RESOLUTION NO. 2012-55

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, REPEALING, REVISING AND REENACTING THE PROVISIONS OF RESOLUTION 2007-72, AND AUTHORIZING THE COLLECTION OF DELINQUENT AND UNPAID TAXES AND CHARGES FOR SOLID WASTE COLLECTION ON THE TAX ROLL.

WHEREAS, the City Council has heretofore adopted Chapter 6.02 of Title 6 of the City of Moreno Valley Municipal Code relating to refuse collection, transfer and disposal services; and

WHEREAS, Section 6.02.030 of Chapter 6.02 provides for the collection of delinquent and unpaid fees and charges on the tax roll in the same manner, by the same persons, and at the same time as, together with and not separately from, the City's general taxes, pursuant to the provisions of Section 5473 of the California Health and Safety Code; and

WHEREAS, said delinquent and unpaid fees and charges are those fees and charges for which services have been rendered but which have not been paid for more than sixty (60) days after the billing date; and

WHEREAS, Section 5473.10 of the Health and Safety Code provides that in addition to delinquent fees and charges, the amount collected on the tax roll may also include a 10% basic penalty for nonpayment of those fees and charges and, in addition, a penalty of 1 ½ % per month for nonpayment of those fees, charges and the basic penalty: and

WHEREAS, it is in the best interests of the City that delinquent and unpaid fees and charges for refuse collection be collected on the tax roll: and

WHEREAS, the City Council has heretofore caused a report to be prepared, a copy of which is on file in the office of the City Clerk, which identifies each parcel of real property (without consideration of the value of said property) receiving such refuse collection services and facilities and the amount of the delinquent fees and charges for each parcel for the year which remain outstanding, computed in conformity with the charges prescribed by Chapter 6.02, and has caused notice of said report and of a public hearing thereon to be duly given; and

WHEREAS, the City Council has held said hearing, at which all persons wishing to be heard were heard, and at which hearing the City Council heard and considered all objections and protests, if any;

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

1. Resolution No. 2007-72 as adopted by the City Council on June 26, 2007, is hereby repealed, the repeal to be effective only upon the date of adoption of this resolution. No action commenced pursuant to the authority granted by Resolution No. 2007-72 shall be invalidated or otherwise affected by the repeal thereof.

2. Delinquent and unpaid fees and charges for solid waste collection as set forth in said report, and herein confirmed, shall be collected on the tax roll in the same manner, by the same persons as, and at the same time as, together with and not separately from, the City's general taxes, pursuant to the provisions of Chapter 6.02 of the City of Moreno Valley Municipal Code and Section 5473 of the California Health and Safety Code.

3. On or before August 10th of each year following the final determination of the delinquent charges, the City Clerk shall file with the auditor of the County of Riverside a certified copy of this resolution together with a certified copy of said report endorsed with a statement over her signature that the report has been finally adopted by the City Council.

4. The auditor shall enter the amounts of the charges against the respective lots of parcels of land as they appear on the current assessment roll.

5. Said election to collect delinquent and unpaid fees and charges shall remain in effect until December 31, 2017, unless otherwise repealed or amended by the City Council.

APPROVED AND ADOPTED this 26th day of June, 2012.

Report to City Council

TO: Mayor and City Council

FROM: Richard Teichert, Chief Financial Officer

AGENDA DATE: June 24, 2014

TITLE: PUBLIC HEARING AND ADOPTION OF RESOLUTION ESTABLISHING APPROPRIATIONS ("GANN") LIMIT FOR THE CITY OF MORENO VALLEY FOR FISCAL YEAR 2014-15

RECOMMENDED ACTION

Recommendations: That the City Council:

1. Conduct a Public Hearing to receive public comments on the City's appropriations limit for Fiscal Year 2014-15.

2. Adopt Resolution No. 2014-55. A Resolution of the City Council of the City of Moreno Valley, California, Establishing the Appropriations Limit for Fiscal Year 2014-15.

SUMMARY

Each year the City is required to adopt a resolution establishing a limit on its appropriations of tax proceeds. Under a voter approved spending-limit initiative to restrict growth of tax-funded programs and services, the 1978-79 expenditure level serves as the base. It is adjusted annually for population growth, inflation (using the lower of the percentage growth of the U.S. Consumer Price Index or California's per capita personal income), and transfers of financial responsibility from one governmental entity to another. The Traffic Congestion Relief and Spending Limitation Act (Proposition 111), approved by the voters on June 5, 1990, changed some of the factors used in the calculation of this limit. For Fiscal Year 2014-15, the City's appropriations limit is calculated to be $101,751,705. The City's Preliminary Base Operating Budget contains appropriations subject to the limit totaling $61,132,366. Therefore, the portion of the Fiscal Year 2014-15 Preliminary Base Operating Budget subject to the limit is $40,619,339 less than the City's Fiscal Year 2014-15 appropriations limit.

DISCUSSION

On November 6, 1979, California voters approved the Gann Spending Limitation Initiative (Proposition 4) establishing Article XIIIB of the State Constitution. Article XIIIB sets limits on the amount of tax revenues that the State and most local governments can appropriate within a given fiscal year. Its basic provisions are as follows:

- Each year, the State and local governments must adopt a resolution establishing an appropriations limit, also known as the "Gann Limit". Fiscal Year 1984-85 appropriations serve as the base for this limit, with adjustments being made annually to reflect increases in population, the cost of living, and financial responsibility transfers.

- Only tax proceeds are subject to the limit. Charges for services, regulatory fees, grants, loans, donations and other non-tax proceeds are not subject to the limit. Exemptions are also made for voter-approved debt, debt that existed prior to January 1, 1979, and for the cost of compliance with court or Federal government mandates.

- All tax revenues received in excess of the appropriations limit must be refunded to taxpayers within a two-year period.

- The voters may approve an increase in the appropriations limit. For the increase to remain in effect, however, it must be re-approved by voters at four-year intervals.

On June 5, 1990, California voters approved the Traffic Congestion Relief and Spending Limitation Act (Proposition 111), which made various amendments to Article XIIIB of the State Constitution. The major changes, which became effective July 1, 1990, are as follows:

- The change in the cost of living is defined to be either the change in California per capita personal income or the change in assessed valuation due to the addition of non-residential new construction or the change in the U.S. Consumer Price Index or the change in California per capita personal income.

- The change in population is defined as either a change in the City's population or a change in the County's population, whichever is greater.

- "Qualified capital outlay projects" were added to the items exempted from the appropriations limit. Qualified capital outlay projects must have a useful life of ten or more years and a cost that equals or exceeds $100,000.

- Tax revenues received in excess of the appropriations limit must be refunded to taxpayers only if the limit is exceeded over a two-year period.

- The annual calculation of the appropriations limit must be reviewed as part of the City's annual financial audit.

The information used to calculate the City's Fiscal Year 2014-15 appropriations limit is presented in Exhibit A, Proceeds of Tax Calculation and Exhibit B, Appropriations (Gann) Limit Calculation. The City's appropriations limit for Fiscal Year 2013-14 was $99,825,081. The change factor allowed by Proposition 111 due to population and cost of living changes is 1,0193. This results in a Fiscal Year 2014-15 appropriations limit of $101,751,705.

As previously indicated, Proposition 111 provides several options for calculating increases in the appropriations limit. With respect to the change in population, the increase in the County's population was used since it was greater than the growth reported for the City (+1.12% vs. +.54%).

With respect to the change in the cost-of-living criterion, the change in Consumer Price Index (Los Angeles/Riverside/Orange County region) (+.80%) was used, as the change in non-residential assessed valuation information is not yet available from the County.

The City's total projected revenue proceeds from the General Fund are $81,340,874. Of this amount, $61,132,366 is identified as coming from tax proceeds, while $20,208,508 is identified as coming from non-tax proceeds. Exhibit A provides a breakdown of budgeted revenues and their classification as tax proceeds or non-tax proceeds.

The Fiscal Year 2014-15 Preliminary Base Operating Budget contains appropriations subject to the limitation of $61,132,366. This amount is $40,619,339 below the City's legal appropriations limit of $101,751,705.

ALTERNATIVES

The following alternatives are available to the City Council:

1. Adopt proposed resolution establishing the City's Fiscal Year 2014-15 appropriations limit at $101,751,705. Staff recommends this alternative.

2. Provide staff with further direction.

FISCAL IMPACT

There is no fiscal impact. The City is safely within its legal appropriations limit for Fiscal Year 2014-15.

CITY COUNCIL GOALS

Revenue Diversification and Preservation. Develop a variety of City revenue sources and policies to create a stable revenue base and fiscal policies to support essential City services, regardless of economic climate.

NOTIFICATION

This agenda item on the Fiscal Year 2014-15 Appropriations ("Gann") Limit was properly noticed as a Public Hearing.

Documentation for the Gann Limit has been available for public review at the City Clerk's Office since Monday June 2, 2014.

RESOLUTION NO. 2014-55

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, ESTABLISHING THE APPROPRIATIONS LIMIT FOR FISCAL YEAR 2014-15

WHEREAS, Article XIIIB of the California Constitution and Section 7910 of the California Government Code require that each year the City of Moreno Valley shall by resolution, establish an appropriations limit for the City for the following fiscal year; and

WHEREAS, the City Council has received the Preliminary Base Operating Budget for Fiscal Year 2014-15, a copy of which is on file in the Office of the City Clerk and is available for public inspection; and

WHEREAS, the said budget contains the estimates of the services, activities and projects comprising the budget, and contains expenditure requirements and the resources available to the City; and

WHEREAS, the City's Financial & Management Services Department has heretofore prepared and submitted data and documentation required for and to be used in the determination of certain matters and for the establishment of an appropriations limit for the City for Fiscal Year 2014-15 and such data and documentation has been available to the public for at least fifteen days prior to adoption of this Resolution; and

WHEREAS, the City Council has elected to use the annual change in the Consumer Price Index (CPI) for the Los Angeles/Riverside/Orange County areas as the cost of living factor, and

WHEREAS, the City Council has considered pertinent data and documentation and made such determinations as may be required by law, and has adopted this Resolution at a regularly scheduled meeting of the City Council.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

1. That the appropriations limit for the City of Moreno Valley for Fiscal Year 2014-15 is hereby established at $101,751,705 and the total annual appropriations subject to such limitation for Fiscal Year 2014-15 is estimated to be $61,132,366.

2. The City Council hereby adopts the findings and methods of calculations set forth in Exhibit A, the Proceeds of Tax Calculation, Exhibit B, the Appropriations (Gann) Limit Calculation, and Exhibit C, the Summary of Annual Appropriation (Gann) Limits. To the extent permitted by applicable law, the City of Moreno Valley reserves the right to change or revise any gross factors associated with the calculation of the limit established pursuant to Article XIIIB of the California

Constitution if such changes or revisions would result in a more advantageous appropriation limit in the present or future.

3. Pursuant to Section 53901 of the California Government Code, by no later than August 30, 2014, the City Clerk shall file a copy of this Resolution with the Auditor of the County of Riverside.

4. Within fifteen days after the adoption of this Resolution, the City Clerk shall certify to the adoption thereof and, as so certified, cause a copy to be posted in at least three public places within the City.

BE IT FURTHER RESOLVED that this Resolution shall take effect immediately upon the date of its adoption.

APPROVED AND ADOPTED this 24th day of June, 2014.

Report to City Council

TO: Mayor and City Council Acting in its Capacity as President and Members of the Board of Directors of the Moreno Valley Community Services District (CSD)

FROM: Richard Teichert, Chief Financial Officer

AGENDA DATE: June 24, 2014

TITLE: PUBLIC HEARING AND ADOPTION OF RESOLUTION ESTABLISHING APPROPRIATIONS ("GANN") LIMIT FOR THE MORENO VALLEY COMMUNITY SERVICES DISTRICT FOR FISCAL YEAR 2014-15

RECOMMENDED ACTION

Recommendations: That the CSD:

1. Conduct a Public Hearing to receive public comments on the Community Services District's appropriations limit for Fiscal Year 2014-15.

2. Adopt Resolution No. CSD 2014-12. A Resolution of the Moreno Valley Community Services District Establishing the Appropriations Limit for Fiscal Year 2014-15.

SUMMARY

Each year the Community Services District is required to adopt a resolution establishing a limit on its appropriations of tax proceeds. Under a voter approved spending-limit initiative to restrict growth of tax-funded programs and services, the 1978-79 expenditure level serves as the base. It is adjusted annually for population growth, inflation (using the lower of the percentage growth of the U.S. Consumer Price Index or California's per capita personal income), and transfers of financial responsibility from one governmental entity to another. The Traffic Congestion Relief and Spending Limitation Act (Proposition 111), approved by the voters on June 5, 1990, changed some of the factors used in the calculation of this limit. For Fiscal Year 2014-15, the District's appropriations limit is calculated to be $16,396,590. The District's Preliminary

Base Operating Budget contains appropriations subject to the limit totaling $3,661,696. Therefore, the portion of the Fiscal Year 2014-15 Preliminary Base Operating Budget subject to the limit is $12,734,894 less than the District's Fiscal Year 2014-15 appropriations limit.

