should also be noted that blow-down events generate ground vibrations and natural gas odors in the vicinity in the surrounding area when events occur. Again, it must be noted that these blow-down events are part of the existing conditions of the project site, and any impacts caused by development of new warehousing near these facilities, and any mitigation necessary, are not the responsibility of SCGC or SDG&E.

4.12.2 Existing Policies and Regulations

The applicable noise standards governing the project site are the criteria in the City of Moreno Valley General Plan Safety Element (Environmental Safety, Noise) and Municipal Code (Noise Ordinance). The City's Safety Element of the General Plan does not contain specific noise standards or significance thresholds. However, the General Plan does cite applicable State standards including the California Administrative Code, Section 1092 of Title 25, Chapter 1, Subchapter 1, Article 4 and Section 5014 of Title 21, Subchapter 6, Article 2. In addition, other applicable standards identified in the *California Noise Insulation Standards*¹ and the *State of California Vehicular Code*² are included below. The following sections list the General Plan policies, Municipal Code, and State standards relevant to noise for the proposed project.

4.12.2.1 City of Moreno Valley General Plan Policies

Chapter 9 of the *City of Moreno Valley General Plan*³ defines goals, objectives, policies, and action items related to noise conditions in the City. The specific policies related to noise that are relevant to the proposed project are as follows:

Objective 6.3 Provide noise compatible land use relationships by establishing noise standards utilized for design and siting purposes.

Policy 6.3.5 Enforce the California Administrative Code, Title 24 noise insulation standards for new multi-family housing developments, motels and hotels.

Policy 6.3.6 Building shall be limited in areas of sensitive receptors.

¹ California Code of Regulations, Title 24, Part 2, §3501, *California Noise Insulation Standards*.

² Governor's Office of Planning and Research, *State of California General Plan Guidelines*, October 2003, pages 249 and 250.

³ *City of Moreno Valley General Plan*, City of Moreno Valley, July 2006.

THIS PAGE INTENTIONALLY LEFT BLANK

- Objective 6.4** Review noise issues during the planning process and require noise attenuation measures to minimize acoustic impacts to existing and future surrounding land uses.
- Policy 6.4.1** Site, landscape and architectural design features shall be encouraged to mitigate noise impacts for new developments, with a preference for noise barriers that avoid freeway sound barrier walls.
- Objective 6.5** Minimize noise impacts from significant noise generators such as, but not limited to, motor vehicles, trains, aircraft, commercial, industrial, construction, and other activities.
- Policy 6.5.1** New commercial and industrial activities (including the placement of mechanical equipment) shall be evaluated and designed to mitigate noise impacts on adjacent uses.
- Policy 6.5.2** Construction activities shall be operated in a manner that limits noise impacts on surrounding uses.

4.12.2.2 City of Moreno Valley Municipal Code

The *Moreno Valley Municipal Code*¹ establishes a Noise Ordinance that describes the noise standards within the City. Chapter 11.80.030 (Title 11) lists specific prohibited acts.

The City's residential site development standards, as identified in Chapter 9.03.040 of the City's Planning and Zoning Code, state that in all residential districts, air conditioners, heating, cooling, and ventilating equipment and all other mechanical lighting or electrical devices shall be operated so that noise levels do not exceed 60 dBA (L_{dn}) at the property line.

The City's Municipal Code, Section 6.04.030.J states that "to create, allow or maintain any loud or unusual noise or operate or maintain any device, instrument, vehicle, or machinery in such a manner as to create loud or unusual noise, cause vibrations, or unreasonable light spillage or glare which causes discomfort or annoyance to reasonable persons of normal sensitivity, or which endangers the comfort, repose, health or peace of the public or of any person using or occupying other property in the vicinity" is prohibited.

The City's Municipal Code, Section 9.10.140, specifies that all commercial and industrial uses shall be operated so that noise created by any loudspeaker, bells, gongs, buzzers, or other noise attenuation or attracting devices shall not exceed 55 dBA at any one time beyond the boundaries of the property.

Chapter 11.80.030 of the City's Municipal Code also states:

Based on statistics from the Center for Disease Control and Prevention and the National Institute for Occupational Safety and Health, Table 1 and Table 1-A specify sound level limits which, if exceeded, will have a high probability of producing permanent hearing loss in anyone in the area where the sound levels are being exceeded. No sound shall be permitted within the City which exceeds the parameters set forth in Table 11.80.030-1 [Table 4.12.E] and 11.80.030-1-A [Table 4.12.F] of this chapter.

No person shall maintain, create, operate or cause to be operated on private property any source of sound in such a manner as to create any nonimpulsive sound which exceeds the limits set forth for the source land use category (as defined in Section 11.80.020) in Table 11.80.030-2 [Table 4.12.F] when measured at a distance of two hundred (200) feet or more from the real property line of the source of the sound, if the sound occurs on privately owned property, or from the source of the sound, if the sound occurs on public right-of-way, public space or other publicly owned property. Any source of sound in violation of this subsection shall be deemed prima facie to be a noise disturbance.

¹ *Moreno Valley Municipal Code*, City of Moreno Valley, current through Ordinance 836 and the November 2012 code supplement.

World Logistics Center Project
Draft Environmental Impact Report

The following uses and activities shall be exempt from the sound level regulations except the maximum sound levels provided in Tables 11.80.030-1 [Table 4.12.E] and 11.80.030-1A [Table 4.12.F]:

1. Sounds resulting from any authorized emergency vehicle when responding to an emergency call or acting in time of an emergency.
2. Sounds resulting from emergency work as defined in Section 11.80.020.
3. Any aircraft operated in conformity with, or pursuant to, federal law, federal air regulations and air traffic control instruction used pursuant to and within the duly adopted federal air regulations; and any aircraft operating under technical difficulties in any kind of distress, under emergency orders or air traffic control, or being operated pursuant to and subsequent to the declaration of an emergency under federal air regulations.
4. All sounds coming from the normal operations of interstate motor and rail carriers, to the extent that local regulation of sound levels of such vehicles has been preempted by the Noise Control Act of 1972 (42 U.S.C. § 4901 et seq.) or other applicable federal laws or regulations.
5. Sounds from the operation of motor vehicles, to the extent they are regulated by the California Vehicle Code.
6. Any constitutionally protected noncommercial speech or expression conducted within or upon any public right-of-way, public space or other publicly owned property constituting an open or a designated public forum in compliance with any applicable reasonable time, place and manner restriction on such speech or expression or otherwise pursuant to legal authority.
7. Sounds produced at otherwise lawful and permitted city-sponsored events, organized sporting events, school assemblies, school playground activities, by permitted fireworks, and by permitted parades on public right-of-way, public space, or other publicly owned property.
8. An event for which a temporary use permit or special event permit has been issued under other provisions of this code, where the provision of Section 11.80.010 are met, the permit granted expressly grants an exemption from specific standards contained in this chapter, and the permittee and all persons under the permittee's reasonable control actually comply with all conditions of such permit. Violation of any condition of such permit related to sound or sound equipment shall be in violation of this chapter and punishable as such.

Table 4.12.E and Table 4.12.F show the maximum sound levels that are permitted in the City for continuous and impulsive sounds, respectively.

Table 4.12.E: Maximum Continuous Sound Levels*

Duration Per Day Continuous Hours	Sound Level (dBA)
8	90
6	92
4	95
3	97
2	100
1.5	102
1	105
0.5	110
0.25	115

* When the daily sound exposure is composed of two or more periods of sound exposure at different levels, the combined effect of all such periods shall constitute a violation of this section if the sum of the percentage of allowed period of sound exposure at each level exceeds 100 percent.

Source: Chapter 11.80.030 Table 11.80.030-1, City of Moreno Valley Municipal Code, City of Moreno Valley.

Table 4.12.F: Maximum Impulsive Sound Levels

Number of Repetitions Per 24-Hour Period	Sound Level (dBA)
1	145
10	135
100	125

Source: Chapter 11.80.030 Table 11.80.030-1A, City of Moreno Valley Municipal Code, City of Moreno Valley.

The City also restricts the sound levels for non-impulsive sound on lands designated for residential and commercial land uses during the daytime and nighttime time periods. These levels are shown in Table 4.12.G. Section 11.80.050 (3) clearly identifies the measurement as an “average” noise level, and therefore, the noise limits shown in Table 4.12.G are interpreted as the L_{eq} noise level.

Table 4.12.G: Maximum Sound Levels (in dBA) for Source Land Uses

Residential		Commercial	
Daytime	Nighttime	Daytime	Nighttime
60	55	65	60

Source: Chapter 11.80.030 Table 11.80.030-2, City of Moreno Valley Municipal Code, City of Moreno Valley.

The City prohibits all construction and demolition activities between the hours of 8:00 p.m. and 7:00 a.m. the day following a noise disturbance. A noise disturbance is defined as any sound which that disturbs a reasonable person of normal sensitivities, exceeds the sound level limits set forth in the Noise Ordinance, or is plainly audible. A noise disturbance is defined as plainly audible measured at a distance of 200 feet from the real property line of the source of the sound if the sound occurs on privately owned property, or from the source of the sound, if the sound occurs on public right-of-way, public space or other publicly owned property.

4.12.2.3 State of California Vehicle Code

Recent studies have shown that the most objectionable feature of traffic noise is the sound produced by vehicles equipped with illegal or faulty exhaust systems. In addition, such vehicles are often operated in a manner that causes tire squeal and excessively loud exhaust noise. A number of California State vehicle noise regulations can be enforced by local authorities as well as the California Highway Patrol. These include § 27150 (mufflers) of the California Vehicle Code (CVC), as well as excessive speed laws, which may be applied to curtail traffic noise. The California Highway Patrol and the Department of Health Services (through local health departments) are available to aid local authorities in code enforcement and training pursuant to proper vehicle sound level measurements.

4.12.2.4 State of California Noise Compatibility Guidelines

The State of California Noise Compatibility Guidelines, published by the Department of Health, Services provides guidance for use when siting land uses. The compatibility guidelines are shown in Figure 4.12.7. The guidelines will be used to evaluate the compatibility of the proposed land uses with the noise environment. The guidelines show compatibility of various land uses with different noise environments. The guidelines show that industrial uses are normally acceptable in noise environments up to 75 CNEL.

4.12.3 Methodology

Evaluation of noise impacts associated with the proposed project includes the following:

THIS PAGE INTENTIONALLY LEFT BLANK

Land Use/Noise Compatibility Guidelines

-  **Normally Acceptable** Specified land use is satisfactory based upon the assumption that any buildings involved are of normal conventional construction without any special noise insulation requirements
-  **Conditionally Acceptable** - New construction or development shall be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply system of air conditioning, will normally suffice.
-  **Normally Unacceptable** New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design
-  **Clearly Unacceptable** New construction or development should generally not be undertaken

THIS PAGE INTENTIONALLY LEFT BLANK

- Determination of the short-term construction noise impacts on off-site noise-sensitive uses;
- Determination of the long-term noise impacts, including vehicular traffic and stationary noise sources, on on-site and off-site noise-sensitive uses; and
- Determination of the required mitigation measures to reduce long-term noise impacts from all sources.

Because of the location of noise-sensitive receptors, the noise analysis evaluates the noise effects of the industrial development on the existing residential development (sensitive receptors) near the southwest portion of the proposed project area.

There are no Federal Highway Administration (FHWA), State, or local standards for vibration. According to the FHWA, highway traffic and construction vibrations pose no threat to buildings and structures; and annoyance to people is not considered any worse than other discomforts experienced from living near highways. However, a substantial amount of research has been completed to compare vibrations from single events such as dynamite blasts with architectural and structural damage. The U.S. Bureau of Mines has set a safe limit of 0.5 inch per second peak particle velocity to avoid structure damage in residential structures (U.S. Bureau of Mines 1980). Below this level, there is virtually no risk of building damage.

4.12.4 Thresholds of Significance

A project would have a significant effect on the environment related to noise if it would substantially increase the ambient noise levels for adjoining areas or if it would conflict with adopted environmental plans and goals of the community in which it is located.

The applicable noise standards and guidelines governing the project are those specified previously in Sections 4.12.2.1 through 4.12.2.4. In summary, these criteria are contained within the Safety Element of the General Plan, the Municipal Code, the California Vehicle Code, and the State Noise Compatibility Guidelines.

For this project, a noise impact is considered significant if the project would result in:

- Exposure of persons to or generation of noise levels in excess of standards established in the *City of Moreno Valley General Plan*, *Moreno Valley Municipal Code*, or applicable standards of other agencies;
- Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels;
- A substantial temporary, periodic, and/or permanent increase in ambient noise levels in the project vicinity above levels existing without the project;
- For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels; and/or
- For a project within the vicinity of a private airstrip, expose people residing or working in the project area to excessive noise levels.

The standards within the *City of Moreno Valley General Plan* and *Moreno Valley Municipal Code* determine the acceptable noise environment for proposed project and its vicinity. The standards are as follows:

World Logistics Center Project
Draft Environmental Impact Report

- To the extent feasible, ensure through the design review process that exterior noise levels at commercial and industrial areas do not exceed 75 dBA CNEL.
- Consider the following uses noise-sensitive and discourage them in areas where exterior noise levels exceed 65 dBA CNEL unless measures are implemented that reduce the noise exposure below this level: single-family and multiple-family residential uses, group homes, hospitals, schools and other learning institutions, and parks and open space areas where quiet is a basis for use.

Long-term impacts from the project's traffic noise that affect existing sensitive land uses are considered to be substantial and, therefore, constitute a significant noise impact if the project would:

- Increase noise levels by 5 dB or more where the no project noise level is less than 60 CNEL;
- Increase noise level by 3 dB or more where the no project noise level is 60 CNEL to 65 CNEL; or
- Increase noise levels by 1.5 dB or more where the no project noise level is greater than 65 CNEL.

The project's incremental contribution to a cumulative noise increase would be considered cumulatively considerable and significant when ambient noise levels affect noise-sensitive land uses and when the project increases noise levels by 1 dB or more over pre-project conditions and the predicted future cumulative with project noise levels cause the following cumulative increases:

- Increase noise levels by 5 dB or more where the existing noise level is less than 60 CNEL;
- Increase noise levels by 3 dB or more where the existing noise level is 60 to 65 CNEL; or
- Increase noise levels by 1.5 dB or more where the existing noise level is greater than 65 CNEL.

4.12.5 No Impact/Less than Significant Impacts

The following impacts were identified as having a less than significant impact or no impact on the environment with implementation of the proposed project.

4.12.5.1 Groundborne Vibration Impacts

Threshold	Would the project result in exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?
-----------	----------------------------------------------------------------------------------------------------------------------------------

Roadways in the vicinity of the project area are either paved or would be paved as the area develops, and would not result in project traffic driving over rough or dirt roads. Well maintained roads typically do not result in substantial vibration levels. Even roads with irregularities typically only generate substantial levels of vibration very near, less than 50 feet from the irregularity. Construction activities that would occur within the WLCSP area are not anticipated to require blasting or pile driving. Roadway vibrations are typically not perceptible more than 50 feet from the roadway except in very unusual circumstances. Generally, the interface between the soft tire of a truck or automobile will not generate significant vibration unless the road is in poor shape (e.g., potholes or pavement joints) Therefore, impacts associated with this issue are anticipated to be less than significant, and no mitigation is required.

4.12.5.2 Airport Noise Impacts

Threshold	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, results in exposure of people residing or working in the project area to excessive noise levels. For a project within the vicinity of a private airstrip, expose people residing or working in the project area to excessive noise levels.
-----------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

The project area is located approximately 5.5 miles northeast of the March Airfield (MAF) and is not located within two miles of a private airstrip. The MAF is a joint-use airport, used for both military and civilian purposes. The March Air Reserve Base (MARB) is the military operator of the MAF and March Inland Port (MIP) is the civilian operator of the airport. This facility is anticipated to play an increasingly important role in the transportation of goods and cargo for the Southern California region. Existing flight patterns affect a large portion of the City of Moreno Valley, along a path that affects the western portion of the City in a northwest/southeast alignment. Aircraft operations from the airport currently contribute intermittent single-event noise.

There is potential for single-event noise exposure levels from MAF activity to affect the proposed project. The exposure levels will vary dependent upon the type of aircraft and flight track flown for each operation at MAF. However, the proposed project is not identified as being within the noise or safety contours delineated for the MARB Airport.¹ In addition, the proposed project is not considered to contain sensitive receivers and, therefore, the impacts from these single-event noise levels are considered to be below the level of significance. The City's exterior noise standard for industrial uses is 70 dBA CNEL. MAF noise levels are less than 60 dB CNEL within the project area. Therefore, the proposed project would not have the potential to expose people to excessive noise levels from airport operations. Therefore, no significant noise impacts would occur regarding these issues from implementation of the proposed project, and no mitigation is required.

4.12.6 Significant Impacts

4.12.6.1 Short-Term Construction Noise Impacts

Threshold	Would the project result in a substantial temporary, periodic, and/or permanent increase in ambient noise levels in the project vicinity above levels existing without the project?
-----------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Short-term noise would occur during the construction of the WLCSP. First, construction crew commutes and the transport of construction equipment and materials to the site for the proposed WLC project would incrementally increase noise levels on access roads in the WLC planning area. In addition, noise would be generated during excavation, grading, and building construction on various portions of the Specific Plan site. Construction is completed in discrete steps, each of which has its own mix of equipment, and consequently, its own noise characteristics. These various sequential phases would change the character of the noise generated on the site and, therefore, the noise levels surrounding the site as construction progresses. Despite the variety in the type and size of construction equipment, similarities in the dominant noise sources and patterns of operation allow construction-related noise ranges to be categorized by work phase. The site preparation phase, which includes excavation and grading of the site, tends to generate the highest noise levels, because the noisiest construction equipment is earthmoving equipment, which includes excavating machinery such as backfillers, bulldozers, draglines, and front loaders. Earthmoving and compacting equipment includes compactors, scrapers, and graders. Typical operating cycles for these types of construction equipment may involve one or two minutes of full-power operation followed by three to four minutes at

¹ Figure 5.4-1 March Reserve Air Base Noise Impact Area, City of Moreno Valley General Plan EIR, July 2006.

World Logistics Center Project

Draft Environmental Impact Report

lower power settings. Implementation of the Specific Plan would result in construction activities that would require the use of scrapers, bulldozers, and water and pickup trucks within the WLCSP area.

Figure 4.12.8 presents construction noise levels measured at 50 feet. The peak noise level for the majority of the equipment that will be used during construction of the proposed project will range from 70 to 95 dBA. Based on the fact that noise levels dissipate with increases in distance from the noise source due to noise divergence, noise levels at greater distances are less than those presented in Figure 4.12.8. Noise measurements made by Mestre Greve Associates demonstrate that the noise levels generated by commonly used grading equipment (e.g., loaders, graders, and trucks) generate noise levels that typically do not exceed the middle of the range shown in Figure 4.12.8.¹ However, the noise levels shown in Figure 4.12.8 have been used as the basis for the noise analysis estimates presented in this EIR.

Construction activities that are associated with the proposed WLCSP project would occur in two general areas: on-site and off-site. Some phases of the on-site construction would occur for 24 hours a day for 7 days a week. It is anticipated that on-site construction would occur periodically over a nine-year period with a potential start year of 2013 and ending in 2021. Off-site construction (which would involve minor grading, drainage, interchange, utility, and roadway improvements) is anticipated to only during the daytime weekday hours and would have a shorter construction duration.

On-site Construction. Sensitive receptors that would be potentially affected by on-site construction activities would include residences located within and adjacent to the WLCSP area as well as residences located on the north side of SR-60. For residences on the opposite side of SR-60, existing daytime and nighttime freeway noise is anticipated to be greater than the noise generated by the construction activities that would occur within the WLCSP area. Although certain conditions at night, such as low inversions and very calm conditions, can increase the ability of construction noise to travel to the residences north of the freeway, these same conditions would also amplify the noise generated on the freeway. Since freeway noise would continue to be the dominant noise source in the area for these residences along SR-60, construction noise impacts on the residents north of the freeway will be less than significant and no mitigation is required.

Existing residences within the WLCSP area or adjacent to the Specific Plan area, such as those along Redlands Boulevard, Merwin Street, Bay Avenue, Cactus Avenue, and Gilman Springs Road, may be located within 50 feet or less from areas where intense construction (24 hours a day, 7 days a week) would occur. Although residential properties located within the WLCSP would be rezoned as Light Logistics, the existing residences are considered to be noise-sensitive uses that would be affected by intense construction activities. Similarly, residences located adjacent to the project site (i.e., along Redlands Boulevard, Merwin Street, Bay Avenue, Cactus Avenue, and Gilman Springs Road) would also be affected by intense construction activities. Based on a 50-foot noise attenuation distance, these residences may experience worst-case unmitigated peak construction noise levels (L_{max}) up to 97 dBA. The average noise levels are typically 5 to 15 dB lower than the peak noise levels. Average noise levels (L_{eq}) at 50 feet could easily be in the range of 82 to 92 dBA during most phases of construction.

The City of Moreno Valley Municipal Code does not include any exemptions for construction noise. Therefore, construction would be subject the limitations of 60 dBA during daytime and 55 dBA at nighttime measured at residential areas. According to Section 3.4.14, *Project Description*, WLC project construction may occur 24 hours a day, 7 days a week for certain activities. Significant noise impacts would be expected, especially if work with high noise levels occurs between 8:00 p.m. and 6:00 a.m.

I:\HFV1201\Reports\EIR\fig4-12-8_ConstructEquipNoise.ai (12/21/12)

THIS PAGE INTENTIONALLY LEFT BLANK

Based on these projections, anticipated worst-case construction noise levels would regularly be exceeded during daytime and nighttime hours at residences within the Specific Plan area. Based on an L_{eq} noise level of 90 dBA at 50 feet, an observer would need to be 1,580 feet from the construction to experience a noise level of 60 dBA (L_{eq}), or 2,800 feet for a noise level of 55 dBA (L_{eq}). Therefore, a residence within 1,580 feet during active construction during the daytime would be affected. Similarly, a residence within 2,800 feet during the nighttime would be affected by construction noise.

As set forth in Section 3.4.14 and as stated by the project applicant, construction could occur 24 hours per day, 7 days per week for these construction activities. Therefore, noise levels at the nearest residences would exceed the City's exterior noise standard of the 60 dBA¹ CNEL daytime standard and 55 dBA CNEL nighttime standard for residential uses. This is a significant impact requiring mitigation.

Off-site Construction. Construction activities associated with off-site construction include road improvements along Cactus Avenue and Redlands Boulevard, water and utility improvements, construction of a detention basin, debris basins, and interchange improvements. Roadway and interchange improvements are planned along Cactus Avenue, Redlands Boulevard, State Route 60, and Gilman Springs Road. Often the loudest pieces of equipment associated with this type of construction are the graders/scrapper equipment. Peak noise levels at 50 feet can reach 96 dBA, with average noise levels (L_{eq}) in the 85 dBA range. Noise levels of 60 dBA (L_{eq}) could be exceeded for up to 900 feet from the construction area. Existing residences are located within 900 feet of the off-site construction areas and would be exposed to noise levels that would exceed of the Moreno Valley noise criteria for residential uses.

Other off-site construction improvements such as drainage, sewer, water, and utility features would also generate noise in close proximity to existing sensitive uses. However, these activities typically utilize less construction equipment, which results in lower noise levels. These construction activities may commonly employ a backhoe as the loudest piece of equipment. A backhoe may have a peak noise level that exceeds 90 dBA at 50 feet, but has an average noise level around 80 dBA (L_{eq}) at 50 feet. However, at this noise level one would need to be more than 500 feet away to experience a noise level (L_{eq}) of less than 60 dBA. This noise level would exceed the City's daytime criteria at the nearest existing residences and mitigation measures would be required.

Specific Plan Design Features. The WLCSP does not contain any design features that specifically address noise. Other features, such as perimeter setback requirements, will have the effect of reducing noise to certain residential areas.

Mitigation Measures. Construction of the proposed project would result in noise levels at the closest residences exceeding the maximum noise level allowed under the City's Municipal Code. The following measures² would reduce short-term construction-related noise impacts associated with the proposed WLC project:

4.12.6.1A Prior to issuance of any discretionary approvals for development in the WLCSP, the project applicant shall submit a Noise Reduction Compliance Plan (NRCP) to the City of Moreno Valley for review and approval. The NRCP shall show the limits of nighttime construction in relation to any then occupied residential dwellings. Conditions shall be added to any discretionary projects requiring that the limits of nighttime grading be shown on the NRCP and all grading plans submitted to the City.

¹ Chapter 11.80.030 Table 11.80.030-2, City of Moreno Valley Municipal Code, City of Moreno Valley.

² Measures 4.12.6.1B-F correspond to the noise study measures N-1 through N-5

World Logistics Center Project
Draft Environmental Impact Report

The limits of construction allowed at night shall be clearly staked on site, and contractors will be provided with a copy of the plan showing the limits of nighttime construction.

- 4.12.6.1B** During all project site grading, all construction equipment, fixed or mobile, shall be equipped with operating and maintained mufflers consistent with manufacturers' standards.
- 4.12.6.1C** All discretionary approvals for development in the WLCSP shall prohibit construction vehicles from using Redlands Boulevard south of Fir Avenue during on-site construction for all phases of the Specific Plan.
- 4.12.6.1D** All discretionary approvals for development in the WLCSP shall include conditions of approval stating that no nighttime grading shall occur within 2,800 feet of residences south of SR-60 (between 8 p.m. and 6 a.m. on weekends and 8 p.m. and 7 a.m. on weekends or holidays). These restrictions shall be included as part of the Noise Reduction Compliance Plan. As an alternative to this requirement, a temporary construction sound barrier may be used in lieu of the construction buffer, per Mitigation Measure 4.12.6.1E.
- 4.12.6.1E** As an alternative to Mitigation Measure 4.12.6.1D, a 12-foot tall temporary construction sound barrier may be installed for residences within 1,580 feet of active nighttime construction areas. The temporary sound barrier shall be constructed of plywood with a total thickness of 1 to 1.5 inches, or a sound blanket wall may be used. If sound blankets are used, the curtains must have a Sound Transmission Class (STC) rating of 27. This shall be included as part of the Noise Reduction Compliance Plan required in Mitigation Measure 4.12.6.1A, which shall be reviewed and approved by the City prior to implementation.
- 4.12.6.1F** As an alternative to Mitigation Measure 4.12.6.1D, actual noise measurements of construction areas may be taken by qualified personnel and recommend specific buffer distances between construction activities and existing residences based on actual noise levels. These measurements will be incorporated into the Noise Reduction Compliance Plan required in Mitigation Measure 4.12.6.1A, which shall be reviewed and approved by the City prior to implementation.
- 4.12.6.1G** Any discretionary approvals for development that proposes grading within 1,580 feet of occupied residential units shall require that all grading equipment be equipped with residential grade mufflers (or better).
- 4.12.6.1H** All material stockpiles in connection with any grading operations shall be located at least 1,200 feet from existing residences.
- 4.12.6.1I** All project-related off-site construction shall be limited to 6 a.m. and 8 p.m. on weekdays only. Construction during City holidays shall not be permitted.
- 4.12.6.1J** Prior to the issuance of grading permits for off-site construction activities in support of development in the WLCSP, the project developer shall provide evidence to the City that any off-site construction area adjacent to occupied residential units shall have a 12-foot temporary sound barrier installed for construction activities lasting more than one month.

Level of Significance after Mitigation. *On-site Construction.* Elimination of nighttime construction within 2,800 feet of residences would lower the noise levels to 55 dBA (L_{eq}) at the closest residences. The noise levels would just meet the 55 dBA (L_{eq}) nighttime criteria contained in the Moreno Valley Noise Ordinance resulting in a less than significant impact. With the implementation of **Mitigation Measures 4.12.6.1A** through **4.12.6.1J**, the loudest noise level that would be experienced at any

developed residential parcel would be less than the 55 dBA (L_{eq}) nighttime threshold and would be consistent with the limits established in the City's Noise Ordinance resulting in a less than significant impact. In addition, implementation of **Mitigation Measure 4.12.6.1H**, would reduce the noise experienced at existing residences, resulting in a less than significant impact.

As previously stated, construction within 1,580 feet of residential areas south of the freeway has the potential to exceed the daytime Moreno Valley Noise Ordinance criteria of 60 dBA (L_{eq}). With implementation of **Mitigation Measure 4.12.6.1E**, any existing residences within 1,580 feet of a construction area would be shielded from construction noise with a 12-foot temporary sound barrier. A sound barrier will reduce the noise levels by about 10 dB resulting in a reduction of noise below City thresholds at residences 500 feet or further from the construction area. Although the installation of the temporary sound barrier would reduce noise levels experienced at the closest residences, those residences that are located within 500 feet of a construction area would still be exposed to noise levels greater than 60 dBA (L_{eq}). Therefore, impacts associated with this issue would remain significant and unavoidable.

Off-site Construction. With the implementation of **Mitigation Measure 4.12.6.1I**, off-site construction activities would be limited to daytime hours while **Mitigation Measure 4.12.6.1J** would require the installation of a temporary sound barrier. With these mitigation measures in place, residences adjacent to construction activities (depending on the loudness of the construction equipment) could experience noise levels greater than 60 dBA (L_{eq}) for off-site construction projects lasting less than one month. These impacts would only occur during weekday, daytime hours. However, even with implementation of these mitigation measures, noise levels experienced at these residences would be above the City's threshold. Therefore, impacts would remain significant and unavoidable.

4.12.6.2 Long-Term Traffic Noise Impacts

Threshold	Would the project result in a substantial temporary, periodic, and/or permanent increase in ambient noise levels in the project vicinity above levels existing without the project?
-----------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

The noise analysis for the proposed project is based on the traffic volume data contained in the Traffic Impact Analysis (TIA) prepared for the project (contained in its entirety as EIR Appendix L). The TIA addressed the intersections of surface streets in Moreno Valley of a collector or higher classification street with another collector or higher classification street, at which the proposed project will add 50 or more peak hour trips. The study area also included the main travel routes between the project and the neighboring cities of Riverside, Perris, Beaumont, San Jacinto, and Redlands. The study area extended west to the nearest ramps on SR-91 and as far south as the I-215 ramps at Redlands Avenue in Perris. The study area for freeways was selected to cover the freeway routes radiating from the project site to the north, south, east, and west. The traffic analysis covered SR-60 from SR-62 in the east to SR-71 in the west, SR-91 from I-215 in the east to I-15 in the west, and I-215 from SR-210 in the north to the Scott Road interchange in the south.

Three hundred and thirty nine (339) roadway links and eighty (80) freeway segments were analyzed in the noise analysis. The change in noise level was calculated for all 419 roadway and freeway links with and without the project for the existing case (2012), 2017, 2022, and 2035 time horizons. Links with noise increases less than 1.5 dB would not have a substantial noise increase and were not presented in the main body of the noise report (i.e., the tables and figures). Similarly, any links that do not have sensitive receptors (e.g., residential uses) were also not presented in the main body of the noise report. Based on this filtering process, of the 419 links analyzed, 72 links have sensitive receptors and an increase of 1.5 dB for at least one time horizon and were therefore addressed in the analysis.

**World Logistics Center Project
Draft Environmental Impact Report**

The projected future daily traffic volumes (Parsons Brinckerhoff, Inc., December, 2012) for roadway segments in the project vicinity were used in the traffic noise impact analysis. Modeled noise levels represent the worst-case scenario, which assumes that no shielding is provided between the traffic and the location where the noise contours are drawn. As previously identified, the threshold for traffic noise is 65 dBA CNEL for sensitive receptors.

Operation of development that could occur within the proposed project area would generate traffic along roadways in the project vicinity. Table 4.12.H identifies existing with project roadway traffic noise levels with the project.

Table 4.12.H: Existing Year (2012) Plus Project Traffic Noise Levels (dBA)

Source: Mestre Greve Associates, November 2012.

As identified in Table 4.12.I, implementation of the proposed WLC project would result in relatively minor changes in traffic noise levels in Year 2017 (Phase I). The largest project-related increase in traffic noise would be along Street D (Street E to Cactus Avenue) and Street E (north of Alessandro Boulevard), where increases of greater than 65 dBA are predicted for the 2017 With Project scenario over the Year 2017 without project scenario. The increase associated with these roadway segments is attributable in part to Streets D and E being new roads that will be constructed by the proposed project.

Future Year (2022) with and without project scenarios projected daily traffic volumes on roadway segments in the project vicinity were used to conduct the traffic noise modeling. The projected daily traffic volumes in the area were taken from the TIA prepared for the proposed project. Table 4.12.J identifies the future year (2022) without project and with project traffic noise levels.

Table 4.12.J: Future Year (2022) Plus Project Traffic Noise Levels (dBA)

Roadway Segment	CNEL (dBA) at 100 feet		
	Without Project	With Project	Change
Alessandro Boulevard (west of Redlands Boulevard)	61.5	63.4	1.9
Alessandro Road (Crescent Avenue to Sunset Drive)	64.6	65.9	1.3
Alessandro Road (Sunset Drive to San Timoteo Canyon Road)	65.0	66.3	1.3

As identified in Table 4.12.J, implementation of the proposed WLC project would result in relatively minor changes in traffic noise levels in Future Year 2022. The largest project-related increase in traffic noise would be along Street D (Street E to Cactus Avenue), Street E (north of Alessandro Boulevard), and Street F west (of Street A), where increases of greater than 65 dBA are predicted for the Future Year 2022 With Project scenario over the Future Year 2022 Without Project scenario. The increase associated with these roadway segments is attributable in part to Streets D, E, and F being new roads that will be constructed by the proposed project.

Operation of the proposed project would generate traffic along roadways in the surrounding area during the buildout year (2035) scenario. Buildout Year (2035) with and without project scenarios projected daily traffic volumes on roadway segments in the project vicinity were used to conduct the traffic noise modeling. The projected daily traffic volumes in the area were taken from the TIA prepared for the proposed project. Table 4.12.K identifies the Buildout Year (2035) without project and with project traffic noise levels.

Source: Mestre Greve Associates, November 2012.

Increases in noise levels associated with Buildout Year (2035) traffic conditions on area roadways range from 0.1 to 68.0 dBA. As identified in the Table 4.12.K, the greatest increase in noise levels would be along Street D (Street E to Cactus Avenue), Street E (north of Alessandro Boulevard), and

Street F west (of Street A), where increases of greater than 65 dBA are predicted for the Buildout Year 2035 With Project scenario over the Buildout Year 2035 Without Project scenario. The increase associated with these roadway segments is attributable in part to Streets D, E, and F being new roads that will be constructed by the proposed project.

Tables 4.12.H through 4.12.K identify the noise increases directly caused by the proposed project. These numbers represent the distance from the centerline of the road to the contour value shown. Note that the values given in Tables 4.12.H through 4.12.I do not take into account the effect of any existing noise attenuation in the form of barriers, soundwalls, or topography that may affect ambient noise levels.

For the reader's convenience, the significance threshold for a project-specific roadway noise impact as defined previously is:

- Project induced increase in noise levels by 5 dB or more where the no project noise level is less than 60 CNEL;
- Project induced increase in noise level by 3 dB or more where the no project noise level is 60 CNEL to 65 CNEL; or
- Project induced increase in noise levels by 1.5 dB or more where the no project noise level is greater than 65 CNEL.

For the reader's convenience, the significance threshold for a project's incremental contribution to a cumulative noise increase as defined previously is:

A project increase of the ambient (cumulative without project) noise level by 1 dB or more, and the predicted future cumulative with project noise levels cause the following cumulative increases:

- Increase noise levels by 5 dB or more where the existing noise level is less than 60 CNEL;
- Increase noise levels by 3 dB or more where the existing noise level is 60 to 65 CNEL; or
- Increase noise levels by 1.5 dB or more where the existing noise level is greater than 65 CNEL.

It should be noted that the same noise increase occurs at all locations along a roadway link. In other words, the same increase will occur at 50 feet from a roadway as it does at 100 feet. In addition, the noise contours cover a wider area around the local roadways than does the existing condition. State Route 60, however, continues to be the dominant noise source in the area.

In general, the project proposes logistics uses and will not be affected by these noise increases. However, there are a few scattered residences within the project area and adjacent to the WLCSP area that would be affected by the proposed logistics uses.

Within the Specific Plan Area. For locations within the WLCSP area, these include three groups of residences that may remain with the implementation of the proposed project. The Specific Plan would rezone the properties as Light Logistics, but it is anticipated that the residences may remain for some time. The Light Logistics use is not sensitive to noise. However, the existing residences, as long as they remain, must be considered sensitive land uses.

- *Redlands Boulevard (north of Brodiaea Avenue).* The first group of homes is located east of Redlands Boulevard north of the intersection with Brodiaea Avenue. The traffic on Redlands Boulevard will not increase significantly as a result of the project. Future Street E is proposed to be constructed west of these existing residences. However, as stated in the Noise Study

World Logistics Center Project

Draft Environmental Impact Report

conducted for the Specific Plan, it is likely that there will be intervening buildings and that the distance from Street E will be so great that these homes will not experience significant noise from public roadways. Therefore, impacts are anticipated to be less than significant and no mitigation is required.

- *Street A/Theodore Street (Street B to Street F)*. The second group of residences within the Specific Plan area is located on the east side of Street A (Theodore Street) midway between the future Street B and Street F. There are currently two residences in this area. These residences are anticipated to experience noise increases up to 18 dB due to the implementation of the Specific Plan. As a result, existing noise levels at these two residences will be changed significantly. The exact alignment of the roadway is yet to be determined, but the homes may be roughly 100 feet from the centerline on the roadway. As identified in Table 4.12.J, at this distance, the noise level by future year (2022) could be as high as 73.1 CNEL. This level of noise would be above the 65 CNEL threshold and would result in a greater than 1.5 dB noise increase when compared to without project conditions. This is a significant impact requiring mitigation.
- *Street F/Dracaea Avenue (east of Theodore Street)*. The third area is a single residence located east of Theodore Street along what is currently Dracaea Avenue (future Street F). Existing conditions identify low levels of traffic noise on Dracaea Avenue. The 65 CNEL contour is projected to lie 84 feet from the centerline of Street F and it is likely that the one residence would lie within this zone. This level of noise would be above the 65 CNEL threshold and result in a greater than 1.5 dB noise increase when compared to without project conditions. Therefore, this is a significant impact requiring mitigation.

Off-Site Areas Adjacent to the Specific Plan Area. For areas adjacent to the Specific Plan area, 22 segments would experience a noise increase that would be greater than significance criteria specified previously. These seven areas are described below.

- *Cactus Avenue (Redlands Boulevard to Street D)*. This area is occupied by a small group of single-family homes along Cactus Avenue between the future Street D and Redlands Boulevard. A significant noise increase is projected for all four time horizons. Currently, there is no soundwall along these homes. Therefore, this is a significant impact requiring mitigation.
- *Cactus Avenue (west of Redlands Boulevard)*. As identified in the noise study, this area shows noise increases ranging from 1.5 dB to 5.1 dB depending on the time horizon. Only the 2035 case results in a significant noise increase.

Existing residences are located along Redlands Boulevard with rear yards facing Cactus Avenue. Existing 6-foot high soundwalls are located along the residences and rear yard areas are approximately 60 feet from the centerline of the roadway. In buildout year (2035), the noise levels for 60 feet from the centerline of the roadway including the effects of the soundwall are projected to be 64.8 CNEL. This is below the City criteria of 65 CNEL and, therefore, a less than significant impact will occur and no mitigation is required.

- *Day Street (between Cottonwood Avenue and Alessandro Boulevard)*. There are scattered single-family homes along this roadway that front onto Day Street. Only the 2035 time horizon results in a significant noise increase for this area. In 2035, the project is projected to increase noise levels by 1.7 dB, bringing the noise level up to 69.4 CNEL. Therefore, this is a significant impact requiring mitigation.
- *Fir Avenue (between Quincy Drive and Redlands Boulevard)*. There is one single-family home along this roadway fronting Fir Avenue. Only the 2035 time horizon results in a significant noise increase for this area. In 2035, the project is projected to increase noise levels by 6.7 dB, bringing the noise level up to 68.3 CNEL. Therefore, this is a significant impact requiring mitigation.

- *Gilman Springs Road (between Eucalyptus Avenue and Street C, and between Jack Rabbit Trail and Bridge Street)*. There are three single-family homes scattered along these roadway segments. All of the houses are set back from the roadway, but none has soundwalls. A significant noise increase is projected for at least one of these segments in three of the four case years. Therefore, this is a significant impact requiring mitigation.
- *Ironwood Avenue (between Redlands Boulevard and Highland Boulevard)*. There are two single-family homes that front onto Ironwood Avenue. There are also two churches along this roadway. A significant noise increase is projected for all four study years. In 2035, the project is projected to increase noise levels by 5 dB, bringing the noise level to 63.6 CNEL. Therefore, this is a significant impact requiring mitigation.
- *John F. Kennedy Drive (south of Cactus Avenue)*. The residences along John F. Kennedy Drive south of Cactus Avenue will experience significant noise increases in all four time horizons. Similar to the area along Cactus Avenue, this noise increase will be due to cars and light vehicles, and not heavy trucks. The residences along the west side of the roadway are generally depressed with respect to the road and have existing 6-foot soundwalls. Due to the presence of the existing soundwalls and slope conditions, noise levels would be reduced by 6 to 10 dB. This would result in noise levels being below the City threshold of 65 CNEL for residential uses. Therefore, residences on the west side of the street will not be affected. Impacts are considered to be less than significant and no mitigation is required.

The residences on the east side of the roadway are elevated with respect to the roadway and do not have soundwalls. Rear yards areas on both sides of the street are approximately 60 to 90 feet from the centerline of the roadway and are bordered by wrought iron fencing. As identified in Tables 4.12.H through 4.12.K, the greatest noise levels that would be experienced at these residences would range up to 67.9 CNEL, which is above the City threshold of 65 CNEL. This is a significant impact requiring mitigation.

- *Locust Avenue (between Moreno Beach Drive and Smiley Boulevard)*. There are three single-family homes along this roadway and they front onto the roadway. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 3.5 dB, bringing the noise level to 68.9 CNEL. This is a significant impact requiring mitigation.
- *Moreno Beach Drive (between Locust Avenue and Ironwood Avenue)*. There are 18 single-family homes along this roadway. Some homes front onto the roadway, but most back up to the roadway. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 3.3 dB, bringing the noise level to 66.6 CNEL. This is a significant impact requiring mitigation.
- *Perris Boulevard (between John F. Kennedy Drive and Iris Avenue)*. This is a mixed area in terms of residential land use. There are approximately 36 single-family homes along this roadway, some with a soundwall and some without. There is also a large multifamily development without a soundwall. Most of the homes either back up to the roadway or side-on to the roadway, making a soundwall feasible. Approximately half of the homes along this roadway do have a soundwall in place. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 1.7 dB, bringing the noise level up to 72.2 CNEL for areas without a soundwall. For the homes with a soundwall, there would not be a significant noise impact since the year 2035 the noise would increase by 1.7 dB and reaching up to 66.2 CNEL. For the homes on this roadway that do not have a soundwall, there would be a significant noise impact and mitigation is required.
- *Placentia Avenue (from El Nido Avenue to Evans Road, and on to Water Avenue)*. There are scattered single-family homes along this roadway that front onto the roadway. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 10 to 14 dB, bringing the noise level up to 68 CNEL. This is a significant impact requiring mitigation.

World Logistics Center Project

Draft Environmental Impact Report

- *Quincy Drive (from Cactus Avenue to Alessandro Boulevard, and on to Cottonwood Avenue)*. The existing single-family homes along Quincy Drive have a soundwall. Quincy Drive currently only exists from Cottonwood to Bay Avenue, which is north of Alessandro Boulevard. The 2035 time horizon results in a significant noise increase. This is a significant impact requiring mitigation.
- *Reche Canyon Road (from Keissel Road to Reche Vista Drive, and on to High Country Drive)*. There are roughly 22 single-family homes scattered along these two roadway segments. These homes are scattered along the roadway and front onto Reche Canyon Road. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 1.8 to 3.3 dB with resulting noise levels in the 67 to 68 CNEL range. This is a significant impact requiring mitigation.
- *Redlands Boulevard (from Dracaea Avenue to State Route 60)*. There are scattered homes in this area that either face Redlands Boulevard (or Shubert Street) or are on Redlands Boulevard. The 2012, 2022, and 2035 time horizons result in a significant noise increase for this area. This is a significant impact requiring mitigation.
- *Redlands Boulevard (from State Route 60 to San Timoteo Canyon Road)*. There are approximately 28 homes along this roadway that would be affected. The single-family homes are scattered and generally front the roadway. The 2012, 2022, and 2035 time horizons result in a significant noise increase for this area. The increases in noise are around 2 dB with a resultant noise level in the 71 to 72 CNEL range. This is a significant impact requiring mitigation.
- *San Timoteo Canyon Road (from Alessandro Road to Live Oak Canyon Road to Redlands Boulevard)*. There are about four scattered residences along this roadway that would be affected. The existing baseline plus project time horizon results in a significant noise increase for this area. The noise increases by up to 3.3 dB with resultant noise levels in the 65 to 66 CNEL range. This is a significant impact requiring mitigation.
- *Theodore Street (State Route 60 to Highland Boulevard)*. There are four existing homes on Theodore Street that front onto the roadway. Implementation of the Specific Plan would result in a 10.7 dB increase over baseline conditions (2012), a 7.4 dB increase in Opening Year (2017), and a 3.8 dB increase in future year (2022). By Buildout Year (2035), the noise increase associated with the proposed project is anticipated to be 2.9 dB, which would not be significant. In future year (2022), the 65 CNEL contour for this roadway link would lie approximately 138 feet from the centerline of the roadway. The four existing residences on Theodore Street are within 138 feet of the roadway. As a result, these existing residences could experience noise levels above the 65 CNEL threshold during all time horizons. This is a significant impact requiring mitigation.
- *Street D (from Street E to Cactus Avenue)*. Street D, as shown in the Specific Plan, will come down the western side of the project parallel to Merwin Street. It then merges with Cactus Avenue traveling to the west until Redlands Boulevard. A specific alignment has not been determined for this roadway. There are approximately 14 homes that side-on to Merwin Street that could be affected by traffic on Street D. There are no soundwalls along these homes. There would be limited or no heavy trucks using this roadway. The 65 CNEL contour will lie 114 feet from the centerline of Street D. If the centerline of Street D is located closer than 114 feet to the residences, then a significant impact would occur. Outdoor living spaces for homes along Merwin Street would experience noise levels greater than 65 CNEL, and this would not be consistent with City criteria. This is a significant impact requiring mitigation.
- *State Route 60 (from Pigeon Pass Road to Perris Boulevard)*. All residential areas along this stretch of freeway have soundwalls in place. The 2012 time horizon results in a significant noise increase for this area. The noise levels are projected to increase by 1.5 to 1.7 dB in this area with resultant noise levels in the 66.9 to 68.1 CNEL range. This is a significant impact requiring mitigation.
- *State Route 60 (from Perris Boulevard to Nason Street)*. All residential areas along this stretch of freeway have soundwalls in place. The 2022 time horizon results in a significant noise increase

for this area. The noise level will go up by 1.6 dB with the project up to a level of 67.2 CNEL. This is a significant impact requiring mitigation.

- *State Route 60 (from Moreno Beach Drive to Redlands Boulevard)*. There are soundwalls in place for all residences in this area. The existing 2012 and 2035 time horizons result in a significant noise increase for this area, reaching 67.1 CNEL by 2035. This is a significant impact requiring mitigation.
- *State Route 60 (from Redlands Boulevard to Theodore Street)*. No soundwalls are present in this area. The residential area is set back from the freeway and is clustered along Redlands Boulevard north of the freeway. The existing 2012 time horizon results in a significant noise increase for this area. The resultant noise level will be 63.5 CNEL with an increase due to the project of 3.4 dB. This is a significant impact requiring mitigation.

Specific Plan Design Features. The WLCSP indicates there will be a 250-foot setback from existing housing along Redlands Boulevard. No additional design features to attenuate noise impacts are planned as part of the WLCSP.

Mitigation Measures. Construction of the proposed WLC project would result in noise levels at the closest residences within and adjacent to the WLCSP area exceeding the maximum noise level allowed under the City's Municipal Code. The following measures would reduce long-term traffic related noise impacts associated with the proposed project:

4.12.6.2A Within the WLCSP, Street D shall be designed such that exterior noise levels at existing residential areas shall not exceed 65 CNEL, which may require installation of a soundwall or other noise attenuation improvements. The design and calculations of such improvements shall be incorporated into a report that shall be submitted to the City for review and approval prior to the issuance of construction permits for Street D.

4.12.6.2B Prior to issuance of any discretionary approvals for development in the WLCSP, a WLC Noise Development Impact Fee study shall be submitted to the City for review and approval. The City shall require future development within the WLCSP to participate in a WLC Noise Development Impact Fee program to include soundwall attenuation to mitigate impacts from the proposed project based on the collection of fair-share fee payments from each increment of development and the implementation of each soundwall in accordance with Mitigation Measure 4.12.6.2C. The update to the DIF shall be based on a nexus study in conformance with State law (i.e., AB 1600). The Nexus study shall examine the soundwalls specified below, shall include detailed cost estimates for each soundwall, and shall establish a pro-rated fee to be paid per square foot by all development proposals within the WLCSP. The soundwalls to be included in this study include:

Cactus Avenue Soundwall from Redlands Boulevard to Street D. Construct an approximately 1,000-foot long, 6-foot high soundwall at the top of slope. The existing wrought-iron fencing will be removed and replaced with the soundwall (e.g., masonry wall, berming, glass barrier, or combinations of these barriers). The soundwall would need to measure 6 feet as measured from the rear yard of the residences.

John F. Kennedy Drive, east side, Soundwall from Cactus Avenue to Bay Hill Drive. Construct an approximately 5,000-foot long, 6-foot high soundwall at the top of slope for the existing residences that are on the east side of John F. Kennedy Drive. The existing wrought-iron fencing will be removed and replaced with the soundwall (e.g., masonry wall, berming, glass barrier, or combinations of these barriers). The

soundwall would need to measure 6 feet as measured from the rear yard of the residences.

Moreno Beach Drive Soundwall between Locust Avenue and Ironwood Avenue. Construct an approximately 2,000-foot long, 6-foot high soundwall at the top of slope for the existing residences that are on the east side of John F. Kennedy Drive. The soundwall would need to measure 6 feet as measured from the rear yard of the residences.

Perris Boulevard Soundwall between John F. Kennedy Drive and Iris Avenue. Construct an approximately 1,500-foot long, 6-foot high soundwall at the top of slope for the existing residences that are on the east side of John F. Kennedy Drive. The soundwall would need to measure 6 feet as measured from the rear yard of the residences.

State Route 60 Soundwall from Redlands Boulevard to Theodore Street. Construct an approximately 580-foot long, 6-foot high soundwall for the existing residences. The soundwall would need to measure 6 feet as measured from the rear yard of the residences.

Iris Avenue Soundwall from Nason Street to Oliver Street. Construct an approximately 3,000-foot long, 6-foot high soundwall along the property line for the existing residences.

Sycamore Canyon Boulevard Soundwall from College Boulevard and Central Avenue. Construct an approximately 1,000-foot long, 6-foot high soundwall at the top of slope for the existing residences. The soundwall would need to measure 6 feet as measured from the rear yard of the residences.

4.12.6.2C Prior to issuance of any building permits for development in the WLCSP, the City shall collect the Development Impact Fee (DIF) as modified in accordance with Mitigation Measure 4.12.6.2B. The City shall establish a schedule for installing the specific soundwalls listed in Mitigation Measure 4.12.6.2B consistent with the WLC Noise DIF program..

Level of Significance after Mitigation. *Within the WLC Specific Plan Area.* For areas within the WLCSP area, these include three groups of residences that may remain with the implementation of the proposed project. The level of significance after mitigation is provided for each of the two areas for which a significant impact has been identified.

- *Theodore Street/Street A (Street B to Street F).* There are two residences in this area. These residences are anticipated to experience noise increases up to 18 dB due to the implementation of the Specific Plan. As a result, existing noise levels at these two residences will be changed significantly. The exact alignment of the roadway is to be determined, but the homes may be roughly 100 feet from the centerline on the roadway. One residence fronts onto Street A (Theodore Street), and the driveway access would make a soundwall ineffective. The other residence is on to Street A. It is difficult to determine where an outdoor living area is for this residence. However, since it is a single residence, a soundwall would have a limited effectiveness. Since mitigation is not feasible, impacts remain significant and unavoidable.
- *Dracaea Avenue/Street F (east of Theodore Street).* There is one residence in this area fronting onto the future alignment of Street F (currently Dracaea Avenue). Existing conditions identify low levels of traffic noise on Dracaea Avenue. The 65 CNEL contour is projected to lie 84 feet from the centerline of Street F and it is likely that the one residence would lie within this zone. Installation of a soundwall would not be effective in reducing noise levels due to the opening for the driveway. Since mitigation is not feasible, impacts remain significant and unavoidable.

Off-Site Areas Adjacent to the Specific Plan Area. For areas adjacent to the WLCSP area, eight areas would experience noise increases that would be mitigated to a less than significant level with implementation of **Mitigation Measures 4.12.6.2A** through **4.12.6.2C**. These areas are as follows:

- Cactus Avenue from Redlands Boulevard to Street D;
- John F. Kennedy Drive, west side, from Cactus Avenue to Bay Hill Drive;
- Moreno Beach Drive between Locust Avenue and Ironwood Avenue (15 of 18 homes);
- Perris Boulevard between John F. Kennedy Drive and Iris Avenue;
- State Route 60 from Redlands Boulevard to Theodore Street;
- Iris Avenue from Nason Street to Oliver Street;
- Sycamore Canyon Boulevard from College Boulevard and Central Avenue; and
- Street D from Street E to Cactus Avenue (8).

For the remaining noise impact locations adjacent to the WLCSP area for which significant noise impacts have been identified, mitigation measures are not feasible or will not fully reduce the impact to less than significant levels. Each location that will remain significant and unavoidable with implementation of the proposed project is discussed below.

- *Cactus Avenue (west of Redlands Boulevard).* Existing soundwalls will reduce noise levels by an estimated 6 dB, lowering the ultimate noise levels to 64.8 CNEL in the rear yard areas along Cactus Avenue. This is below the City criteria of 65 CNEL. It is not feasible to modify the existing residential block wall to reduce the project increase in noise levels because the block walls are designed for the height that they are built. In addition, the projected noise levels in year 2035 are within the City's exterior noise level for residences. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Day Street (between Cottonwood Avenue and Alessandro Boulevard).* The scattered single-family homes along this roadway front onto Day Street. In 2035, the project is projected to increase noise levels by 1.7 dB, bringing the noise level up to 69.4 CNEL. Homes that are widely separated from other homes cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Fir Avenue (between Quincy Drive and Redlands Boulevard).* There is one single-family home along this roadway fronting Fir Avenue. Only the 2035 time horizon results in a significant noise increase for this area. In 2035, the project is projected to increase noise levels by 6.7 dB, bringing the noise level up to 68.3 CNEL. A single home that fronts on a roadway cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Gilman Springs Road (between Eucalyptus Avenue and Street C, and between Jack Rabbit Trail and Bridge Street).* There are three single-family homes scattered along these roadway segments. All of the houses are set back from the roadway, but none has soundwalls. A significant noise increase is projected for at least one of these segments in three of the four case years. Homes that are widely separated from other homes cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Ironwood Avenue (between Redlands Boulevard and Highland Boulevard).* There are two single-family homes that front onto Ironwood Avenue. There are also two churches along this roadway. A significant noise increase is projected for all four study years. In 2035, the project is projected to increase noise levels by 5 dB, bringing the noise level to 63.6 CNEL. Land uses that are widely

World Logistics Center Project

Draft Environmental Impact Report

separated from one another cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.

- *Locust Avenue (between Moreno Beach Drive and Smiley Boulevard)*. There are three single-family homes along this roadway and they front onto the roadway. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 3.5 dB, bringing the noise level to 68.9 CNEL. As discussed above, homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Moreno Beach Drive (between Locust Avenue and Ironwood Avenue)*. There are 18 single-family homes along this roadway. Some homes front onto the roadway, but most back up to the roadway. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 3.3 dB, bringing the noise level to 66.6 CNEL. This is a significant impact requiring mitigation. Even with the soundwall that would be implemented as part of **Mitigation Measures 4.12.6.2A** through **4.12.6.2C**, sound levels at 3 of the 18 homes would exceed 65 CNEL. These homes front onto Moreno Beach Drive and cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Placentia Avenue (from El Nido Avenue to Evans Road, and on to Water Avenue)*. There are scattered single-family homes that front onto the roadway. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 10 to 14 dB, bringing the noise level up to 68 CNEL. As discussed above, homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Quincy Drive (from Cactus Avenue to Alessandro Boulevard, and on to Cottonwood Avenue)*. The existing single-family homes along Quincy Drive have a soundwall. Quincy Drive currently only exists from Cottonwood to Bay Avenue, which is north of Alessandro Boulevard. The 2035 time horizon results in a significant noise increase. It is not feasible to modify the existing residential block walls to reduce the project increase in noise levels because the block walls are designed for the height that they are built. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Reche Canyon Road (from Keissel Road to Reche Vista Drive, and on to High Country Drive)*. There are approximately 22 single-family homes scattered along these two roadway segments. These homes front onto Reche Canyon Road. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 1.8 to 3.3 dB with resulting noise levels in the 67 to 68 CNEL range. Homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Redlands Boulevard (Dracaea Avenue to State Route 60)*. There are scattered homes in this area that either face Redlands Boulevard (or Shubert Street) or are on Redlands Boulevard. The 2012, 2022, and 2035 time horizons result in a significant noise increase for this area. Homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Redlands Boulevard (State Route 60 to San Timoteo Canyon Road)*. There are approximately 28 homes along this roadway that would be affected. The single-family homes are scattered and generally front the roadway. The 2012, 2022, and 2035 time horizons result in a significant noise increase for this area. The increases in noise are around 2 dB with a resultant noise level in the 71 to 72 CNEL range. Homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.

- *San Timoteo Canyon Road (from Alessandro Road to Live Oak Canyon Road to Redlands Boulevard)*. There are approximately four scattered residences along this roadway that would be affected. The existing baseline plus project time horizon results in a significant noise increase for this area. The noise increases by up to 3.3 dB with resultant noise levels in the 65 to 66 CNEL range. Homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Theodore Street (State Route 60 to Highland Boulevard)*. There are four existing homes on Theodore Street that front onto the roadway. Implementation of the Specific Plan would result in a 10.7 dB increase over baseline conditions (2012), a 7.4 dB increase in Opening Year (2017), and a 3.8 dB increase in future year (2022). By Buildout Year (2035), the noise increase associated with the proposed project is anticipated to be 2.9 dB, which would not be significant. In future year (2022), the 65 CNEL contour for this roadway link would lie approximately 138 feet from the centerline of the roadway. The four existing residences on Theodore Street are within 138 feet of the roadway. As a result, these existing residences could experience noise levels above the 65 CNEL threshold for all time horizons. Homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.

4.12.6.3 Long-Term Operational Noise Impacts

Threshold	Would the project cause exposure of persons to or generation of noise levels in excess of standards established in the <i>City of Moreno Valley General Plan, Moreno Valley Municipal Code</i> , or applicable standards of other agencies?
-----------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Potential long-term stationary noise impacts would primarily be associated with operations at logistics facilities within the WLCSP area. Logistics facility uses would generate noise from truck delivery, loading/unloading activities at the loading areas, heating, ventilation, and air-conditioning (HVAC) equipment and other noise-producing activities within the parking lot (e.g., doors slamming, vehicle engine start-ups, and conversing in the parking lot). These activities are potential point sources of noise that could affect noise-sensitive receptors adjacent to the loading areas and parking lots. As noise spreads from a source, it loses energy; therefore, the farther away the noise receiver is from the noise source, the lower the perceived noise level would be.

Noise levels were measured at similar facilities to determine representative noise levels that might be generated by this type of activity. Noise measurements were made at two facilities; specifically, Lowes Distribution Center (3984 Indian Avenue, Perris, CA) and Ross Distribution Center (3404 Indian Avenue, Perris, CA). Based on these representative noise measurements, Table 4.12.L provides the noise levels for various distances from the warehouse property line with no noise barrier in place and with an assumed 12-foot noise barrier.

Table 4.12.L: Representative Noise Levels for Warehousing Activities

Distance from Facility (feet)	Noise Level (dBA L_{eq})	
	No Barrier	With 12-foot barrier
50	56.9	48.6
100	54.9	47.8
250	50.8	44.7
500	46.6	40.9

Source: Mestre Greve Associates, November 2012.

World Logistics Center Project
Draft Environmental Impact Report

The City of Moreno Valley Noise Ordinance requires that noise levels remain below 55 dBA (L_{eq}) during nighttime hours. To achieve this noise level, the warehouse property line would only need to be 100 feet from the nearest residential property and no soundwall would need to be present.

Another consideration is whether the proposed activity levels will be substantially higher than current ambient conditions. No matter what is developed in the Specific Plan area, ambient conditions would be higher in future years due to higher levels of traffic and activity. Ambient noise levels were measured at seven sites that could border the World Logistics Center (i.e., Measurement Sites 3 through 9). The nighttime ambient noise levels (L_{eq}) ranged from 35.8 to 61.8 dBA with an average for the sites of 46.6 dBA. To keep the noise levels at nearby residential areas less than typical ambient conditions, the logistics property line should be located a minimum distance of 250 feet and a 12-foot soundwall should be located along the perimeter of the property that faces any residential areas. This would keep the logistic use noise to less than 45 dBA (L_{eq}) at the residences. The implementation of this buffer between logistics uses and noise sensitive uses has been included as **Mitigation Measure 4.12.6.3A**.

Specific Plan Design Features. The WLCSP indicates there will be a 250-foot building setback from residentially zoned property along Redlands Boulevard, Bay Avenue, and Merwin Street.

Mitigation Measures. Operation of the proposed WLC project would result in noise levels at the closest residences within and adjacent to the WLC Specific Plan area exceeding the maximum noise level allowed under the City's Municipal Code. The following measure would reduce long-term operational noise impacts associated with the proposed WLC project:

4.12.6.3A All discretionary approvals for development in the area of Redlands Boulevard, Bay Avenue, Merwin Street, and Cactus Avenue shall provide a minimum 250-foot setback between residentially zoned property and logistics buildings within the WLCSP. In addition, all such discretionary approvals shall provide sound attenuation improvements that will reduce expected noise levels from development to within City standards.

Level of Significance after Mitigation. Implementation of **Mitigation Measure 4.12.6.3A** would eliminate any noise impacts on residential areas due to the operation of logistic activities. Through the provision of a 250-foot buffer, berms, and/or soundwalls, noise levels at the nearest residences would be reduced to below the City's thresholds. Therefore, with adherence to the identified mitigation measure, impacts associated with this issue would be less than significant.

4.12.6.4 Long-Term Utility Noise Impacts

Threshold	Would the project cause exposure of persons to or generation of noise levels in excess of standards established in the <i>City of Moreno Valley General Plan</i> , <i>Moreno Valley Municipal Code</i> , or applicable standards of other agencies?
-----------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

As illustrated in previously referenced Figure 4.12.3 and Figure 4.12.6, there is one existing SDG&E compressor station and two existing SCGC facilities located within the WLC Specific Plan area.

Based on preliminary calculations as illustrated in Figure 4.12.3, the worst-case compressor station operational characteristics will result in a maximum noise level just above 65 CNEL within the project area proposed for development (i.e., not open space). Typical commercial construction results in buildings that achieve at least a 20 dB reduction of outdoor noise levels. Therefore, an office use

exposed to the highest noise level from the compressor station will be just above 45 CNEL and below the 50 CNEL limit prescribed by the City's General Plan, resulting in a less than significant impact and no mitigation is required.

As illustrated in previously referenced Figure 4.12.4, the L_{eq} noise level generated by the compressor station does not exceed 60 dBA L_{eq} beyond the property lines of the facility. Therefore, the compressor station is not considered a noise disturbance based on City criteria. Operation of the compressor station would not result in any interior noise levels exceeding the limits established by the City in the General Plan. Therefore, noise impacts associated with the operation of the compressor station would be less than significant and no mitigation is required.

As identified in previously referenced Figure 4.12.5, the maximum noise level from a blow-down at the SDG&E compressor station within the WLCSP area proposed for development (i.e., the Logistics Development land use) is 100 dBA. A person would need to be exposed to this level for more than two hours in a day before permanent hearing loss would be expected. As discussed above, blow-down events at the SDG&E compressor station typically do not last longer than 90 seconds. Therefore, the SDG&E blow-down events will not result in a significant impact to the uses proposed within the WLCSP area, and no mitigation is required.

For SCGC blow-down events, noise generated could reach as high as 130 dBA just outside the fence line of the southern facility and in excess of 135 dB just outside the fence line of the northern facility. People within approximately 250 feet of the blow-down points would be exposed to noise levels greater than 115 dBA, which would likely cause permanent hearing damage regardless of the exposure time. The SCGC blow-downs could last as long as 90 minutes. It is anticipated that people exposed to noise levels greater than 102 dBA, within approximately 1,300 feet from the blow-down point could experience permanent hearing loss based on this event duration. Noise generated by SCGC blow-down events has the potential to cause permanent hearing loss in persons in the developed area of the project. This is a significant impact and mitigation is required.

SCGC blow-down events also have the potential to produce groundborne vibration. However, the effect of the blow-down groundbourne vibration would be limited to within 100 feet of the equipment and would not be perceived beyond the facility fenceline, resulting in a less than significant impact and no mitigation is required.

Specific Plan Design Features. The WLCSP provides a setback of open space and a street between the SCGC facility and planned warehouse buildings in the WLCSP. However, the separation may not be sufficient to prevent significant noise impacts during blow-down events.

Mitigation Measures. Operation of the proposed WLC project could result in exposure of people to noise levels as high as 130 dBA or greater during SCGC blow-down events. The following measure would reduce long-term utility related noise impacts associated with the proposed WLC project:

4.12.6.4A Prior to the issuance of building permits for projects within 500 feet of the SCGC and SDG&E facilities, documentation shall be submitted to the City confirming that sound attenuation devices or improvements for the blow-down facilities providing at least a 40 dB reduction in noise levels during blow-down events area available and will be installed for all planned blow-down events. This measure shall be implemented to the satisfaction of the City Planning Official.

Level of Significance after Mitigation. The SCGC blow-down equipment does not currently include a permanent silencer system. A review of the literature of a leading manufacturer of specialty silencer

systems (Industrial Acoustics Company) determined that a specialty silencer system added to the blow-down equipment could reduce noise levels by about 40 dB. With a silencer system providing 40 dB of noise reduction, blow-down noise levels would be less than 102 dBA approximately 30 feet from the blow-down point, which is within the property line of these facilities. 102 dBA is the noise level that could be experienced for up to 90 minutes without causing permanent hearing loss. Therefore, while occupants within the WLCSP in close proximity to the SCGC facilities would be subject to high noise levels during these infrequent noise events, they would not be subject to any permanent hearing damage. With implementation of **Mitigation Measure 4.12.6.4A**, SCGC blow-down events would not result in noise levels that could cause permanent hearing loss and the project would not be significantly affected by noise from the SCGC facilities, resulting in a less than significant impact.

4.12.7 Cumulative Impacts

The cumulative area for noise impacts is the City of Moreno Valley. Implementation of the Specific Plan would result in the introduction of new noise sources and levels from on-site activities and from increased traffic volumes on vicinity roadway and freeways.

Construction crew commutes and the transport of construction equipment, and materials to the WLCSP area would incrementally increase noise levels on access roads leading to the site. Secondary sources of noise would include noise generated during excavation, grading, and building erection on the project site. The net increase in project site noise levels generated by these activities and other sources has been quantitatively estimated and compared to the applicable noise standards and thresholds of significance. Although it is not possible to predict if contiguous properties may be constructed at the same time and create cumulative noise impacts that would be greater than if developed at separate times, it is unlikely that adjacent properties will be developed at the same time as the Specific Plan area. However, in the unlikely event that adjacent properties are developed at the same time as the proposed WLC project, adherence to the City's Municipal Code provisions that regulate construction activities and other development standards would render the cumulative impacts of the proposed project to less than significant levels.

The noise analysis contained in this section also provides an assessment of on-site operational noise level impacts on adjacent sensitive uses, both existing and future. Additionally, on-site operational noises are individual noise occurrences and are not typically additive in nature. It is extremely unlikely that adjacent properties will generate noises that would be additive in nature because of two important reasons. First, the noise sources would have to be adjacent or in close proximity to one another in order for the noises to intermingle. Second, the sensitive receptor or receptors would also have to be adjacent to or in close proximity to the noise generators. Although it is not possible to predict if contiguous or proximate properties may generate noise at the same time that would be additive in nature and thus create a significant cumulative noise impact at sensitive receptors, adherence to the City's Municipal Code provisions that regulate nuisance noise from land uses and other development standards would render the cumulative impacts of the proposed project to less than significant levels.

Cumulative traffic volumes contained in the TIA were developed for the Future Year 2022 and Buildout 2035 analysis time horizons. Traffic volumes for each time horizon were developed utilizing a combination of various future traffic growth methods as follows. For Future Year 2022, traffic volumes were developed by interpolating year 2035 traffic volume projections from the Riverside County Transportation and Analysis Model (RivTAM) to year 2022 plus traffic from a list of past, present, and reasonably foreseeable projects. For Buildout Year 2035, traffic volumes were developed by utilizing the year 2035 traffic volume projections from the RivTAM plus traffic from a list of past, present, and reasonably foreseeable projects.

Cumulative noise impacts associated with roadway noise have been addressed based on the cumulative traffic volumes. Previously referenced Tables 4.12.J and 4.12.K provide a comparison of Future Year (2022) and Buildout Year (2035) without and with project noise levels, and if a significant impact (project-specific or cumulatively significant) occurs.

The project calls for improvements to several of the roadways around the project area in order to accommodate the projected increase in project traffic volumes. There are no new noise-sensitive land uses proposed to be constructed within the area of analysis. However the presence of residential uses occurs within the WLCSP project and nearby area. These roadway segments are analyzed against the thresholds for determining significant impacts defined previously in Section 4.12.6.2. As described previously in Section 4.12.4, the project's incremental contribution to a cumulative noise increase would be considered cumulatively considerable and significant when ambient noise levels affect noise-sensitive land uses and when the proposed project increases noise levels by 1 dB or more over pre-project conditions and the predicted future cumulative with project noise levels cause the following cumulative increases:

- Increase noise levels by 5 dB or more where the existing noise level is less than 60 CNEL;
- Increase noise levels by 3 dB or more where the existing noise level is 60 to 65 CNEL; or
- Increase noise levels by 1.5 dB or more where the existing noise level is greater than 65 CNEL.

Cumulative noise impacts associated with roadway noise have been addressed based on the 2022 and 2035 time horizons analyses contained in Section 4.12.6.2. As identified in the preceding analysis, Tables 4.12.J and 4.12.K show the Future Year 2022 and Buildout Year 2035 CNEL values without and with the proposed project and if a significant impact would be produced based on the project-specific significance criteria identified in Section 4.12.4 and the cumulatively significant significance criteria identified in Section 4.12.4 and repeated above. Traffic noise level increases from the existing baseline condition and the future (2022 and 2035) time horizons are attributable to the intermingled effects of both the cumulative (i.e., past, present, and reasonably foreseeable projects) development projects in the project vicinity and region as well as the proposed project. As indicated in Section 4.12.6.2, roadway noise impacts have been identified and **Mitigation Measures 4.12.6.2A** through **4.12.6.2C** have been presented to reduce roadway noise impacts to the greatest extent feasible. As disclosed in Section 4.12.6.2, there are numerous instances in which there is no feasible means to reduce roadway noise impacts because of the existing developed nature of the affected roadway segment and/or the scattered nature of the sensitive receptors (i.e., residences), which prohibits the effectiveness of a soundwall. Therefore, no significant cumulative noise impacts would occur after implementation of the proposed mitigation measures. For those segments at which there is a cumulatively considerable impact and there is no feasible means to provide mitigation, the significant cumulative impact will remain significant and unavoidable.

THIS PAGE INTENTIONALLY LEFT BLANK

PLEASE READ

Locust Avenue between Moreno Beach Drive and Smiley Boulevard (54). Only the 2035 case results in a significant noise increase for this area. In 2035 the project will result in a 3.5 dB increase raising the noise level up to 68.9 CNEL. There are three single-family homes along this roadway and they front onto the roadway. As discussed above, homes that front onto a street cannot be effectively mitigated with a soundwall. ***Therefore, this potentially significant impact feasibly cannot be mitigated.***

Moreno Beach Drive between Locust Avenue and Ironwood Avenue (56). Only the 2035 case results in a significant noise increase for this area. In 2035 the project will result in a 3.3 dB increase raising the noise level up to 66.6 CNEL. There are 18 single-family homes along this roadway. Some homes front onto the roadway, but most backup to the roadway. Currently there are no soundwalls along these homes. The walls would need to be 6 feet tall with respect to the rear yard. **Roughly 2,000 feet of six foot tall barrier** would need to be provided for mitigation for 15 of the 18 impacted homes (Exhibit 18). With the retrofit the noise levels would drop at least 5 dB, with the resultant noise levels around 62 CNEL in rear yard areas. Approximately 3 homes would remain unmitigated, because these homes front onto Moreno Beach.

Ironwood Avenue between Redlands Boulevard and Highland Boulevard (36). A significant noise increase is projected for all four study years on this roadway link. In 2035, the noise level will increase 5 dB to 63.6 CNEL. There are two single-family homes that front onto Ironwood Avenue. There are also two churches along this roadway, however, the churches are setback from the roadway far enough that no significant impacts will occur. Although the noise levels remain below the City's 65 CNEL standard, the noise levels will increase substantially above those without the project. As discussed above, homes that front onto a street cannot be effectively mitigated with a soundwall. ***This potentially significant impact feasibly cannot be mitigated.***

Redlands Boulevard from State Route 60 to San Timoteo Canyon Road (35, 42). The noise analysis shows significant noise increases along this roadway segment for the 2012, 2022, and 2035 cases. The increases in noise are around 2 dB with a resultant noise level in the 71 to 72 CNEL range. There are 28 homes along this roadway that would be affected. The single-family homes are scattered and generally front the roadway. As discussed above, homes that front onto a street cannot be effectively mitigated with a soundwall. ***Therefore, this potentially significant impact feasibly cannot be mitigated.***

San Timoteo Canyon Road from Alessandro Road to Live Oak Canyon Road to Redlands Boulevard (177, 179). The noise analysis shows a significant impact in the existing (2012) to existing plus project comparison. The noise increases by a little over 3 dB with resultant noise levels in the 65 to 66 CNEL range. There are four scattered residences along the roadway that would be impacted. As discussed above, homes that are scattered cannot be effectively mitigated with a soundwall. ***Therefore, this potentially significant impact feasibly cannot be mitigated.***

Theodore Street from State Route 60 to Highland Blvd (38). The noise analysis indicates that the project will cause a 2.9 dB increase in the year 2035 with a resulting noise level of 67.9 CNEL. There are 4 homes on Theodore Street that front onto the roadway. As discussed above, homes that front onto a street cannot be effectively mitigated with a soundwall. ***This potentially significant impact feasibly cannot be mitigated.***

State Route 60 from Moreno Beach Drive to Redlands Boulevard (33). A significant increase is shown for the existing case and for 2035. It is not feasible to modify the existing residential block wall to lower the increase in project generated noise because block walls are designed for the height that they are built. It is also infeasible for the Lead Agency to demolish the existing walls on private property and build new ones of increased height so that the noise level increases are lowered. ***Therefore, this potentially significant impact feasibly cannot be mitigated.***

WILL THE WORLD LOGISTIC CENTER TRUCK TRAFFIC IMPACT YOUR HOME OR NEIGHBORHOOD? SOUND WALLS MAY HELP LOWER SOUND LEVELS, BUT THEY DON'T STOP TOXIC DIESEL POLLUTION FROM ENTER YOUR YARDS AND NEIGHBORHOODS. SOME EXISTING WALLS WILL BE TORN DOWN AND REPLACED. PLEASE READ

Cactus Avenue from Redlands Boulevard to Street D (Towards eastern end of Cactus Avenue)(50). A significant noise increase is project for all four case years. Currently there is no soundwall along these homes. The homes along Cactus Avenue are elevated above the roadway. A soundwall will need to be located at the top of the slope along the residents rear yards. At the top of slope the residents currently have wrought iron fencing. The wrought iron fencing would need to be replaced with a masonry wall or retrofitted with a glass barrier. The walls would need to be 6 feet tall with respect to the rear yard. Roughly 1,000 feet of barrier would need to be provided depending on where Street D intersects Cactus Avenue. With the retrofit the noise levels would drop at least 5 dB, with the resultant noise levels around 63 CNEL in rear yard areas. A new 6 foot high wall at the top of slope for the existing residences that are on the south side of Cactus Avenue between Street D and Redlands Boulevard is needed for mitigation. The 6 foot wall will need to extend roughly 1,000 feet. Prior to the opening of Street D, the soundwall should be in place.

Cactus Avenue West of Redlands Boulevard (32). This area shows noise increases ranging from 1.5 dB to 5.1 dB depending on the study year. Only the 2035 case results in a significant noise increase. Single-family residences back up to this street with rear yards facing Cactus Avenue. Soundwalls are located along the residences that are approximately 6 foot high. Rear yard areas are approximately 60 feet from the centerline of the roadway. In 2035, the noise levels projected for the yard area, including the effects of the soundwall, will be 64.8 CNEL which will be below the City standard of 65 CNEL. The significant impact is not creating noise levels above the noise standard, but rather creating a significant increase in noise levels above the ambient noise level that would not occur without the project. It will be necessary to modify the existing residential block wall, or to remove and replace the wall to lower the increase in project generated noise.

John F. Kennedy Drive South of Cactus Avenue (9). The homes along John F. Kennedy Drive south of Cactus Avenue will experience significant noise increases for all four study years. Similar to the area along Cactus Avenue, this noise increase will be due to cars and light trucks, and not heavy trucks. The homes along the west side of the roadway are generally lower than the adjacent roadway have a roughly 6 foot soundwall. The homes on the east side of the roadway do not have any soundwalls and are elevated with respect to the roadway. Rear yards areas on both sides of the street generally are in the range of 60 to 90 feet from the centerline of the roadway. Without any sound barrier exterior noise levels at the residences along John F. Kennedy Drive will be 67.9 CNEL. The homes on the west side of the roadway have soundwalls and slope conditions that will reduce noise levels 6 to 10 dB, putting these homes well under the City criteria. Homes on the west side of the street will not be impacted. Homes on the east side of the street do not have soundwalls, and there will be a significant impact unless adequately mitigated.

The homes on the east side of John F. Kennedy Drive are elevated with respect to the road. Their rear yard area sits above the roadway, so there is a slope going up to their yards. At the top of slope the residents have wrought iron fencing. The wrought iron fencing would need to be replaced with a masonry wall or retrofitted with a glass barrier. The walls would need to 6 feet tall with respect to the rear yard. Roughly 5,000 feet of barrier would need to be provided. With the retrofit the noise levels would drop at least 5 dB, with the resultant noise levels around 62.6 CNEL in rear yard areas. A new 6 foot high wall at the top of slope for the existing residences that are on the east side of John F. Kennedy Drive between Cactus Avenue and Bay Hill Drive will be needed for mitigation. The 6 foot wall will need to extend roughly 5,000 feet.

Perris Boulevard between John F. Kennedy Drive and Iris Avenue (303). Only the 2035 case results in a significant noise increase for this area. In 2035 the project will result in a 1.7 dB increase raising the noise level to 72.2 CNEL for areas without a soundwall. This is a mixed area in terms of residential land use. There are 36 single-family homes along this roadway, some with a soundwall and some without. There is also a large multi-family development without a soundwall. Most of the homes either back up to the roadway or side-on to the roadway, making a soundwall feasible. Approximately half of the homes along this roadway do have a soundwall in place. For these homes, there would not be a significant noise impact since for the year 2035 the noise would increase by 1.7 dB going up to 66.2 CNEL.

The walls would need to be 6 feet tall with respect to the rear yard. Roughly 1,500 feet of barrier would need to be provided (Exhibit 19). With the retrofit the noise levels would drop at least 5 dB, with the resultant noise levels around 61 CNEL in rear yard areas. A new 6 foot high wall along the property line for the existing residences that are on Perris Boulevard between John F. Kennedy Drive and Iris Avenue is needed for mitigation (Exhibit 19). The 6 foot wall will need to extend roughly 2,000 feet. The impact is not anticipated to occur until sometime after 2022 and before 2035.

Redlands Boulevard from Dracaea Avenue to State Route 60 (12, 13). The noise analysis shows significant noise increases along this roadway segment for the 2012, 2022, and 2035 cases. There are scattered homes in this area that either face Redlands Boulevard (actually on Shubert Street) or are on Redlands Boulevard. As discussed above, homes that front onto a street cannot be effectively mitigated with a soundwall. *Therefore, this potentially significant impact feasibly cannot be mitigated.* **SPREAD THE WORD-1111- ABOUT THESE AND OTHER N** **Item No. E.3**

4.12 NOISE

This section of the EIR is intended to satisfy the City's requirements for a project-specific noise impact analysis by examining the short-term and long-term noise impacts of the proposed project on sensitive uses adjacent to the proposed project area and by evaluating the effectiveness of mitigation measures. This includes the potential for the proposed project to result in impacts associated with a substantial temporary and/or permanent increase in ambient noise levels in the vicinity of the project area; exposure of people to excessive noise levels, groundborne vibration, or groundborne noise levels.

CEQA requires an analysis of the proposed project's impacts on the existing environment; not an analysis on the existing environment's impacts on the proposed project. The occasional blow downs that occur at the Southern California Gas Company (SCGC) are part of the existing conditions and have been part of the existing conditions for years. Thus, for purposes of clarity, it should be noted that the impact analysis below goes beyond the requirements of CEQA and provided as part of an analysis to ensure worker safety. All mitigation measures imposed in this analysis are the responsibility of future developers and not SCGC.

For the reader's reference, this EIR and each of the technical reports and analyses contained herein have been written to address a series of planning entitlements, which affect several separate, adjacent and related properties. The overall project site covers 3,918 acres in the Rancho Belago area of the City of Moreno Valley. It includes 3,814 acres of land, which is the subject of various entitlements, plus 104 acres of land affected by off-site improvements needed to support the proposed development. The proposed entitlements are summarized below.

A General Plan Amendment is proposed covering 3,814 acres, which redesignates approximately 71 percent of the area (2,710 acres) for logistics warehousing and the remaining 29 percent (1,104 acres) for permanent open space and public facilities. The following elements of the General Plan are included in the proposed Amendment: Community Development (land use); Circulation; Parks, Recreation, and Open Space; Safety; Conservation; and the General Plan Goals and Objectives.

A new Specific Plan will be adopted to govern development of the World Logistics Center for the 2,710 acres. A separate zoning amendment will also be processed and adopted to rezone 1,104 acres for open space and public facilities uses and to incorporate the Specific Plan into the City's Zoning Map.

In addition to the General Plan Amendment, Specific Plan, and Zone Change, the project includes a Tentative Parcel Map covering 1,539 acres (property owned by the project applicant, Highland Fairview) within the project site. This subdivision map is for financing purposes only and will not confer any development rights to the property owner.

The project includes pre-annexation zoning for an 85-acre parcel of land within the project area.

Finally, a Development Agreement between the City and Highland Fairview (the project applicant) is included as one of the project entitlements. The details of all the project entitlements are included in Section 3.4 of the EIR, *Project Characteristics*. The environmental impacts of all of these entitlements on the entire project area are addressed in this EIR and the accompanying technical reports and analyses.

The analysis contained in this section is based on the following technical study prepared for the proposed project:

- *Noise Assessment for the World Logistic Center Specific Plan*, Mestre Greve Associates, January 24, 2013 (Appendix K of this EIR); and

World Logistics Center Project

Draft Environmental Impact Report

In addition to these project-specific technical studies, the analysis contained in this section is also based on the following reference documents:

- *California Noise Insulation Standards*, California Code of Regulations, Title 24, Part 2, §3501;
- *Highway Traffic Noise Prediction Model (FHWA-RD-77-108)*, Federal Highway Administration (FHWA);
- *City of Moreno Valley General Plan*, City of Moreno Valley, July 2006;
- *Moreno Valley Municipal Code*, City of Moreno Valley, current through Ordinance 836 and the February 2012 code supplement; and
- *State of California General Plan Guidelines*, Governor's Office of Planning and Research, October 2003, pages 249 and 250.

4.12.1 Existing Setting

4.12.1.1 Background

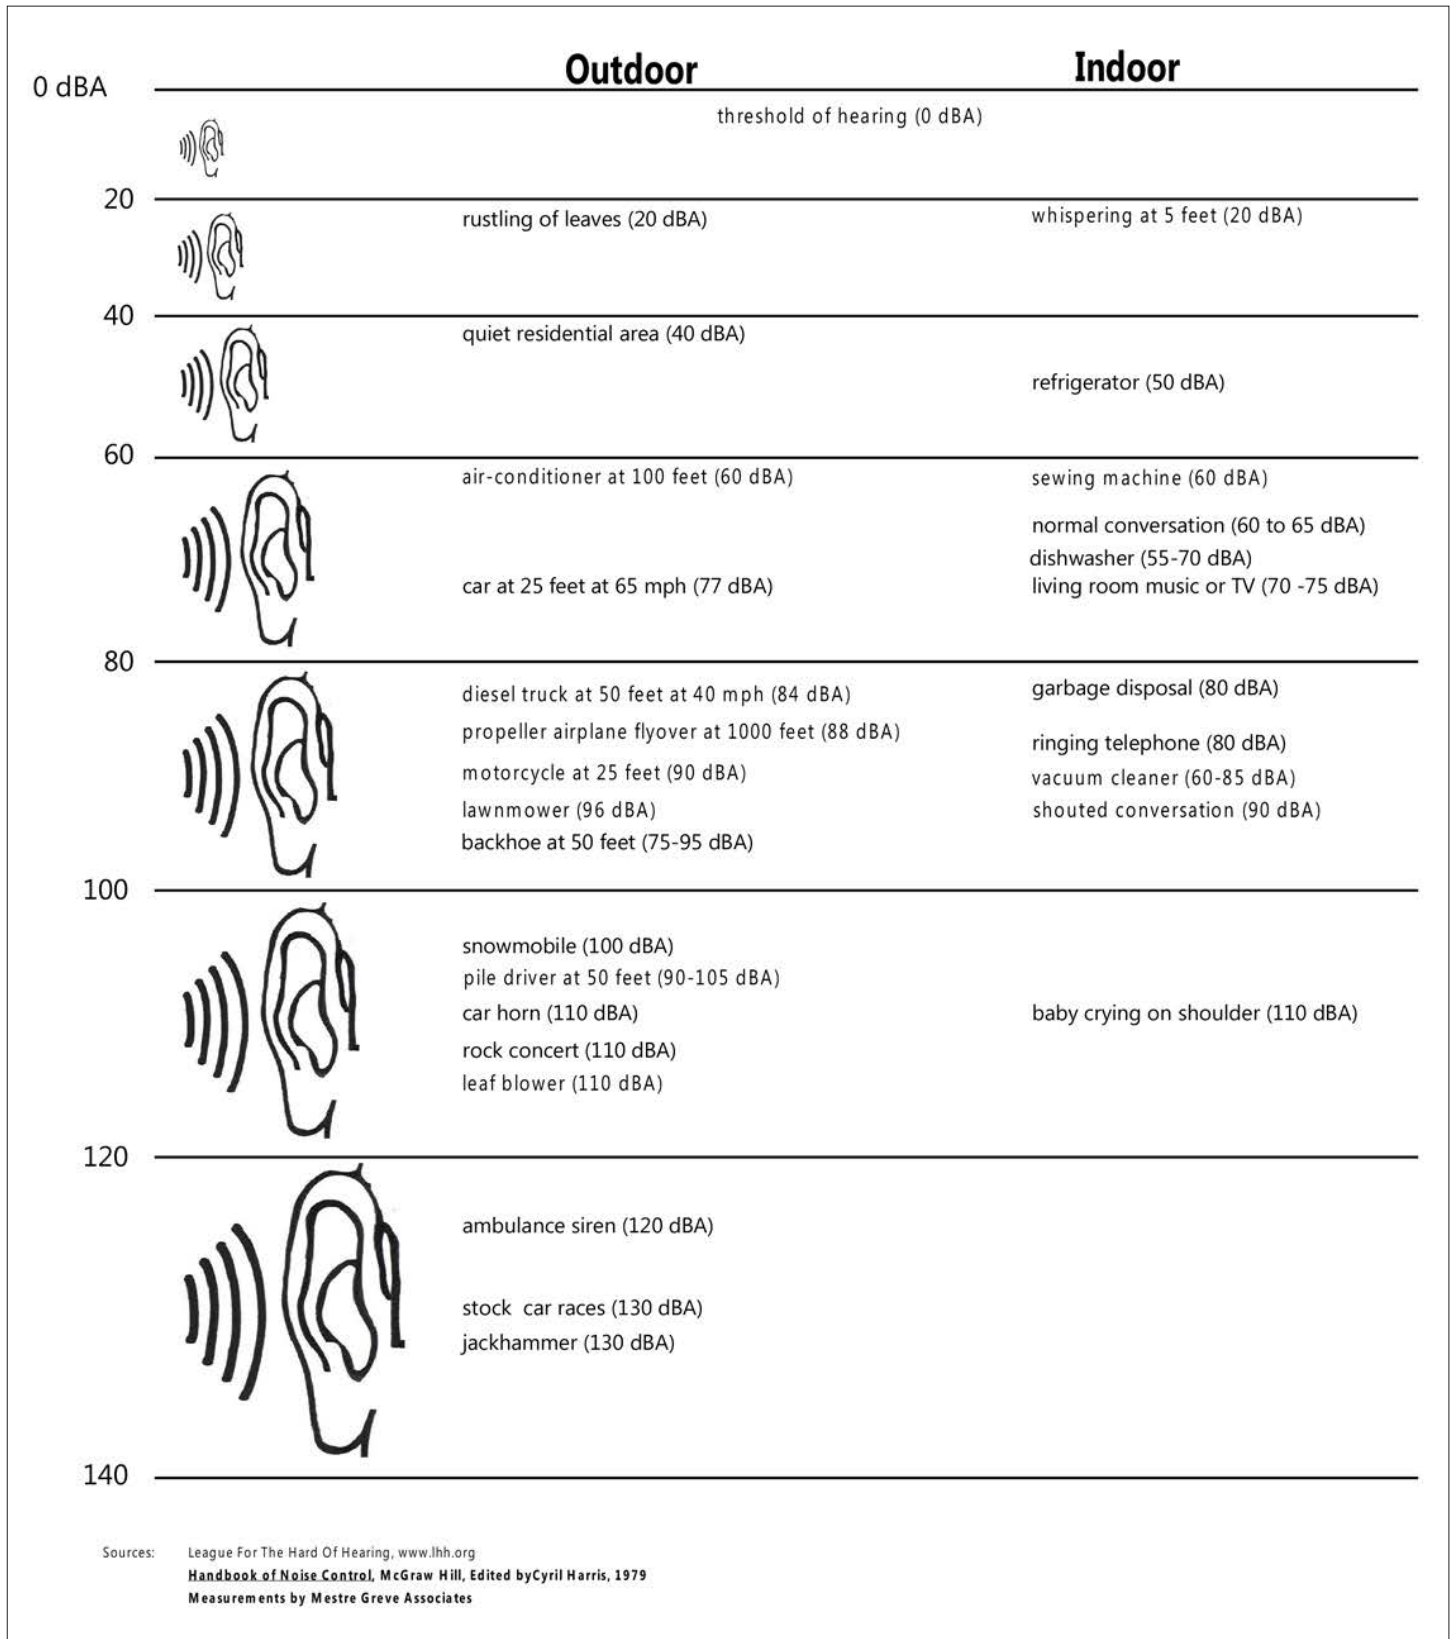

Characteristics of Noise. To the human ear, sound is technically described in terms of its loudness (amplitude) and pitch (frequency). Pitch is generally an annoyance, while loudness can affect our ability to hear. Noise is usually defined as unwanted sound; it consists of any sound that may produce physiological or psychological damage and/or interfere with communication, work, rest, recreation, and sleep.

Measurement of Noise. The standard unit of measurement of the loudness of sound is the decibel (dB). Decibels are based on a logarithmic scale. The logarithmic scale compresses the wide range in sound levels resulting in a more usable range of sound level values, similar to the Richter scale used to measure earthquakes. To humans, a sound 10 dB higher than another is considered to be twice as loud; a sound 20 dB higher than another is considered four times as loud; etc. Typical daily sounds in the environmental range from 30 dB (very quiet) to 100 dB (very loud).

Since the human ear is not equally sensitive to sound at all frequencies, a special frequency-dependent rating scale has been devised to relate noise to human sensitivity. The A-weighted decibel (dBA) scale performs this compensation by discriminating against frequencies in a manner approximating the sensitivity of the human ear. Community noise levels are measured in terms of the dBA. Figure 4.12.1 shows examples of various noises sources and their typical dBA noise level.

There are two categories of noise that are measured to characterize noise conditions: single event noise and community, or cumulative, noise. Single event measurements describe the noise levels from an individual event such as a passing airplane or a heavy-duty truck. Cumulative measurements average the total noise in a community over a specific time period, which is typically 1 or 24-hours. The noise impact analysis performed for this EIR is based on assessment of both single event noise and community or cumulative, noise.

Several rating scales have been developed for measurement of community noise. These account for: (1) the parameters of noise that have been shown to contribute to the effects of noise on humans; (2) the variety of noises found in the environment; (3) the variations in noise levels that occur as a person moves through the environment; and (4) the variations associated with the time of day. They are designed to account for the known health effects of noise on people described previously. Based on these effects, the observation has been made that the potential for a noise to affect people is

LSA

FIGURE 4.12.1

World Logistics Center Project
 Environmental Impact Report
 Typical A-Weighted Noise Levels

THIS PAGE INTENTIONALLY LEFT BLANK

dependent on the total acoustical energy content of the noise. A number of noise scales have been developed to account for this observation. Two of the predominant noise scales are the Equivalent Noise Level (L_{eq}) and the Community Noise Equivalent Level (CNEL). L_{eq} is the sound level corresponding to a steady-state sound level containing the same total energy as a time-varying signal over a given sample period. L_{eq} is the “energy” average noise level during the time period of the sample. L_{eq} can be measured for any time period, but is typically measured for 1 hour. This 1-hour noise level can also be referred to as the Hourly Noise Level (HNL). It is the energy sum of all the events and background noise levels that occur during that time period.

CNEL is the predominant rating scale now in use in California for land use noise compatibility assessment. The CNEL scale represents a time weighted 24-hour average noise level based on the dBA. Time weighted refers to the inclusion of penalties for noise that occurs during certain noise-sensitive time periods. The evening time period (7 p.m. to 10 p.m.) penalizes noises by 5 dBA, while nighttime (10 p.m. to 7 a.m.) noises are penalized by 10 dBA, reflecting people’s increased sensitivity to noise during these time periods. A CNEL noise level may be reported as a CNEL of 60 dBA, 60 dBA CNEL, or simply 60 CNEL.

$L(\%)$ is a statistical method of describing noise which accounts for variance in noise levels throughout a given measurement period. $L(\%)$ is a way of expressing the noise level exceeded for a percentage of time in a given measurement period. For example, since 5 minutes is 25 percent of 20 minutes, $L(25)$ is the noise level that is equal to or exceeded for five minutes in a twenty-minute measurement period. It is $L(\%)$ that is used for most Noise Ordinance standards. For example most daytime County, State and City noise ordinances use a standard of 55 dBA for 30 minutes per hour, or an $L(50)$ level of 55 dBA. In other words, the noise ordinance may state that no noise level should exceed 55 dBA for more than fifty percent of a given period.

The maximum noise level (L_{max}) is the highest exponential time averaged sound level that occurs during a stated time period. The noise levels discussed in this analysis for short-term noise impacts are specified in terms of maximum levels denoted by L_{max} , which reflects peak noise conditions and addresses the annoying aspects of intermittent noise. It is often used together with another noise scale, or noise standards in terms of percentile noise levels, in noise ordinances for enforcement purposes. For example, the L_{10} noise level represents the noise level exceeded 10 percent of the time during a stated period. The L_{50} noise level represents the median noise level. Half the time the noise level exceeds this level, and half the time it is less than this level. The L_{90} noise level represents the noise level exceeded 90 percent of the time and is considered the background noise level during a monitoring period. For a relatively constant noise source, the L_{eq} and L_{50} are approximately the same.

Fundamentals of Groundborne Vibration. Vibration refers to groundborne noise and perceptible motion of the earth. Similar to noise, vibration is transmitted in noise-like waves through the earth and solid objects.

There are several ways to categorize vibration sources. One way is to divide vibration into natural sources (e.g., earthquakes, volcanic eruptions, sea waves, and landslides) and human sources (e.g., explosions, machinery, traffic, trains, and construction equipment). Similar to noise sources, vibration sources can also be described as continuous (e.g., operating factory machinery) or transient (e.g., explosions).

As with noise, ground vibrations can be described by amplitude and frequency. Vibration amplitude is characterized by its displacement, velocity, and acceleration. Displacement is the distance that soil particles travel from their original location as a result of vibration, as measured in inches or millimeters. Velocity is the speed of the soil particles measured in inches per second or millimeters per second. Acceleration is the acceleration of the soil particles measured in inches per second per second or millimeters per second per second. Particle velocity is the most commonly used vibration

World Logistics Center Project
Draft Environmental Impact Report

attribute used to describe vibration. Table 4.12.A presents the human reaction to various levels of peak particle velocity. Vibrations also vary in frequency. Traffic vibrations generally range in frequencies from 10 to 30 hertz (Hz), and tend to average around 15 Hz. As a point of reference, city buses often generate frequencies around 3 Hz at high vehicle speeds, due to their suspension systems.

Table 4.12.A: Human Reaction to Typical Vibration Levels

Vibration Level Peak Particle Velocity (inches/second)	Human Reaction
0.0059–0.0188	Threshold of perception, possibility of intrusion.
0.0787	Vibrations readily perceptible.
0.0984	Level at which continuous vibrations begin to annoy people.
0.1968	Vibrations annoying to people in buildings.
0.3937–0.5905	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges.

Source: Caltrans 1992.

Groundborne vibration is almost exclusively a concern inside buildings and is rarely perceived as a problem outdoors, where the motion may be discernable. However, without the effects associated with the shaking of a building, there is less adverse reaction. Building vibration may be perceived by the occupants as motion of building surfaces, rattling of items on shelves or hanging on walls, or as a low-frequency rumbling noise. Building damage is not a factor for normal projects, with the occasional exception of blasting and pile driving during construction or mining. Annoyance from vibration often occurs when the vibration exceeds the threshold of perception by up to 10 decibels. This is an order of magnitude below the damage threshold for normal buildings.

Typical sources of groundborne vibration are construction activities (e.g., blasting, pile driving, and operating heavy-duty earthmoving equipment), steel-wheeled trains, and occasional traffic on rough roads. Problems with groundborne vibration and noise from these sources are usually localized to within about 100 feet of the vibration source, although there are examples of groundborne vibration causing interference out to distances greater than 200 feet, as described in the FTA Transit Noise and Vibration Impact Assessment (FTA, May 2006). When roadways are smooth, vibration from traffic, even heavy trucks, is rarely perceptible.

Factors that influence groundborne vibration and noise include the following:

- *Vibration Source:* Vehicle suspension, wheel types and condition, track/roadway surface, track support system, speed, transit structure, and depth of vibration source.
- *Vibration Path:* Soil type, rock layers, soil layering, depth to water table, and frost depth.
- *Vibration Receiver:* Foundation type, building construction, and acoustical absorption.

Among the factors listed above, there are significant differences in the vibration characteristics when the source is underground versus at ground surface. In addition, soil conditions are known to have a strong influence on the levels of groundborne vibration. Among the most important factors are the stiffness and internal damping of the soil and the depth to bedrock. Vibration propagation is more efficient in stiff clay soils than in loose sandy soils, and shallow rock seems to concentrate the vibration energy close to the surface and can result in groundborne vibration problems at a great distance from the track. Factors such as layering of the soil and depth to water table can have significant effects on the propagation of groundborne vibration. Soft, loose, sandy soils tend to attenuate more vibration energy than hard, rocky materials. Vibration propagation through groundwater is more efficient than through sandy soils.

4.12.1.2 Sensitive Land Uses in the Project Vicinity

Certain land uses are considered more sensitive to noise than others. Examples include residential areas, educational facilities, hospitals, childcare facilities, and senior housing. The project vicinity and Specific Plan area are characterized by a mix of developed and undeveloped properties. Developed properties in the vicinity include an industrial/warehouse building in Moreno Valley to the northwest (Skechers) and several residential neighborhoods along Redlands Boulevard along the western boundary of the project site. An area of the City known as “Old Moreno” is situated near the southwest portion of the project site, around the intersection of Redlands and Alessandro Boulevards. The homes along Merwin Street, east of Redlands Boulevard, constitute the closest sensitive receptors to the project site (i.e., they are adjacent to the property).

4.12.1.3 Existing Noise Measurements

Existing noise levels in the vicinity of the proposed project are used establish baseline noise levels in key areas. Noise measurements within the project site and in the surrounding area were taken. The noise measurement locations were selected to provide coverage of the project’s potential noise impact area. The noise measurement locations are shown Figure 4.12.2.

Noise measurements were taken at sixteen sites in the project vicinity during the daytime hours (between 7 a.m. and 10 p.m.) and during nighttime hours (between 10 p.m. and 7 a.m.). For each measurement site and time period, noise levels were measured for 15 minutes and calibrated to ensure that the measured sound level readings were accurate. The measurements were used to calculate existing L_{eq} , L_{min} , L_{max} , $L_{1.7}$, $L_{8.3}$, L_{25} and L_{50} values for the measurement locations. Table 4.12.B shows the results for the daytime measurements, and Table 4.12.C shows the nighttime measurements.

Table 4.12.B: Existing Daytime Noise Measurements (dBA)

Site	Date	Start Time	L_{eq}	L_{max}	$L_{1.7}$	$L_{8.3}$	L_{25}	L_{50}	L_{min}

4.12.1.4 Existing Traffic Noise Environment

The primary existing noise sources in the project area are transportation facilities. Traffic on SR-60, Redlands Boulevard, Theodore Street, Gilman Springs Road, and other local streets is the dominant source contributing to the ambient noise levels in the project vicinity. Noise from motor vehicles is generated by engine vibrations, the interaction between the tires and the road, and the exhaust system. Table 4.12.D identifies the existing (2012) traffic noise levels adjacent to roadway segments in the project vicinity.

Table 4.12.D: Existing Traffic Noise Levels (dBA)

Roadway Segment	CNEL (dBA) at 100 feet

4.12.1.5 Existing SDG&E and SCGC Facilities

The proposed World Logistics Center Specific Plan area is currently occupied by one San Diego Gas and Electric Company (SDG&E) compressor station and two Southern California Gas Company (SCGC) facilities. These facilities are located within the boundaries of the Specific Plan as shown in previously referenced Figure 4.12.2. The SDG&E compressor station recompresses natural gas received from interstate gas pipelines and delivers the gas to Southern California via transmission pipelines. The two SCGC facilities contain flow valve and metering equipment facilities. The southern SCGC facility contains a maintenance functions as well. All of these facilities contain gas pipeline blow-down equipment. This equipment includes exhaust stacks that vent the high pressure gas into the atmosphere occur during emergencies, scheduled maintenance, and annual testing of the blow-down systems.

The SDG&E and SCGC facilities produce noise from three different sources that could affect future development within the proposed project: 1) the operation of the compressor station; 2) blow-down events at the compressor station; and 3) blow-down events at the SCGC facilities. The blow-down events generate infrequent high noise levels for relatively short periods. The compressor station generates a relatively constant noise level, although noise levels vary slightly when the compressors are turned on and off when the gas is conveyed to the transmission pipelines.

The SDG&E compressors are the primary source of operational noise generated by the compressor station. The facility contains two sets of three reciprocating natural gas combustion engines and one set of four natural gas-fired turbines, for a total of ten compressors with power ranging from 995 to 3,400 horsepower. The compressors are located within noise attenuation structures and are equipped

with intake and exhaust silencers. The facility routinely operates at maximum capacity 24 hours per day. It is anticipated that demand on the compressor station will increase in the future to the point where the facility operates 24 hours a day, year round.

The CNEL levels for the SDG&E compressor station presented in Figure 4.12.3 are based on a worst-case assumption that the compressor station is in full operation 24 hours a day. Figure 4.12.4 presents the average (L_{eq}) noise levels generated by the compressor station during full operation. Both the CNEL and L_{eq} metrics are used to assess the noise impacts from the facility.

There are several blow-down points within the SDG&E compressor station. As stated previously, these blow-down points allow for the release of pressurized gas during emergencies, scheduled maintenance, and annual testing. Blow-down events at the compressor station vent gas and last between 30 and 90 seconds. The maximum sound levels (L_{max} dBA) generated by the blow-down events is presented in Figure 4.12.5.

There are blow-down points in the SCGC facilities. Blow-down events at the SCGC facilities vent gas from miles of pipeline and are much longer than those at the compressor station, and can last up to 90 minutes. Approximately four blow-down events occur annually at the SCGC facilities. L_{max} noise levels (dBA) are shown in in Figure 4.12.6. The noise level will be at or near the L_{max} level during the entire blow-down event. It should also be noted that blow-down events generate ground vibrations and natural gas odors in the vicinity in the surrounding area when events occur. Again, it must be noted that these blow-down events are part of the existing conditions of the project site, and any impacts caused by development of new warehousing near these facilities, and any mitigation necessary, are not the responsibility of SCGC or SDG&E.

4.12.2 Existing Policies and Regulations

The applicable noise standards governing the project site are the criteria in the City of Moreno Valley General Plan Safety Element (Environmental Safety, Noise) and Municipal Code (Noise Ordinance). The City's Safety Element of the General Plan does not contain specific noise standards or significance thresholds. However, the General Plan does cite applicable State standards including the California Administrative Code, Section 1092 of Title 25, Chapter 1, Subchapter 1, Article 4 and Section 5014 of Title 21, Subchapter 6, Article 2. In addition, other applicable standards identified in the *California Noise Insulation Standards*¹ and the *State of California Vehicular Code*² are included below. The following sections list the General Plan policies, Municipal Code, and State standards relevant to noise for the proposed project.

4.12.2.1 City of Moreno Valley General Plan Policies

Chapter 9 of the *City of Moreno Valley General Plan*³ defines goals, objectives, policies, and action items related to noise conditions in the City. The specific policies related to noise that are relevant to the proposed project are as follows:

Objective 6.3 Provide noise compatible land use relationships by establishing noise standards utilized for design and siting purposes.

Policy 6.3.5 Enforce the California Administrative Code, Title 24 noise insulation standards for new multi-family housing developments, motels and hotels.

Policy 6.3.6 Building shall be limited in areas of sensitive receptors.

- Objective 6.4** Review noise issues during the planning process and require noise attenuation measures to minimize acoustic impacts to existing and future surrounding land uses.
- Policy 6.4.1** Site, landscape and architectural design features shall be encouraged to mitigate noise impacts for new developments, with a preference for noise barriers that avoid freeway sound barrier walls.
- Objective 6.5** Minimize noise impacts from significant noise generators such as, but not limited to, motor vehicles, trains, aircraft, commercial, industrial, construction, and other activities.
- Policy 6.5.1** New commercial and industrial activities (including the placement of mechanical equipment) shall be evaluated and designed to mitigate noise impacts on adjacent uses.
- Policy 6.5.2** Construction activities shall be operated in a manner that limits noise impacts on surrounding uses.

4.12.2.2 City of Moreno Valley Municipal Code

The *Moreno Valley Municipal Code*¹ establishes a Noise Ordinance that describes the noise standards within the City. Chapter 11.80.030 (Title 11) lists specific prohibited acts.

The City's residential site development standards, as identified in Chapter 9.03.040 of the City's Planning and Zoning Code, state that in all residential districts, air conditioners, heating, cooling, and ventilating equipment and all other mechanical lighting or electrical devices shall be operated so that noise levels do not exceed 60 dBA (L_{dn}) at the property line.

The City's Municipal Code, Section 6.04.030.J states that "to create, allow or maintain any loud or unusual noise or operate or maintain any device, instrument, vehicle, or machinery in such a manner as to create loud or unusual noise, cause vibrations, or unreasonable light spillage or glare which causes discomfort or annoyance to reasonable persons of normal sensitivity, or which endangers the comfort, repose, health or peace of the public or of any person using or occupying other property in the vicinity" is prohibited.

The City's Municipal Code, Section 9.10.140, specifies that all commercial and industrial uses shall be operated so that noise created by any loudspeaker, bells, gongs, buzzers, or other noise attenuation or attracting devices shall not exceed 55 dBA at any one time beyond the boundaries of the property.

Chapter 11.80.030 of the City's Municipal Code also states:

Based on statistics from the Center for Disease Control and Prevention and the National Institute for Occupational Safety and Health, Table 1 and Table 1-A specify sound level limits which, if exceeded, will have a high probability of producing permanent hearing loss in anyone in the area where the sound levels are being exceeded. No sound shall be permitted within the City which exceeds the parameters set forth in Table 11.80.030-1 [Table 4.12.E] and 11.80.030-1-A [Table 4.12.F] of this chapter.

No person shall maintain, create, operate or cause to be operated on private property any source of sound in such a manner as to create any nonimpulsive sound which exceeds the limits set forth for the source land use category (as defined in Section 11.80.020) in Table 11.80.030-2 [Table 4.12.F] when measured at a distance of two hundred (200) feet or more from the real property line of the source of the sound, if the sound occurs on privately owned property, or from the source of the sound, if the sound occurs on public right-of-way, public space or other publicly owned property. Any source of sound in violation of this subsection shall be deemed prima facie to be a noise disturbance.

¹ *Moreno Valley Municipal Code*, City of Moreno Valley, current through Ordinance 836 and the November 2012 code supplement.

World Logistics Center Project
Draft Environmental Impact Report

The following uses and activities shall be exempt from the sound level regulations except the maximum sound levels provided in Tables 11.80.030-1 [Table 4.12.E] and 11.80.030-1A [Table 4.12.F]:

1. Sounds resulting from any authorized emergency vehicle when responding to an emergency call or acting in time of an emergency.
2. Sounds resulting from emergency work as defined in Section 11.80.020.
3. Any aircraft operated in conformity with, or pursuant to, federal law, federal air regulations and air traffic control instruction used pursuant to and within the duly adopted federal air regulations; and any aircraft operating under technical difficulties in any kind of distress, under emergency orders or air traffic control, or being operated pursuant to and subsequent to the declaration of an emergency under federal air regulations.
4. All sounds coming from the normal operations of interstate motor and rail carriers, to the extent that local regulation of sound levels of such vehicles has been preempted by the Noise Control Act of 1972 (42 U.S.C. § 4901 et seq.) or other applicable federal laws or regulations.
5. Sounds from the operation of motor vehicles, to the extent they are regulated by the California Vehicle Code.
6. Any constitutionally protected noncommercial speech or expression conducted within or upon any public right-of-way, public space or other publicly owned property constituting an open or a designated public forum in compliance with any applicable reasonable time, place and manner restriction on such speech or expression or otherwise pursuant to legal authority.
7. Sounds produced at otherwise lawful and permitted city-sponsored events, organized sporting events, school assemblies, school playground activities, by permitted fireworks, and by permitted parades on public right-of-way, public space, or other publicly owned property.
8. An event for which a temporary use permit or special event permit has been issued under other provisions of this code, where the provision of Section 11.80.010 are met, the permit granted expressly grants an exemption from specific standards contained in this chapter, and the permittee and all persons under the permittee's reasonable control actually comply with all conditions of such permit. Violation of any condition of such permit related to sound or sound equipment shall be in violation of this chapter and punishable as such.

Table 4.12.E and Table 4.12.F show the maximum sound levels that are permitted in the City for continuous and impulsive sounds, respectively.

Table 4.12.E: Maximum Continuous Sound Levels*

Duration Per Day Continuous Hours	Sound Level (dBA)
8	90
6	92
4	95
3	97
2	100
1.5	102
1	105
0.5	110
0.25	115

* When the daily sound exposure is composed of two or more periods of sound exposure at different levels, the combined effect of all such periods shall constitute a violation of this section if the sum of the percentage of allowed period of sound exposure at each level exceeds 100 percent.

Source: Chapter 11.80.030 Table 11.80.030-1, City of Moreno Valley Municipal Code, City of Moreno Valley.

Table 4.12.F: Maximum Impulsive Sound Levels

Number of Repetitions Per 24-Hour Period	Sound Level (dBA)
1	145
10	135
100	125

Source: Chapter 11.80.030 Table 11.80.030-1A, City of Moreno Valley Municipal Code, City of Moreno Valley.

The City also restricts the sound levels for non-impulsive sound on lands designated for residential and commercial land uses during the daytime and nighttime time periods. These levels are shown in Table 4.12.G. Section 11.80.050 (3) clearly identifies the measurement as an “average” noise level, and therefore, the noise limits shown in Table 4.12.G are interpreted as the L_{eq} noise level.

Table 4.12.G: Maximum Sound Levels (in dBA) for Source Land Uses

Residential		Commercial	
Daytime	Nighttime	Daytime	Nighttime
60	55	65	60

Source: Chapter 11.80.030 Table 11.80.030-2, City of Moreno Valley Municipal Code, City of Moreno Valley.

The City prohibits all construction and demolition activities between the hours of 8:00 p.m. and 7:00 a.m. the day following a noise disturbance. A noise disturbance is defined as any sound which that disturbs a reasonable person of normal sensitivities, exceeds the sound level limits set forth in the Noise Ordinance, or is plainly audible. A noise disturbance is defined as plainly audible measured at a distance of 200 feet from the real property line of the source of the sound if the sound occurs on privately owned property, or from the source of the sound, if the sound occurs on public right-of-way, public space or other publicly owned property.

4.12.2.3 State of California Vehicle Code

Recent studies have shown that the most objectionable feature of traffic noise is the sound produced by vehicles equipped with illegal or faulty exhaust systems. In addition, such vehicles are often operated in a manner that causes tire squeal and excessively loud exhaust noise. A number of California State vehicle noise regulations can be enforced by local authorities as well as the California Highway Patrol. These include § 27150 (mufflers) of the California Vehicle Code (CVC), as well as excessive speed laws, which may be applied to curtail traffic noise. The California Highway Patrol and the Department of Health Services (through local health departments) are available to aid local authorities in code enforcement and training pursuant to proper vehicle sound level measurements.

4.12.2.4 State of California Noise Compatibility Guidelines

The State of California Noise Compatibility Guidelines, published by the Department of Health, Services provides guidance for use when siting land uses. The compatibility guidelines are shown in Figure 4.12.7. The guidelines will be used to evaluate the compatibility of the proposed land uses with the noise environment. The guidelines show compatibility of various land uses with different noise environments. The guidelines show that industrial uses are normally acceptable in noise environments up to 75 CNEL.

4.12.3 Methodology

Evaluation of noise impacts associated with the proposed project includes the following:

THIS PAGE INTENTIONALLY LEFT BLANK

Land Use/Noise Compatibility Guidelines

-  **Normally Acceptable** Specified land use is satisfactory based upon the assumption that any buildings involved are of normal conventional construction without any special noise insulation requirements
-  **Conditionally Acceptable** - New construction or development shall be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply system of air conditioning, will normally suffice.
-  **Normally Unacceptable** New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design
-  **Clearly Unacceptable** New construction or development should generally not be undertaken

THIS PAGE INTENTIONALLY LEFT BLANK

- Determination of the short-term construction noise impacts on off-site noise-sensitive uses;
- Determination of the long-term noise impacts, including vehicular traffic and stationary noise sources, on on-site and off-site noise-sensitive uses; and
- Determination of the required mitigation measures to reduce long-term noise impacts from all sources.

Because of the location of noise-sensitive receptors, the noise analysis evaluates the noise effects of the industrial development on the existing residential development (sensitive receptors) near the southwest portion of the proposed project area.

There are no Federal Highway Administration (FHWA), State, or local standards for vibration. According to the FHWA, highway traffic and construction vibrations pose no threat to buildings and structures; and annoyance to people is not considered any worse than other discomforts experienced from living near highways. However, a substantial amount of research has been completed to compare vibrations from single events such as dynamite blasts with architectural and structural damage. The U.S. Bureau of Mines has set a safe limit of 0.5 inch per second peak particle velocity to avoid structure damage in residential structures (U.S. Bureau of Mines 1980). Below this level, there is virtually no risk of building damage.

4.12.4 Thresholds of Significance

A project would have a significant effect on the environment related to noise if it would substantially increase the ambient noise levels for adjoining areas or if it would conflict with adopted environmental plans and goals of the community in which it is located.

The applicable noise standards and guidelines governing the project are those specified previously in Sections 4.12.2.1 through 4.12.2.4. In summary, these criteria are contained within the Safety Element of the General Plan, the Municipal Code, the California Vehicle Code, and the State Noise Compatibility Guidelines.

For this project, a noise impact is considered significant if the project would result in:

- Exposure of persons to or generation of noise levels in excess of standards established in the *City of Moreno Valley General Plan*, *Moreno Valley Municipal Code*, or applicable standards of other agencies;
- Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels;
- A substantial temporary, periodic, and/or permanent increase in ambient noise levels in the project vicinity above levels existing without the project;
- For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels; and/or
- For a project within the vicinity of a private airstrip, expose people residing or working in the project area to excessive noise levels.

The standards within the *City of Moreno Valley General Plan* and *Moreno Valley Municipal Code* determine the acceptable noise environment for proposed project and its vicinity. The standards are as follows:

World Logistics Center Project
Draft Environmental Impact Report

- To the extent feasible, ensure through the design review process that exterior noise levels at commercial and industrial areas do not exceed 75 dBA CNEL.
- Consider the following uses noise-sensitive and discourage them in areas where exterior noise levels exceed 65 dBA CNEL unless measures are implemented that reduce the noise exposure below this level: single-family and multiple-family residential uses, group homes, hospitals, schools and other learning institutions, and parks and open space areas where quiet is a basis for use.

Long-term impacts from the project's traffic noise that affect existing sensitive land uses are considered to be substantial and, therefore, constitute a significant noise impact if the project would:

- Increase noise levels by 5 dB or more where the no project noise level is less than 60 CNEL;
- Increase noise level by 3 dB or more where the no project noise level is 60 CNEL to 65 CNEL; or
- Increase noise levels by 1.5 dB or more where the no project noise level is greater than 65 CNEL.

The project's incremental contribution to a cumulative noise increase would be considered cumulatively considerable and significant when ambient noise levels affect noise-sensitive land uses and when the project increases noise levels by 1 dB or more over pre-project conditions and the predicted future cumulative with project noise levels cause the following cumulative increases:

- Increase noise levels by 5 dB or more where the existing noise level is less than 60 CNEL;
- Increase noise levels by 3 dB or more where the existing noise level is 60 to 65 CNEL; or
- Increase noise levels by 1.5 dB or more where the existing noise level is greater than 65 CNEL.

4.12.5 No Impact/Less than Significant Impacts

The following impacts were identified as having a less than significant impact or no impact on the environment with implementation of the proposed project.

4.12.5.1 Groundborne Vibration Impacts

Threshold	Would the project result in exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?
-----------	----------------------------------------------------------------------------------------------------------------------------------

Roadways in the vicinity of the project area are either paved or would be paved as the area develops, and would not result in project traffic driving over rough or dirt roads. Well maintained roads typically do not result in substantial vibration levels. Even roads with irregularities typically only generate substantial levels of vibration very near, less than 50 feet from the irregularity. Construction activities that would occur within the WLCSP area are not anticipated to require blasting or pile driving. Roadway vibrations are typically not perceptible more than 50 feet from the roadway except in very unusual circumstances. Generally, the interface between the soft tire of a truck or automobile will not generate significant vibration unless the road is in poor shape (e.g., potholes or pavement joints) Therefore, impacts associated with this issue are anticipated to be less than significant, and no mitigation is required.

4.12.5.2 Airport Noise Impacts

Threshold	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, results in exposure of people residing or working in the project area to excessive noise levels. For a project within the vicinity of a private airstrip, expose people residing or working in the project area to excessive noise levels.
-----------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

The project area is located approximately 5.5 miles northeast of the March Airfield (MAF) and is not located within two miles of a private airstrip. The MAF is a joint-use airport, used for both military and civilian purposes. The March Air Reserve Base (MARB) is the military operator of the MAF and March Inland Port (MIP) is the civilian operator of the airport. This facility is anticipated to play an increasingly important role in the transportation of goods and cargo for the Southern California region. Existing flight patterns affect a large portion of the City of Moreno Valley, along a path that affects the western portion of the City in a northwest/southeast alignment. Aircraft operations from the airport currently contribute intermittent single-event noise.

There is potential for single-event noise exposure levels from MAF activity to affect the proposed project. The exposure levels will vary dependent upon the type of aircraft and flight track flown for each operation at MAF. However, the proposed project is not identified as being within the noise or safety contours delineated for the MARB Airport.¹ In addition, the proposed project is not considered to contain sensitive receivers and, therefore, the impacts from these single-event noise levels are considered to be below the level of significance. The City's exterior noise standard for industrial uses is 70 dBA CNEL. MAF noise levels are less than 60 dB CNEL within the project area. Therefore, the proposed project would not have the potential to expose people to excessive noise levels from airport operations. Therefore, no significant noise impacts would occur regarding these issues from implementation of the proposed project, and no mitigation is required.

4.12.6 Significant Impacts

4.12.6.1 Short-Term Construction Noise Impacts

Threshold	Would the project result in a substantial temporary, periodic, and/or permanent increase in ambient noise levels in the project vicinity above levels existing without the project?
-----------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Short-term noise would occur during the construction of the WLCSP. First, construction crew commutes and the transport of construction equipment and materials to the site for the proposed WLC project would incrementally increase noise levels on access roads in the WLC planning area. In addition, noise would be generated during excavation, grading, and building construction on various portions of the Specific Plan site. Construction is completed in discrete steps, each of which has its own mix of equipment, and consequently, its own noise characteristics. These various sequential phases would change the character of the noise generated on the site and, therefore, the noise levels surrounding the site as construction progresses. Despite the variety in the type and size of construction equipment, similarities in the dominant noise sources and patterns of operation allow construction-related noise ranges to be categorized by work phase. The site preparation phase, which includes excavation and grading of the site, tends to generate the highest noise levels, because the noisiest construction equipment is earthmoving equipment, which includes excavating machinery such as backfillers, bulldozers, draglines, and front loaders. Earthmoving and compacting equipment includes compactors, scrapers, and graders. Typical operating cycles for these types of construction equipment may involve one or two minutes of full-power operation followed by three to four minutes at

¹ Figure 5.4-1 March Reserve Air Base Noise Impact Area, City of Moreno Valley General Plan EIR, July 2006.

World Logistics Center Project

Draft Environmental Impact Report

lower power settings. Implementation of the Specific Plan would result in construction activities that would require the use of scrapers, bulldozers, and water and pickup trucks within the WLCSP area.

Figure 4.12.8 presents construction noise levels measured at 50 feet. The peak noise level for the majority of the equipment that will be used during construction of the proposed project will range from 70 to 95 dBA. Based on the fact that noise levels dissipate with increases in distance from the noise source due to noise divergence, noise levels at greater distances are less than those presented in Figure 4.12.8. Noise measurements made by Mestre Greve Associates demonstrate that the noise levels generated by commonly used grading equipment (e.g., loaders, graders, and trucks) generate noise levels that typically do not exceed the middle of the range shown in Figure 4.12.8.¹ However, the noise levels shown in Figure 4.12.8 have been used as the basis for the noise analysis estimates presented in this EIR.

Construction activities that are associated with the proposed WLCSP project would occur in two general areas: on-site and off-site. Some phases of the on-site construction would occur for 24 hours a day for 7 days a week. It is anticipated that on-site construction would occur periodically over a nine-year period with a potential start year of 2013 and ending in 2021. Off-site construction (which would involve minor grading, drainage, interchange, utility, and roadway improvements) is anticipated to only during the daytime weekday hours and would have a shorter construction duration.

On-site Construction. Sensitive receptors that would be potentially affected by on-site construction activities would include residences located within and adjacent to the WLCSP area as well as residences located on the north side of SR-60. For residences on the opposite side of SR-60, existing daytime and nighttime freeway noise is anticipated to be greater than the noise generated by the construction activities that would occur within the WLCSP area. Although certain conditions at night, such as low inversions and very calm conditions, can increase the ability of construction noise to travel to the residences north of the freeway, these same conditions would also amplify the noise generated on the freeway. Since freeway noise would continue to be the dominant noise source in the area for these residences along SR-60, construction noise impacts on the residents north of the freeway will be less than significant and no mitigation is required.

Existing residences within the WLCSP area or adjacent to the Specific Plan area, such as those along Redlands Boulevard, Merwin Street, Bay Avenue, Cactus Avenue, and Gilman Springs Road, may be located within 50 feet or less from areas where intense construction (24 hours a day, 7 days a week) would occur. Although residential properties located within the WLCSP would be rezoned as Light Logistics, the existing residences are considered to be noise-sensitive uses that would be affected by intense construction activities. Similarly, residences located adjacent to the project site (i.e., along Redlands Boulevard, Merwin Street, Bay Avenue, Cactus Avenue, and Gilman Springs Road) would also be affected by intense construction activities. Based on a 50-foot noise attenuation distance, these residences may experience worst-case unmitigated peak construction noise levels (L_{max}) up to 97 dBA. The average noise levels are typically 5 to 15 dB lower than the peak noise levels. Average noise levels (L_{eq}) at 50 feet could easily be in the range of 82 to 92 dBA during most phases of construction.

The City of Moreno Valley Municipal Code does not include any exemptions for construction noise. Therefore, construction would be subject the limitations of 60 dBA during daytime and 55 dBA at nighttime measured at residential areas. According to Section 3.4.14, *Project Description*, WLC project construction may occur 24 hours a day, 7 days a week for certain activities. Significant noise impacts would be expected, especially if work with high noise levels occurs between 8:00 p.m. and 6:00 a.m.

I:\HFV1201\Reports\EIR\fig4-12-8_ConstructEquipNoise.ai (12/21/12)

THIS PAGE INTENTIONALLY LEFT BLANK

Based on these projections, anticipated worst-case construction noise levels would regularly be exceeded during daytime and nighttime hours at residences within the Specific Plan area. Based on an L_{eq} noise level of 90 dBA at 50 feet, an observer would need to be 1,580 feet from the construction to experience a noise level of 60 dBA (L_{eq}), or 2,800 feet for a noise level of 55 dBA (L_{eq}). Therefore, a residence within 1,580 feet during active construction during the daytime would be affected. Similarly, a residence within 2,800 feet during the nighttime would be affected by construction noise.

As set forth in Section 3.4.14 and as stated by the project applicant, construction could occur 24 hours per day, 7 days per week for these construction activities. Therefore, noise levels at the nearest residences would exceed the City's exterior noise standard of the 60 dBA¹ CNEL daytime standard and 55 dBA CNEL nighttime standard for residential uses. This is a significant impact requiring mitigation.

Off-site Construction. Construction activities associated with off-site construction include road improvements along Cactus Avenue and Redlands Boulevard, water and utility improvements, construction of a detention basin, debris basins, and interchange improvements. Roadway and interchange improvements are planned along Cactus Avenue, Redlands Boulevard, State Route 60, and Gilman Springs Road. Often the loudest pieces of equipment associated with this type of construction are the graders/scrapper equipment. Peak noise levels at 50 feet can reach 96 dBA, with average noise levels (L_{eq}) in the 85 dBA range. Noise levels of 60 dBA (L_{eq}) could be exceeded for up to 900 feet from the construction area. Existing residences are located within 900 feet of the off-site construction areas and would be exposed to noise levels that would exceed of the Moreno Valley noise criteria for residential uses.

Other off-site construction improvements such as drainage, sewer, water, and utility features would also generate noise in close proximity to existing sensitive uses. However, these activities typically utilize less construction equipment, which results in lower noise levels. These construction activities may commonly employ a backhoe as the loudest piece of equipment. A backhoe may have a peak noise level that exceeds 90 dBA at 50 feet, but has an average noise level around 80 dBA (L_{eq}) at 50 feet. However, at this noise level one would need to be more than 500 feet away to experience a noise level (L_{eq}) of less than 60 dBA. This noise level would exceed the City's daytime criteria at the nearest existing residences and mitigation measures would be required.

Specific Plan Design Features. The WLCSP does not contain any design features that specifically address noise. Other features, such as perimeter setback requirements, will have the effect of reducing noise to certain residential areas.

Mitigation Measures. Construction of the proposed project would result in noise levels at the closest residences exceeding the maximum noise level allowed under the City's Municipal Code. The following measures² would reduce short-term construction-related noise impacts associated with the proposed WLC project:

4.12.6.1A Prior to issuance of any discretionary approvals for development in the WLCSP, the project applicant shall submit a Noise Reduction Compliance Plan (NRCP) to the City of Moreno Valley for review and approval. The NRCP shall show the limits of nighttime construction in relation to any then occupied residential dwellings. Conditions shall be added to any discretionary projects requiring that the limits of nighttime grading be shown on the NRCP and all grading plans submitted to the City.

¹ Chapter 11.80.030 Table 11.80.030-2, City of Moreno Valley Municipal Code, City of Moreno Valley.

² Measures 4.12.6.1B-F correspond to the noise study measures N-1 through N-5

World Logistics Center Project
Draft Environmental Impact Report

The limits of construction allowed at night shall be clearly staked on site, and contractors will be provided with a copy of the plan showing the limits of nighttime construction.

- 4.12.6.1B** During all project site grading, all construction equipment, fixed or mobile, shall be equipped with operating and maintained mufflers consistent with manufacturers' standards.
- 4.12.6.1C** All discretionary approvals for development in the WLCSP shall prohibit construction vehicles from using Redlands Boulevard south of Fir Avenue during on-site construction for all phases of the Specific Plan.
- 4.12.6.1D** All discretionary approvals for development in the WLCSP shall include conditions of approval stating that no nighttime grading shall occur within 2,800 feet of residences south of SR-60 (between 8 p.m. and 6 a.m. on weekends and 8 p.m. and 7 a.m. on weekends or holidays). These restrictions shall be included as part of the Noise Reduction Compliance Plan. As an alternative to this requirement, a temporary construction sound barrier may be used in lieu of the construction buffer, per Mitigation Measure 4.12.6.1E.
- 4.12.6.1E** As an alternative to Mitigation Measure 4.12.6.1D, a 12-foot tall temporary construction sound barrier may be installed for residences within 1,580 feet of active nighttime construction areas. The temporary sound barrier shall be constructed of plywood with a total thickness of 1 to 1.5 inches, or a sound blanket wall may be used. If sound blankets are used, the curtains must have a Sound Transmission Class (STC) rating of 27. This shall be included as part of the Noise Reduction Compliance Plan required in Mitigation Measure 4.12.6.1A, which shall be reviewed and approved by the City prior to implementation.
- 4.12.6.1F** As an alternative to Mitigation Measure 4.12.6.1D, actual noise measurements of construction areas may be taken by qualified personnel and recommend specific buffer distances between construction activities and existing residences based on actual noise levels. These measurements will be incorporated into the Noise Reduction Compliance Plan required in Mitigation Measure 4.12.6.1A, which shall be reviewed and approved by the City prior to implementation.
- 4.12.6.1G** Any discretionary approvals for development that proposes grading within 1,580 feet of occupied residential units shall require that all grading equipment be equipped with residential grade mufflers (or better).
- 4.12.6.1H** All material stockpiles in connection with any grading operations shall be located at least 1,200 feet from existing residences.
- 4.12.6.1I** All project-related off-site construction shall be limited to 6 a.m. and 8 p.m. on weekdays only. Construction during City holidays shall not be permitted.
- 4.12.6.1J** Prior to the issuance of grading permits for off-site construction activities in support of development in the WLCSP, the project developer shall provide evidence to the City that any off-site construction area adjacent to occupied residential units shall have a 12-foot temporary sound barrier installed for construction activities lasting more than one month.

Level of Significance after Mitigation. *On-site Construction.* Elimination of nighttime construction within 2,800 feet of residences would lower the noise levels to 55 dBA (L_{eq}) at the closest residences. The noise levels would just meet the 55 dBA (L_{eq}) nighttime criteria contained in the Moreno Valley Noise Ordinance resulting in a less than significant impact. With the implementation of **Mitigation Measures 4.12.6.1A** through **4.12.6.1J**, the loudest noise level that would be experienced at any

developed residential parcel would be less than the 55 dBA (L_{eq}) nighttime threshold and would be consistent with the limits established in the City's Noise Ordinance resulting in a less than significant impact. In addition, implementation of **Mitigation Measure 4.12.6.1H**, would reduce the noise experienced at existing residences, resulting in a less than significant impact.

As previously stated, construction within 1,580 feet of residential areas south of the freeway has the potential to exceed the daytime Moreno Valley Noise Ordinance criteria of 60 dBA (L_{eq}). With implementation of **Mitigation Measure 4.12.6.1E**, any existing residences within 1,580 feet of a construction area would be shielded from construction noise with a 12-foot temporary sound barrier. A sound barrier will reduce the noise levels by about 10 dB resulting in a reduction of noise below City thresholds at residences 500 feet or further from the construction area. Although the installation of the temporary sound barrier would reduce noise levels experienced at the closest residences, those residences that are located within 500 feet of a construction area would still be exposed to noise levels greater than 60 dBA (L_{eq}). Therefore, impacts associated with this issue would remain significant and unavoidable.

Off-site Construction. With the implementation of **Mitigation Measure 4.12.6.1I**, off-site construction activities would be limited to daytime hours while **Mitigation Measure 4.12.6.1J** would require the installation of a temporary sound barrier. With these mitigation measures in place, residences adjacent to construction activities (depending on the loudness of the construction equipment) could experience noise levels greater than 60 dBA (L_{eq}) for off-site construction projects lasting less than one month. These impacts would only occur during weekday, daytime hours. However, even with implementation of these mitigation measures, noise levels experienced at these residences would be above the City's threshold. Therefore, impacts would remain significant and unavoidable.

4.12.6.2 Long-Term Traffic Noise Impacts

Threshold	Would the project result in a substantial temporary, periodic, and/or permanent increase in ambient noise levels in the project vicinity above levels existing without the project?
-----------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

The noise analysis for the proposed project is based on the traffic volume data contained in the Traffic Impact Analysis (TIA) prepared for the project (contained in its entirety as EIR Appendix L). The TIA addressed the intersections of surface streets in Moreno Valley of a collector or higher classification street with another collector or higher classification street, at which the proposed project will add 50 or more peak hour trips. The study area also included the main travel routes between the project and the neighboring cities of Riverside, Perris, Beaumont, San Jacinto, and Redlands. The study area extended west to the nearest ramps on SR-91 and as far south as the I-215 ramps at Redlands Avenue in Perris. The study area for freeways was selected to cover the freeway routes radiating from the project site to the north, south, east, and west. The traffic analysis covered SR-60 from SR-62 in the east to SR-71 in the west, SR-91 from I-215 in the east to I-15 in the west, and I-215 from SR-210 in the north to the Scott Road interchange in the south.

Three hundred and thirty nine (339) roadway links and eighty (80) freeway segments were analyzed in the noise analysis. The change in noise level was calculated for all 419 roadway and freeway links with and without the project for the existing case (2012), 2017, 2022, and 2035 time horizons. Links with noise increases less than 1.5 dB would not have a substantial noise increase and were not presented in the main body of the noise report (i.e., the tables and figures). Similarly, any links that do not have sensitive receptors (e.g., residential uses) were also not presented in the main body of the noise report. Based on this filtering process, of the 419 links analyzed, 72 links have sensitive receptors and an increase of 1.5 dB for at least one time horizon and were therefore addressed in the analysis.

**World Logistics Center Project
Draft Environmental Impact Report**

The projected future daily traffic volumes (Parsons Brinckerhoff, Inc., December, 2012) for roadway segments in the project vicinity were used in the traffic noise impact analysis. Modeled noise levels represent the worst-case scenario, which assumes that no shielding is provided between the traffic and the location where the noise contours are drawn. As previously identified, the threshold for traffic noise is 65 dBA CNEL for sensitive receptors.

Operation of development that could occur within the proposed project area would generate traffic along roadways in the project vicinity. Table 4.12.H identifies existing with project roadway traffic noise levels with the project.

Table 4.12.H: Existing Year (2012) Plus Project Traffic Noise Levels (dBA)

Source: Mestre Greve Associates, November 2012.

As identified in Table 4.12.I, implementation of the proposed WLC project would result in relatively minor changes in traffic noise levels in Year 2017 (Phase I). The largest project-related increase in traffic noise would be along Street D (Street E to Cactus Avenue) and Street E (north of Alessandro Boulevard), where increases of greater than 65 dBA are predicted for the 2017 With Project scenario over the Year 2017 without project scenario. The increase associated with these roadway segments is attributable in part to Streets D and E being new roads that will be constructed by the proposed project.

Future Year (2022) with and without project scenarios projected daily traffic volumes on roadway segments in the project vicinity were used to conduct the traffic noise modeling. The projected daily traffic volumes in the area were taken from the TIA prepared for the proposed project. Table 4.12.J identifies the future year (2022) without project and with project traffic noise levels.

Table 4.12.J: Future Year (2022) Plus Project Traffic Noise Levels (dBA)

As identified in Table 4.12.J, implementation of the proposed WLC project would result in relatively minor changes in traffic noise levels in Future Year 2022. The largest project-related increase in traffic noise would be along Street D (Street E to Cactus Avenue), Street E (north of Alessandro Boulevard), and Street F west (of Street A), where increases of greater than 65 dBA are predicted for the Future Year 2022 With Project scenario over the Future Year 2022 Without Project scenario. The increase associated with these roadway segments is attributable in part to Streets D, E, and F being new roads that will be constructed by the proposed project.

Operation of the proposed project would generate traffic along roadways in the surrounding area during the buildout year (2035) scenario. Buildout Year (2035) with and without project scenarios projected daily traffic volumes on roadway segments in the project vicinity were used to conduct the traffic noise modeling. The projected daily traffic volumes in the area were taken from the TIA prepared for the proposed project. Table 4.12.K identifies the Buildout Year (2035) without project and with project traffic noise levels.

Source: Mestre Greve Associates, November 2012.

Increases in noise levels associated with Buildout Year (2035) traffic conditions on area roadways range from 0.1 to 68.0 dBA. As identified in the Table 4.12.K, the greatest increase in noise levels would be along Street D (Street E to Cactus Avenue), Street E (north of Alessandro Boulevard), and

Street F west (of Street A), where increases of greater than 65 dBA are predicted for the Buildout Year 2035 With Project scenario over the Buildout Year 2035 Without Project scenario. The increase associated with these roadway segments is attributable in part to Streets D, E, and F being new roads that will be constructed by the proposed project.

Tables 4.12.H through 4.12.K identify the noise increases directly caused by the proposed project. These numbers represent the distance from the centerline of the road to the contour value shown. Note that the values given in Tables 4.12.H through 4.12.I do not take into account the effect of any existing noise attenuation in the form of barriers, soundwalls, or topography that may affect ambient noise levels.

For the reader's convenience, the significance threshold for a project-specific roadway noise impact as defined previously is:

- Project induced increase in noise levels by 5 dB or more where the no project noise level is less than 60 CNEL;
- Project induced increase in noise level by 3 dB or more where the no project noise level is 60 CNEL to 65 CNEL; or
- Project induced increase in noise levels by 1.5 dB or more where the no project noise level is greater than 65 CNEL.

For the reader's convenience, the significance threshold for a project's incremental contribution to a cumulative noise increase as defined previously is:

A project increase of the ambient (cumulative without project) noise level by 1 dB or more, and the predicted future cumulative with project noise levels cause the following cumulative increases:

- Increase noise levels by 5 dB or more where the existing noise level is less than 60 CNEL;
- Increase noise levels by 3 dB or more where the existing noise level is 60 to 65 CNEL; or
- Increase noise levels by 1.5 dB or more where the existing noise level is greater than 65 CNEL.

It should be noted that the same noise increase occurs at all locations along a roadway link. In other words, the same increase will occur at 50 feet from a roadway as it does at 100 feet. In addition, the noise contours cover a wider area around the local roadways than does the existing condition. State Route 60, however, continues to be the dominant noise source in the area.

In general, the project proposes logistics uses and will not be affected by these noise increases. However, there are a few scattered residences within the project area and adjacent to the WLCSP area that would be affected by the proposed logistics uses.

Within the Specific Plan Area. For locations within the WLCSP area, these include three groups of residences that may remain with the implementation of the proposed project. The Specific Plan would rezone the properties as Light Logistics, but it is anticipated that the residences may remain for some time. The Light Logistics use is not sensitive to noise. However, the existing residences, as long as they remain, must be considered sensitive land uses.

- *Redlands Boulevard (north of Brodiaea Avenue).* The first group of homes is located east of Redlands Boulevard north of the intersection with Brodiaea Avenue. The traffic on Redlands Boulevard will not increase significantly as a result of the project. Future Street E is proposed to be constructed west of these existing residences. However, as stated in the Noise Study

World Logistics Center Project

Draft Environmental Impact Report

conducted for the Specific Plan, it is likely that there will be intervening buildings and that the distance from Street E will be so great that these homes will not experience significant noise from public roadways. Therefore, impacts are anticipated to be less than significant and no mitigation is required.

- *Street A/Theodore Street (Street B to Street F)*. The second group of residences within the Specific Plan area is located on the east side of Street A (Theodore Street) midway between the future Street B and Street F. There are currently two residences in this area. These residences are anticipated to experience noise increases up to 18 dB due to the implementation of the Specific Plan. As a result, existing noise levels at these two residences will be changed significantly. The exact alignment of the roadway is yet to be determined, but the homes may be roughly 100 feet from the centerline on the roadway. As identified in Table 4.12.J, at this distance, the noise level by future year (2022) could be as high as 73.1 CNEL. This level of noise would be above the 65 CNEL threshold and would result in a greater than 1.5 dB noise increase when compared to without project conditions. This is a significant impact requiring mitigation.
- *Street F/Dracaea Avenue (east of Theodore Street)*. The third area is a single residence located east of Theodore Street along what is currently Dracaea Avenue (future Street F). Existing conditions identify low levels of traffic noise on Dracaea Avenue. The 65 CNEL contour is projected to lie 84 feet from the centerline of Street F and it is likely that the one residence would lie within this zone. This level of noise would be above the 65 CNEL threshold and result in a greater than 1.5 dB noise increase when compared to without project conditions. Therefore, this is a significant impact requiring mitigation.

Off-Site Areas Adjacent to the Specific Plan Area. For areas adjacent to the Specific Plan area, 22 segments would experience a noise increase that would be greater than significance criteria specified previously. These seven areas are described below.

- *Cactus Avenue (Redlands Boulevard to Street D)*. This area is occupied by a small group of single-family homes along Cactus Avenue between the future Street D and Redlands Boulevard. A significant noise increase is projected for all four time horizons. Currently, there is no soundwall along these homes. Therefore, this is a significant impact requiring mitigation.
- *Cactus Avenue (west of Redlands Boulevard)*. As identified in the noise study, this area shows noise increases ranging from 1.5 dB to 5.1 dB depending on the time horizon. Only the 2035 case results in a significant noise increase.

Existing residences are located along Redlands Boulevard with rear yards facing Cactus Avenue. Existing 6-foot high soundwalls are located along the residences and rear yard areas are approximately 60 feet from the centerline of the roadway. In buildout year (2035), the noise levels for 60 feet from the centerline of the roadway including the effects of the soundwall are projected to be 64.8 CNEL. This is below the City criteria of 65 CNEL and, therefore, a less than significant impact will occur and no mitigation is required.

- *Day Street (between Cottonwood Avenue and Alessandro Boulevard)*. There are scattered single-family homes along this roadway that front onto Day Street. Only the 2035 time horizon results in a significant noise increase for this area. In 2035, the project is projected to increase noise levels by 1.7 dB, bringing the noise level up to 69.4 CNEL. Therefore, this is a significant impact requiring mitigation.
- *Fir Avenue (between Quincy Drive and Redlands Boulevard)*. There is one single-family home along this roadway fronting Fir Avenue. Only the 2035 time horizon results in a significant noise increase for this area. In 2035, the project is projected to increase noise levels by 6.7 dB, bringing the noise level up to 68.3 CNEL. Therefore, this is a significant impact requiring mitigation.

- *Gilman Springs Road (between Eucalyptus Avenue and Street C, and between Jack Rabbit Trail and Bridge Street).* There are three single-family homes scattered along these roadway segments. All of the houses are set back from the roadway, but none has soundwalls. A significant noise increase is projected for at least one of these segments in three of the four case years. Therefore, this is a significant impact requiring mitigation.
- *Ironwood Avenue (between Redlands Boulevard and Highland Boulevard).* There are two single-family homes that front onto Ironwood Avenue. There are also two churches along this roadway. A significant noise increase is projected for all four study years. In 2035, the project is projected to increase noise levels by 5 dB, bringing the noise level to 63.6 CNEL. Therefore, this is a significant impact requiring mitigation.
- *John F. Kennedy Drive (south of Cactus Avenue).* The residences along John F. Kennedy Drive south of Cactus Avenue will experience significant noise increases in all four time horizons. Similar to the area along Cactus Avenue, this noise increase will be due to cars and light vehicles, and not heavy trucks. The residences along the west side of the roadway are generally depressed with respect to the road and have existing 6-foot soundwalls. Due to the presence of the existing soundwalls and slope conditions, noise levels would be reduced by 6 to 10 dB. This would result in noise levels being below the City threshold of 65 CNEL for residential uses. Therefore, residences on the west side of the street will not be affected. Impacts are considered to be less than significant and no mitigation is required.

The residences on the east side of the roadway are elevated with respect to the roadway and do not have soundwalls. Rear yards areas on both sides of the street are approximately 60 to 90 feet from the centerline of the roadway and are bordered by wrought iron fencing. As identified in Tables 4.12.H through 4.12.K, the greatest noise levels that would be experienced at these residences would range up to 67.9 CNEL, which is above the City threshold of 65 CNEL. This is a significant impact requiring mitigation.

- *Locust Avenue (between Moreno Beach Drive and Smiley Boulevard).* There are three single-family homes along this roadway and they front onto the roadway. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 3.5 dB, bringing the noise level to 68.9 CNEL. This is a significant impact requiring mitigation.
- *Moreno Beach Drive (between Locust Avenue and Ironwood Avenue).* There are 18 single-family homes along this roadway. Some homes front onto the roadway, but most back up to the roadway. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 3.3 dB, bringing the noise level to 66.6 CNEL. This is a significant impact requiring mitigation.
- *Perris Boulevard (between John F. Kennedy Drive and Iris Avenue).* This is a mixed area in terms of residential land use. There are approximately 36 single-family homes along this roadway, some with a soundwall and some without. There is also a large multifamily development without a soundwall. Most of the homes either back up to the roadway or side-on to the roadway, making a soundwall feasible. Approximately half of the homes along this roadway do have a soundwall in place. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 1.7 dB, bringing the noise level up to 72.2 CNEL for areas without a soundwall. For the homes with a soundwall, there would not be a significant noise impact since the year 2035 the noise would increase by 1.7 dB and reaching up to 66.2 CNEL. For the homes on this roadway that do not have a soundwall, there would be a significant noise impact and mitigation is required.
- *Placentia Avenue (from El Nido Avenue to Evans Road, and on to Water Avenue).* There are scattered single-family homes along this roadway that front onto the roadway. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 10 to 14 dB, bringing the noise level up to 68 CNEL. This is a significant impact requiring mitigation.

World Logistics Center Project

Draft Environmental Impact Report

- *Quincy Drive (from Cactus Avenue to Alessandro Boulevard, and on to Cottonwood Avenue)*. The existing single-family homes along Quincy Drive have a soundwall. Quincy Drive currently only exists from Cottonwood to Bay Avenue, which is north of Alessandro Boulevard. The 2035 time horizon results in a significant noise increase. This is a significant impact requiring mitigation.
- *Reche Canyon Road (from Keissel Road to Reche Vista Drive, and on to High Country Drive)*. There are roughly 22 single-family homes scattered along these two roadway segments. These homes are scattered along the roadway and front onto Reche Canyon Road. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 1.8 to 3.3 dB with resulting noise levels in the 67 to 68 CNEL range. This is a significant impact requiring mitigation.
- *Redlands Boulevard (from Dracaea Avenue to State Route 60)*. There are scattered homes in this area that either face Redlands Boulevard (or Shubert Street) or are on Redlands Boulevard. The 2012, 2022, and 2035 time horizons result in a significant noise increase for this area. This is a significant impact requiring mitigation.
- *Redlands Boulevard (from State Route 60 to San Timoteo Canyon Road)*. There are approximately 28 homes along this roadway that would be affected. The single-family homes are scattered and generally front the roadway. The 2012, 2022, and 2035 time horizons result in a significant noise increase for this area. The increases in noise are around 2 dB with a resultant noise level in the 71 to 72 CNEL range. This is a significant impact requiring mitigation.
- *San Timoteo Canyon Road (from Alessandro Road to Live Oak Canyon Road to Redlands Boulevard)*. There are about four scattered residences along this roadway that would be affected. The existing baseline plus project time horizon results in a significant noise increase for this area. The noise increases by up to 3.3 dB with resultant noise levels in the 65 to 66 CNEL range. This is a significant impact requiring mitigation.
- *Theodore Street (State Route 60 to Highland Boulevard)*. There are four existing homes on Theodore Street that front onto the roadway. Implementation of the Specific Plan would result in a 10.7 dB increase over baseline conditions (2012), a 7.4 dB increase in Opening Year (2017), and a 3.8 dB increase in future year (2022). By Buildout Year (2035), the noise increase associated with the proposed project is anticipated to be 2.9 dB, which would not be significant. In future year (2022), the 65 CNEL contour for this roadway link would lie approximately 138 feet from the centerline of the roadway. The four existing residences on Theodore Street are within 138 feet of the roadway. As a result, these existing residences could experience noise levels above the 65 CNEL threshold during all time horizons. This is a significant impact requiring mitigation.
- *Street D (from Street E to Cactus Avenue)*. Street D, as shown in the Specific Plan, will come down the western side of the project parallel to Merwin Street. It then merges with Cactus Avenue traveling to the west until Redlands Boulevard. A specific alignment has not been determined for this roadway. There are approximately 14 homes that side-on to Merwin Street that could be affected by traffic on Street D. There are no soundwalls along these homes. There would be limited or no heavy trucks using this roadway. The 65 CNEL contour will lie 114 feet from the centerline of Street D. If the centerline of Street D is located closer than 114 feet to the residences, then a significant impact would occur. Outdoor living spaces for homes along Merwin Street would experience noise levels greater than 65 CNEL, and this would not be consistent with City criteria. This is a significant impact requiring mitigation.
- *State Route 60 (from Pigeon Pass Road to Perris Boulevard)*. All residential areas along this stretch of freeway have soundwalls in place. The 2012 time horizon results in a significant noise increase for this area. The noise levels are projected to increase by 1.5 to 1.7 dB in this area with resultant noise levels in the 66.9 to 68.1 CNEL range. This is a significant impact requiring mitigation.
- *State Route 60 (from Perris Boulevard to Nason Street)*. All residential areas along this stretch of freeway have soundwalls in place. The 2022 time horizon results in a significant noise increase

for this area. The noise level will go up by 1.6 dB with the project up to a level of 67.2 CNEL. This is a significant impact requiring mitigation.

- *State Route 60 (from Moreno Beach Drive to Redlands Boulevard)*. There are soundwalls in place for all residences in this area. The existing 2012 and 2035 time horizons result in a significant noise increase for this area, reaching 67.1 CNEL by 2035. This is a significant impact requiring mitigation.
- *State Route 60 (from Redlands Boulevard to Theodore Street)*. No soundwalls are present in this area. The residential area is set back from the freeway and is clustered along Redlands Boulevard north of the freeway. The existing 2012 time horizon results in a significant noise increase for this area. The resultant noise level will be 63.5 CNEL with an increase due to the project of 3.4 dB. This is a significant impact requiring mitigation.

Specific Plan Design Features. The WLCSP indicates there will be a 250-foot setback from existing housing along Redlands Boulevard. No additional design features to attenuate noise impacts are planned as part of the WLCSP.

Mitigation Measures. Construction of the proposed WLC project would result in noise levels at the closest residences within and adjacent to the WLCSP area exceeding the maximum noise level allowed under the City's Municipal Code. The following measures would reduce long-term traffic related noise impacts associated with the proposed project:

4.12.6.2A Within the WLCSP, Street D shall be designed such that exterior noise levels at existing residential areas shall not exceed 65 CNEL, which may require installation of a soundwall or other noise attenuation improvements. The design and calculations of such improvements shall be incorporated into a report that shall be submitted to the City for review and approval prior to the issuance of construction permits for Street D.

4.12.6.2B Prior to issuance of any discretionary approvals for development in the WLCSP, a WLC Noise Development Impact Fee study shall be submitted to the City for review and approval. The City shall require future development within the WLCSP to participate in a WLC Noise Development Impact Fee program to include soundwall attenuation to mitigate impacts from the proposed project based on the collection of fair-share fee payments from each increment of development and the implementation of each soundwall in accordance with Mitigation Measure 4.12.6.2C. The update to the DIF shall be based on a nexus study in conformance with State law (i.e., AB 1600). The Nexus study shall examine the soundwalls specified below, shall include detailed cost estimates for each soundwall, and shall establish a pro-rated fee to be paid per square foot by all development proposals within the WLCSP. The soundwalls to be included in this study include:

Cactus Avenue Soundwall from Redlands Boulevard to Street D. Construct an approximately 1,000-foot long, 6-foot high soundwall at the top of slope. The existing wrought-iron fencing will be removed and replaced with the soundwall (e.g., masonry wall, berming, glass barrier, or combinations of these barriers). The soundwall would need to measure 6 feet as measured from the rear yard of the residences.

John F. Kennedy Drive, east side, Soundwall from Cactus Avenue to Bay Hill Drive. Construct an approximately 5,000-foot long, 6-foot high soundwall at the top of slope for the existing residences that are on the east side of John F. Kennedy Drive. The existing wrought-iron fencing will be removed and replaced with the soundwall (e.g., masonry wall, berming, glass barrier, or combinations of these barriers). The

soundwall would need to measure 6 feet as measured from the rear yard of the residences.

Moreno Beach Drive Soundwall between Locust Avenue and Ironwood Avenue. Construct an approximately 2,000-foot long, 6-foot high soundwall at the top of slope for the existing residences that are on the east side of John F. Kennedy Drive. The soundwall would need to measure 6 feet as measured from the rear yard of the residences.

Perris Boulevard Soundwall between John F. Kennedy Drive and Iris Avenue. Construct an approximately 1,500-foot long, 6-foot high soundwall at the top of slope for the existing residences that are on the east side of John F. Kennedy Drive. The soundwall would need to measure 6 feet as measured from the rear yard of the residences.

State Route 60 Soundwall from Redlands Boulevard to Theodore Street. Construct an approximately 580-foot long, 6-foot high soundwall for the existing residences. The soundwall would need to measure 6 feet as measured from the rear yard of the residences.

Iris Avenue Soundwall from Nason Street to Oliver Street. Construct an approximately 3,000-foot long, 6-foot high soundwall along the property line for the existing residences.

Sycamore Canyon Boulevard Soundwall from College Boulevard and Central Avenue. Construct an approximately 1,000-foot long, 6-foot high soundwall at the top of slope for the existing residences. The soundwall would need to measure 6 feet as measured from the rear yard of the residences.

4.12.6.2C Prior to issuance of any building permits for development in the WLCSP, the City shall collect the Development Impact Fee (DIF) as modified in accordance with Mitigation Measure 4.12.6.2B. The City shall establish a schedule for installing the specific soundwalls listed in Mitigation Measure 4.12.6.2B consistent with the WLC Noise DIF program..

Level of Significance after Mitigation. *Within the WLC Specific Plan Area.* For areas within the WLCSP area, these include three groups of residences that may remain with the implementation of the proposed project. The level of significance after mitigation is provided for each of the two areas for which a significant impact has been identified.

- *Theodore Street/Street A (Street B to Street F).* There are two residences in this area. These residences are anticipated to experience noise increases up to 18 dB due to the implementation of the Specific Plan. As a result, existing noise levels at these two residences will be changed significantly. The exact alignment of the roadway is to be determined, but the homes may be roughly 100 feet from the centerline on the roadway. One residence fronts onto Street A (Theodore Street), and the driveway access would make a soundwall ineffective. The other residence is on to Street A. It is difficult to determine where an outdoor living area is for this residence. However, since it is a single residence, a soundwall would have a limited effectiveness. Since mitigation is not feasible, impacts remain significant and unavoidable.
- *Dracaea Avenue/Street F (east of Theodore Street).* There is one residence in this area fronting onto the future alignment of Street F (currently Dracaea Avenue). Existing conditions identify low levels of traffic noise on Dracaea Avenue. The 65 CNEL contour is projected to lie 84 feet from the centerline of Street F and it is likely that the one residence would lie within this zone. Installation of a soundwall would not be effective in reducing noise levels due to the opening for the driveway. Since mitigation is not feasible, impacts remain significant and unavoidable.

Off-Site Areas Adjacent to the Specific Plan Area. For areas adjacent to the WLCSP area, eight areas would experience noise increases that would be mitigated to a less than significant level with implementation of **Mitigation Measures 4.12.6.2A** through **4.12.6.2C**. These areas are as follows:

- Cactus Avenue from Redlands Boulevard to Street D;
- John F. Kennedy Drive, west side, from Cactus Avenue to Bay Hill Drive;
- Moreno Beach Drive between Locust Avenue and Ironwood Avenue (15 of 18 homes);
- Perris Boulevard between John F. Kennedy Drive and Iris Avenue;
- State Route 60 from Redlands Boulevard to Theodore Street;
- Iris Avenue from Nason Street to Oliver Street;
- Sycamore Canyon Boulevard from College Boulevard and Central Avenue; and
- Street D from Street E to Cactus Avenue (8).

For the remaining noise impact locations adjacent to the WLCSP area for which significant noise impacts have been identified, mitigation measures are not feasible or will not fully reduce the impact to less than significant levels. Each location that will remain significant and unavoidable with implementation of the proposed project is discussed below.

- *Cactus Avenue (west of Redlands Boulevard).* Existing soundwalls will reduce noise levels by an estimated 6 dB, lowering the ultimate noise levels to 64.8 CNEL in the rear yard areas along Cactus Avenue. This is below the City criteria of 65 CNEL. It is not feasible to modify the existing residential block wall to reduce the project increase in noise levels because the block walls are designed for the height that they are built. In addition, the projected noise levels in year 2035 are within the City's exterior noise level for residences. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Day Street (between Cottonwood Avenue and Alessandro Boulevard).* The scattered single-family homes along this roadway front onto Day Street. In 2035, the project is projected to increase noise levels by 1.7 dB, bringing the noise level up to 69.4 CNEL. Homes that are widely separated from other homes cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Fir Avenue (between Quincy Drive and Redlands Boulevard).* There is one single-family home along this roadway fronting Fir Avenue. Only the 2035 time horizon results in a significant noise increase for this area. In 2035, the project is projected to increase noise levels by 6.7 dB, bringing the noise level up to 68.3 CNEL. A single home that fronts on a roadway cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Gilman Springs Road (between Eucalyptus Avenue and Street C, and between Jack Rabbit Trail and Bridge Street).* There are three single-family homes scattered along these roadway segments. All of the houses are set back from the roadway, but none has soundwalls. A significant noise increase is projected for at least one of these segments in three of the four case years. Homes that are widely separated from other homes cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Ironwood Avenue (between Redlands Boulevard and Highland Boulevard).* There are two single-family homes that front onto Ironwood Avenue. There are also two churches along this roadway. A significant noise increase is projected for all four study years. In 2035, the project is projected to increase noise levels by 5 dB, bringing the noise level to 63.6 CNEL. Land uses that are widely

World Logistics Center Project

Draft Environmental Impact Report

separated from one another cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.

- *Locust Avenue (between Moreno Beach Drive and Smiley Boulevard)*. There are three single-family homes along this roadway and they front onto the roadway. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 3.5 dB, bringing the noise level to 68.9 CNEL. As discussed above, homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Moreno Beach Drive (between Locust Avenue and Ironwood Avenue)*. There are 18 single-family homes along this roadway. Some homes front onto the roadway, but most back up to the roadway. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 3.3 dB, bringing the noise level to 66.6 CNEL. This is a significant impact requiring mitigation. Even with the soundwall that would be implemented as part of **Mitigation Measures 4.12.6.2A** through **4.12.6.2C**, sound levels at 3 of the 18 homes would exceed 65 CNEL. These homes front onto Moreno Beach Drive and cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Placentia Avenue (from El Nido Avenue to Evans Road, and on to Water Avenue)*. There are scattered single-family homes that front onto the roadway. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 10 to 14 dB, bringing the noise level up to 68 CNEL. As discussed above, homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Quincy Drive (from Cactus Avenue to Alessandro Boulevard, and on to Cottonwood Avenue)*. The existing single-family homes along Quincy Drive have a soundwall. Quincy Drive currently only exists from Cottonwood to Bay Avenue, which is north of Alessandro Boulevard. The 2035 time horizon results in a significant noise increase. It is not feasible to modify the existing residential block walls to reduce the project increase in noise levels because the block walls are designed for the height that they are built. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Reche Canyon Road (from Keissel Road to Reche Vista Drive, and on to High Country Drive)*. There are approximately 22 single-family homes scattered along these two roadway segments. These homes front onto Reche Canyon Road. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 1.8 to 3.3 dB with resulting noise levels in the 67 to 68 CNEL range. Homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Redlands Boulevard (Dracaea Avenue to State Route 60)*. There are scattered homes in this area that either face Redlands Boulevard (or Shubert Street) or are on Redlands Boulevard. The 2012, 2022, and 2035 time horizons result in a significant noise increase for this area. Homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Redlands Boulevard (State Route 60 to San Timoteo Canyon Road)*. There are approximately 28 homes along this roadway that would be affected. The single-family homes are scattered and generally front the roadway. The 2012, 2022, and 2035 time horizons result in a significant noise increase for this area. The increases in noise are around 2 dB with a resultant noise level in the 71 to 72 CNEL range. Homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.

- *San Timoteo Canyon Road (from Alessandro Road to Live Oak Canyon Road to Redlands Boulevard)*. There are approximately four scattered residences along this roadway that would be affected. The existing baseline plus project time horizon results in a significant noise increase for this area. The noise increases by up to 3.3 dB with resultant noise levels in the 65 to 66 CNEL range. Homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Theodore Street (State Route 60 to Highland Boulevard)*. There are four existing homes on Theodore Street that front onto the roadway. Implementation of the Specific Plan would result in a 10.7 dB increase over baseline conditions (2012), a 7.4 dB increase in Opening Year (2017), and a 3.8 dB increase in future year (2022). By Buildout Year (2035), the noise increase associated with the proposed project is anticipated to be 2.9 dB, which would not be significant. In future year (2022), the 65 CNEL contour for this roadway link would lie approximately 138 feet from the centerline of the roadway. The four existing residences on Theodore Street are within 138 feet of the roadway. As a result, these existing residences could experience noise levels above the 65 CNEL threshold for all time horizons. Homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.

4.12.6.3 Long-Term Operational Noise Impacts

Threshold	Would the project cause exposure of persons to or generation of noise levels in excess of standards established in the <i>City of Moreno Valley General Plan</i> , <i>Moreno Valley Municipal Code</i> , or applicable standards of other agencies?
-----------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Potential long-term stationary noise impacts would primarily be associated with operations at logistics facilities within the WLCSP area. Logistics facility uses would generate noise from truck delivery, loading/unloading activities at the loading areas, heating, ventilation, and air-conditioning (HVAC) equipment and other noise-producing activities within the parking lot (e.g., doors slamming, vehicle engine start-ups, and conversing in the parking lot). These activities are potential point sources of noise that could affect noise-sensitive receptors adjacent to the loading areas and parking lots. As noise spreads from a source, it loses energy; therefore, the farther away the noise receiver is from the noise source, the lower the perceived noise level would be.

Noise levels were measured at similar facilities to determine representative noise levels that might be generated by this type of activity. Noise measurements were made at two facilities; specifically, Lowes Distribution Center (3984 Indian Avenue, Perris, CA) and Ross Distribution Center (3404 Indian Avenue, Perris, CA). Based on these representative noise measurements, Table 4.12.L provides the noise levels for various distances from the warehouse property line with no noise barrier in place and with an assumed 12-foot noise barrier.

Table 4.12.L: Representative Noise Levels for Warehousing Activities

Distance from Facility (feet)	Noise Level (dBA L _{eq})	
	No Barrier	With 12-foot barrier
50	56.9	48.6
100	54.9	47.8
250	50.8	44.7
500	46.6	40.9

World Logistics Center Project
Draft Environmental Impact Report

The City of Moreno Valley Noise Ordinance requires that noise levels remain below 55 dBA (L_{eq}) during nighttime hours. To achieve this noise level, the warehouse property line would only need to be 100 feet from the nearest residential property and no soundwall would need to be present.

Another consideration is whether the proposed activity levels will be substantially higher than current ambient conditions. No matter what is developed in the Specific Plan area, ambient conditions would be higher in future years due to higher levels of traffic and activity. Ambient noise levels were measured at seven sites that could border the World Logistics Center (i.e., Measurement Sites 3 through 9). The nighttime ambient noise levels (L_{eq}) ranged from 35.8 to 61.8 dBA with an average for the sites of 46.6 dBA. To keep the noise levels at nearby residential areas less than typical ambient conditions, the logistics property line should be located a minimum distance of 250 feet and a 12-foot soundwall should be located along the perimeter of the property that faces any residential areas. This would keep the logistic use noise to less than 45 dBA (L_{eq}) at the residences. The implementation of this buffer between logistics uses and noise sensitive uses has been included as **Mitigation Measure 4.12.6.3A**.

Specific Plan Design Features. The WLCSP indicates there will be a 250-foot building setback from residentially zoned property along Redlands Boulevard, Bay Avenue, and Merwin Street.

Mitigation Measures. Operation of the proposed WLC project would result in noise levels at the closest residences within and adjacent to the WLC Specific Plan area exceeding the maximum noise level allowed under the City's Municipal Code. The following measure would reduce long-term operational noise impacts associated with the proposed WLC project:

4.12.6.3A All discretionary approvals for development in the area of Redlands Boulevard, Bay Avenue, Merwin Street, and Cactus Avenue shall provide a minimum 250-foot setback between residentially zoned property and logistics buildings within the WLCSP. In addition, all such discretionary approvals shall provide sound attenuation improvements that will reduce expected noise levels from development to within City standards.

Level of Significance after Mitigation. Implementation of **Mitigation Measure 4.12.6.3A** would eliminate any noise impacts on residential areas due to the operation of logistic activities. Through the provision of a 250-foot buffer, berms, and/or soundwalls, noise levels at the nearest residences would be reduced to below the City's thresholds. Therefore, with adherence to the identified mitigation measure, impacts associated with this issue would be less than significant.

4.12.6.4 Long-Term Utility Noise Impacts

Threshold	Would the project cause exposure of persons to or generation of noise levels in excess of standards established in the <i>City of Moreno Valley General Plan</i> , <i>Moreno Valley Municipal Code</i> , or applicable standards of other agencies?
-----------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

As illustrated in previously referenced Figure 4.12.3 and Figure 4.12.6, there is one existing SDG&E compressor station and two existing SCGC facilities located within the WLC Specific Plan area.

Based on preliminary calculations as illustrated in Figure 4.12.3, the worst-case compressor station operational characteristics will result in a maximum noise level just above 65 CNEL within the project area proposed for development (i.e., not open space). Typical commercial construction results in buildings that achieve at least a 20 dB reduction of outdoor noise levels. Therefore, an office use

exposed to the highest noise level from the compressor station will be just above 45 CNEL and below the 50 CNEL limit prescribed by the City's General Plan, resulting in a less than significant impact and no mitigation is required.

As illustrated in previously referenced Figure 4.12.4, the L_{eq} noise level generated by the compressor station does not exceed 60 dBA L_{eq} beyond the property lines of the facility. Therefore, the compressor station is not considered a noise disturbance based on City criteria. Operation of the compressor station would not result in any interior noise levels exceeding the limits established by the City in the General Plan. Therefore, noise impacts associated with the operation of the compressor station would be less than significant and no mitigation is required.

As identified in previously referenced Figure 4.12.5, the maximum noise level from a blow-down at the SDG&E compressor station within the WLCSP area proposed for development (i.e., the Logistics Development land use) is 100 dBA. A person would need to be exposed to this level for more than two hours in a day before permanent hearing loss would be expected. As discussed above, blow-down events at the SDG&E compressor station typically do not last longer than 90 seconds. Therefore, the SDG&E blow-down events will not result in a significant impact to the uses proposed within the WLCSP area, and no mitigation is required.

For SCGC blow-down events, noise generated could reach as high as 130 dBA just outside the fence line of the southern facility and in excess of 135 dB just outside the fence line of the northern facility. People within approximately 250 feet of the blow-down points would be exposed to noise levels greater than 115 dBA, which would likely cause permanent hearing damage regardless of the exposure time. The SCGC blow-downs could last as long as 90 minutes. It is anticipated that people exposed to noise levels greater than 102 dBA, within approximately 1,300 feet from the blow-down point could experience permanent hearing loss based on this event duration. Noise generated by SCGC blow-down events has the potential to cause permanent hearing loss in persons in the developed area of the project. This is a significant impact and mitigation is required.

SCGC blow-down events also have the potential to produce groundborne vibration. However, the effect of the blow-down groundbourne vibration would be limited to within 100 feet of the equipment and would not be perceived beyond the facility fenceline, resulting in a less than significant impact and no mitigation is required.

Specific Plan Design Features. The WLCSP provides a setback of open space and a street between the SCGC facility and planned warehouse buildings in the WLCSP. However, the separation may not be sufficient to prevent significant noise impacts during blow-down events.

Mitigation Measures. Operation of the proposed WLC project could result in exposure of people to noise levels as high as 130 dBA or greater during SCGC blow-down events. The following measure would reduce long-term utility related noise impacts associated with the proposed WLC project:

4.12.6.4A Prior to the issuance of building permits for projects within 500 feet of the SCGC and SDG&E facilities, documentation shall be submitted to the City confirming that sound attenuation devices or improvements for the blow-down facilities providing at least a 40 dB reduction in noise levels during blow-down events area available and will be installed for all planned blow-down events. This measure shall be implemented to the satisfaction of the City Planning Official.

Level of Significance after Mitigation. The SCGC blow-down equipment does not currently include a permanent silencer system. A review of the literature of a leading manufacturer of specialty silencer

systems (Industrial Acoustics Company) determined that a specialty silencer system added to the blow-down equipment could reduce noise levels by about 40 dB. With a silencer system providing 40 dB of noise reduction, blow-down noise levels would be less than 102 dBA approximately 30 feet from the blow-down point, which is within the property line of these facilities. 102 dBA is the noise level that could be experienced for up to 90 minutes without causing permanent hearing loss. Therefore, while occupants within the WLCSP in close proximity to the SCGC facilities would be subject to high noise levels during these infrequent noise events, they would not be subject to any permanent hearing damage. With implementation of **Mitigation Measure 4.12.6.4A**, SCGC blow-down events would not result in noise levels that could cause permanent hearing loss and the project would not be significantly affected by noise from the SCGC facilities, resulting in a less than significant impact.

4.12.7 Cumulative Impacts

The cumulative area for noise impacts is the City of Moreno Valley. Implementation of the Specific Plan would result in the introduction of new noise sources and levels from on-site activities and from increased traffic volumes on vicinity roadway and freeways.

Construction crew commutes and the transport of construction equipment, and materials to the WLCSP area would incrementally increase noise levels on access roads leading to the site. Secondary sources of noise would include noise generated during excavation, grading, and building erection on the project site. The net increase in project site noise levels generated by these activities and other sources has been quantitatively estimated and compared to the applicable noise standards and thresholds of significance. Although it is not possible to predict if contiguous properties may be constructed at the same time and create cumulative noise impacts that would be greater than if developed at separate times, it is unlikely that adjacent properties will be developed at the same time as the Specific Plan area. However, in the unlikely event that adjacent properties are developed at the same time as the proposed WLC project, adherence to the City's Municipal Code provisions that regulate construction activities and other development standards would render the cumulative impacts of the proposed project to less than significant levels.

The noise analysis contained in this section also provides an assessment of on-site operational noise level impacts on adjacent sensitive uses, both existing and future. Additionally, on-site operational noises are individual noise occurrences and are not typically additive in nature. It is extremely unlikely that adjacent properties will generate noises that would be additive in nature because of two important reasons. First, the noise sources would have to be adjacent or in close proximity to one another in order for the noises to intermingle. Second, the sensitive receptor or receptors would also have to be adjacent to or in close proximity to the noise generators. Although it is not possible to predict if contiguous or proximate properties may generate noise at the same time that would be additive in nature and thus create a significant cumulative noise impact at sensitive receptors, adherence to the City's Municipal Code provisions that regulate nuisance noise from land uses and other development standards would render the cumulative impacts of the proposed project to less than significant levels.

Cumulative traffic volumes contained in the TIA were developed for the Future Year 2022 and Buildout 2035 analysis time horizons. Traffic volumes for each time horizon were developed utilizing a combination of various future traffic growth methods as follows. For Future Year 2022, traffic volumes were developed by interpolating year 2035 traffic volume projections from the Riverside County Transportation and Analysis Model (RivTAM) to year 2022 plus traffic from a list of past, present, and reasonably foreseeable projects. For Buildout Year 2035, traffic volumes were developed by utilizing the year 2035 traffic volume projections from the RivTAM plus traffic from a list of past, present, and reasonably foreseeable projects.

Cumulative noise impacts associated with roadway noise have been addressed based on the cumulative traffic volumes. Previously referenced Tables 4.12.J and 4.12.K provide a comparison of Future Year (2022) and Buildout Year (2035) without and with project noise levels, and if a significant impact (project-specific or cumulatively significant) occurs.

The project calls for improvements to several of the roadways around the project area in order to accommodate the projected increase in project traffic volumes. There are no new noise-sensitive land uses proposed to be constructed within the area of analysis. However the presence of residential uses occurs within the WLCSP project and nearby area. These roadway segments are analyzed against the thresholds for determining significant impacts defined previously in Section 4.12.6.2. As described previously in Section 4.12.4, the project's incremental contribution to a cumulative noise increase would be considered cumulatively considerable and significant when ambient noise levels affect noise-sensitive land uses and when the proposed project increases noise levels by 1 dB or more over pre-project conditions and the predicted future cumulative with project noise levels cause the following cumulative increases:

- Increase noise levels by 5 dB or more where the existing noise level is less than 60 CNEL;
- Increase noise levels by 3 dB or more where the existing noise level is 60 to 65 CNEL; or
- Increase noise levels by 1.5 dB or more where the existing noise level is greater than 65 CNEL.

Cumulative noise impacts associated with roadway noise have been addressed based on the 2022 and 2035 time horizons analyses contained in Section 4.12.6.2. As identified in the preceding analysis, Tables 4.12.J and 4.12.K show the Future Year 2022 and Buildout Year 2035 CNEL values without and with the proposed project and if a significant impact would be produced based on the project-specific significance criteria identified in Section 4.12.4 and the cumulatively significant significance criteria identified in Section 4.12.4 and repeated above. Traffic noise level increases from the existing baseline condition and the future (2022 and 2035) time horizons are attributable to the intermingled effects of both the cumulative (i.e., past, present, and reasonably foreseeable projects) development projects in the project vicinity and region as well as the proposed project. As indicated in Section 4.12.6.2, roadway noise impacts have been identified and **Mitigation Measures 4.12.6.2A** through **4.12.6.2C** have been presented to reduce roadway noise impacts to the greatest extent feasible. As disclosed in Section 4.12.6.2, there are numerous instances in which there is no feasible means to reduce roadway noise impacts because of the existing developed nature of the affected roadway segment and/or the scattered nature of the sensitive receptors (i.e., residences), which prohibits the effectiveness of a soundwall. Therefore, no significant cumulative noise impacts would occur after implementation of the proposed mitigation measures. For those segments at which there is a cumulatively considerable impact and there is no feasible means to provide mitigation, the significant cumulative impact will remain significant and unavoidable.

RE: Comment on Final Environmental Impact Report for ProLogis Eucalyptus Industrial Park (State Clearinghouse No. 2008021002)

Dear Mr. Bradshaw:

I am writing on behalf of Laborers International Union of North America, Local Union No. 1184 and its members living in Riverside County (collectively "LIUNA Local 1184") regarding the Final Environmental Impact Report ("FEIR") prepared for the ProLogis Eucalyptus Industrial Park, State Clearinghouse No. 2008021002 ("Project").

LIUNA Local 1184 appreciates the Planning Commission's decision to delay its consideration of the FEIR until staff and the EIR consultant reviewed and prepared responses to our comments of August 2012. Unfortunately, it appears the brief delay was not sufficient time for staff to adequately review and consider those comments as many of the concerns expressed about the DEIR still remain in regard to the FEIR. In addition, LIUNA Local 1184 is particularly concerned that the Commission's staff is proposing not to address the significant new information of the proposed nearby World Logistics Center which, when combined with the ProLogis project, the two projects alone will emit as much greenhouse gasses per year in 2020 as the City has established as its total GHG emission target for that year. In other words, the two projects together will emit as much GHGs as the entire City and will cause the City to emit twice as many GHGs as its announced goal as of 2020. Obviously, this is significant new information regarding a serious significant impact of the ProLogis Project's cumulative GHG emissions that must be addressed in a recirculated EIR for public review. These and other concerns are elaborated upon in the following comments.

In addition, LIUNA Local 1184 has had its consultants who prepared comments in 2012 review the staff's responses to comments. Matthew Hagemann, P.G., C.Hg. and Anders Sutherland, of SWAPE Consulting and Dr. James Clark, Ph.D., have reviewed the FEIR and prepared detailed comments regarding numerous technical shortcomings and omissions in the responses. SWAPE Comments (attached as Exhibit A); Clark Comments (attached as Exhibit B). Although this comment will highlight some of those technical comments below, the Commission should review each of the concerns raised in those expert comments.

LIUNA Local 1184 requests that the Planning Commission not certify the EIR at this time but request staff to reconsider the analyses and require additional mitigation measures in order to address the Project's significant air quality impacts, GHG emissions, health risks, farmland conversion, and hazardous material risks that the Project as proposed will cause in the City of Moreno Valley.

A. The FEIR's Failure To Tackle The Project's Massive GHG Emissions is an Abuse of Discretion.

The total GHG emissions that the City claims it will achieve by 2020 are 798,693 metric tons of CO₂ equivalent per year for the entire City. *See* World Logistics Center DEIR, p. 4.7-9 (excerpts attached as Exhibit C). Yet the Prologis Project alone is projected to emit 79,000 metric tons of CO₂e per year at full build-out – a full ten percent of the City's target. The FEIR basically relies upon a wish and a prayer that a number of air quality mitigations will miraculously reduce the Project by about 70,000 tons of GHGs per year down to 10,000 tons per year, the South Coast Air Quality Management District's ("SCAQMD") threshold of significance for GHG emissions. *See* FEIR, PDF p. 111 ("The mitigation measures discussed in the project-level impact analysis of GHG emissions indicated the measures would substantially reduce the project's emissions of greenhouse gases..."). No effort to rationally quantify or describe a reviewable basis for concluding that the smattering of air quality mitigations will come anywhere close to reducing the Project's GHG emissions by that level is provided or discussed. Moreover, when combined with the nearby World Logistics Center's GHG emissions of about 700,000 metric tons of CO₂ equivalents per year, the City has essentially abandoned any GHG reduction strategy, instead taking steps to almost double its projected GHG emissions.

1. There is no substantial evidence to support the FEIR's remarkable assertion that the air quality mitigations applied to the Project will reduce GHG emissions by 70,000 tons per year.

It is not sufficient under CEQA for the City to pick a few air quality mitigations of unknown efficacy and then simply assume that they will miraculously reduce the Project's 79,000 metric tons of GHG emissions down to less than 10,000 metric tons. As SWAPE explains in its comments, there is nothing precluding the City from estimating quantitative reductions by any claimed mitigations and providing the public, this Commission, and the City Council with a rational means to evaluate whether the currently optimistic predictions have any basis in reality. SWAPE Comments, pp. 2-3. The FEIR must do more than make exaggerated

claims of mitigation effectiveness. *See Friends of Oroville v. City of Oroville* (2013) 219 Cal.App.4th 832. In *Oroville*, the court held that failing to calculate existing air emissions at the project site, and “failing to quantitatively or qualitatively ascertain or estimate the effect of the Project’s mitigation measures on those emissions,” amounted to misapplication of the threshold-of-significance standard. *Id.* at 842-843. Claiming to rely on a qualitative assessment, the City instead applies bald assumptions, assuming that the air quality mitigations will have a dramatic effect on reducing GHG emissions from the project all the way down to a level of insignificance, *i.e.* less than 10,000 metric tons per year. No rational discussion relying on explicable estimates, whether qualitative or quantitative, is provided to explain this unlikely result for this Project that will include upwards of 5,800 vehicle trips per day. *See Clark & Associates Comments*, p. 3 (attached as Exhibit B).

The FEIR all but admits the randomness of its GHG emission discussion, responding at one point to the Sierra Club’s comments that “it is not possible to determine with certainty whether the project’s emissions of greenhouse gases will be cumulatively considerable, within the meaning of CEQA Guidelines Sections 15065(a)(3) and 15130.” FEIR, p. 109. A hundred pages later, that uncertainty appears to have vanished, the FEIR restating its two rationales for discounting the Project’s 79,000 metric tons of GHGs per year. First, the EIR attempts to find solace in the claim that “the project’s impacts alone would not cause or significantly contribute to global climate change...” FEIR, p. 222. This statement is entirely arbitrary given the SCAQMD’s significance threshold of 10,000 metric tons per year. 79,000 metric tons per year is obviously very large compared to the threshold. And nothing in the EIR explains how or which mitigation measures will reduce the Project’s GHG emissions to this level. The second rationale set forth in the EIR is that “the project has no substantial effect on consumption of fuels or other energy resources, especially fossil fuels that contribute to GHG emissions when consumed.” *Id.* How a project that will generate upwards of 5,000 vehicle trips per day would have no substantial effect on consumption of fuels is not further elucidated in the EIR. What these two rationales mean in the end is that the world is already suffering from global warming and because this project’s GHG contribution is small compared to the overall problem, there is no need to grapple with it in any meaningful way. Of course, as *Oroville* recognized, that capitulation renders the SCAQMD’s expert threshold, which is a rational quantification of the point where a project’s GHG emissions are significant and cumulatively considerable, a meaningless number.

2. The Proposed World Logistics Center and its massive GHG emissions is significant new information that must be addressed in the cumulative impact analysis.

The EIR’s mishandling of the Project’s large GHG emissions is exacerbated to a frightening level by the FEIR’s refusal to account for the massive World Logistics Center project (“WLC”). WLC is expected to emit about 700,000 metric tons of GHGs per year from within the City. WLC and Prologis together all but scuttle the City’s GHG reduction target. The FEIR, responding to comments about the WLC’s cumulative impacts on traffic states that, because the WLC project was not proposed at the time of the Notice of Preparation (“NOP”) for the Prologis

Project (in 2008), the EIR need not include WLC's impacts in its baseline. The City claims that the baseline traffic for the previous development proposed for the WLC site was actually higher at the time of the NOP. This response, in addition to steadfastly refusing to provide the City and its residents a realistic assessment of the Project's cumulative impacts, overlooks the City's responsibility to address significant new information that arises after a DEIR is released but prior to certification of the FEIR. Alternatively, it is simply unreasonable for the City to not adjust its baseline to reflect the impacts of the WLC project, especially given the long delay between the Project's 2008 NOP and the FEIR now six years later.

The CEQA Guidelines require recirculation of an EIR when significant new information, such as the processing of a nearby project that will drastically increase the City's GHG contributions inconsistent with its GHG reduction targets, as well as NOx and PM emissions. Section 15088.5 provides:

(a) A lead agency is required to recirculate an EIR when significant new information is added to the EIR after public notice is given of the availability of the draft EIR for public review under Section 15087 but before certification. As used in this section, the term "information" can include changes in the project or environmental setting as well as additional data or other information. New information added to an EIR is not "significant" unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement. "Significant new information" requiring recirculation include, for example, a disclosure showing that:

...

(2) A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.

(3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project, but the project's proponents decline to adopt it.

(4) The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded. (*Mountain Lion Coalition v. Fish & Game Com.*(1989) 214 Cal.App.3d 1043).

14 CCR 15088.5. The processing of the WLC is significant new information requiring recirculation. It is plain that the WLC's emission of 700,000 metric tons of GHG per year would largely erase the City's GHG reduction target in 2020 and the additional Prologis GHG emissions will have a more profound cumulative impact on the City's GHG contributions than are evident without considering the WLC project. Likewise, because the DEIR was so basically inadequate and conclusory in asserting without any meaningful estimates that air quality mitigations uncoupled from any detailed information regarding their effectiveness at reducing GHG emissions would reduce the Prologis Project's GHG emissions by 70,000 metric tons per

year, the addition of WLC's 700,000 metric tons of GHG per year makes it imperative that the City revisit and recirculate the EIR's GHG analysis before the City further dooms its supposed GHG reduction targets.

The need to address this new information and/or adjust the baseline for GHGs is also supported by the fact that, unlike traffic levels purportedly included in the baseline, the GHG emissions for WLC increase any conceivable GHG emissions that may have been estimated for that project's location at the time of the WLC project's NOP by at least 60 percent, possibly more. *See* World Logistics EIR, p. 6-16 & Table 6.F (665,321 metric tons of GHG for WLC as compared to zero at site with no project or 228,719 metric tons if built out consistent with previous General Plan) (*see* Exhibit C). This massive addition of GHG emissions to the baseline is new information that must be addressed and recirculated or, alternatively, added to the Project's baseline in order to make sure the City's EIR remains realistic.

3. The substantial evidence in the record establishes that the Project will have a significant impact on GHG emissions, including the sheer volume of its GHG emissions and its adverse impact on the City's ever achieving its GHG reduction targets.

The FEIR confirms that the City has not gathered in any estimate of actual reductions of GHG emissions by any of the mitigation measures it purports will address those emissions. Hence, it is clear that there is no substantial evidence in the record to show that the Project will emit 10,000 metric tons or less per year of CO₂ equivalents. As a result, the EIR cannot substantiate a conclusion that the Project's GHG emissions will result in less than significant impacts and, instead, must conclude that these emissions will result in significant impacts. The EIR must include additional feasible mitigations to address these GHG impacts, including electrified loading docks, mandating the installation of solar panels (rather than the mere possibility of solar panels), on-site industrial solar power storage, additional pollution control equipment on trucks utilizing the facility, and, where other feasible project specific mitigations are exhausted, the use of offset credits through recognized programs. SWAPE describes several mitigation measures in its comments as well as the availability of offset credits. SWAPE Comments, pp. 3-4.

Mitigation measures, including for a project's GHG emissions, must be fully enforceable through permit conditions, agreements or other legally binding instruments. 14 CCR § 15126.4(a)(2). *See Woodward Park Homeowners Assn., Inc. v. City of Fresno* (2007) 150 Cal. App. 4th 683, 730 (project proponent's agreement to a mitigation by itself is insufficient; mitigation measure must be an enforceable requirement). Especially given the uncertainty claimed by the City in measuring GHG reductions from various mitigation measures, the EIR must include a monitoring and verification process to confirm reductions in the Project's overall GHG emissions and include contingencies, *i.e.* additional mitigations including more offsets, if the measures do not achieve expected GHG reductions.

Lastly, because the evidence does not support a finding of no significant impact from the Project's GHG emissions, the City must acknowledge that significant impact and make a finding of overriding considerations that is supported by a showing that all feasible mitigation measures have been required. CEQA Guidelines §§ 15126.4, 15091, 15092(b)(2); Pub. Res. Code § 21002.

B. The EIR Significantly Underestimates the Project's Air Pollution Emissions From Mobile Sources.

The EIR makes a significant error in its air pollution emissions analysis by failing to rely upon substantial evidence regarding the veracity of the estimated truck trips for the Project. According to the review of Dr. James Clark, the EIR relies on an uncorroborated estimate of the Project's daily truck trips of 1.96 daily truck trips per 1,000 square feet. As Dr. Clark explains, "[i]n order to avoid underestimating the number of trips associated with large warehouse/distribution center operations without rail service, the SCAQMD staff recommended that lead agencies utilize a rate of 2.59 trips per TSF [thousand square feet] for large warehouse air quality analyses on a project specific basis." Clark Comments, p. 3. By using a value that is significantly reduced from SCAQMD's recommended value for the CalEEMod model, the EIR significantly understates the Project's air emissions:

Based upon the trip generation rate of 2.59, the total number of trips associated with Project would increase from 4,400 to 5,813 trips per day. The net result is that the air quality analysis performed by the Proponent greatly underestimates the emissions from mobile sources by at least one-third during the operational phase of the Project. Those impacts are likely to lead to a significant impact that will be unmitigated and unaccounted for in the FEIR. Without proper modeling of the emissions from these additional vehicles the impacts on the environment and the citizens of the Moreno Valley are unknown.

Clark Comments, p. 4. Because the EIR fails to disclose the full extent of the Project's air pollution impacts, it should be revised to include an accurate discussion of those impacts and recirculated along with any necessary additional mitigation measures.

C. The EIR Does Not Include Additional Feasible Mitigation Measures to Further Reduce the Project's Significant Impacts From its Emissions of NOx and PM10 and, Without Requiring Additional Measures, the City Cannot Adopt a Statement of Overriding Considerations.

An agency may adopt a statement of overriding considerations only *after* it has imposed all feasible mitigation measures to reduce a project's impact to less than significant levels. CEQA Guidelines §§ 15126.4, 15091. CEQA prohibits agencies from approving projects with significant environmental impacts when feasible mitigation measures can substantially lessen or avoid such impacts. Pub. Res. Code § 21002. As explained in CEQA Guidelines section 15092(b)(2), an agency is prohibited from approving a project unless it has "[e]liminated or

substantially lessened all significant effects on the environment where feasible.” The EIR states that the Project’s direct and cumulative emissions of NO_x and ROG_s will remain significant after the identified mitigation measures are implemented. *See* DEIR, pp. 1-22, 1-28. As a result, the EIR must require all feasible mitigations to reduce these impacts. As explained by SWAPE, additional mitigation measures are available that are not included by the City. The measures include requiring electrified loading docks for all refrigeration units and the use of fuel cell trucks to reduce NO_x emissions. SWAPE Comments, pp. 4-5. SCAQMD also provided a list of feasible mitigations that must be mandated for the Project. *See* FEIR, Letter B-3, pp. 3-4.

In addition, whether or not to implement several key measures included in the EIR is left to the future discretion of the City. *See, e.g.* DEIR, p. 1-22 (Mitigation Measure 4.3.6.5B) (“Prior to issuance of building permits, the project applicant shall provide evidence to the City that energy-efficient and low-emission methods and features of building construction shall be incorporated into the project design. These methods and features *may include* (but are not limited to) the following...” (emphasis added)). The list of measures included in Mitigation Measure 4.3.6.5B should be mandatory and enforceable in order to be consistent with the CEQA Guidelines.

LIUNA Local 1184 appreciates the change in the FEIR to make the energy efficiency requirement set forth in Measure 4.3.6.5A mandatory rather than voluntary. However, a number of the requirements embedded within the mandatory efficiency standard should also be adjusted to be mandatory requirements or otherwise clarified. For example, there is a requirement that lease/purchase documents shall identify that tenants are merely encouraged to promote a list of air pollution reduction measures. *See* DEIR, 1-27 – 1-28, Table 1.C; FEIR, pp. 58-59, 61-62. The FEIR should be revised to make these feasible tenant/purchaser measures mandatory as well.

Measure 4.3.6.5A also includes a vague requirement to “[i]ncorporate energy efficient space heating and cooling equipment.” This measure should be clarified to require that cooling for the main warehouse spaces at the Project shall be provided through evaporative coolers rather than air conditioners, or use new or different cooling technology that is at least as efficient. In addition, the mitigation should require the warehouse spaces to incorporate automated airflow and ventilation systems designed to minimize need for supplemental heating and cooling within the warehouse spaces. These measures are feasible, having been applied at other warehouse facilities. *See Coalition for Clean Air v. VWR Int’l LLC*, Consent Decree, attached as Exhibit D.

Currently, Measure 4.3.6.5A requires that “[a]ll buildings shall be designed to accommodate renewable energy sources, such as photovoltaic solar electricity systems, appropriate to their architectural design.” FEIR, p. 197. This mitigation measure should be revised to require that photovoltaic, or comparable renewable energy sources, be actually installed on all buildings sufficient to provide all of the energy needs of the Project and, if feasible, surplus energy to help offset the Project’s remaining pollution emissions. Given the size of the buildings’ roofs, this measure is feasible and would reduce or help offset the Project’s emissions of both ROG_s, NO_x, and GHG_s.

Additionally, Mitigation Measure 4.3.6.5B currently appears inconsistent with Mitigation Measure 4.3.6.5A. Unlike Measure 4.3.6.5A, Measure 4.3.6.5B does not increase the improvement over energy efficiency standards to 20 percent as was proposed in the DEIR and which applies to the related Measure 4.3.6.5A. FEIR, pp. 194-201. In order to apply all feasible measures, Measure 4.3.6.5B's list of measures should be made mandatory (replace "may" with "shall") and the measure to exceed statewide energy efficiency requirements by 10 percent restored to a 20 percent exceedance. FEIR, pp. 194-96. In addition, a requirement that the Project use building automation systems to control and optimize the efficiency of its mechanical systems, including lighting, HVAC, exhaust dampers, fans, and ventilation louvers should be added to Measure 4.3.6.5B's list.

Until each of the above mitigation measures as well as those measures identified by SCAQMD are incorporated as enforceable measures into the Project approval, the City will not be in a position to make a finding of overriding considerations for the Project's NOx, ROG, and GHG emissions.

D. The EIR Does Not Include Additional Feasible Mitigation Measures to Further Reduce the Project's Significant Impacts From its Particulate Matter Emissions During Construction and, Without Requiring Additional Measures, the City Cannot Adopt a Statement of Overriding Considerations.

An additional feasible mitigation measure that also would assist in assuring that the Project's air quality pollution mitigations during construction are enforceable is a measure to require monitoring of dust plumes. SWAPE identifies "[m]onitoring for opacity for all construction activities, including grading, not just for "screening" and "turf overseeding" activities" as an additional feasible measure. Without such a measure, it is not clear how the implementation or effectiveness of many of the air pollution control measures during construction will be documented or enforced. SWAPE lays out the following monitoring requirement:

Opacity monitoring should be conducted by qualified personnel using a Ringelmann chart. Monitoring with use of the Ringelmann Chart should be required when construction is occurring when wind speeds exceed 15 miles an hour, as gauged by a wind meter installed at the Project site. When a 20% opacity (Ringelmann 1) standard is exceeded, construction activities should cease until wind speeds drop to below 15 miles per hour. A log should be kept at the Project site to document when wind speeds exceed 15 miles per hour and the Ringelmann readings recorded during those periods, along with actions taken to comply when Ringelmann readings exceed the 20% opacity threshold.

SWAPE Comments, p. 4. Because this mitigation is feasible, would help to prevent any oversight of other mitigation measures, and would further reduce actual excessive emissions of PM10 at the Project site, it must be included in the mitigation requirements for construction-related air pollution.

E. The EIR Fails to Disclose the Project's Serious Cancer Risks to Neighbors and Workers.

a. The Project has significant air quality and health risk impacts because it will expose nearby residents to cancer risks of 22 cancers in one million for adults and 33 excess cancers in a million for children.

The EIR states that nearby residents and on-site workers will not be exposed to any significant health risks by the Project's construction. DEIR, p. 4.3-14. However, the EIR dramatically understates the health risks that will result from the Project's construction phase because the health risk assessment it relies upon assumes construction will only occur for four months rather than the 11.5 months reported in the EIR. SWAPE Comments, pp. 6-10. See DEIR, p. 4.3-13. This is despite the EIR's acknowledgement that "[a]lthough construction of the structures uses different types of equipment on site than during grading periods, similarities do exist in terms of equipment exhaust emissions and fugitive dust emissions." DEIR, p. 4.3-23. SWAPE prepared a screening-level HRA for construction-related DPM air quality impacts using the emissions and phasing data from the EIR and covering the full construction period. As SWAPE concludes, its risk assessment for nearby residences "shows that the adult exposure resulted in an additional 22 cancers in one million while the child exposure resulted in 33 excess cancers in a million. For both adult and child exposure parameters, the CEQA significance threshold of ten in one million excess cancer risk was exceeded during the construction period." SWAPE Comments, p. 9. In contrast to SWAPE's analysis, which fully discloses all of its inputs and models, "no modeling files or cancer risk calculations for the construction impacts analysis were provided in the DEIR or the FEIR" for the EIR's health risk assessment. *Id.*, pp. 9-10. Hence, the substantial evidence available to the Commission and others indicates that cancer risks to the Project's neighbors are significant. This must be acknowledged in the EIR and additional mitigations required. As SWAPE concludes:

An updated HRA should be prepared that incorporates all emissions from construction equipment over the entire duration of Project construction, and addresses the potential for significant air quality impacts to nearby sensitive receptors. Our analysis has demonstrated that by utilizing appropriate U.S. EPA and OEHHA exposure assessment methodologies, excess cancer risks consequent of Project construction have the potential to exceed CEQA thresholds of significance even under mitigated construction scenarios.

SWAPE Comments, p. 10.

b. The Project relied on a flawed health risk assessment in concluding that health risks to workers for the life of the Project would be insignificant.

The EIR also underestimates health risk impacts to workers to be employed at the Project site. SWAPE Comments, pp. 10-11. First, the Project's worker health risk assessment assumes

that trucks will be 87.5 percent diesel, explaining in its response to SCAQMD that the City believed such a number was appropriate because “[i]t is pure guesswork to predict how the diesel emissions will change over this period.” FEIR, p. 66. Acknowledging uncertainty of future actions does not warrant then selecting a number based on the acknowledged guesswork. Rather than use the conditions that the City knows exist currently to prepare a reasonable estimate of future worker health risks, they made a guess that trucks using the Project would be 87.5 percent diesel. That number, by the FEIR’s own admission, is not supported by substantial evidence. Likewise, SWAPE notes that the EIR suggests that a health risk assessment was prepared assuming operations were concentrated in 12-hours of each day rather than 24-hours. No such calculation was made in the health risk assessment for 12-hour days at the Project. SWAPE Comments, p. 11. A revised HRA for workers must be prepared and reviewed to determine if any changes to the EIR should be made prior to the Commission and City taking action on the EIR.

F. The EIR Continues to Fail to Require Feasible Mitigations to the Project’s Destruction of Farmland, Including Requiring the Applicant to Locate and Purchase an Equivalent or More Acreage of Farmland Conservation Easements Outside of the City and Western Riverside County.

In response to LIUNA’s comments noting the absence of any measures to mitigate the Project’s destruction of 82.55 acres of Prime Farmland and 36.4 acres of Farmland of Local Importance, the City continues to claim that it is excused from mitigating this impact simply because it intends to eventually destroy all remaining farmland within the City and because there is no program established by either the City or the County of Riverside for those governmental entities to manage conservation easement or land purchases for mitigation. *See* FEIR, p. 218. Neither of these excuses relieves the City and the Project Applicant from having to mitigate the Project’s significant impacts on farmland. Farmland conservation easements are feasible within Riverside County. The State of California has a program to facilitate such easements, providing grants and easement template applicable anywhere in the State of California, including Riverside County. *See* Exhibit E. There is no need for the City or County to create some bureaucratic program in order for the City to require the Project applicant to mitigate the 119-acres of farmland by purchasing easements or farmland of equivalent quality somewhere in Riverside or even other nearby counties. Private organizations also exist to facilitate the creation of farmland easements, including one located in Riverside County – the Riverside Land Conservancy. *See* Exhibit F.

The City claims that a 2010 Court of Appeal decision – *Building Industry Association of Central California v. County of Stanislaus* (2010) 190 Cal.App.4th 582 – conditioned the use of conservation easements as CEQA mitigation on the presence of a city- or county-wide program. FEIR, p. 218 (“That case concluded that it is appropriate to mitigate at a 1:1 ratio for the loss of prime agricultural land through the acquisition of an offsite agricultural easement if such a program is established by a county or regional governmental entity”). No such rule is found in the case. Instead, the pertinent rule is that the Court of Appeal upheld a requirement included in Stanislaus County’s General Plan requiring either 1:1 mitigation of developed

farmland based primarily on private purchases of farmland conservation easements. *See* 190 Cal.App.4th at 601 (“Under the FMP, although the developer is required to arrange for the granting of a conservation easement in order to obtain a development approval, most likely by a purchase, *no particular landowner* is required to grant the conservation easement”) (emphasis added). The case was not even a CEQA case so it certainly did not preclude mitigation under CEQA of destroyed farmland through a conservation easement unless some governmental program was in place. Nor is there any reason to restrict mitigation farmland to western Riverside County, given the county-wide and indeed statewide problem of farmland conversion. In short, there is no reason the applicant cannot take the steps necessary to purchase one or more farmland conservation easements for farmland of similar quality to that being destroyed by the Project somewhere in Riverside County or other nearby counties in southern California. Because the Project’s destruction of farmland is significant and unavoidable, the City must incorporate all feasible mitigation measures. Requiring the applicant to obtain farmland conservation easements for comparable quality farmland in other areas is plainly feasible and must be included.

G. Additional Details for Sampling Soils for Residual Pesticides Should be Required.

The FEIR has added a mitigation measure to require additional soil sampling prior to issuance of a grading permit. FEIR, p. 222. LIUNA Local 1184 believes that, because the additional information will not be available prior to the certification of the EIR, this change does not cure the baseline concerns raised in their previous comment letter. In addition, unless additional details are added to the mitigation, it amounts to improper deferred mitigation. SWAPE recommends the following additional details:

The mitigation measure (MM 4.6.6.1A) should be revised to include specifics on the number of samples to be collected, the chemical analytes, and to provide for documentation of the sampling and analysis of the results prior to FEIR certification. The mitigation measure should also include a commitment to compare sampling results to health-protective regulatory screening levels such as U.S. EPA Regional Screening Levels and California Human Health Screening Levels, and to mitigate any exceedances of the screening levels through further evaluation of health risks and the removal of any contaminated soil that may pose a risk to human health.

SWAPE Comments, p. 2. LIUNA Local 1184 request that the EIR’s mitigation be changed to address these details.

VI. CONCLUSION

For the foregoing reasons, as well as each of the comments raised in LIUNA Local 1184’s DEIR comments, LIUNA Local 1184 recommends that the Commission continue the matter for future consideration pending completion of a supplemental EIR addressing the above

Subject: Comments on the Final Environmental Impact Report, Prologis Eucalyptus Industrial Park Project, Riverside County, California

Dear Mr. Drury:

We have reviewed the April 2, 2014 Revised Final Environmental Impact Report (FEIR) for the Prologis Eucalyptus Industrial Park Project ("Project"). We have found the FEIR fails to adequately address comments we made in an August 30, 2012 letter on the July 2012 Draft Environmental Impact Report (DEIR). The comments we made focused on issues related to hazardous waste, greenhouse gas emissions and air quality. The FEIR should not be certified until these concerns are adequately addressed.

Hazards and Hazardous Materials

Baseline Conditions Remain Undisclosed

Comments we made on the July 2012 Draft Environmental Impact Report (DEIR) focused on the inadequacy of ten year-old Phase I Environmental Site Assessments (ESAs) to represent conditions at the Project site that may pose risks to workers and the neighboring public. We also noted that the Phase I ESAs that had been completed did not cover the entire Project site and that potential residual pesticide risks had not been satisfactorily addressed.

In response to concerns we expressed about the potential for residual pesticides to be present (Comment 9), the FEIR adds a mitigation measure (MM 4.6.6.1A) to sample for agricultural chemicals prior to issuance of a grading permit. While we applaud the addition of this needed mitigation measure, it does not go far enough in that it does not specify the manner in which the samples will be collected (namely, the number of samples, the depths and the chemical analytes) and the sampling is not to occur until after certification of the project (and prior to grading).

The mitigation measure (MM 4.6.6.1A) should be revised to include specifics on the number of samples to be collected, the chemical analytes, and to provide for documentation of the sampling and analysis of the results prior to FEIR certification. The mitigation measure should also include a commitment to compare sampling results to health-protective regulatory screening levels such as U.S. EPA Regional Screening Levels¹ and California Human Health Screening Levels,² and to mitigate any exceedances of the screening levels through further evaluation of health risks and the removal of any contaminated soil that may pose a risk to human health.

The FEIR should also provide the closure documentation we requested in DEIR comments for a 13,400 gallon underground storage tank (UST) that was reportedly removed from the Project site in 2004. As we requested, the documentation should be produced to disclose if closure for the UST removal was granted by the County.

Greenhouse Gas Emissions

In DEIR comments (Comment 12), we expressed concern that estimates of the Project's operational greenhouse gas (GHG) emissions, following mitigation, were not quantified. We commented that the need to show the efficacy of the mitigation was necessary because pre-mitigation operational GHG emissions were well above any applicable South Coast Air Quality Management District thresholds. The Response to Comment 12 states:

This comment states that the EIR did not show the GHG emissions with mitigation. The reductions with mitigation were not calculated because the GHG-related mitigation measures included in the EIR do not have quantified reduction amounts.

The mitigation in the DEIR, for which emissions reductions were not quantified, included:

- Establishment of a Transportation Management Association (TMA) to encourage and coordinate carpooling among building occupants (p. 1-26).
- Green building and maintenance provisions (MMs 4.13.6.1A, 4.13.6.1B, 4.13.6.1C)

Other measures identified in the DEIR to reduce GHG emissions include recommended actions within the Transportation, Electricity and Natural Gas, Green Buildings, and Water sectors. Again, no effort was made to quantify the reductions in GHG emissions from the incorporation of these measures.

It is simply not good enough for the Responses to assert, qualitatively, that mitigation measures and recommended actions will reduce GHG emissions from 79,000 MTCO₂e/yr to below 10,000 MTCO₂e/yr, the applicable South Coast Air Quality Management District (SCAQMD) threshold. Without quantifying the reductions, there is absolutely no basis to say that reductions will be below the applicable threshold.

Likewise, it is non-responsive to state that mitigation could not be quantified "because the GHG-related mitigation measures included in the EIR do not have quantified reduction amounts" (Response to Comment 12). Numerous means to quantify GHG mitigation emissions reductions are available,

¹ <http://www.epa.gov/region9/superfund/prg/>

² <http://www.calepa.ca.gov/brownfields/documents/2005/CHHSLsGuide.pdf>

including methods as published in an August 2010 guidance document published by the California Air Pollution Control Officers Association (CAPCOA), entitled “Quantifying Greenhouse Gas Mitigation Measures”.³ The CAPCOA document has numerous separate methodologies to quantify GHG mitigation emission reductions for activities related to the project, and for the mitigation measures identified for the Project. The reductions cited below, from the CAPCOA guidance document, are for operational activities relevant to the Project:

Transportation

- Use of electrified loading docks to reduce the need for diesel auxiliary engines to run in order to keep refrigerated transportation units temperature controlled to achieve a 26-71% reduction in GHG emissions;
- Use of electric or hybrid vehicles to achieve a 0.4-20% reduction in GHG emissions; and
- Use of alternative fueled vehicles (reductions vary).

Water Use

- Install low-flow water fixtures (as identified in MM 4.13.6.1A) to achieve a 17-31% reduction in GHG emissions;
- Design water-efficient landscapes (as identified in MM 4.13.6.1C) to achieve up to 70% in GHG emissions reductions; and
- Use reclaimed water for up to 81% GHG emissions reductions.

The need to quantify GHG reductions is critical to show that the Project’s emissions will meet the SCAQMD threshold of 10,000 MTCO₂e/yr. The examples from the CAPCOA guidance, as cited above, are just a few of those measures that can be quantified to estimate GHG emissions reductions, demonstrating that Response to Comment 12 is inadequate when it states mitigation could not be quantified “because the GHG-related mitigation measures included in the EIR do not have quantified reduction amounts.”

The FEIR should not be certified until GHG mitigation measures are quantified to demonstrate estimates that are below the SCAQMD threshold of 10,000 MTCO₂e/yr. If the threshold is not met, additional mitigation or use of credits (offsets) would be necessary, consistent with other Southern California projects where the SCAQMD threshold was exceeded, after mitigation.⁴

If emissions reductions estimates do not demonstrate that the threshold is met, additional measures should be undertaken, to include credits for all GHG emissions generated above the threshold of 10,000 MTCO₂e per year. To ensure GHG emissions reductions are real and verifiable, a GHG reporting and reduction plan should be submitted to the SCAQMD and the City detailing the measures to be implemented to achieve the required reductions. Credits should comply with

- SCAQMD Regulation XXVII protocol;⁵
- CAPCOA GHG Rx program;⁶ and
- Those verified by the Climate Action Reserve or the American Carbon Registry.

Air Quality

Mitigation of Criteria Air Pollutants is Inadequate

The Responses fail to address to the concerns we expressed about the need to employ all available mitigation to address what the FEIR identifies as significant emissions of criteria air pollutants from construction and operation. The specific response to the comment we made on this issue (Letter D-4C, Response to Comment 5) stated:

For a detailed response on comparing construction emissions to daily construction thresholds, see the Responses to Comments D-4A-13 and D-4A-14 in the previous Letter D-4A from Lozeau Drury. For a detailed response on operational impacts of the project, see the Response to Comment D-4A-16 in the previous Letter D-4A from Lozeau Drury.

Responses to Comments D-4A-13, D-4A-14 and D-4A-16 have nothing to do with the issue of the inadequacy of mitigation measures to reduce construction emissions of NOx and ROG and operational emissions of ROG, NOx, and PM10 to less-than-significant levels. Some responses to other comments did address the need for additional mitigation (see Responses 1-12, Comment Letter B-3 and Responses 49-60, Comment Letter D-3) but we find these measures do not incorporate all measures that are feasible to reduce criteria air pollutant emissions.

Applicable Construction Mitigation Measures

- Monitoring for opacity for all construction activities, including grading, not just for “screening” and “turf overseeding” activities (as cited in the Air Quality Measure 4.3.6.2M Best Available Control Measures for Fugitive Dust). Opacity monitoring should be conducted by qualified personnel using a Ringelmann chart. Monitoring with use of the Ringelmann Chart should be required when construction is occurring when wind speeds exceed 15 miles an hour, as gauged by a wind meter installed at the Project site. When a 20% opacity (Ringelmann 1) standard is exceeded, construction activities should cease until wind speeds drop to below 15 miles per hour. A log should be kept at the Project site to document when wind speeds exceed 15 miles per hour and the Ringelmann readings recorded during those periods, along with actions taken to comply when Ringelmann readings exceed the 20% opacity threshold.

Applicable Operation Mitigation Measures

⁵ http://www.aqmd.gov/rules/reg/reg27_tofc.html

⁶ <http://www.capcoa.org/>

- Use of electrified loading docks for all refrigeration units;
- Use fuel cell trucks that use hydrogen produced primarily from natural gas show only slightly lower net PM emissions (11 percent) relative to new diesel trucks, largely due to the steam reformation process to produce hydrogen from natural gas; NOx emissions are reduced 84 percent in total and GHGs are cut in half. Greater use of renewable hydrogen or improved hydrogen production methods could cut fuel cell emissions relative to conventional technology.⁷

Cumulative Impacts have not been Adequately Addressed

We commented that the DEIR identified 13 proposed projects within five miles of the Project but failed to identify a construction schedule for the projects. The Responses (Comment D-4A-19) did not provide this schedule and simply states:

The EIR includes a complete cumulative air quality impacts analysis that satisfies all CEQA requirements and that includes the conclusion that the long-term cumulative air quality impacts would be significant and avoidable.

The FEIR does not go far enough to address concerns about emissions of criteria air pollutants. For example, to meet air quality standards required by 2023, NOx emissions must be reduced by approximately two thirds beyond existing rules and regulations. The largest source of NOx emissions in the SCAQMD are heavy duty trucks. Without meeting air quality standards, the Southern California area faces federally mandated sanctions, including possible loss of transportation funding.

Other major projects in Moreno Valley, which involve significant trucking operations, include the WestRidge Commerce Center Project (which will be built adjacent to the proposed Project), the VIP Moreno Valley Project and the March Business Center. Along with the Project, these projects may be constructed simultaneously, highlighting the need for an estimate of the combined emissions of these projects.

Although the FEIR states that cumulative impacts are significant, additional measures are available to mitigate cumulative impacts on air quality. Perhaps most important is to quantify the emissions that will stem from the construction of other projects and, using those emissions estimates, identify how the construction of the projects might be staged to reduce temporal impacts. The US EPA has commented on the benefit of this approach to prevent violations of air quality standards.⁸

The FEIR should not be certified until cumulative emissions data from all projects have been compiled, by month, for construction in a six-mile radius that would overlap with the Project. From use of this data, a phased construction schedule, for projects that will undergo construction concurrently, should be derived so that violations of local, state or federal air quality regulations will not result. Consistent

⁸ U.S. Environmental Protection Agency, Comments on the Alta East Wind Project, September 27, 2012 <http://www.epa.gov/region9/nepa/letters/blm/ca/alta-east-wind-project-kern-county-deis.pdf>, p. 2

with US EPA's recommendations, the Project should be scheduled for constructed in light of the other planned construction activities to ensure air quality standards are not exceeded.

Diesel Particulate Matter Emissions have not been Evaluated and Addressed Adequately

Emissions of diesel particulate matter (DPM) associated with activities occurring on the Project site both during construction and operations have not been adequately characterized in estimating risks to human health. We have re-reviewed the DEIR documents, the 2012 LSA Air Quality Analysis (AQA) report, and the FEIR Responses to Comments and determined that impacts of DPM emissions on human health should be reevaluated before certification of the FEIR. Our evaluation has shown that construction of the Project has the potential to result in DPM exposures at nearby residences that exceed CEQA significance thresholds, and DPM exposure to workers on-site during operations warrants additional investigation by the Lead Agency.

Construction of the Project Will Result in Significant Air Quality Impacts

The Project location is situated just south of the Moreno Valley Freeway (SR60), with residential neighborhoods located within 50 feet to the southeast and 200 feet to the north of the Project boundary. The 2012 LSA AQA relied upon several inaccurate assumptions in preparing the Health Risk Assessment (HRA) for off-site residential exposure that accompanied the DEIR:

"The anticipated level of diesel-powered equipment use will, on average for the entire construction period, emit approximately 6.0 lbs/day of diesel exhaust particulate. A screening health risk assessment was performed using this emission rate and assuming the mobile equipment operates for 22 days per month and 4 months continuously at this high rate. This is considered conservative even though the total construction period will be longer than 4 months due to the extreme variation from day to day of heavy-duty construction equipment usage. **All of these values are deliberately higher than expected so that the risk levels will not be underestimated.**⁹ [*emphasis added*]

This statement contradicts itself in saying that even though average daily emissions of DPM were assumed to be 6 pounds, the duration of construction utilized for the exposure model was actually less than half of the total anticipated length. Therefore, it is impossible that all values are deliberately higher than expected, as LSA admits that the Project construction will in fact take longer than 4 months. By a simple calculation, the total pounds of DPM emissions evaluated in the HRA for construction-related activities is: $\frac{6 \text{ lbs}}{\text{day}} \times \frac{22 \text{ days}}{\text{month}} \times \frac{4 \text{ months}}{\text{Project}} = 528 \text{ lbs DPM}$ from construction. We believe that this represents a significant underestimate of actual construction-related DPM emissions, as the total length of Project construction is approximately 11.5 months. We have prepared a revised estimate that more accurately represents the exposures that nearby residents will be subjected to during Project construction.

⁹ LSA Associates, Inc., 2012. Air Quality Analysis, Eucalyptus Industrial Park, City of Moreno Valley, California. March 2012. Page 43.

We extracted only the estimates of mitigated on-site daily construction exhaust emissions provided in the CalEEMod output files (shown in the table below from the FEIR¹⁰), and multiplied the daily emissions estimates for each phase by the number of days given in AQA Table E: Construction Schedule, also shown below. The total pounds of construction-related DPM emissions was calculated to be 934.37 pounds, or 177% of the emissions that LSA incorporated into their HRA for off-site residential exposure. The HRA and FEIR should be revised to include more accurate estimates of total construction-related DPM emissions, as well as the appropriate exposure duration for nearby sensitive receptors in the residential communities.

Construction Phase	Onsite Pollutant Emissions, lbs/day							
	ROG	NO _x	CO	SO ₂	Fugitive PM ₁₀	Exhaust PM ₁₀	Fugitive PM _{2.5}	Exhaust PM _{2.5}
Site Preparation	10.43	84.72	47.82	0.07	7.05	4.27	3.87	4.27
Grading	12.5	103.9	55.13	0.1	3.38	5.01	1.29	5.01
Building Construction	5.63	37.37	23.73	0.04	0	2.54	0	2.54
Architectural Coating	342.39	2.96	1.94	0	0	0.27	0	0.27
Paving	7.91	33.81	20.89	0.03	0	2.93	0	2.93

Table E: Construction Schedule

Phase Name	Phase Start Date	Phase End Date	Number of Days
Site Preparation	9/1/2012	9/26/2012	18
Grading	9/27/2012	11/27/2012	44
Building Construction	11/28/2012	8/16/2013	188
Architectural Coating	1/17/2013	8/16/2013	152
Paving	6/1/2013	8/16/2013	55

Source: Project Plans

We have prepared our own screening-level HRA for construction-related DPM air quality impacts using the emissions and phasing data from the above tables. From the AQA appendices, we determined that diesel-fueled construction equipment would be operated for no more than 8 hours per day, and 5 days per week. The total number of construction days was 250 (weekdays between 9/1/2012 and 8/16/2013, or 18+44+188 as the last three phases of the Project in Table E overlap entirely). The emission rate derived for our screening model was therefore:

$$\text{Emission Rate (grams/second)} = \frac{934.37 \text{ lbs} \times 453.6 \text{ grams/lb}}{250 \text{ days} \times 8 \text{ hours/day} \times 3600 \text{ seconds/hour}} = 0.05886 \text{ g/s}$$

This value represents the average DPM emission rate during hours that construction activities are occurring for the entire Project

¹⁰ Response to Letter D-4A, Final EIR - Response to Comments, Prologis Eucalyptus Industrial Park, City of Moreno Valley. Page 223.

We used the EPA-recommended screening model AERSCREEN to evaluate off-site impacts to residential receptors during construction¹¹. As of 2011, AERSCREEN replaced SCREEN3 as the official screening model of the EPA due to its enhanced ability to simulate near-field dispersion from emissions sources. When detailed data pertaining to specific locations of emissions sources are unavailable, it is acceptable to model the average emission rate over the entire area of project construction. However, the Project boundary is geometrically complicated, and so our analysis focused on a subset of the Project site for screening-level modeling and HRA. The figure below depicts the portion of the site that was considered for the screening model. The yellow rectangle measures approximately 570 meters by 600 meters, with an area of approximately 84.51 acres.

The total Project boundary encompasses an area of 122.8 meters. For the purposes of our screening model, we multiplied the emission rate of 0.05886 g/s by the fraction $\frac{84.51}{122.8} = 0.6882$ to arrive at an average emission rate of 0.0405 g/s for the designated area over the course of Project construction. Due to lack of available information describing the anticipated sequencing of Project construction by area within the boundary, we assumed that averaging the emissions over the total duration was the best methodology to prepare this screening-level HRA.

The AERSCREEN model predicts the maximum single-hour concentration of a pollutant downwind of an emissions source. The maximum downwind concentration of DPM will be encountered during hours of

¹¹ U.S. Environmental Protection Agency Air Quality Modeling Group, C439-01 , MEMORANDUM: AERSCREEN Released as the EPA Recommended Screening Model, April 11, 2011.

construction equipment use, during which air quality impacts to sensitive receptors will also be highest. EPA screening methodology states that to estimate the maximum reasonable annualized concentration of an air pollutant, the maximum single-hour concentration can be multiplied by a scaling factor of 0.1¹². The maximum single-hour concentration of DPM produced by the AERSCREEN model during construction hours of the Project was 50.89 µg/m³ at 402 meters (1,319 feet) downwind. Residential receptors in the community to the southeast of the Project boundary are situated at this downwind distance.

The following table provides our estimations for a screening-level HRA for excess cancer risk at downwind residential receptors. The maximum single-hour concentration was multiplied by 0.1 to represent a maximum reasonable estimate of the annualized DPM concentration from construction. 80th percentile breathing rates were obtained from OEHHA guidance on HRA, as utilized in the LSA AQA¹³. Instead of incorporating the 4-month exposure considered by LSA, we utilized an 11.5 month exposure duration based on anticipated start and end dates of Project construction given in the tables presented above.

402-Meter Downwind Exposure

Parameter	Description	Units	Adult Exposure	Child Exposure
CPF	Cancer Potency Factor	1/(mg/kg-day)	1.1	1.1
Cair	Concentration in Air	µg/m ³	5.09	5.09
DBR	Daily Breathing Rate	L/kg-day	302	452
EF	Exposure Frequency	days/year	350	350
ED	Exposure Duration	years	0.95	0.95
AT	Averaging Time	days	25550	25550
	Inhaled Dose		2.0E-05	3.0E-05
	Cancer Risk		2.20E-05	3.29E-05

The table shows that the adult exposure resulted in an additional 22 cancers in one million while the child exposure resulted in 33 excess cancers in a million. For both adult and child exposure parameters, the CEQA significance threshold of ten in one million excess cancer risk was exceeded during the construction period. The maximum calculated inhalation cancer risk estimate provided in Table Q of the AQA report was 0.53 in one million at approximately 50-56 feet downwind. However, there is no modeling files or cancer risk calculations for the construction impacts analysis were provided in the DEIR

¹² U.S. Environmental Protection Agency Office of Air Quality Planning and Standards, Screening Procedures for Estimating the Air Quality Impacts of Stationary Sources, Revised, , October 1992.

¹³ Office of Environmental Health Hazard Assessment, The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments, Air Toxics Hot Spots Program Risk Assessment Guidelines, August 2003.

or the FEIR. In fact, the 2012 LSA AQA report references a November 2011 Traffic Impact Study as the source of the information, however this report does not mention cancer risk a single time¹⁴.

There is a considerable discrepancy between the 0.53 in one million calculated by LSA and the 22 in one million calculated in our analysis. An updated HRA should be prepared that incorporates all emissions from construction equipment over the entire duration of Project construction, and addresses the potential for significant air quality impacts to nearby sensitive receptors. Our analysis has demonstrated that by utilizing appropriate U.S. EPA and OEHHA exposure assessment methodologies, excess cancer risks consequent of Project construction have the potential to exceed CEQA thresholds of significance even under mitigated construction scenarios.

A Health Risk Assessment for On-Site Workers Should be Prepared Using Appropriate Parameters

Neither the FEIR, the DEIR, nor the AQA provides a detailed description of the methodologies utilized in arriving at the on-site worker excess cancer risk reported to be 1.5 in one million in Table 4.3.F of the DEIR. Response to Comment 13 of Letter D-2 addresses the lack of available data that made the assessment of operational DPM exposure to workers difficult in making a reference to the AQA:

Due to lack of data, precise evaluation of vehicle exhaust impacts is not feasible; however, based on the limited amount of TAC from vehicle exhaust associated with the project operations in relation to background levels, the impact is not expected to be significant.

This conclusion relied upon several inappropriate assumptions, and a revision to the on-site worker HRA should be prepared. An example of an appropriate HRA for on-site workers can be found in the ENVIRON HHRA for the proposed Stanford University Medical Center¹⁵, which clearly demonstrates that evaluation of vehicle exhaust impacts is indeed feasible.

The fleet of trucks that will be passing through the facility on a daily basis is expected to include 1,246 heavy-duty trailer trucks. In Response to Comment 21 of Letter B-3 the Lead Agency defends its assumption that the heavy-duty trailer trucks will be 87.5% diesel based on fuel use percentages from the URBEMIS model. However, the SCAQMD website clearly states that, "Emissions calculated using URBEMIS are now outdated and SCAQMD staff recommends all projects now evaluate emissions with CalEEMod if they use software for their analysis."¹⁶ Furthermore, the SCAQMD Comment Letter directly asserts that the fleet should be assumed 100% diesel.¹⁷ The FEIR admits that adjusting the fuel use of the fleet will increase the carcinogenic health risks to workers during Project operations (Comment 21, Response to Letter B-3), and this adjustment should be made in a revised iteration of the worker HRA.

¹⁴ LSA Associates, Inc., Draft Traffic Study, Eucalyptus Industrial Park, City of Moreno Valley, California, April 24, 2012.

¹⁵ ENVIRON, Human Health Risk Assessment, Construction and Incremental Operational Emissions, Proposed Stanford University Medical Center, Facilities Renewal and Replacement Project, Palo Alto, California, February 22, 2010.

¹⁶ SCAQMD, Air Quality Modeling. <http://www.aqmd.gov/ceqa/models.html>.

¹⁷ Comment 21, Letter B-3: South Coast Air Quality Management District, Final EIR - Response to Comments, ProLogis Eucalyptus Industrial Park, City of Moreno Valley, p. 54.

Additionally, the methodology by which daily operational emissions associated with the heavy-duty truck fleet were quantified is unclear. In the AQA, page 44 clearly states that, "Deliveries are assumed to occur 24 hours per day and 7 days per week." This was confirmed by reviewing the HRA emission worksheet in Appendix C to the AQA. However, the FEIR claims that, "Modeling the actual number of trucks that are planned to operate over 24 hours as if they operated over 12 hours results in much higher hourly emissions. Thus, the HRA is protective of human health in case there is a change in the project operations to only operate 12 hours per day" (Comment 19, Response to Letter B-3). There is no evidence to suggest that the HRA utilized an emission rate assumed over 12 hours per day instead of 24.

A revised iteration of the HRA during Project operations should be prepared prior to FEIR certification to clearly identify how the emissions generated by truck idling and movement were quantified. Incorporation of the SCAQMD comments regarding the use of a 100% diesel-fueled fleet, as well as the increased idle time per truck of fifteen minutes per trip instead of five, will unquestionably increase the estimates of emissions from Project operations. Adjustment of these parameters will provide a more accurate characterization of air quality impacts to on-site workers during Project operations, as current assumptions may have resulted in underestimated exposures.

Sincerely,

Matt Hagemann, P.G., C.Hg.

Attn: Mr. Richard Drury

Subject: Comment Letter on the Final Environmental Impact Report for the Prologis Eucalyptus Industrial Park, SCH No. 2008021002

Dear Mr. Drury:

At the request of Lozeau | Drury LLP (Lozeau Drury), Clark and Associates (Clark) has reviewed materials related to the above referenced project, including the Final Environmental Impact Report¹ (FEIR) for the Prologis Eucalyptus Industrial Park (hereafter called the Project), SCH No. 2008021002 and its appendices. The proposed project site is located in the eastern portion of the City of Moreno Valley, in Riverside County, California. The 122.8-acre project site is located south of State Route 60 (SR-60) east of the Moreno Valley Auto Mall, and adjacent to and west of the Quincy Channel. According to the FEIR the proposed project would result in the construction and operation of a warehouse facility, consisting of approximately 2,244,638 square feet (sq ft).

¹ LSA. 2014. Final Environmental Impact Report, State Clearinghouse No. 2008021002, Prologis Eucalyptus Industrial Park (formerly Prologis Park Moreno Valley Eucalyptus Project), City of Moreno Valley, Riverside County, California. LSA Associates, Inc. 1500 Iowa Ave, Suite 200, Riverside, CA LAS Project No. PLO1101. Prepared February 12, 2014 and revised April 2, 2014

Clark's review of the materials in no way constitutes a validation of the conclusions or materials contained within the plan. If we do not comment on a specific item this does not constitute acceptance of the item.

Project Description

This FEIR was issued prematurely without considering the serious flaws in the Proponent's analysis of the project by failing to accurately characterize truck traffic at the site

The air quality impacts from the traffic associated with an approximately 2,250,000 square foot facility are significant. The most significant factor used to quantify air quality impacts from project traffic is the vehicle trip rate, or the number of vehicle trips per day. A vehicle trip is one round trip (one trip segment to a site and one trip segment away from a site). In the case of the proposed Project, the primary concern will be the number of truck trips per day.

In the analysis of this Project, the Proponent estimates the vehicle trip rate used a truck trip rate of 1.96 trips per 1,000 square feet of land use to estimate operational air quality impacts instead of the default Cal EEMod land use model trip rate of 2.59 (an underestimation of operational emissions by 32%).

According to SCAQMD², for CEQA purposes, the volume of truck traffic predicted to serve a new large warehouse project has historically been derived using the ITE Trip Generation manual's general rate for warehouse projects (land use type 150), which is 4.96 trips per 1,000

² As reported in Appendix E, p. 10, Technical Source Documentation for the CalEEMod, prepared for the CAPCOA by Environ International Corporation and the California Air Districts, July 2013, available at : <http://www.aqmd.gov/caleemod/doc/AppendixE.pdf>

square feet (TSF). This is the same source of traffic data used in the URBEMIS air quality model.³ This value is from the 7th Edition of the ITE Trip Generation manual, published in 2003. Several developers of high-cube warehouses in recent years have questioned the validity of this value for modern warehousing operations and commissioned local studies to investigate these trip rates⁴. As a result, in the most recent version of the ITE Trip Generation manual (8th Edition, 2008), additional data has been included to provide a new high-cube warehouse (land use type 152) trip rate of 1.44 trips/TSF⁵.

This greatly reduced trip rate has been criticized in California. In order to avoid underestimating the number of trips associated with large warehouse/distribution center operations without rail service, the SCAQMD staff recommended that lead agencies utilize a rate of 2.59 trips per TSF for large warehouse air quality analyses on a project specific basis⁶. According to SCAQMD and based on a review of warehouse studies and operations, this value provides a reasonable default rate for individual new warehouses in the absence of more project-specific data.⁷ This trip rate has been accepted by CAPCOA and incorporated into the CalEEMod model.

Another way to illustrate how the DEIR greatly underestimates truck traffic associated with the Project is to review the estimated number of daily truck trips per 1,000 square feet of warehouse. As described above, the DEIR estimates 1.96 daily truck trips per 1,000 square feet.

³ *Ibid.*

⁴ *Ibid.*

⁵ *Ibid.*

⁶ *Ibid.*

⁷ *Ibid.*

The results of utilizing the CalEEMOD method for estimating the traffic impacts from the Project are substantial. Based upon the trip generation rate of 2.59, the total number of trips associated with Project would increase from 4,400 to 5,813 trips per day.

The net result is that the air quality analysis performed by the Proponent greatly underestimates the emissions from mobile sources by at least one-third during the operational phase of the Project. Those impacts are likely to lead to a significant impact that will be unmitigated and unaccounted for in the FEIR. Without proper modeling of the emissions from these additional vehicles the impacts on the environment and the citizens of the Moreno Valley are unknown.

Conclusion

The facts identified and referenced in this comment letter lead me to reasonably conclude that the Project will result in significant adverse impacts that were not identified in the FEIR and that are not adequately mitigated. Many of the FEIR's conclusions that environmental impacts are not significant or less than significant with mitigation are unsupported or contradicted by the evidence. As a result, several analyses presented in the FEIR, including impacts on air quality, fail to identify or disclose the magnitude of significant adverse impacts. To protect air quality and public health the Proponent must prepare a revised FEIR for the Project.

Sincerely,

A handwritten signature in blue ink that reads "James Clark".

James Clark, Ph.D.

EXHIBIT C

4.7.1.4 Greenhouse Gas Inventories

The City of Moreno Valley estimated greenhouse gas emissions for the community for 2007 and 2010 and projected emissions for 2020 are shown in Table 4.7.B, which shows the reduced 2020 emissions are below the reduction target.

Table 4.7.B: City of Moreno Valley Projected Greenhouse Gas Emissions

Source Category	Moreno Valley Greenhouse Gas Emissions (MTCO ₂ e per year)			
	2007	2010	BAU 2020	Reduced 2020
Transportation	517,098	513,581	788,267	421,561
Energy	287,261	277,230	356,192	251,372
Area	69,390	69,437	84,665	73,046
Water and Wastewater	21,595	16,831	20,216	14,158
Solid Waste	44,294	43,633	49,203	38,000
Total	939,638	920,712	1,298,543	798,137
Reduction Target	—	—	798,693	798,693

Notes: MTCO₂e = metric tons of carbon dioxide equivalents BAU = business as usual
Source: Table 9, City of Moreno Valley Greenhouse Gas Analysis, 2012., MBA 2013

The existing WLC project site is largely vacant with scattered dry farming that generates minimal greenhouse gas emissions. For the purposes of this analysis, a zero baseline will be assumed to identify the “worst case” emissions (i.e., GHG emissions from the entire WLC project without removal of any existing GHG emissions).

4.7.2 Regulatory Setting

4.7.2.1 International Regulation of Climate Change

Intergovernmental Panel on Climate Change (IPCC). In 1988, the United Nations created the IPCC to provide independent scientific information regarding climate change to policymakers. The IPCC does not conduct research itself, but rather compiles information from a variety of sources into reports regarding climate change and its impacts. The IPCC has thereafter periodically released reports on climate change, and in 2007 released its Fourth Assessment Report which concluded most global climate change was the result of human activity, mainly the burning of fossil fuels (see Section 4.7.1.1).

United Nations Framework Convention on Climate Change. On March 21, 1994, the United States joined a number of countries around the world in signing the United Nations Framework Convention on Climate Change (Convention). Under the Convention, governments gather and share information on greenhouse gas emissions, national policies, and best practices; launch national strategies for addressing greenhouse gas emissions and adapting to expected impacts, including the provision of financial and technological support to developing countries; and cooperate in preparing for adaptation to the impacts of climate change.

Kyoto Protocol. The Kyoto Protocol is an international agreement linked to the United Nations Framework Convention on Climate Change. The major feature of the Kyoto Protocol is that it sets binding targets for 37 industrialized countries and the European community for reducing greenhouse gas emissions at average of five per cent against 1990 levels over the five-year period 2008-2012. The Convention (discussed above) encouraged industrialized countries to stabilize emissions; however, the Protocol commits them to do so. Developed countries have contributed more emissions

Reduction summary: local vehicles = 3 percent; waste = 35 percent
Source: Michael Brandman Associates 2013.

When compared with the proposed project, air quality impacts associated with the No Project/Existing General Plan Alternative would be correspondingly decreased in magnitude. Similar to the proposed project, the generation of these emissions would still result in a cumulative contribution of air pollutants in a nonattainment basin; therefore, impacts remain significant and unavoidable.

Table 6.E: No Project/Existing General Plan Alternative Operational Emissions

Source	Pollutant Emissions, lbs/day					
	CO	VOC	NO _x	SO _x	PM ₁₀	PM _{2.5}

No Project/Existing General Plan ²	4,853	1,114	1072	14	1,231	86
Net Change	+1,387	+385	-1,987	-7	-454	-67
SCAQMD thresholds	550	55	55	150	150	55
Alternative exceeds thresholds?	Yes	Yes	Yes	No	Yes	Yes

Source: MBA 2013

¹ MBA 2013 Air Quality Assessment for the proposed project

² From Moreno Highlands Specific Plan updated by MBA using CalEEMod software

Global Climate Change: GHG emissions associated with the No Project/Existing General Plan Alternative are correspondingly decreased as this alternative does not include a logistics warehouse component. In addition, the No Project/Existing General Plan Alternative would decrease the amount of water utilized and wastewater generated. As identified in Table 6.F, the No Project/Existing General Plan Alternative would generate 228,719 metric tons of total CO₂ equivalent¹ (mt CO₂e), which is approximately 60 percent less than what was identified for the proposed project.

Table 6.F: Comparison of Greenhouse Gas Emissions

Type of Development	Annual MTCO ₂ e Emissions	Change
Proposed Project	665,321	100%
No Project/No Build ¹	—	0%
No Project/Existing General Plan ²	228,719	35%
Alternative 1: Reduced Density	465,725	70%
Alternative 2: Mixed Use A	794,828	120%
Alternative 3: Mixed Use B	318,808	48%
Alternative Sites	665,321	100%

MTCO₂e is metric tons of carbon dioxide equivalents, which is a standard unit of measure for greenhouse gases.

¹ Estimated based on existing on-site rural residential uses.

² Based on approved Moreno Highland Specific Plan.

Source: MBA 2013 project air quality study, alternatives analysis (see Appendix D).

Hazards and Hazardous Materials: Development of the No Project/Existing General Plan Alternative would still result in the on-site handling of hazardous substances, both during project construction and operation. It is reasonable to assume that, like any current use, these substances would continue to be used in accordance with applicable local, State, and Federal standards. Impacts associated with the transport or use of hazardous materials or potential upsets or accidents would not be increased in magnitude because the intensity of development is still below what is envisioned under the proposed project. Therefore, it is not expected that increased quantities of hazardous materials would be present on site. With the adherence to existing hazardous materials regulations,

¹ Carbon dioxide equivalent (CO₂e) is an internationally accepted measure that expresses the amount of other greenhouse gases (e.g., methane and nitrous oxide) in terms of the amount of carbon dioxide (CO₂). The CO₂e measure is used as a way to measure the warming potential of a greenhouse gas as compared to CO₂, which has the highest global warming potential.

Case No. 1:12-CV-1569-LJO-BAM

CONSENT JUDGMENT

17
18 Pursuant to Rules 54 and 58 of the Federal Rules of Civil Procedure, the Court hereby
19 ORDERS, ADJUDGES AND DECREES as follows:

20 1. Defendant VWR International, LLC (“VWR”) shall install two (2) electric vehicle
21 charging stations at its warehousing and distribution facility located at 8711 West Riggin Avenue
22 in the City of Visalia (the “Project”). VWR shall make said electric vehicle charging stations
23 available to VWR employees and/or customers.

24 2. VWR shall maintain the following features of the Project until June 11, 2022 (10
25 years after the Project became operational), unless VWR ceases to own and operate the Project in
26 its present form and for its present function prior to that time:

27 a. The emergency generator for the Project shall be powered by natural gas and

- include a catalytic converter.
- b. Ninety percent of the truck carriers contracted to service the Project by VWR shall be Environmental Protection Agency SmartWay partners, provided however, that temporary variances from this percentage due to circumstances not created by VWR shall not be a violation of this order.
 - c. The Project shall utilize energy efficient interior lighting, *i.e.*, light-emitting diodes (“LED”), and T5 and T8 fluorescent lamps, provided, however, that this order shall not prohibit VWR from incorporating new or different lighting technology that is at least as efficient.
 - d. The Project shall utilize energy efficient exterior lighting, *i.e.*, LED, and T5 and T8 fluorescent lamps, provided, however, that this order shall not prohibit VWR from incorporating new or different lighting technology that is at least as efficient.
 - e. The air conditioning system for the management offices at the Project shall use non-chlorofluorocarbon refrigerant.
 - f. Cooling for the main warehouse space at the Project shall be provided through evaporative coolers rather than air conditioners, provided, however, that this order shall not prohibit VWR from incorporating new or different cooling technology that is at least as efficient.
 - g. The warehouse space at the Project shall incorporate automated airflow and ventilation systems designed to minimize need for supplemental heating and cooling within the warehouse space.
 - h. Forklifts and interior vehicles at the Project shall be electric powered.
 - i. The Project shall use a building automation system to control and optimize the efficiency of its mechanical systems, including lighting, HVAC, exhaust dampers, fans, and ventilation louvers
 - j. Interior lights shall incorporate motion sensors that turn them off when not in use.

- 1 k. The Project shall incorporate a light colored “cool roof” membrane to reduce
- 2 surface temperature, heat island effect, and heat transfer to the interior of the
- 3 structure.
- 4 l. The landscape design and irrigation system shall be in compliance with LEED
- 5 Silver certification standards to reduce water consumption.
- 6 m. The warehouse shall incorporate water-efficient building design with water
- 7 efficient fixtures and appliances meeting LEED Silver certification standards.
- 8 n. The Project shall have an operational recycling program covering paper,
- 9 corrugated cardboard, glass, plastics and metals.
- 10 o. A bicycle rack shall be provided at the Project for employees who wish to
- 11 bicycle commute.
- 12 p. Five (5) premium car/vanpool spaces shall be provided at the Project.

13 3. Notwithstanding the provisions of paragraph 2, above, this order shall not prohibit
14 VWR from incorporating new or different technology at its facility instead of the specific
15 technology specified in paragraph 2, provided that is no less efficient than the technology
16 specified.

17 4. VWR need not take further action to comply with San Joaquin Valley Air
18 Pollution Control District Rule 9510, as incorporated into the California State Implementation
19 Plan under the Clean Air Act (42 U.S.C. Section 7604(a)).

20 5. VWR need not take further action to comply with Visalia Municipal Code Section
21 17.28.040A.

22 6. VWR shall pay no civil penalties.

23 7. Nothing in this judgment shall prohibit VWR from selling, transferring,
24 demolishing, rebuilding, or repurposing the Project, in whole or in part, or the real property upon
25 which it sits.

26 8. Except as may otherwise be provided by written agreement, each party shall bear
27 their own fees and costs.

28 / / /

1 9. This judgment shall be entered by the clerk of the court forthwith. The Clerk is
2 directed to close this action.

3 IT IS SO ORDERED, ADJUDGED, AND DECREED.

4

5

6 IT IS SO ORDERED.

[Grantee's name & address]

(Space above this line reserved for Recorder's use)

DEED OF AGRICULTURAL CONSERVATION EASEMENT

This Deed of Agricultural Conservation Easement is granted on this ____ of _____ 2012, by [Landowner's name], [Ownership status], having an address at [Landowner's address] ("Landowner"), to [Grantee's name], a California nonprofit public benefit corporation, having an address at [Grantee's address] ("Grantee"), for the purpose of forever conserving the agricultural productive capacity and open space character of the subject property.

RECITALS

A. The Landowner is the sole owner in fee simple of the [farm/rangeland] property ("Property") legally described in Exhibit A ("Legal Description") and generally depicted in Exhibit B ("Vicinity Map"), attached to and made a part of this Agricultural Conservation Easement ("Easement"). The Property consists of approximately [acres] acres of land and is commonly known as the "[Farm/Ranch name]," together with buildings and other improvements, is located in [County name] County, California, and is identified by assessor's parcel number(s) [parcel numbers]. The existing buildings and improvements on the Property are shown within the Building Envelope as depicted in Exhibit C ("Building Envelope and Existing Improvements"), also attached to and made a part of this Easement. Except as shown in Exhibit C, the Property is open farmland, whose soils have been classified as [prime farmland, farmland of statewide importance, etc.] by the U.S. Department of Agriculture's Natural Resources Conservation Service, and by the California Department of Conservation's Farmland Mapping and Monitoring Program, because this land has the soil quality, growing season, and water supply needed for sustained agricultural production.

B. The agricultural and other characteristics of the Property, its current use and state of improvement, are documented and described in a Baseline Documentation Report ("Baseline Report"), prepared by the Grantee with the cooperation of the Landowner and incorporated herein by this reference. The Landowner and the Grantee acknowledge that the Baseline Report is complete and accurate as of the date of this Easement. Both the Landowner and the Grantee shall retain duplicate original copies of the Baseline Report. The Baseline Report may be used to establish whether or not a change in the use or condition of the Property has occurred, but its existence shall not preclude the use of other evidence to establish the condition of the Property as of the date of this Easement.

C. The Department of Conservation’s California Farmland Conservancy Program (hereinafter alternatively referred to as the “Department” or “Department of Conservation”) has made a grant of funds to the Grantee to support the acquisition of this Agricultural Conservation Easement. The Department’s funds represent a substantial investment by the people of the State of California in the long-term conservation of valuable agricultural land and the retention of agricultural land in perpetuity. The Property and this Easement have met the California Farmland Conservancy Program’s mandatory eligibility criteria and certain selection criteria and have multiple natural resource conservation objectives. The rights vested herein in the State of California arise out of the State’s statutory role in fostering the conservation of agricultural land in California and its role as fiduciary for the public investment represented by the Department’s funds.

D. The Landowner grants this Easement for valuable consideration to the Grantee for the purpose of assuring that, under the Grantee’s perpetual granteeship, the agricultural productive capacity and open space character of the Property will be conserved and maintained forever, and that uses of the land that are inconsistent with these conservation purposes will be prevented or corrected. The parties agree, however, that the current agricultural use of, and improvements to, the Property are consistent with the conservation purposes of this Easement.

E. The conservation purposes of this Easement are recognized by, and the grant of this Easement will serve, the following clearly delineated governmental conservation policies:

The Farmland Protection Policy Act, P.L. 97-98, 7 U.S.C. section 4201 et seq., whose purpose is “to minimize the extent to which Federal programs and policies contribute to the unnecessary and irreversible conversion of farmland to nonagricultural uses, and to assure that Federal programs are administered in a manner that, to the extent practicable, will be compatible with State, unit of local government and private programs and policies to protect farmland;”

California Civil Code at Part 2, Chapter 4, (commencing with section 815), which defines and authorizes perpetual conservation easements;

California Constitution Article XIII, section 8, California Revenue and Taxation Code sections 421.5 and 422.5, and California Civil Code section 815.1, under which this Agricultural Conservation Easement is an enforceable restriction, requiring that the Property’s tax valuation be consistent with restriction of its use for purposes of food and fiber production and conservation of natural resources;

Section 10200 et seq. of the California Public Resources Code, which creates the California Farmland Conservancy Program within the Department;

85 Section 51220 of the California Government Code, which declares a public
86 interest in the preservation of agricultural lands, by providing that “agricultural
87 lands have a definitive public value as open space” and “that the discouragement of
88 premature and unnecessary conversion of agricultural land to urban uses is a matter
89 of public interest”;

90
91 California Food and Agriculture Code Section 821 states that one of the major
92 principles of the State's agricultural policy is "to sustain the long-term productivity
93 of the State's farms by conserving and protecting the soil, water, and air, which are
94 agriculture's basic resources;"

95
96 The California General Plan law section 65300 et seq. and Section 65400 et seq.
97 of the California Government Code, and the [*County name*] County General Plan,
98 as updated on [*Update date*], which includes as one of its goals to protect
99 farmlands designated as prime, of statewide importance, unique, or of local
100 importance from conversion to and encroachment of non-agricultural uses; and,

101
102 Resolution No. [*Resolution number*], approved by the Board of Supervisors of
103 [*County name*] County on the [*day*] of [*month*], [*year*], which expresses support
104 for the acquisition of this Easement and finds that the acquisition is consistent
105 with the County’s General Plan and the Resolution’s findings. (NOTE: If the
106 Property lies within the Sphere of Influence of an incorporated city, both the city
107 and county must pass resolutions of support.)

108
109 F. The Grantee is a California nonprofit organization within the meaning of
110 California Public Resources Code section 10221 and California Civil Code section 815.3
111 and is a tax exempt and “qualified conservation organization” within the meaning of
112 Sections 501(c)(3) and 170(b)(1)(A)(iv) as defined by the United States Internal Revenue
113 Code. Grantee, as certified by a resolution of Grantee's Board of Trustees, accepts the
114 responsibility of enforcing the terms of this Easement and upholding its conservation
115 purposes forever.

116 117 GRANT OF AGRICULTURAL CONSERVATION EASEMENT

118
119 Now, therefore, for the reasons given, and in consideration of their mutual
120 promises and covenants, terms, conditions and restrictions contained herein, and other
121 good and valuable consideration, the receipt and adequacy of which are hereby
122 acknowledged, the Landowner voluntarily grants and conveys to the Grantee, and the
123 Grantee voluntarily accepts, a perpetual conservation easement, as defined by Section
124 815.1 and 815.2 of the California Civil Code and California Public Resources Code
125 section 10211, and of the nature and character described in this Easement for the purpose
126 described below, and agree as follows:

127 128 1. *Conservation Purpose.*

129
130 The conservation purpose (“Conservation Purpose” or “Purpose”) of this Easement is to

131 enable the Property to remain in productive agricultural use in perpetuity by preventing
132 and correcting uses of the Property prohibited by the provisions of this Easement. To the
133 extent that the preservation of the open space character and [*scenic, habitat, natural, or*
134 *historic, etc.*] values of the Property are consistent with such use, it is within the Purpose
135 of this Easement to protect those values.

136
137 *2. Right to Use Property for Agricultural Purposes.*
138

139 The Landowner retains the right to use the Property for agricultural purposes, or to permit
140 others to use the Property for agricultural purposes, in accordance with applicable law and
141 this Easement.

142
143 *3. Prohibited Uses.*
144

145 The Landowner shall not perform, nor knowingly allow others to perform, any act on or
146 affecting the Property that is inconsistent with this Easement. Any use or activity that
147 would diminish or impair the agricultural productive capacity and open space character
148 [*or scenic, habitat, natural, historic etc. values*] of the Property, or that would cause
149 significant soil degradation or erosion, restrict agricultural husbandry practices, or that is
150 otherwise inconsistent with the Conservation Purpose is prohibited (“Prohibited Use”).
151 “Husbandry practices” means agricultural activities, such as those specified in Section
152 3482.5(e) of the California Civil Code, conducted or maintained for commercial purposes
153 in a manner consistent with proper and accepted customs and standards, as established
154 and followed by similar agricultural operations in the same locality. This Easement
155 authorizes the Grantee to enforce these covenants in the manner described herein.
156 However, unless otherwise specified, nothing in this Easement shall require the
157 Landowner to take any action to restore the condition of the Property after any Act of
158 God or other event over which it had no control. The Landowner understands that
159 nothing in this Easement relieves it of any obligation or restriction on the use of the
160 Property imposed by law.

161
162 *4. Permission of the Grantee.*
163

164 Where the Landowner is expressly required to obtain the Grantee’s permission for a
165 proposed use hereunder, said permission (a) shall not be unreasonably delayed or
166 withheld by the Grantee, (b) shall be sought and given in writing, with copies of all
167 documents to be provided to the Department, and (c) shall in all cases be obtained by the
168 Landowner prior to the Landowner's undertaking of the proposed use. The Grantee shall
169 grant permission to the Landowner only where the Grantee, acting in the Grantee's sole
170 reasonable discretion and in good faith, determines that the proposed use is not a
171 “Prohibited Use” per Section 3.

172
173 *5. Construction or Placement of Buildings and Other Improvements.*
174

175 The Landowner may undertake construction, erection, installation, or placement of
176 buildings, structures, or other improvements on the Property only as provided in

177 subsections (a) through (d) below. All other construction, erection, installation, or
178 placement of buildings, structures, or other improvements on the Property is prohibited.
179 Before undertaking any construction, erection, installation or placement that requires
180 permission, the Landowner shall notify the Grantee and obtain prior written permission
181 from the Grantee.

182
183 For purposes of this section, the term “improvements” shall not refer to, and specifically
184 excludes, crops, plants, trees, vines, or other living improvements planted for agricultural
185 purposes, nor shall it refer to irrigation improvements necessary or desirable to irrigate
186 the Property for agricultural purposes, all of which may be made without permission of
187 the Grantee.

188
189 (a) Fences – Existing fences may be repaired and replaced without permission of
190 the Grantee. New fences may be built anywhere on the Property for purposes of
191 reasonable and customary agricultural management, and for security of farm
192 produce, livestock, equipment, and improvements on the Property, without
193 permission of the Grantee.

194
195 (b) Agricultural Structures and Improvements – Existing agricultural structures
196 and improvements as shown in Exhibit C and more fully described in the Baseline
197 Report, may be repaired, reasonably enlarged, and replaced at their current
198 locations within the Building envelope for agricultural purposes without
199 permission from the Grantee. New buildings and other structures and
200 improvements to be used solely for agricultural production on the Property or sale
201 of farm products predominantly grown or raised on the Property, including barns
202 and equipment sheds, but not including any dwelling or farm labor housing, may
203 be built on the Property within the Building Envelope depicted in Exhibit B,
204 without permission of the Grantee. All permissible new agricultural structures
205 may be repaired, reasonably enlarged, and replaced without permission of the
206 Grantee. Any other agricultural production or marketing-related structures may
207 be constructed only with permission of the Grantee pursuant to Section 4.

208
209 (c) Residential Dwellings – The single-family dwelling shown in Exhibit C may
210 be repaired, enlarged or replaced at the current location entirely within the
211 Building Envelope shown in Exhibit C without permission of the Grantee. Said
212 single-family dwelling shall not exceed three thousand square feet (3,000 sq. ft.)
213 of living area. No other residential structures may be constructed or placed on the
214 Property except for agricultural employee housing per Section 5(d).

215
216 *(NOTE: With approval of the funder(s), this section may need to be modified*
217 *depending on the circumstances of the property and other factors)*

218
219 (d) Agricultural Employee Housing – The agricultural employee house shown in
220 Exhibit C may be repaired, enlarged or replaced at the current location entirely
221 within the Building Envelope shown in Exhibit C without permission of the
222 Grantee. No additional agricultural employee housing may be constructed or

223 placed on the Property without permission of the Grantee. Grantee may only
224 grant permission pursuant to Section 4 and only if the Landowner can
225 demonstrate to the Grantee's satisfaction that such additional agricultural
226 employee housing is reasonable and necessary for the agricultural operation of the
227 Property. The aggregate living area of agricultural employee housing shall not
228 exceed two thousand five hundred square feet (2,500 sq ft.). All agricultural
229 employee housing must be located entirely within the Building Envelope shown
230 in Exhibit C.

231

232 *(NOTE: With approval of the funder(s), this section may need to be modified*
233 *depending on the circumstances of the property and other factors)*

234

235 (e) Utilities and Septic Systems. Wires, lines, pipes, cables or other facilities
236 providing electrical, gas, water, sewer, communications, energy generation, or
237 other utility services solely to serve the improvements permitted herein or to
238 transmit power generated on the Property may be installed, maintained, repaired,
239 removed, relocated and replaced. In addition, septic or other underground
240 sanitary systems serving the improvements permitted herein may be installed,
241 maintained, repaired, replaced, relocated or improved, but must be located within
242 the Building Envelope. Power generation and transmission facilities primarily for
243 agricultural and other permitted uses on the Property may be constructed within
244 the Building Envelope. Power generated in excess of requirements on the
245 Property may be sold to appropriate public utilities. Notwithstanding the
246 foregoing, commercial power generation, collection or transmission facilities,
247 including wind or solar farms outside of Building Envelope, and the conveyance
248 of any rights-of-way over, under or on the Property for any such purpose, are
249 prohibited.

250

251 6. *No Subdivision.*

252

253 The division, subdivision, defacto subdivision, or partition of the Property, including
254 transfer of development rights, whether by physical, legal, or any other process, is
255 prohibited.

256

257 The Landowner and Grantee acknowledge and understand that the Property consists of
258 [number] legal parcel(s), and that no additional, separate legal parcels currently exist
259 within the Property that may be recognized by a certificate of compliance or conditional
260 certificate of compliance pursuant to California Government Code section 66499.35
261 based on previous patent or deed conveyances, subdivisions, or surveys. The Landowner
262 will not apply for or otherwise seek recognition of additional legal parcels within the
263 Property based on certificates of compliance or any other authority. The Landowner shall
264 continue to maintain the legal parcels comprising the Property, and all interests therein,
265 under common ownership, as though a single legal parcel.

266

267 Lot line adjustment may be permitted only with the written approval of the Grantee
268 pursuant to Section 4, in conjunction with the approval of the local jurisdiction, and for

269 purposes of maintaining, enhancing or expanding agricultural practices or productivity on
270 the Property.

271

272 *7. Extinguishment of Development Rights.*

273

274 The Landowner hereby grants to the Grantee all development rights except as specifically
275 reserved in this Easement, that were previously, are now or hereafter allocated to,
276 implied, reserved, appurtenant to, or inherent in the Property, and the parties agree that
277 such rights are released, terminated, and extinguished, and may not be used on or
278 transferred by either party to any portion of the Property as it now or later may be
279 bounded or described, or to any other property adjacent or otherwise, or used for the
280 purpose of calculating permissible lot yield of the Property or any other property. This
281 Easement shall not create any development rights.

282

283 *8. Mining.*

284

285 The mining or extraction of soil, sand, gravel, rock, oil, natural gas, fuel, or any other
286 mineral substance, using any method that disturbs the surface of the land, is prohibited.

287

288 *(NOTE: With approval of the funder(s), this section may need to be modified depending*
289 *on the circumstances of the property and other factors)*

290

291 *9. Paving and Road Construction.*

292

293 Other than existing roads shown within the Building Envelope as identified in the Baseline
294 Report, no portion of the Property presently unpaved shall be paved or otherwise covered
295 with concrete, asphalt, or any other impervious paving material, unless such measures are
296 required by air quality laws or regulations applicable to the Property. Except as otherwise
297 permitted herein, no road for access or other purposes shall be constructed without the
298 permission of the Grantee pursuant to Section 4. Notwithstanding the foregoing,
299 construction of unpaved farm roads, as necessary or desirable by agricultural operations,
300 is permitted without permission from the Grantee. The Landowner shall notify the
301 Grantee of any significant net relocation or addition of unpaved farm roads.

302

303 *10. Trash and Storage.*

304

305 The dumping or accumulation on the Property of any kind of trash, refuse, vehicle bodies
306 or parts, or "Hazardous Materials," as defined in Section 25 is prohibited. Farm-related
307 trash and refuse produced on the Property may be temporarily stored on the Property
308 subject to all applicable laws. The storage of agricultural products and byproducts
309 produced on the Property and materials reasonably required for agricultural production
310 on the Property, including Hazardous Materials, is permitted as long as it is done in
311 accordance with all applicable government laws and regulations.

312

313

314 11. *Commercial Signs.*

315

316 Commercial signs (including billboards) unrelated to permitted activities conducted on
317 the Property are prohibited.

318

319 12. *Recreational Uses; Motorized Vehicle Use Off Roadways*

320

321 Resort structures, athletic fields, golf courses, non-residential swimming pools, public or
322 commercial airstrips, commercial equestrian facilities, public or commercial helicopter
323 pads, and any other non-agricultural recreational structures or facilities are prohibited on
324 the Property. Recreational structures or improvements for the personal use of the
325 Landowner and its guests (e.g. swimming pool, tennis court) are permitted only within
326 the Building Envelope. The use of motorized vehicles off roadways and outside of the
327 Building Envelope is prohibited except where used for agricultural production, property
328 maintenance and security, or for the purpose of monitoring this Easement.

329

330 13. *Water Rights.*

331

332 The Landowner shall retain and reserve all ground water, and all appurtenant,
333 prescriptive, contractual or other water rights appurtenant to the Property at the time this
334 Easement becomes effective. The Landowner shall not permanently transfer, encumber,
335 lease, sell, or otherwise separate such quantity of water or water rights from title to the
336 Property itself. Permanent separation of water or water rights is prohibited. All water
337 shall be retained in [*County name*] County for agricultural production and used in
338 conjunction with the improvements permitted by Section 5 of this Easement only. Water
339 may be distributed to a contiguous property or other property owned or leased by the
340 Landowner on an annual basis for agricultural production only. Any temporary
341 distribution of water shall not impair the long-term agricultural productive capacity or
342 open space character of the Property.

343

344 14. *Rights Retained by the Landowner.*

345

346 Subject to Section 7 and to interpretation under Section 22, as owner of the Property, the
347 Landowner reserves all interests in the Property not transferred, conveyed, restricted,
348 prohibited or extinguished by this Easement. These ownership rights include, but are not
349 limited to, the right to sell, lease, or otherwise transfer the Property to anyone the
350 Landowner chooses, as well as the right to privacy, the right to exclude any member of
351 the public from trespassing on the Property, and any other rights consistent with the
352 Purpose of this Easement. Nothing contained herein shall be construed as a grant to the
353 general public of any right to enter upon any part of the Property.

354

355 Nothing in this Easement relieves the Landowner of any obligation or restriction on the
356 use of the Property imposed by law.

357

358

359 15. *Responsibilities of the Landowner and the Grantee Not Affected.*

360
361 Other than as specified herein, this Easement is not intended to impose any legal or other
362 responsibility on the Grantee, or in any way to affect any existing obligation of the
363 Landowner as owner of the Property. Among other things, this shall apply to:

364
365 (a) Taxes – The Landowner shall be solely responsible for payment of all taxes
366 and assessments levied against the Property. If the Grantee ever pays any taxes or
367 assessments on the Property, or if the Grantee pays levies on the Landowner’s
368 interest in order to protect Grantee’s interests in the Property, the Landowner will
369 reimburse the Grantee for the same. It is intended that this Easement constitute an
370 enforceable restriction within the meaning of Article XIII, Section 8 of the
371 California Constitution and that this Easement qualify as an enforceable
372 restriction under the provisions of California Revenue and Taxation Code
373 Sections 402.1(a)(8) and 423.

374
375 (b) Upkeep and Maintenance – The Landowner shall be solely responsible for the
376 upkeep and maintenance of the Property, to the extent it may be required by law.
377 The Grantee shall have no obligation for the upkeep or maintenance of the
378 Property. If the Grantee acts to maintain the Property in order to protect the
379 Grantee’s interest in the Property, the Landowner will reimburse the Grantee for
380 any such costs.

381
382 (c) Liability and Indemnification – In view of the Grantee’s and the Department
383 of Conservation’s negative rights, limited access to the land, and lack of active
384 involvement in the day-to-day management activities on the Property, the
385 Landowner shall indemnify, protect, defend and holds harmless the Grantee, the
386 Department of Conservation, their officers, directors, members, employees,
387 contractors, legal representatives, agents, successors and assigns (collectively,
388 “Agents and Assigns”) from and against all liabilities, costs, losses, orders, liens,
389 penalties, claims, demands, damages, expenses, or causes of action or cases,
390 including without limitation reasonable attorneys’ fees, arising out of or in any
391 way connected with or relating to the Property or the Easement. The Landowner
392 shall be solely liable for injury or the death of any person, or physical damage to
393 any property, or any other costs or liabilities resulting from any act, omission,
394 condition, or other matter related to or occurring on or about the Property,
395 regardless of cause, unless due to the negligence or willful misconduct of the
396 Grantee, the Department of Conservation, and/or their respective Agents and
397 Assigns. The Grantee shall be named as an additional insured on Landowner’s
398 general liability insurance policy.

399
400 Neither the Grantee, the Department of Conservation, nor their Agents and
401 Assigns shall have responsibility for the operation of the Property, monitoring of
402 hazardous conditions on it, or the protection of the Landowner, the public or any
403 third parties from risks relating to conditions on the Property. Without limiting
404 the foregoing, neither the Grantee, the Department, nor their respective Agents

405 and Assigns shall be liable to the Landowner or other person or entity in
406 connection with consents given or withheld, or in connection with any entry upon
407 the Property occurring pursuant to this Easement, or on account of any claim,
408 liability, damage or expense suffered or incurred by or threatened against the
409 Landowner or any other person or entity, except as the claim, liability, damage, or
410 expense is the result of the gross negligence or intentional misconduct of the
411 Grantee, the Department, and/or their respective Agents and Assigns.
412

413 *16. Monitoring.*
414

415 The Grantee shall manage its responsibilities as holder of this Easement in order to
416 uphold the Purpose of this Easement. The Grantee's responsibilities include, but are not
417 limited to, annual monitoring, such additional monitoring as circumstances may require,
418 record keeping, and enforcement of this Easement, for the purpose of preserving the
419 Property's agricultural productive capacity and open space character in perpetuity.
420 Failure of the Grantee to carry out these responsibilities shall not impair the validity of
421 this Easement or limit its enforceability in any way. With reasonable advance notice
422 (except in the event of an emergency circumstance or prevention of a threatened breach),
423 Grantee shall have the right to enter upon, inspect, observe, monitor and evaluate the
424 Property to identify the current condition of, and uses and practices on the Property and
425 to determine whether the condition, uses and practices are consistent with this Easement.
426

427 Grantee shall indemnify, defend with counsel of Landowner's choice, and hold
428 Landowner harmless from, all expense, loss, liability, damages and claims, including
429 Landowner's attorneys' fees, if necessary, arising out of Grantee's entry on the Property,
430 unless caused by a violation of this Easement by Landowner or by Landowner's
431 negligence or willful misconduct.
432

433 The Grantee shall report to the Department of Conservation by June 30 of each year after
434 the annual monitoring visit, describing method of monitoring, condition of the Property,
435 stating whether any violations were found during the period, describing any corrective
436 actions taken, the resolution of any violation, and any transfer of interest in the Property.
437 Failure to do so shall not impair the validity of this Easement or limit its enforceability in
438 any way.
439

440 *17. Enforcement.*
441

442 The Grantee may take all actions that it deems necessary to ensure compliance with the
443 terms, conditions, covenants, and purposes of this Easement. The Grantee shall have the
444 right to prevent and correct violations of the terms, conditions, covenants, and purposes
445 of this Easement. If the Grantee finds what it believes is a violation or potential
446 violation, it may at its discretion take appropriate legal action to ensure compliance with
447 the terms, conditions, covenants, and purposes of this Easement and shall have the right
448 to correct violations and prevent the threat of violations. Except when an ongoing or
449 imminent violation could irreversibly diminish or impair the agricultural productive
450 capacity and open space character of the Property, the Grantee shall give the Landowner

451 written notice of the violation or potential violation, and thirty (30) days to correct it,
452 before filing any legal action.

453

454 If a court with jurisdiction determines that a violation may exist, has occurred, or is about
455 to occur, the Grantee may obtain an injunction, specific performance, or any other
456 appropriate equitable or legal remedy, including (i) money damages, including damages
457 for the loss of the agricultural conservation values protected by this Easement, (ii)
458 restoration of the Property to its condition existing prior to such violation, and (iii) an
459 award for all of the Grantee's expenses incurred in stopping and correcting the violation,
460 including but not limited to reasonable attorney's fees. The failure of the Grantee to
461 discover a violation or potential violation, or to take immediate legal action to prevent or
462 correct a violation or potential violation known to the Grantee, shall not bar the Grantee
463 from taking subsequent legal action. The Grantee's remedies under this section shall be
464 cumulative and shall be in addition to all remedies now or hereafter existing at law or in
465 equity.

466

467 Without limiting the Landowner's liability therefor, the Grantee shall apply damages
468 recovered to the cost of undertaking any corrective action on the Property. Should the
469 restoration of lost values be impossible or impractical for whatever reason, the Grantee
470 shall apply any and all damages recovered to furthering its mission, with primary
471 emphasis on agricultural conservation easement acquisition and enforcement.

472

473 In the event the Grantee fails to enforce any term, condition, covenant or purpose of this
474 Easement, as determined by the Director of the Department of Conservation, the Director
475 of the Department and his or her successors and assigns shall have the right to enforce the
476 Easement after giving notice to the Grantee and the Landowner and providing a
477 reasonable opportunity under the circumstances for the Grantee to enforce any term,
478 condition, covenant, or purpose of the Easement. In the event that the Director of the
479 Department determines that the Grantee has failed to enforce any of the terms,
480 conditions, covenants, or purposes of the Easement, the Director of the Department and
481 his or her successors and assigns shall be entitled to exercise the same right to enter the
482 Property granted to the Grantee, including right of immediate entry in the event of an
483 emergency or suspected emergency where the Director of the Department or his or her
484 successor or assign determines that immediate entry is required to prevent, terminate or
485 mitigate a violation of this Easement.

486

487 Failure or refusal to exercise any rights under the terms of this Easement by the Grantee
488 in the event of a violation by the Landowner of any term herein shall not constitute a
489 waiver or forfeiture of the Grantee's right to enforce any term, condition, covenant, or
490 purpose of this Easement.

491

492 18. *Transfer of Easement.*

493

494 This Easement may only be assigned or transferred to a private nonprofit organization
495 that, at the time of transfer, is a "qualified organization" under Section 170(h) of the
496 United States Internal Revenue Code and meets the requirements of Section 815.3(a) of

497 the California Civil Code and has similar purposes to preserve agricultural lands and
498 open space. If no such private nonprofit organization exists or is willing to assume the
499 responsibilities imposed by this Easement, then this Easement may be transferred to any
500 public agency authorized to hold interests in real property as provided in Section 815.3(b)
501 of the California Civil Code. Such an assignment or transfer may proceed only if the
502 organization or agency expressly agrees to assume the responsibility imposed on the
503 Grantee by the terms of this Easement and is expressly willing and able to hold this
504 Easement for the Purpose for which it was created. All assignment and assumption
505 agreements transferring the Easement shall be duly recorded in <County name> County.
506

507 If the Grantee should desire to assign or transfer this Easement, the Grantee must obtain
508 written permission from the Landowner and the Department of Conservation, which
509 permission shall not be unreasonably withheld.
510

511 If the Grantee or its successors ever ceases to exist or no longer qualifies under Section
512 170(h) of the U.S. Internal Revenue Code, or applicable state law, the Department of
513 Conservation, in consultation with the Landowner, shall identify and select an
514 appropriate private or public entity to whom this Easement shall be transferred.
515

516 *19. Perpetual Duration and No Merger of Title.*
517

518 Pursuant to California Civil Code at Part 2, Chapter 4, (commencing with section 815),
519 which defines and authorizes perpetual conservation easements; this Easement shall run
520 with the land in perpetuity. Every provision of this Easement that applies to the
521 Landowner or the Grantee shall also apply to their respective agents, heirs, executors,
522 administrators, assigns, and all other successors as their interests may appear.
523

524 No merger of title, estate or interest shall be deemed effected by any previous,
525 contemporaneous, or subsequent deed, grant, or assignment of an interest or estate in the
526 Property, or any portion thereof, to the Grantee, or its successors or assigns. It is the
527 express intent of the parties that this Easement not be extinguished by, merged into,
528 modified, or otherwise deemed affected by any other interest or estate in the Property
529 now or hereafter held by the Grantee or its successors or assigns.
530

531 *20. Transfer of Property Interest.*
532

533 Any time the Property itself, or any interest in it, is transferred by the Landowner to any
534 third party, the Landowner shall notify the Grantee and the Department of Conservation
535 in writing at least thirty (30) days prior to the transfer of the Property or interest, and the
536 document of conveyance shall expressly incorporate by reference this Easement. Any
537 document conveying a lease of the Property shall expressly incorporate by reference this
538 Easement. Failure of the Landowner to do so shall not impair the validity of this
539 Easement or limit its enforceability in any way.
540
541

542 21. *Amendment of Easement.*

543

544 This Easement may be amended only with the written consent of the Landowner, the
545 Grantee, and the Director of the Department of Conservation. Any such amendment shall
546 be consistent with the Purpose of this Easement and with the Grantee's easement
547 amendment policies, and shall comply with all applicable laws, including Section 170(h)
548 of the Internal Revenue Code, or any regulations promulgated in accordance with that
549 section, and with Section 815 et seq. of the California Civil Code, and the California
550 Farmland Conservancy Program Act as codified in Section 10200 et seq. of the California
551 Public Resources Code, and any regulations promulgated thereunder. No amendment
552 shall diminish or affect the perpetual duration or the Purpose of this Easement, nor the
553 status or rights of the Grantee under the terms of this Easement.

554

555 This Easement and any amendment to it shall be recorded in [*County name*] County.
556 Copies of any amendments to this Easement shall be provided to the Department of
557 Conservation within 30 days of recordation.

558

559

560 22. *Termination of Easement.*

561 *(NOTE: Landowners may waive the administrative termination provision defined in*
562 *Public Resources Code sections 10270-77, in which case Scenario A shall be used below,*
563 *with potential easement termination shall be governed solely by judicial termination*
564 *proceedings. Otherwise, Scenario B on page 15 shall be used.)*

565

566 ***[Scenario A: Landowner's Administrative Termination Rights Waived]***

567

568 (a) It is the intention of the parties that the Conservation Purpose of this Easement
569 shall be carried out forever as provided in the Section 10211 of the Public
570 Resources Code and Section 815 et seq. of the Civil Code. Accordingly,
571 Landowner hereby waives on behalf of the Landowner and the Landowner's
572 successors and assigns all rights at law or inequity to request a termination of this
573 Easement pursuant to Public Resources Code Sections 10270 et seq.

574

575 Waiver of Right to Request Administrative Termination:

576

577 Landowner's Initials: _____ [*and* _____]

578

579 (b) Other than pursuant to eminent domain or purchase in lieu of eminent
580 domain, no other voluntary or involuntary sale, exchange, conversion, or
581 conveyance of any kind of all or part of the Property, or of any interest in it, shall
582 limit or terminate the provisions of this Easement. This Easement can only be
583 terminated or extinguished, whether in whole or in part, by judicial proceedings in
584 a court of competent jurisdiction. The fact that the land is not in agricultural use
585 is not reason for termination of this Easement.

586

587 Termination of the Easement through condemnation is subject to the requirements

588 of Section 10261 of the Public Resources Code, the eminent domain laws of the
589 State of California, federal law, and this Easement. The Property may not be
590 taken by eminent domain or in lieu of eminent domain if the planned use is more
591 than seven (7) years in the future (California Code of Civil Procedure section
592 1240.220). Grantee shall be paid by the condemnor the value of the Easement at
593 the time of condemnation (Public Resources Code section 10261(a)(2)). Purchase
594 in lieu of condemnation, or settlement of an eminent domain proceeding, shall
595 occur pursuant to applicable laws and procedures, including but not limited to
596 California Government Code sections 7267.1 and 7267.2, and shall require
597 approval of the Grantee, the Director of the Department, and the [match funder].
598 Grantee shall have an opportunity to accompany the appraiser for the condemning
599 agency when the appraiser goes on the Property with Landowner. Should this
600 Easement be condemned or otherwise terminated on any portion of the Property,
601 the balance of the Property shall remain subject to this Easement. In this event,
602 all relevant related documents shall be updated and re-recorded by the Grantee to
603 reflect the modified easement area. Encumbrances junior to this Easement shall
604 remain subordinate to the Easement as amended.
605

606 (c) In the event the Landowner is notified that a public entity intends or proposes
607 to acquire the Easement Area in whole or in part by eminent domain, the
608 Landowner shall provide the Grantee, the Department, and the [match funder]
609 with a copy of the notification within five (5) business days of having received
610 such notification. In the event the Landowner intends to seek termination of the
611 easement pursuant to initiation of a judicial proceeding which is not based on
612 eminent domain, the Landowner shall notify the Grantee, the Department and the
613 [match funder] of such intent no later than sixty (60) days before initiating such
614 proceedings. No inaction or silence by the Grantee, the Department, or the
615 [match funder] shall be construed as abandonment of the Easement.
616

617 (d) The grant of this Easement gives rise to a property right immediately vested in
618 the Grantee. For the purpose of determining the amount to be paid by the
619 Landowner in a repurchase of the Easement pursuant to judicial proceedings, and
620 for the purpose of allocating proceeds from a sale or other disposition of the
621 Property at the time of termination, the Easement and the Grantee's property right
622 therein shall have a value equal to the difference between the current fair market
623 value of the Property as if unencumbered by this Easement and the current fair
624 market value of the Property encumbered by this Easement, each as determined
625 on or about the date of termination. The values shall be determined by an
626 appraisal performed by an appraiser jointly selected by the Landowner and the
627 Grantee. The Landowner shall pay the cost of the appraisal, and it is subject to
628 approval by the Department and the [match funder]. Nothing herein shall prevent
629 the Landowner, the Grantee, the Department, or the [match funder] from having
630 an appraisal prepared at its own expense.
631

632 (e) Upon approval of termination of this Easement or any portion thereof, the
633 Landowner shall reimburse the State of California, Department of Conservation

634 California Farmland Conservancy Program Fund and *[match funder]*, the amount
635 equal to the value of the Easement that is terminated. If the entire Easement is
636 terminated, the amount required to be paid in connection with the Landowner's
637 repurchase shall be distributed as follows: (i) to the State of California,
638 Department of Conservation, California Farmland Conservancy Program Fund,
639 ?%; and (ii) to the *[match funder]*, ?%, representing the proportion of easement
640 value originally contributed by these agencies for the purchase of this Easement.
641 If only a portion of the Easement is so terminated, the reimbursement shall be
642 pro-rated. This Easement shall not be deemed terminated under a judicial
643 termination proceeding until such payment is received by the State of California,
644 Department of Conservation California Farmland Conservancy Program Fund, the
645 *[match funder]* and Grantee *[if any bargain sale occurred]*. Grantee, in using any
646 funds received from the termination of this Easement, shall use the funds in a
647 manner consistent with the Purpose of this Easement.

648

649 *(NOTE: Additional language IRS language may need to be used for landowners*
650 *seeking IRS recognition of a charitable donation)*

651

652 (f) If the Grantee obtains payment on a claim under a title insurance policy
653 insuring this Easement, payment shall be distributed as set forth in Section 22(e).

654

655 ***[Scenario B: Landowner's Administrative Termination Rights NOT Waived]***

656

657 (a) Other than pursuant to eminent domain or purchase in lieu of eminent domain,
658 no other voluntary or involuntary sale, exchange, conversion, or conveyance of
659 any kind of all or part of the Property, or of any interest in it, shall limit or
660 terminate the provisions of this Easement. This Easement can only be terminated
661 or extinguished, whether in whole or in part, by judicial proceedings in a court of
662 competent jurisdiction or by administrative termination pursuant to Section
663 10270-10277 of the Public Resources Code. The fact that the land is not in
664 agricultural use is not reason for termination of this Easement.

665

666 Termination of the Easement through condemnation is subject to the requirements
667 of Section 10261 of the Public Resources Code, the eminent domain laws of the
668 State of California, federal law, and this Easement. The Property may not be
669 taken by eminent domain or in lieu of eminent domain if the planned use is more
670 than seven (7) years in the future (California Code of Civil Procedure section
671 1240.220). Grantee shall be paid by the condemnor the value of the Easement at
672 the time of condemnation (Public Resources Code section 10261(a)(2)). Purchase
673 in lieu of condemnation, or settlement of an eminent domain proceeding, shall
674 occur pursuant to applicable laws and procedures, including but not limited to
675 California Government Code sections 7267.1 and 7267.2, and shall require
676 approval of the Grantee, the Director of the Department, and the *[match funder]*.
677 Grantee shall have an opportunity to accompany the appraiser for the condemning
678 agency when the appraiser goes on the Property with Landowner. Should this
679 Easement be condemned or otherwise terminated on any portion of the Property,

680 the balance of the Property shall remain subject to this Easement. In this event,
681 all relevant related documents shall be updated and re-recorded by the Grantee to
682 reflect the modified easement area. Encumbrances junior to this Easement shall
683 remain subordinate to the Easement as amended.

684
685 (b) In the event the Landowner is notified that a public entity intends or proposes
686 to acquire the Easement Area in whole or in part by eminent domain, the
687 Landowner shall provide the Grantee, the Department, and the [match funder]
688 with a copy of the notification within five (5) business days of having received
689 such notification. In the event the Landowner intends to seek termination of the
690 easement pursuant to administrative termination or judicial proceeding that is not
691 based on eminent domain, the Landowner shall notify the Grantee, the
692 Department and the [match funder] of such intent no later than sixty (60) days
693 before initiating such proceedings. No inaction or silence by the Grantee, the
694 Department, or the [match funder] shall be construed as abandonment of the
695 Easement.

696
697 (c) The grant of this Easement gives rise to a property right immediately vested in
698 the Grantee. For the purpose of determining the amount to be paid by the
699 Landowner in a repurchase of the Easement at the time of a administrative
700 termination or pursuant to judicial proceedings, and for the purpose of allocating
701 proceeds from a sale or other disposition of the Property at the time of
702 termination, the Easement and the Grantee's property right therein shall have a
703 value equal to the difference between the current fair market value of the Property
704 as if unencumbered by this Easement and the current fair market value of the
705 Property encumbered by this Easement, each as determined on or about the date
706 of termination. The values shall be determined by an appraisal performed by an
707 appraiser jointly selected by the Landowner and the Grantee. The Landowner
708 shall pay the cost of the appraisal, and it is subject to approval by the Department
709 and the [match funder]. Nothing herein shall prevent the Landowner, the Grantee,
710 the Department, or the [match funder] from having an appraisal prepared at its
711 own expense.

712
713 (d) Upon approval of termination of this Easement or any portion thereof, the
714 Landowner shall reimburse the State of California, Department of Conservation
715 California Farmland Conservancy Program Fund and [match funder], the amount
716 equal to the value of the Easement that is terminated. If the entire Easement is
717 terminated, the amount required to be paid in connection with the Landowner's
718 repurchase shall be distributed as follows: (i) to the State of California,
719 Department of Conservation, California Farmland Conservancy Program Fund,
720 ?%; and (ii) to the [match funder], ?%, representing the proportion of easement
721 value originally contributed by these agencies for the purchase of this Easement.
722 If only a portion of the Easement is so terminated, the reimbursement shall be
723 pro-rated. This Easement shall not be deemed terminated under a judicial
724 termination proceeding until such payment is received by the State of California,
725 Department of Conservation California Farmland Conservancy Program Fund, the

726 [match funder] and Grantee [if any bargain sale occurred]. Grantee, in using any
727 funds received from the termination of this Easement, shall use the funds in a
728 manner consistent with the Purpose of this Easement.

729
730 (NOTE: Additional language IRS language may need to be used for landowners
731 seeking IRS recognition of a charitable donation)

732
733 (s) If the Grantee obtains payment on a claim under a title insurance policy
734 insuring this Easement, payment shall be distributed as set forth in Section 22(d).

735
736 23. Interpretation.

737
738 (a) This Easement shall be interpreted under the laws of the State of California,
739 resolving any ambiguities and questions of the validity of specific provisions so as
740 to give maximum effect to its conservation purposes.

741
742 (b) References to specific authorities in this Easement shall be to the statute, rule,
743 regulation, ordinance, or other legal provision that is in effect at the time this
744 Easement becomes effective.

745
746 (c) No provision of this Easement shall constitute governmental approval of any
747 improvements, construction or other activities that may be permitted under this
748 Easement.

749
750 24. Notices.

751
752 Any notices to the Landowner and the Grantee required by this Easement shall be in
753 writing and shall be personally delivered or sent by First-Class Mail to the following
754 addresses, unless a party has been notified by the other of a change of address:

755
756 To the Landowner:

757
758 _____
759 _____
760 _____

761
762 To the Grantee:

763
764 _____
765 _____
766 _____

767
768 Any notices required by this Easement to be sent to the Department shall be in writing
769 and shall be personally delivered or sent by first class mail, at the following address,
770 unless a party has been notified by the Department of a change of address:

771

772 To the Department of Conservation:

773

774 Department of Conservation

775 801 K Street, MS 18-01

776 Sacramento, CA 95814

777 Attn: California Farmland Conservancy Program

778

779 25. *The Landowner's Environmental Warranty.*

780

781 (a) Nothing in this Easement shall be construed as giving rise to any right or
782 ability in the Grantee or the Department of Conservation to exercise physical or
783 management control over the day-to-day operations of the Property, or any of the
784 Landowner's activities on the Property, or otherwise to become an "owner" or
785 "operator" with respect to the Property as those words are defined and used in
786 environmental laws, including the Comprehensive Environmental Response,
787 Compensation, and Liability Act of 1980 ("CERCLA"), as amended or any
788 corresponding state and local statute or ordinance.

789

790 (b) The Landowner warrants that it has no actual knowledge of a release or
791 threatened release of any Hazardous Materials on, at, beneath or from the
792 Property. Moreover the Landowner hereby promises to defend and indemnify the
793 Grantee and the Department of Conservation against all litigation, claims,
794 demands, penalties and damages, including reasonable attorneys' fees, arising
795 from or connected with the release or threatened release of any Hazardous
796 Materials on, at, beneath or from the Property, or arising from or connected with a
797 violation of any Environmental Laws. The Landowner's indemnification
798 obligation shall not be affected by any authorizations provided by the Grantee to
799 the Landowner with respect to the Property or any restoration activities carried
800 out by the Grantee at the Property; provided, however, that the Grantee shall be
801 responsible for any Hazardous Materials contributed after this date to the Property
802 by the Grantee.

803

804 (c) The Landowner warrants that it shall remain in compliance with, all applicable
805 Environmental Laws. The Landowner warrants that there are no notices by any
806 governmental authority of any violation or alleged violation of, non-compliance
807 or alleged non-compliance with or any liability under any Environmental Law
808 relating to the operations or conditions of the Property.

809

810 (d) "Environmental Law" or "Environmental Laws" means any and all Federal,
811 state, local or municipal laws, rules, orders, regulations, statutes, ordinances,
812 codes, guidelines, policies or requirements of any governmental authority
813 regulating or imposing standards of liability or standards of conduct (including
814 common law) concerning air, water, solid waste, Hazardous Materials, worker
815 and community right-to-know, hazard communication, noise, radioactive
816 material, resource protection, subdivision, inland wetlands and watercourses,
817 health protection and similar environmental health, safety, building and land use

818 as may now or at any time hereafter be in effect.

819

820 (e) "Hazardous Materials" means any petroleum, petroleum products, fuel oil,
821 waste oils, explosives, reactive materials, ignitable materials, corrosive materials,
822 hazardous chemicals, hazardous wastes, hazardous substances, extremely
823 hazardous substances, toxic substances, toxic chemicals, radioactive materials,
824 infectious materials and any other element, compound, mixture, solution or
825 substance which may pose a present or potential hazard to human health or the
826 environment or any other material defined and regulated by Environmental Laws.

827

828 (f) If at any time after the effective date of this Easement there occurs a release,
829 discharge or other incident in, on, or about the Property of any substance now or
830 hereafter defined, listed, or otherwise classified pursuant to any federal, state, or
831 local law, regulation, or requirement as hazardous, toxic, polluting, or otherwise
832 contaminating to the air, water, or soil, or in any way harmful or threatening to
833 human health or the environment, the Landowner agrees to take any steps that are
834 required of the Landowner with respect thereto under federal, state, or local law
835 necessary to ensure its containment and remediation, including any cleanup.

836

837 26. *The Landowner's Title Warranty; No Prior Conservation Easements.*

838

839 The Landowner represents and warrants that it owns the entire fee simple interest in the
840 Property, including the entire mineral estate, and hereby promises to defend this
841 Easement against all claims that may be made against it. Any and all financial liens or
842 financial encumbrances with priority over this Easement existing as of the date of the
843 recording of this Easement have been subordinated. Exhibit C (Prior Encumbrances) sets
844 forth all prior encumbrances. The Landowner represents and warrants that the Property
845 is not subject to any other conservation easement whatsoever.

846

847 27. *Granting Subsequent Easements, Interests in Land, or Use Restrictions.*

848

849 With permission of the Grantee pursuant to Section 4, the Landowner may grant
850 subsequent easements, including conservation easements, interests in land, or use
851 restrictions on the Property. Under no circumstances shall the Grantee approve the
852 granting of subsequent easements, interests in land, or use restrictions that might diminish
853 or impair the agricultural productive capacity or open space character of the Property.
854 The Grantee's written approval shall be obtained at least thirty (30) days in advance of
855 the Landowner's execution of any proposed subsequent easement, interests in land, or use
856 restriction on the Property, and such subsequent easements, interests in land, and use
857 restrictions shall make reference to and be subordinate to this Easement. The Grantee
858 shall notify the Department immediately upon receipt of request by the Landowner to
859 grant a subsequent easement, interest in land, or use restriction on the Property. The
860 Grantee shall notify the Department in the event that it approves the grant of any
861 subsequent easement, interest in land, or use restriction on the Property.

862

863 28. *Severability.*

864

865 If any term, provision, covenant, condition, or restriction of this Easement is held by a
866 court of competent jurisdiction to be unlawful, invalid, void, unenforceable, or not
867 effective the remainder of this Easement shall remain in full force and effect and shall in
868 no way be affected, impaired, or invalidated.

869

870 29. *Entire Agreement.*

871

872 This Easement is the final and complete expression of the agreement between the parties
873 with respect to the subject matter contained herein. Any and all prior or
874 contemporaneous agreements with respect to this subject matter, written or oral, are
875 merged into and superseded by this written instrument.

876

877 30. *Acceptance.*

878

879 As attested by the signature of its [*Position title*] affixed hereto, as authorized by
880 Grantee's Board of Directors/Trustees, in exchange for consideration, the Grantee hereby
881 accepts without reservation the rights and responsibilities conveyed by this Deed of
882 Agricultural Conservation Easement.

883

884 To Have and To Hold, this Deed of Agricultural Conservation Easement unto the
885 Grantee, its successors and assigns, forever.

886

887 In Witness Whereof, the Landowner and the Grantee, intending to legally bind
888 themselves, have set their hands on the date first written above.

Conservation Easements

The Riverside Land Conservancy is increasingly making use of conservation easements as a conservation tool. A conservation easement (or conservation restriction) is a legal agreement between a landowner and a land trust or government agency that permanently limits uses of the land in order to protect its conservation value. It allows landowners to continue to own and use their land and to sell it or pass it on to heirs. Future owners continue to be bound by the easement's terms. Currently, RLC holds conservation easements on 801 acres in western Riverside and San Bernardino Counties including a conservation easement on the 150 acre Colton Dehii sands flower-loving fly Conservation Bank. RLC is in active negotiations to accept an additional 375 acres of conservation easements on sensitive open space and natural habitat areas.

CITY OF MORENO VALLEY
Planning Division

March 17, 2014

Jeff Bradshaw
City of Moreno Valley
Planning Department
14177 Frederick Street
P.O. Box 88055
Moreno Valley, CA 92552ProLogis Eucalyptus Industrial Park (formerly ProLogis Park Moreno Valley Eucalyptus Project)
SCH # 2008021002

Mr. Bradshaw,

We have completed our review for above named project located south of State Route 60, east of Moreno Valley Auto Mall, and adjacent to and west of the Quincy Channel. The proposed project consists of construction of a warehouse facility with six individual warehouses of varying sizes with a total of 2,244,638 square feet on 122.8 acres. The project includes construction of parking and driving areas, detention basins, erosion protection and bridge over Quincy Channel, offsite road and utility improvements, and landscaping along the perimeter and roadway frontages.

As the owner and operator of the State Highway System (SHS), it is our responsibility to coordinate and consult with local jurisdictions when proposed development may impact our facilities. As the responsible agency under the California Environmental Quality Act (CEQA), it is also our responsibility to make recommendations to offset associated impacts with the proposed project. Although the project is under the jurisdiction of the City of Moreno Valley due to the Project's potential impact to State facilities it is also subject to the policies and regulations that govern the SHS.

We recommend the following to be provided:

- It is recommended that a system of coordinating these fees with a state sponsored program of collecting transportation mitigation fees from development projects be developed to implement the necessary improvements and mitigation measures on the State Highway System.

We appreciate the opportunity to offer comments concerning this project. If you have any questions regarding this letter, please contact Talvin Dennis at (909) 383-6908 or myself at (909) 383-4557 for assistance.

Mr. Bradshaw

Subject: SAN JACINTO VALLEY: Audubon booklet shows many species | Local News | PE.com

<http://www.pe.com/local-news/columns/cassie-macduff-headlines/20140317-san-jacinto-valley-audubon-booklet-shows-many-species.ece>

Good afternoon/evening Planning Commissioners,

The booklet I gave you at your last meeting is the subject of the below article. If you use the above link you will be able to see at least one picture that goes with the below. I hope you read both the article and the text of the booklet. The public has paid more than \$80,000,000 in tax dollars for this wonderful area known as the San Jacinto Wildlife Area. If you wish to have a guided visit to the area, Google the Friends of the Northern San Jacinto Valley and read their latest newsletter which will provide you a list of walks during the next two months which are some of the best times to visit.

Take care,

George Hague

SAN JACINTO VALLEY: Audubon booklet shows many species

An Audubon photo booklet, “Birds of the San Jacinto Valley,” shows myriad species that share the wildlife area. Audubon put out the book to highlight the area’s importance.

BY CASSIE MACDUFF
March 17, 2014; 08:20 PM

When a friend gave me a free booklet about the birds of the San Jacinto Wildlife Area, I was stunned by the variety and beauty of the species that could be found so close to Riverside.

The booklet, published by the San Bernardino Valley Audubon Society, contains 86 color photos taken by Audubon members at the wildlife area and neighboring Lake Perris.

A vermilion flycatcher, a cinnamon teal duck, a snowy egret, Northern Harriers, bald eagles, a white-tailed kite poised to pounce on its prey, and an amazing variety of shorebirds with bills long and longer, all grace the booklet.

I had heard of the wildlife area, but had never seen it. Now I was determined to visit it and view the burgeoning avian population for myself.

I couldn't have picked a better time of year.

When I arrived last Tuesday morning, the rocky slopes surrounding the valley were turning green from the recent rain. And the warm spring weather was bringing out flocks and pairs of birds by the dozens.

A group of birders from Oceanside was just setting up. They let me look through their scope at a flock of ibis on a distant pond.

The area's former manager, Tom Paulek, and his wife, Susan Nash, showed me around, identifying the birds and explaining their significance.

The shallow ponds, flooded with reclaimed water from the Eastern Municipal Water District, attract all kinds of wading birds that skim the surface or probe the mud for insects, worms and grubs.

Some that we saw that day are rare in the inland area.

Long-billed curlews, their downward-curving bills almost as long as their bodies, were tiptoeing through the waters and pecking at invisible food sources.

American avocets with up-turned bills, and stilts with long red legs under petite black-and-white bodies, plied the same waters but at different depths, feeding on different bugs. Two kinds of egrets stood quietly and stared into the water, watching for prey.

At one point, a golden eagle swooped by.

By far, the highlight of the morning was seeing a pair of great horned owls.

I spotted one soaring over a newly plowed field, circling low then disappearing behind a stand of trees. As we came closer, a second owl flew out of the trees to a nearby limb, perching high and watching at us.

Wildlife advocates like Paulek and Nash are concerned that the water district will raise the discounted price the wildlife area has been paying since 1987.

The district already has said it plans to cut the area's annual water allocation from 4,500 acre-feet to 2,200 acre-feet. That's been enough to flood the ponds part of the year, but it won't be enough to expand the wildlife area as planned, Paulek and Nash said.

Audubon put out the booklet to highlight the importance of the area to birds migrating between Alaska and South America. The ponds attract shorebirds and ducks, which in turn, along with rodents in the fields, attract raptors — more than 20 species, according to the Audubon booklet.

The authors say the area is threatened by proposed developments to the north and south:

World Logistics Center, a 40 million square-foot warehouse complex, is proposed at the north end of the wildlife area in Moreno Valley.

The Villages of Lakeview, with more than 11,000 homes on 2,800 acres, was successfully challenged in court, sending the environmental report back for revisions. But the proposal is expected to return with the revisions.

Audubon members are worried surrounding development will eventually crowd out many of the species.

“You can’t just preserve the wildlife area alone and expect to maintain the numbers and diversity of birds,” said Dave Goodward, a naturalist and retired science teacher who wrote much of the booklet.

“The farmers’ fields are very important for a lot of birds to forage in, to look for food,” he said. If the agricultural land is developed, some species will no longer be able to find food, he said.

Environmentalists aren’t the only ones concerned.

Elmer Lackey of the wildlife area’s Little Ramona Duck Club said his group is “100 percent against” the projects.

“I think it’ll kill us,” he said. “It will affect our duck club. It will dry up this valley.”

If homes are built nearby, Lackey said, eventually residents will complain about the shooting. That’s what happened when the Irvine Co. was allowed to build next to the Irvine Duck Club, he said: A homeowner sued; the hunting club was shut down.

The Audubon Society sent copies of the San Jacinto Valley bird booklet to members of the Moreno Valley City Council and Riverside County Board of Supervisors, who will decide on the projects.

I called several to find out what they thought.

Supervisor Marion Ashley, whose district includes the area, said the birds are really important, and the wildlife area is core to Riverside County’s multi-species habitat plan.

“The main thing is to protect the birds we have and, if anything, grow them,” Ashley said. Any development will have to be consistent with the habitat plan, he said.

“It’s all part of the fabric of life,” he said. “I really appreciate (Audubon) doing the booklet. It will bring the board’s awareness of the importance of the birds and wildlife.”

Moreno Valley Councilman Richard Stewart didn’t remember seeing the booklet but said he is very familiar with the issues, adding, “We can’t stop development on thousands of acres of... just because there’s a wildlife area near it and Lake Perris.”

To see the booklet for yourself, log onto sbvas.net and scroll down to “Birds of the San Jacinto Valley.” That will take you to the conservation page. Then click on the booklet link to open it.

Key facts

San Jacinto Wildlife Area: Established in 1979 by the state Department of Fish and Wildlife to make up for wetlands and riparian habitat lost to the state water project. Consists of 19,000 acres east of Lake Perris. Attracts thousands of migrating ducks, shore birds, raptors and other species that co-exist on the flooded ponds and dry fields.

Villages of Lakeview: Proposed 2,800-acre, 11,350-home development south of wildlife area on unincorporated county land. Court struck down environmental report last summer. Project being revised.

World Logistics Center: Proposed 40 million square foot, distribution center complex north of the wildlife area in Moreno Valley. Environmental report being revised, may come to planning commission later this year.

Eastern Municipal Water District: Proposed to cut the wildlife area's allocation from 4,500 acre-feet of treated wastewater annually to 2,200 acre-feet. The water, which can't be used for drinking, is used to create ponds and wetlands as shelter, feeding grounds and breeding grounds for many species of birds and waterfowl.

Article: Planning Commission meeting on Prologis warehouse with 2,000 trucks per day (Press-Enterprise 3-7-2014)

Dictionary

review |ri'vyoō|noun1 a formal assessment or examination of something with the possibility or intention of instituting change if necessary : *a comprehensive review of defense policy | all areas of the company will come under review.* • a critical appraisal of a book, play, movie, exhibition, etc., published in a newspaper or magazine.

Good afternoon/evening Planning Commissioner

re: Prologis Eucalyptus Industrial Park Final EIR

On page three of the Staff Report it reads that "the Planning Commission **reviewed** and considered the information contained in the Final EIR". This means as defined from the dictionary above you have conducted a formal assessment, examination and critical appraisal of the Final EIR. Read the first paragraph of page three of the Final EIR to know what you must read prior to voting. This specifically includes the Draft EIR and all the comment letters written on the document as well as the Statement of Overriding Consideration, Staff Reports and several other important sections. When you vote on this project you are affirming you are aware of all aspects of this project and believe it is worth all the impacts which can not be mitigated. It is important that in your review that you read pages 77-115 of exhibit A.

This project will not just make its 2,000 daily toxic diesel trucks (mentioned in the above link) go from SR-60 to/from the project by way of Redlands Blvd or Moreno Beach. A significant number of their trucks will head south to Alessandro Blvd as you can read on pages 256-260 of Appendix A. You can read how little their fair share is to improve these intersections which means it will take many years before full improvements will take place. They stop their impacts to Alessandro Blvd at Nason Street, because of the City's use of only a five mile radius for a projects's traffic impacts. The Sierra Club and some judges have stated such a limited range is not enough to show the true impacts of a project. Many of these trucks will use Alessandro Blvd all the way to/from the I-215 and in some cases going through the City of Riverside. Pages 111 - 115 will explain more about these five mile traffic impacts which may not, as stated, be fully mitigated until 2035. They continue to avoid doing the proper analysis which would include the 41,600,000 sq ft World Logistic Center with its more than 70,000 additional Daily trips added to our City and surrounding infrastructure. Two years ago in March of 2012 agencies/groups and individuals were writing comments about the WLC's Notice of Preparation and the City knew about the WLC in 2011 -- the Prologis Draft EIR didn't come out until July 2012. This makes their traffic analysis invalid and they cannot just say that we thought about our project before the WLC formalized theirs. The fact that the existing traffic data is three years old

(2011) also makes it an invalid analysis. They also do not address impacts to the 1-215, I-10, or SR-91 which 2,000 daily diesel trucks and many other project related vehicles will impact -- in addition to many of City's surface streets.

Based on the Staff's recommendation you are suppose to believe the following quote about another toxic and traffic clogging warehouse added to our City and vote yes "c) Environmental, economic, social and other considerations and benefits derived from the development of the proposed Project **OVERRIDE** and make infeasible any alternatives to the proposed Project OR future mitigation measures beyond those incorporated into the proposed Project." (Page 130 Appendix A) Within everything you are suppose to read prior to voting they mention it is possible to approve a portion of the project and also allow the Auto Mall to expand. This shows an alternative is possible and invalidates the above quote.

The Sierra Club believes that the above is just one of a number of reasons to vote no or tell them to go back and redo their EIR to allow you to have valid data prior to voting. You represent the residents of Moreno Valley and your are our voices. I do not know many residents who would accept all of the Statement of Overriding Considerations for this project which displaces land zoned for homes and will make it impossible for other nearby lands also zoned for homes to be built. This is because it is recommended that sensitive receptors like homes should be 1,500 yards away from warehouses and their toxic diesel trucks. Will all current homes be 1,500 yards away from Prologis or even 1000 yards?

Take care,

George Hague Sierra Club Moreno Valley Group Conservation Chair

C. ENVIRONMENTAL IMPACTS NOT FULLY MITIGATED TO A LEVEL OF LESS-THAN-SIGNIFICANT

The Moreno Valley City Council finds the following environmental impacts identified in the EIR remain significant even after application of all feasible mitigation measures: aesthetics (individually and cumulative), agricultural resources (individually and cumulative), air quality (individually and cumulative), cumulative population and housing, and transportation. In accordance with CEQA Guidelines Section 15092(b)(2), the City Council of the City of Moreno Valley cannot approve the Project unless it first finds (1) under *Public Resources Code* Section 21081(a)(3), and CEQA Guidelines Section 15091(a)(3), that specific economic, legal, social technological, or other considerations, including provisions of employment opportunities to highly trained workers, make infeasible the mitigation measures or Project alternatives identified in the EIR; and (2) under CEQA Guidelines section 15092(b), that the remaining significant effects are acceptable due to overriding concerns described in the CEQA Guidelines Section 15093 and, therefore, a statement of overriding considerations is included herein. (Page 77 of Exhibit A of Prologis Read pages 77-115)

VI. STATEMENT OF OVERRIDING CONSIDERATIONS

The Moreno Valley City Council adopts this Statement of Overriding Considerations with respect to the significant unavoidable impacts associated with adoption of the Project as addressed in the EIR, specifically:

1. Agricultural Impacts—Conversion of State Designated Farmland; 2. Agricultural Impacts—Conversion to a Non-Agricultural Use; and
- a. Cumulative Agricultural Impacts 3. Air Quality Impact—Construction Air Pollutant Emissions;
4. Air Quality Impact—Operational Air Pollutant Emissions; and Cumulative Air Pollutant Emissions.
5. Climate Change and GHG Emissions
6. Transportation—Existing and Cumulative Impacts to State Freeway Segments and Freeway Merge/Diverge Areas
(Pages 126-127 of Exhibit A)

To: Moreno Valley Planning Commission
re: ProLogis Exolytus Warehouse Project

The developer states that even though a recent court case allows you to require Ag Mitigation which will also serve as a foraging, they are unable to find an Ag mitigation bank in Riverside Co. I believe there will be an Ag mitigation program by occupancy of the project and you could require mitigation at that time. The state does have such programs and the developer could use those - even if the county doesn't have an Ag mitigation program.

Even though ^{the developer} ~~you~~ believes ^{they} ~~you~~ do not need to include the World Logistic Center (WLC) in their cumulative impacts, it is our opinion that the WLC was a foreseeable project based on newspaper articles and conversations in the community.

Caltrans wants a mitigation Bank. Will you require this project to participate in such. I am sure all in the room would appreciate anything you can do to mitigate noise on SR-60.

The WLC will cast a cancer plume over basically all of Moreno Valley - this project as you heard will add to it

This project is being honest - to a point with traffic impacts. Moreno Beach south will be impacted - including a new housing housing tract being build now near the substation. The environmental document also has impacts at Alessandro Blvd at Nason - but not further west because of the city's 5 mile limit which isn't far enough to address full impacts of its traffic.

The city's General Plan is now internally inconsistent with all the changes since its adoption and this project only increases that problem.

George Hague

RE: Comments on Prologis Eucalyptus Industrial Park Project (PA07-0081 et al)

Greetings:

On behalf of the Sierra Club, Moreno Valley Group, and Residents for a Livable Moreno Valley, I hereby submit these comments on, and in opposition to, the Prologis Eucalyptus Industrial Park Project, Public Hearing Item 1. I hereby incorporate all comments previously submitted, and ask that the Planning Commission considered those prior comments as those set forth in full herein.

The FEIR has been updated to incorporate an August 31, 2012 letter from Lozeau Drury, LLP. The changes made and responses to comments in the updated FEIR illustrate, rather than resolve, defects of the EIR. For example, response to comment 12 at page 222 fails to address any of the proposed mitigation to further reduce GHG impacts where such effects are many times SCAQMD's proposed quantitative threshold. The addition of MM 4.6.6.1A provides for testing onsite for contamination by agricultural chemicals which should be done in the EIR prior to consideration by the City of Project approval due to the farming which occurred after the Phase 1 assessment and the risk of pesticides onsite not previously addressed. Air quality and health risk impacts are also shown to be understated, yet receive only brief responses in the FEIR. The responses to comments ignore/overlook whole portions of the comments made; for example, the responses made to Letter D-4B and D-4C fail to address the very important issues raised therein. Overall, the responses for this letter does not evidence good faith, reasoned analysis, or resolve the substantial concerns raised.

More importantly, this minor update to the FEIR does not address or resolve the many significant flaws raised in the other comments on the EIR and made previously, which demand the EIR and

its studies be significantly modified, updated, and recirculated prior to consideration of this Project for approval. The City should determine not to approve the Project and not to certify this defective EIR.

It is apparent that this Project is good only for the developer and bad for the environment and people of Moreno Valley. The Project requires City approval of ten applications for development including a General Plan Amendment and Zone Change, undermining future planning for development in the City. The existing General Plan designation and zoning for the project site consists of a balanced collection of land uses to meet a specific need of the City, which this Project would entirely obliterate. (i.e. by converting for Project development land presently designated in the General Plan R15, R5, and R2; Zoning BP, BPX, R15, R5, RA-2, and PAKO-land)

The Project will also result in, as disclosed in the EIR, significant and unmitigated impacts to aesthetics, agricultural resources, air quality, population and housing, and transportation. In addition, many commenters cited a lack of evaluation, disclosure, and adequate mitigation regarding numerous other impacts, including health risks, air quality, GHGs, biology, etc. Given the harm to the community and region expected to be caused by the Project, and the failures of the EIR prepared for the Project, Project denial is well supported. At a minimum, the EIR and its technical studies must be significantly updated and recirculated before this Project is even considered for approval by the City.

Additionally, Caltrans sent a letter to the City dated March 17, 2014 recommending that the City of Moreno Valley coordinate a state sponsored program of collecting transportation mitigation fees from development projects to make improvements to the State Highway System. I concur that such a fee program is essential to ensuring that all feasible traffic mitigation is adopted for this Project and others like it in the City. The City should take Caltrans' request to heart and work with the State in developing a mitigation fee program for highway impacts *prior to* making any approval relative to this Project. Until such a program is adopted, the City ignores its obligations to adopt all feasible mitigation for traffic impacts for this Project and others.

For these reasons and those previously set forth in comments provided on this Project, I respectfully request that you deny the Project and recommend denial of this Project to the City Council.

Sincerely,

Raymond W. Johnson

RE: Comment on Final Environmental Impact Report for ProLogis Eucalyptus Industrial Park (State Clearinghouse No. 2008021002)

Dear Mr. Bradshaw:

I am writing on behalf of Laborers International Union of North America, Local Union No. 1184 and its members living in Riverside County (collectively "LIUNA Local 1184") regarding the Final Environmental Impact Report ("FEIR") prepared for the ProLogis Eucalyptus Industrial Park, State Clearinghouse No. 2008021002 ("Project").

LIUNA Local 1184 appreciates the Planning Commission's decision to delay its consideration of the FEIR until staff and the EIR consultant reviewed and prepared responses to our comments of August 2012. Unfortunately, it appears the brief delay was not sufficient time for staff to adequately review and consider those comments as many of the concerns expressed about the DEIR still remain in regard to the FEIR. In addition, LIUNA Local 1184 is particularly concerned that the Commission's staff is proposing not to address the significant new information of the proposed nearby World Logistics Center which, when combined with the ProLogis project, the two projects alone will emit as much greenhouse gasses per year in 2020 as the City has established as its total GHG emission target for that year. In other words, the two projects together will emit as much GHGs as the entire City and will cause the City to emit twice as many GHGs as its announced goal as of 2020. Obviously, this is significant new information regarding a serious significant impact of the ProLogis Project's cumulative GHG emissions that must be addressed in a recirculated EIR for public review. These and other concerns are elaborated upon in the following comments.

In addition, LIUNA Local 1184 has had its consultants who prepared comments in 2012 review the staff's responses to comments. Matthew Hagemann, P.G., C.Hg. and Anders Sutherland, of SWAPE Consulting and Dr. James Clark, Ph.D., have reviewed the FEIR and prepared detailed comments regarding numerous technical shortcomings and omissions in the responses. SWAPE Comments (attached as Exhibit A); Clark Comments (attached as Exhibit B). Although this comment will highlight some of those technical comments below, the Commission should review each of the concerns raised in those expert comments.

LIUNA Local 1184 requests that the Planning Commission not certify the EIR at this time but request staff to reconsider the analyses and require additional mitigation measures in order to address the Project's significant air quality impacts, GHG emissions, health risks, farmland conversion, and hazardous material risks that the Project as proposed will cause in the City of Moreno Valley.

A. The FEIR's Failure To Tackle The Project's Massive GHG Emissions is an Abuse of Discretion.

The total GHG emissions that the City claims it will achieve by 2020 are 798,693 metric tons of CO₂ equivalent per year for the entire City. *See* World Logistics Center DEIR, p. 4.7-9 (excerpts attached as Exhibit C). Yet the Prologis Project alone is projected to emit 79,000 metric tons of CO₂e per year at full build-out – a full ten percent of the City's target. The FEIR basically relies upon a wish and a prayer that a number of air quality mitigations will miraculously reduce the Project by about 70,000 tons of GHGs per year down to 10,000 tons per year, the South Coast Air Quality Management District's ("SCAQMD") threshold of significance for GHG emissions. *See* FEIR, PDF p. 111 ("The mitigation measures discussed in the project-level impact analysis of GHG emissions indicated the measures would substantially reduce the project's emissions of greenhouse gases..."). No effort to rationally quantify or describe a reviewable basis for concluding that the smattering of air quality mitigations will come anywhere close to reducing the Project's GHG emissions by that level is provided or discussed. Moreover, when combined with the nearby World Logistics Center's GHG emissions of about 700,000 metric tons of CO₂ equivalents per year, the City has essentially abandoned any GHG reduction strategy, instead taking steps to almost double its projected GHG emissions.

1. There is no substantial evidence to support the FEIR's remarkable assertion that the air quality mitigations applied to the Project will reduce GHG emissions by 70,000 tons per year.

It is not sufficient under CEQA for the City to pick a few air quality mitigations of unknown efficacy and then simply assume that they will miraculously reduce the Project's 79,000 metric tons of GHG emissions down to less than 10,000 metric tons. As SWAPE explains in its comments, there is nothing precluding the City from estimating quantitative reductions by any claimed mitigations and providing the public, this Commission, and the City Council with a rational means to evaluate whether the currently optimistic predictions have any basis in reality. SWAPE Comments, pp. 2-3. The FEIR must do more than make exaggerated

claims of mitigation effectiveness. *See Friends of Oroville v. City of Oroville* (2013) 219 Cal.App.4th 832. In *Oroville*, the court held that failing to calculate existing air emissions at the project site, and “failing to quantitatively or qualitatively ascertain or estimate the effect of the Project’s mitigation measures on those emissions,” amounted to misapplication of the threshold-of-significance standard. *Id.* at 842-843. Claiming to rely on a qualitative assessment, the City instead applies bald assumptions, assuming that the air quality mitigations will have a dramatic effect on reducing GHG emissions from the project all the way down to a level of insignificance, *i.e.* less than 10,000 metric tons per year. No rational discussion relying on explicable estimates, whether qualitative or quantitative, is provided to explain this unlikely result for this Project that will include upwards of 5,800 vehicle trips per day. *See Clark & Associates Comments*, p. 3 (attached as Exhibit B).

The FEIR all but admits the randomness of its GHG emission discussion, responding at one point to the Sierra Club’s comments that “it is not possible to determine with certainty whether the project’s emissions of greenhouse gases will be cumulatively considerable, within the meaning of CEQA Guidelines Sections 15065(a)(3) and 15130.” FEIR, p. 109. A hundred pages later, that uncertainty appears to have vanished, the FEIR restating its two rationales for discounting the Project’s 79,000 metric tons of GHGs per year. First, the EIR attempts to find solace in the claim that “the project’s impacts alone would not cause or significantly contribute to global climate change...” FEIR, p. 222. This statement is entirely arbitrary given the SCAQMD’s significance threshold of 10,000 metric tons per year. 79,000 metric tons per year is obviously very large compared to the threshold. And nothing in the EIR explains how or which mitigation measures will reduce the Project’s GHG emissions to this level. The second rationale set forth in the EIR is that “the project has no substantial effect on consumption of fuels or other energy resources, especially fossil fuels that contribute to GHG emissions when consumed.” *Id.* How a project that will generate upwards of 5,000 vehicle trips per day would have no substantial effect on consumption of fuels is not further elucidated in the EIR. What these two rationales mean in the end is that the world is already suffering from global warming and because this project’s GHG contribution is small compared to the overall problem, there is no need to grapple with it in any meaningful way. Of course, as *Oroville* recognized, that capitulation renders the SCAQMD’s expert threshold, which is a rational quantification of the point where a project’s GHG emissions are significant and cumulatively considerable, a meaningless number.

2. The Proposed World Logistics Center and its massive GHG emissions is significant new information that must be addressed in the cumulative impact analysis.

The EIR’s mishandling of the Project’s large GHG emissions is exacerbated to a frightening level by the FEIR’s refusal to account for the massive World Logistics Center project (“WLC”). WLC is expected to emit about 700,000 metric tons of GHGs per year from within the City. WLC and Prologis together all but scuttle the City’s GHG reduction target. The FEIR, responding to comments about the WLC’s cumulative impacts on traffic states that, because the WLC project was not proposed at the time of the Notice of Preparation (“NOP”) for the Prologis

Project (in 2008), the EIR need not include WLC's impacts in its baseline. The City claims that the baseline traffic for the previous development proposed for the WLC site was actually higher at the time of the NOP. This response, in addition to steadfastly refusing to provide the City and its residents a realistic assessment of the Project's cumulative impacts, overlooks the City's responsibility to address significant new information that arises after a DEIR is released but prior to certification of the FEIR. Alternatively, it is simply unreasonable for the City to not adjust its baseline to reflect the impacts of the WLC project, especially given the long delay between the Project's 2008 NOP and the FEIR now six years later.

The CEQA Guidelines require recirculation of an EIR when significant new information, such as the processing of a nearby project that will drastically increase the City's GHG contributions inconsistent with its GHG reduction targets, as well as NOx and PM emissions. Section 15088.5 provides:

(a) A lead agency is required to recirculate an EIR when significant new information is added to the EIR after public notice is given of the availability of the draft EIR for public review under Section 15087 but before certification. As used in this section, the term "information" can include changes in the project or environmental setting as well as additional data or other information. New information added to an EIR is not "significant" unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement. "Significant new information" requiring recirculation include, for example, a disclosure showing that:

...

(2) A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.

(3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project, but the project's proponents decline to adopt it.

(4) The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded. (*Mountain Lion Coalition v. Fish & Game Com.*(1989) 214 Cal.App.3d 1043).

14 CCR 15088.5. The processing of the WLC is significant new information requiring recirculation. It is plain that the WLC's emission of 700,000 metric tons of GHG per year would largely erase the City's GHG reduction target in 2020 and the additional Prologis GHG emissions will have a more profound cumulative impact on the City's GHG contributions than are evident without considering the WLC project. Likewise, because the DEIR was so basically inadequate and conclusory in asserting without any meaningful estimates that air quality mitigations uncoupled from any detailed information regarding their effectiveness at reducing GHG emissions would reduce the Prologis Project's GHG emissions by 70,000 metric tons per

year, the addition of WLC's 700,000 metric tons of GHG per year makes it imperative that the City revisit and recirculate the EIR's GHG analysis before the City further dooms its supposed GHG reduction targets.

The need to address this new information and/or adjust the baseline for GHGs is also supported by the fact that, unlike traffic levels purportedly included in the baseline, the GHG emissions for WLC increase any conceivable GHG emissions that may have been estimated for that project's location at the time of the WLC project's NOP by at least 60 percent, possibly more. *See* World Logistics EIR, p. 6-16 & Table 6.F (665,321 metric tons of GHG for WLC as compared to zero at site with no project or 228,719 metric tons if built out consistent with previous General Plan) (*see* Exhibit C). This massive addition of GHG emissions to the baseline is new information that must be addressed and recirculated or, alternatively, added to the Project's baseline in order to make sure the City's EIR remains realistic.

3. The substantial evidence in the record establishes that the Project will have a significant impact on GHG emissions, including the sheer volume of its GHG emissions and its adverse impact on the City's ever achieving its GHG reduction targets.

The FEIR confirms that the City has not gathered in any estimate of actual reductions of GHG emissions by any of the mitigation measures it purports will address those emissions. Hence, it is clear that there is no substantial evidence in the record to show that the Project will emit 10,000 metric tons or less per year of CO₂ equivalents. As a result, the EIR cannot substantiate a conclusion that the Project's GHG emissions will result in less than significant impacts and, instead, must conclude that these emissions will result in significant impacts. The EIR must include additional feasible mitigations to address these GHG impacts, including electrified loading docks, mandating the installation of solar panels (rather than the mere possibility of solar panels), on-site industrial solar power storage, additional pollution control equipment on trucks utilizing the facility, and, where other feasible project specific mitigations are exhausted, the use of offset credits through recognized programs. SWAPE describes several mitigation measures in its comments as well as the availability of offset credits. SWAPE Comments, pp. 3-4.

Mitigation measures, including for a project's GHG emissions, must be fully enforceable through permit conditions, agreements or other legally binding instruments. 14 CCR § 15126.4(a)(2). *See Woodward Park Homeowners Assn., Inc. v. City of Fresno* (2007) 150 Cal. App. 4th 683, 730 (project proponent's agreement to a mitigation by itself is insufficient; mitigation measure must be an enforceable requirement). Especially given the uncertainty claimed by the City in measuring GHG reductions from various mitigation measures, the EIR must include a monitoring and verification process to confirm reductions in the Project's overall GHG emissions and include contingencies, *i.e.* additional mitigations including more offsets, if the measures do not achieve expected GHG reductions.

Lastly, because the evidence does not support a finding of no significant impact from the Project's GHG emissions, the City must acknowledge that significant impact and make a finding of overriding considerations that is supported by a showing that all feasible mitigation measures have been required. CEQA Guidelines §§ 15126.4, 15091, 15092(b)(2); Pub. Res. Code § 21002.

B. The EIR Significantly Underestimates the Project's Air Pollution Emissions From Mobile Sources.

The EIR makes a significant error in its air pollution emissions analysis by failing to rely upon substantial evidence regarding the veracity of the estimated truck trips for the Project. According to the review of Dr. James Clark, the EIR relies on an uncorroborated estimate of the Project's daily truck trips of 1.96 daily truck trips per 1,000 square feet. As Dr. Clark explains, "[i]n order to avoid underestimating the number of trips associated with large warehouse/distribution center operations without rail service, the SCAQMD staff recommended that lead agencies utilize a rate of 2.59 trips per TSF [thousand square feet] for large warehouse air quality analyses on a project specific basis." Clark Comments, p. 3. By using a value that is significantly reduced from SCAQMD's recommended value for the CalEEMod model, the EIR significantly understates the Project's air emissions:

Based upon the trip generation rate of 2.59, the total number of trips associated with Project would increase from 4,400 to 5,813 trips per day. The net result is that the air quality analysis performed by the Proponent greatly underestimates the emissions from mobile sources by at least one-third during the operational phase of the Project. Those impacts are likely to lead to a significant impact that will be unmitigated and unaccounted for in the FEIR. Without proper modeling of the emissions from these additional vehicles the impacts on the environment and the citizens of the Moreno Valley are unknown.

Clark Comments, p. 4. Because the EIR fails to disclose the full extent of the Project's air pollution impacts, it should be revised to include an accurate discussion of those impacts and recirculated along with any necessary additional mitigation measures.

C. The EIR Does Not Include Additional Feasible Mitigation Measures to Further Reduce the Project's Significant Impacts From its Emissions of NO_x and PM₁₀ and, Without Requiring Additional Measures, the City Cannot Adopt a Statement of Overriding Considerations.

An agency may adopt a statement of overriding considerations only *after* it has imposed all feasible mitigation measures to reduce a project's impact to less than significant levels. CEQA Guidelines §§ 15126.4, 15091. CEQA prohibits agencies from approving projects with significant environmental impacts when feasible mitigation measures can substantially lessen or avoid such impacts. Pub. Res. Code § 21002. As explained in CEQA Guidelines section 15092(b)(2), an agency is prohibited from approving a project unless it has "[e]liminated or

substantially lessened all significant effects on the environment where feasible.” The EIR states that the Project’s direct and cumulative emissions of NO_x and ROG_s will remain significant after the identified mitigation measures are implemented. *See* DEIR, pp. 1-22, 1-28. As a result, the EIR must require all feasible mitigations to reduce these impacts. As explained by SWAPE, additional mitigation measures are available that are not included by the City. The measures include requiring electrified loading docks for all refrigeration units and the use of fuel cell trucks to reduce NO_x emissions. SWAPE Comments, pp. 4-5. SCAQMD also provided a list of feasible mitigations that must be mandated for the Project. *See* FEIR, Letter B-3, pp. 3-4.

In addition, whether or not to implement several key measures included in the EIR is left to the future discretion of the City. *See, e.g.* DEIR, p. 1-22 (Mitigation Measure 4.3.6.5B) (“Prior to issuance of building permits, the project applicant shall provide evidence to the City that energy-efficient and low-emission methods and features of building construction shall be incorporated into the project design. These methods and features *may include* (but are not limited to) the following...” (emphasis added)). The list of measures included in Mitigation Measure 4.3.6.5B should be mandatory and enforceable in order to be consistent with the CEQA Guidelines.

LIUNA Local 1184 appreciates the change in the FEIR to make the energy efficiency requirement set forth in Measure 4.3.6.5A mandatory rather than voluntary. However, a number of the requirements embedded within the mandatory efficiency standard should also be adjusted to be mandatory requirements or otherwise clarified. For example, there is a requirement that lease/purchase documents shall identify that tenants are merely encouraged to promote a list of air pollution reduction measures. *See* DEIR, 1-27 – 1-28, Table 1.C; FEIR, pp. 58-59, 61-62. The FEIR should be revised to make these feasible tenant/purchaser measures mandatory as well.

Measure 4.3.6.5A also includes a vague requirement to “[i]ncorporate energy efficient space heating and cooling equipment.” This measure should be clarified to require that cooling for the main warehouse spaces at the Project shall be provided through evaporative coolers rather than air conditioners, or use new or different cooling technology that is at least as efficient. In addition, the mitigation should require the warehouse spaces to incorporate automated airflow and ventilation systems designed to minimize need for supplemental heating and cooling within the warehouse spaces. These measures are feasible, having been applied at other warehouse facilities. *See Coalition for Clean Air v. VWR Int’l LLC*, Consent Decree, attached as Exhibit D.

Currently, Measure 4.3.6.5A requires that “[a]ll buildings shall be designed to accommodate renewable energy sources, such as photovoltaic solar electricity systems, appropriate to their architectural design.” FEIR, p. 197. This mitigation measure should be revised to require that photovoltaic, or comparable renewable energy sources, be actually installed on all buildings sufficient to provide all of the energy needs of the Project and, if feasible, surplus energy to help offset the Project’s remaining pollution emissions. Given the size of the buildings’ roofs, this measure is feasible and would reduce or help offset the Project’s emissions of both ROG_s, NO_x, and GHG_s.

Additionally, Mitigation Measure 4.3.6.5B currently appears inconsistent with Mitigation Measure 4.3.6.5A. Unlike Measure 4.3.6.5A, Measure 4.3.6.5B does not increase the improvement over energy efficiency standards to 20 percent as was proposed in the DEIR and which applies to the related Measure 4.3.6.5A. FEIR, pp. 194-201. In order to apply all feasible measures, Measure 4.3.6.5B's list of measures should be made mandatory (replace "may" with "shall") and the measure to exceed statewide energy efficiency requirements by 10 percent restored to a 20 percent exceedance. FEIR, pp. 194-96. In addition, a requirement that the Project use building automation systems to control and optimize the efficiency of its mechanical systems, including lighting, HVAC, exhaust dampers, fans, and ventilation louvers should be added to Measure 4.3.6.5B's list.

Until each of the above mitigation measures as well as those measures identified by SCAQMD are incorporated as enforceable measures into the Project approval, the City will not be in a position to make a finding of overriding considerations for the Project's NOx, ROG, and GHG emissions.

D. The EIR Does Not Include Additional Feasible Mitigation Measures to Further Reduce the Project's Significant Impacts From its Particulate Matter Emissions During Construction and, Without Requiring Additional Measures, the City Cannot Adopt a Statement of Overriding Considerations.

An additional feasible mitigation measure that also would assist in assuring that the Project's air quality pollution mitigations during construction are enforceable is a measure to require monitoring of dust plumes. SWAPE identifies "[m]onitoring for opacity for all construction activities, including grading, not just for "screening" and "turf overseeding" activities" as an additional feasible measure. Without such a measure, it is not clear how the implementation or effectiveness of many of the air pollution control measures during construction will be documented or enforced. SWAPE lays out the following monitoring requirement:

Opacity monitoring should be conducted by qualified personnel using a Ringelmann chart. Monitoring with use of the Ringelmann Chart should be required when construction is occurring when wind speeds exceed 15 miles an hour, as gauged by a wind meter installed at the Project site. When a 20% opacity (Ringelmann 1) standard is exceeded, construction activities should cease until wind speeds drop to below 15 miles per hour. A log should be kept at the Project site to document when wind speeds exceed 15 miles per hour and the Ringelmann readings recorded during those periods, along with actions taken to comply when Ringelmann readings exceed the 20% opacity threshold.

SWAPE Comments, p. 4. Because this mitigation is feasible, would help to prevent any oversight of other mitigation measures, and would further reduce actual excessive emissions of PM10 at the Project site, it must be included in the mitigation requirements for construction-related air pollution.

E. The EIR Fails to Disclose the Project's Serious Cancer Risks to Neighbors and Workers.

a. The Project has significant air quality and health risk impacts because it will expose nearby residents to cancer risks of 22 cancers in one million for adults and 33 excess cancers in a million for children.

The EIR states that nearby residents and on-site workers will not be exposed to any significant health risks by the Project's construction. DEIR, p. 4.3-14. However, the EIR dramatically understates the health risks that will result from the Project's construction phase because the health risk assessment it relies upon assumes construction will only occur for four months rather than the 11.5 months reported in the EIR. SWAPE Comments, pp. 6-10. See DEIR, p. 4.3-13. This is despite the EIR's acknowledgement that "[a]lthough construction of the structures uses different types of equipment on site than during grading periods, similarities do exist in terms of equipment exhaust emissions and fugitive dust emissions." DEIR, p. 4.3-23. SWAPE prepared a screening-level HRA for construction-related DPM air quality impacts using the emissions and phasing data from the EIR and covering the full construction period. As SWAPE concludes, its risk assessment for nearby residences "shows that the adult exposure resulted in an additional 22 cancers in one million while the child exposure resulted in 33 excess cancers in a million. For both adult and child exposure parameters, the CEQA significance threshold of ten in one million excess cancer risk was exceeded during the construction period." SWAPE Comments, p. 9. In contrast to SWAPE's analysis, which fully discloses all of its inputs and models, "no modeling files or cancer risk calculations for the construction impacts analysis were provided in the DEIR or the FEIR" for the EIR's health risk assessment. *Id.*, pp. 9-10. Hence, the substantial evidence available to the Commission and others indicates that cancer risks to the Project's neighbors are significant. This must be acknowledged in the EIR and additional mitigations required. As SWAPE concludes:

An updated HRA should be prepared that incorporates all emissions from construction equipment over the entire duration of Project construction, and addresses the potential for significant air quality impacts to nearby sensitive receptors. Our analysis has demonstrated that by utilizing appropriate U.S. EPA and OEHHA exposure assessment methodologies, excess cancer risks consequent of Project construction have the potential to exceed CEQA thresholds of significance even under mitigated construction scenarios.

SWAPE Comments, p. 10.

b. The Project relied on a flawed health risk assessment in concluding that health risks to workers for the life of the Project would be insignificant.

The EIR also underestimates health risk impacts to workers to be employed at the Project site. SWAPE Comments, pp. 10-11. First, the Project's worker health risk assessment assumes

that trucks will be 87.5 percent diesel, explaining in its response to SCAQMD that the City believed such a number was appropriate because “[i]t is pure guesswork to predict how the diesel emissions will change over this period.” FEIR, p. 66. Acknowledging uncertainty of future actions does not warrant then selecting a number based on the acknowledged guesswork. Rather than use the conditions that the City knows exist currently to prepare a reasonable estimate of future worker health risks, they made a guess that trucks using the Project would be 87.5 percent diesel. That number, by the FEIR’s own admission, is not supported by substantial evidence. Likewise, SWAPE notes that the EIR suggests that a health risk assessment was prepared assuming operations were concentrated in 12-hours of each day rather than 24-hours. No such calculation was made in the health risk assessment for 12-hour days at the Project. SWAPE Comments, p. 11. A revised HRA for workers must be prepared and reviewed to determine if any changes to the EIR should be made prior to the Commission and City taking action on the EIR.

F. The EIR Continues to Fail to Require Feasible Mitigations to the Project’s Destruction of Farmland, Including Requiring the Applicant to Locate and Purchase an Equivalent or More Acreage of Farmland Conservation Easements Outside of the City and Western Riverside County.

In response to LIUNA’s comments noting the absence of any measures to mitigate the Project’s destruction of 82.55 acres of Prime Farmland and 36.4 acres of Farmland of Local Importance, the City continues to claim that it is excused from mitigating this impact simply because it intends to eventually destroy all remaining farmland within the City and because there is no program established by either the City or the County of Riverside for those governmental entities to manage conservation easement or land purchases for mitigation. *See* FEIR, p. 218. Neither of these excuses relieves the City and the Project Applicant from having to mitigate the Project’s significant impacts on farmland. Farmland conservation easements are feasible within Riverside County. The State of California has a program to facilitate such easements, providing grants and easement template applicable anywhere in the State of California, including Riverside County. *See* Exhibit E. There is no need for the City or County to create some bureaucratic program in order for the City to require the Project applicant to mitigate the 119-acres of farmland by purchasing easements or farmland of equivalent quality somewhere in Riverside or even other nearby counties. Private organizations also exist to facilitate the creation of farmland easements, including one located in Riverside County – the Riverside Land Conservancy. *See* Exhibit F.

The City claims that a 2010 Court of Appeal decision – *Building Industry Association of Central California v. County of Stanislaus* (2010) 190 Cal.App.4th 582 – conditioned the use of conservation easements as CEQA mitigation on the presence of a city- or county-wide program. FEIR, p. 218 (“That case concluded that it is appropriate to mitigate at a 1:1 ratio for the loss of prime agricultural land through the acquisition of an offsite agricultural easement if such a program is established by a county or regional governmental entity”). No such rule is found in the case. Instead, the pertinent rule is that the Court of Appeal upheld a requirement included in Stanislaus County’s General Plan requiring either 1:1 mitigation of developed

farmland based primarily on private purchases of farmland conservation easements. *See* 190 Cal.App.4th at 601 (“Under the FMP, although the developer is required to arrange for the granting of a conservation easement in order to obtain a development approval, most likely by a purchase, *no particular landowner* is required to grant the conservation easement”) (emphasis added). The case was not even a CEQA case so it certainly did not preclude mitigation under CEQA of destroyed farmland through a conservation easement unless some governmental program was in place. Nor is there any reason to restrict mitigation farmland to western Riverside County, given the county-wide and indeed statewide problem of farmland conversion. In short, there is no reason the applicant cannot take the steps necessary to purchase one or more farmland conservation easements for farmland of similar quality to that being destroyed by the Project somewhere in Riverside County or other nearby counties in southern California. Because the Project’s destruction of farmland is significant and unavoidable, the City must incorporate all feasible mitigation measures. Requiring the applicant to obtain farmland conservation easements for comparable quality farmland in other areas is plainly feasible and must be included.

G. Additional Details for Sampling Soils for Residual Pesticides Should be Required.

The FEIR has added a mitigation measure to require additional soil sampling prior to issuance of a grading permit. FEIR, p. 222. LIUNA Local 1184 believes that, because the additional information will not be available prior to the certification of the EIR, this change does not cure the baseline concerns raised in their previous comment letter. In addition, unless additional details are added to the mitigation, it amounts to improper deferred mitigation. SWAPE recommends the following additional details:

The mitigation measure (MM 4.6.6.1A) should be revised to include specifics on the number of samples to be collected, the chemical analytes, and to provide for documentation of the sampling and analysis of the results prior to FEIR certification. The mitigation measure should also include a commitment to compare sampling results to health-protective regulatory screening levels such as U.S. EPA Regional Screening Levels and California Human Health Screening Levels, and to mitigate any exceedances of the screening levels through further evaluation of health risks and the removal of any contaminated soil that may pose a risk to human health.

SWAPE Comments, p. 2. LIUNA Local 1184 request that the EIR’s mitigation be changed to address these details.

VI. CONCLUSION

For the foregoing reasons, as well as each of the comments raised in LIUNA Local 1184’s DEIR comments, LIUNA Local 1184 recommends that the Commission continue the matter for future consideration pending completion of a supplemental EIR addressing the above

Comments on FEIR for ProLogis Eucalyptus Industrial Park

Subject: Comments on the Final Environmental Impact Report, Prologis Eucalyptus Industrial Park Project, Riverside County, California

Dear Mr. Drury:

We have reviewed the April 2, 2014 Revised Final Environmental Impact Report (FEIR) for the Prologis Eucalyptus Industrial Park Project ("Project"). We have found the FEIR fails to adequately address comments we made in an August 30, 2012 letter on the July 2012 Draft Environmental Impact Report (DEIR). The comments we made focused on issues related to hazardous waste, greenhouse gas emissions and air quality. The FEIR should not be certified until these concerns are adequately addressed.

Hazards and Hazardous Materials

Baseline Conditions Remain Undisclosed

Comments we made on the July 2012 Draft Environmental Impact Report (DEIR) focused on the inadequacy of ten year-old Phase I Environmental Site Assessments (ESAs) to represent conditions at the Project site that may pose risks to workers and the neighboring public. We also noted that the Phase I ESAs that had been completed did not cover the entire Project site and that potential residual pesticide risks had not been satisfactorily addressed.

In response to concerns we expressed about the potential for residual pesticides to be present (Comment 9), the FEIR adds a mitigation measure (MM 4.6.6.1A) to sample for agricultural chemicals prior to issuance of a grading permit. While we applaud the addition of this needed mitigation measure, it does not go far enough in that it does not specify the manner in which the samples will be collected (namely, the number of samples, the depths and the chemical analytes) and the sampling is not to occur until after certification of the project (and prior to grading).

The mitigation measure (MM 4.6.6.1A) should be revised to include specifics on the number of samples to be collected, the chemical analytes, and to provide for documentation of the sampling and analysis of the results prior to FEIR certification. The mitigation measure should also include a commitment to compare sampling results to health-protective regulatory screening levels such as U.S. EPA Regional Screening Levels¹ and California Human Health Screening Levels,² and to mitigate any exceedances of the screening levels through further evaluation of health risks and the removal of any contaminated soil that may pose a risk to human health.

The FEIR should also provide the closure documentation we requested in DEIR comments for a 13,400 gallon underground storage tank (UST) that was reportedly removed from the Project site in 2004. As we requested, the documentation should be produced to disclose if closure for the UST removal was granted by the County.

Greenhouse Gas Emissions

In DEIR comments (Comment 12), we expressed concern that estimates of the Project's operational greenhouse gas (GHG) emissions, following mitigation, were not quantified. We commented that the need to show the efficacy of the mitigation was necessary because pre-mitigation operational GHG emissions were well above any applicable South Coast Air Quality Management District thresholds. The Response to Comment 12 states:

This comment states that the EIR did not show the GHG emissions with mitigation. The reductions with mitigation were not calculated because the GHG-related mitigation measures included in the EIR do not have quantified reduction amounts.

The mitigation in the DEIR, for which emissions reductions were not quantified, included:

- Establishment of a Transportation Management Association (TMA) to encourage and coordinate carpooling among building occupants (p. 1-26).
- Green building and maintenance provisions (MMs 4.13.6.1A, 4.13.6.1B, 4.13.6.1C)

Other measures identified in the DEIR to reduce GHG emissions include recommended actions within the Transportation, Electricity and Natural Gas, Green Buildings, and Water sectors. Again, no effort was made to quantify the reductions in GHG emissions from the incorporation of these measures.

It is simply not good enough for the Responses to assert, qualitatively, that mitigation measures and recommended actions will reduce GHG emissions from 79,000 MTCO₂e/yr to below 10,000 MTCO₂e/yr, the applicable South Coast Air Quality Management District (SCAQMD) threshold. Without quantifying the reductions, there is absolutely no basis to say that reductions will be below the applicable threshold.

Likewise, it is non-responsive to state that mitigation could not be quantified "because the GHG-related mitigation measures included in the EIR do not have quantified reduction amounts" (Response to Comment 12). Numerous means to quantify GHG mitigation emissions reductions are available,

¹ <http://www.epa.gov/region9/superfund/prg/>

² <http://www.calepa.ca.gov/brownfields/documents/2005/CHHSLsGuide.pdf>

including methods as published in an August 2010 guidance document published by the California Air Pollution Control Officers Association (CAPCOA), entitled “Quantifying Greenhouse Gas Mitigation Measures”.³ The CAPCOA document has numerous separate methodologies to quantify GHG mitigation emission reductions for activities related to the project, and for the mitigation measures identified for the Project. The reductions cited below, from the CAPCOA guidance document, are for operational activities relevant to the Project:

Transportation

- Use of electrified loading docks to reduce the need for diesel auxiliary engines to run in order to keep refrigerated transportation units temperature controlled to achieve a 26-71% reduction in GHG emissions;
- Use of electric or hybrid vehicles to achieve a 0.4-20% reduction in GHG emissions; and
- Use of alternative fueled vehicles (reductions vary).

Water Use

- Install low-flow water fixtures (as identified in MM 4.13.6.1A) to achieve a 17-31% reduction in GHG emissions;
- Design water-efficient landscapes (as identified in MM 4.13.6.1C) to achieve up to 70% in GHG emissions reductions; and
- Use reclaimed water for up to 81% GHG emissions reductions.

The need to quantify GHG reductions is critical to show that the Project’s emissions will meet the SCAQMD threshold of 10,000 MTCO₂e/yr. The examples from the CAPCOA guidance, as cited above, are just a few of those measures that can be quantified to estimate GHG emissions reductions, demonstrating that Response to Comment 12 is inadequate when it states mitigation could not be quantified “because the GHG-related mitigation measures included in the EIR do not have quantified reduction amounts.”

The FEIR should not be certified until GHG mitigation measures are quantified to demonstrate estimates that are below the SCAQMD threshold of 10,000 MTCO₂e/yr. If the threshold is not met, additional mitigation or use of credits (offsets) would be necessary, consistent with other Southern California projects where the SCAQMD threshold was exceeded, after mitigation.⁴

If emissions reductions estimates do not demonstrate that the threshold is met, additional measures should be undertaken, to include credits for all GHG emissions generated above the threshold of 10,000 MTCO₂e per year. To ensure GHG emissions reductions are real and verifiable, a GHG reporting and reduction plan should be submitted to the SCAQMD and the City detailing the measures to be implemented to achieve the required reductions. Credits should comply with

- SCAQMD Regulation XXVII protocol;⁵
- CAPCOA GHG Rx program;⁶ and
- Those verified by the Climate Action Reserve or the American Carbon Registry.

Air Quality

Mitigation of Criteria Air Pollutants is Inadequate

The Responses fail to address to the concerns we expressed about the need to employ all available mitigation to address what the FEIR identifies as significant emissions of criteria air pollutants from construction and operation. The specific response to the comment we made on this issue (Letter D-4C, Response to Comment 5) stated:

For a detailed response on comparing construction emissions to daily construction thresholds, see the Responses to Comments D-4A-13 and D-4A-14 in the previous Letter D-4A from Lozeau Drury. For a detailed response on operational impacts of the project, see the Response to Comment D-4A-16 in the previous Letter D-4A from Lozeau Drury.

Responses to Comments D-4A-13, D-4A-14 and D-4A-16 have nothing to do with the issue of the inadequacy of mitigation measures to reduce construction emissions of NO_x and ROG and operational emissions of ROG, NO_x, and PM₁₀ to less-than-significant levels. Some responses to other comments did address the need for additional mitigation (see Responses 1-12, Comment Letter B-3 and Responses 49-60, Comment Letter D-3) but we find these measures do not incorporate all measures that are feasible to reduce criteria air pollutant emissions.

Applicable Construction Mitigation Measures

- Monitoring for opacity for all construction activities, including grading, not just for “screening” and “turf overseeding” activities (as cited in the Air Quality Measure 4.3.6.2M Best Available Control Measures for Fugitive Dust). Opacity monitoring should be conducted by qualified personnel using a Ringelmann chart. Monitoring with use of the Ringelmann Chart should be required when construction is occurring when wind speeds exceed 15 miles an hour, as gauged by a wind meter installed at the Project site. When a 20% opacity (Ringelmann 1) standard is exceeded, construction activities should cease until wind speeds drop to below 15 miles per hour. A log should be kept at the Project site to document when wind speeds exceed 15 miles per hour and the Ringelmann readings recorded during those periods, along with actions taken to comply when Ringelmann readings exceed the 20% opacity threshold.

Applicable Operation Mitigation Measures

⁵ http://www.aqmd.gov/rules/reg/reg27_tofc.html

⁶ <http://www.capcoa.org/>

- Use of electrified loading docks for all refrigeration units;
- Use fuel cell trucks that use hydrogen produced primarily from natural gas show only slightly lower net PM emissions (11 percent) relative to new diesel trucks, largely due to the steam reformation process to produce hydrogen from natural gas; NOx emissions are reduced 84 percent in total and GHGs are cut in half. Greater use of renewable hydrogen or improved hydrogen production methods could cut fuel cell emissions relative to conventional technology.⁷

Cumulative Impacts have not been Adequately Addressed

We commented that the DEIR identified 13 proposed projects within five miles of the Project but failed to identify a construction schedule for the projects. The Responses (Comment D-4A-19) did not provide this schedule and simply states:

The EIR includes a complete cumulative air quality impacts analysis that satisfies all CEQA requirements and that includes the conclusion that the long-term cumulative air quality impacts would be significant and avoidable.

The FEIR does not go far enough to address concerns about emissions of criteria air pollutants. For example, to meet air quality standards required by 2023, NOx emissions must be reduced by approximately two thirds beyond existing rules and regulations. The largest source of NOx emissions in the SCAQMD are heavy duty trucks. Without meeting air quality standards, the Southern California area faces federally mandated sanctions, including possible loss of transportation funding.

Other major projects in Moreno Valley, which involve significant trucking operations, include the WestRidge Commerce Center Project (which will be built adjacent to the proposed Project), the VIP Moreno Valley Project and the March Business Center. Along with the Project, these projects may be constructed simultaneously, highlighting the need for an estimate of the combined emissions of these projects.

Although the FEIR states that cumulative impacts are significant, additional measures are available to mitigate cumulative impacts on air quality. Perhaps most important is to quantify the emissions that will stem from the construction of other projects and, using those emissions estimates, identify how the construction of the projects might be staged to reduce temporal impacts. The US EPA has commented on the benefit of this approach to prevent violations of air quality standards.⁸

The FEIR should not be certified until cumulative emissions data from all projects have been compiled, by month, for construction in a six-mile radius that would overlap with the Project. From use of this data, a phased construction schedule, for projects that will undergo construction concurrently, should be derived so that violations of local, state or federal air quality regulations will not result. Consistent

⁷ http://www.ucsusa.org/assets/documents/clean_vehicles/Moving-California-Forward-Executive-Summary.pdf p. 2

⁸ U.S. Environmental Protection Agency, Comments on the Alta East Wind Project, September 27, 2012 <http://www.epa.gov/region9/nepa/letters/blm/ca/alta-east-wind-project-kern-county-deis.pdf>, p. 2

with US EPA's recommendations, the Project should be scheduled for constructed in light of the other planned construction activities to ensure air quality standards are not exceeded.

Diesel Particulate Matter Emissions have not been Evaluated and Addressed Adequately

Emissions of diesel particulate matter (DPM) associated with activities occurring on the Project site both during construction and operations have not been adequately characterized in estimating risks to human health. We have re-reviewed the DEIR documents, the 2012 LSA Air Quality Analysis (AQA) report, and the FEIR Responses to Comments and determined that impacts of DPM emissions on human health should be reevaluated before certification of the FEIR. Our evaluation has shown that construction of the Project has the potential to result in DPM exposures at nearby residences that exceed CEQA significance thresholds, and DPM exposure to workers on-site during operations warrants additional investigation by the Lead Agency.

Construction of the Project Will Result in Significant Air Quality Impacts

The Project location is situated just south of the Moreno Valley Freeway (SR60), with residential neighborhoods located within 50 feet to the southeast and 200 feet to the north of the Project boundary. The 2012 LSA AQA relied upon several inaccurate assumptions in preparing the Health Risk Assessment (HRA) for off-site residential exposure that accompanied the DEIR:

"The anticipated level of diesel-powered equipment use will, on average for the entire construction period, emit approximately 6.0 lbs/day of diesel exhaust particulate. A screening health risk assessment was performed using this emission rate and assuming the mobile equipment operates for 22 days per month and 4 months continuously at this high rate. This is considered conservative even though the total construction period will be longer than 4 months due to the extreme variation from day to day of heavy-duty construction equipment usage. **All of these values are deliberately higher than expected so that the risk levels will not be underestimated.**⁹ [*emphasis added*]

This statement contradicts itself in saying that even though average daily emissions of DPM were assumed to be 6 pounds, the duration of construction utilized for the exposure model was actually less than half of the total anticipated length. Therefore, it is impossible that all values are deliberately higher than expected, as LSA admits that the Project construction will in fact take longer than 4 months. By a simple calculation, the total pounds of DPM emissions evaluated in the HRA for construction-related activities is: $\frac{6 \text{ lbs}}{\text{day}} \times \frac{22 \text{ days}}{\text{month}} \times \frac{4 \text{ months}}{\text{Project}} = 528 \text{ lbs DPM}$ from construction. We believe that this represents a significant underestimate of actual construction-related DPM emissions, as the total length of Project construction is approximately 11.5 months. We have prepared a revised estimate that more accurately represents the exposures that nearby residents will be subjected to during Project construction.

⁹ LSA Associates, Inc., 2012. Air Quality Analysis, Eucalyptus Industrial Park, City of Moreno Valley, California. March 2012. Page 43.

We extracted only the estimates of mitigated on-site daily construction exhaust emissions provided in the CalEEMod output files (shown in the table below from the FEIR¹⁰), and multiplied the daily emissions estimates for each phase by the number of days given in AQA Table E: Construction Schedule, also shown below. The total pounds of construction-related DPM emissions was calculated to be 934.37 pounds, or 177% of the emissions that LSA incorporated into their HRA for off-site residential exposure. The HRA and FEIR should be revised to include more accurate estimates of total construction-related DPM emissions, as well as the appropriate exposure duration for nearby sensitive receptors in the residential communities.

Construction Phase	Onsite Pollutant Emissions, lbs/day							
	ROG	NO _x	CO	SO ₂	Fugitive PM ₁₀	Exhaust PM ₁₀	Fugitive PM _{2.5}	Exhaust PM _{2.5}
Site Preparation	10.43	84.72	47.82	0.07	7.05	4.27	3.87	4.27

Source: Project Plans

We have prepared our own screening-level HRA for construction-related DPM air quality impacts using the emissions and phasing data from the above tables. From the AQA appendices, we determined that diesel-fueled construction equipment would be operated for no more than 8 hours per day, and 5 days per week. The total number of construction days was 250 (weekdays between 9/1/2012 and 8/16/2013, or 18+44+188 as the last three phases of the Project in Table E overlap entirely). The emission rate derived for our screening model was therefore:

$$Emission\ Rate\ \left(\frac{grams}{second}\right) = \frac{934.37\ lbs \times 453.6\ \frac{grams}{lb}}{250\ days \times 8\ \frac{hours}{day} \times 3600\ \frac{seconds}{hour}} = 0.05886\ g/s$$

This value represents the average DPM emission rate during hours that construction activities are occurring for the entire Project

¹⁰ Response to Letter D-4A, Final EIR - Response to Comments, Prologis Eucalyptus Industrial Park, City of Moreno Valley. Page 223.

We used the EPA-recommended screening model AERSCREEN to evaluate off-site impacts to residential receptors during construction¹¹. As of 2011, AERSCREEN replaced SCREEN3 as the official screening model of the EPA due to its enhanced ability to simulate near-field dispersion from emissions sources. When detailed data pertaining to specific locations of emissions sources are unavailable, it is acceptable to model the average emission rate over the entire area of project construction. However, the Project boundary is geometrically complicated, and so our analysis focused on a subset of the Project site for screening-level modeling and HRA. The figure below depicts the portion of the site that was considered for the screening model. The yellow rectangle measures approximately 570 meters by 600 meters, with an area of approximately 84.51 acres.

The total Project boundary encompasses an area of 122.8 meters. For the purposes of our screening model, we multiplied the emission rate of 0.05886 g/s by the fraction $\frac{84.51}{122.8} = 0.6882$ to arrive at an average emission rate of 0.0405 g/s for the designated area over the course of Project construction. Due to lack of available information describing the anticipated sequencing of Project construction by area within the boundary, we assumed that averaging the emissions over the total duration was the best methodology to prepare this screening-level HRA.

The AERSCREEN model predicts the maximum single-hour concentration of a pollutant downwind of an emissions source. The maximum downwind concentration of DPM will be encountered during hours of

¹¹ U.S. Environmental Protection Agency Air Quality Modeling Group, C439-01 , MEMORANDUM: AERSCREEN Released as the EPA Recommended Screening Model, April 11, 2011.

construction equipment use, during which air quality impacts to sensitive receptors will also be highest. EPA screening methodology states that to estimate the maximum reasonable annualized concentration of an air pollutant, the maximum single-hour concentration can be multiplied by a scaling factor of 0.1¹². The maximum single-hour concentration of DPM produced by the AERSCREEN model during construction hours of the Project was 50.89 µg/m³ at 402 meters (1,319 feet) downwind. Residential receptors in the community to the southeast of the Project boundary are situated at this downwind distance.

The following table provides our estimations for a screening-level HRA for excess cancer risk at downwind residential receptors. The maximum single-hour concentration was multiplied by 0.1 to represent a maximum reasonable estimate of the annualized DPM concentration from construction. 80th percentile breathing rates were obtained from OEHHA guidance on HRA, as utilized in the LSA AQA¹³. Instead of incorporating the 4-month exposure considered by LSA, we utilized an 11.5 month exposure duration based on anticipated start and end dates of Project construction given in the tables presented above.