DISCUSSION

On November 6, 1979, California voters approved the Gann Spending Limitation Initiative (Proposition 4) establishing Article XIIIB of the State Constitution. Article XIIIB sets limits on the amount of tax revenues that the State and most local governments can appropriate within a given fiscal year. Its basic provisions are as follows:

• Each year, the State and local governments must adopt a resolution establishing an appropriations limit, also known as the "Gann Limit". Fiscal Year 1984-85 appropriations serve as the base for this limit, with adjustments being made annually to reflect increases in population, the cost of living, and financial responsibility transfers.

• Only tax proceeds are subject to the limit. Charges for services, regulatory fees, grants, loans, donations and other non-tax proceeds are not subject to the limit. Exemptions are also made for voter-approved debt, debt that existed prior to January 1, 1979, and for the cost of compliance with court or Federal government mandates.

• All tax revenues received in excess of the appropriations limit must be refunded to taxpayers within a two-year period.

• The voters may approve an increase in the appropriations limit. For the increase to remain in effect, however, it must be re-approved by voters at four-year intervals.

On June 5, 1990, California voters approved the Traffic Congestion Relief and Spending Limitation Act (Proposition 111), which made various amendments to Article XIIIB of the State Constitution. The major changes, which became effective July 1, 1990, are as follows:

• The change in the cost of living is defined to be either the change in California per capita personal income or the change in assessed valuation due to the addition of non-residential new construction or the change in the U.S. Consumer Price Index or the change in California per capita personal income.

• The change in population is defined as either a change in the City's population or a change in the County's population, whichever is greater.

•"Qualified capital outlay projects" were added to the items exempted from the appropriations limit. Qualified capital outlay projects must have a useful life of ten or more years and a cost that equals or exceeds $100,000.

• Tax revenues received in excess of the appropriations limit must be refunded to taxpayers only if the limit is exceeded over a two-year period.

• The annual calculation of the appropriations limit must be reviewed as part of the City's annual financial audit.

The information used to calculate the District's Fiscal Year 2014-15 appropriations limit is presented in Exhibit A, Proceeds of Tax Calculation and Exhibit B, Appropriations (Gann) Limit Calculation. The District's appropriations limit for Fiscal Year 2013-14 was $16,086,128. The change factor allowed by Proposition 111 due to population and cost of living changes is 1.0193. This results in a Fiscal Year 2014-15 appropriations limit of $16,396,590.

As previously indicated, Proposition 111 provides several options for calculating increases in the appropriations limit. With respect to the change in population, the increase in the County's population was used since it was greater than the growth reported for the City (+1.12% vs. +.54%).

With respect to the change in the cost-of-living criterion, the change in Consumer Price Index (Los Angeles/Riverside/Orange County region) (+.80%) was used, as the change in non-residential assessed valuation information is not yet available from the County.

The total projected revenue proceeds from the District are $17,203,374. Of this amount, $3,661,696 is identified as coming from tax proceeds, while $13,541,678 is identified as coming from non-tax proceeds. Exhibit A provides a breakdown of budgeted revenues and their classification as tax proceeds or non-tax proceeds.

The Fiscal Year 2014-15 Preliminary Base Operating Budget contains appropriations subject to the limitation of $3,661,696. This amount is $12,734,894 below the District's legal appropriations limit of $16,396,590.

ALTERNATIVES

The following alternatives are available to the Board:

1. Adopt proposed resolution establishing the District's Fiscal Year 2014-15 appropriations limit at $16,396,590. Staff recommends this alternative.

2. Provide staff with further direction.

FISCAL IMPACT

There is no fiscal impact. The District is safely within its legal appropriations limit for Fiscal Year 2014-15.

CITY COUNCIL GOALS

Revenue Diversification and Preservation. Develop a variety of City revenue sources and policies to create a stable revenue base and fiscal policies to support essential City services, regardless of economic climate.

NOTIFICATION

The agenda item on the Fiscal Year 2014-15 Appropriations ("Gann") Limit was properly noticed as a Public Hearing.

Documentation for the Gann Limit has been available for public review at the City Clerk's Office since Monday June 2, 2014.

RESOLUTION NO. CSD 2014-12

A RESOLUTION OF THE MORENO VALLEY COMMUNITY SERVICES DISTRICT ESTABLISHING THE APPROPRIATIONS LIMIT FOR FISCAL YEAR 2014-15

WHEREAS, Article XIIIB of the California Constitution and Section 7910 of the California Government Code require that each year the Moreno Valley Community Services District (District) shall by resolution, establish an appropriations limit for the District for the following fiscal year; and

WHEREAS, the City Council, acting in its capacity as the Board of Directors of the District, has received the Preliminary Base Operating Budget for Fiscal Year 2014-15, a copy of which is on file in the Office of the City Clerk and is available for public inspection; and

WHEREAS, the said budget contains the estimates of the services, activities and projects comprising the budget, and contains expenditure requirements and the resources available to the District; and

WHEREAS, the District's Financial & Management Services Department has heretofore prepared and submitted data and documentation required for and to be used in the determination of certain matters and for the establishment of an appropriations limit for the District for Fiscal Year 2014-15 and such data and documentation has been available to the public for at least fifteen days prior to adoption of this Resolution; and

WHEREAS, the City Council has elected to use the annual change in the Consumer Price Index (CPI) for the Los Angeles/Riverside/Orange County areas as the cost of living factor; and

WHEREAS, the City Council, acting in its capacity as the Board of Directors of the District, has considered pertinent data and documentation and made such determinations as may be required by law, and has adopted this Resolution at a regularly scheduled meeting of the Board of Directors of the District.

NOW, THEREFORE, THE BOARD OF DIRECTORS OF THE MORENO VALLEY COMMUNITY SERVICES DISTRICT DOES HEREBY RESOLVE AS FOLLOWS:

1. That the appropriations limit for the Moreno Valley Community Services District for Fiscal Year 2014-15 is hereby established at $16,396,590 and the total annual appropriations subject to such limitation for Fiscal Year 2014-15 is estimated to be $3,661,696.

2. The District's Board of Directors hereby adopts the findings and methods of calculations set forth in Exhibit A, the Proceeds of Tax Calculation, Exhibit B, the Appropriation (Gann) Limit Calculation, and Exhibit C, the Summary of Annual

Appropriation (Gann) Limits. To the extent permitted by applicable law, the District reserves the right to change or revise any gross factors associated with the calculation of the limit established pursuant to Article XIIIB of the California Constitution if such changes or revisions would result in a more advantageous appropriations limit in the present or future.

3. Pursuant to Section 53901 of the California Government Code, by no later than August 30, 2014, the City Clerk, acting in the capacity of Secretary of the Moreno Valley Community Services District, shall file a copy of this Resolution with the Auditor of the County of Riverside.

4. Within fifteen days after the adoption of this Resolution, the City Clerk, acting in the capacity of Secretary of the Moreno Valley Community Services District, shall certify to the adoption thereof and, as so certified, cause a copy to be posted in at least three public places within the City.

BE IT FURTHER RESOLVED that this Resolution shall take effect immediately upon the date of its adoption.

APPROVED AND ADOPTED this 24th day of June, 2014.

Report to City Council

TO: Mayor and City Council Acting in its Capacity as President and Members of the Board of Directors of the Moreno Valley Community Services District (CSD)

FROM: Richard Teichert, Chief Financial Officer

AGENDA DATE: June 24, 2014

TITLE: PUBLIC HEARING TO CONSIDER RECOMMENDED RESOLUTIONS APPROVING THE CONTINUANCE OF CURRENT MORENO VALLEY COMMUNITY SERVICES DISTRICT ANNUAL PARCEL TAXES AND CHARGES PROPOSED FOR FISCAL YEAR 2014/15

RECOMMENDED ACTION

Recommendations: That the CSD:

1. Acting in its capacity as President and Members of the Board of Directors of the Moreno Valley CSD ("CSD Board") conduct a Public Hearing to consider the continuance of current Moreno Valley Community Services District annual parcel taxes and charges proposed for Fiscal Year 2014/15.

2. Approve and adopt Resolution No. CSD 2014-13. A Resolution of the Moreno Valley Community Services District of the City of Moreno Valley, California, Approving the Calculation of the Maximum Parcel Tax for Providing Zone A (Parks and Community Services) Services During Fiscal Year 2014/15.

3. Approve and adopt Resolution No. CSD 2014-14. A Resolution of the Moreno Valley Community Services District of the City of Moreno Valley, California, Approving the Calculation of the Maximum Parcel Tax for Providing Zone C (Arterial Street Lighting and Intersection Lighting) Services During Fiscal Year 2014/15.

4. Approve and adopt Resolution No. CSD 2014-15. A Resolution of the Moreno Valley Community Services District of the City of Moreno Valley, California, Approving the Calculation of the Maximum Parcel Charge for Providing Zone D (Parkway Landscape Maintenance) Services During Fiscal Year 2014/15.

5. Approve and adopt Resolution No. CSD 2014-16. A Resolution of the Moreno Valley Community Services District of the City of Moreno Valley, California, Approving the Calculation of the Maximum Parcel Charge for Providing Zone E (Extensive Landscape Maintenance) Services During Fiscal Year 2014/15.

6. Approve and adopt Resolution No. CSD 2014-17. A Resolution of the Moreno Valley Community Services District of the City of Moreno Valley, California, Approving the Calculation of the Maximum Parcel Charge for Providing Zone M (Commercial/Industrial/Multifamily Improved Median Maintenance) Services During Fiscal Year 2014/15.

7. Approve and adopt Resolution No. CSD 2014-18. A Resolution of the Moreno Valley Community Services District of the City of Moreno Valley, California, Approving the Calculation of the Maximum Parcel Charge for Providing Zone S (Sunnymead Boulevard Maintenance) Services During Fiscal Year 2014/15.

8. Authorize the Chief Financial Officer to determine the applied parcel tax or charge to be levied on the property tax bill of properties located within Zones A, C, D, E, M, and S provided it does not exceed the maximum approved parcel tax or parcel charge and does not exceed the approved budget.

SUMMARY

This report recommends that the CSD convene a Public Hearing and consider staff recommendations to adopt the resolutions for the continuation of the Community Services District's annual parcel taxes for Zones A and C and annual parcel charges for Zones D, E, M, and S. These taxes and charges have been previously approved by the property owners. There are no increases proposed other than in those areas where the property owners have approved a CPI adjustment. The Preliminary Annual Levy Report, on file with the Secretary of the CSD (City Clerk), identifies the maximum parcel tax and parcel charges that may be levied on the 2014/15 property tax bill.

Revenues generated from these districts support the provision of specific services provided by the Parks and Community Services Department, arterial street lighting and landscaped maintenance areas, and have been included in the Fiscal Year (FY) 2014/15 Adopted Budget.

The County requires resolutions be approved by the legislative body that establishes the authority to collect the CSD parcel taxes and charges on the annual property tax bills. Approval of the resolutions will satisfy the County requirement.

DISCUSSION

The CSD was formed simultaneously with City incorporation to provide a variety of benefit services. Zones within the CSD were established to allocate costs to those parcels that receive proportional benefit from the services provided. Each of the zones represents either a different service or degree of service to particular properties within each zone.

Approval of the proposed resolutions will set the proposed maximum amount for each parcel tax and parcel charge for each CSD zone and authorize the County to levy the parcel taxes and parcel charges on the upcoming fiscal year's property tax bill.

Revenues received from the parcel taxes, fees, charges, and/or assessments help to fund specific services which may include: parks and community services, street lighting, maintenance of parkway and extensive parkway landscaping, internal parkway landscape maintenance, median landscape maintenance, and maintenance of certain improvements along Sunnymead Boulevard. The Preliminary Annual Levy Report more fully describes each zone, including the services funded, the method of calculation of the tax or charge, budget and improvements, the maximum tax or charge for each parcel, and an annual update through March of the current fiscal year. The Report is on file in the office of the City Clerk (Secretary of the CSD Board) and can be located on the City's website.

Proposition 218

Proposition 218, approved during the November 1996 election as a constitutional amendment, specifically addresses the ability of public agencies to collect taxes, fees, charges, and/or assessments. The City of Moreno Valley has reviewed Proposition 218 with respect to the CSD charge collection process. Based upon this review, it has been determined that the CSD parcel taxes and charges as currently collected are in compliance with Proposition 218. Any future increases, other than an inflation adjustment that has been approved during a prior mail ballot proceeding, shall require a property ballot or vote of the people, which will be conducted in accordance with the legislative requirements of Proposition 218 and in compliance with the Policy for Conducting Mail Ballot Proceedings as originally adopted by the City Council and the CSD Board on January 22, 2002, and as most recently amended on February 23, 2010.

For FY 2014/15, no increases are proposed for any of the zones, other than in those zones wherein property owners have previously approved an inflation adjustment. The inflation adjustment for FY 2014/15 is 1.14% and is based on the percentage change calculated for the prior calendar year in the Los Angeles-Riverside-Orange County Regional Consumer Price Index (CPI), as published by the Department of Labor's Bureau of Labor Statistics. The table below shows the FY 2013/14 and the FY 2014/15 Notice/Maximum Taxes/Charges for each of the zones. Additional detail is also available in the Preliminary Annual Levy Report (on file with the Secretary of the CSD Board and available from the City's website).

CSD Zone Description		Category	FY 2013/14 Noticed/Maximum Taxes/Charges	FY 2014/15 Noticed/Maximum Taxes/Charges
A	Parks & Community Services	per parcel/dwelling unit	$ 87.50	$ 87.50
C	Arterial Street and Intersection Lighting	per parcel	9.00	9.00
D	Parkway Landscape Maintenance	Charge varies by parcel. Only properties within the housing tract pay per parcel.		
E	Extensive Landscape Maintenance			
	E-7: Centerpointe	per acre	717.42	725.59
	E-8: Promontory Park	per res. parcel per condo (Tr 31889 & 31890)	560.38 198.38	566.76 200.64
M	Improved Median Maintenance	Varies by parcel. Only commercial, industrial, and multifamily projects adjacent to medians pay parcel charges.		
S	Sunnymead Blvd. Maintenance	Varies by parcel. Only parcels with front footage facing Sunnymead Blvd., between Frederick St. & Perris Blvd. pay per front linear foot.		

The Public Hearing allows property owners an opportunity to provide testimony about the continuance of the existing parcel taxes and charges proposed to be collected on the property tax bills for the upcoming fiscal year. Every property owner within the CSD was mailed a notification of tonight's Public Hearing and also provided information on how to obtain specific information related to their property either by reviewing the Preliminary Annual Levy Report (available at the City Clerk's office or on the City's website) or via direct contact with staff.

The following section summarizes the services provided by the CSD to each listed zone, along with the current FY 2013/14 and proposed FY 2014/15 annual parcel taxes/charges:

Zone A is a parcel tax that funds park and community services citywide. All properties within the City boundaries are levied this tax to help offset costs associated with current programs and to provide upkeep on parks and park facilities. The proposed FY 2014/15 maximum parcel tax is $87.50 per dwelling unit (residential), nonresidential parcels (commercial and industrial), and undeveloped parcels. (The current FY 2013/14 maximum parcel tax is $87.50.) The total maximum amount noticed for Zone A for FY 2014/15 was $4,930,800.00.

Zone C is a parcel tax that funds the operation of arterial street lighting and intersection lighting on major roadways throughout the City. All properties within the City are levied this tax except those located within the boundaries of the Edgemont Community Services District. Properties within the Edgemont CSD contribute to an independent District for street light services. For FY 2014/15, the proposed maximum tax for each parcel in the CSD is $9.00. (The current FY 2013/14 maximum parcel tax is $9.00.) The total maximum amount noticed for Zone C for FY 2014/15 was $423,261.00.

To continue the current level of arterial street light services, the General Fund began contributing an amount to fund the revenue shortfall. For FY 2011/12 the amount contributed was $90,000, of which $28,579 was a loan and $61,421 a subsidy to fund the revenue shortfall. In FY 2012/13, the General Fund contributed an additional

$420,000 to fund the revenue shortfall to continue the arterial street light services. The General Fund contributed $288,000 during FY 2013/14. The adopted FY 2014/15 budget allocates an additional contribution of $397,000 to continue the current level of arterial street lighting services.

Zone D provides the revenue for parkway landscape maintenance services to the perimeters, entry statements, and/or medians of designated residential tract developments. The proposed maximum parcel charges for FY 2014/15 are listed in the Zone D Resolution (Attachment 3). The proposed charge for certain tracts may include an inflation adjustment, which has been previously approved by a majority of affected property owners. For FY 2014/15, the CPI adjustment (1.14%) shall be applied to certain tracts as noted on the Zone D Resolution. The total maximum amount noticed for Zone D for FY 2014/15 was $1,340,665.32.

Zone E provides revenue for extensive parkway landscape maintenance of landscaped areas for subzones E-7 and E-8. For FY 2014/15, the CPI adjustment of 1.14% will be applied to each subzone. The proposed maximum parcel charges for the subzones are listed in the Zone E Resolution (Attachment 4). The total maximum amount noticed for Zone E for FY 2014/15 was $393,946.04.

Zone M provides revenue for maintenance for improved medians. Parcel charges for this zone are calculated by determining the proportional obligation for the total median maintenance and administrative costs attributable to the improved median areas associated with the affected commercial/industrial/multifamily properties. The proposed FY 2014/15 maximum parcel charges for Zone M are included in the Zone M Resolution (Attachment 5). The total maximum amount noticed for Zone M for FY 2014/15 was $282,786.43.

Zone S provides the revenue to fund maintenance services for certain improvements along Sunnymead Boulevard between Frederick Street and Perris Boulevard. Parcel charges for this zone are calculated by determining the proportional financial obligation, based on front linear footage, of the properties adjacent to the improvements. The Zone S maximum parcel charge for 2014/15 is $2.988733 per front linear footage, which includes an inflation factor. The total maximum amount noticed for Zone S for FY 2014/15 was $56,885.81. (Current FY 2013/14 maximum parcel charge is $2.955046 per front linear footage).

The CSD Board adopted Resolution No. CSD 2014-08, forming Moreno Valley Community Services District Lighting Maintenance District 2014-01 (“LMD 2014-01”) on May 27, 2014. LMD 2014-01 was established to replace Zone B. No further service charge will be levied for Zone B, but rather will be replaced by the LMD 2014-01 assessment.

On May 27, 2014, the CSD Board adopted Resolution No. CSD 2014-09, forming Moreno Valley Community Services District Landscape Maintenance District 2014-02 (the “Assessment District” or “LMD 2014-02”). Several zones of the Assessment District were established to replace and succeed CSD subzones E-1, E-1A, E-2, E-3, E-3A, E-

4, E-12, E-14, E-15, and E-16; subzone E-4A was eliminated. No further service charge will be levied in connection with the succeeded zones of the CSD, but rather will be replaced by the LMD 2014-02 assessment.

ALTERNATIVES

1. Conduct a Public Hearing and adopt the proposed CSD resolutions. *Approving the proposed parcel taxes for CSD Zones A and C, and parcel charges for Zones M will provide a revenue stream to partially fund park and community services (Zone A), arterial street lighting services (Zone C) and improved median maintenance (Zone M). Approval of the parcel charges for CSD Zones D, E, and S as proposed will provide the CSD funding to continue providing maintenance at the applicable service levels. The County of Riverside requires resolutions be approved annually, prior to levying the CSD parcel taxes and charges on the property tax bills. Approval of these resolutions will satisfy the County requirement.*

2. By not adopting the proposed resolutions, the parcel taxes and charges may not be able to be levied by the County of Riverside. *By not adopting the resolutions, the County may not honor the CSD's request to place the CSD parcel taxes and charges on the County property tax bill. The CSD will not be able to adequately provide services without the necessary funding these taxes and charges provide.*

3. Do not approve or adopt the proposed resolutions, but rather continue the item to a future City Council meeting date. *If there is a delay in authorizing the parcel taxes and charges to be applied on the property tax bill, then the deadline to submit the levy may not be met and additional costs may be charged by the County in order to levy the parcel taxes and charges on the property tax bill.*

FISCAL IMPACT

Property owners pay the CSD parcel taxes and charges as a part of their annual property tax bill. Annual parcel taxes and charges, including CPI adjustments where applied, have been approved by the affected property owners through prior proceedings. The annual inflation factor is based on the percentage change in the CPI for the prior calendar year. For FY 2014/15, the CPI adjustment is 1.14%.

CSD Zones D, E, and S annual parcel charges are based on full-cost recovery and fund program operations that have no impact on the General Fund. Zones A and C parcel taxes and Zone M parcel charges reduce General Fund support required to provide services for these programs. **The funds collected through the CSD annual parcel taxes and charges are restricted funds and may only be used to pay for costs to operate programs for which they are collected within each respective CSD Zone.**

Approving annual parcel taxes and charges less than those proposed may require a decrease to both the level and quality of service from that provided during FY 2013/14. The service levels may be adjusted according to the approved funding level.

CITY COUNCIL GOALS

COMMUNITY IMAGE, NEIGHBORHOOD PRIDE AND CLEANLINESS
CSD landscape maintenance services help enhance community image, neighborhood pride and cleanliness. Residential properties, which have landscaped parkways and/or medians, as maintained by the CSD, help to foster a pleasant environment and neighborhood atmosphere. Proper placement of plant materials helps in the prevention of graffiti.

REVENUE DIVERSIFICATION AND PRESERVATION
The CSD annual parcel taxes and charges comply with the City's goal of revenue diversification and preservation and are based upon actual costs, which include maintenance and administration. The CSD annual taxes and parcel charges support the preservation of the current services provided by the CSD.

NOTIFICATION

On June 6, 2014, property owners of 48,279 parcels were mailed a post card notification of the Public Hearing. Information on the post card was presented in both English and Spanish. A direct link to the Preliminary Annual Levy Report is also on the Special Districts Division's webpage (www.moval.org/sd).

Newspaper advertising was published in The Press-Enterprise on June 6, 2014 for the Public Hearing.

RESOLUTION NO. CSD 2014-13

A RESOLUTION OF THE MORENO VALLEY COMMUNITY SERVICES DISTRICT OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING THE CALCULATION OF THE MAXIMUM PARCEL TAX FOR PROVIDING ZONE A (PARKS AND COMMUNITY SERVICES) SERVICES DURING FISCAL YEAR 2014/15

WHEREAS, the Moreno Valley Community Services District ("CSD") provides improvements and maintenance for parks and community services within the CSD and provides funding for such services through the collection of the CSD Zone A parcel tax; and

WHEREAS, the Community Services District Law of the State of California, California Government Code Section 61000 et seq. provides that such services may be funded, in whole or in part, by taxes which may be collected on the tax roll in the same manner, by the same persons, at the same time as, and together with and not separately from, the general property taxes collected by the County for the benefit of the CSD; and

WHEREAS, the City Council, acting in its capacity as Board of Directors of the CSD ("CSD Board"), has determined that it is in the best interest of the CSD to have its taxes for Zone A (Parks and Community Services) be so collected on the Riverside County tax roll; and

WHEREAS, the CSD Board has determined that continuing the calculation and application of the tax as previously approved for each assessable parcel of real property or per actual dwelling unit within CSD Zone A will provide the necessary and equitable revenue stream to fund parks and community services by the CSD for Fiscal Year 2014/15; and

WHEREAS, a report identifying each assessable parcel of real property subject to the tax, and the tax which is to be levied against each such parcel for Fiscal Year 2014/15 (the "Report"), is on file in the Office of the City Clerk, available for public inspection, and is incorporated herein by reference; and

WHEREAS, notice of the filing of the report, and of a hearing thereon, has been given as required by law; and

WHEREAS, the CSD Board has held said hearing, at which all persons wishing to be heard were heard, and at which hearing the CSD Board heard and considered all objections and protests, if any.

NOW, THEREFORE, THE MORENO VALLEY COMMUNITY SERVICES DISTRICT OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

1. The maximum tax rate for Fiscal Year 2014/15 to defray the costs of furnishing parks and community services within the CSD is eighty-seven dollars and fifty cents ($87.50) per assessable parcel of real property or per actual dwelling unit.

2. For Fiscal Year 2014/15, the tax will be levied at $87.50 per assessable parcel of real property or per actual dwelling unit. A lower amount may be levied in any subsequent fiscal year based on projected District expenses for the fiscal year.

3. The tax is hereby confirmed for each parcel of real property within CSD Zone A, as set forth in the Report, as such Report may have been modified by order of the CSD Board.

4. The Chief Financial Officer is hereby authorized to reduce the amount in the report to the extent that the reduction is warranted to avoid over funding the services. Any such reduction shall be spread in a proportionate manner.

5. The taxes set forth in the report, as herein confirmed, shall be collected on the Riverside County tax roll at the same time and in the same manner as ad valorem property taxes and shall be subject to the same penalties, procedure, sale and lien priority in any case of delinquency as applicable for ad valorem taxes; provided, however, the CSD may utilize a direct billing procedure for any tax that cannot be collected on the Riverside County tax roll or may, by resolution, elect to collect the taxes at a different time or in a different manner if necessary to meet its financial obligations, and if so collected, a delinquent penalty of 10% of the tax will attach at 5:00 pm on the date the tax becomes delinquent and interest at 1.5% per month of the delinquent tax will attach on July 1st after the delinquency date and the first of each month thereafter until such tax is paid.