402-Meter Downwind Exposure

Parameter	Description	Units	Adult Exposure	Child Exposure
CPF	Cancer Potency Factor	1/(mg/kg-day)	1.1	1.1
Cair	Concentration in Air	µg/m ³	5.09	5.09
DBR	Daily Breathing Rate	L/kg-day	302	452
EF	Exposure Frequency	days/year	350	350
ED	Exposure Duration	years	0.95	0.95
AT	Averaging Time	days	25550	25550
	Inhaled Dose		2.0E-05	3.0E-05
	Cancer Risk		2.20E-05	3.29E-05

The table shows that the adult exposure resulted in an additional 22 cancers in one million while the child exposure resulted in 33 excess cancers in a million. For both adult and child exposure parameters, the CEQA significance threshold of ten in one million excess cancer risk was exceeded during the construction period. The maximum calculated inhalation cancer risk estimate provided in Table Q of the AQA report was 0.53 in one million at approximately 50-56 feet downwind. However, there is no modeling files or cancer risk calculations for the construction impacts analysis were provided in the DEIR

¹² U.S. Environmental Protection Agency Office of Air Quality Planning and Standards, Screening Procedures for Estimating the Air Quality Impacts of Stationary Sources, Revised, , October 1992.

¹³ Office of Environmental Health Hazard Assessment, The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments, Air Toxics Hot Spots Program Risk Assessment Guidelines, August 2003.

or the FEIR. In fact, the 2012 LSA AQA report references a November 2011 Traffic Impact Study as the source of the information, however this report does not mention cancer risk a single time¹⁴.

There is a considerable discrepancy between the 0.53 in one million calculated by LSA and the 22 in one million calculated in our analysis. An updated HRA should be prepared that incorporates all emissions from construction equipment over the entire duration of Project construction, and addresses the potential for significant air quality impacts to nearby sensitive receptors. Our analysis has demonstrated that by utilizing appropriate U.S. EPA and OEHHA exposure assessment methodologies, excess cancer risks consequent of Project construction have the potential to exceed CEQA thresholds of significance even under mitigated construction scenarios.

A Health Risk Assessment for On-Site Workers Should be Prepared Using Appropriate Parameters

Neither the FEIR, the DEIR, nor the AQA provides a detailed description of the methodologies utilized in arriving at the on-site worker excess cancer risk reported to be 1.5 in one million in Table 4.3.F of the DEIR. Response to Comment 13 of Letter D-2 addresses the lack of available data that made the assessment of operational DPM exposure to workers difficult in making a reference to the AQA:

Due to lack of data, precise evaluation of vehicle exhaust impacts is not feasible; however, based on the limited amount of TAC from vehicle exhaust associated with the project operations in relation to background levels, the impact is not expected to be significant.

This conclusion relied upon several inappropriate assumptions, and a revision to the on-site worker HRA should be prepared. An example of an appropriate HRA for on-site workers can be found in the ENVIRON HHRA for the proposed Stanford University Medical Center¹⁵, which clearly demonstrates that evaluation of vehicle exhaust impacts is indeed feasible.

The fleet of trucks that will be passing through the facility on a daily basis is expected to include 1,246 heavy-duty trailer trucks. In Response to Comment 21 of Letter B-3 the Lead Agency defends its assumption that the heavy-duty trailer trucks will be 87.5% diesel based on fuel use percentages from the URBEMIS model. However, the SCAQMD website clearly states that, "Emissions calculated using URBEMIS are now outdated and SCAQMD staff recommends all projects now evaluate emissions with CalEEMod if they use software for their analysis."¹⁶ Furthermore, the SCAQMD Comment Letter directly asserts that the fleet should be assumed 100% diesel.¹⁷ The FEIR admits that adjusting the fuel use of the fleet will increase the carcinogenic health risks to workers during Project operations (Comment 21, Response to Letter B-3), and this adjustment should be made in a revised iteration of the worker HRA.

¹⁴ LSA Associates, Inc., Draft Traffic Study, Eucalyptus Industrial Park, City of Moreno Valley, California, April 24, 2012.

¹⁵ ENVIRON, Human Health Risk Assessment, Construction and Incremental Operational Emissions, Proposed Stanford University Medical Center, Facilities Renewal and Replacement Project, Palo Alto, California, February 22, 2010.

¹⁶ SCAQMD, Air Quality Modeling. <http://www.aqmd.gov/ceqa/models.html>.

¹⁷ Comment 21, Letter B-3: South Coast Air Quality Management District, Final EIR - Response to Comments, ProLogis Eucalyptus Industrial Park, City of Moreno Valley, p. 54.

Additionally, the methodology by which daily operational emissions associated with the heavy-duty truck fleet were quantified is unclear. In the AQA, page 44 clearly states that, "Deliveries are assumed to occur 24 hours per day and 7 days per week." This was confirmed by reviewing the HRA emission worksheet in Appendix C to the AQA. However, the FEIR claims that, "Modeling the actual number of trucks that are planned to operate over 24 hours as if they operated over 12 hours results in much higher hourly emissions. Thus, the HRA is protective of human health in case there is a change in the project operations to only operate 12 hours per day" (Comment 19, Response to Letter B-3). There is no evidence to suggest that the HRA utilized an emission rate assumed over 12 hours per day instead of 24.

A revised iteration of the HRA during Project operations should be prepared prior to FEIR certification to clearly identify how the emissions generated by truck idling and movement were quantified. Incorporation of the SCAQMD comments regarding the use of a 100% diesel-fueled fleet, as well as the increased idle time per truck of fifteen minutes per trip instead of five, will unquestionably increase the estimates of emissions from Project operations. Adjustment of these parameters will provide a more accurate characterization of air quality impacts to on-site workers during Project operations, as current assumptions may have resulted in underestimated exposures.

Sincerely,

Matt Hagemann, P.G., C.Hg.

Anders Sutherland

Attn: Mr. Richard Drury

Subject: Comment Letter on the Final Environmental Impact Report for the Prologis Eucalyptus Industrial Park, SCH No. 2008021002

Dear Mr. Drury:

At the request of Lozeau | Drury LLP (Lozeau Drury), Clark and Associates (Clark) has reviewed materials related to the above referenced project, including the Final Environmental Impact Report¹ (FEIR) for the Prologis Eucalyptus Industrial Park (hereafter called the Project), SCH No. 2008021002 and its appendices. The proposed project site is located in the eastern portion of the City of Moreno Valley, in Riverside County, California. The 122.8-acre project site is located south of State Route 60 (SR-60) east of the Moreno Valley Auto Mall, and adjacent to and west of the Quincy Channel. According to the FEIR the proposed project would result in the construction and operation of a warehouse facility, consisting of approximately 2,244,638 square feet (sq ft).

¹ LSA. 2014. Final Environmental Impact Report, State Clearinghouse No. 2008021002, Prologis Eucalyptus Industrial Park (formerly Prologis Park Moreno Valley Eucalyptus Project), City of Moreno Valley, Riverside County, California. LSA Associates, Inc. 1500 Iowa Ave, Suite 200, Riverside, CA LAS Project No. PLO1101. Prepared February 12, 2014 and revised April 2, 2014

Clark's review of the materials in no way constitutes a validation of the conclusions or materials contained within the plan. If we do not comment on a specific item this does not constitute acceptance of the item.

Project Description

This FEIR was issued prematurely without considering the serious flaws in the Proponent's analysis of the project by failing to accurately characterize truck traffic at the site

The air quality impacts from the traffic associated with an approximately 2,250,000 square foot facility are significant. The most significant factor used to quantify air quality impacts from project traffic is the vehicle trip rate, or the number of vehicle trips per day. A vehicle trip is one round trip (one trip segment to a site and one trip segment away from a site). In the case of the proposed Project, the primary concern will be the number of truck trips per day.

In the analysis of this Project, the Proponent estimates the vehicle trip rate used a truck trip rate of 1.96 trips per 1,000 square feet of land use to estimate operational air quality impacts instead of the default Cal EEMod land use model trip rate of 2.59 (an underestimation of operational emissions by 32%).

According to SCAQMD², for CEQA purposes, the volume of truck traffic predicted to serve a new large warehouse project has historically been derived using the ITE Trip Generation manual's general rate for warehouse projects (land use type 150), which is 4.96 trips per 1,000

² As reported in Appendix E, p. 10, Technical Source Documentation for the CalEEMod, prepared for the CAPCOA by Environ International Corporation and the California Air Districts, July 2013, available at : <http://www.aqmd.gov/caleemod/doc/AppendixE.pdf>

square feet (TSF). This is the same source of traffic data used in the URBEMIS air quality model.³ This value is from the 7th Edition of the ITE Trip Generation manual, published in 2003. Several developers of high-cube warehouses in recent years have questioned the validity of this value for modern warehousing operations and commissioned local studies to investigate these trip rates⁴. As a result, in the most recent version of the ITE Trip Generation manual (8th Edition, 2008), additional data has been included to provide a new high-cube warehouse (land use type 152) trip rate of 1.44 trips/TSF⁵.

This greatly reduced trip rate has been criticized in California. In order to avoid underestimating the number of trips associated with large warehouse/distribution center operations without rail service, the SCAQMD staff recommended that lead agencies utilize a rate of 2.59 trips per TSF for large warehouse air quality analyses on a project specific basis⁶. According to SCAQMD and based on a review of warehouse studies and operations, this value provides a reasonable default rate for individual new warehouses in the absence of more project-specific data.⁷ This trip rate has been accepted by CAPCOA and incorporated into the CalEEMod model.

Another way to illustrate how the DEIR greatly underestimates truck traffic associated with the Project is to review the estimated number of daily truck trips per 1,000 square feet of warehouse. As described above, the DEIR estimates 1.96 daily truck trips per 1,000 square feet.

³ *Ibid.*

⁴ *Ibid.*

⁵ *Ibid.*

⁶ *Ibid.*

⁷ *Ibid.*

The results of utilizing the CalEEMOD method for estimating the traffic impacts from the Project are substantial. Based upon the trip generation rate of 2.59, the total number of trips associated with Project would increase from 4,400 to 5,813 trips per day.

The net result is that the air quality analysis performed by the Proponent greatly underestimates the emissions from mobile sources by at least one-third during the operational phase of the Project. Those impacts are likely to lead to a significant impact that will be unmitigated and unaccounted for in the FEIR. Without proper modeling of the emissions from these additional vehicles the impacts on the environment and the citizens of the Moreno Valley are unknown.

Conclusion

The facts identified and referenced in this comment letter lead me to reasonably conclude that the Project will result in significant adverse impacts that were not identified in the FEIR and that are not adequately mitigated. Many of the FEIR's conclusions that environmental impacts are not significant or less than significant with mitigation are unsupported or contradicted by the evidence. As a result, several analyses presented in the FEIR, including impacts on air quality, fail to identify or disclose the magnitude of significant adverse impacts. To protect air quality and public health the Proponent must prepare a revised FEIR for the Project.

Sincerely,

A handwritten signature in blue ink, appearing to read "James Clark".

James Clark, Ph.D.

EXHIBIT C

4.7.1.4 Greenhouse Gas Inventories

The City of Moreno Valley estimated greenhouse gas emissions for the community for 2007 and 2010 and projected emissions for 2020 are shown in Table 4.7.B, which shows the reduced 2020 emissions are below the reduction target.

Table 4.7.B: City of Moreno Valley Projected Greenhouse Gas Emissions

Source Category	Moreno Valley Greenhouse Gas Emissions (MTCO ₂ e per year)			
	2007	2010	BAU 2020	Reduced 2020
Transportation	517,098	513,581	788,267	421,561
Energy	287,261	277,230	356,192	251,372
Area	69,390	69,437	84,665	73,046

Solid Waste	44,294	43,633	49,203	38,000
Total	939,638	920,712	1,298,543	798,137
Reduction Target	—	—	798,693	798,693

Notes: MTCO₂e = metric tons of carbon dioxide equivalents BAU = business as usual
Source: Table 9, City of Moreno Valley Greenhouse Gas Analysis, 2012., MBA 2013

The existing WLC project site is largely vacant with scattered dry farming that generates minimal greenhouse gas emissions. For the purposes of this analysis, a zero baseline will be assumed to identify the “worst case” emissions (i.e., GHG emissions from the entire WLC project without removal of any existing GHG emissions).

4.7.2 Regulatory Setting

4.7.2.1 International Regulation of Climate Change

Intergovernmental Panel on Climate Change (IPCC). In 1988, the United Nations created the IPCC to provide independent scientific information regarding climate change to policymakers. The IPCC does not conduct research itself, but rather compiles information from a variety of sources into reports regarding climate change and its impacts. The IPCC has thereafter periodically released reports on climate change, and in 2007 released its Fourth Assessment Report which concluded most global climate change was the result of human activity, mainly the burning of fossil fuels (see Section 4.7.1.1).

United Nations Framework Convention on Climate Change. On March 21, 1994, the United States joined a number of countries around the world in signing the United Nations Framework Convention on Climate Change (Convention). Under the Convention, governments gather and share information on greenhouse gas emissions, national policies, and best practices; launch national strategies for addressing greenhouse gas emissions and adapting to expected impacts, including the provision of financial and technological support to developing countries; and cooperate in preparing for adaptation to the impacts of climate change.

Kyoto Protocol. The Kyoto Protocol is an international agreement linked to the United Nations Framework Convention on Climate Change. The major feature of the Kyoto Protocol is that it sets binding targets for 37 industrialized countries and the European community for reducing greenhouse gas emissions at average of five per cent against 1990 levels over the five-year period 2008-2012. The Convention (discussed above) encouraged industrialized countries to stabilize emissions; however, the Protocol commits them to do so. Developed countries have contributed more emissions

Item No. E.3

When compared with the proposed project, air quality impacts associated with the No Project/Existing General Plan Alternative would be correspondingly decreased in magnitude. Similar to the proposed project, the generation of these emissions would still result in a cumulative contribution of air pollutants in a nonattainment basin; therefore, impacts remain significant and unavoidable.

Table 6.E: No Project/Existing General Plan Alternative Operational Emissions

Source	Pollutant Emissions, lbs/day					
	CO	VOC	NO _x	SO _x	PM ₁₀	PM _{2.5}
Proposed Project ¹	3,466	729	3,059	21	1,685	153
No Project/Existing General Plan ²	4,853	1,114	1072	14	1,231	86
Net Change	+1,387	+385	-1,987	-7	-454	-67
SCAQMD thresholds	550	55	55	150	150	55
Alternative exceeds thresholds?	Yes	Yes	Yes	No	Yes	Yes

Source: MBA 2013

¹ MBA 2013 Air Quality Assessment for the proposed project

² From Moreno Highlands Specific Plan updated by MBA using CalEEMod software

Global Climate Change: GHG emissions associated with the No Project/Existing General Plan Alternative are correspondingly decreased as this alternative does not include a logistics warehouse component. In addition, the No Project/Existing General Plan Alternative would decrease the amount of water utilized and wastewater generated. As identified in Table 6.F, the No Project/Existing General Plan Alternative would generate 228,719 metric tons of total CO₂ equivalent¹ (mt CO₂e), which is approximately 60 percent less than what was identified for the proposed project.

Table 6.F: Comparison of Greenhouse Gas Emissions

Type of Development	Annual MTCO ₂ e Emissions	Change
Proposed Project	665,321	100%
No Project/No Build ¹	—	0%
No Project/Existing General Plan ²	228,719	35%
Alternative 1: Reduced Density	465,725	70%
Alternative 2: Mixed Use A	794,828	120%
Alternative 3: Mixed Use B	318,808	48%
Alternative Sites	665,321	100%

MTCO₂e is metric tons of carbon dioxide equivalents, which is a standard unit of measure for greenhouse gases.

¹ Estimated based on existing on-site rural residential uses.

² Based on approved Moreno Highland Specific Plan.

Source: MBA 2013 project air quality study, alternatives analysis (see Appendix D).

Hazards and Hazardous Materials: Development of the No Project/Existing General Plan Alternative would still result in the on-site handling of hazardous substances, both during project construction and operation. It is reasonable to assume that, like any current use, these substances would continue to be used in accordance with applicable local, State, and Federal standards. Impacts associated with the transport or use of hazardous materials or potential upsets or accidents would not be increased in magnitude because the intensity of development is still below what is envisioned under the proposed project. Therefore, it is not expected that increased quantities of hazardous materials would be present on site. With the adherence to existing hazardous materials regulations,

¹ Carbon dioxide equivalent (CO₂e) is an internationally accepted measure that expresses the amount of other greenhouse gases (e.g., methane and nitrous oxide) in terms of the amount of carbon dioxide (CO₂). The CO₂e measure is used as a way to measure the warming potential of a greenhouse gas as compared to CO₂, which has the highest global warming potential.

CONSENT JUDGMENT

17
18 Pursuant to Rules 54 and 58 of the Federal Rules of Civil Procedure, the Court hereby
19 ORDERS, ADJUDGES AND DECREES as follows:

20 1. Defendant VWR International, LLC (“VWR”) shall install two (2) electric vehicle
21 charging stations at its warehousing and distribution facility located at 8711 West Riggin Avenue
22 in the City of Visalia (the “Project”). VWR shall make said electric vehicle charging stations
23 available to VWR employees and/or customers.

24 2. VWR shall maintain the following features of the Project until June 11, 2022 (10
25 years after the Project became operational), unless VWR ceases to own and operate the Project in
26 its present form and for its present function prior to that time:

27 a. The emergency generator for the Project shall be powered by natural gas and

- include a catalytic converter.
- b. Ninety percent of the truck carriers contracted to service the Project by VWR shall be Environmental Protection Agency SmartWay partners, provided however, that temporary variances from this percentage due to circumstances not created by VWR shall not be a violation of this order.
- c. The Project shall utilize energy efficient interior lighting, *i.e.*, light-emitting diodes (“LED”), and T5 and T8 fluorescent lamps, provided, however, that this order shall not prohibit VWR from incorporating new or different lighting technology that is at least as efficient.
- d. The Project shall utilize energy efficient exterior lighting, *i.e.*, LED, and T5 and T8 fluorescent lamps, provided, however, that this order shall not prohibit VWR from incorporating new or different lighting technology that is at least as efficient.
- e. The air conditioning system for the management offices at the Project shall use non-chlorofluorocarbon refrigerant.
- f. Cooling for the main warehouse space at the Project shall be provided through evaporative coolers rather than air conditioners, provided, however, that this order shall not prohibit VWR from incorporating new or different cooling technology that is at least as efficient.
- g. The warehouse space at the Project shall incorporate automated airflow and ventilation systems designed to minimize need for supplemental heating and cooling within the warehouse space.
- h. Forklifts and interior vehicles at the Project shall be electric powered.
- i. The Project shall use a building automation system to control and optimize the efficiency of its mechanical systems, including lighting, HVAC, exhaust dampers, fans, and ventilation louvers
- j. Interior lights shall incorporate motion sensors that turn them off when not in use.

- 1 k. The Project shall incorporate a light colored “cool roof” membrane to reduce
2 surface temperature, heat island effect, and heat transfer to the interior of the
3 structure.
- 4 l. The landscape design and irrigation system shall be in compliance with LEED
5 Silver certification standards to reduce water consumption.
- 6 m. The warehouse shall incorporate water-efficient building design with water
7 efficient fixtures and appliances meeting LEED Silver certification standards.
- 8 n. The Project shall have an operational recycling program covering paper,
9 corrugated cardboard, glass, plastics and metals.
- 10 o. A bicycle rack shall be provided at the Project for employees who wish to
11 bicycle commute.
- 12 p. Five (5) premium car/vanpool spaces shall be provided at the Project.

13 3. Notwithstanding the provisions of paragraph 2, above, this order shall not prohibit
14 VWR from incorporating new or different technology at its facility instead of the specific
15 technology specified in paragraph 2, provided that is no less efficient than the technology
16 specified.

17 4. VWR need not take further action to comply with San Joaquin Valley Air
18 Pollution Control District Rule 9510, as incorporated into the California State Implementation
19 Plan under the Clean Air Act (42 U.S.C. Section 7604(a)).

20 5. VWR need not take further action to comply with Visalia Municipal Code Section
21 17.28.040A.

22 6. VWR shall pay no civil penalties.

23 7. Nothing in this judgment shall prohibit VWR from selling, transferring,
24 demolishing, rebuilding, or repurposing the Project, in whole or in part, or the real property upon
25 which it sits.

26 8. Except as may otherwise be provided by written agreement, each party shall bear
27 their own fees and costs.

28 / / /

1 9. This judgment shall be entered by the clerk of the court forthwith. The Clerk is
2 directed to close this action.

3 IT IS SO ORDERED, ADJUDGED, AND DECREED.

4

5

6 IT IS SO ORDERED.

Recording requested by and when recorded please return to:

[Grantee's name & address]

(Space above this line reserved for Recorder's use)

DEED OF AGRICULTURAL CONSERVATION EASEMENT

This Deed of Agricultural Conservation Easement is granted on this ____ of _____ 2012, by [Landowner's name], [Ownership status], having an address at [Landowner's address] ("Landowner"), to [Grantee's name], a California nonprofit public benefit corporation, having an address at [Grantee's address] ("Grantee"), for the purpose of forever conserving the agricultural productive capacity and open space character of the subject property.

RECITALS

A. The Landowner is the sole owner in fee simple of the [farm/rangeland] property ("Property") legally described in Exhibit A ("Legal Description") and generally depicted in Exhibit B ("Vicinity Map"), attached to and made a part of this Agricultural Conservation Easement ("Easement"). The Property consists of approximately [acres] acres of land and is commonly known as the "[Farm/Ranch name]," together with buildings and other improvements, is located in [County name] County, California, and is identified by assessor's parcel number(s) [parcel numbers]. The existing buildings and improvements on the Property are shown within the Building Envelope as depicted in Exhibit C ("Building Envelope and Existing Improvements"), also attached to and made a part of this Easement. Except as shown in Exhibit C, the Property is open farmland, whose soils have been classified as [prime farmland, farmland of statewide importance, etc.] by the U.S. Department of Agriculture's Natural Resources Conservation Service, and by the California Department of Conservation's Farmland Mapping and Monitoring Program, because this land has the soil quality, growing season, and water supply needed for sustained agricultural production.

B. The agricultural and other characteristics of the Property, its current use and state of improvement, are documented and described in a Baseline Documentation Report ("Baseline Report"), prepared by the Grantee with the cooperation of the Landowner and incorporated herein by this reference. The Landowner and the Grantee acknowledge that the Baseline Report is complete and accurate as of the date of this Easement. Both the Landowner and the Grantee shall retain duplicate original copies of the Baseline Report. The Baseline Report may be used to establish whether or not a change in the use or condition of the Property has occurred, but its existence shall not preclude the use of other evidence to establish the condition of the Property as of the date of this Easement.

C. The Department of Conservation’s California Farmland Conservancy Program (hereinafter alternatively referred to as the “Department” or “Department of Conservation”) has made a grant of funds to the Grantee to support the acquisition of this Agricultural Conservation Easement. The Department’s funds represent a substantial investment by the people of the State of California in the long-term conservation of valuable agricultural land and the retention of agricultural land in perpetuity. The Property and this Easement have met the California Farmland Conservancy Program’s mandatory eligibility criteria and certain selection criteria and have multiple natural resource conservation objectives. The rights vested herein in the State of California arise out of the State’s statutory role in fostering the conservation of agricultural land in California and its role as fiduciary for the public investment represented by the Department’s funds.

D. The Landowner grants this Easement for valuable consideration to the Grantee for the purpose of assuring that, under the Grantee’s perpetual granteeship, the agricultural productive capacity and open space character of the Property will be conserved and maintained forever, and that uses of the land that are inconsistent with these conservation purposes will be prevented or corrected. The parties agree, however, that the current agricultural use of, and improvements to, the Property are consistent with the conservation purposes of this Easement.

E. The conservation purposes of this Easement are recognized by, and the grant of this Easement will serve, the following clearly delineated governmental conservation policies:

The Farmland Protection Policy Act, P.L. 97-98, 7 U.S.C. section 4201 et seq., whose purpose is “to minimize the extent to which Federal programs and policies contribute to the unnecessary and irreversible conversion of farmland to nonagricultural uses, and to assure that Federal programs are administered in a manner that, to the extent practicable, will be compatible with State, unit of local government and private programs and policies to protect farmland;”

California Civil Code at Part 2, Chapter 4, (commencing with section 815), which defines and authorizes perpetual conservation easements;

California Constitution Article XIII, section 8, California Revenue and Taxation Code sections 421.5 and 422.5, and California Civil Code section 815.1, under which this Agricultural Conservation Easement is an enforceable restriction, requiring that the Property’s tax valuation be consistent with restriction of its use for purposes of food and fiber production and conservation of natural resources;

Section 10200 et seq. of the California Public Resources Code, which creates the California Farmland Conservancy Program within the Department;

85 Section 51220 of the California Government Code, which declares a public
86 interest in the preservation of agricultural lands, by providing that “agricultural
87 lands have a definitive public value as open space” and “that the discouragement of
88 premature and unnecessary conversion of agricultural land to urban uses is a matter
89 of public interest”;

90
91 California Food and Agriculture Code Section 821 states that one of the major
92 principles of the State's agricultural policy is "to sustain the long-term productivity
93 of the State's farms by conserving and protecting the soil, water, and air, which are
94 agriculture's basic resources;"

95
96 The California General Plan law section 65300 et seq. and Section 65400 et seq.
97 of the California Government Code, and the [*County name*] County General Plan,
98 as updated on [*Update date*], which includes as one of its goals to protect
99 farmlands designated as prime, of statewide importance, unique, or of local
100 importance from conversion to and encroachment of non-agricultural uses; and,

101
102 Resolution No. [*Resolution number*], approved by the Board of Supervisors of
103 [*County name*] County on the [*day*] of [*month*], [*year*], which expresses support
104 for the acquisition of this Easement and finds that the acquisition is consistent
105 with the County’s General Plan and the Resolution’s findings. (NOTE: If the
106 Property lies within the Sphere of Influence of an incorporated city, both the city
107 and county must pass resolutions of support.)

108
109 F. The Grantee is a California nonprofit organization within the meaning of
110 California Public Resources Code section 10221 and California Civil Code section 815.3
111 and is a tax exempt and “qualified conservation organization” within the meaning of
112 Sections 501(c)(3) and 170(b)(1)(A)(iv) as defined by the United States Internal Revenue
113 Code. Grantee, as certified by a resolution of Grantee's Board of Trustees, accepts the
114 responsibility of enforcing the terms of this Easement and upholding its conservation
115 purposes forever.

116 GRANT OF AGRICULTURAL CONSERVATION EASEMENT

117
118
119 Now, therefore, for the reasons given, and in consideration of their mutual
120 promises and covenants, terms, conditions and restrictions contained herein, and other
121 good and valuable consideration, the receipt and adequacy of which are hereby
122 acknowledged, the Landowner voluntarily grants and conveys to the Grantee, and the
123 Grantee voluntarily accepts, a perpetual conservation easement, as defined by Section
124 815.1 and 815.2 of the California Civil Code and California Public Resources Code
125 section 10211, and of the nature and character described in this Easement for the purpose
126 described below, and agree as follows:

127 1. *Conservation Purpose.*

128 The conservation purpose (“Conservation Purpose” or “Purpose”) of this Easement is to
129
130

131 enable the Property to remain in productive agricultural use in perpetuity by preventing
132 and correcting uses of the Property prohibited by the provisions of this Easement. To the
133 extent that the preservation of the open space character and [*scenic, habitat, natural, or*
134 *historic, etc.*] values of the Property are consistent with such use, it is within the Purpose
135 of this Easement to protect those values.

136
137 *2. Right to Use Property for Agricultural Purposes.*
138

139 The Landowner retains the right to use the Property for agricultural purposes, or to permit
140 others to use the Property for agricultural purposes, in accordance with applicable law and
141 this Easement.

142
143 *3. Prohibited Uses.*
144

145 The Landowner shall not perform, nor knowingly allow others to perform, any act on or
146 affecting the Property that is inconsistent with this Easement. Any use or activity that
147 would diminish or impair the agricultural productive capacity and open space character
148 [*or scenic, habitat, natural, historic etc. values*] of the Property, or that would cause
149 significant soil degradation or erosion, restrict agricultural husbandry practices, or that is
150 otherwise inconsistent with the Conservation Purpose is prohibited (“Prohibited Use”).
151 “Husbandry practices” means agricultural activities, such as those specified in Section
152 3482.5(e) of the California Civil Code, conducted or maintained for commercial purposes
153 in a manner consistent with proper and accepted customs and standards, as established
154 and followed by similar agricultural operations in the same locality. This Easement
155 authorizes the Grantee to enforce these covenants in the manner described herein.
156 However, unless otherwise specified, nothing in this Easement shall require the
157 Landowner to take any action to restore the condition of the Property after any Act of
158 God or other event over which it had no control. The Landowner understands that
159 nothing in this Easement relieves it of any obligation or restriction on the use of the
160 Property imposed by law.

161
162 *4. Permission of the Grantee.*
163

164 Where the Landowner is expressly required to obtain the Grantee’s permission for a
165 proposed use hereunder, said permission (a) shall not be unreasonably delayed or
166 withheld by the Grantee, (b) shall be sought and given in writing, with copies of all
167 documents to be provided to the Department, and (c) shall in all cases be obtained by the
168 Landowner prior to the Landowner's undertaking of the proposed use. The Grantee shall
169 grant permission to the Landowner only where the Grantee, acting in the Grantee's sole
170 reasonable discretion and in good faith, determines that the proposed use is not a
171 “Prohibited Use” per Section 3.

172
173 *5. Construction or Placement of Buildings and Other Improvements.*
174

175 The Landowner may undertake construction, erection, installation, or placement of
176 buildings, structures, or other improvements on the Property only as provided in

177 subsections (a) through (d) below. All other construction, erection, installation, or
178 placement of buildings, structures, or other improvements on the Property is prohibited.
179 Before undertaking any construction, erection, installation or placement that requires
180 permission, the Landowner shall notify the Grantee and obtain prior written permission
181 from the Grantee.

182
183 For purposes of this section, the term “improvements” shall not refer to, and specifically
184 excludes, crops, plants, trees, vines, or other living improvements planted for agricultural
185 purposes, nor shall it refer to irrigation improvements necessary or desirable to irrigate
186 the Property for agricultural purposes, all of which may be made without permission of
187 the Grantee.

188
189 (a) Fences – Existing fences may be repaired and replaced without permission of
190 the Grantee. New fences may be built anywhere on the Property for purposes of
191 reasonable and customary agricultural management, and for security of farm
192 produce, livestock, equipment, and improvements on the Property, without
193 permission of the Grantee.

194
195 (b) Agricultural Structures and Improvements – Existing agricultural structures
196 and improvements as shown in Exhibit C and more fully described in the Baseline
197 Report, may be repaired, reasonably enlarged, and replaced at their current
198 locations within the Building envelope for agricultural purposes without
199 permission from the Grantee. New buildings and other structures and
200 improvements to be used solely for agricultural production on the Property or sale
201 of farm products predominantly grown or raised on the Property, including barns
202 and equipment sheds, but not including any dwelling or farm labor housing, may
203 be built on the Property within the Building Envelope depicted in Exhibit B,
204 without permission of the Grantee. All permissible new agricultural structures
205 may be repaired, reasonably enlarged, and replaced without permission of the
206 Grantee. Any other agricultural production or marketing-related structures may
207 be constructed only with permission of the Grantee pursuant to Section 4.

208
209 (c) Residential Dwellings – The single-family dwelling shown in Exhibit C may
210 be repaired, enlarged or replaced at the current location entirely within the
211 Building Envelope shown in Exhibit C without permission of the Grantee. Said
212 single-family dwelling shall not exceed three thousand square feet (3,000 sq. ft.)
213 of living area. No other residential structures may be constructed or placed on the
214 Property except for agricultural employee housing per Section 5(d).

215
216 *(NOTE: With approval of the funder(s), this section may need to be modified*
217 *depending on the circumstances of the property and other factors)*

218
219 (d) Agricultural Employee Housing – The agricultural employee house shown in
220 Exhibit C may be repaired, enlarged or replaced at the current location entirely
221 within the Building Envelope shown in Exhibit C without permission of the
222 Grantee. No additional agricultural employee housing may be constructed or

223 placed on the Property without permission of the Grantee. Grantee may only
224 grant permission pursuant to Section 4 and only if the Landowner can
225 demonstrate to the Grantee's satisfaction that such additional agricultural
226 employee housing is reasonable and necessary for the agricultural operation of the
227 Property. The aggregate living area of agricultural employee housing shall not
228 exceed two thousand five hundred square feet (2,500 sq ft.). All agricultural
229 employee housing must be located entirely within the Building Envelope shown
230 in Exhibit C.

231

232 *(NOTE: With approval of the funder(s), this section may need to be modified*
233 *depending on the circumstances of the property and other factors)*

234

235 (e) Utilities and Septic Systems. Wires, lines, pipes, cables or other facilities
236 providing electrical, gas, water, sewer, communications, energy generation, or
237 other utility services solely to serve the improvements permitted herein or to
238 transmit power generated on the Property may be installed, maintained, repaired,
239 removed, relocated and replaced. In addition, septic or other underground
240 sanitary systems serving the improvements permitted herein may be installed,
241 maintained, repaired, replaced, relocated or improved, but must be located within
242 the Building Envelope. Power generation and transmission facilities primarily for
243 agricultural and other permitted uses on the Property may be constructed within
244 the Building Envelope. Power generated in excess of requirements on the
245 Property may be sold to appropriate public utilities. Notwithstanding the
246 foregoing, commercial power generation, collection or transmission facilities,
247 including wind or solar farms outside of Building Envelope, and the conveyance
248 of any rights-of-way over, under or on the Property for any such purpose, are
249 prohibited.

250

251 6. *No Subdivision.*

252

253 The division, subdivision, defacto subdivision, or partition of the Property, including
254 transfer of development rights, whether by physical, legal, or any other process, is
255 prohibited.

256

257 The Landowner and Grantee acknowledge and understand that the Property consists of
258 [number] legal parcel(s), and that no additional, separate legal parcels currently exist
259 within the Property that may be recognized by a certificate of compliance or conditional
260 certificate of compliance pursuant to California Government Code section 66499.35
261 based on previous patent or deed conveyances, subdivisions, or surveys. The Landowner
262 will not apply for or otherwise seek recognition of additional legal parcels within the
263 Property based on certificates of compliance or any other authority. The Landowner shall
264 continue to maintain the legal parcels comprising the Property, and all interests therein,
265 under common ownership, as though a single legal parcel.

266

267 Lot line adjustment may be permitted only with the written approval of the Grantee
268 pursuant to Section 4, in conjunction with the approval of the local jurisdiction, and for

269 purposes of maintaining, enhancing or expanding agricultural practices or productivity on
270 the Property.

271

272 *7. Extinguishment of Development Rights.*

273

274 The Landowner hereby grants to the Grantee all development rights except as specifically
275 reserved in this Easement, that were previously, are now or hereafter allocated to,
276 implied, reserved, appurtenant to, or inherent in the Property, and the parties agree that
277 such rights are released, terminated, and extinguished, and may not be used on or
278 transferred by either party to any portion of the Property as it now or later may be
279 bounded or described, or to any other property adjacent or otherwise, or used for the
280 purpose of calculating permissible lot yield of the Property or any other property. This
281 Easement shall not create any development rights.

282

283 *8. Mining.*

284

285 The mining or extraction of soil, sand, gravel, rock, oil, natural gas, fuel, or any other
286 mineral substance, using any method that disturbs the surface of the land, is prohibited.

287

288 *(NOTE: With approval of the funder(s), this section may need to be modified depending*
289 *on the circumstances of the property and other factors)*

290

291 *9. Paving and Road Construction.*

292

293 Other than existing roads shown within the Building Envelope as identified in the Baseline
294 Report, no portion of the Property presently unpaved shall be paved or otherwise covered
295 with concrete, asphalt, or any other impervious paving material, unless such measures are
296 required by air quality laws or regulations applicable to the Property. Except as otherwise
297 permitted herein, no road for access or other purposes shall be constructed without the
298 permission of the Grantee pursuant to Section 4. Notwithstanding the foregoing,
299 construction of unpaved farm roads, as necessary or desirable by agricultural operations,
300 is permitted without permission from the Grantee. The Landowner shall notify the
301 Grantee of any significant net relocation or addition of unpaved farm roads.

302

303 *10. Trash and Storage.*

304

305 The dumping or accumulation on the Property of any kind of trash, refuse, vehicle bodies
306 or parts, or "Hazardous Materials," as defined in Section 25 is prohibited. Farm-related
307 trash and refuse produced on the Property may be temporarily stored on the Property
308 subject to all applicable laws. The storage of agricultural products and byproducts
309 produced on the Property and materials reasonably required for agricultural production
310 on the Property, including Hazardous Materials, is permitted as long as it is done in
311 accordance with all applicable government laws and regulations.

312

313

314 11. *Commercial Signs.*

315

316 Commercial signs (including billboards) unrelated to permitted activities conducted on
317 the Property are prohibited.

318

319 12. *Recreational Uses; Motorized Vehicle Use Off Roadways*

320

321 Resort structures, athletic fields, golf courses, non-residential swimming pools, public or
322 commercial airstrips, commercial equestrian facilities, public or commercial helicopter
323 pads, and any other non-agricultural recreational structures or facilities are prohibited on
324 the Property. Recreational structures or improvements for the personal use of the
325 Landowner and its guests (e.g. swimming pool, tennis court) are permitted only within
326 the Building Envelope. The use of motorized vehicles off roadways and outside of the
327 Building Envelope is prohibited except where used for agricultural production, property
328 maintenance and security, or for the purpose of monitoring this Easement.

329

330 13. *Water Rights.*

331

332 The Landowner shall retain and reserve all ground water, and all appurtenant,
333 prescriptive, contractual or other water rights appurtenant to the Property at the time this
334 Easement becomes effective. The Landowner shall not permanently transfer, encumber,
335 lease, sell, or otherwise separate such quantity of water or water rights from title to the
336 Property itself. Permanent separation of water or water rights is prohibited. All water
337 shall be retained in [*County name*] County for agricultural production and used in
338 conjunction with the improvements permitted by Section 5 of this Easement only. Water
339 may be distributed to a contiguous property or other property owned or leased by the
340 Landowner on an annual basis for agricultural production only. Any temporary
341 distribution of water shall not impair the long-term agricultural productive capacity or
342 open space character of the Property.

343

344 14. *Rights Retained by the Landowner.*

345

346 Subject to Section 7 and to interpretation under Section 22, as owner of the Property, the
347 Landowner reserves all interests in the Property not transferred, conveyed, restricted,
348 prohibited or extinguished by this Easement. These ownership rights include, but are not
349 limited to, the right to sell, lease, or otherwise transfer the Property to anyone the
350 Landowner chooses, as well as the right to privacy, the right to exclude any member of
351 the public from trespassing on the Property, and any other rights consistent with the
352 Purpose of this Easement. Nothing contained herein shall be construed as a grant to the
353 general public of any right to enter upon any part of the Property.

354

355 Nothing in this Easement relieves the Landowner of any obligation or restriction on the
356 use of the Property imposed by law.

357

358

359 15. *Responsibilities of the Landowner and the Grantee Not Affected.*

360
361 Other than as specified herein, this Easement is not intended to impose any legal or other
362 responsibility on the Grantee, or in any way to affect any existing obligation of the
363 Landowner as owner of the Property. Among other things, this shall apply to:

364
365 (a) Taxes – The Landowner shall be solely responsible for payment of all taxes
366 and assessments levied against the Property. If the Grantee ever pays any taxes or
367 assessments on the Property, or if the Grantee pays levies on the Landowner’s
368 interest in order to protect Grantee’s interests in the Property, the Landowner will
369 reimburse the Grantee for the same. It is intended that this Easement constitute an
370 enforceable restriction within the meaning of Article XIII, Section 8 of the
371 California Constitution and that this Easement qualify as an enforceable
372 restriction under the provisions of California Revenue and Taxation Code
373 Sections 402.1(a)(8) and 423.

374
375 (b) Upkeep and Maintenance – The Landowner shall be solely responsible for the
376 upkeep and maintenance of the Property, to the extent it may be required by law.
377 The Grantee shall have no obligation for the upkeep or maintenance of the
378 Property. If the Grantee acts to maintain the Property in order to protect the
379 Grantee’s interest in the Property, the Landowner will reimburse the Grantee for
380 any such costs.

381
382 (c) Liability and Indemnification – In view of the Grantee’s and the Department
383 of Conservation’s negative rights, limited access to the land, and lack of active
384 involvement in the day-to-day management activities on the Property, the
385 Landowner shall indemnify, protect, defend and holds harmless the Grantee, the
386 Department of Conservation, their officers, directors, members, employees,
387 contractors, legal representatives, agents, successors and assigns (collectively,
388 “Agents and Assigns”) from and against all liabilities, costs, losses, orders, liens,
389 penalties, claims, demands, damages, expenses, or causes of action or cases,
390 including without limitation reasonable attorneys’ fees, arising out of or in any
391 way connected with or relating to the Property or the Easement. The Landowner
392 shall be solely liable for injury or the death of any person, or physical damage to
393 any property, or any other costs or liabilities resulting from any act, omission,
394 condition, or other matter related to or occurring on or about the Property,
395 regardless of cause, unless due to the negligence or willful misconduct of the
396 Grantee, the Department of Conservation, and/or their respective Agents and
397 Assigns. The Grantee shall be named as an additional insured on Landowner’s
398 general liability insurance policy.

399
400 Neither the Grantee, the Department of Conservation, nor their Agents and
401 Assigns shall have responsibility for the operation of the Property, monitoring of
402 hazardous conditions on it, or the protection of the Landowner, the public or any
403 third parties from risks relating to conditions on the Property. Without limiting
404 the foregoing, neither the Grantee, the Department, nor their respective Agents

405 and Assigns shall be liable to the Landowner or other person or entity in
406 connection with consents given or withheld, or in connection with any entry upon
407 the Property occurring pursuant to this Easement, or on account of any claim,
408 liability, damage or expense suffered or incurred by or threatened against the
409 Landowner or any other person or entity, except as the claim, liability, damage, or
410 expense is the result of the gross negligence or intentional misconduct of the
411 Grantee, the Department, and/or their respective Agents and Assigns.
412

413 *16. Monitoring.*
414

415 The Grantee shall manage its responsibilities as holder of this Easement in order to
416 uphold the Purpose of this Easement. The Grantee's responsibilities include, but are not
417 limited to, annual monitoring, such additional monitoring as circumstances may require,
418 record keeping, and enforcement of this Easement, for the purpose of preserving the
419 Property's agricultural productive capacity and open space character in perpetuity.
420 Failure of the Grantee to carry out these responsibilities shall not impair the validity of
421 this Easement or limit its enforceability in any way. With reasonable advance notice
422 (except in the event of an emergency circumstance or prevention of a threatened breach),
423 Grantee shall have the right to enter upon, inspect, observe, monitor and evaluate the
424 Property to identify the current condition of, and uses and practices on the Property and
425 to determine whether the condition, uses and practices are consistent with this Easement.
426

427 Grantee shall indemnify, defend with counsel of Landowner's choice, and hold
428 Landowner harmless from, all expense, loss, liability, damages and claims, including
429 Landowner's attorneys' fees, if necessary, arising out of Grantee's entry on the Property,
430 unless caused by a violation of this Easement by Landowner or by Landowner's
431 negligence or willful misconduct.
432

433 The Grantee shall report to the Department of Conservation by June 30 of each year after
434 the annual monitoring visit, describing method of monitoring, condition of the Property,
435 stating whether any violations were found during the period, describing any corrective
436 actions taken, the resolution of any violation, and any transfer of interest in the Property.
437 Failure to do so shall not impair the validity of this Easement or limit its enforceability in
438 any way.
439

440 *17. Enforcement.*
441

442 The Grantee may take all actions that it deems necessary to ensure compliance with the
443 terms, conditions, covenants, and purposes of this Easement. The Grantee shall have the
444 right to prevent and correct violations of the terms, conditions, covenants, and purposes
445 of this Easement. If the Grantee finds what it believes is a violation or potential
446 violation, it may at its discretion take appropriate legal action to ensure compliance with
447 the terms, conditions, covenants, and purposes of this Easement and shall have the right
448 to correct violations and prevent the threat of violations. Except when an ongoing or
449 imminent violation could irreversibly diminish or impair the agricultural productive
450 capacity and open space character of the Property, the Grantee shall give the Landowner

451 written notice of the violation or potential violation, and thirty (30) days to correct it,
452 before filing any legal action.

453

454 If a court with jurisdiction determines that a violation may exist, has occurred, or is about
455 to occur, the Grantee may obtain an injunction, specific performance, or any other
456 appropriate equitable or legal remedy, including (i) money damages, including damages
457 for the loss of the agricultural conservation values protected by this Easement, (ii)
458 restoration of the Property to its condition existing prior to such violation, and (iii) an
459 award for all of the Grantee's expenses incurred in stopping and correcting the violation,
460 including but not limited to reasonable attorney's fees. The failure of the Grantee to
461 discover a violation or potential violation, or to take immediate legal action to prevent or
462 correct a violation or potential violation known to the Grantee, shall not bar the Grantee
463 from taking subsequent legal action. The Grantee's remedies under this section shall be
464 cumulative and shall be in addition to all remedies now or hereafter existing at law or in
465 equity.

466

467 Without limiting the Landowner's liability therefor, the Grantee shall apply damages
468 recovered to the cost of undertaking any corrective action on the Property. Should the
469 restoration of lost values be impossible or impractical for whatever reason, the Grantee
470 shall apply any and all damages recovered to furthering its mission, with primary
471 emphasis on agricultural conservation easement acquisition and enforcement.

472

473 In the event the Grantee fails to enforce any term, condition, covenant or purpose of this
474 Easement, as determined by the Director of the Department of Conservation, the Director
475 of the Department and his or her successors and assigns shall have the right to enforce the
476 Easement after giving notice to the Grantee and the Landowner and providing a
477 reasonable opportunity under the circumstances for the Grantee to enforce any term,
478 condition, covenant, or purpose of the Easement. In the event that the Director of the
479 Department determines that the Grantee has failed to enforce any of the terms,
480 conditions, covenants, or purposes of the Easement, the Director of the Department and
481 his or her successors and assigns shall be entitled to exercise the same right to enter the
482 Property granted to the Grantee, including right of immediate entry in the event of an
483 emergency or suspected emergency where the Director of the Department or his or her
484 successor or assign determines that immediate entry is required to prevent, terminate or
485 mitigate a violation of this Easement.

486

487 Failure or refusal to exercise any rights under the terms of this Easement by the Grantee
488 in the event of a violation by the Landowner of any term herein shall not constitute a
489 waiver or forfeiture of the Grantee's right to enforce any term, condition, covenant, or
490 purpose of this Easement.

491

492 18. *Transfer of Easement.*

493

494 This Easement may only be assigned or transferred to a private nonprofit organization
495 that, at the time of transfer, is a "qualified organization" under Section 170(h) of the
496 United States Internal Revenue Code and meets the requirements of Section 815.3(a) of

497 the California Civil Code and has similar purposes to preserve agricultural lands and
498 open space. If no such private nonprofit organization exists or is willing to assume the
499 responsibilities imposed by this Easement, then this Easement may be transferred to any
500 public agency authorized to hold interests in real property as provided in Section 815.3(b)
501 of the California Civil Code. Such an assignment or transfer may proceed only if the
502 organization or agency expressly agrees to assume the responsibility imposed on the
503 Grantee by the terms of this Easement and is expressly willing and able to hold this
504 Easement for the Purpose for which it was created. All assignment and assumption
505 agreements transferring the Easement shall be duly recorded in <County name> County.

506
507 If the Grantee should desire to assign or transfer this Easement, the Grantee must obtain
508 written permission from the Landowner and the Department of Conservation, which
509 permission shall not be unreasonably withheld.

510
511 If the Grantee or its successors ever ceases to exist or no longer qualifies under Section
512 170(h) of the U.S. Internal Revenue Code, or applicable state law, the Department of
513 Conservation, in consultation with the Landowner, shall identify and select an
514 appropriate private or public entity to whom this Easement shall be transferred.

515
516 *19. Perpetual Duration and No Merger of Title.*

517
518 Pursuant to California Civil Code at Part 2, Chapter 4, (commencing with section 815),
519 which defines and authorizes perpetual conservation easements; this Easement shall run
520 with the land in perpetuity. Every provision of this Easement that applies to the
521 Landowner or the Grantee shall also apply to their respective agents, heirs, executors,
522 administrators, assigns, and all other successors as their interests may appear.

523
524 No merger of title, estate or interest shall be deemed effected by any previous,
525 contemporaneous, or subsequent deed, grant, or assignment of an interest or estate in the
526 Property, or any portion thereof, to the Grantee, or its successors or assigns. It is the
527 express intent of the parties that this Easement not be extinguished by, merged into,
528 modified, or otherwise deemed affected by any other interest or estate in the Property
529 now or hereafter held by the Grantee or its successors or assigns.

530
531 *20. Transfer of Property Interest.*

532
533 Any time the Property itself, or any interest in it, is transferred by the Landowner to any
534 third party, the Landowner shall notify the Grantee and the Department of Conservation
535 in writing at least thirty (30) days prior to the transfer of the Property or interest, and the
536 document of conveyance shall expressly incorporate by reference this Easement. Any
537 document conveying a lease of the Property shall expressly incorporate by reference this
538 Easement. Failure of the Landowner to do so shall not impair the validity of this
539 Easement or limit its enforceability in any way.

540
541

542 21. *Amendment of Easement.*

543

544 This Easement may be amended only with the written consent of the Landowner, the
545 Grantee, and the Director of the Department of Conservation. Any such amendment shall
546 be consistent with the Purpose of this Easement and with the Grantee's easement
547 amendment policies, and shall comply with all applicable laws, including Section 170(h)
548 of the Internal Revenue Code, or any regulations promulgated in accordance with that
549 section, and with Section 815 et seq. of the California Civil Code, and the California
550 Farmland Conservancy Program Act as codified in Section 10200 et seq. of the California
551 Public Resources Code, and any regulations promulgated thereunder. No amendment
552 shall diminish or affect the perpetual duration or the Purpose of this Easement, nor the
553 status or rights of the Grantee under the terms of this Easement.

554

555 This Easement and any amendment to it shall be recorded in [*County name*] County.
556 Copies of any amendments to this Easement shall be provided to the Department of
557 Conservation within 30 days of recordation.

558

559

560 22. *Termination of Easement.*

561 *(NOTE: Landowners may waive the administrative termination provision defined in*
562 *Public Resources Code sections 10270-77, in which case Scenario A shall be used below,*
563 *with potential easement termination shall be governed solely by judicial termination*
564 *proceedings. Otherwise, Scenario B on page 15 shall be used.)*

565

566 ***[Scenario A: Landowner's Administrative Termination Rights Waived]***

567

568 (a) It is the intention of the parties that the Conservation Purpose of this Easement
569 shall be carried out forever as provided in the Section 10211 of the Public
570 Resources Code and Section 815 et seq. of the Civil Code. Accordingly,
571 Landowner hereby waives on behalf of the Landowner and the Landowner's
572 successors and assigns all rights at law or inequity to request a termination of this
573 Easement pursuant to Public Resources Code Sections 10270 et seq.

574

575 Waiver of Right to Request Administrative Termination:

576

577 Landowner's Initials: _____ [*and* _____]

578

579 (b) Other than pursuant to eminent domain or purchase in lieu of eminent
580 domain, no other voluntary or involuntary sale, exchange, conversion, or
581 conveyance of any kind of all or part of the Property, or of any interest in it, shall
582 limit or terminate the provisions of this Easement. This Easement can only be
583 terminated or extinguished, whether in whole or in part, by judicial proceedings in
584 a court of competent jurisdiction. The fact that the land is not in agricultural use
585 is not reason for termination of this Easement.

586

587 Termination of the Easement through condemnation is subject to the requirements

588 of Section 10261 of the Public Resources Code, the eminent domain laws of the
589 State of California, federal law, and this Easement. The Property may not be
590 taken by eminent domain or in lieu of eminent domain if the planned use is more
591 than seven (7) years in the future (California Code of Civil Procedure section
592 1240.220). Grantee shall be paid by the condemnor the value of the Easement at
593 the time of condemnation (Public Resources Code section 10261(a)(2)). Purchase
594 in lieu of condemnation, or settlement of an eminent domain proceeding, shall
595 occur pursuant to applicable laws and procedures, including but not limited to
596 California Government Code sections 7267.1 and 7267.2, and shall require
597 approval of the Grantee, the Director of the Department, and the [match funder].
598 Grantee shall have an opportunity to accompany the appraiser for the condemning
599 agency when the appraiser goes on the Property with Landowner. Should this
600 Easement be condemned or otherwise terminated on any portion of the Property,
601 the balance of the Property shall remain subject to this Easement. In this event,
602 all relevant related documents shall be updated and re-recorded by the Grantee to
603 reflect the modified easement area. Encumbrances junior to this Easement shall
604 remain subordinate to the Easement as amended.
605

606 (c) In the event the Landowner is notified that a public entity intends or proposes
607 to acquire the Easement Area in whole or in part by eminent domain, the
608 Landowner shall provide the Grantee, the Department, and the [match funder]
609 with a copy of the notification within five (5) business days of having received
610 such notification. In the event the Landowner intends to seek termination of the
611 easement pursuant to initiation of a judicial proceeding which is not based on
612 eminent domain, the Landowner shall notify the Grantee, the Department and the
613 [match funder] of such intent no later than sixty (60) days before initiating such
614 proceedings. No inaction or silence by the Grantee, the Department, or the
615 [match funder] shall be construed as abandonment of the Easement.
616

617 (d) The grant of this Easement gives rise to a property right immediately vested in
618 the Grantee. For the purpose of determining the amount to be paid by the
619 Landowner in a repurchase of the Easement pursuant to judicial proceedings, and
620 for the purpose of allocating proceeds from a sale or other disposition of the
621 Property at the time of termination, the Easement and the Grantee's property right
622 therein shall have a value equal to the difference between the current fair market
623 value of the Property as if unencumbered by this Easement and the current fair
624 market value of the Property encumbered by this Easement, each as determined
625 on or about the date of termination. The values shall be determined by an
626 appraisal performed by an appraiser jointly selected by the Landowner and the
627 Grantee. The Landowner shall pay the cost of the appraisal, and it is subject to
628 approval by the Department and the [match funder]. Nothing herein shall prevent
629 the Landowner, the Grantee, the Department, or the [match funder] from having
630 an appraisal prepared at its own expense.
631

632 (e) Upon approval of termination of this Easement or any portion thereof, the
633 Landowner shall reimburse the State of California, Department of Conservation

634 California Farmland Conservancy Program Fund and *[match funder]*, the amount
635 equal to the value of the Easement that is terminated. If the entire Easement is
636 terminated, the amount required to be paid in connection with the Landowner's
637 repurchase shall be distributed as follows: (i) to the State of California,
638 Department of Conservation, California Farmland Conservancy Program Fund,
639 ?%; and (ii) to the *[match funder]*, ?%, representing the proportion of easement
640 value originally contributed by these agencies for the purchase of this Easement.
641 If only a portion of the Easement is so terminated, the reimbursement shall be
642 pro-rated. This Easement shall not be deemed terminated under a judicial
643 termination proceeding until such payment is received by the State of California,
644 Department of Conservation California Farmland Conservancy Program Fund, the
645 *[match funder]* and Grantee *[if any bargain sale occurred]*. Grantee, in using any
646 funds received from the termination of this Easement, shall use the funds in a
647 manner consistent with the Purpose of this Easement.

648
649 *(NOTE: Additional language IRS language may need to be used for landowners*
650 *seeking IRS recognition of a charitable donation)*

651
652 (f) If the Grantee obtains payment on a claim under a title insurance policy
653 insuring this Easement, payment shall be distributed as set forth in Section 22(e).

654
655 ***[Scenario B: Landowner's Administrative Termination Rights NOT Waived]***

656
657 (a) Other than pursuant to eminent domain or purchase in lieu of eminent domain,
658 no other voluntary or involuntary sale, exchange, conversion, or conveyance of
659 any kind of all or part of the Property, or of any interest in it, shall limit or
660 terminate the provisions of this Easement. This Easement can only be terminated
661 or extinguished, whether in whole or in part, by judicial proceedings in a court of
662 competent jurisdiction or by administrative termination pursuant to Section
663 10270-10277 of the Public Resources Code. The fact that the land is not in
664 agricultural use is not reason for termination of this Easement.

665
666 Termination of the Easement through condemnation is subject to the requirements
667 of Section 10261 of the Public Resources Code, the eminent domain laws of the
668 State of California, federal law, and this Easement. The Property may not be
669 taken by eminent domain or in lieu of eminent domain if the planned use is more
670 than seven (7) years in the future (California Code of Civil Procedure section
671 1240.220). Grantee shall be paid by the condemnor the value of the Easement at
672 the time of condemnation (Public Resources Code section 10261(a)(2)). Purchase
673 in lieu of condemnation, or settlement of an eminent domain proceeding, shall
674 occur pursuant to applicable laws and procedures, including but not limited to
675 California Government Code sections 7267.1 and 7267.2, and shall require
676 approval of the Grantee, the Director of the Department, and the *[match funder]*.
677 Grantee shall have an opportunity to accompany the appraiser for the condemning
678 agency when the appraiser goes on the Property with Landowner. Should this
679 Easement be condemned or otherwise terminated on any portion of the Property,

680 the balance of the Property shall remain subject to this Easement. In this event,
681 all relevant related documents shall be updated and re-recorded by the Grantee to
682 reflect the modified easement area. Encumbrances junior to this Easement shall
683 remain subordinate to the Easement as amended.
684

685 (b) In the event the Landowner is notified that a public entity intends or proposes
686 to acquire the Easement Area in whole or in part by eminent domain, the
687 Landowner shall provide the Grantee, the Department, and the [match funder]
688 with a copy of the notification within five (5) business days of having received
689 such notification. In the event the Landowner intends to seek termination of the
690 easement pursuant to administrative termination or judicial proceeding that is not
691 based on eminent domain, the Landowner shall notify the Grantee, the
692 Department and the [match funder] of such intent no later than sixty (60) days
693 before initiating such proceedings. No inaction or silence by the Grantee, the
694 Department, or the [match funder] shall be construed as abandonment of the
695 Easement.
696

697 (c) The grant of this Easement gives rise to a property right immediately vested in
698 the Grantee. For the purpose of determining the amount to be paid by the
699 Landowner in a repurchase of the Easement at the time of a administrative
700 termination or pursuant to judicial proceedings, and for the purpose of allocating
701 proceeds from a sale or other disposition of the Property at the time of
702 termination, the Easement and the Grantee's property right therein shall have a
703 value equal to the difference between the current fair market value of the Property
704 as if unencumbered by this Easement and the current fair market value of the
705 Property encumbered by this Easement, each as determined on or about the date
706 of termination. The values shall be determined by an appraisal performed by an
707 appraiser jointly selected by the Landowner and the Grantee. The Landowner
708 shall pay the cost of the appraisal, and it is subject to approval by the Department
709 and the [match funder]. Nothing herein shall prevent the Landowner, the Grantee,
710 the Department, or the [match funder] from having an appraisal prepared at its
711 own expense.
712

713 (d) Upon approval of termination of this Easement or any portion thereof, the
714 Landowner shall reimburse the State of California, Department of Conservation
715 California Farmland Conservancy Program Fund and [match funder], the amount
716 equal to the value of the Easement that is terminated. If the entire Easement is
717 terminated, the amount required to be paid in connection with the Landowner's
718 repurchase shall be distributed as follows: (i) to the State of California,
719 Department of Conservation, California Farmland Conservancy Program Fund,
720 ?%; and (ii) to the [match funder], ?%, representing the proportion of easement
721 value originally contributed by these agencies for the purchase of this Easement.
722 If only a portion of the Easement is so terminated, the reimbursement shall be
723 pro-rated. This Easement shall not be deemed terminated under a judicial
724 termination proceeding until such payment is received by the State of California,
725 Department of Conservation California Farmland Conservancy Program Fund, the

726 [match funder] and Grantee [if any bargain sale occurred]. Grantee, in using any
727 funds received from the termination of this Easement, shall use the funds in a
728 manner consistent with the Purpose of this Easement.

729
730 (NOTE: Additional language IRS language may need to be used for landowners
731 seeking IRS recognition of a charitable donation)

732
733 (s) If the Grantee obtains payment on a claim under a title insurance policy
734 insuring this Easement, payment shall be distributed as set forth in Section 22(d).

735
736 23. Interpretation.

737
738 (a) This Easement shall be interpreted under the laws of the State of California,
739 resolving any ambiguities and questions of the validity of specific provisions so as
740 to give maximum effect to its conservation purposes.

741
742 (b) References to specific authorities in this Easement shall be to the statute, rule,
743 regulation, ordinance, or other legal provision that is in effect at the time this
744 Easement becomes effective.

745
746 (c) No provision of this Easement shall constitute governmental approval of any
747 improvements, construction or other activities that may be permitted under this
748 Easement.

749
750 24. Notices.

751
752 Any notices to the Landowner and the Grantee required by this Easement shall be in
753 writing and shall be personally delivered or sent by First-Class Mail to the following
754 addresses, unless a party has been notified by the other of a change of address:

755
756 To the Landowner:

757
758 _____
759 _____
760 _____

761
762 To the Grantee:

763
764 _____
765 _____
766 _____

767
768 Any notices required by this Easement to be sent to the Department shall be in writing
769 and shall be personally delivered or sent by first class mail, at the following address,
770 unless a party has been notified by the Department of a change of address:

771

772 To the Department of Conservation:

773

774 Department of Conservation

775 801 K Street, MS 18-01

776 Sacramento, CA 95814

777 Attn: California Farmland Conservancy Program

778

779 25. *The Landowner's Environmental Warranty.*

780

781 (a) Nothing in this Easement shall be construed as giving rise to any right or
782 ability in the Grantee or the Department of Conservation to exercise physical or
783 management control over the day-to-day operations of the Property, or any of the
784 Landowner's activities on the Property, or otherwise to become an "owner" or
785 "operator" with respect to the Property as those words are defined and used in
786 environmental laws, including the Comprehensive Environmental Response,
787 Compensation, and Liability Act of 1980 ("CERCLA"), as amended or any
788 corresponding state and local statute or ordinance.

789

790 (b) The Landowner warrants that it has no actual knowledge of a release or
791 threatened release of any Hazardous Materials on, at, beneath or from the
792 Property. Moreover the Landowner hereby promises to defend and indemnify the
793 Grantee and the Department of Conservation against all litigation, claims,
794 demands, penalties and damages, including reasonable attorneys' fees, arising
795 from or connected with the release or threatened release of any Hazardous
796 Materials on, at, beneath or from the Property, or arising from or connected with a
797 violation of any Environmental Laws. The Landowner's indemnification
798 obligation shall not be affected by any authorizations provided by the Grantee to
799 the Landowner with respect to the Property or any restoration activities carried
800 out by the Grantee at the Property; provided, however, that the Grantee shall be
801 responsible for any Hazardous Materials contributed after this date to the Property
802 by the Grantee.

803

804 (c) The Landowner warrants that it shall remain in compliance with, all applicable
805 Environmental Laws. The Landowner warrants that there are no notices by any
806 governmental authority of any violation or alleged violation of, non-compliance
807 or alleged non-compliance with or any liability under any Environmental Law
808 relating to the operations or conditions of the Property.

809

810 (d) "Environmental Law" or "Environmental Laws" means any and all Federal,
811 state, local or municipal laws, rules, orders, regulations, statutes, ordinances,
812 codes, guidelines, policies or requirements of any governmental authority
813 regulating or imposing standards of liability or standards of conduct (including
814 common law) concerning air, water, solid waste, Hazardous Materials, worker
815 and community right-to-know, hazard communication, noise, radioactive
816 material, resource protection, subdivision, inland wetlands and watercourses,
817 health protection and similar environmental health, safety, building and land use

818 as may now or at any time hereafter be in effect.

819

820 (e) “Hazardous Materials” means any petroleum, petroleum products, fuel oil,
821 waste oils, explosives, reactive materials, ignitable materials, corrosive materials,
822 hazardous chemicals, hazardous wastes, hazardous substances, extremely
823 hazardous substances, toxic substances, toxic chemicals, radioactive materials,
824 infectious materials and any other element, compound, mixture, solution or
825 substance which may pose a present or potential hazard to human health or the
826 environment or any other material defined and regulated by Environmental Laws.

827

828 (f) If at any time after the effective date of this Easement there occurs a release,
829 discharge or other incident in, on, or about the Property of any substance now or
830 hereafter defined, listed, or otherwise classified pursuant to any federal, state, or
831 local law, regulation, or requirement as hazardous, toxic, polluting, or otherwise
832 contaminating to the air, water, or soil, or in any way harmful or threatening to
833 human health or the environment, the Landowner agrees to take any steps that are
834 required of the Landowner with respect thereto under federal, state, or local law
835 necessary to ensure its containment and remediation, including any cleanup.

836

837 26. *The Landowner’s Title Warranty; No Prior Conservation Easements.*

838

839 The Landowner represents and warrants that it owns the entire fee simple interest in the
840 Property, including the entire mineral estate, and hereby promises to defend this
841 Easement against all claims that may be made against it. Any and all financial liens or
842 financial encumbrances with priority over this Easement existing as of the date of the
843 recording of this Easement have been subordinated. Exhibit C (Prior Encumbrances) sets
844 forth all prior encumbrances. The Landowner represents and warrants that the Property
845 is not subject to any other conservation easement whatsoever.

846

847 27. *Granting Subsequent Easements, Interests in Land, or Use Restrictions.*

848

849 With permission of the Grantee pursuant to Section 4, the Landowner may grant
850 subsequent easements, including conservation easements, interests in land, or use
851 restrictions on the Property. Under no circumstances shall the Grantee approve the
852 granting of subsequent easements, interests in land, or use restrictions that might diminish
853 or impair the agricultural productive capacity or open space character of the Property.
854 The Grantee’s written approval shall be obtained at least thirty (30) days in advance of
855 the Landowner’s execution of any proposed subsequent easement, interests in land, or use
856 restriction on the Property, and such subsequent easements, interests in land, and use
857 restrictions shall make reference to and be subordinate to this Easement. The Grantee
858 shall notify the Department immediately upon receipt of request by the Landowner to
859 grant a subsequent easement, interest in land, or use restriction on the Property. The
860 Grantee shall notify the Department in the event that it approves the grant of any
861 subsequent easement, interest in land, or use restriction on the Property.

862

863 28. *Severability.*

864

865 If any term, provision, covenant, condition, or restriction of this Easement is held by a
866 court of competent jurisdiction to be unlawful, invalid, void, unenforceable, or not
867 effective the remainder of this Easement shall remain in full force and effect and shall in
868 no way be affected, impaired, or invalidated.

869

870 29. *Entire Agreement.*

871

872 This Easement is the final and complete expression of the agreement between the parties
873 with respect to the subject matter contained herein. Any and all prior or
874 contemporaneous agreements with respect to this subject matter, written or oral, are
875 merged into and superseded by this written instrument.

876

877 30. *Acceptance.*

878

879 As attested by the signature of its [*Position title*] affixed hereto, as authorized by
880 Grantee's Board of Directors/Trustees, in exchange for consideration, the Grantee hereby
881 accepts without reservation the rights and responsibilities conveyed by this Deed of
882 Agricultural Conservation Easement.

883

884 To Have and To Hold, this Deed of Agricultural Conservation Easement unto the
885 Grantee, its successors and assigns, forever.

886

887 In Witness Whereof, the Landowner and the Grantee, intending to legally bind
888 themselves, have set their hands on the date first written above.

Conservation Easements

The Riverside Land Conservancy is increasingly making use of conservation easements as a conservation tool. A conservation easement (or conservation restriction) is a legal agreement between a landowner and a land trust or government agency that permanently limits uses of the land in order to protect its conservation value. It allows landowners to continue to own and use their land and to sell it or pass it on to heirs. Future owners continue to be bound by the easement's terms. Currently, RLC holds conservation easements on 801 acres in western Riverside and San Bernardino Counties including a conservation easement on the 150 acre Colton Dehii sands flower-loving fly Conservation Bank. RLC is in active negotiations to accept an additional 375 acres of conservation easements on sensitive open space and natural habitat areas.

WILL THE WORLD LOGISTIC CENTER TRUCK TRAFFIC IMPACT YOUR HOME OR NEIGHBORHOOD? SOUND WALLS MAY HELP LOWER SOUND LEVELS, BUT THEY DON'T STOP TOXIC DIESEL POLLUTION FROM ENTER YOUR YARDS AND NEIGHBORHOODS. Come to our Saturday April 13th Valley View HS meeting 10 a.m.-12 noon.

PLEASE READ

Locust Avenue between Moreno Beach Drive and Smiley Boulevard (54). Only the 2035 case results in a significant noise increase for this area. In 2035 the project will result in a 3.5 dB increase raising the noise level up to 68.9 CNEL. There are three single-family homes along this roadway and they front onto the roadway. As discussed above, homes that front onto a street cannot be effectively mitigated with a soundwall. ***Therefore, this potentially significant impact feasibly cannot be mitigated.***

Moreno Beach Drive between Locust Avenue and Ironwood Avenue (56). Only the 2035 case results in a significant noise increase for this area. In 2035 the project will result in a 3.3 dB increase raising the noise level up to 66.6 CNEL. There are 18 single-family homes along this roadway. Some homes front onto the roadway, but most backup to the roadway. Currently there are no soundwalls along these homes. The walls would need to be 6 feet tall with respect to the rear yard. **Roughly 2,000 feet of six foot tall barrier** would need to be provided for mitigation for 15 of the 18 impacted homes (Exhibit 18). With the retrofit the noise levels would drop at least 5 dB, with the resultant noise levels around 62 CNEL in rear yard areas. Approximately 3 homes would remain unmitigated, because these homes front onto Moreno Beach.

Ironwood Avenue between Redlands Boulevard and Highland Boulevard (36). A significant noise increase is projected for all four study years on this roadway link. In 2035, the noise level will increase 5 dB to 63.6 CNEL. There are two single-family homes that front onto Ironwood Avenue. There are also two churches along this roadway, however, the churches are setback from the roadway far enough that no significant impacts will occur. Although the noise levels remain below the City's 65 CNEL standard, the noise levels will increase substantially above those without the project. As discussed above, homes that front onto a street cannot be effectively mitigated with a soundwall. ***This potentially significant impact feasibly cannot be mitigated.***

Redlands Boulevard from State Route 60 to San Timoteo Canyon Road (35, 42). The noise analysis shows significant noise increases along this roadway segment for the 2012, 2022, and 2035 cases. The increases in noise are around 2 dB with a resultant noise level in the 71 to 72 CNEL range. There are 28 homes along this roadway that would be affected. The single-family homes are scattered and generally front the roadway. As discussed above, homes that front onto a street cannot be effectively mitigated with a soundwall. ***Therefore, this potentially significant impact feasibly cannot be mitigated.***

San Timoteo Canyon Road from Alessandro Road to Live Oak Canyon Road to Redlands Boulevard (177, 179). The noise analysis shows a significant impact in the existing (2012) to existing plus project comparison. The noise increases by a little over 3 dB with resultant noise levels in the 65 to 66 CNEL range. There are four scattered residences along the roadway that would be impacted. As discussed above, homes that are scattered cannot be effectively mitigated with a soundwall. ***Therefore, this potentially significant impact feasibly cannot be mitigated.***

Theodore Street from State Route 60 to Highland Blvd (38). The noise analysis indicates that the project will cause a 2.9 dB increase in the year 2035 with a resulting noise level of 67.9 CNEL. There are 4 homes on Theodore Street that front onto the roadway. As discussed above, homes that front onto a street cannot be effectively mitigated with a soundwall. ***This potentially significant impact feasibly cannot be mitigated.***

State Route 60 from Moreno Beach Drive to Redlands Boulevard (33). A significant increase is shown for the existing case and for 2035. It is not feasible to modify the existing residential block wall to lower the increase in project generated noise because block walls are designed for the height that they are built. It is also infeasible for the Lead Agency to demolish the existing walls on private property and build new ones of increased height so that the noise level increases are lowered. ***Therefore, this potentially significant impact feasibly cannot be mitigated.***

WILL THE WORLD LOGISTIC CENTER TRUCK TRAFFIC IMPACT YOUR HOME OR NEIGHBORHOOD? SOUND WALLS MAY HELP LOWER SOUND LEVELS, BUT THEY DON'T STOP TOXIC DIESEL POLLUTION FROM ENTER YOUR YARDS AND NEIGHBORHOODS. SOME EXISTING WALLS WILL BE TORN DOWN AND REPLACED. PLEASE READ

Cactus Avenue from Redlands Boulevard to Street D (Towards eastern end of Cactus Avenue)(50). A significant noise increase is project for all four case years. Currently there is no soundwall along these homes. The homes along Cactus Avenue are elevated above the roadway. A soundwall will need to be located at the top of the slope along the residents rear yards. At the top of slope the residents currently have wrought iron fencing. The wrought iron fencing would need to be replaced with a masonry wall or retrofitted with a glass barrier. The walls would need to be 6 feet tall with respect to the rear yard. Roughly 1,000 feet of barrier would need to be provided depending on where Street D intersects Cactus Avenue. With the retrofit the noise levels would drop at least 5 dB, with the resultant noise levels around 63 CNEL in rear yard areas. A new 6 foot high wall at the top of slope for the existing residences that are on the south side of Cactus Avenue between Street D and Redlands Boulevard is needed for mitigation. The 6 foot wall will need to extend roughly 1,000 feet. Prior to the opening of Street D, the soundwall should be in place.

Cactus Avenue West of Redlands Boulevard (32). This area shows noise increases ranging from 1.5 dB to 5.1 dB depending on the study year. Only the 2035 case results in a significant noise increase. Single-family residences back up to this street with rear yards facing Cactus Avenue. Soundwalls are located along the residences that are approximately 6 foot high. Rear yard areas are approximately 60 feet from the centerline of the roadway. In 2035, the noise levels projected for the yard area, including the effects of the soundwall, will be 64.8 CNEL which will be below the City standard of 65 CNEL. The significant impact is not creating noise levels above the noise standard, but rather creating a significant increase in noise levels above the ambient noise level that would not occur without the project. It will be necessary to modify the existing residential block wall, or to remove and replace the wall to lower the increase in project generated noise.

John F. Kennedy Drive South of Cactus Avenue (9). The homes along John F. Kennedy Drive south of Cactus Avenue will experience significant noise increases for all four study years. Similar to the area along Cactus Avenue, this noise increase will be due to cars and light trucks, and not heavy trucks. The homes along the west side of the roadway are generally lower than the adjacent roadway have a roughly 6 foot soundwall. The homes on the east side of the roadway do not have any soundwalls and are elevated with respect to the roadway. Rear yards areas on both sides of the street generally are in the range of 60 to 90 feet from the centerline of the roadway. Without any sound barrier exterior noise levels at the residences along John F. Kennedy Drive will be 67.9 CNEL. The homes on the west side of the roadway have soundwalls and slope conditions that will reduce noise levels 6 to 10 dB, putting these homes well under the City criteria. Homes on the west side of the street will not be impacted. Homes on the east side of the street do not have soundwalls, and there will be a significant impact unless adequately mitigated.

The homes on the east side of John F. Kennedy Drive are elevated with respect to the road. Their rear yard area sits above the roadway, so there is a slope going up to their yards. At the top of slope the residents have wrought iron fencing. The wrought iron fencing would need to be replaced with a masonry wall or retrofitted with a glass barrier. The walls would need to 6 feet tall with respect to the rear yard. Roughly 5,000 feet of barrier would need to be provided. With the retrofit the noise levels would drop at least 5 dB, with the resultant noise levels around 62.6 CNEL in rear yard areas. A new 6 foot high wall at the top of slope for the existing residences that are on the east side of John F. Kennedy Drive between Cactus Avenue and Bay Hill Drive will be needed for mitigation. The 6 foot wall will need to extend roughly 5,000 feet.

Perris Boulevard between John F. Kennedy Drive and Iris Avenue (303). Only the 2035 case results in a significant noise increase for this area. In 2035 the project will result in a 1.7 dB increase raising the noise level to 72.2 CNEL for areas without a soundwall. This is a mixed area in terms of residential land use. There are 36 single-family homes along this roadway, some with a soundwall and some without. There is also a large multi-family development without a soundwall. Most of the homes either back up to the roadway or side-on to the roadway, making a soundwall feasible. Approximately half of the homes along this roadway do have a soundwall in place. For these homes, there would not be a significant noise impact since for the year 2035 the noise would increase by 1.7 dB going up to 66.2 CNEL.

The walls would need to be 6 feet tall with respect to the rear yard. Roughly 1,500 feet of barrier would need to be provided (Exhibit 19). With the retrofit the noise levels would drop at least 5 dB, with the resultant noise levels around 61 CNEL in rear yard areas. A new 6 foot high wall along the property line for the existing residences that are on Perris Boulevard between John F. Kennedy Drive and Iris Avenue is needed for mitigation (Exhibit 19). The 6 foot wall will need to extend roughly 2,000 feet. The impact is not anticipated to occur until sometime after 2022 and before 2035.

Redlands Boulevard from Dracaea Avenue to State Route 60 (12, 13). The noise analysis shows significant noise increases along this roadway segment for the 2012, 2022, and 2035 cases. There are scattered homes in this area that either face Redlands Boulevard (actually on Shubert Street) or are on Redlands Boulevard. As discussed above, homes that front onto a street cannot be effectively mitigated with a soundwall. *Therefore, this potentially significant*

Item No. E.3 *to be mitigated. SPREAD THE WORD- ABOUT THESE AND OTHER NOISE IMPACTS!!!*

PROJECT MEMORANDUM

Date: June 10, 2014

To: Jeff Bradshaw, City of Moreno Valley

From: Kent Norton, LSA Associates

Project: ProLogis Eucalyptus Industrial Park FEIR

Subject: PC Comment Letters

On April 24, 2014, the City Planning Commission held a continued public hearing on the ProLogis Eucalyptus Industrial Park project, including the Final Environmental Impact Report (FEIR). Just prior to the meeting, the following three additional comment letters were received from: (1) the law firm of Johnson & Sedlack (J&S) dated April 24; (2) George Hague, a local Sierra Club representative; and (3) the law firm of Lozeau Drury LLP dated April 23. It should be noted that these letters are attached for the reader's reference.

While the comments in these letters were similar in nature and scope to those made by these same firms on the Draft EIR, they focused on the responses to their many comments on the DEIR. The following responses are general in nature and mainly intended to clarify the information already provided in the Draft and Final EIR documents. There were no new issues raised by these additional comments as outlined in the California Environmental Quality Act (CEQA). Please let me know if you need any additional information in this regard.

1. Johnson & Sedlack Letter (April 24, 2014)

Comment A (page 1): *The FEIR has been updated to incorporate an August 31, 2012 letter from Lozeau Drury, LLP. The changes made and responses to comments in the updated FEIR illustrate, rather than resolve, defects of the EIR. For example, response to comment 12 at page 222 fails to address any of the proposed mitigation to further reduce GHG impacts where such effects are many times SCAQMD's proposed quantitative threshold.*

Response to Comment A: The response to comment 12 on page 222 of the FEIR does not address any of the proposed mitigation because, as explained in that response, the emissions of greenhouse gases by the proposed project are determined to be less-than-significant and therefore no mitigation is needed.

Comment B (page 1): *The addition of MM 4.6.6.1A provides for testing onsite for contamination by agricultural chemicals which should be done in the EIR prior to consideration by the City of Project approval due to the farming which occurred after the Phase 1 assessment and the risk of pesticides onsite not previously addressed.*

Response to Comment B: Responses 8 and 9 to Letter D-4A in the Final EIR go into great detail about the potential for contamination by agricultural chemicals on the project site, and the conclusion is there is only a low or minor potential. There is no indication that contamination is widespread, and almost of the site was previously surveyed for soil contamination, including soil tests for such chemicals. However, Mitigation Measure 4.6.6.1A was added to address this potential impact, as explained in the responses. There is no evidence that would lead a reasonable person to conclude that the potential for soil contamination by agricultural chemicals on this site was so high as to require soil testing and remediation prior to approval of the project. It is common in this portion of Riverside County to find former agricultural sites that have low or negligible levels of some agricultural chemicals as may be present on the project site. However, as outlined in

the indicated responses, these do not represent a significant environmental impact (i.e., one that would prevent approval of the project), and the additional mitigation measure will assure there will be no significant impacts in this regard as it will be implemented prior to grading or development of the site.

Comment C (page 1): *Air quality and health risk impacts are also shown to be understated, yet receive only brief responses in the FEIR. The responses to comments ignore/overlook whole portions of the comments made; for example, the responses made to Letter D-4B and D-4C fail to address the very important issues raised therein.*

Response to Comment C: The air quality and health risk impacts are all well documented and thoroughly analyzed. Nowhere has either been shown to be understated. In fact, as explained in the health risk assessment, the potential air quality and health risk impacts shown in the FEIR are analyzed using conservative assumptions so that they are intentionally overstated to be protective of the health of any individual affected by the air emissions from the projects construction and/or operation.

Comment D (pages 1 and 2): *Overall, the responses for this letter does not evidence good faith, reasoned analysis, or resolve the substantial concerns raised. More importantly, this minor update to the FEIR does not address or resolve the many significant flaws raised in the other comments on the EIR and made previously, which demand the EIR and its studies be significantly modified, updated, and recirculated prior to consideration of this Project for approval. The City should determine not to approve the Project and not to certify this defective EIR. It is apparent that this Project is good only for the developer and bad for the environment and people of Moreno Valley. The Project requires City approval of ten applications for development including a General Plan Amendment and Zone Change, undermining future planning for development in the City. The existing General Plan designation and zoning for the project site consists of a balanced collection of land uses to meet a specific need of the City, which this Project would entirely obliterate. (i.e. by converting for Project development land presently designated in the General Plan R15, R5, and R2; Zoning BP, BPX, R15, R5, RA-2, and PAKO-land).*

Response to Comment D: The EIR does provide a reasoned and reasonable assessment of the potential impacts of the proposed project, including changes in the General Plan and zoning designations for the site. The EIR identifies the significant environmental impacts that will result from implementation of the project even with the proposed feasible mitigation, as required by CEQA. It will be up to the discretion of the City to take appropriate action on the project in light of the whole record of evidence presented in the Draft and Final EIR documents.

Comment E (page 2): *The Project will also result in, as disclosed in the EIR, significant and unmitigated impacts to aesthetics, agricultural resources, air quality, population and housing, and transportation. In addition, many commenters cited a lack of evaluation, disclosure, and adequate mitigation regarding numerous other impacts, including health risks, air quality, GHGs, biology, etc. Given the harm to the community and region expected to be caused by the Project, and the failures of the EIR prepared for the Project, Project denial is well supported. At a minimum, the EIR and its technical studies must be significantly updated and recirculated before this Project is even considered for approval by the City.*

Response to Comment E: As required by CEQA, the EIR identifies the significant environmental impacts that will result from implementation of the project even with the proposed feasible mitigation. It should be noted that much of the delay in processing the project environmental documents in a timely fashion are due to the City's moratorium on development processing within the eastern SR-60 corridor during 2013, and responding to comments on the CEQA documents raised by conservation groups. There has been no empirical evidence submitted that would indicate updated technical studies would identify any new or different significant impacts of the project.

Comment F (page 2): *Additionally, Caltrans sent a letter to the City dated March 17, 2014 recommending that the City of Moreno Valley coordinate a state sponsored program of collecting transportation mitigation fees from development projects to make improvements to the State Highway System. I concur that such a fee program is essential to ensuring that all feasible traffic mitigation is adopted for this Project and others like it in the City. The City should take Caltrans' request to heart and work with the State in developing a mitigation fee program for highway impacts prior to making any approval relative to this Project. Until such a program is adopted, the City ignores its obligations to adopt all feasible mitigation for traffic impacts for this Project and others.*

Response to Comment F: The EIR outlines mitigation that is needed for project-related impacts, but a number of the recommended improvements are under the jurisdiction of Caltrans, not the City. It would be up to Caltrans to develop a regional mitigation program for freeway-related improvements, and certainly the City can encourage Caltrans to initiate such a program. However, as previously stated, the Caltrans-related improvements are not feasible according to the definition of CEQA since the lead agency (i.e., the City) does not have control over them. Therefore, the mitigation has to be determined to be infeasible at this time and the impacts determined to be significant.

2. George Hague Letter (April 24, 2014)

Comment A (page 1): *The developer states that even though a recent court case allows you to require Ag mitigation which will also serve raptor foraging, they are unable to find an AG mitigation bank in Riverside Co. I believe there will be an AG mitigation program by occupancy of the project and you could require mitigation at that time. The state does have such programs and the developer could use those—even if the county doesn't have an AG mitigation program.*

Response to Comment A: An Appeals Court decision (*Building Industry Association of Central California v. County of Stanislaus*) certified in November 29, 2010 may be more applicable to this situation. That case concluded that it is appropriate to mitigate at a 1:1 ratio for the loss of prime agricultural land through the acquisition of an offsite agricultural easement if such a program is established by a county or regional governmental entity. However, as outlined in the DEIR section, there is no established County or regional program, and active agriculture in western Riverside County is no longer economically viable or feasible. It should be noted that the State provides information on how to establish agricultural easements and mitigation banks, but the State does not fund or maintain such programs in western Riverside County.

Comment B (page 1): *Even though the developer believes they do not need to include the World Logistics Center (WLC) in their cumulative impacts, it is our opinion that the WLC was a foreseeable project based on newspaper articles, and conversations in the community.*

Response to Comment B: According to the procedures identified in CEQA, the list of cumulative projects is established at the time the baseline environmental conditions are set, which is the time the Notice of Preparation (NOP) is issued for the EIR. The NOP for the ProLogis EIR was issued on February 4, 2008 which was four years before the NOP for the World Logistics Center EIR which was issued on February 3, 2012. As much as the commenter would like the ProLogis project and EIR to be connected to the World Logistics Center project, CEQA does not allow the lead agency to “cherry pick” development information that occurs subsequent to issuing the NOP. In addition, the World Logistics Center project is highly controversial and it is not clear or reasonable to conclude at this time that project would be approved.

Comment C (page 1): *Caltrans wants a mitigation Bank. Will you require this project to participate in such? I am sure all in the room would appreciate anything you can do to mitigate noise on SR-60.*

Response to Comment C: The EIR outlines mitigation that is needed for project-related impacts, but a number of the recommended traffic improvements are under the jurisdiction of Caltrans, not the City. It would be up to

Caltrans to develop a regional mitigation program for freeway-related improvements, including noise walls, and certainly the City can encourage Caltrans to initiate such a program. However, as previously stated, the Caltrans-related improvements are not feasible according to the definition of CEQA since the lead agency (i.e., the City) does not have control over them. Therefore, the mitigation has to be determined to be infeasible at this time and the impacts determined to be significant. It should also be noted that there are already sound walls along the SR-60 freeway through much of the City, so it is unclear to what specific noise mitigation on the SR-60 the commenter is referring.

Comment D (page 1): *The WLC will cast a cancer plume over basically all of Moreno Valley. This project as you heard will add to it.*

Response to Comment D: The EIR examined the potential health risks of the ProLogis project which are relatively limited due to the size of the project, and as explained above in Response B, the ProLogis EIR was not able to include any information on potential impacts of the World Logistics Center project. The reader should note however that the World Logistics Center Specific Plan EIR does include an extensive analysis of potential project and cumulative health risks related to that project, which does include the ProLogis project in its cumulative projects list because the ProLogis project was in the City's development review process when the NOP for the World Logistics Center project was issued.

Comment E (page 1): *This project is being honest to a point with traffic impacts. Moreno Beach South will be impacted, including a new housing tract being built now near the substation. The environmental document also has impacts at Alessandro Blvd at Nason but not further west because of the City's 5 mile limit which isn't far enough to address full impacts of its traffic.*

Response to Comment E: The radius for cumulative projects that could contribute traffic to City streets was adequate for determining the significance of traffic impacts from the proposed ProLogis project. The commenter has not provided any empirical evidence that would suggest the traffic study parameters and methodology were not appropriate or not consistent with the City's long-established requirements for such studies.

Comment F (page 1): *The City's General Plan is now internally inconsistent with all the changes since its adoption and this project only increases that problem.*

Response to Comment F: The City has the discretion to determine at what point its General Plan must be updated to incorporate General Plan Amendments that have occurred since the last update of the General Plan. In addition, CEQA requires projects that propose any amendments to the General Plan to evaluate the potential environmental impacts of those changes in their CEQA compliance documents, which was included in the EIR for the ProLogis project. The commenter has provided no empirical evidence to indicate this or other General Plan Amendments would result in significant adverse impacts on the environment that have not either been mitigated to less than significant levels or that cannot be mitigated but the project provides various benefits to the community that outweigh the identified impacts (see the Findings of Fact and Statement of Overriding Considerations for this project).

3. Lozeau Drury Letter (April 23, 2014)

NOTE: This letter was too long to include in its entirety in this brief response memo, but the reader is encouraged to refer to that letter for the specific text of each comment as appropriate.

Comment A (page 2): *There is no substantial evidence to support the FEIR's remarkable assertion that the air quality mitigations applied to the Project will reduce GHG emissions by 70,000 tons per year. It is not sufficient under CEQA for the City to pick a few air quality mitigations of unknown efficacy and then simply assume that*

they will miraculously reduce the Project's 79,000 metric tons of GHG emissions down to less than 10,000 metric tons.

Response to Comment A: The FEIR never claims that the project-related emissions of GHGs will be reduced to an annual rate of 10,000 metric tons of CO₂e. As stated in the FEIR on page 109, “The Draft EIR (Section 4.3) made a determination that the proposed project would not conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases and no mitigation is required. However, it was determined that the proposed project would generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment and mitigation was proposed to reduce these project-specific effects to less than significant (Draft EIR, page 4.3-21 through 4.3-26).” It should also be noted that the 10,000 metric ton “limit” is a guideline and only a threshold used by the SCAQMD for evaluating its own projects – it has not been adopted as a legal standard for the City of Moreno Valley or other cities at this point.

Comment B (pages 2-3): *The FEIR must do more than make exaggerated claims of mitigation effectiveness.*

Response to Comment B: The FEIR does not make any claims related to the effectiveness of mitigation of project-related emissions of GHGs. The significance conclusions are not based on the effectiveness of any mitigation, but rather as described in Section 4.13.6, “...project-related GHG emissions and their contribution to global climate change impacts in the State are less than significant and less than cumulatively considerable because: (1) the project’s impacts alone would not cause or significantly contribute to global climate change, and (2) the project has no substantial effect on consumption of fuels or other energy resources, especially fossil fuels that contribute to GHG emissions when consumed.”

Comment C (page 3): *Claiming to rely on a qualitative assessment, the City instead applies bald assumptions, assuming that the air quality mitigations will have a dramatic effect on reducing GHG emissions from the project all the way down to a level of insignificance, i.e. less than 10,000 metric tons per year.*

Response to Comment C: See the Response to Comment B.

Comment D (page 3): *The second rationale set forth in the EIR is that “the project has no substantial effect on consumption of fuels or other energy resources, especially fossil fuels that contribute to GHG emissions when consumed.” How a project that will generate upwards of 5,000 vehicle trips per day would have no substantial effect on consumption of fuels is not further elucidated in the EIR.*

Response to Comment D: The basis for this assertion in the FEIR is that the project is not manufacturing vehicles, thus the vehicles that will travel to and from the project site are vehicles that already exist and are in use. The project will only cause them to be used in a different location. When analyzing local or even regional impacts this relocation of vehicles is important, however, when analyzing a global impact, the location of vehicles does not matter.

Comment E (page 3): The commenter suggests the cumulative analysis in the ProLogis EIR must include the World Logistics Center project.

Response to Comment E: According to the procedures identified in CEQA, the list of cumulative projects is established at the time the baseline environmental conditions are set, which is the time the Notice of Preparation (NOP) is issued for the EIR. The NOP for the ProLogis EIR was issued on February 4, 2008 which was four years before the NOP for the World Logistics Center EIR which was issued on February 3, 2012. As much as the commenter would like the ProLogis project and EIR to be connected to the World Logistics Center project, CEQA does not allow the lead agency to “cherry pick” development information that occurs subsequent to issuing the NOP. In addition, the World Logistics Center project is highly controversial and it is not clear or reasonable to conclude at this time that project would be approved. Therefore, the World Logistics Center project does not constitute “significant new information” at this time within the definition of CEQA.

Comment F (page 5): *The substantial evidence in the record establishes that the Project will have a significant impact on GHG emissions, including the sheer volume of its GHG emissions and its adverse impact on the City's ever achieving its GHG reduction targets. The FEIR confirms that the City has not gathered in any estimate of actual reductions of GHG emissions by any of the mitigation measures it purports will address those emissions. Hence, it is clear that there is no substantial evidence in the record to show that the Project will emit 10,000 metric tons or less per year of CO₂ equivalents.*

Response to Comment F: The FEIR does not use 10,000 metric tons of CO₂ equivalents as a threshold of significance nor make any claims that GHG emissions would be reduced to that level.

Comment G (page 6): The commenter believes the EIR underestimates the air quality impacts of the project because the project traffic study used the wrong trip generation rates.

Response to Comment G: The commenter is incorrect, the traffic study for the project did use appropriate trip generation rates as described in the Draft EIR Section 4.11 and the project Traffic Impact Assessment (TIA)(DEIR Appendix I). The City requires TIAs to use the latest trip generation rates established by the International Traffic Engineers (ITE) which was done in this case, based on similar kinds of projects in the region. The SCAQMD trip rates have not been vetted through regional traffic modeling maintained by the Southern California Association of Governments (SCAG) or the Western Riverside Council of Governments (WRCOG). Until they are, the City will continue to require the use of appropriate ITE trip rates for TIAs within the City.

Comment H (page 6): *The EIR Does Not Include Additional Feasible Mitigation Measures to Further Reduce the Project's Significant Impacts From its Emissions of NO_x and PM₁₀ and, Without Requiring Additional Measures, the City Cannot Adopt a Statement of Overriding Considerations. The measures include requiring electrified loading docks for all refrigeration units and the use of fuel cell trucks to reduce NO_x emissions.*

Response to Comment H: The FEIR includes all feasible mitigation available to reduce the emissions of NO_x and PM₁₀; however, these are not sufficient to reduce the emissions levels to less than significant. Regarding the two measures cited, the first would not reduce the emissions of trucks driving to and from the project site, only those from trucks while loading or unloading, a very small portion of the overall truck emissions. The second is not feasible until fuel cell trucks become commercially available.

Comment I (page 8): *The list of measures included in Mitigation Measure 4.3.6.5B should be mandatory and enforceable in order to be consistent with the CEQA Guidelines.*

Response to Comment I: The measures listed in Mitigation Measure 4.3.6.5B are intended to be suggestions for the developer to choose from to reduce energy consumption by 10% above Title 24 standards (as described in the FEIR Response to Comment D-3, No. 109).

Comment J (page 8): *LIUNA Local 1184 appreciates the change in the FEIR to make the energy efficiency requirement set forth in Measure 4.3.6.5A mandatory rather than voluntary. However, a number of the requirements embedded within the mandatory efficiency standard should also be adjusted to be mandatory requirements or otherwise clarified. For example, there is a requirement that lease/purchase documents shall identify that tenants are merely encouraged to promote a list of air pollution reduction measures. See DEIR, 1-27 – 1-28, Table 1.C; FEIR, pp. 58-59, 61-62. The FEIR should be revised to make these feasible tenant/purchaser measures mandatory as well.*

Response to Comment J: The measures listed in Mitigation Measure 4.3.6.5A (in the DEIR, the revised mitigation measure in the FEIR is 4.3.6.6.A) are intended to be suggestions for the developer to choose from to reduce energy consumption by 10% above Title 24 standards (as described in the FEIR Response to Comment D-3, No. 109).

Comment K (page 8): *Measure 4.3.6.5A also includes a vague requirement to “[i]ncorporate energy efficient space heating and cooling equipment.” This measure should be clarified to require that cooling for the main warehouse spaces at the Project shall be provided through evaporative coolers rather than air conditioners, or use new or different cooling technology that is at least as efficient. In addition, the mitigation should require the warehouse spaces to incorporate automated airflow and ventilation systems designed to minimize need for supplemental heating and cooling within the warehouse spaces. These measures are feasible, having been applied at other warehouse facilities.*

Response to Comment K: As described in the Response to SCAQMD Comment 1 on page 57 of the FEIR, the City desires to address the District’s recommendations to the extent feasible, so the applicant has agreed to allow the following modifications to Mitigation Measure 4.3.6.6A to incorporate the District’s recommendations to eliminate “encouraged” with stronger enforceable language. This is sufficient to satisfy the SCAQMD. The building HVAC system will be built in compliance with all California building codes resulting in a highly efficient system.

Comment L (page 8): *Currently, Measure 4.3.6.5A requires that “[a]ll buildings shall be designed to accommodate renewable energy sources, such as photovoltaic solar electricity systems, appropriate to their architectural design.” FEIR, p. 197. This mitigation measure should be revised to require that photovoltaic, or comparable renewable energy sources, be actually installed on all buildings sufficient to provide all of the energy needs of the Project and, if feasible, surplus energy to help offset the Project’s remaining pollution emissions.*

Response to Comment L: The GHG emissions resulting from project-related energy demand increases is approximately 2.75% of the total GHG emissions predicted from project operations. While the installation of photovoltaic (or comparable renewable energy sources) would reduce the energy demand somewhat, it would only affect this small percentage of the total project emissions. Thus, adding photovoltaic panels would have a negligible effect on the total GHG emissions.

Comment M (page 8): *Additionally, Mitigation Measure 4.3.6.5B currently appears inconsistent with Mitigation Measure 4.3.6.5A. Unlike Measure 4.3.6.5A, Measure 4.3.6.5B does not increase the improvement over energy efficiency standards to 20 percent as was proposed in the DEIR and which applies to the related Measure 4.3.6.5A. FEIR, pp. 194-201. In order to apply all feasible measures, Measure 4.3.6.5B’s list of measures should be made mandatory (replace “may” with “shall”) and the measure to exceed statewide energy efficiency requirements by 10 percent restored to a 20 percent exceedance. FEIR, pp. 194-96. In addition, a requirement that the Project use building automation systems to control and optimize the efficiency of its mechanical systems, including lighting, HVAC, exhaust dampers, fans, and ventilation louvers should be added to Measure 4.3.6.5B’s list.*

Response to Comment M: These mitigation measures were totally updated in the FEIR, as described in the Response to Comment 14 on page 103 of the FEIR: “Mitigation Measure 4.3.6.6A was modified and Mitigation Measure 4.3.6.6B was added to address construction equipment and vehicles operating for the project (see Final EIR, Section 3.0, *EIR Errata and Additions*).” These updates resolve the apparent inconsistencies.

Comment N (page 8): *The EIR Does Not Include Additional Feasible Mitigation Measures to Further Reduce the Project’s Significant Impacts From its Particulate Matter Emissions During Construction and, Without Requiring Additional Measures, the City Cannot Adopt a Statement of Overriding Considerations. An additional feasible mitigation measure that also would assist in assuring that the Project’s air quality pollution mitigations during construction are enforceable is a measure to require monitoring of dust plumes. SWAPE identifies “[m]onitoring for opacity for all construction activities, including grading, not just for “screening” and “turf overseeding” activities” as an additional feasible measure.*

Response to Comment N: The fugitive emissions of particulate matter (PM₁₀ and PM_{2.5}) during construction was shown to be very small compared to the SCAQMD significance thresholds - 18 lbs/day compared to the 150 lbs/day threshold for PM₁₀, 3.9 lbs/day compared to 55 lbs/day for PM_{2.5}. There is no need to take any actions to further reduce these already small emission rates.

Comment O (page 9): *The EIR dramatically understates the health risks that will result from the Project's construction phase because the health risk assessment it relies upon assumes construction will only occur for four months rather than the 11.5 months reported in the EIR.*

Response to Comment O: The rationale used for the screening-level HRA of construction emissions is that, while the total construction period will be about 11 ½ months, the only portion of that time that will have large diesel-powered construction equipment operating regularly is the 2 month grading phase. Assuming that there will be large diesel-powered construction equipment operating occasionally during the other phases, it was assumed that using 4 months of daily use of the large diesel-powered construction equipment would conservatively characterize the overall construction process.

Comment P (page 9): *In contrast to SWAPE's analysis, which fully discloses all of its inputs and models, "no modeling files or cancer risk calculations for the construction impacts analysis were provided in the DEIR or the FEIR" for the EIR's health risk assessment. Id., pp. 9-10. Hence, the substantial evidence available to the Commission and others indicates that cancer risks to the Project's neighbors are significant.*

Response to Comment P: The commenter is incorrect, the DEIR includes the full Air Quality technical analysis which contains the full documentation of the inputs, modeling and results files in Appendix C. The project HRA is based on recommendations and methodologies established by the SCAQMD for such studies, including reasonable worst case assumptions for project construction and operation. Certainly making other worst case assumptions as SWAPE has done would yield different results, but the City as the lead agency must ultimately make the determination as to what expert information it uses on which to base its evaluation of project impacts.

Comment Q (page 9): *The EIR also underestimates health risk impacts to workers to be employed at the Project site.*

Response to Comment Q: The HRA in the EIR fully documents the projected health risk levels to nearby residents, however, CEQA does require an analysis of impacts to onsite workers as these individuals are protected by OSHA regulations. In addition, CEQA requires an analysis of impacts of a project on the existing or baseline environment, and future workers of the project do not constitute baseline conditions.

Comment R (page 10): The commenter states the EIR fails to recommend feasible mitigation for loss of agricultural land.

Response to Comment R: As documented in Section 4.2 of the Draft EIR, farming is no longer a viable economic activity in this portion of Riverside County, and the General Plans of the County and City both identify land uses that will a transition from historical agricultural land to appropriate suburban land uses. This proposed project represents a step in that anticipated transition. Gail Egenes, Executive Director of the Riverside Land Conservancy, has indicated the agency does not have any established program to purchase agricultural easements or lands. Also, in consultation with the National Conservation Easement Database, Riverside County does not have any established agricultural easements.¹

Contributions to Riverside County Land Conservancy or the San Jacinto Basin Resource Conservation District by private land owners are not required as part of a City or regional mitigation plan for loss of agricultural land. Therefore, the decision whether to make any contributions in this regard would be at the discretion of the

¹ <http://nced.conservationregistry.org/browse/map>, accessed October 4, 2012.

developer in consultation with the City. For additional detailed analysis on this issue, see Responses 22 and 23 in the letter from Johnson & Sedlack (D-3) in the Final EIR. Since there is no feasible mitigation available, the impact has been identified as significant and unavoidable, and the City will have to adopt a Statement of Overriding Considerations as part of its Findings on the EIR prior to action on the project.

Comment S (page 11): The commenter requests additional information regarding soil sampling for residual pesticides.

Response to Comment S: Responses 8 and 9 to Letter D-4A from the same commenter in the Final EIR go into great detail about the potential for contamination by agricultural chemicals on the project site, and the conclusion is there is only a low or minor potential. There is no indication that contamination is widespread, and almost of the site was previously surveyed for soil contamination, including soil tests for such chemicals. However, Mitigation Measure 4.6.6.1A was added to address this potential impact, as explained in the responses. There is no evidence that would lead a reasonable person to conclude that the potential for soil contamination by agricultural chemicals on this site was so high as to require soil testing and remediation prior to approval of the project. It is common in this portion of Riverside County to find former agricultural sites that have low or negligible levels of some agricultural chemicals as may be present on the project site. However, as outlined in the indicated responses, these do not represent a significant environmental impact (i.e., one that would prevent approval of the project), and the additional mitigation measure will assure there will be no significant impacts in this regard as it will be implemented prior to grading or development of the site.

Regarding the proposed additional requirements for Mitigation Measure 4.6.6.1A, the City may adopt one or more of these items at their discretion and incorporate them into the Mitigation Monitoring Plan or Conditions of Approval as appropriate.

Appendix A –SWAPE Letter dated April 21, 2014

Response to Appendix A: The air quality data in this letter was used to prepare the Lozeau Drury comment letter addressed above. The specific comments made by SWAPE have been addressed in appropriate sections of the Lozeau Drury letter.

Appendix B – Clark & Associates Letter dated April 22, 2014

Response to Appendix B: The trip generation data in this letter was used to prepare the Lozeau Drury comment letter addressed above. The specific comments made by Clark & Associates have been addressed in appropriate sections of the Lozeau Drury letter.

Appendix C –World Logistics Center EIR: Selected excerpts of the air quality analysis were provided as a comparison to the ProLogis project.

Response to Appendix C: The data in this appendix was referred to by the commenter in relation to greenhouse gas emissions (GHG) and the City's GHG inventory. There were no specific comments in this appendix, only background info for certain comments by Lozeau Drury in this letter.

PLANNING COMMISSION STAFF REPORT

Case: PA07-0081 - Zone Change
 PA07-0082 - General Plan Amendment
 PA07-0083 - Master Plot Plan including Building 2
 PA07-0084 - Tentative Parcel Map 35679
 PA07-0158 - Plot Plan for Building 1
 PA07-0159 - Plot Plan for Building 3
 PA07-0160 - Plot Plan for Building 4
 PA07-0161 - Plot Plan for Building 5
 PA07-0162 - Plot Plan for Building 6
 P07-186 - Environmental Impact Report

Date: March 13, 2014

Applicant: Prologis

Representative: Prologis

Location: South of State Route 60 and east of Moreno Valley Auto Mall, at Fir Avenue (Future Eucalyptus Avenue) and between Pettit Street and the Quincy Channel.

Proposal: General Plan Amendment and Zone Change from existing Business Park, Business Park Mixed-use, R15, R5, and RA-2 land use designations to Light Industrial for 122 acres. The land use changes are required for development of six distribution warehouse facilities totaling 2,244,419 square feet with building sizes that range from 160,106 square feet to 862,035 square feet. The applicant also proposes Tentative Parcel Map No. 35679 to subdivide the project site into six parcels. A General Plan Amendment is also required for proposed changes to the City's circulation element and the Master Plan of Trails. Approval of this project will require certification of an EIR.

Recommendation: Approval

SUMMARY

The applicant proposes to develop a 2.2 million square foot industrial park on 122 acres subject to approval of a General Plan Amendment and Zone Change from BP, BPX, R15, R5 and RA-2 to LI, and certification of a Final EIR.

PROJECT DESCRIPTION

The applicant, Prologis, has submitted ten applications for development of the Prologis Eucalyptus Industrial Park Project, which include a General Plan Amendment, Zone Change, Master Plot Plan, related Plot Plans, a Tentative Parcel Map, and an Environmental Impact Report, in order to develop a 2,244,419 square foot industrial park on a 122 acre site (Assessor's Parcel Numbers 488-330-011, 012, -013, -017, -018, -019, -020, and -021) located South of State Route 60 and east of Moreno Valley Auto Mall, at Fir Avenue (Future Eucalyptus Avenue) and between Pettit Street and the Quincy Channel.

General Plan Amendment

The project site has current General Plan land use designations that include approximately 50 acres of Business Park, 36 acres of R15 (Residential – up to 15 units per acre), 23 acres of R5 (Residential – up to 5 units per acre), and 12 acres of RA-2 (Residential/Agriculture – up to 2 units per acre). The applicant proposes to change the land use designation for the entire project site to Business Park. The proposed change would expand the Business Park designation onto approximately 71 acres that is currently designated for residential development.

Land uses to the north include the adjacent freeway with Office Commercial, R2 and RA-2 zoned land north of the freeway. Land uses to the east include a mix of Light Industrial and Community Commercial zoned land and RA-2 zoned land with an approved warehouse facility located immediately to the east and a developed warehouse facility further to the east between Redlands Boulevard and Theodore Street. Land uses to the south include vacant RA-2 zone with developed tract homes across the channel from the project site.

The General Plan Amendment also proposes a change to the Circulation Element that would eliminate the connection from Fir Avenue/Future Eucalyptus Avenue to Eucalyptus Avenue/Future Encilia Avenue to the south. The change ensures that traffic generated by existing and proposed non-residential uses is kept separate from residents that live along Eucalyptus Avenue/Future Encilia Avenue to the southeast.

Additionally, the General Plan Amendment proposes changes to the Master Plan of Trails. The proposed change would remove an existing trail segment that runs north/south along the west side of the Quincy Channel between Fir Avenue/Future Eucalyptus Avenue to State Route 60. This trail segment was originally intended to cross the freeway on an overpass at Quincy Street. This overpass is no longer on the City's General Plan Circulation element. With the loss of the overpass, trail would end in a cul-de-sac at State Route 60.

Staff met with the City's Recreational Trails Board in February 2012 to discuss replacement of the dead end segment of the trail with a new segment of trail on the north side of Fir Avenue/Eucalyptus Avenue that would run from the Quincy Channel west to the site's western boundary ending at the Fire Station #58. The Board was supportive of the change. The applicant has agreed to install the new segment of trail.

Zone Change

The project site has current zoning designations that include approximately 49.5 acres of Business Park, 0.5 acre of Business Park Mixed-use, 36 acres of R15, 23 acres of R5, and 12 acres of RA-2. The applicant proposes to change the Zoning for the entire project site to Light Industrial. The proposed change to Light Industrial is compatible with the 50 acres that is currently within a Business Park General Plan designation but would replace approximately 71 acres of residential zone land with a Light Industrial zone. The proposal would also result in the removal of a portion of the site from the PAKO (Primary Animal Keeping Overlay).

Land uses to the north include the adjacent freeway with Office Commercial, R2 and RA-2 zoned land north of the freeway. Land uses to the east include a mix of Light Industrial and Community Commercial zoned land and RA-2 zoned land with an approved warehouse facility located immediately to the east and a developed warehouse facility further to the east between Redlands Boulevard and Theodore Street. Land uses to the south include vacant RA-2 zone with developed tract homes across the channel from the project site.

Warehouse distribution uses are permitted in both the Business Park and Light Industrial zones, but the size of the buildings proposed by the project requires a Zone Change to Light Industrial to allow for the warehouse facilities over 50,000 square feet.

Plot Plans

Master Plot Plan PA07-0083 proposes the development of an industrial park to include a total of 2,244,419 square feet of warehouse distribution on 122 acres. This application also includes Building #2 on Parcel 2 of TPM 35679 for development of an 862,035 square foot warehouse distribution building on 39.32 acres with 311 required employee parking spaces and 135 required truck parking spaces.

Plot Plan PA07-0158 for Building #1 on Parcel 1 of TPM 35679 proposes development of a 168,342 square foot warehouse distribution building on 8.84 acres with 100 required employee parking spaces and 21 required truck parking spaces.

Plot Plan PA07-0159 for Building #3 on Parcel 3 of TPM 35679 proposes development of a 160,106 square foot warehouse distribution building on 8.5 acres with 98 required employee parking spaces and 20 required truck parking spaces.

Plot Plan PA07-0160 for Building #4 on Parcel 4 of TPM 35679 proposes development of a 339,015 square foot warehouse distribution building on 15.66 acres with 180 required employee parking spaces and 36 required truck parking spaces.

Plot Plan PA07-0161 for Building #5 on Parcel 5 of TPM 35679 proposes development of a 390,102 square foot warehouse distribution building on 19.29 acres with 173 required employee parking spaces and 53 required truck parking spaces.

Planning Commission Staff Report

Page 4

Plot Plan PA07-0162 for Building #6 on Parcel 6 of TPM 35679 proposes development of a 325,038 square foot warehouse distribution building on 17.55 acres with 176 required employee parking spaces and 53 required truck parking spaces.

The loading and truck parking areas have been oriented away from adjacent residential zoned partials and meet/exceed the Municipal Codes minimum buffer distance of 250 feet.

All truck courts are screened by perimeter concrete tilt-up walls with a citrus tree row required along the State Route 60 frontage as an extension of the tree plantings along the rear of Fire Station #58. A tree row is also required along the Quincy Channel and southern property lines.

The project has been conditioned to provide standard parking lot and setback landscape to include ground cover shrubs and trees. Detention/water quality basins will be extensively landscaped. The project's Fir Avenue/Future Eucalyptus Avenue frontage will be developed with curb, gutter, parkway, sidewalk and a segment of multi-use trail. A segment of multi-use trail will also be installed on the west side of the Quincy Channel from Fir Avenue/Future Eucalyptus Avenue south to Eucalyptus Avenue/Future Encilia Avenue.

Tentative Parcel Map

Tentative Parcel Map No. 35679 proposes to re-configure the eight parcels located within the project site into six parcels with lettered lots to convey property to Caltrans for future development and to the City for public streets.

Site

The project site is comprised of vacant land that is mostly level and at grade with Fir Avenue/Future Eucalyptus Avenue and at or below grade of adjacent State Route 60. There are no trees, rock outcroppings or existing structures located within the limits of the project site. The project site includes a portion of the Quincy Channel which includes some riparian vegetation.

Surrounding Area

The project is located in an area that includes a mix of business park, office, commercial, residential and agricultural uses.

Developed land within proximity to the project site includes the Moreno Valley Auto Mall and Moreno Beach Plaza (Walmart) center to the west at Moreno Beach Drive, the 1.8 million square foot Highland Fairview Business Park (Skechers) warehouse facility to the east between Redlands and Theodore and large lot subdivisions in the RA-2 zone across the channel from the project site. Also immediately to the east is the site of the recently approved 800,340 square foot regional headquarters for ALDI Foods.

Access/Parking

The project site will be accessed directly from Fir Avenue/Future Eucalyptus Avenue via Moreno Beach Boulevard or Redlands Boulevard and State Route 60. This portion of Fir Avenue/Future Eucalyptus Avenue, including the bridge crossing at the Quincy Channel would be constructed by the applicant/developer as a condition of the project.

The driveways and interior drive aisles associated with the project have been approved by the Fire Prevention Bureau for fire truck access and turnaround. The site has also been designed for adequate truck maneuvering and turnaround within the designated loading zones. The project as designed satisfies all parking requirements of the City's Municipal Code.

Design/Landscaping

Site design of the proposed warehouse distribution facility is consistent with requirements of the City's Municipal Code.

The architectural design of the buildings is concrete tilt-up construction. Building and wall colors include earthtones, with varying amounts of accent colors and vertical features to break up the architecture of building. Roof top equipment will be screened from public view by parapet walls.

Staff worked with the applicant to ensure that all sides of the buildings include architectural treatment. The loading bays and trailer storage areas have been screened from view. The screen walls are of concrete tilt-up construction which will match the building designs and colors.

Landscaping for the project as proposed is at around 18% of the site area including the water quality/detention basins. The City's Municipal Code does not require a minimum percentage of landscape on a site. Instead, there are requirements for landscape setback areas along perimeter streets, parking lot landscape, street trees and landscape treatments around the perimeter of the buildings where visible from the public right-of-way. The project as designed meets the City's current landscape criteria.

Signs are not a part of this approval and will be reviewed and approved under separate administrative permit.

This project design conforms to all development standards of the Light Industrial zone and the design guidelines for industrial uses as required within the City's Municipal Code.

REVIEW PROCESS

The project was originally reviewed by the Project Review Staff Committee (PRSC) in September 2007. Modifications were required to the plot plan exhibits and preliminary grading plan.

Revised plans were submitted in January and August 2008 and again in July and November 2011 and July and October 2012. Upon review of a final draft of the site plan and completion of the Final Environmental Impact Report in early 2014, a determination was made to schedule this project for a Planning Commission public hearing on March 13, 2014.

Community outreach efforts by the applicant in 2012 included mail distribution of project brochures to area residents, neighborhood walks to pass out brochures and open house invitations for an open house held in August 2012 at the Moreno Valley Ranch Golf Club.

State Route 60 East Corridor Study

The City Council imposed a 45 day moratorium on development for properties located along the State Route 60 corridor on January 23, 2013. The moratorium was later extended for a year by Council through adoption of Ordinance 861.

The moratorium was imposed to allow time for staff to work with a consultant to prepare a highest and best use analysis of the area. The State Route 60 East Corridor Study was prepared to identify land use alternatives for vacant and underutilized parcels within four sub-areas or study areas of the corridor.

The completed study was presented to the City Council as a report item on January 14, 2014. The study presented three alternatives including a preferred alternative. The City Council received the study but took no action to approve the study. The study becomes a resource document for consideration in the review of land use change applications. The City Council also recognized that the moratorium would expire on January 23, 2014. The land use changes proposed by the preferred alternative included expansion of the Auto Mall and warehouse uses.

Automobile dealerships which are a permitted use within the Auto Mall Specific Plan to the west are not a permitted use in existing Business Park zone. A change in zone to Light Industrial as proposed by the project would allow for automobile sales as a permitted use.

In recognition of the guidance provided by the SR 60 East Corridor study and based on discussions with City staff, the applicant has agreed to a condition of approval that would state that no building permits could be issued for the warehouse distribution buildings for plot plans located immediately adjacent to the Auto Mall (Plot Plan PA07-0158 and Plot Plan PA07-0159) during the initial 18 months if approved. This would allow for the potential expansion of the Auto Mall in the short term.

ALTERNATIVES DISCUSSION

The following scenarios or alternatives are presented for the Planning Commissions consideration.

1. Approve the project as proposed. As stated previously, the project has been conditioned to not build the two warehouses (Buildings 1 and 3) located adjacent to the Auto Mall for the first 18 months of the approval. This would allow for the potential expansion of the Auto Mall in the short term. The staff report has been prepared in support of this alternative;
2. Deny the General Plan Amendment and Zone Change for the two sites (Buildings 1 and 2) located adjacent to the Auto Mall but approve the proposed land changes for the remainder of the project site. This would prevent warehouse facilities from being built on potential Auto Mall expansion sites, but would still allow for warehouse development to occur on most of the project site. However, denial of the land use changes would also prevent future development of automobile sales since auto dealerships are not permitted within the BP and R15 zones.
3. Deny the proposed land use changes and thereby deny the proposed industrial park. Denial of the land use changes would prevent the warehouses from being approved. Denial of the land use changes would also prevent future development of automobile sales since auto dealerships are not permitted within the BP and R15 zones.

ENVIRONMENTAL

Initial Study/Notice of Preparation

An Initial Study was completed after all discretionary applications were deemed complete. Based on the information within the Initial Study, an Environmental Impact Report (EIR) was recommended to be prepared. A Notice of Preparation for the EIR was issued on February 4, 2008, with the public comment period beginning on February 4, 2008 and ending on March 4, 2008. A public meeting to receive input on the issues to be covered by the EIR was held at City Hall on February 13, 2008.

Draft Environmental Impact Report

Subsequent to that meeting, draft environmental documents were prepared by the applicant's consultant LSA Associates, Inc. and submitted to the City and its peer consultant for review.

City staff and the peer review consultant reviewed the draft environmental documents for compliance with the California Environmental Quality Act (CEQA) Guidelines and required revisions to address identified questions and concerns. After revisions were incorporated into the document, the Draft EIR was circulated for a 45-day public review period, starting on July 18, 2012, and ending on September 4, 2012.

The Draft EIR was sent to all required State and local agencies and numerous interested parties on July 17, 2012, as well as to the City's Environmental and Historical Preservation Board. Thirteen comment letters were provided during the 45-day review period.

Final Environmental Impact Report

Responses to the thirteen comments received during the 45 day review period are included in the Response to Comments. The Response to Comments and related documents were mailed to all interested parties and responsible agencies on February 26, 2014, to allow for their review prior to the Planning Commission hearing, within the minimum notice period of 10 days required by CEQA. As was the case with the Draft EIR, the draft Final EIR was provided for public review at City Hall, the City Library and posted on the City's website.

Significant and Unavoidable Impacts

Analysis presented in the EIR indicates that the proposed project will have a number of potentially significant impacts. The EIR includes a number of proposed mitigation measures to reduce or eliminate potential significant impacts. Even with proposed mitigation, a number of potential impacts cannot be reduced to a less than significant level. As identified in the Final EIR document, these impacts are considered to be significant and unavoidable.

Where a project's impacts cannot be reduced to less than significant levels, CEQA allows a decision making body to consider a statement of overriding considerations and findings. CEQA requires the decision making agency to balance the economic, legal, social, technological or other benefits of a proposed project against its unavoidable environmental impacts when determining whether to approve the proposed project. This would include project benefits such as the creation of jobs or other beneficial project features versus project impacts that cannot be mitigated to less than significant levels. If the decision making body determines that the benefits of a proposed project outweigh the unavoidable adverse environmental effects, it may approve a statement of overriding considerations and approve the project.

Mitigation Measures

The EIR includes mitigation measures intended to reduce project-specific and cumulative impacts for Air Quality, Biological Resources, Cultural Resources, Hydrology and Water Quality, Noise, Transportation, and Greenhouse Gases and Global Climate Change. All other environmental effects evaluated in the EIR are considered to be less than significant, or can be adequately mitigated below significant thresholds.

Mitigation measures are included to reduce the environmental impacts where possible, even where the impacts could not be reduced to less than significant levels. All mitigation measures have also been included as conditions of approval for the project.

Approval and Certification

The Planning Commission will take public testimony on the EIR and project and forward a recommendation to City Council. Before the proposed project can be acted upon, the City Council will need to review the final environmental document, receive public testimony and either certify or reject the EIR and project Mitigation Monitoring Program.

NOTIFICATION

Public notice was sent to all property owners of record within 300' of the project. The public hearing notice for this project was also posted on the project site and published in the local newspaper. As of the date of report preparation, staff had one comment letter stating opposition to the project.

A copy of the above referenced letter is included in the staff report as part of Attachment #7. Attachment #7 also includes opposition letters submitted in 2012 in response to the circulation of the Draft Environmental Impact Report.

STAFF RECOMMENDATION

Staff recommends that the Planning Commission **APPROVE** Resolution No's. 2014-09 and 2014-10 and thereby recommend that the City Council take the following actions:

1. **CERTIFY** that the Environmental Impact Report (EIR) for the Prologis Eucalyptus Industrial Park Project (Attachments 9 and 10) has been completed in compliance with the California Environmental Quality Act; and
2. **ADOPT** the Findings and Statement of Overriding Considerations regarding the Final EIR for the Prologis Eucalyptus Industrial Park Project, attached hereto as Exhibit A to Attachment 2; and
3. **APPROVE** the Mitigation Monitoring Program for the Final EIR for the proposed Prologis Eucalyptus Industrial Park Project, attached hereto as Exhibit B to Attachment 2; and
4. **APPROVE** General Plan Amendment application PA07-0082 as shown on Exhibit A to Attachment 3; and
5. **APPROVE** Zone Change application PA07-0081 as shown on Exhibit B to Attachment 3; and
6. **APPROVE** Master Plot Plan PA07-0083 and related Plot Plans PA07-0158 through PA07-0162, subject to the attached conditions of approval included as Exhibit C to Attachment 3; and

7. **APPROVE** Tentative Parcel Map 35679 (PA07-0084), subject to the attached conditions of approval included as Exhibit D to Attachment 3.

Date: April 24, 2014 – Continued from the March 13, 2014 meeting

Applicant: Prologis

Representative: Prologis

Location: South of State Route 60 and east of Moreno Valley Auto Mall, at Fir Avenue (Future Eucalyptus Avenue) and between Pettit Street and the Quincy Channel.

Proposal: General Plan Amendment and Zone Change from existing Business Park, Business Park Mixed-use, R15, R5, and RA-2 land use designations to Light Industrial for 122 acres. The land use changes are required for development of six distribution warehouse facilities totaling 2,244,419 square feet with building sizes that range from 160,106 square feet to 862,035 square feet. The applicant also proposes Tentative Parcel Map No. 35679 to subdivide the project site into six parcels. A General Plan Amendment is also required for proposed changes to the City's circulation element and the Master Plan of Trails. Approval of this project will require certification of an EIR.

Recommendation: Approval

SUMMARY

The applicant proposes to develop a 2.2 million square foot industrial park on 122 acres subject to approval of a General Plan Amendment and Zone Change from BP, BPX, R15, R5 and RA-2 to LI, and certification of a Final EIR.

PROJECT DESCRIPTION

The applicant, Prologis, has submitted ten applications for development of the Prologis Eucalyptus Industrial Park Project, which include a General Plan Amendment, Zone Change, Master Plot Plan, related Plot Plans, a Tentative Parcel Map, and an Environmental Impact Report, in order to develop a 2,244,419 square foot industrial park on a 122 acre site (Assessor's Parcel Numbers 488-330-011, 012, -013, -017, -018, -019, -020, and -021) located South of State Route 60 and east of Moreno Valley Auto Mall, at Fir Avenue (Future Eucalyptus Avenue) and between Pettit Street and the Quincy Channel.

Background

A public hearing for this project was held on March 13, 2014. At the meeting information about the project and the related Final Environmental Impact Report (FEIR) was presented to the Planning Commission by Planning Division staff and representatives from LSA Associates, Inc. who prepared the FEIR. Following the staff report, comments were taken from the applicant and interested parties and residents.

The speakers included Gideon Kracov, an attorney representing Laborers International Union of North America (LIUNA). He was concerned that a second of two comment letters submitted by Lozeau Drury, LLP on behalf of LIUNA in response to the Draft Environmental Impact Report was not included in the Final Environmental Impact Report.

It was verified at the meeting that the City had received a second letter dated August 31, 2012, that should have been included in the FEIR. Following discussion with staff, the Planning Commission determined that the most appropriate action was to continue the item to the Commission's April 24, 2014 agenda, to allow for time to update the FEIR to include the August 31, 2012 letter and responses to the letter.

Following the March 13, 2014 meeting it was determined that there was an inadvertent omission in the distribution and tracking of the August 31, 2012 letter. Planning worked with LSA Associates, Inc. to update the FEIR to address the concerns raised in the letter. The FEIR was then redistributed to all agencies and interested parties and published on the City's webpage. Notice of the status of the FEIR and the Planning Commission's April 24, 2014 meeting was published in the newspaper, posted at the project site and sent to all property owners within 300 feet and all interested parties.

ENVIRONMENTAL

Final Environmental Impact Report

Responses to the fourteen comments received during the 45 day review period, including the August 31, 2012 letter from Lozeau Drury, LLP, are included in the Response to Comments. The updated Final Environmental Impact Report (FEIR) was mailed to all interested parties and responsible agencies on April 4, 2014, to allow for their review prior to the Planning Commission hearing on April 24, 2014.

The City issued a press release referencing the updated FEIR and the continued Planning Commission meeting and the updated Final EIR along with the Draft EIR and technical studies were provided for public review at City Hall, the City Library and posted on the City's website.

The concerns raised in the August 31, 2012 letter including segmentation of the project, loss of farmland, hazardous materials and soils, greenhouse gas, and air quality, have been addressed in detail in LSA Associate's response to comments.

Planning worked with LSA Associates, Inc. to provide responses to each of the concerns raised in the letter.

The site was previously surveyed for pesticides and removal of a former underground storage tank was documented and determined to result in no significant impacts in the Draft EIR. The following mitigation measure has been added by LSA Associates, Inc., in response to concerns raised in the letter, even though impacts would remain less than significant without the additional measure:

- **4.6.6.1A** Prior to issuance of a grading permit for the project, a qualified contractor shall test onsite soils for contamination by agricultural chemicals. If present in concentrations above established actionable levels or thresholds, these materials shall be removed and transported to an appropriate landfill by a licensed contractor. This measure shall be implemented to the satisfaction of the Building Division including written documentation of the disposal of any agricultural chemical residue in conformance with all applicable regulations.

The above mitigation measure has also been added to the conditions of approval for the project.

Significant and Unavoidable Impacts

Analysis presented in the EIR indicates that the proposed project will have a number of potentially significant impacts. The EIR includes a number of proposed mitigation measures to reduce or eliminate potential significant impacts. Even with proposed mitigation, a number of potential impacts cannot be reduced to a less than significant level. As identified in the Final EIR document, these impacts are considered to be significant and unavoidable.

Where a project's impacts cannot be reduced to less than significant levels, CEQA allows a decision making body to consider a statement of overriding considerations and findings. CEQA requires the decision making agency to balance the economic, legal, social, technological or other benefits of a proposed project against its unavoidable environmental impacts when determining whether to approve the proposed project. This would include project benefits such as the creation of jobs or other beneficial project features versus project impacts that cannot be mitigated to less than significant levels. If the decision making body determines that the benefits of a proposed project outweigh the unavoidable adverse environmental effects, it may approve a statement of overriding considerations and approve the project.

Mitigation Measures

The EIR includes mitigation measures intended to reduce project-specific and cumulative impacts for Air Quality, Biological Resources, Cultural Resources, Hydrology and Water Quality, Noise, Transportation, and Greenhouse Gases and Global Climate Change. All other environmental effects evaluated in the EIR are considered to be less than significant, or can be adequately mitigated below significant thresholds.

Mitigation measures are included to reduce the environmental impacts where possible, even where the impacts could not be reduced to less than significant levels. All mitigation measures have also been included as conditions of approval for the project.

Approval and Certification

The Planning Commission will take public testimony on the EIR and project and forward a recommendation to City Council. Before the proposed project can be acted upon, the City Council will need to review the final environmental document, receive public testimony and either certify or reject the EIR and project Mitigation Monitoring Program.

NOTIFICATION

Public notice of the April 24, 2014 Planning Commission hearing was sent to all property owners of record within 300' of the project. The public hearing notice for this project was also posted on the project site and published in the local newspaper. As of the date of report preparation, staff received a comment letter from Caltrans which is included as an attachment to the staff report.

STAFF RECOMMENDATION

Staff recommends that the Planning Commission **APPROVE** Resolution No's. 2014-09 and 2014-10 and thereby recommend that the City Council take the following actions:

1. **CERTIFY** that the Environmental Impact Report (EIR) for the Prologis Eucalyptus Industrial Park Project (Attachments 5 and 6) has been completed in compliance with the California Environmental Quality Act; and
2. **ADOPT** the Findings and Statement of Overriding Considerations regarding the Final EIR for the Prologis Eucalyptus Industrial Park Project, attached hereto as Exhibit A to Attachment 2; and
3. **APPROVE** the Mitigation Monitoring Program for the Final EIR for the proposed Prologis Eucalyptus Industrial Park Project, attached hereto as Exhibit B to Attachment 2; and

Planning Commission Staff Report

Page 5

4. **APPROVE** General Plan Amendment application PA07-0082 as shown on Exhibit A to Attachment 3; and
5. **APPROVE** Zone Change application PA07-0081 as shown on Exhibit B to Attachment 3; and
6. **APPROVE** Master Plot Plan PA07-0083 and related Plot Plans PA07-0158 through PA07-0162, subject to the attached conditions of approval included as Exhibit C to Attachment 3; and
7. **APPROVE** Tentative Parcel Map 35679 (PA07-0084), subject to the attached conditions of approval included as Exhibit D to Attachment 3.

1 Warmington to make sure that happened and unlike what sometimes the Mayor
 2 will try to make people believe, the Sierra Club and Audubon does not receive
 3 any financial benefit from our negotiations on that project or the present
 4 warehouses we're dealing with. It doesn't happen. None of that goes on. In fact
 5 there is a deficit if anything to the environmental community for these
 6 negotiations. I hope you'll take a minute and look through this. Don't bury it
 7 under a pile of papers and if you would like to go on one of these walks or see
 8 this area closer, my name is on enough emails to you that you can contact me,
 9 so please do. I'd appreciate showing them to you. You have a good evening.

10
 11 **CHAIR VAN NATTA** – Thank you very much and it is a beautiful book.

29
 30 **CHAIR VAN NATTA** – Okay we're going on now to our first Public Hearing Item;
 31 well actually the Public Hearing Item for today. Case Description PA07-0081
 32 Zone Change, PA07-0082 General Plan Amendment, PA07-0083 Master Plot
 33 Plan including Building 2, PA07-0084 Tentative Parcel Map 35679, PA07-0158
 34 Plot Plan for Building 1, PA07-0159 Plot Plan for Building 3, PA07-0160 Plot Plan
 35 for Building 4, PA07-0161 Plot Plan for Building 5, PA07-0162 Plot Plan for
 36 Building 6 and P07-186 Environmental Impact Report. The Applicant and Owner
 37 and Representative are all Prologis. The Case Planner is Jeff Bradshaw. Could
 38 we have the report please?

39
 40 **ASSOCIATE PLANNER BRADSHAW** – Thank you. Good evening Chair Van
 41 Natta and members of the Planning Commission. The item before you this
 42 evening is a proposal for a 2.2 million square foot industrial park to be developed
 43 on 122 acres located on the south side of State Route 60 east of the Moreno
 44 Valley Auto Mall at Fir or what is sometimes referred to as future Eucalyptus
 45 Avenue, between Petit and Quincy Street. The net acreage for this site is about
 46 116 acres and I think you see both acreages referred to in the Staff Report.

1 As described in the title of the Agenda, applications for this project include a
2 General Plan Amendment and Zone Change to establish a Business Park,
3 General Plan designation in a Light Industrial Zone for the entire site. Plot Plan
4 applications were also submitted for six warehouse distribution facilities as well
5 as a Tentative Parcel Map to create six parcels for development within the
6 Industrial Park. A General Plan Amendment is also required for proposed
7 changes to the City's General Plan Circulation Element as well as changes to the
8 Master Plan of Trails.

9
10 Approval of this project would require certification of an Environmental Impact
11 Report and the project presented to you this evening is for your review and for
12 recommendation to the City Council. The project site does have a current...
13 includes current General Plan and zoning designations for approximately 50
14 acres of the site are currently designated Business Park or Business Park Mixed
15 Use, 36 acres are designated R15 which is a multi-family zone, 23 acres are
16 designated R5 and 12 acres are designated RA2. Both of those are single family
17 residential zones.

18
19 The proposal would be to replace the 71 acres that is under the residential land
20 use designation with Business Park land use designation over the top. This
21 designation would then be compatible with the City's Industrial Zone categories.
22 The proposed Zone Change for the 50 acres that are BP would be compatible
23 with the General Plan; the proposal for the remaining 71 acres that is a
24 residential zone would be for Light Industrial zoning. This proposal would also
25 result in the removal of a portion of the site from what referred to as the PAKO or
26 the Primary Animal Keeping Overlay Zone. Warehouse distribution uses are
27 currently permitted in both Business Park and Light Industrial Zones. The
28 limitation within a Business Park is size. Structure are not allowed greater than
29 50,000 square feet. In the case of this proposal the structures are larger than
30 that and so the Light Industrial Zone is required in order to accommodate the
31 proposal.

32
33 The change in the General Plan Circulation Element would propose to eliminate
34 what is currently a connection from what is known as Fir or future Eucalyptus
35 Avenue. That road alignment currently curves down and connects through to
36 what is currently called Eucalyptus and would in the future would be Encilia. The
37 proposal here is to remove the connection to ensure that traffic... that either
38 existing traffic or traffic generated by the proposed project would be kept
39 separate from residents living to the southeast of the project. The additional
40 General Plan Amendment I refer to is a change to the Master Plan of Trails.
41 There is currently a trail segment on the west side of the Quincy Channel. That
42 trail segment runs... it is undeveloped that runs from Fir Avenue north to the
43 south side of State Route 60. The idea in the past was to provide a crossing at
44 the freeway. The General Plan Circulation Element has since been updated and
45 that overpass is no longer scheduled to be developed. With the loss of the
46 overpass, the trail would essentially be a dead end or end in a cul-de-sac on the

1 south side of the freeway. Staff met with the Recreational Trails Board in
2 February of 2012 to discuss replacing that segment with a segment of trail that
3 would run across or through the project site, it would tie into an existing trail
4 segment on Fir Avenue and continue across the project on the north side of Fir
5 and ending at the Auto Mall at Fire Station 58. The applicant has agreed to a
6 condition of approval to both remove the trail segment along Quincy and replace
7 that the longer trail segment through the project.

8
9 The Industrial Park itself proposes six warehouse buildings. They range in size
10 from approximately 160,000 square feet up to approximately 860,000 square
11 feet. The total building area upon completion would be approximately 2.2 million
12 square feet for the six buildings. The architectural design for the facility is similar
13 to other warehouse uses that you have reviewed in the past. It's concrete tilt-up
14 construction. The building and the screen wall colors would be earth-tones with
15 varying amounts of accent colors and vertical features to break up the
16 architecture. Staff worked with the applicant to ensure that that all sides of the
17 buildings would include architectural treatment, that the screen walls would be
18 designed in way that is compatible with the main building. We also worked on a
19 design that would ensure that the loading bays and truck storage areas were all
20 screened from view and all turned or oriented from adjacent residential zones.
21 The project as designed conforms to the City standard for Light Industrial Zone
22 as well as for development standards for industrial development here in the City.
23 Staff worked with LSA Associates in preparation of an Initial Study back in
24 February of 2008; through that exercise, identified those issues that needed to be
25 carried into an Environmental Impact Report.

26
27 Notice of preparation was distributed to the public for comment in early 2008.
28 Those comments were then used in the preparation of a Draft Environmental
29 Impact Report. Staff worked with the consultant in the preparation of that
30 document and it was provided to the public for public review for a 45 day period
31 beginning in July of 2012 and ending September 4th, 2012. That was circulated
32 to all State and local agencies, to any interested parties that had asked to be
33 kept informed of the process. In response to that, the City received 13 comment
34 letters during that time period. The consultant worked with Staff in the
35 preparation of responses to those comments that were prepared. Those
36 documents were provided to you. Prior to this evening's meeting, both the Draft
37 and the Final document; the Final including responses to the comments that
38 were submitted during the 45 day review. It is important to note I think that
39 through this process; the analysis; the EIR analysis for this project will have
40 noted a number of potentially significant impacts.

41
42 The document that was prepared includes mitigation measures that are proposed
43 to reduce the impacts or eliminate significant impacts to the extent possible.
44 There are circumstances or even cases with mitigation certain are not reduced to
45 a less than significant level and those are identified in both the Draft and the
46 Final EIR. Where those impacts cannot be reduced, the California

1 Environmental Quality Act does allow decision makers to consider a Statement of
2 Overriding Considerations that has also been provided to you guys for review. It
3 requires the decision making body to balance benefits to the community against
4 those potential environmental impacts when making a decision and if the
5 decision making body does determine that those benefits outweigh the
6 environmental impacts, then a Statement of Overriding Considerations would
7 need to be adopted and certified ultimately by City Council. Again the document
8 does include Mitigations Measures. Those are referenced both in the conditions
9 of approval for the project as well as the Mitigation Monitoring Program and it is
10 included in the documentation before you this evening.

11
12 Public Notice was provided for the Hearing this evening by our standard practice
13 to everyone within 300 feet of the project. The site was posted and notice was
14 also provided in the newspaper. Additionally notices of the hearing as well as
15 preparation of the Final EIR were provided to those that commented on the draft
16 as well as any interested parties that indicated that they wanted to receive copies
17 of those documents. Leading up to this evening, we did receive comment letters
18 which have been provided to you guys I think during the week by email and hard
19 copies available to you again this evening. There is also a memo that has been
20 prepared identifying conditions of approval for the Tentative Parcel Map that are
21 the preferred conditions. The conditions included in the Staff Report for the map
22 are more specific to a Plot Plan and so the replacement conditions are more
23 appropriate for the map and so Staff would be recommending those conditions
24 as the set to approve for Special Districts. Additionally there was another letter
25 provided this evening. I think most of the Commissioners have copies of that and
26 Staff hasn't time really to review the content of that letter. With us this evening is
27 our representatives from LSA Associates, the Consulting firm that prepared the
28 environmental document and with that, that will conclude my part of the
29 presentation. I'd like to turn some time over to Kent Norton with LSA who has
30 something he wanted to present on the environmental side. Additionally the
31 Traffic Consultant has prepared a traffic simulation or model for what the traffic
32 would look like within this facility that they are prepared to show you this evening
33 if you are interested in that and with that, I'll turn the time over to Kent Norton.

34
35 **CHAIR VAN NATTA** – Thank you

36
37 **SPEAKER NORTON** – Thank you Jeff. Good evening Commissioners. My
38 name is Kent Norton. I'm with LSA Associates. We prepared the Environmental
39 Impact Report. I was the Project Manager. The EIR represents 530 pages and
40 dozens of appendices. The Final EIR was 280 pages with additional appendices,
41 so I appreciate the effort you've gone to review that. I wanted to make a few
42 comments about some of the letters that were submitted prior to this hearing.
43 Most of the letters we've already responded to in the Final EIR; the Response to
44 Comments document, but there were a number of emails and brief letters and
45 then a few longer letters that were submitted this week. I would say most of the
46 issues have been dealt with in the EIR and the Final EIR Response to Comments

1 already, but there were a few items that were additional. One is there were a
2 couple of... a number of comments about independent review and the response
3 to comments providing evidence on its comments and we believe the documents
4 we prepared represent the independent judgment of the City and do represent
5 adequate information, that the decision makers such as the Planning
6 Commission can make an informed decision on. There were some comments
7 about the EIR needs to evaluate the cumulative impacts of the World Logistics
8 Center now that that has been put into the CEQA process, but if you'll recall this
9 EIR started its CEQA process far and well in advance of the World Logistics
10 Center document and CEQA... the process basically sets the baseline. When
11 the notice of preparation goes out for the environmental analysis and that was
12 back in 2008, so there is no CEQA requirement to analyze that additional project
13 as part of the cumulative growth. There were a number of comments about
14 mitigation and air quality, energy conservation. As outlined in the Final EIR there
15 were a whole host, almost a dozen mitigation measures in various sections
16 including air quality, traffic and energy that were modified and quite a bit of
17 additional text added to address comments by the AQMD as well as a number of
18 conservation organizations, so we believe we've answered a lot of the comments
19 about additional mitigation.
20

21 We provided documentation of what is feasible and what is infeasible and we've
22 added information about solar. The buildings will be solar ready and the project
23 is going to provide a 10 percent reduction from the green building code, Title 24
24 Energy Conservation Standards and just want to note, in doing some research
25 on solar facilities, Prologis, a lot of their other facilities, when they do these types
26 of buildings, the users that eventually come into them, do install their own solar
27 systems, but because there is no specific users designated for this project at
28 present, that can't be identified at this particular time. Along with energy
29 conservation, there were some comments about making it a LEED certified
30 project. The applicant has indicated they are buildings will and meet the
31 requirements of LEED certified buildings, but again they don't have specific
32 users, so that would be incumbent upon individual users to apply for that
33 process, but they will meet a lot of standards of the LEED process. There were a
34 number of comments and I'll just mention this in passing, a number of articles
35 attached to some of the comments about Sketchers and Walmart warehouses
36 and a lot of the comments were kind of trying to draw a comparison between the
37 two. There is really no comparison. This is a different applicant; and however
38 people feel about those particular warehouse developers, this project stands on
39 its own and we believe the documents we provided give you the information you
40 need to make an informed decision. With me tonight, I have Megan Macias who
41 is head of our Traffic group and Ron Brugger with our Air Quality group and all of
42 us are available to answer any questions you have following your review and
43 discussion of the EIR.
44

45 **CHAIR VAN NATTA** – If it's okay with the Commissioners, I'd like to hear the
46 various different reports and then we can go back and ask questions of the

1 different ones rather than taking them one by one. Is that okay with everybody?
2 Okay yes we would like to see the traffic study next.

3
4 **SPEAKER BRUGGER** – At this time... okay.

5
6 **INTERIM PLANNING OFFICIAL ORMSBY** – While we're switching speakers, I'd
7 just wanted to add that the City completed independent review of the
8 Environmental Impact Report and there was also a peer review completed by
9 Wildan and Associates under their contact with the City.

10
11 **SPEAKER MACIAS** – Good evening. While the simulation plays, I can say a
12 few words about the Traffic Study and if you have any particular questions I could
13 answer those. The traffic simulation that we put together is intended to represent
14 the 2035 traffic volumes. It is the 2035 with the proposed project, so this
15 includes a number cumulative projects that are proposed to be built, both in the
16 vicinity of the project as well as south on Moreno Beach Drive east and west of
17 the project as well. Some of the things you'll notice is on Eucalyptus east of
18 Moreno Beach Drive there is not as much traffic as we have actually coming
19 north on Moreno Beach as well as coming from the west, so the majority of the
20 traffic movements that we were seeing in that area is not necessarily coming
21 from the project, but there is a significant amount of background traffic out there
22 both in the short term cumulative as well as in the 2035 conditions. And then
23 also while the traffic simulation is playing, I could say a words about the findings
24 of the Traffic Study.

25
26 We did look at opening year cumulative. We looked at 2035 which is the build
27 out year or I should say it is the horizon year of RIV (?) Town Traffic Model. We
28 also looked at the build out conditions for the entire City and what we found is
29 that the opening year conditions and the opening year cumulative conditions, the
30 payment of both the City's development impact fee as well as the Regional
31 TUMF fee would mitigate any impacts of the proposed project with the exception
32 of some level of service deficiencies which were on the freeway mainlines.
33 Those were identified in the EIR as significant and unavoidable impacts and the
34 reason being is that the City does not have control over CalTrans facilities, nor is
35 there a mechanism for the applicant to either pay into a program to improve
36 those or to make the improvements on their own. In the 2035 and the build out
37 conditions there were some additional improvements that are required beyond
38 the DIF and the TUMF fees. Those improvements are identified in the 2035.
39 They're minor improvements involving signal modifications and minor changes to
40 striping at a couple of intersections. We've identified the project's fair share of
41 those improvements in the Traffic Study and those are feasible improvements
42 and can be implemented. The simulation goes on for several more minutes, so if
43 you want we can continue to leave this in the background while you continue with
44 the Public Hearing or if you have any specific questions, I can answer them.

1 **VICE CHAIR GIBA** – Is that simulation; can you move that up to the 60 freeway?
2 Is that part of the simulation or is it just...

3
4 **SPEAKER MACIAS** – The 60 freeway is not simulation because the City does
5 not have control over that and we're not proposing improvements to the 60
6 freeway, so therefore we didn't include it in the simulation. Many of the issues
7 that we discussed with Staff had to do with the trip generation of the project and
8 questions about whether local intersections such as at Moreno Beach Drive and
9 Eucalyptus, what the contribution of the project was at those locations, so we did
10 not include the freeway in the simulation.

11
12 **CHAIR VAN NATTA** – Did you include Redlands in the simulation?

13
14 **SPEAKER MACIAS** – We did include Redlands and I think if we hang in there
15 long enough, I could pull up the actual simulation. We could move over to there.
16 This what you are seeing is just a video presentation of it. So what you'll notice
17 is that Redlands looks much less congested in this traffic simulation and as a
18 matter of fact there are many fewer vehicles on Redlands in this condition which
19 is what we reported in the Traffic Study as well. What I can do is I'm going to
20 speed up the simulation because when you are watching it in real time like now,
21 it is sort of like watching grass grow so that way you can see the cars a little bit
22 faster. This is the pm peak hour and of course this includes all improvements
23 that are noted as mitigation measures in the Traffic Study, so that's why it seems
24 better than what you experience today at the intersection because it is
25 significantly improved and there is additional capacity that has been provided
26 which is what will be provided with the improvements that are noted as the
27 mitigation measures of the report.

28
29 **COMMISSIONER LOWELL** – I read in the report that there were upwards of
30 2,000 truck trips a day. Is that true? Is that included in the traffic model?

31
32 **SPEAKER MACIAS** – I'm referencing the trip generation so I can give you the
33 correct numbers. So the total trip generation... the trip generation is looked at in
34 two ways. It's looked at as total vehicles and we also break it out in what we call
35 passenger car equivalence, which recognizes the impact of a truck is much
36 greater than the impact of a passenger car, so the total daily trip generation is
37 4,409 vehicles, so when you ask is there is actually 2,000 trucks per day, there
38 are approximately 2,000 truck trips per day and that's two-way trips, so that
39 would mean 1,000 trucks in and 1,000 trucks out and that is 2, 3 and 4 axle
40 trucks, so that is not 2,000 four axle trucks, it is actually broken out into 2 axle
41 trucks which is 238 and 3 axle is 505 and the large trucks is 1,246 and remember
42 that is one way trucks, so it's really 600 in and out of the project.

43
44 **COMMISSIONER LOWELL** – That compares to a residential development I
45 believe; average residential house and residential development car trips a day.
46

1 **SPEAKER MACIAS** – It actually generates about 9 ½ per unit, for single family
2 residential.

3
4 **COMMISSIONER LOWELL** – For a 150 lot tract like I live in, you are talking
5 about 1,500 car trips, so we're talking this entire development is going to
6 generate about 3 ½ times more traffic than my little housing development.
7

8 **SPEAKER** – Yes but you have to look at it in terms of the size of the...
9

10 **COMMISSIONER LOWELL** – That's what I was implying that this is a larger area
11 and mine is only about 40 acres and we're generating that much trip traffic
12 generation on the 40 acres as opposed to this large proposed project, so the
13 density of trips per acre is a lot less than my housing tract.
14

15 **SPEAKER MACIAS**– Yes that's correct and I was going to point out we also did
16 look at doing a comparison between if the General Plan designation for the
17 project site was built, how many trips would the General Plan generate in
18 comparison to the project and what we found is that the project actually
19 generates 885 fewer and peak hour 939 fewer pm peak hour and 6,702 fewer
20 daily trips, so it is a less intense use of the site than it would be under the
21 General Plan designation, which includes 845 dwelling units and 41 acres of
22 industrial business park.
23

24 **COMMISSIONER LOWELL** – In the Traffic Study, how far of a sphere of
25 influence did you reference?
26

27 **SPEAKER MACIAS** – Well the Traffic Study includes... we did a sensitivity
28 analysis looking at the 215/60 interchange at the request of City Staff just to
29 know what percentage of vehicles would we be adding to the interchange. We
30 didn't analyze that as part of the study. About the farthest we went within...
31 looking at intersections, we looked at Nason Street and Redlands Blvd., so one
32 interchange to the east and west and then in terms of our freeway analysis let me
33 look and make sure I don't tell you the wrong thing...we went from Pigeon Pass
34 Road to Redlands Blvd. looking at the freeways.
35

36 **COMMISSIONER SIMS** – What was the traffic... what was the effect at Pigeon
37 Pass and what was the easterly intersection?
38

39 **SPEAKER MACIAS** – Well there is a lot of different numbers here so... would
40 you like to know... should we be talking about the 2035 condition? Would you
41 like to know existing? We'll talk about the 2035 since that it is the worst case.
42

43 **COMMISSIONER SIMS** – Well I guess what would be current; what is it today
44 and what would it be at 2035?
45

1 **COMMISSIONER LOWELL** – Well 2035 is the ultimate condition. Does that also
2 include World Logistics? Does that include the residential or just this Prologis
3 development in 2035?
4

5 **SPEAKER MACIAS** – Well 2035 is based on the RIV Town Traffic Model so it
6 would include pretty much the General Plan designation for not only land in
7 Moreno Valley but in other cities in the area, so it is kind of considered the
8 General Plan build out. Now there is recognizing that the City of Moreno Valley
9 may not be built out by 2035. We do look at a build out condition but in terms of
10 the horizon year of the RIV Town Model, we're pretty safe to say that that's a
11 build out condition for the area, so that's when we talk about 2035. You asked
12 about existing...
13

14 **COMMISSIONER SIMS** – So my question would be information that I'd like is
15 what would be on the 60 freeway at the most westerly intersection, what would
16 be the current truck traffic or I guess total traffic and then do you have that
17 broken down into truck traffic and then could you then also tell me what it is at
18 the most easterly section of the 60... did you say Theodore?
19

20 **SPEAKER MACIAS** – You know what, unfortunately I don't have it broken down
21 into truck traffic. I can tell you what the total vehicles are and I can tell you what
22 the level of service is.
23

24 **COMMISSIONER SIMS** – That would be perfect. That was going to be my next
25 question is, what the current and then future level of service at those two
26 intersections.
27

28 **SPEAKER MACIAS** – Okay, so the current level of service... this is looking at
29 the freeway segments which is what you wanted; the freeway mainline... okay,
30 so the freeway mainline on Pigeon Pass, we'll say at the am peak hour it is level
31 of service D and the pm peak hour it is level of service E. That is the existing
32 condition. That is going eastbound. In the westbound direction and actually this
33 is at Heacock Street, the am peak hour is F and the pm peak hour is C. That is
34 existing conditions without the project. If we look at existing conditions with the
35 project in the eastbound direction at Pigeon Pass, with the project it is level of
36 service D in the am peak hour and it is level of service E in pm peak hour, so
37 there is no change in the level of service. In the westbound direction in the am
38 peak hour it is still level of service F. There is no change in the westbound
39 direction and in the pm peak hour it is level of service D, so there is one level of
40 service change on the freeway mainline. And then you asked about the east
41 limits as well, so in the east limits...
42

43 **COMMISSIONER SIMS** – What intersection is that?
44

45 **SPEAKER MACIAS** – Well it is a freeway segment, so it's the segment between
46 Pigeon Pass Road and Heacock Street. I'm going to put up the map from our

1 Traffic Study so that I can reference that. Okay, you know what, unfortunately
2 this is our study area intersection, so I don't have a map which is large enough to
3 show the full extent of the freeway analysis on the screen, so I apologize for that.
4 I didn't finish answering your question I believe, so we were on the...you wanted
5 to know the easternmost boundary of our study area. Okay in the existing
6 condition, this is the freeway segment between Moreno Beach Drive and
7 Redlands Blvd. which is the farthest east that we looked, so in the eastbound
8 direction in the am peak hour it is level of service C and in the pm peak hour it
9 is level of service B and in the westbound direction it is same; it's C in the am
10 peak hour and B in the pm peak hour and if we look at it with the project this is
11 still existing with the project, this shows the project's direct impact, eastbound in
12 the am peak it is C and in the pm peak it's B, so there is no change and
13 westbound in the am peak it is C and in the pm peak it is C, so there is one
14 change in the westbound direction in the pm peak hour between Moreno Beach
15 Drive and Redlands Blvd. Does that fully answer your question in regards to
16 freeways?

17
18 **COMMISSIONER SIMS** – Yeah and the other question I have, so the way I
19 understand from the Staff Report in reading through the piles of paper here, is
20 that the notice of preparation for the project went out in 2008 prior to other
21 projects in the area, so the cumulative effects of the project based on the
22 transportation side of it are based on what was current land use planned and
23 General Plan designations at the time the notice of preparation went out.

24
25 **SPEAKER MACIAS** – It is also based on... it is really based on applications that
26 the City had received at the time of the notice of preparation, so for example the
27 full World Logistics Center was not an application at that time, however the full
28 General Plan build out or what we are calling the 2035 analysis, it would not have
29 changed significantly between then and now, because as I said it is based on the
30 RIV Town Traffic Model and so there has not been a major update to the traffic
31 model in the last few years and so therefore the socio economic data and the
32 model has not significantly changed for the build out condition.

33
34 **COMMISSIONER SIMS** – Can you explain to us and everybody that is listening
35 what designations of level of service in a qualitative way what that means, so if
36 I'm sitting on the 60 and I'm going from B to a C or E to a D, what does that
37 mean to me? Am I sitting there going hmmm, I can't get off the freeway for 20
38 minutes or what does that mean?

39
40 **SPEAKER MACIAS** – Okay, generally you'll be experiencing somewhat free flow
41 conditions up through level of service C, I would say. At level of service C you'll
42 start to notice some friction, so between C and F we're going to say that F is
43 where you are stopped... F is you know there is very little through put, so E is
44 that condition before F where you've got some stop and go and D is sort of that
45 transition between stop and go and we're completely stopped, so I think that is
46 something you can kind of you know relate with. F is the condition you

1 absolutely don't want to be in and E is the sort of like this is tolerable and I think I
2 can kind of see I am going to get there at some point. In extreme layman's terms
3 is how I'll put that.

4
5 **COMMISSIONER SIMS** – Yeah can you put up... is there a map that shows the
6 improvements on... when I was looking at this there were so many mitigations
7 and things and kind of hard to get your mind around what each of the
8 improvements are and when they are going to happen, so it does not appear that
9 there is any improvement to the freeway in itself and we heard from Staff that
10 that is because there is no jurisdictional way to acquire and it is through TUMF
11 fees I assume that money would be paid, so you are showing on your traffic
12 simulation, you were showing improvements on the eastbound Redlands off-
13 ramp. How do those fit into the timing and phasing of the improvements?

14
15 **SPEAKER MACIAS** – Okay there are three...

16
17 **COMMISSIONER SIMS** – The timing and phasing of the project, so you know is
18 the off-ramp built or is that an assumption that the off-ramp is built, that the use
19 of the TUMF fees are going to be prioritized to fix that problem in Cal Trans right
20 away or how does that get done?

21
22 **SPEAKER MACIAS** – Well the TUMF fees are based on a priority list that is
23 established by WRCOG and so the priority list is already established and I
24 printed out the latest short term projects before I came here tonight, so for
25 example the Moreno Beach Drive interchange is in two phases. Phase one as
26 you know is already beginning and included and is already built. Phase two, the
27 north side, is still to be programmed; however the money is there in the program.
28 I don't know that the approval of one project you know hastens the
29 implementation of that improvement and an interesting thing to note was I was
30 re-reading the cumulative analysis in the study as I was sitting here and the
31 cumulative projects in this area, so residential projects, there is a Lowe's Center.
32 There are several other projects we've included. Cumulatively, they generate
33 quite a few more trips than this project does, so the question of would the
34 interchange construction be hastened by this project, I think is you have to look
35 at the fact of this project in relation to everything else in the area is I don't want to
36 say it's insignificant because it not, but it is not the majority of the trips that
37 currently have applications into the City.

38
39 **COMMISSIONER SIMS** – I thank you for that explanation, but my question is the
40 improvements on the off-ramps at Redlands Blvd., when would those be
41 implemented as part of phasing of the project?

42
43 **SPEAKER MACIAS** – The improvements to the off-ramps at Redlands Blvd. I
44 believe are part of the TUMF improvements. I believe they are part of TUMF
45 improvements which I do not know when those... I could find out before the end
46 of meeting.

1 **CHAIR VAN NATTA** – That was also a condition of a different project.

2
3 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** –
4 Commissioner Sims, is there a particular item?

5
6 **COMMISSIONER SIMS** – I don't have the map in front of me here but I saw it on
7 the simulation. You were showing the off-ramp improvements and so forth. I
8 guess what I'm just kind of... the TUMF fees; the pro rata share of the TUMF
9 fees is going to propose to pay for mitigation improvements, but is there any
10 linkage with the improvements to the project or is it just when the TUMF fees get
11 allocated and programmed to do the work.

12
13 **SPEAKER MACIAS** – It is when the TUMF fees get allocated and the Redlands
14 Blvd. improvements are not programmed in the short term program of the TUMF,
15 so it is going to be some time in the future after Moreno Beach is implemented
16 and I don't know the year, but like I said I could get that information for you, but it
17 doesn't have anything to do with the timing of the project.

18
19 **COMMISSIONER SIMS** – In your analysis of the traffic, so the Traffic Study and
20 the simulation shows traffic based on the situation with the implemented
21 improvements; anticipated implementation of improvements and so if we go;
22 that's only about 15 or 20 years from now if TUMF fees aren't generated and
23 don't get applied here, is there a traffic analysis in the absence of the
24 improvements that shows the level of service for Redlands and Moreno Beach
25 and the freeway?

26
27 **SPEAKER MACIAS** – Yes, with project analysis and the Traffic Study does not
28 include all of the improvements. The improvements are added as mitigation
29 measures because they are both adopted fee programs and so therefore they
30 are available to be considered as project mitigation and quite frankly especially
31 for the DIF, that is the purpose of that program is to mitigate impacts of future
32 development within the City, so our analysis wherein we identify the impacts of
33 the project does not assume that those improvements are in place.

34
35 **COMMISSIONER BARNES** – Excuse me, I have a question regarding going
36 back to the TUMF improvements and schedule. You had mentioned that there
37 weren't improvements currently on the schedule. Is there anything within the
38 sphere of influence of this project on the current TUMF construction schedule
39 that would impact any of your analysis? So are there any TUMF funds being
40 spent in the locale or area of this project?

41
42 **SPEAKER MACIAS** – Yes there are TUMF funds being spent in the area of the
43 project. They are included as part of our project mitigation because the project
44 will pay its fair share of the TUMF fees, so they'll be paying into those
45 improvements which are the Moreno Beach Drive interchange, the Redlands
46 Blvd. interchange.

1 **COMMISSIONER BARNES** – I think what I’m asking is are there any actual
2 projects in the schedule for TUMF that you are aware of? Is there a published
3 schedule of upcoming TUMF funded projects?
4

5 **SPEAKER MACIAS** – There is a published schedule and what I’m holding here
6 is the five year transportation improvement program and included in that is the
7 Nason Street interchange as well as the Moreno Beach Drive interchange.
8

9 **COMMISSIONER BARNES** – Okay so with both of those are in the five year
10 schedule.
11

12 **SPEAKER MACIAS** – Correct. It is the Redlands Blvd. that is farther than five
13 years and I don’t know what the year is.
14

15 **COMMISSIONER BARNES** – Thank you, that was my question.
16

17 **COMMISSIONER LOWELL** – If I’m not mistaken, I believe Nason Street over-
18 crosses... (Inaudible... no sound)
19

20 **COMMISSIONER BARNES** – So the five...that’s right, so what she has
21 mentioned, the five year plan has already been built actually, so there is nothing
22 pending in that five year plan.
23

24 **COMMISSIONER LOWELL** – I believe it’s more of a question for Staff, but I
25 remember hearing at one of the City Council meetings...
26

27 **CHAIR VAN NATTA** – I believe there is still additional improvements yet being
28 worked on Moreno Beach.
29

30 **INTERIM PLANNING OFFICIAL ORMSBY** – There is at Moreno Beach, but we’ll
31 have Michael Lloyd respond to the question.
32

33 **VICE CHAIR GIBA** – Am I reading this correctly, in your mitigation measures...
34 otherwise completed prior to project opening that prior issuance to certificate of
35 occupancy, the applicant shall construct the following improvements installing a
36 traffic signal condition then those are not being finished, you’ll at least put in
37 traffic signals and add a northbound left turn lane, a southbound left turn lanes. If
38 the improvements are constructed by others prior to the certificate of occupancy
39 the applicant shall pay its fair share towards the DIF.
40

41 **SPEAKER MACIAS** – I believe that applies to the intersection of Redlands Blvd.
42 and Fir.
43

44 **VICE CHAIR GIBA** – Redlands Blvd. and Fir Avenue
45

1 **SPEAKER MACIAS** – Eucalyptus... correct and I believe the project applicant
2 has agreed to if... those are also conditions of another project to construct the
3 traffic signal at that location and so whichever project is in first would construct
4 that improvement, so if the applicant of this project does construct the
5 improvement then they would be applying for some reimbursement of that
6 through the City’s Development Impact Fee program since that is programmed in
7 the fee program.

8
9 **CHAIR VAN NATTA** – Okay I have one last question here on the traffic here. I’d
10 like to hear some of the other presentation. We can always come back with
11 additional questions and I’m sure there are other speakers who might have
12 questions on that too, but on this traffic flow and traffic study pattern and so forth,
13 what is the anticipated route that trucks of all sizes would be using to access this
14 project both coming in and going back out. What are you seeing as the route
15 they would take?

16
17 **SPEAKER MACIAS** – Trucks would be using both Redlands Blvd. as well as
18 Moreno Beach Drive. It is anticipated that they are going to be and I’m looking
19 for the trip distribution to make sure that I’m not speaking out of turn here, but
20 they would be mostly using the two interchanges to access the freeway; that
21 there would be very few trucks going south into the City or into residential areas
22 as it would be mostly warehousing facilities to be shipping offsite into more
23 regional areas.

24
25 **CHAIR VAN NATTA** – Okay that was my last question on that. Did we have
26 another presentation by the applicant of any other phase?

27
28 **ASSOCIATE PLANNER BRADSHAW** – I believe that would conclude the Staff
29 Report of the presentation and the applicant is here to speak when you are ready
30 for the Public Hearing portion of the meeting.

31
32 **CHAIR VAN NATTA** – Then we are going to open the Public Hearing portion
33 now and... I think the traffic one was the last one that was... At this point I think
34 who we want to hear from is the applicant so we’re opening the public comment
35 portion and beginning with the applicant.

36
37 **APPLICANT CAVANAGH** – Good evening. My name is Pat Cavanagh. I’m with
38 Prologis and I am joined tonight with other associates of mine from Prologis
39 Tyson Chave, standing next to me who is the Vice President of Prologis
40 responsible for development in the Inland Empire. Additionally we have Kim
41 Snyder with us. Kim is the President of the Southwest Region for Prologis. Jim
42 Jachetta is with us. Jim is the Project Manager who worked with Staff from the
43 beginning on this project and who am I leaving out. I guess that’s all and then we
44 have Dennis Roy, the Architect on the project with RGA. I wanted to thank all of
45 you; the Commissioners and Staff for and I know this is a special meeting and we
46 took you out of your homes and lot more comfortable places than here tonight

1 and we don't take for granted and are very appreciative of that and in particular
2 the Staff. I want to acknowledge them. They have been very responsive. They
3 have been accommodating and very professional in every way to get us to where
4 we are tonight, so John Terrell, Jeff Bradshaw and Chris Ormsby in particular. I
5 wanted to cover four topics tonight and I'll try to be as brief as possible. I wanted
6 to cover a few brief comments on Prologis for those who aren't familiar with us. I
7 want to talk why we are here. I want to talk about project benefits and then I
8 want to respond to some of the common concerns and questions that have been
9 posed to us. I've asked Tyson Chave to cover the first two of those topics.

10
11 **SPEAKER CHAVE** – Thank you Pat. I wanted to briefly talk a little bit about who
12 Prologis is for those of you who may not be familiar with us. Prologis is a publicly
13 traded company with a strong balance sheet, low leverage and a global platform.
14 We have a commitment to develop quality industrial buildings with a long term
15 ownership structure as a public (?). Our focus is on quality, customer retention
16 and corporate responsibility. I don't see the clicker, but just one slide forward.
17 We put together just a brief slide to show a sample of some of our largest
18 customers globally in the form of the logos that you see and there are some brief
19 descriptions more specific to Southern California along the west side, but we've
20 also included customer accounts on that slide as well. Locally Prologis owns 35
21 million square feet of industrial buildings in the Inland Empire and in February,
22 Fortune Magazine named Prologis as one of the world's most admired
23 companies and that was for 2014. Prologis was also ranked as the top real
24 estate company for corporate or social responsibility and then finally I wanted to
25 transition to why we are here.

26
27 In 2007, Prologis made a commitment to Moreno Valley for a variety of reasons
28 but a few of the compelling reasons were that we felt at the time we would have
29 the support of the community and the City for a quality industrial project that
30 would bring jobs to Moreno Valley. We felt that at that time Moreno Valley was
31 underserved and we still feel that Moreno Valley is underserved from an
32 industrial perspective when compared with other cities within the Inland Empire.
33 A lot has changed since 2007. The world has survived an economic disaster and
34 we seem to be slowly recovering from that. Several recent industrial
35 developments in Moreno Valley along the I-60 and I-215 corridor have occurred,
36 but Prologis is here tonight to confirm that we are still committed to the
37 development of a quality industrial project while being very sensitive and
38 responsive to the issues surrounding a project of this magnitude. Now I'm going
39 to have Pat Cavanagh finish the rest of our topics.

40
41 **APPLICANT CAVANAGH** - Thank you Tyson. I wanted to talk briefly about
42 project benefits and also the response to questions and concerns. As it relates
43 to the project benefits, we stated in our community outreach materials, which
44 included the distribution of over 17,600 project brochures in early 2012 in an
45 open house which we conducted in August of 2012 that the Prologis Park in
46 Moreno Valley is expected to provide the capacity for a minimum of 600

1 permanent jobs and perhaps double that number when completed. This is based
2 on a track record on our actual portfolio and not a hypothetical number. We have
3 done research on this and we are comfortable making that representation.

4
5 As far as the fees and the improvements that are anticipated, we expect that the
6 project will generate significant fees and street improvements and by way of
7 example, a full build-out of the total impact fees and street improvements are
8 estimated at 19.3 million dollars. That is just street improvements. That does not
9 include buildings and it includes school fees at 1.1 million dollars, Police and Fire
10 of 800 thousand dollars, nearly 3 million dollars in local flood control and area
11 drainage improvements and street improvements of over 11 million dollars. That
12 also includes a 2.5 million contribution to TUMF fees. The fee breakdown is
13 located on our website. It is project specific and if people are interested in it, they
14 can look at those fees referenced there.

15
16 There was a reference to solar and I wanted to comment that we have installed
17 solar installations on over 12 million feet of buildings in the Inland Empire. There
18 is not an industrial company that can probably come within; I mean it is clearly
19 the most significant solar commitment of any company in the industry and that is
20 a complicated subject that we probably shouldn't spend a lot of time on tonight,
21 but it is something that we are focused on and we would certainly have all of
22 buildings solar ready and LEED certified. That is a commitment that we make on
23 any development project that we have. As far as the response to questions and
24 concerns, the three most common that I hear are land use, job creation and
25 traffic and air. I'm going to leave traffic and air alone because that has been
26 addressed by the LSA Consultants.

27
28 As far as land use is concerned, the current zoning allows for development, so
29 the issue really is the type of development that provides the greatest benefit for
30 the community. Open space; at least in my opinion, when a General Plan has a
31 designation for development is an unrealistic expectation over the long term, so I
32 guess we ask what is the best use of the subject property for the community and
33 I'll refer to the Rami and Associates Study that was done this last year. It was
34 done to prepare a land use study for the City and the City leadership with a tool
35 for future land uses in a defined area that included the Prologis property as well
36 as other properties along the I-60 corridor. The consultant came up with three
37 alternatives for consideration and a recommendation. Their preferred alternative
38 included a suggested best use for the subject Prologis property which was
39 consistent with our proposed plan and allowed for a possible expansion of the
40 Auto Mall along the west side of the Prologis Project.

41
42 As an accommodation in working with Staff, we've come up with what I call the
43 Auto Mall condition, which if we are approved would restrict us from developing
44 the two westerly buildings for a period of 18 months from the approval date to
45 allow us and the City to explore Auto Mall uses on those two properties. Job
46 creation... I'm not going to spend a lot of time on this other than to say that

1 Tyson mentioned that the City seems to be underserved on industrial and to that
2 end, we polled all the cities in the Inland Empire. There are 13 that we looked at.
3 Moreno Valley is the fourth largest in terms of population and they are tenth in
4 terms of industrial base. My interpretation of that is people are going elsewhere
5 to work and they are living here and that I think hurts the City and the community
6 at large. In conclusion, our intention and goal is to create an environment to
7 allow us to grow our customer base in Moreno Valley and along with this will
8 come jobs and increase the tax revenue, a best in class project, a finish to the
9 industrial corridor already created with the Aldi and Sketchers projects on the
10 south side of the 60 freeway, a buffer to future residential, infrastructure
11 improvements and a more favorable impact to traffic compared to the current
12 zoned alternative and an opportunity to expand the Auto Mall if the market
13 supports that expansion. And with that I appreciate your time and we are
14 certainly glad to answer any questions that you might have.

15

16 **CHAIR VAN NATTA** – Thank you

17

18 **VICE CHAIR GIBA** – I was curious. You started this project in 2007. Am I
19 correct?

20

21 **SPEAKER CAVANAGH** – We acquired this property in 2007 and initiated the
22 EIR process and in 2008 the market had virtually collapsed in the Inland Empire
23 on all sectors, industrial included and we decided that if we continued with our
24 entitlement we would get through the entitlement process and perhaps and most
25 likely be in a situation where the entitlements we had would expire before the
26 market recovered, so we stopped the entitlement process and waited for the
27 market to return and in 2011 we started looking more seriously at re-engaging
28 the entitlement process and got going full steam in 2012 and then there was a
29 moratorium as you probably are aware put on a project area so that the City
30 could do the land use study and that delayed us a year and so that expired in
31 January of this year and we are re-engaged in where it gets us to where we are
32 today.

33

34 **VICE CHAIR GIBA** – You referenced the Rami Study, so I'll come back to that at
35 some point. I don't where that would be appropriate, where it is going to be you
36 folks because we kind of jumped around a little bit. It's not the normal process
37 we would do, but I was curious again. You started it in 2007, but that area out on
38 the east side was never specifically zoned for warehouse, but more warehouse
39 was specifically zoned for the 60, 215, Cactus and all that corridor out there,
40 where in 2007 maybe you can answer this, when did Sketchers get built. Was
41 that after 2007? Am I correct?

42

43 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Yes is
44 was submitted around... it was already known at that time but it wasn't built until
45 later.

46

1 **SPEAKER CAVANAGH** – I think Sketchers probably didn't get completed until...

2
3 **VICE CHAIR GIBA** – 2010... so in 2007 there was no warehousing or any plan,
4 didn't even specify having warehousing out in that area. I remember when I was
5 brought on as a Planning Commissioner and Mr. Terell took me for a ride and
6 said this area over there is considered joint use. We were looking at future
7 housing and apartments and that type of construction, so in 2007 what made you
8 want to purchase land and look at a large 2.2 million warehouse in an area that
9 wasn't specifically designated for that type of housing or that type of building at
10 that time.

11
12 **SPEAKER CAVANAGH** – Well a good question. We looked at a number of
13 things. One is the proximity to the freeway and good access to freeway
14 circulation. The property was already partially zoned for industrial in the form of
15 Business Park, so it appeared the City already had it in their General Plan
16 concept that it would be industrial, so we were presented the opportunity and we
17 came in and met with most of the members of City Council at that time and went
18 through a discussion of what we would need to do to get to the end line of what
19 our concept of the project and it's 2.2 million feet, but it's in six separate
20 buildings, so it's not a Sketchers kind of project. Sketchers is one building and
21 it's a big building and we felt that the location was as good, maybe even better
22 than most of the locations down the 215 corridor because of its proximity to the
23 freeway and the City seemed to agree that it would be a good use and they liked
24 what we were proposing and so we moved forward on it.

25
26 **VICE CHAIR GIBA** – I understand that that was zoned for Business Park and of
27 course what part of your proposal is to change this zoning in the definitions so
28 that we can increase the size of the warehouse. That's not what I would normally
29 call Business Park, that's called warehouse park, so even though it might have
30 been zoned as Business Park, you guys began to still look at it warehouse park
31 instead of business park, but if I may, just for one moment, off of your own
32 website, it just caught my eye, unmatched global platform specializing in infill
33 location, owning and operating logistics facilities near seaports, airports and
34 major highway interchanges. That site doesn't necessarily specify any one of
35 those key elements of what Prologis looks for. That's why it was kind of a
36 curiosity to me when I reviewed your site and went over some of your key
37 elements on where you put facilities and why you put them there, that didn't
38 seem to match very well and I'll stop for now and give my other Commissioners a
39 chance to speak or anybody else, but I would like to come to the Rami Report as
40 well because you mentioned three alternatives and that was something we had
41 discussed last year in conjunction with Prologis and I just want to re-visit that
42 issue because you did make very, very good points that I appreciate; land use
43 and job creation.

44
45 **APPLICANT CAVANAGH** – The only comment I'll make...