6. As set forth in Resolution CSD 97-01, the existing Zone A parcel taxes are exempt from the requirements of Proposition 218 (Articles XIII C and XIII D of the California Constitution) so long as they are not increased and therefore are not subject to voter ratification at this time.

7. The Secretary of the CSD is hereby ordered to forward certified copies of this Resolution and of the Report to the County of Riverside and to take such actions as are required for the collection of the tax.

APPROVED AND ADOPTED this 24th day of June, 2014.

RESOLUTION NO. CSD 2014-14

A RESOLUTION OF THE MORENO VALLEY COMMUNITY SERVICES DISTRICT OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING THE CALCULATION OF THE MAXIMUM PARCEL TAX FOR PROVIDING ZONE C (ARTERIAL STREET LIGHTING AND INTERSECTION LIGHTING) SERVICES DURING FISCAL YEAR 2014/15

WHEREAS, the Moreno Valley Community Services District ("CSD") provides for the energy, pole, and maintenance costs for intersection and arterial street lighting services within the CSD and provides funding for such services, in part, through the collection of the CSD Zone C parcel tax; and

WHEREAS, the Community Services District Law of the State of California, California Government Code Section 61000 et seq. provides that such services may be funded, in whole or in part, by taxes which may be collected on the tax roll in the same manner, by the same persons, at the same time as, and together with and not separately from, the general property taxes collected by the County for the benefit of the CSD; and

WHEREAS, the City Council, acting in its capacity as Board of Directors of the CSD ("CSD Board"), has determined that it is in the best interest of the CSD to have its taxes for Zone C (Arterial Street Lighting and Intersection Lighting) services be so collected on the Riverside County tax roll; and

WHEREAS, the CSD Board has determined that continuing the calculation and application of the tax as previously approved for each assessable parcel of real property within CSD Zone C, excluding properties in the Edgemont Community Services District, will provide the necessary and equitable revenue stream to fund the arterial and intersection street lighting services by the CSD for Fiscal Year 2014/15; and

WHEREAS, a report identifying each assessable parcel of real property subject to the tax, and the tax which is to be levied against each such parcel for Fiscal Year 2014/15 (the "Report"), is on file in the Office of the City Clerk, available for public inspection, and is incorporated herein by reference; and

WHEREAS, notice of the filing of the report, and of a hearing thereon, has been given as required by law; and

WHEREAS, the CSD Board has held said hearing, at which all persons wishing to be heard were heard, and at which hearing the CSD Board heard and considered all objections and protests, if any.

NOW, THEREFORE, THE MORENO VALLEY COMMUNITY SERVICES DISTRICT OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

1. The maximum tax rate for Fiscal Year 2014/15 to defray the costs of furnishing arterial and intersection street lighting services within the CSD is nine dollars ($9.00) per parcel.

2. For Fiscal Year 2014/15, the tax is $9.00 per assessable parcel of real property; however a lower amount may be levied in any subsequent fiscal year based on projected District expenses for the fiscal year.

3. The tax is hereby confirmed for each parcel of real property within CSD Zone C, as set forth in the Report, as such Report may have been modified by order of the CSD Board.

4. The Chief Financial Officer is hereby authorized to reduce the amount in the report to the extent that the reduction is warranted to avoid over funding the services. Any such reduction shall be spread in a proportionate manner.

5. The taxes set forth in the report, as herein confirmed, shall be collected on the Riverside County tax roll at the same time and in the same manner as ad valorem property taxes and shall be subject to the same penalties, procedure, sale and lien priority in any case of delinquency as applicable for ad valorem taxes; provided, however, the CSD may utilize a direct billing procedure for any tax that cannot be collected on the Riverside County tax roll or may, by resolution, elect to collect the taxes at a different time or in a different manner if necessary to meet its financial obligations, and if so collected, a delinquent penalty of 10% of the tax will attach at 5:00 pm on the date the tax becomes delinquent and interest at 1.5% per month of the delinquent tax will attach on July 1st after the delinquency date and the first of each month thereafter until such tax is paid.

6. As set forth in Resolution CSD 97-01, the existing Zone C parcel taxes are exempt from the requirements of Proposition 218 (Articles XIII C and XIII D of the California Constitution) so long as they are not increased and therefore are not subject to voter ratification at this time.

7. The Secretary of the CSD is hereby ordered to forward certified copies of this Resolution and of the Report to the County of Riverside and to take such actions as are required for the collection of the tax.

RESOLUTION NO. CSD 2014-15

A RESOLUTION OF THE MORENO VALLEY COMMUNITY SERVICES DISTRICT OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING THE CALCULATION OF THE MAXIMUM PARCEL CHARGE FOR PROVIDING ZONE D (PARKWAY LANDSCAPE MAINTENANCE) SERVICES DURING FISCAL YEAR 2014/15

WHEREAS, the Moreno Valley Community Services District ("CSD") provides improvements and maintenance for parkway and median landscape within the CSD and provides funding for such services through the collection of the CSD Zone D parcel charge; and

WHEREAS, the Community Services District Law of the State of California, California Government Code Section 61000 et seq. provides that such services may be funded, in whole or in part, by charges which may be collected on the tax roll in the same manner, by the same persons, at the same time as, and together with and not separately from, the general property taxes collected by the County for the benefit of the CSD; and

WHEREAS, the City Council, acting in its capacity as Board of Directors of the CSD ("CSD Board"), has determined that it is in the best interest of the CSD to have its charges for Zone D (Parkway Landscape Maintenance) be so collected on the Riverside County tax roll; and

WHEREAS, the CSD Board has determined that continuing the calculation, including a Consumer Price Adjustment ("CPI") adjustment (if applicable), and application of charge as previously approved by the property owners for each assessable parcel or unit of real property within CSD Zone D will provide the necessary and equitable revenue stream to fund the parkway landscape services by the CSD for Fiscal Year 2014/15; and

WHEREAS, a report identifying each assessable parcel of real property subject to the charge, and the charge which is to be levied against each such parcel for Fiscal Year 2014/15 (the "Report"), is on file in the Office of the City Clerk, available for public inspection, and incorporated herein by reference; and

WHEREAS, notice of the filing of the report, and of a hearing thereon, has been given as required by law; and

WHEREAS, the CSD Board has held said hearing, at which all persons wishing to be heard were heard, and at which hearing the CSD Board heard and considered all objections and protests, if any.

NOW, THEREFORE, THE MORENO VALLEY COMMUNITY SERVICES DISTRICT OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

1. The maximum charge rate for Fiscal Year 2014/15 to defray the costs of furnishing parkway landscape services within the CSD is on a per parcel basis as defined in the table below.

2. For Fiscal Year 2014/15, the maximum charge that may be levied is identified in the table below. A lower amount may be levied based on projected District expenses for the fiscal year.

RESOLUTION NO. CSD 2014-16

A RESOLUTION OF THE MORENO VALLEY COMMUNITY SERVICES DISTRICT OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING THE CALCULATION OF THE MAXIMUM PARCEL CHARGE FOR PROVIDING ZONE E (EXTENSIVE LANDSCAPE MAINTENANCE) SERVICES DURING FISCAL YEAR 2014/15

WHEREAS, the Moreno Valley Community Services District ("CSD") provides improvements for and maintenance of landscaped parkways, open space, and medians within the CSD and provides funding for such services through the collection of the CSD Zone E parcel charges; and

WHEREAS, the Community Services District Law of the State of California, California Government Code Section 61000 et seq. provides that such services may be funded, in whole or in part, by charges which may be collected on the tax roll in the same manner, by the same persons, at the same time as, and together with and not separately from, the general property taxes collected by the County for the benefit the CSD; and

WHEREAS, the City Council, acting in its capacity as Board of Directors of the CSD ("CSD Board"), has determined that it is in the best interest of the CSD to have its charges for Zone E (Extensive Landscape Maintenance) be so collected on the Riverside County tax roll; and

WHEREAS, the CSD Board has determined that continuing the calculation and application of charge as previously approved by the property owners for each assessable parcel within CSD Zone E will provide the necessary and equitable revenue stream to fund landscape maintenance services by the CSD for Fiscal Year 2014/15; and

WHEREAS, a report identifying each assessable parcel of real property subject to the charge and the charge which is to be levied against each such parcel for Fiscal Year 2014/15 (the "Report"), is on file in the Office of the City Clerk, available for public inspection, and is incorporated herein by reference; and

WHEREAS, notice of the filing of the report, and of a hearing thereon, has been given as required by law; and

WHEREAS, the CSD Board has held said hearing, at which all persons wishing to be heard were heard, and at which hearing the CSD Board heard and considered all objections and protests, if any.

NOW, THEREFORE, THE MORENO VALLEY COMMUNITY SERVICES DISTRICT OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

1. The maximum charge for Fiscal Year 2014/15 to defray the costs of furnishing landscape maintenance services per parcel within the CSD is identified in the table below.

2. For Fiscal Year 2014/15, the maximum charge that may be levied is identified in the table below. A lower amount may be levied based on projected District expenses for the fiscal year.

Zone E (Extensive Landscape Maintenance)

FY 2014/15 Maximum Annual Charge

Zone E	Specific Plan or Major Development	Charge Category	FY 2014/15 Maximum/Noticed Annual Charges
E-7	Centerpointe	Per acre	$725.59
E-8	Promontory Park	Per single family dwelling parcel Per condo unit	566.76 200.64

3. The maximum charge is hereby confirmed for each assessable parcel of real property within CSD Zone E, as set forth in the Report, as such Report may have been modified by order of the CSD Board.

4. The Chief Financial Officer is hereby authorized to reduce the amount in the report to the extent that the reduction is warranted to avoid over funding the services. Any such reduction shall be spread in a proportionate manner.

5. The charges set forth in the report, as herein confirmed, shall be collected on the Riverside County tax roll at the same time and in the same manner as ad valorem property taxes and shall be subject to the same penalties, procedure, sale and lien priority in any case of delinquency as applicable for ad valorem taxes; provided, however, the CSD may utilize a direct billing procedure for any charge that cannot be collected on the Riverside County tax roll or may, by resolution, elect to collect the charges at a different time or in a different manner if necessary to meet its financial obligations, and if so collected, a delinquent penalty of 10% of the charge will attach at 5:00 pm on the date the charge becomes delinquent and interest at 1.5% per month of

the delinquent charge will attach on July 1st after the delinquency date and the first of each month thereafter until such charge is paid.

6. As set forth in Resolution CSD 97-06, the existing Zone E parcel charges are exempt from the requirements of Proposition 218 (Articles XIII C and XIII D of the California Constitution) so long as they are not increased and are therefore are not subject to voter ratification at this time.

7. By its Resolution No. 2014-09, the CSD formed its Moreno Valley Community Services District Landscape Maintenance District 2014-02 (the "Assessment District" or "LMD 2014-02"). Several zones of the Assessment District were established to replace and succeed existing zones of the CSD as identified in the table below. No further service charge will be levied in connection with the succeeded zones of the CSD. Furthermore, any surplus money or property of each succeeded zone shall be transferred to its successor zone of the Assessment District.

Former CSD	LMD 2014-02	Description
E-1	Zone 01	TownGate
E-1A	Zone 01A	Renaissance Park
E-2	Zone 02	Hidden Springs
E-3	Zone 03	Moreno Valley Ranch – West
E-3A	Zone 03A	Lasselle Powerline Parkway
E-4	Zone 04	Moreno Valley Ranch – East
E-4A	Eliminated	
E-12	Zone 05	Stoneridge Ranch
E-14	Zone 06	Mahogany Fields
E-15	Zone 07	Celebration
E-16	Zone 08	Shadow Mountain

8. The Secretary of the CSD is hereby ordered to forward certified copies of this Resolution and of the Report to the County of Riverside and to take such actions as are required for the collection of the charge.

APPROVED AND ADOPTED this 24th day of June, 2014.

RESOLUTION NO. CSD 2014-17

A RESOLUTION OF THE MORENO VALLEY COMMUNITY SERVICES DISTRICT OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING THE CALCULATION OF THE MAXIMUM PARCEL CHARGE FOR PROVIDING ZONE M (COMMERCIAL/INDUSTRIAL/MULTIFAMILY IMPROVED MEDIAN MAINTENANCE) SERVICES DURING FISCAL YEAR 2014/15

WHEREAS, the Moreno Valley Community Services District ("CSD") provides improvements to and maintenance for commercial/industrial/multifamily improved medians within the CSD and provides funding for such services through the collection of the CSD Zone M parcel charges; and

WHEREAS, the Community Services District Law of the State of California, California Government Code Section 61000 et seq. provides that such services may be funded, in whole or in part, by charges which may be collected on the tax roll in the same manner, by the same persons, at the same time as, and together with and not separately from, the general property taxes collected by the County for the benefit of the CSD; and

WHEREAS, the City Council, acting in its capacity as Board of Directors of the CSD ("CSD Board"), has determined that it is in the best interest of the CSD to have its charges for Zone M (Commercial/Industrial/Multifamily Improved Median Maintenance) be so collected on the Riverside County tax roll; and

WHEREAS, the CSD Board has determined that continuing the calculation and application of charge as previously approved by the property owners for each assessable commercial/industrial/multifamily property within CSD Zone M will provide the necessary and equitable revenue stream to fund landscape maintenance to improved medians by the CSD for Fiscal Year 2014/15; and

WHEREAS, a report identifying each assessable parcel of real property subject to the charge and the charge which is to be levied against each such parcel for Fiscal Year 2014/15 (the "Report"), is on file in the Office of the City Clerk, available for public inspection, and is incorporated herein by reference; and

WHEREAS, notice of the filing of the report, and of a hearing thereon, has been given as required by law; and

WHEREAS, the CSD Board has held said hearing, at which all persons wishing to be heard were heard, and at which hearing the CSD Board heard and considered all objections and protests, if any.

NOW, THEREFORE, THE MORENO VALLEY COMMUNITY SERVICES DISTRICT OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

1. The maximum charge rate for Fiscal Year 2014/15 to defray the costs of furnishing landscape maintenance services to medians within the CSD is identified per parcel in the table below.

2. For Fiscal Year 2014/15, the maximum charge that may be levied is identified in the table below. A lower amount may be levied in any subsequent fiscal year based on projected District expenses for the fiscal year.

(1) An annual inflation adjustment has not been approved by the property owners.

3. The maximum charge is hereby confirmed for each assessable parcel of real property within CSD Zone M, as set forth in the Report, as such Report may have been modified by order of the CSD Board.

4. The Chief Financial Officer is hereby authorized to reduce the amount in the report to the extent that the reduction is warranted to avoid over funding the services. Any such reduction shall be spread in a proportionate manner.

5. The charges set forth in the report, as herein confirmed, shall be collected on the Riverside County tax roll at the same time and in the same manner as ad valorem property taxes and shall be subject to the same penalties, procedure, sale and lien priority in any case of delinquency as applicable for ad valorem taxes; provided, however, the CSD may utilize a direct billing procedure for any charge that cannot be collected on the Riverside County tax roll or may, by resolution, elect to collect the charges at a different time or in a different manner if necessary to meet its financial obligations, and if so collected, a delinquent penalty of 10% of the charge will attach at 5:00 pm on the date the charge becomes delinquent and interest at 1.5% per month of the delinquent charge will attach on July 1st after the delinquency date and the first of each month thereafter until such charge is paid.

6. The Secretary of the CSD is hereby ordered to forward certified copies of this Resolution and of the Report to the County of Riverside and to take such actions as are required for the collection of the charge.

APPROVED AND ADOPTED this 24th day of June, 2014.

RESOLUTION NO. CSD 2014-18

A RESOLUTION OF THE MORENO VALLEY COMMUNITY SERVICES DISTRICT OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING THE CALCULATION OF THE MAXIMUM PARCEL CHARGE FOR PROVIDING ZONE S (SUNNYMEAD BOULEVARD MAINTENANCE) SERVICES DURING FISCAL YEAR 2014/15

WHEREAS, the Moreno Valley Community Services District ("CSD") provides improvements and maintenance for certain parkway and median landscaping and improvements along Sunnymead Boulevard, from Frederick Street to Perris Boulevard that were installed in participation with the City of Moreno Valley (City) and the former Redevelopment Agency of the City and provides funding for such services through CSD Zone S; and

WHEREAS, the Community Services District Law of the State of California, California Government Code Section 61000 et seq. provides that such services may be funded, in whole or in part, by charges which may be collected on the tax roll in the same manner, by the same persons, at the same time as, and together with and not separately from, the general property taxes collected by the County for the benefit of the CSD; and

WHEREAS, the City Council, acting in its capacity as Board of Directors of the CSD ("CSD Board"), has determined that it is in the best interest of the CSD to have its charges for Zone S (Sunnymead Boulevard Maintenance for certain improvements along from Frederick Street to Perris Boulevard) be so collected on the Riverside County tax roll; and

WHEREAS, the CSD Board has determined that continuing the calculation and application of the charge as previously approved by the property owners for each assessable parcel within CSD Zone S will provide the necessary and equitable revenue stream to fund ongoing maintenance of certain improvements along Sunnymead Boulevard from Frederick Street to Perris Boulevard by the CSD for Fiscal Year 2014/15; and

WHEREAS, a report identifying each assessable parcel of real property subject to the charge, and the charge which is to be levied against each such parcel for Fiscal Year 2014/15 (the "Report"), is on file in the Office of the City Clerk, available for public inspection, and incorporated herein by reference; and

WHEREAS, notice of the filing of the report, and of a hearing thereon, has been

given as required by law; and

WHEREAS, the CSD Board has held said hearing, at which time all persons wishing to be heard were heard, and at which hearing the CSD Board heard and considered all objections and protests, if any.

NOW, THEREFORE, THE MORENO VALLEY COMMUNITY SERVICES DISTRICT OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

1. The maximum charge rate for Fiscal Year 2014/15 to defray the costs of ongoing maintenance of certain improvements along Sunnymead Boulevard from Frederick Street to Perris Boulevard within the CSD is $2.988733 per front linear foot.

2. For Fiscal Year 2014/15, the maximum charge will be levied at $2.988733 per front linear foot. A lower amount may be levied in any subsequent fiscal year based on projected District expenses for the fiscal year.

3. The maximum charge is hereby confirmed for each assessable parcel of real property within CSD Zone S, as set forth in the Report, as such Report may have been modified by order of the CSD Board.

4. The Chief Financial Officer is hereby authorized to reduce the amount in the report to the extent that the reduction is warranted to avoid over funding the services. Any such reduction shall be spread in a proportionate manner.

5. The charges set forth in the report, as herein confirmed, shall be collected on the Riverside County tax roll at the same time and in the same manner as ad valorem property taxes and shall be subject to the same penalties, procedure, sale and lien priority in any case of delinquency as applicable for ad valorem taxes; provided, however, the CSD may utilize a direct billing procedure for any charge that cannot be collected on the Riverside County tax roll or may, by resolution, elect to collect the charges at a different time or in a different manner if necessary to meet its financial obligations, and if so collected, a delinquent penalty of 10% of the charge will attach at 5:00 pm on the date the charge becomes delinquent and interest at 1.5% per month of the delinquent charge will attach on July 1st after the delinquency date and the first of each month thereafter until such charge is paid.

6. The Secretary of the CSD is hereby ordered to forward certified copies of this Resolution and of the Report to the County of Riverside and to take such actions as are required for the collection of the charge.

Report to City Council

TO: Mayor and City Council

FROM: John C. Terell, Community and Economic Development Director

AGENDA DATE: June 24, 2014

TITLE: A PUBLIC HEARING FOR THE PROLOGIS EUCALYPTUS INDUSTRIAL PARK PROJECT AND RELATED ENVIRONMENTAL IMPACT REPORT. THE PROJECT PROPOSES A GENERAL PLAN AMENDMENT AND A ZONE CHANGE FOR 122 ACRES. THE LAND USE CHANGES ARE REQUIRED FOR DEVELOPMENT OF SIX WAREHOUSE DISTRIBUTION FACILITIES TOTALING 2,244,419 SQUARE FEET. THE DEVELOPER ALSO PROPOSES TENTATIVE PARCEL MAP NO. 35679 TO SUBDIVIDE THE PROJECT SITE INTO SIX PARCELS. A GENERAL PLAN AMENDMENT IS ALSO REQUIRED FOR PROPOSED CHANGES TO THE CITY'S GENERAL PLAN CIRCULATION ELEMENT AND THE MASTER PLAN OF TRAILS. THE SITE IS LOCATED SOUTH OF STATE ROUTE 60 AND EAST OF THE MORENO VALLEY AUTO MALL, AT FIR AVENUE (FUTURE EUCALYPTUS AVENUE) AND BETWEEN PETTIT STREET AND THE QUINCY CHANNEL. THE APPLICANT IS PROLOGIS

RECOMMENDED ACTION

Recommendations: That the City Council:

1. Conduct a public hearing for Prologis Eucalyptus Industrial Park Project and subsequent to the public hearing:

2. Approve Resolution No. 2014-56. A Resolution of the City Council of the City of Moreno Valley, California, Certifying the Final Environmental Impact Report (P07-186) and Adopting the Findings and Statement of Overriding Considerations and Approving the Mitigation Monitoring Program for the Prologis Eucalyptus Industrial Park Project, included as Exhibits A and B.

3. Approve Resolution No. 2014-57. A Resolution of the City Council of the City of Moreno Valley, California, Approving a General Plan Amendment (PA07-0082) from R15, R5, and RA-2 land use designations to Business Park for approximately 71 acres for development of a 2,244,419 square foot industrial park located within Assessor's Parcel Numbers 4880330-011, -012, -013, -017, -018, -019, -020 and -021, as shown on the General Plan Amendment Map included as Exhibit A.

4. Introduce Ordinance No. 880. An Ordinance of the City Council of the City of Moreno Valley, California, Approving a Zone Change (PA07-0081) from Business Park, Business Park Mixed-use, R15, R5, and RA-2 to Light Industrial for approximately 122 acres for development of a 2,244,419 square foot industrial park located within Assessor's Parcel Numbers 488-330-011, 012, -013, -017, -018, -019, -020, and -021, as shown on the Zone Change Map included as Exhibit A.

5. Approve Resolution No. 2014-58. A Resolution of the City Council of the City of Moreno Valley, California, Approving Master Plot Plan application PA07-0083 and Plot Plan applications PA07-0158 through PA07-0162 for development of the 2,244,419 square foot Prologis Eucalyptus Industrial Park Project within the 122 acres of Assessor's Parcel Numbers 488-330-011, 012, -013, -017, -018, -019, -020, and -021, subject to the conditions of approval included as Exhibit A.

6. Approve Resolution No. 2014-59. A Resolution of the City Council of the City of Moreno Valley, California, Approving Tentative Parcel Map 35679 (PA07-0084) for development of the 2,244,419 square foot Prologis Eucalyptus Industrial Park Project within the 122 acres of Assessor's Parcel Numbers 488-330-011, 012, -013, -017, -018, -019, -020, and -021, subject to the conditions of approval included as Exhibit A.

SUMMARY

This report recommends that the City Council conduct a Public Hearing and consider staff's recommendation to approve the Prologis Eucalyptus Industrial Park project and related Environmental Impact Report. Following the Planning Commission Public Hearing on April 24, 2014, the Planning Commission approved a resolution recommending that the City Council approve this project.

DISCUSSION

Background

A Planning Commission Public Hearing for this project was held on March 13, 2014. At the meeting information about the project and the related Final Environmental Impact Report (FEIR) was presented to the Planning Commission by Planning Division staff and representatives from LSA Associates, Inc. who prepared the FEIR. Following the staff report, comments were taken from the applicant and interested parties and residents.

At the public hearing, one speaker identified a letter that had not been addressed in the FEIR. The project was continued to the April 24, 2014 meeting to allow for time to update the FEIR to include the August 31, 2012 letter and responses to the letter.

Planning worked with LSA Associates, Inc. to update the FEIR to address the concerns raised in the letter. The FEIR was redistributed to all agencies and interested parties and published on the City's webpage. Notice of the status of the FEIR and the Planning Commission's April 24, 2014 meeting was published in the newspaper, posted at the project site and sent to all property owners within 300 feet and all interested parties.

A second Planning Commission Public Hearing was held on April 24, 2014. At the meeting updated information about the project and the related FEIR was presented to the Planning Commission by Planning Division staff and representatives from LSA Associates, Inc. Following the staff report, public comments were provided by the applicant, interested parties and residents.

The Planning Commission supported staff's recommendation to restrict development of the two parcels located immediately adjacent to the Auto Mall. Planning condition of approval P3 states that, "No building permits shall be issued for the warehouse distribution buildings approved for Plot Plan PA07-0158 and Plot Plan PA07-0159 during the initial 18 months of this approval."

The Planning Commission voted 4-3 to recommend that the City Council certify the project Environmental Impact Report and approve the Prologis Eucalyptus Industrial Park project subject to expanding the findings in the Statement of Overriding Considerations (SOC) before it was taken to the City Council. The SOC is required by the California Environmental Quality Act (CEQA) when an agency approves a project with potential significant environmental impacts.

Project

The applicant, Prologis, has submitted ten applications for development of the Prologis Eucalyptus Industrial Park Project, which include a General Plan Amendment, Zone Change, Master Plot Plan, related Plot Plans, a Tentative Parcel Map, and an Environmental Impact Report, in order to develop a 2,244,419 square foot industrial park on a 122 acre site (Assessor's Parcel Numbers 488-330-011, 012, -013, -017, -018, -019, -020, and -021) located South of State Route 60 and east of Moreno Valley Auto Mall, at Fir Avenue (Future Eucalyptus Avenue) and between Pettit Street and the Quincy Channel.