1 **VICE CHAIR GIBA** – If they’re going to be using that and you did reference and
2 cite it so I could do the same, and they did say this report was done as a
3 guidance document, it was never approved by the Council was it?
4

5 **INTERIM PLANNING OFFICIAL ORMSBY** – Correct, it was received and filed,
6 so it is a guidance document.
7

8 **VICE CHAIR GIBA** – It was received and filed and never approved, yet if I
9 remember correctly when we were sitting here and discussing that last year, it
10 was a request for us to approve it and approve one of the plans, at least that’s
11 how I interpreted it at the time and I may be in error.
12

13 **CHAIR VAN NATTA** –Yeah, I think the understanding might have been a little
14 twisted there because it was really only for us to review and to except into the
15 record and not as an approval of a specific plan.
16

17 **VICE CHAIR GIBA** – And I understand that and so there were the elements in
18 here that were giving guidance to the direction of the land use in those specific
19 areas and so I think that is important and I think we need to come back to it
20 because I think that is a major element of...
21

22 **APPLICANT CAVANAGH** – The only comment I’ll make and I appreciate your
23 comment about where Prologis wants to locate projects is we look at the Inland
24 Empire in totally. We have projects in Rialto that are off of I-210 freeway that
25 have been very successful. They are comparable somewhat in their proximity to
26 ports and airports and the things that you mentioned and we looked in the
27 Moreno Valley market and you go down the I-215 all the way down to Perris and
28 you look at this site in comparison to those sites and I would stack this site up
29 very well against any of those because of proximity to the freeway, so that is the
30 primary attraction. We try to stay away from going places that are away from
31 freeways because that kind of creates all kinds of issues that cities have and we
32 have and our customers have so the primary driver is comparatively speaking to
33 I-215 corridor. We like the I-60 corridor every bit as much.
34

35 **CHAIR VAN NATTA** – Excuse me, this is not a time for comments from the
36 public in general. When you have your moment to speak it will be when you are
37 at the podium.
38

39 **VICE CHAIR GIBA** – And please, just so you understand, I’m trying to clarify the
40 thinking that went into the land uses in this... I’ve lived here for 30 odd years so I
41 changes. I’m just curious why in 2007 you didn’t have the same level of
42 warehouse building that went on in the I-215 corridor, why Staff didn’t kind of
43 direct you over there saying we have other uses for this over here. Now I’m not
44 saying anything about your project. Your project is beautiful, but I’m concerned
45 about land use and future land use to build out, so I want to understand the value
46 of putting it there versus putting it somewhere else back in 2007 and now. I

1 know the economy had to wait, so I had several other questions, but these guys
2 know I'll ask them and it will take too much time, so I'll come to it. Is that okay
3 with you guys?
4

5 **CHAIR VAN NATTA** – Sure.
6

7 **VICE CHAIR GIBA** – So, everybody else can get their word in edgewise.
8

9 **CHAIR VAN NATTA** – We're going to on to some questions from Commissioner
10 Lowell but I did want to comment on the questions that we're asking, we cannot
11 pre-suppose that somebody has complete autonomy about where they are going
12 to put something. Sometimes it has to do with where the land is available and
13 can be purchased and not just say well wanted to build this, where do we want to
14 put it. Sometimes it has to do with what land is available or owned.
15

16 **VICE CHAIR GIBA** – We want to look at the whole package here. We want to
17 understand the whole package and I'm sure all the folks out there want to know
18 the whole package.
19

20 **CHAIR VAN NATTA** – I'm sure they would and I would like to see more
21 questions that are directed specifically to this project so that we have a good
22 understanding of the project before we begin discussing the advisability of going
23 ahead with it or not, so go ahead Commissioner Lowell.
24

25 **COMMISSIONER LOWELL** – I had a pretty simple question. Do you know what
26 the construction timeline is from breaking ground to completing the project with
27 all the improvements?
28

29 **APPLICANT CAVANAGH** – Well I'll answer it two ways. To build a building
30 takes about seven months. The time that it takes to get to the point where you
31 build the building probably takes an equivalent amount of time, so if you said
32 green light, nothing in your way, get going, probably the earliest you'd see a
33 building there if we built it on spec; speculative development; an empty building,
34 would probably be in the twelve to fourteen month timeframe. Now our intention
35 today is we don't intend to break ground the day you say yes. A lot of what we
36 do is solicit build to suit activity and a lot of what we do is sort create a pipeline of
37 buildings so that we are strategic in when we are building and what we are
38 building and we have other sites that we are involved in and this would... so that
39 is a building. The totally of the project, I would say a project of this size with the
40 number of buildings is five years from start to finish. I would be pleased if we
41 were done in totally in five years; all of it built; all of it leased.
42

43 **COMMISSIONER LOWELL** – One of the options that we have is to basically
44 install a moratorium for 18 months on the westerly portion of the project to allow
45 the Auto Mall to hum and haw and decide what they want to do. What benefit

1 would that be to us if allowed that since Prologis already owns the property and it
2 would be in Prologis' best interest to keep the property for themselves.

3
4 **APPLICANT CAVANAGH** – It would be a benefit if you feel that having an
5 expansion to the Auto Mall benefits the City.

6
7 **COMMISSIONER LOWELL** – But would Prologis be willing to either sublet or
8 sell that property to the Auto Mall if they were interested.

9
10 **APPLICANT CAVANAGH** – We would be open to selling the land to an Auto
11 Mall use if there was demand for it; sure. I mean we've acknowledged that. That
12 is something that we are not opposed to doing. I'll tell you quite honestly. We've
13 explored this and I'm not sure what the demand is. I think 18 months would
14 certainly be enough time to figure out what the demand is. There is still vacant
15 lots over at the Auto Mall that have never been used, so I don't know if the Auto
16 Mall use a realistic expectation or if it's not. I have no idea.

17
18 **COMMISSIONER LOWELL** – That is correct. There is still room over there for
19 expansion. I was just curious what the feasibility was and what the logic was
20 behind the 18 months.

21
22 **APPLICANT CAVANAGH** – It was trying to define a period of time to allow the
23 City and the Auto Mall and Prologis to explore that alternative because it seemed
24 to be part of the Rami Study recommended plan that was of interest to at least
25 some of the people on the Council when it was presented to them.

26
27 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Yeah the
28 other thing... John Terell, Community and Economic Development Director. The
29 other issues was it was in all three of the alternative, the concept of allowing for
30 the expansion of the Auto Mall, so it was consistent across all the particular
31 alternatives that were presented there and that is why Staff in the report
32 referenced that issue as opposed to any other land use issues that are identified
33 in the study.

34
35 **COMMISSIONER LOWELL** – Is the Auto Mall the only option that we're looking
36 for or is there any other kind of development like say a Jiffy Lube or some kind of
37 small commercial business like development?

38
39 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – The
40 SR60 Corridor Study specifically identified as it went through that process in
41 talking to stakeholders and looking at various things about Auto Mall uses which
42 could be that were loosely defined as dealerships.

43
44 **COMMISSIONER LOWELL** – Correct but the land is currently zoned as
45 Business Park, so I was just curious if there was any interest in a Business Park
46 type development...

1 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – I’m not
2 quite sure...

3
4 **COMMISSIONER LOWELL** – Like Bob’s Big Boy or a strip mall like a Subway
5 sandwich shop or something along those lines that is more business park or
6 more in line with the current zoning.

7
8 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – In any of
9 those major uses that would have been permitted would still be possible. Let’s
10 put it that way. One of the uses that is not possible in a business park zone is an
11 auto dealership.

12
13 **VICE CHAIR GIBA** – John could that at any given time though, just as we would
14 request a zoning change or anything here, could the Auto Mall, even though...
15 and part of this plan that you were specifying is one of reasons we need to
16 change all the zoning is in case the Auto Mall wants to move forward and build a
17 dealership, they would have to have that specific zoning. But a dealership could
18 come forward and request a zoning change for a specific lot of property. Could
19 they not independent of us doing anything with this...
20

21 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – That’s
22 correct yes. I think the point in the Staff Report points out that this proposed use
23 as well as an auto dealership both require the same land use change. I think
24 that’s what really the Staff Report was meant to point out, you know whoever
25 suggests or proposes that.

26
27 **COMMISSIONER LOWELL** – And then I had one more follow-up for the
28 Applicant. I live fairly close to this area and I’m fairly familiar with the orange
29 trees and orange groves that have been there for a long time and I drove by just
30 about a month ago and I noticed that all the trees were gone. Do you know when
31 the trees were removed?
32

33 **APPLICANT CAVANAGH** – We made the decision to remove the trees because
34 there is a time of the year where you allowed to do that and then if you do not do
35 it during that time of the year and the time of the year I think is from...
36

37 **COMMISSIONER LOWELL** – February 1 is the cutoff.

38
39 **APPLICANT CAVANAGH** – I think is September to February I believe it is. If
40 you don’t have them removed by February then you can’t remove them until the
41 following September.
42

43 **COMMISSIONER LOWELL** – That was actually what I was aiming towards; I
44 was curious if you remembered the date they were removed if it was within that
45 timeframe.
46

1 **APPLICANT CAVANAGH** – We had to remove them prior to the date that we
2 were allowed to do it and I think that was February 1st.

3
4 **COMMISSIONER LOWELL** – So all the removals were completed before then?

5
6 **APPLICANT CAVANAGH** – Yeah

7
8 **COMMISSIONER LOWELL** – Did you happen to do any kind analysis that was
9 required for post February 1st removal, if there was a specific environmental
10 analysis and report that you have to do.

11
12 **APPLICANT CAVANAGH** – You have to do a nesting study. It's all related to...

13
14 **COMMISSIONER LOWELL** – Correct I was just curious because it is such a
15 large area of trees that were removed. I was wondering if you did any kind of
16 analysis on that anyway even though...

17
18 **APPLICANT CAVANAGH** – It was outside of the nesting season so there is
19 nothing of that nature required.

20
21 **COMMISSIONER LOWELL** – It was just real close to that February 1st deadline,
22 so just a little bit of a gray area. I was just curious if Prologis went ahead and did
23 that study anyway or if not...

24
25 **APPLICANT CAVANAGH** – Well we were up against that day, so we wanted to
26 be sure to have it done prior to that date so...

27
28 **COMMISSIONER LOWELL** – Just clarifying and I think that was it for my
29 questions for the Applicant so far.

30
31 **COMMISSIONER SIMS** – I have a couple of questions on this. So I was looking
32 through and I think was the Draft EIR and I want to go into the air quality
33 questions, so I was looking at Section 4-4.3, specifically under the Section
34 4.3.1.3. There is a table in there that had data for ambient air quality in the
35 project. Going back in looking at the monitoring station, it is not right at the
36 project but it's in Riverside, Rubidoux area and it shows a listing of the ambient
37 air quality for 2008, 2009 and 2010 and so I was wondering is there an analysis
38 done with the air quality work that you've done supportive of the EIR that shows
39 the delta of air quality between what we would consider pre-project and post-
40 project.

41
42 **APPLICANT CAVANAGH** – I'm going to defer that to the air quality consultant
43 with LSA if you don't mind.

44

1 **SPEAKER BRUGGER** – Good evening. My name is Ron Brugger. I'm with LSA
2 and your question was did we analyze the air quality with and without the
3 project?
4

5 **COMMISSIONER SIMS** – I'm not an air quality expert, so in looking at this I'm
6 just asking the question. There was a table; your table 4.3.c ambient quality in
7 the project and it is reflective of three years of data collected at Riverside
8 Rubidoux monitoring station in Rubidoux I assume and anyhow it's showing a
9 variety of different contaminants that is being monitored. The question is the
10 project; is the ambient; has there been a model conducted showing what the
11 effects to the air quality are and is there a delta plus or minus with or without the
12 project that you could compare. So in essence with this table if you 2016 or you
13 put 2035 what would that column through modelling be?
14

15 **SPEAKER BRUGER** – The simple answer to that is no. What the analysis
16 focused on was several air quality effects primarily emissions. What the table is
17 showing is are measured concentrations of pollutants at that location in Riverside
18 Rubidoux area. That was the closest one. That is considered representative of
19 the region even coming out this far. What you are asking is what the effects to
20 those concentrations would be from adding this project and that analysis isn't
21 done; that isn't really feasible. What we can do is analyze or predict based on
22 the emissions models and so on what the total emission rates of pollutants will be
23 and there are ambient air quality standards that say as long as the emissions
24 stay below emission rates from the project, stay below rate thresholds, that the
25 resulting concentrations at locations and that's what... the concentrations are
26 what matter to health and to people breathing etc. and emissions are an indirect
27 indicator. It depends on the wind. It depends on a variety of dispersion effects in
28 terms of the pollutants getting become translated to concentration levels, so what
29 the air quality analysis does is calculate the emissions from the project
30 operations and says based on the regional thresholds that are set by the Air
31 Quality Management Board for the area, these emission rates from the project
32 are above and below thresholds. If they are above then that is considered a
33 significant impact because their emission rates are high enough that the resulting
34 concentrations will probably be above the ambient air quality standards and you
35 know be significant from that standpoint.
36

37 **COMMISSIONER SIMS** – So in your analysis on the emissions have you
38 exceeded any of the thresholds established by Air Quality Management District.
39

40 **SPEAKER BRUGGER** – Yes the project operations exceeds several I believe. It
41 exceeded the emissions of NOX, CO and I'm sorry there are six criteria
42 pollutants that we consider for which we have these thresholds. ROG is an
43 organic gas and VOC is another name for it. NOX is an ozone precursor and CO
44 is carbon monoxide, THOX is a result of the sulfur in fuel primarily, PM 10 and
45 PM 10 2.5 are both sizes of particulate matter. This project operational

1 emissions are expected to exceed the emission rate thresholds for all of those
2 except the THOX; the sulfur, because the sulfur content is so low these days.

3
4 **COMMISSIONER SIMS** – So with those exceedences of this, further into the
5 report or before, I don't know which there was under 4.3.5.2, the operational
6 acute health risk emissions impacts, there is a graphic that had contours of
7 carcinogenic risk levels, so how does relate or how does a person in layman
8 terms... when I read it I understand there is supposed to be risk of ten in one
9 million people with potential for carcinogenic risk. The threshold in this project is
10 acknowledged less than that in all cases but is there way to put it in layman's
11 terms you know when you have an exceedence of an air quality limit, how is that
12 dealt with, if at all through the mitigations that are proposed for the project and as
13 far as this table 4.3.1 that shows these contours of carcinogenic risk, how does
14 that kind of tie together... well it's too much of an open ended question but you're
15 the expert.

16
17 **SPEAKER BRUGGER** – Well actually the health risk assessment you were
18 referring to now is probably... the best way to answer your original question of
19 how the operational emissions; how the operation of this project will affect the
20 ambient air quality in the region in the area right around the project, so I guess
21 we got sidetracked; I got sidetracked from your original question being based on
22 the criteria pollutants and those ambient concentrations that are measured in
23 Riverside Rubidoux. The health risk assessment is exactly focused on what the
24 health effects to people living around this project will be from the air emissions
25 from the operations of this project and it is focusing on all toxic air contaminants
26 in that case, which is to say is a sort of special category of pollutants. Without
27 getting into all those details the criteria pollutants; the NOX and PM 10 etc. are
28 recognized as indicators of general problems and for the purposes of regional
29 planning and other aspects that have very little to do with the effects of this
30 individual project, that is where all those thresholds and emission rates have to
31 do with is regional planning and regional air pollution.

32
33 The health risk on the other hand focuses exclusively on what the project does to
34 the proximity of the area right around it and that is exactly what it shows is that all
35 health risk assessments incorporate a lot of very conservative assumptions to
36 ensure that they are protective of the health of the people that are in the area that
37 is being analyzed such as the trucks; that the emission rates are expected or that
38 are modelled for the diesel trucks; the big trucks that are going to be operating
39 for this project, do not take advantage of what we truly anticipate to be regulatory
40 improvements to reduce those emissions, so the health risk is assuming those
41 improvements that are likely planned for and are likely to be incorporated but are
42 not actually approved yet, those are ignored, so the health risk is protected in all
43 ways that it can be and it comes up with what you can see in the report a health
44 risk that is less than significant on the order of half of what the threshold being
45 ten in a million, it is less than half of that.

46

1 **COMMISSIONER SIMS** – So that was kind of where I wanted to go, because
2 when you read these numbers and you see carcinogenic risk is five in one
3 million, you sure don't want to be one of the five, so...

4
5 **SPEAKER BRUGGER** – That's the problem with statistics

6
7 **COMMISSIONER SIMS** – Yeah so the pertinent perspective you have right in the
8 heart of the project, there is a five, which is a five in one million and as you get
9 out maybe 1,000 feet or so from the project you are down to one in one million
10 risk. I guess can you put it in perspective what would be the air quality risk for a
11 person just if you take the project away to kind of put in perspective, is a person's
12 risk from emissions and contaminants that would be from emissions and just
13 sitting in a room right here or being outside. If you are driving on the 60 freeway
14 today is your risk one in a million or 20 in a million or is there a way to correlate
15 that.

16
17 **SPEAKER BRUGGER** – Yes the South Coast Air Quality Management District
18 has done three and is now in the process of a fourth study called the Mates
19 Mobile Air Toxic Emission Standard (MATES) study where they in great detail
20 measured monitored actual toxic contaminant concentrations throughout the
21 whole south coast region, but here certainly as well and according to that report,
22 while the toxic air contaminant levels and the health risks associated with those
23 are better now than they were when they did the first study in the late 90's, there
24 is still around 250 in a million cancer risk right ambient or the air we're standing in
25 right here, that's about the health risk level of this ambient air; 250 in a million, so
26 this project is going to affect that by a few, four or five... this isn't really valid but
27 you could say we'll go from 250 to 254 or 255 in a million and that's a small
28 percentage of the ambient health risk levels.

29
30 **COMMISSIONER SIMS** – Thank you

31
32 **CHAIR VAN NATTA** – Do we have any more specific questions about any of the
33 presentation we've seen so far?

34
35 **COMMISSIONER BARNES** – Earlier when we were discussing transportation,
36 there was a reference made to... it's for you, I'll get there in a second. There
37 was a reference made to the impacts of the current land use designation and as
38 it relates to this project, so there was kind of what we currently have and what we
39 will have. Could you give us the same relationship in regards to air quality?

40
41 **SPEAKER BRUGGER** – I did not do that analysis. There wasn't an analysis
42 made of anything other than what the project as proposed might do in the long
43 term.

1 **COMMISSIONER BARNES** – Because there is a proposed use there and it will
2 have an impact, so it's not like we're going from zero to this project, but we don't
3 have quantified.

4
5 **SPEAKER BRUGGER** – Right

6
7 **COMMISSIONER BARNES** – Okay

8
9 **COMMISSIONER SIMS** – I do have one more. I'm switching from air quality. I'm
10 done with air quality. The other one I had is that I live very, very close to this
11 project. In fact my neighborhood touches your southeasterly corner of the
12 project, so out of curiosity I was looking in the EIR on 4.1-10 and it's the view
13 sheds from residents from the southeast of the site and there is and I don't know
14 which... but it's a picture from if you are on Eucalyptus... now currently
15 Eucalyptus looking it would be north and to the west, you no longer can see the
16 hills from those homes. Is that because they are just blotted out, the buildings
17 block the view shed from those property owners that live...basically is would
18 these property owners...

19
20 **APPLICANT CAVANAGH** – Southeast... is that what you're talking about?

21
22 **COMMISSIONER SIMS** – All these people right in here no longer when they are
23 looking out this way all they see is a wall of buildings.

24
25 **APPLICANT CAVANAGH** – Well let me... I don't know how much comfort I can
26 give you in that regard, but I can give you some dimensions and that might tell
27 you something. The distance from end of the cul-de-sac which is the street at
28 the very southeast; the proposed cul-de-sac to the nearest point of the building is
29 366 feet, so if you were back from that it obviously gets further back. The
30 buildings are going to be approximately 40 feet tall. That would be the height of
31 the exterior wall, so I don't know what you would see if you were back 360 feet
32 looking to the north.

33
34 **COMMISSIONER SIMS** – You're analysis shows what it looks like. You have a
35 picture of it showing... you see the building and the pre-picture...you see; of
36 course you see the mountains, the view shed you have out there. Here it's gone.

37
38 **SPEAKER CHAVE** – The line of sight study that you are referencing would be
39 just one point where that was taken from, so the further you would go south
40 along that residential neighborhood you know the building remains the same and
41 so I don't know that it would definitively block the view of the mountains from the
42 entirety of that project. The line of sight that you are looking at is from right on
43 the property line.

44

1 **COMMISSIONER SIMS** – Yeah one specific spot. I get it. That property owner
2 or that person that owns that property that has that current view shed is impacted
3 directly to that property owner.
4

5 **CHAIR VAN NATTA** – Okay, I found that if I say Jeff instead of the last name I'm
6 at least right half of the time. Okay, go ahead
7

8 **VICE CHAIR GIBA** – Just going back to the jobs issue, I just wanted to clarify a
9 couple of things. You said there is anywhere from 600 to 1200 jobs that will be
10 produced. Am I correct on that number that you were giving?
11

12 **APPLICANT CAVANAGH** – We feel real comfortable in that. We own as Tyson
13 mentioned 35 million feet in the Inland Empire and we have polled a number of
14 our buildings and business parks to get head counts on employees in those
15 projects for the very purpose in making these kind of representations and I think
16 600 is conservative, but I don't want to promise something that doesn't happen.
17 It's not one building; it's six buildings. They'll be a variety of uses. Some of the
18 uses might be more intense and some less, but that is the main the project we
19 polled, Prologis Park in San Bernardino County; the Kaiser Commerce Center; is
20 five million plus square feet; nine buildings; Johnson and Johnson, LG
21 Electronics, Sports Authority, Kellogg's, Walmart. Those are tenants in that park
22 and the head count exceeded 600 by a lot in that project.
23

24 **VICE CHAIR GIBA** – All six buildings at final build out which could be as far as
25 five years in the future, the estimate that you were discussing earlier is fairly
26 accurate and are these automated warehouses or they standard types of
27 warehousing.
28

29 **APPLICANT CAVANAGH** – They are very similar to what we are proposing to
30 build here; same concept.
31

32 **VICE CHAIR GIBA** – I mean is level of automation in those warehouses or are
33 these more... there is always a discussion of an automated warehouse versus a
34 physical warehouse where you have the warehouse workers move things around
35 versus... Do you follow me?
36

37 **SPEAKER CHAVE** - I think I understand your question. You know if you look at
38 a snapshot of our 35 million square feet, we have very few on the order of
39 magnitude of maybe five of the 90 buildings that make up that 35 million square
40 feet that we would qualify as kind of highly automated. The vast majority of our
41 projects are very typical warehouse distribution centers. They are automated to
42 the extent that there is forklifts to pull product from the racking but they are not
43 highly mechanized facilities, so I think there is a lot of buzz, talk about the
44 Amazon's of the world and those type of facilities, but they are still a rarity and if
45 you looked at the overall Inland Empire, you know that is 440 million square feet,
46 I would say it's probably less than ten percent or probably less than five percent

1 facilities that are quote unquote highly automated, so if you looked at this project
2 of 2.2 million square feet, I would venture to say that you know if a building was
3 highly automated it would be probably above that kind of percentage of you know
4 buildings that would have level of improvement.

5
6 **VICE CHAIR GIBA** – The labor necessary is not necessarily technical labor that
7 they would have that would work at those sites or facilities. Am I correct in the
8 context that they have to care of robotic equipment and things like that?

9
10 **SPEAKER CHAVE** – I think if you look at the job count that we created, I think
11 you have you know basically every job that would make up that profile of how to
12 run a warehouse distribution center, so you're question is somebody specially
13 that would repair robotics within the facility and I don't know if we can answer that
14 definitely within that job count.

15
16 **VICE CHAIR GIBA** – But do you have any kind of an average pay scale... I know
17 these questions are going to come up at some point so I might as well air them
18 know and get them out in the open so the folks can understand them. Prologis
19 hires a lot of people so if there an average salary structure that people usually
20 get hired at a Prologis facility but I think the better question for that is this may
21 not be Prologis. Are these warehouses speculative type warehouses. You don't
22 have somebody to move into them yet do you?

23
24 **SPEAKER CHAVE** – I guess just to clarify. Within the Inland Empire; you know
25 the 35 million square feet, Prologis only employs 17 people within that 35 million
26 square feet, so the actual employer would be the actual end tenant or customer
27 within the facility, so it would be the...

28
29 **VICE CHAIR GIBA** – You don't have end tenant yet for these buildings that you
30 are building at this point in time.

31
32 **SPEAKER CHAVE** – Correct

33
34 **VICE CHAIR GIBA** – Again referring to your website, there was many of those
35 warehouse logistics buildings you built were built for a specific tenant, much like
36 Sketchers was and Aldi's is going to, but these are not. Am I correct?

37
38 **APPLICANT CAVANAGH** – Well I mentioned earlier our intention initially would
39 be to pursue build to suit opportunities in the market and at some point we would
40 perhaps make the decision to build a speculative building within the project either
41 the first building or maybe a second building in conjunction with the first building
42 and we build, in a big year we might have two or three speculative projects going
43 on. There is probably 15 or 20 speculative projects going on in the market right
44 now that are marketed in its entirety and this market is primarily a speculative
45 market. The companies that do what we do more often than not, would build
46 speculative buildings. We wouldn't build two million feet of speculative buildings.

1 We would build a building and then we would lease it and we would build another
2 one and then we would lease it and we would build another one and if we had a
3 build to suit; fortunate enough to procure a build to suit on one of the buildings,
4 we might do that building in conjunction with the speculative building and so that
5 cycle I would guess would take four to five years to get it built out.

6
7 **VICE CHAIR GIBA** – So if I'm hearing you correctly then your intention is to build
8 six buildings. Hopefully what you are trying to do is build to suit and as you get a
9 tenant you build that next building. Is that your primary intention?

10
11 **APPLICANT CAVANAGH** – Well we would love that but that doesn't always
12 work out that way.

13
14 **VICE CHAIR GIBA** – If that doesn't work can you give me an estimated
15 timeframe that it usually takes for you guys to find a tenant for a speculative
16 building?

17
18 **APPLICANT CAVANAGH** – Well we just finished a building in Redlands; an
19 800,000 square foot building and four months after the building was completed
20 we had at least two; a company called Burlington Coat Factory. That is an
21 example. We leased a building in Ontario. It was a 400,000 square foot building
22 and that took longer. That probably took eight months to get leased. It ebbs and
23 flows. The market is the market. We are in a competitive environment and we
24 understand that but we are comfortable building speculative. We've made an
25 enormous impact in this market doing that and I will tell you sort of one thing that
26 I would... might give you some comfort is we have 35 million square feet and we
27 have 98 percent occupancy. We have 2 percent vacancy, so we run very
28 efficiently. We don't spend our money foolishly. We build it to own it and our job
29 is to get them leased as fast as we can and the good news for us; the good news
30 for you and the good news for the community is that the types of companies that
31 we find gravitating to our projects are the largest companies in the world.

32
33 **VICE CHAIR GIBA** – The reason I bring that up is because there are going to be
34 those that are going to be concerned about an empty warehouse sitting on land
35 use that could have been used for something else while an empty building sits
36 there.

37
38 **APPLICANT CAVANAGH** – Well my boss worries about that a lot more than you
39 will.

40
41 **VICE CHAIR GIBA** – I bet he does. Okay, thank you very much.

42
43 **CHAIR VAN NATTA** – I guess the good news on that is as long as it is sitting
44 there vacant, it's not creating many emissions, right?

45
46 **VICE CHAIR GIBA** – No, not a thing

1 **CHAIR VAN NATTA** – Some of these speculative questions are kind of like
2 asking a girl when she plans to get married when she doesn't even have a
3 boyfriend.

4
5 **APPLICANT CAVANAGH** – That's a good analogy; thank you.
6

7 **CHAIR VAN NATTA** – We don't really know till it happens. When we first saw
8 the Aldi project, they didn't have a tenant, but then they hadn't built either until
9 they had that built to suit tenant to go with it, so a lot of these things we're not
10 necessarily going to have answers for but we are trying to get answers on as
11 many of them as we can.
12

13 **APPLICANT CAVANAGH** – You know in answer to an earlier question you had
14 about why we think this location is a good location and we didn't know in 2007,
15 but I think the fact that Sketchers is out there and the fact that Aldi is out there,
16 more or less support what we knew to be the case, which is the location that
17 users would find acceptable and we feel that's going to be the case with our
18 project as well.
19

20 **CHAIR VAN NATTA** – Okay do we have any other specific questions here?
21

22 **COMMISSIONER RAMIREZ** – Thank you gentlemen for coming out. I think my
23 question might be directed towards Staff and has to do with the truck traffic flow.
24 What measures do have in place to prohibit and prevent truck traffic from
25 travelling south on Redlands Blvd. to Alessandro and Moreno Beach Drive to
26 Alessandro and north to Ironwood?
27

28 **TRANSPORTATION DIVISION ENGINEER LLOYD** – Good evening Chair and
29 Commissioners. This is Michael Lloyd with the Transportation Engineering
30 Division. You're are referring to our truck routes which is governed within the
31 City by our Municipal Code, so currently Redlands south of Eucalyptus is not a
32 truck route, therefore they are prohibited from using the roadway and the
33 enforcement mechanism would be working with the Police Department to enforce
34 that, so they would either issue+ tickets, citations or whatever the means is to
35 deter that from happening.
36

37 **COMMISSIONER RAMIREZ** – Very well, thank you.
38

39 **CHAIR VAN NATTA** – What about Moreno Beach, Alessandro, Cactus
40

41 **TRANSPORTATION DIVISION ENGINEER LLOYD** - Sure, I'll get out my figures
42 so I can kind of expand my view.
43

44 **CHAIR VAN NATTA** – Thank you
45

1 **TRANSPORTATION DIVISION ENGINEER LLOYD** – Currently part of the
2 Municipal Code; Moreno Beach Road is a truck route from the north side of State
3 Route 60; the westbound ramps down to Alessandro Boulevard. Alessandro
4 Boulevard is currently a truck route, all the way from Gilman Springs over to the
5 I-215, so the entire distance across the City and Ironwood. I don't know if you
6 asked about Ironwood, but Ironwood in the eastern part of the City is currently
7 not classified as a truck route. Ironwood is only classified as a truck route
8 between Pigeon Pass Road and Perris Boulevard. That's the extent of Ironwood
9 being classified as a truck route.

10
11 **CHAIR VAN NATTA** – And Cactus

12
13 **TRANSPORTATION DIVISION ENGINEER LLOYD** – Cactus; the only place
14 designed as a truck route is from the I-215 to Perris Boulevard, so once you're
15 east of Perris Boulevard it is not classified as a truck route.

16
17 **CHAIR VAN NATTA** – So then if someone were to take Moreno Beach south,
18 intending to take Cactus across, they would be at least for part of the way not on
19 a truck route.

20
21 **TRANSPORTATION DIVISION ENGINEER LLOYD** – That is correct. They
22 would need to utilize...

23
24 **CHAIR VAN NATTA** – But take Alessandro across which is commercial most of
25 the way.

26
27 **TRANSPORTATION DIVISION ENGINEER LLOYD** – That is correct.

28
29 **COMMISSIONER LOWELL** – How about Nason Street?

30
31 **TRANSPORTATION DIVISION ENGINEER LLOYD** – Nason Street currently is
32 not classified on any of it as a truck route. Now obviously trucks need to go from
33 the freeway to say the shopping center adjacent to it, so they have the right to
34 exit the freeway and go directly into the shopping center, however they do not
35 have the right to say alright I need to go across the City or I need to go to Perris
36 or some other locale and decide to utilize Perris or excuse me Nason to get that
37 next destination.

38
39 **COMMISSIONER LOWELL** – How about long term parking overnight or over the
40 weekends?

41
42 **TRANSPORTATION DIVISION ENGINEER LLOYD** – That would fall under...
43 again we have locations within the City that accommodate commercial vehicle,
44 the larger truck type parking areas. Off of the top of my head I do not recall all of
45 them, however generally they tend to be located in an industrial areas with
46 industrial collectors to provide that and the most immediate one that comes to

1 mind is down near Heacock and Iris. There is an existing collector roadway on
2 the northeast corner and it's Revere Way. There is no buildings there currently,
3 however the roadway is in place. Trucks are allowed to park there overnight.

4
5 **CHAIR VAN NATTA** – Okay, does the Applicant have any other presentations or
6 reports that he wants to give us or if not we are going to move on with our public
7 comments?

8
9 **APPLICANT CAVANAGH** – No I think we have said what we came to say.

10
11 **CHAIR VAN NATTA** – Okay did you have another question?

12
13 **COMMISSIONER SIMS** – What was the amount of TUMF fees that are being
14 paid by the project in its entirety?

15
16 **APPLICANT CAVANAGH** – Approximately two and half million dollars.

17
18 **CHAIR VAN NATTA** – Okay thank you very much. At this point we are going to
19 be open for public comments. I have a couple of pages of them here. Now do
20 we have the timer working now? Okay can you keep the time and let us know
21 because I get distracted if I'm trying to look at my watch, but you know if you can
22 hold up a finger when are within a few seconds of the end and let me know so we
23 can keep moving along. Okay our first speaker is Gideon Kracov.

24
25 **SPEAKER KRACOV** – Good evening Chair Van Natta and Commissioners. My
26 name is Gideon Kracov. I'm an Environmental Lawyer appearing here on behalf
27 of the Labor's Union, Local 1184 and there are 3,500 members who live and
28 work in the County and I'm here respectfully to tell you that you cannot approve
29 this project tonight. You must continue this item. Why... the Union timely
30 submitted on August 31st, 2012, a 350 page comment letter. It included 29
31 pages of legal analysis, 22 pages of expert comments. It was the only letter to
32 include comments from experts. I gave you copies of this letter. You have it
33 tonight. It's not new. It's from 2012.

34
35 Unfortunately and I'm not pointing any fingers, our letter did not make it into the
36 Final EIR as required by CEQA even though in the cover email I gave you and
37 highlighted, it was received by your Staff timely, back in 2012. But a letter is not
38 included and not responded to... nothing. There is a two page information
39 request from us in the Final EIR; that's letter D1, but that is a different letter. It
40 had a different cover email. The big letter of August 31st, 2012 that your Staff
41 got, please look at the email I highlighted and also sent by overnight mail. It's not
42 in your Final EIR. Staff told you tonight that the City received 13 timely Draft EIR
43 comments. That's untrue. You got 14 and our email proves it. We brought this
44 to Staff's attention, but it is very last minute, it's all very confused. We need time
45 Commissioners to straighten this out. The City has to go back and continue this
46 item, reopen the EIR with our letter.

1 CEQA requires that the City shall consider all EIR comments like ours. It shall
2 prepare a written response that describes each issue. Failure to do so is terribly
3 unfair and invalidates this EIR. None of that happened here. Our letter is not in
4 the document. This would certainly invalidate any action, any findings, and any
5 approvals that you take tonight. Now this is not something that can be ignored or
6 punted to the City Council and it can't be sort of be ham and egged here on the
7 fly tonight. On the Tract Map, you Commissioners are the decision makers; not
8 the Council. How can you make that decision with a defective EIR? To sum up,
9 mistakes happen. I don't know how this happened. We're trying to work through
10 this with Staff. We haven't had a lot of time to figure this out. We have to face
11 the facts and deal with it. Please, I know it's procedural. We not trying to play
12 "got you" here and I know its last minute. It's no fun sometimes but in this
13 instance unfortunately it means you have to continue this, reopen the EIR,
14 respond to this very detailed comment letter, recirculate it and then it will come
15 back to you. I'm sorry this is last minute, but we're trying to deal with this too in
16 the most professional way possible and it's very unfortunate. Thank you.

17
18 **CHAIR VAN NATTA** – Thank you. Our next speaker is Tom Thornsley.

19
20 **SPEAKER THORNSLEY** – I'm still writing extra notes. Of course in three
21 minutes I can't get that far; right? Okay I'm going to start out with a quick
22 barrage of some questions. Don't need the answers right now? Will the project
23 widen or pay the fees to widen Moreno Beach just south of the project site? You
24 know all know where that bottleneck is. Also why is there no screen wall
25 proposed along the freeway adjacent to building one? In the Statement of
26 Overriding Considerations they used the economic benefit; the jobs benefit as
27 part of why this project should go forward in light of the impacts that it imposes
28 on the City.

29
30 Nowhere in this is there any form of economic analysis that indicates anything.
31 There is no economic analysis provided to stipulate the economic benefits to the
32 City that the City believes nor realize what source of revenues would be
33 generated by this project. Additionally no analysis has been prepared to show
34 the tax increment generated from this project that will keep up with inflation,
35 increases for services to the property for such things as Police, Fire, sewer,
36 water, road maintenance. Prologis maintains their properties. Prop 13 allows
37 them to keep the tax rate at about one percent a year. Our inflationary rate as
38 we've heard the Mayor mention for our Police alone is five percent, so it won't
39 take too many years before our inflationary rate outstrips our ability to provide
40 services.

41
42 Our City finally wrapped up its update of the General Plan sometime in 2006 and
43 by 2007, one year later it appears now that Staff and Council began entertaining
44 assaulting the General Plan and for the developers; for this developer and for
45 Highland Fairview for considerations of Sketchers. All those areas that have
46 been converted were Business Park. The current mix of land use creates...in this

1 area the current mix of land uses creates a community node with a Commercial,
2 Residential and Business Park. Now we're being asked drastically to change to
3 eliminate the mix which is in violation of our very General Plan goals cited in the
4 EIR's goals number 2.1 and 2.5. They recommend a mix of uses. Over the past
5 six years, the City has continually abandoned all the Business Park land use
6 properties in favor of the Light Industrial for what now appears to be the soul
7 purpose of allowing massive warehouses, completely displacing future
8 opportunities for business development with a higher square foot job ratio.
9 Recently the City analyzed this location with the SR 60 Corridor Study trying to
10 find the highest and best uses that would benefit freeway exposure ergo the Auto
11 Mall... so be it the Auto Mall or the... could utilize the exposure...

12
13 **CHAIR VAN NATTA** – That's the full three minutes. Thank you very much for
14 your comments.

15
16 **SPEAKER THORNSLEY** – You should respect the General Plan at this time.
17 Thank you.

18
19 **CHAIR VAN NATTA** – When we have very few speakers, sometimes we can
20 allow a little bit of latitude, but we have a lot of people who want to speak. Thank
21 you. George Hague is our next speaker. To save travel time, the next one is
22 going to be Tyson Chave so you are aware.

23
24 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Oh Tyson
25 Chave is the Applicant Representative.

26
27 **CHAIR VAN NATTA** – Well his name is on here, so I didn't know if there was
28 something else he wanted to say. After that would be Scott Thompson. Okay go
29 ahead Mr. Hague.

30
31 **SPEAKER HAGUE** – George Hague, Moreno Valley, Sierra Club. If anybody in
32 the audience wants to speak, please fill out one of these green slips to do so. I'm
33 going to hand this letter in, in a few minutes. It has come to the Sierra Club's
34 attention that the Law Firm of Gideon Kracov submitted a Draft EIR comment
35 letter of several hundred pages on the Prologis project. Originally comments for
36 tonight were based on the Draft EIR comment letters and the responses to those
37 found in the Final EIR. Since the Draft EIR comments are not in the Final EIR
38 which is posted online and over on the table, the Sierra Club believes it has been
39 denied a chance to read these responses. Our comment letter would have been
40 different. The project may have been modified and the Mitigation Monitoring
41 Plan may have been different than what is before you now.

42
43 The Sierra Club strongly recommends that a new Final EIR, which includes their
44 letter with responses with any necessary revisions in the document or plan, then
45 recirculated to the public and a lot of other comments other than that, but that is
46 important for you to decide tonight.

1 You talked a lot about traffic. Imagine yourself trying to go out on Moreno Beach
2 and you are going to pull out right and go east on 60, you go up a grade, you
3 have three trucks there in front of you. Trucks take a lot of time to move. It's not
4 the same as cars. They can't compare what's happening with what was there as
5 supposedly as houses and what is going to be there for trucks. There is a huge
6 difference. You should also be able to condition them to build an acceleration
7 lane on the freeway to deal with this so we don't get stuck behind them and we
8 can pull around them. Their traffic analysis only went three miles. That is why it
9 stopped at Nason. It doesn't stop at Nason. It keeps going on to the 215 or from
10 the 215 to Nason. We should know what's happening at all those other
11 intersections. It should happen. There may need to be additional improvements
12 just as they recommended at Moreno Beach and Nason. That's where they
13 stopped because that's all the study did. You need to push them all the way so
14 you have the knowledge before you actually vote on the project and hopefully
15 you will.

16
17 With all the changes in the General Plan that have come forward and modified, in
18 my opinion now, our General Plan is generally inconsistent and has become
19 even more so and this project is just making this happen. Also our TUMF
20 fees...they are based on our General Plan. Well this project helps change our
21 General Plan and therefore our TUMF fees don't really recognize part of this
22 project as part of what is supposed to happen. That's happened with other
23 projects that are going on. We keep changing. I will submit a letter with all my
24 other comments.

25
26 **CHAIR VAN NATTA** – Okay thank you very much. Okay then our next speaker
27 will be Scott Thompson.

28
29 **SPEAKER THOMPSON** – Good evening. My name is Scott Thompson. I too
30 live over on the east end of town. I'm right off of Redlands Blvd. and I have
31 issues with all the warehouses that are going in over there. I don't know if you
32 guys have been on the road in the morning at 7 o'clock since we put the stop
33 sign in and the signal light in, but the traffic is already backed up clear to the stop
34 light and even further. When I watching that little traffic report there, none of the
35 cars are really stopping and gathering like they normally would today. Now some
36 of that might be yielded because of the signals, but also over on Moreno Beach
37 we have the same issue going on right now. You drive over there. You go all the
38 way up to Alessandro. You've got traffic all the way back; almost to Cottonwood
39 now, so I mean there are a lot of things that aren't happening that should be and
40 I don't think that traffic report really represents what is going to happen. A lot of
41 the flow was going on and it was moving and it wasn't really stopping. It wasn't
42 gathering at the places where it should gather and when you add a truck and two
43 trucks and three trucks, it gets even worse, so I see that as being one of the
44 biggest problems.

45

1 The other problem is we're building warehouses right next to a neighborhood that
2 was already developed. Again, Sketchers, you know and now this and I think
3 that most of this area was meant to be residential, especially up Redlands
4 Boulevard and you are kind of converting it into warehouse space and I don't
5 think this is a great plan; a good idea and I think you can stop making some of
6 these mistakes by stopping this project. Some other things I have is obviously
7 the property values in this area have gone down as everybody's did in the
8 economy. They are just now starting to come back up and then to put
9 warehouses right next to it is not going to help the property values at all. Me
10 trying to sell my house...

11
12 **CHAIR VAN NATTA** – Can you please not interrupt the speaker.

13
14 **SPEAKER THOMPSON** - ...me trying to sell my house in five or ten years if I
15 want to leave or want to leave because of all the warehouses being built and the
16 possibility of the WLC being built you know I don't think I have a chance, so this
17 community and your motto is dreams should soar, well this is becoming a
18 nightmare for me. I'm watching all this stuff happen around me and I feel like
19 even as an individual in this community, it's not getting respected that we have
20 already have lived here and now you're developing these areas that are not for
21 us. I don't know what they're for. Six hundred jobs; really? We have over six
22 hundred homes in that area and all you're saying is one job; six hundred jobs? I
23 know, I'm for jobs. I work for a living. I create jobs too, but six hundred jobs to
24 develop all of this? All these stop signs; all these roads; all these improvements;
25 all this and for what, six hundred jobs. Isn't there a better way to come up with
26 six hundred jobs? We have vacant warehouses over by Lake Perris. We have
27 vacant warehouses over by March Air Force Base. Why don't fill some of those
28 up and those will bring you six hundred jobs. There is many more to say and I
29 too will put my comments in through email, the rest of them and I'll let others
30 speak.

31
32 **CHAIR VAN NATTA** – Thank you very much for your comments. Our next
33 speaker is Hans Wolterbeek followed by Brandon Carne.

34
35 **SPEAKER WOLTERBEEK** – Good evening. Section 8.2 in the EIR asks how
36 this project will affect SR 60 traffic and specifically I ask if WRC impact has been
37 addressed. The response from Prologis states in the document that the 2035
38 analysis includes the evaluation on the effects on the City of a project larger than
39 the WLC. I will assume that this has been done in such areas as trip generation
40 and the associated impacts on air quality and the SR 60 truck traffic. The total
41 impact of this facility and the Aldi facility will be about ten percent of the probable
42 WLC facility in the next fifteen years. Ten percent is not an insignificant impact. I
43 personally think that the traffic study should have included the 215/60 interstates.
44 I think we need this as the current truck point. The 215 and the 215 is a target of
45 Prologis. Daily truck trips will be 2,000 for this project alone. This is higher than
46 my evaluation of the WLC. AQMD states that the result of these trips, the

1 impacts of the air quality of the Prologis project by itself exceeds Federal and
2 State standards, so when we combine the ten percent of Aldi and this facility with
3 the proposed WLC we'll have a real problem. The City states it believes that the
4 trip generation rate for the Prologis is too high. The problem is we don't know the
5 identity of the tenants so it's difficult to verify this assumption, but I tend to agree
6 with the assessment with traffic evaluation based on some other recent studies.
7 However there is no reason to assume that the air quality impacts from trucks will
8 be less than stated in the response. No one knows the true impact on air quality
9 due to trucks in a basin like ours... no one. All we can say is that will have a
10 known degradation in air quality.

11
12 The City will control truck traffic trips from this facility through the City, but how
13 will this prohibition be enforced and who will pay for it and how will various
14 regulations such as idling time be enforced to citizens in the local area can be
15 assured of proper control of the air quality. AQMD has stated they want to
16 cooperate with the City and with the developer. We do not know what we will get
17 in air quality. Will you agree to support and help finance the implementation and
18 operation of an air quality station in the eastern part of Moreno Valley. This
19 facility will provide jobs in Moreno Valley, but will you support and help finance
20 the implementation and operation of a program in Moreno Valley to learn about
21 warehousing so people can actually move up; the people you hire. Thank you.

22
23 **CHAIR VAN NATTA** – Thank you very much for your comments. Brandon Carn
24 following by Darryl Terrell.

25
26 **SPEAKER CARN** – Good evening Planning Commission. I first want to make
27 known that this project seems to be placed at a very silly geographical location in
28 Moreno Valley. I think it was purchased in the short term wildness of cheap land
29 prices during the real estate bubble that ended in 2008 in a national global
30 recession and I don't think it was planned out very well because many of the
31 projects like Walmart and other projects like residences and things were not built
32 or planned at the time, so there was no long term planning when these
33 warehouses were planned. Traffic cannot be mediated now at Moreno Beach
34 Drive. If you don't believe me compare the school traffic, people commuting to
35 San Bernardino County in the early morning hours around 8 o'clock in the
36 morning. The light isn't working property. Sometimes there is construction going
37 there and Nason. Now when they finally finish the Nason Street Bridge after two
38 and half years that was overdue, so traffic realistically is not going to be mediated
39 here or along Redlands Boulevard or any other structure that is going to be built.
40 Another thing is we don't need more warehouses in Moreno Valley that have no
41 tenants.

42
43 These are six buildings the tenth of the size are of what we probably have now
44 available just in square footage in warehouses that have not been filled. People
45 have easily a million to two to three million square footage of warehouses that
46 are being leased out by Lee and Associates. If you don't believe me drive down

1 Frederick to Cactus. There are tons of buildings or land that is vacant lots now
2 that is not yet been developed into warehouses. There is plenty of it. We also
3 should not bring in tenants unless they are bringing in something in the on the
4 retail commercial level. When Aldi is coming its bringing stores to the local area.
5 It's also bringing more logistics and truck facilities in the area. We need to fill in a
6 lot of vacant space that was left over from the urban sprawl from that real estate
7 bubble.

8
9 Another thing is in five years there is going to be... the demand... the economy is
10 going to be a lot more improved and what is going to be in demand then is
11 residential development and retail once again as Moreno Valley is famous for.
12 Warehouses are going to be a thing of the past unless they are supporting a local
13 chain of businesses. There are going to be tons of more homeowners and retail
14 businesses and parks and schools eventually built out there. That is Moreno
15 Valley's end game when development... when build-out is completed in the
16 2030's.

17
18 Also we don't utilize any of the infrastructure that we currently have for
19 warehouses. We have a March Global Port empty with almost no vacancy. We
20 have land that could be annexed by the City from the GPA that could be a
21 logistics facility. We could use... we're building a March... March is building a
22 General Aviation Airport and that could be used for hangar space and logistics.
23 Last month a program for the Perris Valley Line Project; the Metrolink service
24 that is eventually coming to Moreno Valley next year to Perris, Menifee and other
25 communities. The long term goal of that project is to build a freight line for rail
26 back down to San Jacinto and other communities as it used to be many decades
27 ago, so in the long term that's the area that's going to have the most right of way
28 in logistics for logistics. The freeway is wide enough already, but we also need to
29 keep in mind as that with recently President Obama was discussing cutting the
30 budget and the military size. March is not going to be military facility forever. It
31 was eventually downgraded in the 90's to reserve status but eventually it will not
32 be an Air Force Base facility anymore. It is going to close someday.

33
34 **CHAIR VAN NATTA** – Thank you very much for your comments.

35
36 **SPEAKER CARN** – Norton, George and Victorville did the same thing, now their
37 logistics. We need to build and counteract that negativity.

38
39 **CHAIR VAN NATTA** – Could I just comment to the public that if you have
40 something you want to say, turn in a comment card and you can come up and
41 speak, but when you are clapping over what the person is saying, it can
42 sometimes interfere with our ability hear the presentation.

43
44 **SPEAKER TERELL** – My name is Darryl Terrell. I live in Moreno Valley. The
45 Prologis group; this is your land, you can do whatever you want within the
46 confines of the General Plan. I'm not against development, but I'm in favor of

1 responsible development. I'm here tonight because it's time to put our people
2 and our kids and their future first for a change. We all share a common belief
3 that we want our kid's dreams of tomorrow to eclipse our greatest hopes of
4 today. As I said to the City Council Tuesday, Moreno Valley could be much more
5 than a blue collar city. We could be a white, brown collar, green collar or any
6 collar because I believe in our kids and our people and their God given ability to
7 raise the bar and set their sights even higher beyond a blue collar City. There is
8 nothing wrong with blue collar jobs because I have one and my dad as I said
9 before, I've got two of them, but we could be much more than that. Our kids
10 deserve more.

11
12 Our people deserve more for a brighter future and greater economic
13 opportunities. We could be a City where all collars are welcome to our General
14 Plan. We could be a 21st century city. We have all the tools to achieve this in the
15 existing General Plan and diversify our economy and building a (inaudible) a
16 green, a research and development light factory, a biomed (?) economy and
17 creating everlasting prosperity, a sustainable economic growth that will provide
18 our people with a living wage or a career that would lift them out of poverty and
19 keep them off of the freeway and closer to home and most importantly provide a
20 future for our kids to come home to after College. We must give our people hope
21 and raise our kids and their aspirations and their future and their dreams in
22 (inaudible) and not (inaudible).

23
24 It's time to raise the bar now. It's time to put our people; our kids and their future
25 first for a change because we have enough warehouses right now. It's time for
26 us to start thinking about building something. We have never attracted
27 businesses that build, manufactured or building something that can lift people out
28 of poverty because our kids don't want to come back here because there is
29 nothing for them to come back to. It's time to start thinking forward to the new
30 global economic frontier of the 21st century. That's where our future lies right
31 now because we're going to be 21st century city. Then we've got to look forward;
32 not backward. Logistics is going to have its time, but what about beyond that
33 where our kids, if we want to have an establishment like Riverside, then that's
34 what we have to look for bringing our kids home. Thank you.

35
36 **CHAIR VAN NATTA** – Thank you very much Mr. Terrell. Our next speaker is
37 Lindsay Robinson followed by Jaime Moreno.

38
39 **SPEAKER ROBINSON** – I'm not a public speaker so bear with me. I'm not
40 opposed to the business park being built as it zoned. I am opposed to them
41 coming in and asking to change the zoning so more warehouses can go in when
42 it should be residential. I researched the zoning before I purchased my property
43 here. This is someplace I wanted to retire and stay. I don't know if I would be
44 able to afford to leave. I participated in the process with City Staff and other
45 residents to come up with the General Plan to build out the eastern end that was
46 satisfactory to everyone. I think it is unfair that people with money and

1 speculators can come in and get these zone changes in. We had a great
2 General Plan for that area; schools, small business, light industrial, business
3 parks. Schools would have brought better paying jobs, longer term jobs than
4 warehouses, however the zone change that allowed Sketchers to come in has
5 negatively affected the whole area down there. I'm asking... well we know that
6 warehouses; his warehouse in particular did not bring in the promised jobs nor
7 the revenue to the City. We were told that it only brought in 200 thousand when
8 he was telling us it going to bring two million. I'm asking that you please do what
9 is morally right and ethically correct thing and do not permit any more zone
10 changes for warehouses on the eastern end. They are detrimental to our health
11 and wellbeing of the residents and don't bring the jobs and revenue.

12
13 Regarding traffic, she brought up if it was built out residential, how many vehicles
14 it would be versus the trucks. I did not hear that they included for the 600 to 1200
15 employees; their vehicles added to that mix plus any clients, customers etc., we
16 would have all that traffic also and then also the Rami Overlays. I attended that
17 meeting and as we all know from Marcelo Co's testimony, overlays have been
18 used to circumvent the zone change process. The current General Plan was not
19 presented to the people, only these three alternatives that have been kind of
20 crammed down everyone's throat as well as what are the three we can choose
21 from and I still think the original General Plan is the best one for the eastern end
22 of Moreno Valley. Thank you.

23
24 **CHAIR VAN NATTA** – Thank you for your comments. Our next speaker is
25 Debra Coggins Ortiz followed by Melody Lardner.

26
27 **SPEAKER COGGINS ORTIZ** – Hello Commissioners. I love you guys; really I
28 do. You have a lot of power in your hands and I know that a lot of what we are
29 seeing pretty much doesn't have a chance against more warehouses being built
30 in the area, but I love you guys anyway and I love Jeff too, wherever he is. I
31 understand it's his property and he would like to make some money and do
32 business and I'm sure he's a very smart businessman, however I have lived in
33 Moreno Valley almost 30 years and raised my family here. We started out in a
34 little biddy new house and moved to a second house as our family grew and then
35 purchased our house in the east end 16 years ago where we absolutely loved it
36 and I am north of the freeway off of Redlands Boulevard right on the corner of
37 Juniper and Redlands Boulevard and nobody has brought up the fact that that is
38 a truck route that goes through San Mateo Canyon and all the traffic goes
39 through there as a short cut to get to Loma Linda, Redlands, the 10 freeway or
40 whatever.

41
42 Ever since Sketchers has been built, truck traffic has increased past my house
43 and either of you are welcome to come to my house anytime you like. When the
44 trucks go by my windows rattle and I have to stop and think is that an earthquake
45 or a truck and that's a hell of a way to live. If more warehouses get built there,
46 that will increase as well. I keep hearing everyone talk for years about how we

1 all want to put Moreno Valley on the map. What kind of map? The king, world
2 capital of warehouses? Is that what we want for our families and our
3 community? I say no. I say logistics and all of California stinks and warehouses
4 are just because we've lost all business and we're importing all of this junk from
5 other countries that we are filling our stores with.

6 What I would like to see and what I would like the Commission to create is a
7 possibility for making Moreno Valley a haven and have a reputation for being
8 open and encouraging for small businesses to come here; for manufacturing to
9 come here so that American products can be made here and so we don't have to
10 import all this junk from overseas. Thank you.

11
12 **CHAIR VAN NATTA** – Thank you very much. Melody Lardner followed by Bob
13 Palomarez.

14
15 **SPEAKER LARDNER** – I'm Melody Lardner. I live south of this project in
16 Moreno Valley. I'm again concerned our City is trying to change our General
17 Plan. The Plan was a document developed with the City in conjunction with the
18 residents in a vision of how we wanted to City become and this warehouse
19 complex is a far cry from our vision. I'm concerned that the high density housing
20 that was supposed to be there is now going to have to be relocated which
21 happening with every new project that changes our General Plan.

22
23 Truck traffic mixed with cars is a big concern. I commute through the Redlands
24 warehouse area and traffic accidents are increasing between cars and trucks
25 there. Potholes are increasing in the roads out there and this City here doesn't
26 seem to have the money to always fix potholes and there is getting to be more
27 and more of them around our City. I also am concerned about the traffic on
28 Moreno Beach like was pointed out. It's a bottleneck and a truck route. I'm
29 concerned... I won't repeat the Highway 60 stuff. I'm concerned with noise from
30 this project because I read that it was going to be 24 hours operations and at
31 night sound really travels. I can hear the freeway at night, so I'll hear this at night
32 too.

33
34 I am concerned with the diesel exhaust as others have talked about. I am
35 concerned this development may increase run-off into the Quincy Channel
36 because they are taking away a couple of the smaller channels that absorb the
37 water. I don't know if the detention basins can handle some of these storms
38 we've been having. We've seen what the storms can do in just one event, how
39 much soil can move; how much water can move. This project... I am concerned
40 if this does get approved about lighting to make sure that the dark standards are
41 enforced and also if they have skylights that the light is not coming up from those
42 at night if they are operating 24 hours.

43
44 If you do approve this development, the landscaping looked pretty skimpy.
45 Sketchers promised lush us landscaping and if that's the definition of lush
46 landscaping then that's a far cry from what we need to see to screen these

1 buildings from view especially around the perimeter. There are nice apartments
2 that have nice views. Right now they'll just see buildings and a little wimpy
3 landscaping. There are some good examples of some warehouses in Redlands
4 that have nice landscaping and setbacks and built below grade. I'm not sure if all
5 that is going to be done here and then they said they would build them to
6 accommodate solar panels but nowhere did they promise solar panels. I would
7 like to see you know that is a lot of ground being covered with cement and
8 asphalt and it would be nice if we take advantage to help with the climate change
9 and global warming and maybe bring utility costs for residents in the area and
10 make the City a greener City and I would like to see the parcels if you do approve
11 this, closest to the Auto Mall, give the Auto Mall a little more chance than 18
12 months. The economy is just barely picking up and making a centralized Auto
13 Mall makes sense for that area and that what was intended. So anyway, thanks
14 for listening and I have a copy of the letter I can submit.

15
16 **CHAIR VAN NATTA** – Thank you very much. Okay Bob Palomarez is next
17 followed by Craig Givens.

18
19 **SPEAKER PALOMAREZ** – Good evening Commissioners. I'm here to speak on
20 my behalf. I am in support of this project. I am concerned with the size of it
21 because a lot of this stuff that we've heard, even the gentleman who came up
22 here at the last minute and professed that he has the answer to everything, those
23 are the same people that said thing when Sketchers was on the drawing board;
24 you know the same concerns; the bumper to bumper traffic on the 60 freeway. I
25 don't see it. I know there are concerns but you know they just don't want it out
26 there, but I know you'll make the right decision based on everything that you
27 receive; you know paperwork. These people, that's their land and if they meet
28 City, State and Federal guidelines and go beyond it, why should you deny them.
29 They have been denied seven years, but this City has been denied since 1986
30 for these kinds of projects. I am concerned with the size, but I'm looking at the
31 big picture. I mean the City of Riverside, threw their two cents in saying they are
32 concerned with the pollution. I don't think they came to this City and told us
33 we're going to build a lot of warehouses on the south side of the 215. Do you
34 have any concerns? Of course we do. But they didn't give us a courtesy, but yet
35 they'll get in the Press Enterprise and say that they're concerned. They aren't
36 concerned. They just don't want anything here period. You know these people
37 are entitled to their due. Thank you very much.

38
39 **CHAIR VAN NATTA** - Thank you. Craig Givens followed by Jonathan Lipscomb.

40
41 **SPEAKER GIVENS** – Good evening Planning Commission. I'm here to oppose
42 approval of this project. If I can look and just read something that Highland
43 Fairview sent out dated February 28th. It said that it's an opportunity, when they
44 are talking about the World Logistics Center, for our City to meet its potential as
45 one of the nation's leading warehouse centers. Now if that is the only potential
46 that Moreno Valley has is warehouses, that's pathetic. You represent the people

1 of Moreno Valley and the Council. These projects are in the interest of the
2 developers and not in the interest of the people of Moreno Valley.

3
4 The people want more than just warehouses and if we look at our industrial area;
5 the Joint Powers area, we have plenty of warehouses and more room for more to
6 come. The gentleman that came up here talking about the project said that
7 normally they look for ports, freeways, airports and rail lines. Now there is no
8 port here but three of those items are in the Joint Powers area. That's where our
9 industrial section is and to the gentleman who says that he would have to leave.
10 You don't have to leave. You can joint our movement to remove every single
11 appointed and elected leader that believes we should be in an industrial
12 warehouse city. The people out there, you need to support what we're out here
13 doing in the community. You don't have to give up, you have to fight for the type
14 of city you want. They have a view of a warehouse, industrial city. We don't
15 share that view and we have to use our voice and our votes to make the changes
16 that we need in Moreno Valley so that we will be a first rate city; a city that we
17 can be proud of; that our young people can look forward to living in and that we
18 can proposer in. We have a place for warehouses. It's in our industrial section.

19
20 **CHAIR VAN NATTA** – Thank you very much for your comments. Jonathon
21 Lipscomb followed by Debra Craig.

22
23 **SPEAKER LIPSCOMB** – Good evening. I agree with many of the things that
24 have been put forward tonight as far as the concerns with air quality and traffic
25 and such. There were a few things that I'd like to direct my comments to. It
26 came up while Pat Cavanagh was speaking. As mentioned by one of your
27 Councilmembers, Prologis began this project as a warehouse park in 2007 when
28 the property was zoned as a Business Park. Obviously Prologis in 2007 had no
29 concern for the Moreno Valley General Plan or what the vision for the area was,
30 or its business park intentions, but rather was solely concerned with its fiduciary
31 vision for delivering dividends to its shareholders via development of a
32 warehouse park.

33
34 Now obviously warehouses provide lots of jobs; 600 jobs at warehouse pay is not
35 going to give you a whole lot of tax revenue. If the laws have already been
36 structured to reduce tax revenue for large scale businesses and developers of
37 this type, you can't count on that for revenue either, so you're at a loss and taking
38 on a liability for the sake of a well moneyed and possibly well intentioned
39 developer may be counterproductive to the community as a whole. Beyond that,
40 the Sabian (?) site was and is that the ideal site for Prologis' project according to
41 the company's website was spoke earlier today, is a major port or harbor or other
42 sort of hub, which Moreno Valley really isn't, except for perhaps the fact that it
43 does have a potential maybe airport in the future and a lot of highway access and
44 some roads that can be converted over. With that idea then, this project was
45 created to exploit the region as a hub even before the idea of the development or
46 the General Plan was presented.

1 This vision that they wanted to share with us has nothing to do with us except for
2 the fact that we have a potential for an airport and a bunch of highways that they
3 want to exploit. Beyond that strategic hub, perhaps their Moreno Valley vision
4 was seen to be more to exploit us than anything and I would think that you're
5 responsibility to us as a community would be beyond that and that focusing on
6 small business and manufacturing would help get us beyond a short sided goal.
7 Thank you.

8
9 **CHAIR VAN NATTA** – Thank you for your comments. Debra Craig followed by
10 Scott Heveran.

11
12 **SPEAKER CRAIG** – Good evening. I came here just to get information. I didn't
13 plan on speaking tonight, but then when I heard the presentation on the traffic
14 report and they said they didn't include the traffic leading up to the 215 and 60
15 freeway, I had to speak. For the record I live in District 2. I don't even live on the
16 east side but I am against this project. I am teacher in the District. I live a mile
17 from my school. I don't even have to get on the freeways and I'm sure Prologis
18 is a really good company but the City Council they just recently approved Aldi
19 warehouse and they said they might have 250 stores that they will be delivering
20 to and that's already adding truck traffic to our freeways, so I don't know how in
21 good conscientious this City Planning Commission can approve this project.
22 How could you do this to the people who are already sitting on the 60 freeway
23 sitting stuck in traffic? I just don't understand why. It's not worth the 600 jobs we
24 might gain. I've often that the right thing to do is often the hard thing to do, but in
25 this case I think the right thing to do is really easy. You should just say no to this
26 project. It's really a no-brainer. Thank you.

27
28 **CHAIR VAN NATTA** – Thank you for your comments. Okay our next speaker is
29 Scott Heveran followed by Brian Sharrow.

30
31 **SPEAKER HEVERAN** – Good evening. First of all I'd like to thank the
32 Commission and I guess the City Council for televising these things. I watched
33 my first one last week. Chairwoman Natta said Moreno Valley is a beautiful town
34 surrounded on three sides by beautiful views, beautiful mountains and it is and
35 during that meeting that was about possibly bringing in higher end homes. Of
36 course you know it seems to be the motto of this City is aim low. You know it
37 was said that we can't build high end homes because we're not Temecula.
38 We're not 30 miles closer to San Diego and I believe one the Commissioners
39 said we're 30 miles closer to Vegas. What happens in Vegas stays in Vegas, but
40 what I would suggest to you is that we're 30 miles closer to the mountains.
41 We're 30 miles closer to Coachella Valley, to Palm Springs, but the logic of that
42 is anybody closer to San Diego would be a more affluent City and that's just not
43 true. The problem with Moreno Valley is that we don't choose to be; we don't
44 choose to aim high. We choose to aim low. I don't understand why you would
45 go to such trouble of re-branding a section of the City as Rancho Belago and
46 then turning it into warehouses.

1 Nobody I know bought a house in Moreno Valley thinking well one day we'll just
2 have all these warehouses here. How can you turn a bedroom community into a
3 warehouse community and just expect the citizens to go along with it. The whole
4 idea of changing the General Plan is a bad idea. First of all, the City is under a
5 cloud of corruption. Now the Council can blame the citizens for drawing attention
6 to that, but by not looking at that and not trying to show the City and the rest of
7 the community that we are thinking of the citizens. We're not giving the
8 developers whatever they want. That's how you clean up the City's image, not by
9 changing the General Plan at the whim of the developer. Now they say that this
10 project is going to bring in x amount of traffic and pollution. Well that's not
11 cumulative. You have all these warehouses going in with the big monster
12 coming down the road of the World Logistics Center. All of these things are
13 going to brand Moreno Valley as a warehouse City. That's not a good thing.

14
15 **CHAIR VAN NATTA** – Thank you for your comments. Our final speaker is Bryan
16 Sharrow.

17
18 **SPEAKER SHARROW** – Hi, thank you for your time. I'm probably maybe one of
19 the newest residents here. I've lived here for about three months. I've been out
20 here since 1979, grew up in Nuevo, went to Perris High School, moved out to the
21 May Ranch Development out there when it was just nothing more than potato
22 fields all around where I lived and I saw the bigger master plan businesses
23 coming in and it was proposed that they wouldn't be a burden to our community.
24 Well they were. The noise was horrible. I mean you can argue whatever you
25 want on any kind of study, but I was a resident and I sat there listened to these
26 trucks in the middle of the night going beep, beep, beep backing up and what
27 not. Well that wasn't the big problem. The big problem was really the freeways
28 that weren't designed to hold that. Not only the roads and the damage they did
29 to it, but the freeways was really a problem to where I see it's going to be a huge
30 problem where I live now up on Moreno Beach Drive just north of there.

31
32 That exit is designed for two people going left and right and they are night timed
33 properly, especially on the north side. If you guys could do something about that,
34 that would be great, but anyhow the problem that I see that really should be
35 looked into, aside from this whole concept which I'm not a fan of; sorry, is that on
36 the Ramona Expressway where I lived off of, the added truck traffic alone, not to
37 mention all the vehicles that were involved backed up that freeway oh I'd say a
38 good mile and unfortunately there were a lot of accidents caused because people
39 would try to get way up front and dive in there and it wasn't designed ever to hold
40 all the people on the side of the shoulder, which is actually for emergencies not
41 for regular traffic stopped, so then you come up here to where you're out on the
42 freeway, which your study didn't really cover and I'm thinking guys you've got to
43 deal with that because we're merging from Nason onto Moreno Beach to the
44 freeway and then you've got people exiting on Moreno Beach Drive and I see a
45 lot of truck traffic going to be piling that up and I'm trying to get in there as a
46 resident and not to mention there are 600 jobs.

1 I'm for job creation; absolutely fabulous, but how many people are going to
2 suffer. You know when I leave in the morning for traffic purposes, it's a
3 nightmare. So now all the people coming from LA for this 2,000 trucks or
4 whatever, going to be coming in here and creating more traffic in the morning for
5 me and then leaving, more traffic at night. I don't see how that helps us. I think
6 there is maybe better ideas hopefully on putting this location out at March or
7 something like that. I think there are areas that are developed for this. I'm not
8 here to point fingers or to say you guys are doing a bad job or anything, I would
9 just hope that you would take it into consideration what the people here are
10 saying and maybe do due diligence and so thanks.

11
12 **CHAIR VAN NATTA** – Thank you very much for your comments. Seeing no
13 other speaker slips having been handed in, I'm going to close the Public
14 Comment Section and I do have a couple of questions for Staff on a couple of
15 the items that were brought up during the public comment if I may.

16
17 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Do you
18 want to ask those in advance of the rebuttal by the Applicant?

19
20 **CHAIR VAN NATTA** – Oh, actually I would because there might be something
21 that could be included in their rebuttal. So one of them was and this would be for
22 our Economic Development Director here. There was some comments about all
23 the vacant warehouses we have in town. Do we? Are there a lot of warehouses
24 that haven't been leased or spoken for?

25
26 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – As of
27 today, there are two vacant warehouses in Moreno Valley. One is on Cactus and
28 the other is down in the south industrial area. Together one is about half a
29 million square feet and the other is about 600,000 square feet and those are
30 recently completed and are not leased, so yes there are two vacant buildings in
31 Moreno Valley. That is approximately five percent of the current inventory in
32 town.

33
34 **CHAIR VAN NATTA** – Would that be considered a good percentage of
35 occupancy factors?

36
37 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Well I'm
38 sure for those people who own those buildings, it's not a good percentage.
39 Across the region the vacancy rate on warehouse logistics, which also includes
40 manufacturing, they all use the same kinds of buildings is right around 10 percent
41 or a little bit less, so the vacancy rate in Moreno Valley is not higher than
42 average. It's somewhat lower than average, so it's not an anomaly.

43
44 **CHAIR VAN NATTA** – The other question that was brought up was about the
45 trucks going north on Redlands and we had asked about truck routes and you

1 had mentioned that south Redlands is not a truck route. Is it still a truck route
2 north?

3
4 **TRAFFIC DIVISION ENGINEER LLOYD** – Yes that is correct.

5
6 **CHAIR VAN NATTA** – And that’s because it goes through to Redlands and...

7
8 **TRAFFIC DIVISION ENGINEER LLOYD** – Correct into the County.

9
10 **CHAIR VAN NATTA** – Okay then at this point the rebuttal from the Applicant if
11 there was anything that they want to address that was brought up in the public
12 comments.

13
14 **APPLICANT CAVANAGH** – There was a couple of things that I wanted to
15 comment and I’m not going to go deep on all the comments. A lot of it is dealt
16 with in the Traffic Study and I’ll leave that alone. There is a couple of things.
17 One is the notion that it would be much better to have business park designation
18 and build business parks as the General Plan allows for and I would tell you that
19 that segment of the market was probably the hardest hit; maybe as bad or worse
20 than the residential market. It’s still slowly recovering. It will take a long time to
21 recover and it’s a different kind of market. We have an average size building in
22 the Inland Empire of about 300,000 feet. That’s our average building size. In
23 Los Angeles our average building size is about 60,000 feet, so we know this
24 market. We know the market for business parks because we own a lot of it in
25 Los Angeles and you generally end up with smaller companies, poor credit and
26 more vacancy. It just comes with some baggage so I guess my only comment is
27 that if we thought that business park was a viable good workable idea in this
28 location, we would be pursuing that and we just don’t think that makes a whole
29 lot of sense in this location for anytime in the near or long term.

30
31 One of the things that was cited in the Traffic Study and I want to just make a
32 point of it is the Traffic Study conducted for the proposed project shows a 47
33 percent reduction in daily trips when the proposed project is compared to the
34 General Plan build out condition. According to the study, it can be reasonable to
35 conclude that air pollution emissions would be correspondingly reduced, so I’m
36 just pointing that out because it seems like I hear a lot of comments that if we just
37 build it to General Plan it will be so much better and what will happen if you build
38 it to the General Plan is that you will have a significantly larger amount of traffic
39 to deal with, so it doesn’t go away, as a matter of fact it gets worse and I wanted
40 to make that point. They were comments about landscaping. I mean I would
41 invite anybody that was interested to be objective to look at the projects in
42 Redlands that we built that’s close by. We own five million feet in Redlands. I
43 think they are beautiful buildings. They are landscaped with a high degree of
44 care and I think the comment was we need more landscaping. Look at what they
45 did in Redlands; not they being us, but I think the buildings that they are talking
46 about are the buildings we own.

1 **COMMISSIONER LOWELL** – Are those buildings typical of your ... sorry
2 Commissioner Lowell up here. Are those buildings typical of the landscaping that
3 you'd be proposing here on this project?
4

5 **APPLICANT CAVANAGH** – Very much so; yes.
6

7 **COMMISSIONER LOWELL** – Could you provide a couple of addresses for now
8 or after the meeting? I'd like check those out?
9

10 **APPLICANT CAVANGH** – I'd be glad to do that. And I stayed away from solar
11 in my earlier discussion because it is a complicated concept and the reason I
12 stayed away from is that generally speaking for you to install solar on a roof there
13 has to be a buyer and the buyer is typically the utility company and Moreno
14 Valley has their own utility company. We have met with your utility company and
15 we've talked about our solar program. There is an opportunity to do something
16 there, but it is more on Moreno Valley's initiative than ours. We just wouldn't
17 build a solar installation for millions of dollars on a roof and not have anybody to
18 use it, so I don't want to get too deep into the weeds on it, but solar is
19 complicated. There is nobody doing more of it than us. We would love to have a
20 further discussion with your utility provider to see if we can incorporate that into
21 what we are doing, but the one thing that we do is we set the buildings up so that
22 they can accommodate solar, so that down the road if the utility decides that they
23 want to have that installation we can do that. And the last comment is there was
24 no subterfuge in 2007. We were not trying to undermine the General Plan. We
25 did not have an agenda that was inconsistent with what the City Council
26 members knew about and bought into at the time and you know a lot of time has
27 gone by and the Council is different and we understand all that. We sat down
28 with the Council members at the time before we made the decision to spend 40
29 million dollars on this site and we had buy in. They felt the plan was good. The
30 concept was good and the product was the right product and here we are today
31 and there is a lot of people pointing fingers at people that I don't think is entirely
32 appropriate, so thank you.
33

34 **CHAIR VAN NATTA** – Thank you very much. Okay at this point normally we
35 would go into our Commissioner Discussion, but I think we have an issue here
36 that we need to talk about and decide what to do and that is that we were given a
37 large piece of information here, five minutes before the meeting started and I'm
38 trying to get some direction as to was this submitted in a timely manner? Do we
39 have... does the email confirm that and if it was, do we have a defective
40 Environmental Impact Report because this information was not addressed and
41 I'm going to ask the Attorney?
42

43 **CITY ATTORNEY CURLEY** – I'm glad you did. Well I'll give you a good lawyerly
44 answer. I can't answer that. The point being because it did just come in; CEQA
45 is a complex law as you well know. We would want to be able to thoughtfully and
46 carefully look at the history of this, look at what their letter covers, look at what

1 our responses have done. Perhaps those items are already addressed and isn't
2 known. The two main issues are was the information received timely? Was the
3 letter received and does the current environmental information address it? If it
4 doesn't; yes the re-circulation reprocessing would be in order. You do it when
5 there is significant new information. That is the CEQA buzz word that you use. If
6 there isn't significant new information, then you don't. You would just augment
7 the Final EIR that you have and move it along. With that amount of paper and
8 the care that we want to attribute to this, shooting from the hip tonight is not what
9 we would recommend. A recommendation is you can continue it to a date
10 certain and I'd say to the next meeting unless Staff thinks otherwise. Let
11 everybody get their arms around the facts and details; give you the right
12 information so that you can make the right decision. That's how we could
13 properly advise you. It may be just hunky dory and it may not; we'll sort that out.

14
15 **CHAIR VAN NATTA** – That was kind of my take on it, that continuing this
16 meeting to a date certain. I didn't want to do this earlier in the meeting because
17 we have a lot of people here who had things they wanted to say and we want to
18 be able to get that information without telling them you came out here for nothing
19 and come back another day, but I think receiving this amount of information, not
20 having any opportunity to even look at it and see if it is something that should
21 have been included, I don't think those of us who got it at the last minute are
22 comfortable with that.

23
24 **CITY ATTORNEY CURLEY** – And Staff echoes that and I echo that.

25
26 **CHAIR VAN NATTA** – Okay, then this particular Agenda item, do we have
27 motion to... would we do it that way... a motion to continue it to a specific date?

28
29 **INTERIM PLANNING OFFICIAL ORMSBY** – Yes but we would recommend it to
30 a date specific which would be your next regular meeting of April 24th.

31
32 **VICE CHAIR GIBA** – I thought it was the 27th?

33
34 **CHAIR VAN NATTA** – Okay, we have another meeting

35
36 **INTERIM PLANNING OFFICIAL ORMSBY** – We do, but that would not be
37 adequate time and if we did need to re-notice the Final EIR it wouldn't be
38 adequate time to that.

39
40 **CHAIR VAN NATTA** – Okay, so then would I ask for a motion to continue this
41 Agenda item to our meeting of April 24th and then we would take action on that?

42
43 **CITY ATTORNEY CURLEY** – That would be in order

44
45 **VICE CHAIR GIBA** – I make that motion that we continue it to April 24th.

46

1 **COMMISSIONER BAKER** – I'll second it.

2
3 **COMMISSIONER LOWELL** – I wanted to second it

4
5 **CHAIR VAN NATTA** – Okay you can third it

6
7 **COMMISSIONER LOWELL** – I third it

8
9 **CHAIR VAN NATTA** – Okay all those in favor and we'll do it by roll call vote.

10
11 **COMMISSIONER SIMS** – Yes

12
13 **COMMISSIONER LOWELL** – In light of the information, I vote yes

14
15 **COMMISSIONER BAKER** – Yes

16
17 **COMMISSIONER RAMIREZ** – Yes

18
19 **COMMISSIONER BARNES** – Yes

20
21 **VICE CHAIR GIBA** – Yes

22
23 **CHAIR VAN NATTA** – Yes. All ayes and the motion passes. This item now
24 goes to our next; not the meeting scheduled for March but the meeting scheduled
25 for April 24th and Staff is requested to give us a report on what has been
26 discovered as far as when this was received and if it should have had an impact
27 on the EIR. Okay so other business.

28
29
30
31 **STAFF COMMENTS**

32
33 **INTERIM PLANNING OFFICIAL ORMSBY** – With regard to Staff Comments I
34 would just mention that for the March 27th meeting you have the same two items I
35 believe I briefed you on last time which is smaller warehouse project not too far
36 from City Hall; Veteran and New Hope area, which is 366,000 square feet
37 approximately and then you have also an Amended CUP for a use on
38 Sunnymead Boulevard. So you'll be seeing that as well and those will be the two
39 items. We're also hoping to bring forward the Study Session to at least begin
40 talking or discussion on the Overlay Zones that we already have in place and
41 introduce the concept of Overlay Zone and so forth at that meeting as well.

42
43 **CHAIR VAN NATTA** – Are there any other Staff Comments?

44
45 **INTERIM PLANNING OFFICIAL ORMSBY** – I didn't have any other Staff
46 Comments?

1 **PUBLIC HEARING ITEMS**

2
3 1. This item is continued from the March 13th, 2014 Agenda

4	Case Description:	PA07-0081	Zone Change
5		PA07-0082	General Plan Amendment
6		PA07-0083	Master Plot Plan including Building 2
7		PA07-0084	Tentative Parcel Map 35679
8		PA07-0158	Plot Plan for Building 1
9		PA07-0159	Plot Plan for Building 3
10		PA07-0160	Plot Plan for Building 4
11		PA07-0161	Plot Plan for Building 5
12		PA07-0162	Plot Plan for Building 6
13		P07-186	Environmental Impact Report

14
15
16 Case Planner: Jeff Bradshaw

17
18 **CHAIR VAN NATTA** – Okay now we’re going into our Public Hearing Items and
19 the first Public Hearing Item is Case Description and this was continued from our
20 March 13th, 2014 Agenda and it’s PA07-0081 Zone Change, PA07-0082 General
21 Plan Amendment, PA07-0083 Master Plot Plan including Building 2, PA07-0084
22 Tentative Parcel Map 35679, PA07-0158 Plot Plan for Building 1, PA07-0159
23 Plot Plan for Building 3, PA07-0160 Plot Plan for Building 4, PA07-0161 Plot Plan
24 for Building 5, PA07-0162 Plot Plan for Building 6 and P07-186 Environmental
25 Impact Report. The Applicant is Prologis. The Case Planner is Jeff Bradshaw
26 and could we have the Staff Report please?
27

28 **ASSOCIATE PLANNER BRADSHAW** – Thank you. Good evening Chair Van
29 Natta and members of the Planning Commission. This item was presented to
30 you as described originally on March 13th, 2014. We were able to provide a Staff
31 Report and information on the project as well as the project Environmental
32 Impact Report. During the Public Hearing portion of the meeting one of the
33 speakers Gideon Kracov representing the Laborers International Union
34 expressed a concern that one of the comment letters prepared on behalf of his
35 client had not made it into the Final Environmental Impact Report nor were there
36 responses. We were able to determine that that in fact was correct, that there
37 had been an error in the preparation of the Final and we used the time between
38 the March 13th meeting and this evening to bring that comment letter into the
39 Final and we worked with LSA Associates to provide appropriate responses to
40 the comments and concerns raised in that letter. That document was
41 recirculated to the public for comment with re-noticing also completed for
42 tonight’s meeting. In response to that we did receive a number of comment
43 letters. Copies of those letters have been made available to you by email
44 originally and then hardcopies were provided for you this evening as well. With
45 us this evening again is the project applicant with his development team and also
46 available is the Environmental Consultant Kent Norton with LSA Associates who

1 has worked with the City to prepare that document. I wanted to keep my portion
2 of this very brief and with that I'll introduce Kent Norton. He had some comments
3 he wanted to be able to present to you as part of the Staff Report on the Impact
4 Report itself.

5
6 **SPEAKER NORTON** – Thank you Jeff. Good evening Madam Chairman and
7 Commissioners. My name is Kent Norton. I'm an Environmental Planner with
8 LSA Associates. We prepared the Environmental Impact Report for the Prologis,
9 Eucalyptus Industrial Park Project. I wanted to bring to your attention and I
10 believe Jeff already indicated you received copies of the correspondence that
11 was transmitted this week regarding additional comments in the Final EIR. I'd
12 like to clarify some of our responses to some of those comments. There were
13 four emails or letters I believe you received. One from Johnson and Sedlak, one
14 from Lozeau Drury, an email from George Hague and I believe a series of emails
15 from Mr. Wolterbeek. I'll address the Johnson and Sedlak letter first. There were
16 four main comments contained in that. That letter was received today. The first
17 comment was about trying to again tie the Prologis project to the World Logistics
18 Center project in terms of cumulative analysis and as much as the commenter
19 would probably like to do that, that's really not allowed under CEQA because the
20 notice of preparation which is when the baseline is set for the Prologis project
21 was circulated in 2008, well before any applications for the World Logistics
22 Center project. The Johnson and Sedlak letter also indicated there were a
23 number of problems with the air quality assessment both for criteria pollutants,
24 for the health risk assessment and greenhouse gases. We believe that we use
25 the most appropriate data assumptions and methodologies, in fact those
26 recommended by the South Coast Air Quality Management District to prepare
27 our analysis, so we are very confident that those are accurate. Those accurately
28 depict the potential impacts of the project. Pesticides were raised, the potential
29 for contamination on the site by hazardous materials. That has been addressed
30 both in the original and the Final or the revised Final EIR. We actually even
31 added mitigation measures to help assure that there wouldn't be any issues
32 regarding pesticides and finally there was a comment about a new fee program
33 supposedly recommended or suggested by Cal Trans to fund freeway
34 improvements, but under CEQA Guidelines if a mitigation program has not been
35 established for a particular purpose or specific improvements, the project is not
36 responsible for contributions to that and we believe that's the case with this
37 project. The second letter was from Lozeau Drury. Their first letter from August
38 12th as Mr. Bradshaw indicated was inadvertently left out of the Final EIR. We
39 have corrected that and responded to all of their specific comments. They
40 primarily focused on... also the cumulative analysis with the World Logistics
41 Center as well as air quality assumptions and pesticides and hazardous
42 materials. Their second letter which was submitted yesterday now focuses also
43 on the World Logistics Center, but also more detail on the health risk
44 assessment, the criteria pollutant assessment of the air quality study and
45 greenhouse gas assessment. As I stated previously we believe that we used the
46 proper assumptions and methodologies for that assessment. Lozeau Drury did

1 their own calculations and hired some independent consultants to help them with
2 that and not surprisingly they got different results than we did, however as I said,
3 we believe we used appropriate guidance and assumptions and methodologies
4 for that analysis and we believe that it accurately represents the potential air
5 quality impacts of the project. The EIR did determine that air quality impacts
6 were significant but not health risk impacts of the project on local residents
7 mainly due to the size and the type of the project that is proposed and the AQMD
8 thresholds that are provided. There were a number of mitigation measures
9 proposed. In fact, eight of the mitigation measures were modified, two of them
10 extensively in response to a number of comments including those from Lozeau
11 Drury and also some of the other environmental organizations in the area and
12 also the project would be required to implement those mitigation measures as
13 well as comply with standard AQMD requirements regarding air pollution. As an
14 example of some of the additional mitigation that was suggested by Lozeau
15 Drury, they said that construction dust emissions should have plume monitoring
16 even though and I can bring up our air quality expert to explain, but quickly that
17 type of monitoring; the efficiency of the effectiveness of that has not been
18 demonstrated in typical air quality monitoring situations. Also there was a
19 concern about long term dust impacts on residents and the health risks of that,
20 but even if construction lasted a year, the assessment period for the health risk
21 assessment is a seventy year period and you can probably easily assume from
22 that that construction during that period of time would not have a cumulative
23 significant effect on individuals living in that area. As I said our health risk
24 assessment was comprehensive and did look at those issues and we feel
25 comfortable that the analysis and the mitigation measures that are recommended
26 in the EIR will effectively reduce pollutants from the project. A couple of other
27 items raised by the Lozeau Drury letter; the greenhouse gases. They brought up
28 a lot of additional information on estimating impacts. There are mitigation
29 measures proposed. The project will have to comply with the latest requirements
30 of the California Green Building Code as well as the latest Title 24 energy
31 requirements. Farm land was indicated as we haven't changed the
32 determination on that. It is a significant impact, but the Final EIR does explain in
33 detail why we concluded that mitigation for that impact is not feasible based on
34 information in the City's General Plan and the decline of farming in Western
35 Riverside County. Finally, their letter brought up as their original letter did the
36 issue of pesticides and potential hazmat contamination. As I indicated, we have
37 proposed mitigation measures. We actually added some measures to help make
38 sure that that would not be a significant impact, but apparently it is probably still
39 not enough for the commenter. I imagine that if this Hearing gets continued, I
40 have no doubt that that commenter will probably continue to submit letters before
41 those hearings as well. The third email communication was from George Hague.
42 In fact he actually mentioned some of his concerns tonight about cumulative
43 noise impacts, but those are directly related to the World Logistics Center project
44 and Mr. Hague and others have continued to try to directly connect the World
45 Logistics Center project to the Prologis Project and it is simply inappropriate
46 under CEQA as I explained. The final issue was some emails I believe Mr.

1 Bradshaw received in the last day or two from Mr. Wolterbeek, a member of the
2 public, regarding SP18 consultation with Native American tribes. The last
3 communication was actually received even today on that. During the circulation
4 of the EIR, prior to that, LSA assisted the City in sending additional notices to
5 Native American Tribes to try and seek or find out if local tribes wanted additional
6 consultation and we believe that the City has met the requirements under SP18
7 for Native American Consultation. Several of the tribes have expressed interest
8 in that and the City is communicating with them and essentially all of the
9 mitigation measures in the Draft EIR were modified to meet the suggestions or
10 the requirements of the Native American Tribes to better define how the
11 monitoring for culture resources would occur during grading. With that I would
12 just conclude and say that we believe the information in the EIR, the Draft EIR
13 and response to comments in the Final EIR are accurate and can be relied upon
14 for decision making purposes and we believe they meet the intent as well as all
15 of the requirements of CEQA. We have several people here tonight to answer
16 questions if you have any regarding air quality, traffic or I can handle any of the
17 other issues if you have questions of our team. Thank you.

18
19 **CHAIR VAN NATTA** – Thank you very much. Are there any more items to the
20 Staff Report?

21
22 **ASSOCIATE PLANNER BRADSHAW** – Not from Staff at this time and the
23 applicant is here as well.

24
25 **CHAIR VAN NATTA** – Okay and I'm going to open the Public Comment and
26 begin with the applicant if there is anything he wants to say prior to hearing from
27 the other speakers.

28
29 **APPLICANT CAVANAGH** – Good evening Madam Chairman and Council and
30 Staff and the group of citizens that have taken the time to come here tonight. I
31 don't want to spend a lot of time talking about what we've already covered in the
32 last month's meeting or restating that, but I did want to touch on a few points that
33 I think are important. In 2007 we acquired this property. After an extensive
34 amount of due diligence, which included measuring the City Council support at
35 that time, the community support and also market demand studies that showed
36 that Moreno Valley was underserved in industrial. What has changed since then
37 is that we've gone through significant economic downturn as everybody in this
38 room knows I'm sure. We have a new City Council and one of the things that
39 has happened that has created a lot of comments and concerns is the
40 introduction of the World Logistics Center and in some fashion people confusing
41 them with us and I will make that point more than once tonight, that we are not
42 connected with the World Logistics Center. I have no involvement with that
43 project or that company and we are totally independent of them. That project
44 happens to be about 18 times larger than ours and I can understand why people
45 raise concerns about a project of that magnitude, but that is not our project. Also
46 during that time period, Prologis merged with A&B, so the two largest companies

1 in the industrial sector merged together to create the company that now exists
2 and continued to be called Prologis and then in 2012 we emerged from the
3 recession and we emerged with a focus on development and growing our
4 platform and in particular in the Inland Empire. I won't talk about Prologis, I've
5 already done that, but the Moreno Valley project is the first sizable project that
6 we are endeavoring in Moreno Valley and it is an important project to us
7 obviously. In regards to land use, I believe that the question that should be
8 asked is what is best for the City and the community and to that end the City
9 contracted with Rami and Associates last year to do a land use study and that
10 study was done for the purpose of giving not only the Planning Commission, but
11 the City Council a guidance tool, not a legislation, but a guidance tool to help
12 them better understand what a third party expert would consider for land uses
13 and they came up with three alternatives and the preferred alternative just
14 happened to be a plan that coincided with the plan that we have been proposing
15 from the beginning. That land use study was a setback in many ways for us
16 because it delayed our project for a full year because a moratorium was put in
17 place and that has been fairly well discussed and I don't need to say more about
18 that, but the preferred alternative is the plan that we are proposing and I think
19 that is meaningful in many respects because that was what the City was after, to
20 find out if there a consistency with the General Plan or maybe there was a better
21 way of looking at it and least to the degree that the consultant that was hired by
22 the City came up with an opinion that our project seemed to be from a land use
23 perspective, the best plan or alternative that they were viewing. In regards to
24 traffic, our proposed project would generate less traffic than the current existing
25 zoning, so there is much discussion about traffic, but I think that is an important
26 point to make and then I touched on it last time, but I'll just mention it again. The
27 fees and street improvements for our project would total approximately 19 million
28 dollars based on the build out that we are anticipating and that includes a lot of
29 fees that don't really accrue to our benefit. That includes over a million dollars in
30 school fees and TUMF fees of two and a half million dollars and 800 for Police
31 and Fire Department and 3 million dollars for flood control and drainage
32 improvements and then the one other piece of this is property tax. The current
33 property tax that is charged this land versus what the property tax that would be
34 generated at the project completion represents about a million and half dollars a
35 year of additional property tax billings. And then I guess lastly, we talked a lot
36 about jobs and the project would be a job generating opportunity for the City and
37 not only for the construction portion of it, but long term permanent jobs which I
38 think are something that everybody seems to have a focus on. Industrial is the
39 primary driver, economic driver in the Inland Empire and right now Moreno Valley
40 is exporting jobs because they're underserving the nature of our business is
41 based on population. Moreno Valley's representation within the industrial sector
42 is low relative to other cities in the Inland Empire. I think industrial would be well
43 served in this location. There was some discussion about that last time and I
44 think that is evidenced by Sketchers locating out here and also Aldi making a
45 commitment to be out here as well, so that has firmed our belief going back to
46 2007 that it's a very good location for building warehouse buildings that we would

1 intend to build. Many of the concerns that have been raised have been in
2 context of the World Logistics Center and we should not be viewed as part of
3 Highland Fairview's proposed project. I believe that most of the concerns that
4 exist regarding the project would be eliminated or greatly reduced if the World
5 Logistics Center had not been introduced after our project had been submitted. It
6 has been a great frustration to us that we've been viewed as part of their project
7 since we are in no way connected to the World Logistics Center project. In
8 closing, Prologis is committed to developing a best in class project. A great deal
9 of thought and time has gone into design, landscaping, the positioning of
10 buildings and providing functionality and aesthetics at the same time. We look
11 forward to bringing our experience, our financial strength and our global
12 customer platform to Moreno Valley. Thank you and I'd be glad to answer any
13 questions.

14
15 **CHAIR VAN NATTA** – Thank you. Does anyone have questions of the
16 applicant? Okay at this time if you'd like to take a seat we will go on to our other
17 speakers. We have several speaker slips here. The first one is Pat Cavanagh.
18 That was you. Of course it was, alright. I'm sorry. The next one is Thomas
19 Jelinec.

20
21 **SPEAKER JELINEC** – Good evening Madam Chairwoman and Planning
22 Commission. Thank you for the opportunity to speak before you this evening.
23 My name is Thomas Jelinec. I'm with Highland Fairview. I am not here so much
24 to speak about this project as much as a comment letter that was submitted on it.
25 As you've already heard today a comment letter was submitted about the noise
26 impacts and truck impacts associated with the World Logistics Center. That
27 information unfortunately is very misleading. As you know trucks in Moreno
28 Valley are restricted to designated truck routes. Most of the streets that were
29 listed in the information that was provided to you are not part of the designated
30 truck routes within Moreno Valley and trucks would not be on any of those streets
31 and in fact the World Logistics Center has been designed in a way that prevents
32 trucks from moving through residential communities. Access at the World
33 Logistics Center would only be through three areas, Theodore via SR60,
34 Redlands north of Eucalyptus via SR60 and Gilman Springs Road and so what
35 you are seeing here, there are noise impacts from the proposed World Logistics
36 Center but those impacts are the result of passenger vehicles. People who would
37 be travelling to the site to work and that is an important distinction to make,
38 because when you look at what the site is currently zoned at and if it was built
39 out as it currently zoned, there would be thousands more vehicle trips from that
40 property than would be under the proposed World Logistics Center and so this is
41 not a matter of trucks moving through the community. The World Logistics
42 Center has been consciously designed to keep trucks out of residential
43 neighborhoods and we just regret that information has not been properly
44 represented to you and we wanted to set the record straight. We provided to the
45 Planning Commission a letter that outlines these facts and we're always available
46 to discuss this information with you. So thank you very much.

1
2 **CHAIR VAN NATTA** – Thank you for your comments. Our next speaker is
3 Michael Lozeau.

4
5 **SPEAKER LOZEAU** – Thank you Madam Chair and Commissioners. Good
6 evening. My name is Mike Lozeau. I'm with the firm Lozeau Drury and I'm here
7 on behalf of LIUNA Local 1184 tonight. We did submit some comments and I'm
8 glad to hear you received the email as well and I dropped off some hardcopies,
9 so I suspect you've not had a chance to look at the hard copy in the few
10 moments you've had, but I'll quickly just go through some of the concerns in our
11 letter. For the greenhouse gas emissions, what we're concerned about is what
12 we perceive as almost as an assumption that somehow the mitigations in there
13 are going to drop the GHG emissions per year from 79,000 metric tons down
14 70,000 to less than 10,000. We just don't think there is any rationale that has
15 been explained in the document; certainly not a quantification nor kind of an
16 objective qualified explanation of how you could possibly with those mitigations
17 go from 79,000 metric tons down to 10. It's just kind of a conclusory assertion.
18 We don't think it is supported by substantial evidence, so that's the main concern
19 we had. The World Logistics concern we had was simply, you heard your
20 consultant say that CEQA prevents you from including it in the baseline. Well
21 that's not true. You certainly have the discretion to include it. It's has been a
22 long time since this project has been on the table, so you should feel comfortable
23 if you desired to update your baseline. The other issue we raised about that is
24 that it qualifies as new information under CEQA. It is significant new information.
25 The context of this project does entirely change with that very large proposed
26 project and just looking at the greenhouse gas emissions and you add those
27 together and the targets that are described in the EIR for that one that apparently
28 the City is hoping to achieve someday. Those two projects alone equal
29 everything the City will be discharging, everything else in 2020, at least according
30 to the numbers that we were looking at. So that's our concern. It's new
31 information. You have to take it into account whether you change your baseline
32 or not. You can change your baseline if you like. Either way you've got to deal
33 with that changed circumstance. In terms of the air emissions, what we were
34 worried about especially NOX, ROG and PM10 is that EIR admits that there is an
35 impact, but all the mitigations you could do aren't there. All the feasible
36 mitigations have not been included and in our letter we go through the EIR and
37 we point out where things aren't mandatory, they are sort of optional, there not
38 enforceable because you aren't even sure they are going to happen. We do list
39 those out hoping that you can affirm those up and do all the feasible mitigation
40 measures to address those and the last thing I'll mention given the time is on the
41 health risk assessments. We did have our consultant re-run the numbers for the
42 construction period and the numbers they got were dramatically different from the
43 EIR... 22 cancers in a million for an adult and 33 in a million for children. And
44 yeah, construction is only expected to occur for 11.5 months; that's almost a
45 year, but in EIR it assumes it is a four month construction period. They only look
46 at the grading period, so when our consultant ran it with the full construction

1 period and the other numbers I think were much from the EIR. The numbers did
2 go up, so whatever the rationales might be from looking out 70 years, applying
3 the air districts methodologies; they certainly don't have the methodologies that
4 says its eleven and a half month construction project, just look at four months.
5 That's not their methodology. Our people did it and got much bigger numbers.
6 This has to be addressed and perhaps mitigation, but I see I'm out of time unless
7 you have a question. Thank you.

8
9 **CHAIR VAN NATTA** – Okay thank you very much. Our next speaker is Hans
10 Wolterbeek.

11
12 **SPEAKER WOLTERBEEK** – Good evening Madam Chair and Councilmen.
13 Basically I looked at the SP18 concerns about documentation in the EIR. There
14 is a table in the EIR, Appendix B in the EIR; not the DEIR and I went through that
15 table you have those tables; I gave those to you, effectively there is a Supreme
16 Court decision Pueblo Vs. United States 50F3D856 of 1995, which basically said
17 that emails or any written documentation really is not enough in communicating
18 with Indian Tribes or Indian Bands and three Indians Bands apparently were not
19 properly contacted according to that criteria. Email contact for the Morongo Band
20 appears to be incorrect in the EIR; at least I was unable to find an email contact
21 to invite them to this meeting, so if that indeed is the truth, then what impact did
22 the lack of notification of this meeting have on behalf of the Morongo Band and
23 what about the delivery of the EIR. Now the document is not complete and
24 needs to be undated. Basically when you look at the table and that's the
25 document and that's what I'm going to be talking about here, it basically says
26 some things and it leaves a lot of conclusions out, so therefore I came up with
27 conclusions and I did coordinate a little bit with one of the Staff and basically I
28 drew what conclusions I could. There were probably more communications. I
29 could not see them and they were not in that table you have in front of you. In
30 addition and I think that is very important. In the EIR by the way states that an
31 archeologist will be on site and Indian Bands will be notified if something is
32 found, which is okay for some Bands when you read through EIR, however again
33 in that magic table that I was talking about, there is Soboba and Cahuilla Bands
34 and I hope that I pronounced that correctly, ask them Indian monitors on the site.
35 Were these concerns fully addressed and documented. I'm sorry, I could not tell
36 that from those two tables. The EIR also states that the City does not require the
37 developer to stay for an Indian monitor from the Indian Bands. Okay I can see
38 that for a small development; a small project, but this is not a small project, so
39 why not. Just because it wasn't done before, doesn't mean we cannot do that
40 now and impose that on the developer. It is not that high an expense. It is at
41 most basically it seems to me when they are digging up the ground, which as
42 everybody says seems to be one man; one year, so one man year is not that
43 expensive for a company the size of Prologis.

44
45 **CHAIR VAN NATTA** – Thank you very much for your comments.
46

1 **SPEAKER WOLTERBEEK** – I’m already out of time.

2
3 **CHAIR VAN NATTA** – Your time is up. Our next speaker is Deanna Reeder.
4 Hello again.

5
6 **SPEAKER REEDER** – Hello. Um, two things. One; the moratorium and
7 Prologis, they should have never done that moratorium, that was dumb and they
8 did it based on an emergency ordinance, which means it should have been a
9 threat to the health, safety or welfare of the community and I can’t see how
10 building or not building could have done that, so that was a pile of crap. You’re
11 right, you were put on hold for a year, however, let’s go talk about when you
12 bought that piece of property and why. Prologis is the company that Sketchers
13 was leasing from before they moved here. In 2007 is when Benzeevi signed that
14 deal with Sketchers, which means in 2007 Prologis knew that Sketchers was
15 moving there and that they were going to put a warehouse there and it was in
16 2007 that Benzeevi started formulating his plan for the World Logistics Center
17 because it was in the Sketchers EIR and Draft EIR as a logistics modified
18 General Plan, so Prologis you knew about the World Logistics Center when you
19 made your application. You knew exactly what the plan was, so that’s probably
20 and I’ll say probably why you bought the property because you are in the
21 warehouse business and you knew that Benzeevi was going to talk the City
22 Council into it because after all his money buys what he wants. So no, you don’t
23 get a pass on skipping over what the World Logistics Center affects are going to
24 be. You knew it was going there when you bought that property and you knew
25 what it was going to be when you made your application, so you need to take
26 those affects into consideration in your EIR. Thank you.

27
28 **CHAIR VAN NATTA** – Thank you for your comments. Our next speaker is Tom
29 Thornsley.

30
31 **SPEAKER THORNSLEY** – I see you have a bigger timer now. I can see it.
32 Thank you although it’s not running.

33
34 **CHAIR VAN NATTA** – It will when you start talking.

35
36 **SPEAKER THORNSLEY** – Hi, good evening. I’m happy to be here. My name is
37 Tom Thornsley. I’m a resident of Moreno Valley. I’m one of those folks who is
38 definitely not in favor of this City’s constant conversion of land uses to now permit
39 warehousing. This location was designated as a community node which had
40 housing, commercial and Business Park which had a more diverse range of
41 employment opportunities. You as the Commission have seen over the last five
42 years a multitude of proposals coming in to you where the request has been to
43 change the land use from Business Park to Light Industrial so that it can convert
44 to warehouse use; we’re talking the mega warehouse use and not the small
45 business park type use, so therefore we are moving farther and farther away
46 from what had been the General Plan’s goals and objectives which this project

1 cites as there rationale for doing that. Objective 2.5 promote a mix of industrial
2 uses which provide sound and diverse economic base and ample employment
3 opportunities for City's and the goals it says, a well-organized designed high
4 quality functional balance of urban and rural land uses that meet the need of a
5 diverse population and promote the degree of health, safety and well-being. The
6 way this land is currently designated, meets all those criteria when that area was
7 designated and the land uses were established. All that was taken into account
8 and it was set forward to be that way. Why the City went for a moratorium and
9 wants to change it, wants to look at it, is way beyond me other than somebody is
10 trying to scratch somebody's back. I feel for the developer that he bought the
11 property at one time under a different tenure for the City, but it's like when I buy
12 stock. If I don't get out of it in time I lose my money. You know this isn't what we
13 should be going after right now. We did the corridor study. We did not do it on a
14 macro analysis, we did a micro analysis of just this particular area. You have to
15 look at what has been changed throughout the City over the course of the last
16 five to six years and analyze just where we are going with our land use changes.
17 We are not following the General Plan design. We are letting our City be
18 designed piecemeally by these constant changes and I think it's time that we...
19 well when they did the moratorium it should have been Citywide and it should
20 have been a full size assessment on it and I think that's what we need to do in
21 the future. Thank you very much.

22

23 **CHAIR VAN NATTA** – Thank you for your comments. Our next speaker is
24 George Hague. Can we take a brief recess? We have a Commissioner that left
25 the room and he'll be back in a minute. I didn't want anybody to miss your
26 comments.

27

28 **SPEAKER HAGUE** – George Hague, Moreno Valley, Sierra Club. The
29 developer states in their response to comments that there was a recent court
30 case that allows for mitigation of AG. This project destroys 80 acres of AG;
31 prime AG. You know the thousands of citrus that disappeared and they're saying
32 they can't do that here locally because there isn't an AG mitigation program here
33 in the County. I would say that by the time there is occupancy of this project
34 there will be one and you could condition this project based on that, but even if
35 that didn't happen there are State AG Programs for conservation of AG that we
36 could make sure that they apply for, so just because there isn't one in the County
37 doesn't mean there isn't one that they could actually use. The developer also
38 believes the cumulative impacts... this is also handled already. The World
39 Logistics Center was out there and they knew it; other people knew it. Their
40 impacts needs to be included. Cal Trans... you received a letter late probably at
41 the last hearing saying we need a mitigation bank here for Highway 60; State
42 Route 60. All of us who use State Route 60, please have such a thing. Please
43 make this developer be part of that. We need it. We can't just allow thousands
44 and thousands of additional trucks and traffic to impact State Route 60 without
45 any mitigation. The World Logistics Center will cast a toxic plume. You can go
46 to their documents. They have wonderful pictures of the toxic plume of cancer

1 that is going to cover this City. It goes out over Lake Perris even. It goes in
2 places it was never before seen east of San Bernardino almost all the way out to
3 Palm Springs. This is significant. This project will add to that as you heard a few
4 minutes ago from another speaker that this project will add to the cancer
5 problems of our area and actually beyond our area. That is why some people
6 are concerned about the warehousing in Moreno Valley because they know the
7 plumes and toxicity of these projects does not stop at the border of Moreno
8 Valley. At least this project is being somewhat honest with its traffic and trucks
9 and so forth. They mentioned that south on Moreno Beach this project will have
10 an impact. There is a housing development going in near the substation. This
11 project will go by that now. It says there is an impact at Alessandro and Moreno
12 Beach. It continues on to Nason and Moreno Beach there will be a significant
13 impact. For some reason it all disappears because the City has this kind of
14 bogus idea that beyond 5 miles there are no impacts. Well you know that Nason
15 is going to continue on all the way to 215 and vice versa, so at Heacock and
16 Perris and these other intersections there is going to be impacts, but this City
17 doesn't require those mitigations.

18
19 **CHAIR VAN NATTA** – Okay, your time is up now Mr. Hague.

20
21 **SPEAKER HAGUE** – So Alessandro is a truck route. Cactus is a truck route.
22 World Logistics Center isn't going stop them.

23
24 **CHAIR VAN NATTA** – Thank you for your comments. Our next speaker is
25 Monique Gordon. It's for Item 2 she says. Excuse me, oh for item 2. It was on
26 this list so we'll take it off. Okay, thank you. Seeing no more speaker slips for
27 the public comments and nobody else approaching the microphone there, I'm
28 going to close the public comment and we'll have questions from the
29 Commissioners.

30
31 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Excuse
32 me Chair. The applicant would have an opportunity to rebut if they choose to do
33 so.

34
35 **CHAIR VAN NATTA** – Exactly, thank you. Did you have anything else you wish
36 to comment on? Okay, seeing no request from the applicant for rebuttal then we
37 will go on. Were there any questions from the Commissioners of either Staff or
38 the applicant regarding the presentations?

39
40 **COMMISSIONER RAMIREZ** – Yes for me one of the biggest issues is traffic,
41 especially traffic along Highway 60. Now it is evident that eventually this entire
42 Highway 60 corridor is going to have to be redeveloped from approximately
43 where Frederick and Pigeon Pass is all way throughout to the east end. We
44 received this letter dated March 17th, 2014 recommending the City of Moreno
45 Valley coordinate a State sponsored program of collecting transportation
46 mitigation fees from development projects to make improvements to the State

1 highway system. My first question is have we started this program? If so can we
2 ask Prologis to contribute to the fees of this program?

3
4 **TRANSPORTATION DIVISION ENGINEER LLOYD** – Good evening Chair and
5 Commissioners. I'm Michael Lloyd with Transportation Engineering Division. I'm
6 aware of that letter and we have received similar letters for other projects from
7 Cal Trans making a similar statement and if you'll notice in that it states a State
8 sponsored program, so we've been in a position where any type of fair share
9 payment program from developers to the State would need to be established by
10 the State even though the State is asking the City to take the initiative, so it's a
11 little confusing. We have had conversations ever since I've been at the City for
12 approximately seven to eight years now with Cal Trans and this topic comes up
13 regularly, however the State has made no movement. To put it into maybe a little
14 more perspective, the State really needs to initiate the dialogue with a regional
15 type of agency such as WRCOG or RCTC because it would make no sense for
16 Moreno Valley to collect developer impact fees and give it to the State when
17 other jurisdictions around us aren't doing so, so this was a regional effort and I'm
18 guessing why we haven't seen any movement from Cal Trans is there just hasn't
19 been any momentum on a regional basis. So to answer your question a little
20 more directly, yes we are aware of this and we've had conversations with Cal
21 Trans and my guess is those conversations will continue to occur, but as I
22 mentioned, it really needs to be focused on a regional basis very similar to our
23 TUMF program so that those regional impacts, where part of a regional effort to
24 address them and not just on city basis.

25
26 **COMMISSIONER RAMIREZ** – Very well, thank you.

27
28 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Yeah
29 Michael is it correct to say that the current TUMF system actually does provide
30 some improvements related to the freeway?

31
32 **TRANSPORTATION DIVISION ENGINEER LLOYD** – That is correct. We do
33 collect fees as part of the TUMF program to address the ramp terminals at the
34 arterials. I believe Cal Trans' focus is really more on establishing a program to
35 establish a fee collection system for the actual mainline of the freeway, but John
36 you're correct. The fees that are collected as part of the TUMF regional program,
37 some of those monies are geared towards the ramps; the connections with
38 arterial streets.

39
40 **CHAIR VAN NATTA** – Okay any questions of the Commissioners?

41
42 **COMMISSIONER SIMS** – I do have some... I looked over the EIR and the Traffic
43 Impact Analysis Report and it is clear to me when I was reading through the
44 Traffic Impact Analysis that the cumulative analysis at build out with the
45 improvements does not include the World Logistics Center and so when you look
46 through the tables, specifically Table 4.11.j of the Traffic Impact Analysis it shows

1 that most intersections with the Prologis project with improvements will be at a
2 level of service C and D, but I repeat that those levels of service projections are
3 made without knowing the cumulative impacts of the World Logistics Center,
4 which is just within a mile of this facility and as we heard earlier today it is
5 eighteen times the size of the Prologis project. I think in the spirit of transparency
6 and care for the entire City, based on some of the City leadership support of the
7 World Logistics project, that in the absence of this project; the Prologis project
8 doing a cumulative traffic analysis that includes the World Logistics Center, I
9 believe the City should initiate a traffic study that includes an overall traffic impact
10 analysis for all of this magnitude of change in the land use for the warehouses. It
11 just seems like it's a piecemeal effect of unknown traffic impacts that we just
12 don't know about and so I would... I just think at this point it just seems like it's
13 hard to make a decision. I mean it seems like a good project; the Prologis.
14 We've heard about it. We've read about it, but there's just unknown in the
15 cumulative effect. We're making a big decision. You know we're opening the
16 gates to more and more warehouse reuse of land that wasn't speculated.

17
18 **CHAIR VAN NATTA** – At this point though we're kind of into asking questions
19 and not up for discussion and so do have questions or anything?
20

21 **COMMISSIONER SIMS** – So my first question is am I clear that the Prologis EIR
22 Traffic Impact Analysis does not include the cumulative effects of the World
23 Logistics Center?
24

25 **INTERIM PLANNING OFFICIAL ORMSBY** – That's correct and from a CEQA
26 standpoint it wouldn't be typically required because of the fact that the cumulative
27 impact list would be established during that notice of preparation period, which
28 occurred several years before the World Logistics project was submitted.
29

30 **COMMISSIONER SIMS** – Okay so my next question is in the EIR there is a
31 generation factor for jobs, so it's on page 4.10.5 of the EIR and there is a formula
32 in there that says one employee; the generation factor for employees for
33 warehouse use is one employee per 1,465 square feet of warehouse and in the
34 document it states that this equates to 1,532 jobs which I assume are permanent
35 jobs that would be expected to be created, so my question to Staff or the
36 applicant would be does this factor come from? Is it a Southern California
37 number? Is it a national average? You know how do we reconcile that? The
38 second question is how does that factor compare with actual job creation in
39 warehouses within the City of Moreno Valley?
40

41 **INTERIM PLANNING OFFICIAL ORMSBY** – The applicant would best address
42 that and I'll defer to them as which member of their team would like to address
43 that.
44

45 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Yeah I'll
46 address your second question. On a warehouse facility by facility it varies quite a

1 bit. I would suggest that the average is close to that on a project. There are
2 projects that have one job for every 3,000 square and there are projects that
3 have one job for every seven or eight hundred square feet, but on average
4 something similar to one for every 1,500 square feet is probably not off the mark
5 on actual averages.

6
7 **SPEAKER NORTON** – Kent Norton with LSA. Again, Mr. Terell is correct. That
8 was an area wide average. The information was averaged over the Southern
9 California regional projects and so yes, a lot of projects would vary, but that
10 number appears to be fairly representative of warehouse projects in Western
11 Riverside County. Actually, the comments about the cumulative traffic, if I may
12 just very quickly answer that. Our traffic people indicated that the build out
13 analysis for Prologis even though it doesn't include the World Logistics Center
14 specifically, as I said the reason for that is the NOP was issued well before
15 Prologis was issued, well before any application for the World Logistics project
16 which is the time when the baseline is set for studies such as traffic, but the
17 Prologis traffic study does look at General Plan build out and there were more
18 trips... the existing land use I believe was mentioned earlier; the existing land
19 use for the project would actually generate more trips than this proposed Prologis
20 project, so the cumulative analysis for the General Plan EIR analysis actually
21 would show more trips than this project would actually generate, so I just wanted
22 to clarify that.

23
24 **COMMISSIONER SIMS** – But that is just for the Prologis area?

25
26 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Kent, if I
27 can... you are talking about General Plan build out on a City-wide basis?

28
29 **SPEAKER NORTON** – Right

30
31 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Yeah, so
32 that would have allocated whatever the current land use is in the General Plan
33 city-wide and not just this property. That would be typically how the build out
34 would be done.

35
36 **SPEAKER NORTON** – If you'd like, Megan Macias, the Director of our Traffic
37 Group is here and she can answer any specific questions you have about the
38 traffic analysis if you like.

39
40 **COMMISSIONER LOWELL** - I had a question while you are still standing up
41 here. One of the public speakers beforehand, I believe his name was Michael
42 Lozeau... I forgot...

43
44 **SPEAKER NORTON** – Lozeau
45

1 **COMMISSIONER LOWELL** - He said there are new CEQA requirements that
2 would be in effect if the project went in today versus when the project was
3 conditioned in 2007. Could you enlighten us on what that would be if the project
4 went into the new set of conditions today?

5
6 **SPEAKER NORTON** – I don't have notes on that... I didn't... Could you expand
7 on that a little bit? I don't have that in my note.

8
9 **COMMISSIONER LOWELL** – That was from one of the public speakers. He
10 came up and he said that there would be new CEQA requirements if the project
11 went through today versus in 2007 when the project was presented to the City.

12
13 **SPEAKER NORTON** – Well you mean the requirements; the development
14 requirements on projects changed throughout time. The 2007 and 2008 period
15 was when the environmental baseline was set for the analysis in the EIR,
16 however when development comes on line when Prologis comes to pull building
17 permits for example, they would be required to meet the current development
18 requirements of the City as well as items like the California Green Building Code,
19 Title 24. Does that answer your question?

20
21 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Oh Kent,
22 as I recall the comment and obviously the person that still in the audience, they
23 could probably correct that if I have it wrong, that there other projects that have
24 been submitted after this project, therefore they should be reviewed because the
25 development landscape in the City is different. That's true, but there is a reason
26 why when projects are submitted and the baseline is submitted, it's not
27 constantly changed because theoretically a project... this is not what happened
28 in this case, but a project could have been submitted yesterday and somehow
29 because it was submitted yesterday before a decision on this project was made,
30 it has to be assessed, so it's kind of what I call an expose facto. At some point in
31 time there has to be a scope of work and that is what is reviewed so that the
32 applicant can rely on that and not constantly having to redo their studies as they
33 get closer and closer to a decision on their project. So there is a reason for the
34 rationale of not going back and adding additional projects after that baseline and
35 I believe that the comment was talking about that, that conditions have changed
36 which they have as far as what projects have been submitted to the City.

37
38 **COMMISSIONER LOWELL** – I appreciate that. Thank you very much but I
39 really kind of concerned; well not concerned but just curious how the CEQA
40 requirements... have they made dramatic changes between 2007 and 2014 or
41 are they pretty much standard.

42
43 **SPEAKER NORTON** – The CEQA requirements... the CEQA requirements have
44 changed incrementally other than since then greenhouse gases have been
45 added and some changes to the environmental checklist in the State CEQA
46 Guidelines have changed but the overall CEQA process remains the same and

1 just remember that development has to meet the current development
2 requirements of the City and that my reference to 2007 and 2008 is only
3 regarding the environmental baseline against which certain impacts are
4 measured; the existing conditions in 2007 and 2008 are used as the baseline in
5 the EIR to determine impacts.

6
7 **COMMISSIONER LOWELL** – Okay, thank you, I appreciate it.

8
9 **CHAIR VAN NATTA** – Okay Commissioners, does anybody else have any
10 questions?

11
12 **VICE CHAIR GIBA** – I may have missed this but could you I think Jeff, could you
13 respond to Mr. Wolterbeek’s concern about the Native American contact record?
14 I’m very concerned about it and I have that little sheet.

15
16 **ASSOCIATE PLANNER BRADSHAW** – The email exchange from earlier this
17 afternoon...what I can say with confidence is that the Tribal groups that the City
18 coordinated with, mitigation has been imposed on the project that the applicants
19 agreed to that would include tribal monitors per the request of those groups that
20 asked for such. The specifics in terms of what is summarized in Appendix B, I
21 would defer I think to Kent and I hate to make him walk back up again, but I think
22 he is going to be a little familiar with the content and the preparation of the
23 summary data than I am. I would defer to him.

24
25 **VICE CHAIR GIBA** – Thank you

26
27 **SPEAKER NORTON** – The information in Appendix B that Mr. Wolterbeek
28 referred to was some additional notifications that LSA assisted the City with by
29 notifying the Native American Tribes that are listed on the Native American
30 Heritage Commission’s list. We have a person who helps us coordinate those in
31 our Irvine office. It was an additional level of trying to reach out to the Tribes on
32 the City’s behalf and let them know about the project continuing on and as far as
33 I know all of the Tribes that were indicated were contacted. We used various
34 methods of contacting and Mr. Wolterbeek referred to a 1995 Federal case,
35 however remember that this is... we’re talking about CEQA of the CEQA process
36 and actually the SP18 notification process and consultation process between the
37 City and the Native American Groups is a separate State requirement, actually
38 even separate from the CEQA process, but I believe the City’s fulfilled all of its
39 requirements regarding SP18 and has consulted with tribes that indicated that
40 they would like to do that as evidenced by the substantial changes to the
41 mitigations measures in response to their comments on the Draft EIR.

42
43 **VICE CHAIR GIBA** – The last time we all met we had a lot of speakers and I
44 don’t know if this will affect you so...

45
46 **SPEAKER NORTON** – Maybe I should stay

1
2 **VICE CHAIR GIBA** – There was one in particular that really caught my eye and
3 so I wanted to... Michael this is probably going to be one of your questions
4 because you know me and traffic right... This was from Ms. Coggins... through
5 San Mateo Canyon and all the traffic goes through there as a short cut to Loma
6 Linda and Redlands; the 10 freeway or whatever. Ever since Sketchers has
7 been built truck traffic has increased past my house and either of you are
8 welcome to come by. When the trucks go by my windows rattle. I have
9 stopped... that's her comments and I did take a little trip up there and that road is
10 not exactly in the best of shape. Last time you mentioned that that is considered
11 an artery for truck traffic. It appears to me that when we looked at the traffic
12 mitigations there was nothing basically north of the 60. Everything dealt with
13 intersections and south of the 60. Was there any consideration at all for the
14 Redlands Boulevard traffic going through there because if this is starting to be a
15 big concern just with one warehouse in there, Aldi's is going to be building theirs
16 and if Prologis gets approved that adds to that and I'm not even going to talk
17 about the World Logistics Center. So is there anything that can be done about
18 that Redlands Boulevard? Can it be changed so that it is no longer a truck traffic
19 artery or can the streets and the roads be improved such that they will take some
20 pressure off of the homes and stuff going up? It is a beautiful route up that way
21 but it doesn't look like it should be a truck route.

22
23 **TRANSPORTATION DIVISION ENGINEER LLOYD** – Michael Lloyd again with
24 Transportation Engineering. Yes Commissioner, action could be taken at the...
25 truck routes are established within the Municipal Code and action by City Council
26 could certainly change that, so it is something if Council took that up and directed
27 Staff, we would investigate and make a proposal to make a change to the truck
28 routes. I would note that Redlands does cross out of the City of Moreno Valley
29 into the County. The County portion of Redlands Boulevard is an established
30 truck route, so the City could certainly take action and say it is not a truck route,
31 however as soon as you cross into the County it is a truck route, so we now have
32 an enforcement problem, so it's not inconceivable or insurmountable to change
33 the designation, it would require a cooperative effort between the City and
34 County to have it removed as a truck route. So it is a possibility, however to my
35 knowledge, there has been no conversations to change that current designation.

36
37 **VICE CHAIR GIBA** – Is there any reason why we can't pursue that
38 conversation... it seemed to me that there were a couple of residents who
39 brought that concern up and that was the first time I've had an opportunity to
40 hear that and again if we are pursuing that direction what would we do? There is
41 your question what would we do as a City, a Commission and a Staff and how
42 would that affect the outcome of what we're doing this evening?

43
44 **TRANSPORTATION DIVISION ENGINEER LLOYD** – If Staff were directed to
45 investigate this and pursue it, Staff would contact the County and begin the
46 dialogue on how to remove the County's portion so that we're working in concert.

1 Assuming the County was amicable to the request we would then move forward
2 to work collectively I guess to have the portions removed; the designation
3 removed from the City as well as the County and it would require action as I
4 mentioned by our City Council and it would require action I believe at the County
5 level and I don't know to what level that would need to occur. I don't know if it is
6 handled administratively or if it would need to go to the Board of Supervisors. I'm
7 not familiar on how the County makes their designations on truck routes, so it
8 would require a little investigation on my part and certainly that dialogue with the
9 County would establish very clearly and quickly what needs to occur.

10
11 **VICE CHAIR GIBA** – So with that recommendation to the Council, could that
12 come from the Commission, but not necessarily effect the outcome of what we
13 determine here but also add that as a mitigation measure down the road?

14
15 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Vice
16 Chair Giba, I don't think it would be a mitigation measure on this project.

17
18 **VICE CHAIR GIBA** – okay

19
20 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – I don't
21 think it would be appropriate, because I would suggest that this project didn't
22 allocate any truck traffic onto Redlands Boulevard.

23
24 **VICE CHAIR GIBA** – That's going to be the natural flow as we've been seeing
25 and we may not have anticipated that I'm sure.

26
27 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – And not
28 to discount the public comments, because I don't live on Redlands Boulevard,
29 but I drive it quite often. It's very rare that I see a truck on Redlands Boulevard
30 and usually when I see it, it is a Coke truck or a Pepsi truck. I've seen others but
31 they don't have markings on them, but I know I've seen the Pepsi truck and the
32 Coke truck on there and they are making local deliveries in essence. But yes, it
33 would certainly... I don't know that it's appropriate to make that recommendation
34 to the Council as part of this action, but certainly separately the Commission
35 could suggest that and I would hope that if this project goes forward to the City
36 Council that those residents that are concerned about it will express those
37 concerns again directly to the City Council. But yes, it would be appropriate
38 probably separate from this project.

39
40 **VICE CHAIR GIBA** – Thank you John. Thank you Michael.

41
42 **COMMISSIONER LOWELL** – I have a question for Staff. The project proposes
43 a General Plan Amendment; I remember just recently that we approved the
44 Housing Element where we had to verify and look at where different types of
45 housing; residential, apartments, mixed use, all that was located. How would this
46 General Plan effect what we just recently approved?

1
2 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – It doesn't
3 affect it. This particular residential zoning was not counted as required to meet
4 the State guidelines. The State guidelines require that you have a certain
5 capacity in low, moderate and above moderate. In the low and moderate, this
6 was not counted towards that so it doesn't affect compliance with those
7 regulations. In the above moderate, the City was substantially over the regional
8 housing needs assessment that was provided to us. As I recall it was by a factor
9 or three or four times, so removal of residential in this particular area would not
10 impact a compliance of the Housing Element.

11
12 **COMMISSIONER LOWELL** – Even though there is some R15 that is going to be
13 removed, I would envision that would be apartments and...

14
15 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – For the
16 low and moderate income categories, the only ones that could be counted were
17 either specific projects; affordable housing projects that were under review or
18 R30, so R20, R15, R10, none of those were counted towards the regional
19 housing needs assessment.

20
21 **COMMISSIONER LOWELL** – I appreciate it, thank you.

22
23 **CHAIR VAN NATTA** – Any other questions? Yes go ahead.

24
25 **COMMISSIONER BARNES** – I have a question for Staff. Could you give me a
26 little background on the General Plan? When was it adopted and is it scheduled
27 for regular revision or is it cast in stone?

28
29 **INTERIM PLANNING OFFICIAL ORMSBY** – The General Plan was last updated
30 in totality in 2006 and it would be due to be updated roughly 10 years from then,
31 so we're looking at a few years still.

32
33 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Yeah the
34 General Plan is not set in stone and the first General Plan was adopted in 1988
35 or 89.... 88, so it was 18 years from the first one to the first update and not to
36 cast aspersions on other communities, in Riverside they just updated their
37 General Plan a couple of years ago. Previous to that the latest update was in
38 1973; comprehensive. So General Plans can change up to four times a year.
39 Each element of a General Plan can be modified up to four times a year under
40 State law, so obviously you wouldn't make wholesale changes four times a year,
41 but it is not intended to be a... it is intended to be a living document, but
42 obviously the framework you need to look at comprehensively. They recommend
43 10 years. Sometimes it's a little bit longer than that.

44
45 **COMMISSIONER BARNES** – And I guess that's the point of my question, not
46 specific to this project, but the fact that we are considering making a change to it,

1 but it's an old document and we all know that a lot has happened in the
2 intervening time, so even discounting this project, it would be subject to review
3 and probably some substantial changes, so I think we need to keep that in mind
4 when consider making a change to it that it's dated.

5
6 **COMMISSIONER LOWELL** – Piggybacking on that last comment Mr. Terell, you
7 said the General Plan can be amended up to four times a year. Is this
8 amendment considered one of those four times?

9
10 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Yes. I
11 believe we had... did we have one this year already? I don't believe so.

12
13 **INTERIM PLANNING OFFICIAL ORMSBY** – I don't believe we've had one this
14 year, but there are a couple perhaps in the pipeline, but this would be the first
15 one this year.

16
17 **COMMISSIONER LOWELL** – Thank you.

18
19 **COMMISSIONER SIMS** – Are there any general triggers of best practice in a city
20 planning department of when there is known development activity that is not
21 consistent with the current General Plan where there would be a stop in the
22 jurisdiction say maybe it is time to do a comprehensive General Plan
23 amendment? Perhaps a trigger such that x percent of the total city is being
24 redeveloped to a certain other type of land use?

25
26 **INTERIM PLANNING OFFICIAL ORMSBY** – There isn't any guidance in the
27 State General Plan Guidelines that I'm aware of and John might have some other
28 thoughts on that. I mean the other thing that should be considered is the General
29 Plan was updated in 2006, but we did go through a recession period. In some
30 respects there hasn't been as much change as there would generally be in that
31 same number of years as during a more active time period. Certainly there was
32 in the first couple of years but during the recession things were slower.

33
34 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Chris is
35 correct. There is no guidance that I'm aware of in planning literature on a set
36 percentage, because if you were looking at a substantial project you'd always
37 want to look at the impacts on the adjacencies anyways and I think as you
38 requested on this project some information perspective on you know what other
39 vacant land is available for this use, I think that's a reasonable question to ask
40 when any major change is made to the General Plan. How does this affect the
41 overall composition of the City as far as uses and how might that compare to
42 other communities? I think that is a reasonable question to ask whenever a
43 major change comes forward.

44
45 **CHAIR VAN NATTA** – I get to ask questions now? One question Planner
46 Bradshaw... was there any communication back and forth from the Auto Mall

1 about the increase of traffic going along Eucalyptus through the middle of the
2 mall there?

3
4 **ASSOCIATE PLANNER BRADSHAW** – I'm not aware of any such
5 communication.

6
7 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Maybe I
8 can answer that. When talking about a different subject I did talk to Glen Moss
9 who is the owner of the current dealerships in the Auto Mall and he was looking
10 forward to the concept of having more traffic come through the Auto Mall and he
11 did not express any concerns about this project. Then I asked him specifically do
12 you have any concerns and he said no. He is looking forward to that road going
13 through.

14
15 **CHAIR VAN NATTA** – Okay. Another question I think at our last meeting, we
16 were talking about the flow of traffic going through there and that this would
17 complete Eucalyptus over to Redlands Boulevard which would make from this
18 project probably as much traffic up getting onto the freeway on Redlands as on
19 Moreno Beach and had a concern about whether or not that intersection would
20 be able to handle it and is there anything going towards that area to improve the
21 access or traffic flow on and off of Redlands Boulevard.

22
23 **TRANSPORTATION DIVISION ENGINEER LLOYD** – You're correct that the
24 analysis did assume a split between the two interchanges. I don't recall off the
25 top of my head the exact split but it was roughly speaking about 50/50 utilizing
26 Redlands versus Moreno Beach Drive and the analysis did not find any direct
27 impacts at the Moreno Beach Drive interchange. It did identify some cumulative
28 impacts. Some of the mitigation measures identified for those cumulative
29 impacts have actually been implemented with the recent completion of the
30 Capital Improvement Project where Eucalyptus was connected to Moreno Beach
31 Drive and the southerly or eastbound ramps were reconstructed. So we are in
32 the process of getting those improvements in. The first phase of improvements
33 to the Moreno Beach interchange have been implemented and the second phase
34 I believe the design is wrapping up and should be done in the next year and it's a
35 matter of identifying a full funding package so it can go out to construction, so it is
36 in the process for Moreno Beach Drive.

37
38 **CHAIR VAN NATTA** – Okay how about Redlands?

39
40 **TRANSPORTATION DIVISION ENGINEER LLOYD** – Redlands, I'm not aware
41 of any improvements at this point in time to actually reconstruct the interchange.
42 Just as a reminder, the Aldi project was conditioned to put in a traffic signal as
43 well as turn lane improvements for the westbound ramps or the ramps on the
44 north side of the interchange. This project is conditioned similarly. This project
45 was also conditioned as well as Aldi to install a traffic signal where Eucalyptus
46 will intersect with Redlands, so those were identified for both projects as direct

1 impacts and there were mitigation measures imposed on the project to address
2 those impacts.

3
4 **CHAIR VAN NATTA** – Does that mean they are going to be done?

5
6 **TRANSPORTATION DIVISION ENGINEER LLOYD** – Yes

7
8 **CHAIR VAN NATTA** – When these are completed then there will be lights there.
9 There will be traffic signals, an additional off ramp from the freeway to Redlands
10 etc.

11
12 **TRANSPORTATION DIVISION ENGINEER LLOYD** – That is correct. Neither
13 project would receive a Certificate of Occupancy allowing them to utilize the
14 building until those improvements are complete and accepted by the City.

15
16 **CHAIR VAN NATTA** – Okay, then the other question of course, we know
17 Redlands Boulevard is a major artery going northbound up towards the Redlands
18 area; Loma Linda area, San Bernardino and so forth, because to get to the 10
19 freeway otherwise you would either have to go through the badlands and meet
20 up with the 10 there or go all the way to the 215 interchange, so it's not realistic
21 to expect that that is not going to continue to be a truck route as you said, only a
22 portion of it is within the City, so are there any plans to upgrade the road bed
23 there to make it more safe for truck traffic?

24
25 **TRANSPORTATION DIVISION ENGINEER LLOYD** – The roadway per our
26 General Plan is designated as a divided arterial, so that would mean an
27 additional lane in the northbound as well as the southbound direction so that we
28 would have a four lane facility with a median. So we'd have two lanes in each
29 direction. As of this time, funding has not been identified to move forward with
30 designer construction, so it is part of our Capital Improvement Program, so that
31 we've identified it as a need, however it is what is referred to as an unfunded
32 project.

33
34 **CHAIR VAN NATTA** – Are funds for that possibly going...are any funds going
35 towards that going to come from this project; from the Aldi project or from the
36 World Logistics Center?

37
38 **TRANSPORTATION DIVISION ENGINEER LLOYD** – That would be established
39 based upon the yearly update or the yearly approval of the CIP; the Capital
40 Improvement Program where Staff works with Council to establish priorities and
41 identify funding, so the possibility is out there. When this project is complete and
42 has paid their DIF and TUMF the fees would be paid to the City. It would go into
43 the pool of funds for that.

44
45 **CHAIR VAN NATTA** – Does it come from DIF and TUMF fees?
46

1 **TRANSPORTATION DIVISION ENGINEER LLOYD** – It is a possibility and there
2 are other funding sources that the City utilizes to build roadways that would
3 include gas tax monies, Measure A monies. We pursue grant monies through
4 the State and the Federal Government, so we often to get a project out to bid in
5 construction, it's generally a pool or several funding sources to get it out to
6 construction.

7
8 **CHAIR VAN NATTA** – Well I can't see telling the people who live along
9 Redlands Boulevard which has always been an arterial that okay now we're not
10 going to make it not an arterial because the trucks are making noise, but I can
11 see where right now it is a hazard and there have been accidents on that road
12 because of the heavy traffic and there are trucks besides the Pepsi and Coke
13 trucks. I was coming down south on Redlands Boulevard from Redlands about
14 two weeks ago and a truck coming up the other way hit debris that was... asphalt
15 debris that was on the road and it went straight through my bumper, so I see that
16 happening. It could have gone through my windshield just as easily. It went
17 through my bumper instead. That is a hazardous road because of the conditions
18 that it is in and should be addressed sooner rather than later.

19
20 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Yeah I
21 think one of things though and I don't know where you had that incident happen,
22 within the City limits is what... Redlands Boulevard within the City limits is part of
23 the City's development impact fee program and I'm not sure if it is a TUMF road
24 as well. It is okay, so fees are part of the system on which fees from any
25 development are collected and then it is a policy decision both the WRCOG level
26 as well as the City and County level of how to spend those monies and I'm
27 assuming if it is on the TUMF network inside the City, it is in the County as well.
28 So I understand...

29
30 **CHAIR VAN NATTA** – The funds from these project are going to go into that
31 fund which could be used there at the discretion of the City's planning...

32
33 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Well it
34 would be the City Council or the County Board of Supervisors

35
36 **CHAIR VAN NATTA** - ...deciding that that is an impact area?

37
38 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Correct;
39 yes

40
41 **CHAIR VAN NATTA** – Okay, another questions?

42
43 **COMMISSIONER BARNES** – Yeah I have a question of Staff. In the resolution
44 that would go to the City Council should this project be approved, one of the, or
45 the primary consideration to override the impacts that aren't sufficiently mitigated
46 is overriding considerations and it lists four of them. On page 126, the project will

1 provide development consistent of Municipal standards, codes and policies. This
2 project provides development, improves and maximizes economic viability of a
3 vacant site by transitioning the project to productive light industrial and there are
4 two more, but in reading through the documentation that we've been given I don't
5 find a lot of substance that supports those overriding considerations. If we are
6 going to elect to do that, what is the basis for those comments and what makes
7 them significant enough to override them.

8
9 **INTERIM PLANNING OFFICIAL ORMSBY** – I didn't see the information on that
10 particular page number, so I'm not actually able to take a look at that. I'm
11 thinking we might want to have the applicant...

12
13 **VICE CHAIR GIBA** – 227, just right next door... the bullet point. There are four
14 bullet points Chris.

15
16 **INTERIM PLANNING OFFICIAL ORMSBY** – Oh 227... okay, I'm think we may
17 want to have the applicant address that and the Environmental Consultant. They
18 prepared the overriding findings.

19
20 **APPLICANT CAVANAGH** – I'll let Kent address that. The one thing I would say
21 though it gets back to what is the right land use for the property and what is the
22 right use for the community and this sort of gets back to, is the current General
23 Plan designation the best use. I guess that's a soft answer to the question and
24 you know I have to... I was very disappointed when the City took the position that
25 they wanted to have a land use study done somewhat at our expense because I
26 thought we were kind of targeted in some ways because there was a lot of other
27 properties that could have been included in that, that weren't, but that aside, I
28 think the findings of the consultant that did the land use study somewhat answers
29 your question as to what is the best; the highest and best use for that land and it
30 is in conformance with what our proposed project is and that gets back to a lot of
31 the things that I said earlier that relate to job creation, traffic impacts that as Kent
32 said I believe are lessened by our proposed use than the current existing plan,
33 the fees that are created and more specifically on the fees, I would say that a lot
34 of the fees that are paid are fees that we don't get the benefit of. We don't
35 directly get the benefit of school fees, the taxing of the Police Department and
36 Fire Department is drastically less than compared to the current zoning, so there
37 are some hidden benefits and it sort of a bundled answer and Kent wrote that so
38 I'll let him respond to it, but that was a few things that I wanted to cover.

39
40 **SPEAKER NORTON** – As you are aware, the CEQA process is balancing act of
41 looking at the adverse impacts of a project and seeing if any benefits of that
42 project are outweighed by those benefits, so in the findings the statement of
43 overriding considerations as the Commissioner identified, there are four primary
44 ones and I'm not sure if you had a specific question about a specific one, but in
45 general as I'm sure you're aware, the new industrial uses would generate short
46 term as well as long term employment. They would make a considerable

1 infrastructure improvements to the area. They would develop the site in a
2 productive manner for light industrial uses and that development would have to
3 be consistent with the City's development guidelines for those uses. Those are
4 the benefits that have been identified for the project and those benefits have to
5 be weighed against the adverse impacts that the EIR identifies and that's the
6 City's; that's the heart of the CEQA process for the City.

7
8 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Yeah and
9 to add onto that, that is one of the things that the policymakers; you have the
10 opportunity to override. Obviously it is not required, the opportunity based on
11 what you would see as the beneficial; whether it is economic, social or other
12 benefits you see of the project that outweigh the potential impact; the
13 environmental impact. So it's an opportunity; to some extent a value judgment,
14 but you've been provided with identifying some potential items that the
15 Consultant and Staff has concurred that would provide that benefit.

16
17 **COMMISSIONER BARNES** – Right, and I didn't ask the question with any pre-
18 judgment, it just seems like we're going through hundreds and hundreds of
19 pages of analysis and some of it negative and we're going to make a ruling
20 based on four sentences. To help me make the decision, I would like to see
21 some specific substance to those and again this is just a general observation. It
22 would help me to have some specifics of those things that basically explain those
23 to me in more detail as they relate to this project.

24
25 **SPEAKER NORTON** – I would say the EIR document in various places provides
26 quite a bit of that information. The project description itself describes in detail
27 the kinds of infrastructure improvements that will be required and the project will
28 install. It talks about the employment benefits that the project will generate. It
29 identifies the transition of the land uses from vacant to the proposed uses; yes
30 different than what it is designated for now, but that's where the General Plan
31 Amendment and Zone Change process and then indicating especially in a
32 number of mitigation measures that the City's development codes and
33 requirements will be followed and then the mitigation typically identifies actions
34 that have to be taken over and above simple compliance with established laws
35 and regulations, including the City's development or review process. So it is in
36 there; yes it's not all in this document as part of this. The findings are more
37 designed to outline the extent of the impacts and how those or to what degree
38 those are mitigated. We could certainly provide additional documentation as a
39 supplement to this for the statement of overriding considerations, but you
40 probably had enough to read regarding this project already, but we can certainly
41 provide that clarification if the Commission so desires.

42
43 **COMMISSIONER BARNES** – Thank you.

44
45 **CITY ATTORNEY CURLEY** – And if I might... lawyers have trouble being quiet.
46 Putting it in context your point is very well taken and let me walk you through just

1 a very few minor but critical elements. In the EIR, the CEQA process... if you
2 have unmitigated or problems that you haven't solved, you can't recommend
3 approval. That's basic, but and this is as you've heard the concept of balancing
4 or the concept of what is called overriding considerations and I'm going to go just
5 straight to the statute, because it's probably most convenient. If specific
6 economic, legal, social, technological or other benefits of a proposed project
7 outweigh the unavoidable adverse environmental impacts, you may then
8 consider that project acceptable. The key is, as it goes on and this is called the
9 statement of overriding considerations, which means what it says, those
10 statements must be supported by substantial evidence in the record. Substantial
11 evidence is defined in there as fact; fact backed by expert opinion or fact based
12 on in essence the circumstances, so you need meat on the bones. You
13 mentioned four sentences; that's pretty thin meat. We would need as was
14 offered to augment that to say the factors that are presented that allow you to say
15 the impacts that are there, while real in the balance are outweighed by the
16 benefits, that needs to be augmented in the statement of overriding
17 considerations, so it is clear to the world what you were thinking when you said
18 we will trump those defects or those problems if you will. The environmental
19 document again as was noted will state in it the objectives that this project is
20 trying to accomplish; bringing jobs. It is bringing development. It's bringing many
21 positives, so that is the objective they were aiming at. You then measure did
22 they hit those objectives. Did they carry off those good things and do those good
23 things outweigh the identified non-mitigated or just broadly stated bad things. If
24 you go back to elementary school where the teacher said show your work, two
25 plus two may be four, but they wanted to see you actually write that formula,
26 that's what you want to augment this with, your four sentences. Show the work,
27 put the meat on to support that legal, economic, social, technological or other
28 benefit. If you do that you've conformed to CEQA. You haven't left people
29 scratching their head. Why did Jeffrey Barnes say this was better than not, so
30 your point is well taken and that should be augmented. Keep in mind you are
31 recommending to the Council. Your recommendation can be augmented that
32 statement of overriding considerations; put some more meat on those bones.

33

34 **COMMISSIONER BARNES** – Thank you.

35

36 **CHAIR VAN NATTA** – Okay you had a question also?

37

38 **VICE CHAIR GIBA** – Yes. I wondered if... well I actually have two but this is the
39 more important one. Would it be appropriate Jeff and Chris for you to just briefly
40 and don't go away, briefly go over the project alternatives so that we kind of have
41 a good idea of what those alternatives are on this EIR and its thing. Would that
42 be an appropriate question for you to do or too much to go into or...

43

44 **ASSOCIATE PLANNER BRADSHAW** – No I just want to make sure I'm
45 understanding the question.

46

1 **VICE CHAIR GIBA** – There are six alternatives to this project.

2
3 **ASSOCIATE PLANNER BRADSHAW** – There are alternatives that are
4 discussed in the EIR and then there also some alternatives suggested as actions
5 that the Planning Commission, and ultimately Council could take, so there is
6 some discussion of alternatives in the Staff Report that are distinct from
7 alternatives in the EIR. I just want to make sure that I'm responding to you with
8 the correct information.

9
10 **VICE CHAIR GIBA** – You know just clarify both of them if you would like very
11 briefly, but I was looking at page 215... adequacy of the range of project
12 alternatives... alternative 1 through 6. In other words you said alternative 1, no
13 project existing zoning and so on. And I ask that for a couple of reasons, as I
14 read through it, sometimes my brain just doesn't really digest it properly, but on
15 the other hand we've also got people here that might like to have better
16 understanding. Now before you address that, I do have one for Mr. Cavanagh
17 real quick if I may. Because in the EIR and you yourself invoked the 60
18 document; the State Route 60 Corridor Study as one reason or consideration
19 why this project should be approved, I went back to the document and on page
20 30 if I may just for the record says, the alternatives received mixed reviews from
21 the community and here are the bullet points... concerns about how new
22 development along corridor would lead to a loss of the existing rural lifestyle,
23 concerns about how residential adjacent to the freeway can impact the health,
24 desire for high and large lot homes, mixed input on whether additional family, a
25 broad desire for more realistic planning that reflects current market conditions,
26 support for utilizing future detention basins, concerns about the negative effects
27 of additional logistics warehouses and concerns about over-saturating the
28 corridor with retail uses. Then it goes on to say the City Staff and the consultant
29 team used the community's comments to refine the land use alternatives and
30 select a preferred alternative. I read that over five times. I couldn't see anything
31 in there that said we wanted a warehouse out in that location nor could I
32 understand how we could come to that conclusion selecting that alternative with
33 that warehouse there, because there were three or four more. So my question to
34 you if would help me please better understand this as this is... I would consider
35 this substantial evidence of the community's involvement in how they feel about
36 what should be out here. How do you draw your conclusions as to why we
37 should put a warehouse out there, especially the size of the warehouse that you
38 are suggesting?

39
40 **SPEAKER CAVANAGH** – Your question is interesting. I didn't write the land use
41 study, so I'm speaking absent their input here, but I would answer that in a
42 couple ways. One is that we looked at this property as an ideal location for the
43 product that we have proposed to build and the reason for that is its proximity to
44 the freeways and the population base that would provide labor and the amenity
45 base that would provide places for people to go eat and experience things
46 outside the workplace. Those are all key ingredients for what makes a good

1 location for building what we build. The other is the market demand and if you
2 looked at the existing zoning for business park that runs along the freeways not
3 only from our property but all the way east out through the Highland Fairview
4 project, that product type has struggled in good times and failed horribly in bad
5 times and so I would just suggest that the General Plan that was originally
6 created, perhaps got it wrong. I don't know the thought process that went into it
7 back into 2006 or prior to that, but it is not where the economy has gone in the
8 Inland Empire and what has driven our market and driven our entire economic
9 base in the Inland Empire has been warehouse distribution and that has been
10 documented and studied ad nauseam and I think we looked at that location and
11 felt it was an ideal location for what we wanted to do and I think that has been
12 proven out by Aldi wanting to be there and Sketchers wanting to be there and it is
13 a similar location going down the 215 corridor. I don't really differentiate the two
14 very much, also I would say I think it's better in some respects because it is right
15 on the freeway and most of the opportunities down the 215 corridor are away
16 from the freeway and that makes those less desirable in that regard. And then
17 the residential, you know that is sort of a decision that you make... does Moreno
18 Valley need more rooftops or does Moreno Valley need more jobs and I think that
19 answer has been proven out pretty clearly at least in my opinion and I have
20 heard that over and over again and you know the other piece of this that probably
21 doesn't get said but I'll say it is that most of the comments that get made at these
22 forums and the land use study and those opportunities for the public to come
23 forward, the people that come and state their opinion are usually the people that
24 have strong feelings against what is going on. The people that are supportive
25 usually are at home on their couch and that's just a fact of life and I don't know
26 what you'd do about that, but it is what it is and people experience that every
27 time you get together. It is very rare that I sit here and hear anybody come up
28 and say what a great job you are doing, so I mean that's just the life or the
29 experience that you have and we have when we are proposing something. I
30 don't know if that answers your question, but I think that... I'm trying to be Rami
31 and Associates in their absence.

32
33 **VICE CHAIR GIBA** – Thank you very much

34
35 **CHAIR VAN NATTA** – Unless we have any other questions let's go into our
36 Commissioner discussion. Thank you very much. Okay who would like to talk
37 about their conclusions first? Who wants to go first? Well I usually go last but I
38 can go first. I don't have a problem with that. My outlook on all of these things
39 when they come up is a little bit different than the experiences than the rest of the
40 Commission. I have a tendency to be very practical. Since I'm not an
41 Engineer... how many of them are up here... I don't always expect everything to
42 come out with all the perfect answers and with everything being exactly right. I
43 look at things in terms of alternatives and so we're looking here at highest and
44 best use perhaps of the land and highest and best use for the community and I'm
45 thinking really what we have is we have three options. We can either say leave
46 the land vacant, don't do anything with it, you know let's protect the little birds

1 and other creatures that are on the land and not disturb their habitat and you
2 know let's just go back and plant some more trees on it, which really isn't going
3 to help the community very much. We could look at what would happen if we just
4 developed it the way that it is already zoned to be developed; business park,
5 offices, some more residential and so forth and has been very correctly brought
6 up right now we don't need more rooftops. We need jobs. We need the
7 infrastructure that would be paid for by development that would increase the tax
8 base, put money in for schools, for Fire Department, for the TUMF fees, improve
9 the traffic flow by putting traffic lights and additional off-ramps and this sort of
10 thing and so that's what I'm looking at this in terms of it may not be a perfect
11 project. I don't think we'll ever see a perfect project, but I don't think there is any
12 demand in today's economy for Business Park, offices and so forth. We're
13 already seeing retail that is closing down. We lost the Best Buy a couple of years
14 ago. We are now losing the Office Max out there in that area because people
15 are not going to stores to buy things. They are going online. They're buying
16 things and what is needed in order to support that kind of an economy is
17 someplace to store, warehouse and distribute those items for people that are
18 buying them and so I see this type of a project as being something that is coming
19 along with our digital age, our information age and so forth as being something
20 that is meeting a need. If there was a need for what was originally zoned for that
21 area then we would probably have applicants saying you know we want to build a
22 business park. We want to build some offices there. We want to build more
23 houses. We don't have applicants for those things because there is not a
24 demand for them and so with the demand comes the need for them, with the
25 need comes the development and it's kind of where the money flows and so I'm
26 looking at this and thinking there is a lot that this project brings to the community.
27 There are some challenges of course and yes it is going to increase traffic, but
28 anything you put there is going to increase traffic. The original project as was
29 mentioned; the original zoning that was there, if it was built out that way it would
30 be even more traffic than what this particular project is, so I think it is an
31 attractive project. I think it fits well where it is. It is close to the freeway. It will
32 bring good things to Moreno Valley including jobs and even though there may be
33 some challenges to it, I think that the benefits outweigh the challenges and those
34 are my comments.

35
36 **COMMISSIONER SIMS** – I think the... a lot of this going through right now is
37 you... the warehouses on the east end is a big decision. The project end itself
38 seems to be a good project. I do have concerns. We're coming out of a steep
39 economic recession and the current thought is we don't need new rooftops and
40 maybe so. But I look at the commercial development that we have, especially as
41 we move out into the east end. I sometimes ponder with what would help
42 support Moreno Valley commercial. You know there is a lot of businesses that
43 have gone out of business. We have indoor swap meets and 99 cent stores and
44 different things and is that a function of the demographics of the City or is it a
45 function that we've been in a series of... we don't have the rooftops and we don't
46 have the population to support more restaurants, to support more service

1 oriented. We're losing businesses in Stonegate. The Best Buy moved out. The
2 Office Depot is closing. I happened to be in Office Depot the other day and it is
3 not because of the lack of business, it is because it is a tenant landlord
4 relationship that they are intending to change the occupancy because that space
5 is directly adjacent to a Best Buy or the former Best Buy. So what I worry about
6 is when we commit to such a large area within the City towards a warehouse;
7 warehousing, that's cast in stone. The City will seal its fate that that is what it is
8 going to be and you know I'm not an Economist. I don't understand long term
9 what that means, but there is a lot of change. The General Plan; a
10 comprehensive General Plan Amendment coming out of the recession and not
11 doing overlays and piecemeal fashion seems a more appropriate approach and
12 as far as the traffic study goes, you know I appreciate the comments made and
13 I'm not a Traffic Engineer per say. I did take a little bit of it in College and so
14 forth, but at the end of the day I just think the City; the leadership in the City has
15 come out in support of the World Logistics Center. It's a no commodity. The Aldi
16 project has gone through. Now the Prologis is here in front of us today. We
17 have 3,000 acres sitting just directly to the east and we don't have a cumulative
18 traffic impact analysis and it just seems inappropriate; it would seem appropriate
19 for transparency for the City at large to understand what the overall traffic impact
20 is and I think the City could fund and would do it quickly based on take the
21 cumulative work from the EIR for the World Logistics and the Prologis and do a
22 comprehensive look at that and perhaps even do a comprehensive General Plan
23 Amendment taking into account that we're moving out of a recession. So
24 anyhow, this is kind of a big decision tonight, so I would encourage just some
25 more comprehensive looks. We're coming out of something that was bad. The
26 economy is moving better in pockets. Is this the pocket... is this the hotbed of
27 what Moreno Valley will forever be is warehouse?
28

29 **COMMISSIONER LOWELL** – I echo Mr. Sims comments also. I echo Ms. Van
30 Natta's comments. My concerns are as a personal note, I like to evaluate
31 projects not only on their legality, meeting zoning and General Plan and what not.
32 I also like to look at the project on its entirety; if it's a good project in the right
33 location. I personally really like this project. I think the layout of the buildings; I
34 think the tenant; I think the property owner is a fantastic project. I do believe it is
35 in the wrong location. I believe it is too close to the residential developments. I
36 believe that the people that moved into the east end of the City did not anticipate
37 large warehouses coming in. I would approve this project if it were farther away
38 but I'm very hesitant to establish this large complex. It will add a book end to
39 that end of our City that will essentially allow the way for more and more
40 warehouses between this project and the World Logistics Center. I personally
41 think that we need to evaluate the grand scheme of things of basically reevaluate
42 our General Plan and see what the future of the City should hold and not amend
43 the General Plan tonight.
44

45 **CHAIR VAN NATTA** – Who would like to comment next?
46

1 **VICE CHAIR GIBA** – Well everything that everybody said is very relevant. It's
2 very important. I'm one of those that believes that we should have the proper
3 project in the proper place. It's always been my feelings. When we did the study
4 on the 60 Corridor, I was probably the most vocal about the fact that we didn't get
5 enough weigh in from the entire community as to how that area of our community
6 should be built up at all. I think there is a lot that the other people had spoken in
7 the previous meeting that we had and what Mr. Sims and Mr. Lowell said as well
8 as what Meli has said that all these things are very difficult to take into
9 consideration. This is a very nice project. It really is. When I looked at all the
10 plans and all the layouts, Prologis knows what they're doing. They build a very
11 nice facility. If they had built just Building 1 and just Building 2 with Eucalyptus
12 coming down underneath and not Buildings 3, 4, 5 and 6 going down into the
13 residential area it probably would be much more appealing considering we
14 already have Aldi's and Sketchers all along that 60 freeway corridor, but it's a
15 very large area covering dropping down into the residential neighborhood. The
16 traffic studies; absolutely correct Meli. If we put in the other types of facilities,
17 apartments, restaurants and whatever the original plan would have specified, we
18 may have more traffic. Yes, Prologis is putting a lot of money into upgrades and
19 repairs of our area, but I think what we need to start doing in this City is we need
20 to start getting a better vision for who we are and what we are. Sometimes we
21 take the easy way out. I'll give you an analogy. When I was a recruiter in the
22 Navy, Cat 4's were easy to come by. Those are the guys that were very low on
23 the scope but they really wanted to go into the Navy, but the Navy didn't need
24 Cat 4's academically, educationally and test score wise, but they were easy to
25 come by so every recruiter had a whole bunch of Cat 4's ready to go into the
26 Navy. The hard part was to go out there and find those Cat 1's and Cat 2's.
27 They were the high scoring people that they could put into the nuclear programs.
28 I think sometimes we're hurting ourselves. We're shooting ourselves in the foot
29 by not going out and searching for the proper projects for the proper locations
30 any more. We're changing this as there have been other comments made. We
31 have been changing. We're no longer the same City we were in 1984 when we
32 first incorporated and we also have a change of Councilmembers and we are a
33 whole different Commission here. Mr. Cavanagh I apologize to you that I was
34 not here in 2007. I don't know why that area was chosen. I don't know why the
35 decisions were made back then. They were difficult decisions to make I'm sure
36 on your part because you guys are builders of wonderful warehouses. I'm not
37 going to dispute that, but I'm having a very, very, very difficult time with this one
38 in that much like Mr. Lowell said a wonderful facility, but possibly in the wrong
39 location and back in 2007 you had a choice of a lot of other locations in the City
40 that you could have built that at and you chose to come to the east side for
41 whatever reasons. So it is a difficult one Mr. Sims; you're right and it is a
42 decision; I think a pivotal moment right now where we have to make a very hard
43 decision as to what we are going to do on that east side and so that's as one
44 individual would say, that's all I've got to say about that.
45

1 **COMMISSIONER BARNES** – I think the comment I'd like to add is that at least in
2 my perspective a decision on this project tonight does not in my mind cast the
3 dye for everything in the east half of Moreno Valley. The quality of the Prologis
4 project I think stands on its own merit and in the location that it's at, given the
5 surroundings and the things that have changed in the economy and the
6 development in that area, it deserves to be analyzed by itself and to lump it
7 together with what may happen in the east end, I think is not necessarily fair to
8 this project and I know that whichever way I vote on this project, does not mean
9 that I will vote the same way on what might come down the pike at some point,
10 so I agree with the Chairperson that I think at this point in time, knowing what we
11 know about the quality of the project and what their proposal is that I think it's a
12 good project and should stand on its own merits and I think that it does and
13 should something else east of it come down the pike, it will be reviewed on its
14 own merits at whatever point in time it comes before us and I don't think we
15 should penalize this project for what that project might be. So I think this is a
16 quality project that deserves consideration.

17
18 **COMMISSIONER RAMIREZ** – Well I think everybody made some valid points.
19 You know the bottom line is does the benefit outweigh the environmental impact
20 and the impact for the entire community. You know there is a lot of economic
21 impacts with this project. We're talking 19 million dollars in fees; 1.5 million
22 dollars a year in tax revenue. You know that is revenue that we can use to
23 support our public safety, our Police Department, you know hire crossing guards
24 and things of that nature. Yeah the project is relatively close to some
25 neighborhoods, but logistically it is located in an ideal spot which is close to the
26 freeway. If we can address the traffic issues such as making a recommendation
27 of that Redlands Boulevard corridor; truck corridor north of the freeway so that
28 can be eliminated, enhancing other truck routes such as Moreno Beach Drive
29 south from Eucalyptus as soon as you're going southbound past those apartment
30 homes. That is a very dangerous area. It is a very dangerous corridor. We're
31 talking about big trucks driving south or maybe even north and at some times
32 pedestrians are fighting for their lives just trying to walk or ride their bikes through
33 there, so I don't know if that is something that we can make as a
34 recommendation to our Capital Improvement Plan or what have you, but I think
35 it's a good project. Seeing no two jobs is very difficult. You know I have a job
36 and I'm sure most of you out there have a job too and coming from a family
37 whose dad used to leave at three in the morning to drive all the way to LA for
38 work and sit two hours in traffic on the way there and two hours in traffic on the
39 way back and didn't have a dad that was really very motivated to support the
40 family emotionally, so any time you can keep residents close to their job and
41 close to home that's a good thing. It means they'll be able to spend more quality
42 time with their families, so I like this project and I'm ready to vote yes for this.

43
44 **COMMISSIONER BAKER** – I guess I'll bring up the rear on this. I've really
45 thought a lot about this last month we've been on this and the deal is here the
46 economics of the whole United States and California has changed a hundred

1 percent. Like Meli was saying it's an ecommerce deal, that's why we have that
2 Amazon; what is that, a million plus square foot warehouse out here, the one
3 over in San Bernardino. People are just not going to the Best Buy's and Circuit
4 City's or even Office Max to buy their products anymore. If they can it online or
5 in the mail, that's what they're doing, so the number one thing we've got here is
6 there's a lot of things here that maybe we look at that aren't a hundred percent
7 where they need to be, but I think overall we've got to look at what's good for the
8 economic base for Moreno Valley and hopefully we can work through some of
9 the mitigation problems on the transportation. I know I'll do all I can to help on
10 that, but I think it's a good project. I've reviewed these people online and other
11 projects they've had. It's a top notch company we're dealing with here, so I'm for
12 it. It's a good project. I think need to move forward with this and like you said, if
13 there is some things we need to do on the transportation; I don't know how we
14 build that into a motion here, but I'd like to see the project move forward, okay.

15
16 **CHAIR VAN NATTA** – I do want to come back with just one little comment here
17 and a little bit of rebuttal. I'm looking at this and I've heard a couple of the
18 Commissioners say oh it's the right project but it's in the wrong place and I'm
19 looking at the map here and I'm seeing that this is bounded on the north by State
20 Route 60, on the west by the Auto Mall, on the east by Aldi and most of the south
21 border is that row of rocky hills that goes through there. It only abuts residential
22 area on the corner and yet it's separated by the Quincy Street Channel there, so
23 I don't really see that it is effecting existing residential all that much in this project.
24 I don't see anything that I would think would make a better fill for that spot than a
25 project of this type. What else are you going to put there? If you put residential
26 there, you're going to have residential in between the Auto Mall and Aldi. I mean
27 that doesn't make any sense to put anything there other than some sort of a
28 commercial development and as I mentioned earlier and as Commissioner Baker
29 acknowledged, this is the wave of the future. It's not turning Moreno Valley into a
30 City of warehouses. It's opening us up to what's happening for now and for the
31 future which is the distribution type centers and so forth and as another
32 Commissioner mentioned also, it does not mean that if we're approving this that
33 we're saying yes to warehousing all over the east side. Each project deserves
34 and each applicant deserves consideration for their project and for what it offers
35 and it needs to be weighed on its own merit. Yes, you have to look at the
36 cumulative effect, but there are other projects that have been proposed that have
37 not even come before us yet and I don't think we can say, oh let's hold off on
38 making a decision on this until we see what this other project is going to do. I
39 don't think that would be fair to the applicant and I don't think that would be fair to
40 the City of Moreno Valley. We can certainly use as Commissioner Ramirez
41 commented, we can certainly use the revenue that it's going to bring to the City
42 to improve things and the jobs that it will bring and I think it's a good project.

43
44 **COMMISSIONER SIMS** – I like to note here. I tend to agree with Commissioner
45 Giba that I'd be more supportive. I think the Prologis is a good project. I
46 checked them out as well and did my research on it and the project end itself is a

1 nice looking project. I tend to agree that part of the project south of what would
2 be Eucalyptus is what disturbs me most about it. I think along the freeway
3 seems reasonable but anyhow... those houses are you know Sand Wedge; the
4 back end of the property is directly adjacent to existing residential homes and
5 more likely than not over time you'll see more warehouse goes up to between
6 Redlands Boulevard and this project all along Eucalyptus, so that whole
7 neighborhood will be impacted. But anyhow needless to say, you know the right
8 place for the right kind of development. There are 1504... I asked City Staff the
9 commercial brokerage provided. There are 1504 acres within the City of Moreno
10 Valley and Perris available that is already zoned for industrial warehouse. You
11 drive along the 215 freeway. There is a bunch of vacant land already there with
12 railroad, freeway. It's all warehouse, so you know is this the right place. We
13 have all the south entry into the City that's warehouse. You have Alessandro
14 and Cactus bound with warehouse and distribution, its proximity to large
15 industrial with the March Air Reserve Base. This just seems kind of moving
16 warehouses into the east end. It's our last entry portal into the City. That's what
17 we're going to be seen as is as people coming out from a nice weekend and nice
18 areas out in the desert, they're going to be coming into warehouses. There is
19 going to be a fly-in Pilot station with Subway at the intersections, so anyhow I
20 know this project stands on its own and it's a nice project. It is a pivotal decision
21 I personally believe as a Commissioner.

22

23 **VICE CHAIR GIBA** – No I never implied that it had anything to do with any other
24 warehousing. My concern was is... as a matter of fact I think I even stated that
25 for you. If this warehouse was Building 1 and Building 2 with Eucalyptus then
26 you have these warehouses along the 60 and that's great, but as Mr. Sims said
27 and I don't know if Mr. Lowell mentioned it as well, it's the extension down into an
28 area that makes it very difficult. It begins to see warehouse tops. That area to
29 me could be better developed for other reasons.

30

31 **CHAIR VAN NATTA** – For example?

32

33 **VICE CHAIR GIBA** – To stay within the same context is what you originally. It
34 might take us awhile Ms. Meli. It might take us a lot of work, but to use some
35 vision as to who you can go out and actually bring to those locations rather than
36 sit around and wait for the only answer we seem to find, which is a warehouse
37 project and we do have good warehouse projects and this is a beautiful
38 warehouse project. There is no argument whatsoever. I never said that it wasn't
39 well done, but there is probably a better location for it and I don't believe the east
40 side is the best location, at least that location originally was some of the plans
41 that were put forward from this document. There were other alternatives for
42 building small light industrial, which what it was originally; mixed use facilities.
43 The vision was given to me John Terrell when I first came on in 2011 and he took
44 me through there. He said this is mixed use and there should be some
45 apartments. There should be some houses there. There should be some light
46 industrial there, restaurants, hotels. That's the kind of vision and that's the kind

1 of thing that will support the east side and its growth and not only that, support
2 that hospital corridor back behind it, so as you come in, you come into
3 warehouses and you still have a hospital corridor that they will build, but not right
4 away, so I too feel that it's probably not the... I honestly say if you just build
5 Buildings 1 and 2, you'd probably have the perfect fit there you know, but that's
6 just my opinion.

7
8 **CHAIR VAN NATTA** – No and discussing this here, but if you only put buildings
9 north of Eucalyptus then what are going to put south of Eucalyptus? You're not
10 going to put other types of properties facing Eucalyptus that are going to be
11 different than what you've put on the north side. I mean you are looking at this
12 here and you're saying okay just complete this area here with those and leave
13 this something else. Well what else would you put other than going on both
14 sides of Eucalyptus with a similar...?

15
16 **VICE CHAIR GIBA** – What's wrong with hotels? What's wrong with restaurants?

17
18 **CHAIR VAN NATTA** – Because there's no hotels or restaurants that want to
19 come out there right now and there are other places that will be available for
20 them.

21
22 **VICE CHAIR GIBA** – If you show them what you can do with it Meli, they can do
23 it, but your premise is usually very different from mine and you say... you know I
24 kinda say if... you say you can't build it they won't come and you've got to have a
25 market for it. If you don't go out and actually go for that market, you take your
26 vision and you go and you try to actually sell what you have. Look I use the
27 recruiter example. I put in over 126 people in this area in five years. I had to go
28 to a lot of kids. I had to talk on a lot of telephones, meet a lot of parents, test and
29 evaluate a lot of people to get those kids into the service. We have to do the
30 same thing with our City. We may have to go out and do a little bit of work.

31
32 **CHAIR VAN NATTA** – But when you are looking at a project of this type. Okay
33 let's say for example you want to have a hotel come in. I don't know of any
34 hotels that come in and build next to an Auto Mall. That's not the kind of area
35 that they would come to. You know if we want to attract the higher end retail and
36 we want to attract the hotels and so forth, we have to have the jobs and other
37 things that are going to attract them to the area and when you are looking at it
38 here, all of this along here along this side, it's all those hills and everything and
39 you've got commercial there, you've got the freeway there, you've got
40 commercial here, so you only have this one corner here that abuts the
41 residential, which may or may not stay residential in the future.

42
43 **VICE CHAIR GIBA** – To the east of that there is still open land that you continue
44 to grow and I go back to their document. I think one person said the State Route
45 60 Study was a good start and within this study they talked about key guidance

1 for future development; pedestrian bicycle connectivity, neighborhood
2 connectivity and all kinds of potential futures right next to that Auto Mall.

3
4 **CHAIR VAN NATTA** – But it wasn't all in this section right here necessarily.
5 There was also some talk...

6
7 **VICE CHAIR GIBA** – Exactly

8
9 **CHAIR VAN NATTA** - ... about the other side north of the 60 and other areas
10 too. I think once you start in this area here, it's like this whole thing goes
11 together. It's all in a square there basically and developing it all together just
12 makes sense because they brought together a comprehensive plan that brings it
13 all together that it does not look... when you look at the pictures of the project;
14 the concepts of the project, it doesn't look like a bunch of big square box
15 warehouses, it looks like a commercial development. There is a mix of sizes. A
16 mix of different layouts of the buildings and so forth. It's not like one big box
17 warehouse after another. It's laid out attractively.

18
19 **VICE CHAIR GIBA** – Good points.

20
21 **CHAIR VAN NATTA** – Thank you.

22
23 **VICE CHAIR GIBA** – We just agree to disagree agreeably

24
25 **CHAIR VAN NATTA** – That's fine. If we all agree, then most this wouldn't be
26 necessary. We could just have one person up here if we were just saying the
27 same thing.

28
29 **VICE CHAIR GIBA** – Thank you Meli.

30
31 **CHAIR VAN NATTA** – Okay, any other comments from... further discussion?

32
33 **COMMISSIONER BAKER** – One thing I would like to add. On these big
34 projects... you know we talk about the streets, but the infrastructure that it's
35 going to provide in that end of town; like I'm talking the water, the sewer and the
36 electric. I don't know how much of that is there, but it has to be a definite
37 improvement that they are going to bring into that area. It is isn't probably there
38 right now. Am I correct there? I mean is that bringing in water, sewer and
39 electric... or electric is probably there, but...

40
41 **COMMISSIONER SIMS** – I live out there towards that area and we have water
42 and sewer at our house.

43
44 **COMMISSIONER BAKER** – I mean up and down Redlands Boulevard?

45
46 **COMMISSIONER SIMS** – Somehow we struggle through... we make it.

1
2 **CHAIR VAN NATTA** – No, we’re talking about Quincy

3
4 **COMMISSIONER BAKER** – I’m talking about...

5
6 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** –
7 Commissioner Baker, yes there is sewer and water extended to that general
8 vicinity. This project would... the major infrastructure that this project if it were
9 approved would provide is extending Eucalyptus Avenue from the Auto Mall to
10 the Aldi site, so it would continue that road, so you could go I guess almost from
11 one end of the City to the other on Eucalyptus once that area is developed. And
12 then underneath that road would be the water, sewer and electric lines that would
13 connect a gap. So it exists in that area, they would just be closing that gap. If I
14 had to say what is the major infrastructure this will provide is? It is most likely the
15 road improvements.

16
17 **CHAIR VAN NATTA** – Okay through here all the way through to... giving an
18 alternative to driving on the 60. Also if somebody wanted to get from this side to
19 that side without getting on the freeway, they could.

20
21 **COMMISSIONER SIMS** – I do want to have one last poke at this thing. You know
22 the east end of the area, there are people that have moved out to the east end.
23 Those are larger lots; half acre; you know larger kind of things and does have the
24 potential for making... in fact the development that this... the housing that’s
25 directly that this project now abuts and Meli as you suggest as it goes east that it
26 will logically fill in and then that’s where that Adam Hall Nursery is. That will all
27 become a big box or boxes or something like that. Those are all half acre
28 homes. Those people who moved out there 20 years ago, based on the
29 investment they made and based on the trust of the City for the General Plan to
30 be rural residential out there, now will have big boxes right next to it. There are
31 significant amount of areas within the City where projects like this could coexist in
32 an area that’s not intrusive on residential areas and anyhow, we are going to
33 disagree on this and that’s fine. I get it, but it’s just people make investments.
34 The investor in Stonegate I’m sure when they went and did their thing, they didn’t
35 anticipate a five or six year economic downturn, but rooftops are what support it.
36 Why is the Canyon Springs area so well? There’s obviously problems in Moreno
37 Valley with the commercial when you look at the Moreno Valley Mall. That is a
38 very under-utilized, under-whelming commercial center. Why is that? Why is
39 Stonegate having trouble? Why are things right in the heart of the City get
40 boarded up and they go pretty ratty; our commercial development? I don’t why.
41 I’m not an economist, but I just think there is reason we need... there’s not a bad
42 thing having more residential in a well thought out, well planned residential and
43 we can set our mark and have parks. You know look at the City of Eastvale.
44 That’s one of the most affluent City’s in all of Southern California. It’s not by the
45 coast. It’s pierced by major freeways. It’s probably located... it does very well.
46 There’s like 500 or 600 hundred thousand dollar home is the median price in that

1 thing. They don't have warehouses. They commercial supporting a very higher
2 end, but they planned it that way. There were very conscientious. They set very,
3 very strict limits. They created some community service districts. They have an
4 abundance of parks. The residents pay dearly for that. We could do stuff like
5 that here, but we have to have the vision and we have to go for it and set that.

6
7 **CHAIR VAN NATTA** – I'll give you a reason why we're having problems with our
8 retail and part of it is that people have to drive through Eastvale area to get to
9 jobs. Eastvale is thriving because they are closer to jobs and they are closer to
10 the higher paying jobs, so when people have to drive as you were mentioning,
11 your father. When people have to drive an hour or two to get to work, they quite
12 often stop and do their shopping where it is that they are working. If we bring
13 more jobs here, we will also by bringing the jobs, enhance the retail and enhance
14 the shopping and everything else like that. House tops don't work if you don't
15 work if you don't have jobs for the people who live in them. Okay, well we're
16 definitely split on this. It will be interesting to see how it goes, but we will need a
17 motion before we can take a vote on it.

18
19 **COMMISSIONER LOWELL** – I have one quick question of Staff. Last time this
20 came before us there were options that we had to vote on yes or no. I don't see
21 that in here. One of the recommendations is just to approve everything blanketly.
22 Do we have the option of voting option A, B or C like we did last time?

23
24 **ASSOCIATE PLANNER BRADSHAW** – Those alternatives are in the March 13th
25 Staff Report and they are still available there for reference.

26
27 **COMMISSIONER LOWELL** – I don't have that in front of me unfortunately.

28
29 **ASSOCIATE PLANNER BRADSHAW** – We can provide a copy to you. We still
30 have them for reference here. The recommendation in that same March report is
31 the same recommendation we carried into tonight's report. We didn't try and
32 provide all those alternatives in formal recommendation language, but we do
33 have the alternatives for reference. The first was to approve the project as it's
34 proposed, but to condition two of the warehouse buildings to not be built for the
35 first 18 months of approval. That was one of the options. Alternative two of
36 those suggested was to deny the General Plan Amendment and Zone Change
37 for the two sites; Buildings 1 and 2 which are the two sites located immediately
38 adjacent to the Auto Mall, but approve the proposed land use changes for the
39 remainder of the project site. This would prevent warehouse facilities from
40 developing along those two sites immediately adjacent to the Auto Mall and the
41 third alternative was to deny the land use changes and through that denial, deny
42 the project as presented to you this evening.

43
44 **COMMISSIONER LOWELL** – But there is no option to deny the General Plan
45 Amendment but approve the balance of the project as it stands?
46

1 **ASSOCIATE PLANNER BRADSHAW** – The project as proposed... we didn't
2 suggest that alternative.

3
4 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – Yeah can
5 you clarify... the General Plan Amendment affects most of the property, so are
6 you saying approve part of the General Plan Amendment and not another part?

7
8 **COMMISSIONER LOWELL** – I don't have last month's information in front of me,
9 so there was a map on there that showed where the zoning would change and
10 I'm not familiar with exactly how those zones lay out because I don't have that
11 map in front of me today.

12
13 **COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL** – The quick
14 answer is if you wanted to only approve part of the project, for example the part
15 north of Eucalyptus. The project would...we'd need to take that back and revise
16 the exhibits, because the General Plan Amendment didn't match up exactly to
17 Eucalyptus Avenue. So if a majority of the Commission wanted to pursue what I
18 call an alternative to the project as proposed, we would need to revise that and
19 bring that back to you.

20
21 **VICE CHAIR GIBA** – How do we do that John? I mean is there some kind of a
22 motion you'd make for saying can we look at another alternative for this project?

23
24 **CHAIR VAN NATTA** – I don't think we should.