General Plan Amendment

The project site has current General Plan land use designations that include approximately 50 acres of Business Park, 36 acres of R15 (Residential – up to 15 units per acre), 23 acres of R5 (Residential – up to 5 units per acre), and 12 acres of RA-2 (Residential/Agriculture – up to 2 units per acre). The applicant proposes to change the land use designation for the entire project site to BP (Business Park).

Land uses to the north include the adjacent freeway with OC (Office Commercial), R2 (Residential – up to 2 units per acre) and RA-2 zoned land north of the freeway. Land uses to the east include a mix of BP and CC (Community Commercial) zoned land and RA-2 zoned land with an approved warehouse facility located immediately to the east and a developed warehouse facility further to the east between Redlands Boulevard and Theodore Street. Land uses to the south include RA-2 with developed tract homes to the southeast. Land uses to the west include CC (Auto Mall, Moreno Beach Plaza and Stoneridge Towne Centre).

The General Plan Amendment also proposes a change to the Circulation Element to eliminate the connection from Fir Avenue/Future Eucalyptus Avenue to Eucalyptus Avenue/Future Encilia Avenue to the south. The change ensures that traffic generated by existing and proposed non-residential uses would be kept separate from residential areas along Eucalyptus Avenue/Future Encilia Avenue to the south and southeast.

Additionally, the General Plan Amendment proposes changes to the Master Plan of Trails. The proposed change would remove an existing trail segment that runs north/south along the west side of the Quincy Channel between Fir Avenue/Future Eucalyptus Avenue to State Route 60. This trail segment was originally intended to cross the freeway on an overpass at Quincy Street. This overpass is no longer on the City's General Plan Circulation element. Without the overpass, trail would end in a cul-de-sac at State Route 60.

The City's Recreational Trails Board met in February 2012 to discuss replacement of the dead end segment of the trail with a new segment of trail on the north side of Fir Avenue/Eucalyptus Avenue that would run from the Quincy Channel west to the site's western boundary ending at the Fire Station #58. The Board was supportive of the change. The General Plan Amendment would add the new trail segment.

Zone Change

The project site has current zoning designations that include 49.5 acres of BP, 0.5 acre of BPX (Business Park Mixed-use), 36 acres of R15, 23 acres of R5, and 12 acres of RA-2. The applicant proposes to change the zoning for the entire project site to LI (Light Industrial). The proposal would also result in the removal of a portion of the site from the PAKO (Primary Animal Keeping Overlay).

Zoning to the north includes OC, R2 and RA-2 land north of the freeway. Zoning to the east includes LI, CC and RA-2 land. Zoning to the south include vacant and developed RA-2 land. Zoning to the west is C (Commercial) under Specific Plan 209 and CC.

Warehouse distribution uses are permitted in both the BP and LI zones, but the size of the buildings proposed by the project requires a Zone Change to Light Industrial to allow for the warehouse facilities over 50,000 square feet.

Plot Plans

Master Plot Plan PA07-0083 proposes the development of an industrial park with 2,244,419 square feet of warehouse facilities on 122 acres. This application also

includes Building #2 on Parcel 2 of TPM 35679 for development of an 862,035 square foot warehouse distribution building on 39.32 acres with 311 required employee parking spaces and 135 required truck parking spaces.

Plot Plan PA07-0158 for Building #1 on Parcel 1 of TPM 35679 proposes development of a 168,342 square foot warehouse distribution building on 8.84 acres with 100 required employee parking spaces and 21 required truck parking spaces.

Plot Plan PA07-0159 for Building #3 on Parcel 3 of TPM 35679 proposes development of a 160,106 square foot warehouse distribution building on 8.5 acres with 98 required employee parking spaces and 20 required truck parking spaces.

Plot Plan PA07-0160 for Building #4 on Parcel 4 of TPM 35679 proposes development of a 339,015 square foot warehouse distribution building on 15.66 acres with 180 required employee parking spaces and 36 required truck parking spaces.

Plot Plan PA07-0161 for Building #5 on Parcel 5 of TPM 35679 proposes development of a 390,102 square foot warehouse distribution building on 19.29 acres with 173 required employee parking spaces and 53 required truck parking spaces.

Plot Plan PA07-0162 for Building #6 on Parcel 6 of TPM 35679 proposes development of a 325,038 square foot warehouse distribution building on 17.55 acres with 176 required employee parking spaces and 53 required truck parking spaces.

The loading and truck parking areas have been oriented away from adjacent residential zoned parcels and meet or exceed the Municipal Codes minimum buffer distance of 250 feet provided for in the Municipal Code.

All truck courts are screened by perimeter concrete tilt-up walls with a citrus tree row required along the State Route 60 frontage as an extension of the tree plantings along the rear of Fire Station #58. A tree row is also required along the Quincy Channel and southern property lines to soften the visual impact of the project and reflect back on the citrus groves previously on the site.

The project has been conditioned to provide standard parking lot and setback landscape to include ground cover shrubs and trees. Detention/water quality basins will be extensively landscaped. The project's Fir Avenue/Future Eucalyptus Avenue frontage will be developed with curb, gutter, parkway, sidewalk and a segment of multi-use trail. A segment of multi-use trail will also be installed on the west side of the Quincy Channel from Fir Avenue/Future Eucalyptus Avenue south to Eucalyptus Avenue/Future Encilia Avenue.

Tentative Parcel Map

Tentative Parcel Map No. 35679 proposes to re-configure the eight parcels located within the project site into six parcels with lettered lots to convey property to Caltrans for future development and to the City for public streets.

Site

The project site is comprised of vacant land that is mostly level and at grade with Fir Avenue/Future Eucalyptus Avenue and at or below grade of adjacent State Route 60. There are no trees, rock outcroppings or existing structures located within the limits of the project site. The project site includes a portion of the Quincy Channel which includes some riparian vegetation.

Surrounding Area

The project is located in an area that includes a mix of business park, office, commercial, residential and agricultural uses.

Developed land within proximity to the project site includes the Moreno Valley Auto Mall and Moreno Beach Plaza (Walmart) center to the west at Moreno Beach Drive, the 800,430 square foot regional headquarters for ALDI Foods (under construction) to the immediate east, and the 1.8 million square foot Highland Fairview Business Park (Skechers) warehouse facility further to the east between Redlands and Theodore and large lot subdivisions in the RA-2 zone across the channel from the project site.

Access/Parking

The project site will be accessed directly from Fir Avenue/Future Eucalyptus Avenue via Moreno Beach Boulevard or Redlands Boulevard and State Route 60. This portion of Fir Avenue/Future Eucalyptus Avenue, including the bridge crossing at the Quincy Channel would be constructed by the applicant/developer as a condition of the project.

The driveways and interior drive aisles associated with the project have been approved by the Fire Prevention Bureau for fire truck access and turnaround. The site has also been designed for adequate truck maneuvering and turnaround within the designated loading zones. The project as designed satisfies all parking requirements of the City's Municipal Code.

Design/Landscaping

Site design of the proposed warehouse distribution facility is consistent with requirements of the City's Municipal Code.

The architectural design of the buildings is concrete tilt-up construction. Building and wall colors include earthtones, with varying amounts of accent colors and vertical features to break up the architecture of building. Roof top equipment will be screened from public view by parapet walls.

Staff worked with the applicant to ensure that all sides of the buildings include architectural treatment. The loading bays and trailer storage areas have been screened from view. The screen walls are of concrete tilt-up construction which will match the building designs and colors.

Landscaping for the project as proposed is at around 18% of the site area including the water quality/detention basins. The City's Municipal Code does not require a minimum percentage of landscape on a site. Instead, there are requirements for landscape setback areas along perimeter streets, parking lot landscape, street trees and landscape treatments around the perimeter of the buildings where visible from the public right-of-way. The project as designed meets the City's current landscape criteria.

Signs are not a part of this approval and would be reviewed and approved under separate administrative permit.

This project design conforms to all development standards of the Light Industrial zone and the design guidelines for industrial uses as required within the City's Municipal Code.

REVIEW PROCESS

The project was originally reviewed by the Project Review Staff Committee (PRSC) in September 2007. Modifications were required to the plot plan exhibits and preliminary grading plan.

Revised plans were submitted in January and August 2008 and again in July and November 2011 and July and October 2012. Upon review of a final draft of the site plan and completion of the Final Environmental Impact Report in early 2014, a determination was made to schedule this project for a Planning Commission public hearing.

Community outreach efforts by the applicant in 2012 included mail distribution of project brochures to area residents, neighborhood walks to pass out brochures and open house invitations for an open house held in August 2012 at the Moreno Valley Ranch Golf Club.

ENVIRONMENTAL

Initial Study/Notice of Preparation

An Initial Study was completed after all discretionary applications were deemed complete. Based on the information within the Initial Study, an Environmental Impact Report (EIR) was recommended to be prepared. A Notice of Preparation for the EIR was issued on February 4, 2008, with the public comment period beginning on February 4, 2008 and ending on March 4, 2008. A public meeting to receive input on the issues to be covered by the EIR was held at City Hall on February 13, 2008.

Draft Environmental Impact Report

Subsequent to that meeting, draft environmental documents were prepared by the applicant's consultant LSA Associates, Inc. and submitted to the City.

City staff and the City's peer consultant reviewed the draft environmental documents for compliance with the California Environmental Quality Act (CEQA) Guidelines and required revisions to address identified questions and concerns. After revisions were

incorporated into the document, the Draft EIR was circulated for a 45-day public review period, starting on July 18, 2012, and ending on September 4, 2012.

The Draft EIR was sent to all required State and local agencies and interested parties on July 17, 2012, as well as to the City's Environmental and Historical Preservation Board. Thirteen comment letters were provided during the 45-day review period.

Final Environmental Impact Report

Responses to the thirteen comments received during the 45 day review period are included in the Response to Comments. The Response to Comments and related documents were mailed to all interested parties and responsible agencies on February 26, 2014, to allow for their review prior to the Planning Commission hearing, within the minimum notice period of 10 days required by CEQA. As was the case with the Draft Environmental Impact Report (DEIR), the draft Final Environmental Impact Report (FEIR) was provided for public review at City Hall, the City Library and posted on the City's website.

As discussed previously, a comment letter and appropriate responses were added to the FEIR following the March 13, 2014 Planning Commission hearing. The FEIR was re-distributed to all commenting agencies and interested parties in advance of the April 24, 2014 public hearing.

Additional questions were raised at the March 13, 2014 Planning Commission hearing about the City's documentation of the SB 18 Tribal Consultation process as referenced in Appendix B. The status of the City's interaction with some of the listed tribal groups has been updated in Appendix B to more accurately describe the City's efforts to satisfy consultation as prescribed by State law.

Significant and Unavoidable Impacts

Analysis presented in the FEIR indicates that the proposed project will have a number of potentially significant impacts. The FEIR includes a number of proposed mitigation measures to reduce or eliminate potential significant impacts. Even with proposed mitigation, a number of potential impacts cannot be reduced to a less than significant level. As identified in the FEIR document, these impacts are considered to be significant and unavoidable.

Where a project's impacts cannot be reduced to less than significant levels, CEQA allows a decision making body to consider a statement of overriding considerations and findings. CEQA requires the decision making agency to balance the economic, legal, social, technological or other benefits of a proposed project against its unavoidable environmental impacts when determining whether to approve the proposed project. This would include project benefits such as the creation of jobs or other beneficial project features versus project impacts that cannot be mitigated to less than significant levels. If the decision making body determines that the benefits of a proposed project outweigh the unavoidable adverse environmental effects, it may approve a statement of overriding considerations and approve the project.

The Planning Commission recommended Certification of the FEIR on April 24, 2014 subject to expanding the CEQA findings in the Statement of Overriding Considerations. Planning staff worked with LSA Associates, Inc. to provide more detailed facts in support of the findings in the in the statement of overriding considerations. The expanded language is attached to the staff report as Exhibit A to Attachment 2. A strikeout/underline version of the revised findings is included for reference as Attachment 15.

Mitigation Measures

The EIR includes mitigation measures intended to reduce project-specific and cumulative impacts for Air Quality, Biological Resources, Cultural Resources, Hydrology and Water Quality, Noise, Transportation, and Greenhouse Gases and Global Climate Change. All other environmental effects evaluated in the FEIR are considered to be less than significant, or can be adequately mitigated below significant thresholds.

Mitigation measures are included to reduce the environmental impacts where possible, even where the impacts could not be reduced to less than significant levels. All mitigation measures have also been included as conditions of approval for the project.

Approval and Certification

The City Council will take public testimony on the FEIR and project. Before the proposed project can be acted upon, the City Council will need to review the final environmental document before making a decision to either certify or reject the FEIR and project Mitigation Monitoring Program.