25
26 **CITY ATTORNEY CURLEY** – If I might... what is before you is the applicant's
27 request that is for you to recommend to the Council. You know you are not
28 deciding it. Under the statute, you have the duty as the Planning Advisory Body
29 to give the Council the decision maker, your thoughts on it, so you could go
30 through the one through seven and certify the EIR, but if it was your pleasure to
31 augment the statement of overriding considerations that would be a
32 recommendation. I'm just dropping down here. Number four, General Plan
33 Amendment. A recommendation would be to approve part of it; you know lot one
34 and two or however you want to designate it and not the rest and go on... Zone
35 Change, we recommend you approve part or not. The Council will get that. They
36 will consider your advice. They have the privilege to say thank you, we're going
37 to do just that. Thank you but we're not going to listen to you at all. Thank you
38 somewhere in between.

39
40 **CHAIR VAN NATTA** – That's happened before

41
42 **CITY ATTORNEY CURLEY** – So they will take your advice as their land use
43 advisors, but you're not the bottom line, so in each one of these, depending on
44 how creative you want to be on your recommendation, but you could give Staff
45 here the narrative; you know, approve lot one and two or this or that. That's what
46 would get written up in the recommendation for the Council's consideration.

1
2 **CHAIR VAN NATTA** – I think what we have here is a proposal that has been
3 brought after much work between Staff and the applicant and after much delay of
4 time and everything like that. We have a project that’s their vision of what they
5 would like to do with the property and I think we should make a decision whether
6 we’re going to say yes go ahead to the City Council and this is our
7 recommendation or whether we’re going to say no we don’t like it and let them
8 make their decision on that. But I think as it stands, is how we should vote on it
9 because all we’re doing is making a recommendation.

10
11 **COMMISSIONER LOWELL** – I agree. I think we’ve been leading them on a little
12 too long so we need to make a decision, yes or no.

13
14 **VICE CHAIR GIBA** – I agree and I think I’ve already made my recommendations.

15
16 **COMMISSIONER LOWELL** – When we vote on this are we going to vote on
17 items one through seven blanketly or are we going to vote on item 1 by itself, 2
18 by itself, 3 by itself and so on.

19
20 **CHAIR VAN NATTA** – No, let’s just read the whole thing; the recommendation,
21 approve, read the whole seven and then we’ll yeah or nay.

22
23 **COMMISSIONER LOWELL** – I understand.

24
25 **CHAIR VAN NATTA** – Commissioner Baker would you make the motion.

26
27 **COMMISSIONER BAKER** - Okay I move that we **APPROVE** Resolution No’s.
28 2014-09 and 2014-10 and thereby **RECOMMEND** that the City Council take the
29 following actions:

- 30
31 1. **CERTIFY** that the Environmental Impact Report (EIR) for the Prologis
32 Eucalyptus Industrial Park Project (Attachments 5 and 6) has been
33 completed in compliance the California Environmental Quality Act;
34
35 2. **ADOPT** the Findings and Statement of Overriding Considerations
36 regarding the Final EIR for the Prologis Eucalyptus Industrial Park Project
37 attached hereto as Exhibit A to Attachment 2;
38
39 3. **APPROVE** the Mitigation Monitoring Program for the Final EIR for the
40 proposed Prologis Eucalyptus Industrial Park Project attached hereto as
41 Exhibit B to Attachment 2;
42
43 4. **APPROVE** General Plan Amendment application PA07-0082 as shown for
44 Exhibit A to Attachment 3;
45

- 1 **5. APPROVE** Zone Change application PA07-0081 as shown on Exhibit B to
2 Attachment 3;
3
4 **6. APPROVE** Master Plot Plan PA07-0083 and related Plot Plans PA07-
5 0158 through PA07-0162, subject to the attached conditions of approval
6 included as Exhibit C to Attachment 3;
7
8 **7. APPROVE** Tentative Parcel Map 35679 (PA07-0084), subject to the
9 attachment conditions of approval included as Exhibit D to Attachment 3.

10
11 **CITY ATTORNEY CURLEY** – And if I might add, does that include the
12 augmented conditions that were on your dais this evening? I assume it did, but
13 so the record is complete. You have two colored sheets, a purple and a blue
14 one. I think your intent was to include that. It was part of the second? Alright
15 disregard me. Never mind.

16
17 **COMMISSIONER BARNES** – Second

18
19 **CHAIR VAN NATTA** – Okay we have a motion and a second. We will go to a
20 roll call vote please.

21
22 **COMMISSIONER SIMS** – No

23
24 **COMMISSIONER LOWELL** – With all due respect I vote no

25
26 **COMMISSIONER BAKER** – Yes

27
28 **COMMISSIONER BARNES** – Yes

29
30 **COMMISSIONER RAMIREZ** – Yes

31
32 **VICE CHAIR GIBA** – No

33
34 **CHAIR VAN NATTA** – Yes

35
36 **CHAIR VAN NATTA** – Okay so we have 4 yesses and 3 no's and the motion
37 passes. And could somebody do something about the air conditioning.

38
39 **COMMISSIONER LOWELL** – I agree

40
41 **COMMISSIONER BARNES** - I'll second that

42
43 **INTERIM PLANNING OFFICIAL ORMSBY** – We will try to take care of that.

44
45 **CHAIR VAN NATTA** – And Staff...
46

1 **INTERIM PLANNING OFFICIAL ORMSBY** - Just a wrap up for this item, the
2 Planning Commission recommendation will be referred to the City Council for
3 final action.

4
5 **CHAIR VAN NATTA** – And I’m doing nothing until somebody turns the air
6 conditioner back up a little. Yeah 5 minutes.

**Facts, Findings and Statement of Overriding Considerations
Regarding the Environmental Effects and the Approval of the
ProLogis Eucalyptus Industrial Park
(State Clearinghouse No. 2008021002)**

I. INTRODUCTION

The City Council of the City of Moreno Valley (this “Council”), in certifying the EIR for the Prologis Eucalyptus Industrial Park and approving Tentative Parcel Map 35679 and a Site Plan authorizing the construction of up to approximately 2,244,638 square feet of distribution warehouse space (the “Project”), makes the Findings described below and adopts the Statement of Overriding Considerations presented at the end of the Findings. The Environmental Impact Report (“EIR”) was prepared by the City of Moreno Valley (“City”) acting as lead agency pursuant to the California Environmental Quality Act (“CEQA”). Hereafter, unless specifically identified, the Notice of Preparation (“NOP”), Notice of Availability & Completion (“NOA/NOC”), Draft EIR (“DEIR”), Technical Studies, Final EIR containing Responses to Comments and textual revisions to the Draft EIR (“FEIR”), and the Mitigation Monitoring and Reporting Program (“MMRP”) will be referred to collectively herein as the “EIR.” These Findings are based on the entire record before this Council, including the EIR. This Council adopts the facts and analyses in the EIR, which are summarized below for convenience. The omission of some detail or aspect of the EIR does not mean that it has been rejected by this Council.

II. PROJECT SUMMARY

A. PROJECT DESCRIPTION

1. Site Location

The Project is located in the eastern portion of the City of Moreno Valley. The Project site consists of ten parcels totaling approximately 122.8 net acres located south of and adjacent to SR-60, east of Moreno Valley Auto Mall, and adjacent to and west of the Quincy Channel.

The Project site is vacant and supports mainly weedy vegetation. The major road that provides access to the Project site is Eucalyptus Avenue. Land adjacent to the Project site includes vacant land east and south of the proposed Project site, SR-60 to the north, and the Moreno Valley Auto Mall and the City

of Moreno Valley Fire Station No. 58 northwest of the Project site. Existing single-family residential uses are located approximately 50 feet southeast of the southeastern corner of the Project site.

2. Project Description

The Project site is approximately 122.8 acres in size. The proposed Project includes the construction and operation of a warehouse facility comprising six buildings consisting of a total of approximately 2,244,638 square feet. The Project site is divided into northern and southern areas. The northern area, north of the future Eucalyptus Avenue, would contain approximately 1,030,377 square feet of warehouse uses divided between two buildings (No. 1 and 2). Development in the southern area, south of the future Eucalyptus Avenue, would consist of approximately 1,214,261 square feet of warehouse uses divided among four separate buildings (No. 3 through 6). The master and individual building plans, including grading, landscaping, elevations, and selected line of sight plans. The proposed Project includes the construction of asphalt/concrete surfaces in parking and driving areas, and landscaping along the perimeter and roadway frontages.

The Project site is currently designated Residential in the City's General Plan. The site is zoned as Business Park (BP), Business Park/Mixed Use (BPX), Residential 15 District (R15), Residential 5 District (R5), and Residential Agriculture 2 (RA-2). The zoning is not consistent with the existing General Plan land use and the Project is not consistent with the General Plan and zoning. Therefore the Project will require a General Plan Amendment which would change the designation to Business Park and a Zone Change that would change the zoning of the site to Light Industrial (LI).

3. Actions Covered by the EIR

The EIR will support the following discretionary and non-discretionary approvals:

- General Plan Amendment to amend the Land Use Element resulting in a change of land use designations for the southern portion of the project site (approximately 71.3 acres) from Residential 15, Residential 5, and Residential Agriculture to Business Park.
- General Plan Amendment to amend the Circulation Element including (1) elimination of undeveloped Quincy Street from Eucalyptus Avenue to Encilia Avenue; and (2) realignment of Encilia Avenue from its current alignment such that its westerly terminus is located at Moreno Beach Drive instead of the current General

Plan westerly terminus at Eucalyptus Avenue. The segment between Quincy Channel and Moreno Beach Drive would be classified as a Collector.

- Change of Zone resulting in a change from Business Park (BP), Business Park Mixed-Use (BPX), Residential 15 (R15), Residential 5 (R5), and Residential Agriculture (RA-2) to Light Industrial (LI) on the project site.
- Modification of the Primary Animal Keeping Overlay (PAKO) zone district per the recommended change of zone.
- Modification of the Master Plan of Trails to eliminate trail segment along the west side of the Quincy Channel north of the future Eucalyptus Avenue and add a segment along the north side of Eucalyptus Avenue from the Quincy Channel to the west boundary of the project site.
- Approval of a Master Plot Plan and five related Plot Plans.
- Tentative Parcel Map approval.
- Certification of the Environmental Impact Report.
- Final Parcel Map, public improvement agreement, and related securities approval.
- Issuance of an encroachment permit for any construction work done in any City-controlled ROW. Encroachment permit issuance requires approval of improvement plans, public improvement agreement execution with securities posted, and satisfying those conditions of approval required prior to grading.
- Approval of a Storm Water Pollution Prevention Plan (SWPPP) to accommodate site runoff during construction.
- Approval of a Preliminary Water Quality Management Plan (P-WQMP) and Final Water Quality Management Plan (F-WQMP) to mitigate for post-construction runoff flows (non-discretionary).
- Issuance of a Grading Permit that requires approval of a grading plan, approval of the final drainage study, approval of the F-WQMP, obtaining an Notice of Intent and Water Discharge Identification Number, obtaining a WQMP#, and satisfying those conditions of approval required prior to grading (non-discretionary).

- Issuance of a Building permit. The comprehensive building permit includes building, plumbing, mechanical, and electrical permits (non-discretionary).

Approvals and permits required by other agencies include:

- Approval from the City and Riverside County Flood Control and Water Conservation District (RCFCWCD) to ensure that construction site drainage velocities are equal to or less than the pre-construction conditions and downstream water quality is not worsened
- Approval of Quincy Channel improvements from the RCFCWCD
- A Section 404 Permit from the U.S. Army Corps of Engineers (USACE)
- A Section 401 Water Quality Certification from the Regional Water Quality Control Board (RWQCB)
- A Section 1602 Streambed Alteration Agreement from the California Department of Fish and Wildlife (CDFW)
- Encroachment permits from Caltrans for any construction work done in any State-controlled right of way(i.e., SR-60)

B. PROJECT OBJECTIVES

The Project Objectives include the following:

- Provide industrial warehouse facilities that meet the substantial and unmet demands of businesses located in the City and County;
- Provide new industrial development that is attractive and minimizes conflicts with the surrounding existing uses;
- Provide a variety of new employment opportunities for the citizens of Moreno Valley and surrounding communities;
- Encourage warehouse distribution services that take advantage of the area's close proximity to various freeways and transportation corridors;
- Encourage new development consistent with the capacity and municipal service capabilities;

- Provide infrastructure improvements to meet phased Project needs in an efficient and cost-effective manner;
- Cluster industrial warehouse uses near access points to the state highway system to reduce traffic congestion on surface streets and to reduce air pollutant emissions from vehicle sources;
- Develop land uses that provide the City with a positive revenue/cost ratio and provide needed infrastructure in a timely fashion;
- Address community circulation, both vehicular and pedestrian, utilizing available capacity within the existing circulation system, and provide fair share improvements to various future-year deficient intersection or road segments; and
- Reduce peak hour vehicle trips, energy and water consumption compared to existing General Plan land uses.

III. ENVIRONMENTAL REVIEW AND PUBLIC PARTICIPATION

The City has conducted an extensive review of this Project which included the DEIR, FEIR and supporting technical studies, along with a public review and comment period first during the circulation of the Notice of Preparation/Initial Study and then through the circulation of the DEIR. The following is a summary of the environmental review of this Project:

- On February 4, 2008, the City circulated a Notice of Preparation (“NOP”) and the Initial Study that identified the environmental issues that the City anticipated would be analyzed in the Project’s DEIR to the State Clearinghouse, responsible agencies, and other interested parties.
- On February 13, 2008, the City conducted a public scoping meeting to allow members of the public to provide comments and input regarding the scope and content of the DEIR.
- The NOP public review period ran for 30 days, from February 4 to March 4, 2008. Written comments on the NOP were received from 22 different agencies, organizations, and individuals. The scope of the issues identified in the comments expressing concern included potential impacts associated with:

- Change in use from established General Plan and zoning designations. This issue was discussed in Section 4.1, Aesthetics, and Section 4.8, Land Use, of the DEIR;
 - Short-term and long-term air pollutant emissions including dust and diesel particulates from truck exhaust that could negatively affect nearby residential uses. This issue was discussed in Section 4.3, Air Quality, of the DEIR;
 - Short-term and long-term noise impacts that could affect nearby residential uses. These issues were discussed in Section 4.9, Noise, of the DEIR;
 - Potential impacts to future planned school sites were addressed in Section 4.8, Land Use, of the DEIR;
 - Potential water-related impacts (drainage, water quality of runoff from the project) were addressed in Section 4.7, Hydrology and Water Quality, in the DEIR;
 - Project truck traffic causing congestion on local roads, intersections, and freeway ramps, primarily on Redlands Boulevard, and impacts to vehicular, bicycle, and pedestrian safety. These issues were discussed in Section 4.11, Transportation, of the DEIR;
 - Impacts to aesthetics from loss of views, loss of neighborhood character, and increased night lighting as this area transitions from previously planned residential and business park uses to industrial uses along the south side of SR-60. These issues were discussed in Section 4.1, Aesthetics, and 4.8, Land Use, of the DEIR; and
 - Potential loss of biological or cultural (archaeological) resources by grading and development of the site, and suggestions to consult with local Native American tribes per SB 18. These issues were discussed in Section 4.4, Biological Resources, and 4.5, Cultural Resources, of the DEIR.
- Based on the Initial Study, included in the DEIR in Appendix A, and comments received pursuant to the NOP, it was determined that some issues need not be addressed in depth in the DEIR because previous studies of other analyses provided sufficient information,

analysis, and mitigation to conclude that there was little or no potential for significant impacts. These environmental topics included: (1) Geology and Soils; (2) Mineral Resources; (3) Public Services; (4) Recreation; and, (5) Forest Resources.

- As required by the California Environmental Quality Act (CEQA) Guidelines Section 15087, a Notice of Completion (NOC) of the Draft EIR State Clearinghouse No. 2008021002 for the Eucalyptus Industrial Park project was filed with the State Clearinghouse on July 17, 2012, and the Notice of Availability (NOA) of the Draft EIR was filed with the Riverside County Clerk on July 18, 2012.
- The Draft EIR was circulated for public review for a period of 48 days, from July 18, 2012 to September 4, 2012. Copies of the Draft EIR were distributed to all Responsible Agencies and to the State Clearinghouse in addition to various public agencies, citizen groups, and interested individuals. Copies of the Draft EIR were also made available for public review at the City Planning Department, at one area library, and on the internet. A total of thirteen (13) comment letters were received on the DEIR. Ten of the comment letters received were from Federal, State, regional, or local agencies. Three comment letters were received from private organizations or conservation groups – no letters were received from individuals. The City prepared specific responses to all comments. The responses to comments are included in Section 2.0 of the FEIR.
- On (date) in accordance with *Public Resources Code* Section 21092.5, the City provided written responses to public agencies that commented on the DEIR.
- On (date), Notice of the City Council hearing to consider the Project was provided in the following newspaper(s) of general and/or regional circulation: Press Enterprise.
- On (date), this Council held a public hearing to consider the Project and staff recommendations. The City, after considering written comments and oral testimony on the EIR, determined that no new information was presented that would require recirculation of the EIR. Following public testimony, submission of additional written comments, and staff recommendations, this Council certified the EIR, adopted these Facts, Findings and the Statement of Overriding Considerations, and the further recommendations in the Staff Report, and approved the Project (collectively the “Approvals”).

IV. INDEPENDENT JUDGMENT FINDING

The Applicant retained the independent consulting firm of LSA Associates, Inc. (“LSA”) to prepare the EIR for the Project. LSA has prepared the EIR under the supervision, direction and review of the City with the assistance of an independent peer review (Willdan Engineering). The City of Moreno Valley is the Lead Agency for the preparation of the EIR, as defined by CEQA CPRC Section 21067 as amended. The City Council has received and reviewed the EIR prior to certifying the EIR and prior to making any decision to approve or disapprove the Project.

Finding: The EIR for the Project reflects the City’s independent judgment. The City has exercised independent judgment in accordance with *Public Resources Code* Section 21082.1(c) (3) in directing the consultant in the preparation of the EIR, as well as reviewing, analyzing, and revising material prepared by the consultant.

A. GENERAL FINDING ON MITIGATION MEASURES

In preparing the Approvals for this Project, City staff incorporated the mitigation measures recommended in the EIR as applicable to the Project. In the event that the Approvals do not use the exact wording of the mitigation measures recommended in the EIR, in each such instance, the adopted Approvals are intended to be identical or substantially similar to the recommended mitigation measure. Any minor revisions were made for the purpose of improving clarity or to better define the intended purpose.

Finding: Unless specifically stated to the contrary in these findings, it is this Council’s intent to adopt all mitigation measures recommended by the EIR which are applicable to the Project. If a measure has, through error, been omitted from the Approvals or from these Findings, and that measure is not specifically reflected in these Findings, that measure shall be deemed to be adopted pursuant to this paragraph. In addition, unless specifically stated to the contrary in these Findings, all Approvals repeating or rewording mitigation measures recommended in the EIR are intended to be substantially similar to the mitigation measures recommended in the EIR and are found to be equally effective in avoiding or lessening the identified environmental impact. In each instance, the Approvals contain the final wording for the mitigation measures.

V. ENVIRONMENTAL IMPACTS AND FINDINGS

City staff reports, the EIR, written and oral testimony at public meetings or hearings, these facts, findings, and statement of overriding considerations, and other information in the administrative record, serve as the basis for the City's environmental determination.

The detailed analysis of potentially significant environmental impacts and proposed mitigation measures for the Project is presented in Section 4.0 of the DEIR and Section 3.0 of the FEIR. Responses to comments on the DEIR, along with copies of the comments, are provided in Chapter 2.0 of the FEIR.

The EIR evaluated thirteen major environmental categories for potential impacts including Aesthetics, Agricultural Resources, Air Quality, Biological Resources, Cultural Resources, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use, Noise, Population and Housing, Transportation, Utilities and Service Systems, and Greenhouse Gases and Global Climate Change. Both Project-specific and cumulative impacts were evaluated. Of these thirteen major environmental categories, this Council concurs with the conclusions in the EIR that the issues and sub issues discussed in Sections V.A and V. B below either are less-than-significant without mitigation or can be mitigated below a level of significance. For the remaining potential environmental impacts that cannot feasibly be mitigated below a level of significance discussed in Section V.C, overriding considerations exist which make these potential impacts acceptable to this Council.

A. LESS-THAN-SIGNIFICANT ENVIRONMENTAL IMPACTS NOT REQUIRING MITIGATION

The Moreno Valley City Council hereby finds that the following potential environmental impacts of the Project are less-than-significant and therefore do not require the imposition of mitigation measures.

1. Aesthetics

a. Light and Glare

Potential Significant Impact: Whether the Project would create a new source of substantial light or glare that would adversely affect day or nighttime views in the area.

Findings: Potential impacts of the Project related to light and glare are discussed in detail in Section 4.1 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will

not result in significant impacts related to light and glare with the adherence to established City ordinances and development guidelines, therefore, no mitigation is required.

Facts in Support of the Findings: Section 4.1 identifies no sources of light or glare on the Project site. Development of the Project site would introduce new sources of light and glare into the area in the form of street lighting, parking lot lighting, and security lighting for the buildings. Lighting within loading areas (areas within the public view include the loading areas of Buildings 1, 2, and 3) will be directed downward so as to not Project lighting into the sky. The overall increase in ambient light in the area is expected to be incremental with compliance with the City’s development standards for lighting. The proposed Project will incrementally increase the amount of daytime glare in the Project area from introducing windows and metal fixtures into the area. All development in the City, which includes light generated from warehouse buildings and parking lots, is required to adhere to lighting requirements contained in the City’s Municipal Code. The Project is consistent with General Plan policies and Municipal Code requirements regarding light and glare, therefore, no impacts associated with this issue would occur and no mitigation is required (DEIR, pgs. 4.1-8 to 4.1-9).

b. Light and Glare

Potential Significant Impact: Whether the Project would create a new source of substantial light or glare that would adversely affect day or nighttime views in the area.

Findings: Potential impacts of the Project related to light and glare are discussed in detail in Section 4.1 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to light and glare with the adherence to established City ordinances and development guidelines, therefore, no mitigation is required.

Facts in Support of the Findings: Section 4.1 identifies no sources of light or glare on the Project site. Development of the Project site would introduce new sources of light and glare into the area in the form of street lighting, parking lot lighting, and security lighting for the buildings. Lighting within loading areas (areas within the public view include the loading areas of Buildings 1, 2, and 3) will be directed downward so as to not Project lighting into the sky. The overall increase in ambient light in the area is expected to be incremental with compliance with the City’s development standards for lighting. The proposed Project will incrementally increase the amount of daytime glare in the Project area from introducing windows and metal fixtures into the area. All development in the City, which includes light generated from warehouse buildings and parking lots, is required to adhere to lighting requirements contained in the City’s Municipal Code. The Project is consistent with General Plan policies and

Municipal Code requirements regarding light and glare, therefore, no impacts associated with this issue would occur and no mitigation is required (DEIR, pgs. 4.1-8 to 4.1-9).

2. Air Quality

a. Construction-Chronic Health Risk Impacts

Potential Significant Impact: Whether the Project would expose sensitive receptors to substantial pollutant concentrations.

For Maximum Individual Cancer Risk (MICR), the applicable thresholds are:

- An increased cancer risk greater than 10 in 1 million (1.0×10^{-5}) at any receptor location; or
- A cancer burden greater than 0.5.

For non-cancer chronic Hazard Index (HI); the applicable threshold is:

- A cumulative increase for any target organ system exceeding 1.0 at any receptor location.

Findings: Potential impacts of the Project related to construction-chronic health risks are discussed in detail in Section 4.3 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to sensitive receptor health risks and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.3 of the DEIR, the only toxic air pollution emissions in any significant quantity associated with the construction of the Project occur from diesel-powered equipment exhaust. A screening health risk assessment was performed according to the published Office of Environmental Health Hazard Assessment (OEHHA) health risk techniques.¹ According to the health risk assessment, the cancer risk due to construction of the Project is less than the threshold of 10 in 1 million. Therefore, health risks would be less than significant and no mitigation is required. (DEIR, pgs. 4.3-13 to 4.3-14)

b. Operational-Acute Health Risk Emission Impacts

Potential Significant Impact: Whether the Project would expose sensitive receptors to substantial pollutant concentrations.

For MICR, the applicable thresholds are:

¹ OEHHA, *Air Toxics Hot Spots Program Risk Assessment Guidelines*, August 2003, Appendix D, *Risk Assessment Procedures to Evaluate Particulate Emissions from Diesel-Fueled Vehicles*.

- An increased cancer risk greater than 10 in 1 million (1.0×10^{-5}) at any receptor location; or

For non-cancer chronic and acute HI; the applicable threshold is:

- A cumulative increase for any target organ system exceeding 1.0 at any receptor location.

Findings: Potential impacts of the Project related to operational-acute health risks are discussed in detail in Section 4.3 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to operational-acute health risks and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.3 of the DEIR, a screening level health risk assessment was performed for the operational emissions associated with the proposed Project based on the SCAQMD's *Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis* guidance. The operations expected to occur at this facility will not emit any toxic chemicals in any significant quantity other than vehicle exhaust. According to the health risk assessment the nearest residences would experience a cancer risk of 4.33 in 1 million, which is below the 10 in 1 million threshold. The nearest residences would also experience a chronic HI of 0.0016 and an acute HI of 0.0000088. Both the chronic and acute HI would be below the chronic and acute HI threshold of 1.0. Since the operational phase of the proposed Project would not exceed any of the long-term acute health risk assessment thresholds, a less than significant impact would occur. No mitigation is required. (DEIR, pgs. 4.3-14 to 4.3-18)

c. **Operational-Carcinogenic and Chronic Health Risk Emission Impacts**

Potential Significant Impact: Whether the proposed Project would expose sensitive receptors to substantial pollutant concentrations.

For MICR, the applicable thresholds are:

- An increased cancer risk greater than 10 in 1 million (1.0×10^{-5}) at any receptor location; or

For non-cancer health risk HI; the applicable threshold is:

- A cumulative increase for any target organ system exceeding 1.0 at any receptor location.

Findings: Potential impacts of the Project related to operational-carcinogenic and chronic health risk emission impacts are discussed in detail in Section 4.3 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to health risks related to operational emissions and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.3 of the DEIR, the closest residences to the Project would be exposed to a lifetime inhalation cancer risk of no more than 4.33 in 1 million, a 30-year inhalation cancer risk of no more than 3.88 in 1 million, and nearby workers a 40-year career inhalation cancer risk of no more than 1.5 in 1 million. The chronic health risk index is significantly less than the threshold of 1.0, in this case 0.0016 for residents and workers. No significant carcinogenic or chronic health risks would occur from Project-related traffic. No significant health risk would occur from Project-related truck traffic, and no mitigation is necessary. (DEIR, pg. 4.3-18)

d. Air Quality Impacts to Adjacent Future Development

Potential Significant Impact: Whether the proposed Project would expose sensitive receptors to substantial pollutant concentrations.

Findings: Potential impacts of the Project related to air quality impacts to adjacent future developments are discussed in detail in Section 4.3 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to air quality impacts to adjacent future development and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.3 of the DEIR, based on the land use assumptions for the future L-Aquila D’Pietra (LADP) Project, residential development would be located along the southern Project boundary between the proposed Project and the proposed LADP. It is anticipated that the proposed Project site would be fully developed prior to the occupation of any dwelling units in LADP; therefore, no construction-related air quality impacts to adjacent sensitive receptors would result from development of the proposed Project.

The primary health risk is from heavy-duty truck emissions is diesel particulate exhaust. According to the screening-level assessment, the future residential units south of the Project site would be exposed to an unmitigated inhalation cancer risk of approximately 4.3 in 1 million, which is less than the threshold of 10 in 1 million. The corresponding chronic and acute hazard indices would be approximately 0.0016 and 0.000088, which is less than the threshold of 1.0 for the chronic hazard index and acute hazard index. Since the screening-level analysis overall Project health risks are below established thresholds, any

detailed assessment would also produce less than significant health risk levels. Therefore, a less than significant impact associated with future uses that may occupy adjacent properties subsequent to development of the proposed Project would occur. No mitigation is required. (DEIR, pgs. 4.3-18 to 4.3-19)

e. Long-Term Microscale (CO Hotspot) Impacts

Potential Significant Impact: Whether the proposed Project would violate any air quality standard or contribute substantially to an existing or projected air quality violation. For CO, the applicable thresholds are:

- California State one-hour CO standard of 20.0 ppm; and
- California State eight-hour CO standard of 9.0 ppm.

Findings: Potential impacts of the Project related to long-term microscale emissions are discussed in detail in Section 4.3 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to long-term microscale emissions and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.3 of the DEIR, the highest one-hour CO concentration experienced at any of the intersections in the Project vicinity would not exceed the one hour CO State standard of 20 ppm. Based on the *Air Quality Analysis* prepared for the proposed Project, the proposed Project would contribute, at most, a 0.1 ppm increase to the one-hour CO concentrations for all scenarios. This is below the 1.0 ppm increase threshold. Also the highest eight-hour CO concentration experienced at any of the intersections in the Project vicinity would not exceed the eight-hour CO state standard of 35 ppm. Based on the *Air Quality Analysis* prepared for the proposed Project, the proposed Project would contribute, at most, a 0.1 ppm increase to the eight-hour CO concentrations for all scenarios. This is below the 0.45 ppm increase threshold. Since the proposed Project would not exceed the one-hour or eight-hour CO concentration standards, it is reasonable to conclude that no CO hot spots would occur. Therefore, the proposed Project would not have a significant impact on local air quality for CO and no mitigation measures would be required. (DEIR, pgs. 4.3-19 to 4.3-20)

f. Odors

Potential Significant Impact: Whether the Project would create objectionable odors affecting a substantial number of people.

Findings: Potential impacts of the Project related to objectionable odors are discussed in detail in Section 4.3 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts due to objectionable odors and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.3 of the DEIR, the Project does not propose land uses typically associated with emitting objectionable odors. Potential odors during Project construction may result from heavy equipment exhaust and the application of asphalt and architectural coatings. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less-than-significant. Project-related operational odor sources such as vehicle exhaust and routine painting/ maintenance activities are typical of industrial/commercial activities and would be localized to the immediate Project vicinity, with little or no off-site effects. Accordingly, impacts related to objectionable odors will be less-than-significant and no mitigation is required. (DEIR, pg. 4.3-20)

3. Biological Resources

a. Habitat Fragmentation/Wildlife Movement

Potential Significant Impact: Whether the Project would interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.

Findings: Potential impacts of the Project related to habitat fragmentation and wildlife movement are discussed in detail in Section 4.4 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts to habitat and wildlife movement and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.4 of the DEIR, the proposed Project site is isolated from regional wildlife corridors by existing barriers including urban development, agricultural uses, and roadways. Land uses adjacent to the Project site include fallow agricultural land to the south and east, commercial uses to the west, and residential uses to the north across SR-60. Due to the nature of development occurring in the Project area and the current condition of the Project site, it is highly unlikely that the Project site is utilized as a wildlife movement corridor, with the exception of the Quincy Channel. The proposed Project will not affect the majority of Quincy Channel, thus allowing wildlife to continue using the existing channel to traverse the site. The quality of on-site habitat has been diminished

due to the previous and frequent ground disturbance and past agricultural activities. In addition, the existing roadways and infrastructure features further isolate the Project site from natural areas. Due to the disturbed condition of the Project site, the nature of development to the southeast and west, the intervening presence of roadways and infrastructure, and adherence to City development standards identified in the Municipal Code, development of the proposed Project will not result in significant habitat fragmentation or substantially affect established wildlife corridors or wildlife movement. A less than significant impact would result and no mitigation is required. (DEIR, pg. 4.4-23)

b. Adopted Policies and Ordinances

Potential Significant Impact: Whether the Project would conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

Findings: Potential impacts of the Project related to adopted policies and ordinances are discussed in detail in Section 4.4 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in conflict with local policies or ordinances and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.4 of the DEIR, city policies or ordinances identified in the General Plan protecting biological resources include: mitigation of impacts to riparian areas or other natural sensitive communities (Policy 7.4.1), preservation of natural drainage courses in their natural hydrological state (Policy 7.4.3), and City fulfillment of obligations set forth within any agreements and permits related to the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) implementation (Policy 7.4.5).

The Quincy Channel, located adjacent and to the east of the proposed Project site, is considered a sensitive natural habitat due to the value it provides as nesting sites and foraging sites for migratory birds. The proposed Project would be designed to minimize encroachment into this natural area through setback requirements established in Sections 9.16.120 and 9.05.040 of the City's Municipal Code, thus preserving this habitat area in its natural state pursuant to the City's General Plan. At the northeast corner of Building 2, the development plans call for a minimum setback from Quincy Channel due to the topography and alignment of the creek. From that point, the plan provides a setback and landscaped buffer area between the drainage area and the structures proposed on the site that widens and varies from 25 to 50 feet (including the flood control access road). Therefore, the proposed Project would not conflict with local policies or ordinances protecting biological resources and a less than significant impact would occur. No mitigation is required. (DEIR, pg. 4.4-24)

c. Adopted Habitat Conservation Plans

Potential Significant Impact: Whether the Project would conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

Findings: Potential impacts of the Project related to adopted habitat conservation plans are discussed in detail in Section 4.4 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in conflicts with local habitat conservation plans and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.4 of the DEIR, the Project site is located within the Western Riverside County MSHCP, however, the Project site is not within any MSHCP criteria cell or habitat linkage. Furthermore, the Project site is not located within an MSHCP mammal or amphibian survey area; a Narrow Endemic Plant Species Survey Area or Criteria Area Plant Species Survey Area; or a riparian, wetland, or vernal pool habitat/species survey area. A habitat assessment for the burrowing owl is required under the MSHCP. While the Project site is not within any MSHCP conservation areas, the Project is still subject to provisions of the MSHCP. In particular, the Project applicant will be required to provide payment of mitigation fees and adhere to the requirements established in the MSHCP. Pursuant to agreements with the USFWS and the CDFG, the payment of the mitigation fee prior to the issuance of a building permit by the City, and compliance with applicable provisions of the MSHCP provides full mitigation under CEQA, FESA, and CESA for impacts to the species and habitats covered by the MSHCP. Therefore, development of the proposed Project will not conflict with the provisions of the MSHCP. A less than significant impact would occur and no mitigation is required.

In addition to the MSHCP, the Project site is within the boundaries of the Stephens Kangaroo Rat Habitat Conservation Plan (SKR HCP) established by the County of Riverside. Development of the proposed Project will not conflict with the provisions of the SKR HCP. The payment of a local mitigation fee prior to issuance of a grading permit by the City will be required. There are no other requirements for the Project under the SKR HCP and a less than significant impact would occur with payment of the fee and no further mitigation is required. (DEIR, pg. 4.4-24)

d. Endangered and Threatened Species

Potential Significant Impact: Whether the Project would have a substantial adverse effect, either directly or through habitat modifications, on any species identified as endangered or threatened in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (CDFW) or U.S. Fish and Wildlife Service (USFWS).

Findings: Potential impacts of the Project related to endangered and threatened species are discussed in detail in Section 4.4 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts to endangered or threatened species and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.4 of the DEIR, no species listed by the State and/or Federal Government as Endangered or Threatened was identified on site during the field surveys; however, Swainson's hawk, a State-listed species, and Stephens' kangaroo rat, a federally and State-listed species, have a low potential to occur on the site.

The Project site is not located within any USFWS designated critical habitat. Swainson's hawk would be expected to occur on the site, if at all, only during migration as foraging individuals. Swainson's hawk is covered by the MSHCP. Mitigation for covered species consists of participation in the MSHCP.

The Project site is also within the SKR HCP Fee Area. The proposed Project site is not within an SKR Core Area. The SKR HCP provides Take Authorization for the SKR within its boundaries, and no surveys or additional measures are required other than paying a development fee prior to issuance of a grading permit by the City. In the absence of a significant impact, no mitigation is warranted. (DEIR, pg. 4.4-25)

e. Cumulative Biological Impacts

Potential Significant Impact: Whether the Project in connection with past, current, and probably future projects would incrementally effect biological resources.

Findings: Potential impacts of the Project related to cumulative biological impacts are discussed in detail in Section 4.4 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant cumulative impacts to biological resources and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.4 of the DEIR, the proposed Project would not make a cumulatively considerable contribution to impacts on endangered or threatened species, riparian

habitat or natural plant communities, jurisdictional waters, habitat fragmentation, wildlife movement, local policies and ordinances, or habitat conservation plans. There are no projects that would, in combination with the proposed Project, produce a significant impact to non-listed sensitive species. Therefore, there are no significant cumulative impacts anticipated to occur that are associated with biological resources. With implementation of Project-level Mitigation Measures 4.4.6.1 through 4.4.6.3, the Project's contribution to cumulative biological impacts will not be cumulatively considerable and no additional mitigation is required. (DEIR, pgs 4.4-30 to 4.4-31)

4. Cultural Resources

a. Historical Structures and Features

Potential Significant Impact: Whether the Project would cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5.

Findings: Potential impacts of the Project related to historical structures and features are discussed in detail in Section 4.5 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts to historical structures and features and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.5 of the DEIR, no structures or unique features are currently located within the Project limits. An online title search was conducted and historic maps were reviewed to determine the potential for structures and/or the remains of former sites of buildings or resources within the Project limits. No evidence of past structures or historic features was identified, nor was evidence of such structures identified during the on-site cultural resource survey or the records search. As no evidence has been identified to suggest the presence of past or current structures on site, no impacts related to historic structures or features will occur. In the absence of a significant impact, no mitigation is warranted. (DEIR, pg.4.5-5)

b. Human Remains

Potential Significant Impact: Whether the Project would disturb any human remains, including those interred outside of formal cemeteries.

Findings: Potential impacts of the Project related to human remains are discussed in detail in Section 4.5 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts to human remains and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.5 of the DEIR, the Project site was utilized for agricultural production. No evidence suggesting the Project site has been utilized in the past for human burials has been identified.² In the unlikely event human remains are discovered during grading or construction activities, State law (Health and Safety Code §7050.5) requires that no further disturbance shall occur until the County Coroner has made determination of the origin and disposition pursuant to Public Resources Code 5097.98. Because adherence to provisions of Health and Safety Code §7050.5 is required of all development projects, and because adherence to the requirements in State law sufficiently mitigates for potential impacts to human remains, no significant impact related to this issue will occur. Because potential impacts associated with this issue are less than significant, no mitigation is required. (DEIR, pg. 4.5-5)

c. Cumulative Cultural Resources

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have a cumulative significant impact on cultural resources.

Findings: Potential impacts of the Project related to cumulative cultural resources are discussed in detail in Section 4.5 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant cumulative impacts to cultural resources and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.5 of the DEIR, on-site sediments and cumulative archaeological and paleontological discoveries elevate the potential for the on-site presence of archaeological and paleontological resources. The proposed Project includes measures to identify, recover, and/or record any archaeological or paleontological resource that may occur within the Project limits. Although unlikely to occur, potential impacts associated with human remains would be reduced to a less than significant level through adherence to existing State law. There are no projects that would, in combination with the proposed Project, result in any significant cumulative impacts on historical, archaeological, or paleontological resources, or cumulative impacts to human remains. Therefore, the Project will not make a significant contribution to any cumulatively considerable impacts associated with cultural resources, and no mitigation is required. (DEIR, pg. 4.5-8)

5. Hazards and Hazardous Materials

² Chapter 5.10 Cultural Resources, City of Moreno Valley General Plan Final EIR, July 2006.

a. Routine Transport, Use, or Disposal of Hazardous Materials and Reasonable Foreseeable Upset and Accident Conditions

Potential Significant Impact: Whether the Project would create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Also, whether the Project would create a significant hazard to the public through the routine transport, use, or disposal of hazardous materials.

Findings: Potential impacts of the Project related to routine transport, use or disposal of hazardous materials and/or the risk of upset or accidental release of hazardous materials into the environment are discussed in detail in Section 4.6 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to routine transport, use or disposal of hazardous materials and, therefore, no mitigation is required.

Facts in Support of the Findings: Two *Phase I Environmental Site Assessments* (ESAs) were prepared for the proposed Project site. During the on-site inspection, no hazardous materials handling, storage, or disposal areas were observed. Additionally, no evidence of stressed vegetation, discolored water, or pools of liquid was observed during the on-site reconnaissance. However, because the Project site has been historically utilized for agricultural production and because of the close proximity to SR-60, soil samples were taken in various parts of the Project site to further evaluate the potential contamination on the site. Laboratory results indicated no detectable concentrations of hydrocarbon compounds in the samples collected. However, there were detectable concentrations of organochlorine pesticides and PCBs in samples collected from possible drainage accumulation and pesticide usage on site. These concentrations were within the allowable Preliminary Remedial Goals (PRGs) for the Project.

During the Project's construction and operation, it is likely that materials such as fuels, lubricants, solvents, cleansers, and paints will be transported to and from the site. The use and transport of these materials and all potentially hazardous materials would be handled according to the appropriate State and Federal regulations. Adherence to existing regulations as they relate to the handling and transport of potentially hazardous materials during construction would reduce impacts associated with this issue to a less than significant level and no mitigation is required. (DEIR, pgs. 4.6-6 through 4.6-11)

b. Hazardous Material Sites

Potential Significant Impact: Whether the Project would be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment.

Findings: Potential impacts of the Project related to hazardous material sites are discussed in detail in Section 4.6 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts due to hazardous material sites and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.6 of the DEIR, a database review was conducted for both of the Phase 1 ESAs conducted for the Project site. Based on the database review, the Project site is not included on the State of California Hazardous Waste and Substances Site List (Cortese list) pursuant to the California Code (Section 65962.5). The Project site is not listed in the NPL; Corrective Action Order Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) list; Emergency Response Notification System (ERNS) list; Resource Conservation and Recovery Act System; Toxic Release Inventory System (TRIS); CAL-SITES Database for Annual Work Plan; California Department of Toxic Substances Control (DTSC); Regional Water Quality Control Board (RWQCB); California Waste Management Board (CWMB); Solid Waste Information System (SWIS); Waste Management Units Database System (WMUDS); California Border Zone Properties (Deed Restriction Properties); DTSC Hazardous Waste and Substances Site List (Cortese list); or any Leaking Underground Storage Tank (LUST) database.

Because the Project site is not identified on a list of hazardous materials sites, the potential that the development of the site would create a significant hazard to the public or environment is less than significant. In addition, the results of the site investigations performed by RM Environmental indicate that no significant amount of any hazardous material exists on site. Therefore, impacts associated with this issue are less than significant and no mitigation would be required. (DEIR, pgs. 4.6-11 through 4.6-12)

c. Existing or Proposed Schools

Potential Significant Impact: Whether the Project would create hazardous emissions or handle acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school.

Findings: Potential impacts of the Project related to existing or proposed schools are discussed in detail in Section 4.6 of the DEIR. Based on the entire record before us, this Council finds that development of

the Project will not result in significant impacts related to existing or proposed schools and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.6 of the DEIR, at the time the NOP for the proposed Project was released, the Moreno Valley Unified School District (MVUSD) had identified three potential school sites within the Project vicinity. Of these potential school sites, High School #5 was the closest planned school to the Project site as it was to be located on the adjacent parcel east of the Project site. Due to MVUSD concerns regarding the placement of schools in areas that may be rezoned with warehousing uses, MVUSD has made a decision to abandon the development of these school facility projects on the identified sites.³ Therefore, no planned school facilities would be located adjacent to or within 0.25 mile of the Project site. Since there are no schools planned, proposed, or operating within 0.25 mile of the Project site, no impacts associated with this issue would occur and no mitigation is required. (DEIR, pgs. 4.6-12 through 4.6-13)

³ *Resolution No. 2007-08-8*, Board of Education of the Moreno Valley Unified School District, April 15, 2008.

d. Emergency Response Plan

Potential Significant Impact: Whether the Project would impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan.

Findings: Potential impacts of the Project related to emergency response plans are discussed in detail in Section 4.6 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to emergency response plans and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.6 of the DEIR, in February 2006, the County of Riverside, in cooperation with the cities and special districts, completed its Emergency Operations Plan (EOP). The EOP establishes the emergency organization, assigns tasks, specifies general procedures, and provides for coordination of planning efforts of the various emergency staff and resources.

Construction activities that may temporarily restrict vehicular traffic would be required to implement adequate measures to facilitate the passage of people and vehicles through/around any required road closures. During the operational phase of the proposed Project, on-site access for fire and emergency vehicles would be required to comply with standards established by the City Public Works Department. The size and location of fire suppression facilities (e.g., hydrants) and fire access routes would be required to conform to Fire Department standards. As required of all development in the City, the operation of the proposed Project would be required to conform to applicable Uniform Fire Code standards. The submittal of such plans would be considered a condition of approval, which would be part of the permitting process initiated by the applicant and approved by the City in accordance with City standards. As with any development, access to and through the Project would be required to comply with the required street widths, as determined in the General Plan Circulation Element, and the Uniform Fire Code. Therefore, implementation of the proposed Project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. No significant impact would occur and no mitigation is required. (DEIR, pg. 4.6-13)

e. Wildland Fires

Potential Significant Impact: Whether the Project would expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildland.

Findings: Potential impacts of the Project related to wildland fires are discussed in detail in Section 4.6 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to wildland fires and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.6 of the DEIR, the Project site is not located within a “High Fire Hazard Area” or within an area susceptible to wildfires identified by the City of Moreno Valley. Areas surrounding the Project site consist of urban, built, and open space. Because of lack of abundant vegetation and the extensive amount of development within the vicinity of the Project site, on-site and adjacent areas do not have the capability to support a wildfire. The proposed uses on site do not typically create a fire hazards nor are they subject to wildland fire hazards due to the type of construction materials used. The Project will be designed and constructed to comply with adopted standards and guidelines for fire protection. Irrigated landscaping will surround Project buildings, and are required to include fire suppression features by law. Due to the location of the fire station adjacent to the Project in the northwest corner and the low probability that the Project site would be subject or susceptible to wildland fires, no significant impact related to this issue would occur. No mitigation is required. (DEIR, pgs. 4.6-13 through 4.6-14)

f. Cumulative Impacts from Hazards and Hazardous Materials

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would cumulatively increase the risk of hazardous materials and exposure to hazardous materials.

Findings: Potential impacts of the Project related to cumulative hazardous materials impacts are discussed in detail in Section 4.6 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to cumulative hazardous materials and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.6 of the DEIR, the proposed Project would not result in significant cumulative impacts associated with the routine transport, use, and disposal of hazardous materials; or the emission or handling of hazardous substances. As areas of the eastern portion of Moreno Valley continue to develop, the amount of truck traffic is expected to increase in proportion to the amount of industrial or commercial development that take place in the area. The trucks traveling in the area of the Project and the surrounding areas may contain hazardous materials as well as contribute to emission in the cumulative area. Accidental spills and leaks are unplanned occurrences. It is impossible to predict the occurrences of such events and the likelihood of such events occurring in close proximity to

each other at the same time is very small; therefore, such events cannot be considered cumulatively significant.

As anticipated in the City's General Plan, demographic increases, continued retail and service demands, and the availability of vacant property will lead to the new residential, commercial, and industrial development in the City and surrounding area. While the project-specific hazardous material impacts of individual development projects will be addressed separately in future CEQA documents, anticipated future development will contribute, through increases in the number of locations that sell, store, transport, or dispose of hazardous materials, to a cumulative increase in risk for hazardous material incidents. As with the proposed Project, it is anticipated that future development projects will be required to adhere to applicable local, State, and Federal requirements that regulate the use, release, storage, sale, and transport of hazardous materials. Such compliance would ensure that the proposed Project will not make a significant contribution to a cumulatively considerable impact in this regard, and no mitigation measures for cumulative impacts are required. (DEIR, pg. 4.6-14)

6. Hydrology, Drainage, and Water Quality

a. Groundwater

Potential Significant Impact: Whether the Project would substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level

Findings: Potential impacts of the Project related to groundwater are discussed in detail in Section 4.7 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to groundwater and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.7 of the DEIR, the proposed Project would obtain water service from the EMWD. It is anticipated that the proposed Project would primarily utilize imported water purchased from Metropolitan. In the event that imported water is not available, this imported water would be supplemented by local groundwater sources.

The implementation of the existing West San Jacinto Groundwater Basin Management Plan would ensure that local groundwater resources are conserved and groundwater overdraft does not occur. If the use of groundwater supplies was necessary, the proposed Project would be required to comply with any future water use restricting regulations further minimizing impacts to groundwater supply.

As identified in the City's General Plan, the proposed Project would not interfere with groundwater recharge as the Project site is not identified as a groundwater recharge area.⁴ Therefore, the proposed Project would not interfere with groundwater recharge activities. Impacts associated with this issue are less than significant and no mitigation measure is required. (DEIR, pg. 4.7-14)

b. Flooding-Related Impacts

Potential Significant Impact: Whether the Project would place within a 100-year flood hazard area structures that would impede or redirect flood flows.

Findings: Potential impacts of the Project related to flooding are discussed in detail in Section 4.7 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to flooding and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.7 of the DEIR, flooding in the City of Moreno Valley could result from intense storms resulting in rapid runoff. The Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) identify areas subject to flooding during the 100-year storm.⁵ Based on these FIRMs and the Project site does not fall within a 100-year flood zone.⁶ The proposed Project is industrial in nature and the implementation of the proposed Project would not result in the placement of housing within a 100-year floodplain. Because the Project site does not lie within a 100-year floodplain and does not include housing, impacts related to this issue are less than significant. No further discussion or mitigation is required. (DEIR, pgs. 4.7-14 through 4.7-17)

c. Drainage Pattern-Related Impacts

Potential Significant Impact: Whether the Project would substantially alter the existing local drainage patterns of the site and substantially increase the rate or amount of surface runoff in a manner which would result in substantial erosion, siltation, or flooding on or off site.

Findings: Potential impacts of the Project related to drainage patterns are discussed in detail in Section 4.7 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to drainage patterns and, therefore, no mitigation is required.

⁴ Section 5.7 *Hydrology/Water Quality*, City of Moreno Valley General Plan Final Program EIR, City of Moreno Valley, July 2006.

⁵ The term "100-year" is a measure of the size of the flood, not how often it occurs. The "100-year flood" is a flooding event that has a one percent chance of occurring in any given year.

⁶ FEMA DFIRM Data, 2008.

Facts in Support of the Findings: According to Section 4.7 of the DEIR, the proposed Project would alter the existing drainage patterns and affect surface runoff; however, several BMPs would be designed and installed on site to minimize these alterations, resulting in a less than significant impact. Development of the Project site would result in increased impervious surfaces in the form of roadways, parking lots, and industrial warehouse buildings. The proposed Project incorporates six detention/sedimentation basins for both water quality and quantity control purposes. The Project would also include vegetated swales, detention/sedimentation basins, and sand filters.

Under post-development conditions, all on-site flows would be routed to Quincy Channel. This drainage pattern would mimic the existing drainage pattern, which has flows draining to the Quincy Channel and the unnamed dry wash to the south. Since the unnamed dry wash connects to Quincy Channel farther south of the Project, all flows under existing conditions drain into Quincy Channel. Flows in Quincy Channel are routed to the Perris Valley Storm Drain where flows continue onto the San Jacinto River and eventually reach Lake Elsinore.

Increased runoff from the site could result in substantial erosion of local drainage ways and siltation of downstream receiving waters. However, with the proposed drainage system installed on site, the proposed Project would not produce any post-development peak flow leaving the site larger than the pre-development peak flows leaving the site for the analyzed storms. In addition, because the implementation of various BMPs will reduce off-site flow velocity and volume, erosional runoff and silt volumes would be minimized to the greatest extent practical. Because the proposed Project would maintain existing drainage patterns on site and implement BMPs that would minimize erosion and generation of silt on site, impacts associated with this issue are less than significant and no mitigation measures are required. (DEIR, pg. 4.7-17)

d. Hydrology and Water Quality Cumulative Impacts

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts on hydrology and water quality.

Findings: Potential impacts of the Project related to cumulative hydrology and water quality impacts are discussed in detail in Section 4.7 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant cumulative impacts to hydrology and water quality and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.7 of the DEIR, increases in the amount and extent of development in the City and surrounding areas will increase the potential for pollutants in runoff, which in turn would affect water quality. The Project's water quality impacts will be mitigated through on-site detention/sedimentation basins and other water pollution control mechanisms such as vegetated swales, sand filters, and storm drain inlet filters. Similar requirements will be placed on all other development in the Project vicinity by the City and the RWQCB, further reducing the potential for cumulative impacts. Since all development within the City is required to account and mitigate for their individual water quality impacts before runoff leaves each individual site, it is reasonable to conclude that water quality would be maintained throughout the cumulative area. Adherence to NPDES, SWPPP, and WQMP requirements will reduce any such cumulative water quality impact to a less than significant level.

Groundwater recharge policies and practices implemented by the RWQCB and local agencies will ensure groundwater supplies are maintained at appropriate levels. As such, no significant cumulative groundwater supply impacts are anticipated to occur with the development of the proposed Project.

The drainage system for the proposed Project would be designed so that runoff from the Project site after Project development is directed to on-site treatment BMPs and flow volumes would be equal to or less than historic conditions at any given discharge location. This same requirement will be placed on all other development in the vicinity of the Project site by the City of Moreno Valley. Therefore, the proposed Project will not make a significant contribution to any cumulatively considerable impacts related to drainage or water quality and no mitigation is required. (DEIR, pgs. 4.7-28 through 4.7-29)

8. Land Use and Planning

a. Physically Divide an Established Community

Potential Significant Impact: Whether the Project would physically divide an established community.

Findings: Potential impacts of the Project related to the physically dividing an established community are discussed in detail in Section 4.8 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts due to a physical divide of an established community and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.8 of the DEIR, land uses adjacent to the Project site include residential uses to the southeast, vacant land to the south, commercial uses to the west, SR-60 and residential uses to the north, and active hay/alfalfa production uses to the east. The Project site

does not contain any existing housing, nor does the site complement or constitute part of a community or neighborhood. Based on this information, the proposed Project will physically divide an existing established community. No impact related to this issue would occur; therefore, no mitigation is required. (DEIR, pgs. 4.8-4 through 4.8-5)

b. Conflict with Any Applicable Habitat or Natural Community Conservation Plan

Potential Significant Impact: Whether the Project would conflict with any applicable habitat conservation plan or natural community conservation plan.

Findings: Potential impacts of the Project related to the conflict with any applicable habitat conservation plan are discussed in detail in Section 4.8 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts due to a conflict with any applicable habitat or natural community conservation plan and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.8 in the DEIR, the Project site is located within the MSHCP area.⁷ The Project site is not within an MSHCP criteria cell or habitat linkage. Furthermore, the Project site is not located within an MSHCP mammal or amphibian survey area, Narrow Endemic Plant Species Survey Area (NEPSSA), Criteria Area Plant Species Survey Area (CAPSSA), or a riparian, wetland, or vernal pool habitat/species survey area.⁸

While the Project site is not within any conservation area delineated in the MSHCP, the Project is still subject to provisions of the MSHCP. In particular, the Project proponent will be required to provide payment of mitigation fees and adhere to the requirements established in the MSHCP. Pursuant to agreements with the USFWS and the CDFW, the payment of the mitigation fees and compliance provisions of the MSHCP provides full mitigation under the CEQA, FESA, and CESA for impacts to the species and habitats covered by the MSHCP. Since the City has adopted the MSHCP and its requirements and provisions, and since the Project is within the City, the proposed Project would be required to adhere to applicable MSHCP requirements and fees. Therefore, the proposed Project would not conflict with any applicable HCP and no significant impact associated with this issue would occur. No mitigation would be required. (DEIR, pg. 4.8-4)

c. Cumulative Land Use Impacts

Potential Significant Impact: Whether the Project in connection with past, current, and foreseeable future projects would incrementally affect biological resources.

Findings: Potential impacts of the Project related to cumulative land use impacts are discussed in detail in Section 4.8 of the DEIR. Based on the entire record before us, this Council finds that development of

⁷ City of Moreno Valley General Plan Final Program EIR, Figure 5.9-4 Reche Canyon/Badlands Area.

⁸ <http://www.rctlma.org/gis/rciprepgen.html>, site accessed December 4, 2007.

the Project will not result in significant cumulative impacts related to land uses and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.8 of the DEIR, implementation of the proposed Project represents establishment of new land uses within the currently undeveloped Project site that would result in an intensification of permitted land uses associated with a land use change from Business Park and Residential to Light Industrial uses, changes to the General Plan Circulation Element, and the loss of the Primary Animal Keeping Overlay (PAKO) associated with the RA-2 zone. However, the proposed Project is generally consistent with regional plans and planning efforts, although it is not fully consistent with the SCAG's RTP and Compass Blueprint Plan because it eliminates some housing in favor of industrial employment uses. It will incrementally improve the City's long-standing jobs/housing ratio, which is also a regional goal of the various SCAG plans. It is also not consistent with existing General Plan land use designations, objectives and policies, nor is it consistent with existing zoning designations on the site. For these reasons, a General Plan Amendment and Zone Change are proposed for consideration by the City.

The proposed changes in land use will also result in a loss of up to 584 (R-15) multi-family residential units, many of which could have contributed to the City's affordable housing supply at some point in the future. However, this was determined to be a less than significant Project impact on local housing because the City's Housing Element identifies over twice as much potential affordable housing as the City's RHNA allocation, so it will not make a significant contribution to a cumulatively considerable impact on regional housing.

The Project would also not make a similar cumulatively considerable land use impact relative to dividing an established community or conflicting with an approved habitat conservation plan and no mitigation is required. (DEIR, pgs. 4.8-17 to 4.8-18)

8. Noise

a. **Airport Noise**

Potential Significant Impacts: Whether a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would result in exposure of people residing or working in the Project area to excessive noise levels. Or if a Project within the vicinity of a private airstrip, would expose people residing or working in the Project area to excessive noise levels.

Findings: Potential impacts of the Project relating to airport noise are discussed in detail in Section 4.9 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to airport noise will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.9 of the DEIR, the proposed Project site is located approximately 5 miles northeast of the March Air Reserve Base. Aircraft operations from the airport currently contribute intermittent single-event noise. However, the proposed Project is not identified as being within the noise or safety contours delineated for the MARB Airport. The proposed Project is not located within two miles of a public or private airport; therefore, the proposed Project would not have the potential to expose people to excessive noise levels from airport operations and no impact regarding this issue would occur with implementation of the proposed Project. No mitigation is required. (DEIR, pg. 4.9-10)

b. Ground-Borne Vibrations

Potential Significant Impact: Whether the Project would result in exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels.

Findings: Potential impacts of the Project relating groundborne vibration and groundborne noise are discussed in detail in Section 4.9 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to ground-borne vibration and groundborne noise will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.9 of the DEIR, the Project site is not located near steel-wheeled trains. Additionally, roadways in the Project area are either paved or would be paved and would not result in traffic driving over rough roads. Construction activities for the Project site do not include blasting or pile driving. The primary vibratory source during the construction of the proposed Project would be large bulldozers. Based on published data, typical bulldozer activities generate an approximate vibration level of 0.089 in/sec at a distance of 25 feet. At the distance of the nearest residence to the Project boundary (about 50 feet) the estimated vibration level will be 0.0415 in/sec. While heavy-duty earthmoving equipment would be used during the construction phase of the Project, the level of vibration would not be excessive or permanent, nor would it exceed the level at which building damage typically occurs. Therefore, impacts from construction-related groundborne vibration construction would be less than significant and no mitigation is required. (DEIR, pg. 4.-11)

c. Long-Term Traffic Noise

Potential Significant Impact: Whether the Project would result in a substantial temporary, periodic, and/or permanent increase in ambient noise levels in the Project vicinity above levels existing without the Project.

Findings: Potential impacts of the Project related to long-term noise are discussed in detail in Section 4.9 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to long-term noise will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.9 of the DEIR, the *Noise Impact Analysis* (Appendix H) indicates that implementation of the proposed Project would result in relatively minor changes in traffic noise levels except along Eucalyptus Avenue between Moreno Beach Drive and Driveway A. The largest Project-related increase in traffic noise would be along Eucalyptus Avenue/Fir Avenue between Auto Mall Drive and Redlands Boulevard. This segment would experience a 13.6 dBA increase over the baseline (with the Project) scenario and a 13.3 dBA increase over the baseline (with the Project) scenario in opening year (2012). In addition, the roadway segment along Eucalyptus Avenue between Moreno Beach Drive and Auto Mall Drive would experience a 4.5 dBA increase over the baseline scenario in 2012. However, no noise-sensitive uses exist or are planned near either roadway segment.

For the Project build out year (2035) analysis, the greatest increase in noise levels is along Eucalyptus Avenue between Auto Mall Drive and Redlands Boulevard, where an increase of up to 1.3 dBA is predicted, with the ambient noise level predicted to be 71.6 dBA at 50 feet from the centerline of the street. In addition, the greatest increases in noise levels associated with the General Plan Build Out Year is along Eucalyptus Avenue between Auto Mall Drive and Redlands Boulevard, where an increase of up to 0.9 dBA is predicted, with the ambient noise level predicted to be 73.0 dBA at 50 feet from the centerline of the street. However, no noise-sensitive uses exist or are planned near the roadway segment. Therefore, noise impacts at the roadway segments where an increase of more than 3.0 dBA would occur are considered less than significant because there are no sensitive receptors located along the roadway segments that would be affected. All other roadway segments would have an increase in noise of less than 3.0 dBA, which would not be perceptible to the human ear in an outdoor environment. Therefore, impacts would be less than significant and no mitigation measures would be required for off-site areas. (DEIR, pgs. 4.9-11 to 4.9-19)

d. Long-Term Operational Noise

Potential Significant Impact: Whether the Project would cause exposure of persons to or generation of noise levels in excess of standards established in the City of Moreno Valley General Plan, Moreno Valley Municipal Code, or applicable standards of other agencies.

Findings: Potential impacts of the Project related to long-term operational noise are discussed in detail in Section 4.9 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to long-term operational noise will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.9 of the DEIR, potential long-term stationary noise impacts would primarily be associated with operations at the proposed warehouse and the light industrial uses. The proposed on-site uses would generate noise from truck delivery, loading/unloading activities at the loading areas, and other noise-producing activities within the parking lot. Through distance divergence, attenuation, and building shielding these sources of noise would be reduced to less than significant levels; and no mitigation is required. (DEIR, pgs. 4.9-20 to 4.9-22)

e. Noise Impacts to Adjacent Future Development

Potential Significant Impact: Whether the Project would result in a substantial permanent increase in ambient noise levels in the Project vicinity above levels existing without the Project.

Findings: Potential impacts of the Project related to noise impacts to adjacent future development are discussed in detail in Section 4.9 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to noise impacts to adjacent future development and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.9 of the DEIR, based on the land use assumptions for the future LADP Project, residential development would be located along the southern Project boundary between the proposed Project and the proposed LADP. It is anticipated that the proposed Project site would be fully developed prior to the occupation of any dwelling units in LADP; therefore, no construction-related noise impacts to future adjacent sensitive receptors would result from development of the proposed Project. Also, the proposed on-site uses would generate noise from truck delivery, loading/unloading activities at the loading areas, and other noise-producing activities within the parking lot. Through distance divergence, attenuation, and building shielding these sources of noise

would be reduced to less than significant levels. Therefore, a less than significant impact would occur to adjacent future development and no mitigation is required. (DEIR, pgs. 4.9-23 to 4.9-24)

f. Cumulative Noise Impacts

Potential Significant Impact: Whether the Project in connection with past, current, and probable future Project would cause cumulative noise impacts within the City of Moreno Valley.

Findings: Potential impacts of the Project related to cumulative noise are discussed in detail in Section 4.9 of the DEIR. Based on the entire record before us, this Council finds that no significant cumulative impacts related to noise will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: Construction crew commutes and the transport of construction equipment, materials, and fill to the site for the proposed Project would incrementally increase noise levels on access roads leading to the site. Secondary sources of noise would include noise generated during excavation, grading, and building erection on the Project site. Although it is unlikely that adjacent properties will be developed at the same time as the proposed Project, if adjacent properties are developed at the same time as the proposed Project, implementation of the stated mitigation measures in Section 4.9 of the DEIR would render the cumulative impacts of the proposed Project to less than significant levels.

Section 4.9 of the DEIR compared cumulative noise levels that would occur both with and without the Project. According to the analysis the proposed Project would not expose sensitive uses located adjacent to area roadways to excessive noise levels. The future roadway noise assessment concludes that there will be no significant roadway noise impacts associated with cumulative and cumulative plus Project conditions. Therefore, there are no projects that would, in combination with the proposed Project, produce significant noise impacts to sensitive land uses from on-site operational noise. Thus, no cumulatively considerable noise impacts are expected to occur in this area, and the proposed Project will not make a significant contribution to cumulative noise impacts, so no mitigation measures are required. (DEIR, pg. 4.9-27)

9. Population and Housing

a. Population Growth

Potential Significant Impact: Whether the Project would induce substantial population growth in an area, either directly (e.g., new homes and businesses) or indirectly (e.g., extension of roads and infrastructure).

Findings: Potential impacts of the Project related to population growth are discussed in detail in Section 4.10 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to population growth will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.10 of the DEIR, the development of the proposed on-site warehouse distribution uses would create new jobs in the local economy. The proposed Project would generate up to 1,532 job opportunities.⁹ The new employment opportunities resulting from development of the proposed warehouse uses would improve the City's current jobs-to-housing ratio by providing jobs to local residents. While the places of residence of the persons accepting employment provided by the proposed uses is uncertain, due to the City's projected jobs-to-housing ratio, it is reasonable that a large percentage of these jobs would be filled by persons already living within the City or Project area; therefore, no significant increase in population of the City would result from the development or operation of the proposed on-site uses. In the absence of a significant impact, no mitigation is required. (DEIR, pgs. 4.10-3 to 4.10-5)

b. Displace Substantial Housing/People

Potential Significant Impact: Whether the Project would displace substantial numbers of people or existing housing, necessitating the construction of replacement housing elsewhere.

Findings: Potential impacts of the Project related to displacement of housing or people are discussed in detail in Section 4.10 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to displacement of housing or people will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.10 of the DEIR, the Project site has not been historically utilized for residential uses, and no residential structures are currently located within the Project limits. The construction and operation of the proposed on-site uses would neither displace existing housing or residents nor require the construction of replacement housing elsewhere in the City. However, the areas currently zoned for residential uses on the site could support up to 681 units. Approximately 80

⁹ 1 employee/1,465 square feet of warehouse use × 2,244,419 square feet of warehouse uses = 1,532 employees.

percent of that potential new housing was in the R15 category, which is considered high enough density to support affordable housing programs. In addition, a portion of the Project site is shown in the latest Housing Element for the City (2008–2014) as a potential location for affordable housing in the future (2011 Housing Element, Vacant Properties Inventory). Development of the site as proposed could eliminate as many as 681 housing units from the site, with 80 percent of those units (548) at a density that is generally accepted as helping to promote housing affordability (15 units per acre) on a regional level. These changes may incrementally hinder the City’s ability to achieve its affordable housing goals in the future. However, the proposed Project would not reduce the City’s potential pool of affordable housing to below its RHNA number; therefore, it would not create a significant impact related to the City’s Housing Element, and no mitigation is required. (DEIR, pg. 4.10-6)

c. Cumulative Population and Housing Impacts

Potential Significant Impact: Whether the Project could cause an increase in population that is substantial in relation to the past, current, and probable future projects.

Findings: Potential impacts of the Project related to cumulative impacts of the proposed Project on housing or population are discussed in detail in Section 4.10 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to cumulative impacts on housing or population will occur as a result of development of the Project and, therefore, no mitigation is required.

Fact Supporting the Findings: The project includes development of 2.2 million square feet of new industrial uses, but would eliminate the potential for up to 681 new residential units, most of which would be in the R15 category, which can support affordable housing programs. The proposed industrial uses would provide additional employment opportunities for City and area residents. The proposed project, together with the other developments identified in Chapter 3, will serve existing and future cumulative demands for both housing and employment within the City. The proposed uses would not induce significant population or housing growth in areas where growth was not previously anticipated.

10. Transportation

a. Air Traffic Patterns

Potential Significant Impact: Whether the Project would result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks.

Findings: Potential impacts of the Project related to air traffic patterns are discussed in detail in Section 4.11 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to air traffic patterns will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.11 of the DEIR, the proposed Project site is located approximately 5.5 miles northwest of the March Air Reserve Base and is not within the designated safety zones or the flight paths established for this facility.¹⁰ The proposed Project does not consist of any uses that would cause changes to air traffic volumes or otherwise affect air traffic patterns. Additionally, the proposed Project does not include any visual, electronic, or physical hazards to aircraft in flight and is not anticipated to disrupt or alter air traffic patterns, including either an increase in traffic levels or a change in location. As such, no impacts associated with this issue would occur and no mitigation is required. (DEIR, pg. 4.11-16)

b. Design Features or Incompatible Uses

Potential Significant Impact: Whether the proposed Project would substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

Findings: Potential impacts of the Project related to design features or incompatible uses are discussed in detail in Section 4.11 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to design features or incompatible uses will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.11 of the DEIR, roadway improvements in and around the Project site would be designed and constructed to satisfy all City requirements for street widths, corner radii, intersection control as well as incorporate design standards tailored specifically to site access requirements.

The final design of all roadways and intersections within the Project site access would be reviewed by a licensed professional civil engineer to ensure adequate safety when traveling to and from the Project site. The proposed Project does not include any sharp curves or dangerous intersections in its design. Adherence to applicable existing requirements of the City of Moreno Valley consistent with the City's

¹⁰ March Air Reserve Compatibility Plan, December 29, 2004. [http://www.rcaluc.org/filemanager/plan/old//March%20Air%20Reserve%20Base%20\(MARB\).pdf](http://www.rcaluc.org/filemanager/plan/old//March%20Air%20Reserve%20Base%20(MARB).pdf). Accessed June 3, 2008.

Circulation Element Objectives 5.1 (create a safe, efficient, and neighborhood-friendly street system), 5.5 (maximize efficiency of the local circulation system by using appropriate policies and standards to design, locate, and size roadways), and 5.11 (eliminate obstructions that impede safe movement of vehicles, bicyclists, and pedestrians) and other agencies would reduce impacts associated with this issue to a less than significant level and no mitigation is required. (DEIR, pgs. 4-17)

c. Inadequate Emergency Access

Potential Significant Impact: Whether the Project would result in inadequate emergency access.

Findings: Potential impacts of the Project related to emergency access are discussed in detail in Section 4.11 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to emergency access will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.11 of the DEIR, the developers of the proposed Project would be required to design, construct, and maintain structures, roadways, and facilities to provide for adequate emergency access and evacuation. Construction activities, which may temporarily restrict vehicular traffic, would be required to implement adequate and appropriate measures to facilitate the passage of persons and vehicles through/around any required road closures. The proposed Project design would be submitted to and approved by the City's Fire and Police Departments prior the issuance of building permits. Adherence to applicable existing requirements of the City of Moreno Valley and other agencies would reduce impacts associated with this issue to a less than significant level and no further discussion is required. (DEIR, pgs. 4.11-17 to 4.11-18)

d. Inadequate Parking Capacity

Potential Significant Impact: Whether the Project would result in inadequate parking capacity.

Findings: Potential impacts of the Project related to parking capacity are discussed in detail in Section 4.11 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to parking capacity will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.11 of the DEIR, the preliminary site plan indicates that 1,091 automobile parking spaces are provided, which includes spaces for employees, drivers, and handicap spaces, and is well above the minimum requirement of 562 spaces. The design of

the proposed Project would be required to comply with parking standards prior to final site plan approval. Adherence to parking standards contained in the Zoning Code would ensure that the proposed Project would not result in inadequate parking capacity. Impacts associated with parking capacity are less than significant and no mitigation is required. (DEIR, pg. 4.11-18)

e. Alternative Transportation

Potential Significant Impact: Whether the proposed Project would conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.

Findings: Potential impacts of the Project related to alternative transportation are discussed in detail in Section 4.11 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to alternative transportation will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.11 of the DEIR, the design of the Project would be required to adhere to applicable City of Moreno Valley standards that support and/or facilitate alternative modes of transportation, including but not limited to pedestrian pathways and sidewalks consistent with the City's Circulation Element Objective 5.8. Through the City's Project review process, policies, plans, and/or programs supporting alternative transportation would be reviewed and incorporated as applicable. Consequently, a less than significant impact would occur as a result of the proposed Project and no mitigation is required. (DEIR, pg. 4.11-18)

11. Utilities and Service Systems

a. Solid Waste Facilities

Potential Significant Impact: Whether the Project would be served by a landfill with insufficient permitted capacity to accommodate the Project's solid waste disposal needs.

Findings: Potential impacts of the Project related to solid waste facilities are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to solid waste facilities will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, based on a solid waste generation of 0.006 pound per square foot per day for industrial uses, the proposed Project is anticipated

to generate approximately 6.73 tons of solid waste per day (2,456 tons/year). Solid waste from the proposed Project would be hauled by Waste Management of Inland Valley and transferred to the Badlands Sanitary Landfill, located in Moreno Valley, northeast of the Project site. The volume of solid waste generated by the proposed Project per day represents 0.17 percent of the current permitted throughput and 0.29 percent of the current surplus capacity at the Badlands Sanitary Landfill. As adequate daily surplus capacity exists at the receiving landfill, development of the proposed Project would not significantly affect current operations or the expected lifetime of the landfill serving the Project area. No significant solid waste disposal impact would occur and no mitigation is required. (DEIR, pgs. 4.12-3 to 4.12-4)

b. Solid Waste Reduction

Potential Significant Impact: Whether the Project would fail to comply with applicable Federal, State, and local statutes and regulations related to solid waste.

Findings: Potential impacts of the Project related to solid waste reduction are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to solid waste reduction will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the proposed Project would be required to coordinate with the waste hauler to develop collection of recyclable materials for the Project on a common schedule as set forth in applicable local, regional, and State programs. Recyclable materials that would be recycled by the Project include paper products, glass, aluminum, and plastic.

Additionally, the proposed Project would be required to comply with applicable elements of AB 1327, Chapter 18 (California Solid Waste Reuse and Recycling Access Act of 1991) and other applicable local, State, and Federal solid waste disposal standards, thereby ensuring that the solid waste stream to the Badlands Sanitary Landfill is reduced in accordance with existing regulations. Impacts are considered less than significant and require no mitigation. (DEIR, pg. 4.12-4)

c. Solid Waste Cumulative Impacts

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have an incremental impact on solid waste.

Findings: Potential impacts of the Project related to cumulative solid waste are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant cumulative impacts related to solid waste will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the Badlands Sanitary Landfill has an estimated closure date of 2016, the City's waste hauler will also use other County landfills in the area (e.g., Lamb Canyon Landfill and El Sobrante Landfill). The estimated closure date of the Lamb Canyon Landfill is 2023 and the estimated closure date of the El Sobrante Landfill is 2030. With planned expansion activities of landfills in the Project vicinity and projected growth rates contained

within the City's General Plan EIR, sufficient landfill capacity would exist to accommodate future disposal needs through City build out in 2030. Therefore, build out of the City General Plan would not create demands for solid waste services that would exceed the capabilities of the County's waste management system. Consequently, cumulative impacts associated with solid waste within the City would be considered less than significant and no mitigation is required. (DEIR, pg. 4.12-5)

d. Construction or Expansion of Water Treatment Facility

Potential Significant Impact: Whether the Project would require the construction of new water treatment facilities or expansion of existing facilities, the construction of which would cause significant environmental effects.

Findings: Potential impacts of the Project related to construction or expansion of water treatment facilities are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts that would cause the construction or expansion of water treatment facilities will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the water demand required for the proposed Project totals 0.04 and 0.03 percent of the 2015 and 2035 projected Eastern Municipal Water District (EMWD) supplies. The amount of water demand would be within the existing available supply even with a reduction in deliveries from the State Water Project (SWP). Imported sources of water will be supplemented by an increase in desalination of brackish groundwater, recycled water use, and water use efficiency, and implementation of aggressive conservation measures by the EMWD. The proposed Project would not require the construction of new water treatment facilities or expansion of existing facilities, which could cause significant environmental effects. Impacts related to this issue would be less than significant and no mitigation is required. (DEIR, pgs. 4.12-15 to 4.12-16)

e. Adequate Water Supply

Potential Significant Impact: Whether the Project would have sufficient water supplies available to serve the Project from existing entitlements and resources, or are new or expanded entitlements needed.

Findings: Potential impacts of the Project related to adequate water supply are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to adequate water supply will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the anticipated water demand for the proposed Project is substantially less than what is identified for the General Plan land uses and what was used in the formulation of the 2010 Urban Water Management Plan. The water demand required for the proposed Project would total 0.05 and 0.04 percent of the EMWD's 2015 and 2035 supplies. The Project's water consumption represents substantially less than 1 percent of the consumption yearly capacity and because the EMWD indicates that water to service the Project's proposed industrial uses is available, no significant water supply impacts would occur with implementation of the industrial use, and no mitigation would be necessary. (DEIR, pg. 4.12-17 to 4.12-22)

f. Cumulative Impacts to Water Supply Services

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have a cumulative impact to water supply services.

Findings: Potential impacts of the Project related to cumulative water supply services are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant cumulative impacts related to water supply services will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the projected demand for the EMWD service area for the year 2015 is 213,900 acre-feet per year (AFY). The cumulative projects including the proposed Project would make up approximately 0.11 percent of the projected demand for 2015. For the year 2035, the EMWD service area projected demand is 302,200 AFY. The proposed Project would consist of 0.63 percent of the Project water demand. As the cumulative projects including the proposed Project constitute less than one percent of the projected water demand in both 2015 and 2025, the cumulative impact of the proposed Project would be less than significant.

Metropolitan Water District (Metropolitan) will continue to rely on the plans and policies outlined in its Regional Urban Water Master Plan (RUWMP) and Integrated Regional Water Plan (IRP) to address water supply shortages and interruptions (including potential shut downs of SWP pumps) to meet water demands. Metropolitan has also analyzed the reliability of water delivery through the SWP and the Colorado River Aqueduct. Metropolitan's IRP and RUWMP conclude that, with the storage and transfer programs developed by Metropolitan, there will be a reliable source of water to serve its member agencies' needs through 2035. The EWMD is a member agency of Metropolitan and would have water supplies for projected growth through 2035 in wet, dry, and multiple-dry years, so cumulative impacts to water supply would be less than significant. The proposed Project would connect to existing conveyance

infrastructure and adequate treatment capacity is available, so the proposed Project would not make a significant contribution to any cumulatively considerable impacts on water supply or infrastructure and no mitigation is required. (DEIR, pg 4.12-22)

g. Wastewater Treatment Requirements

Potential Significant Impact: Whether the Project would exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board (RWQCB).

Findings: Potential impacts of the Project related to wastewater treatment requirements are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to wastewater treatment requirements will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the proposed Project would result in a connection to the sewer line underlying the future Eucalyptus Avenue. The EMWD expects this sewer to be in service once it is necessary for demand expected from the proposed Project. It is anticipated that all wastewater generated by the proposed Project would be routed to and treated by the Moreno Valley Regional Water Reclamation Facility (MVRWRF). The MVRWRF is a Publically Owned Treatment Works (POTW), so operational discharge flows treated at the MVRWRF would be required to comply with the Waste Discharge Requirements (WDRs) for that facility. Compliance with condition or permit requirements established by the City and WDRs at the MVRWRF would ensure that discharges into the wastewater treatment facility system from the operation of the proposed Project would not exceed applicable Santa Ana RWQCB wastewater treatment requirements. Expected wastewater flows from the proposed Project will not exceed the capabilities of the serving treatment plant, so no significant impact related to this issue would occur and no mitigation would be required. (DEIR, pg. 4.12-24)

h. Wastewater Treatment Capacity and/or New or expanded Wastewater Treatment Facilities

Potential Significant Impact: Whether the Project would result in a determination by the wastewater treatment provider, which serves or may serve the Project, that it lacks adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments.

Also, whether the proposed Project would require the construction of new wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

Findings: Potential impacts of the Project related to wastewater capacity are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to wastewater capacity will occur as a result of development of the Project and no new wastewater treatment facilities or expansion of existing facilities would be required, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the proposed Project would result in a connection to the sewer line underlying the future Eucalyptus Avenue. The EMWD expects this sewer to be in service once it is necessary for demand expected from the proposed Project. It is anticipated that all wastewater generated by the proposed Project would be routed to and treated by the MVRWRF. The MVRWRF is a POTW, so operational discharge flows treated at the MVRWRF would be required to comply with the WDRs for that facility. Compliance with condition or permit requirements established by the City and WDRs at the MVRWRF would ensure that discharges into the wastewater treatment facility system from the operation of the proposed Project would not exceed applicable Santa Ana RWQCB wastewater treatment requirements. Expected wastewater flows from the proposed Project will not exceed the capabilities of the serving treatment plant, so no significant impact related to wastewater would occur and no mitigation would be required. (DEIR, pg. 4.12-25)

i. Cumulative Impacts to Wastewater Facilities

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would result in cumulative impacts to wastewater facilities.

Findings: Potential impacts of the Project related to cumulative wastewater facilities are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant cumulative impacts related to wastewater facilities will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the proposed Project would not have a cumulatively significant impact on wastewater infrastructure because the proposed Project would not require the expansion of existing infrastructure; only connections to existing infrastructure would be required by the Project. By adhering to the wastewater treatment requirements established by the Santa Ana RWQCB through the NPDES permit, wastewater from the Project site that is processed through the MVRWRF would meet established standards. As the wastewater from all development within the service area of the MVRWRF would be similarly treated under the NPDES, no cumulatively significant exceedance of Santa Ana RWQCB wastewater treatment requirements would occur.

The proposed Project would not result in significant impacts to wastewater treatment or wastewater treatment facilities. The MVRWRF also plans expand the capacity of the wastewater facility. The ultimate expansion of the MVRWRF will allow it to process 41 mgd of wastewater. The wastewater generation of the listed cumulative projects represents 4.8 percent of the future capacity of the 2013 expansion and 2.5 percent of the ultimate expansion of the MVRWRF. The projected wastewater generation of the cumulative projects represents a small percentage of the average wastewater capacity and, because there are no projects that would, in combination with the proposed industrial uses, result in any significant impact related to wastewater treatment or cause significant environmental effects, the Project will not make a significant contribution to any cumulatively considerable impacts associated with wastewater and no mitigation is required. (DEIR, pg. 4.12-26)

11. Global Climate Change

a. Greenhouse Gas Plan, Policy, Regulation Consistency

Potential Significant Impact: Whether the Project would conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases.

Findings: Potential impacts of the Project related to greenhouse gas plans, policies, or regulation consistency are discussed in detail in Section 4.13 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related greenhouse gas plans, policies or regulations will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.13 of the DEIR, the proposed Project includes a variety of physical attributes and operational programs that would generally contribute to a reduction in operational-source pollutant emissions including GHG emissions. Future development that would occur under the proposed Project would be consistent with state and local greenhouse gas emission reduction strategies and policies. The Project would implement appropriate GHG reduction strategies and would ensure that it does not conflict with or impede implementation of reduction goals identified in AB 32, Governor’s Executive Order S-3-05, and other strategies to help reduce GHGs to the level proposed by the Governor. In addition, the Project would also be subject to all applicable regulatory requirements, which would also reduce the GHG emissions of the Project. Therefore, the proposed Project would not conflict with any applicable plan, program, policy, or regulation related to the reduction of GHG emissions. Impacts are considered less than significant and no mitigation is required. (DEIR, pgs. 4.13-10 to 4.13-17)

B. ENVIRONMENTAL IMPACTS MITIGATED TO A LEVEL OF LESS-THAN-SIGNIFICANT

Public Resources Code Section 21081 states that no public agency shall approve or carry out a project for which an EIR has been completed which identifies one or more significant effects unless the public agency makes one or more of the following findings:

- I. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment.
- II. Those changes or alterations are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency.
- III. Specific economic, legal, social, technological, or other considerations make infeasible the mitigation measures or alternatives identified in the EIR, and overriding economic, legal, social, technological, or other benefits of the Project outweigh the significant effects on the environment.

Certain of the following issues from the environmental categories analyzed in the EIR, including biological resources, cultural and paleontological resources, hydrology, drainage, and water quality, noise (short-term construction), transportation (local intersections), utilities, and global climate change (individually and cumulatively) were found to be potentially significant, but can be mitigated to a less-than-significant level with the imposition of mitigation measures. This Council hereby finds pursuant to *Public Resources Code* Section 21081 that all potentially significant impacts listed below can and will be mitigated to below a level of significance by imposition of the mitigation measures in the EIR; and that these mitigation measures are included as Conditions of Approval and set forth in the Mitigation Monitoring and Reporting Program (MMRP) adopted by this Council. Specific findings of this Council for each category of such impacts are set forth in detail below.

1. Air Quality

a. Localized Construction Equipment Exhaust Emissions Impacts

Potentially Significant Impact: The EIR evaluated and concluded that the Project has the potential to exceed short-term construction thresholds.

Finding: Implementation of the following mitigation measures will reduce the potential adverse impacts to sensitive or special status species to less than significant:

4.3.6.3A *Prior to the issuance of grading permits, the project applicant shall require by contract specifications that all trucks hauling dirt, sand, soil, or other loose materials are to be covered or shall maintain at least 2 feet of freeboard in accordance with the requirements of California Vehicle Code (CVC) Section 23114 (freeboard means vertical space between the top of the load and top of the trailer).*

4.3.6.3B *Prior to the issuance of grading permits, the project applicant shall provide evidence to the City that construction access roads shall be paved at least 100 feet onto the site from the main road.*

4.3.6.3C *Prior to the issuance of grading permits, the project applicant shall require by contract specifications that all streets within the construction site shall be swept once per day if visible soil materials are carried to adjacent streets.*

Facts in Support of the Finding: SCAQMD has developed LST methodology that can be used to determine whether or not a project may generate significant adverse localized air quality impacts. LSTs represent the maximum emissions from a project that would not cause or contribute to an exceedance of the most stringent applicable Federal or State ambient air quality standard and are developed based on the ambient concentrations of that pollutant for each source receptor area. The emissions of concern from construction activities are NOX, CO, PM₁₀, and PM_{2.5} resulting from on-site combustion emissions from construction equipment and on-site fugitive PM₁₀ dust from construction site preparation activities.

According to Section 4.3 of the DEIR, the air pollutant emission rates for the proposed construction activities are below the localized construction thresholds at the nearest sensitive receptor for CO, NO_x, PM₁₀, and PM_{2.5}. Thus, no mitigation is required. However, implementation of **Mitigation Measures 4.3.6.2A through 4.3.6.2M** and the incorporation of these additional requirements as **Mitigation Measures 4.3.6.3A through 4.3.6.3C** are designed to track both standard requirements and mitigation measures as part of the project's Mitigation Monitoring and Reporting Program (MMRP). Therefore, impacts related to construction exhaust emissions are less than significant. (DEIR, pgs. 4.3-29 to 4.3-30)

2. Biological Resources

a. Candidate, Non-listed Sensitive, or Other Special Status Species

Potential Significant Impact: The EIR evaluated and concluded that the Project has the potential to affect migratory bird species and 15 non-listed special status species, including burrowing owl.

Finding: Implementation of the following mitigation measures will reduce the potential adverse impacts to sensitive or special status species to less than significant:

4.4.6.1A *If tree removal or clearing and grubbing activities must take place during the general nesting season (February 1 through August 31), a nesting bird survey shall be conducted within seven (7) days prior to any vegetation disturbance activities. If passerine birds are found to be nesting or there is evidence of nesting behavior inside the impact area, an exclusion buffer, to be determined by the appropriate agency (e.g. the City, County, and/or CDFG), shall be set in place around the nest where no vegetation disturbance will be permitted. For raptor species, such as hawks and owls, this buffer may be as large as 500 feet. A qualified biologist shall closely monitor nests until it is determined that they are no longer active, at which time construction activity in the vicinity of nests may continue.*

4.4.6.1B *Prior to site grading, a pre-construction survey shall be required for the burrowing owl to confirm the presence/absence of this species from the site. The survey shall be conducted by a qualified biologist within 30 days prior to ground disturbance, and in accordance with MSHCP survey requirements, to avoid direct take of burrowing owls. If burrowing owls are determined to occupy the project site or immediate vicinity, the City of Moreno Valley Planning Department shall be notified and avoidance measures as identified in Mitigation Measure 4.4.6.1C shall be implemented. Implementation of avoidance measures shall be executed pursuant to the MSHCP, the California Fish and Game Code, and the MBTA, and according the Burrowing Owl Survey Protocol and Mitigation Guidelines (CBOC 1993) and reviewed the City of Moreno Valley, the County of Riverside, and/or by the CDFG.*

4.4.6.1C *As recommended in the BUOW Survey and Mitigation Guidelines prepared by the CBOC, no disturbance to an occupied burrow shall occur within approximately 160 feet*

of an occupied burrow during the non-breeding season (September 1 through January 31), or within approximately 250 feet of an occupied burrow during the breeding season (February 1 through August 31). For unavoidable impacts, passive relocation of burrowing owls shall be implemented. Passive relocation shall be conducted by a qualified biologist in accordance with procedures set forth by the MSHCP and California Burrowing Owl Consortium. Passive relocation of occupied burrows supporting a breeding pair of burrowing owls shall be conducted outside of the breeding season pursuant to the California Fish and Game Code and the MBTA.

Facts in Support of the Finding: According to Section 4.4 of the DEIR, one non-listed special status species, grasshopper sparrow, was observed on the site during the burrowing owl survey. Fourteen other non-listed special status species, including burrowing owl, have a low to moderate potential to occur on the site based on existing habitat quality. None of these species is listed as Threatened or Endangered under State or Federal law, all are relatively widespread, and the site does not contain high quality habitat for any of them. Therefore, any impacts to these species by the Project would not be considered significant. Neither additional surveys nor additional conservation measures for these species will be required for the proposed Project, with the exception of burrowing owl.

The planning area may support habitat for bird species protected under the California Fish and Game Code and Migratory Bird Treaty Act (MBTA). If clearing and grubbing activities take place during the general bird nesting season (February 1 through August 31), potential impacts to bird species protected under the California Fish and Game Code and MBTA may occur, therefore **Mitigation Measure 4.4.6.1A** is required.

The Project site also contains habitat suitable to support the burrowing owl. Although burrowing owl was not found on the site during the focused survey, the species is highly mobile, so there is a potential that at some future date prior to Project development, this species may occupy the site. This is a potentially significant impact requiring **Mitigation Measures 4.4.6.1B and 4.4.6.1C**. Implementation of the above-listed mitigation measures would reduce impacts to migratory bird species and non-listed sensitive species to a less than significant level. (DEIR, pgs. 4.4-25 to 4.4-27).

b. Riparian Habitat or Other Sensitive Natural Communities

Potential Significant Impact: The EIR evaluated and concluded that the Project has the potential to permanently affect 0.36 acre of riparian/riverine habitat and to temporarily affect 0.35 acre of riparian/riverine habitat.

Finding: Implementation of the following mitigation measures will reduce the potential adverse impacts to riparian habitat or other sensitive natural communities to less than significant:

4.4.6.2A *As outlined in the project's Determination of a Biologically Equivalent or Superior Preservation (DBESP) report, the project applicant shall compensate for the temporary and permanent impact on and loss of jurisdictional waters and streambeds by providing a minimum 2:1 off-site replacement of equivalent riverine/riparian habitat prior to project construction. Offsite restoration, enhancement, and/or land purchase mitigation for the drainage impacts will occur at an offsite location through one or more of the following: an USACE approved mitigation bank, through an in lieu fee mitigation program, and/or land purchase and conservation. CDFW and USFWS will need to provide concurrence that this mitigation is equivalent or superior to that proposed for impact through their review and acceptance of the DBESP.*

4.4.6.2B *Riparian/riverine resources that are temporarily impacted by project construction shall be returned to their preconstruction contours and hydroseeded, as outlined in the DBESP.*

Facts in Support of the Findings: According to Section 4.4 of the DEIR, the Project site consists of highly disturbed land from which most natural vegetation has been removed by regular disking for weed abatement and historical citrus cultivation. No special status species plants were recorded on site within the southern and western drainages due to the site's long-standing disturbances and the fact that on-site soils may not be capable of supporting most sensitive plant species.

However, implementation of the proposed Project would result in permanent impacts on 0.36 acre of riparian/riverine areas as a result of the construction of the detention basins, and drain outlets. In addition to permanent impacts, the proposed Project would result in temporary impacts on 0.35 acre of riparian/riverine areas associated with construction activities. Minimal intrusion into the drainages would be necessary and no construction is anticipated in the drainages themselves.

Following construction, temporary impact areas would be restored to their pre-construction contours and revegetated per a Habitat Mitigation and Monitoring Plan (HMMP) to be written for the Project site. The HMMP would be developed to address temporary impacts on riverine/riparian areas subject to jurisdiction under the MSHCP, waters of the United States subject to jurisdiction under Section 404 of the Clean Water Act (CWA), waters of the state subject to jurisdiction under Section 401 of the CWA, and

jurisdictional streambeds subject to jurisdiction under Sections 1600–1616 of the California Fish and Game Code. Therefore, the proposed mitigation design is directed at providing adequate mitigation based on impacts on the largest jurisdictional area (namely, CDFW jurisdictional streambeds). Because implementation of the proposed Project would have impacts on riparian/riverine areas on site, mitigation would be required. Implementation of the **Mitigation Measures 4.4.6.2A and 4.4.6.2B** would reduce impacts to riparian habitat to a less than significant level. (DEIR, pgs. 4.4-29 to 4.4-27)

c. Jurisdictional Waters/Wetlands

Potential Significant Impact: The EIR evaluated and concluded that the Project has the potential to permanently affect 0.051 non-wetland waters of the United States (US) and 0.362 acre of CDFW jurisdictional area, and to temporarily affect 0.054 acre of non-wetland waters of the U.S. and 0.33 acre of CDFW jurisdictional area.

Findings: Implementation of the following mitigation measures will reduce the potential adverse impacts to jurisdictional waters and wetlands to less than significant:

4.4.6.3A *The project applicant shall obtain a Section 404 Nationwide or Individual Permit, as appropriate, from the USACE, a Section 401/Porter-Cologne Water Quality Certification from the RWQCB, and a Section 1602 Streambed Alteration Agreement from the CDFW. Offsite restoration, enhancement, and/or land purchase mitigation of jurisdictional drainage impacts will occur at an off-site location through one or more of the following: an USACE approved mitigation bank, through an in-lieu fee mitigation program, and/or land purchase and conservation.*

Facts in Support of the Findings: According to Section 4.4 of the DEIR, there is a clear connection to drainages associated with the San Jacinto watershed, and all three drainages (western, southern, and eastern) located on or adjacent to the Project site are determined to be jurisdictional waters of the United States. Implementation of the proposed Project would result in permanent impacts to 0.051 acre (354 linear feet) of non-wetland waters of the US and waters of the State and 0.362 acre (440 linear feet) of state streambed associated with the eastern, southern, and western drainages. In addition to permanent impacts, the proposed Project would result in temporary impacts to 0.054 acre (332 linear feet) of non-wetland waters of the US and waters of the State and 0.33 acre (547 linear feet) of State streambed associated with construction activities. This is a significant impact requiring mitigation.

The proposed on-site restoration of temporary impact areas and the long-term enhancement of off-site riparian/riverine habitat managed by Santa Ana Water Authority provides adequate mitigation for identified impacts to on-site jurisdictional areas. Implementation of the recommended **Mitigation Measure 4.4.6.3A** would reduce impacts to jurisdictional waters to less than significant levels. (DEIR, pgs. 4.4-29 to 4.4-30)

3. Cultural Resources

a. Prehistoric Cultural Resources

Potential Significant Impact: The EIR evaluated and concluded that the Project could have an adverse effect on significant archaeological resource pursuant to Section 15064.5.

Finding: Implementation of the following mitigation measures will reduce the impact to unique archaeological resources to less than significant:

4.5.6.1A *Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a Cultural Resources Monitoring Agreement has been secured for qualified Tribal representatives, and that a professional archaeological monitor meeting Secretary of Interior standards has been retained by the Applicant to conduct monitoring of all mass grading and trenching activities and has the authority to temporarily halt and redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project Archaeologist and Tribal representatives shall attend the pre-grading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.*

4.5.6.1B *Prior to the issuance of a grading permit, the Applicant shall provide evidence to the City of Moreno Valley that appropriate Native American representative(s), Project Archaeologist, and the Tribal representative(s) shall be allowed to monitor and have received a minimum of 30 days advance notice of all mass grading and trenching activities. During grading and trenching operations, the Tribal representatives and the project archaeological monitor shall observe all mass grading and trenching activities per the Cultural Resources Monitoring Agreement. If the Tribal representatives suspect that an archaeological resource may have been unearthed, the archaeologist, in consultation with the tribal representative, shall immediately halt and redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. In consultation with the appropriate Native American Tribe(s), the archaeological monitor shall evaluate the suspected resource and make a*

determination of significance pursuant to California Public Resources Code Section 21083.2.

4.5.6.1C *If a significant archaeological resource(s) is discovered on the property, ground disturbing activities shall be suspended 100 feet around the resource(s). The archaeological monitor and representatives of the appropriate Native American Tribe(s), the Project Applicant, and the City Planning Division shall confer regarding mitigation of the discovered resource(s). A treatment plan and/or preservation plan shall be prepared and by the archaeological monitor and reviewed by representatives of the appropriate Native American Tribe(s), the Project Applicant, and the City Planning Division and implemented by the archaeologist to protect the identified archaeological resource(s) from damage and destruction. The landowner shall relinquish ownership of all archaeological artifacts that are of Native American origin found on the Project site to the culturally affiliated Native American tribe(s) for proper treatment and disposition. A final report containing the significance and treatment findings shall be prepared by the archaeologist and submitted to the City Planning Division, the appropriate Native American tribe(s), and the Eastern Information Center at the University of California, Riverside. All cultural material, excluding sacred, ceremonial, grave goods and human remains, collected during the grading monitoring program and from any previous archaeological studies or excavations on the project site shall be curated, as determined by the treatment plan, according to the current professional repository standards and may include the Pechanga Bands curatorial facility.*

4.5.6.1D *Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan:*

"If any suspected archaeological resources are discovered during ground-disturbing activities and the archaeological monitor or Tribal representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the project archaeologist and the Tribal representatives to the site to assess the significance of the find."

4.5.6.1E *If human remains are encountered, California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to California Public*

Resources Code Section 5097.98(b), remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made by the Coroner. If the Riverside County Coroner determines the remains to be Native American, the California Native American Heritage Commission must be contacted within 24 hours. The Native American Heritage Commission must then immediately notify the “most likely descendant(s)” of receiving notification of the discovery. The most likely descendant(s) shall then make recommendations within 48 hours, and engage in consultations concerning the treatment of the remains as provided in Public Resources Code §5097.98.

Facts in Support of the Finding: Based on Section 4.5 of the DEIR, a reconnaissance pedestrian-survey for the Project site was conducted in November 2007. Although the Project site is located within the Moreno Hills Complex, no archaeological resources were identified on the Project site during the field survey, and the cultural resource assessment concluded the Project would have no significant impacts; however, there is a potential for Project grading to disturb previously undiscovered cultural resources. While there is no recorded or surface evidence that archaeological resources are present on site, the Project is located in an area with a high potential of containing prehistoric archaeological resources. Therefore, a potential exists that excavation and construction activities may uncover previously undetected prehistoric or historic cultural resources. This is a potentially significant impact under CEQA and requires mitigation. Adherence to the above **Mitigation Measures 4.5.6.1A** through **4.5.6.1E** would reduce potential impacts to archaeological resources to a less than significant level. (DEIR, pgs. 4.5-6 to 4.5-7)

b. Paleontological Resources

Potential Significant Impact: The EIR evaluated and concluded that the Project could have an adverse effect on significant paleontological resource or site or unique geologic feature.

Findings: Implementation of the following mitigation measures will reduce the impact to unique paleontological resource or unique geologic feature to less than significant:

4.5.6.2A *Prior to the issuance of grading permits, the project applicant shall submit to and receive approval from the City, a Paleontological Resource Impact Mitigation Program (PRIMP). The PRIMP shall include the provision of a trained paleontological monitor during on-site soil disturbance activities. The monitoring for paleontological resources shall be conducted during the rough-grading phase of the project. In the event that*

paleontological resources are unearthed or discovered during excavation, Mitigation Measure 4.5.6.2C shall apply. Conversely, if no paleontological resources are unearthed or discovered on site during excavation, no additional action is required.

4.5.6.2B *The paleontological monitor shall be equipped to rapidly remove any large fossil specimens encountered during excavation. During monitoring, samples of soil shall be collected and processed to recover microvertebrate fossils. Processing shall include wet screen washing and microscopic examination of the residual materials to identify small vertebrate remains.*

4.5.6.2C *If paleontological resources are unearthed or discovered during excavation of the project site, the monitoring for paleontological resources shall be conducted on a full-time basis for the duration of the rough-grading of the project site. The following recovery processes shall apply:*

- *Upon encountering a large deposit of bone, salvage of all bone in the area shall be conducted with additional field staff and in accordance with modern paleontological techniques.*
- *All fossils collected during the project shall be prepared to a reasonable point of identification. Excess sediment or matrix shall be removed from the specimens to reduce the bulk and cost of storage. Itemized catalogs of all material collected and identified shall be provided to the museum repository along with the specimens.*
- *A report documenting the results of the monitoring and salvage activities and the significance of the fossils shall be prepared.*
- *All fossils collected during this work, along with the itemized inventory of these specimens, shall be deposited in a museum repository for permanent curation and storage.*

4.5.6.2D *Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan:*

“If any suspected paleontological resources are discovered during ground-disturbing activities, the construction supervisor is obligated to halt work in a 100-foot radius

around the find and call a qualified paleontologist to the site to assess the significance of the find. A qualified paleontologist shall evaluate the suspected resource. If the paleontologist determines that the find is not unique, construction shall be permitted to proceed. However, if the paleontologist determines that further information is needed to evaluate significance, the City of Moreno Valley shall be notified and a treatment plan shall be prepared and implemented in consultation with the City to protect the identified paleontological resource(s) from damage and destruction.”

Facts in Support of the Findings: According to Section 4.5 of the DEIR, the proposed Project site is located within an area that has a high potential to contain near-surface Pleistocene fossils.¹¹ The paleontological literature search indicated that there is potential for significant, nonrenewable resources that to encountered during onsite construction activities. Therefore, a paleontological resources impact mitigation program (PRIMP), including excavation monitoring by a qualified paleontologist, is recommended for earthmoving activities in Pleistocene sediments on the Project site with potential to contain significant, nonrenewable paleontological resources. Although no paleontological resources were identified on site during the field survey, because of the location of the Project site and associated sensitivity for paleontological resources, the potential exists that paleontological resources maybe uncovered during construction. Adherence to the **Mitigation Measures 4.5.6.2A through 4.5.6.2D** will reduce potential impacts to paleontological resources to a less than significant level. (DEIR, pgs. 4.5-7 to 4.5-8)

4. Hydrology, Drainage, and Water Quality

a. Construction-Related Water Quality Impacts

Potential Significant Impact: The EIR evaluated and concluded that the Project could violate water quality standards or waste discharge requirements during construction phases of the Project in form of increased soil erosion, sedimentation, or storm water discharges.

Findings: Implementation of the following mitigation measures will reduce the impact to construction-related water quality to less than significant:

4.7.6.1A *Prior to grading plan approval and the first issuance of a grading permit by the City, the project applicant shall provide evidence to the City that a Notice of Intent (NOI) has been filed with the Regional Water Quality Control Board for coverage under the State*

¹¹ Ibid.

NPDES General Construction Permit for discharge of storm water associated with construction activities.

4.7.6.1B

Prior to grading plan approval and the first issuance of a grading permit by the City, the project applicant shall submit to the City of Moreno Valley a Storm Water Pollution Prevention Plan (SWPPP). The SWPPP shall include a surface water control plan and erosion control plan citing specific measures to control on-site and off-site erosion during the entire grading and construction period. Additionally, the SWPPP shall identify structural and nonstructural BMPs to control sediment and nonvisible discharges from the site. BMPs to be implemented in the SWPPP may include (but shall not be limited to) the following:

- Sediment discharges from the site may be controlled by the following: sandbags, silt fences, straw wattles and temporary debris basins (if deemed necessary), and other discharge control devices. The construction and condition of the BMPs will be periodically inspected during construction, and repairs will be made when necessary as required by the SWPPP.*
- No materials of any kind shall be placed in drainage ways.*
- Materials that could contribute nonvisible pollutants to storm water must be contained, elevated, and placed in temporary storage containment areas.*
- All loose piles of soil, silt, clay, sand, debris, and other earthen material shall be protected per RWQCB standards to eliminate any discharge from the site. Stockpiles will be surrounded by silt fences.*
- The SWPPP will include inspection forms for routine monitoring of the site during the construction phase to ensure NPDES compliance.*
- Additional BMPs and erosion control measures will be documented in the SWPPP and utilized if necessary.*
- The SWPPP will be kept on site for the entire duration of project construction and will also be available to the local RWQCB for inspection at any time.*

In the event that it is not feasible to implement the above BMPs, the City of Moreno Valley can make a determination that other BMPs will provide equivalent or superior treatment either on or off site.

4.7.6.1C *Prior to the issuance of grading permits, the project applicant shall provide evidence to the City that the following provisions have been added to construction contracts for the project:*

- *The Construction Contractor shall be responsible for performing and documenting the application of BMPs identified in the SWPPP. Weekly inspections shall be performed on sediment control measures called for in the SWPPP. Monthly reports shall be maintained by the Contractor and submitted to the City for inspection. In addition, the Contractor will also be required to maintain an inspection log and have the log on site to be reviewed by the City of Moreno Valley and the representatives of the Regional Water Quality Control Board.*

Facts in Support of the Findings: According to Section 4.7 of the DEIR, the construction and grading phases of the project site would require the disturbance of surface soils and removal of existing orange groves and vegetative cover. During the construction period, grading and excavation activities would result in exposure of soil to storm runoff, potentially causing erosion and sediment in runoff. If not managed through Best Management Practices (BMPs), the runoff could cause erosion and increased sedimentation in local drainage ways such as the Quincy Channel. The potential for chemical releases is present at most construction sites in the form of fuels, solvents, glues, paints, and other building construction materials. However, implementation of construction practices and adherence to existing water quality regulations and **Mitigation Measures 4.7.6.1A** through **4.7.6.1C** would reduce these impacts to a less than significant level. (DEIR, pgs. 4.7-21 to 4.7-23)

b. Operational-Related Water Quality Impacts

Potential Significant Impact: The EIR evaluated and concluded that the Project could violate water quality standards or waste discharge requirements during the operational phases of the project in the form of increased soil erosion, sedimentation, or urban runoff.

Findings: Implementation of the following mitigation measure will reduce the impact to operational-related water quality to less than significant:

4.7.6.2A *Prior to grading plan approval and the first issuance of a grading permit by the City, the project applicant shall receive approval from the City of Moreno Valley for a Final Water Quality Management Plan (F-WQMP). The F-WQMP shall specifically identify*

pollution prevention, site design, source control, and treatment control BMPs that shall be used on site to control predictable pollutant runoff in order to reduce impacts to water quality to the maximum extent practicable. BMPs to be implemented in the F-WQMP may include (but shall not be limited to) the following:

- *Required landscaped areas shall not use decorative concrete or impervious surfaces.*
- *Landscape plans shall incorporate native and drought-tolerant plants, trees, and shrubs. Landscaping shall be maintained weekly and maintenance contractor will properly dispose of all landscape wastes.*
- *Irrigation systems shall be inspected monthly by the landscape contractor to check for overwatering, leaks, or excessive runoff to paved areas. Timers will be used to prevent overwatering.*
- *Signage will be inspected and maintained twice a year for legibility.*
- *Outdoor Loading/Unloading truck docks shall be kept in a clean and orderly condition with weekly inspections, continuous monitoring and immediate clean up of spills.*
- *Parking area maintenance shall be swept or vacuumed at least quarterly, if there is any trash or debris in between the routine sweeping, it shall be swept or vacuumed immediately.*
- *Trash enclosures will be inspected and maintained weekly or as needed by maintenance contractor.*
- *On-site extended detention/sedimentation basins and sand filters will treat all of the site's runoff via vegetated swales and will be maintained and inspected at least twice a year and prior to October 1.*
- *Additional BMPs will be documented in the WQMP and utilized if necessary.*

In the event that it is not feasible to implement the above BMPs, the City of Moreno Valley can make a determination that other BMPs will provide equivalent or superior treatment either on or off site.

Facts in Support of the Findings: According to Section 4.7 of the DEIR, the proposed Project would result in the conversion of existing on-site permeable surfaces to impermeable surfaces, thereby altering the current drainage pattern. Upon development of the proposed on-site uses, storm runoff from the roadways, parking lots, and buildings may carry a variety of pollutants such as sediment, pathogens, petroleum products, commonly utilized construction materials, landscaping chemicals, and (to a lesser extent) trace metals such as zinc, copper, lead, cadmium, and iron, which may lead to the degradation of storm water in downstream channels. These impacts to water quality are considered significant impacts that require mitigation. **Mitigation Measure 4.7.6.2A** has been identified to reduce impacts to water quality to less than significant.

The proposed Project would also incorporate on-site drainage that would have hydrodynamic infrastructure components that would meet City and County water quality requirements. Through the use of site design BMPs, source control BMPs, and treatment control BMPs, the resulting pollutant loads coming from the proposed Project would be reduced thereby ultimately reducing pollutants discharged from urban storm water runoff to surface water bodies. Because adherence to the requirements of the NPDES permit, which include implementation of the BMPs outlined in the WQMP, would be required by the City during the operation of the proposed Project, potential water quality impacts resulting from storm water and urban runoff would be reduced to a less than significant level. (DEIR, pgs. 4.7-23 to 4.7-26)

c. **Drainage Capacity-Related Impacts**

Potential Significant Impact: The EIR evaluated and concluded that the Project could create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff.

Findings: Implementation of the following mitigation measure will reduce the impact to drainage to less than significant:

4.7.6.3A *Prior to the approval of a rough grading plan, the project proponent shall receive approval on a project-specific Final Hydrology Study, with supporting engineering calculations, from the City Engineer. The Final Hydrology Study shall incorporate relevant requirements identified by the City, and/or site-specific geotechnical investigations.*

Facts in Support of the Findings: According to Section 4.7 of the DEIR, development and operation of the proposed Project would result in the generation of the additional storm water flows that would be

above those generated in existing site conditions. With the construction and maintenance of adequate storm water drainage systems, through the adherence of **Mitigation Measure 4.7.6.3A**, impacts would be less than significant. In addition, the design and installation of the proposed drainage improvements will be required to adhere to applicable City and County standards. (DEIR, pgs. 4.7-26 to 4.7-28)

5. Noise

a. **Short-Term Construction Noise**

Potential Significant Impact: The EIR evaluated and concluded that noise levels from grading and other construction activities for the proposed Project may range up to 91 dBA at the closest residences southeast of the Project site for very limited times when construction occurs near the Project's boundary. Construction-related noise impacts from the proposed Project would be potentially significant.

Finding: Implementation of the following mitigation measures will reduce potential short-term construction noise impacts to less than significant:

4.9.6.1A *During all project site excavation and grading on site, the project contractor shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers consistent with manufacturers' standards.*

4.9.6.1B *The project contractor shall place all stationary construction equipment so that emitted noise is directed away from sensitive receptors nearest to the project site.*

4.9.6.1C *The construction contractor shall locate equipment staging in areas that will create the greatest distance between construction-related noise sources and noise-sensitive receptors nearest to the project site during all project construction.*

4.9.6.1D *During all project site construction activities at Building 6 (i.e., closest to existing residences), the construction contractor shall limit all construction-related activities that would result in high noise levels to between the hours of 6:00 a.m. and 8:00 p.m. on weekdays and between the hours of 7:00 a.m. to 8:00 p.m. on weekends and holidays, unless written approval is obtained from the City Building Official or City Engineer for specific construction activities that must be conducted outside of the permitted time periods.*

Facts in Support of the Finding: According to Section 4.9 of the DEIR, two types of short-term noise impacts could occur during the construction of the Project. First, construction crew commutes and the

transport of construction equipment and materials to the site for the proposed Project would incrementally increase noise levels on access roads leading to the site. The second type of short-term noise impact is related to noise generated during excavation, grading, and building erection on the Project site. Construction of the proposed Project is expected to require the use of scrapers, bulldozers, and water and pickup trucks. The site preparation phase, which includes excavation and grading of the site, tends to generate the highest noise levels, because the noisiest construction equipment is earthmoving equipment. Earthmoving equipment includes excavating machinery such as backfillers, bulldozers, draglines, and front loaders. Earthmoving and compacting equipment includes compactors, scrapers, and graders. Typical operating cycles for these types of construction equipment may involve one or two minutes of full-power operation followed by three to four minutes at lower power settings. The maximum noise level generated by each scraper on the proposed Project site is assumed to be approximately 87 dBA L_{max} at 50 feet from the scraper. Each bulldozer would generate approximately 85 dBA L_{max} at 50 feet. The maximum noise level generated by water and pickup trucks is approximately 86 dBA L_{max} at 50 feet from these vehicles. Each doubling of the sound sources with equal strength increases the noise level by three (3) dBA. Assuming that each piece of construction equipment operates at some distance from the other equipment, the worst-case composite noise level during this phase of construction would be 91 dBA L_{max} at a distance of 50 feet from the active construction area.

The nearest noise-sensitive receptor locations to the Project site are existing residences approximately 50 feet to the southeast. These nearest residents may be subject to short-term, intermittent, maximum noise reaching 91 dBA L_{max} , generated by construction activities on the Project site. This noise level would exceed the City's exterior noise standard of 60 dBA¹² CNEL for residential uses. However, no significant construction noise impacts would occur if construction of the proposed Project would occur within the permitted hours of 6:00 a.m. to 8:00 p.m. of any working day, and within the permitted hours of 7:00 a.m. and 8:00 p.m. on Sundays and Federal holidays. Compliance with the construction hours specified in the City's Municipal Code would result in construction noise impacts that are less than significant. While impacts would be considered less than significant as long as construction activities occur within the designated hours identified in the City's Municipal Code, mitigation measures have been identified to reduce the noise levels that would expose nearby sensitive receptors to noise levels in excess of the City's noise standards.

¹² Chapter 11.80.030 Table 11.80.030-2, City of Moreno Valley Municipal Code, City of Moreno Valley.

With adherence to the City’s designated construction hours and with implementation of the proposed **Mitigation Measures 4.9.6.1A through 4.9.6.1D**, potential short-term construction noise impacts would be reduced below the level of significance. (DEIR, pgs. 4.9-25 to 4.9-27)

6. Transportation

a. Future Year 2035 with Project Conditions (Intersection) Traffic and Level of Service

Potential Significant Impact: The EIR evaluated and concluded that the Project could cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system.

Findings: Implementation of the following mitigation measures will reduce the impact related to future traffic LOS to less than significant:

4.11.6.4A. *Prior to issuance of a Certificate of Occupancy the project applicant shall construct the following traffic improvements:*

- *Redlands Boulevard/SR-60 Westbound Ramps. Install a traffic signal. This improvement is currently approved, and permitted by Caltrans. If not otherwise completed prior to project opening, the required traffic signal shall be constructed by the Applicant prior to issuance of the first Certificate of Occupancy.*
- *Redlands Boulevard/Fir Avenue/Eucalyptus Avenue. If not otherwise completed prior to project opening, prior to issuance of the first Certificate of Occupancy, the Applicant shall construct the following improvements: Install a traffic signal and add a northbound left-turn lane and a southbound left-turn lane.*

If the improvements are constructed by others prior to the Certificate of Occupancy, the applicant shall pay its fair share towards the improvements through the City’s DIF program.

4.11.6.4B *Prior to issuance of building permits, the project applicant shall pay the fair-share contribution toward the following traffic improvements through fees paid to the City of Moreno Valley based on the City’s DIF system and the County’s TUMF program:*

- **Moreno Beach Drive/SR-60 Eastbound Ramps.** *The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the*

design phase. Therefore, payment of the TUMF would mitigate the significant impact at this location. This project is scheduled to go into construction by the end of this year and completed by the end of 2013.

- ***Redlands Boulevard/SR-60 Westbound Ramps.** Install a traffic signal. This improvement is currently approved, and permitted by Caltrans. If not otherwise completed prior to project opening, the required traffic signal shall be constructed by the Applicant prior to issuance of the first Certificate of Occupancy.*
- ***Redlands Boulevard/Fir Avenue/Eucalyptus Avenue.** If not otherwise completed prior to project opening, prior to issuance of the first Certificate of Occupancy, the Applicant shall construct the following improvements: Install a traffic signal. This improvement is listed in the City's DIF program. Add a northbound left-turn lane and a southbound left-turn lane.*

4.11.6.4C *Prior to issuance of building permits, the project applicant shall pay the fair-share contribution toward the following traffic improvements through fees paid to the City of Moreno Valley based on the City's DIF system and the County's TUMF program:*

- ***Moreno Beach Drive/SR-60 Eastbound Ramps.** The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF would mitigate the significant impact at this location.*
- ***Moreno Beach Drive/Cottonwood Avenue.** Add a southbound through lane. This improvement is listed in the City's DIF program. Therefore, payment of the DIF would mitigate the significant impact at this location.*
- ***Moreno Beach Drive/Alessandro Boulevard.** Add a southbound through lane. This improvement is listed in the City's DIF program. Therefore, payment of the DIF would mitigate the significant impact at this location.*
- ***Redlands Boulevard/SR-60 Westbound Ramps.** Install a traffic signal. This improvement is listed in the City's DIF program and will be installed before building occupancy since it was identified as a direct project impact. Add a northbound through lane. The Redlands Boulevard/SR-60 Interchange reconstruction would implement the*

northbound through lane. The interchange reconstruction project is programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.

- **Redlands Boulevard/SR-60 Eastbound Ramps.** The Redlands Boulevard/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF. Therefore, payment of the TUMF would mitigate the significant impact at this location.
- **Redlands Boulevard/Fir Avenue/Eucalyptus Avenue.** Install a traffic signal. Add a westbound right-turn lane and provide overlap phasing for the westbound right turns. Add a westbound left-turn lane and an eastbound left-turn lane. These improvements are programmed in the City's DIF program. Add a northbound left-turn lane a southbound through lane and a southbound left-turn lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.
- **Redlands Boulevard/Eucalyptus Avenue.** Add a southbound right-turn lane. This improvement is programmed in the TUMF. Therefore, payment of the TUMFs would mitigate the significant impact at this location.
- **Redlands Boulevard/Alessandro Boulevard.** Add a southbound left-turn lane. This improvement is programmed in the TUMF. Therefore, payment of the TUMFs would mitigate the significant impact at this location.

4.11.6.4D *Prior to issuance of building permits, the project applicant shall pay the fair-share contribution toward the following traffic improvements through fees paid to the City of Moreno Valley based on the City's DIF system and the County's TUMF program. At some locations, the DIF and TUMFs would not fully mitigate the projects impact. For these locations, additional improvements shall be implemented by the project applicant prior to the issuance of a certificate of occupancy for the project:*

- **Nason Street/Eucalyptus Avenue.** Add a northbound right-turn lane. This improvement is programmed in the City's DIF; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, the project shall contribute a fair

share (calculated to be 1.76%) toward restriping the westbound approach to provide dual left-turn lanes

- **Nason Street/Alessandro Boulevard.** Add an eastbound through lane and a westbound through lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, the project shall contribute a fair share (calculated to be 1.4%) toward modification of the traffic signal to provide overlap phasing for the eastbound right-turn lane.
- **Moreno Beach Drive/SR-60 Westbound Ramps.** The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF would mitigate the significant impact at this location.
- **Moreno Beach Drive/SR-60 Eastbound Ramps.** The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF would mitigate the significant impact at this location.
- **Moreno Beach Drive/Eucalyptus Avenue.** Convert the existing eastbound through lane to a left-turn lane and the eastbound right-turn lane to a shared through/right-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, the project shall contribute a fair share (calculated to be 8.63%) toward modification of the traffic signal to provide right-turn overlap phasing for the westbound right turn.
- **Moreno Beach Drive/Cottonwood Avenue.** Add a southbound through lane. This improvement is programmed in the City's DIF program. Therefore, payment of the DIF would mitigate the significant impact at this location.
- **Moreno Beach Drive/Alessandro Boulevard.** Add 2 southbound through lanes, 2 northbound through lanes, an eastbound through lane, and a westbound through lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would mitigate the significant impact at this location.

- **Redlands Boulevard/SR-60 Westbound Ramps.** Install a traffic signal. This improvement is programmed in the City's DIF program and will be installed before building occupancy since it was identified as a direct project impact.
- **Redlands Boulevard/SR-60 Eastbound Ramps.** The Redlands Boulevard/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF. Therefore, payment of the TUMF would mitigate the significant impact at this location.
- **Redlands Boulevard/Fir Avenue-Eucalyptus Avenue.** Install a traffic signal and add a westbound left-turn lane, eastbound through lane, eastbound left-turn lane, and a westbound right-turn lane with overlap phasing. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a southbound through lane, southbound left-turn lane, northbound through lane, northbound left-turn lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.
- **Redlands Boulevard/Eucalyptus Avenue.** Install a traffic signal and add a westbound left-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a northbound left-turn lane and a southbound left-turn lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.
- **Redlands Boulevard/Alessandro Boulevard.** Install a traffic signal. This improvement is programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a southbound left-turn lane, a northbound left-turn lane, a westbound left-turn lane, an eastbound left-turn lane, a westbound right-turn lane, and a southbound through lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.

4.11.6.4E Prior to issuance of building permits, the project applicant shall implement the following improvements, either through fees paid to the City of Moreno Valley based on the City's DIF

system and the County's TUMF program, or through a fair-share contribution to the City of Moreno Valley as noted below:

- **Nason Street/Eucalyptus Avenue.** Add a northbound right-turn lane and an eastbound right-turn lane. These improvements are programmed in the City's DIF; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. Implementation of the improvements identified for this intersection in **Mitigation Measure 4.11.6.4D** would also partially mitigate the significant impact at this intersection. In addition, the project shall pay a fair share (calculated to be 1.6%) toward modification of the traffic signal to provide right-turn overlap phasing for the eastbound and northbound right turns.
- **Nason Street/Alessandro Boulevard.** Add an eastbound through lane and westbound through lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. Implementation of the improvements identified for this intersection in **Mitigation Measure 4.11.6.4D** would also partially mitigate the significant impact at this intersection. In addition, the project shall pay a fair share (calculated to be 1.35%) toward the addition of an eastbound left-turn lane and modification of the traffic signal to provide overlap phasing for the westbound right-turn lane.
- **Moreno Beach Drive/SR-60 Westbound Ramps.** The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF would mitigate the significant impact at this location.
- **Moreno Beach Drive/SR-60 Eastbound Ramps.** The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF would mitigate the significant impact at this location.
- **Moreno Beach Drive/Eucalyptus Avenue.** Restripe eastbound approach to dual left-turn lanes and add a northbound through lane, a westbound through lane, and a southbound right-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this

intersection. Implementation of the improvements identified for this intersection in **Mitigation Measure 4.11.6.4D** would also partially mitigate the significant impact at this intersection. In addition, the project shall pay a fair share (calculated to be 5.17%) toward modification of the traffic signal to provide right-turn overlap phasing for the southbound right-turn lane.

- **Moreno Beach Drive/Cottonwood Avenue.** Add a southbound through lane, a northbound through lane, an eastbound left-turn lane, an eastbound through lane, a westbound through lane, and a westbound left-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would mitigate the significant impact at this location.
- **Moreno Beach Drive/Alessandro Boulevard.** Add 2 southbound through lanes, add 2 northbound through lanes, an eastbound through lane, and a westbound through lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would mitigate the significant impact at this location.
- **Auto Mall Drive/Eucalyptus Avenue.** Install a traffic signal. This improvement is programmed in the City's DIF program; therefore, payment of the DIF would mitigate the significant impact at this location.
- **Redlands Boulevard/SR-60 Westbound Ramps.** Install a traffic signal. This improvement is programmed in the City's DIF program and will be installed before building occupancy since it was identified as a direct project impact. Therefore, payment of the DIF would mitigate the significant impact at this location.
- **Redlands Boulevard/SR-60 Eastbound Ramps.** The Redlands Boulevard/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF. Therefore, payment of the TUMF would mitigate the significant impact at this location.
- **Redlands Boulevard/Fir Avenue-Eucalyptus Avenue.** Install a traffic signal and add a westbound left-turn lane, eastbound through lane, eastbound left-turn lane, a westbound right-turn lane with overlap phasing, and a southbound right-turn lane with overlap phasing. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a southbound through lane, a southbound left-turn lane, a northbound

through lane, a northbound left-turn lane, and a northbound right-turn lane. These improvements are programmed in the TUMF. Therefore, payment of the TUMF would also partially mitigate the significant impact at this location. In addition, the project shall pay a fair share (calculated to be 10.44%) of the cost of adding a southbound left-turn lane.

- **Redlands Boulevard/Eucalyptus Avenue.** Install a traffic signal and add a westbound left-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a northbound left-turn lane, a northbound through lane, a southbound left-turn lane, and a southbound through lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.
- **Redlands Boulevard/Cottonwood Avenue.** Add an eastbound through lane and westbound through lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a northbound through lane, and a southbound through lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.
- **Redlands Boulevard/Alessandro Boulevard.** Install a traffic signal. This improvement is programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a southbound left-turn lane, a northbound left-turn lane, a westbound left-turn lane, an eastbound left-turn lane, a westbound right-turn lane, a southbound through lane, a westbound through lane, and an eastbound through lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.

4.11.6.4F *If the Encilia Avenue and Quincy Street Connection plan is implemented as part of the proposed project, then prior to issuance of building permits, the project applicant shall implement the following improvements: In addition to those identified in **Mitigation Measure 4.11.6.4E**, either through fees paid to the City of Moreno Valley based on the City's DIF*

system and the County's TUMF program, or through a fair-share contribution to the City of Moreno Valley as noted below:

- **Moreno Beach Drive/Eucalyptus Avenue.** Restripe the southbound shared through/right-turn lane to a southbound through lane. This improvement is programmed in the City's DIF program; therefore, payment of the DIF would mitigate the impacts of the project at this intersection.
- **Redlands Boulevard/Fir Avenue-Eucalyptus Avenue.** Pay the fair share (calculated to be 10.84%) to add a southbound right-turn lane.
- **Redlands Boulevard/Encilia Avenue-Eucalyptus Avenue.** Install a traffic signal and add a westbound left-turn lane. These improvements are programmed in the City's DIF program. In addition, add a northbound left-turn lane, northbound through lane, southbound left-turn lane, and a southbound through lane. These improvements are programmed in the TUMF program. Therefore, payment of the DIF and TUMF would fully mitigate the impact of the project at this intersection.
- **Moreno Beach Drive/Encilia Avenue.** Install a traffic signal, add a northbound through lane, southbound left-turn lane, and a southbound through lane. This improvement is programmed in the City's DIF program; therefore, payment of the DIF would mitigate the impacts of the project at this intersection.

Facts in Support of the Findings: Future Year (2035) with Project conditions considers the addition of traffic generated by the proposed project to Future Year (2035) Baseline conditions. The addition of project traffic to the Future Year (2035) scenario would result in conditions exceeding City and Caltrans LOS standards at twelve intersections.

All of the intersections that are forecast to experience a deficient LOS with the proposed project would also operate with a deficient LOS without the proposed project. Although the proposed project does not cause these intersections to operate at an unsatisfactory LOS, it does contribute to the worsening of the intersections' LOS and therefore mitigation would be required to offset the cumulative impact of the project.

Freeway mainline and ramp junctions were evaluated in the Future Year 2035 plus Project condition. Nine segments are forecast to operate at an unsatisfactory level of service in the Future Year 2035 Cumulative plus Project condition. The Traffic Study for the proposed Project also analyzes the Future

Year 2035 plus Project conditions a.m. and p.m. peak hour ramp merge-diverge volumes and levels of service for the freeway segments on SR-60. Nine ramp junctions are forecast to operate at an unacceptable level of service in the future Year 2035 plus Project condition. (DEIR pgs. 4.11-25 to 4.11-27)

According to Section 4.11 in the DEIR, with the implementation of the recommended improvements, the minimum level of service standards would be maintained for the Future Year (2035) with Project scenario and impacts would be reduced to a less than significant level for all identified intersections. In addition, reconstruction of the interchanges at the location of the deficient freeway ramp intersections identified in **Mitigation Measure 4.11.6.2D** are already programmed into the TUMF program. It is anticipated that by future year (2035) improvement to the identified freeway ramps and intersections would be built through the TUMF process and coordination by Caltrans, WRCOG, and the City of Moreno Valley. Because the project would pay its fair-share cost associated with these improvements and because such improvements are anticipated to be constructed by the future year (2035), impacts associated with this issue are less than significant after the identified mitigation measures have been implemented. (DEIR, pg. 4.11-35)

**b. General Plan Build Out With Project Conditions (Intersection)
Traffic and Level of Service Impacts**

Potential Significant Impact: The EIR evaluated and concluded that the Project could cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system.

Findings: Implementation of **Mitigation Measure 4.11.6.4E** will reduce the impact related to General Plan buildout to less than significant.

Facts in Support of the Findings: General Plan Build Out with project conditions considers the addition of traffic generated by the proposed project to General Plan Build Out baseline conditions. An intersection LOS analysis was conducted to determine General Plan Build Out intersection performance. The addition of project traffic to the General Plan Build Out scenario would result in conditions exceeding City and Caltrans LOS standards at 13 intersections.

All of the intersections that are forecast to experience a deficient LOS with the proposed project would also operate with a deficient LOS without the proposed project. Although the proposed project does not cause these intersections to operate at an unsatisfactory LOS, it does contribute to the worsening of the intersections' LOS and therefore mitigation would be required to offset the cumulative impact of the project. (DEIR, pg. 4.11-28)

According to Section 4.11 of the DEIR, with the implementation of the recommended improvements, the minimum level of service standards would be maintained for the General Plan Build Out with Project scenario and impacts would be reduced to a less than significant level for all identified intersections. However, as noted previously, improvements to the freeway intersections and infrastructure are under the authority of Caltrans. In addition, the deficient freeway ramp intersections identified in **Mitigation Measure 4.11.6.2E** are already programmed into the TUMF program. It is anticipated that by the General Plan Build Out, improvements to the identified freeway ramps and intersections would be built through the TUMF process and coordination by Caltrans, WRCOG, and the City of Moreno Valley. Because the project would pay its fair-share cost associated with these improvements and because such improvements are anticipated to be constructed by the future year (2035), impacts associated with this issue are less than significant after the identified mitigation measures have been implemented. (DEIR, pg. 4.11-37)

7. Utilities and Service Systems

a. Storm Water Drainage Requirements

Potential Significant Impact: The EIR evaluated and concluded that the Project could result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

Findings: Implementation of the following mitigation measures will reduce the impact to storm water drainage to less than significant:

4.7.6.3A *Prior to the approval of associated project rough grading plan, the project proponent shall receive approval on a project-specific Final Hydrology Study, with supporting engineering calculations, from the City Engineer. The Final Hydrology Study shall incorporate relevant requirements identified by the City, and/or site-specific geotechnical investigations.*

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the proposed Project would route storm water flows from the Project site into Quincy Channel after flows are routed through a combination of water quality basins and sand filters. Due to the installation of impervious surfaces on the Project site, the post-development flows would be higher than the pre-development flows. To avoid a significant impact to the existing drainage capacity, the post-development flows coming from the

proposed Project site are required to be equal to or less than pre-development flows.¹³ To reduce flows to below or equal to pre-development conditions, the on-site storm water flows would be routed to the on-site detention basins¹⁴ before flows are routed off site. While the increase in impervious surfaces attributable to the proposed Project would contribute to a greater volume and higher velocity of storm water flows, the proposed Project's water quality basins would accept and accommodate runoff that would result from project construction at pre-project conditions.

As identified in the Preliminary Hydrology Calculations¹⁵ prepared for the Project, to adequately contain and store the greatest volume that would be generated, the Project site would require a minimum storage volume of 13.6 acre-feet. The proposed amount of storage area (20.3 acre-feet) is greater than the required amount of storage area. Based on this, it appears there is excess capacity of 6.7 acre-feet (20.3 acre-feet – 13.6 acre-feet = 6.7 acre-feet) of storage area available from the on-site detention basins; therefore, the proposed Project appears to have adequate drainage capacity that would result in post-development flows being reduced to pre-development flows before leaving the Project site. However, to ensure that impacts associated with on-site drainage capacity are reduced to a less significant level, the **Mitigation Measure 4.7.6.3A** has been identified to reduce potential impacts to less than significant levels. (DEIR, pgs. 4.12-16 to 4.12-17)

8 Global Climate Change

a. Greenhouse Gas Emissions

Potential Significant Impact: The EIR evaluated and concluded that the Project could have an adverse effect due to the generation of greenhouse gas emissions (GHGs).

Findings: Implementation of the following mitigation measures will reduce the impact related to greenhouse gas emissions to less than significant:

4.13.6.1A *Prior to the issuance of building permits, the project applicant shall provide evidence to the City of Moreno Valley that building features have been incorporated in building*

¹³ As part of the MS4 Permit issuance requirements, projects must identify any Hydrologic Conditions of Concern and demonstrate that changes to hydrology are minimized to ensure that post-development runoff rates and velocities from a site do not adversely affect downstream erosion, sedimentation, or stream habitat.

¹⁴ A detention basin is an area where excess storm water is stored or held temporarily and then slowly drains when water levels in the receiving channel recede. In essence, the water in a detention basin is temporarily detained until additional room becomes available in the receiving channel.

¹⁵ *Preliminary Hydrology Calculations for ProLogis Park Moreno Valley-Eucalyptus TPM 35679*, Thienes Engineering, November 4, 2008.

plans as required by Title 24 of the California Code of Regulations. These features include but are not limited to the following:

- *Exterior windows shall utilize window treatments for efficient energy conservation.*
- *Per CALGreen Code requirements, water-efficient fixtures and appliances, including but not limited to low-flow faucets, dual-flush toilets minimizing water consumption by 20 percent from the Building Standards Code baseline water consumption shall be used.*
- *Per CALGreen Code requirements, a Commissioning Plan shall be prepared and all building systems (e.g., heating, ventilation, and air-conditioning [HVAC], irrigation systems, lighting, and water heating) shall be commissioned by the Commissioning Authority.*
- *Per CALGreen Code, restrict watering methods (e.g., prohibit systems that apply water to non-vegetated surfaces) and control runoff.*

4.13.6.1B *Prior to the issuance of building permits, the project applicant shall provide evidence to the City of Moreno Valley that the following measures have been incorporated into the design and construction of the project:*

- *Use of locally produced and/or manufactured building materials for at least 10 percent of the construction materials used for the project.*
- *Use of “Green Building Materials,” such as those materials that are resource efficient, and recycled and manufactured in an environmentally friendly way, for at least 10 percent of the project.*
- *Limit unnecessary idling of construction equipment. A reduction in equipment idling would reduce fuel consumption, and therefore, GHG emissions.*
- *Maximize the use of electricity from the power grid by replacing diesel- or gasoline-powered equipment. This would reduce GHG emissions because electricity can be produced more efficiently at centralized power plants.*
- *Design the project building to exceed the California Building Code’s (CBC) Title 24 energy standard, including, but not limited to, any combination of the following:*

- *Increase insulation such that heat transfer and thermal bridging is minimized.*
- *Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.*
- *Incorporate ENERGY STAR or better rated windows, space heating and cooling equipment, light fixtures, appliances, or other applicable electrical equipment.*
- *Provide a landscape and development plan for the project that takes advantage of shade, prevailing winds, and landscaping.*
- *Install efficient lighting and lighting control systems. Use daylight as an integral part of the lighting systems in buildings.*
- *Install light-colored “cool” roof and cool pavements.*
- *Install energy-efficient heating and cooling systems, appliances and equipment, and control systems.*
- *Install solar or light-emitting diodes (LEDs) for outdoor lighting for auto parking areas.*

4.13.6.1C *Prior to the issuance of occupancy permits, the project applicant shall provide evidence to the City of Moreno Valley that the following measures have been incorporated into the operation of the project:*

- *The project applicant shall use less than 3,900 Global Warming Potential (GWP) hydrofluorocarbon (HCF) refrigerants or natural refrigerants (ammonia, propane, carbon dioxide [CO₂]) for refrigeration and fire suppression equipment.*
- *Provide vegetative or man-made exterior wall shading devices for east-, south-, and west facing walls with windows.*
- *Devise a comprehensive water conservation strategy appropriate for the project and its location. The strategy may include the following, plus other innovative measures that may be appropriate:*
 - *Install drought-tolerant plants for landscaping.*

- *Use reclaimed water for landscape irrigation within the project. Install the infrastructure to deliver and use reclaimed water.*
- *Install water-efficient irrigations systems, such as weather-based and soil-moisture-based irrigation controllers and sensors for landscaping according to the California Department of Water Resources Model Efficient Landscape Ordinance.*
- *Provide employee education about reducing waste and available recycling services.*

Facts in Support of the Findings: Future development that could occur on the proposed Project site could generate GHG emissions during construction and operation activities. It is anticipated that the majority of energy consumption (and associated generation of GHG emissions) would occur during the project’s operation (as opposed to its construction). The total GHG emissions over the entire construction process are expected to be 2,700 metric tons. Based on a comparison of the proposed Project to the South Coast Air Quality Management District tiered interim GHG significance criteria, the most applicable screening threshold listed is the Industrial at 10,000 ton per year (tpy) CO₂e. The long-term project operational GHG emissions for the proposed Project are 79,000 tpy CO₂e and exceed this threshold; therefore, the project operational GHG emissions are significant. In order to ensure that the proposed Project complies with and would not conflict with or impede the implementation of reduction goals identified in AB 32, the Governor’s EO S-3-05, and other strategies to help reduce GHGs to the level proposed by the Governor, **Mitigation Measures 4.13.6.1A** through **4.13.6.1C** shall be implemented. The mitigation measure would contribute to a reduction in GHG emissions from energy, mobile, and water usage sources. With implementation of the identified mitigation measures, the proposed Project’s GHG emissions would be reduced to less than significant levels.

C. ENVIRONMENTAL IMPACTS NOT FULLY MITIGATED TO A LEVEL OF LESS-THAN-SIGNIFICANT

The Moreno Valley City Council finds the following environmental impacts identified in the EIR remain significant even after application of all feasible mitigation measures: aesthetics (individually and cumulative), agricultural resources (individually and cumulative), air quality (individually and cumulative), cumulative population and housing, and transportation. In accordance with CEQA Guidelines Section 15092(b)(2), the City Council of the City of Moreno Valley cannot approve the Project unless it first finds (1) under *Public Resources Code* Section 21081(a)(3), and CEQA Guidelines Section 15091(a)(3), that specific economic, legal, social technological, or other

considerations, including provisions of employment opportunities to highly trained workers, make infeasible the mitigation measures or Project alternatives identified in the EIR; and (2) under CEQA Guidelines section 15092(b), that the remaining significant effects are acceptable due to overriding concerns described in the CEQA Guidelines Section 15093 and, therefore, a statement of overriding considerations is included herein.

1. Aesthetics (Individual and Cumulative Impacts)

a. Scenic Vistas

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could have adverse effects on one or more scenic vistas, notably views of the Box Springs Mountains, the Badlands, Moreno Peak, and the Russell Mountains.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts to scenic vistas will remain significant and unavoidable.

Facts in Support of the Finding: According to Section 4.1 of the DEIR, the nearest sensitive permanent visual receptor to the Project would be the existing single-family residences to the southeast across future Encilia Avenue. In general, views for the residences southeast of the site will change from vacant land to industrial buildings with extensive landscaping including rows of citrus trees to help provide a visual buffer. Permanent views for residences north of SR-60 and transient views for travelers on SR-60 will change as the tops of the proposed industrial buildings will partially block views of the mountains to the south. Despite the provision of ornamental landscaping and citrus trees along the northern, western, and southern boundaries, implementation of the proposed Project would obstruct background views of the distant Box Springs Mountains for residences southeast of the Project, foreground and midground views of travelers on SR-60, and background views of the Mount Russell Range for residences north of SR-60 and along Pettit Street. This obstruction of views is a significant visual impact of the proposed Project. The sizes, heights, and general locations of buildings on the site are limited by the types of uses being proposed as part of this Project. Therefore, there is no feasible mitigation available to reduce impacts related to the loss of this viewshed. Since there is no feasible mitigation available to reduce adverse effects on scenic vistas, impacts associated with this issue would remain significant and unavoidable. (DEIR, pgs. 4.1-9 to 4.1-17)

b. Scenic Resources and Scenic Highways

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could have adverse effects on one or more scenic vistas, including views of the Box Springs Mountains and the Badlands for both residents and travelers on SR-60.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts to scenic vistas and scenic highways will remain significant and unavoidable.

Facts in Support of the Finding: According to Section 4.1 of the DEIR, the City of Moreno Valley identifies SR-60 as a local scenic road.¹⁶ According to the City's General Plan, the man-made environment is equally important as natural landforms in terms of scenic values (e.g., buildings, landscaping and signs). Agricultural uses, such as citrus groves, are one example of a man-made environment that constitutes a visually pleasing feature.

Existing views for motorists traveling eastbound and westbound on SR-60 consist of noise attenuation walls, commercial and residential development, landscaping, parking lots, open space, and orange groves in addition to the mountains and badlands in the distance. Development of the proposed Project would alter the existing view by introducing large industrial buildings adjacent to the freeway. Existing eastbound views on SR-60 would be altered with the development of the proposed Project. Motorists would still view noise attenuation walls, urban development, landscaping, and scattered trees as they look to the south, although these views would be of short duration for motorists traveling at normal freeway speeds.

The proposed Project would have highly reflective surfaces at the taller (43 feet) glass veneered office towers, but would not result in development along ridge lines. The proposed Project would result in an increased number of large bulk structures, but would include colors and materials that are compatible with the existing environment. The proposed ornamental landscaping and citrus trees would provide some visual screening. However, the proposed Project would result in the obstruction of most of the Mount Russell Range for motorists traveling on SR-60, so the proposed buildings would obstruct the view of a scenic feature. The proposed Project meets criteria in both the moderate and major visual intrusion categories. In an overabundance of caution, the worst-case scenario is utilized. Therefore, it is anticipated that based on Project design features, the proposed Project would have a major visual intrusion (i.e., significant impact) for motorists traveling on SR-60. Incorporation of the proposed building façades and

¹⁶ *Conservation Element, Figure 7-2 Major Scenic Resources, City of Moreno Valley General Plan, adopted July 11, 2006.*

ornamental landscaping design features will soften the visual appearance of the buildings from SR-60; however, the obstruction of local views will still be significant, and there are no feasible mitigation measures available that would reduce these impacts to less than significant levels. Therefore, impacts associated with this issue would remain significant and unavoidable. (DEIR, pgs. 4.1-17 to 4.1-19)

c. Existing Visual Character or Quality of Site and its Surroundings

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could have adverse effects that change the general character of the Project site (e.g., loss of open area), the components of the visual settings (e.g., landscaping and architectural elements), and the visual compatibility between proposed site uses and adjacent land uses.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts to the existing visual character of the site will remain significant and unavoidable.

Facts in Support of the Finding: The significance of visual impacts is inherently subjective as individuals respond differently to changes in the visual characteristics of an area. Development of the proposed Project would change the existing character of the Project site from open space to a more urbanized setting with large industrial buildings. The change in the character of the site would constitute a significant alteration of the existing visual character of the Project site.

According to Section 4.1 of the DEIR, the proposed Project features a variety of architectural elements including façade accents such as corner treatments and roof trim. The Project also provides variation in wall planes that serve to avoid an institutional appearance and break up the bulk of the buildings. This variation would create shadow lines at various times of the day. The proposed ornamental landscaping would replace the scattered weedy vegetation. Landscaping on the site would be provided in accordance with City Municipal Code Chapter 9.17, which requires the installation of landscaping on site and the planting of one tree for every 30 linear feet of building dimension that is visible from the parking lot or public right-of-way. As part of conditions of approval for the proposed Project, orange trees would be planted on the northern portion of the Project site adjacent to SR-60 and along the perimeter of the proposed Project site adjacent to the public right-of-way or residential zoning.

Since the Project site is currently vacant, suburban development of any type would cause a fundamental change in the visual characteristics of the Project site. In addition, the site is currently planned for industrial, business park, single-family, and multifamily uses, which would be different in appearance from the proposed industrial warehouse buildings. Of these uses, the lower density housing (R2) is currently designated adjacent to the existing residences southeast of the Project site.

The proposed Project would replace the existing vacant parcel and citrus groves with development that is visually compatible with the existing commercial development to the west and the existing and the approved Ridge industrial development to the east, but it will not be compatible with the residential uses to the southeast or farther to the north across SR-60.

Incorporation of the proposed building façades and landscaping design features will soften the visual appearance of the buildings from both SR-60 and nearby residences; however, the fundamental change in visual character of the area will still be significant. Even with compliance with the City's General Plan and Municipal Code development guidelines for industrial development, including the 250-foot buffer between industrial and residential land uses, the anticipated fundamental change in views expected in this area will be significant. Due to the heights and masses of buildings needed to accommodate the proposed land uses, no feasible mitigation is available that would reduce these potential impacts to less than significant levels. Therefore, impacts associated with this issue would remain significant and unavoidable. (DEIR, pgs. 4.1-19 to 4.1-21)

d. Cumulative Aesthetics Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could in connection with past, present, and probable future projects adversely affect one or more scenic vistas.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this cumulative impact to a level of less than significant. Accordingly, Project-related cumulative impacts to scenic vistas will remain significant and unavoidable.

Facts in Support of the Finding: The development of the proposed Project would partially obstruct views of surrounding mountain ranges from current vantage points near the Project structures. However, vistas would not be completely obstructed from viewpoints through parking circulation areas, openings between rows of buildings or trees, or at the end of vehicular rights-of-way. Development of lands within the City, particularly along SR-60, would result in the cumulative conversion from open space to a more urbanized land use. The proposed Project would continue a recent development trend in the City to expand industrial uses along the south side of SR-60 east of the City's Auto Center. This development trend has not yet been incorporated into the City's General Plan. The proposed Project, in conjunction with other cumulative projects, would be developed in a manner consistent with existing development trends in the City. Since other cumulative projects in the area would include similar distribution uses, it can be anticipated that such uses would have a similar design and massing as the proposed Project. Since

the proposed Project would obstruct views of the surrounding mountains, it can be reasonable to conclude that similar warehouse distribution uses would also obstruct views of the surrounding mountains. In addition, General Plan Policy 7.7.4 in the Conservation Element requires the designation of SR-60 as a local scenic roadway. Therefore, the proposed Project, in combination with other cumulative projects in the eastern portion of the City and along SR-60 would have a cumulatively significant and unavoidable impact on aesthetics (i.e., views and scenic resources) in this portion of the City. (DEIR, pgs. 4.1-21 to 4.1-22)

2. **Agricultural Resources (Individual and Cumulative Impacts)**

a. **Conversion of State Designated Farmland**

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could impact 82.5 acres of Prime Farmland.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts to state designated farmland will remain significant and unavoidable.

Facts in Support of the Finding: Section 4.2 of the DEIR identifies several potential agricultural conservation measures contained in the City's General Plan that include: enrolling productive agricultural land into a Williamson Act Contract; providing protection to ongoing agricultural operations from complaints and nuisance complaints from adjacent new development; protecting productive agricultural land subject to conversion through the purchase of or transfer of its development rights; purchasing conservation easements on existing agricultural land to ensure that the land is never converted to urban uses; and donating funds to a regional or statewide program that promotes and implements the use of agricultural land conservation easements.

The potential agricultural conservation measures identified in the DEIR are not considered to be feasible by the City for the following reasons:

Williamson Act Contracts: Williamson Act contracts are entered into voluntarily by property owners and the City cannot force owners to participate in this program. In addition, Williamson Act contracts will result only in temporary preservation of agricultural land since property owners have the option of non-renewal of these contracts at any time after the ten-year contract period ends.

Protecting Existing Agricultural Operations: Providing protection for ongoing agricultural activities from new developments, such as buffers between agricultural operations and new development or requiring the notification and disclosure of agricultural activities to the purchasers adjacent properties, will not permanently protect agricultural land.

Transfer of Development Rights, Conservation Easements, or Agricultural Conservation Bank: The purchase or transfer of development rights, purchase of conservation easements, or donation of funds to assist in the conservation of agricultural land would need to be implemented to ensure the preservation of agricultural land. As stated previously, the City anticipates the conversion of agricultural land within the City and does not set aside land for permanent preservation. The current General Plan does not include any agricultural designations. The City allows agricultural uses in all land use designations as an interim use until such time as the land is developed per the vision identified in the General Plan. One of the goals stated in the City's recent General Plan is the "...orderly conversion of agricultural lands." For this reason, the City expects that the majority of the land within the City will be converted to urban uses, although some agriculture will continue as interim uses, as allowed by the City's Development Code for all zoning categories. The existing and continued reduction in productive agricultural operations within the City is produced by several factors including; urbanization in the City and Inland Empire resulting in dramatically increasing land prices; high water and labor costs; environmental regulation (e.g., insects, odors, groundwater contamination, and solid waste removal); and competition from Kern County and the Central Valley with lower land costs and reduced regulations. (DEIR, pgs. 4.1-10 to 4.1-14)

The City has determined that these measures are economically infeasible and that they are contrary to the City's vision (as stated in its General Plan) for the Project site and alternative mitigation has not been identified, and impacts related to this issue remain significant and unavoidable. (DEIR, pgs. 4.2-6 to 4.2-9)

b. Conversion of Farmland to a Non-Agricultural Use

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would result in the development of industrial uses on land that has historically been utilized for citrus production.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts from the conversion of farmland to a non-agricultural use will remain significant and unavoidable.

Facts in Support of the Finding: According to Section 4.2 of the DEIR, the Project site has historically been in agricultural production and was most recently used to grow citrus. The conversion of the Project site to a non-agricultural use is a result of various economic and demographic factors. Increased cost for water and a continuing demand for housing and other development in the City and region are the primary reasons for this agricultural land conversion. A LESA model was also used to evaluate the site. It was determined that the Project LESA score is 85.3, which is considered significant. The Project does not include design features that would prevent the existing agricultural operations in the area from continuing. The Project would convert land that was previously used for agriculture and the development of the proposed Project may contribute to the conversion of adjacent lands. However, the Project is a logical extension of development in the City and does not create leapfrog development or islands of agricultural land that would be difficult to farm. The City recognizes development pressures within the City, and that these pressures will increase as the City continues to build out. Additionally, while the Project would not directly cause the conversion of adjacent agricultural land to non-agricultural uses because in has lied fallow for several years, it would contribute to development pressure within the City that could potentially lead to the conversion of agricultural land off site. However, as stated in the previous discussion of these Findings regarding the conversion of state designated farmland, the City has determined the agricultural conservation measures identified by the City are economically infeasible and that they are contrary to the City’s vision (as stated in its General Plan) for the Project site and alternative mitigation has not been identified. Therefore, impacts associated with this issue remain significant and unavoidable. (DEIR, pgs. 4.1-9 to 4.1-10)

c. Cumulative Agricultural Resource Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would have a significant cumulative impact on agricultural resources in Riverside County.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts to cumulative state designated farmland will remain significant and unavoidable.

Facts in Support of the Finding: According to Section 4.2 of the DEIR, the Project-related impacts to Prime Farmland and the conversion of agricultural land to a non-agricultural use cannot be mitigated through a local or regional program to mitigate impacts to agricultural resources. As stated previously, the City does not maintain a General Plan or zoning designation for agricultural uses and there are no Project-

level feasible mitigation measures that would help reduce cumulative impacts. The cumulative effect of development in the region will continue to result in the conversion of agricultural lands to non-agricultural uses. Because agricultural land, including Prime Farmland, Farmland of Statewide Importance, and Farmland of Local Importance are finite resource, the conversion of approximately 122.8 acres of farmland to industrial uses, combined with planned and future development in the City and region, represents a significant cumulative impact to agricultural operations and resources. As stated in the previous discussion of these Findings regarding the conversion of state designated farmland and conversion of agricultural land to a non-agricultural land use, the City has determined the agricultural conservation measures identified by the City are economically infeasible and that they are contrary to the City's vision (as stated in its General Plan) for the Project site and alternative mitigation has not been identified. Therefore, cumulative impacts to agricultural resources are considered significant and unavoidable. (DEIR, pg. 4.1-11)

2. Air Quality (Project-Specific and Cumulative Impact)

a. Air Quality Management Plan Consistency

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project has the potential to conflict with implementation of regional Air Quality Management Plan and the SIP.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that **Mitigation Measures 4.3.6.2A through 4.3.6.2M and 4.3.6.3A through 4.3.6.3C** are incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, the proposed Project will not be consistent with AQMP and the SIP and therefore impacts are considered significant and unavoidable.

Facts in Support of the Finding: An Air Quality Management Plan (AQMP) describes air pollution control strategies to be taken by counties or regions classified as nonattainment areas. The AQMP's main purpose is to bring the area into compliance with the requirements of Federal and State air quality standards. The AQMP uses the assumptions and projections by local planning agencies to determine control strategies for regional compliance status. Therefore, any projects causing a significant impact on air quality would impede the progress of the AQMP. CEQA requires that projects resulting in a General Plan Amendment be analyzed for consistency with the AQMP.

For a Project in the Basin to be consistent with the AQMP, the pollutants emitted from the Project must not exceed the South Coast AQMD significant threshold or cause a significant impact on air quality. One measurement tool in determining consistency with the AQMP is to determine how a Project accommodates the expected increase in population or employment. The proposed Project site is located in an urbanizing area of the City of Moreno Valley along SR-60, which accommodates traffic in the area. In addition, the proposed warehouse uses would be within walking distance of existing homes and commercial areas in the local vicinity. The proposed Project would add jobs resulting from the development of the warehouse uses to the City, with the potential to minimize the VMT traveled within the Project site and community.

The SCAQMD also has the following consistency criteria: the proposed Project cannot result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP; and the proposed Project cannot exceed the assumptions in the AQMP in 2010 or increments based on the year of Project build-out phase.

Implementation of the proposed Project would require a zone change from Business Park (BP), Business Park Mixed Use (BPX), Multi-Family Residential (R-15), Suburban Residential (R-5), and Residential Agriculture (RA-2) to Light Industrial for the entire 122.8 acres. Since the proposed Project will require a General Plan Amendment, the Project has not been considered in preparation of the General Plan and therefore it is uncertain if it is consistent with the AQMP.

Because the Project site is located in a nonattainment air basin for ozone, PM₁₀ and PM_{2.5}, the proposed Project's emission of ozone precursors (CO, ROG, and NO_x), PM₁₀ and PM_{2.5} would contribute to the existing nonattainment status in the Basin. Thus, according to the SCAQMD Consistency Criterion No. 1, the proposed Project is not consistent with the AQMP.

The proposed Project would have significant impacts. **Mitigation Measures 4.3.6.2A** through **4.3.6.2M** and **Mitigation Measures 4.3.6.3A** through **4.3.6.3C** shall be implemented as part of the proposed Project. The proposed Project would be considered to be consistent only after the City of Moreno Valley General Plan Amendment is approved. Once the City's General Plan Amendment and the required zoning changes are approved, the proposed Project would be included in the next SCAG and SCAQMD AQMP projections. When that occurs, the proposed Project would be consistent with the regional AQMP and the SIP. However, until that occurs, the Project is inconsistent with the regional AQMP and the impacts are considered significant and unavoidable. (DEIR, pgs. 4.3-21 to 4.3-22)

b. Equipment Exhaust from Construction-Related Activities

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project has the potential to exceed applicable daily thresholds that may affect sensitive receptors.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that Mitigation Measures 4.3.6.2A through 4.3.6.2M are incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, the proposed Project will have a significant impact due to equipment exhaust from construction related activities and therefore impacts are considered significant and unavoidable.

4.3.6.2A *Prior to the issuance of a grading permit, the Project developer shall require by contract specifications that contractors shall place construction equipment staging areas at least 200 feet away from sensitive receptors. Contract specifications shall be included in the proposed Project construction documents, which shall be reviewed by the City.*

4.3.6.2B *Prior to the issuance of a grading permit, the Project developer shall require by contract specifications that contractors shall utilize power sources (e.g., power poles) or clean-fuel generators. Contract specifications shall be included in the proposed Project construction documents, which shall be reviewed by the City.*

4.3.6.2C *Prior to the issuance of a grading permit, the Project developer shall require by contract specifications that contractors shall utilize California Air Resources Board (CARB) Tier II Certified equipment or better during the rough/mass grading phase for the following pieces of equipment: rubber-tired dozers and scrapers. Contract specifications shall be included in the proposed Project construction documents, which shall be reviewed by the City.*

Project start to December 31, 2014: All off-road diesel-powered construction equipment greater than 50 horsepower shall meet Tier 3 off-road emission standards. In addition, all construction equipment shall be outfitted with Best Available Control Technology (BACT) devices certified by CARB. Any emission control devices used by the contractor shall achieve emission reductions that are no less than what would be achieved by a Level 3 diesel emission control strategy for a similarly sized engine as defined by CARB regulations.

Post January 1, 2015: All off-road diesel-powered construction equipment greater than 50 horsepower shall meet Tier 4 emission standards, where available. In addition, all construction equipment shall be outfitted with Best Available Control Technology (BACT) devices certified by CARB. Any emission control devices used by the contractor shall achieve emission reductions that are no less than what would be achieved by a Level 3 diesel emission control strategy for a similarly sized engine as defined by CARB regulations.

A copy of each unit's certified tier specifications, BACT documentation, and CARB or SCAQMD operating permit shall be provided at the time of mobilization of each applicable unit of equipment.

4.3.6.2D *All clearing, grading, earthmoving, or excavation activities shall cease when winds (as instantaneous gusts) exceed 25 mph per SCAQMD guidelines in order to limit fugitive dust emissions.*

4.3.6.2E *The contractor shall ensure that all disturbed unpaved roads and disturbed areas within the Project are watered at least three times daily during dry weather. Watering, with complete coverage of disturbed areas, shall occur at least three times a day, preferably in the mid-morning, afternoon, and after work is done for the day.*

4.3.6.2F *The contractor shall ensure that traffic speeds on unpaved roads and Project site areas are reduced to 15 miles per hour or less to reduce PM₁₀ and PM_{2.5} fugitive dust haul road emissions. Speed limit signs (15 mph maximum) shall be posted at entry points to the Project site, and along any unpaved roads providing access to or within the Project site and/or any unpaved designated on-site travel routes.*

4.3.6.2G *Groundcover shall be replaced, and/or non-toxic soil stabilizers shall be applied (according to manufacturers' specifications) to any inactive construction areas (previously graded areas inactive for ten days or more).*

4.3.6.2H *The contractor shall minimize pollutant emissions by maintaining equipment engines in good condition and in proper tune according to manufacturer's specifications and by not allowing construction equipment to be left idling for more than five minutes (per California law).*

4.3.6.2I *The contractor shall ensure use of low-sulfur diesel fuel in construction equipment as required by the California Air Resources Board (CARB) (diesel fuel with sulfur content of 15 ppm by weight or less).*

4.3.6.2J *Grading plans, construction specifications and bid documents shall also include the following requirements:*

- *Off-road construction equipment shall utilize alternative fuels where feasible e.g., biodiesel fuel (a minimum of B20), natural gas (CNG), liquefied natural gas (LNG), propane, except for equipment where use of such fuels would void the equipment warranty;*
- *Gravel pads shall be provided at all access points to prevent tracking of mud onto public roads;*
- *Install and maintain trackout control devices at all access points where paved and unpaved access or travel routes intersect;*
- *The contractor or builder shall designate a person or person(s) to monitor the dust control program and to order increased watering, as necessary, to prevent transport of dust off site;*
- *The contractor or builder shall post a publicly visible sign with the telephone number and person to contact regarding dust complaints. The contact person shall take corrective action within 24 hours;*
- *High-pressure injectors shall be provided on diesel construction equipment if feasible;*
- *Engine size of construction equipment shall be limited to the minimum practical size;*
- *Substitute gasoline-powered for diesel powered construction equipment where gasoline powered equipment is available;*
- *Use electric construction equipment where it is practical to use such equipment;*
- *Install catalytic converters on gasoline-powered equipment where this type of equipment is available;*

- *Ride-sharing program for the construction crew shall be supported by contractor(s) via incentives or other inducement;*
- *Documentation shall be provided to the City of Moreno Valley indicating that construction workers have been encouraged to carpool or otherwise reduce VMT to the greatest extent practical, including providing information on available park and ride programs;*
- *Lunch vendor services shall be allowed on site during construction to minimize the need for off-site vehicle trips; and*
- *All forklifts used during construction and in subsequent operation of the Project shall be electric or natural gas powered.*

4.3.6.2K *Throughout Project construction, a construction relations officer/community liaison, appointed by the Applicant, shall be retained on site. In coordination and cooperation with the City, the construction relations officer/community liaison shall respond to any concerns related to PM₁₀ (fugitive dust) generation or other construction-related air quality issues.*

4.3.6.2L *All Project entrances shall be posted with signs which state:*

- *Truck drivers shall turn off engines when not in use;*
- *Diesel delivery trucks servicing the Project shall not idle for more than three (3) minutes; and*
- *Telephone numbers of the building facilities manager and CARB, to report violations.*

These measures shall be enforced by the on-site facilities manager (or equivalent).

4.3.6.2M *During Project grading and construction, the various Project contractors shall adhere to the control measures listed in Tables 1 and 2.*

Air Quality Measure 4.3.6.2M Table 1: Best Available Control Measures for Fugitive Dust (Applicable to All Construction Activity Sources)

<i>Source Category</i>	<i>Control Measures</i>	<i>Guidance</i>
<i>Backfilling</i>	<ul style="list-style-type: none"> • <i>Stabilize backfill material when not actively handling; and</i> • <i>Stabilize backfill material during handling; and</i> • <i>Stabilize soil at completion of activity.</i> 	<ul style="list-style-type: none"> • <i>Mix backfill soil with water prior to moving; and</i> • <i>Dedicate water truck or high capacity hose to backfilling equipment; and</i> • <i>Empty loader bucket slowly so that no dust plumes are generated; and</i> • <i>Minimize drop height from loader bucket.</i>
<i>Clearing and grubbing</i>	<ul style="list-style-type: none"> • <i>Maintain stability of soil through pre-watering of site prior to clearing and grubbing; and</i> • <i>Stabilize soil during clearing and grubbing activities; and</i> • <i>Stabilize soil immediately after clearing and grubbing activities.</i> 	<ul style="list-style-type: none"> • <i>Maintain live perennial vegetation where possible; and</i> • <i>Apply water in sufficient quantity to prevent generation of dust plumes.</i>
<i>Clearing forms</i>	<ul style="list-style-type: none"> • <i>Use water spray to clear forms; or</i> • <i>Use sweeping and water spray to clear forms; or</i> • <i>Use vacuum system to clear forms.</i> 	<ul style="list-style-type: none"> • <i>Use of high pressure air to clear forms may cause exceedance of Rule requirements.</i>
<i>Crushing</i>	<ul style="list-style-type: none"> • <i>Stabilize surface soils prior to operation of support equipment; and</i> • <i>Stabilize material after crushing.</i> 	<ul style="list-style-type: none"> • <i>Follow permit conditions for crushing equipment; and</i> • <i>Pre-water material prior to loading into crusher; and</i> • <i>Monitor crusher emissions</i>

Facts in Support of the Finding: Grading and other construction activities produce combustion emissions from various sources such as site grading, utility engines, on-site heavy-duty construction vehicles, equipment hauling materials to and from the site, asphalt paving, and motor vehicles transporting the construction crew. The use of construction equipment on site would result in localized exhaust emissions. Activity during peak grading days typically generates a greater amount of air pollutants than other Project construction activities.

Section 4.3 of the DEIR indicates construction equipment/vehicle emissions during proposed on-site grading periods would exceed the SCAQMD daily thresholds for ROG and NO_x. Although construction of the structures uses different types of equipment on site than during grading periods, similarities do exist in terms of equipment exhaust emissions and fugitive dust emissions. While it is anticipated that total emissions during construction would be below the peak grading day emissions, construction emissions of ROG and NO_x would still exceed the SCAQMD daily threshold. This is a significant impact requiring **Mitigation Measures 4.3.6.2A through 4.3.6.2M**. The use of low-NO_x diesel fuel in construction equipment typically reduces NO_x emissions by 16 percent.¹⁷ Use of this fuel would reduce NO_x emissions but not below SCAQMD thresholds. However, there is no reasonable way to ensure that retrofitted diesel-powered equipment, low- NO_x diesel fuel, and alternative fuel sources would be available during the construction period; therefore, it is not possible to quantify reductions in NO_x emissions that would result from **Mitigation Measures 4.3.6.2A through 4.3.6.2M**. Because no additional feasible mitigation is available to reduce construction-related NO_x emissions, this impact remains significant and unavoidable. Furthermore, there is no feasible mitigation to reduce the ROG

emissions during architectural coating phase to less than the daily threshold. Thus, the emissions during construction of NO_x and ROG will remain significant. (DEIR, pgs. 4.3-22 to 4.3-29)

c. Architectural Coating Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could potentially exceed applicable daily thresholds for VOC.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that Mitigation Measure 4.2.6.4A is incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of this mitigation measures, impacts related to architectural coatings are considered significant and unavoidable.

4.3.6.4A *The Project applicant shall use “Low-Volatile Organic Compounds” paints, coatings, and solvents with a VOC content lower than required under Rule 1113 (not to exceed 150 grams/liter; 1.25 pounds/gallon). High Pressure Low Volume (HPLV) applications of paints, coatings, and solvents shall be consistent with South Coast Air Quality Management District Rule 1113. Alternatively, the Project applicant shall use materials that do not require painting or are pre-painted.*

Facts in Support of the Finding: Architectural coatings contain volatile organic compounds (VOC) that are similar to ROG and are part of the O₃ precursors. Rule 1113 is applicable to any person who applies or solicits the application of any architectural coating within the Basin. Rule 1113 sets limits on the amount of VOC emissions allowed for all types of architectural coatings, along with a time table for tightening the emissions standards in the future.

According to Section 4.3 of the DEIR, approximately 344 pounds of ROG would be generated during the architectural coating phase of the Project. Manual applications such as paintbrush, hand roller, trowel, spatula, dauber, rag, or sponge have 100 percent transfer efficiency. Construction of the Project using the required HVLP spray method reduces the daily VOC emissions to 224 pounds per day during the architectural coatings application period. The amount of VOC generated per day from the application of architectural coating even with the use of the required HVLP spray method (224 pounds) during the application of architectural coatings would exceed the SCAQMD VOC threshold of 75 lbs/day. Emissions associated with architectural coatings can be reduced by using pre-coated/natural-colored

¹⁷ <http://www.aqmd.gov/ceqa/igr/2006/feb/10-01.pdf>, site accessed December 30, 2011.

building materials, water-based or low VOC coating or by using coating transfer or spray equipment with high transfer efficiency. Adherence to SCAQMD Rule 1113 and **Mitigation Measure 4.3.6.4A** would reduce the Project’s architectural coatings emissions impact. However, even with adherence to SCAQMD Rule 1113, the SQAQMD VOC threshold would still be exceeded. Therefore, impacts associated with this issue would remain significant and unavoidable. (DEIR, pg. 4.3-31)

d. Long-Term Project-Related Emissions Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could potentially exceed applicable daily thresholds for operational activities.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that Mitigation Measures 4.3.6.5A and 4.3.6.5B are incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, long term construction emissions-related air quality impacts are considered significant and unavoidable.

4.3.6.5A *Prior to issuance of building permits, the Project applicant shall provide evidence to the City that applicable (as determined by the City) Transportation Demand Management (TDM)/Transportation Control Measure (TCM) strategies such as preferential parking for employee vanpooling/carpooling, bicycle parking facilities (such as bicycle lockers and racks), bus turnouts, and other strategies are incorporated into the design of the proposed Project.*

4.3.6.5B *Prior to issuance of building permits, the Project applicant shall provide evidence to the City that energy-efficient and low-emission methods and features of building construction shall be incorporated into the Project design. These methods and features may include (but are not limited to) the following:*

- *Construction of buildings that exceed statewide energy requirements beyond 20_10 percent of that identified in Title 24, Part 6 Energy Efficiency Standards:*
 - *Use of low-emissions water heaters;*
 - *Use of central water-heating systems;*
 - *Use of energy-efficient appliances;*

- *Use of increase insulation;*
- *Use of automated controls for air conditioners;*
- *Use of energy-efficient parking lot lighting; and*
- *Use of lighting controls and energy-efficient lighting.*
- *Utilize low-VOC interior and exterior coatings during Project repainting.*
- *Provide on-site improvements such as sidewalks or pedestrian walkways to promote pedestrian activity and reduce the amount of vehicle trips.*
- *Installation of skylights and energy-efficient lighting that exceeds California Title 24 standards where feasible, including electronic dimming ballasts and computer-controlled daylight sensors in the buildings.*
- *Shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and building shall be planted at the proposed Project site. These strategies will minimize the heat island effect and thereby reduce the amount of air conditioning required.*
- *Strategies to be considered include fans to assist natural ventilation, centralized water and space conditioning systems, high efficiency individual heating and cooling units, and automatic setback thermostats.*
- *Reduction of energy demand associated with potable water conveyance through the following methods:*
 - *Incorporating drought-tolerant plants into the landscaping palette; and*
 - *Use of water-efficient irrigation techniques.*
- *Energy-efficient low-pressure sodium parking lot lights or lighting equivalent as determined by the City, shall be used;*
- *Buildings shall be oriented north-south where feasible;*
- *Implement an on-site circulation plan in parking lots to reduce vehicle queuing;*

- *Develop a trip reduction plan to achieve 1.5 average vehicle ridership (AVR) for businesses with fewer than 250 employees or multitenant worksites;*
- *Include bicycle parking facilities such as bicycle lockers and racks;*
- *Include showers for bicycling employees use; and*
- *Construct on-site pedestrian facility improvements such as building access that is physically separated from street and parking lot traffic and walk paths.*

Facts in Support of the Finding: Although implementation of **Mitigation Measures 4.3.6.5A** through **4.3.6.5B** may reduce vehicle trips associated with the proposed Project, it is not possible to quantify the reduction in the amount of emissions that may occur. Considering the volume of emissions generated and current commuter habits, it is unlikely the implementation of TDMs/TCMs will result in a reduction of operational Project emissions to below existing SCAQMD thresholds. Application of Leadership in Energy and Environmental Design (LEED) standards and green building design principles could reduce emissions from building operations such as heating and cooling; however, such standards and principles would not reduce emissions of CO, ROG, NO_x, PM₁₀, and PM_{2.5} to below SCAQMD thresholds. No other feasible mitigation measures have been identified to reduce the operational emissions of CO, ROG, NO_x, PM₁₀, and PM_{2.5} to a less than significant level. Because the Project site is located in a nonattainment air basin for criteria pollutants, the addition of air pollutants resulting from operation of the proposed Project would contribute to the continuation of nonattainment status in the Basin. In the absence of mitigation to reduce the proposed Project's emission of contribution of CO, ROG, NO_x, PM₁₀, and PM_{2.5} to below SCAQMD thresholds, long-term air quality impacts resulting from the operation of the proposed Project would remain significant and unavoidable. (DEIR, pgs. 4.2-26 to 4.2.28)

e. Project-Related Localized Operational Emissions Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could potentially exceed applicable long-term operational daily thresholds.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that **Mitigation Measures 4.3.6.6A** and **4.3.6.6B** are incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, long term operational-related emission impacts are considered significant and unavoidable.

4.3.6.6A *Prior to issuance of the first building permit, building and site plan designs shall ensure that the Project's energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of 10 percent until January 1, 2014. For building permits issued after that date, new state energy standards require a 20 percent reduction from 2008 Title 24, Part 6 Energy Efficiency Standards. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and reviewed and approved by the City. The following design features shall be used to fulfill this requirement:*

- *Buildings shall exceed California Title 24 Energy Efficiency performance standards for water heating and space heating and cooling, as deemed acceptable by the City.*
- *Increase in insulation such that heat transfer and thermal bridging is minimized.*
- *Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.*
- *Incorporate dual-paned or other energy efficient windows.*
- *Incorporate energy efficient space heating and cooling equipment.*
- *Interior and exterior energy efficient lighting which exceeds the California Title 24 Energy Efficiency performance standards shall be installed, as deemed acceptable by the City. Automatic devices to turn off lights when they are not needed shall be implemented.*
- *To the extent that they are compatible with landscaping guidelines established by the City, shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and buildings shall be planted at the Project site.*
- *Paint and surface color palette for the Project shall emphasize light and off-white colors which reflect heat away from the buildings.*
- *All buildings shall be designed to accommodate renewable energy sources, such as photovoltaic solar electricity systems, appropriate to their architectural design.*
- *To reduce energy demand associated with potable water conveyance, the Project shall implement the following:*
 - *Landscaping palette emphasizing drought-tolerant plants;*
 - *Use of water-efficient irrigation techniques; and,*

- *U.S. EPA Certified WaterSense labeled for equivalent faucets, high-efficiency toilets (HETs), and water-conserving shower heads.*
- *The Project shall provide secure, weather-protected, on-site bicycle storage/parking.*
- *The Project shall provide on-site showers (one for males and one for females). Lockers for employees shall be provided.*
- *The Project will establish a Transportation Management Association (TMA). The TMA will coordinate with other TMAs within the City to encourage and coordinate carpooling among building occupants. The TMA will advertise its services to building occupants, and offer transit and/or other incentives to reduce greenhouse gas (GHG) emissions. A plan will be submitted by the TMA to the City within two months of Project completion that outlines the measures implemented by the TMA, as well as contact information.*
- *The Project shall provide preferential parking for carpools and vanpools. Locations and configurations of proposed preferential parking for carpools and vanpools are subject to review and approval by the City. Prior to final site plan approval, preferential parking for carpools and vanpools shall be delineated on the Project site plan.*
- *The Project shall provide at least two electric vehicle charging stations. Locations and configurations of proposed charging stations are subject to review and approval by the City. Prior to issuance of the first building permit, stub outs for charging stations shall be indicated on the Project building plans.*
- *Lease/purchase documents shall identify that tenants are encouraged to promote the following:*
 - *Implementation of compressed workweek schedules.*
 - *SmartWay partnership;*
 - *Achievement of at least 20 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of consolidated trips carried by SmartWay carriers until it reaches a minimum of 90 percent of all long-haul trips carried by SmartWay 1.0 or greater carriers.*
 - *Achievement of at least 15 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of long-haul trips carried by SmartWay carriers until it reaches a minimum of 85 percent of all consolidator trips carried by*

SmartWay 1.0 or greater carriers.

- *Use of fleet vehicles conforming to 2010 air quality standards or better.*
- *Installation of catalytic converters on gasoline-powered equipment.*
- *Inclusion of electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets.*
- *Establishment and use of carpool/vanpool programs, complemented by parking fees for single-occupancy vehicles.*
- *Provision of preferential parking for EV and CNG vehicles.*
- *Use of electrical equipment (instead of gasoline-powered equipment) for landscape maintenance.*
- *Use of electric (instead of diesel or gasoline-powered) yard trucks.*
- *Use of SmartWay 1.25 rated trucks.*
- *Each facility operator shall provide regular sweeping of onsite parking and drive areas using street sweepers that comply with applicable SCAQMD Rules.*
- *Each facility operator shall maintain a log of all trucks entering the facility to ensure that, on average, the daily truck fleet meets applicable air quality emission standards. This log shall be available for inspection by City staff at any time.*
- *Each facility operator shall prohibit all vehicles from idling in excess of five minutes in all onsite areas.*
- *Each facility operator shall ensure that onsite staff in charge of keeping the daily log and monitoring for excess idling will be trained and certified in diesel health effects and technologies, such as by requiring attendance at CARB-approved courses.*
- *Each facility operator which upon occupancy does not already operate 2077 and newer trucks shall in good faith be required to apply for funding to replace or retrofit their trucks such as Carl Moyer, VIP, Prop 1B or similar funds. Should funds be awarded, the tenant shall be required to accept and use them.*

4.3.6.6B *The Project shall be designed to facilitate the reduction of waste generated by building occupants that is hauled to and disposed of in landfills by providing easily accessible areas that are dedicated to the collection and storage of recyclable materials including*

paper, cardboard, glass, plastics, and metals. Locations of proposed recyclable materials collection areas are subject to review and approval by the City. Prior to Final Site Plan approval, locations of proposed recyclable materials collection areas shall be delineated on the Project site plan.

f. Cumulative Air Quality Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could potentially result in a cumulatively considerable net increase of criteria pollutants for which the Project region is in non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors).