ALTERNATIVES

1. Certify the Environmental Impact Report and approve the applications for the Prologis Eucalyptus Industrial Park project. **Staff recommends this alternative.**

2. Do not Certify the Environmental Impact Report and Deny the applications for the Prologis Eucalyptus Industrial Park Project. **Staff does not recommend this alternative**.

FISCAL IMPACT

Not applicable.

CITY COUNCIL GOALS

Not applicable.

NOTIFICATION

A notice of the public hearing was published in the newspaper, posted at required City locations and at the project site, and mailed to property owners within 300 feet of the proposed project. Notice was also provided to all interested parties that requested a notice.

As of the date of report preparation, staff had received no public inquiries in response to the noticing for the City Council public hearing for this project.

Attachment 1

Notice of PUBLIC HEARING

This may affect your property. Please read.

Notice is hereby given that a Public Hearing will be held by the City Council of the City of Moreno Valley on the following item(s):

CASE: PA07-0081 - Zone Change
PA07-0082 - General Plan Amendment
PA07-0083 - Master Plot Plan including Building 2
PA07-0084 - Tentative Parcel Map 35679
PA07-0158 - Plot Plan for Building 1
PA07-0159 - Plot Plan for Building 3
PA07-0160 - Plot Plan for Building 4
PA07-0161 - Plot Plan for Building 5
PA07-0162 - Plot Plan for Building 6
P07-186 - Environmental Impact Report

APPLICANT: Prologis

OWNER: Prologis

REPRESENTATIVE: Prologis

LOCATION: South of State Route 60 and east of Moreno Valley Auto Mall, at Fir Avenue (Future Eucalyptus Avenue) and between Pettit Street and the Quincy Channel.

PROPOSAL: General Plan Amendment for portion of site from R15, R5 and R2 to Business Park and Zone Change from existing Business Park, Business Park Mixed-use, R15, R5, and RA-2 zoning to Light Industrial for 122 acres. The land use changes are required for development of six distribution warehouse facilities totaling 2,244,419 square feet with building sizes that range from 160,106 square feet to 862,035 square feet. The applicant also proposes Tentative Parcel Map No. 35679 to subdivide the project site into six parcels. A General Plan Amendment is also required for proposed changes to the City's circulation element and the Master Plan of Trails. Approval of this project will require certification of an EIR.

ENVIRONMENTAL DETERMINATION: Environmental Impact Report

COUNCIL DISTRICT: 3

Any person interested in any listed proposal can contact the Community & Economic Development Department, Planning Division, at 14177 Frederick St., Moreno Valley, California, during normal business hours (7:30 a.m. to 6:00 p.m., Monday through Thursday and 2nd and 4th Fridays from 7:30 a.m. to 1:30 p.m.), or may telephone (951) 413-3206 for further information. The associated documents will be available for public inspection at the above address.

In the case of Public Hearing items, any person may also appear and be heard in support of or opposition to the project or recommendation of adoption of the Environmental Determination at the time of the Hearing.

The City Council, at the Hearing or during deliberations, could approve changes or alternatives to the proposal.

If you challenge any of these items in court, you may be limited to raising only those items you or someone else raised at the Public Hearing described in this notice, or in written correspondence delivered to the City Council at, or prior to, the Public Hearing.

RESOLUTION NO. 2014-56

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, CERTIFYING THE FINAL ENVIRONMENTAL IMPACT REPORT (P07-186) AND ADOPTING THE FINDINGS AND STATEMENT OF OVERRIDING CONSIDERATIONS AND APPROVING THE MITIGATION MONITORING PROGRAM FOR THE PROLOGIS EUCALYPTUS INDUSTRIAL PARK PROJECT, INCLUDED AS EXHIBITS A AND B

Section 1:

WHEREAS, the applicant, Prologis, submitted applications for the Prologis Eucalyptus Industrial Park which include an Environmental Impact Report (P07-186), a General Plan Amendment (PA07-0082), a Zone Change (PA07-0081), Master Plot Plan PA07-0083 and related Plot Plans for a total of six buildings. The development of the industrial park include a total of 2,244,419 square feet of warehouse distribution space on 122 acres (this application also includes an 862,035 square foot warehouse facility on 39.32 acres), Plot Plan PA07-0158 for a 168,342 square foot warehouse distribution building on 8.84 acres, Plot Plan PA07-0159 for a 160,106 square foot warehouse distribution building on 8.5 acres, Plot Plan PA07-0160 for a 339,015 square foot warehouse distribution building on 15.66 acres, Plot Plan PA07-0161 for a 390,102 square foot warehouse distribution building on 19.29 acres, Plot Plan PA07-0162 for a 325,038 square foot warehouse distribution building on 17.55 acres, and Tentative Parcel Map 35679 (PA07-00084). A General Plan Amendment is also required for proposed changes to the City's Circulation Element and the Master Plan of Trails. The above applications shall not be approved unless the Final Environmental Impact Report (P07-186) is certified and approved; and

WHEREAS, the applicant, Prologis, and the environmental consultant, LSA Associates, worked with the City in the preparation of an Initial Study checklist and a Notice of Preparation (NOP). A Notice of Completion and Environmental Document Transmittal was filed with the State Clearinghouse on February 4, 2008 for the Notice of Preparation (NOP) of a Draft EIR for the project. The public review period of the NOP was February 4, 2008 through March 4, 2008. A public scoping meeting was held in connection with the NOP on February 13, 2008 in the Council Chamber at City Hall; and

WHEREAS, the applicant, Prologis, and the environmental consultant, LSA, worked with the City in the review of NOP response comments for the preparation of a Draft Environmental Impact Report (EIR) for this project. The Draft EIR was circulated to the public and to responsible agencies for comments for a 45 day period beginning on July 18, 2012 and ending on September 4, 2012; and

WHEREAS, the City has prepared responses to comments on the Draft EIR received during the 45 day comment period, which have been included in the Final EIR;

WHEREAS, on March 1, 2014 and April 12, 2014, the City published a notice in the local newspaper (Press Enterprise) and distributed copies of the draft Final EIR to the State Clearinghouse, local agencies and other interested parties; and

WHEREAS, the draft and final EIR concerning the proposed Prologis Eucalyptus Industrial Park Project were prepared in sufficient detail and duly circulated in compliance with the California Environmental Quality Act (CEQA), the State CEQA Guidelines and the City of Moreno Valley Rules and Procedures to Implement CEQA; and

WHEREAS, since July 18, 2012, copies of the draft EIR have been made available to the public at the City's offices, on the City's website and at the City's public

library; and

WHEREAS, the Final EIR includes a review of potential impacts associated with the implementation of the Prologis Eucalyptus Industrial Park Project, including, but not limited to Aesthetics, Agricultural Resources, Air Quality, Land Use and Planning, and Transportation; and

WHEREAS, a Mitigation Monitoring Program has been completed to ensure that all of the mitigation measures outlined in the final EIR are implemented; and

WHEREAS, A Final EIR, (including the Draft EIR, and responses to comments), has been completed and is being recommended for certification, prior to the approval of discretionary permits related to the project; and

WHEREAS, on March 13, 2014**,** the Planning Commission conducted a public hearing to consider the Final EIR for the proposed project and continued the item to their April 24, 2014 agenda; and

WHEREAS, on April 24, 2014**,** the Planning Commission conducted a public hearing to consider the Final EIR for the proposed project and recommended City Council approval; and

WHEREAS, on June 24, 2014**,** the City Council conducted a public hearing to consider the Final EIR for the proposed project; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, BE IT RESOLVED, it is hereby found, determined and resolved by the City Council of the City of Moreno Valley as follows:

A. This City Council hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this City Council during the above-referenced meeting on June 24, 2014, including written and oral staff reports, and the record from the public hearing, this City Council hereby specifically finds as follows:

1. Independent Judgment and Analysis – The Final Environmental Impact Report represents the City's independent judgment and analysis.

   FACT: A public hearing was conducted by the City Council on June 24, 2014, during which opportunity was given to address the adequacy of the Final Environmental Impact Report. All comments on the Final EIR raised during the public and agency comment period and at the Public Hearing(s) on the project were considered by the City Council.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

1. CERTIFYS that the Final Environmental Impact Report (EIR) for the Prologis Eucalyptus Industrial park Project on file with the Community & Economic Development Department, incorporated herein by this reference, has been completed in compliance with the California Environmental Quality Act, that the City Council reviewed and considered the information contained in the Final EIR and that the Final EIR reflects the City's independent judgment and analysis; and

2. ADOPTS the Findings and Statement of Overriding Considerations regarding the Final EIR for the Prologis Eucalyptus Industrial Park Project, attached hereto as Exhibit A; and

3. APPROVES the Mitigation Monitoring Program for the Final EIR for the proposed Prologis Eucalyptus Industrial Park Project, attached hereto as Exhibit B.

APPROVED AND ADOPTED this 24th day of June, 2014.

Facts, Findings and Statement of Overriding Considerations Regarding the Environmental Effects and the Approval of the ProLogis Eucalyptus Industrial Park (State Clearinghouse No. 2008021002)

I. INTRODUCTION

The City Council of the City of Moreno Valley (this "Council"), in certifying the EIR for the Prologis Eucalyptus Industrial Park and approving Tentative Parcel Map 35679 and a Site Plan authorizing the construction of up to approximately 2,244,638 square feet of distribution warehouse space (the "Project"), makes the Findings described below and adopts the Statement of Overriding Considerations presented at the end of the Findings. The Environmental Impact Report ("EIR") was prepared by the City of Moreno Valley ("City") acting as lead agency pursuant to the California Environmental Quality Act ("CEQA"). Hereafter, unless specifically identified, the Notice of Preparation ("NOP"), Notice of Availability & Completion ("NOA/NOC"), Draft EIR ("DEIR"), Technical Studies, Final EIR containing Responses to Comments and textual revisions to the Draft EIR ("FEIR"), and the Mitigation Monitoring and Reporting Program ("MMRP") will be referred to collectively herein as the "EIR." These Findings are based on the entire record before this Council, including the EIR. This Council adopts the facts and analyses in the EIR, which are summarized below for convenience. The omission of some detail or aspect of the EIR does not mean that it has been rejected by this Council.

II. PROJECT SUMMARY

A. PROJECT DESCRIPTION

1. Site Location

The Project is located in the eastern portion of the City of Moreno Valley. The Project site consists of ten parcels totaling approximately 122.8 net acres located south of and adjacent to SR-60, east of Moreno Valley Auto Mall, and adjacent to and west of the Quincy Channel.

The Project site is vacant and supports mainly weedy vegetation. The major road that provides access to the Project site is Eucalyptus Avenue. Land adjacent to the Project site includes vacant land east and south of the proposed Project site, SR-60 to the north, and the Moreno Valley Auto Mall and the City

of Moreno Valley Fire Station No. 58 northwest of the Project site. Existing single-family residential uses are located approximately 50 feet southeast of the southeastern corner of the Project site.

2. Project Description

The Project site is approximately 122.8 acres in size. The proposed Project includes the construction and operation of a warehouse facility comprising six buildings consisting of a total of approximately 2,244,638 square feet. The Project site is divided into northern and southern areas. The northern area, north of the future Eucalyptus Avenue, would contain approximately 1,030,377 square feet of warehouse uses divided between two buildings (No. 1 and 2). Development in the southern area, south of the future Eucalyptus Avenue, would consist of approximately 1,214,261 square feet of warehouse uses divided among four separate buildings (No. 3 through 6). The master and individual building plans, including grading, landscaping, elevations, and selected line of sight plans. The proposed Project includes the construction of asphalt/concrete surfaces in parking and driving areas, and landscaping along the perimeter and roadway frontages.

The Project site is currently designated Residential in the City's General Plan. The site is zoned as Business Park (BP), Business Park/Mixed Use (BPX), Residential 15 District (R15), Residential 5 District (R5), and Residential Agriculture 2 (RA-2). The zoning is not consistent with the existing General Plan land use and the Project is not consistent with the General Plan and zoning. Therefore the Project will require a General Plan Amendment which would change the designation to Business Park and a Zone Change that would change the zoning of the site to Light Industrial (LI).

3. Actions Covered by the EIR

The EIR will support the following discretionary and non-discretionary approvals:

- General Plan Amendment to amend the Land Use Element resulting in a change of land use designations for the southern portion of the project site (approximately 71.3 acres) from Residential 15, Residential 5, and Residential Agriculture to Business Park.
- General Plan Amendment to amend the Circulation Element including (1) elimination of undeveloped Quincy Street from Eucalyptus Avenue to Encilia Avenue; and (2) realignment of Encilia Avenue from its current alignment such that its westerly terminus is located at Moreno Beach Drive instead of the current General

Plan westerly terminus at Eucalyptus Avenue. The segment between Quincy Channel and Moreno Beach Drive would be classified as a Collector.