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts cumulative air quality impacts will remain significant and unavoidable.

Facts in Support of the Finding: Included in Section 4.3 of the DEIR, the Project would contribute criteria pollutants to the area during Project construction. A number of individual projects in the area may be under construction simultaneously with the proposed Project. Depending on construction schedules and actual implementation of projects in the area, generation of fugitive dust and pollutant emissions during construction would result in substantial short-term increases in air pollutants. This would be a contribution to short-term cumulative air quality impacts.

The traffic study included vehicular trips from all present and future projects in the Project vicinity; therefore, the CO hot spot concentrations calculated at these intersections include the cumulative traffic effect. Based on this, no significant cumulative CO impacts would occur.

Long-term operation of the Project would exceed the standards for CO, ROC, NO_x, PM₁₀, and PM_{2.5}. The Basin is in nonattainment for PM₁₀ and ozone at the present time; therefore, the construction and operation of the proposed Project would exacerbate nonattainment of air quality standards for PM₁₀ and ozone within the Basin and contribute to cumulative air quality impacts. Therefore, long-term cumulative air quality impacts are considered to be significant and unavoidable.

The Health Risk Assessment (HRA) conducted for the proposed Project identified the increase in health risks to the nearby sensitive receptors from the proposed Project's air pollutant emissions. This HRA identified that the Project's incremental increase is only a very small fraction of the ambient condition.

Therefore, the concentration of diesel particulates at the Project site is below the established risk threshold. Individuals living and working in southern California may be exposed to levels of diesel emissions that are cumulatively significant; however, that circumstance is not created by the Project.

It is reasonable to anticipate that advancements in truck/transportation technology would reduce the amount of particulate matter in future years. However, a determination of the amount and extent of that reduction in diesel particulate matter from these types of activities is not available at this time. Therefore, in an overabundance of caution, because other cumulative projects in the area would also contribute diesel particulates in the area and because the Riverside area has a level of particulate matter that is above the SCAQMD's recommended cancer risk threshold of 10 in one million, regional impacts associated with diesel particulate matter are considered cumulatively considerable and the proposed Project will make a significant contribution to that cumulative impact. (DEIR, pgs. 4.3-37 to 4.3-38)

4. Land Use and Planning (Individual and Cumulative)

b. Conflict with Applicable Land Use Plans, Policies, or Regulations

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would potentially conflict with various land use plans, policies, or regulations.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce bring the Project into compliance with all land use plans. Accordingly, Project-related conflicts with land use plans will remain significant and unavoidable.

Facts in Support of the Finding: According to Section 4.8 of the DEIR, a discussion of the proposed Project's consistency with the 2007 AQMP has been analyzed in Section 4.3 (Air Quality) of this EIR. "Since the proposed Project will require a General Plan Amendment, the Project has not been considered in preparation of the City's General Plan and therefore is inconsistent with the AQMP. Amendments to the City of Moreno Valley General Plan, zoning reclassification, and plan approval are required before the affected portion of the proposed Project can be implemented. This is a significant impact requiring mitigation." That section of this EIR concluded that, despite the recommended mitigation, Project air quality impacts related to the AQMP would remain significant.

The Project proposes the development of warehouse uses, which would result in an inconsistency with the existing residential zoning on the southern portion of the site, and the BP zone on the northern portion of the site. The development that would occur with the zone change has the potential to create indirect

environmental impacts since the zone change would permit more intense and larger industrial/warehousing uses on the Project site, requiring a discretionary action based on an environmental determination of the Project. These environmental impacts are analyzed through this EIR for each of the environmental topics. The baseline for comparative analysis of environmental impacts would be the existing condition of the Project site. Currently, there is no existing development on the Project site, which represents the worst-case scenario on which the EIR analysis is based. With implementation of the zone change, the proposed Project would be consistent with zoning requirements identified by the City.

According to the latest development plans, the closest loading and unloading operations of the proposed Project (e.g., truck courts) would be located 395 feet northwest of the nearest single-family residence (see plans in Appendix K). In addition, the reconfigured roadways surrounding the Project site would discourage industrial traffic through the residential areas to the southeast. Despite these design characteristics, the fundamental change from residential/business park uses to industrial adjacent to residential represents an incremental adverse effect on the “quality of life” of existing residents in this area, which represents a potentially significant land use compatibility impact. This impact requires the City Council to approve a Zone Change to bring the proposed zoning designations into consistency with the Zoning Map and Municipal Code.

The Compass Growth Vision plan provides a framework for local and regional decision-making regarding growth, transportation, land use, and economic development. The main objective of the Compass Growth Vision is to manage the forecast growth while improving future living conditions for all people within the SCAG area, including live, work, and play activities.

The proposed Project may not be fully consistent with the growth principles of the Compass Growth Vision plan. The nature of the proposed Project allows the transport of commodities from a single area rather than multiple areas, minimizing vehicle trip generation. Conversely, trucks from the proposed Project may increase localized and freeway congestion. The Project eliminates a planned transition of land uses that may incrementally reduce livability in this portion of the City. The proposed Project does support increased prosperity by providing additional (mainly “blue collar”) employment opportunities close to existing housing within the City of Moreno Valley. The proposed Project is located in an area where existing infrastructure (freeway, sewer, electrical, water, etc.) is present. The development of the proposed Project will augment existing services available in the City and region. In these ways, the Project is only partially consistent with the principles of the Compass Growth Vision. (DEIR, pgs. 4.8-5 to 4.8-17)

a. Cumulative Land Use and Planning

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would have a cumulative impact to land use and planning issues.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related cumulative impacts to land use and planning will remain significant and unavoidable.

Facts in Support of the Finding: Implementation of the proposed Project represents establishment of new land uses within the currently undeveloped Project site that would result in an intensification of permitted land uses associated with a land use change from Business Park and Residential to Light Industrial uses, changes to the General Plan Circulation Element, and the loss of the Primary Animal Keeping Overlay (PAKO) associated with the RA-2 zone. The proposed Project is generally consistent with regional plans and planning efforts, although it is not fully consistent with the SCAG's RTP and Compass Blueprint Plan because it eliminates some housing in favor of industrial employment uses. However, it will incrementally improve the City's long-standing jobs/housing ratio, which is also a regional goal of the various SCAG plans. It is also not consistent with existing General Plan land use designations, objectives and policies, nor is it consistent with existing zoning designations on the site. For these reasons, a General Plan Amendment and Zone Change are proposed for consideration by the City.

In addition, the proposed Project represents a fundamental change in community character for this portion of the City (i.e., mixed residential and business park to industrial warehouse buildings), which can represent an incremental adverse change in terms of public perception. This change would be particularly acute if both the proposed Project and the approved West Ridge Commerce Centre (an industrial Project just east of the proposed Project) were built within a relatively short period of time, as they would both follow relatively closely the completion of the Sketchers Logistics Center (another warehouse Project) east of both the proposed Project and the West Ridge Project, on the east side of Redlands Boulevard. Furthermore, the addition of industrial space from the proposed Project and the adjacent West Ridge (industrial) Project may create an over-supply of warehousing space in the City, based on current economic conditions.

The proposed changes in land use will also result in a loss of up to 584 (R-15) multi-family residential units. However, this was determined to be a less than significant Project impact on local housing because the City's Housing Element identifies over twice as much potential affordable housing as the City's

RHNA allocation, so it will not make a significant contribution to a cumulatively considerable impact on regional housing.

Similar to the proposed Project, some of the cumulative projects within the Project vicinity would also require amendments to the existing General Plan and zoning, which may in turn cause additional cumulative impacts. Therefore, planned industrial development in the City may contribute to a cumulatively considerable impact or change in the overall character of the surrounding area, and the proposed Project would make a significant contribution to that change in terms of consistency with adopted land use plans. No feasible mitigation is available to reduce this significant contribution. However, the Project would not make a similar cumulatively considerable land use impact relative to dividing an established community or conflicting with an approved habitat conservation plan. (DEIR, pgs. 4.8-17 to 4.8-18)

5. Transportation

a. Existing (2011) With Project Conditions (Intersection) Traffic and Level of Service Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that **Mitigation Measure 4.11.6.4A** is incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, existing (2011) with Project LOS impacts are considered significant and unavoidable.

Facts in Support of the Finding: As indicated in Section 4.11 of the DEIR, with the addition of Project traffic, the following intersections are forecast to operate at unsatisfactory levels of service: Redlands Boulevard/SR-60 Westbound Ramps (a.m. and p.m. peak hours); and Redlands Boulevard/Eucalyptus Avenue-Fir Avenue (p.m. peak hour).

The Project would contribute to the worsening of the already unsatisfactory LOS at the intersection of Redlands Boulevard/SR-60 Westbound Ramps and would create a significant impact at the intersection of Redlands Boulevard/Eucalyptus Avenue-Fir Avenue. Therefore, mitigation is required at both intersections.

Also, the following segments are forecast to operate at an unsatisfactory level of service in the Existing plus Project condition: SR-60 Eastbound: Pigeon Pass Road to Heacock Street (a.m. and p.m. peak hours); SR-60 Westbound: Heacock Street to Perris Boulevard (a.m. peak hour); and SR-60 Westbound: Perris Boulevard to Nason Street (a.m. peak hour).

The Project would add to the existing unsatisfactory LOS on these three freeway segments; therefore, the addition of Project traffic would be considered a cumulative impact. Neither the Project applicant nor the City has jurisdiction over Caltrans facilities; therefore, implementation of improvements to the freeway mainline cannot be guaranteed. Review of the SCAG Regional Transportation Improvement Plan (RTIP) indicates that there are no projects programmed on SR-60 within the study area. Furthermore, Caltrans does not have a mechanism for development projects to contribute to improvements on State Highways. Therefore, the cumulative impact to these three segments of SR-60 would be significant and unavoidable. (DEIR, pgs. 4.11-19)

b. Opening Year 2016 With Project Conditions (Intersection) Traffic and Level of Service Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that **Mitigation Measure 4.11.6.4B** is incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, existing (2016) with Project LOS impacts are considered significant and unavoidable.

Facts in Support of the Finding: Opening Year (2016) with Project conditions considers the addition of traffic generated by the proposed Project to Opening Year (2016) without Project conditions. Section 4.11 of the DEIR indicates that the following intersections would operate at unsatisfactory LOS: Moreno Beach Drive/SR-60 Westbound Ramps (p.m. peak hour); Redlands Boulevard/SR-60 Westbound Ramps (a.m. and p.m. peak hours); and Redlands Boulevard/Eucalyptus Avenue-Fir Avenue (p.m. peak hour). The Project would have a significant impact at all three intersections, and therefore mitigation would be required.

Freeway mainline and ramp junctions were evaluated in the Opening Year (2016) plus Project condition. The following segments are forecast to operate at an unsatisfactory level of service in the Opening Year (2016) plus Project condition: SR-60 Eastbound: Pigeon Pass Road to Heacock Street (a.m. and p.m. peak hours); SR-60 Eastbound: Heacock Street to Perris Boulevard (p.m. peak hour); SR-60 Westbound: Heacock Street to Perris Boulevard (a.m. peak hour); and SR-60 Westbound: Perris Boulevard to Nason Street (a.m. peak hour).

The Project would add to the existing unsatisfactory LOS on these four freeway segments; therefore, the addition of Project traffic would be considered a cumulative impact. Neither the Project applicant nor the City has jurisdiction over Caltrans facilities; therefore, implementation of improvements to the freeway mainline cannot be guaranteed. Review of the RTIP indicates that there are no projects programmed on SR-60 within the study area. Furthermore, Caltrans does not have a mechanism for development projects to contribute to improvements on State Highways. Therefore, the cumulative impact to these three segments of SR-60 would be significant and unavoidable.

**c. Opening Year 2016 Cumulative With Project Conditions
(Intersection) Traffic and Level of Service Impacts**

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that **Mitigation Measure 4.11.6.4C** is incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, existing (2016) cumulative with Project LOS impacts are considered significant and unavoidable.

Facts in Support of the Finding: According to Section 4.11 of the DEIR, an intersection LOS analysis was conducted to determine Opening Year (2016) Cumulative intersection performance. The addition of Project traffic to the Opening Year (2016) Cumulative scenario would result in conditions exceeding the established LOS standard at the following intersections: Moreno Beach Drive/SR-60 Eastbound Ramps (p.m. peak hour); Moreno Beach Drive/Cottonwood Avenue (p.m. peak hour); Moreno Beach Drive/Alessandro Avenue (p.m. peak hour); Redlands Boulevard/SR-60 Westbound Ramps (a.m. and p.m. peak hours); Redlands Boulevard/SR-60 Eastbound Ramps (a.m. and p.m. peak hours); Redlands Boulevard/Fir Avenue-Eucalyptus Avenue (a.m. and p.m. peak hours); Redlands Boulevard/Encilia

Avenue-Eucalyptus Avenue (p.m. peak hour); and Redlands Boulevard/Alessandro Boulevard (p.m. peak hour).

While these intersections are forecast to exceed satisfactory levels of service in Opening Year (2016) Cumulative with Project conditions, with the exception of the intersection of Redlands Boulevard/Eucalyptus Avenue-Fir Avenue and Redlands Boulevard/Encilia Avenue-Eucalyptus Avenue, these intersections already exceeded established LOS standards in the Opening Year (2016) Cumulative without-Project condition. Because the proposed Project would contribute to and would cause intersections to operate at unsatisfactory levels, mitigation is required.

Freeway mainline and ramp junctions were evaluated in the Opening Year 2016 Cumulative plus Project condition. The following segments are forecast to operate at an unsatisfactory level of service in the Opening Year 2016 Cumulative plus Project condition: SR-60 Eastbound: Pigeon Pass Road to Heacock Street (a.m. and p.m. peak hours); SR-60 Eastbound: Heacock Street to Perris Boulevard (a.m. and p.m. peak hours); SR-60 Eastbound: Perris Boulevard to Nason Street (a.m. and p.m. peak hours); SR-60 Westbound: Heacock Street to Perris Boulevard (a.m. and p.m. peak hours); SR-60 Westbound: Perris Boulevard to Nason Street (a.m. and p.m. peak hours); and SR-60 Westbound: Nason Street to Moreno Beach Drive (a.m. peak hour).

The Project would add to the existing unsatisfactory LOS on these six freeway segments; therefore, the addition of Project traffic would be considered a cumulative impact. Review of the RTIP indicates that there are no projects programmed on SR-60 within the study area. Furthermore, neither the Project applicant nor the City has jurisdiction over Caltrans facilities; therefore, implementation of improvements to the freeway mainline cannot be guaranteed. Furthermore, Caltrans does not have a mechanism for development projects to contribute to improvements on State Highways. Therefore, the cumulative impact to these segments of SR-60 would be significant and unavoidable.

d. Cumulative Transportation Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would have a cumulative significant impact to transportation.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that Mitigation Measure 4.11.6.4C is incorporated into the MMRP for the Project, and will be implemented as specified

therein. However, the Council finds that even with application of these mitigation measures, cumulative transportation impacts are considered significant and unavoidable.

Facts in Support of the Finding: Cumulative impacts associated with traffic volumes are determined based the addition of traffic volumes from approved and pending projects in the area and projected traffic growth to existing traffic volumes. The cumulative analysis forecasts that, with the development of the proposed Project and the cumulative projects, eight intersections would require improvements in order to maintain the City's LOS standard of D.

Those intersections are as follows: Moreno Beach Drive/SR-60 Eastbound Ramps (p.m. peak hour); Moreno Beach Drive/Cottonwood Avenue (p.m. peak hour); Moreno Beach Drive/Alessandro Avenue (p.m. peak hour); Redlands Boulevard/SR-60 Westbound Ramps (a.m. and p.m. peak hours); Redlands Boulevard/SR-60 Eastbound Ramps (a.m. and p.m. peak hours); Redlands Boulevard/Fir Avenue-Eucalyptus Avenue (a.m. and p.m. peak hours); Redlands Boulevard/Encilia Avenue-Eucalyptus Avenue (p.m. peak hour); and Redlands Boulevard/Alessandro Boulevard (p.m. peak hour).

Although the suggested improvements are consistent with the City's General Plan, the Project will be responsible for contributing its fair share toward the funding of the future improvements via payment of the City's DIF. Of these eight affected intersections, five intersections are under the jurisdiction of the City of Moreno Valley.

Three intersections are under the jurisdiction of Caltrans. The improvements identified in **Mitigation Measure 4.11.6.4C** would reduce impacts at these intersections to a less than significant level. However, since the affected freeway ramp intersections are under the jurisdiction of Caltrans, neither the Project proponent nor the City has control over the specific timing of when the improvements would be constructed. It is anticipated that by opening year (2016), improvements at these intersections would not be constructed, as they are not currently planned for near-term construction. Therefore, this cumulative impact in opening year (2016) remains significant and unavoidable until such time as the improvements to this interchange are constructed by Caltrans, WRCOG, and the City of Moreno Valley through the TUMF process.

Because TUMF provides a mechanism for collecting fees from all development projects in the area that would contribute traffic to the existing roadway network, fees for the improvements to the affected freeway intersections would be collected. Therefore, it is anticipated that since these freeway intersection improvements are programmed into the TUMF program, such improvements would be constructed by

future year (2035) and would be able to accommodate future year (2035) traffic levels, resulting in a less than significant cumulative impact.

D. ADEQUACY OF THE RANGE OF PROJECT ALTERNATIVES

The EIR analyzed four alternatives to the Project as proposed, and evaluated these alternatives for their ability to meet the Project’s objectives as described in Section II.B above. CEQA requires the evaluation of a “No Project Alternative” to assess a maximum net change in the environment as a result of implementation of the Project. The No Project Alternative, referred to as the No Project/Existing Zoning Alternative, makes a reasoned assessment as to the future development of the subject site should the Project under consideration not be developed yet the site would be developed in a similar manner to the proposed Project and consistent with existing zoning for the site. A Reduced Intensity Alternative, a Commercial Center (mixed retail/office) Alternative, and an Off-site Alternative were also selected for analysis. CEQA requires the evaluation of alternatives that can reduce the significance of identified impacts and “feasibly attain most of the basic objectives of the proposed Project.” Thus, in order to develop a range of reasonable alternatives, the Project Objectives must be considered when this Council is evaluating the alternatives.

1. Alternative 1 – No Project/Existing Zoning Alternative

Description: The No Project/Existing Zoning Alternative (hereinafter referenced as the “No Project” Alternative), considers the environmental conditions that would occur if the subject site were developed consistent with its existing Specific Plan 208 zoning designation, consisting of an underlying land use of Business Park/Industrial. To allow for quantified comparison of potential impacts, the No Project Alternative was assumed to result in the development of approximately 1,420,000 square feet of industrial warehouse uses on approximately 63 acres and approximately 180,000 square feet of commercial service uses on approximately 8 acres as would be allowed under the existing zoning and land use designations. The commercial service component of this alternative would be located along the frontage of Perris Boulevard while the industrial warehouse uses would occupy the remaining portion of the site. (DEIR, pg. 6-12)

Impacts: The No Build Alternative, as referenced in Section 6.0 of the DEIR, would result in similar impacts when compared to the proposed Project. Similar to the Project, the No Build Alternative would result in less than significant impacts in the following areas: Aesthetics; Williamson Act Contracts/Agricultural Zoning and Forestry Resources; Biological Resources; Cultural Resources; Geology and Soils; Hazards and Hazardous Materials; Hydrology and Water Quality; Land Use; Mineral Resources; Noise; Population and Housing; Public Services; Recreation and Parks; and Utilities and Service Systems. The Project’s significant and unavoidable agricultural impacts, air quality impacts,

climate change and GHG impacts, and transportation impacts would also occur in the same manner as the proposed Project. However, under the No Build Alternative, potential air quality, climate change, and traffic/transportation impacts would be greater than the proposed Project because of the higher trip generation potential of the commercial uses.

Objectives: Under the No Build Alternative, the subject site would develop in a similar manner as the proposed Project, and most of the Project Objectives would be achieved. However, the objectives specifically oriented towards warehouse and industrial uses would be met at a reduced level due to the commercial component included in this Alternative.

Finding: Under the No Build Alternative, the Project site would be developed with approximately 1,420,000 square feet of industrial warehouse uses on approximately 63 acres and approximately 180,000 square feet of commercial service uses on approximately 8 acres. This Alternative would result in the same significant and unavoidable impacts associated with agricultural resources, air quality, climate change and greenhouse gases, and traffic that have been identified within the DEIR. However, potential air quality, climate change, and traffic/transportation impacts would be greater than the proposed Project because of the higher trip generation potential of the commercial uses. Because the No Build Alternative results in an increase in potential significant and unavoidable impacts in comparison to the proposed Project, the City Council hereby rejects the No Build Alternative.

2. Alternative 2 – Reduced Intensity Alternative

Description: The Reduced Intensity Alternative assumes the same general land use type as the Project, but at a development intensity scoped to reduce the extent of regional threshold exceedances for air pollution and greenhouse gas emissions that would otherwise result from the Project. In that the same type of development is proposed, most if not all the Project Objectives would be achieved to a certain extent but at a reduced level. Implementation of the Reduced Intensity Alternative would yield approximately 1,212,100 square feet of development, a reduction of approximately 25 percent or approximately 434,033 square feet, when compared to the approximately 1,616,133 square-foot Project analyzed in the EIR.

Impacts: Under the Reduced Intensity Alternative, impacts related to agricultural resources would be similar to the proposed Project as the same amount of land would be disturbed. Similarly, impacts related to short-term construction-related air quality would be similar to the proposed Project as the same amount of land would be disturbed and the same mix of equipment would be utilized. Because of the decrease in vehicle trips achieved under this alternative, impacts to the operation of local roadways and intersections

would be proportionally reduced from what was identified for the proposed Project; however, long-term traffic impacts to state freeway segments and merge/diverge areas would remain significant and unavoidable. Long-term operational-related air quality impacts would be reduced in magnitude when compared to the Project but would remain significant and unavoidable. Impacts associated with the generation of greenhouse gas emissions would also be reduced proportionate to the reduction in building area in comparison to the proposed Project, but would remain significant and unavoidable.

Objectives: The Reduced Intensity Alternative would, to some degree, realize the Project Objectives. However, because the scale of the development would be diminished under this Alternative, the resulting generation of sales tax, the number of jobs created, and potential second tier economic benefits to the City and region (e.g. wholesale/retail support sales; temporary and long-term construction jobs, and facilities maintenance employment opportunities) would likely be reduced when compared to the Project.

Finding: Under the Reduced Intensity Alternative, a light industrial warehouse/ distribution facility reduced by approximately 25 percent (or 434,033 square feet) would be realized as compared to the Project. The City Council hereby finds that the Reduced Intensity Alternative will not avoid or substantially reduce the significant and unavoidable agricultural resources impacts, construction and operational air quality impacts, and cumulative greenhouse gas impacts identified in the EIR. This Alternative would not meet Project Objectives to the same extent as the Project. Furthermore, the scale of the reduction in intensity would not maximize or realize the economic potential of the site. Based on the reduced scope of development, the Reduced Intensity Alternative would diminish capacities and capabilities to satisfy existing and projected unmet market demands within the trade area. The Reduced Intensity Alternative would also result in comparatively fewer opportunities to provide jobs, as compared to the Project. Therefore, the City Council rejects the Reduced Intensity Alternative on the basis that it fails to avoid or substantially reduce the significant and unavoidable impacts of the Project and does not meet the Project Objectives as well as the Project. The City Council also finds that each of these considerations constitutes a ground for rejecting this alternative that is independently sufficient to support the City Council's rejection of this alternative.

3. Alternative 3 - Commercial Center (Mixed Commercial/Office)

Description: As identified in Section 6.0 of the DEIR, the Commercial Center Alternative would result in the development of commercial service and office uses on the Project site. Although business and professional offices, financial institutions, and medical clinics are permitted in SP208, they are permitted only in the industrial support areas while commercial service-oriented uses are permitted throughout the

SP208 Industrial designation. For this reason, the General Plan and zoning designations for the site would need to be amended to accommodate the business and professional offices. Permitted commercial service uses include, but are not limited to, Automotive Sales/Rental/Leasing & Accessories, Automotive/Truck Repair, Business Supply/Equipment Sales/Rental & Services, and Repair Services. Approximately 760,000 square feet of commercial service uses would be developed on approximately 35 acres. The balance of the site (35 acres) would be developed with up to approximately 760,000 square feet of office uses.

Impacts: As identified in Section 6.0 of the DEIR, the Commercial Center Alternative would result in similar impacts for the following eight environmental issues: Agriculture and Forestry Resources; Biological Resources; Cultural Resources; Geology and Soils; Hazards and Hazardous Materials; Hydrology and Water Quality; Land Use and Planning; and Mineral Resources. Because of the increase in vehicle trips under this alternative, impacts to the operation of local roadways and intersections would be proportionally greater than what was identified for the proposed Project. Long-term traffic impacts to state freeway mainline segments and merge/diverge areas would remain significant and unavoidable. Under the Commercial Center Alternative, impacts related to short-term construction emissions would be similar to the proposed Project as the same amount of land would be disturbed and the same mix of equipment would be utilized. Long-term operational-related air quality emissions would be increased in magnitude because of the increase in vehicle trips when compared to the Project and would remain significant and unavoidable. Traffic-related noise would be increased in magnitude but would be similarly mitigated like the proposed Project and would remain less than significant.

Objectives: Under this alternative, some of the proposed Project objectives are not met as warehouse uses would not be built. However, development of this alternative would provide new employment opportunities for residents of Moreno Valley, but not within the industrial employment sector.

Findings: Under the Commercial Center Alternative, development of commercial service and office uses would occur. This Alternative would have similar impacts that have been identified within the DEIR. However, the Commercial Center Alternative would result in an increase in trip generation in comparison to the proposed Project, and would result in an increase in the severity of the significant and unavoidable impacts to construction and operational air pollution emissions, climate change and greenhouse gas emission, and traffic. The City Council finds that the Commercial Center Alternative would fulfill some but not all of the Project Objectives. Moreno Valley residents would have more opportunities for employment but a warehouse would not be built. Because the Commercial Center Alternative will not fulfill the primary objective of the Project and the severity of significant and unavoidable impacts would

be increased in comparison to the proposed Project, the Council hereby rejects the Commercial Center Alternative.

4. Alternative 4 - Off-Site Location

Description: As identified in Section 6.0 of the DEIR, this alternative would result in the same intensity of development of approximately 1,616,133 square feet of warehouse uses on approximately 70.3 acres. The alternative Project site identified by the City is bounded by Kramaria Street (extended) to the north, vacant and partially developed property and March Air Reserve Base to the west, Indian Street to the east, and the Perris Valley Storm Drain and vacant land to the south. The off-site location is approximately 1.0 miles northwest of the Project site and is within the same Industrial Area Specific Plan as the proposed Project. This alternative off-site property is not owned or under the control of the applicant. The off-site location is currently zoned SP 208 I and is designated Business Park in the City's General Plan, identical to the proposed Project development of this site would not require soil import, inherently reducing impacts from air pollution emissions during construction.

Impacts: Section 6.0 of the DEIR, identifies nine environmental issues that would have similar impacts as the proposed Project. These issues are: Cultural Resources; Geology and Soils; Hydrology and Water Quality; Land Use and Planning; Mineral Resources; Population and Housing; Public Services; Recreation; and Utilities and Service Systems. With the Off-Site Location Alternative, impacts related to air quality and traffic impacts would be similar to those identified with the proposed Project. Short-term construction and long-term air quality operational and climate change/greenhouse gas emissions impacts under this alternative would remain significant and unavoidable and would result in similar conditions as identified for the proposed Project. Additionally, due to adjacent sensitive receptors, potential impacts to these receptors would be greater in magnitude when compared to the proposed Project. Similarly, noise impacts would be greater in magnitude due to the adjacent sensitive receptors. Operational traffic would result in increased traffic on vanity roadways and may impact different intersection and roadways in comparison to the proposed Project. Under this Alternative, impacts to agricultural resources would be eliminated.

Objectives: The Off-Site Alternative would meet most of the Project objectives. The location of the Off-Site Alternative further north of Harley Knox Boulevard would not meet the Project objectives of locating distribution services near transportation corridors and clustering such uses near the state highway system.

Finding: Under the Off-Site Alternative, development of the warehouse would occur in a different location. This Alternative would have similar impacts that have been identified within the DEIR. And most of the objectives of the proposed Project would be met, would not meet the Project objectives of locating distribution services near transportation corridors and clustering such uses near the state highway

system. The Council finds that the Off-Site Alternative would have similar impacts to all environmental issues except for agriculture because this Alternative would eliminate the significant and unavoidable impacts to agricultural resources.. Because the Off-Site Alternative will not substantially reduce the environmental impact of the Project and it would not meet the Project objectives of locating distribution services near transportation corridors and clustering such uses near the state highway system, the Council hereby rejects the Off-Site Alternative.

5. Alternatives Considered and Rejected

A variety of additional alternatives were considered as part of the DEIR's Alternatives Analysis. (DEIR, pgs. 6-3 through 6-5) Three possible alternatives were considered and rejected because they could not accomplish the basic objectives of the Project or they were considered infeasible. Per the *CEQA Guidelines* (Section 15126.6(c)), factors that may be considered when addressing the feasibility of alternatives include failure to meet most of the stated Project objectives, infeasibility, or inability to avoid significant environmental effects. The purpose of the proposed Project is to provide for and expand employment and revenue opportunities within the City of Moreno Valley. The proposed Project would expand employment options in a location that is convenient to existing transportation corridors, convenient to existing and future City residents and would augment the City's economic base. The following provides and discussion of the three development scenarios that were considered and rejected as potential alternatives to implementation of the proposed Project based on Section 15126.6 of the *CEQA Guidelines* because they did not feasibly attaining most of the basic objectives of the Project while reducing or avoiding any of the significant effects of the proposed Project:

- No Build Alternative: No development would take place within the Project limits and no impacts would occur. However, disallowing development of the site, as suggested by this alternative, would not fulfill the primary objectives of the proposed Project and the site would likely be developed in accordance with existing zoning should the Project not move forward. Retention of the Project site in its current condition would not expand employment opportunities to residents of the City. Retaining the site in its current undeveloped condition would not generate the revenue (e.g., property tax) that could augment the City's current revenue stream. Therefore, the No Build Alternative was rejected from further consideration in the EIR.
- Residential Alternative: The Residential Alternative would develop the 71-acre Project site with approximately 355 single-family units based on the City's R5 zone. The R5 zone was utilized as this is the zoning designation of the nearest residential uses to the north along Perris Boulevard

and north of the Perris Valley Storm Drain channel. A zone change, General Plan Amendment, and Specific Plan Amendment would be required for this alternative to change the Project site from its existing Business Park/Light Industrial (BP) General Plan designation and Industrial Area Plan (SP208 I) zoning designation to a residential R5 designation. Furthermore, a Specific Plan Amendment would be required to remove the Project site from the underlying Industrial Specific Plan 208. Since the Residential Alternative consists only of residential uses, employment-generating opportunities would not occur aside from temporary construction work, which would be filled predominantly by those already residing in the area. The residential uses would produce demand for public services that would exceed the amount of municipal revenues it would generate. The Project's full potential to utilize the area's close proximity to various freeways and transportation corridors would not be realized as only residential uses would occur under the Residential Alternative. Additionally, the development of the entire 71-acre Project site under this alternative would result in the placement of the residential uses within an area planned for industrial uses which could result in additional adverse impacts such as exposure to air pollutants, noise, and land use incompatibilities. This alternative has been rejected because it would result in greater impacts and would not satisfy the basic City employment generating objectives for development of the Project site.

- Mixed Commercial/Residential Alternative: The Mixed Commercial/Residential Alternative would develop the 71-acre Project site with approximately 690,000 square feet of Community Commercial uses and 532 multiple-family units. A zone change, General Plan Amendment, and Specific Plan Amendment would be required for this alternative to change the Project site from its existing Business Park/Light Industrial (BP) General Plan designation and SP208 I zoning designation to a residential designation and commercial designation. Additionally, a Specific Plan Amendment would be required to remove the Project site from the underlying Industrial Specific Plan 208. While the commercial component of this Alternative would utilize the Project site's close proximity to nearby transportation corridors, the development of the remainder of the site with residential uses would not provide the varied employment and service uses and revenue associated with the proposed Project. The development of approximately half of the Project site under this alternative with residential uses would result in the placement of the residential uses adjacent to SP208 I industrial/business park uses which could potentially result in additional adverse impacts such as exposure to air pollutants, noise, and land use incompatibilities. The residential component of this alternative would produce demand for public services that would exceed the amount of municipal revenues it would generate, and there would be little to no

employment opportunities created. Therefore, the mixed commercial/residential alternative would not meet the Project objectives of providing new employment and revenue generation options in close proximity to local consumers to the same degree as the proposed Project. The employment opportunities and economic benefits derived from the proposed Project are superior to the Mixed Commercial/Residential Alternative. This alternative has been rejected because it would result in greater impacts and would not satisfy the basic City employment generating objectives for development of the Project site.

6. Environmentally Superior Alternative

As explained by Section 6.0 in the DEIR, Alternative 2 (Reduced Intensity Alternative) reduces the severity of Project related air quality impacts. However, long-term air quality impacts, would remain significant after mitigation for this alternative for ROG, NO_x, PM₁₀ and PM_{2.5}. In a similar manner, Alternative 2 would reduce the volume of daily traffic trips when compared to the proposed Project; however, such impacts to state freeway mainline segments and merge/diverge areas would remain significant and unavoidable until freeway improvements are completed by the state. Alternative 2 would also reduce the quantity of greenhouse gas emission when compared to the proposed Project; however, impacts to Climate Change would remain significant and unavoidable. The remaining environmental issues would ultimately be similar to the proposed Project through adherence to existing standards and mitigation measures. Based on the analysis in Section 6.0 and the summary contained in Table 6.K, Alternative 2, the Reduced Intensity Alternative, is the environmentally superior alternative. The amount of development under this alternative would be reduced when compared to the proposed Project; however, the Alternative 2 would not satisfy several of the Project objectives because it would reduce the level at which it meets the employment generating Project objectives. Because the Reduced Intensity Alternative allows the development of warehouse uses and the provision of new employment opportunities, it meets many of the City's stated Project objectives, while at the same time reduces the impacts associated with the proposed Project. However, because of the lower industrial density, the Alternative fails to meet several key employment generating objectives related to density efficiencies in the same manner as the proposed Project.

E. GROWTH-INDUCING IMPACTS

CEQA requires a discussion of ways in which the proposed Project could be growth inducing. Specifically, CEQA Guidelines Section 1512602(d) states that an EIR must describe the ways

in which the proposed Project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment.

Section 5.0 of the DEIR identifies the extent to which the new jobs created by a Project are filled by existing residents is a factor that tends to reduce the growth inducing effect of a Project. Construction of the proposed Project will create short-term construction jobs. Due to the existing high unemployment levels that exist in the City, the potential exists for these short-term positions to be filled by workers who, for the most part, reside in the City or neighboring communities to the Project area. Therefore, construction of the proposed Project will not generate a permanent increase in population within the Project area.

As previously identified, the proposed Project is expected to employ 646 people. These full-time positions are also anticipated to be filled by workers who, for the most part, reside in the Project area due to high unemployment levels that exist in the City. Operations of the proposed Project will not generate a permanent increase in population within the Project area.

The area surrounding the Project site is governed by the City of Moreno Valley General Plan and the area is guided by Specific Plan 208. Specific Plan 208 guides land use within the Project area to ensure that new development and redevelopment is implemented consistent with the land use policies, controls, and standards contained in Specific Plan 208. Any development of remaining undeveloped land adjacent to the Project site would require its own discretionary approvals and is not reliant on the proposed Project. However, development of the Project site may lead to indirect growth in the Specific Plan area by making available the extension of infrastructure such as water, sewer, drainage, etc. This growth has been planned for and is guided by Specific Plan 208.

The proposed Project would occur within an area currently designated for industrial uses. The proposed Project would not require a General Plan Amendment nor does it require a change in the underlying zoning designation. In addition, the Project reflects the City of Moreno Valley's vision for the area and is consistent with Specific Plan 208. Land uses surrounding the Project site would be in conformance with the City's General Plan and Specific Plan 208. Impacts to population and housing are less than significant; see Section 13 Population and Housing of the Initial Study (Appendix A of the DEIR).

The proposed Project would not eliminate a constraint for development of an approved Project within the City of Moreno Valley. There are no projects in the City of Moreno Valley or surrounding cities that have been approved but are conditioned or dependent on additional improvements

at the Project site. Specific Plan 208 guides land uses surrounding the Project site to ensure compatibility between existing operations and adjacent surrounding development. Additionally, the proposed Project would not add capacity to urban services or infrastructure that would be utilized by other Project proponents in the surrounding area.

The proposed Project would not result in any significant pressure to redevelop the area around the Project site at a higher density. As previously stated, the development of remaining undeveloped land adjacent to the Project site is independent and not reliant on the proposed Project. Therefore, implementation of the proposed Project would not result in redevelopment of adjacent lands at a higher intensity than already prescribed in the City of Moreno Valley's General Plan and Specific Plan 208.

F. SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL CHANGES

Public Resources Code Section 21100(b)(2)(B) and CEQA Guidelines Sections 15126(c), 15126.2(c), and 15127, require that for certain types or categories of projects, an EIR must address significant irreversible environmental changes that would occur should the Project be implemented. As presented at CEQA Guidelines Section 15127, the topic of Significant Irreversible Environmental Changes needs to be addressed in EIRs prepared in connection with any of the following activities:

- (a) The adoption, amendment, or enactment of a plan, policy, or ordinance of a public agency;
- (b) The adoption by a local agency formation commission of a resolution making determinations; or
- (c) A Project which will be subject to the requirements for preparing of an environmental impact statement pursuant to the requirements of the National Environmental Policy Act of 1969, 42 U.S.C. Sections 4321-4347.

The Project does not trigger any of the conditions cited in Guidelines §15127. Nonetheless, this EIR analysis addresses any significant irreversible environmental changes which would be involved in the proposed action should it be implemented [Guidelines, Sections 15126(e) and 15127]. An impact would fall into this category if:

- The Project would involve a large commitment of nonrenewable resources;

- The primary and secondary impacts of the Project would generally commit future generations of people to similar uses;
- The Project involves uses in which irreversible damage could result from any potential environmental incidents associated with the Project; and/or
- The proposed consumption of resources is not justified (e.g., the Project could waste energy).

Determining whether the proposed Project may result in significant irreversible effects requires a determination of whether key resources would be degraded or destroyed in such a way that there would be little possibility of restoring them. The Project site is generally fallow agricultural land with the site historically used for sod farming operations. However, as identified within the City's General Plan, the City anticipates the eventual conversion of agricultural uses to urban uses and the proposed Project would permanently alter the site by converting predominantly agricultural uses to urban uses. This is a significant irreversible environmental change that would occur as a result of Project implementation. Because no significant mineral resources were identified within the Project limits, no significant impacts related to these issues would result from development of the Project site. Natural resources in the form of construction materials would be utilized in the construction of the proposed Project and energy resources in the form of electricity and natural gas would be used during the long-term operation of the Project; however, their use is justified in supporting the City's planned use of the site and is not expected to negatively impact the availability of these resources.

In addition, this industrial warehouse Project, in concert with the other built or approved industrial warehouse projects, will fundamentally change the character and land use pattern of this portion of the City. Many of the Project-specific impacts are addressed, as outlined above, but the change in the use of the land from agricultural to industrial represents a substantial irreversible change for this area. However, this is an intended change as verified by the City's General Plan land use designations and zoning for the area. (DEIR pgs. 5-2 and 5-3)

VI. STATEMENT OF OVERRIDING CONSIDERATIONS

The Moreno Valley City Council adopts this Statement of Overriding Considerations with respect to the significant unavoidable impacts associated with adoption of the Project as addressed in the EIR, specifically:

1. Aesthetics - Scenic Vistas;
2. Aesthetics - Scenic Resources and Scenic Highways;
3. Aesthetics - Existing Visual Character or Quality of Site and its Surroundings;
4. Aesthetics – Cumulative;
5. Agricultural Impacts - Conversion of State Designated Farmland;
6. Agricultural Impacts - Conversion of Farmland to a Non-Agricultural Use;
7. Agricultural Impacts - Cumulative;
8. Air Quality Impact - Air Quality Management Plan Consistency;
9. Air Quality Impact - Equipment Exhaust from Construction-Related Activities;
10. Air Quality Impact - Architectural Coatings;
11. Air Quality Impact - Long-Term Project-Related Emissions;
12. Air Quality Impact - Project-Related Localized Operational Emissions;
13. Air Quality Impact - Cumulative;
14. Land Use and Planning Impact - Conflict with Applicable Land Use Plans, Policies, or Regulations;
15. Land Use and Planning - Impact Cumulative;
16. Transportation Impact - Existing With Project Conditions (Intersection) Traffic and Level of Service;

17. Transportation Impact - Opening Year With Project Conditions (Intersection) Traffic and Level of Service;
18. Transportation Impact - Opening Year 2016 Cumulative With Project Conditions (Intersection) Traffic and Level of Service; and
19. Transportation Impact – Cumulative.

The Moreno Valley City Council hereby declares that, pursuant to CEQA Guidelines Section 15093, the City Council has balanced the benefits of the proposed Project against any significant and unavoidable environmental impacts in determining whether to approve the proposed Project. If the benefits of the proposed Project outweigh the unavoidable adverse environmental impacts, those impacts are considered “acceptable.”

The City Council hereby declares that the EIR has identified and discussed significant effects that may occur as a result of the Project. With the implementation of the mitigation measures discussed in the EIR, these impacts can be mitigated to a level of less than significant except for the unavoidable and significant impacts discussed in Section V(C) herein.

The City Council hereby declares that it has made a reasonable and good faith effort to eliminate or substantially mitigate the potential impacts resulting from the Project.

The City Council hereby declares that to the extent any mitigation measures recommended to the City are not incorporated, such mitigation measures are infeasible because they would impose restrictions on the Project that would prohibit the realization of specific economic, social, and other benefits that this City Council finds outweigh the unmitigated impacts.

The City Council further finds that except for the Project, all other alternatives set forth in the EIR are infeasible because they would prohibit the realization of the Project objectives and/or specific economic, social or other benefits that this City Council finds outweigh any environmental benefits of the alternatives or the other alternatives do not substantively reduce the severity of unavoidable and significant impacts.

The City Council hereby declares that, having reduced the adverse significant environmental effects of the Project, to the extent feasible by adopting the proposed mitigation measures, having considered the entire administrative record on the Project and having weighed the benefits of the Project against its unavoidable significant impact after mitigation, the City Council has determined that the social,

economic and environmental benefits of the Project outweigh the potential unavoidable significant impacts and render those potential significant impacts acceptable based on the following considerations:

- The Project will provide development consistent municipal standards, codes and policies;
- The Project provides development that improves and maximizes economic viability of a vacant site by transitioning the Project site into a productive light industrial use;
- The Project creates additional employment-generating opportunities for the City of Moreno Valley and surrounding communities; and
- The Project provides adequate infrastructure and public amenities, including upgrading and widened streets, signal upgrades and utility improvements.

As the CEQA Lead Agency for the proposed action, the City of Moreno Valley has reviewed the Project description and the alternatives presented in the EIR, and fully understands the Project and Project alternatives proposed for development. Further, this Council finds that all potential adverse environmental impacts and all feasible mitigation measures to reduce the impacts from the Project have been identified in the Draft EIR, the Final EIR and public testimony. This Council also finds that a reasonable range of alternatives was considered in the EIR and this document, Section V(E) above, and finds that approval of the Project is appropriate.

This Council has identified economic and social benefits and important policy objectives, Section V above, which result from implementing the Project. The Council has balanced these substantial social and economic benefits against the unavoidable significant adverse effects of the Project. Given the substantial social and economic benefits that will accrue from the Project, this Council finds that the benefits identified herein override the unavoidable environmental effects.

California Public Resource Code 21002 provides: “In the event specific economic, social and other conditions make infeasible such Project alternatives or such mitigation measures, individual projects can be approved in spite of one or more significant effects thereof.” Section 21002.1(c) provides: “In the event that economic, social, or other conditions make it infeasible to mitigate one or more significant effects of a Project on the environment, the Project may nonetheless be approved or carried out at the discretion of a public agency...” Finally, California Administrative Code, Title 4, 15093 (a) states: “If the benefits of a proposed Project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered „acceptable.□”

The City Council hereby declares that the foregoing benefits provided to the public through approval and implementation of the Project outweighs the identified significant adverse environmental impacts of the Project that cannot be mitigated. The City Council finds that each of the Project benefits outweighs the unavoidable adverse environmental impacts identified in the EIR and, therefore, finds those impacts to be acceptable.

Facts in Support of the Finding (Overriding Considerations). The ProLogis project has four overriding considerations: (1) development consistent with City standards; (2) economic viability; (3) employment generation; and (4) infrastructure improvements.

(1) Consistency with City Goals. The City's Development Review process will assure the proposed development is consistent with the City's General Plan, zoning, and Municipal Code upon approval of the requested General Plan Amendment, Zone Change, and other development applications. The analysis in the DEIR indicates the ProLogis project is generally consistent with the following development goals of the City's General Plan and the requirements of the City zoning code and municipal code for the five environmental issues that were determined to be significant even after implementation of proposed mitigation:

- **DEIR Section 4.1 Aesthetics - Consistency with General Plan Policies.** The project is consistent with Objective 2.5 and Policy 2.5.1 by providing industrial uses near SR-60 and within the FAR limits outlined. The project does not appear to be fully consistent with Policies 2.5.2 and 2.5.3 because it places industrial uses adjacent to lower density residential uses without the typical buffering land uses (e.g., higher density residential or business park). The project is consistent with Policy 2.5.4 as it precludes industrial traffic through residential areas by eliminating Quincy Street south of the new Eucalyptus Avenue road alignment and eliminating the new Encilia Avenue (old Eucalyptus Avenue) west of the Quincy Channel. The project is generally consistent with Objective 2.10 and Policies 2.10.1 through 2.10.5 by providing detailed architectural and landscaping themes for the proposed buildings and grounds, including adjacent to SR-60. The project is consistent with Policies 2.10.7 and 2.10.8 relative to lighting, although the tower accent features at the corners of the buildings may produce new off-site glare. The project appears to be consistent with Policy 2.10.9 as its fences and walls will incorporate landscaping and materials designed to reduce graffiti (see design details in DEIR Appendix K). The project may not be fully consistent with Policy 2.10.11 in terms of buffering for nearby residential uses, although it does comply with the new Municipal Code requirement of a 250-foot

buffer between industrial and residential uses. Policies 2.10.12 and 2.10.13 require screening for parking areas and the project is consistent with that policy.

- **DEIR Section 4.1 Aesthetics -Consistency with Municipal Code Requirements.** The previous analysis indicates the project is not consistent with Objective 7.7 and Policies 7.7.4 and 7.7.5 as it does not fully preserve significant views and vistas, including those along SR-60. Signage will be consistent with Municipal Code requirements so it is consistent with Policy 7.7.3. Finally, the project appears to be consistent with the various Municipal Code requirements for the proposed land uses outlined in Section 4.1.2 related to landscaping, setbacks, parking, storage, etc.
- **DEIR Section 4.2 Agriculture – Consistency with General Plan Policies -** The Moreno Valley General Plan policies and zoning designations support agriculture only as an interim use, and no land in the City is designated solely for agricultural use or for agricultural preservation. Despite this, the proposed zone change would conflict with the existing zone and Primary Animal Keeping Overlay (PAKO) designation for this portion of the project site; however, this change would remove less than one percent of the PAKO-designated land and would not represent a significant loss of land under this overlay designation. Based on the recent trends of urban development in the City, development pressures will eventually lead to the conversion of agricultural land in the City to suburban uses.

The City’s General Plan recognizes that these conversions will eventually occur, and the proposed project is a demonstration of that trend. The proposed project would result in the conversion of Prime Farmland, development of this site and the surrounding area is consistent with the long-term vision of the City as outlined in the General Plan. The Moreno Valley General Plan policies support agriculture as an interim use, and no land in the City is designated for agricultural preservation.

- **DEIR Section 4.3 Air Quality – Consistency with General Plan Policies –** Chapter 9 of the City’s General Plan defines goals and policies related to air quality within the City of Moreno Valley. The specific policies of the General Plan that are relevant to the proposed project are as follows:
 - **Objective 6.7:** *Reduce mobile and stationary source air pollutant emissions.*

- **Policy 6.7.1:** *Cooperate with regional efforts to establish and implement regional air quality strategies and tactics.*
- **Policy 6.7.5:** *Require grading activities to comply with South Coast Air Quality Management District's Rule 403 regarding the control of fugitive dust.*
- **Policy 6.7.6:** *Require building construction to comply with the energy conservation requirements of Title 24 of the California Administrative Code.*

The proposed project site is located in an urbanizing area of the City along SR-60 which accommodates traffic in the area. In addition, the proposed warehouse uses would be within walking distance of existing homes and commercial areas in the local vicinity. The proposed project will incrementally reduce overall vehicle miles traveled (VMT) in the region by introducing employment into an area (i.e., the City of Moreno Valley) with a low jobs/housing ratio as monitored by the Southern California Association of Governments (SCAG). This reduction in VMT will consequently reduce air pollutant emissions so the project is consistent with City General Plan Objective 6.7 and Policies 6.7.1. Mitigation Measures 4.3.6.2A through 2M to control dust, and Mitigation Measure 4.3.6.5B requires the project to exceed Title 24 energy conservation requirements, so the project is consistent with General Plan Policies 6.7.5 and 6.7.6.

- **DEIR Section 4.8 Land Use and Planning – Consistency with General Plan Policies – Section 9.2.2 Community Development of the General Plan contains the following goals and objectives;**
 - *Goal 2.1: A pattern of land uses which organizes future growth, minimizes conflicts between land uses, and which promotes the rational utilization of presently underdeveloped and undeveloped parcels.*
 - *Goal 2.2: An organized, well-designed, high quality, and functional balance of urban and rural land uses that will meet the needs of a diverse population, and promote the optimum degree of health, safety, well-being, and beauty for all areas of the community, while maintaining a sound economic base.*
 - *Objective 2.1: Balance the provision of urban and rural lands within Moreno Valley by providing adequate land for present and future urban and economic development needs, while retaining the significant natural features and the rural character and lifestyle of the northeastern portion of the community.*
 - *Objective 2.5: Promote a mix of industrial uses which provide a sound and diversified economic base and ample employment opportunities for the citizens of Moreno Valley with the establishment of industrial activities that have good access to the regional*

transportation system, accommodate the personal needs of workers and business visitors; and which meets the service needs of local businesses.

- *Policy 2.5.1: The primary purpose of areas designated Business Park/Light Industrial is to provide for manufacturing, research and development, warehousing and distribution, as well as office and support commercial activities. The zoning regulations shall identify the particular uses permitted on each parcel of land. Development intensity should not exceed a Floor Area Ratio of 1.00 and the average floor area ratio should be significantly less.*
- *Policy 2.5.2: Locate manufacturing and industrial uses to avoid adverse impacts on surrounding land uses.*
- *Policy 2.5.3: Screen manufacturing and industrial uses where necessary to reduce glare, noise, dust, vibrations and unsightly views.*
- *Policy 2.5.4: Design industrial development to discourage access through residential areas.*

In addition, General Plan Section 9.6.2 Safety Element contains the following applicable objective:

- *Objective 6.6: Promote land use patterns that reduce daily automotive trips and reduce trip distance for work, shopping, school, and recreation.*

The City's adopted General Plan Land Use Map designations for the existing project area largely reflect the existing land use pattern. The northern portion of the proposed project site is designated Business Park/Light Industrial, while the southern area, south of proposed Eucalyptus Avenue, is designated Residential in the City's General Plan. The primary purpose of areas designated Business Park/Light Industrial is to provide for manufacturing, research and development, warehousing and distribution, as well as office and support commercial activities.¹⁸ The proposed project is not consistent with the current General Plan and zoning, and includes a General Plan Amendment (and related Zone Change) so the project will be consistent with the General Plan. Impacts relative to the City's Primary Animal Keeping Overlay (PAKO) are addressed in the discussion of DEIR Section 4.2 Agriculture.

General Plan Objective 2.1 and Policy 2.5.1 require a transition of buffer of land uses between residential and industrial uses. In this area, the R5 and R15 zone areas in the southern portion of the site act

¹⁸ Moreno Valley General Plan. Chapter 9 Goals and Objectives. Policy 2.5.1. Pg. 9-7.

as a buffer from the BP uses near the freeway and the RA2 residential uses. It should be noted that, while there is an existing transition of land uses from BP to R2 in the vicinity of the project site, it is not the function of either the R-5 or R-15 zones to act as a buffer between non-residential land uses and low density residential uses.

The project provides light industrial uses close to freeway access that will generate short- and long-term employment for the City while minimizing conflicts with existing residential land uses to the southeast through planned changes in the circulation network, so it is consistent with Land Use Goals 2.1 and 2.2, Objectives 2.1 and 2.5, Policies 2.5.1 through 2.5.4, and Safety Objective 6.6. In addition, the proposed project is generally consistent with SR-60 East Corridor Study and can accommodate limited expansions of the Moreno Valley Auto Mall if necessary in the next two years.

- Relative to the City’s Housing Element, the proposed project would result in the loss of potential housing units as the General Plan Amendment (GPA) and Zone Change (ZC) request a change to industrial uses. Development of the site as proposed could eliminate as many as 681 housing units from the site, with 80 percent of those units (548) at a density that is generally accepted as helping to promote housing affordability (15 units per acre) on a regional level. The loss of the (max) potential 548 units (R-15 land) from the proposed project would reduce the total potential affordable units from 20,894 to 20,346 or still 2.7 times the RHNA number. The proposed project would not reduce the City’s potential pool of affordable housing to below its RHNA number; therefore, it would not create a significant impact related to the City’s Housing Element.
- **DEIR Section 4.8 Land Use and Planning – Consistency with the Municipal Code.** Section 9.05, Industrial Districts, of the City Municipal Code requires a minimum 250-foot buffer between residential uses and truck activity areas of industrial uses. The site plan of the proposed project provides a buffer of almost 400 feet from the closest residence to the southeast, so the project is consistent with this adopted land use buffer requirement.
- **DEIR Section 4.11 Transportation – Consistency with General Plan Policies** – The project is consistent with Community Development Policy 2.2.17 because the proposed amendment to the Circulation Element will prevent industrial traffic from traveling through existing residential areas southeast of the site. The project is also consistent with most of the relevant policies of the

Circulation Element, including: providing adequate emergency access (Policy 5.1.1); minimizing traffic conflicts (Policies 5.1.2, 5.5.3, and 5.5.4); providing adequate off-street parking (Policy 5.1.3), ADA and Title 24 consistency (Policy 5.1.5); promoting through access (Policies 5.1.6, 5.2.2, 5.3.1, and Objective 5.5); mitigating project-related traffic impacts (Policy 5.5.8); allow for bicycle, pedestrian, and non-vehicular access options (Objective 5.8 and Policy 5.8.4, Objective 5.10 and Policy 5.10.1, Objective 5.11 and Policies 5.11.1 and 5.11.2); and using safe project design procedures (Policies 5.5.5, 5.5.9, and 5.5.10) plus applicable Municipal Code requirements.

The project is not fully consistent with Objective 5.2 which requires Level of Service C or roadways or Level of Service D on local freeway segments, but will make improvements, pay City Development Impact Fees, and make contributions to the County's Traffic Uniform Mitigation Fee (TUMF) program to offset project impacts, which is consistent with City Policies 5.3.5, 5.3.6, and 5.3.7).

(2) Economic Viability. ProLogis estimates the project would result in a property tax increase from \$282,058 in 2013 to \$1.4 million at project buildout, representing an increase of \$1.2 million. Although a fiscal/economic study was not prepared for the ProLogis project, a comprehensive fiscal study was recently prepared by David Taussig and Associates (DTA¹⁹) for 41 million square feet of logistics warehousing proposed east of the ProLogis project site. This study indicated that logistics warehousing in Moreno Valley generates a surplus of City revenues versus costs. Since the ProLogis project is also logistics warehousing, it is reasonable to assume similar ratios of revenues and costs as outlined in the DTA study. Based on data in the DTA study, the ProLogis project could be expected to generate a surplus of approximately \$330,000 per year to the City at buildout.²⁰ This estimate is supported by data from a similar fiscal study prepared for a recent warehouse project in the City of Perris²¹. That study estimated 1.7 million square feet of warehousing would generate an annual surplus of \$216,500 which would equal \$331,000 if a similar cost/revenue ratio was applied to the proposed ProLogis project²².

¹⁹ "Fiscal and Economic Impact Study for the World Logistics Center Specific Plan." David Taussig and Associates, Inc. January 15, 2013.

²⁰ The DTA 2013 study estimated a surplus of \$6 million for 41 million square feet of logistics warehousing in the City, so the ProLogis project (2.25 million square feet) would generate a surplus of approximately \$330,000 using similar data and assumptions.

²¹ Andrew Chang and Company, LLC. Stratford Ranch Industrial Development. Fiscal and Economic Impacts, City of Perris. September 2012.

²² \$216,500 for 1.7 million square feet (Stratford Ranch) is equal to \$331,000 for 2.6 million square feet (ProLogis).

(3) Employment Generation. ProLogis estimates the project would generate a need for approximately 1,400 temporary construction—related workers²³ and approximately 600 permanent full-time employee positions at buildout of the proposed warehousing.

(4) Traffic and Infrastructure Improvements. The DEIR²⁴ indicated that the ProLogis project would produce an estimated 4,408 or 37 percent fewer Passenger Car Equivalent or PCE trips per day compared to the site as presently zoned (7,527 trips for ProLogis compared to 11,935 trips under current zoning). Note the PCE calculation takes into account large trucks in the vehicle mix.

ProLogis estimates the proposed project would pay approximately \$4.5 million for onsite road improvements including mainly Eucalyptus Avenue as an arterial street. In addition, ProLogis will provide \$9.2 million in Development Impact Fees (DIFs) to the City and other agencies in the following categories:

- * Moreno Valley Unified School District school impact fees
- * Arterial Streets
- * Traffic Signals
- * Interchange Improvements
- * Fire Facilities
- * Police Facilities
- * City Hall
- * Corporate Yard
- * Maintenance Equipment
- * Transportation Uniform Mitigation Fee (TUMF-separate from DIF)(see below)
- * Multi-Species Habitat Conservation Plan (MSHCP-County)
- * Riverside County Area Drainage Fee
- * Stephen’s Kangaroo Rat Habitat Conservation Plan Fee (SKR HCP)
- * SR-60/Moreno Beach Drive/Redlands Blvd. Improvement Fee
- * Fair Share for DIF and TUMF improvements per project traffic study
- * Santa Ana Watershed Authority (SAWA) mitigation for Quincy Channel impacts
- * Eastern Municipal Water District (various – water, sewer, landscaping, etc.)

²³ Estimate of construction-related employees generated by the ProLogis Ontario project, May 2014.

²⁴ ProLogis trip generation on DEIR Table 4.11.E, page 4.11-15, and existing zoning trip generation outlined on Table 6.B, page 6-9.

The ProLogis project will also make a variety of improvements (e.g., utilities, streets) both onsite and in the surrounding area, and offsite improvements, or contributions to needed roadway and intersection improvements, are shown below as summarized from the project Traffic Impact Assessment²⁵ and as outlined in Mitigation Measures 4.11.6.4A-4F:

Make Improvements or Fully Fund Before Project Opening

- Redlands Boulevard/SR-60 Westbound Ramps – Install traffic signal.
- Redlands Boulevard/Fir Avenue/Eucalyptus Avenue – Install a traffic signal, add a northbound left-turn lane, and add a southbound left-turn lane.
- Moreno Beach Drive/SR-60 Eastbound Ramps – TUMF fee includes interchange.

Make a Fair Share Contribution (Year 2016 Impacts)

- Moreno Beach Drive/SR-60 Eastbound Ramps – TUMF fee contributes to a planned interchange upgrade.
- Moreno Beach Drive/Cottonwood Avenue – DIF fee contributes to the addition of a southbound through lane.
- Moreno Beach Drive/Alessandro Blvd. – DIF fee contributes to the addition of a southbound through lane.
- Redlands Blvd./SR-60 Westbound Ramps – DIF and TUMF fees contribute to installation of a traffic signal and add a northbound through lane.
- Redlands Blvd./SR-60 Eastbound Ramps – TUMF fee contributes to improvement costs.
- Redlands Blvd./Fir Avenue/Eucalyptus Avenue – DIF fee contributes to installation of a traffic signal, adding a westbound right-turn lane, and adding an eastbound left-turn lane. TUMF fee will cover installation of a northbound left-turn lane and a southbound through lane.
- Redlands Blvd./Eucalyptus Avenue – TUMF fee contributes to the addition of a southbound right-turn lane.
- Redlands Blvd./Alessandro Blvd. – TUMF fee contributes to the addition of a southbound left-turn lane.

Make a Fair Share Contribution (Year 2035 Impacts)

- Nason Street/Eucalyptus Avenue – DIF fee will contribute to installation of a northbound right-turn lane and restriping the westbound approach to provide dual left-turn lanes.

²⁵ LSA Associates, Inc. April 24, 2012 as summarized in the ProLogis Draft EIR Section 4.15, Transportation and Traffic.

- Nason Street/Alessandro Blvd. – DIF fee will contribute to installation of an eastbound through lane, westbound through lane, and overlap phasing for the eastbound right-turn lane.
 - Moreno Beach Drive/SR-60 Westbound Ramps – TUMF fee contributes to improvements.
 - Moreno Beach Drive/SR-60 Eastbound Ramps – TUMF fee contributes to improvements.
 - Moreno Beach Drive/Eucalyptus Avenue – DIF fee contributes to traffic signal and various lane improvements/restriping.
 - Moreno Beach Drive/Cottonwood Avenue – DIF fee contributes to addition of a southbound lane.
 - Moreno Beach Drive/Alessandro Blvd. – DIF fee contributes to various lane improvements and restriping.
 - Redlands Blvd./SR-60 Westbound Ramps – DIF fee contributes to installation of a traffic signal.
 - Redlands Blvd./SR-60 Eastbound Ramps – TUMF fee contributes to various interchange improvements at this location.
 - Redlands Blvd./Fir Avenue/Eucalyptus Avenue – DIF and TUMF fees contribute to installation of a traffic signal and various lane improvements.
 - Redlands Blvd./Eucalyptus Avenue – DIF and TUMF fees contribute to installation of a traffic signal and various lane improvements.
 - Redlands Blvd./Alessandro Blvd. - DIF and TUMF fees contribute to installation of a traffic signal and various lane improvements.
- **Make a Fair Share Contribution (General Plan Buildout Impacts)(In addition to 2035)**
 - Nason Street/Eucalyptus Avenue – DIF fee will contribute to installation of a northbound right-turn lane and eastbound right-turn lane.
 - Nason Street/Alessandro Blvd. – DIF fee will contribute to installation of an eastbound left-turn lane and traffic signal improvements,
 - Moreno Beach Drive/Eucalyptus Avenue – DIF fee contributes to various lane improvements/restriping.
 - Moreno Beach Drive/Cottonwood Avenue – DIF fee contributes to addition of a southbound lane.
 - Moreno Beach Drive/Alessandro Blvd. – DIF fee contributes to various lane improvements and restriping.

- Auto Mall Drive/Eucalyptus Avenue – DIF fee contributes to installation of a traffic signal.
- Redlands Blvd./Alessandro Blvd. - DIF and TUMF fees contribute to installation of various lane improvements.

If the Encilia Avenue/Quincy Street Connection is Approved, the project will make the following improvements:

- Moreno Beach Drive/Eucalyptus Avenue – DIF fee will contribute to installation of various lane improvements and restriping.
- Redlands Blvd./Fir Avenue/Eucalyptus Avenue – Fair share contribution toward the addition of a southbound right-turn lane.
- Redlands Blvd./Encilia Avenue/Eucalyptus Avenue – DIF and TUMF fees contribute to installation of a traffic signal and various lane improvements.
- Moreno Beach Drive/Encilia Avenue - DIF fee contributes to installation of a traffic signal and various lane improvements.

VII. CERTIFICATION OF THE FINAL ENVIRONMENTAL IMPACT REPORT

The Moreno Valley City Council finds that it has reviewed and considered the FEIR in evaluating the Project, that the FEIR is an accurate and objective statement that fully complies with CEQA and the CEQA Guidelines, and that the FEIR reflects the independent judgment of the City Council.

The City Council declares that no new significant information as defined by CEQA Guidelines Section 15088.5 has been received by the City Council after the circulation of the DEIR that would require recirculation. All of the information added to the FEIR merely clarifies, amplifies or makes insignificant modifications to an already adequate DEIR pursuant to CEQA Guidelines Section 15088.5(b).

The City Council hereby certifies the EIR based on the following findings and conclusions:

A. Findings

1. CEQA Compliance

As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the Findings and supporting documentation. The City Council

determines that the Findings contain a complete and accurate reporting of the environmental impacts and mitigation measures associated with the Project, as well as complete and accurate reporting of the unavoidable impacts and benefits of the Proposed Project as detailed in the Statement of Overriding Considerations. The City Council finds that the EIR was prepared in compliance with CEQA and that the City Council complied with CEQA's procedural and substantive requirements.

2. Significant Unavoidable Impacts/Statement of Overriding Considerations

The Project will have significant adverse impacts even following adoption of all feasible mitigation measures which are required by the City Council. The following significant environmental impacts have been identified in the FEIR and will require mitigation but cannot be mitigated to a level of insignificance as set forth in Section V(C) of these Findings:

- *Aesthetics Impacts (Scenic Vistas; Scenic Resources and Scenic Highways; Existing Visual Character or Quality of Site and its Surroundings; and Cumulative Impacts)* as a result of substantial change in visual characteristics of the proposed project compared to the existing site and the fact that the site was planned for Business Park and Residential uses and no feasible mitigation measures are available.
- *Agricultural Impacts (Conversion of State Designated Farmland; Conversion of Farmland to a Non-Agricultural Use; and Cumulative Impacts)* due to loss of 82.5 of Prime Farmland and Former Agriculture Activities and there is not an established regional mitigation program available.
- *Air Quality Impacts (Air Quality Management Plan Consistency; Equipment Exhaust from Construction-Related Activities; Architectural Coatings; Long-Term Project-Related Emissions; Project-Related Localized Operational Emissions; and Cumulative Impacts;)* due to the size and type of project, the proposed project would exceed SCAQMD thresholds and available mitigation would not reduce impacts to less than significant levels.
- *Land Use and Planning Impacts (Conflicts with Applicable Land Use Plans, Policies, or Regulations; and Cumulative Impacts)* due to the proposed project not being consistent with current General Plan land use and zoning designation

- *Transportation Impacts (Existing With Project Conditions (Intersection) Traffic and Level of Service; Opening Year With Project Conditions (Intersection) Traffic and Level of Service; Opening Year Cumulative With Project Conditions (Intersection) Traffic and Level of Service; and Cumulative Impacts.)* due to various mitigation measures being under the jurisdiction of Caltrans and so implementation cannot be guaranteed by the Lead Agency (City).

The City Council has eliminated or substantially reduced environmental impacts where feasible as described in the Findings, and the City Council determines that the remaining unavoidable significant adverse impacts are acceptable due to the reasons set forth in the preceding Statement of Overriding Considerations.

3. Conclusions

- a. All potentially significant environmental impacts from implementation of the proposed Project have been identified in the EIR and, with the implementation of the mitigation measures defined herein and set forth in the MMRP, will be mitigated to a less-than-significant level, except for the impacts identified in Section V(C) above.
- b. Other reasonable alternatives to the proposed Project that could feasibly achieve the basic objectives of the proposed Project have been considered and rejected in favor of the proposed Project.
- c. Environmental, economic, social and other considerations and benefits derived from the development of the proposed Project override and make infeasible any alternatives to the proposed Project or further mitigation measures beyond those incorporated into the proposed Project.

VII. ADOPTION OF MITIGATION MONITORING AND REPORTING PROGRAM

Pursuant to *Public Resources Code* Section 21081.6, the City Council hereby adopts, as conditions of approval of the Project, the Mitigation Monitoring and Reporting Plan (MMRP) set forth in Section 4.0 of the Final EIR. In the event of any inconsistencies between the mitigation measures as set forth herein and the MMRP, the MMRP shall control, except to the extent that a mitigation measure contained herein is inadvertently omitted from the MMRP, in which case such mitigation measure shall be deemed as if it were included in the MMRP.

COMMENT LETTERS

CITY COUNCIL MEETING
JUNE 24, 2014

June 24, 2014

Moreno Valley City Council:

The attached information is submitted regarding Agenda item E.6 on the June 24, 2014 City Council agenda for the ProLogis Eucalyptus Industrial Park (Case Numbers PA07-0081, 0082, 0083, 0084, 0158, 0159, 0160, 0161 and 0162).

These comments focus on deficiencies with the approval findings found in the resolutions for approval of the General Plan Amendment, Parcel Map and Plot Plan applications and the ordinance for approval of the Change of Zone application, all included with tonight's agenda package as attachments to the staff report. A summary of observations regarding deficiencies in the larger project record is also attached – these are items that became evident as a result of reviewing the project record relative to the project approval findings. As demonstrated in the attached comments, the findings are substantially deficient and the record before you strongly demonstrates that approval of the applications is not in the long-term best interest of the City of Moreno Valley, or surrounding communities.

For members of the public, these materials were only made available late Thursday afternoon. It is simply unconscionable to ask people to digest these materials in a mere four-day period. With the release late Thursday afternoon and City Hall closure on Friday, members of the public only have Monday and Tuesday to attempt to resolve questions with staff – assuming they have been able to pour over the thousands of pages of documents so that any questions are apparent by then.

I would ask each of you to HONESTLY disclose to the public whether you have reviewed the staff report and attachments IN THEIR ENTIRETY. Affirmative action on these applications will substantially alter the City's land use policy and will result in unmitigated impacts throughout the City and surrounding areas that will adversely affect the public health, safety and welfare. A decision of this magnitude deserves your full attention and due consideration of the entire record before you.

If you have truly considered the entire record before you and if you have listened to the citizens who have taken time to express their views to you tonight, the only responsible action is to DENY the applications before you. If this is your intent, please DO NOT CERTIFY THE EIR. A certified EIR could be used at a later date for a similar project – here or at another site. The community deserves a full disclosure and participation process if another proposal of this nature comes forward at a later time.

If you are inclined to ignore the overwhelming evidence before you and approve the actions, then it is necessary to defer that action to a later date to substantially enhance the findings within the approval ordinance and resolutions.

Respectfully submitted,

Kathleen Dale

Resident of Moreno Valley since 1958

B.S Environmental Science, UC Riverside

Planner and environmental consultant for more than 33 years

ProLogis Eucalyptus Industrial Park
Case Numbers PA07-0081, 0082, 0083, 0084, 0158, 0159, 0160, 0161 and 0162
June 24, 2014 City Council

Comments on Proposed Approval Findings

PA07-0082 - General Plan Amendment (Resolution 2014-57)

1. The resolution erroneously identifies the existing General Plan Land Use designations. RA-2 is not a valid General Plan land use designation. It appears this is intended to be Residential 2 (or R2). See General Plan Policy 2.2.5 and the General Plan Land Use Map available at http://www.moreno-valley.ca.us/city_hall/general_plan.shtml.
2. The resolution erroneously identifies the proposed General Plan land use designation. The official designation indicated in the General Plan is Business Park/Industrial (General Plan Policy 2.5.1).
3. The resolution misstates the second finding required under Municipal Code Section 9.02.040F which requires an affirmative finding that “The proposed amendment will not adversely affect the public health, safety or general welfare”.
4. The supporting statements for each finding are conclusory, incomplete and inaccurate. To the contrary, the record demonstrates that the proposed General Plan Amendment(s) are not consistent with several aspects of the General Plan and that the project would result in unmitigated significant adverse impacts that would be detrimental to public health, safety and general welfare. The following provides one example for each finding demonstrating the failings of the resolution findings as presented:
 - a. **General Plan Consistency.** Community Development Element Objective 2.4 calls for provision of commercial areas within the City that are conveniently located, efficient, attractive, and have safe and easy pedestrian and vehicular circulation in order to serve the retail and service commercial needs of Moreno Valley residents and businesses.
 - i. The proposed General Plan Amendment would establish truck traffic on Eucalyptus Avenue (not a designated truck route per truck route map currently posted to City website at http://www.moreno-valley.ca.us/city_hall/departments/pub-works/transportation/pdfs/truckroutes.pdf, copy also provided with these comments). Eucalyptus Avenue west of the project site to Moreno Beach Drive is fronted on both sides by automobile dealerships within the Moreno Valley Auto Center. Customers utilize on-street parking and there is regular pedestrian activity along and across Eucalyptus Avenue. Approval of the proposed General Plan land use designation amendment will increase truck activity along this section of Eucalyptus Avenue. The associated intensity of truck trips would be inconsistent with the expressed General Plan objectives for safe and easy pedestrian access and vehicular circulation for this important retail commercial area.
 - b. **Public Health, Safety and Welfare.** The second finding merely cites preparation of a Final EIR as supporting evidence that the General Plan Amendment(s) would not be detrimental to the public health, safety and general welfare. To the contrary, the EIR findings in Resolution 2014-56 (beginning on page 88) identify unavoidable significant impacts related to aesthetics, air quality, and traffic, which would occur as a result of implementing the proposed General Plan Amendment(s), and which would clearly be detrimental to the public health, safety and general welfare.

5. A listing of all applicable provisions from the General Plan Objectives, Goals, Policies and Programs (General Plan Chapter 9) is also provided with these comments. The proposed General Plan Amendment(s) also conflict with: Ultimate Goals I, IV, VI and VII; Community Development Element Goals 2.1, 2.2; Community Development Element Policies 2.2.5, 2.2.17, 2.5.2, 2.10.7, and 2.10.11; Community Development Objective 2.5; Circulation Element Policies 5.1.2, 5.2.3, and 5.5.2; Circulation Element Program 5-16; Safety Element Program 6-3; Conservation Element Objective 7.7; and Conservation Element Policies 7.4.3, 7.7.4 and 7.7.5. The findings must address the project's relationship to each applicable General Plan goal, policy, program and objective, provide a statement supported by substantial evidence as to the project's consistency with each applicable General Plan provision, or provide a statement of the specific location in the project record where such substantial evidence can be found – a global reference to the thousands of pages that constitute the Final EIR and supporting documents is not sufficient.
6. The map (Exhibit A) attached to the Resolution 2014-57 as posted for public review identifies only the land use designation change. Text and attachments depicting the nature of the trail and circulation element revisions are required as well.
7. As presented, the approval resolution does not sufficiently characterize the action being approved and the required findings (Municipal Code Section 9.02.040F) are not affirmatively supported by substantial evidence in the record before you. The General Plan Amendment approval resolution cannot be adopted as presented.

PA07-0081 - Change of Zone (Ordinance 880)

1. The supporting statements for Findings 1 and 3 are conclusory, incomplete and inaccurate. To the contrary, the record demonstrates that the proposed Change of Zone is not consistent with several aspects of the General Plan and that the project would result in unmitigated significant adverse impacts that would be detrimental to public health, safety and general welfare. The following provides one example for each finding demonstrating the failings of the resolution findings as presented:
 - a. **General Plan Consistency.** Community Development Element Policy 2.2.5 identifies the purpose of areas designated Residential 2 is to provide for suburban lifestyles on residential lots larger than commonly available in suburban subdivisions and to provide a rural atmosphere.
 - i. The proposed Change of Zone would establish an industrial land use designation where adjoining lands to the west and south are designated for future Residential 2 uses and where existing residences within the Residential 2 land use designation are within immediate proximity to the east across the Quincy Channel. The massive concrete structures, parades of big rigs, and commotion of loading dock activity that would be accommodated with the proposed Change of Zone are not consistent with the average individual's concept of "rural atmosphere".
 - b. **Public Health, Safety and Welfare.** The second finding merely cites preparation of a Final EIR as supporting evidence that the Change of Zone would not be detrimental to the public health, safety and general welfare. To the contrary, the EIR findings in Resolution 2014-56 (beginning on page 88) identify unavoidable significant impacts related to aesthetics, air quality, and traffic, which would occur as a result of implementing the proposed Change of Zone, and which would clearly be detrimental to the public health, safety and general welfare.
 - c. **Conformance with Moreno Valley Municipal Code Title 9.** The finding as presented erroneously refers to a pre-zoning action that is not an element of the entitlements before you. The resolution also misstates the finding as required under Municipal Code Section

9.02.050.D.3. The finding in item 3 under Section 2.1 of the ordinance should address the required affirmative finding that “The proposed amendment is consistent with the purposes and intent of this title”. The supporting text as presented is an unsupported conclusion that the zone change has satisfied the Municipal Code and other regulations associated with a change of zone. This “finding” does not refer to any supporting documentation in the record and, in fact, does not address the substantive requirement of the finding. For example, Municipal Code Sections 12.36.030 (Designation of Truck Routes) and 9.05.050.B.2 (Good Neighbor Guidelines for warehouse distribution facilities) require enforcement of the City’s designated truck routes. Eucalyptus Avenue east of Moreno Beach Drive is not a designated truck route (per truck route map currently posted to City website at http://www.moreno-valley.ca.us/city_hall/departments/pub-works/transportation/pdfs/truckroutes.pdf, copy also provided with these comments) and a change to this effect is not disclosed to be part of this project. The project would not be in compliance with Municipal Code Sections 12.36.030 and 9.05.050. The ordinance should at a minimum acknowledge and address the City’s practices for ensuring implementation of Municipal Code Section 9.05.050.

2. A listing of all applicable provisions from the General Plan Objectives, Goals, Policies and Programs (General Plan Chapter 9) is also provided with these comments. The proposed Zone Change also conflicts with: Ultimate Goals I, IV, VI and VII; Community Development Element Goals 2.1, 2.2, and 2.2.17; Community Development Element Objectives 2.4 and 2.5; Community Development Element Policies 2.5.2, 2.5.4, 2.10.7, and 2.10.11; Circulation Element Policies 5.1.2, 5.2.3, and 5.5.2; Circulation Element Program 5-16; Safety Element Program 6-3; Conservation Element Objective 7.7; and Conservation Element Policies 7.4.3, 7.7.4 and 7.7.5.
3. As presented, the required findings (Municipal Code Section 9.02.050.D) are not affirmatively supported by substantial evidence in the record before you. The Change of Zone approval ordinance cannot be introduced or adopted as presented.

PA07-0084 – Tentative Parcel Map (Resolution 2014-59)

Time simply did not permit close assessment of the findings for Resolution 2014-59. The required findings for subdivision maps are detailed in Municipal Code Section 9.14.070. The stipulated findings include requirements that a land division map be denied (1) if it is not consistent with the General Plan and (2) if it would cause serious public health problems. For the same reasons as noted above for Resolution 2014-57 and Ordinance 880, the findings provided with the staff report do not address all aspects of General Plan consistency, do not address significant public health impacts disclosed in the EIR, and do not provide substantial evidence to support the findings. The resolution as presented for your consideration is not adequate to support affirmative action on the

Two additional findings appear to warrant a closer look, namely those related to conformance with applicable City ordinances (Resolution 2014-59, Section 1, Item B.8) and regional housing needs (Resolution 2014-59, Section 1, Item B.10).

PA07-0083 - Master Plot Plan (including Building 2), PA07-0158 - Plot Plan (Building 1), PA07-0159 - Plot Plan (Building 3), PA07-0160 - Plot Plan (Building 4), PA07-0161 - Plot Plan (Building 5), PA07-0162 - Plot Plan (Building 6) (Resolution 2014-58)

Time simply did not permit close assessment of the findings for Resolution 2014-58. The required findings for plot plans are detailed in Municipal Code Section 9.02.070. The stipulated findings include requirements

that plot plans (1) are consistent with the General Plan and (2) would not be detrimental to the public health, safety, or welfare or materially injurious to improvements or properties in the vicinity. For the same reasons as noted above for Resolution 2014-57 and Ordinance 880, the findings provided with the staff report do not address all aspects of General Plan consistency, do not address significant public health impacts disclosed in the EIR, and do not provide substantial evidence to support the findings. The resolution as presented for your consideration is not adequate to support affirmative action on the plot plans.

The two remaining findings (conformance with zoning regulations and compatibility with existing and planned land uses in the vicinity) also appear to warrant a closer look.

Additional Points

Aesthetics Impacts – the General Plan identifies both State Route 60 and Moreno Beach Drive as scenic roads with protection of views of the surrounding mountains being the scenic resource (Conservation Element Policies 7.7.4 and 7.7.5). The EIR is silent to project impacts upon vistas along Moreno Beach Drive.

Biological and Hydrological Impacts –an omitted impact related to diversion of flows currently discharged to an off-site natural drainage feature was brought to staff’s attention last week. Coordination with staff and the EIR consultant has identified new information (November 2012 revision of DBESP report) that was not included in the Draft or Final EIR or supporting technical studies. This new information is necessary to characterize and assess the significance of this impact. Mr. Ormsby Mr. Bradshaw and Mr. Norton are all aware of this issue and to this point have not indicated an intent to make the necessary addition to the project record.

Wildland Fire Hazards – the EIR erroneously characterizes the project setting relative to wildland fire hazard. The cited General Plan reference (Draft EIR Section 4.6.5.5, page 4.6-13) for mapped hazard areas is outdated. The project site adjoins lands designated as subject to Very High Fire Hazard (VHFHS) Severity per the Cal Fire maps (available at http://frap.fire.ca.gov/webdata/maps/riverside_west/fhszl_map.60.pdf), with VHFHS zone applied to adjacent lands to the south, extending to the nearby hills. The record should be updated to correct this error and to address the resultant impacts.

Plot Plan Conditions of Approval

- Condition P3 establishes an 18-month moratorium on issuance of building permits for Buildings 1 and 3. The record does not explain the intent of this condition. Please ask staff to explain.
- Condition P51 requires screening of rooftop equipment from SR-60 and Eucalyptus/Fir Avenues. Moreno Beach Drive is also a designated scenic route (per General Plan Conservation Element Policy 7.7.4). The condition should also require screening from views along this street.
- Condition TE15 requires a traffic calming plan for Eucalyptus Avenue through the Auto Mall. There is nothing readily apparent in the record to explain the intent of this condition. Please ask staff to explain. Further, such a study should be prepared prior to project approval; at this juncture there is no indication whether reasonably feasible measures are available to achieve whatever the intended purpose of this study may be.

Basin Emergency Overflow Outlets - the plot plan and preliminary grading plan identify overflow outlets from the basins at the south edge of the development site. The means of access and nature of required maintenance activities is not readily found in the project record. Please ask staff to explain.

SOOC Revisions – the Staff report refers to an Attachment 15 which is to provide a strike-out/underline version of the Statement of Overriding Considerations (which was revised from the version considered by the Planning Commission). It appears this may be intended to be Attachment 17; however, there is no discernible strike-out/underline text in the posted attachment. The Council and the public should have a better understanding of the revisions to this important document before any action is taken.

Significant and Unavoidable Impacts and Mitigation Measures Sections of Staff Report – the content under these headings on pages 8 and 9 of the staff report is incomplete, misleading and inaccurate. The record should provide a concise summary of the impact determinations without requiring the public to delve through thousands of pages of attachments.

Projected Employment – the approximately 1,500 jobs for approximately 2 million square feet of warehouse space are not realistic. The verifiable employment figures for many existing warehouse developments in Moreno Valley indicate that more realistic figures would be approximately 20% to 30% of this figure. If these inflated employment figures are used to support the Statement of Overriding Considerations, the project record should be revised to reflect more reasonable projections. If the Council accepts these employment estimates, the project should be subject to a performance standard and reporting requirements to verify such numbers are achieved.

Business Park General Plan Designation – The single General Plan land use designation for all intensities of industrial development is proving ineffective in moderating appropriate siting and intensity of industrial development. The City should consider reestablishing multiple industrial land use designations.

Future Park Needs – the project site is within a “Recommended Future Parkland Acquisition Area” (General Plan Figure 4-4; Parks, Recreation and Open Space Element Program 4-9). A determination as to whether the project site was evaluated relative to future park needs is not readily apparent in the project record.

Project Objectives – the project itself does not seem to meet, nor is it clear how it would be regulated to meet, several of the applicant’s project objectives as stated in the Draft EIR (Section 3.7, page 3-14), for example:

- Provide industrial warehouse facilities that meet the substantial and unmet demands of businesses located in the City and County
- Provide new industrial development that is attractive and minimizes conflicts with the surrounding existing uses
- Provide a variety of new employment opportunities for the citizens of Moreno Valley and surrounding communities
- Cluster industrial warehouse uses near access points to the state highway system to reduce traffic congestion on surface streets and to reduce air pollutant emissions from vehicle sources

Planning Commission Public Comments – 16 individuals spoke during the two Planning Commission hearings. Fifteen spoke in opposition to the project, citing evidence of significant adverse environmental impacts, objections to the wholesale abandonment of the adopted General Plan for this area, and objections to the proliferation of warehouse uses throughout the City. The Planning Commission majority ignored the public comments as an element of the public record.

Posted Documents – particularly with a record of this magnitude, the posted documents should be bookmarked and searchable. Also, the way the agenda materials are posted, it is necessary to open each individual document before it can be saved to a local drive. It took approximately 90 minutes just to download the staff report and attachments (not including the massive DEIR and FEIR files, which fortunately I had previously downloaded). Documents should be posted so that the entire report can be downloaded as a single file or a zipped folder. If posting of multiple files is the only option, then ability to download with simple right-click should be provided.

General Plan Goals, Policies Program and Objectives
for which the ProLogis Eucalyptus Industrial Park is in Conflict
(excerpts from General Plan Chapter 9¹)

Ultimate Goal I

Exhibits an orderly and balanced land use pattern that accommodates a range of residential, cultural, recreational, business and employment opportunities.

Ultimate Goal IV

Enjoys a healthy economic climate that benefits both residents and businesses.

Ultimate Goal VI

Enjoys a circulation system that fosters traffic safety and the efficient movement of motor vehicles, bicycles and pedestrians.

Ultimate Goal VII

Emphasizes public health and safety, including, but not limited to, police, fire, emergency and animal services and protection from floods and other hazards.

Community Development Element Goal 2.1

A pattern of land uses, which organizes future growth, minimizes conflicts between land uses, and which promotes the rational utilization of presently underdeveloped and undeveloped parcels.

Community Development Element Goal 2.2

An organized, well-designed, high quality, and functional balance of urban and rural land uses that will meet the needs of a diverse population, and promote the optimum degree of health, safety, well-being, and beauty for all areas of the community, while maintaining a sound economic base.

Community Development Element Policy 2.2.5

The primary purpose of areas designated **Residential 2** is to provide for suburban lifestyles on residential lots larger than commonly available in suburban subdivisions and to provide a rural atmosphere. The maximum allowable density shall be 2.0 dwelling units per acre.

Community Development Element Policy 2.2.17

Discourage nonresidential uses on local residential streets that generate traffic, noise or other characteristics that would adversely affect nearby residents.

Community Development Element Objective 2.4

Provide commercial areas within the City that are conveniently located, efficient, attractive, and have safe and easy pedestrian and vehicular circulation in order to serve the retail and service commercial needs of Moreno Valley residents and businesses.

Community Development Element Objective 2.5

Promote a mix of industrial uses which provide a sound and diversified economic base and ample employment opportunities for the citizens of Moreno Valley with the establishment of industrial activities that have good

¹ Staff was contacted to confirm that document posted on City's website is current. Indication that this is the case was provided in e-mail from Case Planner Bradshaw date June 17, 2014

access to the regional transportation system, accommodate the personal needs of workers and business visitors; and which meets the service needs of local businesses.

Community Development Element Policy 2.5.2

Locate manufacturing and industrial uses to avoid adverse impacts on surrounding land uses.

Community Development Element Policy 2.5.4

Design industrial developments to discourage access through residential areas.

Community Development Element Policy 2.10.7

On-site lighting should not cause nuisance levels of light or glare on adjacent properties.

Community Development Element Policy 2.10.11

Screen and buffer nonresidential projects from adjacent residential property and other sensitive land uses when necessary to mitigate noise, glare and other adverse effects on adjacent uses.

Parks, Recreation and Open Space Element Program 4-9

Acquire land and develop neighborhood and community parks in the “Recommended Future Parkland Acquisition Areas” shown in Figure 4-4.

Circulation Element Policy 5.1.2

Plan the circulation system to reduce conflicts between vehicular, pedestrian and bicycle traffic.

Circulation Element Policy 5.2.3

Encourage the incorporation of traffic calming design into local and collector streets to promote safe vehicle speeds.

Circulation Element Policy 5.5.2

Provide dedicated left-turn lanes at all major intersections on minor arterials and higher classification roadways.

Circulation Element Program 5-16

Implement programs that mitigate on-street hazards for bicyclists.

Safety Element Program 6-3

Reevaluate designated truck routes in terms of noise impact on existing land uses to determine if those established routes and the hours of their use

Conservation Element Policy 7.4.3

Preserve natural drainage courses in their natural state and the natural hydrology, unless the protection of life and property necessitate improvement as concrete channels.

Conservation Element Objective 7.7

Where practical, preserve significant visual features significant views and vistas.

Conservation Element Policy 7.7.4

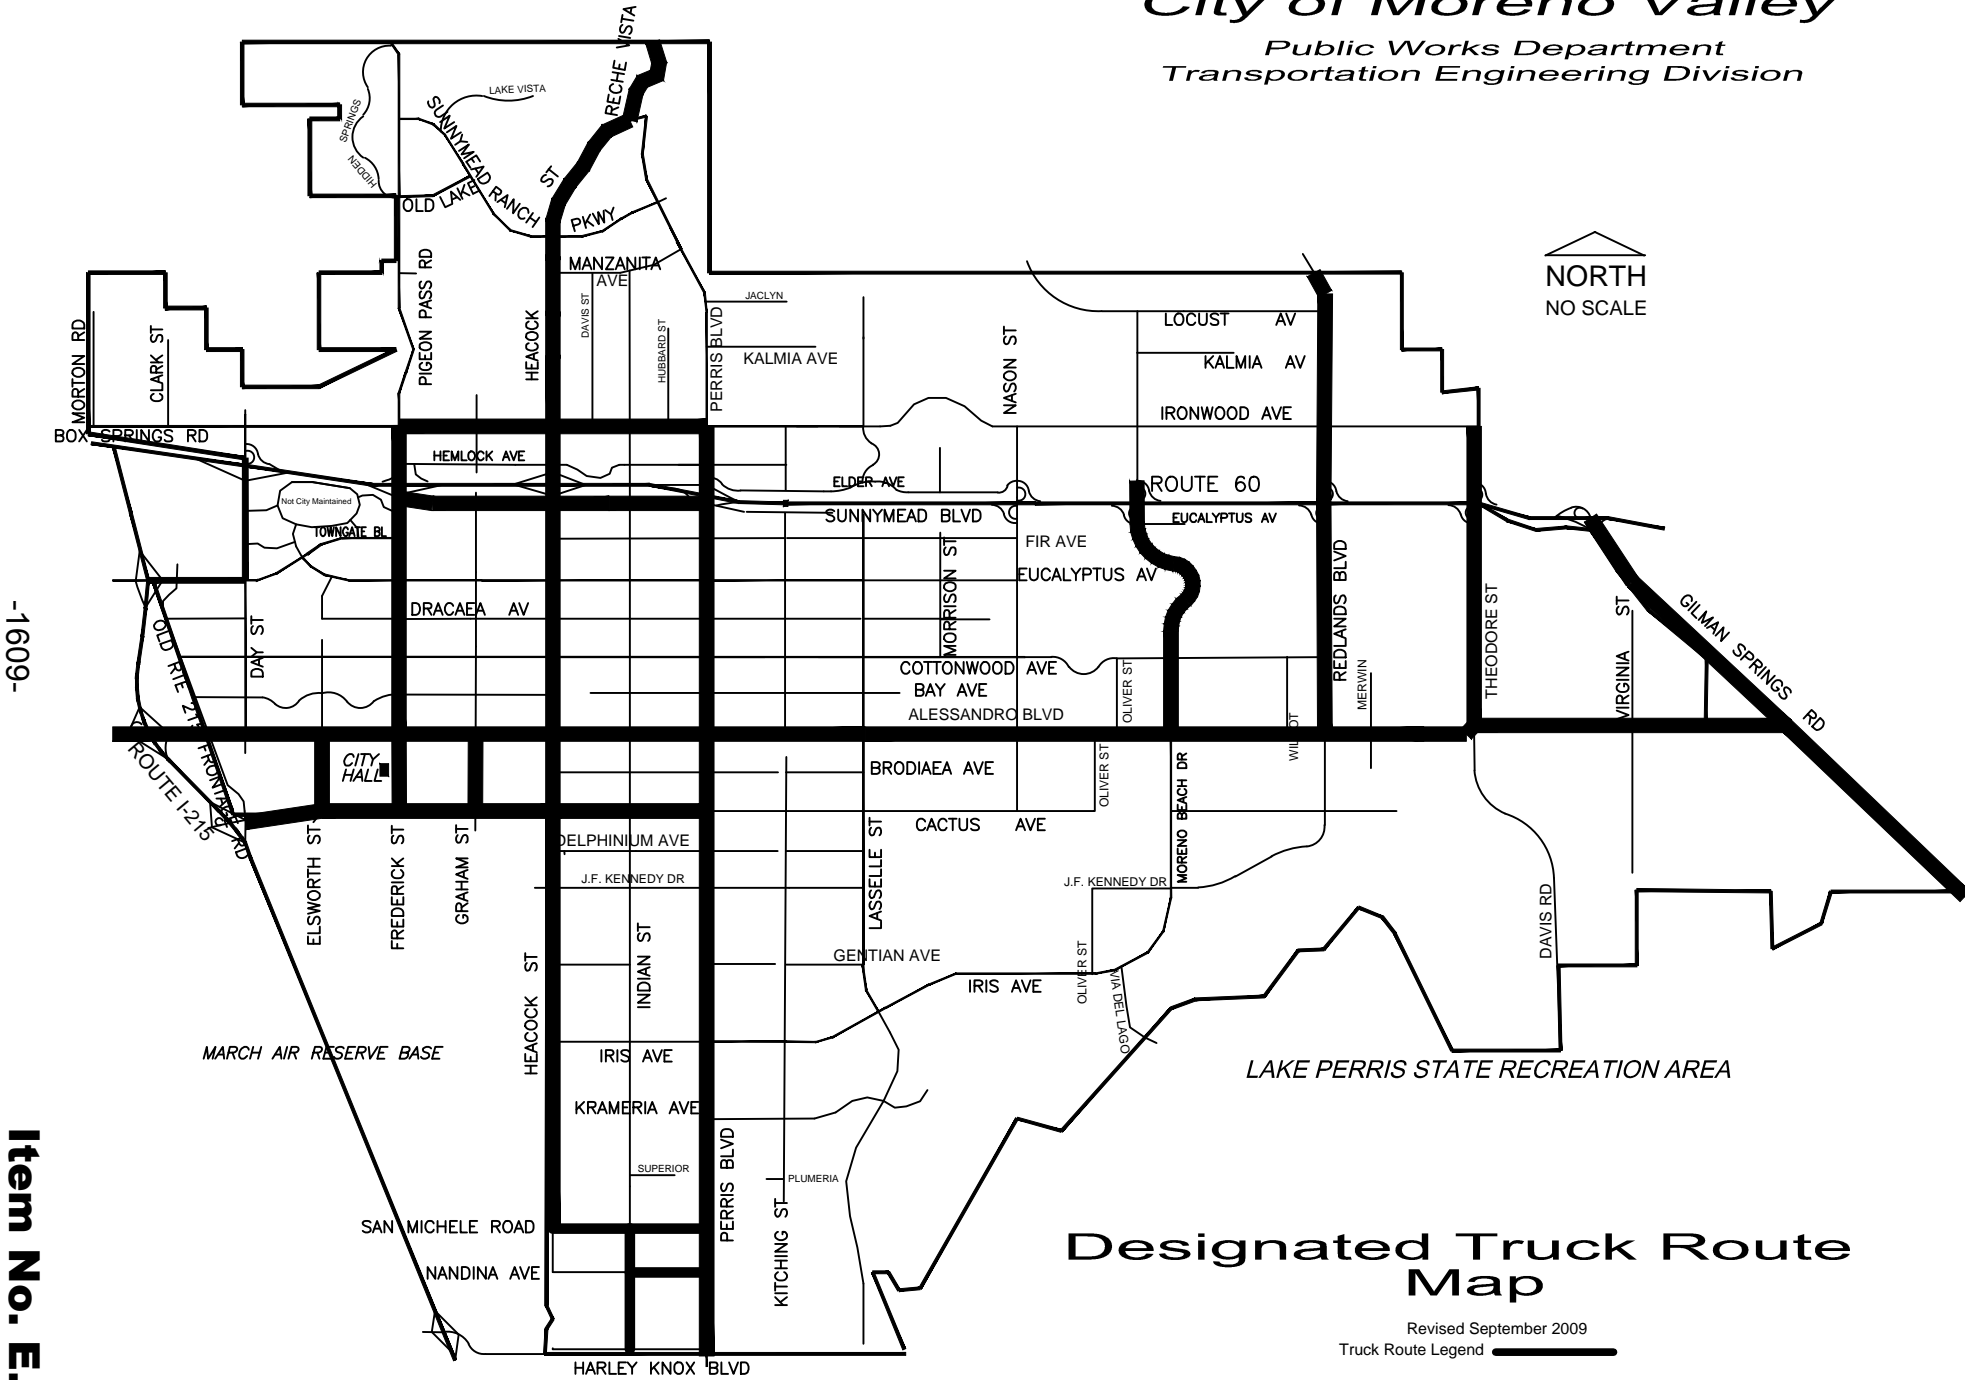

Gilman Springs Road, Moreno Beach Drive, and State Route 60 shall be designated as local scenic roads.

Conservation Element Policy 7.7.5

Require development along scenic roadways to be visually attractive and to allow for scenic views of the surrounding mountains and Mystic Lake.

Cc: Chris Ormsby
Subject: ProLogis Eucalyptus warehouse comments

Good morning Mr Bradshaw,

The fact that the ProLogis Eucalyptus warehouse developer in the response to comments about AG agrees that it is legally possible for the City to require mitigation for loss of all those Prime AG acres, then the Sierra Club expects you to do so. The State has AG mitigation programs and ways to have conservation easements and therefor it is possible to use those for what the Courts are saying can be imposed. Just because the City now downplays AG in its future, it is still regionally important and needs to be mitigated. You could also require the developer to use a local AG mitigation program if ones is developed before occupancy of the entire project. This is quite possible with the current Riverside County General Plan Update. This is also very important for loss of raptor foraging and local AG decreases GHG as well as climate change or as Sierra Club now calls it Climate Disruption. Mitigation for AG near publicly owned lands, like the San Jacinto Wildlife Area, is very important and this project needs to step up with this mitigation.

The developer of the WLC put together a proposed plan for the Moreno Highlands lands that would have been mainly warehousing at the time Skechers was being proposed. He even put together a documents which compared the Moreno Highlands land uses with his proposed warehouse use on mainly the same lands -- plus some additional acreage. It is wrong for Prologis to continually claim they did not know about what we now call the World Logistic Center (WLC) for it was very foreseeable. The WLC waited until the 20 year Development Agreement on Moreno Highlands expired to formally put their project forward, but everyone knew for years prior, exactly what was going to be proposed. Prologis must include the WLC in its cumulative impacts or all its environmental documents and analysis are inadequate. It is also sad that the ProLogis developer waited only one year after the City and its residents approved a new General Plan to purchase the acreage for this project. It would not surprise the Sierra Club if they were watching during our General Plan process and knew they could get the City Council to change the land use later.

The City has limited amount of freeway frontage and we should not continue to use it for for cement boxes. It does not benefit the City economically in the long term to give away these prime acreages to warehouses instead of for businesses that could truly use the exposure along the SR-60.

Toxic diesel pollution is going to cover our entire city with all these warehouse approvals. When are the decision makers going to realize that the health of the young and old as well as the warehouse workers are being compromised by these approvals? Since it has been shown that one must be 500 meter or about 1500 feet away form these toxic diesel warehouses to significantly lessen their impacts, how can the City allow this project on lands zoned for homes and also adjacent to land zoned for homes as well as close to existing homes? The decision makers must know the choices that they must make in the future on lands adjacent to this project which should no longer permit housing, prior to approving this project. The full cumulative, growth inducing impacts as well as direct and indirect impacts have not been fully shown and analyzed for this project. The ProLogis Eucalyptus warehouse project does not protect the Health, Safety or Welfare of Moreno Valley residents.

Thank you,

George Hague

Subject: City Projects

Good Afternoon,

Thank you so much for returning my call this afternoon. I am writing to the city council because I am very concerned about the future of the neighborhood in which I purchased my home. I purchased this home because I loved the location. Now I am fearful that this neighborhood is going to turn into an industrial center with warehouses, pollution, traffic from huge trucks, not a residential neighborhood where it is safe to raise children. Also, large trucks will cost the city more funds because they will destroy the roads.

I am also concerned because we pay more taxes in this neighborhood than other parts of the city. So if the plan is as I have been told, we will be paying large exorbitant taxes and will be living in an industrial environment. When I purchased my home this area was zoned for more homes not warehouses and logistic centers. Please consider the city and its citizens.

Dear Councilmember

Re: ProLogis Final Environmental Impact Report (P07-186) for the ProLogis Eucalyptus Industrial Park Project. The project case numbers: PA07-0081 through PA07-0084 and PA07-0158 through PA07-0162

I am writing to ask that you vote 'no' on the ProLogis Eucalyptus Industrial Park Project.

I am concerned about:

- 1) The continuing decline in our air quality; the increase in microfine particulates that cause health problems such as asthma, heart disease, lung disease & more
- 2) increase in truck traffic (2,000 trucks per day for this project alone) on highways that are not designed to accommodate that number of trucks;
- 3) placing warehouses next to lands zoned for housing
- 4) the erosion of our quality of life
- 5) the high number of warehouses in our city

It would be helpful to know and have the city council members discuss:

- 1) how many warehouses (total square footage) are currently approved by the city
- 2) how many of these approved warehouses have been built
- 3) how many are occupied or vacant

At this point in time I think the city council needs to ask itself and more specifically it really needs to ask its residents (the taxpayers) just what is their vision for the future?

Are we going to have a diverse economy or are we going to continue our 'boom town' mentality that describes the 1980s & 1990s where excessive numbers of homes were built, recessions nuked our tax base and the city and its residents suffered economic losses.

If the city cannot see beyond approving unlimited housing and mega-warehouses, if it can not create a diverse economy of variety of employers, then I would ask, why are we here?

I do not support the ProLogis project and I would ask you to vote 'no'.

Sincerely,
Ann Turner McKibben

Dear Mr. Gross:

Re: Comments to the Final Environmental Impact Report for the ProLogis Eucalyptus Industrial Park.

As a concerned resident who lives on the east end I have great interest and concerns about development in our area. Therefore, I have taken an extensive amount of time to review the Final Environmental Impact Report and the Statement for Overriding Consideration. I cannot agree with some of the conclusions because this project goes beyond good planning recommending the replacement of viable land uses that it should never have been encouraged by the City to the developer.

Once again the City and a Developer are collectively agreeing to change the General Plan to justify a project. It appears that a number of impacts are being written off because the City simply will not take a strong stand on potential development impacts or adopt stricter mitigation measures to assure that development impacts are brought down to the lowest feasible point versus no mitigation if the impacts are not significantly above set thresholds.

One of the hardest losses I find in the whole concept of this project is the lost viability of financially valuable land with freeway exposure. It is in the best economic interest of all cities to place the highest and best uses adjacent to the freeways where those businesses can promote themselves and draw in customers. At the very least the city should be designating the land along the south side of SR-60 for such commercial use. It is noted that the staff report makes no mention of the option to expand the auto mall although it was discussed with the Planning Commission. Further to my dismay is the continued quest to give approval for land use changes that do not gain us new or unique job opportunities. There is plenty of available land designated for warehouse development and we do not need to be hopscotching that use all over the city.

In review of the project objectives and the Statement of Overriding Consideration it is clear that objectivity was not always utilized or expressed. Since I do profess to be in opposition to the project my comments could be considered biased but I have prepared comments none the less.

The following contains italicized text straight from the Final EIR followed by standard text of my comments and concerns.

Here is the list of Project Objectives as found in the Draft Environmental Impact Report followed by an independent evaluation of their stated goal as follows:

B. PROJECT OBJECTIVES

- *Provide industrial warehouse facilities that meet the substantial and unmet demands of businesses located in the City and County;*

- Moreno Valley may be in need more businesses however there is not an “unmet” demand for warehouses by any operations within this City or surrounding area. In all likelihood, these proposed warehouses will be utilized by companies outside of our region that must import their products and take them to a location where they can be distributed to other distant locations.
- In the past few years the City has added millions of square feet of warehouse space intended to serve the same purpose and meeting the demand for the area.

- *Provide new industrial development that is attractive and minimizes conflicts with the surrounding existing uses;*

- Although this developer proposes building with aesthete features little is done along the highway or the residential properties to provide sufficient landscaping to screen the huge buildings.
- At the very least this project will create air quality, traffic, noise, and lighting conflicts with the surrounding residential property both built and unbuilt.
- The project’s truck and vehicular traffic will now take access to the west through the City’s Auto Mall ultimately increasing traffic volumes and conflicts with their operations and customer access to those economically beneficial businesses. We cannot afford to have our auto sales diminish because of undue truck traffic impacts scaring off customers.

- *Provide a variety of new employment opportunities for the citizens of Moreno Valley and surrounding communities;*

- This proposal more of what we have been getting the past few years and thus fails to provide a “variety” of new employment opportunities. Its development of warehouses and the jobs associated with that industry only increases the same type of employment opportunity already in high supply through the numerous warehouses already built or approved for construction within the City and the surrounding area.

- *Encourage warehouse distribution services that take advantage of the area’s close proximity to various freeways and transportation corridors;*

- This project can only claim its proximity to SR-60. It is neither adjacent nor near any rail service corridors.

- *Encourage new development consistent with the capacity and municipal service capabilities;*

- *Provide infrastructure improvements to meet phased Project needs in an efficient and cost-effective manner;*

- This is a “must do” with any development. However, highway improvements are not tied to development timetables or percentage of constructed building square footage to preclude development operational impacts that reduce roadway levels of service below acceptable levels for indefinite period of time. Remember that paying into the TUMF program has no guarantee as to when those needed improvements will be made.

- *Cluster industrial warehouse uses near access points to the state highway system to reduce traffic congestion on surface streets and to reduce air pollutant emissions from vehicle sources;*

- Traffic intensity at the state highway systems' intersecting points with project site will be highly impacted as will the commercial and residential use adjacent to the project location. This will further impede others accessing the community at these highway intersections.
- With the change of land use to permit warehouses you are also changing the vehicle types coming into the area. The air quality analysis needs to show whether the reduction of car exhaust over the increase in trucks and diesel exhaust truly reduces the health risk associated with one over the other.

- *Develop land uses that provide the City with a positive revenue/cost ratio and provide needed infrastructure in a timely fashion;*

- This objective simply points out the known bias for industrial and commercial land uses which are the only land uses that have a positive ratio. This could be argued at any time to justify the elimination of residential uses and it meets no unique criteria for development.
- As the environment stands today we are unaware of any "needed" infrastructure to meet current conditions. However, development of the project site, as with any development type, would require the installation of necessary infrastructure to off-set the impacts of said development. Again, not unique.

- *Address community circulation, both vehicular and pedestrian, utilizing available capacity within the existing circulation system, and provide fair share improvements to various future-year deficient intersection or road segments; and*

- Although this project will pay into the TUMF program for major highway improvements, construction of those improvements is not tied to any timetable of the development. Should the facilities be in operation prior to the completion of roadway improvements the impacted roadways will operate at substantially reduced rates of service until such time that improvements are made. This timetable is indeterminable.

- *Reduce peak hour vehicle trips, energy and water consumption compared to existing General Plan land uses.*

DEIR - FEIR

Although the analysis in the DEIR has concluded that there will be no impacts relevant to some issues it is surprising to find the following questionable judgment in just the first assessment made about impacts.

1. Aesthetics

a. Light and Glare

Potential Significant Impact: Whether the Project would create a new source of substantial light or glare that would adversely affect day or nighttime views in the area.

This project with its high intensity of on-site lighting will substantially increase the ambient night light in the surrounding area than would not have otherwise been created at this intensity if the developed were developed as currently designated. The obvious "light glow" from the Skechers facility would appear to necessitate a reconsideration of this item and the need to address the excessive lighting.

The following are excerpts from the ProLogis Draft Environment Impact Report's Land Use and Planning section relevant to the changes and impacts that this project will have on the surrounding area and the community. Some underlining has been added to highlight the major issues of concern. It is more than obvious that there are impacts that should have been used to justify recommending the denial of this project as follows:

4.8.6 Significant Impacts

The following significant land use and planning impacts were identified for the proposed project, and no feasible mitigation measures are available that would reduce these impacts to less than significant levels. Approval of the proposed General Plan Amendment and Zone Change would be required to make the proposed project consistent with the City's General Plan and zoning designations for the project site. However, the following analysis is based on the project as proposed compared to the existing General Plan land use designations, applicable General Plan objectives and policies, and the existing zoning designations for the project site.

Although the proposed project would introduce a type of land use not historically associated with the rural character and lifestyle of the northeastern portion of the City, it would provide an opportunity for the City to provide adequate land for present and future urban and economic development needs. (DEIR pg. 4.8-16)

The project proposes the development of warehouse uses, which would result in an inconsistency with the existing residential zoning on the southern portion of the site, and the BP zone on the northern portion of the site. The development that would occur with the zone change has the potential to create indirect environmental impacts since the zone change would permit more intense and larger industrial/warehousing uses on the project site, requiring a discretionary action based on an environmental determination of the project. (DEIR pg. 4.8-16)

4.8.7 Cumulative Impacts

Implementation of the proposed project represents establishment of new land uses within the currently undeveloped project site that would result in an intensification of permitted land uses associated with a land use change from Business Park and Residential to Light Industrial uses, changes to the General Plan Circulation Element, and the loss of the PAKO associated with the RA-2 zone. As outlined in the analysis in Section 4.8.6.1, the proposed project is generally consistent with regional plans and planning efforts, although it is not fully consistent with the SCAG's RTP and Compass Blueprint Plan because it eliminates some housing in favor of industrial employment uses. (DEIR pg. 4.8-17)

The project proposes more intense land uses (i.e., from residential and business park uses to industrial uses) which will result in significant air quality and traffic impacts (see Sections 4.3 and 4.11, respectively), and both were found to be cumulatively considerable even after implementation of all project-specific mitigation. (DEIR pg. 4.8-18)

In addition, the proposed project represents a fundamental change in community character for this portion of the City (i.e., mixed residential and business park to industrial warehouse buildings), which can represent an incremental adverse change in terms of public perception. This change would be particularly acute if both the proposed project and the approved West Ridge Commerce Centre (an industrial project just east of the proposed project) were built within a relatively short period of time, as they would both follow relatively closely the completion of the Skechers Logistics Center (another

warehouse project) east of both the proposed project and the West Ridge project, on the east side of Redlands Boulevard. Furthermore, the addition of industrial space from the proposed project and the adjacent West Ridge (industrial) project may create an over-supply of warehousing space in the City, based on current economic conditions. (DEIR pg. 4.8-18)

Similar to the proposed project, some of the cumulative projects within the project vicinity would also require amendments to the existing General Plan and zoning, which may in turn cause additional cumulative impacts. Therefore, planned industrial development in the City may contribute to a cumulatively considerable impact or change in the overall character of the surrounding area, and the proposed project would make a significant contribution to that change in terms of consistency with adopted land use plans. No feasible mitigation is available to reduce this significant contribution. (DEIR pg. 4.8-18)

VI. STATEMENT OF OVERRIDING CONSIDERATIONS pg 136

Fact in Supporting of the Finding (Overriding Considerations)

Objective 2.5

Promote a mix of industrial uses which provide a sound and diversified economic base and ample employment opportunities for the citizens of Moreno Valley with the establishment of industrial activities that have good access to the regional transportation system, accommodate the personal needs of workers and business visitors; and which meets the service needs of local businesses.

“The first portion of this Objective to promote a mix of industrial uses for a sound economic base and employment opportunities is not met. This project fails to offer a mix and for the past several years the primary business growth in the city has been in the same industry sector of warehousing. Since this project offers more of the same it fails to meet this objective and it is not an economically sound decision to continue expansion. Elsewhere in the DEIR it states: ‘the addition of industrial space from the proposed project and the adjacent West Ridge (industrial) project may create an over-supply of warehousing space in the City, based on current economic conditions.’” (FEIR-Facts & Findings pg. 143).

The GP indicates that BP and its permitted uses are the proper buffer between industrial and residential and not as stated in the paragraph above.

General Plan Objective 2.1 and Policy 2.5.1 require a transition of buffer of land uses between residential and industrial uses. In this area, the R5 and R15 zone areas in the southern portion of the site act as a buffer from the BP uses near the freeway and the RA2 residential uses. It should be noted that, while there is an existing transition of land uses from BP to R2 in the vicinity of the project site, it is not the function of either the R-5 or R-15 zones to act as a buffer between nonresidential land uses and low density residential uses. (DEIR pg. 4.8-18).

Comments are provided to the General Plan Goals and Policies stated in the FEIR in an attempt to justify the project. Comments are in standard text.

• DEIR Section 4.8 Land Use and Planning – Consistency with General Plan Policies –

Section 9.2.2 Community Development of the General Plan contains the following goals and objectives:

- *Goal 2.1: A pattern of land uses which organizes future growth, minimizes conflicts between land uses, and which promotes the rational utilization of presently underdeveloped and undeveloped parcels.*

The project site as currently designated by the General Plan Land Uses represent this areas plan for “organized” future growth. To date land to the west has been developed with commercial services which are dependent on the residential uses for expansion of their customer base. The location of the higher density residential is in line with city and regional policies for their placement in proximity to service and transportation corridors. Pursuit of the proposed project will eliminate this rational arrangement of use and will bring the conflict of adjacent land use incompatibility.

- *Goal 2.2: An organized, well-designed, high quality, and functional balance of urban and rural land uses that will meet the needs of a diverse population, and promote the optimum degree of health, safety, well-being, and beauty for all areas of the community, while maintaining a sound economic base.*

The placement of the most impactive urban use (industrial) within the area of rural land uses cannot be considered “an organized, well-designed...balance.” As stated in the EIR this project will have adverse health and traffic impacts that cannot be mitigated which will obviously diminish the well-being of the community. And the continued pursuit and expansion of only one sector of jobs fails to provide a “sound economic base” or opportunities for the city’s residents.

- *Objective 2.1: Balance the provision of urban and rural lands within Moreno Valley by providing adequate land for present and future urban and economic development needs, while retaining the significant natural features and the rural character and lifestyle of the northeastern portion of the community.*

The proposed project changes the character of the rural lands within the city and further depletes land that could offer more divers form of future economic development. The project site contains land designated for Business Park uses which are significantly different from the massive warehouses proposed by this project. Although the current economy does not favor immediate development of Business Park uses maintaining this use provides for the “future urban and economic development needs” as stated in Objective 2.1.

- *Objective 2.5: Promote a mix of industrial uses which provide a sound and diversified economic base and ample employment opportunities for the citizens of Moreno Valley with the establishment of industrial activities that have good access to the regional transportation system, accommodate the personal needs of workers and business visitors; and which meets the service needs of local businesses.*

This project may be viewed an meeting the desire for employment opportunities but this project does not offer a mix of uses nor can in claimed that more of the same development type provides a sound and diversified economic base and employment opportunities for the citizens. Base on the size and likely operational demand for large-scale warehouses workers will likely spend their entire day within the facility rarely patronizing other business in the area. Since the project proposes warehouses they will be few “visitors” beyond those having as association with the warehouse tenant and these warehouses will offer little or nothing to meet the service need of local business. Objective 2.5 is not adequately addressed for the full scope of its objective.

- *Policy 2.5.1: The primary purpose of areas designated Business Park/Light Industrial is to provide for manufacturing, research and development, warehousing and distribution, as well as office and support*

commercial activities. The zoning regulations shall identify the particular uses permitted on each parcel of land. Development intensity should not exceed a Floor Area Ratio of 1.00 and the average floor area ratio should be significantly less.

Although this project will be in compliance with the 1.0 FAR it does not meet the other elements of the objective for providing uses other than warehousing. Again, this project proposes to construct the same type of development being proposed elsewhere in the city and the outlying areas and thus not creating any diversity of business types.

- *Policy 2.5.2: Locate manufacturing and industrial uses to avoid adverse impacts on surrounding land uses.*

Since this project will place large warehouse adjacent to residential property without a buffer of other uses it cannot be considered an attainable policy.

- *Policy 2.5.3: Screen manufacturing and industrial uses where necessary to reduce glare, noise, dust, vibrations and unsightly views.*

From review of the site plan it would appear that minimal area along the perimeter is provided to sustain substantial landscape buffer to offset the lost vista and the unsightly view of loading areas and parking lots. Additionally, the landscape areas adjacent to the extremely tall (40+ feet) buildings are of insufficient size to sustain any form of significant tall tree growth or other vertical landscaping to aid in screening and softening the view of these large buildings.

- *Policy 2.5.4: Design industrial development to discourage access through residential areas.*

This has been achieved on site but there is no way to preclude truck traffic from traveling on the local surface street in search of service or alternative routes when traffic levels appear burdensome to the drivers.

In addition, General Plan Section 9.6.2 Safety Element contains the following applicable objective:

- *Objective 6.6: Promote land use patterns that reduce daily automotive trips and reduce trip distance for work, shopping, school, and recreation.*

Thank you for the opportunity to comment on the Final EIR for this project. I request to be informed of any future meetings and public hearings related to this project or other consideration for projects on east end of Moreno Valley. Feel free to contact me if you have any questions regarding my comments.

Sincerely,

Thomas Thornsley

PROJECT MEMORANDUM

Date: June 24, 2014
To: Jeffrey Bradshaw, City of Moreno Valley
From: Kent Norton, LSA Associates
Project: ProLogis Eucalyptus Industrial Park EIR
Subject: Johnson & Sedlack Comment Letter

On June 24, 2014, the law firm of Johnson & Sedlack submitted an additional comment letter on the ProLogis Eucalyptus Industrial Park EIR. The following responses address the comments in that letter.

Comment 1 (paragraphs 1 & 2, page 1): The commenter asks the City to deny the project because it is not consistent with the General Plan.

Response 1: State Law allows the General Plan to be amended up to 4 times per year, and landowners are allowed to submit development proposals to change General Plan and zoning designations for their property, with the appropriate documentation that the proposed uses will not be in conflict with the goals of the General Plan. This information was provided in the EIR for the ProLogis project.

Comment 2 (paragraph 3, page 1): The commenter questions the condition of approval from the Planning Commission giving 18 months before the developer can build buildings 1 or 3 (the two adjacent to the auto mall).

Response 2: This condition of approval was recommended by the Planning Commission to allow time for the economic market to dictate the highest and best use of the site consistent with the SR-60 Corridor Study.

Comment 3 (paragraph 2, page 2): The commenter says the World Logistics Center project must be considered in the cumulative impacts of the ProLogis EIR.

Response 3: According to the procedures identified in CEQA, the list of cumulative projects is established at the time the baseline environmental conditions are set, which is the time the Notice of Preparation (NOP) is issued for the EIR. The NOP for the ProLogis EIR was issued on February 4, 2008 which was four years before the NOP for the World Logistics Center EIR which was issued on February 3, 2012. The slowdown in the economy that occurred resulted in a slowdown in development activity in the region so there were not that many projects to be considered as cumulative projects when the NOP was issued. As much as the commenter would like the ProLogis project and EIR to be connected to the World Logistics Center project, CEQA does not allow the lead agency to “cherry pick” development information that occurs subsequent to issuing the NOP.

It has also been argued that the World Logistics Center project represents “significant new information.” It should be noted the extensive EIR prepared for the World Logistics Center project included the ProLogis project in its list of cumulative projects for its traffic study, which is appropriate under CEQA as explained above. The commenter is therefore referred to that document and analyses to see the effects of both projects. It is also important to note that the World Logistics Center project is highly controversial and it is not reasonable to conclude at this time that project would be approved, therefore, it cannot be included as “significant new information” in this EIR analysis.

Comment 4 (paragraph 3, page 2): The commenter indicates the traffic report does not adequately address traffic impacts.

Response 4: The project traffic study was prepared using appropriate trip generation rates, trip distribution, and methodologies long established by the City for these types of studies. The area circulation has been proposed to be modified specifically to reduce cut through traffic or truck traffic on residential streets south of the site. Regarding freeways, the project identifies traffic impacts on local freeways that are already impacted by regional traffic. It should be noted that this project will add jobs in an area with an historically poor jobs/housing ratio, which will incrementally improve (i.e., reduce) commute distances and times of local workers over time after the project is built out.

Comment 5 (paragraph 4, page 2): The commenter encourages additional air quality mitigation.

Response 5: The EIR does address feasible mitigation for this project. The Final EIR notes that a number of mitigation measures were modified from the Draft to Final EIR as a result of many comments received from the commenter and related groups, including for air quality. IT should be noted however, that the project does not own the trucks, thus they would have no trucks to “phase-in”. It is not feasible for an individual warehouse operator to control the age or emissions controls on the trucks since that is regulated by CARB and the U.S. EPA.

Comment 6 (paragraph 4, page 2): The commenter mentions agricultural mitigation.

Response 6: An Appeals Court decision (*Building Industry Association of Central California v. County of Stanislaus*) certified in November 29, 2010 concluded that it is appropriate to mitigate at a 1:1 ratio for the loss of prime agricultural land through the acquisition of an offsite agricultural easement if such a program is established by a county or regional governmental entity. However, as outlined in the DEIR section, there is no established County or regional program, and active agriculture in western Riverside County is no longer economically viable or feasible. It should be noted that the State provides information on how to establish agricultural easements and mitigation banks, but the State does not fund or maintain such programs in western Riverside County.

Comment 7 (paragraph 1, page 3): The commenter indicates the City must adopt the Reduced Intensity Alternative. The EIR fully evaluates alternatives to the proposed project, including the Reduced Intensity Alternative. The EIR states...

6.3.3.20 Conclusion

Under the Reduced Intensity Alternative, impacts related to short-term construction-related air quality would be similar to the proposed project as the same amount of land would be disturbed and the same mix of equipment would be utilized. Long-term operational-related air quality impacts would be reduced in magnitude when compared to the project but would remain significant and unavoidable. Because this alternative would require a Zone Change and General Plan Amendment, land use impacts would be similar to the proposed project. The decrease in warehouse uses would result in a reduction of permanent jobs that would be created. This alternative would have a reduced demand on public services, recreation, and water use. However, similar to the proposed project, the payment of fees, dedication of parkland, and adherence to utility requirements would reduce these impacts to a less than significant level. This alternative reduces the impact associated with the loss of prime farmland to a less than significant level.

Because of the decrease in vehicle trips achieved under this alternative, impacts to the operation of local roadways and intersections would be proportionally reduced from what was identified for the proposed project; however, long-term traffic impacts would remain significant and unavoidable. Traffic-related noise would be reduced in magnitude but would be similarly mitigated like the proposed project and would remain less than significant. Water use for this alternative would be less than the proposed project and

would generate less wastewater and solid waste. Under this alternative, the proposed project objectives are met and warehouse uses would still be built, but on a smaller scale.

Response 7: This alternative was determined to be environmentally superior to the proposed project, however, it does not achieve the objectives of the project to nearly the same degree as the project, so it was rejected in favor of the proposed project, as allowed under CEQA.

Comment 8 (paragraph 2, page 3): The commenter says the economic benefits of the project have not been substantiated.

Response 8: The supporting data provided with the Findings does in fact support the contention that the proposed ProLogis project, which is logistics warehousing, will have similar economic impacts to the World Logistics Center project, but on a reduced scale based on the square footage of the two projects. The economic and fiscal study prepared for the World Logistics Center project demonstrates that costs and revenues of a logistics warehouse project are directly proportional to the square footage of the project. The ProLogis project has substantially fewer improvements required to develop the site, so there should be no higher long-term inflationary rate of service for the ProLogis project compared to the World Logistics Center project.

Comment 9 (paragraph 3, page 3): The commenter says the GPA and zone change findings are not supported.

Response 9: The EIR provides substantial evidence that do support the GPA and zone change requests, as outlined in Section 4.7, Land Use and Planning, of the EIR.

Comment 10 (paragraph 4, page 3): The commenter says the burrowing owl mitigation should be 500 feet per current Fish and Wildlife requirements.

Response 10: The mitigation measure can be modified at the City's discretion to reflect current agency requirements.

PROJECT MEMORANDUM

Date: June 24, 2014
To: Jeffrey Bradshaw, City of Moreno Valley
From: Kent Norton, LSA Associates
Project: ProLogis Eucalyptus Industrial Park EIR
Subject: Lozeau Drury Comment Letter

On June 20, 2014, the law firm of Lozeau Drury LLP submitted an additional comment letter on the ProLogis Eucalyptus Industrial Park EIR. The following responses address the comments in that letter.

Comment 1: *The Project's GHG Emissions Remain Significant. ...the EIR continues to fail to explain or justify how the vague greenhouse gas ("GHG") emission mitigations will reduce the Project's 79,000 metric tons of GHG emissions to a level less than the South Coast Air Quality Management District's ("SQAQMD") threshold of significance of 10,000 metric tons. Indeed, the referenced mitigation measures do not even address the Project's GHG emissions from about 5,000 daily truck trips. Nor do the mitigation measures incorporated into the building's design exhaust the available mitigation measures to reduce the Project's GHG emissions to below the SQAQMD 10,000 metric tons per day significance threshold, including an enforceable requirement to install solar panels and purchasing offset credits for any remaining significant emissions. If the City is serious about meeting its 2020 goal of limiting GHG emissions to 798,693 metric tons of CO₂ equivalent per year for the entire City, the Project should include mitigations that result in a net reduction of GHG emissions.*

Response 1: The FEIR never claims that the project-related emissions of GHGs will be reduced to an annual rate of 10,000 metric tons of CO₂e. As stated in the FEIR on page 109, "The Draft EIR (Section 4.3) made a determination that the proposed project would not conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases and no mitigation is required. However, it was determined that the proposed project would generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment and mitigation was proposed to reduce these project-specific effects to less than significant (Draft EIR, page 4.3-21 through 4.3-26)." However, the mitigation measures proposed do not lead to easily quantifiably emissions reductions. The analysis in the FEIR chose to avoid using very rough estimates of emissions reductions to show small reductions in emissions that would still be significant. The significance conclusions are not based on the effectiveness of any mitigation, but rather as described in Section 4.13.6, "...project-related GHG emissions and their contribution to global climate change impacts in the State are less than significant and less than cumulatively considerable because: (1) the project's impacts alone would not cause or significantly contribute to global climate change, and (2) the project has no substantial effect on consumption of fuels or other energy resources, especially fossil fuels that contribute to GHG emissions when consumed."

Comment 2: *The EIR's cumulative GHG and traffic analyses must include the World Logistics Center Project...*

Response 2: This comment has been made several times by the commenter and others during the EIR review process. According to the procedures identified in CEQA, the list of cumulative projects is established at the time the baseline environmental conditions are set, which is the time the Notice of Preparation (NOP) is issued for the EIR. The NOP for the ProLogis EIR was issued on February 4, 2008 which was four years before the NOP for the World Logistics Center EIR which was issued on February 3, 2012. As much as the commenter

would like the ProLogis project and EIR to be connected to the World Logistics Center project, CEQA does not allow the lead agency to “cherry pick” development information that occurs subsequent to issuing the NOP.

Regarding the argument that the World Logistics Center project represents “significant new information”, it should be noted the extensive EIR prepared for the World Logistics Center project included the ProLogis project in its list of cumulative projects for its traffic study, which is appropriate under CEQA as explained above. The commenter is therefore referred to that document and analyses to see the effects of both projects. It is also important to note that the World Logistics Center project is highly controversial and it is not reasonable to conclude at this time that project would be approved, therefore, it cannot be included as “significant new information” in this EIR analysis.

Comment 3a: *The EIR’s Discussion of the Project’s NO_x, ROG_s, and PM₁₀ and Accompanying Mitigations are Inadequate. The EIR also does not cure or adequately explain its use of a 1.96 daily truck trip per 1,000 square feet estimate in its modeling of the Project’s air pollution emissions rather than the truck estimate figure of 2.59 truck trips per 1,000 square feet identified by the SCAQMD.*

Response 3a: The traffic study for the project did use appropriate trip generation rates as described in the Draft EIR Section 4.11 and the project Traffic Impact Assessment (TIA)(DEIR Appendix I). The City requires TIAs to use the latest trip generation rates established by the International Traffic Engineers (ITE) which was done in this case, based on similar kinds of projects in the region. The SCAQMD trip rates have not been vetted through regional traffic modeling maintained by the Southern California Association of Governments (SCAG) or the Western Riverside Council of Governments (WRCOG). Until they are, the City will continue to require the use of appropriate ITE trip rates for TIAs within the City.

It is also useful to note that the diesel truck emission regulation passed by the California Air Resources Board in 2008 is now be phased into effect. As of January 1st, 2016 heavy truck diesel engines manufactured in 1995 or before must be off the road (these engines are the worst polluters). As of January 1st, 2014 heavy truck diesel engines manufactured between 1996 and 2006 must now have an exhaust Particulate Matter Filter. As of January 1st, 2023 all heavy truck diesel engines must meet the low “2010 year” engine emission requirements. All heavy diesel truck engines manufactured since 2010 meet this requirement. The California Air Resources Board 2008 report indicates diesel truck regulation is already having a significant impact in reducing diesel truck emissions. The end result will be a substantial reduction in air pollution from diesel trucks.

Comment 3b (con’t.): *In addition, the mitigation measures to address the acknowledged significant air impacts of the Project are in many cases not enforceable, or are deferred to the future. See LIUNA April 2014 Comment, pp. 6-8. The mitigation measures should be made enforceable and any deferrals need to specify the clear standards to be achieved by each specific mitigation measure. For example, requiring solar panels, rather than merely designing the building for their future potential installation is plainly feasible and would assist in offsetting the Project’s emissions of both ROG_s, NO_x, and GHG_s.*

Response 3b: The FEIR includes all feasible mitigation available to reduce the emissions of NO_x and PM₁₀; however, these are not sufficient to reduce the emissions levels to less than significant. Requiring solar panels would only reduce the electrical demand from the project, reducing the emissions from electrical power plants. It would not have any effect on the truck emissions, which are the majority of the operational emissions.

Comment 3c (con’t.): *LIUNA is concerned that, as currently proposed, the Project’s mitigation measures will not prevent large amounts of particulate matter and dust emissions during construction. Given the proximity to residential neighborhoods, the City Council should make sure that the PM₁₀ mitigations are fully enforceable by requiring edge of site air monitoring.*

Response 3c: The fugitive emissions of particulate matter (PM₁₀ and PM_{2.5}) during construction was shown to be very small compared to the SCAQMD significance thresholds - 18 lbs/day compared to the 150 lbs/day

threshold for PM₁₀, 3.9 lbs/day compared to 55 lbs/day for PM_{2.5}. There is no need to take any actions to monitor these already small emission rates.

Comment 4a: *The EIR's discussion of health risks to nearby residents and workers significantly underestimate the exposures and cancer risks. The EIR and its mitigation measures also fail to protect the adjacent residents by obviously understating the health risks from toxic air contaminants that will be released by the Project during its construction. The only reason the EIR claims to justify its conclusion that nearby residents and on-site workers will not be exposed to any significant health risks by the Project's construction is by making believe that the Project's construction phase will only last four months rather than the 11.5 months reported in the EIR. Nor does the EIR reference or provide the actual data and assumptions that went into the health risk assessment relied upon by the EIR. Applying the actual construction period and disclosing all of the inputs to their assessment, SWAPE calculates the risk assessment and demonstrates that the adult exposure in nearby residences resulted in an additional 22 cancers in one million while the child exposure resulted in 33 excess cancers in a million during the construction period, well above the CEQA significance threshold of ten in one million excess cancer risk.*

Response 4a: The rationale used for the screening-level HRA of construction emissions is that, while the total construction period will be about 11 ½ months, the only portion of that time that will have large diesel-powered construction equipment operating regularly is the 2 month grading phase. Assuming that there will be large diesel-powered construction equipment operating occasionally during the other phases, it was assumed that using 4 months of daily use of the large diesel-powered construction equipment would conservatively characterize the overall construction process. The DEIR includes the full Air Quality technical analysis which contains the full documentation of the inputs, modeling and results files in Appendix C.

Comment 4b (con't.): *The EIR's handling of health risks to workers takes additional liberties to the incorrect assumptions applied generally to residences, including the unsubstantiated assumption that only 87.5 percent of trucks used for constructing the Project will be diesel-fuel and, based on the available documents, averaging the exposures over 24-hours rather than the duration of the work day.*

Response 4b: The HRA in the EIR fully documents the projected health risk levels to nearby residents, however, does not include onsite workers, as these individuals are protected by OSHA regulations.

Comment 5: *Even if the City is Intent on Destroying Remaining Farmland Within its Borders Does Not Relieve the City of Mitigating Impacts From the Loss of Prime Farmland. In terms of the Project's proposed conversion of prime farmland, the City does not get a pass on CEQA's mitigation requirements simply because the City believes that it is inevitable that all farmland within the City will eventually be destroyed. LIUNA April 2014 Comment, pp. 10-11. Farmland conservation easements are feasible within Riverside County. Id., p. 10. The case relied upon by staff is easily distinguished and does not exempt a city from mitigating a project's destruction of farmland simply because a city or some other governmental entity has not established a bureaucratic program to facilitate such easements. See id., pp. 10-11, discussing Building Industry Association of Central California v. County of Stanislaus (2010) 190 Cal.App.4th 582. In any event, the State of California has a state-wide program to facilitate the establishment of farmland conservation easements.*

Response 5: An Appeals Court decision (*Building Industry Association of Central California v. County of Stanislaus*) certified in November 29, 2010 concluded that it is appropriate to mitigate at a 1:1 ratio for the loss of prime agricultural land through the acquisition of an offsite agricultural easement if such a program is established by a county or regional governmental entity. However, as outlined in the DEIR section, there is no established County or regional program, and active agriculture in western Riverside County is no longer economically viable or feasible. It should be noted that the State provides information on how to establish agricultural easements and mitigation banks, but the State does not fund or maintain such programs in western Riverside County.

Comment 6: *The Additional Soil Sampling for Pesticides Must be More Specific. Lastly, the Council should clarify the criteria for the applicant to conduct additional soil sampling for residual pesticides prior to obtaining construction approval from the City. LIUNA April 2014 Comment, p. 11. Right now, the prior soil sampling was insufficient to rule out the likelihood that pesticide applications at the site during the many decades of agricultural operations have not contaminated the soil with pesticide residuals that may pose health hazards to workers. Id.; SWAPE DEIR Comment, pp. 1-3 (Aug. 30, 2012) (LIUNA August 2012 Comment, Exhibit).*

Response 6: As part of the response to the commenter's previous comments on the EIR, a mitigation measure was added to provide additional soil testing even though there is no substantial evidence that such contamination actually exists. In fact, the EIR concluded that existing soil testing was sufficient to determine there were no significant impacts in this regard. However, in an effort to respond to the commenter's concern and comment, the mitigation measure for additional soil testing was added. The same comment has been addressed in the Final EIR (Response to Comments).

In addition, Responses 8 and 9 to Letter D-4A in the Final EIR go into great detail about the potential for contamination by agricultural chemicals on the project site, and the conclusion is there is only a low or minor potential. There is no indication that contamination is widespread, and almost of the site was previously surveyed for soil contamination, including soil tests for such chemicals. However, Mitigation Measure 4.6.6.1A was added to address this potential impact, as explained in the responses. There is no evidence that would lead a reasonable person to conclude that the potential for soil contamination by agricultural chemicals on this site was so high as to require soil testing and remediation prior to approval of the project. It is common in this portion of Riverside County to find former agricultural sites that have low or negligible levels of some agricultural chemicals as may be present on the project site. However, as outlined in the indicated responses, these do not represent a significant environmental impact (i.e., one that would prevent approval of the project), and the additional mitigation measure will assure there will be no significant impacts in this regard as it will be implemented prior to grading or development of the site.

Comment 7: For all of these reasons, as well as other issues set forth in LIUNA's and its consultants' previous comments, LIUNA does not believe the City Council is fully informed about the environmental impacts of the ProLogis Project. In order to comply with CEQA, the Council must send the Project back to the Planning Department and Planning Commission to supplement and recirculate the EIR to address the shortcomings identified by LIUNA and others. LIUNA appreciates this opportunity to comment on the Project. LIUNA's counsel intends to appear at the City Council meeting and will be available to respond to any Council Member or staff questions.

Response7: The Draft and Final EIR documents do provide sufficient impartial and objective information upon which the City Council can base its findings and determinations regarding this project. The EIR is supported by substantial evidence in the record, and provides the level of analysis and public input required by CEQA. There has been no substantial evidence submitted that significant new information requires the recirculation of the DEIR for additional public comment.

Exhibit A – Tom Brochard Associates Letter

Response: The commenter again makes the statement that the ProLogis EIR needs to include the World Logistics Center EIR in its cumulative analysis. According to the procedures identified in CEQA, the list of cumulative projects is established at the time the baseline environmental conditions are set, which is the time the Notice of Preparation (NOP) is issued for the EIR. The NOP for the ProLogis EIR was issued on February 4, 2008 which was four years before the NOP for the World Logistics Center EIR which was issued on February 3, 2012. As much as the commenter would like the ProLogis project and EIR to be connected to the World Logistics Center project, CEQA does not allow the lead agency to "cherry pick" development information that occurs subsequent to issuing the NOP.

Regarding the argument that the World Logistics Center project represents “significant new information”, it should be noted the extensive EIR prepared for the World Logistics Center project included the ProLogis project in its list of cumulative projects for its traffic study, which is appropriate under CEQA as explained above. The commenter is therefore referred to that document and analyses to see the effects of both projects. It is also important to note that the World Logistics Center project is highly controversial and it is not reasonable to conclude at this time that project would be approved, therefore, it cannot be included as “significant new information” in this EIR analysis.

Finally, the issue of trip generation rates has been addressed in the Final EIR. The traffic study for the project did use appropriate trip generation rates as described in the Draft EIR Section 4.11 and the project Traffic Impact Assessment (TIA)(DEIR Appendix I). The City requires TIAs to use the latest trip generation rates established by the International Traffic Engineers (ITE) which was done in this case, based on similar kinds of projects in the region.

Exhibit B – SWAPE Analysis of the World Logistics Center

Response: For the reasons outlined above, it is not appropriate to include the World Logistics Center in the cumulative projects list for the ProLogis project. Therefore, this letter does not apply to the ProLogis EIR.

Exhibit C – Tom Brochard Assoc. Analysis of the World Logistics Center

Response: For the reasons outlined above, it is not appropriate to include the World Logistics Center in the cumulative projects list for the ProLogis project. Therefore, this letter does not apply to the ProLogis EIR.

Subject: RE: ProLogis RTC

I would add the following:

It should be noted, that the General Plan Build Out Traffic Volumes were developed using the City of Moreno Valley's General Plan Build Out Traffic Model. As a result, the Build Out traffic volumes are based on the General Plan land uses for the World Logistics Center, which the commenter confirms generate more traffic than the World Logistics Center. As a result, the Build Out analysis is actually more conservative than if the World Logistics Center were specifically evaluated.

Also

The commenter disagrees with the trip distribution which assumes that 70 percent of passenger car trips will be generated within Moreno Valley but does not provide substantial evidence to warrant changing the distribution. In fact, this distribution results in a conservative analysis of local traffic impacts, as additional traffic distributed to the freeway would lessen the project's impacts on City streets. In addition, the commenter states that 55 percent of truck trips have been assigned to local streets. This is incorrect. Figures 9 and 11 clearly show that 85 percent of truck traffic was assigned to SR-60.

Subject: ProLogis Eucalyptus warehouse comments

Good morning Mr Bradshaw,

The fact that the ProLogis Eucalyptus warehouse developer in the response to comments about AG agrees that it is legally possible for the City to require mitigation for loss of all those Prime AG acres, then the Sierra Club expects you to do so. The State has AG mitigation programs and ways to have conservation easements and therefor it is possible to use those for what the Courts are saying can be imposed. Just because the City now downplays AG in its future, it is still regionally important and needs to be mitigated. You could also require the developer to use a local AG mitigation program if ones is developed before occupancy of the entire project. This is quite possible with the current Riverside County General Plan Update.

LSA Response: An Appeals Court decision (Building Industry Association of Central California v. County of Stanislaus) certified in November 29, 2010 concluded that it is appropriate to mitigate at a 1:1 ratio for the loss of prime agricultural land through the acquisition of an offsite agricultural easement if such a program is established by a county or regional governmental entity. However, as outlined in the DEIR section, there is no established County or regional program, and active agriculture in western Riverside County is no longer economically viable or feasible. It should be noted that the State provides information on how to establish agricultural easements and mitigation banks, but the State does not fund or maintain such programs in western Riverside County.

This is also very important for loss of raptor foraging and local AG decreases GHG as well as climate change or as Sierra Club now calls it Climate Disruption. Mitigation for AG near publicly owned lands, like the San Jacinto Wildlife Area, is very important and this project needs to step up with this mitigation.

LSA Response: The project will pay the established MSCHP mitigation fee which includes thousands of acres of open space land supporting a variety of habitats, and much of the open space land will provide continued foraging for raptors. There is no unusual impact caused by the ProLogis project itself that would trigger an independent and additional assessment for raptor foraging beyond the MSHCP fee.

The developer of the WLC put together a proposed plan for the Moreno Highlands lands that would have been mainly warehousing at the time Skechers was being proposed. He even put together a documents which compared the Moreno Highlands land uses with his proposed warehouse use on mainly the same lands -- plus some additional acreage. It is wrong for Prologis to continually claim they did not know about what we now call the World Logistic Center (WLC) for it was very foreseeable. The WLC waited until the 20 year Development Agreement on Moreno Highlands expired to formally put their project forward, but everyone knew for years prior, exactly what was going to be proposed. Prologis must include the WLC in its cumulative impacts or all its environmental documents and analysis are inadequate. It is also sad that the ProLogis developer waited only one year after the City and its residents approved a new General Plan to purchase the acreage for this project. It would not surprise the Sierra Club if they were watching during our General Plan process and knew they could get the City Council to change the land use later.

LSA Response: The commenter is incorrect according to established CEQA procedures. According to the procedures identified in CEQA, the list of cumulative projects is established at the time the baseline environmental conditions are set, which is the time the Notice of Preparation (NOP) is issued for the EIR. The NOP for the ProLogis EIR was issued on February 4, 2008 which was four years before the NOP for the World Logistics Center EIR which was issued on February 3, 2012. As much as the commenter would like the ProLogis project and EIR to be connected to the World Logistics Center project, CEQA does not allow the lead agency to "cherry pick" development information that occurs subsequent to issuing the NOP. It has also been argued that the World Logistics Center project represents "significant new information." It should be noted the extensive EIR prepared for the World Logistics Center project included the ProLogis project in its list of cumulative projects for its traffic study, which is appropriate under CEQA as explained above. The commenter is therefore referred to that document and analyses to see the effects of both projects. It is also important to note that the World Logistics Center project is highly controversial and it is not reasonable to conclude at this time that project would be approved, therefore, it cannot be included as "significant new information" in this EIR analysis.

The City has limited amount of freeway frontage and we should not continue to use it for for cement boxes. It does not benefit the City economically in the long term to give away these prime acreages to warehouses instead of for businesses that could truly use the exposure along the SR-60.

LSA Response: It is up to the City's discretion based on the General Plan and other guidance documents as to what is developed along the freeway corridors within the City. The proposed uses are in fact consistent with the recommendations of the SR-60 Corridor Study prepared for the City during 2013. Certainly it is advantageous to place commercial uses in locations with freeway visibility, but it should be noted there are other land uses within the City along the freeways, including office, light industrial, and residential.

Toxic diesel pollution is going to cover our entire city with all these warehouse approvals. When are the decision makers going to realize that the health of the young and old as well as the warehouse workers are

being compromised by these approvals? Since it has been shown that one must be 500 meeter or about 1500 feet away form these toxic diesel warehouses to significantly lessen their impacts, how can the City allow this project on lands zoned for homes and also adjacent to land zoned for homes as well as close to existing homes? The decision makers must know the choices that they must make in the future on lands adjacent to this project which should no longer permit housing, prior to approving this project. The full cumulative, growth inducing impacts as well as direct and indirect impacts have not been fully shown and analyzed for this project. The ProLogis Eucalyptus warehouse project does not protect the Health, Safety or Welfare of Moreno Valley residents.

LSA Response: The air quality and health risk assessments in the EIR and supporting technical studies were prepared using the most current data and methodologies recommended by the SCAQMD. They concluded there were significant air quality impacts from criteria pollutants but not from health risks mainly associated with diesel exhaust.

Thank you,

George Hague

PUBLIC RESPONSE TO LSA'S RESPONSES

CITY COUNCIL MEETING
JUNE 24, 2014

Thomas Thornsley
29177 Stevens Avenue, Moreno Valley, CA 92555

With LSA Responses in Red Below (6/24)...

June 24, 2014

Mr. Jeffery Bradshaw
City of Moreno Valley
14177 Frederick Street/P.O. Box 88005
Moreno Valley, California 92552

Via e-mail: JefferyB@moval.org

Dear Mr. Gross:

Re: Comments to the Final Environmental Impact Report for the ProLogis Eucalyptus Industrial Park.

As a concerned resident who lives on the east end I have great interest and concerns about development in our area. Therefore, I have taken an extensive amount of time to review the Final Environmental Impact Report and the Statement for Overriding Consideration. I cannot agree with some of the conclusions because this project goes beyond good planning recommending the replacement of viable land uses that it should never have been encouraged by the City to the developer.

Once again the City and a Developer are collectively agreeing to change the General Plan to justify a project. It appears that a number of impacts are being written off because the City simply will not take a strong stand on potential development impacts or adopt stricter mitigation measures to assure that development impacts are brought down to the lowest feasible point versus no mitigation if the impacts are not significantly above set thresholds.

LSA Response: State Law allows the General Plan to be amended up to 4 times per year, and landowners are allowed to submit development proposals to change General Plan and zoning designations for their property, with the appropriate documentation that the proposed uses will not be in conflict with the goals of the General Plan. This information was provided in the EIR for the ProLogis project.

One of the hardest losses I find in the whole concept of this project is the lost viability of financially valuable land with freeway exposure. It is in the best economic interest of all cities to place the highest and best uses adjacent to the freeways where those businesses can promote themselves and draw in customers. At the very least the city should be designating the land along the south side of SR-60 for such commercial use. It is noted that the staff report makes no mention of the option to expand the auto mall although it was discussed with the Planning Commission. Further to my dismay is the continued quest to give approval for land use changes that do not gain us new or unique job opportunities. There is plenty of available land designated for warehouse development and we do not need to be hopscotching that use all over the city.

LSA Response: The proposed uses are in fact consistent with the recommendations of the SR-60 Corridor Study prepared for the City during 2013. Certainly it is advantageous to place commercial

uses in locations with freeway visibility, but it should be noted there are other land uses within the City along the freeways, including office, light industrial, and residential.

In review of the projects objectives and the Statement of Overriding Consideration it is clear that objectivity was not always utilized or expressed. Since I do profess to be in opposition to the project my comments could be considered biased but I have prepared comments none the less.

The following contains italicized text straight from the Final EIR followed by standard text of my comments and concerns.

Here is the list of Project Objectives as found in the Draft Environmental Impact Report followed by an independent evaluation of their stated goal as follows:

B. PROJECT OBJECTIVES

• *Provide industrial warehouse facilities that meet the substantial and unmet demands of businesses located in the City and County;*

- Moreno Valley may be in need more businesses however there is not an “unmet” demand for warehouses by any operations within this City or surrounding area. In all likelihood, these proposed warehouses will be utilized by companies outside of our region that must import their products and take them to a location where they can be distributed to other distant locations.

LSA Response: Studies of regional logistics and goods mobility indicate that much of the truck traffic within the Southern California area are to move goods that are purchased within this area, while much of the material bound for the mid-west or east coast is often sent by rail.

- In the past few years the City has added millions of square feet of warehouse space intended to serve the same purpose and meeting the demand for the area.

LSA Response: Although the exact square footage added within the City is not known by the author at this time, local market conditions for now and in the foreseeable future favor logistics warehousing. Local land use decisions often change in response to changes in regional and national market conditions.

• *Provide new industrial development that is attractive and minimizes conflicts with the surrounding existing uses;*

- Although this developer proposes building with aesthete features little is done along the highway or the residential properties to provide sufficient landscaping to screen the huge buildings.

LSA Response: The EIR appendices include landscaping plans for both the freeway frontage and that faces the residential uses to the southeast, and eventually the planned landscaping will help buffer views of the warehouses from the freeway and residential areas.

- At the very least this project will create air quality, traffic, noise, and lighting conflicts with the surrounding residential property both built and unbuilt.

LSA Response: The EIR acknowledges the various impacts of the project regarding these environmental issues, and proposes mitigation to reduce those impacts the extent feasible.

- The project's truck and vehicular traffic will now take access to the west through the City's Auto Mall ultimately increasing traffic volumes and conflicts with their operations and customer access to those economically beneficial businesses. We cannot afford to have our auto sales diminish because of undue truck traffic impacts scaring off customers.

LSA Response: The EIR examines the traffic circulation impacts of the project, and the owner of the auto sales area west of the project did not object to the proposed land uses and the resulting traffic. It is expected that only a portion of the project traffic would travel west through the auto sales area.

• *Provide a variety of new employment opportunities for the citizens of Moreno Valley and surrounding communities;*

- This proposal more of what we have been getting the past few years and thus fails to provide a "variety" of new employment opportunities. Its development of warehouses and the jobs associated with that industry only increases the same type of employment opportunity already in high supply through the numerous warehouses already built or approved for construction within the City and the surrounding area.

LSA Response: Although the specific users are not known at this time, ProLogis has indicated that its experience with similar development with different building sizes is that this project will attract a variety of light industrial uses/users that require warehousing space.

• *Encourage warehouse distribution services that take advantage of the area's close proximity to various freeways and transportation corridors;*

- This project can only claim its proximity to SR-60. It is neither adjacent nor near any rail service corridors.

LSA Response: The site also has access to Gilman Springs Road and routes to the south via SR-60 east, but yes there is no rail service proximate to the project site.

• *Encourage new development consistent with the capacity and municipal service capabilities;*

• *Provide infrastructure improvements to meet phased Project needs in an efficient and cost-effective manner;*

- This is a "must do" with any development. However, highway improvements are not tied to development timetables or percentage of constructed building square footage to preclude development operational impacts that reduce roadway levels of service below acceptable levels for indefinite period of time. Remember that paying into the TUMF program has no guarantee as to when those needed improvements will be made.

LSA Response: Payment of fees to an established traffic mitigation program is considered acceptable mitigation for regional traffic impacts.

• *Cluster industrial warehouse uses near access points to the state highway system to reduce traffic congestion on surface streets and to reduce air pollutant emissions from vehicle sources;*

- Traffic intensity at the state highway systems' intersecting points with project site will be highly impacted as will the commercial and residential use adjacent to the project location. This will further impede others accessing the community at these highway intersections.

LSA Response: The project will increase truck and vehicular traffic on SR-60 and the I-215 freeways, but what has not been estimated is the traffic benefits this project will have by introducing

employment into the City which has been historically jobs poor and housing rich, which will help incrementally reduce the overall commute times for local workers as the project is built out and occupied, and employs local workers.

- With the change of land use to permit warehouses you are also changing the vehicle types coming into the area. The air quality analysis needs to show whether the reduction of car exhaust over the increase in trucks and diesel exhaust truly reduces the health risk associated with one over the other.

LSA Response: The traffic and air quality analyses in the EIR (and their associated technical studies) did take these changes into account, and the health risk screening analysis does evaluate potential health risks of the diesel emissions from the trucks.

• Develop land uses that provide the City with a positive revenue/cost ratio and provide needed infrastructure in a timely fashion;

- This objective simply points out the known bias for industrial and commercial land uses which are the only land uses that have a positive ratio. This could be argued at any time to justify the elimination of residential uses and it meets no unique criteria for development.
- As the environment stands today we are unaware of any “needed” infrastructure to meet current conditions. However, development of the project site, as with any development type, would require the installation of necessary infrastructure to off-set the impacts of said development. Again, not unique.

LSA Response: It is not the goal of the analysis to show why a project may be unique but rather if or to what degree it is consistent with the stated goal. This project will produce a positive revenue to cost ratio and thus provide the City with a surplus of revenue as its uses build out.

• Address community circulation, both vehicular and pedestrian, utilizing available capacity within the existing circulation system, and provide fair share improvements to various future-year deficient intersection or road segments; and

- Although this project will pay into the TUMF program for major highway improvements, construction of those improvements is not tied to any timetable of the development. Should the facilities be in operation prior to the completion of roadway improvements the impacted roadways will operate at substantially reduced rates of service until such time that improvements are made. This timetable is indeterminable.

LSA Response: The TUMF program does have an implementation timing plan, although not every planned improvement is scheduled but only those in the upcoming 5-year time period. The County can only reasonably plan improvements over that timeframe so that actual revenues do not exceed estimates of revenues and result in planned improvements becoming infeasible.

• Reduce peak hour vehicle trips, energy and water consumption compared to existing General Plan land uses.

DEIR - FEIR

Although the analysis in the DEIR has concluded that there will be no impacts relevant to some issues it is surprising to find the following questionable judgment in just the first assessment made about impacts.

1. Aesthetics

a. Light and Glare

Potential Significant Impact: Whether the Project would create a new source of substantial light or glare that would adversely affect day or nighttime views in the area.

This project with its high intensity of on-site lighting will substantially increase the ambient night light in the surrounding area than would not have otherwise been created at this intensity if the developed were developed as currently designated. The obvious “light glow” from the Skechers facility would appear to necessitate a reconsideration of this item and the need to address the excessive lighting.

LSA Response: The EIR examines potential impacts of the project regarding lighting and compliance with the City’s nightlighting ordinance will assure impacts to the residential neighborhood to the south are not significantly impacted. It should be noted the Skechers facility is not proximate to residential uses so it is an inaccurate comparison.

The following are excerpts from the ProLogis Draft Environment Impact Report’s Land Use and Planning section relevant to the changes and impacts that this project will have on the surrounding area and the community. Some underlining has been added to highlight the major issues of concern. It is more than obvious that there are impacts that should have been used to justify recommending the denial of this project as follows:

4.8.6 Significant Impacts

The following significant land use and planning impacts were identified for the proposed project, and no feasible mitigation measures are available that would reduce these impacts to less than significant levels. Approval of the proposed General Plan Amendment and Zone Change would be required to make the proposed project consistent with the City’s General Plan and zoning designations for the project site. However, the following analysis is based on the project as proposed compared to the existing General Plan land use designations, applicable General Plan objectives and policies, and the existing zoning designations for the project site.

Although the proposed project would introduce a type of land use not historically associated with the rural character and lifestyle of the northeastern portion of the City, it would provide an opportunity for the City to provide adequate land for present and future urban and economic development needs. (DEIR pg. 4.8-16)

The project proposes the development of warehouse uses, which would result in an inconsistency with the existing residential zoning on the southern portion of the site, and the BP zone on the northern portion of the site. The development that would occur with the zone change has the potential to create indirect environmental impacts since the zone change would permit more intense and larger industrial/warehousing uses on the project site, requiring a discretionary action based on an environmental determination of the project. (DEIR pg. 4.8-16)

4.8.7 Cumulative Impacts

Implementation of the proposed project represents establishment of new land uses within the currently undeveloped project site that would result in an intensification of permitted land uses associated with a land use change from Business Park and Residential to Light Industrial uses, changes to the General Plan Circulation Element, and the loss of the PAKO associated with the RA-2 zone. As outlined in the analysis in Section 4.8.6.1, the proposed project is generally consistent with regional plans and planning efforts,

although it is not fully consistent with the SCAG's RTP and Compass Blueprint Plan because it eliminates some housing in favor of industrial employment uses. . (DEIR pg. 4.8-17)

The project proposes more intense land uses (i.e., from residential and business park uses to industrial uses) which will result in significant air quality and traffic impacts (see Sections 4.3 and 4.11, respectively), and both were found to be cumulatively considerable even after implementation of all project-specific mitigation. (DEIR pg. 4.8-18)

In addition, the proposed project represents a fundamental change in community character for this portion of the City (i.e., mixed residential and business park to industrial warehouse buildings), which can represent an incremental adverse change in terms of public perception. This change would be particularly acute if both the proposed project and the approved West Ridge Commerce Centre (an industrial project just east of the proposed project) were built within a relatively short period of time, as they would both follow relatively closely the completion of the Skechers Logistics Center (another warehouse project) east of both the proposed project and the West Ridge project, on the east side of Redlands Boulevard. Furthermore, the addition of industrial space from the proposed project and the adjacent West Ridge (industrial) project may create an over-supply of warehousing space in the City, based on current economic conditions. (DEIR pg. 4.8-18)

Similar to the proposed project, some of the cumulative projects within the project vicinity would also require amendments to the existing General Plan and zoning, which may in turn cause additional cumulative impacts. Therefore, planned industrial development in the City may contribute to a cumulatively considerable impact or change in the overall character of the surrounding area, and the proposed project would make a significant contribution to that change in terms of consistency with adopted land use plans. No feasible mitigation is available to reduce this significant contribution. (DEIR pg. 4.8-18)

VI. STATEMENT OF OVERRIDING CONSIDERATIONS pg 136

Fact in Supporting of the Finding (Overriding Considerations)

Objective 2.5

Promote a mix of industrial uses which provide a sound and diversified economic base and ample employment opportunities for the citizens of Moreno Valley with the establishment of industrial activities that have good access to the regional transportation system, accommodate the personal needs of workers and business visitors; and which meets the service needs of local businesses.

"The first portion of this Objective to promote a mix of industrial uses for a sound economic base and employment opportunities is not met. This project fails to offer a mix and for the past several years the primary business growth in the city has been in the same industry sector of warehousing. Since this project offers more of the same it fails to meet this objective and it is not an economically sound decision to continue expansion. Elsewhere in the DEIR it states: 'the addition of industrial space from the proposed project and the adjacent West Ridge (industrial) project may create an over-supply of warehousing space in the City, based on current economic conditions.'" (FEIR-Facts & Findings pg. 143).

The GP indicates that BP and its permitted uses are the proper buffer between industrial and residential and not as stated in the paragraph above.

LSA Response: The proposed warehouses would provide a buffer greater than that identified in the City's Municipal Code in that there would be almost 400 feet between the existing residences and the closest point of Building 6, which well exceeds the City's recommended 250 feet buffer.

General Plan Objective 2.1 and Policy 2.5.1 require a transition of buffer of land uses between residential and industrial uses. In this area, the R5 and R15 zone areas in the southern portion of the site act as a buffer from the BP uses near the freeway and the RA2 residential uses. It should be noted that, while there is an existing transition of land uses from BP to R2 in the vicinity of the project site, it is not the function of either the R-5 or R-15 zones to act as a buffer between nonresidential land uses and low density residential uses. (DEIR pg. 4.8-18).

Comments are provided to the General Plan Goals and Policies stated in the FEIR in an attempt to justify the project. Comments are in standard text.

• DEIR Section 4.8 Land Use and Planning – Consistency with General Plan Policies –

Section 9.2.2 Community Development of the General Plan contains the following goals and objectives:

• Goal 2.1: A pattern of land uses which organizes future growth, minimizes conflicts between land uses, and which promotes the rational utilization of presently underdeveloped and undeveloped parcels.

The project site as currently designated by the General Plan Land Uses represent this areas plan for “organized” future growth. To date land to the west has been developed with commercial services which are dependent on the residential uses for expansion of their customer base. The location of the higher density residential is in line with city and regional policies for their placement in proximity to service and transportation corridors. Pursuit of the proposed project will eliminate this rational arrangement of use and will bring the conflict of adjacent land use incompatibility.

• Goal 2.2: An organized, well-designed, high quality, and functional balance of urban and rural land uses that will meet the needs of a diverse population, and promote the optimum degree of health, safety, well-being, and beauty for all areas of the community, while maintaining a sound economic base.

The placement of the most impactful urban use (industrial) within the area of rural land uses cannot be considered “an organized, well-designed...balance.” As stated in the EIR this project will have adverse health and traffic impacts that cannot be mitigated which will obviously diminish the well-being of the community. And the continued pursuit and expansion of only one sector of jobs fails to provide a “sound economic base” or opportunities for the city's residents.

LSA Response: The City's Municipal Code requires a minimum setback of 250 feet between residential uses and warehousing or light industrial uses, which would apply to this or any other types of projects in this area. Yes the existing General Plan designations do allow for more of a transition from warehousing to residential uses, but that does not mean that other land use arrangements will result in significant land use or other environmental impacts. That is the purpose of the CEQA process, to identify those potential impacts and mitigate them as much as feasible. The EIR did not identify significant health risks from this project on nearby residential uses. It must be remembered that the “balance” to which the commenter refers is a City-wide goal and cannot be applied to each individual

project within the City, otherwise many projects would not be consistent with the current zoning (i.e., they would all have to be mixed use projects).

• *Objective 2.1: Balance the provision of urban and rural lands within Moreno Valley by providing adequate land for present and future urban and economic development needs, while retaining the significant natural features and the rural character and lifestyle of the northeastern portion of the community.*

The proposed project changes the character of the rural lands within the city and further depletes land that could offer more diverse form of future economic development. The project site contains land designated for Business Park uses which are significantly different from the massive warehouses proposed by this project. Although the current economy does not favor immediate development of Business Park uses maintaining this use provides for the “future urban and economic development needs” as stated in Objective 2.1.

LSA Response: The City Council must weigh the various impacts and benefits of each project through the CEQA process, and determine if the proposed uses are consistent with the goals of the General Plan and if changes are needed to respond to current economic conditions. State law allows for a City to make changes to its General Plan if it determines those changes are consistent with the intent of the General Plan and would provide benefits to the City.

• *Objective 2.5: Promote a mix of industrial uses which provide a sound and diversified economic base and ample employment opportunities for the citizens of Moreno Valley with the establishment of industrial activities that have good access to the regional transportation system, accommodate the personal needs of workers and business visitors; and which meets the service needs of local businesses.*

This project may be viewed as meeting the desire for employment opportunities but this project does not offer a mix of uses nor can it be claimed that more of the same development type provides a sound and diversified economic base and employment opportunities for the citizens. Based on the size and likely operational demand for large-scale warehouses workers will likely spend their entire day within the facility rarely patronizing other business in the area. Since the project proposes warehouses they will be few “visitors” beyond those having an association with the warehouse tenant and these warehouses will offer little or nothing to meet the service need of local business. Objective 2.5 is not adequately addressed for the full scope of its objective.

LSA Response: The mix to which the commenter refers is from a City-wide goal, and thus should be applied in a City-wide view instead of for each individual project, as outlined above.

• *Policy 2.5.1: The primary purpose of areas designated Business Park/Light Industrial is to provide for manufacturing, research and development, warehousing and distribution, as well as office and support commercial activities. The zoning regulations shall identify the particular uses permitted on each parcel of land. Development intensity should not exceed a Floor Area Ratio of 1.00 and the average floor area ratio should be significantly less.*

Although this project will be in compliance with the 1.0 FAR it does not meet the other elements of the objective for providing uses other than warehousing. Again, this project proposes to construct the same type of development being proposed elsewhere in the city and the outlying areas and thus not creating any diversity of business types.

LSA Response: The goal of this project is to change the General Plan and zoning designations to accommodate warehousing which may also involve some assembly, so the project is consistent with portion of this policy. However, that is why a General Plan Amendment and Zone Change are being processed for this project.

- *Policy 2.5.2: Locate manufacturing and industrial uses to avoid adverse impacts on surrounding land uses.*

Since this project will place large warehouse adjacent to residential property without a buffer of other uses it cannot be considered an attainable policy.

LSA Response: The commenter is incorrect, this project will have a buffer (in excess of that outlined in the City's Municipal Code) between it and the residential uses to the south, and the circulation plan is being changed to preclude project truck traffic from the residential areas to the south.

- *Policy 2.5.3: Screen manufacturing and industrial uses where necessary to reduce glare, noise, dust, vibrations and unsightly views.*

From review of the site plan it would appear that minimal area along the perimeter is provided to sustain substantial landscape buffer to offset the lost vista and the unsightly view of loading areas and parking lots. Additionally, the landscape areas adjacent to the extremely tall (40+ feet) buildings are of insufficient size to sustain any form of significant tall tree growth or other vertical landscaping to aid in screening and softening the view of these large buildings.

LSA Response: The EIR does evaluate the impact on views that would result from the new warehouse buildings. In addition, the EIR appendices include landscaping plans for both the freeway frontage and that faces the residential uses to the southeast, and eventually the planned landscaping will help buffer views of the warehouses from the freeway and residential areas.

- *Policy 2.5.4: Design industrial development to discourage access through residential areas.*

This has been achieved on site but there is no way to preclude truck traffic from traveling on the local surface street in search of service or alternative routes when traffic levels appear burdensome to the drivers.

LSA Response: The circulation plan for the area will be modified so that project truck traffic will not travel through the residential areas to the south.

In addition, General Plan Section 9.6.2 Safety Element contains the following applicable objective:

- *Objective 6.6: Promote land use patterns that reduce daily automotive trips and reduce trip distance for work, shopping, school, and recreation.*

LSA Response: The proposed project will help improve the City's jobs/housing balance which will in turn incrementally reduce overall commute times and trip distances for work-related trips as project uses are occupied and local workers are employed.

Thank you for the opportunity to comment on the Final EIR for this project. I request to be informed of any future meetings and public hearings related to this project or other consideration for projects on east end of Moreno Valley. Feel free to contact me if you have any questions regarding my comments.

Sincerely,

Thomas Thornsley

Re: Prologis Eucalyptus Industrial Park
Case No. PA07-0081, 0082, 0083, 0084, 0158, 0159, 0160, 0161 and 0162

Dear Mr. Bradshaw:

I am writing to supplement my June 30, 2014 letter requesting that the above-referenced case be continued to August 26, 2014. Prologis has decided to propose some substantial modifications to the project in order to respond to the concerns that have been expressed by the community. We believe that continuing this matter will benefit all concerned because we will have additional time to refine our proposal and to allow the city staff to evaluate the proposal before it is considered for approval by the City Council.

As always, please do not hesitate to call me if you have any questions.

Best regards,

Pat Cavanagh
Sr. Vice President

Moreno Valley, CA 92552

Dear Mr. Bradshaw:

Prologis is requesting a continuance of the City Council vote on the Prologis Eucalyptus Industrial Park Case No. PA07-0081, 0082, 0083, 0084, 0158, 0159, 0160, 0161 and 0162 that was presented to Council on June 24th and delayed until July 8th. We feel we need for more time to review and determine the need to respond to comments and letters received at the June 24th hearing regarding our proposed project. We respectfully request a continuance until the next City Council meeting of August 26th, or if time is not available at that date, the earliest date thereafter.

Best regards,

Pat Cavanagh

Sr. Vice President

Moreno Valley, CA

RE: Prologis Park Eucalyptus

Dear Mayor Molina:

Thank you for taking the time to meet with me to discuss our proposed Prologis Park Eucalyptus. In addition to meeting with you, we have now met with each of the other Council members and had the opportunity to discuss the modifications to the project. Based on the favorable feedback we have received to the proposed modifications, we are planning on moving forward with the changes discussed.

Although the proposed project was approved at the Planning Commission Meeting with a 4-3 margin, we recognize that there were 3 no votes, each with various concerns about the project. We also have listened to the comments coming from the public at the Planning Commission meeting as well as the City Council meeting.

In an attempt to be responsive to these concerns, Prologis has revisited our proposed plan and decided to request that the City Council, rather than voting on the Proposed Project on August 26th, consider instead what we are referring to as the "Less Intensive Modified Plan" that we outlined for you in our meeting. We are requesting that Council review these modifications by Prologis and provide input and direction in our efforts to resolve as many of the stated concerns that we have heard. Prologis is prepared to formalize the "Less Intensive Modified Plan", by updating and revising the EIR document as needed and resubmitting to Council for a vote. We have met with Planning Staff and they are familiar with this change in direction and have provided us with guidance in the process. With your approval, we will target getting back to Council on the Tuesday, October 14th scheduled meeting.

The "Less Intensive Modified Plan" will require considerable expense to redo the various studies in the EIR and we are prepared to undertake this based on the positive feedback we have received from Council. I have attached a site plan showing the original "Proposed Project" that has been presented to you at the City Council Meeting and a revised site plan showing the "Less Intensive Modified Plan". Additionally, I have enclosed an exhibit labeled "Comparison of Average Daily Vehicle Trips" to demonstrate how much traffic is generated from the two alternatives as well as the traffic counts based on the current General Plan.

I wanted to restate some of the benefits to the "Less Intensive Modified Plan" are:

- A 32% reduction in the overall project square footage, eliminating 718,655 square feet in the 2 buildings (No. 5 & 6) that are located in the SEC, nearest the residential community to the south.
- Although the total traffic is only slightly reduced, there would be a 32% reduction in truck traffic and related air quality and noise generated by trucks.
- A buffer of 250' will be created from the nearest truck court to future residential
- A distance of 1,636 feet from the nearby existing neighborhood at the SEC of the project area to the closest truck court.
- Preserves the auto mall expansion parcels (bldg. 1 & 3), a condition previously provided.
- Even with the reduction in square feet, the project would still represent and estimated 4-500 new full time permanent jobs and approximately 1,000 construction jobs over the build out period for just the industrial portion of the project.
- The ultimate build-out of industrial and residential would still represent significant fees, infrastructure improvements and incremental tax revenue to the City.

We appreciate your time and input on this project. This modification is a significant change to our original plan but we feel that it will soften a great deal of the concerns that have been raised. We can't do anything to satisfy the concerns the community has about Highland Fairview's plans, but we do feel that the changes we are prepared to make will improve those concerns raised regarding proximity to residential, truck traffic, air quality and preservation of residential that will eventually support the nearby retail centers.

I would welcome your comments and am more than willing to meet with you if you have additional questions.

Best Regards,

Pat Cavanagh

1. INTRODUCTION

The Final Environmental Impact Report (EIR) for the proposed ProLogis Eucalyptus Industrial Park (formerly known as the “ProLogis Moreno Valley Eucalyptus Project”) project is composed of the Draft EIR State Clearinghouse No. 2008021002 and Appendices; the Response to Comments; and the Findings, Statement of Overriding Considerations, Staff Reports, and Resolutions. Specifically, this document portion of the EIR includes the Comments and Responses volume of the Final EIR, EIR modifications or errata, and the Mitigation Monitoring and Reporting Program (MMRP). The purpose of this document is to respond to all comments received by the City of Moreno Valley (City) regarding the environmental information and analyses contained in the Draft EIR. Additionally, any corrections to the text and figures of the Draft EIR, generated either from responses to comments or independently by the City, are stated in this volume of the Final EIR. The Draft EIR text has not been modified to reflect these clarifications. The reason for the delay of more than a year in processing the Final EIR is that the City enacted an entitlement moratorium on new development along the SR-60 corridor in the eastern portion of the City, including the ProLogis site, while the City completed a land use alternatives study of this corridor. That report was officially received by the City on January 14, 2014, and the City rescinded the entitlement moratorium as of January 23, 2014.

IMPORTANT NOTE: Section 4.0 of this document has been added to evaluate the Reduced Intensity Density Alternative in more detail. To that end, the applicant has proposed a “Less Intensive Modified Plan” to address concerns expressed about the Proposed Project (i.e., its environmental impacts). The applicant is requesting the City consider adopting the Reduced Intensity Alternative as evaluated in the Draft EIR in the form of this Less Intensive Modified Plan that would reduce the size of the project by 32% by removing buildings 5 and 6 which are the two buildings proposed in the southeast corner of the project site (i.e., the buildings that are closest to the existing residences). This modified plan would allow development of future residential uses in the southeast portion of the project site, consistent with the existing R-5 and RA-2 zoning, adjacent to the existing residential neighborhood to the southeast. The modified plan also has a 250-foot setback from the project warehouses to the future residential uses, consistent with the City’s municipal code requirements.

1.1 CONTENT AND FORMAT

Subsequent to this introductory section, Section 2.0 contains copies of each comment letter received on the Draft EIR, along with annotated responses to each comment contained within the letters. Section 3 of this document contains corrections and errata to the Draft EIR. Section 4.0 evaluates a Reduced Intensity Alternative (Less Intensive Modified Plan) as described above, while Section 5.0 contains the MMRP.

1.2 PUBLIC REVIEW OF THE DRAFT EIR

As required by the California Environmental Quality Act (CEQA) Guidelines Section 15087, a Notice of Completion (NOC) of the Draft EIR State Clearinghouse No. 2008021002 for the Eucalyptus Industrial Park project was filed with the State Clearinghouse on July 17, 2012, and the Notice of Availability (NOA) of the Draft EIR was filed with the Riverside County Clerk on July 18, 2012.

The Draft EIR was circulated for public review for a period of 48 days, from July 18, 2012 to September 4, 2012. Copies of the Draft EIR were distributed to all Responsible Agencies and to the State Clearinghouse in addition to various public agencies, citizen groups, and interested individuals. Copies of the Draft EIR were also made available for public review at the City Planning Department, at one area library, and on the internet.

A total of fourteen (14) comment letters were received. Ten of the comment letters received were from Federal, State, regional, or local agencies. Four comment letters were received from private organizations or conservation groups – no letters were received from individuals. All 14 letters have been responded to within this document. In particular, comments that address environmental issues are responded to in Section 2.0.

It should be noted that one of the comment letters submitted by a private organization, Lozeau Drury LLP dated August 31, 2012, was inadvertently left out of the original Final EIR document issued on February 12, 2014. This letter has been added to the Final EIR and the document has been revised as of March 31, 2014 including responses to the Lozeau Drury letter.

1.3 POINT OF CONTACT

The Lead Agency for this Project is the City of Moreno Valley. Any questions or comments regarding the preparation of this document, its assumptions, or its conclusions, should be referred to:

Jeff Bradshaw, Associate Planner
City of Moreno Valley, Planning Division
14177 Frederick Street
Moreno Valley, California 92553
Phone: (951) 413-3224
e-mail: jeffreyb@moval.org

1.4 PROJECT SUMMARY

The following information is summarized from the Project Description in the Draft EIR. For additional detail in regard to Project characteristics and Project-related improvements, along with analyses of the Project's potential environmental impacts, please refer to Draft EIR Sections 3.0 and 4.0, respectively.

1.4.1 Project Location/Existing Conditions

The project site is located in the City of Moreno Valley, Riverside County. The approximately 122.8-acre site is generally located south of the Sr-60 Freeway between Redlands Boulevard and Moreno Beach Drive in the eastern portion of the City. The Quincy Channel forms the eastern boundary of the site. During preparation of the Draft EIR, one of the existing onsite conditions was the presence of hundreds of citrus trees in the central and northern portions of the site, which were left over from historical agricultural use of the property. During the entitlement moratorium described before Section 1.1, ProLogis decided to remove the citrus trees due to the high ongoing cost of maintaining and harvesting them, and the potential fire danger if the trees became too dry from not enough watering. This minor change in existing conditions is being documented in this FEIR and does not change any of the conclusions of the DEIR regarding significant impacts or mitigation measures. The trees were removed in the winter of 2013 so it was not during the spring breeding season for bird species in the area. This will be described in more detail in Section 4.4 of this document,

1.4.2 Proposed Project

The proposed development would result in the construction and operation of approximately 2,244,638 square feet of distribution warehouse uses in 6 buildings on an approximately 122.8-acre site. The buildings range in size from 106,106 to 862,035 square feet. The buildings will be constructed with a total of 326 vertical-lift dock-high roll up doors on the long sides of each building to allow access for

the loading and unloading of products from diesel truck/trailers. Each building also includes business office space for the management of each warehouse. A total of 372 truck trailer parking stalls and 1,110 vehicle parking stalls will be provided, with truck and vehicle parking provided at each warehouse sufficient for the anticipated trucks and vehicles for that particular building, in accordance with City standards for light industrial uses. The project provides 15 to 24 percent landscaping for each warehouse building area, with a total average of 18 percent compared to 10 percent minimum required by the City's Municipal Code.

1.4.3 Project Objectives

The purpose of the proposed project is to provide a new facility specializing in warehouse distribution services. Upon development, the proposed project will achieve the following:

- Provide industrial warehouse facilities that meet the substantial and unmet demands of businesses located in the City and County;
- Provide new industrial development that is attractive and minimizes conflicts with the surrounding existing uses;
- Provide a variety of new employment opportunities for the citizens of Moreno Valley and surrounding communities;
- Encourage warehouse distribution services that take advantage of the area's close proximity to various freeways and transportation corridors;
- Encourage new development consistent with the capacity and municipal service capabilities;
- Provide infrastructure improvements to meet phased project needs in an efficient and cost-effective manner;
- Cluster industrial warehouse uses near access points to the state highway system to reduce traffic congestion on surface streets and to reduce air pollutant emissions from vehicle sources;
- Develop land uses that provide the City with a positive revenue/cost ratio and provide needed infrastructure in a timely fashion;
- Address community circulation, both vehicular and pedestrian, utilizing available capacity within the existing circulation system, and provide fair share improvements to various future-year deficient intersection or road segments; and
- Reduce peak hour vehicle trips, energy and water consumption compared to existing General Plan land uses.

1.4.4 Required Permits and Discretionary Actions

The following discretionary actions are anticipated to be taken by the City of Moreno Valley as part of the proposed project:

- General Plan Amendment to amend the Land Use Element resulting in a change of land use designations for the southern portion of the project site (approximately 71.3 acres) from Residential 15, Residential 5, and Residential Agriculture to Business Park.
- General Plan Amendment to amend the Circulation Element including (1) elimination of undeveloped Quincy Street from Eucalyptus Avenue to Encilia Avenue; and (2) realignment of Encilia Avenue from its current alignment such that its westerly terminus is

located at Moreno Beach Drive instead of the current General Plan westerly terminus at Eucalyptus Avenue. The segment between Quincy Channel and Moreno Beach Drive would be classified as a Collector.

- Change of Zone resulting in a change from Business Park (BP), Business Park Mixed-Use (BPX), Residential 15 (R15), Residential 5 (R5), and Residential Agriculture (RA-2) to Light Industrial (LI) on the project site.
- Modification of the Primary Animal Keeping Overlay (PAKO) zone district per the recommended change of zone.
- Modification of the Master Plan of Trails to eliminate trail segment along the west side of the Quincy Channel north of the future Eucalyptus Avenue and add a segment along the north side of Eucalyptus Avenue from the Quincy Channel to the west boundary of the project site.
- Approval of a Master Plot Plan and five related Plot Plans.
- Tentative Parcel Map approval.
- Certification of the Environmental Impact Report.
- Final Parcel Map, public improvement agreement, and related securities approval.
- Issuance of an encroachment permit for any construction work done in any City-controlled ROW. Encroachment permit issuance requires approval of improvement plans, public improvement agreement execution with securities posted, and satisfying those conditions of approval required prior to grading.
- Approval of a Storm Water Pollution Prevention Plan (SWPPP) to accommodate site runoff during construction.
- Approval of a Preliminary Water Quality Management Plan (P-WQMP) and Final Water Quality Management Plan (F-WQMP) to mitigate for post-construction runoff flows (non-discretionary).
- Issuance of a Grading Permit that requires approval of a grading plan, approval of the final drainage study, approval of the F-WQMP, obtaining an Notice of Intent and Water Discharge Identification Number, obtaining a WQMP#, and satisfying those conditions of approval required prior to grading (non-discretionary).
- Issuance of a Building permit. The comprehensive building permit includes building, plumbing, mechanical, and electrical permits (non-discretionary).

The following approvals and permits are required by other agencies:

- Approval from the City and Riverside County Flood Control and Water Conservation District (RCFCWCD) to ensure that construction site drainage velocities are equal to or less than the pre-construction conditions and downstream water quality is not worsened.
- Approval of Quincy Channel improvements from the RCFCWCD.
- A Section 404 Permit from the U.S. Army Corps of Engineers (USACE).
- A Section 401 Water Quality Certification from the Regional Water Quality Control Board (RWQCB).
- A Section 1602 Streambed Alteration Agreement from the California Department of Fish and Game (CDFG).

- Encroachment permits from Caltrans for any construction work done in any State-controlled ROW (i.e., SR-60).

2. RESPONSE TO COMMENTS

A total of thirteen (13) comment letters on the Draft EIR were received with 10 of them from Federal, State, regional, or local agencies and 3 letters from private organizations or individuals. All 13 letters have been responded to within this document. Comments that address environmental concerns have been specifically addressed. Comments that (1) do not address the adequacy or completeness of the Draft EIR; (2) do not raise environmental issues; or (3) do request the incorporation of additional information not relevant to environmental issues, do not require a response, pursuant to Section 15088(a) of the State CEQA Guidelines.

Section 15088 of the State CEQA Guidelines, Evaluation of and Response to Comments, states:

- a) The lead agency shall evaluate comments on environmental issues received from persons who reviewed the draft EIR and shall prepare a written response. The lead agency shall respond to comments received during the noticed comment period and any extensions and may respond to late comments.
- b) The written response shall describe the disposition of significant environmental issues raised (e.g., revisions to the proposed project to mitigate anticipated impacts or objections). In particular, major environmental issues raised when the lead agency's position is at variance with recommendations and objections raised in the comments must be addressed in detail, giving the reasons that specific comments and suggestions were not accepted. There must be good faith, reasoned analysis in response. Conclusory statements unsupported by factual information will not suffice.
- c) The response to comments may take the form of a revision to the draft EIR or may be a separate section in the final EIR. Where the response to comments makes important changes in the information contained in the text of the draft EIR, the lead agency should either:
 1. Revise the text in the body of the EIR; or
 2. Include marginal notes showing that the information is revised in the responses to comments.

Information provided in this volume of the Final EIR clarifies, amplifies, or makes minor modifications to the Draft EIR. No significant changes have been made to the information contained in the Draft EIR as a result of the responses to comments, and no significant new information has been added that would require recirculation of the document.

An Errata section to the EIR (Section 3.0) has been prepared to make minor corrections and clarifications to the Draft EIR as a result of City review and comments received during the public review period. Therefore, this Response to Comments document, along with the Errata is included as part of the Final EIR for consideration by the Planning Commission prior to a vote to certify the Final EIR.

2.1 LIST OF PERSONS, ORGANIZATIONS, AND PUBLIC AGENCIES COMMENTING ON THE DRAFT EIR

The persons, organizations, and public agencies that submitted comments regarding the Draft EIR through September, 2012, are listed below. A total of thirteen (13) comment letters were received. Ten of the comment letters were from Federal, State, regional, or local agencies, while three were from private organizations or individuals. Each comment letter received is indexed with a letter and number below.

Comment Letters Received Regarding the Draft EIR

A FEDERAL AND STATE AGENCIES

- A-1 California Office of Planning and Research, State Clearinghouse (September 4, 2012)**
Scott Morgan, Director State Clearinghouse
- A-2 California Department of Fish and Game (August 28, 2012)**
Jeff Brandt, Senior Environmental Specialist
- A-3 California Native American Heritage Commission (July 20, 2012)**
Dave Singleton, Program Analyst
- A-4 Pechanga Band of Luiseno Indians (September 4, 2012)**
Anna Hoover, Cultural Analyst
- A-5 Morongo Band of Mission Indians (September 10, 2012)**
Franklin Dancy, Director of Planning

B. REGIONAL AND COUNTY AGENCIES

- B-1 Eastern Municipal Water District (September 4, 2012)**
Jayne Joy, Director of Environmental and Regulatory Compliance
- B-2 Eastern Municipal Water District (September 4, 2012)**
Maroun El-Hage, Senior Civil Engineer, New Business Development
- B-3 South Coast Air Quality Management District (September 4, 2012)**
Ian McMillan, Program Supervisor, Intergovernmental Review
- B-4 Riverside County Flood Control and Water Conservation District (September 17, 2012)***
Henry Olivo, Engineering Project Manager

C. LOCAL AGENCIES

- C-1 City of Riverside (September 4, 2012)**
Steve Hayes, City Planner

D. PRIVATE ORGANIZATIONS AND INDIVIDUALS

- D-1 Lozeau Drury LLP (August 29, 2012)**

D-2 Sierra Club, San Geronio Chapter (September 4, 2012)
George Hague, Conservation Chair
Moreno Valley Chapter

D-3 Johnson & Sedlack (September 4, 2012)
Ray Johnson, AICP, Esq.

D-4 Lozeau Drury LLP (August 31, 2012)
Richard Drury et al, Attorneys for LIUNA Local Union 1184

It should be noted that this letter actually consists of four related documents, one main letter from Mr. Drury, two supporting memoranda from other individuals (Dr. Clark and Mr. Hageman), and a number of appendices as attached materials. Each of these has a separate response.

2.2 FORMAT OF RESPONSES TO COMMENTS

Aside from the courtesy statements, introductions, and closings, individual comments within the body of each letter have been identified and numbered. A copy of each comment letter and the City's responses are included in this section. Brackets delineating the individual comments and an alphanumeric identifier have been added to the right margin of the letter. Responses to each comment identified are included on the page(s) following each comment letter. Responses to comments were sent to the agencies that provided comments.

In the process of responding to the comments, there were minor revisions to the Environmental Impact Report. None of the comments or responses constitutes "significant new information" (*CEQA Guidelines* Section 15073.5) that would require recirculation of the Environmental Impact Report.

Subject: ProLogis Eucalyptus Industrial Park EIR (formerly Prologis Park Moreno Valley Eucalyptus Project)
SCH#: 2008021002

Dear Jeff Bradshaw:

The State Clearinghouse submitted the above named Draft EIR to selected state agencies for review. On the enclosed Document Details Report please note that the Clearinghouse has listed the state agencies that reviewed your document. The review period closed on August 31, 2012, and the comments from the responding agency (ies) is (are) enclosed. If this comment package is not in order, please notify the State Clearinghouse immediately. Please refer to the project's ten-digit State Clearinghouse number in future correspondence so that we may respond promptly.

Please note that Section 21104(c) of the California Public Resources Code states that:

"A responsible or other public agency shall only make substantive comments regarding those activities involved in a project which are within an area of expertise of the agency or which are required to be carried out or approved by the agency. Those comments shall be supported by specific documentation."

These comments are forwarded for use in preparing your final environmental document. Should you need more information or clarification of the enclosed comments, we recommend that you contact the commenting agency directly.

This letter acknowledges that you have complied with the State Clearinghouse review requirements for draft environmental documents, pursuant to the California Environmental Quality Act. Please contact the State Clearinghouse at (916) 445-0613 if you have any questions regarding the environmental review process.

Sincerely,

Scott Morgan
Director, State Clearinghouse

P.O. Box 88005
Moreno Valley, CA 92552

Re: ProLogis Eucalyptus Industrial Park Draft Environmental Impact Report
City of Moreno Valley, County of Riverside, SCH# 2008021002

Dear Mr. Bradshaw:

The Department of Fish and Game (Department) appreciates this opportunity to comment on the ProLogis Eucalyptus Industrial Park Draft Environmental Impact Report (DEIR). The Department is responding as a Trustee Agency for fish and wildlife resources [Fish and Game Code sections 711.7 and 1802 and the California Environmental Quality Act Guidelines (CEQA) section 15388] and as a Responsible Agency regarding any discretionary actions (CEQA Guidelines section 15381), such as a Lake and Streambed Alteration Agreement (California Fish and Game Code Sections 1600 *et seq.*), and/or a California Endangered Species Act (CESA) Incidental Take Permit (Fish and Game Code Sections 2080 and 2080.1).

Project Description and Location

The Proposed Project involves the construction of a six building warehouse facility covering an area of 2,244,635 square feet (sf). The project requires a change of land use of 71.2 acres from residential to business park and an overall zone change of 122.8 acres to light industrial. Also included in the Project is the elimination of Quincy Street from State Route 60 (SR-60) south to Cottonwood Avenue, and the completion of Eucalyptus Avenue east to Fir Avenue. The Project site is located in the eastern portion of the City of Moreno Valley, south of SR-60, east of Moreno Valley Auto Mall, and adjacent to and west of the Quincy Channel. The major cross streets are Moreno Beach Drive to the west and Redlands Boulevard to the east. A Notice of Preparation for the Project was submitted to the State Clearinghouse in 2008.

Western Riverside Multiple Species Habitat Conservation Plan (MSHCP)

The Department is responsible for ensuring appropriate conservation of fish and wildlife resources including rare, threatened, and endangered plant and animal species, pursuant to the CESA, and administers the Natural Community Conservation Plan Program (NCCP Program). On June 22, 2004, the Department issued NCCP approval and Take Authorization for the Western Riverside County MSHCP per Section 2800, *et seq.*, of the California Fish and Game Code. The MSHCP establishes a multiple species conservation program to minimize and mitigate habitat loss and the incidental take of covered species in association with activities covered under the permit.

RESPONSE TO LETTER A-2

California Department of Fish and Game

Response to Comment 1. The commenter accurately characterizes the responsibilities of the Department and the characteristics of the proposed project.

Response to Comment 2. The commenter accurately summarizes both the CEQA requirement for an analysis of the proposed project's consistency with the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) and the MSHCP policies and procedures applicable to the proposed project. The commenter also outlines the MSHCP requirement for a burrowing owl survey, and that the surveys conducted for the project showed no burrowing owl sign or observations, but the site was determined to contain suitable habitat.

Response to Comment 3. The commenter provides the definition for significant impact under CEQA but then applies it incorrectly to the project site. The detailed biological surveys prepared for the project site, as well as the Section 4.4 of the EIR on biological resources, concludes that the proposed project would not have significant impacts on the species listed by the commenter due to the lack of existing native vegetation on the site, the fact that the has been regularly disturbed by disking for weed abatement (i.e., fuel modification for fire protection), and a substantial portion of the site supports citrus trees that are not commercially harvested. Development of this site would remove an incremental amount of land that now provides foraging for the two raptor species (i.e., Cooper's hawk and red-tailed hawk) but the site does not contain any large trees that are suitable for raptor roosting or perching (i.e., the citrus trees make these activities difficult for raptors). Impacts to cottontail, bladder pod, and mule fat must be considered only incremental as a result of the loss of 122.8 acres of vacant disturbed land that supports mainly weedy non-native vegetation. The commenter provided no empirical evidence or data to support the contention that impacts to these species should be considered significant under CEQA. Finally, impacts to the drainages that support southern California black walnut were assessed and appropriate onsite and offsite mitigation will be provided, as outlined in Mitigation Measure 4.4.6.3A on 4.4-30 of the Draft EIR. These conclusions are supported by the technical studies prepared by ICF International based on the proposed warehouse development project.

ICF International also reviewed this comment and wished to add the following:

"Cooper's hawk, coyote, and southern California black walnut are fully covered species under the MSHCP and as such any potential impacts to them would be fully mitigated through the project being consistent with the MSHCP. Red-tailed hawk, desert cottontail, bladder pod, and mule fat are all widely distributed species with no threat to their continued existence in western Riverside County. The removal of 121.29 acres of foraging habitat for red-tailed hawk is judged to be less than significant under CEQA. The nesting bird mitigation measure will ensure no direct take of individuals would occur. The removal of 121.29 acres of occupied habitat for desert cottontail is judged to be a less than significant impact under CEQA. This species is widely distributed throughout western Riverside County, including many areas of development. The removal of a few bladder pod and less than an acre of occupied mule fat habitat is also judged to be a less than significant impact given these species' wide distribution w/in the county. Agreed, the project site occurs within the survey area of burrowing owl and a survey following MSHCP protocol was performed and the species was absent."

Response to Comment 4. ICF International has prepared and is processing a Determination of Biologically Equivalent or Superior Preservation (DBESP) report for review and approval by Riverside Conservation Authority (RCA) and California Department of Fish and Game (CDFG), according to the

procedures established by the MSHCP. The applicant will be preserving the Quincy Channel along the east side of the project, and will mitigate for the loss of the two minor drainage features along the western and southern portions of the site, as outlined on page 4.4-30 of the Draft EIR.

As outlined in Mitigation Measures 4.4.6.1A through C in the Draft EIR, a pre-construction survey for burrowing owl will be prepared and processed through CDFG prior to grading the site.

Response to Comment 5. As required by law, the developer will pay the established SKR mitigation and MSHCP development impact fee. ICF International adds that this is for those species covered by both the SKR HCP and the MSHCP. For species with potential for occurrence and/or confirmed present, the proposed impacts were judged less than significant under CEQA and no mitigation was necessary.

Response to Comment 6. It is understandable CDFG is concerned about impacts to stream and riparian vegetation and burrowing owl. However, the commenter does not explain why the CDFG, which is a responsible and trustee agency for biological resources in the state, is concerned with traffic issues or the traffic study. However, we believe Response 8 adequately addresses the CDFG's concerns.

In addition, ICF International adds the following information to this response:

- 1) Stream and riparian vegetation impacts – the project will impact stream and riparian vegetation that is protected under the WRC MSHCP, Clean Water Act Sections 401 and 401, and CDFG 1600 code. The project must, under the WRC MSHCP, provide mitigation for impacts (permanent and temporary) such that the compensation is equivalent or superior in preservation to that proposed for impact. A Determination of Equivalent or Superior Preservation (DBESP) report will be submitted to USFWS and CDFG to ensure the compensatory mitigation is at a minimum adequate per the WRC MSHCP. This is stated in the EIR. Under CEQA it is judged that a minimum mitigation ratio at 2:1 would provide equivalent or superior mitigation for that being impacted. Under the MSHCP, USFWS and CDFG concurrence is necessary and the mitigation ratio may be determined to be higher than 2:1. In addition, it is stated in the CEQA document that impacts to federal and state jurisdictional waters/streambeds would require permits/agreements under CWA 401 and 404 and CDFG 1600 code and that under CEQA, impacts would need to be mitigated at a 2:1 ratio to make impacts less than significant. The mitigation ratio determined during the permit/agreement processing may be determined to be higher or lower and the project proponent would be required to fulfill the higher mitigation ratio. Mitigation Measure 4.4.6.3 will be revised to read “...shall be mitigated at a minimum of a 2:1 ratio.”
- 2) The potential presence of burrowing owl – as indicated in the EIR, a focused survey was performed for this species and the species was found absent. A pre-construction survey for burrowing owl is required and stated in the EIR and is to occur within 30 days prior to ground disturbance activities. This is consistent with the WRC MSHCP. Additionally, the EIR states that if burrowing owl is found that the species would be excluded from the site through appropriate measures that USFWS and CDFG approve. These measures ensure that burrowing owl is not directly impacted by the project, that the project is consistent with the WRC MSHCP and that the project is consistent with USFWS and CDFG protocol.

Response to Comment 7. The commenter summarizes the results of the jurisdictional delineation prepared for the project by ICF International. The project will protect in place the entire Quincy Channel along the eastern boundary of the project site. The City is aware the Department opposes the elimination of minor drainage channels, as outlined in their comment, but there are times when small eroded ephemeral drainage courses must be channelized or incorporated into the overall drainage management of a site to provide effective erosion and flood control. The two smaller

ephemeral drainages along the eastern and southwestern portions of the site will be removed, but their loss will be compensated by offsite mitigation as outlined in Mitigation Measure 4.4.6.3A in the Draft EIR. The Department's subsequent Streambed Alteration Agreement process will allow for the effective transition and ultimate loss of these small drainages with minimum offsite compensation of 2:1 (note: subsequent regulatory permitting may require a different compensation ratio).

ICF International would like to add the following information to this response:

- 1) The project proponent plans on submitting an application to CDFG in the near future to ensure CDFG is involved early on in the permitting process.
- 2) The measures indicated in the CDFG comment are being incorporated into the revised DBESP. Finally, the EIR indicates that impacts to stream and riparian habitat will be mitigated at a ratio of 2:1 to provide sufficient mitigation under CEQA. The project has attempted to reduce impacts to all jurisdictional waters/streambeds. The project will install two storm drains and a bridge. The storm drains are necessary to continue supporting water volumes reaching the natural streams and the bridge is a requirement to maintain appropriate movement into and out of the project site. The ability to support on-site mitigation is limited due to the small amount of Quincy Channel that is owned by the project proponent and which is to be dedicated to the City of Moreno Valley as a condition of project approval. As such, all compensatory mitigation will occur off-site at a minimum ratio of 2:1. It is understood that further coordination with CDFG through the Streambed Alteration Agreement program will be necessary and that under the Streambed Alteration Agreement; the mitigation ratio may be higher or lower than 2:1 (as noted above).
- 3) Based on a pre-application MSHCP project meeting with CDFG, USFWS, RCA, and RWQCB that occurred on October 10, 2012, the following minor changes and clarifications will be added to the indicated mitigation measures, mainly to incorporate temporary impacts into the compensation for permanent impacts:

4.4.6.2A *As outlined in the project's Determination of a Biologically Equivalent or Superior Preservation (DBESP) report, the project applicant shall compensate for the temporary and permanent impact on and loss of jurisdictional waters and streambeds by providing a minimum 2:1 off-site replacement of equivalent riverine/riparian habitat prior to project construction. (0.36 acre impact = 0.72 acre replacement). This off-site replacement shall be accomplished through the contribution of in-lieu fees to the Santa Ana Watershed Association (SAWA) for its efforts in removal of invasive plants and restoration of riparian habitat adjacent to the tributaries of the San Jacinto River or within the Santa Ana River watershed. Documentation of acceptance of the SAWA contribution shall be provided to the City prior to issuance of a grading permit. Offsite restoration, enhancement, and/or land purchase mitigation for the drainage impacts will occur at an offsite location through one or more of the following: an USACE approved mitigation bank, through an in lieu fee mitigation program, and/or land purchase and conservation. DFG and USFWS will need to provide concurrence that this mitigation is equivalent or superior to that proposed for impact through their review and acceptance of the DBESP.*

4.4.6.2B *The project applicant shall retain qualified personnel to prepare and implement a Habitat Mitigation and Monitoring Plan (HMMP) to oversee restoration of temporarily affected areas (0.35 acre of riverine/riparian habitat) to their pre-construction contours and vegetation. The HMMP will be approved by USACE and CDFG prior to the City issuing any occupancy permits. Riparian/riverine resources that are temporarily impacted by project construction shall be returned to their preconstruction contours and hydroseeded, as outlined in the DBESP.*

NOTE: The DBESP replaces the need for a separate Habitat Mitigation and Monitoring Plan.

4.4.6.3A ~~The project applicant shall obtain a Section 404 Nationwide or Individual Permit, as appropriate, from the USACE and a Section 1602 Streambed Alteration Agreement from the CDFG. Direct temporary impacts to more than 0.1 acre of jurisdictional area that are regulated by the USACE, CDFG, and RWQCB shall be mitigated at a 2:1 ratio, including enhancement and/or creation of wetlands or the contribution of in-lieu fee to the Santa Ana Watershed Association (SAWA) for its efforts in removal of invasive plants and restoration of off-site riparian habitat, as outlined in Mitigation Measure 3.3.6.2A.~~ The project applicant shall obtain a Section 404 Nationwide or Individual Permit, as appropriate, from the USACE, a Section 401/Porter-Cologne Water Quality Certification from the RWQCB, and a Section 1602 Streambed Alteration Agreement from the CDFG. Offsite restoration, enhancement, and/or land purchase mitigation of jurisdictional drainage impacts will occur at an off-site location through one or more of the following: an USACE approved mitigation bank, through an in-lieu fee mitigation program, and/or land purchase and conservation.

NOTE: These mitigation measures have been revised to be consistent with the revised DBESP report, and so there will not be any conflicts between the implementation measures of the DBESP and the mitigation measures of the EIR.

Response to Comment 8. This comment states that the Traffic Impact Analysis (TIA) only looks at projects within a 5-mile radius. The 2035 conditions analyzed in the TIA were based on the RivTAM model, which includes General Plan land uses for Cities in Riverside County and SCAG forecasts outside Riverside County. Therefore, the comment that the Draft EIR only evaluates projects within a 5-mile radius is incorrect.

The commenter is interested in how the project and other proposed development will affect traffic flow on the SR-60. The analysis of 2035 conditions is based on reasonable absorption rates for General Plan Buildout of the County and based on SCAG forecasts. The background without project conditions for Year 2035 includes potential projects that are consistent with the approved General Plans.

The commenter notes that the World Logistics Center is not included as a cumulative project. Please note that the baseline used to prepare the cumulative conditions analysis in the EIR is based on the past, present and reasonably foreseeable projects at the time the Notice of Preparation (NOP) for the Draft EIR is issued. The NOP was distributed to state, regional, and local agencies on February 4, 2008. At that time, the World Logistics Center was not a planned project, so this project was not included directly as a cumulative project for opening year conditions. However, the traffic model utilized to prepare the traffic analysis does include the approved Moreno Highlands Specific Plan, which is located on the same site as the currently proposed World Logistics Center project. Furthermore, the Moreno Highland Specific Plan generates more trips than the World Logistics Center. As a result, although the World Logistics Center is not included as a cumulative project, as noted in the comment, the 2035 analysis does evaluate the effects of a larger project than the World Logistics Center.

Similarly, although the analysis does not include the Villages at Lakeview as a cumulative project directly, it is included as a Community Development zone in the RIVTAM model, which was used to forecast future volumes. The Community Development land use designation includes all uses proposed in the now rescinded EIR for the Villages at Lakeview project. The commenter also mentions a residential development near the intersection of Lamb Canyon Road and SR-60. It should be noted that Lamb Canyon Road does not intersect SR-60 and therefore it is unclear exactly where this developed uses is located or the exact size of the developed uses. However, LSA believes that the commenter is referring to a development off of SR-79 in the City of Beaumont. It is unlikely that a

residential development located approximately 16 miles from the proposed project would add cumulatively considerable trips to the project study area. Therefore inclusion of the referenced project in the cumulative project list would not be required.

The commentator is concerned about traffic on surface streets due to increased congestion on the SR-60, especially on Gilman Springs Road and Ramona Expressway. As noted in previous comments, the 2035 conditions analyzed in the TIA were based on the RivTAM model, which includes General Plan land uses for cities in Riverside County and SCAG forecasts outside Riverside County. Traffic models route trips based on available capacity and traffic volumes on roadways using the least cost approach. Using this approach, the RivTAM model also forecasts potential diversion of trips due to congested conditions on freeways. Therefore, the 2035 conditions analyzed in the DRAFT EIR accurately represent the future traffic that could be expected on area surface streets, including Gilman Hot Springs Road and the Ramona Expressway. The commenter also states that these two roadways provide access to the San Jacinto Wildlife Area (SJWA), but are not included in the traffic study. Based on local agency guidelines, intersections where the project would add more than 50 peak hour trips were included in the study area. The project would add fewer than 10 peak hour trips to Gilman Hot Springs Road and Ramona Expressway and as a result, these facilities were not included in the study area. The comment claims that potential cumulative impacts on nearby conserved lands, particularly potential direct and indirect effects of the project on the adjacent SJWA, Lake Perris Recreation Area, and Badlands Area, and potential increased use of Davis Road are not discussed in the DRAFT EIR because the project would add an insignificant number of vehicle trips in these areas. It should be noted that Davis Road is not on the City's Circulation Plan or the County of Riverside's Circulation Element. The road is not open to through traffic, and is currently gated. The gate is controlled/maintained by the California Department of Fish and Game. Even if Davis Road were open to through traffic, the small number of trips that would likely be added by the project or diverted from other facilities is minimal and is therefore not required to be analyzed.

Response to Comment 9. The commenter provides brief information on the SJWA and the resources with which the Department is concerned. This comment provides factual information about the Badlands area and the SJWA and does not require a response. The Badlands and the SJWA will not be significantly adversely impacted by the proposed project, as it is not proximate to either of these areas and only a small amount of project-related traffic is expected to use Gilman Springs Road which is adjacent to both areas.

Response to Comment 10. Based on the information in Responses to Comments A-2, Nos.7-9 above, the analysis of traffic impacts provided in the Draft EIR is based on local agency standards, relevant provisions of CEQA, data obtained the most recent version of RivTAM, and standard traffic engineering principles. The comment does not provide any additional information to reinforce the claim that the Draft EIR is inadequate in describing project related traffic impacts and in identifying mitigation measures.

JUL 23 2012

CITY OF MORENO VALLEY
Planning Division

July 20, 2012

Mr. Jeff Bradshaw, Associate Planner

**City of Moreno Valley Community Development Department:
Planning Division**

14177 Frederick Street; P.O. Box 88005
Moreno Valley, CA 92552

Re: SCH#2008021002; CEQA Notice of Completion: draft Environmental Impact Report (DEIR) for the PROLOGIS EUCALUPTUS INDUSTRIAL PARK; located in the City of Moreno Valley; Riverside County, California.

Dear Mr. Bradshaw:

The Native American Heritage Commission (NAHC), the State of California 'Trustee Agency' for the protection and preservation of Native American cultural resources pursuant to California Public Resources Code §21070 and affirmed by the Third Appellate Court in the case of EPIC v. Johnson (1985: 170 Cal App. 3rd 604).

This letter includes state and federal statutes relating to Native American historic properties of religious and cultural significance to American Indian tribes and interested Native American individuals as 'consulting parties' under both state and federal law. State law also addresses the freedom of Native American Religious Expression in Public Resources Code §5097.9

The California Environmental Quality Act (CEQA – CA Public Resources Code 21000-21177, amendments effective 3/18/2010) requires that any project that causes a substantial adverse change in the significance of an historical resource, that includes archaeological resources, is a 'significant effect' requiring the preparation of an Environmental Impact Report (EIR) per the CEQA Guidelines defines a significant impact on the environment as 'a substantial, or potentially substantial, adverse change in any of physical conditions within an area affected by the proposed project, including ... objects of historic or aesthetic significance.' In order to comply with this provision, the lead agency is required to assess whether the project will have an adverse impact on these resources within the 'area of potential effect (APE), and if so, to mitigate that effect. The NAHC recommends that the lead agency request that the NAHC do a Sacred Lands File search as part of the careful planning for the proposed project.

The NAHC "Sacred Sites," as defined by the Native American Heritage Commission and the California Legislature in California Public Resources Code §§5097.94(a) and 5097.96. Items in the NAHC Sacred Lands Inventory are confidential and exempt from the Public Records Act pursuant to California Government Code §6254 (r).

Early consultation with Native American tribes in your area is the best way to avoid unanticipated discoveries of cultural resources or burial sites once a project is underway. Culturally affiliated tribes and individuals may have knowledge of the religious and cultural significance of the historic properties in the project area (e.g. APE). We strongly urge that you

RESPONSE TO LETTER A-3

California Native American Heritage Commission

Introduction to Responses. The City has implemented the guidance received from the Native American Heritage Commission (NAHC) regarding the structure of the relationship with concerned Native American tribes and individuals during project development. In particular, the relationship with the tribes and the City regarding this project site have been ongoing since 2008, beginning with a request for a Sacred Lands File Search, and continued by providing copies of reports and other documents to interested tribes. Most recently, the City met with the Pechanga Tribe's Cultural Resources Analyst on October 9, 2012 to further discuss the SB 18 consultation process.

Response to Comment 1. The comment is introductory and states that the NAHC is the State "trustee agency" pursuant to Public Resources Code Section 21070 for the protection and preservation of the State's Native American resources. The comment also states that the letter contains state and federal statutes relating to Native American historic properties of religious and cultural significance. The second paragraph is also introductory in nature and outlines the NAHC's authority and role as a commenting agency. The NAHC's introduction in this comment is noted, and no further response is required.

Response to Comment 2. The comment states that CEQA requires that any project that causes a substantial adverse change in the significance of a historical resource, which includes archaeological resources, is a "significant effect" requiring the preparation of an EIR. A Draft EIR was prepared for the proposed project and circulated for public review on July 18, 2012. Based on the *Phase I Cultural Resources Assessment* prepared for the proposed project (Draft EIR Appendix D), the site contained no cultural or historic resources. Consequently, construction and grading of the proposed project site will not affect significant cultural or paleontological resources, resulting in less than significant impacts.

In the second part of the paragraph, the commenter recommends the NAHC Sacred Lands File (SLF) be searched, and such a search was conducted during the Cultural Resource Assessment and found that no Native American cultural resources were identified within the project area. Similarly, the Draft EIR determined that there were no cultural resources (historic or prehistoric) identified on the project site as a result of records searches or during on site reconnaissance. The comment does not contain any substantive statements or questions about the Draft EIR or the analysis therein. Therefore, no further response is necessary.

Response to Comment 3. The comment states that NAHC Sacred Sites are confidential and exempt from the Public Records Act pursuant to California Government Code Section 6254. The City acknowledges the sensitivity and confidentiality of the information contained in the cultural resources report. No records maps have been made public nor will they be made public in association with the City's consideration of the proposed project.

In the second paragraph, the comment states that pursuant to California Public Resources Code Section 5097.95, the NAHC requests that pertinent project information be provided to Native American consulting parties, and that Native American consultation is a matter of environmental justice. The comment letter states that early consultation with Native American Tribes in the area of the project site is the best way to avoid unanticipated discoveries once a project is underway. The letter includes a list of Native American contacts and recommends obtaining their recommendations concerning the proposed project.

Appendix D of the Draft EIR contains the *Phase I Cultural Resource Assessment* prepared for the proposed project in which Native American consultation was conducted. The NAHC was contacted to

determine whether any sacred sites were listed on the Sacred Lands Files for this area of Moreno Valley containing the project site. In response to the Sacred Land Record Search request, the NAHC identified fourteen Native American contacts that may have knowledge of cultural resources in the project area.

Letters were sent to all the Native American contacts provided by the NAHC in 2008. The letters notified the parties of the proposed project and requested that the tribes respond with information concerning cultural resources that might be affected.

Response to Comment 4. The comment states that consultation with Tribes and interested Native American consulting parties on the NAHC list should be conducted in compliance with the requirements of federal National Environmental Policy Act (NEPA), Sections 106 and 4(f) of the National Historic Preservation Act, and the Native American Grave Protection and Repatriation Act (NAGPRA), as appropriate.

Although the project is not a federal undertaking as defined under Section 106 of the National Historic Preservation Act (NHPA) or 36 Code of Federal Regulations (CFR) Part 800 regulations implementing Section 106, and does not use federal funds, it will require a federal Clean Water Act Section 404 permit. Therefore, the project falls under the regulatory oversight of Section 106. As described in Response to Comment A-3, No. 3 above, the City conducted consultation with thirteen local tribes and interested Native American individuals for the project. Consultation included providing those parties with pertinent project and location information.

The project is not a federal transportation project, so it also does not fall under the jurisdiction of Section 4(f) of the Department of Transportation Act of 1966. There is also no federal involvement in the project that would trigger the requirements of NAGPRA.

Response to Comment 5. The comment states that historic properties of religious and cultural significance are confidential and protected by California Government Code Section 6254. The comment further states that the confidentiality of such resources may also be protected by section 304 of the NHPA. The City acknowledges the sensitivity and confidentiality of any identified resources. The SLF and any associated records maps are not for public distribution. In addition, because the project is not a federal undertaking, it is not regulated under Section 304 of the NHPA.

Response to Comment 6. The comment identifies State laws regarding the accidental discovery of human remains. In compliance with these laws, in the unlikely event human remains are encountered during project grading, the County Coroner and the City Planning Division would be notified immediately, and no further disturbance would occur until the County Coroner makes a determination of origin and disposition. If the remains are determined to be Native American, the County Coroner would notify the NAHC, which will determine and notify the most likely descendant (MLD). Implementation of state law reduces potential impacts related to the discovery of human remains on the proposed project site to a less than significant level, and no additional mitigation is required.

Response to Comment 7. The comment states that effective consultation, in the opinion of the NAHC, is the result of an ongoing relationship between Native American tribes and lead agencies, project proponents and their contractors. The City agrees that effective consultation is desired. The City has reached out to Native American tribes through the consultation process (as detailed in the Draft EIR in Appendix D). The comment does not contain any substantive statements or questions about the Draft EIR or the analysis therein. Therefore, no further response is necessary.

Response to Comment 8. The comment states that the NAHC recommends avoidance when a project would damage or destroy Native American cultural resources. The comment further states that documentation and data recovery of such resources is required pursuant to the CEQA Guidelines. Based on the *Phase I Cultural Resources Assessment* (Draft EIR Appendix D) prepared

for the proposed project, the site has a low potential for containing archeological resources due to the lack of such resources previously discovered in the surrounding area and the disturbed nature of the project site. Consequently, construction and grading of the proposed project site will have a low probability of damaging archeological resources. Impacts to archeological resources are considered to be less than significant.

Re: Pechanga Tribe Comments on the Draft EIR for the Prologis Park Moreno Valley Eucalyptus Project

Dear Mr. Bradshaw:

This comment letter is written on behalf of the Pechanga Band of Luiseño Indians (hereinafter, "the Tribe"), a federally recognized Indian tribe and sovereign government. The Tribe formally requests, pursuant to Public Resources Code §21092.2, to be notified and involved in the entire CEQA environmental review process for the duration of the above referenced project (the "Project"). The Tribe requests to be directly notified of all public hearings and scheduled approvals concerning this Project. Please also incorporate these comments into the record of approval for this Project.

The Tribe submits these comments concerning the Project's potential impacts to cultural resources in conjunction with the environmental review of the Project. The Tribe has reviewed the Cultural Resources Section of the Draft Environmental Impact Report and is very concerned that the City did not address any of the Tribes comments and seems to have ignored the other comments provided by Native American tribes. Both Pechanga and Soboba requested monitoring during grading activities as the City itself in the Initial Study indicated that the possibility of uncovering cultural resources during earthmoving activities was high. Further, the Tribe was not afforded the opportunity to consult with the City per SB18 requirements and as we had requested in our March 4, 2008 comment letter. This violates state law. Additionally, as written, the proposed mitigation measures are inadequate and insufficient to mitigate for unanticipated discoveries of cultural resources. Additional information is provided in our comments below.

RESPONSE TO LETTER A-4

PECHANGA BAND OF LUISEÑO INDIANS

Response to Comment 1. The City acknowledges the Pechanga Band (“Tribe”) is a federally recognized Indian Tribe. The City will continue to notify the Tribe regarding the CEQA process for this project, and the Tribe will be notified of any hearings regarding this project. As requested, the Tribe’s comments and the City’s responses are incorporated into this Final EIR document and administrative record.

Response to Comment 2. According to its records, the City did contact the Tribe for consultation under SB 18 when the applicant first started processing the project in 2007-08, and the City sent a copy of the project cultural resources report at that time. The City received no further correspondence or emails regarding the project, so it believed the SB 18 consultation process for the ProLogis project was completed at that time. On July 25, 2011 a letter inquiring about additional consultation was sent to Mark Macarro and the commenter with Pechanga and no response was received (Paul Macarro is the Director of Cultural Resources). A second letter was sent on August 9, 2011 to which the commenter responded that she would work directly with the City regarding further consultation. Jeff Bradshaw with the City contacted Ms. Hoover (“commenter”) but received no follow-up from the Tribe for additional input or consultation. The revised cultural resources study was mainly an update of the original study to “bring it current” and contained no new additional information. At that time, Mr. Bradshaw considered this second round of SB 18 communication with the tribe completed as well. Separate from the SB 18 process, the Tribe has provided comments to the City during the Notice of Preparation (NOP) period and the Notice of Completion (NOC) sent out for the project under CEQA. The commenter is incorrect that the City has not incorporated concerns and comments from the Tribe into the CEQA document, or has somehow neglected the SB 18 consultation process. The City met with the Anna Hoover, Cultural Analyst for the Tribe regarding SB 18 on October 9, 2012 to address any pending questions regarding the City’s participation in the SB 18 consultation process on this project (see Appendix B in this document).

Response to Comment 3. Although there appears to be some confusion regarding the actual completion of the SB 18 consultation process, the City and the Tribe can still continue to consult effectively on the proposed project, following the guidance from the NAHC which states that “To be effective, consultation on specific projects must be the result of an ongoing relationships between the Native American tribes and lead agencies, project proponents, and their contractors.” The City believes the EIR reflects the intent and desire of the Tribe regarding monitoring of grading activities on the project site, as outlined in the tribe’s comment letter received during the Notice of Preparation (NOP) period and included in Appendix A of the Draft EIR. Mitigation Measures 4.5.6.1A through 4.5.6.1E in the Draft EIR state the following:

- 4.5.6.1A** *If cultural resources are found during grading, the applicant shall immediately retain a qualified archaeological monitor to oversee subsequent ground-altering activities (e.g., removal of debris, de-vegetation, and grading). This monitor shall ensure that any buried or previously unidentified resources are adequately identified, recorded, and evaluated in accordance with applicable standards. The archaeological monitor shall be trained in both prehistoric and historic archaeology and have the authority to temporarily redirect any ground disturbing activities affecting potentially significant cultural resources.*
- 4.5.6.1B** *Prior to the issuance of a grading permit, the local Native American representatives (Soboba, Morongo, and Pechanga) shall be notified in writing of the pending activities. If any evidence of Native American resources is discovered during grading, the archaeological monitor identified in **Mitigation Measure 4.5.6.1A** shall invite one or more Native American monitors to participate in the monitoring program. The Native American*

monitor shall work with the archaeological monitor to aid in the identification of resources and assist in the preliminary evaluation of any Native American resources.

- 4.5.6.1C** *If cultural artifacts and resources are discovered during ground disturbance activities and are historic in nature (not Native American in origin), the archaeological monitor shall make recommendations for the appropriate handling and evaluation of the resources. If cultural artifacts and resources are discovered during ground disturbance activities are determined to be of Native American origin (but not involving burials or grave goods), the archaeological monitor/consultant shall notify the applicant, City, and local Native American representatives and complete consultation for the handling of the resources. All archaeological decisions shall be at the discretion of the professional archaeologist, taking the Native American concerns into account. Work may continue on other parts of the project site while historic or unique archaeological mitigation takes place (14 Cal. Code Regs. 15065.5(f)).*
- 4.5.6.1D** *As a condition of approval, the property owner shall make all cultural resources (e.g., artifacts) discovered on site available for curation at a facility identified by the City (e.g., the UCR Archaeological Research Unit, the Western Center for Archaeology and Paleontology, or the Ya'i Heki' Regional Indian Museum). All artifacts shall be inventoried and prepared for curation per standard professional requirements. If neither repository is available to accept the collections, the cultural resources shall be temporarily curated at a facility identified through consultation with all stakeholders.*
- 4.5.6.1E** *Should resources determined to be of sacred or religious significance to Native Americans be identified within the project area, the resources shall be protected from adverse impacts until consultation between the applicant, City, the Most Likely Descendant (MLD) as determined by the Native American Heritage Commission, and the archaeological consultant, occurs. At that time, the responsibility for the care and disposition of the cultural resources shall be determined and recorded to the satisfaction of all parties involved.*

These measures are consistent with the information provided in the Pechanga NOP comment letter. However, the City desires to work cooperatively with the tribe to the greatest extent possible. Therefore, the wording of all these mitigation measures will be modified as shown below:

- 4.5.6.1A** *Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a Cultural Resources Monitoring Agreement has been secured for qualified Tribal representatives, and that a professional archaeological monitor meeting Secretary of Interior standards has been retained by the Applicant to conduct monitoring of all mass grading and trenching activities and has the authority to temporarily halt and redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project Archaeologist and Tribal representatives shall attend the pre-grading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.*
- 4.5.6.1B** *Prior to the issuance of a grading permit, the Applicant shall provide evidence to the City of Moreno Valley that appropriate Native American representative(s), Project Archaeologist, and the Tribal representative(s) shall be allowed to monitor and have received a minimum of 30 days advance notice of all mass grading and trenching activities. During grading and trenching operations, the Tribal representatives and the project archaeological monitor shall observe all mass grading and trenching activities per the Cultural Resources Monitoring Agreement. If the Tribal representatives suspect that an archaeological resource may have been unearthed, the archaeologist, in consultation with the tribal representative, shall immediately halt and redirect grading operations in a*

100-foot radius around the find to allow identification and evaluation of the suspected resource. In consultation with the appropriate Native American Tribe(s), the archaeological monitor shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2.

4.5.6.1C If a significant archaeological resource(s) is discovered on the property, ground disturbing activities shall be suspended 100 feet around the resource(s). The archaeological monitor and representatives of the appropriate Native American Tribe(s), the Project Applicant, and the City Planning Division shall confer regarding mitigation of the discovered resource(s). A treatment plan and/or preservation plan shall be prepared and by the archaeological monitor and reviewed by representatives of the appropriate Native American Tribe(s), the Project Applicant, and the City Planning Division and implemented by the archaeologist to protect the identified archaeological resource(s) from damage and destruction. The landowner shall relinquish ownership of all archaeological artifacts that are of Native American origin found on the Project site to the culturally affiliated Native American tribe(s) for proper treatment and disposition. A final report containing the significance and treatment findings shall be prepared by the archaeologist and submitted to the City Planning Division, the appropriate Native American tribe(s), and the Eastern Information Center at the University of California, Riverside. All cultural material, excluding sacred, ceremonial, grave goods and human remains, collected during the grading monitoring program and from any previous archaeological studies or excavations on the project site shall be curated, as determined by the treatment plan, according to the current professional repository standards and may include the Pechanga Bands curatorial facility.

4.5.6.1D Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan:

"If any suspected archaeological resources are discovered during ground-disturbing activities and the archaeological monitor or Tribal representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the project archaeologist and the Tribal representatives to the site to assess the significance of the find."

Based on input from the tribe, the City believes these modifications will better protect any potential undiscovered cultural resources if they are present on the site. In addition, Measure 4.5.6.1B clearly allows tribal monitors to be present onsite during grading if they so desire, consistent with the City's current practices for allowing such monitoring.

In addition, although DEIR Section 4.5.5.2, *Human Remains*, concludes potential impacts of the project will be less than significant with compliance with state law, Mitigation Measure 4.5.6.1E has been added at the request of the tribe to help assure there will be no significant impacts related to the potential discovery of human remains during grading:

4.5.6.1E If human remains are encountered, California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to California Public Resources Code Section 5097.98(b), remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made by the Coroner. If the Riverside County Coroner determines the remains to be Native American, the California Native American Heritage Commission must be contacted within 24 hours. The Native American Heritage Commission must then immediately notify the "most likely descendant(s)" of receiving notification of the discovery. The most likely descendant(s) shall then make recommendations within 48

hours, and engage in consultations concerning the treatment of the remains as provided in Public Resources Code §5097.98.

Finally, the commenter is correct that the CEQA process cannot be completed before the SB 18 process is completed. However, the City believes the SB 18 consultation process can still be completed prior to final action on the project as specified by state law.

It should also be noted the tribe requested the following language be added to the mitigation for potential impacts to paleontological resources, so the City has agreed to add the following as Mitigation Measure 4.5.6.2D:

4.5.6.2D Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan:

"If any suspected paleontological resources are discovered during ground-disturbing activities, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call a qualified paleontologist to the site to assess the significance of the find. A qualified paleontologist shall evaluate the suspected resource. If the paleontologist determines that the find is not unique, construction shall be permitted to proceed. However, if the paleontologist determines that further information is needed to evaluate significance, the City of Moreno Valley shall be notified and a treatment plan shall be prepared and implemented in consultation with the City to protect the identified paleontological resource(s) from damage and destruction."

Response to Comment 4. The City acknowledges that the tribe has legitimate legal and cultural interests in the project site and surrounding areas, and appreciates the tribal history upon which these interests are based. The City believes it did participate in the SB 18 consultation process in good faith on this project twice, but the City is willing to consider additional input from the tribe regarding this property integral to the CEQA process at this point in time. On October 9 2012, Jeff Bradshaw met with Anna Hoover, Cultural Analyst with the tribe, to receive additional input from the tribe relative to this project. In any case, all of this information will be presented to the City Council for their review prior to any final action on the project, consistent with the requirements of SB 18 and CEQA.

Response to Comment 5. The project cultural resource assessment, and Section 4.5 of the Draft EIR, both acknowledge the existence of Native American resources and sites in the surrounding area. However, the study did not identify any resources actually on the project site, and the site has been previously and regularly disturbed by agricultural and weed abatement activities. In an effort to respond to remaining concerns expressed by the tribe, and based on evidence from mitigation at site on other projects in the region, the City has modified the text of Mitigation Measures 4.5.6.1A through 4.5.6.1E as shown in Response 3 above. The City understands the Tribe's ongoing and currently stated desire to have private development fund Native American monitoring on construction sites. However, the City's repeated position on this issue is not to require private funding of such monitoring, but rather to encourage private landowners to collaborate with Native American tribes regarding monitoring (i.e., private funding is not required but optional). In addition, the revised mitigation measures cited above do require ongoing coordination with the local tribes, including Pechanga.

Response to Comment 6. As outlined in the previous Response to Comment A-4, No.3, the City believes the mitigation measures included in the Draft EIR do reflect the concerns raised by the tribe during the SB 18 and EIR Notice of Preparation processes. In addition, the City believes it has participated in the SB 18 process to an appropriate degree, as described in the previous Responses to Comments A-4, No. 2 and 4 above. Appendix B of this Final EIR includes additional

correspondence and documentation from the City regarding the SB 18 process with the Pechanga tribe on this project.

Response to Comment 7. In response to the tribe's concerns about excavation of the project site, the City has modified the wording of Mitigation Measures 4.5.6.1A through 4.5.6.1E to provide for monitoring of all grading activities. In addition, the modified measures provide a way for local tribes to participate in the monitoring process.

Response to Comment 8. In response to the tribe's concerns, the City has modified the wording of Mitigation Measure 4.5.6.1A to provide for monitoring of all grading activities, and Mitigation Measure 4.5.6.1B provides a way for local tribes like Pechanga to participate in the monitoring process.

Response to Comment 9. As previously explained in Responses 2 and 4 above, the City has participated twice in the SB 18 process on this project, but is certainly willing to accept additional input from the tribe regarding potential impacts and mitigation language within the context of the CEQA process. The mitigation in the EIR, including the text changes to Measures 4.5.6.1A through 4.5.6.1E, do not defer mitigation and are clear as to what will be done and when during the development process if the project is approved. The City believes the tribes have provided input on this project under both SB 18 and CEQA, and the City will strive to implement the project mitigation as outlined.

Response to Comment 10. Section 4.5 of the EIR does evaluate the direct, indirect, and cumulative impacts of the project on cultural resources, and did incorporate information from the City's SB 18 consultation process and the letter from the Pechanga tribe received during the EIR's Notice of Preparation period (see Draft EIR Appendix A). In addition, Appendix B of this Final EIR includes additional correspondence and documentation from the City regarding the SB 18 process with the Pechanga tribe on this project.

Response to Comment 11. The City believes Section 4.5 of the EIR adequately addresses potential impacts of the project on cultural resources, and recommends mitigation measures commensurate with the level of impact expected. In addition, Mitigation Measures 4.5.6.1A through 4.5.6.1E provide additional protection for any undiscovered cultural resources that may exist on the site. The City believes the revised measures are specific, implementable, and do not defer mitigation. It is the City's long-standing policy to encourage but not require private developers to allow and/or fund monitoring of grading by Native American tribal representatives. That continues to be the City's policy on this project as well.

Response to Comment 12. As outlined in the previous responses above, the City believes it has and is participating in the SB 18 and CEQA processes as required by state law, and in a reasonable and fair manner with the Tribe. Please see Response to Comment A-4, No. 11 for additional information in this regard. However, it would not be in the interest of the Tribe to withhold additional comment on the EIR, expecting the City to delay action on the proposed project, based solely on its contention that the City had somehow failed to complete the SB 18 process – the City disagrees with that conclusion. The City encourages the Tribe to provide additional comments if necessary on the EIR and mitigation measures, noting that Measures 4.5.6.1A through 4.5.6.1E have been modified in response to concerns expressed by the Tribe.

Response to Comment 13. The City encourages the Tribe to participate fully in the CEQA process, and see Responses to Comments A-4, Nos. 11 and 12 regarding the related SB 18 process.

Response to Comment 14. The City also looks forward to continuing discussion with the tribe on this project. It should be noted that the City met with the Anna Hoover, Cultural Analyst with the tribe, on October 9 2012 regarding SB 18 which should address any lingering questions about the City's participation in the SB 18 consultation process on this project.

LETTER A-5: MORONGO BAND OF MISSION INDIANS

Letter A-5

MORONGO
BAND OF
MISSION
INDIANS

A SOVEREIGN NATION

RECEIVED
SEP 12 2012
CITY OF MORENO VALLEY
Planning Division

September 10, 2012

Jeff Bradshaw, Associate Planner
City of Moreno Valley
Community & Economic Development Department
14177 Frederick Street
Moreno Valley, CA 92553

**SUBJECT: Notice of Availability
ProLogis Eucalyptus Industrial Park Project)
Draft Environmental Impact Report**

Dear Mr. Bradshaw:

Thank you for contacting the Morongo Band of Mission Indians regarding the above referenced project. The Tribe greatly appreciates the opportunity to review the project and, respectfully, offer the following comments.

The project is outside of the Tribe's current reservation boundaries but within an area that may be considered a traditional use area or one in which the Tribe has cultural ties (e.g. Cahuilla/Serrano territory). Because the project involves a Zone Change, General Plan Amendment, master Plot Plan, Tentative Parcel Map, Plot Plans, and Environmental Impact Report for the Prologis Eucalyptus industrial Park Project the Morongo Band of Mission Indians asks that you impose specific conditions regarding cultural and/or archaeological resources and buried cultural materials on any development plans or entitlement applications as follows:

- If human remains are encountered during grading and other construction excavation, work in the immediate vicinity shall cease and the County Coroner shall be contacted pursuant to State Health and Safety Code §7050.5.
- In the event that Native American cultural resources are discovered during project development/construction, all work in the immediate vicinity of the find shall cease and a qualified archaeologist meeting Secretary of Interior standards shall be hired to assess the find. Work on the overall project may continue during this assessment period.

If significant Native American cultural resources are discovered, for which a Treatment Plan must be prepared, the developer or his archaeologist shall contact the Morongo Band of Mission Indians

12700 PUMARRA ROAD - BANNING, CA 92220 - 951-849-4697 - FAX: 951-849-4425

LETTER A-5
MORONGO
(PAGE 2 OF 2)

RESPONSE TO LETTER A-5

MORONGO BAND OF MISSION INDIANS

Response to Comment 1. The Draft EIR contained measures the City believes are sufficient to protect undiscovered cultural resources, including Native American artifacts. However, the City wishes to cooperate with the tribe to the extent practical, so the language of the mitigation measures related to archaeological and paleontological resources, have been modified to better address the tribe's concerns as outlined in Response to Comment A-4-3 in the previous letter from the Pechanga Tribe.

Response to Comment 2. This action is required under State law, but the City understands the tribe's desire to have the requirement reiterated in the mitigation measure. Therefore, Mitigation Measure 4.5.6.1E has been modified to address this concern as outlined in Response to Comment 3 in Letter A-4 from the Pechanga Band.

Response to Comment 3. All of the cultural mitigation measures were modified as shown to respond to this and similar comments by the Pechanga Band (see Response to Comment 3 in Letter A-4).

Response to Comment 4. The text of Mitigation Measure 4.5.6.1C was changed as shown in Response to Comment 3 in Letter A-4 from the Pechanga Band to better address the tribe's concerns.

Re. NOA of DEIR, Prologis Eucalyptus Industrial Park
PA07-0081,82,83,84,142,158,159,160,161,162,&186

Attn: Jeff Bradshaw, Associate Planner, City Of Moreno Valley

Dear Mr. Bradshaw:

Thank you for the opportunity to review the Notice of Availability (NOA) for the above referenced project. The project is generally described as General Plan Amendment and Zone Change from existing Business Park, to Business Park Mixed-Use, R15, R5, and RA-2 land use designations to Light Industrial for 116.99-net acres. The land use changes are required for development of six distribution warehouse facilities totaling 2,244,419 square feet with building sizes that range from 160,106 square feet to 862,035 square feet. The applicant also proposes Tentative Parcel Map No. 35679 to subdivide the project into six parcels corresponding to the six warehouse facilities. Eastern Municipal Water District (EMWD) offers the following comments:

The subject project requires water, sewer and recycled water services from EMWD. The details of said service connection points will be further detailed in a separate document, known as EMWD's Plan of Service, which is still not yet developed by the project proponent. To that end, EMWD requires dialog with the project proponent, to develop the EMWD Plan of Service, as clarified in the attached letter.

Again, EMWD appreciates the opportunity to comment on this project. Please forward the Final Environmental Impact Report to the attention of Helen Stratton at the mailing address shown on page one. If you have questions concerning these comments, please feel free to contact Helen Stratton at 951 928-3777, Ext. 4545, or Maroun El-Hage Ext. 4468.

Sincerely,

Jayne Joy
Director of Environmental and Regulatory Compliance

RESPONSE TO LETTER B-1

EASTERN MUNICIPAL WATER DISTRICT #1

Response to Comment 1. The EIR acknowledges that the project requires water, sewer, and recycled water service from EMWD. The City and the developer are aware that a Plan of Service will be needed if the project receives entitlement approval from the City.

Response to Comment 2. The Final EIR document, including the Response to Comments, will be sent to the EMWD since they commented on the Draft EIR, in accordance with CEQA Guidelines Section 15088(b).

Re. NOA of DEIR, Prologis Eucalyptus Industrial Park
PA07-0081,82,83,84,142,158,159,160,161,162,&186

Attn. Jeff Bradshaw, Associate Planner, City Of Moreno Valley

In order to receive water, sewer or recycled water service(s) from Eastern Municipal Water District (EMWD), the following information will be helpful to the project proponent:

EMWD requires beginning dialogue with the project proponent at an early stage in site design and development, via a one-hour complimentary Due Diligence meeting. To set up this meeting, the project proponent should complete a Project Questionnaire (form NBD-058) and submit to EMWD. To download this form or for additional information, please visit our "New Development Process" web page, under the "Businesses" tab, at www.emwd.org. This meeting will offer the following benefits:

1. Describe EMWD's development work-flow process
2. Identify project scope and parameters
3. Preliminary, high level review of the project within the context of existing infrastructure
4. Discuss potential candidacy for recycled water service

Following the Due Diligence meeting, to proceed with this project, a Plan Of Service (POS) will need to be developed by the developer's engineer, and reviewed/approved by EMWD prior to submitting improvement plans for Plan Check. The POS process will provide the following:

- 1- Technical evaluation of the project's preliminary design
- 2- Defined facility requirements, i.e. approved POS
- 3- Exception: for feasibility evaluation of a purchase acquisition, only a conceptual facilities assessment may be developed.

If you have questions or concerns, please do not hesitate to contact me.

Sincerely,

Maroun El-Hage, M/S., P.E.

RESPONSE TO LETTER B-2

EASTERN MUNICIPAL WATER DISTRICT

Response to Comment 1. The developer will prepare a Project Questionnaire (NDB-058) and contact the District to schedule a “due diligence” meeting.

Response to Comment 2. As indicated in the responses to the District’s first letter (B-1), the City and the developer are aware that a Plan of Service will be needed if the project receives entitlement approval from the City.

LETTER B-3: SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT

South Coast
Air Quality Management District
21865 Copley Drive, Diamond Bar, CA 91765-4182
(909) 396-2000 www.aqmd.gov

Letter B-3

E-MAILED: September 4, 2012

September 4, 2012

Mr. Jeff Bradshaw, Associate Planner, jeffreyb@moval.org
Planning Department
City of Moreno Valley
14177 Frederick Street
Moreno Valley, CA 92553

**Draft Environmental Impact Report (Draft EIR) for the Proposed
ProLogis Eucalyptus Industrial Park Project (SCH. NO. 2008021002)**

The South Coast Air Quality Management District (AQMD) staff appreciates the opportunity to comment on the above-mentioned document. The following comments are meant as guidance for the Lead Agency and should be incorporated into the Final EIR.

In the project description, the lead agency proposes construction of six warehouse distribution facility buildings totaling 2,244,419 square feet with 326 total loading docks. Building sizes will range from 160,106 to 862,035 square feet on a total 122.8 acre site. Operations at the proposed industrial park will include approximately 1,989 trucks operating 24 hours per day and 7-days per week. Construction is planned to begin in the fall of 2012 and be completed as early as the last quarter of 2013, with a possible opening year by 2016.

In the Air Quality Section, the Draft EIR quantified the project's construction and operation air quality impacts and found that those impacts exceeded the AQMD's recommended significance thresholds. As stated in the Draft EIR, air quality in our basin exceeds federal and state standards and presents numerous health risks to those living and working here. The AQMD staff appreciates that the project therefore includes mitigation measures that have the potential to reduce emissions including building energy efficiency measures, carpooling programs, and encouragement of alternative fueled vehicles. However, the project's air quality impacts remain substantially above AQMD thresholds after mitigation. This is due, in part, to the lack of enforceability of some mitigation measures. The AQMD staff recommends that the lead agency strengthen the project's mitigation measures and additionally provide further clarity to portions of the air quality analysis. Details are provided in the attached comments.

1

Pursuant to Public Resources Code Section 21092.5, please provide the AQMD with written responses to all comments contained herein prior to the adoption of the Final Environmental Impact Report. The AQMD staff is available to work with the Lead

RESPONSE TO LETTER B-3

SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT

Introduction Letter (Pages 1-2)

Response to Comment 1. The following responses address the South Coast Air Quality Management District's (District) specific comments on the air quality analysis in the Draft EIR, including the mitigation measures. The City believes the recommended mitigation measures are feasible and enforceable on future tenants of this project. The project air study does not support the commenter's contention that the main reason the project air emissions exceed the AQMD's daily thresholds is because the mitigation measures cannot be enforced. However, the City desires to address the District's recommendations to the extent feasible, so the applicant has agreed to allow the following modifications to Mitigation Measure 4.3.6.6A to incorporate the District's recommendations to eliminate "encouraged" with stronger enforceable language.

4.3.6.6A *Prior to issuance of the first building permit, building and site plan designs shall ensure that the project's energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of ~~20~~ 10 percent until January 1, 2014. For building permits issued after that date, new state energy standards require a 20 percent reduction from 2008 Title 24, Part 6 Energy Efficiency Standards. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and reviewed and approved by the City. ~~Any combination of~~ The following design features ~~including but not limited to the following list~~ shall be used to fulfill this requirement:*

- *Buildings shall exceed California Title 24 Energy Efficiency performance standards for water heating and space heating and cooling, as deemed acceptable by the City.*
- *Increase in insulation such that heat transfer and thermal bridging is minimized.*
- *Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.*
- *Incorporate dual-paned or other energy efficient windows.*
- *Incorporate energy efficient space heating and cooling equipment.*
- *Interior and exterior energy efficient lighting which exceeds the California Title 24 Energy Efficiency performance standards shall be installed, as deemed acceptable by the City. Automatic devices to turn off lights when they are not needed shall be implemented.*
- *To the extent that they are compatible with landscaping guidelines established by the City, shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and buildings shall be planted at the project site.*
- *Paint and surface color palette for the project shall emphasize light and off-white colors which reflect heat away from the buildings.*
- *All buildings shall be designed to accommodate renewable energy sources, such as photovoltaic solar electricity systems, appropriate to their architectural design.*
- *To reduce energy demand associated with potable water conveyance, the project shall implement the following:*
 - *Landscaping palette emphasizing drought-tolerant plants;*

- *Use of water-efficient irrigation techniques; and,*
- *U.S. EPA Certified WaterSense labeled for equivalent faucets, high-efficiency toilets (HETs), and water-conserving shower heads.*
- *The project shall provide secure, weather-protected, on-site bicycle storage/parking.*
- *The project shall provide on-site showers (one for males and one for females). Lockers for employees shall be provided.*
- *The project will establish a Transportation Management Association (TMA). The TMA will coordinate with other TMAs within the City to encourage and coordinate carpooling among building occupants. The TMA will advertise its services to building occupants, and offer transit and/or other incentives to reduce greenhouse gas (GHG) emissions. A plan will be submitted by the TMA to the City within two months of project completion that outlines the measures implemented by the TMA, as well as contact information.*
- *The project shall provide preferential parking for carpools and vanpools. Locations and configurations of proposed preferential parking for carpools and vanpools are subject to review and approval by the City. Prior to final site plan approval, preferential parking for carpools and vanpools shall be delineated on the project site plan.*
- *The project shall provide at least two electric vehicle charging stations. Locations and configurations of proposed charging stations are subject to review and approval by the City. Prior to issuance of the first building permit, stub outs for charging stations shall be indicated on the project building plans.*
- *Lease/purchase documents shall identify that tenants are encouraged to promote the following:*
 - *Implementation of compressed workweek schedules.*
 - *SmartWay partnership;*
 - *Achievement of at least 20 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of consolidated trips carried by SmartWay carriers until it reaches a minimum of 90 percent of all long-haul trips carried by SmartWay 1.0 or greater carriers.*
 - *Achievement of at least 15 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of long-haul trips carried by SmartWay carriers until it reaches a minimum of 85 percent of all consolidator trips carried by SmartWay 1.0 or greater carriers.*
 - *Use of fleet vehicles conforming to 2010 air quality standards or better.*
 - *Installation of catalytic converters on gasoline-powered equipment.*
 - *Inclusion of electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets.*
 - *Establishment and use of carpool/vanpool programs, complemented by parking fees for single-occupancy vehicles.*
 - *Provision of preferential parking for EV and CNG vehicles.*
 - *Use of electrical equipment (instead of gasoline-powered equipment) for landscape maintenance.*
 - *Use of electric (instead of diesel or gasoline-powered) yard trucks.*

- *Use of SmartWay 1.25 rated trucks.*
- *Each facility operator shall provide regular sweeping of onsite parking and drive areas using street sweepers that comply with applicable SCAQMD Rules.*
- *Each facility operator shall maintain a log of all trucks entering the facility to ensure that, on average, the daily truck fleet meets applicable air quality emission standards. This log shall be available for inspection by City staff at any time.*
- *Each facility operator shall prohibit all vehicles from idling in excess of five minutes in all onsite areas.*
- *Each facility operator shall ensure that onsite staff in charge of keeping the daily log and monitoring for excess idling will be trained and certified in diesel health effects and technologies, such as by requiring attendance at CARB-approved courses.*
- *Each facility operator which upon occupancy does not already operate 2007 and newer trucks shall in good faith be required to apply for funding to replace or retrofit their trucks such as Carl Moyer, VIP, Prop 1B or similar funds. Should funds be awarded, the tenant shall be required to accept and use them.*

Response to Comment 2. The AQMD will receive a copy of the Final EIR, with the Response to Comments, at least 10 days prior to action on the project and EIR, as required under Section 15088(b) of the State CEQA Guidelines.

Technical Evaluation (Pages 3-8)

Response to Comment 1. The recommendations made by the SCAQMD are beyond the scope of this project-level EIR. Fleet-related requirements such as these are the responsibility of state-level agencies (e.g., California Air Resources Board).”

- (1) Onsite vehicles to zero or near-zero emission technology – Mitigation Measure 4.3.6.6A requires the inclusion of electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets.
- (2) Alternative fueling infrastructure – These technologies do not yet represent a significant share of the warehousing truck fleet, so it is burdensome to require one particular project to provide this infrastructure when it is not known what user will locate to this site, or to what degree the future user can control their truck fleet (i.e., large corporate user may have total control, smaller user fleets may be independent truckers who cannot afford the modifications to their trucks to accommodate these fuels.
- (3) Phase-in of zero or near-zero technology – Response to Comment B-3, No. 2 below indicates that Mitigation Measure 4.3.6.6A encourages the future user of the site to participate in the SmartWay program. It should be noted that the end-user of the building is not known at this time and there is the possibility that participation in the SmartWay program may not be feasible.
- (4) Loading docks or truck routes more than 500 feet from sensitive receptors – The Draft EIR clearly describes that the closest loading dock would be 664 feet from the existing residential uses southeast of the site (Draft EIR page 4.3-17, 4th paragraph). In addition, Eucalyptus Avenue, the project’s truck route both east and west to the freeway, would be 1,500 feet at its closest point to the residential uses.

Response to Comment 2. This mitigation might be appropriate if the project warehouses were being built and used by one large warehousing company that had its own truck fleet, but it is infeasible to apply this measure to a “speculation” project where the eventual end user is not known at this time. However, the City desires to address the District’s recommendations to the extent feasible, so the applicant has agreed to allow the following modifications to Mitigation Measure 4.3.6.6A to incorporate the District’s recommendations:

4.3.6.6A *Prior to issuance of the first building permit, building and site plan designs shall ensure that the project’s energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of ~~20~~ 10 percent until January 1, 2014. For building permits issued after that date, new state energy standards require a 20 percent reduction from 2008 Title 24, Part 6 Energy Efficiency Standards. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and reviewed and approved by the City. ~~Any combination of~~ The following design features ~~including but not limited to the following list~~ shall be used to fulfill this requirement:*

- *Buildings shall exceed California Title 24 Energy Efficiency performance standards for water heating and space heating and cooling, as deemed acceptable by the City.*
- *Increase in insulation such that heat transfer and thermal bridging is minimized.*
- *Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.*
- *Incorporate dual-paned or other energy efficient windows.*
- *Incorporate energy efficient space heating and cooling equipment.*
- *Interior and exterior energy efficient lighting which exceeds the California Title 24 Energy Efficiency performance standards shall be installed, as deemed acceptable by the City. Automatic devices to turn off lights when they are not needed shall be implemented.*
- *To the extent that they are compatible with landscaping guidelines established by the City, shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and buildings shall be planted at the project site.*
- *Paint and surface color palette for the project shall emphasize light and off-white colors which reflect heat away from the buildings.*
- *All buildings shall be designed to accommodate renewable energy sources, such as photovoltaic solar electricity systems, appropriate to their architectural design.*
- *To reduce energy demand associated with potable water conveyance, the project shall implement the following:*
 - *Landscaping palette emphasizing drought-tolerant plants;*
 - *Use of water-efficient irrigation techniques; and,*
 - *U.S. EPA Certified WaterSense labeled for equivalent faucets, high-efficiency toilets (HETs), and water-conserving shower heads.*
- *The project shall provide secure, weather-protected, on-site bicycle storage/parking.*
- *The project shall provide on-site showers (one for males and one for females). Lockers for employees shall be provided.*
- *The project will establish a Transportation Management Association (TMA). The TMA will coordinate with other TMAs within the City to encourage and coordinate*

carpooling among building occupants. The TMA will advertise its services to building occupants, and offer transit and/or other incentives to reduce greenhouse gas (GHG) emissions. A plan will be submitted by the TMA to the City within two months of project completion that outlines the measures implemented by the TMA, as well as contact information.

- *The project shall provide preferential parking for carpools and vanpools. Locations and configurations of proposed preferential parking for carpools and vanpools are subject to review and approval by the City. Prior to final site plan approval, preferential parking for carpools and vanpools shall be delineated on the project site plan.*
- *The project shall provide at least two electric vehicle charging stations. Locations and configurations of proposed charging stations are subject to review and approval by the City. Prior to issuance of the first building permit, stub outs for charging stations shall be indicated on the project building plans.*
- *Lease/purchase documents shall identify that tenants are encouraged to promote the following:*
 - *Implementation of compressed workweek schedules.*
 - *SmartWay partnership;*
 - *Achievement of at least 20 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of consolidated trips carried by SmartWay carriers until it reaches a minimum of 90 percent of all long-haul trips carried by SmartWay 1.0 or greater carriers.*
 - *Achievement of at least 15 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of long-haul trips carried by SmartWay carriers until it reaches a minimum of 85 percent of all consolidator trips carried by SmartWay 1.0 or greater carriers.*
 - *Use of fleet vehicles conforming to 2010 air quality standards or better.*
 - *Installation of catalytic converters on gasoline-powered equipment.*
 - *Inclusion of electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets.*
 - *Establishment and use of carpool/vanpool programs, complemented by parking fees for single-occupancy vehicles.*
 - *Provision of preferential parking for EV and CNG vehicles.*
 - *Use of electrical equipment (instead of gasoline-powered equipment) for landscape maintenance.*
 - *Use of electric (instead of diesel or gasoline-powered) yard trucks.*
 - *Use of SmartWay 1.25 rated trucks.*
 - *Each facility operator shall provide regular sweeping of onsite parking and drive areas using street sweepers that comply with applicable SCAQMD Rules.*
 - *Each facility operator shall maintain a log of all trucks entering the facility to ensure that, on average, the daily truck fleet meets applicable air quality emission standards. This log shall be available for inspection by City staff at any time.*

- Each facility operator shall prohibit all vehicles from idling in excess of five minutes in all onsite areas.
- Each facility operator shall ensure that onsite staff in charge of keeping the daily log and monitoring for excess idling will be trained and certified in diesel health effects and technologies, such as by requiring attendance at CARB-approved courses.
- Each facility operator which upon occupancy does not already operate 2007 and newer trucks shall in good faith be required to apply for funding to replace or retrofit their trucks such as Carl Moyer, VIP, Prop 1B or similar funds. Should funds be awarded, the tenant shall be required to accept and use them.

In addition, the City will consider application of these actions on future truck-intensive projects in the area. The District also recommended additional mitigation measures that are addressed in the following Responses to Comments B-3, Nos. 3 through 14.

Response to Comment 3. Truck log – this item has been added to Mitigation Measure 4.3.6.6.A (see Response to Comment B-3, No. 2 and Final EIR, Section 3.0, *EIR Errata and Additions*).

Response to Comment 4. Idle limits - this item has been added to Mitigation Measure 4.3.6.6A (see Response to Comment B-3, No. 2 and Final EIR, Section 3.0, *EIR Errata and Additions*).

Response to Comment 5. Log monitor training - this item has been added to Measure 4.3.6.6A (see Response to Comment B-3, No. 2 and Final EIR, Section 3.0, *EIR Errata and Additions*).

Response to Comment 6. The traffic levels projected in the EIR are considered to be conservative and protective of the environment and public health. Realistically, it is anticipated that the project traffic generation might also be considerably less than indicated in the Draft EIR, depending on the actual user(s) that locate within this project. The City believes the items outlined in Mitigation Measure 4.3.6.6A, including all the recommended additions described in Responses to Comments B-3, Nos. 2-5 and 11-13 are adequate to reduce project emissions. However, considering the volume of emissions generated and current commuter habits, it is unlikely the implementation of TDMs/TCMs described in the EIR will result in a reduction of operational project emissions to below existing localized operation emissions thresholds. Long-term air quality impacts resulting from the operation of the proposed project would remain significant and unavoidable.

Response to Comment 7. Again, the traffic levels projected in the EIR are considered to be conservative and protective of the environment and public health. The City believes the items outlined in Mitigation Measure 4.3.6.6A, including all the recommended additions described in Responses to Comments B-3, Nos. 2-5 and 11-13 are adequate to reduce project emissions to the extent practical.

Response to Comment 8. This measure would be onerous and difficult if not impossible to implement for a particular warehouse project, especially one such as this where the ultimate end user is not known. The City believes the items outlined in Mitigation Measure 4.3.6.6A, including all the recommended additions described in Responses to Comments B-3, Nos. 2-5 and Nos. 11-13 are adequate to reduce project emissions to the extent practical.

Response to Comment 9. Measure 4.3.6.6A require the project applicant to encourage the use of the SmartWay program for the leasee to reduce truck emissions over the long-term. The City believes the items outlined in Mitigation Measure 4.3.6.6A including all the recommended additions described in Responses to Comments B-3, Nos. 2-5 and 11-13 are adequate to reduce project emissions to the extent practical.

4.3.6.6A *Prior to issuance of the first building permit, building and site plan designs shall ensure that the project's energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of ~~20~~ 10 percent until January 1, 2014. For building permits issued after that date, new state energy standards require a 20 percent reduction from 2008 Title 24, Part 6 Energy Efficiency Standards. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and reviewed and approved by the City. ~~Any combination of~~ The following design features ~~including but not limited to the following list~~ shall be used to fulfill this requirement:*

- *Buildings shall exceed California Title 24 Energy Efficiency performance standards for water heating and space heating and cooling, as deemed acceptable by the City.*
- *Increase in insulation such that heat transfer and thermal bridging is minimized.*
- *Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.*
- *Incorporate dual-paned or other energy efficient windows.*
- *Incorporate energy efficient space heating and cooling equipment.*
- *Interior and exterior energy efficient lighting which exceeds the California Title 24 Energy Efficiency performance standards shall be installed, as deemed acceptable by the City. Automatic devices to turn off lights when they are not needed shall be implemented.*
- *To the extent that they are compatible with landscaping guidelines established by the City, shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and buildings shall be planted at the project site.*
- *Paint and surface color palette for the project shall emphasize light and off-white colors which reflect heat away from the buildings.*
- *All buildings shall be designed to accommodate renewable energy sources, such as photovoltaic solar electricity systems, appropriate to their architectural design.*
- *To reduce energy demand associated with potable water conveyance, the project shall implement the following:*
 - *Landscaping palette emphasizing drought-tolerant plants;*
 - *Use of water-efficient irrigation techniques; and,*
 - *U.S. EPA Certified WaterSense labeled for equivalent faucets, high-efficiency toilets (HETs), and water-conserving shower heads.*
- *The project shall provide secure, weather-protected, on-site bicycle storage/parking.*
- *The project shall provide on-site showers (one for males and one for females). Lockers for employees shall be provided.*
- *The project will establish a Transportation Management Association (TMA). The TMA will coordinate with other TMAs within the City to encourage and coordinate carpooling among building occupants. The TMA will advertise its services to building occupants, and offer transit and/or other incentives to reduce greenhouse gas (GHG) emissions. A plan will be submitted by the TMA to the City within two months of project completion that outlines the measures implemented by the TMA, as well as contact information.*

- *The project shall provide preferential parking for carpools and vanpools. Locations and configurations of proposed preferential parking for carpools and vanpools are subject to review and approval by the City. Prior to final site plan approval, preferential parking for carpools and vanpools shall be delineated on the project site plan.*
- *The project shall provide at least two electric vehicle charging stations. Locations and configurations of proposed charging stations are subject to review and approval by the City. Prior to issuance of the first building permit, stub outs for charging stations shall be indicated on the project building plans.*
- *Lease/purchase documents shall identify that tenants are encouraged to promote the following:*
 - *Implementation of compressed workweek schedules.*
 - *SmartWay partnership;*
 - *Achievement of at least 20 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of consolidated trips carried by SmartWay carriers until it reaches a minimum of 90 percent of all long-haul trips carried by SmartWay 1.0 or greater carriers.*
 - *Achievement of at least 15 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of long-haul trips carried by SmartWay carriers until it reaches a minimum of 85 percent of all consolidator trips carried by SmartWay 1.0 or greater carriers.*
 - *Use of fleet vehicles conforming to 2010 air quality standards or better.*
 - *Installation of catalytic converters on gasoline-powered equipment.*
 - *Inclusion of electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets.*
 - *Establishment and use of carpool/vanpool programs, complemented by parking fees for single-occupancy vehicles.*
 - *Provision of preferential parking for EV and CNG vehicles.*
 - *Use of electrical equipment (instead of gasoline-powered equipment) for landscape maintenance.*
 - *Use of electric (instead of diesel or gasoline-powered) yard trucks.*
 - *Use of SmartWay 1.25 rated trucks.*
 - *Each facility operator shall provide regular sweeping of onsite parking and drive areas using street sweepers that comply with applicable SCAQMD Rules.*
 - *Each facility operator shall maintain a log of all trucks entering the facility to ensure that, on average, the daily truck fleet meets applicable air quality emission standards. This log shall be available for inspection by City staff at any time.*
 - *Each facility operator shall prohibit all vehicles from idling in excess of five minutes in all onsite areas.*
 - *Each facility operator shall ensure that onsite staff in charge of keeping the daily log and monitoring for excess idling will be trained and certified in diesel health effects and technologies, such as by requiring attendance at CARB-approved courses.*

- Each facility operator which upon occupancy does not already operate 2007 and newer trucks shall in good faith be required to apply for funding to replace or retrofit their trucks such as Carl Moyer, VIP, Prop 1B or similar funds. Should funds be awarded, the tenant shall be required to accept and use them.

Response to Comment 10. The project site plan has already been checked by City staff for this component and there is sufficient stacking distance within the project.

Response to Comment 11. No residential areas are immediately accessible to the project site from the two main freeway access points (i.e., along Eucalyptus Avenue west to Redlands Boulevard and west to Moreno Beach Drive). Overnight parking of trucks in residential areas is prohibited by the City.

Response to Comment 12. The roofs of all buildings within the proposed project will be capable of supporting photovoltaic solar panels. As shown below, ProLogis has a strong history of installing solar panels on its warehouse projects:

Description	Bldg Size (SF)	Megawatts (Mw)
Ontario Airport #2	562,089	2.55
Ontario Airport #3	369,086	1.41
Ontario Airport #4	680,925	2.85
Ontario Airport #5	241,367	0.773

Response to Comment 13. This item (street sweeping) has been added to Mitigation Measure 4.3.6.6A to require compliance with applicable SCAQMD rules (refer to Response to Comment B-3, No. 2 above).

Response to Comment 14. The recommendations regarding “Trucking Support Services” are all beyond the scope of this project-level EIR. As stated in the comment, these measures are suggested as City requirements that would be applied to any truck-intensive projects in the City.

Response to Comment 15. The combination of the very conservative assumptions required of all health risk assessments with the very small amount of emissions from yard trucks (the project does not plan to use any diesel generators nor allow TRUs during normal operations) compared to the

large emissions from the many heavy-duty haul trucks idling and driving around mean that the HRA as published, which shows health risk levels less than half of the significance thresholds, adequately analyzes the risks to public health from the project operations.

Response to Comment 16. The HRA modeling only allows for one emission rate for the diesel engines to represent the entire 70-year period from opening year (2013) until 2083. The available emissions factors model (EMFAC) only has factors thru 2040. Thus, there is no information available about how the diesel emissions will change from 2040 until 2083. It is pure guesswork to predict how the diesel emissions will change over this period. To assume that the emissions during this 43 year period will not change at all is a very conservative assumption – there is a real possibility that all diesel engines will have been replaced by an alternative power source before 2083 resulting in zero diesel particulate emissions. Selecting the best year between 2083 and 2013 to represent the average is somewhat arbitrary – the median is 2048, outside the range of available factors. EMFAC incorporates expectations of technological improvements that would result in lower emissions over the period from the 1990s thru 2040, however it does not include everything – for instance it does not include the law just passed in August 2012 that sets the average mileage of cars and light trucks to 54.5 miles per gallon by 2025. While this does not include the heavy-duty trucks the HRA is focused on, it is an indication that there will be aggressive regulations in the future reducing these diesel emissions below what is in the EMFAC model. While using the emissions factors for 2040 as an average is not optimal due to the higher existing emissions, using 2013 factors as an average is unreasonably conservative also. In our best engineering judgment, 2025 is the best set of emissions factors to represent this complicated issue.

It should be noted that all of the details for calculating health risks of the proposed project were provided in Appendix B of the Draft EIR, including the EMFAC and dispersion modeling outputs. In addition, “active” CalEEMod and supporting computer files were sent to the AQMD during the EIR review period to allow for replication and verification of the HRA report results.

Response to Comment 17. Refer to Response to Comment B-3, No. 16 above.

Response to Comment 18. Refer to Response to Comment B-3, No. 16 above. The emissions for trucks idling at the load bays and for vehicle operating on the roadways were explicitly modeled. The emissions for the trucks moving the short distances from the loading docks to the driveways were included in the modeling, just without explicit emissions sources (those emissions were included with the roadway sources). Since there are no sensitive receptors between where the trucks are traveling from the loading docks to the driveway and the roadway sources, this simplification of the modeling results in the same health risk levels as a more detailed modeling with the additional emissions sources. There are no diesel generators planned and TRUs will not burn diesel fuel because any refrigerated trucks will plug in and their TRUs run off that electricity. There are also no plans for onsite diesel-powered hostlers or other diesel-powered equipment.

Response to Comment 19. The project is expected to operate 24 hour per day. Modeling the actual number of trucks that are planned to operate over 24 hours as if they operated over 12 hours results in much higher hourly emissions. Thus, the HRA is protective of human health in case there is a change in the project operations to only operate 12 hours per day.

Response to Comment 20. The vast majority (over 90 percent) of the project’s diesel particulate emissions are from the trucks idling on the project site, so adjusting the amount of trucks traveling east and west will have only a very minor effect on the HRA results. The HRA assumed a relatively equal split for east-west trip distribution so the results would not be biased relative to the closest sensitive receptor to the project site (i.e., residential southeast of site) that could otherwise result from an unequal distribution of projected versus actual project trips.

Response to Comment 21. While assuming that 100% of the trucks will be diesel is certainly worst case, it overstates the real-world condition that some trucks use gasoline. The HRA is a careful balance of assumptions, some already very conservative (such as assuming people live in one place for 70 years and stay in that house 24 hours a day for 350 days out the year). The fuel use percentages are from the URBEMIS model. These are percentages there to best represent the real-world operations for projects modeled using the URBEMIS model. Since it is not known what the actual warehouse operator will use, using this published representative fuel use percentages is the best method to model the future use. The carcinogenic health risk at the nearest residences for individuals living there for 70 years was identified in the DEIR as 4.33 in 1 million. Changing the percentage of trucks using diesel from the URBEMIS parameters to 100% would certainly increase the estimate carcinogenic health risk.

Response to Comment 22. The PM₁₀ emissions factor from EMFAC2007 at 50°, 50% humidity, 2025, SCAQMD fleet for HDT traveling at 40mph is 0.095 g/mile/truck. To derive the corresponding project emissions rate in g/sec, the g/mile rate is adjusted by the distance covered between volume sources per second. Thus, 0.095 g/mi is multiplied by 117 meter source spacing. And, since this is to convert from trucks per day to emissions per second, the result is divided by 86,400 sec/day. So, $0.095 * 117 * 0.0006214 \text{ meters/mile} / 86,400 = 8.0E-08 \text{ g/s/truck}$. With 1,246 trucks per day that are 87.5% diesel, this becomes 8.7E-05 g/s.

Response to Comment 23. The idling emissions factors were from EMFAC2007 for HDT at 0.396 g/hr. The following table lists the derivation of the individual emissions rates:

Idling Emissions of Diesel Particulate

	No. of diesel trucks per day	Minutes Idling	Idling Emission Factor	Number of Sources	Emission Rates per Source		
					g/s	lb/hr	lb/yr
Building 1	89	5	0.396	3	9.9E-06	7.9E-05	0.7
Building 2	594	5	0.396	12	1.7E-05	1.3E-04	1.2
Building 3	84	5	0.396	3	9.4E-06	7.5E-05	0.7
Building 4	234	5	0.396	5	1.6E-05	1.3E-04	1.1
Building 5	269	5	0.396	6	1.5E-05	1.2E-04	1.0
Building 6	224	5	0.396	6	1.2E-05	9.5E-05	0.83

For example, for Building 1: $89 * 87.5\% / 24 * 5 \text{ min} / 60 * 0.396 / 3,600 / 3 \text{ sources}$

Response to Comment 24. All of the emissions sources in proximity to the project building that could be affected by the building downwash are point sources, which do work correctly with building downwash. The building height used was an estimate made before the project design had progressed far enough to include the building heights described in the DEIR. The HRA has not been updated to use the planned building heights for two reasons – using a higher building height results in greater building wake affects and higher health risk levels, so is conservative. Secondly, the effects of building wake affects diminish quickly the further the residence of concern is downwind. At the distance of the nearest residence the building wake affect is making a negligible difference

Response to Comment 25. The site is designed so that there will not be any queuing while entering the site, the trucks will proceed immediately from the loading docks immediately to their truck route and vice versa. While it is possible that there will be isolated trucks that stop briefly while in transit, it is expected that the number of occurrences will be so small as to not affect the health risk assessment.

Response to Comment 26. The project trip rate used in the air quality analysis matches what was used in the project traffic study. That study explains the project trip rate selection. The conversion of these factors between EMFAC and CalEEMod is difficult, due to the nomenclature differences. The air quality study used the fleet defaults built into the CalEEMod model to characterize the project operational emissions as the most representative of the expected emissions. As the HRA did not use the same fleet assumptions as the operational air quality analysis, as noted by SCAQMD staff, the HRA used the CalEEMod classifications. ~~these fleet EMFAC adjustments were different.~~

Response to Comment 27. As detailed in Responses 28-33, the mitigation measures have been modified to include all feasible SCAQMD mitigation language suggestions. Since the effectiveness of these mitigation measures is not included in the analysis, the analysis represents a worst-case post-mitigation analysis.

Response to Comment 28. Mitigation Measure 4.3.6.2D has been modified to incorporate this clarification as follows:

4.3.6.2D *All clearing, grading, earthmoving, or excavation activities shall cease when winds (as instantaneous gusts) exceed 25 mph per SCAQMD guidelines in order to limit fugitive dust emissions.*

Response to Comment 29. Mitigation Measure 4.3.6.2D has been modified to include a provisions that grading shall be stopped when instantaneous gusts exceed 25 mph to help further minimize offsite dust impacts. Restricting the number of acres grading on any one day is not reasonable. The CalEEMod calculates a total grading disturbed area many times the size of the project site based on the idea that there are multiple graders, dozers, scrapers, etc. making multiple passes during any one day. This suggested measure to limit simultaneous disturbance of the site to 5 acres per day would not change the results of the air quality modeling and projected air emissions identified in the Draft EIR and in fact may increase emissions due to the grading inefficiencies created by this restriction. By grading a smaller area it prolongs the grading process and releases dust and vehicular emissions (grading construction workers going back and forth to the site over a greater period of time and grading equipment moving around the site) into the air basin over a longer period of time. In addition, the 120-acre project generally slopes at approximately 2% from north to south. Areas on the northern half of the project will have dirt removed (cut) while areas to the south will have dirt added (fill). To achieve this will require that dirt be moved over more than 5 acres per day. To limit the grading operation to any one 5 acre area per day area would result in the same dirt being deposited and picked up many times as it is "hop scotched" to its final location rather than transporting the dirt in one move. A 5-acre daily limitation would result in more, not less, grading equipment emissions. The grading contractor is motivated to move the dirt as efficiently as possible resulting in the lowest amount of equipment run time which also results in the lowest amount of emissions. There are also logistical considerations getting construction equipment and people back and forth to the site.

Response to Comment 30. The agencies mentioned have much more control over truck operations and activities within their respective jurisdictions compared to the City of Moreno Valley. However, the City and the applicant have agreed to add this requirement into Mitigation Measure 4.3.6.2C. The measure has been amended as follows as is included in Final EIR, Section 3.0, *EIR Errata and Additions*:

4.3.6.2C *Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall utilize California Air Resources Board (CARB) Tier II Certified equipment or better during the rough/mass grading phase for the following pieces of equipment: rubber-tired dozers and scrapers. Contract specifications shall be included in the proposed project construction documents, which shall be reviewed by the City.*

Project start to December 31, 2014: All off-road diesel-powered construction equipment greater than 50 horsepower shall meet Tier 3 off-road emission standards. In addition, all construction equipment shall be outfitted with Best Available Control Technology (BACT) devices certified by CARB. Any emission control devices used by the contractor shall achieve emission reductions that are no less than what would be achieved by a Level 3 diesel emission control strategy for a similarly sized engine as defined by CARB regulations.

Post January 1, 2015: All off-road diesel-powered construction equipment greater than 50 horsepower shall meet Tier 4 emission standards, where available. In addition, all construction equipment shall be outfitted with Best Available Control Technology (BACT) devices certified by CARB. Any emission control devices used by the contractor shall achieve emission reductions that are no less than what would be achieved by a Level 3 diesel emission control strategy for a similarly sized engine as defined by CARB regulations.

A copy of each unit's certified tier specifications, BACT documentation, and CARB or SCAQMD operating permit shall be provided at the time of mobilization of each applicable unit of equipment.

Response to Comment 31. The City and the applicant have agreed to include this requirement into Mitigation Measure 4.3.6.2C. The measure has been amended as indicated above in Response to Comment B-3, No. 30 and is included in Final EIR, Section 3.0, *EIR Errata and Additions*.

Response to Comment 32. The City and the applicant have agreed to include this requirement into Mitigation Measure 4.3.6.2C. The measure has been amended as indicated above in Response to Comment B-3, No. 30 and is included in Final EIR, Section 3.0, *EIR Errata and Additions*.

Response to Comment 33. Many of the activities listed in the referenced CEQA Handbook have already been incorporated or have been added to the project mitigation, as outlined in previous responses in this section regarding mitigation.

Response to Comment 34. Mitigation Measure 4.3.6.5B has been modified to include businesses with fewer than 250 employees, rather than 100 employees.

CITY OF MORENO VALLEY
Planning Division

City of Moreno Valley
Community Development Department -
Planning Division
Post Office Box 88005
Moreno Valley, California 92552-0805

Attention: Jeff Bradshaw
Ladies and Gentlemen: Associate Planner

ProLogis Eucalyptus
Re: Industrial Park

The District does not normally recommend conditions for land divisions or other land use cases in incorporated cities. The District also does not plan check city land use cases, or provide State Division of Real Estate letters or other flood hazard reports for such cases. District comments/recommendations for such cases are normally limited to items of specific interest to the District including District Master Drainage Plan facilities, other regional flood control and drainage facilities which could be considered a logical component or extension of a master plan system, and District Area Drainage Plan fees (development mitigation fees). In addition, information of a general nature is provided. 1

The District has not reviewed the proposed project in detail and the following checked comments do not in any way constitute or imply District approval or endorsement of the proposed project with respect to flood hazard, public health and safety or any other such issue: 2

No comment.

This project would not be impacted by District Master Drainage Plan facilities nor are other facilities of regional interest proposed.

This project involves District Master Plan facilities. The District will accept ownership of such facilities on written request of the City. Facilities must be constructed to District standards, and District plan check and inspection will be required for District acceptance. Plan check, inspection and administrative fees will be required. 3

This project proposes channels, storm drains 36 inches or larger in diameter or other facilities that could be considered regional in nature and/or a logical extension of the adopted Moreno Master Drainage Plan. The District would consider accepting ownership of such facilities on written request of the City. Facilities must be constructed to District standards, and District plan check and inspection will be required for District acceptance. Plan check, inspection and administrative fees will be required.

This project is located within the limits of the District's Moreno Area Drainage Plan for which drainage fees have been adopted; applicable fees should be paid by cashier's check or money order only to the Flood Control District or City prior to issuance of grading permits. Fees to be paid should be at the rate in effect at the time of issuance of the actual permit. 4

An encroachment permit shall be obtained for any construction related activities occurring within District right of way or facilities. For further information, contact the District's encroachment permit section at 951.955.1266. 5

The District's previous comments are still valid. 6

GENERAL INFORMATION

This project may require a National Pollutant Discharge Elimination System (NPDES) permit from the State Water Resources Control Board. Clearance for grading, recordation or other final approval should not be given until the City has determined that the project has been granted a permit or is shown to be exempt. 7

If this project involves a Federal Emergency Management Agency (FEMA) mapped flood plain, then the City should require the applicant to provide all studies, calculations, plans and other information required to meet FEMA requirements, and should further require that the applicant obtain a Conditional Letter of Map Revision (CLOMR) prior to grading, recordation or other final approval of the project, and a Letter of Map Revision (LOMR) prior to occupancy. 8

If a natural watercourse or mapped flood plain is impacted by this project, the City should require the applicant to obtain a Section 1602 Agreement from the California Department of Fish and Game and a Clean Water Act Section 404 Permit from the U.S. Army Corps of Engineers, or written correspondence from these agencies indicating the project is exempt from these requirements. A Clean Water Act Section 401 Water Quality Certification may be required from the local California Regional Water Quality Control Board prior to issuance of the Corps 404 permit. 9

Very truly yours,

HENRY OLIVO
Engineering Project Manager

RESPONSE TO LETTER B-4

**RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION
DISTRICT**

Response to Comment 1. The City thanks the District for clarifying its role in the project review process relative to flood control issues.

Response to Comment 2. The City does not infer the District's approval or endorsement of the proposed project.

Response to Comment 3. The City and the developer understand the project improvement review and approval process. The applicant will contact the District to coordinate the design and maintenance of the Quincy Channel as needed.

Response to Comment 4. The City and the applicant understand the project is within the Moreno Area Drainage Plan and the project will pay applicable fees in this regard.

Response to Comment 5. The applicant will obtain an encroachment permit from the District if necessary for work related to the Quincy Channel.

Response to Comment 6. The City and the applicant understand the District's NOP comments on the project are still valid.

Response to Comment 7. The City and the applicant understand that the project may require an NPDES permit from the Regional Water Quality Control Board.

Response to Comment 8. The City and the applicant understand that a CLOMR and/or a LOMR may be required for this project – one or both will be obtained if necessary as part of the subsequent development review process if the project is approved.

Response to Comment 9. The City and the applicant understand that a 1602 Agreement will be needed with Fish and Game, a 401 Certification will be needed from the Regional Water Quality Control Board, and a 404 permit may be required from the U.S. Army Corps of Engineers. The applicant would obtain the necessary permits in this regard subsequent to approval of the proposed entitlements.

Moreno Valley CA, 92553

SUBJECT: Notice of Availability (NOA) of a Draft Environmental Impact Report for the Prologis Eucalyptus Industrial Park Project in Moreno Valley

Dear Mr. Bradshaw:

Thank you for the opportunity to review and comment on the Notice of Availability (NOA) of a Draft Environmental Impact Report (DEIR) for the Prologis Eucalyptus Industrial Park Project proposed on approximately 122.8 acres generally located south of and adjacent to State Route (SR)-60, east of the Moreno Valley Auto Mall and adjacent to and west of the Quincy Channel. As described in the DEIR, the project consists of the development of six distribution warehouse facilities totaling 2,224,419 square feet. Associated with this project is a General Plan Amendment to change the land use designation of 71.3 acres of the project site from Residential (R15, R5, and R2) to Business Park (BP) so the entire site would then be designated Business Park (BP).

City of Riverside staff has reviewed the DEIR and offers the following comments:

- The proposed General Plan Amendment will change the land use designation of 71 acres from residential to a business park designation allowing for large warehouse distribution facilities which will result in a substantial increase in truck trips beyond what is currently anticipated in the Moreno Valley General Plan. The County Transportation Uniform Mitigation Fee (TUMF) model is based on the existing Moreno Valley General Plan and as such did not account for this major change of 71 acres to distribution warehousing facilities. As a result, payment of TUMF does not sufficiently mitigate traffic impacts of the proposed project. 1
- The traffic analysis section of the DEIR is limited in scope as it only analyzes localized traffic impacts within Moreno Valley at 17 intersections, most of which are within a mile radius of the project site, yet the project involves a large warehouse development (over 2.2 million square feet) that will generate substantial truck traffic. Taken together, passenger vehicle and truck traffic is equivalent to over 7,500 passenger vehicle trips a day in terms of traffic impact. The DEIR needs to analyze project impacts regionally, 2

RIVERSIDE
Page 3 of 3

RESPONSE TO LETTER C-1

CITY OF RIVERSIDE

Response to Comment 1. The comment has accurately summarized the characteristics of the proposed project. It is correct that the project proposes a change in land use 71 acres of land from residential uses to warehousing uses. As noted on Page 18 of the traffic study, currently 5 percent of the project site is designated as R2 Residential, 2 percent as R5 Residential, 41 percent as R15 Residential, and the remaining 34 percent as Business Park/Light Industrial. Table E of the Traffic Study (DEIR Table 4.11.E on page 4.11-15 of the DEIR) illustrates a comparison between the trip generation of the site as presently zoned, and the trip generation of the proposed project. As can be seen in Table E, compared to the present zoning, the project produces 6,702 fewer trips per day, with 885 fewer trips in the a.m. peak hour and 939 fewer trips in the p.m. peak hour. Please note that these trips are PCE trips, so the effects of trucks have been included in the trip generation. Therefore, the commenter is mistaken in the statement that the project increases the number of trips. On the contrary, the proposed project actually reduces the future number of PCE trips compared to approved land uses on the site. The comment also asserts that payment of the TUMF does not sufficiently mitigate the traffic impacts of the proposed project. The Mitigation Measures identified in Section 4.11.6.4.E of the DEIR outline the specific improvements required to mitigate the direct and cumulative impacts of the project. This section also identifies where the required improvements are programmed into the DIF and TUMF. In cases where the improvements are not programmed, the project would be responsible to implement the improvements, as outlined in Section 4.11.6.4.E. As a result, the impacts of the project will be fully mitigated prior to issuance of the Certificate of Occupancy by the City, either through payment of the DIF, TUMF, or by a fair-share participation in improvements that are not included in these funding programs.

It should be noted that the **Reduced Intensity Alternative (Less Intensive Modified Plan)** evaluated in Section 4 of this document would substantially reduce traffic generation and therefore warehouse traffic impacts (4 warehouse building with approx. 30% less traffic) compared to the 6 warehouse buildings of the Proposed Project. The reader is referred to Section 4 of this document for more information regarding that alternative land plan.

Response to Comment 2. The City selected the intersections for analysis in accordance with the guidelines established by the City's Traffic Impact Analysis Preparation Guide (i.e., 50 or more peak hour trips within a five mile radius) and as accepted and required by the City of Moreno Valley in their Traffic Impact Assessment (TIA) guidelines. It should be noted that this is the same criteria for selection of a study area in the City of Riverside Traffic Impact Analysis Preparation Guide. It should also be noted that the project does not add more than 50 trips at intersections farther than those included in the analysis. In addition, Response to Comment C-1, No. 1 above demonstrates the proposed project actually reduces the number of PCE trips that would be generated on the project site from the previously considered project. Since the World Logistics Center and RPT Centerpointe West projects were initiated after the NOP for this project went out, the trips from these two projects are not required to be and have not been included in this analysis. See also Response to Letter A-2, Comment No. 8. In addition, see Response No. 1 above regarding the proposed **Less Intensive Modified Plan** evaluated in Section 4 of this document.

Response to Comment 3. The comment states that the redistribution of traffic caused by the project was not appropriately analyzed in the DEIR - this statement is incorrect. The 2035 analysis was prepared using forecasts from the RivTAM traffic model, which distributes traffic according to the "path of least resistance", as requested in the comment. The select zone assignment prepared for the project shows that approximately 5 percent of project traffic, equating to fewer than 50 trips, would utilize Alessandro and Van Buren Boulevards in the City of Riverside. Changes in the distribution of traffic within the City of Riverside due to the influence of the project were not evaluated, as these

roadways and intersections do not meet the criteria for inclusion into the project study area. An explicit analysis of “spill-over” traffic, as requested in the comment, is not required by the traffic study guidelines adopted by the Cities of Moreno Valley or Riverside, or the County of Riverside. The comment also asserts that the TUMF program may not adequately mitigate project impacts due to “spill-over” traffic. This comment is also incorrect. The TUMF Nexus Study prepared by Parsons Brinckerhoff in October 2009 relied upon traffic forecasts from the RivTAM traffic model. As noted previously, the RivTAM traffic model assigns traffic based on the “path of least resistance”. Additionally, the General Plan land use planned for the project site, and included in the RivTAM, would generate more trips than the proposed project. As a result, the forecasts prepared for the TUMF Nexus Study would be a more conservative estimate of “spill-over” traffic than would be experienced with the project, and the projects programmed in the TUMF would be adequate to mitigate project impacts.

Response to Comment 4. The RIVTAM traffic model was used to generate forecast traffic volumes for no project and with project condition. The methodology utilized by the RivTAM traffic model to assign trips to the roadway network minimizes travel time and delay for trip origins and destinations within the model network. As such, if a faster route was observed, then a significant diversion of trips should have been seen on these routes. However, significant diversion of traffic was not observed between the no-build and build conditions. Furthermore, the modeling indicated that diversion of trips on to surface streets under without and with project conditions are anticipated to be minimal (a maximum diversion of 7 peak hour PCE trips is forecast at on Alessandro Boulevard). Please note that compared to the present zoning, the project produces 6,702 fewer trips per day, with 885 fewer trips in the a.m. peak hour and 939 fewer trips in the p.m. peak hour, and based on the model runs, the trips on surface streets in the City of Riverside are generally lower under conditions where the proposed zone change is approved.

Response to Comment 5. The commenter is correct that the project involves a General Plan Amendment and Zone Change, and the Draft EIR does identify a number of significant impacts for the proposed project. The purpose of an EIR is to disclose potential impacts of the project to the public and to decision makers. Utilizing the information provided in the DEIR, the decision makers will determine whether the benefits of the project outweigh the environmental impacts of the project.

| It should be noted that the ~~Less~~ ~~intensive~~ ~~Modified~~ ~~Plan~~ evaluated in Section 4 of this document would substantially reduce traffic generation and therefore warehouse traffic impacts (4 warehouse building with approx. 30% less traffic) compared to the 6 warehouse buildings of the Proposed Project. The reader is referred to Section 4 of this document for more information regarding that alternative land plan.

| **Response to Comment 6.** The City of Moreno Valley will keep the City of Riverside informed regarding the review process for this project, and the City of Riverside will have an opportunity to review these responses prior to action on the ProLogis project.

Re: Comment on Draft Environmental Impact Report for ProLogis Eucalyptus Industrial Park (State Clearinghouse No. 2008021002)

Dear Mr. Bradshaw:

I am writing on behalf of Laborers International Union of North America, Local Union No. 1184, and its members living in Riverside County ("LIUNA Local Union No. 1184") regarding the Draft Environmental Impact Statement ("DEIR") for the ProLogis Eucalyptus Industrial Park, State Clearinghouse No. 2008021002 ("Project").

On Tuesday, August 28, 2012, we made a request that the City of Moreno Valley ("City") extend the comment period for the DEIR due to substantial information requiring additional time for review and comment. You responded today, August 29, 2012 that you respectfully decline to grant the request for additional time.

Today, we sent you an email requesting Appendix L. Appendix L is referenced in the DEIR. In pertinent part, the DEIR states:

Mitigation Measures. The potential mitigation measures identified by the City's General Plan have been deemed infeasible by the property owner under current economic conditions. In addition, supplementary analysis of the project site and local economic conditions indicates that continued citrus production and/or the raising of row crops would not be economically feasible on the project site (*see Appendix L*).

(DEIR, p. 4.2-8) (emphasis added). The DEIR does not contain an Appendix L.

RESPONSE TO LETTER D-1

LOZEAU DRURY, LLP (8/29/12)

Response to Comment 1. As explained to the commenter on the telephone and via email by Jeff Bradshaw on August 28, 2012, the reference to Appendix L was a typographical error – it should have referred to Appendix E which contains the material on “agricultural resources” requested by the commenter. The material in Appendix E is clearly labeled “Agricultural Resources” in the Table of Contents, so the Draft EIR does not need to be recirculated. This correction will be noted in Section 3 of this document (*EIR Errata and Additions*) as shown below. Appendix E was available along with the entire DEIR and all DEIR appendices for the duration of the 45-day public review period. In addition, the comment has not resulted in any change in the impact judgment contained in the DEIR regarding agricultural resources and that impacts were identified as significant and unavoidable.

Mitigation Measures. *The potential mitigation measures identified by the City’s General Plan have been deemed infeasible by the property owner under current economic conditions. In addition, supplementary analysis of the project site and local economic conditions indicates that continued citrus production and/or the raising of row crops would not be economically feasible on the project site (see Appendix ~~L~~ E).*

RE: ProLogis Eucalyptus Industrial Park project's Draft Environmental Impact Report (DEIR).

The Sierra Club appreciates this opportunity to comment on this DEIR. We hope to read your responses in the FEIR which do fully answer our comments, concerns, suggestions and questions. Most of our concerns are about Global Warming, Climate Change, Greenhouse Gas Pollution and Air Pollutant emissions. These concerns can be read below and we expect this project to do everything possible to mitigate these problems in our non-attainment area. The Sierra Club understands that "the applicant has indicated the building will be designed to qualify for certification under the Leadership in Energy and Environmental Design (LEED) program, but there are no plans to submit the project to actual LEED certification." (p 3-12) We do not understand why you do not match the Gold LEED certification recently agreed to by the Alessandro Business Center warehouse in the City of Riverside or even the LEED Silver of nearby Skechers and West Ridge Commerce Center warehouses. In fact your words do not guarantee anything about even reaching the lowest level of LEED certification. The City needs to require you to hire a LEED expert and then require you to become LEED certified—hopefully higher than just certified. You could pay less than \$1,000 this year and lock in current LEED standards for your building. Through the installation of solar panels and other verified LEED ideas you could avoid generating air pollutants with the electricity you consume. This warehouse and all warehouses need to be required to have their roofs built to accommodate the maximum number of solar panels. You are now able to sell excess energy back and earn money as well as do right for our non-attainment area. The DEIR states that "the proposed project would unavoidably contribute to the significant cumulative air quality impacts." (p 1-28) The DEIR also indicates that the "cumulative impacts associated with diesel particulate matter are considered significant and unavoidable". (p 1-29) The Sierra Club does not believe it is totally unavoidable. The fact you are given a cafeteria list of mitigations to chose from shows that there is more that could and should be done to protect the health of area residents. These need to be required of the project and not just implemented "where feasible" or some other weasel words like "will be considered". Why isn't there a requirement to exceed current Title 24 at time of construction by at least 25% instead of just "exceed" Title 24? Agreeing to require all of your

RESPONSE TO LETTER D-2

SIERRA CLUB

Response to Comment 1. The City believes the following responses address the comments submitted by the Sierra Club relative to this EIR on all the topics indicated. Short-term and long-term project specific and cumulative effects of the proposed project on air quality are evaluated in Section 4.3, *Air Quality* (pages 4.3-1 through 4.3-38) in the Draft EIR. Greenhouse gas emissions and climate change were evaluated in Section 4.13, *Global Climate Change* (4.13-1 through 4.13-22) in the Draft EIR. Where the proposed project's impacts were determined to be significant mitigation was provided to lessen those impacts. It was determined that even with the implementation of feasible mitigation measures the proposed project will have a significant and unavoidable impact on short-term construction air quality, long-term operational air quality impacts, cumulative air quality, and cumulative greenhouse gas emissions.

The concerns raised by the commenter have been responded to in the following Response to Comments 1 through 31. Any comments that were raised by the commenter that resulted in additions or revisions to the language in the Draft EIR are provided in Section 3.0, *Errata and Additions*, of this Final EIR.

Lastly, the commenter inaccurately suggests that the project should be required to obtain a LEED Silver or Gold rating as a form of mitigation of significant impacts associated with air pollution and greenhouse gas emissions. The process of obtaining a LEED rating is not mitigation. The specific green building features that are part of the LEED rating equation can reduce air pollution and greenhouse gas emissions impacts by minimizing and reducing the quantity of emissions associated with operations of a building. To clarify, Section 3.5.3, Green Building Construction, in the Project Description states that "The applicant has indicated the buildings will be designed to qualify for certification under the Leadership in Energy and Environmental Design (LEED) program, but there are no plans to submit the project for actual LEED certification at this time due to cost and time delay factors." (EIR page 3-12). The applicant will formally apply for LEED Certified status, but the ultimate determination of the level of compliance is up to the LEED organization and cannot be guaranteed with any certainty at this point in time, since the final engineering will not occur until after certification of the EIR.

Response to Comment 2. See Response No. 1 above regarding LEED certification. In addition, the applicant has agreed that the project will be constructed to accommodate solar photovoltaic panels in the future. Additional information in this regard is found in the responses to the comments by the South Coast Air Quality Management District (Letter B-3).

The opinions stated by the Sierra Club regarding the significance of project and cumulative air quality impacts are unsubstantiated. The air quality analysis in the EIR includes a detailed analysis showing that the cumulative impacts are unavoidable. The "cafeteria list" of mitigation measures listed in Mitigation Measure 4.3.6.5B is included to minimize the air quality impacts from the area and energy emissions. As described in EIR Section 4.3.6.5, page 4.3-34: *"Although implementation of Mitigation Measures 4.3.6.5A through 4.3.6.5B may reduce vehicle trips associated with the proposed project, it is not possible to quantify the reduction in the amount of emissions that may occur. Considering the volume of emissions generated and current commuter habits, it is unlikely the implementation of TDMs/TCMs will result in a reduction of operational project emissions to below existing SCAQMD thresholds. Application of Leadership in Energy and Environmental Design (LEED) standards and green building design principles could reduce emissions from building operations such as heating and cooling; however, such standards and principles would not reduce emissions of CO, ROG, NO_x, PM₁₀, and PM_{2.5} to below SCAQMD thresholds. No other feasible mitigation measures have been identified to reduce the operational emissions of CO, ROG, NO_x, PM₁₀, and PM_{2.5} to a less than*

significant level.” Further, the commenter mixed the short-term construction impacts with the long-term operational impacts – the majority of the comment above is about long-term operational impacts, however the last sentence is about short-term construction impacts and would not help reduce long-term emissions. The emissions control measures listed in Mitigation Measures 4.3.6.2A through 4.3.6.2M are adequate to reduce the short-term construction measures. However, the City and the applicant have agreed to add the Tier III requirement into Mitigation Measure 4.3.6.2C. The measure has been amended as follows as is included in Final EIR, Section 3.0, *EIR Errata and Additions*:

4.3.6.2C *Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall utilize California Air Resources Board (CARB) Tier II Certified equipment or better during the rough/mass grading phase for the following pieces of equipment: rubber-tired dozers and scrapers. Contract specifications shall be included in the proposed project construction documents, which shall be reviewed by the City.*

Project start to December 31, 2014: All off-road diesel-powered construction equipment greater than 50 horsepower shall meet Tier 3 off-road emission standards. In addition, all construction equipment shall be outfitted with Best Available Control Technology (BACT) devices certified by CARB. Any emission control devices used by the contractor shall achieve emission reductions that are no less than what would be achieved by a Level 3 diesel emission control strategy for a similarly sized engine as defined by CARB regulations.

Post January 1, 2015: All off-road diesel-powered construction equipment greater than 50 horsepower shall meet Tier 4 emission standards, where available. In addition, all construction equipment shall be outfitted with Best Available Control Technology (BACT) devices certified by CARB. Any emission control devices used by the contractor shall achieve emission reductions that are no less than what would be achieved by a Level 3 diesel emission control strategy for a similarly sized engine as defined by CARB regulations.

A copy of each unit's certified tier specifications, BACT documentation, and CARB or SCAQMD operating permit shall be provided at the time of mobilization of each applicable unit of equipment.

However, several air quality related mitigation measures have been modified as a result of discussion in the Final EIR (refer to Final EIR, Section 3.0 *EIR Errata and Additions*). The list of mitigations included in the Air Quality section are qualified by “where feasible” because the EIR can only require a project to implement feasible mitigation measures, and at this time it is not possible to determine mitigation measure feasibility. The determination will only be possible once operations have begun and will have to be determined by the project operator in cooperation with the City. Additionally, mandating that the construction process exceed Title 24 by a particular percentage makes the mitigation measure infeasible – there is no way to determine by what percentage the construction operations exceed Title 24.

The modified measures are also in the Mitigation Monitoring and Reporting Plan in Section 4.0 in the Final EIR to ensure they are implemented

Response to Comment 3. As documented in Section 4.2 of the Draft EIR, farming is no longer a viable economic activity in this portion of Riverside County, and the General Plans of the County and City both identify land uses that will a transition from historical agricultural land to appropriate suburban land uses. This proposed project represents a step in that anticipated transition.

This commenter also states that a developer recently donated \$100,000.00 to the Riverside Land Conservancy to help mitigate for the loss of agricultural lands but fails to appropriately cite the

information and identify the basis for determining the amount of agricultural lands lost in relation to this monetary amount. In discussion with Gail Egenes, Executive Director of the Riverside Land Conservancy, the agency does not have any established program to purchase agricultural easements or lands. Also, in consultation with the National Conservation Easement Database, Riverside County does not have any established agricultural easements.¹

Contributions to Riverside County Land Conservancy or the San Jacinto Basin Resource Conservation District by private land owners are laudable but are not required as part of a City or regional mitigation plan for loss of agricultural land. Therefore, the decision whether to make any contributions in this regard would be at the discretion of the developer in consultation with the City. For additional detailed analysis on this issue, see Responses 22 and 23 in the letter from Johnson & Sedlack (D-3). Since there is no feasible mitigation available, the impact has been identified as significant and unavoidable, and the City will have to adopt a Statement of Overriding Considerations as part of its Findings on the EIR prior to action on the project.

The project's greenhouse gas (GHG) emission assessment assumes the citrus groves are not present onsite, which we consider to be a "worst case" estimate of greenhouse gases related to the proposed project. The Draft EIR determined that GHG impacts would be less than significant with implementation of the proposed mitigation, and this information does not alter that conclusion.

The project site likely provides some amount of raptor foraging habitat, as outlined on page 4.4-2 of the Draft EIR. However, there are few large trees suitable for raptor perching and roosting (i.e., the citrus trees do not contribute much in this regard), and the site is proximate to human activity at its southeast and northwest corners, as well as SR-60 along its northern boundary. Therefore, the value of the project site for raptor foraging is marginal at best. The DEIR concluded project impacts on raptor foraging were less than significant with implementation of Mitigation Measure 4.4.6.1A to address impacts on nesting birds (DEIR page 4-29). In addition, any incremental cumulative impact on raptor foraging would be mitigated by the project's payment of the MSHP fee.

Response to Comment 4. Section 4.4 of the Draft EIR fully evaluates and minimizes impacts to the Quincy Channel, the main onsite drainage feature. The offsite mitigation for onsite impacts is mainly for removal of the two degraded erosional drainage channels along the west and southwest portions of the site. As shown on the project site plan (Figure 1.2 in the Draft EIR), the project would protect the Quincy Channel essentially intact (only 0.04 acre permanent impact and 0.03 acre temporary impact) along the eastern boundary of the project site. The impacts are outlined in Table 4.4.D of the EIR and the planned improvements are shown in Figures 1.2, 3.6.B, and 3.6.F, and Appendix K-3 A-1 Master Architectural Plan which shows the channel and bridge notes.

Response to Comment 5. There is no empirical evidence presented that would support the contention that the citrus groves on the project site provide significant biological habitat. The orchard property and the trees are subject to human disturbance on a regular basis, and are immediately adjacent to the SR-60 Freeway. The trees are maintained such that they provide minimal or no potential for roosting or perching by raptors, although some songbirds may utilize them and the fruit to some degree. A detailed biological assessment was prepared for the project to document consistency with the County's MSHCP, of which the City is a signatory. It came to a similar conclusion (i.e., the site has very low value as biological habitat).

Response to Comment 6. Impacts related to agriculture and raptor foraging are addressed in Sections 4.2 and 4.4 of the Draft EIR, and in Responses 3 and 5 above.

¹ <http://nced.conservancyregistry.org/browse/map>, accessed October 4, 2012.

Response to Comment 7. The observation of Swainson's hawk in the general vicinity of the project site does not change the fundamental conclusion that impacts of the project on biological resources are less than significant with the proposed mitigation. Payment of the MSHCP impact fee will also help contribute to preservation of raptor foraging lands as habitat lands are purchased under the plan.

Response to Comment 8. The site would need to continue to be disked for weed abatement and fuel modification per City Fire Department requirements. Since the site is not actively tilled, this clearing would take place mainly once a year. Mitigation Measures 4.4.6.1B and 4.4.6.1C require a pre-construction burrowing owl survey and establish what actions must be taken if the burrowing owl is found on-site during the pre-construction surveys that are in accordance with the Burrowing Owl Consortium 1993 Burrowing Owl Survey Protocol and Mitigation Guidelines¹ and referred to the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) survey instructions² to complete the pre-construction burrowing owl survey.

Response to Comment 9. All of the topics mentioned in the comment were addressed in the Draft EIR and are addressed in specific responses to this letter. Impacts to burrowing owl were addressed in Section 4.4 of the Draft EIR (biological resources), including mitigation for pre-construction surveys. The Draft EIR did look at direct and indirect impacts of the project relative to noise, vibration, odors (fumes?), and light during both construction and operation of the proposed warehouse buildings. Mitigation Measure 4.3.6.5B and 4.3.6.6A require the planting of shade trees in parking areas to reduce heat load on cars and buildings. Alternative fuels for onsite vehicles are addressed in Mitigation Measure 4.3.6.6A.

Response to Comment 10. There is no City-wide general requirement for parking areas of warehouse projects to use porous pavement, which create their own water quality issues with percolation of runoff directly from parking areas into the ground, rather than collecting runoff into detention basins, especially low flows which can have the most concentrated pollutants.

Response to Comment 11. CEQA requires an analysis of cumulative impacts from projects that are "on the books" at the time the baseline for the EIR is established (i.e., recently approved or proposed at the time of issuance of the Notice of Preparation). The cumulative project list does not include the World Logistics Center (WLC) because it was not a proposed project when the Notice of Preparation (NOP) was released for this project EIR (i.e., "baseline" conditions are typically established at the time the NOP is released). Even though that project is now on the City's "horizon", no traffic study or other technical information were available for evaluation relative to the cumulative impacts of this proposed project when the EIR for this project was prepared.

Response to Comment 12. The Draft EIR clearly identifies that... "The nearest existing sensitive land uses are single-family residences located approximately 50 feet southeast of the southern boundary of the project site, approximately 395 feet southeast of the proposed warehouse buildings, and approximately 664 feet southeast of the proposed loading docks." (Draft EIR page 4.3-17, 4th paragraph). The commenter may be confused by the terms used to characterize the spatial relationship of the project to the existing residences. The residences are 50 feet from the project's property line, but the Project Description (e.g., Figure 1.2 clearly shows there are several large detention basins in the southern portion of the site that will act as a buffer and separate truck activities of the project from the residences. As stated in the EIR and demonstrated on the project site plan, the residences would be 395 feet from the closest proposed warehouse building, and 664 feet from the closest proposed loading dock. As shown in the air quality analysis and health risk assessment of the EIR, this distance is sufficient to protect the health of the residents near to the project.

¹ <http://www2.ucsc.edu/scpbrg/burrowingowls.htm>.

² http://www.tlma.co.riverside.ca.us/epd/documents/survey_protocols/burrowing_owl_survey_instructions.pdf.

All recommendations for locating warehouses some safe distance (which varies depending on the author) are all conditioned with the concept “unless a site-specific health risk assessment is performed.” This EIR did include such a health risk assessment, which shows that, even with all the very conservative assumptions required, there will not be a significant health risk to any sensitive receptors (residents, schools, medical facilities, etc.) from project-related air emissions.

In addition, the commenter is referred to Section 4 of this document for an evaluation of a less intensive modified plan, which is a subset of the Reduced Intensity Alternative evaluated in the DEIR (and which was determined to be environmentally superior to the Proposed Project). This less intensive plan proposes to develop 4 warehouse buildings, leaving the southeast portion of the site vacant for future development of residential uses consistent with existing zoning (R-5 and RA-2) adjacent to the existing residential neighborhood to the southeast.

Response to Comment 13. The commenter is correct in pointing out there are other residential uses in the area. However, they are over 250 feet north across the SR-60 Freeway from the project site, and are not downwind of the site based on regional prevailing wind patterns. As stated on page 4.3-17 of the DEIR, “...receptors were placed in a general grid extending in all directions to characterize the risk level surrounding the project site. Meteorological data from the Perris area were utilized to represent the conditions at the project site.” These features of the HRA insure that the health risk levels to all individuals in the region of the project site were adequately considered. The SCAQMD’s methodology for preparing health risk assessments requires an examination of impacts at the closest sensitive receptor to identify the worst case conditions. Therefore, it is neither required nor would it be helpful to show potential health risk levels of all residential zoning within 2,000 feet of the site.

As outlined in Response 12 above, the existing residences would be 664 feet from the closest truck loading dock, which would be the closest main source of truck-related air pollutants including diesel particulate matter. The project HRA used a worst case estimate of 25 meters (minimum 82.5 feet) to calculate potential health risks from new project warehousing, therefore, the actual exposure would likely be lower than that identified in the HRA, which showed that the project would create a maximum health risk of 1 additional cancer case in a million near the southwest corner of the site (or 10 times lower than the significance threshold of 10 in a million). As shown in Figure 4.3.3 of the Draft EIR, expected health risks further from the project site, including residences to the north across the freeway, are much less than 1 in a million.” Therefore, existing housing north of the freeway would likely be exposed to a much higher health risk from ongoing traffic along SR-60 than would be generated by the proposed project.

Worker Health. A detailed health risk assessment (HRA) was prepared for the proposed project and included in Appendix B of the Draft EIR (LSA March 2012). The HRA examined the short-term and long-term potential health effects from project-related emissions of toxic air pollutants (TAP) in the exhaust of diesel-powered delivery trucks on existing surrounding sensitive receptors, including single- and multifamily residences. Onsite workers will be protected by the requirements established by the Occupational Safety and Health Administration (OSHA) and are not considered sensitive receptors in accordance to the California Air Resources Board (CARB). The CARB defines “sensitive” land uses, as homes, medical facilities, daycare centers, schools, and playgrounds but not on-site workers.

According to the HRA prepared for the proposed project, “The operations expected to occur at this facility will not emit any toxic chemicals in any significant quantity other than vehicle exhaust. While there may be other toxic substances in use on site, compliance with State and federal handling regulations will bring emissions to below a level of significance. Due to the lack of data, precise evaluation of vehicle exhaust impacts is not feasible; however, based on the limited amount of TAC from vehicle exhaust associated with the project operations in relation to background levels, the impact is not expected to be significant.” (Section 5.4.2, Operational Health Risk Impacts, page 44).

The responsibility of the health of workers of the proposed project is to OSHA. The following is from the OSHA website (<http://www.osha.gov/as/opa/worker/employer-responsibility.html>):

Employer Responsibilities

Employers have certain responsibilities under the Occupational Safety and Health Act of 1970. The following list is a summary of the most important ones:

- Provide a workplace free from serious recognized hazards and comply with standards, rules and regulations issued under the OSHA Act.
- Examine workplace conditions to make sure they conform to applicable OSHA standards.
- Make sure employees have and use safe tools and equipment and properly maintain this equipment.
- Use color codes, posters, labels or signs to warn employees of potential hazards.
- Establish or update operating procedures and communicate them so that employees follow safety and health requirements.
- Provide medical examinations and training when required by OSHA standards.
- Post, at a prominent location within the workplace, the OSHA poster (or the state-plan equivalent) informing employees of their rights and responsibilities.
- Report to the nearest OSHA office within 8 hours any fatal accident or one that results in the hospitalization of three or more employees.
- Keep records of work-related injuries and illnesses. (Note: Employers with 10 or fewer employees and employers in certain low-hazard industries are exempt from this requirement.)
- Provide employees, former employees and their representatives access to the Log of Work-Related Injuries and Illnesses (OSHA Form 300).
- Provide access to employee medical records and exposure records to employees or their authorized representatives.
- Provide to the OSHA compliance officer the names of authorized employee representatives who may be asked to accompany the compliance officer during an inspection.
- Not discriminate against employees who exercise their rights under the Act.
- Post OSHA citations at or near the work area involved. Each citation must remain posted until the violation has been corrected, or for three working days, whichever is longer. Post abatement verification documents or tags.
- Correct cited violations by the deadline set in the OSHA citation and submit required abatement verification documentation.

With this OSHA protection, the employees of the proposed project will not be subject to unhealthful conditions.

The results of the conservative HRA modeling were shown in Table R (Table 4.3.F in the Draft EIR) for carcinogenic and chronic inhalation health risks at the sensitive receptors. Even with the conservative modeling technique used, assuming that an individual stays outdoors at his or her residence 24 hours per day for 70 years, which is the State-required period of time that all HRAs must assess, the nearest sensitive receptor would be exposed to an unmitigated inhalation cancer risk of no more than 4.3 in 1 million, less than the State's threshold of 10 in a million. The highest worker exposure occurs at the east boundary of the facility just south of Eucalyptus Avenue (see Draft EIR Figure 4.3.1). Based on the conservative nature of the assumptions used in this study, the health risk levels cited in the DEIR in Table 4.3.F on page 3.4-17 are likely higher than are actually expected to occur. This assessment demonstrates that no significant health risk would occur from project-related truck traffic, and no mitigation is necessary. Much of the construction equipment used is not powered by electricity (i.e. grading equipment, bull dozers, etc.) is not available as electric equipment. Therefore, it is not practical to set a percentage requirement for the amount of construction equipment that must be powered by electricity. In addition, a percentage based requirement would not translate well to construction equipment. For example, it would not seem logical to base the calculation on the number of pieces of equipment since the size and emissions of equipment vary significantly.

Again, OSHA has programs that the project operator is required to comply with to protect warehouse workers from the long term health effects of breathing toxic diesel emissions throughout their workday and employment.

In addition, the commenter is referred to Section 4 of this document for an evaluation of a less intensive modified plan, which is a subset of the Reduced Intensity Alternative evaluated in the DEIR (and which was determined to be environmentally superior to the Proposed Project). This less intensive plan proposes to develop 4 warehouse buildings, leaving the southeast portion of the site vacant for future development of residential uses consistent with existing zoning (R-5 and RA-2) adjacent to the existing residential neighborhood to the southeast.

Response to Comment 14. The noise impact analysis for the proposed project evaluated potential noise impacts from construction and project operations, and did not identify any significant noise impacts. Therefore, no noise barrier or other mitigation measures are required. For related discussion of noise impacts, see also Response to Comments 80 through 93 in Letter D-3 from Johnson & Sedlack. In addition, Mitigation Measure 4.3.6.6A was modified and Mitigation Measure 4.3.6.6B was added to address construction equipment and vehicles operating for the project (see Final EIR, Section 3.0, *EIR Errata and Additions*). Modifications are as follows:

4.3.6.6A *Prior to issuance of the first building permit, building and site plan designs shall ensure that the project's energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of 20 10 percent until January 1, 2014. For building permits issued after that date, new state energy standards require a 20 percent reduction from 2008 Title 24, Part 6 Energy Efficiency Standards. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and review and approved by the City. The following design features, including but not limited to the following list, shall be used to fulfill this requirement:*

- *Buildings shall exceed California Title 24 Energy Efficiency performance standards for water heating and space heating and cooling, as deemed acceptable by the City.*
- *Increase in insulation such that heat transfer and thermal bridging is minimized.*

- *Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.*
- *Incorporate dual-paned or other energy efficient windows.*
- *Incorporate energy efficient space heating and cooling equipment.*
- *Interior and exterior energy efficient lighting which exceeds the California Title 24 Energy Efficiency performance standards shall be installed, as deemed acceptable by the City. Automatic devices to turn off lights when they are not needed shall be implemented.*
- *To the extent that they are compatible with landscaping guidelines established by the City, shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and buildings shall be planted at the project site.*
- *Paint and surface color palette for the project shall emphasize light and off-white colors which reflect heat away from the buildings.*
- *All buildings shall be designed to accommodate renewable energy sources, such as photovoltaic solar electricity systems, appropriate to their architectural design.*
- *To reduce energy demand associated with potable water conveyance, the project shall implement the following:*
 - *Landscaping palette emphasizing drought-tolerant plants;*
 - *Use of water-efficient irrigation techniques; and,*
 - *U.S. EPA Certified WaterSense labeled for equivalent faucets, high-efficiency toilets (HETs), and water-conserving shower heads.*
- *The project shall provide secure, weather-protected, on-site bicycle storage/parking.*
- *The project shall provide on-site showers (one for males and one for females). Lockers for employees shall be provided.*
- *The project will establish a Transportation Management Association (TMA). The TMA will coordinate with other TMAs within the City to encourage and coordinate carpooling among building occupants. The TMA will advertise its services to building occupants, and offer transit and/or other incentives to reduce greenhouse gas (GHG) emissions. A plan will be submitted by the TMA to the City within two months of project completion that outlines the measures implemented by the TMA, as well as contact information.*
- *The project shall provide preferential parking for carpools and vanpools. Locations and configurations of proposed preferential parking for carpools and vanpools are subject to review and approval by the City. Prior to final site plan approval, preferential parking for carpools and vanpools shall be delineated on the project site plan.*
- *The project shall provide at least two electric vehicle charging stations. Locations and configurations of proposed charging stations are subject to review and approval by the City. Prior to issuance of the first building permit, stub outs for charging stations shall be indicated on the project building plans.*
- *Lease/purchase documents shall identify that tenants are encouraged to promote the following:*
 - *Implementation of compressed workweek schedules.*
 - *SmartWay partnership.*

- *Achievement of at least 20 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of consolidated trips carried by SmartWay carriers until it reaches a minimum of 90 percent of all long-haul trips carried by SmartWay 1.0 or greater carriers.*
- *Achievement of at least 15 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of long-haul trips carried by SmartWay carriers until it reaches a minimum of 85 percent of all consolidated trips carried by SmartWay 1.0 or greater carriers.*
- *Use of fleet vehicles conforming to 2010 air quality standards or better.*
- *Installation of catalytic converters on gasoline-powered equipment.*
- *Inclusion of electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets.*
- *Establishment and use of carpool/vanpool programs, complemented by parking fees for single-occupancy vehicles.*
- *Provision of preferential parking for EV and CNG vehicles.*
- *Use of electrical equipment (instead of gasoline-powered equipment) for landscape maintenance.*
- *Use of electric (instead of diesel or gasoline-powered) yard trucks.*
- *Use of SmartWay 1.25 rated trucks.*
- *Each facility operator shall provide regular sweeping of onsite parking and drive areas.*
- *Each facility operator shall maintain a log of all trucks entering the facility to ensure that, on average, the daily truck fleet meets the quantities and emissions standards. This log shall be available for inspection by City staff at any time.*
- *Each facility operator shall prohibit all vehicles from idling in excess of five minutes in all onsite areas.*
- *Each facility operator shall ensure that onsite staff in charge of keeping the daily log and monitoring for excess idling will be trained and certified in diesel health effects and technologies, such as by requiring attendance at CARB-approved courses.*
- *Each facility operator upon occupancy that do not already operate 2007 and newer trucks shall in good faith apply for funding to replace or retrofit their trucks such as Carl Moyer, VIP, Prop 1B or similar funds. Should funds be awarded, the tenant shall be required to accept and use them.*

Response to Comment 15. Many of the very detailed portions of the various environmental impact analyses are placed in the appendices so that the EIR is easier to read and understand. All details are available for the reviewer. Trip lengths are not considered, as trip lengths do not affect the operation of traffic at various locations. The passenger vehicle and truck trip assignment figures provided in the DEIR show the number of passenger vehicle and truck trips at each intersection, and therefore indicate the routes that project trips are expected to utilize. The trip generation provided in the DEIR section would be for the project at its full capacity. The project trip generation analyzed in the analysis would be a typical weekday trip generation for the project. It is standard traffic engineering practice and the practice required by Cities and the County to analyze the project trips occurring during the weekday peak hours, as this is generally the period when the worst traffic is experienced on the adjacent streets. In addition, the trip generation analysis does not assume only

some initial level of operation. The full operation of the project is analyzed so that the effects of the project on the existing environment are disclosed, as required by CEQA. Trips generated by the project under opening year are likely to be less than those included in the analysis. All of the details for calculating health risks of the proposed project were provided in Appendix B of the Draft EIR, including the EMFAC and dispersion modeling outputs. The details of the project traffic routing are discussed in detail in the traffic analysis and the truck trip length on DEIR page 4.3-32. In addition, "active" CalEEMod and supporting computer files were sent to the AQMD during the EIR review period to allow for replication and verification of the HRA report results. In addition, Mitigation Measure 4.3.6.6A was modified (see above) to address these types of equipment (see Final EIR, Section 3.0, *EIR Errata and Additions*).

Response to Comment 16. All of the details for calculating health risks of the proposed project were provided in Appendix B of the Draft EIR, including the EMFAC and dispersion modeling outputs. In addition, "active" CalEEMod and supporting computer files were sent to the SCAQMD during the EIR review period to allow for replication and verification of the HRA report results.

The Villages of Lakeview project included over 2,800 acres consisting of 11,350 dwellings, a mixed-use town center including some 500,000 square feet of retail, office and commercial uses, public facilities including four schools and a library, and nearly 1,000 acres of open space/conservation areas. The court found that the EIR analysis of traffic impacts was inadequate because it did not study how an additional 85,000 car trips would affect two local freeways. The only fault the court found in the project's relationship to the General Plan was that traffic congestion standards would be exceeded¹. The proposed project reduces the intensity of the trip generation compared to the General Plan, and as shown in the analysis, doesn't change traffic congestion standards.

This EIR evaluates traffic impacts at intersections with more than 50 trips and freeway segments within a 5 mile radius where the project has more than 100 peak hour trips, as required by the traffic study guidelines adopted by the City of Moreno Valley as well as the County of Riverside. Please note that the 50 and 100 trip thresholds were not questioned in the Lakeview judgment. East of Redlands Boulevard, the project adds less than 100 peak hour trips to freeway facilities, therefore, the study area is consistent with the Friends decision. West of Pigeon Pass Road, project traffic is more than 100 trips. However, traffic volumes on the freeway west of Pigeon Pass Road are higher than those to the east of Pigeon Pass Road. Since the number of lanes is the same, and the segments east of Pigeon Pass Road are forecast to operate at unsatisfactory conditions under future conditions without the project, the segments to the west would also operate at unsatisfactory conditions (higher volumes and same capacity). Therefore, to the freeway segments west of Pigeon Pass Road, the project will not create a direct impact but add to unsatisfactory conditions.

It should also be noted that the referenced case is a Superior Court, not an appellate court decision, and thus does not have the power of an appellate decision.

Response to Comment 17. It is not clear what the commenter is asking. This project is not the Moreno Valley Auto Mall but if the commenter is asking if the cumulative impacts of the Moreno Valley Auto Mall in combination with this project (Eucalyptus Industrial Park) were considered, yes they were for both air quality and traffic on the SR-60. The DEIR includes (1) a description of the circulation system from both a local and regional perspective and list the pages; (2) screening criteria were used to determine the appropriate intersections and segments to include in the analysis, based on whether there was a potential or impacts and what the criteria were; and (3) that freeway impacts were studied in the EIR (list the pages) and the findings and pages on which the freeway analysis findings are listed. The EIR evaluates traffic impacts at intersections with more than 50 trips, and

¹ From Courthouse News Service, May 29, 2012.
<http://www.courthousenews.com/2012/05/29/46884.htm> accessed September 17, 2012.

freeway segments within a 5 mile radius where the project has more than 100 peak hour trips. For freeway segments, the traffic analysis states that the project will add to unsatisfactory conditions but not create unsatisfactory conditions by itself. East of Redlands Boulevard, the project adds less than 100 peak hour trips to freeway facilities, therefore, the study area is consistent with the Friends decision. West of Pigeon Pass Road, since project traffic is more than 100 trips. However, traffic volumes on the freeway west of Pigeon Pass Road are higher than those to the east of Pigeon Pass Road. Since the number of lanes is the same, and the segments east of Pigeon Pass Road are forecast to operate at unsatisfactory conditions under future conditions without the project, the segments to the west would also operate at unsatisfactory conditions (higher volumes and same capacity). Therefore, to the freeway segments west of Pigeon Pass Road, the project will not create a direct impact but add to unsatisfactory conditions. Since the project does not create a direct significant impact at freeway segments where the project traffic is a higher percentage of the total freeway traffic, it can be said with certainty that the project will not create a direct impact at locations where the project traffic is a lower percentage of the total freeway traffic. Therefore, as described in the Response to Comment 13, as shown in Figure 4.3.3 of the DEIR, expected health risks further from the project site, including residences to the north along the freeway, are much less than 1 in a million.

A review of existing traffic volumes on the freeway reveals that the existing traffic volumes on segments beyond a 5-mile radius that were not analyzed and where the project has more than 100 peak hour trips are significantly higher than at the segments that were analyzed in the EIR. Since in 2035 all freeway segments analyzed operate at unsatisfactory levels of service in at least one peak hour, it can be said with certainty that segments with traffic volumes higher than those analyzed will also operate at unsatisfactory levels of service. Moreover, as the distance from the project site increases, project traffic on the freeway segments reduce. Since the project does not create a direct significant impact at freeway segments where traffic volumes are low and project contribution higher, it can be said with certainty that the project will not create a direct impact at locations where background traffic volumes are higher and project trips lesser. It is understood that the project will have a cumulative impact at all freeway segments where the background (without project) traffic volumes result in an unsatisfactory level of service. As stated in the DEIR Section 4.11.7, *Cumulative Impacts*, page 4.11-40, the addition of project traffic would be considered a cumulative impact. Review of the RTIP indicates that there are no projects programmed on SR-60 within the study area. Furthermore, neither the project applicant nor the City has jurisdiction over Caltrans facilities; therefore, implementation of improvements to the freeway mainline cannot be guaranteed. Furthermore, Caltrans does not have a mechanism for development projects to contribute to improvements on State Highways.

Response to Comment 18. The commenter states that global warming poses a grave threat to California and the Draft EIR is obligated to discuss the threats posed by greenhouse gas emissions for the public and decision makers. Page 4.13-1 through 4.13-6 in the Draft EIR (Section 4.13, *Global Climate Change*) provides the background information related to climate change requested in this comment.

The Draft EIR: discusses the existing greenhouse gas/climate change setting including the main gases of concern; provides the current emissions inventory at the global, US, and State levels; gives a detailed description of what global warming is and the effects that result, all of which could be considered the “threat of greenhouse gas pollution and global warming.” The EIR attempts to present a non-sensational, balanced description based on the best information available. Section 4.13.2 describes the entire regulatory setting, including all applicable federal, State and City of Moreno Valley regulations and policies. The DEIR’s GHG analysis is consistent with the requirements of CEQA (specifically CEQA Guidelines Section 15064.4, 15125(d), 15126.4(c), 15130(B).

Response to Comment 19. The comment summarizes international and national concerns about global climate change and greenhouse gas emissions which are also discussed in the DEIR in Section 4.13.1.1 on page 4.13-2.

Response to Comment 20. The comment summarizes concerns within the State of California about global climate change and greenhouse gas emissions which are also discussed in the DEIR in Section 4.13.1.1 on page 4.13-2.

Response to Comment 21. Section 4.13.6 of the Draft EIR includes a complete, detailed inventory and analysis of the project's short-term construction and long-term operational greenhouse gas emissions. The EIR states the project's greenhouse gas emissions and discusses the significance of these emissions without attempting to minimize the impact by subtracting whatever existing greenhouse gas emissions there might be from the project site. Section 4.13.7 discusses the cumulative impacts of the project's greenhouse gas emissions.

The greenhouse gas impact study provided emissions from both construction and operation periods. During the construction period, emissions from both equipment exhaust and other area sources were calculated. During the operational period, emissions associated with vehicular (including automobiles and trucks) trips, water and energy usage, waste treatment, and other known sources have been calculated and identified in the study. If the commenter is suggesting that an exhaustive "life-cycle" inventory of the project's greenhouse gas emissions be prepared, the State Office of Planning and Research provided guidance on this issue and clarified that a life-cycle analysis is not required.¹

Response to Comment 22. According to the greenhouse gas impact study, "*Global climate change is the observed increase in the average temperature of the Earth's atmosphere and oceans along with other significant changes in climate (such as precipitation or wind) that last for an extended period of time. The term "global climate change" is often used interchangeably with the term "global warming," but "global climate change" is preferred to "global warming" because it helps convey that there are other changes in addition to rising temperatures.*" The Draft EIR did analyze the project's effects on greenhouse gas emissions which is a component of global climate change or global warming (Section 4.13 Global Climate Change, pages 4.13-1 through 4.13-22).

In addition the California Green Building Code requires mandatory measures to be implemented on all new construction projects that consist of a wide array of green measures concerning project site design, water use reduction, improvement of indoor air quality, and conservation of materials and resources. The "Cal Green Building Code" refers to compliance with Title 24, Part 6 energy efficiency measures. Additionally, it encourages 15 percent energy use reduction over the amount required in Part 6. The Cal Green Building Code prescribes a wide array of measures that would directly and indirectly result in reduction of GHG emissions from the Business as Usual Scenario. The mandatory measures that are applicable to nonresidential projects include site selection, energy efficiency, water efficiency, materials conservation and resource efficiency, and environmental quality measures.

The Climate Change technical report included in the EIR Appendix B does include a discussion of the impacts that climate change could have on the project. The conclusion is that there are not expected to be any significant impacts. If the commenter is suggesting that the DEIR should provide a more detailed analysis of global warming on the proposed project, there is a recent CEQA Case, *Ballona Wetlands Land Trust v. City of Los Angeles and Ballona Ecosystem Education Project v City of Los Angeles*, No.B231965 (Cal. Ct. App 2d Dist., November 9, 2011), where the opponents claimed that the EIR was inadequate because it did not analyze the effects of sea rise due to global warming on the project. The Court held that CEQA did not require the EIR to analyze this risk, concluding that

¹ Transmittal of the Governor's Office of Planning and Research's Proposed SB97 CEQA Guidelines Amendments to the Natural Resources Agency, California Governor's Office of Planning and Research, April 13, 2009, page 2.

“the purpose of an EIR is to identify the environmental effects of the project on the environment and not the significant effects of the environment on the project.” The court reasoned: “[w]e believe that identifying the environmental effects of attracting development and people to an area is consistent with CEQA’s legislative purpose and statutory requirements, but identifying the effects on the project and its users of locating the project in a particular environmental setting is neither consistent with CEQA’s legislative purpose nor required by CEQA statutes.” Although an analysis of the effects of global climate change on the project is not required, one was provided on page 4.13-3 of the DEIR (Section 4.13.1.3, *Effects of Global Warming*).

Response to Comment 23. The opinion of the Sierra Club that “The project’s greenhouse gas impacts are clearly significant” is noted, but contrary to the detailed climate change analysis included in the EIR. The EIR does include a detailed significance discussion and conclusion at the end of Sections 4.13.5, 4.13.6, and 4.13.7.

The SCAQMD and other air quality agencies agree that GHG and climate change should be assessed as a potentially significant “cumulative impact” rather than a “project-specific” impact. SCAQMD is considering the adoption of a numeric plan-level efficiency target of 6.6 MTCO₂E per service population.

The intent of CEQA is to determine the significant effects of a project on the environment and provide feasible and reasonable mitigation to reduce impacts to less than significant. In instances where the impact of the project cannot be reduced to less than significant and it is determined the impact is significant and unavoidable, the Lead Agency, must adopt a Statement of Overriding Considerations that finds (1) under Public Resources Code Section 21081(a)(3), and CEQA Guidelines Section 15091(a)(3), that specific economic, legal, social technological, or other considerations, including provisions of employment opportunities to highly trained workers make infeasible the mitigation measures or project alternatives identified in the Final EIR; and (2) under CEQA Guidelines section 15092(b), that the remaining significant effects are acceptable due to overriding concerns described in the CEQA Guidelines Section 15093. CEQA does have a provision as stated above that an impact can be significant and unavoidable if the City makes findings as to why it is willing to accept the significant impact; therefore, it was not CEQA’s intent to not allow any tolerance for impacts on the environment as long a good faith effort is made to reduce the impacts where reasonable.

In addition, the Draft EIR analyzed the cumulative effects of the project on greenhouse gas emissions (Section 4.13.7 Cumulative Impacts, page 4.13-25). The EIR further determined that, while it is not possible to determine whether the project individually will have a significant impact on global warming or climate change, it will contribute to cumulative GHG emissions in California. Cumulatively, the build out of the proposed project would contribute approximately 79,000 metric tons of CO₂e per year. The mitigation measures discussed in the project-level impact analysis of GHG emissions indicated the measures would substantially reduce the project’s emissions of greenhouse gases, however, without the necessary science and analytical tools, it is not possible to determine with certainty whether the project’s emissions of greenhouse gases will be cumulatively considerable, within the meaning of CEQA Guidelines Sections 15065(a)(3) and 15130. The CARB is currently in the process of designing regulations to monitor, limit, and ultimately reduce California GHG emissions but there are as yet no adopted standards for assessing the significance of cumulative impacts from projects.

Cumulatively, the emissions from electricity production would comprise approximately 2.8 percent of the project’s total CO₂e emissions. Water usage and solid waste disposal emissions comprise approximately 14 percent of the project’s total CO₂e emissions while the emissions from vehicle exhaust would comprise approximately 84 percent of the project’s total CO₂e emissions. The emissions from vehicle exhaust are controlled by the State and Federal governments and are outside the control of the City. The remaining CO₂e emissions are primarily associated with building systems. The proposed project is required to comply with existing State and Federal regulations regarding the energy efficiency of buildings, appliances, and lighting, which would reduce the project’s electricity demand. The new

buildings constructed in accordance with current energy efficiency standards would be more energy efficient than older buildings.

The Draft EIR (Section 4.3) made a determination that the proposed project would not conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases and no mitigation is required. However, it was determined that the proposed project would generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment and mitigation was proposed to reduce these project-specific effects to less than significant (Draft EIR, page 4.3-21 through 4.3-26).

With implementation of the strategies and programs described previously, the project is consistent with the strategies to reduce California's emissions to the levels proposed in Executive Order S-3-05. However, given the uncertainty of data and appropriate methodology to accurately analyze, and the inability to quantify the reduction achieved through implementation of strategies and programs previously identified, the proposed project's GHG emission contribution would result in a cumulative impact regarding global climate change and the cumulative impacts of the proposed project on global climate change are considered to be significant and unavoidable.

In summary, the City believes all known emissions during construction and operations of the proposed project have been identified and calculated. The preparer of the greenhouse gas impact study has followed the guidelines provided by the OPR and California Air Pollution Controls Officers Association (CAPCOA) and has provided an adequate analysis. It is the City's opinion that the study has disclosed the impacts of the proposed project adequately and mitigated the impacts of greenhouse gas emissions where applicable (Draft EIR Section 4.13, *Global Climate Change*, pages 4.13-1 through 4.13-26).

Response to Comment 24. Section 4.13.6 includes mitigation measures 4.13.6.1A, 4.13.6.1B, and 4.13.6.1C which include many feasible mitigation measures to be implemented to minimize greenhouse gas emissions. As stated in Response 23, all known emissions during construction and operations of the proposed project have been identified and calculated. The preparer of the greenhouse gas impact study has followed the guidelines provided by the OPR and CAPCOA and has provided an adequate analysis. It is the City's opinion that it has disclosed the impacts of the proposed project adequately and mitigated the impacts of greenhouse gas emissions where applicable (Draft EIR Section 4.13, *Global Climate Change*, pages 4.13-1 through 4.13-26).

Response to Comment 25. The proposed project would certainly take advantage of public transit (i.e., bus service) when it becomes available to the area, most likely along the realigned Eucalyptus Avenue. The project would be required to install bus turnouts as directed by the Riverside Transit Authority (RTA) (e.g., RTA Route 35) and future workers would no doubt take advantage of bus service in the project area. The closest existing RTA Bus Route in the area is Route 35 with a bus stop at the WalMart Super Center at Moreno Beach Drive west of the project site and within walking distance.¹ The commenter requests that the project create routes to facilitate access to commercial centers, schools and parks for residents, however, this is an industrial project, not a residential development, so there will not be residents who need access to those facilities.

The project provides for the relocation of the Quincy Channel multi-purpose trail and will provide sidewalks along Eucalyptus Avenue, as required by the City. When completed, Eucalyptus Avenue will be wide enough (72-foot curb-to-curb) to allow bicycles to travel safely east and west to the rest of the City. Pedestrians will also be able to travel west along Eucalyptus Avenue to the shopping and services along and off of Moreno Beach Drive.

¹ <http://www.riversidetransit.com/home/images/stories/DOWNLOADS/ROUTES/035.pdf> accessed December 17, 2012.

Response to Comment 26. The comment states the “FEIR should consider mitigation measures that will ensure the planned community will use energy efficiently and conservatively.” The proposed project is a logistics distribution warehouse not a planned community with a residential component. As stated in the Draft EIR, page 3-2: “The proposed project includes the construction and operation of a warehouse facility comprising six buildings consisting of a total of approximately 2,244,638 square feet.” Nonetheless, the project will be required to comply with the state’s new Green Building Code, which has significantly increased energy, water, and resource conservation features required of new buildings over previous building codes” Second, the project Mitigation Measures, as presented in the Draft EIR and as modified in this Final EIR, will substantially reduce energy, water, and other resource consumption by this project. Many of these measures will also help reduce the potential production of excessive air pollution and greenhouse gas emissions related to this project, as outlined in Sections 4.3 Air Quality and 4.13 Global Climate Change of the Draft EIR. For example, Mitigation Measure 4.3.6.5A requires that the project implement transportation demand management strategies such as preferential parking for employee vanpooling/carpooling, bicycle parking facilities (such as bicycle lockers and racks), bus turnouts, and other strategies to reduce vehicle miles traveled. Mitigation Measure 4.3.6.5B requires that the project applicant incorporate twenty-one (21) energy-efficiency and low-air pollution emission methods into the project design and building construction including but not limited to:

- *Low-emissions water heaters;*
- *Central water-heating systems;*
- *Energy-efficient appliances;*
- *Increased insulation;*
- *Automated controls for air conditioners;*
- *Energy-efficient parking lot lighting;*
- *Lighting controls and energy-efficient lighting;*
- *Low-VOC interior and exterior coatings during project repainting;*
- *On-site improvements such as sidewalks or pedestrian walkways to promote pedestrian activity and reduce the amount of vehicle trips;*
- *Installation of skylights and energy-efficient lighting that exceeds California Title 24 standards where feasible, including electronic dimming ballasts and computer-controlled daylight sensors in the buildings;*
- *Shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and building shall be planted at the proposed project site;*
- *Fans to assist natural ventilation, centralized water and space conditioning systems, high efficiency individual heating and cooling units, and automatic setback thermostats. Incorporating drought-tolerant plants into the landscaping palette; and*
- *Use of water-efficient irrigation techniques;*
- *Energy-efficient low-pressure sodium parking lot lights or lighting equivalent as determined by the City;*
- *Buildings shall be oriented north-south where feasible;*
- *Implement an on-site circulation plan in parking lots to reduce vehicle queuing;*
- *Develop a trip reduction plan to achieve 1.5 average vehicle ridership (AVR) for businesses with fewer than 100 employees or multitenant worksites;*
- *Include bicycle parking facilities such as bicycle lockers and racks;*

- *Include showers for bicycling employees use; and*
- *Construct on-site pedestrian facility improvements such as building access that is physically separated from street and parking lot traffic and walk paths.*

Mitigation Measure 4.13.6.1A requires that the project applicant incorporate four (4) energy-efficiency and water-efficiency methods into the project design including but not limited to:

- *Utilize exterior window treatments for efficient energy conservation;*
- *Utilize water-efficient fixtures and appliances, including but not limited to low-flow faucets, dual-flush toilets minimizing water consumption by 20 percent from the Building Standards Code baseline water consumption;*
- *Prepare a Commissioning Plan that includes commissioning by a Commissioning Authority for all building systems (e.g., heating, ventilation, and air-conditioning [HVAC], irrigation systems, lighting, and water heating); and*
- *Restrict watering methods (e.g., prohibit systems that apply water to non-vegetated surfaces) and control runoff;*

Mitigation Measure 4.13.6.1B requires that the project applicant incorporate twelve (12) energy-efficiency methods into the project design and construction including but not limited to:

- *Use locally produced and/or manufactured building materials for at least 10 percent of the construction materials used for the project;*
- *Use “Green Building Materials,” such as those materials that are resource efficient, and recycled and manufactured in an environmentally friendly way, for at least 10 percent of the project;*
- *Limit unnecessary idling of construction equipment;*
- *Maximize the use of electricity from the power grid by replacing diesel- or gasoline-powered equipment;*
- *Design the project building to exceed the California Building Code (CBC) Title 24 energy standard, including, but not limited to, any combination of the following:*
 - *Increase insulation such that heat transfer and thermal bridging is minimized.*
 - *Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.*
 - *Incorporate ENERGY STAR or better rated windows, space heating and cooling equipment, light fixtures, appliances, or other applicable electrical equipment.*
- *Provide a landscape and development plan for the project that takes advantage of shade, prevailing winds, and landscaping;*
- *Install efficient lighting and lighting control systems. Use daylight as an integral part of the lighting systems in buildings.*
- *Install light-colored “cool” roof and cool pavements.*
- *Install energy-efficient heating and cooling systems, appliances and equipment, and control systems.*
- *Install solar or light-emitting diodes (LEDs) for outdoor lighting.*

Mitigation Measure 4.13.6.1C requires that the project applicant incorporate six (6) greenhouse gas emission and waste reduction methods into project operations including but not limited to:

- *Use less than 3,900 Global Warming Potential (GWP) hydrofluorocarbon (HCF) refrigerants or natural refrigerants (ammonia, propane, carbon dioxide [CO2]) for refrigeration and fire suppression equipment;*
- *Provide vegetative or man-made exterior wall shading devices for east-, south-, and west facing walls with windows;*
- *Devise a comprehensive water conservation strategy appropriate for the project and its location. The strategy may include the following, plus other innovative measures that may be appropriate:*
 - *Install drought-tolerant plants for landscaping.*
 - *Use reclaimed water for landscape irrigation within the project. Install the infrastructure to deliver and use reclaimed water.*
 - *Install water-efficient irrigations systems, such as weather-based and soil-moisture-based irrigation controllers and sensors for landscaping according to the California Department of Water Resources Model Efficient Landscape Ordinance.*
- *Provide employee education about reducing waste and available recycling services.*

Information on the project’s LEED certification is presented in the previous Response to Comments D-2, Nos. 1 and. 2. The other measures suggested in this comment have already been evaluated in this EIR, and most have already been incorporated into the project Mitigation Measures. For example, the project will provide an alternative fuel station, shading of parking areas, energy efficient lighting both inside and outside, etc. The City believes compliance to at least 10 percent less than current energy codes included in the Green Building Code, and the project mitigation measures as proposed in the Draft EIR and as modified in this Final EIR, are sufficient and reduce the energy use of this project to the greatest extent practical and feasible, as required under CEQA.

The comment suggests that thirteen (13) additional measures to reduce greenhouse gas emission be included. The Draft EIR already incorporates or includes eight of the measures and the remaining six measures are not included or are infeasible. An explanation of these measures including where they are already included or incorporated in the Draft EIR or why they are not included or are infeasible is provided in Table A as follows:

Table A: Comparison of Sierra Club Suggested Measures to Project EIR Mitigation Measures

Suggested Mitigation Measure to Reduce Greenhouse Gas Emissions	Response
1. Analyzing and incorporating the U.S. Green Building Council’s LEED (Leadership in Energy and Environmental Design) or comparable standards for energy efficient building during pre-design, design, construction, operations and management.	Included. The project description (see Draft EIR p 3-14) recognizes the trend towards “Green Building” in the state, and the applicant for the proposed project will apply for the Leadership in Energy and Environmental Design (LEED) Core & Shell rating program. LEED is a voluntary, consensus-based standard to support and certify successful green building design, construction, and operations.
2. Designing buildings for passive heating and cooling, and natural light, including building orientation, proper orientation and placement of windows, overhangs, skylights, etc.	Included. A similar mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on pages 4.3-33 and 4.3-34.
3. Designing buildings for maximum energy efficiency including the maximum possible insulation, use of compact florescent or other	Included. Similar mitigation measures are already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on pages 4.3-33 and 4.3-34

FINAL EIR - RESPONSE TO COMMENTS
ProLogis Eucalyptus Industrial Park
City of Moreno Valley

Suggested Mitigation Measure to Reduce Greenhouse Gas Emissions	Response
low-energy lighting, use of energy efficient appliances, etc.	and Mitigation Measure 4.3.6.6A on pages 4.3-35 and 4.3-36 and Section 4.13 Global Climate Change of the Draft EIR under Mitigation Measures 4.13.6.1A, 4.13.6.1B, and 4.13.6.1C on pages 4.13-20 and 4.13-21.
4. Reducing the use of pavement and impermeable surfaces.	Included where appropriate. Impermeable surfaces will be installed where appropriate, but it is not feasible to use impermeable surfaces in the truck parking area since a soft permeable surface will not support the weight of a large truck.
5. Requiring water re-use systems.	Infeasible. Reclaimed water is not available to this area of the City yet, so a “purple” pipe system is not required to be installed as part of this project.
6. Installing light emitting diodes (LEDs) for traffic, street and other outdoor lighting.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.13.6.1B on page 4.13-21.
7. Limiting the hours of operation of outdoor lighting.	Not Included. The future facility operator is not known at this time since the developer is building a spec building. The City cannot burden the future, unknown operator with this limitation provided the operation complies with all applicable City ordinances regarding night lighting. .
8. Maximizing water conservation measures in buildings and landscaping, using drought tolerant plants in lieu of turf, planting shade trees.	Included. Similar mitigation measures are already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-34 and Section 4.13 Global Climate Change of the Draft EIR under Mitigation Measures 4.13.6.1A, 4.13.6.1B, and 4.13.6.1C on pages 4.13-20 and 4.13-21.
9. Ensure that the Project is fully served by full recycling and composting services.	Included. A similar mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.6B on page 4.3-37. Infeasible. The proposed industrial warehouse project will not generate any compost materials, with the exception of trimmings from landscape vegetation and scraps from employee meals. The landscape service provided will be responsible for removal of trimmed vegetation to an off-site receiving facility. Scraps from employee meals will not be generated in enough quantities to warrant an on-site composting facility, so such a system is not required to be installed as part of this project.
10. Ensure that the Project’s wastewater and solid waste will be treated in facilities where greenhouse gas emissions are minimized and captured.	Infeasible. The site is served by public entities for wastewater and solid waste. Neither the City nor the project proponent has control over those facilities.
11. Installing the maximum possible photovoltaic array on the building roofs and/or on the project site to generate all of the electricity required by the Project, and utilizing wind energy to the extent necessary and feasible.	Partially Included. The proposed project does not have a specific end user at this point, but the building design will allow for future installation of solar photovoltaic for the entire building and solar hot water heating for the office area.
12. Installing solar water heating systems to generate all of the Project’s hot water requirements.	Not Included. The proposed project does not have a specific end user at this point, but the building design will allow for future installation of solar photovoltaic and solar hot water heating for the office area.
13. Installing solar or wind powered electric vehicle and plug-in hybrid vehicle charging stations to reduce emissions from vehicle trips.	Included. A similar mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.6B on page 4.3-36.

Response to Comment 27. The commenter is confusing the proposed project, which involves industrial warehouses, with a residential project. All known emissions during construction and operations of the proposed project have been identified and calculated (Draft EIR Section 4.13, Global Climate Change, pages 4.13-1 through 4.13-26). Feasible mitigation measures, including several identified in the list provided by the commenter, have been already included as mitigation for the project and are identified in the Draft EIR. In addition, the mitigation measures shown as “Incorporated” in the Table C have been added to the Final EIR (Section 3.0 Errata and Additions) as suggested by the commenter. The changes to the Draft EIR do not result in the identification of a new or more severe significant impact and has no material effect on the findings of the EIR. Table B below contains each of the greenhouse gas reduction measures suggested for inclusion by the commenter and if it is already included, if will be added mitigation as part of the Final EIR, or if will not be included and why.

The comment suggests that five (5) additional measures to reduce air quality and greenhouse gas emissions during project construction be included. The Draft EIR already incorporates or includes two of the measures and the remaining three measures are not included or are infeasible. An explanation of these measures including where they are already included or incorporated in the Draft EIR or why they are not included or are infeasible is provided in Table B as follows:

Table B: Comparison of Sierra Club Suggested Measures to Project EIR Mitigation Measures

Mitigation Related to Construction	
1. Utilize recycled, low-carbon, and otherwise climate-friendly building materials such as salvaged and recycled-content materials for building, hard surfaces, and non-plant landscaping materials.	Included. A similar mitigation measure is already included in Section 4.13 Global Climate Change of the Draft EIR under Mitigation Measure 4.13.6.1B on page 4.13-20.
2. Minimize, reuse, and recycle construction-related waste.	Not Included. The project is required to comply with Policy 6.7.6 of the Chapter 9 of the City’s General Plan: Require building construction to comply with the energy conservation requirements of Title 24 of the California Administrative Code. The applicant will attempt to divert at least 50% of construction waste, and would apply for LEED credit if they achieve that goal.
3. Minimize grading, earth-moving, and other energy-intensive construction practices.	Infeasible. The entire site must be graded to accommodate the building structures and parking lots.
4. Landscape to preserve natural vegetation and maintain watershed integrity.	Infeasible. The site contains very little natural/native vegetation, only associated with the Quincy Channel, which will be preserved onsite.
5. Utilize alternative fuels in construction equipment and require construction equipment to utilize the best available technology to reduce emissions.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measures 4.3.6.2B and 4.3.6.2J on page 4.3-24.

Response to Comment 28. Many of these proposed measures appear to apply to a residential “planned community” rather than an industrial warehouse project, so it is assumed they were mistakenly excerpted from another document (e.g., shuttle service, car sharing service, encouraging residents to use low or zero emission vehicles, etc.).

Measure 4.3.6.5A requires ridesharing, and the project will provide a vehicle charging station (Measure 4.3.6.6A). In addition, the project will take advantage of transit when transit services are extended through the project along Eucalyptus Avenue by the RTA.

It should be noted that the commenter made very similar comments on the Vogel Industrial Project EIR recently processed by the City, and many of the mitigation measures incorporated into that project were incorporated into this project. However, Table C, below summarizes the measures recommended by the commenter compared to the actual measures provided in the Draft EIR and this Final EIR.

The comment suggests that six (6) additional measures to reduce air quality and greenhouse gas emissions from project vehicles be included. The Draft EIR already incorporates or includes two of the measures and the remaining four measures are not included or are infeasible. An explanation of these measures including where they are already included or incorporated in the Draft EIR or why they are not included or are infeasible is provided in Table C as follows:

Table C: Comparison of Sierra Club Suggested Measures to Project EIR Mitigation Measures

Transportation Mitigation Measures	
1. Encourage and promote ride sharing programs through such methods as a specific percentage of parking spaces for ride sharing vehicles.	Included. Similar mitigation measures are already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5A on pages 4.3-33 and Mitigation Measure 4.3.6.6A on page 4.3-36.
2. Create a car sharing program within the planned community;	Not Included. The suggested mitigation measure applies to a planned community and is therefore inappropriate. As noted in Mitigation Measure 4.3.6.2J (Draft EIR page 4.3-25), documentation shall be provided to the City of Moreno Valley indicating that construction workers have been encouraged to carpool or otherwise reduce VMT to the greatest extent practical, including providing information on available park and ride programs. However, the applicant will provide a bulletin board that will facilitate posting of ridesharing information and requests by project workers.
3. Create a light vehicle network, such as a neighborhood electric vehicle (NEV) system.	Not Included. The suggested mitigation measure applies to a residential neighborhood and is therefore inappropriate. However, Mitigation Measure 4.3.6.2J on page 4.3-24 requires alternative fuel vehicles onsite.
4. Provide necessary facilities and infrastructure to encourage residents to use low or zero-emission vehicles, for example, by developing electric vehicle charging facilities and conveniently located alternative fueling stations.	Included. The mitigation measure the comment suggests refers to “residents”, and this project proposes warehousing not a residential development. However, a similar mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.6A on page 4.3-36.
5. Provide a shuttle service to public transit within and beyond the planned community.	Not required. The RTA serves the general project area and may require bus stops to be installed as service is needed to the project or other nearby areas. Therefore, the site is serviced by the RTA and no further actions are necessary.
6. Incorporate bicycle lanes and routes into the planned community’s street systems.	Not required. Bicycle access to and from the project would use Eucalyptus Avenue, and pedestrians would be able to access the site on the planned multi-purpose trail on the north side of Eucalyptus Avenue. It should be noted the proposed project is warehousing, not a planned community.

Response to Comment 29. The use of carbon offsets is infeasible because:

- The cited precedent is a negotiated settlement for a major oil refinery in Contra Costa County, rather than a warehouse development in Riverside County;
- The cited precedent was for the period prior to 2012;

- California has not established any generally applicable standards for requiring offsets for GHG emissions; and
- Most cities and counties in California have not required offsets for GHG emissions on projects of the scale of the proposed project.

Using such carbon offsets to mitigate for cumulative impacts is fraught with uncertainty. As the comment implies (“... offsets purchased are real...”), but there is considerable controversy regarding whether offsets that are available today will actually mitigate this cumulative effect.

First, it requires an accurate measure of the emissions to be offset and the offsets to be provided. That calculation turns out to be riddled with uncertainty on both ends. As noted above in the example cited by the commenter, this initial offset of \$7 million for the Rodeo refinery was later reduced to \$4.4 million due to revised calculations of GHG emissions. The UN's Intergovernmental Panel on Climate Change found a margin of error of 10% with measuring emissions from making cement or fertilizer; 60% with the oil, gas and coal industries; and 100% with some agricultural processes.

Second, the provision of offsets requires an accurate measure of the carbon saved elsewhere. Most of the earliest offset projects involved planting trees, which naturally ingest carbon, a complex and unpredictable process which forbids accurate measurement.

Finally, the very idea of offsetting relies on the concept that a carbon reduction would not have occurred in the natural order of commercial life. For example, one of the biggest UK companies that sells offsets, Climate Care, distributed 10,000 energy-efficient light bulbs in a South African township; offered the carbon reductions as offsets; and then discovered that an energy company was distributing the same kind of light bulbs free to masses of customers, including their township, so the reduction would have happened anyway.

To accurately calculate the amount of credit for each of the above actions, the offset program must make a number of critical assumptions:

- What is the baseline of emissions for the existing facilities that would be retrofitted to reduce their energy consumption? Would they ultimately be retrofitted in any case, thus limiting the actual resulting reduction in GHG emissions?
- Is the development of the alternative energy source actually dependent on the external funding provided by the offset? Or is the alternative energy developer simply achieving another subsidy?
- How much extra energy (and GHG emissions) is required to construct the alternative energy facility? What period of time should this be amortized over? For example, the development of the California High Speed Rail Project is estimated to reduce energy consumption in the long run. However, the extra energy involved with construction is estimated to have a 40 year payback.

As such, the actual amount of mitigation provided by an offset program can be speculative, based upon the actual performance of the program.

There is a global marketplace for fossil fuel energy based upon a market between buyers and sellers. The sellers, those who own the sources and production of fossil fuel energy, have a powerful economic interest to keep and increase their income stream from the production of fossil fuels.

To the extent that the actions cited above as potential offset measures, in combination with other conservation measures, reduce the demand for fossil fuels in the countries where they are implemented, the owners of these fossil fuel supplies will still want to preserve and enhance their income as much as possible. And there is a large unmet need (unmet as defined by consumer actions) for increased energy consumption in developing countries. For example the average annual energy consumption of a citizen of China or sub-Saharan Africa, at 4.5 metric tons, is far less than that of the average US citizen, at 20 metric tons. To the extent that the US and other countries reduce energy consumption based upon energy efficiency measures, the owners of fossil fuel resources will seek to sell the same energy, perhaps at a lower price, to the less developed countries. If the energy is sold at a lower price, then more energy would need to be sold to generate the same income, and the resulting energy consumption and GHG emissions could actually increase.

In conclusion, the City concludes that compliance to at least 10 percent less than current energy codes included in the Green Building Code, and the project mitigation measures as proposed in the Draft EIR and as modified in this Final EIR, are sufficient and reduce the energy use of this project to the greatest extent practical and feasible, as required under CEQA. There are no established laws or regulatory guidelines requiring contributions toward carbon offsets. In addition, there is uncertainty regarding the efficacy, reliability and legal standing of carbon off-sets at this time. For this reason, such mitigation is considered to be infeasible. The analysis in the Draft EIR concludes that greenhouse gas emission impacts of the project will be less than significant with implementation of the recommended mitigation measures, despite protestations of the commenter and others to the contrary.

Response to Comment 30. The commenter is correct in stating that the EIR must contain a “reasonable” [emphasis added] range of alternatives to the proposed project that avoid or lessen the significant impacts to the proposed project (Pub. Res. Code §21002; CEQA Guidelines §§ 15002(a)(3), 15021(a)(2), 15126.6(d)). According to CEQA Guidelines §15126.6(a) “[A]n EIR need not consider every conceivable alternative to a project. An EIR is not required to consider alternatives which are infeasible. The lead agency is responsible for selecting a range of project alternatives for examination and must publicly disclose its reasoning for selecting those alternatives. There is no ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of reason. [Citizens of Goleta Valley v. Board of Supervisors (1990) 52 Cal.3d 553 and Laurel Heights Improvement Association v. Regents of the University of California (1988) 47 Cal.3d 376].”

The Draft EIR does include an analysis of a reasonable range of alternatives to the proposed project (Draft EIR, Section 6.0 Alternatives, pages. 6-1 to 6-40) in compliance with CEQA. The Draft EIR discusses the No Project Alternative (Section 6.3.2.1) and an Off-Site Alternative (Section 6.3.2.4) as suggested by the commenter.

In addition, the commenter is referred to Section 4 of this document for an evaluation of a less intensive modified plan, which is a subset of the Reduced Intensity Alternative evaluated in the DEIR (and which was determined to be environmentally superior to the Proposed Project). This less intensive plan proposes to develop 4 warehouse buildings, leaving the southeast portion of the site vacant for future development of residential uses consistent with existing zoning (R-5 and RA-2) adjacent to the existing residential neighborhood to the southeast.

The EIR did look at a higher density mixed commercial residential development. As described on page 6-24 of the Draft EIR, the Mixed Commercial/Office/Residential Alternative (Alternative 4) would result in the development of commercial, office and residential uses on the project site resulting in development of 548 multiple-family residential units, 138 single-family residential units, 441,000 square feet of commercial uses, and 441,000 square feet of office uses.

As described on page 6-31 of the Draft EIR:

Under the Alternative 4, impacts related to short-term construction-related air quality would be similar to the proposed project as the same amount of land would be disturbed and the same mix of equipment would be utilized. Long-term operational-related air quality emissions would be increased in magnitude when compared to the project and would remain significant and unavoidable. Because of the increase in vehicle trips under this alternative, impacts to the operation of local roadways and intersections would be proportionally greater than what was identified for the proposed project. Long-term traffic impacts would remain significant and unavoidable. Traffic-related noise would be increased in magnitude but would be similarly mitigated like the proposed project and would remain less than significant.

Because this alternative would also require a Zone Change and General Plan Amendment, land use impacts would be similar to the proposed project. This alternative would result in the development of office uses that would generate permanent jobs, which may require workers who are not current residents of the City. Combined with the residential component, the office use would increase the total number of people that would be added to the City's population. This alternative would have greater demands on public services and recreation. However, the payment of fees and dedication of parkland would reduce these impacts to a less than significant level. This alternative would increase the amount of water utilized and increase the amount of wastewater and solid waste that would be generated on site. Similar to the proposed project, adherence to wastewater and solid waste requirements would reduce these impacts to a less than significant level. In the event that water is not available for development envisioned under this alternative, impacts to water resources would be significant and avoidable. Under this alternative, some of the proposed project objectives would not be met as warehouse uses would not be built. However, development of this alternative would provide new employment opportunities for residents of Moreno Valley.

The Draft EIR does analyze the various alternatives impacts on greenhouse gas emissions (Table 6.F page 6-10) biological resources, water resources including water quality and water use (Table 6.C on page 6-9) and traffic (Table 6.B page 6-9). In addition, detailed analysis for each of the alternatives is included in Section 6 of the Draft EIR as it relates to the environmental issues listed by the commenter.

An agricultural alternative was not considered because the site has been planned by the City since 1987 for suburban intensity land uses. In addition the current General Plan does not include any agricultural designations. The City allows agricultural uses in all land use designations as an interim use until such time as the land is developed per the vision identified in the General Plan. One of the goals stated in the City's recent General Plan is the "...orderly conversion of agricultural lands." Therefore, an agricultural use as a long-term alternative is not practical and does not require analysis as a separate alternative. However, it should be noted that Alternative 3 does incorporate 27 acres of land that would be used for agriculture to provide a less intense buffer in the southeastern portion of the site. No further analysis is necessary and the comment does not change the conclusion in the Draft EIR.

Response to Comment 31. The commenter is correct in stating that a large segment of the population of Moreno Valley is Hispanic or Latino. However, because a person is Hispanic or Latino does not automatically mean that they only speak Spanish. There is no legal requirement to translate the environmental documents or the notices into other languages. It is not the policy of the City to require project applicants to incur the added expense of having project environmental documents or public notices translated into Spanish. The City is also not required to incur the expense of providing a Spanish translator at public meetings. The commenter is free to provide a Spanish translator at its costs. In addition, neither the State CEQA Statutes nor the State CEQA Guidelines require or even suggest providing such notices.

Contrary to the assertion of the commenter, the City believes the Draft EIR does identify and analyze the potential direct, indirect, and cumulative impacts of the proposed warehouse project. The City believes the EIR, including the Draft EIR, Final EIR, and supporting appendices and materials, comply with the requirements of CEQA, and that the Final EIR has adequately addressed the various comments raised by this and other commenters on the EIR.

The Sierra Club, San Gorgonio Chapter, is already on the mailing list for this project, as previously requested.

RE: Comments on Prologis Eucalyptus Industrial Park Draft Environmental Impact Report (SCH No. 2008021002)

Greetings:

On behalf of the Sierra Club, Moreno Valley Group, and Residents for a Livable Moreno Valley, I hereby submit these comments on the Prologis Eucalyptus Industrial Park Draft Environmental Impact Report (EIR). (SCH No. 2008021002)

General Comments:

The California Environmental Quality Act (CEQA) was adopted as a disclosure and transparency document. The theory is that by providing a document that adequately describes the environmental consequences of a project to decision makers and the public, the decision makers will make a rational decision based upon the true environmental consequences of the project and if they do not, the electorate can hold them accountable for their decisions. The core of this statutory structure is the adequacy of the document as an informational document.

Unfortunately, the Draft EIR for this Project fails as an informational document. The Project Description in the EIR is inadequate, misleading, and internally inconsistent. CEQA requires that an EIR contain an accurate, complete, and consistent description of a proposed project so that decision-makers and the public can properly and fully assess the project's environmental

RESPONSE TO LETTER D-3

JOHNSON & SEDLACK

Response to Comment 1. The commenter provided some brief information about the purposes of CEQA. No response is necessary.

Response to Comment 2. The commenter's opinions on the quality of the environmental assessment that was done will be forwarded to the decision-makers for their consideration. The City disagrees with the commenter's generalized assertions regarding the adequacy of the Draft EIR. The comment that the conclusions in the EIR are not based in fact is erroneous. The Draft EIR is based on the findings of technical studies that were prepared for the project that were included in their entirety in the appendices to the Draft EIR. Those studies are all listed in Section 2.2.4, *Technical Reports*, of the Draft EIR, and listed separately in the appropriate impact assessment sub-section of Draft EIR Section 4, Impact Analysis (Sections 4.1 through 4.13). The project description and subsequent analysis in the EIR explain that the trail segment north of the realignment of Eucalyptus Avenue will be eliminated because it does not go anywhere, as it was planned when an undercrossing of the SR-60 was envisioned, but which has been eliminated from the General Plan and supporting planning documents and maps. Rather, the proposed trail will follow Eucalyptus Avenue with a leg south of Eucalyptus along the Quincy Channel, which will connect the trail to existing trails to the west and south. This information is not inconsistent in the EIR document.

In addition, the commenter is incorrect, Table 3.C and Figure 3-4 (in Section 3.8, *Cumulative Projects*) in the Project Description do accurately describe and show the locations of cumulative projects being evaluated in the EIR.

The EIR has provided accurate information about the proposed project and cumulative projects and therefore does not fail as an informational document.

Response to Comment 3. The City disagrees with the opinions of the commenter – The City believes the findings of the EIR are supported by substantial evidence and the EIR is an adequate informational document upon which the decision-makers can base their decisions. The responses below document the ways the EIR provides substantial evidence and complies with the requirements of CEQA.

Regarding the evaluation of environmental impacts, the Initial Study prepared for the proposed project was comprehensive and determined that impacts on forest resources, geology and soils, mineral resources, public services, and recreation would be less than significant with the implementation of mitigation requiring further analysis in an EIR. Those specific mitigation measures are identified in the Initial Study, Section 2.0 of the EIR and are also included in the Mitigation Monitoring and Reporting Plan (MMRP) attached to the Final EIR. The City formally initiated the environmental process with circulation of an NOP along with the Initial Study, which it sent to responsible agencies and interested individuals for a 30-day review period from February 4 to March 6, 2008. At the close of the public review period, the City had received 22 letters on the NOP. The NOP disclosed that an EIR would be prepared and the issues that would be addressed included: aesthetics (views and lighting), agricultural resources, air quality, biological resources, cultural and paleontological resources, hazards and hazardous materials, hydrology and water quality, land use and planning, noise, population and housing, traffic and circulation, utilities and service systems, and global climate change (i.e., Sections 4.1 through 4.13 in the Draft EIR). The commenter is in error that the Draft EIR did not address some of these topics. All of these potential impacts were addressed in appropriate sections of the DEIR.

In addition, the technical studies prepared in support of the DEIR analyses that address temporal-related impacts did allow for 24/7 operation. For example, the traffic study was based on peak-hour impacts assuming worst case conditions (i.e., not 24-hour operation), so 24/7 operation would actually lower peak hour traffic impacts. The project traffic data is the basis for the noise assessment, likewise allow for 24/7 operation. Similarly, page 13 of the project noise assessment states...

"These noise levels represent the worst-case scenario, which assumes that no shielding is provided between the traffic and the location where the noise contours are drawn. The specific assumptions used in developing these noise levels and model printouts are provided in Appendix A. Tables F, H, J, and L show that project-related traffic noise level increases would be 2.6 dBA or less along most roadway segments analyzed, except along Eucalyptus Avenue between Auto Mall Drive and Redlands Boulevard. This range of noise level changes is small and is not perceptible by the human ear. The portion of Eucalyptus Avenue with traffic noise increases greater than 3 dBA has no noise-sensitive uses (auto mall, commercial use, and vacant land only) directly adjacent to it."

Response to Comment 4. DEIR pages 4.2-8 and 4.2-9 clearly explain why mitigation for loss of agricultural land is not feasible on a local or regional basis, based on historical and current economic conditions related to agricultural crops in this portion of Riverside County. This conclusion is supported by the project-specific analysis provided in Appendix E of the DEIR.

In addition, the commenter is referred to Section 4 of this document for an evaluation of a less intensive modified plan, which is a subset of the Reduced Intensity Alternative evaluated in the DEIR (and which was determined to be environmentally superior to the Proposed Project). This less intensive plan proposes to develop 4 warehouse buildings, leaving the southeast portion of the site vacant for future development of residential uses consistent with existing zoning (R-5 and RA-2) adjacent to the existing residential neighborhood to the southeast.

Response to Comment 5. The commenter is incorrect – there are a number of measures recommended to offset anticipated traffic and air quality impacts of the project. These are described in their appropriate impact assessment sections (4.3 and 4.13, respectively) and summarized in Table 1.C of the Executive Summary. As outlined in Section 4.4.6, it is infeasible and ineffective to implement operational mitigation on future warehouse users that do not have specific tenants or end-users identified (Draft EIR, page 4.3-37), but Mitigation Measure 4.3.6.6A did address trucking and other activities on the site to the extent practical. In addition, the City has specifically identified the TUMF and DIF programs as the legally established method of mitigating respective regional and local traffic (i.e., road and intersection) impacts. In addition, the project traffic report specifically identifies a number of roadway and intersection improvements that will not be improved through the TUMF or DIF programs for which the proposed project would be responsible, as outlined in Mitigation Measures 4.11.6.4D, 4.11.6.4E, and 4.11.6.4F.

Response to Comment 6. The commenter's opinion that the mitigation measures in the EIR are vague, uncertain, unenforceable, and/or deferred is not based in fact, nor does the commenter provide any examples to support this contention. As detailed in the following responses, appropriate and enforceable mitigation of the project's significant individual and cumulative impacts have been identified in the Draft EIR. The City believes the mitigation measures recommended in the Draft EIR are appropriate based on the identified impacts of the project. However, certain measures or portions of measures suggested by the commenter (such as for air quality) have been incorporated in the Final EIR to clarify their implementation or help further reduce potential impacts. However, these changes or additions do not change the conclusions or overall analysis in the Draft EIR, as outlined in Final EIR Section 3.0, *Errata and Additions*. All mitigation measures that are in the Draft EIR, and mitigation language changed as a result of responses to comments by this commenter as well as the Sierra Club, have been included in the MMRP (Section 4.0 of the Final EIR) to ensure that they are being implemented.

Response to Comment 7. The City believes the alternatives analysis (Section 6.0 of the Draft EIR) is in compliance with *CEQA Guidelines* Section 15126.6(a), because the Draft EIR describes “a range of reasonable alternatives to the project, or to the location of the project which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project.” The EIR need not consider every conceivable alternative; rather it must consider a reasonable range of potentially feasible alternatives to the project, or to the location of the project, which would avoid or substantially lessen significant effects of the project, even if “these alternatives would impede to some degree the attainment of the project objectives, or would be more costly” (*CEQA Guidelines* Section 15126.6(b)). The discussion of project alternatives must “include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project.” The alternatives are to “substantially lessen the significant effects of the project”, not to satisfy the actual mitigation required.

The comment notes that the Draft EIR identifies Alternative 3, the Reduced Intensity Alternative, as the environmentally superior alternative but that Alternative 5, the Off-Site Location Alternative, would result in fewer significant impacts than Alternative 3 and therefore should have been identified as the environmentally superior alternative. It should be noted that Table 6.M contains a typographical error by omitting a “Significant” indication (“S”) under Alternative 5 relative to consistency with the AQMP. The text analysis of this issue in Section 6.3.5.3 (DEIR page 6-32) indicates air quality impacts of the project on another location would still be significant as it would still be inconsistent with the AQMP. This error has been corrected in Section 3, *EIR Errata and Additions*, of this document.

As detailed in the Draft EIR Tables 6.K, page 3-39, Alternative 3 reduces the severity of project-related air quality impacts and is the only alternative that eliminates the significant agricultural impacts. However, reduced, long-term air quality impacts would remain significant after mitigation for this alternative in the same way as the project. Alternative 5 would produce the same level of air pollution as the proposed project. Alternative 3 would reduce the volume of daily traffic trips when compared to the proposed project; however, such impacts would remain significant and unavoidable until roadway improvements are completed. Alternative 5 would generate the same level of traffic trips as the proposed project. Alternative 5 would eliminate impacts associated with land use and planning as this alternative would not require a Zone Change or General Plan Amendment. Alternative 5 would also eliminate the significant population/housing impacts and the significant aesthetic impacts; however, it would likely not reduce the significant agricultural impacts of the project compared to Alternative 3.

The remaining environmental issues would ultimately be similar to the proposed project through adherence to existing standards and mitigation measures. Though the Off-Site Location Alternative is located in a different part of the City, the amount of development under this alternative would remain the same as the proposed project, and it would satisfy all of the identified project objectives. In addition, the potential offsite location is not under the control of the project applicant, so it is problematic if development of the project could actually occur on an alternative site. Based on a review of all the potential impacts, the Draft EIR concluded that the Reduced Intensity Alternative appears to be the environmentally superior alternative for the project site (see Draft EIR page 6-39).

Under the environmentally superior alternative, the proposed project objectives are met but less square footage of warehouse uses would be built. However, Alternative 3 is the only alternative that would reduce the significant impacts to agricultural resources compared to the proposed project and therefore it results in a substantive environmental benefit in comparison to the proposed project. The environmentally superior alternative (reduced density) will result in reduced air pollution and greenhouse gas (GHG) emissions but the significance of these impacts remain significant and unavoidable for air quality, global climate change, and traffic in the same manner as the proposed project. The significant and unavoidable project impacts associated with GHG emissions and traffic

cannot be reduced to less than significant though reduction in the size of the project. The significant and unavoidable project impacts associated with air quality can be eliminated if the project is reduced to approximately 90,000 square feet (based on a linear reduction in the project's 990 pounds per day of operational NO_x emissions to below the 55 pounds per day threshold).

Under Alternative 5, all of the project objectives are met and it reduces two impacts to less than significant that were determined to be significant and unavoidable for the proposed project (consistency with the General Plan and Aesthetics), (see Draft EIR Section 6.5 Comparison of Project Alternatives, Table 6.M, pages 6-39 and 6-40.) The DEIR does correctly conclude that Alternative 5 is also environmentally superior to the proposed project (i.e., fewer significant impacts than the proposed project), however, the commenter incorrectly concludes that, because Alternative 5 meets most project objectives, it must be approved instead of the proposed project. Alternative 3 also reduces significant impacts of the proposed project, and is the only alternative that will reduce impacts to agricultural resources. The commenter claims that this information requires recirculation of the DEIR to identify Alternative 5 as the Environmentally Superior Alternative, but that is not correct - Alternative 3 is the Environmentally Superior Alternative.

~~In addition, the commenter is referred to Section 4 of this document for an evaluation of a Less Intensive Modified Plan, which is a subset of the Reduced Intensity Alternative evaluated in the DEIR (and which was determined to be environmentally superior to the Proposed Project). This less intensive plan proposes to develop only 4 of the 6 warehouse buildings, leaving the southeast portion of the site vacant for future development of residential uses consistent with existing zoning (R-5 and RA-2) adjacent to the existing residential neighborhood to the southeast.~~
In addition, the commenter is referred to Section 4 of this document for an evaluation of a less intensive modified plan, which is a subset of the Reduced Intensity Alternative evaluated in the DEIR (and which was determined to be environmentally superior to the Proposed Project). This less intensive plan proposes to develop 4 warehouse buildings, leaving the southeast portion of the site vacant for future development of residential uses consistent with existing zoning (R-5 and RA-2) adjacent to the existing residential neighborhood to the southeast.

Response to Comment 8. The commenter states that the EIR must be substantially supplemented, amended, and recirculated. The responses provided to the various comments submitted on the Draft EIR, including those of this commenter, indicate the information in the EIR is adequate and the EIR does not need to be recirculated. The rest of this comment summarizes characteristics of the project and related project approvals, so no response is necessary. One of the comments is regarding the status of vacant land around the project site. It does not appear any of the land surrounding the project site is presently being utilized for agriculture, although the area in general has been used for dry farming in the past. The current onsite and offsite land uses are described in detail in Section 4.8, *Land Use and Planning*.

Response to Comment 9. The commenter is correct, the conclusion of the paragraph will be corrected as follows to reflect the determination that impacts to views are significant:

Impact 4.1.6.1 Existing Visual Character or Quality of Site and Its Surroundings:
Implementation of the proposed project would replace the undeveloped character of the project site with an urban setting containing warehouse uses. Therefore, the change in the character of the site would be recognizable and would constitute a permanent alteration of the existing visual character of the project site. Although the visual characteristic of the project site would change, the proposed project would replace the existing vacant parcel with an attractive, well designed development through the use of architectural elements, landscaping, and design of the project site. In addition, the proposed project would be designed and constructed per applicable City Municipal Code and General Plan standards. Despite these requirements, a less than significant impact related to this issue would occur.

This will be corrected in Final EIR, Section 3.0, *EIR Errata and Additions*, but this modification does not change the overall conclusion of the EIR that this impact is significant.

Response to Comment 10. The EIR did conclude that the project would fundamentally change views of the project area, but the line-of-sight analyses of each building (Draft EIR, Figure 3.7A through 3.7F) demonstrate that the proposed buildings, including Building 2, will not completely block views of the Mt. Russell Range or Box Springs Mountain due to their planned heights and setbacks from the freeway (Building 2) and nearby residences (Building 6). The Conservation Element objectives and policies referred to by the commenter encourage the following:

- Objective 7.7** Where practicable, preserve significant visual features significant views and vistas.
- Policy 7.7.4** Gilman Springs Road, Moreno Beach Drive, and State Route 60 shall be designated as local scenic roads.
- Policy 7.7.5** Require development along scenic roadways to be visually attractive and to allow for scenic views of the surrounding mountains and Mystic Lake.

Overall views of the upper slopes of the Mt. Russell Range, views of the Box Springs Mountains, the Badlands will be maintained from the SR-60 and surrounding residential areas, although some views of Mt. Russell and Box Springs Mountain may be partially obscured by the proposed development. Views from Gilman Springs Road and Moreno Beach will not be adversely affected by the project due to the distances involved of project buildings from these roadways. The Project Description and supporting materials demonstrate that the proposed buildings will be attractive and not eliminate important views in the surrounding areas. Therefore, the project does not significantly conflict with this General Plan objective or policies.

Mitigating the project by substantially changing the size, location, and/or heights of the buildings would prevent the project from providing logistics-type warehousing uses on this site. Lowering the heights of the buildings would render them unable to accommodate high cube warehouse users, and making smaller, more spread out buildings would eliminate a major reason for proposing a logistics-type warehousing project on this site (i.e., large buildings with ready freeway access). Interior heights of 30-40 feet are needed for these types of uses, which result in a maximum building height of approximately 50 feet. Note that only two of the buildings (#2 and #3) will be 50 feet in height, the other buildings will have a maximum height of 44 feet. For these reasons, these types of mitigation are not feasible for this type of project. The Project Description (Section 3.0 in the DEIR) indicates that the southern-most building will be almost 400 feet from the closest existing residences to the southeast (i.e., separated by several detention basins), and will be visually screened by landscaping. These project design features will help buffer the residences from the proposed warehouses.

It is at the discretion of the City to approve or disapprove this requested General Plan Amendment. If the City approves the project, it will have to adopt a Statement of Overriding Considerations and demonstrate that the various benefits of the project (e.g., economic, employment) outweigh or override its significant environmental impacts.

In addition, the commenter is referred to Section 4 of this document for an evaluation of a less intensive modified plan, which is a subset of the Reduced Intensity Alternative evaluated in the DEIR (and which was determined to be environmentally superior to the Proposed Project). This less intensive plan proposes to develop 4 warehouse buildings, leaving the southeast portion of the site vacant for future development of residential uses consistent with existing zoning (R-5 and RA-2) adjacent to the existing residential neighborhood to the southeast. This alternative plan would substantially reduce visual impacts for the residences southeast of the project site.

Response to Comment 11. The Project Description does state that...“*Existing single-family residential uses are located approximately 50 feet southeast of the southeastern corner of the project site.*” (Draft EIR page 3-1). However, the commenter is incorrect regarding project distances and conclusions drawn from those errors. That reference is to the property boundary only, and not to buildings or truck-use areas proposed for the project. The reference of 200 feet on page 4.1-1 of the Draft EIR should actually be 50 feet to the property boundary, as outlined below, and will be corrected in Final EIR, Section 3.0, *EIR Errata and Additions*.

The Draft EIR clearly states that...“*The nearest existing sensitive land uses are single-family residences located approximately 50 feet southeast of the southern boundary of the project site, approximately 395 feet southeast of the proposed warehouse buildings, and approximately 664 feet southeast of the loading docks.*” (Draft EIR page 4.3-17, 4th paragraph). The commenter may be confused by the terms used to characterize the spatial relationship of the project to the existing residences. The residences are 50 feet from the project’s property line, but Figure 1.2 and the Project Description (page 3-7) indicated there will be several large detention basins in the southern portion of the site that will act as a buffer and separate truck activities of the project from the residences to the southeast. As stated in the DEIR and demonstrated on the project site plan, the residences would be 395 feet from the closest proposed warehouse building, and 664 feet from the closest proposed loading dock. We hope this clarification resolves the commenter’s concern in this regard.

In addition, the commenter is referred to Section 4 of this document for an evaluation of a less intensive modified plan, which is a subset of the Reduced Intensity Alternative evaluated in the DEIR (and which was determined to be environmentally superior to the Proposed Project). This less intensive plan proposes to develop 4 warehouse buildings, leaving the southeast portion of the site vacant for future development of residential uses consistent with existing zoning (R-5 and RA-2) adjacent to the existing residential neighborhood to the southeast. -Warehouse buildings under the Less intensive mModified pPlan are 1,515 feet from the nearest existing residential neighborhood (southwest), and 1,636 feet from the existing neighborhood at the southeast corner. The Less intensive mModified pPlan also provides a 250-foot buffer between the nearest warehouse truck court and future residential uses.

Response to Comment 12. The commenter is correct, General Plan Objective 2.5 and its polices do not directly relate to community aesthetics, but the analysis in Section 4.1.6 clearly focuses on the other objectives and policies that are more directly related to aesthetics.

Response to Comment 13. The commenter is incorrect, the Draft EIR does address potential lighting impacts (Draft EIR, Section 4.1.5.1, *Light and Glare*), but determines that the impacts will be less than significant with implementation of the project as proposed, and with implementation of the City’s Municipal Code relative to industrial lighting. Night time views are discussed, since that is when nighttime lighting would be visible. The main reason these impacts will be less than significant is that the actual buildings of the project will be almost 400 feet away from the closest residence (to the southeast). The project plans show walls around the southwest corner and along the southern boundary of the project, which will block lights from vehicles in these areas adjacent to Buildings 5 and 6. Security lighting for the building would be on during all nighttime hours (i.e. overnight) but would also be shielded by walls and compliance with the City’s Municipal Code requirements for night lighting of non-residential buildings (see below). With the proposed setback, walls, landscaping, and potential lighting impacts will be less than significant, as indicated in the Draft EIR.

All development in the City, which includes light generated from warehouse buildings and parking lots, is required to adhere to lighting requirements contained in the City’s Municipal Code (Section 9.08.100 Lighting), which states that any outdoor lighting associated with nonresidential uses shall be shielded and directed away from the surrounding residential uses. Such lighting shall not exceed one-half foot-candle at all property lines and shall not blink, flash, oscillate, or be of unusually high intensity or brightness. Lighting in parking areas and drive aisles must be at least 1.0 foot-candle and

cannot exceed a maximum of 8 foot-candles. Adherence to the City's Zoning Code would ensure that any building or parking lighting would not significantly impact adjacent uses. Therefore, impacts associated with this issue are less than significant, and no mitigation is required, so the additional measures recommended by the commenter are not needed.

In addition, the commenter is referred to Section 4 of this document for an evaluation of a less intensive modified plan, which is a subset of the Reduced Intensity Alternative evaluated in the DEIR (and which was determined to be environmentally superior to the Proposed Project). This less intensive plan proposes to develop 4 warehouse buildings, leaving the southeast portion of the site vacant for future development of residential uses consistent with existing zoning (R-5 and RA-2) adjacent to the existing residential neighborhood to the southeast. This alternative plan would substantially reduce lighting impacts for the residences southeast of the project site.

Response to Comment 14. Page 4.1-20 of the Draft EIR clearly states...*"The City's Municipal Code (Section 19.05 and Table 9.05.040-8) establishes the number, location, height, and style of signage permitted within industrial zones. The submittal and approval of signs are required for all development in the City; therefore, it is reasonable to conclude that all on-site signs are internally compatible and consistent with the City's current signage standards. Adherence to City requirements would result in a less than significant visual impact in this regard. The existing General Plan and zoning designations for the site show low density residential."* Therefore, the commenter's statement about the EIR not evaluating impacts of signage is not correct.

Response to Comment 15. Yes, the commenter is correct that Table 3.B indicates a maximum building height of 50 feet for buildings 2 and 3, but the commenter fails to note that the line-of-sight analyses and renderings for these buildings (Building 2 = Figures 3.7B, 3.8B, and 3.8C, Building 3 = Figures 3.7C and 3.8D) clearly show these buildings would have a maximum height of 50 feet. The line-of-sight analyses show that the proposed Building 2 may impact views from the freeway of the lower slopes of Mt. Russell, but would not eliminate views of the upper slopes and open land to the southeast. Similarly, Building 3, and to some degree Building 6, may limit views from the nearby residential areas (to the southeast) toward Box Springs Mountain, but views of Mt. Russell, the Badlands, and open land to the east would remain. It should be noted that the EIR concluded that loss of views and other visual impacts would be significant.

Response to Comment 16. The reader should refer to Response to Comment D-3, No. 11 above regarding distances from the project and nearby residences.

Response to Comment 17. The commenter suggests that evaluation of the project's consistency with land use development requirements was not addressed and therefore the statement "the project appears to be consistent with the various Municipal Code requirements for the proposed land uses outlined in Section 4.1.2 related to landscaping, setbacks parking, storage, etc." is not supported. The quote from the Draft EIR was making the simple factual conclusion that the proposed project will be required to adhere to all applicable development standards contained in the City's Municipal Code, similar to any project in any municipality.

Response to Comment 18. The commenter is correct, the text of the paragraph will be corrected to reflect the determination in the environmental analysis in Section 4.2.5.1 under No Impact/Less than Significant Impacts, but the conclusions shown in the table reflect the correct conclusions (i.e., this agricultural impact is less than significant).

This has been corrected in Final EIR, Section 3.0, *EIR Errata and Additions*, but this minor editorial correction does not change the overall conclusion of the EIR that this impact is significant.

Response to Comment 19. The commenter is correct, and Response to Comment D-3, No. 18 above shows how the text in Table 1.C of the Executive Summary will be modified to account for this

loss. This will be corrected in Final EIR, Section 3.0, *EIR Errata and Additions*, but this modification does not change the overall conclusion of the EIR that this impact is significant.

The loss of 0.4 percent of the PAKO as a result of this project is a minimal amount of change and does not constitute a significant impact, as indicated in the DEIR, Section 4.2.5.1 Conflict with Existing Zoning or a Williamson Act Contract, page 4.2-6.

Response to Comment 20. The commenter is correct, Farmland of Local Importance will be added to the text in Table 1.C, as shown below. In addition, the “(5.3 acres)” reference is a fragment should have been removed from the text because it does not refer to a formal agricultural designation.

Impact 4.2.6.2 Conversion of State Designated Farmland: *The project site is designated as 67 percent Prime Farmland (82.5 acres) and 12 percent (39.8 acres) as Farmland of Local Importance (5.3 acres). While farmland conservation measures have been implemented in other areas of the State, neither the City of Moreno Valley nor Riverside County maintains a program that developers and property owners can participate in to offset agricultural resource impacts; therefore, the conversion of State designated Prime Farmland is a significant impact.*

This will be corrected in Final EIR, Section 3.0, *EIR Errata and Additions*, but this modification does not change the overall conclusion of the EIR that this impact is significant. The significance conclusion for each type of farmland is included in DEIR Section 4.2.6.1 Conversion of State Designated Farmland, pages 4.2-6 through 4.2-10.

Response to Comment 21. The commenter is correct, the correct LESA score for the project site is 85.3, as shown in Table 4.2.A – the other references will be corrected in Final EIR, Section 3.0, *EIR Errata and Additions*, however, these corrections do not change the overall conclusion of the EIR that this impact is significant. It should be noted that all of these scores represent a significant impact.

The Draft EIR already recognizes that the project would contribute to a cumulative impact on agricultural resources and concludes the following:

“The cumulative effect of development in the region will continue to result in the conversion of agricultural lands to non-agricultural uses. Because agricultural land, including Prime Farmland, is a finite resource, the conversion of 122.8 acres of farmland to industrial uses, combined with planned and future development in the City and region, represents a cumulative impact to agricultural operations and resources, and the proposed project’s contribution to this cumulative impact through the conversion of 122.8 acres of farmland is cumulatively considerable.” (Draft EIR page 4.2-11)

Response to Comment 22. The potential mitigation measures identified in this comment are not considered to be feasible by the City of Moreno Valley as determined in the City’s General Plan EIR. As identified in the Draft EIR (Section 4.1.6.1 Conversion of State Designated Farmland, page 4.1-13), “Williamson Act contracts are entered into voluntarily by property owners and the City cannot force owners to participate in this program. The City does have the ability to encourage property owners to participate in Williamson Act programs; however, this is expected to result only in temporary preservation of agricultural land since property owners have the option of non-renewal of these contracts at any time after the ten-year contract period ends. The land would then be available to be developed with urban uses.

Providing protection for ongoing agricultural activities from new developments, such as requiring buffers between agricultural operation and new development or requiring the notification and disclosure of agricultural activities to the purchasers adjacent properties will not permanently protect agricultural land.

The purchase or transfer of development rights, purchase of conservation easements, or donation of funds to assist in the conservation of agricultural land would need to be implemented to ensure the preservation of agricultural land. As stated previously, the City anticipates the conversion of agricultural land within the City and does not set aside land for permanent preservation. The City expects that the majority of the land within the City will be converted to urban uses, although some agriculture will continue as interim uses, as allowed by the City’s Development Code for all zoning categories. Moreno Valley has determined that these measures are economically infeasible based on the higher costs associated with land, water and labor, increased environmental regulation, and competition from neighboring regions where agricultural operations are less costly; thus, resulting in an inability to make farming profitable. Furthermore, these measures are contrary to the City’s vision (as stated in its General Plan) for the project site; therefore, they are not feasible and alternative mitigation has not been identified.” Table B below contains the suggested mitigation measures by the commenter. The responses determine whether the Draft EIR contains the mitigation measure, if the mitigation will be added mitigation as part of the Final EIR, or if it will not be included and why.

Table B: Evaluation of Potential Agricultural Mitigation

Suggested Mitigation Measure	Response
1. The purchase of agricultural conservation easements	<p>Not Feasible. Based on the higher costs associated with land, water and labor, increased environmental regulation, and competition from neighboring regions where agricultural operations are less costly; thus, resulting in an inability to make farming profitable. The site has been planned for developed uses since 1987, the City has recognized that the conversion of agricultural land under its jurisdiction is an eventual and expected outcome of current and future growth and the current General Plan does not include any agricultural designations; therefore mitigation for the loss of agricultural land is not required.</p> <p>An easement does not compensate for the impact by replacing or providing substitute resources or environments (i.e., the easement would not create any new farmland where no farmland presently exists). See Fourth District Court of Appeal, <i>Cherry Valley Pass Acres and Neighbors v. City of Beaumont</i> (2010) 190 Cal.App.4th 316 (<i>Cherry Valley</i>)</p>
2. Transfer of development rights	<p>Not Feasible. Based on the higher costs associated with land, water and labor, increased environmental regulation, and competition from neighboring regions where agricultural operations are less costly; thus, resulting in an inability to make farming profitable.</p>
3. Acquisition of farmland by the city or county	<p>Not Feasible. Based on the higher costs associated with land, water and labor, increased environmental regulation, and competition from neighboring regions where agricultural operations are less costly; thus, resulting in an inability to make farming profitable. No mechanism for the mitigation of impacts to State-designated Farmland and/or existing agricultural operations has been enacted by either the City of Moreno Valley or the County of Riverside. Rather, the City has specifically recognized that the conversion of agricultural land under its jurisdiction is an eventual and expected outcome of current and future growth. The current General Plan does not include any agricultural designations.</p>
4. Mitigation banking	<p>Not Feasible. Neither the City of Moreno Valley nor the County have a mechanism in place for mitigation banking. The site has been planned for developed uses since 1987, the City has recognized that the conversion of agricultural land under its jurisdiction is an eventual and expected outcome of current and future growth and the current General Plan does not include any agricultural designations; therefore mitigation for the loss of is not required. In addition, there is not any agricultural zoned land in the City for the City or County to purchase.</p>

FINAL EIR - RESPONSE TO COMMENTS
ProLogis Eucalyptus Industrial Park
City of Moreno Valley

Suggested Mitigation Measure	Response
5. The establishment of "urban limits," greenbelts, and buffers	Not Feasible. Will not result in permanent protection of agricultural lands. There is no mechanism for the mitigation of impacts to State-designated Farmland and/or existing agricultural operations has been enacted by either the City of Moreno Valley or the County of Riverside. Rather, the City has specifically recognized that the conversion of agricultural land under its jurisdiction is an eventual and expected outcome of current and future growth. The current General Plan does not include any agricultural designations. Section 4.2.6.1 of the DEIR also outlines why local or regional mitigation in this regard is infeasible.
6. The payment of in-lieu fees sufficient to a purchase and maintain farmland conservation easements	Not Feasible. Based on the higher costs associated with land, water and labor, increased environmental regulation, and competition from neighboring regions where agricultural operations are less costly; thus, resulting in an inability to make farming profitable. An easement does not compensate for the impact by replacing or providing substitute resources or environments (i.e., the easement would not create any new farmland where no farmland presently exists). See (Fourth District Court of Appeal, <i>Cherry Valley Pass Acres and Neighbors v. City of Beaumont</i> (2010) 190 Cal.App.4th 316 (<i>Cherry Valley</i>)) In addition, there is not any agricultural zoned land in the City for the City or County to purchase and there is no existing fee program for farmland in the City.
7. Planning tools such as clustering development, use of density bonuses, and limiting "leapfrog" development	Not Feasible. Based on the higher costs associated with land, water and labor, increased environmental regulation, and competition from neighboring regions where agricultural operations are less costly; thus, resulting in an inability to make farming profitable. In addition the project is an industrial project on a site that has been planned for developed uses in the City's General Plan since 1987. This is not a residential project; therefore, clustering of development is not a feasible option on an industrial project. The proposed mitigation is not applicable. The project won't promote "leapfrog" development since the area surrounding the project site is developed.

Comment No. 3 in the letter from the Sierra Club (D-2) stated that..."a developer recently donated \$100,000.00 to the Riverside Land Conservancy to help mitigate for the loss of agricultural lands but fails to appropriately cite the information and identify the basis for determining the amount of agricultural lands lost in relation to this monetary amount." In discussion with Gail Egenes, Executive Director of the Riverside Land Conservancy, the agency does not have any established program to purchase agricultural easements or lands. Also, in consultation with the National Conservation Easement Database, Riverside County does not have any established agricultural easements.¹

Contributions to Riverside County Land Conservancy or the San Jacinto Basin Resource Conservation District by private land owners are laudable but are not required as part of a City or regional mitigation plan for loss of agricultural land. Therefore, the decision whether to make any contributions in this regard would be at the discretion of the developer in consultation with the City.

The Fourth District Court of Appeal, *Cherry Valley Pass Acres and Neighbors v. City of Beaumont* (2010) 190 Cal.App.4th 316 (*Cherry Valley*) addressed a challenge to an EIR for a project that would convert agricultural land to residential uses. Though recognizing the potential for mitigation in the form of agricultural "conservation easements, Williamson Act preserve status, or temporary protection or conservation plans," the EIR noted the long-term trend in agricultural land conversion in the region and concluded that mitigation was not feasible, and the court upheld the City's determination regarding the feasibility of mitigation. The court also examined the City and County General Plans,

¹ <http://nced.conservationregistry.org/browse/map>, accessed October 4, 2012.

which acknowledged that development pressures were constraining the continued viability of agriculture and included the expansion of housing, commercial and industrial land uses. The court then determined that the project was compatible with these planning documents. The court concluded that given the particular circumstances surrounding the project, such mitigation was infeasible and therefore was not required to be adopted. The project site for the project addressed in the ProLogis EIR has been planned for developed uses since 1987, and the City has recognized in the General Plan that the conversion of agricultural land under its jurisdiction is an eventual and expected outcome of current and future growth and the current General Plan does not include any agricultural designations; therefore mitigation for the loss of is not feasible and the EIR concludes that impacts are significant and unavoidable.

The trend of the reduction in agriculture in the Inland Empire is discussed in *Assessing the Economic and Market Trends Affecting Agriculture in the Western Inland Empire* prepared by Justin L. Adams, Ph.D. of Chang & Adams Consulting, September 2011 and *Economic Viability of Agriculture in the East Inland Empire* report prepared by CBRE Consulting, March 18, 2009. Both reports are provided in Appendices B and C to the Final EIR. This reduction in “farming” is due to pressures of the growth in the demand for housing and development and the transportation and warehousing sector; increased restrictions on water deliveries for agricultural uses after several consecutive drought seasons; higher wages in other industries in the region; strong agricultural competition from the southern Central Valley for dairies; increased regulatory pressures from air quality and local jurisdictions regarding particulate matter emissions and land use adjacency issues; and the trend in Riverside and San Bernardino Counties is for agricultural operations to continue to shift to places like Kern County regardless independent of land use policy due to the economic issues.

As stated in the Draft EIR, mitigation measures must be feasible and fully enforceable through permit conditions, agreements, or other legally binding considerations. To be feasible, mitigation must be capable of being accomplished in a successful manner within a reasonable period of time, taking into account the economic, environmental, legal, social, and technological factors. Identification as to the infeasibility of mitigation measures suggested by the commenter has been provided in the Draft EIR. No mechanism for the mitigation of impacts to State-designated Farmland and/or existing agricultural operations has been enacted by either the City of Moreno Valley or the County of Riverside. Rather, the City has specifically recognized that the conversion of agricultural land under its jurisdiction is an eventual and expected outcome of current and future growth. The current General Plan does not include any agricultural designations. The City allows agricultural uses in all land use designations as an interim use until such time as the land is developed per the vision identified in the General Plan. One of the goals stated in the City’s recent General Plan is the “...orderly conversion of agricultural lands.” The proposed project is a continued extension of development in the surrounding area to the east and west (industrial/commercial/business park). The proposed project does not interfere with the ability of other adjacent properties to be used for agricultural production should the property owner wish to do so.

The potential mitigation measures identified by the City in its General Plan EIR and California Department of Conservation (CDC), which are listed in the Draft EIR (Section 4.1.6.1 Conversion of State Designated Farmland, pages 4.2-7 through 4.2-9), are not considered to be feasible by the City of Moreno Valley as determined in the City’s General Plan EIR. Providing protection for ongoing agricultural activities from new developments, such as requiring buffers between agricultural operation and new development or requiring the notification and disclosure of agricultural activities to the purchasers adjacent properties will not permanently protect agricultural land. As identified in the Draft EIR, the City supports agriculture as an interim use within the City and no land is dedicated or designated for agricultural use or agricultural preservation within the City’s jurisdiction. Land in the project area is classified as containing prime agricultural soils, but the City’s General Plan does not designate these lands, including the project site, for preservation through the establishment of urban limits, greenbelts, and buffers that might result in permanent protection of agricultural land as none exists within the City. Areas where agriculture land use designations may exist that are outside of the

City limits cannot be preserved by the City of Moreno Valley as they are outside of the City's jurisdiction. The City's General Plan has acknowledged the analysis and conclusions of the County General Plan that mitigation for the loss of agricultural land is economically and practically infeasible due to ongoing costs to maintain agriculture in this area (see Appendix E in the Draft EIR).

As stated previously, the City anticipates the conversion of agricultural land within the City and does not set aside land for permanent preservation. The City expects that the majority of the land within the City will be converted to urban uses, although some agriculture will continue as interim uses, as allowed by the City's Development Code for all zoning categories. The City of Moreno Valley has determined that these measures are economically infeasible based on the higher costs associated with land, water and labor, increased environmental regulation, and competition from neighboring regions where agricultural operations are less costly; thus, resulting in an inability to make farming profitable. Furthermore, these measures are contrary to the City's vision (as stated in its General Plan) for the project site; therefore, they are not feasible and alternative mitigation has not been identified.

Response to Comment 23. Response to Comment D-3, No. 22 outlines the City's position regarding the infeasibility of mitigation for loss of agricultural land. The City has repeatedly concluded that development projects within the City that remove agricultural land, even if that land carries a "significant" designation for farmland, cannot be mitigated at the local level and all the recommended measures would render the project financially infeasible, therefore the measures are infeasible. The assessment in Appendix E of the Draft EIR provides additional documentation why continued agriculture is not feasible in the Moreno Valley area.

It should also be noted that the research referred to by the commenter was conducted in the state of Vermont, so its information is not directly applicable to the California economy or local conditions affecting the viability of agriculture within a particular region. Nor does it take into account currently poor economic conditions in California

Response to Comment 24. According to Sergio San Martin of Facilities Planning for MVUSD, the Eucalyptus and Redlands sites have been abandoned.¹ The other two sites at Nason and Ironwood and Ironwood and Quincy have not yet been officially abandoned but are no longer being actively considered for the construction of new schools. It is at the School Board's discretion as to whether these two sites are abandoned, however; MVUSD staff has been directed to explore other potential sites. Therefore, it is no longer reasonably foreseeable that these two sites will be developed as future schools.

Response to Comment 25. The commenter referred to the following General Plan Policies allegedly relevant to air pollutant emissions. The following assesses the consistency of the project with those stated policies:

General Plan Goals, Objectives, and Policies	Project Consistency
<p>Ultimate Goal VII: achieve a community which "Emphasizes public health and safety, including, but not limited to, police, fire, emergency and animal services and protection from floods and other hazards...."</p>	<p>The comment erroneously quotes an ultimate goal contained in the General Plan that addresses public safety issues such as police, fire, emergency and animal services and protection from natural hazards such as flooding. This goal is not associated with air quality. However, Sections 4.6 (Hazards) of the DEIR and the Initial Study for the project (Public Services) demonstrate that the proposed project will not result in any significant impacts to public health or safety as</p>

¹ Resolution No. 2007-08-81, Moreno Valley Unified School District Board of Education, approved April 15, 2008.

	outlined in this goal.
Goal 6.1: To achieve acceptable levels of protection from natural and man-made hazards to life, health, and property.	The comment erroneously quotes a goal that addresses the Safety Element of the General Plan. This goal is not associated with air quality; however, various sections of the DEIR demonstrate that the proposed project will not result in any significant impacts to public health or safety from natural or man-made hazards, as outlined in this goal.
Objective 7.5: Encourage efficient use of energy resources.	The comment cites three policies within General Plan Objective 7.5. Consistency and/or applicability of these policies is as follows:
Policy 7.5.1: Encourage building, site design, and landscaping techniques that provide passive heating and cooling to reduce energy demand.	General Plan Policy 7.5.1 will be applied to the project through implementation of Mitigation Measures 4.3.6.5B page 4.3-33 and 4.3-34, 4.3.6.6A page 4.3-35, 4.13.6.1B page 4.13-20, and 4.13.6.1C page 4.13-21.
Policy 7.5.2: Encourage energy efficient modes of transportation and fixed facilities, including transit, bicycle, equestrian, and pedestrian transportation. Emphasize fuel efficiency in the acquisition and use of City-owned vehicles.	General Plan Policy 7.5.2 is related to alternative modes of transportation. The City considers this policy to be beyond the scope of this project-level EIR, because this is a citywide issue for the City to address and not this development project. The project has no control over the fuels used in City-owned vehicles.
Policy 7.5.5 Encourage the use of solar power and other renewable energy systems.	General Plan Policy 7.5.5 will be applied to the project through implementation of Mitigation Measure 4.3.6.6A page 4.3-35.

The analysis demonstrates that the project is consistent with the two applicable General Plan goals, objectives, and policies cited in the comment. The three other goals, objectives, and policies cited in the comment are not applicable to the project and this project-level EIR; however, the project is consistent with Ultimate Goal VII and Goal 6.1 as outlined above. This analysis does not raise significant new issues, nor does it change the conclusions of the EIR regarding significant impacts.

Response to Comment 26. It is not clear what “record” the commenter is referring to. Perhaps the commenter is referring to the various Multiple Air Toxics Exposure Studies (MATES) performed by the SCAQMD over the last two decades? If so, these only document that the air quality is unhealthy in the majority of the South Coast Air Basin, they say nothing about any particular project’s contribution to the level of toxic air contaminants in a region. The HRA included in the EIR examines the potential affect the project could have on the level of toxic air contaminants in the region of the project site and the resulting change in health risk levels and, as shown in the DEIR, Table 4.3.F on page 4.3-17 in the DEIR, shows them to be all less than significant.

Response to Comment 27. The HRA modeled emissions from vehicles idling at all the project buildings and traveling along the roadways thru the project site and into the surrounding area as described on Page 4.3-17 of the DEIR. While the modeling does not include dedicated emissions sources for the short distances from the loading docks along the building and the driveways onto Eucalyptus Avenue, the emissions sources that were included in the modeling for the truck movements include all emissions from vehicles as they travel. Thus, the HRA does not minimize any impact from project operations. The model incorporates building structures into the atmospheric propagation simulation only to determine changes to the propagation pattern due to disturbances in the flow from passing over buildings. The principal effect is that pollutant concentrations are higher from the building wake affect than they would be if the building was ignored. Changing the building height from 65 to 39 feet would only change the pollutant concentrations within 50 feet of so downwind of each building. There would be no change at the distance of any of the residences.

Therefore, the analysis in the DEIR is conservative and protective of human health.

In addition, the commenter is referred to Section 4 of this document for an evaluation of a less intensive modified plan, which is a subset of the Reduced Intensity Alternative evaluated in the DEIR (and which was determined to be environmentally superior to the Proposed Project). This less intensive plan proposes to develop 4 warehouse buildings, leaving the southeast portion of the site vacant for future development of residential uses consistent with existing zoning (R-5 and RA-2) adjacent to the existing residential neighborhood to the southeast.

Response to Comment 28. The standard assumption for all HRAs, per the OEHHA, is that the 70-year lifetime risk assessment assumes that individuals would be away from the location of interest for 15 days out of the year, even though the on-site operations would occur over 365 days per year. The 350 days per year the comment refers to applies to the people living nearby, not to the project operations. This is what is meant by a full lifetime exposure in any HRA.

Response to Comment 29. The Environmental Summary Table 1.C was not updated properly and now is consistent with the results described in Section 4.3 Air Quality (refer to the Final EIR Errata). This update has no effect on any significance conclusions in the DEIR (refer to the Final EIR Errata). Both the Air Quality Analysis and Air Quality section of the EIR describe the health risks to existing and future residents separately and clearly. The peak cancer risk to existing residents to the north is identified in Table R of the Air Quality Analysis and in Table 4.3.F of the Air Quality section of the Draft EIR as 4.33 in 1 million. Section 4.3.5.4 of the EIR shows the peak cancer risk to future residents of a project proposed on the southern project boundary as 4.3 in 1 million. The threshold is 10 in one million so the 4.3 in 1 million does not exceed the threshold of significance.

The Draft EIR clearly identifies that ...*"The nearest existing sensitive land uses are single-family residences located approximately 50 feet southeast of the southern boundary of the project site, approximately 395 feet southeast of the proposed warehouse buildings, and approximately 664 feet southeast of the proposed loading docks."* (Draft EIR page 4.3-17, 4th paragraph). The commenter may be confused by the terms used to characterize the spatial relationship of the project to the existing residences. The residences are 50 feet from the project's property line, but the Project Description (e.g., Figure 1.2) clearly shows there are several large detention basins in the southern portion of the site that will act as a buffer and separate truck activities of the project from the residences. As stated in the EIR and demonstrated on the project site plan, the residences would be 395 feet from the closest proposed warehouse building, and 664 feet from the closest proposed loading dock. We hope this clarification resolves the commenter's concern in this regard.

Additionally, the HRA was conducted using a grid of receptors covering about a mile in all directions from the center of the project site, as described on page 4.3-17 of the DEIR. Therefore, the project effects on health risk levels were determined at all locations throughout the region including the existing residence with the maximum health risk level and the proposed residence with the maximum health risk level, either of which may or may not be the closest to the project site.

In addition, the commenter is referred to Section 4 of this document for an evaluation of a less intensive modified plan, which is a subset of the Reduced Intensity Alternative evaluated in the DEIR (and which was determined to be environmentally superior to the Proposed Project). This less intensive plan proposes to develop 4 warehouse buildings, leaving the southeast portion of the site vacant for future development of residential uses consistent with existing zoning (R-5 and RA-2) adjacent to the existing residential neighborhood to the southeast.

Response to Comment 30. The EIR is tasked with determining the impact of the project on the environment, thus the HRA does this also. The ambient cancer risk is quite high for all of southern California, but this is independent of the project's operations. The HRA in the EIR identifies how the project's operational emissions will affect the health risk levels by the project's contribution to the

ambient health risk. The following limits for maximum individual cancer risk (MICR), cancer burden and non-cancer acute and chronic hazard indices (HI) from project emissions of TACs have been established for the Basin:

- **MICR and Cancer Burden.** MICR is the estimated probability of a potential maximally exposed individual contracting cancer as a result of exposure to TACs over a period of 70 years for residential and 40 years for worker receptor locations. The MICR calculations include multipathway consideration, when applicable. Cancer burden is the estimated increase in the occurrence of cancer cases in a population subject to a MICR of greater than or equal to one in one million (1.0×10^{-6}) resulting from exposure to TACs.

The total increase in MICR that is the sum of the calculated MICR values for all TACs emitted from the project will not result in any of the following:

- (A) An increased MICR greater than 10 in 1 million (1.0×10^{-5}) at any receptor location (assumes the project will be constructed with T-BACT); or
- (B) A cancer burden greater than 0.5.

- **Chronic HI.** This is the ratio of the estimated long-term level of exposure to a TAC for a potential maximally exposed individual to its chronic reference exposure level. The chronic HI calculations include multipathway consideration, when applicable.

The cumulative increase in total chronic HI for any target organ system due to total emissions from the project will not exceed 1.0 at any receptor location.

- **Acute HI.** This is the ratio of the estimated maximum one-hour concentration of a TAC for a potential maximally exposed individual to its acute reference exposure level.

The cumulative increase in total acute HI for any target organ system due to total emissions from the project will not exceed 1.0 at any receptor location.

The DEIR concludes that the project contribution to the existing TAC conditions will be less than significant, as described on page 4.3-17 and shown in Table 4.3.F.

Response to Comment 31. The HRA includes an assessment of the health risks to workers using standard OEHHA assumptions, including an 8 hour workday and a 40 year work career for workers, which likely results in an over-estimate of cancer risk. Thus, the assumptions in the analysis are conservative and err on the side of overestimating impacts.

See also Response No. 13 in the letter D-2 from the Sierra Club.

Response to Comment 32. The HRA modeling only allows for one emission rate for the diesel engines to represent the entire 70-year period from opening year (2013) until 2083. The available emissions factors model (EMFAC) only has factors thru 2040. Thus, there is no information available about how the diesel emissions will change from 2040 until 2083. It is pure guesswork to predict how the diesel emissions will change over this period. To assume that the emissions during this 43-year period will not change at all is a very conservative assumption – there is a real possibility that all diesel engines will have been replaced by an alternative power source before 2083 resulting in zero diesel particulate emissions. Selecting the best year between 2083 and 2013 to represent the average is somewhat arbitrary – the median is 2048, outside the range of available factors. EMFAC incorporates many of the regulations some expectations of technological improvements that result in lower emissions over the period from the 1990s thru 2040, however it does not include everything – for instance it does not include the law just passed in August 2012 that sets the average mileage of cars and light trucks to 54.5 miles per gallon by 2025. While this does not include the heavy-duty trucks the HRA is focused on, it is an indication that there will be aggressive regulations in the future reducing these diesel emissions below what is in the EMFAC model. While using the emissions factors for 2040 as an average is not optimal due to the higher existing emissions, using 2013 factors

as an average is unreasonably conservative also. In our best engineering judgment, 2025 is the best set of emissions factors to represent this complicated issue.

Response to Comment 33. While the project construction may continue for longer than 4 months, the ultra-conservative screening HRA included in the EIR focuses on the emissions from the very large diesel-powered equipment involved in the project construction. As shown in Table E of the Air Quality Analysis, the Site Preparation phase is expected to continue for 18 days and the Grading phase for 44 days, totaling about 3 months. The use of the very large diesel-powered equipment will be intense for these two phases and then drop off dramatically during the remainder of the construction process. Thus, assuming that the use of these very large diesel-powered equipment will occur continuously for 4 months is a conservative representation of the total construction process and appropriate for this screening-type of HRA.

Response to Comment 34. The staffs of the Air Resources Board (ARB) and the Office of Environmental Health Hazard Assessment (OEHHA) have been evaluating diesel exhaust since 1989 under California's air toxics program, for potential identification as a toxic air contaminant (TAC). Diesel exhaust entered the AB 1807 process in October 1989 and has undergone an extensive evaluation. Diesel exhaust was entered into the process because it has potential cancer and non-cancer health effects and widespread exposure in California. The International Agency for Research on Cancer (IARC) had listed diesel exhaust as a "probable" human carcinogen and the U.S. Environmental Protection Agency (U.S. EPA) had begun an evaluation of both the cancer and non-cancer health effects. The ARB and the OEHHA gave priority to the evaluation of diesel exhaust because it met the TAC program criteria related to potential risk of harm to public health, amount of emissions, exposure and use, and persistence in the atmosphere.¹ All HRAs that include diesel PM as a TAC of concern consider all recognized health impacts.

Response to Comment 35. See Response to Comment D-3, No. 34 above.

Response to Comment 36. The HRA included the concept from the OEHHA indicating that both the prenatal and postnatal life stages can be, but are not always, much more susceptible to developing cancer than the adult life stage. The HRA included age sensitivity factors (ASFs) for these age windows that vary by chemical, gender and species, thus the analysis accounted for impacts to the entire population, children and adults. ASFs for prenatal, postnatal, and juvenile exposures are complicated by the limited database of chemicals and studies available for analysis, and the broad distribution of results for different chemicals. The EPA and OEHHA have proposed to apply a default ASF of 10 for the third trimester to age 2 years, and a factor of 3 for ages 2 through 15 years to account for potential increased sensitivity to carcinogens during childhood (adults 16 and older need no adjustment factor), and applied these to all carcinogens, regardless of the theorized mode of action. Thus, for the 70-year cancer assessment in the Draft EIR, the cancer risk adjustment factor (CRAF) used was 1.7 $[(10 \times 2.25/70) + (3 \times 14/70) + 54/70 = 1.7]$.

Response to Comment 37. See Response to Comment D-3, No. 36 above. The Air Quality Analysis described the inclusion of the cancer risk adjustment factor as prescribed by the ARB and OEHHA.

Response to Comment 38. The HRA in the EIR overview in Section 4.3 Air Quality, details in the Air Quality technical report in Appendix B, followed all current guidance from the EPA, ARB, OEHHA and other state agencies to insure that the health of all residents and other sensitive receptors affected by construction and operational emissions from the project are protected. Source: EPA, *Air Toxics Strategy*, July 1999; ARB, *AB 2588 Air Toxics "Hot Spots" Emission Inventory Criteria and Guidelines Regulation*, August 27, 2007; OEHHA, *Air Toxics Hot Spots Program Risk Assessment Guidelines*, August 2003; SCAQMD, *Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile*

¹ CARB, 1998, *Proposed Identification Of Diesel Exhaust As A Toxic Air Contaminant*.

Source Diesel Idling Emissions for CEQA Air Quality Analysis, August 2003.

Response to Comment 39. As the EIR found that all impacts from project-related diesel PM are less than significant without the use of “buffers and other methods”; none of these are necessary to protect the health of all residents and other sensitive receptors affected by construction and operational emissions from the project.

Response to Comment 40. Comment noted. The exhibit cited is the SCAQMD guidance document *Final-Methodology to Calculate Particulate Matter (PM) 2.5 and PM 2.5 Significance Thresholds*, which is provided for the Localized Significance Threshold (LST) portion of the air quality analysis. The air quality analysis in the DEIR cited this resource and complied with it.

Response to Comment 41. The EIR discusses consistency in detail. It says “*the proposed project would require a General Plan Amendment that would change the General Plan designations for a portion of the project site from Residential to Business Park/Light Industrial. The project also proposes an amendment to the Circulation Element of the General Plan.*” and “*Implementation of the proposed project would require a zone change from Business Park (BP), Business Park Mixed Use (BPX), Multi-Family Residential (R-15), Suburban Residential (R-5), and Residential Agriculture (RA-2) to Light Industrial for the entire 122.8 acres.*” “*Because the project site is located in a nonattainment air basin for ozone, PM10 and PM2.5, the proposed project’s emission of ozone precursors (CO, ROG, and NOX), PM10 and PM2.5 would contribute to the existing nonattainment status in the Basin. Thus, according to the SCAQMD Consistency Criterion No. 1, the proposed project is not consistent with the AQMP.*”

Response to Comment 42. Table 4.3.I of the Draft EIR has a note stating “includes both fugitive and exhaust sources” and the conceptual grading plan for the project indicates that the earthwork will be largely balanced on site and only 200 cubic yards of soil importation is expected. This small amount of soil import will require minimal truck trips which are included in the general construction vehicle calculations.

Response to Comment 43. While no phasing of construction is required of the project, normal construction operations are conducted in phases – grading cannot begin until site preparation is completed, building construction cannot begin until grading is completed, etc. As shown in Table E of the Air Quality Technical Report in Appendix B, the construction analysis conservatively assumed that the building construction, architectural coating and paving phases could all overlap. The peak daily emissions shown in Table 4.3.I of the DEIR reflect this conservative assumption. Note that the DEIR concluded that construction air quality impacts remained significant and unavoidable with mitigation.”

Response to Comment 44. Section 5.1.4 of the air quality technical study (Draft EIR Appendix B) clearly explains that guidance provided by SCAQMD was followed in which all construction phases were considered in the LST analysis. See the Response to Comment 43 concerning construction phasing. As described in the Air Quality Technical Report in the DEIR Appendix B, Section 5.1.4, the grading phase was determined to be the construction phase of concern for the LST analysis by following the SCAQMD guidance on applying CalEEMod modeling results to LST analyses; *Fact Sheet for Applying CalEEMod to Localized Significance Thresholds*, available at www.aqmd.gov/ceqa/handbook/lst/CalEEModguidance.pdf.

Response to Comment 45. While the DEIR analyzes project operational emissions assuming that the project could operate 24 hours per day, 7 days per week, the construction of the project will not occur 24 hours per day. As pointed out by the commenter, noise regulations alone restrict construction operations to 14 hours per day. Current project plans are to build the project following a typical daily construction schedule, which is what is built into the CalEEMod model and was used in the air quality analysis.”

Response to Comment 46. See Response to Comment D-3, No. 44 above.

Response to Comment 47. SCAQMD Rule 402 regarding nuisances states: “A person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.” Construction operations do not typically result in Rule 402 violations, due to the subjective nature of odor and the need for such odor to ‘cause injury, detriment, nuisance, or annoyance to any considerable number of persons’. There is nothing about the proposed project construction that is expected to result in any odor other than those associated with typical construction operations.

Response to Comment 48. LST screening analyses use SCAQMD provided tables for significance determination. The tables provided include data for 1, 2 and 5 acre project sites. The LST emissions thresholds grow larger with larger site areas; using an LST threshold for an area smaller than the actual area (5 acres versus 121 acres) results in lower emissions thresholds than would occur if the entire site was considered. In other words, a 5-acre project is allowed to emit up to 270 lbs/day of NO_x. A 121 acres project would be allowed a much higher daily NO_x emission rate. Thus, using the 5 acre threshold for the proposed project site is conservative.

Response to Comment 49. Based on the results of the air quality study for the project, the mitigation measure as written in the DEIR specifies “...contractors shall place construction equipment staging areas at least 200 feet away from sensitive receptors.” Presumably the commenter is suggesting that this distance should be increased to 1,000 feet. The 200-foot distance was selected after analysis in the project air study determined that construction impacts could be reduced to less than significant levels through imposition of this setback. The commenter has provided no evidence or substantiation why this distance should be increased to 1,000 feet.

Response to Comment 50. The mitigation measure states “...power sources (e.g., power poles)”. Clean fuel is a standard phrase used to describe fuels that release fewer emissions when used in internal combustion engines compared to standard fuels. A “clean-fuel generator” is a generator configured to burn a clean fuel, thus releasing fewer emissions than a generator burning standard fuels.

Response to Comment 51. Mitigation Measure 4.3.6.2C has been updated to specify Tier III equipment for all phases of construction and for all equipment where technologically available.

Response to Comment 52. The text of the mitigation measure states that it is “per SCAQMD guidelines”, showing that this is a requirement for all projects. It is included for completeness and for monitoring purposes.

Response to Comment 53. The commenter first states that Mitigation Measure 4.3.6.2H is not a mitigation measure then allows that the bulk of the measure is a proper mitigation measure. However, the measure has been amended as follows:

4.3.6.2H *The contractor shall minimize pollutant emissions by maintaining equipment engines in good condition and in proper tune according to manufacturer's specifications and ~~during smog season (May through October)~~ by shall not allowing construction equipment to be left idling for more than five minutes (per California law).*

Response to Comment 54. The text of the mitigation measure states that it is “as required by the California Air Resources Board (CARB)”, showing that this is a requirement for all projects. It is included for completeness and monitoring purposes.

Response to Comment 55. Notations to construction documents are how a specified change to the normal construction methods and procedures are documented and to support enforcement. Without notations, no one onsite during construction knows what action or procedure should be enforced. However, in Mitigation Measure 4.3.6.2J has been amended to take out “notations and “where feasible” has been changed to “if available” or “where available” because it is not certain at the time the mitigation is implemented whether the types of fuels and/or construction equipment specified will be available.

4.3.6.2J *Grading plans, construction specifications and bid documents shall also include the following ~~notations~~ requirements:*

- *Off-road construction equipment shall utilize alternative fuels where feasible e.g., biodiesel fuel (a minimum of B20), natural gas (CNG), liquefied natural gas (LNG), propane, except for equipment where use of such fuels would void the equipment warranty;*
- *Gravel pads shall be provided at all access points to prevent tracking of mud onto public roads;*
- *Install and maintain trackout control devices at all access points where paved and unpaved access or travel routes intersect;*
- *The contractor or builder shall designate a person or person(s) to monitor the dust control program and to order increased watering, as necessary, to prevent transport of dust off site;*
- *The contractor or builder shall post a publicly visible sign with the telephone number and person to contact regarding dust complaints. The contact person shall take corrective action within 24 hours;*
- *High-pressure injectors shall be provided on diesel construction equipment ~~where feasible~~ if available;*
- *Engine size of construction equipment shall be limited to the minimum practical size;*
- *Substitute gasoline-powered for diesel powered construction equipment where ~~feasible~~ gasoline powered equipment is available;*
- *Use electric construction equipment where ~~feasible~~ it is practical to use such equipment;*
- *Install catalytic converters on gasoline-powered equipment where ~~feasible~~ this type of equipment is available;*
- *Ride-sharing program for the construction crew ~~shall be encouraged and~~ shall be supported by contractor(s) via incentives or other inducement;*
- *Documentation shall be provided to the City of Moreno Valley indicating that construction workers have been encouraged to carpool or otherwise reduce VMT to the greatest extent practical, including providing information on available park and ride programs;*
- *Lunch vendor services shall be ~~provided~~ allowed on site during construction to minimize the need for off-site vehicle trips; and*
- *All forklifts used during construction and in subsequent operation of the project shall be electric or natural gas powered.*

Response to Comment 56. Mitigation Measure 4.3.6.2K has been revised to include a response time.

4.3.6.2K *Throughout project construction, a construction relations officer/community liaison, appointed by the Applicant, shall be retained on site. In coordination and cooperation with the City, the construction relations officer/community liaison shall respond to any concerns related to PM₁₀ (fugitive dust) generation or other construction-related air quality issues within 24 hours.*

Response to Comment 57. Mitigation Measure 4.3.6.2H requires construction equipment to limit idling, Measure 4.3.6.2L only requires signs be posted so that equipment operators are aware of the limit.

Response to Comment 58. The word “should” has been removed and replaced with “shall” in Mitigation Measure 4.3.6.3A.

4.3.6.3A *Prior to the issuance of grading permits, the project applicant shall require by contract specifications that all trucks hauling dirt, sand, soil, or other loose materials are to be covered or ~~should~~ shall maintain at least 2 feet of freeboard in accordance with the requirements of California Vehicle Code (CVC) Section 23114 (freeboard means vertical space between the top of the load and top of the trailer).*

Response to Comment 59. The project has no ability to affect the control of emissions from mobile sources as these are entirely under the control of State and federal authorities. The only means available to the project to affect mobile source emissions is to reduce their use, either by reducing numbers of vehicles or the distance they drive. The project does discuss these options but concludes that due to the magnitude of the calculated emissions, neither of these means that are available would reduce mobile emissions sufficiently to even approach the emissions thresholds. Thus, while mitigation is proposed (Mitigation Measures 4.3.6.5A and 4.3.6.5B) to reduce the numbers of vehicles and the distance they drive no quantification of the emissions reductions was attempted.

Specific air quality mitigation suggestions provided by the commenter are addressed in Response to Comment 60, below.

Response to Comment 60. See also Response to Comment D-3, No. 59 above. In addition, a number of activities requested by the SCAQMD have been incorporated into the mitigation measures for air quality (see Final EIR, Section 3.0, *EIR Errata and Additions*).

Feasible mitigation measures, including several identified in the list provided by the commentor, have been already included as mitigation for the project and are identified in the Draft EIR. The Table below contains each of the mitigation measures suggested for inclusion by the commentor and if it is already included in the Draft EIR, if will be added mitigation as part of the Final EIR, or if will not be included and why. Mitigation Measures 4.3.6.5B and 4.3.6.6A are intended to be suggestions for the developer to choose from to reduce energy consumption by 10% above Title 24 standards (refer to Response to Comment D-3, No. 109, below).

Table A: Comparison of Suggested Mitigation Measures to Project Mitigation

Suggested Mitigation Measure	Response
1. Preferential parking for employee vanpooling/ carpooling	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.6A on page 4.3-36.
2. Bicycle parking facilities	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-33 and Mitigation Measure 4.3.6.6A on page 4.3-36.

FINAL EIR - RESPONSE TO COMMENTS
ProLogis Eucalyptus Industrial Park
City of Moreno Valley

Suggested Mitigation Measure	Response
3. Bus turnouts	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5A on page 4.3-33.
4. Install low-emissions water heaters	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-33.
5. Require construction of buildings to exceed Title 24 by 20+ percent	Not Included. The EIR indicates the project will exceed Title 14 energy standards by 10 percent which is considered adequate for this type of building and based on the most recent changes to the State Green Building Code, including Title 24. This mitigation is discussed in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.6A on page 4.3-36.
6. Install central water heating systems	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-33.
7. Require use of energy-efficient appliances	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-33.
8. Require increased insulation	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-33.
9. Require use of automated controls for air conditioners	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-33.
10. Require use of energy-efficient parking lot lighting.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-33.
11. Require use of lighting controls and energy – efficient lighting.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-33.
12. Require use of low-VOC interior and exterior coatings during any project repainting.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-33 and Mitigation Measure 4.3.6.4A on page 4.3-31.
13. Require on-site improvements such as sidewalks or pedestrian walkways to promote pedestrian activity and reduce the number of vehicle trips.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-33.
14. Require installation of skylights and energy-efficient lighting that exceeds current California Title 24 standards where feasible, including electronic dimming ballasts and computer-controlled daylight sensors in the buildings.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-33.
15. Require installation of fans to assist natural ventilation.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-33.
16. Require planting of shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and building shall be planted at the proposed project site to minimize the heat island effect and thereby reduce the amount of air conditioning required.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.6A on page 4.3-36.
17. Install central water heating systems	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under

18. Require use of energy-efficient appliances	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-33.
19. Install low-emissions water heaters	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-33.
20. Require planting of shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and building shall be planted at the proposed project site to minimize the heat island effect and thereby reduce the amount of air conditioning required.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-33 and Mitigation Measure 4.3.6.6A on page 4.3-35.
21. Require installation of centralized water and space conditioning systems or, alternatively, high efficiency individual heating and cooling units.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-33.
22. Require installation of automatic setback thermostats.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-33.
23. Require the incorporation of the following to reduce energy demand associated with potable water conveyance through the following methods: <ul style="list-style-type: none"> • Require incorporation of drought-tolerant plants into the landscaping palette; and • Require incorporation of water-efficient irrigation techniques. 	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.6A on page 4.3-36.
24. Require installation of energy-efficient low-pressure sodium parking lot lights or equivalent as determined by the City;	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-34.
25. Increase in insulation such that heat transfer and thermal bridging is minimized.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.6A on page 4.3-35
26. Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.6A on page 4.3-35
27. Incorporate dual-paned or other energy-efficient windows.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.6A on page 4.3-35
28. Incorporate energy-efficient space heating and cooling equipment.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.6A on page 4.3-35
29. Interior and exterior energy-efficient lighting which exceeds the California Title 24	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.6A on page 4.3-35.
30. Energy Efficiency performance standards shall be installed.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.6A on page 4.3-35 for water heating and space heating.
31. Install automatic devices to turn off lights	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under

FINAL EIR - RESPONSE TO COMMENTS
ProLogis Eucalyptus Industrial Park
City of Moreno Valley

Suggested Mitigation Measure	Response
when they are not needed.	Mitigation Measure 4.3.6.6A on page 4.3-35.
32. Shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and buildings shall be planted at the project site.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-33 and Mitigation Measure 4.3.6.6A on page 4.3-35.
33. Paint and surface color palette for the project shall emphasize light and off-white colors which reflect heat away from the buildings.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.6A on page 4.3-35.
34. All buildings shall be designed to accommodate renewable energy sources, such as photovoltaic solar electricity systems, appropriate to their architectural design, and shall incorporate renewable electricity systems.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.6A on page 4.3-35.
35. The project shall implement a landscaping palette emphasizing drought tolerant plants.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-34 and Mitigation Measure 4.3.6.6A on page 4.3-36.
36. The project shall implement use of water-efficient irrigation techniques.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5B on page 4.3-34 and Mitigation Measure 4.3.6.6A on page 4.3-36.
37. The project shall implement EPA Certified WaterSense labeled for equivalent faucets and high-efficiency toilets (HETs).	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.6A on page 4.3-36.
38. The project shall establish a Transportation Management Association (TMA). The TMA will coordinate with other TMAs within the City to encourage and coordinate carpooling among building occupants. The TMA will advertise its services to building occupants, and offer transit and/or other incentives to reduce GHG emissions. A plan will be submitted by the TMA to the City within two months of project completion that outlines the measures implemented by the TMA, as well as contact information.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.6A on page 4.3-36.
39. The project shall provide preferential parking for carpools and vanpools. Locations and configurations of proposed preferential parking for carpools and vanpools are subject to review and approval by the City. Prior to final site plan approval, preferential parking for carpools and vanpools shall be delineated on the project site plan.	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.6A on page 4.3-36.
40. Lease/purchase documents shall require the implementation of the following mitigation measures by contract specification: <ul style="list-style-type: none"> • SmartWay partnership: Achieve at least 20 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of consolidated trips carried by SmartWay carriers until 	Included. This suggested mitigation measure is already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.6A on page 4.3-36. Note that because the end user is not known at this time, the developer can only commit to language in the lease/purchase documents.

Suggested Mitigation Measure	Response
<p>it reaches a minimum of 90 percent of all long haul trips carried by SmartWay carriers.</p> <ul style="list-style-type: none"> • Achievement of at least 15 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of long haul trips carried by SmartWay carriers until it reaches a minimum of 85 percent of all consolidator trips carried by SmartWay carriers. • Install of catalytic converters on all gasoline-powered equipment. • Include to the greatest extent feasible electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets. • Establish and encourage use of carpool/vanpool programs through methods such as vouchers. • Require a charge for parking fees for single-occupancy vehicles. • Provide preferential parking for EV and CNG vehicles consisting of at least 15% of parking stalls. • Require use of electrical equipment (instead of gasoline-powered equipment) for landscape maintenance where technologically feasible. • Require use of only electric (instead of diesel or gasoline-powered) yard trucks. • Require that all trucks within the fleet be SmartWay rated. 	

Response to Comment 61. Threshold 3(c) is discussed in Section 4.3.6.2 of the Air Quality section (page 4.3-22).

Response to Comment 62. Threshold 3(c) is discussed in Section 4.3.6.2 of the Air Quality section (page 4.3-22).

Response to Comment 63. The analysis was done in compliance with SCAQMD methodology (SCAQMD California Environmental Quality Act (CEQA) Air Quality Handbook [SCAQMD 1993]). The SCAQMD thresholds have been developed in recognition of air district ambient conditions. EIR Section 4.3.7 discusses the cumulative air quality impacts of project construction and operations in detail. Other than the Moreno Valley Auto Mall and the Wal-Mart center to the west of the project site, the project site region is currently residential, farmland or undeveloped. The majority of the land uses that would go into a cumulative analysis are not sufficiently documented to allow a comprehensive quantitative evaluation of cumulative impacts. The project traffic study includes what data is available for these proposed projects when projecting future cumulative traffic impacts and this data is included

in the air quality analysis of CO Hotspots, thus to the extent possible, the EIR does quantitatively assess cumulative impacts.

Response to Comment 64. The commenter is incorrect; the potential impacts to birds are discussed at length in Section 4.4.6.1 (Biological Resources) of the Draft EIR. Loss of the project site will incrementally impact migratory and passerine birds, but the EIR clearly indicates a lack of resources on the project site to support birds (i.e., no onsite standing water sources, no trees sufficient for perching or nesting, regular disturbance by human activity, and disking for weed abatement). Migratory birds and passerine birds are not considered significant biological resources on this site, so they were not mentioned in the Executive Summary. Development of this site would incrementally reduce foraging opportunities on this site for raptors, passerine, and migratory bird species. However, there are thousands of acres of dry farm agricultural land, Mystic Lake, and the San Jacinto Wildlife Area east of the project site that would provide significant foraging resources for birds compared to the project site.

Regarding Mitigation Measure 4.4.6.1A, the introduction to the “Mitigation Measures” section clearly states the following measures have been identified to reduce the significance of potential impacts to migratory bird species and the burrowing owl. Mitigation Measure 4.4.6.1A clearly addresses nesting (migratory) birds, which measures 4.4.6.1B and 4.4.6.1C clearly address impacts to burrowing owls.

Response to Comment 65. The CDFG’s 2012 “Staff Report on Burrowing Owl Mitigation” supersedes its 1995 Staff Report, not the Burrowing Owl Consortium’s “Burrowing Owl Survey Protocol and Mitigation Guidelines,” which has been commonly followed for burrowing owl surveys and mitigation since released in 1993. The CDFG continues to list the Burrowing Owl Consortium’s 1993 guidelines on its internet page of “Survey and Monitoring Protocols and Guidelines” (http://www.dfg.ca.gov/wildlife/nongame/survey_monitor.html). The CDFG’s 2012 Staff Report indicates that its recommended setback buffers are “general guidelines” and “should be adjusted to address site-specific conditions.” Mitigation measure 4.4.6.1C follows the Burrowing Owl Consortium’s recommendation of a 160-foot buffer during the non-breeding season and a 250-foot buffer during the breeding season. The CDFG’s comments on the Draft EIR regarding burrowing owl (letter from Jeff Brandt, CDFG, to Jeff Bradshaw, City of Moreno Valley, August 28, 2012) do not indicate concern or disagreement with these buffer distances. In addition the site is subject to the provisions of the Western Riverside County MSHCP, in which burrowing owl relocation requires project-specific approval from CDFG. If burrowing owls are found on the site, they will be moved only with CDFG approval. Mitigation measure 4.4.6.1C indicates that if burrowing owls are found on “the project site or immediate vicinity,” the avoidance measures of 4.4.6.1C, including the buffers, will be taken. This will ensure that burrowing owls that may be found adjacent to the project site are not harmed by project-related activities. Impacts to burrowing owl habitat are covered under the MSHCP providing that the project follows MSHCP requirements. For burrowing owl, these requirements include conducting burrowing owl surveys and relocating burrowing owls found within impact areas. Mitigation for impacts to burrowing owl habitat is required only if the project site is within the MSHCP Criteria Area or if the project site and adjacent habitat support three or more pairs of burrowing owls. The project site is not within the MSHCP Criteria Area. A focused burrowing owl survey was conducted and the site was not found to support any burrowing owls. Burrowing owl mitigation is therefore focused on avoiding take of individual burrowing owls that may move onto the site rather than on burrowing owl habitat preservation or restoration.

Response to Comment 66. The commenter is incorrect, Sections 4.4.6.2 and 4.4.6.3 of the Draft EIR clearly identifies the potential impacts of development on the 3 onsite drainage features, including the Quincy Channel. The mitigation measures do not defer mitigation, but rather specify who, when, and how the implementation of the measures will occur, as required by CEQA.

Regarding SAWA, the commenter is being argumentative. SAWA is a separate governmental unit from the City of Moreno Valley, so the City cannot “force” SAWA to use impact fees for specific

purposes. However, it is the express goal of SAWA to use in lieu fee contributions for drainage impacts to acquire/maintain riparian/riverine habitat within the Santa Ana River basin. In fact, they are the most appropriate organization to collect and administer use of these fees, since they were formed specifically to help improve water quality and riparian/riverine habitat along the Santa Ana River and its tributaries. It should also be noted the offsite mitigation language relative to SAWA has been modified to reflect the most current implementation measures of the project DBESP report.

Response to Comment 67. The commenter is incorrect, Section 4.4.6.2 of the Draft EIR clearly identifies the impacts of development on the 3 onsite drainage features, including the Quincy Channel, and also specified the onsite protection of the Quincy Channel and the minimum amount of offsite mitigation required to offset the loss of the other two erosional drainage features.

Mitigation Measure 4.4.6.2B only provides more specific guidance of implementing Mitigation Measure 4.4.6.2A and for subsequent permitting of these actions. These measures do not defer mitigation, but rather specify when and how the implementation of the measures will occur, as required by CEQA.

Response to Comment 68. The commenter is incorrect. The project does not impact federal wetlands, as clearly demonstrated by Table 4.4.D in Section 4.4.6.3 of the Draft EIR. The table shows that the project will have minimal impacts on non-wetland land under the jurisdiction of the Army Corps or Regional Water Quality Control Board (0.054 acre temporary and 0.051 acre permanent), and also relatively small impacts to land under the jurisdiction of the State Department of Fish and Game (0.35 acre temporary, 0.36 acre permanent). Mitigation Measure 4.4.6.3A requires the project to obtain the appropriate federal and/or state permits for these impacts, subject to subsequent permitting approval processes by these agencies. As previously discussed in Responses to Comments D-3, Nos. 66 and 67 above, the proposed mitigation in the EIR will make sure impacts on these drainage features are less than significant. The commenter has provided no data or material supporting his opinion to the contrary. To reflect the most current implementation measures of the project DBESP, Mitigation Measures 4.5.6.2A, 4.5.6.2B, and 4.5.6.3A were modified based on comments by CDFG.

Response to Comment 69. Section 4.4 of the Draft EIR concluded that all potential impacts of the project on biological resources were either less than significant, or could be reduced to less than significant levels by implementing the recommended mitigation measures. The commenter provided no data or support to his opinion as to why the less than significant impacts of the project would contribute to significant cumulative impacts. This conclusion is incorrect, especially in light of the regional protection for biological resources provided by the MSHCP.

Response to Comment 70. The design of the proposed project is consistent with the edge treatment measures identified in the DBESP document (see Draft EIR Appendix E). This conclusion is supported by the analysis of indirect impacts in the MSHCP consistency analysis report (also in Draft EIR Appendix E). Based on these analyses, lighting and noise will not have significant impacts on any biological resources, and the commenter has not provided any empirical data or evidence to support his opinion in this regard.

“The MSHCP was conceived, developed, and is being implemented specifically to address the direct, indirect, cumulative, and growth-related effects on covered species resulting from build out of planned land use and infrastructure, including the proposed project.” (DEIR page 4.4-9). In addition, page 4.4-32 of the DEIR states that...“Project construction will contribute to the incremental loss of mule fat scrub and non-native grassland in the region, including potential habitat for some special status species. Cumulative impacts potentially include habitat fragmentation, increased edge effects, reduced habitat quality, and increased wildlife mortality. The MSHCP provides a comprehensive approach to the regional conservation of these habitats and, as a regional plan, serves to provide mitigation for cumulative impacts to covered species. Project compliance and consistency with the

MSHCP ensures that any cumulative impacts to covered species are effectively mitigated. Special status species that are not covered by the MSHCP also benefit from the surveys, conservation, and other measures of the MSHCP because they occupy many of the same habitats. Therefore, the proposed project will not make a significant contribution to any cumulatively considerable impacts to biological resources.” The EIR does examine these impacts, and determines that compliance with the MSHCP will be sufficient to mitigate any potential impacts in this regard. The EIR clearly demonstrates that, other than the Quincy Channel, there are no important biological resources in the immediate vicinity of the project site, so potential indirect impacts are negligible. In addition, the EIR concluded that the design of the project, implementation of project mitigation, and payment of MSHCP mitigation fees, would be sufficient to reduce potential biological impacts of the project to less than significant levels.

Response to Comment 71. Moreno Hills Complex is not an accepted term according to the Office of State Historic Preservation. “District” is the most appropriate term; however, no such District has been formally established. What is being suggested in the comment is commonly referred to as the “landscape approach” but lacking the designation of a District no landscape considerations can be applied (although the Pechanga increasingly apply the landscape approach in their dealings with cities and developers).

Response to Comment 72. Most municipalities require that archaeologists meet either County of Riverside or Secretary of the Interior qualifications. Letter A-4 (Response to Comment 2) from the Pechangua Band of Luiseno Indians clarifies the procedures to be taken under Mitigation Measures 4.5.6.1A through 4.5.6.1E. This letter also repeated the City’s position that while it encourages developers to work with the tribes, it does not require developers to hire Native American monitors. Since the status of Native American monitors cannot be clarified at this point, their level of authority is undefined. This letter also clarifies the curation procedures that will be carried out as artifacts are recovered and leaves with the tribes the decision regarding whether or not to curate or re-bury on the project. Mitigation Measures 4.5.6.1A has been revised requiring the monitor meet Secretary of Interior standards. Mitigation Measure 4.5.6.1B has been revised to require that work cease in that area if a resource is found.

Again, note that the wording of Mitigation Measures 4.5.6.1A through 4.5.6.1E have been modified as shown in Response 3 in Letter A-4 from the Pechanga Band to address concerns of both Native American groups regarding archaeological mitigation.

Response to Comment 73. The mitigation for paleontological resources is not deferred and is commonly used as standard mitigation when there are potential paleontological resources onsite that may be uncovered during excavation activities. The City of Moreno Valley requires that the paleontologists meet the standards of Riverside County and the Society for Vertebrate Paleontology. The San Bernardino County Museum in Redlands is well equipped to accept and curate paleontological specimens.

Response to Comment 74. Without an accepted, defined District using a landscape approach does not work either since there are no accepted boundaries for determining a cumulative area. Based on ethnographic studies we could use a 800 sq. km area or greater, but a more realistic cumulative boundary might be what is inside the 1-mile diameter of the record search area. The cumulative “universe” or boundary assumed for potential cumulative impacts for cultural resources is the City limits, as this is the largest area under control of the lead agency, and this area is supported as appropriate for a cumulative analysis in the City’s General Plan EIR as well. Regardless, the EIR clearly concludes, the proposed project will not have a significant impact on cultural resources and will not have a cumulative impact on cultural resources whether the cumulative area is the City limits or the entire ethnographic region.

Response to Comment 75. The commenter is incorrect – the project hydrology study clearly shows that post-development flows will be equal or less than pre-development conditions with construction and maintenance of the proposed detention basins. Each building area will have its own basin, and the four basins across the southern boundary of the site will help assure that offsite flows will not exceed existing runoff volumes. The Final Hydrology Study is required by the City development review process to more accurately characterize drainage conditions based on the final building and property development plans. However, the final plans must be consistent and are based on the draft hydrology plan included in Appendix G-1 of the Draft EIR. Therefore, potential flooding impacts will be less than significant, as indicated in Sections 4.7.5.2 and 4.7.5.3 of the Draft EIR.

Response to Comment 76. As demonstrated in Response to Comment D-3, No. 75 above, the commenter is incorrect - the project will not cause significant drainage or flooding impacts. The project hydrological analysis clearly shows that offsite runoff in the post-development condition will not exceed pre-development conditions for downstream land uses. Therefore, the project is not expected to make any contributions to cumulatively considerable flooding impacts in this area.

The analysis in Section 4.7, *Hydrology and Water Quality*, of the DEIR also determined that the project would not result in significant water quality impacts either onsite or for downstream properties, so the project is also not expected to make any contributions to cumulatively considerable water quality impacts in this area.

Response to Comment 77. While it is correct that soil sampling last occurred in 2004, the commenter is incorrect that this requires additional soil testing. The site has lain fallow since that time, and the only farming that has occurred in the non-citrus portions of the site have been dry farming which does not require the application of pesticides or other agricultural chemicals. In fact, the site has not even been dry farmed for several years, and the onsite ruderal vegetation has only been managed for weed abatement purposes. In addition, the citrus trees have not been commercially harvested, nor have they been irrigated or maintained as a commercial activity (i.e., no pesticides or other agricultural chemicals applied). The commenter has provided no evidence why the 2004 soil samples need to be updated. For the purposes of CEQA review, the City considers the information provided in the Draft EIR to be accurate.

Response to Comment 78. The commenter is incorrect; the Draft EIR does address removing the trail segment along the Quincy Channel north of Eucalyptus Avenue. When this trail segment was first proposed, there was an under-crossing of the SR-60 planned that would allow a trail connection to be constructed along the Quincy Channel north of the freeway. Since that time, the City has eliminated that potential under-crossing, which means the segment of the trail along the channel north of Eucalyptus Avenue would not connect to any other trail. Therefore, the ProLogis project is proposing the trail follow the north side of Eucalyptus Avenue when it is realigned through the proposed project. There would then be a continuous trail up the Quincy Channel from the south to Eucalyptus Avenue, then the trail would go east and west along the north side of Eucalyptus Avenue. A similar trail improvement was required of the Westridge project approved just east of the proposed project. The EIR discusses potential conflicts with the “improve air quality and promote energy efficiency” section of the RTP in Section 4.8.7 of the Land Use and Planning chapter, page 4.8-18.

Response to Comment 79. It is true the project will remove some amount of potential affordable housing, and it will add more warehousing in this portion of the City. The project would also contribute to more warehousing City-wide (i.e., the southern portion of the City has an industrial specific plan). However, the comments regarding the significance of the impact are the opinion of the commenter and will have to be decided by the City Council. If the City decides to approve this project, it would have to adopt a Statement of Overriding Considerations to document that the benefits of the project (e.g., employment, revenues) outweigh the significant impacts of the project, as required by CEQA.

Table 3.C clearly identifies 6.65 million square feet of industrial projects in eight locations within the City (Sites 5, 6, 8-13). This list does include the WestRidge and Highland Fairview Corporate Park (“Skechers”) projects, but does not include World Logistics Center project of 41.6 million square feet of industrial space because that project was not proposed when the Notice of Preparation for this ProLogis project was prepared in 2008, which is the baseline time at which cumulative projects are established for an EIR analysis.

Response to Comment 80. The noise impact study was conducted based on applicable City noise standards, including those identified in the City’s Municipal Code and General Plan Noise Element indicated on pages 4.9-5 through 4.9-9 in the DEIR, and provided disclosure of potential noise impact areas. Specific comments on the noise study are addressed in Responses 81-93.

Response to Comment 81. The dominant on-site noise generating activity is the truck maneuvering during the loading/unloading operations at the loading docks. These noise-generating activities include trucks moving in the loading dock, idling, unloading or loading, moving out of the loading dock, and leave the site. The noise impact analysis was based on the site plan and land use assumptions for the proposed LADP development to determine that the closest distance between the loading/unloading area and the future residences to the south. This distance is approximately 280 feet. Other activities associated with the trucks on-site would be traveling at slow speed (15 mph) to get in and out of the site or to move to the designated parking area. This activity generates much lower noise level and last much shorter time when compared to the activities occurring within the loading dock area. Therefore, evaluating the potential truck-related noise within the loading dock area represents the worst case scenario.

It should be noted that noise from on-site operations, including loading/unloading and onsite maneuvering, have been adequately evaluated at the nearest noise-sensitive land uses and no significant noise impacts were identified. Similarly, even though individual truck noise from trucks driving on public streets is not regulated by the local governments (city or county), project-related traffic noise level increases along roadway segments in the project vicinity were shown to be less than 3 dBA and would not be perceptible by the human ear.

In addition, the commenter is referred to Section 4 of this document for an evaluation of a less intensive modified plan, which is a subset of the Reduced Intensity Alternative evaluated in the DEIR (and which was determined to be environmentally superior to the Proposed Project). This less intensive plan proposes to develop 4 warehouse buildings, leaving the southeast portion of the site vacant for future development of residential uses consistent with existing zoning (R-5 and RA-2) adjacent to the existing residential neighborhood to the southeast.

Response to Comment 82. The 3 dBA increase was not identified in the noise impact analysis as a threshold on page 4.9-2 in the DEIR. Rather, it was stated that “audible impacts that refer to increases in noise levels noticeable to humans generally refer to a change of 3 dB or greater, since this level has been found to be barely perceptible in exterior environment. It should be noted that, every doubling of the sound energy from the source would result in a 3 dBA increase in sound level. This would mean that, given everything else remains the same, the traffic volume needs to be doubled to cause an increase of 3 dBA in traffic noise. For noise level changes that are not perceptible by the human ear, they would not cause any audible change and would therefore not result in any significant noise impacts. The City’s noise thresholds were identified in DEIR Section 4.9.2, Existing Policies and Regulations (pages 4.9-5 to 4.9-8), where an exterior noise level of 60 to 65 dBA CNEL/Ldn and an interior noise level of 45 dBA CNEL/Ldn were identified for residential uses, as well as a maximum source land use noise level for residential uses is 60 dBA during daytime hours (7 a.m. to 10 p.m.) and 55 dBA during the nighttime hours (10 p.m. to 7 a.m.). For commercial source land uses, the maximum noise level is 65 dBA during daytime hours and 60 dBA during nighttime hours. (Source: Chapter 11.80.030, Table 11.80.030-2, City of Moreno Valley Municipal Code, City of Moreno Valley).

Response to Comment 83. The City's Municipal Code, Table 11.80.030-2, Maximum Sound Levels for Source Land Uses states that, "...restricts noise levels above 55 dBA at night and 60 dBA during the day in residential areas, when measured at a distance of 200 feet or more from the real property line of the source of the sound if the sound occurs on privately owned property, ..." Therefore, it is clear that the City's Municipal Code specifically indicates that measurement of the source noise levels would be "at a distance of 200 feet or more from the real property line of the source of the sound". For this project, the nearest residences are at a distance of 664 feet or more from the project (sound source) site. Evaluating the noise level at the nearest residential uses meets the City's definition specified in the Municipal Code.

In addition, the commenter is referred to Section 4 of this document for an evaluation of a less intensive modified plan, which is a subset of the Reduced Intensity Alternative evaluated in the DEIR (and which was determined to be environmentally superior to the Proposed Project). This less intensive plan proposes to develop 4 warehouse buildings, leaving the southeast portion of the site vacant for future development of residential uses consistent with existing zoning (R-5 and RA-2) adjacent to the existing residential neighborhood to the southeast. This alternative plan would substantially reduce noise impacts from warehousing for the residences southeast of the project site.

Response to Comment 84. The City's noise thresholds for transportation sources were identified in the DEIR Section 4.9.2, Existing Policies and Regulations (pages 4.9-5 to 4.9-8), where an exterior noise level of 60 to 65 dBA CNEL/Ldn and an interior noise level of 45 dBA CNEL/Ldn were identified for residential uses, For industrial land uses, the City identifies 70 dBA CNEL as the acceptable exterior noise threshold. Most of the roadway segments in the project vicinity would have up to 2.0 dBA increase in traffic noise as a result of the project-related traffic. This range of traffic noise level increases would not be perceptible by the human ear in an outdoor environment. The only exception is along Eucalyptus Avenue between Moreno Beach Drive and Redlands Boulevard, where the project-related traffic noise level increases would be from 2.5 to 13.6 dBA under the Existing With Project Conditions and from 4.5 to 13.3 dBA under the 2012 With Project Conditions. Since this segment of the road goes or will go through industrial land uses and vacant land, the City's noise standard for industrial land uses of 70 dBA CNEL was used. The 70 dBA CNEL noise contour would be confined to within the roadway right-of-way, therefore, there would be no significant traffic noise impact on land uses along the road.

Response to Comment 85. The City has separate noise standards regulating mobile (traffic) and stationary (on-site operational activity) noise sources in its General Plan Noise Element and Municipal Code. Therefore, noise from different sources is analyzed based on the noise regulations applicable to the activity generating it. The City's noise standards regulating traffic noise are those from the General Plan Noise Element in terms of the 24-hour weighted community noise equivalent level (CNEL) to protect residents during the more sensitive evening and nighttime hours from noise exposure. The CNEL noise metric is averaged and weighted over a 24-hour period, so it is not practical or feasible to combine the CNEL with the short-term, intermittent noise events associated with stationary sources such as truck loading/unloading activities or activity in the parking lot. Chapter 9.03.040 of the City's Planning and Zoning Code states that in all residential districts, air conditioners, heating, cooling, and ventilating equipment and all other mechanical lighting or electrical devices shall be operated so that noise levels do not exceed 60 dBA (L_{dn}) at the property line. The City's Municipal Code, Section 9.10.140, specifies that all commercial and industrial uses shall be operated so that noise created by any loudspeaker, bells, gongs, buzzers, or other noise attenuation or attracting devices shall not exceed 55 dBA at any one time beyond the boundaries of the property. Chapter 11.80.030, Table 11.80.030-2, City of Moreno Valley Municipal Code, sets a maximum source land use noise level for residential uses as 60 dBA during daytime hours (7 a.m. to 10 p.m.) and 55 dBA during the nighttime hours (10 p.m. to 7 a.m.). For commercial source land uses, the maximum noise level is 65 dBA during daytime hours and 60 dBA during nighttime hours. The City does not have noise standards regulating stationary sources such as on-site loading/unloading activities, therefore,

the percentile exceedance levels (Ln) recommended in the State's Modal Community Noise Ordinance, which represent the noise levels that were exceeded for N percent of the time during the one-hour analysis period, are used in the analysis (DEIR, page 4.9-21 under Long-term Operational Noise Impacts for Truck Loading/Unloading Operations) Because the adjacent future development had no final plans available at the time the noise impact study was conducted, the future potential noise impact from on-site operations was evaluated separately using the best assumptions available at the time the noise impact analysis was conducted. The closest possible loading/unloading area was used for on-site operations adjacent to the future planned residential uses.

Response to Comment 86. Please refer to Responses to Comments D-3, Nos. 84 and 85 above for traffic noise impact analysis. Also, please refer Response to Comment D-3, No. 85 on the use of separate noise standards from different noise sources. Please refer to the Response to Comment D-3, No. 83 on the noise level analyzed at the nearest residential property line, rather than the project's own property line. The proposed on-site building would function as a noise barrier for receivers on the opposite side of the noise source. As a rule-of-thumb, a noise barrier that blocks the line-of-sight between the noise source and the receiver would provide at least a 5 dBA in noise reduction (Based on Caltrans Technical Noise Supplement (TeNS, Caltrans, November 2009), for every 2 feet increase in barrier height, an additional 1 dBA noise reduction would be achieved). Since the building would be at least 10 feet above ground and is much higher than the barrier height that barely blocks the line-of-sight, it would provide noise attenuation higher than 5 dBA.

Response to Comment 87. The noise impact analysis evaluated existing and future ambient noise level increases by the project-related traffic on roadway segments in the project vicinity, and determined that no significant noise impacts would occur, partly since the majority of the roadway segments would not have noise level increases that are audible in the outdoor environment and partly since there are no sensitive land uses along the roadway segments with relatively large project-related traffic and the projected noise levels would not exceed the exterior noise standards for the land uses along these segments (industrial uses and vacant land). The City's noise thresholds for transportation sources were identified in 4.9.2, Existing Policies and Regulations (Pages 4.9-5 to 4.9-8), where an exterior noise level of 60 to 65 dBA CNEL/Ldn and an interior noise level of 45 dBA CNEL/Ldn were identified for residential uses, For industrial land uses, the City identifies 70 dBA CNEL as the acceptable exterior noise threshold. Most of the roadway segments in the project vicinity would have up to 2.0 dBA increase in traffic noise as a result of the project-related traffic. This range of traffic noise level increases would not be perceptible by the human ear in an outdoor environment. The only exception is along Eucalyptus Avenue between Moreno Beach Drive and Redlands Boulevard, where the project-related traffic noise level increases would be from 2.5 to 13.6 dBA under the Existing With Project Conditions and from 4.5 to 13.3 dBA under the 2012 With Project Conditions. Since this segment of the road goes or will go through industrial land uses and vacant land, and the noise standard for industrial land uses, the 70 dBA CNEL noise contour would be confined to within the roadway right-of-way and would not impact these industrial land uses, there would be no significant noise impact on land uses along the road. Therefore, no significant traffic noise impacts would occur. Similarly, for on-site operational noise sources, even though the ambient noise level would increase as a result of the project operations, no noise-sensitive land uses would be exposed to noise levels that exceed the City's noise standards for such uses.

Response to Comment 88. Please refer to the response for Response to Comment D-3, No. 87 for the existing noise levels in the project vicinity. The City's General Plan Noise Element (or any other Element) does not have noise level restrictions specified for construction activity. The City's Municipal Code, Chapter 11.80.030, prohibits grading activities between the hours of 8:00 p.m. and 7:00 a.m. and prohibits construction activities from 8:00 p.m. to 6:00 a.m. during the week and between 8:00 p.m. and 7:00 a.m. on weekends and holidays. However, it does not specify any upper noise limits for construction activity. Compliance with the construction hours specified in the City's Municipal Code would result in construction noise impacts that are less than significant. While impacts would be considered less than significant as long as construction activities occur within the designated hours

identified in the City's Municipal Code, mitigation measures 4.9.6.1A through 4.9.6.1D have been identified to reduce the noise levels that would expose nearby sensitive receptors to high construction noise.

It should be noted that the noise levels obtained from the 1987 edition of Noise Control for Buildings and Manufacturing Plants (Bolt, Beranek & Newman, 1987) represent a conservative analysis for construction equipment. Because of technology advancement, most current day construction equipment emits lower noise levels compared to the 1987 version.

In addition, the commenter is referred to Section 4 of this document for an evaluation of a less intensive modified plan, which is a subset of the Reduced Intensity Alternative evaluated in the DEIR (and which was determined to be environmentally superior to the Proposed Project). This less intensive plan proposes to develop 4 warehouse buildings, leaving the southeast portion of the site vacant for future development of residential uses consistent with existing zoning (R-5 and RA-2) adjacent to the existing residential neighborhood to the southeast. This alternative plan would substantially reduce noise impacts from warehousing for the residences southeast of the project site.

Response to Comment 89. The City's General Plan Noise Element (or any other Element) does not have noise level restrictions specified for construction activity. Policy 6.5.2 only states that construction activities shall be operated in a manner that limits noise impacts on surrounding uses. The City's Municipal Code, Chapter 11.80.030, prohibits grading activities between the hours of 8:00 p.m. and 7:00 a.m. and prohibits construction activities from 8:00 p.m. to 6:00 a.m. during the week and between 8:00 p.m. and 7:00 a.m. on weekends and holidays. However, it does not specify any upper noise limits for construction activity. Compliance with the construction hours specified in the City's Municipal Code would result in construction noise impacts that are less than significant. While impacts would be considered less than significant as long as construction activities occur within the designated hours identified in the City's Municipal Code, Mitigation Measures 4.9.6.1A through 4.9.6.1D have been identified to reduce the noise levels that would expose nearby sensitive receptors to high construction noise.

Response to Comment 90. Please refer to Response to Comment D-3, No. 89 above on construction activity meeting the City's requirements identified in its Municipal Code and to limit noise closest to the existing residences. Mitigation Measure 4.9.6.1D has been amended as follows:

4.9.6.1D. *During all-project site construction activities at Building 6 (i.e., closest to existing residences), the construction contractor shall limit all construction-related activities ~~that would result in high noise levels~~ to between the hours of 6:00 a.m. and 8:00 p.m. on weekdays and between the hours of 7:00 a.m. to 8:00 p.m. on weekends and holidays, unless written approval is obtained from the City Building Official or City Engineer for specific construction activities that must be conducted outside of the permitted time periods.*

For activities that would be conducted inside the building/structure and would not result in any noise annoyance to off-site land uses, they can occur outside of the hours specified in the Municipal Code.

Response to Comment 91. According to the project noise assessment, none of these measures would be required for noise mitigation purposes.

No significant construction noise impacts would occur if construction of the proposed project would occur within the permitted hours of 6:00 a.m. to 8:00 p.m. of any working day, and within the permitted hours of 7:00 a.m. and 8:00 p.m. on weekends and federal holidays. Compliance with the construction hours specified in the City's Municipal Code would result in construction noise impacts that are less than significant. While impacts would be considered less than significant as long as construction activities occur within the designated hours identified in the City's Municipal Code.

Mitigation Measures 4.9.6.1A – 4.9.6.1D were identified in the Draft EIR to ensure that the City's noise standards are implemented.

As indicated in the noise impact study, no noise barriers would be required during project construction (DEIR, page 4.9-26 under Construction Noise Impact nor are they required during operation of the proposed project (DEIR, page 4.9-24 under Combined Noise Levels from On-site Stationary Sources). The proposed project will comply with all mitigation measures identified and comply with applicable federal, State, and City guidelines.

Response to Comment 92. The noise impact analysis has evaluated the project's cumulative impacts from both mobile and stationary sources. For example, based on all available information and provided future projected traffic noise along roadway segments in the project vicinity under the Project Buildout (2035) and General Plan Buildout conditions. As shown in Tables 4.9.J through 4.9.M on pages 4.9-15 to 4.9-20 of the DEIR, project-related traffic noise level increases under these two scenarios would be 1.3 dBA or less and the proposed land uses would not be significantly impacted by the future traffic noise in the project vicinity. Furthermore, on DEIR pages 4.9-20 through 4.9-24, with a worst-case scenario of all on-site stationary noise sources occurring at the same time with their maximum noise level, the maximum noise level measured at 200 feet from the project's southern boundary would be 55 dBA L_{max} . Although this "combined" noise level is not likely to occur due to the intermittent nature of these noise events, if it occurs, it would still not exceed the City's 55 dBA L_{max} nighttime standard for residential uses. Therefore, no significant cumulative noise impacts were identified, either from mobile or from stationary noise sources.

Response to Comment 93. After review, the LSA Noise Assessment Group determined that none of these references provide additional relevant information to determine the project's noise impacts in a more accurate or appropriate manner. All project-related mobile and stationary noise sources have been evaluated and compared to noise standards applicable to these different noise sources. No additional or overlapping noise analysis is required to confirm the findings in the noise impact analysis.

Response to Comment 94. The City of Moreno Valley uses a more restrictive, higher truck generating rate for high cube warehouses (buildings over 200 KSF). The total trip generation of the project used in the analysis is higher than that if the analysis was purely based on ITE rates.

Response to Comment 95. The commenter is incorrect - the analysis does not use a plan to plan comparison and uses the trips from the proposed project in the analysis. The "Without Project" analyses for all scenarios are based on conditions where the proposed site is vacant. Therefore, the comparison between without and with project conditions is comparing no development on site with the proposed project. An existing plus project analysis has also been included which evaluates the impacts of the project on existing physical conditions.

Response to Comment 96. LOS is a metric used by traffic engineers throughout the state to evaluate traffic conditions. LOS is based on delay and is a function of traffic volumes and capacity at intersections. Section 4.11.1.3 of the DEIR explains the concept of LOS. In addition, the Traffic Study also includes v/c ratios as requested by the commenter.

Response to Comment 97. In terms of traffic, most of the trips are using the SR-60 freeway. The routes from the project to the SR-60 freeway do not pass through existing and future residential areas or schools with the proposed change to the Circulation Element. An examination of school locations in the area did not show any schools with direct access to the freeway. The entire traffic analysis is based on the concept of Passenger Car Equivalents (PCE) which converts trucks to an equivalent number of passenger cars to correctly evaluate impacts of trucks which can be larger and slower than passenger cars. The traffic impacts of trucks sharing the road with passenger vehicles have been adequately analyzed.

Response to Comment 98. The following table provides an analysis of the project’s consistency with, or the inapplicability of, the various transportation-related policies cited on pages 4.11-11 to 4.11-14 of the Draft EIR. Please note that this additional information does not result in identification of new or severe impacts.

City General Plan Policies/Objectives	Project Consistency
Community Development Element	
Policy 2.2.17: Discourage nonresidential uses on local residential streets that generate traffic, noise, or other characteristics that would adversely affect nearby residents.	As identified on page 4.11-37 in the Draft EIR, the project proposes to eliminate the planned Quincy Street connection to the north of proposed Eucalyptus Avenue. Elimination of the Quincy Street connection creates a physical barrier between the proposed project’s industrial uses and the nearby residential uses, and will help to segregate and prevent truck traffic from entering future residential streets.
Circulation Element	
Objective 5.1: Create a safe, efficient, and neighborhood-friendly street system.	The project is an industrial development and as such does not fall under a “neighborhood” as used in the General Plan. The project will construct roadways along its frontage to City standards. See response to Policy 2.2.17.
Policy 5.1.1: Plan access and circulation of each development project to accommodate vehicles (including emergency vehicles and trash trucks), pedestrians, and bicycles.	Access and circulation for the project will accommodate vehicles (including emergency vehicles and trash trucks), pedestrians, and bicycles.
Policy 5.1.2: Plan the circulation system to reduce conflicts between vehicular, pedestrian, and bicycle traffic.	The project will construct roadways and sidewalks to City Standards. The City Standards are developed to create safe conditions.
Policy 5.1.3: Require adequate off-street parking for all developments.	The project provides off street parking based on City standards.
Policy 5.1.4: Driveway placement shall be designed for safety and to enhance circulation wherever possible.	The project will construct driveways to City Standards. The City Standards are developed to create safe conditions.
Policy 5.1.5: Incorporate Americans with Disabilities Act (ADA) and Title 24 requirements in roadway improvements as appropriate.	City Standards include both ADA and Title 24 requirements
Policy 5.1.6: Design new developments to provide opportunity for access and circulation to future adjacent developments.	Adjacent vacant land will be provided access.
Objective 5.2: Implement access management policies.	Roadways will be constructed per City Standards that incorporate various access management policies.
Policy 5.2.1: Locate residential units with access from local streets. Minimize direct residential access from collectors. Prohibit direct single-family driveway access on arterials and higher classification roadways.	See the response above for Objective 5.2. This policy is inapplicable to the proposed industrial project.
Policy 5.2.2: Feed short local streets into collectors.	See the response above for Objective 5.2. This policy is inapplicable to the proposed industrial project.
Policy 5.2.3: Encourage the incorporation of traffic-calming design into local and collector streets to promote safe vehicle speeds.	See the response above for Objective 5.2. This policy is inapplicable to the proposed industrial project.
Objective 5.3: Maintain LOS C on roadway links, wherever possible, and LOS D in the vicinity of SR-60 and high	As identified on page 4.11-5 in the Draft EIR, the traffic study prepared for the project

FINAL EIR - RESPONSE TO COMMENTS
ProLogis Eucalyptus Industrial Park
City of Moreno Valley

City General Plan Policies/Objectives	Project Consistency
employment centers.	utilized a level of service standard of LOS D for all City intersections and roadways analyzed in the traffic study, with the exception of Moreno Beach Drive/Cottonwood Avenue, at which the level of service standard of LOS C was used. For all signalized ramp terminus intersections on SR-60, the level of service standard of between LOS C and LOS D was used. As identified on pages 4.11-31, 4.11-32, 4.11-33, 4.11-35, and 4.11-37 in the Draft EIR, all impacts to City intersections are mitigated to less than significant levels with mitigation.
Policy 5.3.1: Obtain right-of-way and construct roadways in accordance with the designation shown on the General Plan Circulation Element Map and the City street improvement standards.	The project will be required to construct adjacent half street sections in accordance with City street improvement standards. Although the project will not construct Encilia Avenue, the project will preserve right-of-way along the south project boundary to allow Encilia Avenue to be constructed in the future in accordance with the designation shown on the General Plan Circulation Element Map and the City street improvement standards.
Policy 5.3.5: Ensure that new development pays a fair-share cost to provide local and regional transportation improvements and to mitigate cumulative traffic impacts. For this purpose, require new developments to participate in Transportation Uniform Mitigation Fee (TUMF), the Development Impact Fee Program (DIF), and any other applicable transportation fee programs and benefit assessment districts.	As identified on pages 4.11-31, 4.11-32, 4.11-33, and 4.11-35 in the Draft EIR, the project applicant shall implement transportation improvements, either through fees paid to the City of Moreno Valley based on the City's DIF system and the County's TUMF program, or through a fair-share contribution to the City of Moreno Valley.
Policy 5.3.6: Where new developments would increase traffic flows beyond the LOS C (or LOS D, where applicable), require appropriate and feasible mitigation measures as a condition of approval. Such measures may include extra right-of-way and improvements to accommodate left-turn and right-turn lanes at intersections, or other improvements.	See response to Objective 5.3. All impacts to City intersections are mitigated to less than significant levels with mitigation.
Policy 5.3.7: Provide consideration to projects that have overriding regional or local benefits that would be desirable even though the LOS standards cannot be met. These projects would be required to analyze traffic impacts and mitigate such impacts to the extent that it is deemed feasible.	See response to Objective 5.3. All impacts to City intersections are mitigated to less than significant levels with mitigation. Impacts to freeway ramps and freeway segments cannot be mitigated and would remain significant and unavoidable until such time that improvements are constructed. Caltrans does not have a mechanism for development projects to contribute to improvements on State Highways and the City has no control over when and how regional freeway improvements will be constructed.
Objective 5.4: Maximize efficiency of the regional circulation system through close coordination with State and regional agencies and implementation of regional transportation policies.	As identified on page 4.11-30 in the Draft EIR, the traffic study includes analysis of regional transportation facilities. These facilities are funded by the Transportation Uniform Mitigation Fee (TUMF), which establishes jurisdictional fair-share contributions for regional transportation facilities (e.g., freeway interchanges, regional

City General Plan Policies/Objectives	Project Consistency
	<p>arterials, and railroad grade separations) in western Riverside County. The following improvements within the project area are included in the TUMF program:</p> <ul style="list-style-type: none"> • SR-60/Moreno Beach Drive Interchange reconstruction • SR-60/Redlands Boulevard Interchange reconstruction
Policy 5.4.1: Coordinate with Caltrans and the Riverside County Transportation Commission (RCTC) to identify and protect ultimate rights-of-way, including those for freeways, regional arterial projects, transit, bikeways, and interchange expansion.	See response to Objective 5.4.4.
Policy 5.4.2: Coordinate with Caltrans and the RCTC regarding the integration of Intelligent Transportation Systems (ITS) consistent with the principles and recommendations of the Inland Empire Regional ITS Architecture Project.	See response to Objective 5.4.4.
Objective 5.5: Maximize efficiency of the local circulation system by using appropriate policies and standards to design, locate, and size roadways.	Roadways for the project have been sized per the City's General Plan Circulation Element. A General Plan Amendment is being processed to address the location of Encilia Avenue.
Policy 5.5.3: Prohibit points of access from conflicting with other existing or planned access points. Require points of access to roadways to be separated sufficiently to maintain capacity, efficiency, and safety of the traffic flow.	Project driveways are spaced to provide sufficient sight distances to maintain the capacity, efficiency and safety of traffic flow.
Policy 5.5.4: Wherever possible, minimize the frequency of access points along streets by the consolidation of access points between adjacent properties on all circulation element streets, excluding collectors.	The project consolidates driveways wherever possible.
Policy 5.5.5: Design streets and intersections in accordance with the Moreno Valley Municipal Code.	The project will be required to construct adjacent half street sections in accordance with City street improvement standards.
Policy 5.5.8: Whenever possible, require private and public land developments to provide on-site and off-site improvements necessary to mitigate any development-generated circulation impacts. A review of each proposed land development project shall be undertaken to identify project impacts to the circulation system. The City may require developers to provide traffic impact studies prepared by qualified professionals to identify the impacts of a development.	See response to Objective 5.3 and Policy 5.3.6.
Policy 5.5.9: Design curves and grades to permit safe movement of vehicular traffic per applicable Caltrans and Moreno Valley standards.	The project will be required to construct adjacent half street sections in accordance with City street improvement standards, including appropriate curve radii standards.
Policy 5.5.10: Provide adequate sight distances for safe vehicular movement at all intersections and driveways.	The project will be required to construct adjacent half street sections in accordance with City street improvement standards, including appropriate site distance provisions.

FINAL EIR - RESPONSE TO COMMENTS
ProLogis Eucalyptus Industrial Park
City of Moreno Valley

City General Plan Policies/Objectives	Project Consistency
Objective 5.8: Encourage development of an efficient public transportation system for the entire community.	This objective is inapplicable to the proposed industrial project, because this is an objective oriented to an efficient public transportation system within the City, and is larger than a project level initiative. The project will provide bus bays in the area where RTA requests them.
Policy 5.8.1: Support the development of high-speed transit linkages, or express routes, that would benefit the citizens and employers of Moreno Valley.	See the response above for Objective 5.8. This policy is inapplicable to the proposed industrial project.
Policy 5.8.4: Ensure that all new developments make adequate provision for bus stops and turnout areas for both public transit and school bus service.	The project will provide bus bays in the area where RTA requests them.
Objective 5.10: Encourage bicycling as an alternative to single occupant vehicle travel for the purpose of reducing fuel consumption, traffic congestion, and air pollution.	This objective is inapplicable to the proposed industrial project, because this is an objective oriented to promoting bicycling within the City and is larger than a project level initiative. However, the project will provide bike lanes on Eucalyptus Avenue and also provides bike parking to facilitate alternative transportation should employees desire to bike to work.
Policy 5.10.1: Bikeways shall link residential neighborhood areas with parks, employment centers, civic and commercial areas, and schools.	The project provides bike parking to facilitate alternative transportation should employees desire to bike to work.
Objective 5.11: Eliminate obstructions that impede safe movement of vehicles, bicyclists, and pedestrians.	The project will construct roadways based on City standards, which consider all modes of travel and their safety.
Policy 5.11.2: Driveways shall be designed to avoid conflicts with pedestrian and bicycle travel.	The project will construct driveways to City Standards. The City Standards are developed to create safe conditions.
Program 5-1: Periodically review current traffic volumes, traffic collision data, and the pattern of urban development to coordinate, program, and as necessary revise the planning and prioritization of road improvements.	This program is inapplicable to the proposed industrial project, because this is a program for the City to review traffic data for the purposes of revising the transportation plan and for prioritizing roadway improvements within the City.
Program 5-2: Periodically reassess the goals, objectives and policies statements of the Circulation Element and propose amendments, as necessary.	This program is inapplicable to the proposed industrial project, because this is a program for the City to reassess the Circulation Element as necessary.
Program 5-3: Develop a comprehensive strategy to ensure full funding of the circulation system. The strategy will include the DIF, TUMF, and other funding sources that may be available to the City. In addition, the creation of benefit assessment districts, and road and bridge fee districts may be considered where appropriate.	This program is inapplicable to the proposed industrial project, because this is a program for the City to develop a comprehensive strategy to ensure full funding of the circulation system using the DIF, TUMF, other funding sources, benefit assessment districts, and road and bridge fee districts.
Program 5-4: Develop a multi-year transportation infrastructure improvement program that, to the extent feasible, phases the construction of new projects in advance of new development.	This program is inapplicable to the proposed industrial project, because this is a program for the City to develop a multi-year transportation infrastructure improvement program.

FINAL EIR - RESPONSE TO COMMENTS
ProLogis Eucalyptus Industrial Park
City of Moreno Valley

City General Plan Policies/Objectives	Project Consistency
<p>Program 5-5: The above-referenced program will prioritize circulation improvement projects to be funded from DIF, TUMF and other sources. Prioritization to consider the following factors: (a) Traffic safety; (b) Congestion relief; (c) Access to new development; and (d) Equitable benefit.</p>	<p>This program is inapplicable to the proposed industrial project, because this is a program for the City to develop a multi-year transportation infrastructure improvement program with prioritized circulation improvements.</p>
<p>Program 5-6: Conduct studies of specified arterial segments to determine if any additional improvements will be needed to maintain an acceptable LOS at General Plan build-out. Generally, these segments will be studied as new developments are proposed in their vicinity. Measures will be identified that are consistent with the Circulation Element designation of these roadway segments, such as additional turn lanes at intersections, signal optimization by coordination and enhanced phasing, and travel demand management measures. The study of specified arterial segments will be required to identify measures to maintain an acceptable LOS at General Plan build-out for at least one of the reasons discussed below: (a) Segments will need improvement, but their ultimate volumes slightly exceed design capabilities. (b) Segments will need improvements but require inter-jurisdictional coordination. (c) Segments would require significant encroachment on existing adjacent development if built out to their Circulation Element designations.</p>	<p>This program is inapplicable to the proposed industrial project, because this is a program for the City to conduct studies of specified arterial segments to determine if any additional improvements will be needed to maintain an acceptable level of service at General Plan build-out.</p>
<p>Program 5-7: Establish traffic study guidelines to deal with development projects in a consistent manner. The traffic study guidelines shall include criteria for projects that propose changes in the approved General Plan land uses.</p>	<p>This program is inapplicable to the proposed industrial project, because this is a program for the City to establish traffic study guidelines. The City has traffic study guidelines and the analysis was conducted in accordance to these guidelines.</p>
<p>Program 5-13: Implement Transportation Demand Management (TDM) strategies that reduce congestion in the peak travel hours. Examples include carpooling, telecommuting, and flexible work hours.</p>	<p>Similar mitigation measures are already included in Section 4.3 Air Quality of the Draft EIR under Mitigation Measure 4.3.6.5A on page 4.3-33, Mitigation Measure 4.3.6.5B on page 4.3-34, and Mitigation Measure 4.3.6.6A on 4.3-36.</p>

Response to Comment D-3, No. 78 above explains why the project is proposing to remove the Quincy Channel trail link north of Eucalyptus Avenue (it does not connect to any trail to the north). The trail is proposed to be realigned through both the ProLogis and the WestRidge (located to the east of ProLogis project) projects to follow the north side of Eucalyptus Avenue, and then connect up to the Quincy Channel trail south of Eucalyptus Avenue. There would then be a continuous trail along the Quincy Channel from the south to Eucalyptus Avenue, then the trail would go east and west along the north side of Eucalyptus Avenue. A similar trail improvement was required of the Westridge project.

Response to Comment 99. It is correct that the Trails Commission has accepted the amendment to the Master Plan of Trails. However, the Trails Commission is not an approval body, and approval from the City Council will be required because the Master Plan of Trails is part of the General Plan.

Response to Comment 100. Beyond a delay of 100 seconds, the HCM analysis methodologies fail to accurately reflect increased delays. For future conditions, background traffic growth will lead to congestion and cumulative impacts. As development occurs, fees will be collected to improve the circulation system to accommodate growth in traffic. The project generates fewer trips than the current land use designation for the site. Therefore, the planned improvements included in the DIF

and TUMF should be sufficient to mitigate cumulative impacts from this project, as other cumulative development occurs. As stated in Section 4.11.6.4, the project will mitigate its impacts to the existing plus project conditions, per CEQA.

Response to Comment 101. The City's DIF includes the General Plan Roadway system. Since the project generates less trips than those anticipated in the General Plan, the ultimate General Plan Roadway system will be sufficient to accommodate project traffic. As new development occurs, fees will be collected to improve the circulation system to accommodate growth in traffic. As stated in Section 4.11.6.4, direct project impacts will be mitigated by the project.

Response to Comment 102. As stated in Section 4.11.6.4, of the DEIR, the project will mitigate its direct impacts to intersections based on the Existing Plus Project analysis. Cumulative impacts will be mitigated by payment of TUMF, DIF and fair-share contributions.

Response to Comment 103. Potential project-related traffic noise impacts are determined based on the worst-case scenario, which is typically the build-out year that has the highest traffic volumes. Traffic noise impacts for the opening year are presented to show interim year project-related increases, which were found to be small and less than significant. Since overall traffic volumes would be higher in 2016 when compared to the overall traffic volumes in 2012, project-related contribution would be even smaller in 2016 compared to 2012. Therefore, the use of 2012 as the opening year would not affect the findings in the noise impact analysis since project-related traffic noise level increases in 2016 would be smaller than those identified in 2012. Noise impacts associated with on-site stationary sources, such as loading/unloading operations, would not be affected by the difference in opening year because they are analyzed with project buildout conditions for the worst case scenario on potential noise impacts on adjacent land uses. Therefore, no significant effect would occur for the difference in opening year in the noise impact analysis.

Response to Comment 104. The latest information from the County is that the Badlands landfill will close in 2024 not 2016, so the references to 2016 will be changed (see below). Therefore, the project will not have a significant impact on solid waste disposal services because the landfill will have adequate capacity to accommodate the proposed project's waste stream.

4.12.1.7 Cumulative Impacts to Solid Waste Services (Draft EIR p.4.12-5)

AB 939 mandates the reduction of solid waste disposal in landfills. While the Badlands Sanitary Landfill has an estimated closure date of ~~2016~~ 2024, as previously identified, the City's waste hauler will also use other County landfills in the area (e.g., Lamb Canyon Landfill and El Sobrante Landfill). The estimated closure date of the Lamb Canyon Landfill is 2023 and the estimated closure date of the El Sobrante Landfill is 2030. With planned expansion activities of landfills in the project vicinity and projected growth rates contained within the City's General Plan EIR, sufficient landfill capacity would exist to accommodate future disposal needs through City build out in 2030. Therefore, build out of the City General Plan would not create demands for solid waste services that would exceed the capabilities of the County's waste management system. Consequently, cumulative impacts associated with solid waste within the City would be considered less than significant.

Response to Comment 105. The commenter is incorrect. A comprehensive Water Supply Assessment was prepared for this project, which was extensively discussed in Section 4.12.2.6.2 of the Draft EIR. That analysis evaluated available water supplies compared to current and future projected conditions under a variety of scenarios (i.e., various drought conditions). That analysis determined there were sufficient supplies of water available to serve the project over a 20-year time frame.

Response to Comment 106. The project will install infrastructure to support solar power, which is all the City is encouraging, thus the consistency statement. The applicant has agreed to obtain LEED

Certified status meaning that the buildings will be much closer to zero net energy (which includes both operational energy consumption and the life cycle of building materials) than were buildings constructed in the past, thus they are consistent with the aim of zero net energy. The Draft EIR discusses the existing greenhouse gas/climate change setting including the main gases of concern; current emissions inventory at the global, US, and State levels; a detailed description of what global warming is and the effects that result, all of which could be considered the “threat of greenhouse gas pollution and global warming.” The EIR attempts to present a non-sensational, balanced description based on the best information available. Section 4.13.2 describes the entire regulatory setting, including all applicable federal, State and City of Moreno Valley regulations and policies.

Response to Comment 107. The process of LEED certification is a demanding one that includes not only aspects of the building construction but also is greatly affected by tenant operations. As the EIR is only covering aspects under the control of the applicant and not the future tenant, achieving the LEED status can only be discussed in general terms. The feasibility of suggested GHG-related mitigation measures have been discussed in other responses, see the Responses to Comments 60, 108, 112 in this letter (D-3, Johnson & Sedlack) and Responses to Comments 1 and 27 in Letter D-2 (Sierra Club).

Response to Comment 108. Mitigation Measure 4.13.6.1A lists select features from Title 24 of the California Code of Regulations to emphasize these important features are included in the project construction. The measure states that the features are required by Title 24 of the California Code of Regulations. Since the measures are required by Code, they are feasible. Mitigation measures which require compliance with environmental regulations have been found by the California courts to be common and reasonable mitigation measures (*Sundstrom v. County of Mendocino* (11988) 202 Cal. App.3d)

Response to Comment 109. A clerical error was made in the Draft EIR regarding energy conservation and project mitigation. Section 4.3, *Air Quality*, contains two mitigation measures that refer to a 20 percent reduction in project energy use beyond or below Title 24. First, the “20 percent reduction” phrase refers to older California Building Code requirements – these older codes were much less stringent than the current California “Green” Building Code, which includes the latest Title 24 requirements. In addition, one measure just refers to “Title 24” while the other refers to “2008 California Title 24, Part 6 Energy Efficiency Standards”. These references are inconsistent, and the measures have been modified to reflect the most current regulatory requirements for energy conservation. The most current California Green Building Code was adopted in 2010, but incorporates the most current Title 24, Part 6 Energy Efficiency Standards which are from 2008, not 2010. Projects that would have been able to achieve a 20 percent reduction in building energy use from previous California Building Codes would most likely not be able to achieve a 20 percent reduction from the current code because it is much more stringent than previous versions.

It should be noted that the state has already approved new energy standards effective January 1, 2014 that would require industrial buildings to achieve 20 percent or more savings above the 2008 Title 24 standard. Until that time, the project is required to achieve a 10 percent reduction from the 2008 Title 24 standards.

Response to Comment 110. The implementation of any water conservation strategy insures that water use efficiency will be improved compared to the situation of no water conservation strategy. The Mitigation Monitoring Plan states that the various activities outlined in this measure will be implemented to the satisfaction of the Planning Division prior to issuance of an occupancy permit, so construction must include some or all of these measures or no permit can be issued.

Response to Comment 111. The EIR acknowledges that the expected project GHG emissions will exceed the interim, proposed SCAQMD Tier 1, 2 and 3 thresholds, none of which have been adopted as thresholds of significance. Also, as described in Section 4.13.2, page 4.13-6, no applicable

agency, including the federal, California, and City of Moreno Valley governments, have adopted a greenhouse gas emissions threshold of significance. It is in this absence of regulatory guidance that this EIR is attempting to assess the significance of project emissions of greenhouse gases. The CEQA Guidelines do include two qualitative thresholds, which the DEIR used as the basis for significance, as discussed in Sections 4.13.5 and 4.13.6. The DEIR concludes that the project would have a less than significant impact for the first CEQA threshold: *Would the proposed project conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?* The DEIR concludes that the project would have a significant impact for the second CEQA threshold: *Would the proposed project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?* and includes Mitigation Measures 4.13.6.1A thru 4.16.6.1C to reduce this impact.

Response to Comment 112. See also Response to Comment D-3, No. 111 above. The EIR complies with OPR guidance related to GHG/Climate change analyses and all other guidance applicable to the region. With implementation of the strategies and programs described in the EIR, it was concluded that the project is consistent with the strategies to reduce California's emissions to the levels proposed in Executive Order S-3-05. Based on the threshold of the project's consistency with these measures, the project has a less than significant impact as it complies with these measures. Because the project's impacts alone would not cause or significantly contribute to global climate change, project-related CO₂e emissions and their contribution to global climate change impacts in the State of California would not make a significant contribution to cumulatively considerable GHG emission impacts.

Response to Comment 113. As discussed in Section 6.3.3 of the Draft EIR, Alternative 3 does reduce several of the significant impacts of the project, and it is feasible because the applicant controls the proposed project site. While Alternative 5 does reduce some significant impacts of the project (including land use since it would not require a GPA or ZC), the applicant does not own or control that or any other potential offsite location for this project. Therefore, Alternative 5 is not feasible compared to Alternative 3. In addition, Alternative 3 is the only one that eliminates significant impacts to agricultural resources, so it was selected as the Environmentally Superior Alternative. For additional discussion, see Response 7 earlier in this section.

Response to Comment 114. As explained in Response to Comment D-3, No. 113 above, Alternative 5 is not feasible compared to Alternative 3 as the applicant does not own or control any offsite properties that would accommodate the proposed project. In addition, almost all of the significant impacts of the project would also be present at an alternative site, based on the proposed land uses and air pollutant emissions. Alternative 3 does reduce some of the significant impacts of the proposed project, and it will be up to the discretion of the City Council whether to approve the proposed project, or adopt one of the project alternatives. If the City Council approves the proposed project, it would have to adopt a Statement of Overriding Considerations that demonstrates the benefits of the project (e.g., employment, revenues) outweigh the significant impacts of the project.

**RE: Comment on Draft Environmental Impact Report for ProLogis
Eucalyptus Industrial Park (State Clearinghouse No. 2008021002)**

Dear Mr. Bradshaw:

I am writing on behalf of Laborers International Union of North America, Local Union No. 1184 and its members living in Riverside County (collectively "LIUNA Local Union No. 1184" or "LIUNA" or "Commenters") regarding the Draft Environmental Impact Report ("DEIR") prepared for the ProLogis Eucalyptus Industrial Park, State Clearinghouse No. 2008021002 ("Project").

We have reviewed the DEIR with the assistance of:

1. Atmospheric Scientist, Dr. James Clark, Ph.D.
2. Hydrogeologist, Matthew Hagemann, C.Hg., MS.

These experts have prepared written comments that are attached hereto, and which are incorporated in their entirety. The City of Moreno Valley ("City") should respond to the expert comments separately. These experts and our own independent review demonstrate that the DEIR is woefully inadequate and that a new supplemental EIR is required to be prepared and recirculated for public comment. In particular, the EIR suffers from the following significant errors and omissions, among others:

RESPONSES TO LETTER D-4A

Response to Comment 1: The following responses will address the specific comments made by the commenter regarding these topics.

Response to Comment 2: The project information summarized by the commenter is correct.

Response to Comment 3: The City understands comments made by the LIUNA Local Union No. 1184 regarding standing to make these comments. While it is not the City's responsibility to determine standing, the following responses will address all the comments raised in this letter consistent with CEQA.

Response to Comment 4: The information provided in the letter regarding several EIR and CEQA topics is factually correct, but it may or may not apply to this particular EIR for this specific project. Nonetheless, the following responses address specific comments made by the commenter on the Draft EIR for the ProLogis project.

Response to Comment 5: The information provided in the letter regarding recirculation of an EIR under is factually correct, but it may or may not apply to this particular EIR for this specific project. Nonetheless, the following responses address specific comments made by the commenter on the Draft EIR for the ProLogis project. The City contends that this information does not rise to the level of that requiring circulation, but several mitigation measures have been added to make certain there will be no significant impacts relative to the issues raised by the commenter.

Response to Comment 6: The commenter is correct that the project description of the EIR must describe the "whole of the action" as outlined in CEQA. However, the City believes the EIR does provide that information and does not segment the utility or infrastructure improvements outlined by the commenter. The discussion related to the Westridge project was only relative to the timing and funding of the various improvements for which both projects would either construct or provide a fair share contribution towards their construction, since both were being processed at approximately the same time. Section 3.5.4 of the ProLogis EIR clearly identifies the various utility improvements for which the project will be responsible, and Section 3.5.5 outlines the road and intersection improvements for which the ProLogis project is responsible. The following discussion in Section 3.5.1, Operations and Infrastructure Timing, was included to show the relationship of the two projects in terms of the timing of the various improvements.

3.5.1 Operations and Infrastructure Timing

The EIR evaluated "worst case" conditions of the project operating 24/7. If the proposed project is constructed prior to the West Ridge project, ProLogis will install the infrastructure necessary to serve its project (e.g., roads, water, and sewer) and will be reimbursed by the City from the West Ridge developer at the time that project is constructed. If the West Ridge project is constructed first, ProLogis will contribute an appropriate amount to the City for a reimbursement account to help off-site improvement costs installed by the West Ridge project that serve the ProLogis project. The timing of improvements shall be coordinated by the City in cooperation with ProLogis and the West Ridge developer.

Therefore, the project EIR does not segment these improvements from inclusion in the project description. The impacts of these improvements are also addressed in the appropriate sections of the environmental analysis (e.g., 4.3, *Air Quality*, 4.11, *Transportation and Traffic*, and 4.12, *Utilities*).

Response to Comment 7: The information provided in the letter regarding implementation of all feasible mitigation measures is factually correct, but it may or may not apply to this particular EIR for this specific project. Nonetheless, the following responses address specific comments made by the commenter on specific sections of the Draft EIR and mitigation for impacts on those sections.

Response to Comment 8: The commenter presents information that indicates preservation of habitat is appropriate mitigation for loss of habitat based on the results of the *Mira Mar* case in Oceanside. The commenter then concludes that concept can be applied to loss of prime agricultural land. The comparison may not be directly applicable, but an Appeals Court decision (*Building Industry Association of Central California v. County of Stanislaus*) certified in November 29, 2010 may be more applicable to this situation. That case concluded that it is appropriate to mitigate at a 1:1 ratio for the loss of prime agricultural land through the acquisition of an offsite agricultural easement if such a program is established by a county or regional governmental entity. However, as outlined in the DEIR section, there is no established County or regional program, and active agriculture in western Riverside County is no longer economically viable or feasible.

The commenter also quotes the “farmland mitigation measures” in the General Plan EIR (GPEIR) out of context. The commenter implies that these measures are recommended in the GPEIR, but actually the EIR section, after only describing the potential measures, concludes that they are all infeasible, does not adopt any mitigation measures for loss of farmland, and concludes impacts related to loss of farmland are significant and unavoidable. There are also numerous references in the GP that state the City’s support of interim farmland and agricultural use throughout the City in all land use designations as long as they are economically viable as outlined in Objective 4.1 shown below and included with other materials in Final EIR Appendix E:

Objective 4.1 “Retain agricultural open space as long as agricultural activities can be economically conducted, and are desired by agricultural interests, and provide for an orderly transition of agricultural lands to other urban and rural uses.”

It should also be noted that a statement of overriding considerations was adopted for the GPEIR to address this and other significant impacts of implementing the City GP. Therefore, no mitigation is required for the ProLogis project relative to loss of farmland, as outlined in the DEIR.

Response to Comment 9: The information provided in the letter regarding several EIR and CEQA topics is factually correct, but it may or may not apply to this particular EIR for this specific project. The City believes the EIR did use the proper baseline for hazardous materials. The commenter states that the Phase 1 ESA reports for the site were “out of date”, however, CEQA does not mandate when the data from certain types of studies, such as Phase 1 reports, are considered out of date. The only concept of “out of date” refers to the typical limitation for financial institutions upon which to base their decisions using Phase 1 ESA reports. For that purpose, Phase 1 reports are typically only considered “good” for 90 days. However, if it can be established that the conditions outlined in the Phase 1 have not changed since that report was prepared, a lead agency may rely on that information for the purposes of CEQA documentation. That is the case with the ProLogis EIR, in that the project applicant acquired the project site in 2008 and hired a local grower to manage the citrus trees until December of 2013 when the trees were removed to reduce irrigation and maintenance costs. Until the time the trees were removed, the developer indicates no agricultural chemicals were applied to the property, and the commenter’s own records show that various materials were applied back in 2010.

The commenter also questioned the number of samples taken on the site. The comment references the Department of Toxic Substance Control Interim Guidance for Sampling Agricultural Properties (Third Revision), dated August 7, 2008 as the standard that should have been used for pesticide sampling conducted during the several Phase I Environmental Site Assessment (ESA) reports for

various parcels that comprise the site. The referenced (California) Department of Toxic Substance Control (DTSC) document is:

“specific to agricultural properties where pesticides and/or fertilizers were presumably applied uniformly, for agricultural purposes consistent with normal application practices. It is applicable to agricultural properties that are currently under cultivation with row, fiber or food crops, orchards, or pasture. It is also applicable to fallow and former agricultural properties that are no longer in production and have not been disturbed beyond normal disking and plowing practices. Each field of the same crop is assumed to have been watered, fertilized and treated with agricultural chemicals to the same degree across the field. Because of this homogeneous application, contaminant levels are expected to be similar at any given location within the field. This is the underlying premise of the guidance...”

Properties not requiring agricultural sampling under the referenced guidance include property used exclusively as grazing lands or pasture. The guidance also states that dry-land farming, which is the practice of growing a crop without irrigation, are not treated with pesticides or infrequently treated, since the lack of water does not provide a desirable habitat for most agricultural pests. Properties that clearly qualify as dry-land farming do not need further investigation for pesticides or metals. *“For properties where there is uncertainty regarding dry-land farming, limited sampling may be conducted at a rate of four discrete samples per site, with one sample collected in each quadrant.”* It should be noted that five samples were taken on the ProLogis site, one each in the four quadrants and one near the northern portion of the site near the former UST location.

The DTSCs 2003 Interim Guidance for Sampling Agricultural Properties, which they referenced as to why additional samples for organo-chloro-phosphate (OCPs) were necessary, was taken out of context. The 2008 Interim Guidance for Sampling Agricultural Properties speaks to how an environmental assessor for the DTSC should conduct an evaluation of an agricultural property to be converted into another use. The guidance is envisioned as being most relevant to sites on which schools will be constructed or for residential use. However, it does apply to any project with DTSC oversight. Properties not subject to this guidance include former agricultural property that has been graded for construction or other purposes, land used exclusively for grazing or pasture, most dry-land farming fields, and sites that were agricultural properties prior to 1950. The subject site would be an exempted site as it was dry farmed land.

Based on standard spraying practices for such crops, the number of soil samples taken at the subject site during the Phase I ESA demonstrate that pesticide use was infrequent and limited over the site, and are at levels that are below regulatory requirements for residential property. These are the baseline conditions with respect to pesticide use at the site.

In terms of sample frequency, the sampling pattern should be sufficient to characterize the site. The guidance, done for school and residential properties, apparently interprets this as a range for properties from one acre to fifty acres (with the number of each of the following categories increasing every few acres), of between 4 and 60 borings, 4 and 15 composite organo-chloro-phosphate (OCP) samples. For acreages greater than 50, consultation with the DTSC is required. However, mitigation of frequency is available to sites based on documentation of consistent ownership, operator, and use. It should be noted that none of our samples were composites but all were discrete samples, so they are more representative of what is actually on the properties. The DTSC's document is a guidance document for school sites and residential properties not those that are to be commercial/industrial. The intent is to avoid having children (schools, residential) from coming in contact with soils with high levels of OCPs. Therefore, evidence supports the EIR's contention that there are no significant OCPs present on the site, and only trace amounts were detected in the onsite sampling in 2003.

The state records provided by the commenter indicate that approximately 200 pounds of 2,4-D, 2-Ethylhexyl Ester (DEHE) was applied to the site as a general herbicide (based on data in the

commenter's letter and appendix) in 2010. DEHE is a very common herbicide used in the United States and can be purchased at retailers like Home Depot. Assuming it was applied to the 70 acres of the site without citrus trees (i.e., available for dry farming), this equals less than 3 pounds per acre, or 0.00002 ounce per square foot, in other words a very small amount. In addition, this chemical has a relatively short half-life. Data from the National Library of Medicine, provided by the commenter, indicates that DEHE has a half-life of 1 to 51 days when applied as a spray, and 4-16 days when applied in granular form. In only 6 months there would be less than 0.5 percent of the original product in the soil, so this is not a significant soil contamination issue. It is expected this chemical would have become inert or diluted well past the point of concern or any established governmental action level in the 3 years or more from its most recent application in 2010.

NOTE: There is NO evidence that DDT, DDE, or arsenic were ever applied to the project site, they were not typical pesticides that were sprayed for dry farming and/or citrus production in this area.

The existing conditions at the time the NOP was issued (February 21, 2012), which is when the timeframe of baseline conditions is established, were there was no dry framing or citrus production being conducted on the site, although the trees were being maintained at a minimal level so they would not die and become a fire hazard.

Although both Phase 1 ESA reports were done in 2003, the onsite conditions have not changed appreciably since the Phase 1 reports were done. The commenter also stated the "entire" site had not been surveyed. While this may be technically correct, the commenter failed to note that 98.5 percent or 121 acres of the 122.8-acre site was surveyed, and the 1.8 acres not surveyed were on the far west boundary of the site and planted with citrus, so it is reasonable to conclude the conditions found on the rest of the site apply to this portion as well. It should also be noted that the underground storage tank that would on the site at one time was removed or remediated according to the "Report of Removal of the Abandoned Underground Storage Tank" dated January 28, 2004 in the DEIR Appendix F.

Section 2.3, *Interviews*, in the Phase 1 reports indicate the following:

On November 12, 2003, our environmental assessor interviewed Mr. Pat Kawamoto, owner of APN 477-120-015. Mr. Kawamoto reportedly has owned the land for over 25 years. According to Mr. Kawamoto, no petroleum storage tanks have ever been present on the project site. Mr. Kawamoto indicated that the project site had been regularly leased to Mr. David Bruno of Bruno Ranching for agricultural purposes. Mr. Kawamoto had no knowledge of any pesticides or PCBs stored or used on the site.

In addition, the following information from the EIR (Section 4.6, *Hazards and Hazardous Materials*, bears directly on this discussion:

...because the project site has been historically utilized for agricultural production and because of the close proximity to SR-60, soil samples were taken in various parts of the project site to further evaluate the potential contamination on the site. Soil samples were also collected from the area of a wind-machine remaining in the western portion of the site, the area adjacent to SR-60 in the northern portion of the site, and from selected areas of the citrus groves on the site. These soil samples are identified in Figure 4.6.1. [NOTE: 5 sampling locations spread out around the site]

Two soil samples were collected at the base of the wind-machine. One 200 to 300-gallon petroleum tank is located in the western portion of the site within the column of the wind machine structure. In interviews with Raymond Noriega, manager of the site, he indicated that the wind machine had not been used in the past 10 years that he had been employed there. Soil samples were taken at depths of 1.5 feet and 3 feet below the ground surface to assess the potential of

hydrocarbon compounds occurring in the soil. Laboratory results indicated no detectable concentrations of hydrocarbon compounds in the samples collected.

Two soil samples were collected at areas adjacent to SR-60 at depths of one to four inches below ground surface to assess the potential of lead contamination. Laboratory results indicated total lead concentrations of 0.601 to 4.41 milligrams per kilogram (mg/Kg), which were determined to be insignificant.¹ In addition, on September 3, 2003, five near-surface (upper 6 inches) soil samples were collected from selected areas (upper portion) of possible drainage accumulation and pesticide usage on the site. The detected concentrations of organochlorine pesticides and PCBs were within the allowable Preliminary Remedial Goals (PRGs) for the project. No additional assessment for organochlorine pesticides or PCBs is recommended for the site.² [NOTE: *emphasis added*]

On November 7, 2003, three near-surface (upper six inches) soil samples were collected from selected areas (lower portion) of possible drainage accumulation and pesticide usage on the site. The detected concentrations of organochlorine pesticides and PCBs were within the allowable PRGs for the project. No additional assessment for organochlorine pesticides or PCBs is recommended for the site.³ [NOTE: *emphasis added*]

At the request of the current owner of the site (northern portion), the area of the former abandoned 13,400-gallon UST was excavated during the site reconnaissance on September 20, 2003. No significant hydrocarbon odors or staining were observed. Between January 5 and 8, 2004, the UST was removed from the site. The UST had been abandoned in-place approximately 50 years ago. The abandonment reportedly consisted of removal of free-liquids; removal of the UST top; then backfilling the interior of the UST with on-site soils. Due to the installation of a 12-inch diameter, Eastern Municipal Water District (EMWD) waterline main in the north portion of the UST, the north portion of the UST was not removed. No indication of soil contamination was observed during the UST removal work. Additionally, soil sampling was conducted on January 7, 2004, at depths between 2 feet and 6 feet below the former bottom elevation of the UST, under the direction of a representative from the County of Riverside DEH Hazardous Materials Management Division. Laboratory results of the collected soil samples indicated a concentration of total petroleum hydrocarbons as oil (116 mg/Kg) in the soil sample collected at 2 feet below the bottom elevation of the UST. No other hydrocarbons, BTEX,⁴ or fuel oxygenates were detected; therefore, no additional environmental investigation is recommended for the former UST location.⁵ [NOTE: *emphasis added*]

Therefore, the project site was previously surveyed for pesticides and no significant impacts were found. It has also been documented that the former UST on the site was properly remediated, so it also would not pose a threat to any workers on the site during grading. This previous documentation supports the conclusion that there are no significant health risks on the project site for construction workers related to the proposed project. However, to determine the most current hazmat conditions of the site, the following measure will be added to the DEIR in response to this and other comments:

¹ Phase 1 Preliminary Environmental Site Assessment 84± Acres, Assessor Parcel Numbers (APNs) 477-120-001 and 477-120-006, Near Intersection of Pettit Street and Highway 60, Moreno Valley, California, R M Environmental, October 30, 2003, page 8.

² Phase 1 Preliminary Environmental Site Assessment 84± Acres, Assessor Parcel Numbers (APNs) 477-120-001 and 477-120-006, Near Intersection of Pettit Street and Highway 60, Moreno Valley, California, R M Environmental, October 30, 2003, page 9.

³ Phase 1 Preliminary Environmental Site Assessment 37± Acres, Assessor Parcel Numbers (APNs) 477-120-(007, 008, 014, 015), Near Intersection of Pettit Street and Highway 60, Moreno Valley, California, R M Environmental, November 25, 2003, page 8.

⁴ BTEX is an acronym for benzene, toluene, ethyl benzene, and xylene. This group of volatile organic compounds (VOCs) is found in petroleum hydrocarbons, such as gasoline, and other common environmental contaminants.

⁵ Report of Removal of Abandoned 13,400± gallon Diesel Underground Storage Tank, APN 477-120-001, Near the Intersection of Pettit Street and Highway 60, Moreno Valley, California, R M Environmental, January 28, 2004.

4.6.6.1A Prior to issuance of a grading permit for the project, a qualified contractor shall test onsite soils for contamination by agricultural chemicals. If present in concentrations above established actionable levels or thresholds, these materials shall be removed and transported to an appropriate landfill by a licensed contractor. This measure shall be implemented to the satisfaction of the Building Division including written documentation of the disposal of any agricultural chemical residue in conformance with all applicable regulations.

The text of the EIR will be revised to reflect this additional information. Implementation of this measure will assure that any potential impacts related to pesticide residues on the project site, to either area residents or construction workers on the site, will be reduced to less than significant levels. The addition of this measure will address the commenter's comments in this regard.

Response to Comment 10: Most of this comment was addressed in the early portion of Response 9 above. The commenter's citation that the U.S. EPA requires Phase 1 ESA reports to be prepared within 180 days of property acquisition are related to federal remediation of sites and do not apply directly to the requirements of CEQA to provide accurate information on the project site. As previously stated, CEQA does NOT require a Phase 1 ESA report, but they are typically used to provide the baseline information for EIRs. Although the Phase 1 reports for this project are ten years old, there has been no evidence presented that would indicate baseline conditions are otherwise than presented in the EIR. The site has been dry farmed and supported citrus trees for many years, which were removed in December 2013 to reduce irrigation and maintenance costs and reduce fire hazards. The previous Response 9 addressed the coverage of the Phase 1 reports (121 out of 122.8 acres or 98.5 percent of the site surveyed) much more than an adequate statistical sampling of the site. Response 9 also outlines an additional mitigation measure that addresses these concerns.

Response to Comment 11: As outlined in the previous Response 9 in this letter, the DEIR did evaluate the removal or remediation of the former Underground Storage Tank (UST) which was fully documented in Appendix F of the EIR. There is no empirical evidence that there is any hazmat or health risk from a UST on the site since it has been effectively remediated.

Response to Comment 12: This comment states that the EIR did not show the GHG emissions with mitigation. The reductions with mitigation were not calculated because the GHG-related mitigation measures included in the EIR do not have quantified reduction amounts. The EIR supports the statement of less-than-significance qualitatively by stating: "...project-related GHG emissions and their contribution to global climate change impacts in the State are less than significant and less than cumulatively considerable because: (1) the project's impacts alone would not cause or significantly contribute to global climate change, and (2) the project has no substantial effect on consumption of fuels or other energy resources, especially fossil fuels that contribute to GHG emissions when consumed."

Response to Comment 13: This commenter asks for information about the URBEMIS modeling results. The URBEMIS model was not used in the EIR, except for a few parameters in the health risk assessment. None of the construction or operational emissions modeling were conducted using URBEMIS, only CalEEMod, which is currently the accepted computer emission modeling program recommended by the SCAQMD. Thus, there is no need for highlighting the differences in the models.

In addition, the commenter quotes information from the CalEEMod Technical Paper, but leaves out the following sentence: "This limitation could result in underestimated fugitive dust emissions if high wind and loose soil are substantial characteristics for a given land use/construction scenario." As this project will be constructed following the requirements for dust control specified in SCAQMD Rule 403, including watering the disturbed areas three times per day, there will be no "loose soil".

Response to Comment 14: First, the commenter states the DEIR fails to accurately compare construction emissions to daily construction significance thresholds. The comment correctly states that ROG emissions would be in exceedance of the CEQA thresholds, as is also stated in the EIR. However, the comment incorrectly states that PM_{2.5} emissions would be in exceedance of the CEQA thresholds. The comment correctly identifies the EIR emissions rate of PM_{2.5} as 7.95 lbs/day, and then correctly states that the threshold is 55 lbs/day. It is not clear why the commenter believes that 7.95 lbs/day of PM_{2.5} would be in exceedance of 55 lbs/day.

Further in Section D.2, on page 21: A review of the CalEEMod analysis shows that the highest emission values are not associated with the grading phase. By design and SCAQMD direction, LST analyses only include onsite emissions. The following table from the Air Quality technical report Appendix shows all the onsite emissions for all the construction phases. Note that the onsite emissions (i.e., not fugitive) for the grading phase are the greatest.

Construction Phase	Onsite Pollutant Emissions, lbs/day							
	ROG	NO _x	CO	SO ₂	Fugitive PM ₁₀	Exhaust PM ₁₀	Fugitive PM _{2.5}	Exhaust PM _{2.5}
Site Preparation	10.43	84.72	47.82	0.07	7.05	4.27	3.87	4.27
Grading	12.5	103.9	55.13	0.1	3.38	5.01	1.29	5.01
Building Construction	5.63	37.37	23.73	0.04	0	2.54	0	2.54
Architectural Coating	342.39	2.96	1.94	0	0	0.27	0	0.27
Paving	7.91	33.81	20.89	0.03	0	2.93	0	2.93

Response to Comment 15: As outlined in Responses 9 through 11 above, there is no empirical evidence that onsite soils are contaminated by pesticides or other agricultural chemicals. However, Response 9 outlines an additional mitigation measure that will assure there are no health risks from pesticides or contaminated soil on the site.

Response to Comment 16: It is not clear why the BAAQMD CEQA Guidance is pertinent to this project, as the Bay Area has substantially different climate and pollution conditions than the South Coast area. As a result of these differences, the BAAQMD has different NO_x construction and GHG operational standards than the SCAQMD does. The EIR adequately compares all construction and operational emissions to the appropriate SCAQMD thresholds.

Response to Comment 17: The commenter states the DEIR fails to disclose impacts to offsite receptors. The EIR includes a localized impacts analysis for both construction and operational emissions as well as a full health risk assessment of operational emissions. These analyses completely disclose project-related impacts to offsite receptors.

Response to Comment 18: The information provided in the letter regarding the legal standard for cumulative impacts is factually correct, but it may or may not apply to this particular EIR for this specific project. In fact, the information is not specific to the ProLogis project but is rather a restatement of court case citations and evaluations, so there is no specific response to this comment relative to the EIR.

Response to Comment 19: The EIR includes a complete cumulative air quality impacts analysis that satisfies all CEQA requirements and that includes the conclusion that the long-term cumulative air quality impacts would be significant and avoidable. A similar analysis is performed regarding water supplies and water-related impacts, and that analysis concludes the project will not make a significant contribution to any cumulatively considerable impacts outlined in the DEIR.

Response to Comment 20: The commenter will receive a copy of the revised FEIR document prior to action on the project, similar to that afforded public agencies for projects in the City of Moreno Valley (i.e., 10 days before the next Planning Commission hearing).

In addition, the commenter is referred to Section 4 of this document for an evaluation of a less intensive modified plan, which is a subset of the Reduced Intensity Alternative evaluated in the DEIR (and which was determined to be environmentally superior to the Proposed Project). This less intensive plan proposes to develop 4 warehouse buildings, leaving the southeast portion of the site vacant for future development of residential uses consistent with existing zoning (R-5 and RA-2) adjacent to the existing residential neighborhood to the southeast.

Subject: Comment Letter on the Draft Environmental Impact
Report for the Prologis Eucalyptus Industrial Park,
SCH No. 2008021002.

Dear Mr. Lozeau:

At the request of Lozeau | Drury LLP (Lozeau Drury), Clark and Associates (Clark) has reviewed materials related to the above referenced project, including the Draft Environmental Impact Report¹ (DEIR) for the Prologis Eucalyptus Industrial Park (hereafter called the Project), SCH No. 2008021002 and its appendices. The proposed project site is located in the eastern portion of the City of Moreno Valley, in Riverside County, California. The 122.8-acre project site is located south of State Route 60 (SR-60) east of the Moreno Valley Auto Mall, and adjacent to and west of the Quincy Channel. According to the DEIR the proposed project would result in the construction and operation of a warehouse facility, consisting of approximately 2,244,638 square feet (sq ft).

Currently the site is used undeveloped for commercial uses and has two citrus groves in the northeastern and northwestern portions of the site, while the central and southern portions are vacant and support mainly weedy vegetation. According to a March, 2012 Memo from LSA

**RESPONSES TO LETTER D-4B
LOZEAU DRURY, MEMORANDUM FROM JAMES CLARK, PH.D.**

Response to Comment 1: Most of this comment repeats information from the EIR regarding characteristics of the project and requested approvals. The following responses address each of the specific comments made by the commenter on several topics, as outlined below.

Response to Comment 2: The air quality assessment for the project used the CalEEMod program because the SCAQMD requires projects doing CEQA-level analyses to use that particular program. See the Responses to Comments D-4A-13 and D-4A-14 in the previous Letter D-4A from Lozeau Drury.

Response to Comment 3: For a detailed response regarding the use of CalEEMod vs. URBEMIS, see the Responses to Comments D-4A-13 and D-4A-14 in the previous Letter D-4A from Lozeau Drury.

Response to Comment 4: For a detailed response on comparing construction emissions to daily construction thresholds, see the Responses to Comments D-4A-13 and D-4A-14 in the previous Letter D-4A from Lozeau Drury.

Response to Comment 5: This comment is similar to that addressed in Response D-4A-9 in the letter from Mr. Drury. There is no empirical evidence that onsite soils are contaminated by pesticides or other agricultural chemicals. However, Response D-4A-9 outlines an additional mitigation measure that will assure there are no health risks from pesticides or contaminated soil on the site.

Response to Comment 6: For a detailed response on operational impacts of the project, see the Response to Comment D-4A-16 in the previous Letter D-4A from Lozeau Drury.

Response to Comment 7: Contrary to the commenter's conclusion, there does not appear to be sufficient empirical evidence presented that would lead a reasonable person to conclude the EIR is flawed or lacking in its analysis of these potential impacts. A mitigation was added in response to comments by this commenter and the related comments by Mr. Drury (Letter D-4A), but there is no justification for recirculation based on this information, and there are no new or substantially different significant impacts of the project.

LETTER D-4C: LOZEAU DRURY, LLP, MEMORANDUM FROM MATTHEW HAGEMANN (S.W.A.P.E.)

Brooke O'Hanley
Lozeau | Drury LLP
410 12th Street, Suite 250
Oakland, CA 94607

Subject: Comments on the Prologis Eucalyptus Industrial Park Project, Riverside County, California

Dear Ms. O'Hanley:

We have reviewed the July 2012 Draft Environmental Impact Report (DEIR) for Prologis Eucalyptus Industrial Park Project ("Project"). The Project would construct six buildings encompassing approximately 2.3 million square feet (or 53 acres) of warehouse space. The Project site would be located on a 123-acre lot in the eastern portion of the City of Moreno Valley in Riverside County, California.

We have reviewed the DEIR for issues associated with hazards and hazardous materials, greenhouse gases, air quality, and cumulative impacts. Project construction will result in potentially significant impacts to construction workers and nearby residents that are not adequately disclosed in the DEIR. A revised DEIR needs to be prepared to fully disclose, evaluate, and mitigate these impacts.

Hazards and Hazardous Materials:

Construction workers and nearby residents may be at risk during construction from failure to disclose baseline soil conditions at the Project site.

Residual pesticides in soil may pose health risks to workers and nearby residents

Currently, 57 acres of the Project site are used to grow grapefruit and 36 acres of the Project site are used for hay and alfalfa production (DEIR, p. 4.2-1). The DEIR and supporting documents do not provide any specific details on the types of pesticides that have been used on the Project site in association with

**RESPONSES TO LETTER D-4C
LOZEAU DRURY, MEMORANDUM FROM MATTHEW HAGEMANN**

Response to Comment 1: It appears that Mr. Hagemann's comments were incorporated more or less directly into the letter from Mr. Drury (Letter D-4A). However, the following responses will address Mr. Hagemann's comments with reference to the responses to Mr. Drury's letter when appropriate.

Response to Comment 2: The commenter believes that residual soil contamination may contribute health risks to area residents and workers on the project site. However, the issues raised by Mr. Hagemann have already been addressed in Response to Comment D-4A-9 through D-4A-11.

Response to Comment 3: The commenter believes the Phase 1 ESA reports are out of date. These comments are addressed in the previous Response to Comment D-4A-9 and D-4A-10.

Response to Comment 4: For a detailed response on greenhouse gas emissions of the project, see the Response to Comment D-4A-12 in the previous Letter D-4A from Lozeau Drury.

Response to Comment 5: For a detailed response on comparing construction emissions to daily construction thresholds, see the Responses to Comments D-4A-13 and D-4A-14 in the previous Letter D-4A from Lozeau Drury. For a detailed response on operational impacts of the project, see the Response to Comment D-4A-16 in the previous Letter D-4A from Lozeau Drury. The DEIR presented evidence and supported its conclusions with empirical evidence that the project would not result in any significant health risks to local residents as a result of project air emissions, both in the short-term and over the long-term.

Response to Comment 6: The commenter makes the same comment as Mr. Drury in Response to Comment D-4A-19. The reader is referred to that response for more information.

RESPONSES TO LETTER D-4D: LOZEAU DRURY APPENDICES

Response to Appendix 1 – GHG Strategies Issued by the State Attorney General’s Office: Section 4.13 of the DEIR examined the potential impacts of the ProLogis project relative to greenhouse gases, and compared the project characteristics and impacts to the .

As outlined in DEIR Section 4.13.5.1, *Greenhouse Gas Plan, Policy, Regulation Consistency*, the CAT and the CARB have developed several reports to achieve the Governor’s GHG targets that rely on voluntary actions of California businesses, local government and community groups, and State incentive and regulatory programs. These include the CAT’s 2006 “Report to Governor Schwarzenegger and the Legislature,” the CARB’s 2007 “Expanded List of Early Action Measures to Reduce Greenhouse Gas Emissions in California,” and the CARB’s “Climate Change Proposed Scoping Plan: a Framework for Change. The reports identify strategies to reduce California’s emissions to the levels proposed in Executive Order S-3-05 and AB 32 (i.e., 29 percent below existing “business as usual” emissions) that are applicable to proposed project. Table 4.3.C presents the applicable Recommended Actions (qualitative measures) identified to date by CARB in its Climate Change Proposed Scoping Plan and whether or not the proposed project is consistent with the applicable Recommended Actions. Table 4.13.C, Proposed Scoping Plan Recommended Actions for Climate Change, in the DEIR examined the project’s consistency with these policies.

In addition, GHG emissions reduction strategies were also set forth in the 2006 CAT Report, and the strategies included in the CAT Report that apply to the project were evaluated in Table 4.13.E of the DEIR, which also summarized the extent to which the project would comply with the strategies to help California reach the emission reduction targets. The strategies listed in DEIR Table 4.13.E were addressed as either part of the project, required mitigation measures, or requirements under local or State ordinances.

The mitigation measures outlined in the Attorney General’s guidance have already been addressed in the two evaluation processes outlined above, since most or all of the AG’s recommendations are an outgrowth of the CAT report. Therefore, the project does not need an additional evaluation specifically against the AG’s criteria.

Response to Appendix 2 – Resumes for James Clark Ph.D. and Matt Hagemann: Resumes were provided for the two primary authors of the supplementary comment memos that were included in the Lozeau Drury Letter D-4A. No comments on their qualifications.

Response to Appendix 3 – CalEEMod Technical Paper (July 2011 SCAQMD et al): This report outlines the methodology, reasoning, and policy development issues related to the California Emission Estimator Model (CalEEMod). The commenter does not indicate why this reference was included, so no specific response is necessary. A discussion on two comments regarding differences between the project emissions using CalEEMod and the older URBEMIS model is provided in Responses D-4A-13 and D-4B-3.

Response to Appendix 4 – Initial Statement of Reasons for Rulemaking – Staff Report (CARB): The commenter does not indicate why this reference was included, so no specific response is necessary. However, the air quality study prepared for the project included a Health Risk Assessment (HRA) that assumed diesel exhaust as a toxic air contaminant and used the procedures established by the SCAQMD to conduct the HRA.

Response to Appendix 5 – Health Assessment Document for Diesel Engine Exhaust (U.S. EPA): The commenter does not indicate why this reference was included, so no specific response is necessary. However, the air quality study prepared for the project included a Health Risk Assessment

(HRA) that assumed diesel exhaust as a toxic air contaminant and used the procedures established by the SCAQMD to conduct the HRA, which are in turn consistent with the U.S. EPA guidance.

Response to Appendix 6 – Interim Guidance for Sampling Agricultural Fields for School Sites (Cal DTSC 8/02): The commenter refers to this document in relation to comments that the soil sampling conducted for the Phase 1 ESA reports on the project site were not consistent with the guidance in this report. A discussion on two comments regarding this topic is provided in Responses D-4A-9 through D-4A11 and D-4C-3.

Response to Appendix 7 – Various DTSC forms and chemical data materials related to pesticide applications or suspected applications on the project site (various dates around 2010): The commenter refers to this document in relation to comments that the onsite soils may be contaminated with pesticides, and the attached materials document that certain pesticides were applied to the site (or at least purchased by site maintenance staff) around 2010. A discussion on two comments regarding this topic is provided in Responses D-4A-9, and it should be noted a mitigation measure (4.6.6.1A) was added to do additional soil testing before grading (see Response D-4A-9).

Response to Appendix 8 – Various reports and data on pesticides and other agricultural chemicals (various): The commenter refers to this document in relation to comments that the onsite soils may be contaminated with pesticides such as DDT, DDE, and arsenic. A discussion on two comments regarding this topic is provided in Responses D-4A-9, and it should be noted a mitigation measure (4.6.6.1A) was added to do additional soil testing before grading (see Response D-4A-9).

Response to Appendix 9 – Use of California Human Health Screening Levels in Evaluation of Contaminated Properties (January 2002): The commenter refers to this document in relation to comments that the onsite soils may be contaminated with various kinds of pesticides applied over the years. A discussion on comments regarding this topic is provided in Responses D-4A-9, and it should be noted a mitigation measure (4.6.6.1A) was added to do additional soil testing before grading (see Response D-4A-9).

Response to Appendix 10 – Strategic Plan for Asthma in California, 2008 – 2012, and other reports related to health and air quality: This report was included apparently to support the commenter's contention that there will be health risks to local residents and construction workers from project air emissions, including diesel emissions. The air quality study prepared for the project was comprehensive and based on guidance from SCAQMD for such studies. It included a Health Risk Assessment (HRA) that assumed diesel exhaust as a toxic air contaminant and used the procedures established by the SCAQMD to conduct the HRA, which are in turn consistent with U.S. EPA guidance. The study determined impacts on local residents would be less than significant, although it would contribute to cumulatively significant air impacts due to the poor quality of air in the South Coast Air Basin.

In addition, the commenter is referred to Section 4 of this document for an evaluation of a less intensive modified plan, which is a subset of the Reduced Intensity Alternative evaluated in the DEIR (and which was determined to be environmentally superior to the Proposed Project). This less intensive plan proposes to develop 4 warehouse buildings, leaving the southeast portion of the site vacant for future development of residential uses consistent with existing zoning (R-5 and RA-2) adjacent to the existing residential neighborhood to the southeast.

3. EIR ERRATA AND ADDITIONS

Any corrections to the Draft Environmental Impact Report (EIR) text and figures generated either from responses to comments or independently by the City, are stated in this section of the Final EIR. The Draft EIR text and figures have not been modified to reflect these EIR modifications.

These EIR errata are provided to clarify, refine, and provide supplemental information for the Eucalyptus Industrial Park Draft EIR. Changes may be corrections or clarifications to the text and figures of the original Draft EIR. Other changes to the EIR clarify the analysis in the EIR based upon the information and concerns raised by commenters during the public review period. None of the information contained in these EIR modifications constitutes significant new information or changes to the analysis or conclusions of the Draft EIR.

The information included in this EIR erratum that resulted from the public comment process does not constitute substantial new information that requires recirculation of the Draft EIR. The California Environmental Quality Act (CEQA) Guidelines, Section 15088.5, states in part:

- (a) A lead agency is required to recirculate an EIR when significant new information is added to the EIR after public notice is given of the availability of the draft EIR for public review under Section 15087 but before certification. As used in this section, the term “information” can include changes in the project or environmental setting as well as additional data or other information. New information added to an EIR is not “significant” unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project’s proponents have declined to implement. “Significant new information” requiring recirculation includes, for example, a disclosure showing that:
 - (1) A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.
 - (2) A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.
 - (3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project, but the project’s proponents decline to adopt it.
 - (4) The Draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.
- (b) Recirculation is not required where the new information added to the EIR merely clarifies or amplifies or makes insignificant modifications in an adequate EIR.

The changes to the Draft EIR included in these EIR modifications do not constitute “significant” new information because:

No new significant environmental impact would result from the project or from a new mitigation measure;

There is no substantial increase in the severity of an environmental impact that would result unless mitigation measures are adopted that reduce the identified significant impacts to a level of insignificance;

No feasible project alternative or mitigation measure considerably different from others previously analyzed has been proposed or identified that would clearly lessen the significant environmental impacts of the project; and

The Draft EIR is not fundamentally or basically inadequate or conclusory in nature such that meaningful public review and comment were precluded.

Therefore, recirculation of the Draft EIR is not required because the new information added to the EIR through these modifications clarifies or amplifies information already provided or makes insignificant modifications to the already adequate Draft EIR.

For simplicity, the EIR modifications contained in the following pages are in the same order as the information appears in the Draft EIR. Changes in text are signified by strikeouts (~~strikeouts~~) where text has been removed and by underlining (underline) where text has been added. The applicable page numbers from the Draft EIR are also provided where necessary for easy reference.

Draft EIR, Section 1.0 Executive Summary, Summary (pages 1-13 through 1-73)

Table 1.C: The Environmental Summary in the Draft EIR has been updated to be consistent with changes that have been made, as a result of the responses to comments. Changes have been made to mitigation measures for air quality, biological resources, cultural resources, and noise. These changes to the Draft EIR do not result in a significant impact and has no material effect on the findings of the Draft EIR. The change to Impact 4.3.6.1 was an editorial one, the action section 4.3.5.1 concluded the impact related to “Conflict with an Existing Agricultural Zone” was less than significant with no mitigation required, but Table 1.C wrongly showed it as “significant with no mitigation available”. This has been corrected.

IMPORTANT NOTE: *The various changes to the mitigation measures will be presented following Table 1.C, but the actual wording changes will not be reflected in Table 1.C to avoid duplication and unnecessary length of the table. However, a note will be included in the table to reference mitigation measures that have changed. The revised mitigation measures will appear in their entirety in Section 4, Mitigation Monitoring and Reporting Program.*

Table 1.C: ProLogis Eucalyptus Industrial Park - Environmental Summary

Issues/Impacts	Mitigation Measures	Level of Significance after Mitigation
4.1 AESTHETICS		
<p>Impact 4.1.6.1: Existing Visual Character or Quality of Site and Its Surroundings: Implementation of the proposed project would replace the undeveloped character of the project site with an urban setting containing warehouse uses. Therefore, the change in the character of the site would be recognizable and would constitute a permanent alteration of the existing visual character of the project site. Although the visual characteristic of the project site would change, the proposed project would replace the existing vacant parcel with an attractive, well designed development through the use of architectural elements, landscaping, and design of the project site. In addition, the proposed project would be designed and constructed per applicable City Municipal Code and General Plan standards. Despite these requirements, a less than significant impact related to this issue would occur.</p>	No feasible mitigation is available	Significant and unavoidable

Table 1.C: ProLogis Eucalyptus Industrial Park - Environmental Summary

Issues/Impacts	Mitigation Measures	Level of Significance after Mitigation
4.2 AGRICULTURAL RESOURCES		
<p>Impact 4.2.6.1: Conflict with an Existing Agricultural Zone: The proposed project would not conflict with an existing agricultural zone. An approximately 12-acre portion of the project site is zoned Residential Agriculture (R-A-2) with a PAKO designation, and is located near the southern border. With the development of the project, this portion of the site would be rezoned to Light Industrial to allow for the proposed warehouse distribution uses. While this zone change would not conflict with the existing zone for this area of the project site. This type of change is expected, and planned for within the City, and is consistent with the City's overall vision. Impacts are less than significant.</p>	<p>No feasible mitigation is available <u>No mitigation required.</u></p>	<p>Significant and unavoidable <u>Less than Significant</u></p>
<p>Impact 4.2.6.2: Conversion of State Designated Farmland: The project site is designated as 67 percent Prime Farmland (82.5 acres) and 12 percent (39.8 acres) as <u>Farmland of Local Importance</u> (5.3 acres). While farmland conservation measures have been implemented in other areas of the State, neither the City of Moreno Valley nor Riverside County maintains a program that developers and property owners can participate in to offset agricultural resource impacts; therefore, the conversion of State designated Prime Farmland is a significant impact.</p>	<p>No feasible mitigation is available</p>	<p>Significant and unavoidable</p>
4.3 AIR QUALITY		
<p>Impact 4.3.6.2: Equipment Exhaust Emissions From Construction Activities Impacts: Grading and other construction activities would result in combustion emissions from heavy-duty construction vehicles, haul trucks, utility engines, and vehicles transporting the construction crew. Construction equipment/vehicle emissions during proposed on-site grading periods would exceed the SCAQMD daily thresholds for CO and NO_x. This remains a significant impact requiring mitigation.</p>	<p>4.3.6.2C Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall utilize California Air Resources Board (CARB) Tier II Certified equipment or better during the rough/mass grading phase for the following pieces of equipment: rubber-tired dozers and scrapers. Contract specifications shall be included in the proposed project construction documents, which shall be reviewed by the City.</p> <p><u>Project start to December 31, 2014: All off-road diesel-powered construction equipment greater than 50 horsepower shall meet Tier 3 off-road emission standards. In addition, all construction equipment shall be outfitted with Best Available Control Technology (BACT) devices</u></p>	<p>Implementation of identified mitigation measures would reduce construction-related emissions; however, it is not possible to quantify emission reductions for all pollutants, so impact remains significant and unavoidable.</p>

Table 1.C: ProLogis Eucalyptus Industrial Park - Environmental Summary

Issues/Impacts	Mitigation Measures	Level of Significance after Mitigation
	<p><u>certified by CARB. Any emission control devices used by the contractor shall achieve emission reductions that are no less than what would be achieved by a Level 3 diesel emission control strategy for a similarly sized engine as defined by CARB regulations.</u></p> <p><u>Post January 1, 2015: All off-road diesel-powered construction equipment greater than 50 horsepower shall meet Tier 4 emission standards, where available. In addition, all construction equipment shall be outfitted with Best Available Control Technology (BACT) devices certified by CARB. Any emission control devices used by the contractor shall achieve emission reductions that are no less than what would be achieved by a Level 3 diesel emission control strategy for a similarly sized engine as defined by CARB regulations.</u></p> <p><u>A copy of each unit's certified tier specifications, BACT documentation, and CARB or SCAQMD operating permit shall be provided at the time of mobilization of each applicable unit of equipment.</u></p> <p>4.3.6.2D All clearing, grading, earthmoving, or excavation activities shall cease when winds (as instantaneous gusts) exceed 25 mph per SCAQMD guidelines in order to limit fugitive dust emissions.</p> <p>4.3.6.2H The contractor shall minimize pollutant emissions by maintaining equipment engines in good condition and in proper tune according to manufacturer's specifications and during smog season (May through October) <u>shall not allowing construction equipment to be left idling for more than five minutes (per California law).</u></p> <p>4.3.6.2J Grading plans, construction</p>	

Table 1.C: ProLogis Eucalyptus Industrial Park - Environmental Summary

Issues/Impacts	Mitigation Measures	Level of Significance after Mitigation
	<p>specifications and bid documents shall also include the following notations requirements:</p> <ul style="list-style-type: none"> • Off-road construction equipment shall utilize alternative fuels where feasible e.g., biodiesel fuel (a minimum of B20), natural gas (CNG), liquefied natural gas (LNG), propane, except for equipment where use of such fuels would void the equipment warranty; • Gravel pads shall be provided at all access points to prevent tracking of mud onto public roads; • Install and maintain trackout control devices at all access points where paved and unpaved access or travel routes intersect; • The contractor or builder shall designate a person or person(s) to monitor the dust control program and to order increased watering, as necessary, to prevent transport of dust off site; • The contractor or builder shall post a publicly visible sign with the telephone number and person to contact regarding dust complaints. The contact person shall take corrective action within 24 hours; • High-pressure injectors shall be provided on diesel construction equipment where feasible if <u>available</u>; • Engine size of construction equipment shall be limited to the minimum practical size; • Substitute gasoline-powered for diesel powered construction equipment where feasible <u>gasoline powered equipment is available</u>; • Use electric construction equipment where feasible <u>it is</u> 	

FINAL EIR - RESPONSE TO COMMENTS
ProLogis Eucalyptus Industrial Park
City of Moreno Valley

Table 1.C: ProLogis Eucalyptus Industrial Park - Environmental Summary

Issues/Impacts	Mitigation Measures	Level of Significance after Mitigation
	<p><u>practical to use such equipment;</u></p> <ul style="list-style-type: none"> • Install catalytic converters on gasoline-powered equipment where feasible <u>this type of equipment is available;</u> • Ride-sharing program for the construction crew shall be encouraged and shall be supported by contractor(s) via incentives or other inducement; • Documentation shall be provided to the City of Moreno Valley indicating that construction workers have been encouraged to carpool or otherwise reduce VMT to the greatest extent practical, including providing information on available park and ride programs; • Lunch vendor services shall be provided <u>allowed</u> on site during construction to minimize the need for off-site vehicle trips; and • All forklifts used during construction and in subsequent operation of the project shall be electric or natural gas powered. <p>4.3.6.2K Throughout project construction, a construction relations officer/community liaison, appointed by the Applicant, shall be retained on site. In coordination and cooperation with the City, the construction relations officer/community liaison shall respond to any concerns related to PM₁₀ (fugitive dust) generation or other construction-related air quality issues <u>within 24 hours.</u></p>	
<p>Impact 4.3.6.3: <u>Localized Construction Equipment Exhaust Emissions Impacts:</u> Emissions of PM₁₀ and PM_{2.5} exceed the localized threshold that would occur for construction activity. PM₁₀ and PM_{2.5} emissions are a significant impact requiring mitigation.</p>	<p>4.3.6.3A Prior to the issuance of grading permits, the project applicant shall require by contract specifications that all trucks hauling dirt, sand, soil, or other loose materials are to be covered or should <u>shall</u> maintain at least 2 feet</p>	<p>Although Mitigation Measures 4.3.6.3A through 4.3.6.3C would reduce localized emission rates up to 50 percent, the localized</p>

Issues/Impacts	Mitigation Measures	Level of Significance after Mitigation
	<p>of freeboard in accordance with the requirements of California Vehicle Code (CVC) Section 23114 (freeboard means vertical space between the top of the load and top of the trailer).</p> <p>4.3.6.3B Prior to the issuance of grading permits, the project applicant shall provide evidence to the City that construction access roads shall be paved at least 100 feet onto the site from the main road.</p> <p>4.3.6.3C. Prior to the issuance of grading permits, the project applicant shall require by contract specifications that all streets within the construction site shall be swept once per day if visible soil materials are carried to adjacent streets.</p>	<p>construction thresholds are exceeded at the nearest residences for PM₁₀ and PM_{2.5}. Therefore, even with implementation of Mitigation Measures 4.3.6.3A through 4.3.6.3C, impacts associated with localized construction emissions for PM₁₀ and PM_{2.5} would remain significant and unavoidable.</p>