- Change of Zone resulting in a change from Business Park (BP), Business Park Mixed-Use (BPX), Residential 15 (R15), Residential 5 (R5), and Residential Agriculture (RA-2) to Light Industrial (LI) on the project site.
- Modification of the Primary Animal Keeping Overlay (PAKO) zone district per the recommended change of zone.
- Modification of the Master Plan of Trails to eliminate trail segment along the west side of the Quincy Channel north of the future Eucalyptus Avenue and add a segment along the north side of Eucalyptus Avenue from the Quincy Channel to the west boundary of the project site.
- Approval of a Master Plot Plan and five related Plot Plans.
- Tentative Parcel Map approval.
- Certification of the Environmental Impact Report.
- Final Parcel Map, public improvement agreement, and related securities approval.
- Issuance of an encroachment permit for any construction work done in any City-controlled ROW. Encroachment permit issuance requires approval of improvement plans, public improvement agreement execution with securities posted, and satisfying those conditions of approval required prior to grading.
- Approval of a Storm Water Pollution Prevention Plan (SWPPP) to accommodate site runoff during construction.
- Approval of a Preliminary Water Quality Management Plan (P-WQMP) and Final Water Quality Management Plan (F-WQMP) to mitigate for post-construction runoff flows (non-discretionary).
- Issuance of a Grading Permit that requires approval of a grading plan, approval of the final drainage study, approval of the F-WQMP, obtaining an Notice of Intent and Water Discharge Identification Number, obtaining a WQMP#, and satisfying those conditions of approval required prior to grading (non-discretionary).

- Issuance of a Building permit. The comprehensive building permit includes building, plumbing, mechanical, and electrical permits (non-discretionary).

Approvals and permits required by other agencies include:

- Approval from the City and Riverside County Flood Control and Water Conservation District (RCFCWCD) to ensure that construction site drainage velocities are equal to or less than the pre-construction conditions and downstream water quality is not worsened
- Approval of Quincy Channel improvements from the RCFCWCD
- A Section 404 Permit from the U.S. Army Corps of Engineers (USACE)
- A Section 401 Water Quality Certification from the Regional Water Quality Control Board (RWQCB)
- A Section 1602 Streambed Alteration Agreement from the California Department of Fish and Wildlife (CDFW)
- Encroachment permits from Caltrans for any construction work done in any State-controlled right of way(i.e., SR-60)

B. PROJECT OBJECTIVES

The Project Objectives include the following:

- Provide industrial warehouse facilities that meet the substantial and unmet demands of businesses located in the City and County;
- Provide new industrial development that is attractive and minimizes conflicts with the surrounding existing uses;
- Provide a variety of new employment opportunities for the citizens of Moreno Valley and surrounding communities;
- Encourage warehouse distribution services that take advantage of the area's close proximity to various freeways and transportation corridors;
- Encourage new development consistent with the capacity and municipal service capabilities;

- Provide infrastructure improvements to meet phased Project needs in an efficient and cost-effective manner;
- Cluster industrial warehouse uses near access points to the state highway system to reduce traffic congestion on surface streets and to reduce air pollutant emissions from vehicle sources;
- Develop land uses that provide the City with a positive revenue/cost ratio and provide needed infrastructure in a timely fashion;
- Address community circulation, both vehicular and pedestrian, utilizing available capacity within the existing circulation system, and provide fair share improvements to various future-year deficient intersection or road segments; and
- Reduce peak hour vehicle trips, energy and water consumption compared to existing General Plan land uses.

III. ENVIRONMENTAL REVIEW AND PUBLIC PARTICIPATION

The City has conducted an extensive review of this Project which included the DEIR, FEIR and supporting technical studies, along with a public review and comment period first during the circulation of the Notice of Preparation/Initial Study and then through the circulation of the DEIR. The following is a summary of the environmental review of this Project:

- On February 4, 2008, the City circulated a Notice of Preparation ("NOP") and the Initial Study that identified the environmental issues that the City anticipated would be analyzed in the Project's DEIR to the State Clearinghouse, responsible agencies, and other interested parties.
- On February 13, 2008, the City conducted a public scoping meeting to allow members of the public to provide comments and input regarding the scope and content of the DEIR.
- The NOP public review period ran for 30 days, from February 4 to March 4, 2008. Written comments on the NOP were received from 22 different agencies, organizations, and individuals. The scope of the issues identified in the comments expressing concern included potential impacts associated with:

- Change in use from established General Plan and zoning designations. This issue was discussed in Section 4.1, Aesthetics, and Section 4.8, Land Use, of the DEIR;

- Short-term and long-term air pollutant emissions including dust and diesel particulates from truck exhaust that could negatively affect nearby residential uses. This issue was discussed in Section 4.3, Air Quality, of the DEIR;

- Short-term and long-term noise impacts that could affect nearby residential uses. These issues were discussed in Section 4.9, Noise, of the DEIR;

- Potential impacts to future planned school sites were addressed in Section 4.8, Land Use, of the DEIR;

- Potential water-related impacts (drainage, water quality of runoff from the project) were addressed in Section 4.7, Hydrology and Water Quality, in the DEIR;

- Project truck traffic causing congestion on local roads, intersections, and freeway ramps, primarily on Redlands Boulevard, and impacts to vehicular, bicycle, and pedestrian safety. These issues were discussed in Section 4.11, Transportation, of the DEIR;

- Impacts to aesthetics from loss of views, loss of neighborhood character, and increased night lighting as this area transitions from previously planned residential and business park uses to industrial uses along the south side of SR-60. These issues were discussed in Section 4.1, Aesthetics, and 4.8, Land Use, of the DEIR; and

- Potential loss of biological or cultural (archaeological) resources by grading and development of the site, and suggestions to consult with local Native American tribes per SB 18. These issues were discussed in Section 4.4, Biological Resources, and 4.5, Cultural Resources, of the DEIR.

- Based on the Initial Study, included in the DEIR in Appendix A, and comments received pursuant to the NOP, it was determined that some issues need not be addressed in depth in the DEIR because previous studies of other analyses provided sufficient information,

analysis, and mitigation to conclude that there was little or no potential for significant impacts. These environmental topics included: (1) Geology and Soils; (2) Mineral Resources; (3) Public Services; (4) Recreation; and, (5) Forest Resources.

- As required by the California Environmental Quality Act (CEQA) Guidelines Section 15087, a Notice of Completion (NOC) of the Draft EIR State Clearinghouse No. 2008021002 for the Eucalyptus Industrial Park project was filed with the State Clearinghouse on July 17, 2012, and the Notice of Availability (NOA) of the Draft EIR was filed with the Riverside County Clerk on July 18, 2012.

- The Draft EIR was circulated for public review for a period of 48 days, from July 18, 2012 to September 4, 2012. Copies of the Draft EIR were distributed to all Responsible Agencies and to the State Clearinghouse in addition to various public agencies, citizen groups, and interested individuals. Copies of the Draft EIR were also made available for public review at the City Planning Department, at one area library, and on the internet. A total of thirteen (13) comment letters were received on the DEIR. Ten of the comment letters received were from Federal, State, regional, or local agencies. Three comment letters were received from private organizations or conservation groups – no letters were received from individuals. The City prepared specific responses to all comments. The responses to comments are included in Section 2.0 of the FEIR.

- On April 12, 2014 in accordance with *Public Resources Code* Section 21092.5, the City provided written responses to public agencies that commented on the DEIR.

- On June 13, 2014, Notice of the City Council hearing to consider the Project was provided in the following newspaper(s) of general and/or regional circulation: Press Enterprise.

- On June 24, 2014, this Council held a public hearing to consider the Project and staff recommendations. The City, after considering written comments and oral testimony on the EIR, determined that no new information was presented that would require recirculation of the EIR. Following public testimony, submission of additional written comments, and staff recommendations, this Council certified the EIR, adopted these Facts, Findings and the Statement of Overriding Considerations, and the further recommendations in the Staff Report, and approved the Project (collectively the "Approvals").

IV. INDEPENDENT JUDGMENT FINDING

The Applicant retained the independent consulting firm of LSA Associates, Inc. ("LSA") to prepare the EIR for the Project. LSA has prepared the EIR under the supervision, direction and review of the City with the assistance of an independent peer review (Willdan Engineering). The City of Moreno Valley is the Lead Agency for the preparation of the EIR, as defined by CEQA CPRC Section 21067 as amended. The City Council has received and reviewed the EIR prior to certifying the EIR and prior to making any decision to approve or disapprove the Project.

Finding: The EIR for the Project reflects the City's independent judgment. The City has exercised independent judgment in accordance with *Public Resources Code* Section 21082.1(c) (3) in directing the consultant in the preparation of the EIR, as well as reviewing, analyzing, and revising material prepared by the consultant.

A. GENERAL FINDING ON MITIGATION MEASURES

In preparing the Approvals for this Project, City staff incorporated the mitigation measures recommended in the EIR as applicable to the Project. In the event that the Approvals do not use the exact wording of the mitigation measures recommended in the EIR, in each such instance, the adopted Approvals are intended to be identical or substantially similar to the recommended mitigation measure. Any minor revisions were made for the purpose of improving clarity or to better define the intended purpose.

Finding: Unless specifically stated to the contrary in these findings, it is this Council's intent to adopt all mitigation measures recommended by the EIR which are applicable to the Project. If a measure has, through error, been omitted from the Approvals or from these Findings, and that measure is not specifically reflected in these Findings, that measure shall be deemed to be adopted pursuant to this paragraph. In addition, unless specifically stated to the contrary in these Findings, all Approvals repeating or rewording mitigation measures recommended in the EIR are intended to be substantially similar to the mitigation measures recommended in the EIR and are found to be equally effective in avoiding or lessening the identified environmental impact. In each instance, the Approvals contain the final wording for the mitigation measures.

V. ENVIRONMENTAL IMPACTS AND FINDINGS

City staff reports, the EIR, written and oral testimony at public meetings or hearings, these facts, findings, and statement of overriding considerations, and other information in the administrative record, serve as the basis for the City's environmental determination.

The detailed analysis of potentially significant environmental impacts and proposed mitigation measures for the Project is presented in Section 4.0 of the DEIR and Section 3.0 of the FEIR. Responses to comments on the DEIR, along with copies of the comments, are provided in Chapter 2.0 of the FEIR.

The EIR evaluated thirteen major environmental categories for potential impacts including Aesthetics, Agricultural Resources, Air Quality, Biological Resources, Cultural Resources, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use, Noise, Population and Housing, Transportation, Utilities and Service Systems, and Greenhouse Gases and Global Climate Change. Both Project-specific and cumulative impacts were evaluated. Of these thirteen major environmental categories, this Council concurs with the conclusions in the EIR that the issues and sub issues discussed in Sections V.A and V. B below either are less-than-significant without mitigation or can be mitigated below a level of significance. For the remaining potential environmental impacts that cannot feasibly be mitigated below a level of significance discussed in Section V.C, overriding considerations exist which make these potential impacts acceptable to this Council.

A. LESS-THAN-SIGNIFICANT ENVIRONMENTAL IMPACTS NOT REQUIRING MITIGATION

The Moreno Valley City Council hereby finds that the following potential environmental impacts of the Project are less-than-significant and therefore do not require the imposition of mitigation measures.

1. <u>Aesthetics</u>

a. Light and Glare

Potential Significant Impact: Whether the Project would create a new source of substantial light or glare that would adversely affect day or nighttime views in the area.

Findings: Potential impacts of the Project related to light and glare are discussed in detail in Section 4.1 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will

not result in significant impacts related to light and glare with the adherence to established City ordinances and development guidelines, therefore, no mitigation is required.

Facts in Support of the Findings: Section 4.1 identifies no sources of light or glare on the Project site. Development of the Project site would introduce new sources of light and glare into the area in the form of street lighting, parking lot lighting, and security lighting for the buildings. Lighting within loading areas (areas within the public view include the loading areas of Buildings 1, 2, and 3) will be directed downward so as to not Project lighting into the sky. The overall increase in ambient light in the area is expected to be incremental with compliance with the City's development standards for lighting. The proposed Project will incrementally increase the amount of daytime glare in the Project area from introducing windows and metal fixtures into the area. All development in the City, which includes light generated from warehouse buildings and parking lots, is required to adhere to lighting requirements contained in the City's Municipal Code. The Project is consistent with General Plan policies and Municipal Code requirements regarding light and glare, therefore, no impacts associated with this issue would occur and no mitigation is required (DEIR, pgs. 4.1-8 to 4.1-9).

b. Light and Glare

Potential Significant Impact: Whether the Project would create a new source of substantial light or glare that would adversely affect day or nighttime views in the area.

Findings: Potential impacts of the Project related to light and glare are discussed in detail in Section 4.1 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to light and glare with the adherence to established City ordinances and development guidelines, therefore, no mitigation is required.

Facts in Support of the Findings: Section 4.1 identifies no sources of light or glare on the Project site. Development of the Project site would introduce new sources of light and glare into the area in the form of street lighting, parking lot lighting, and security lighting for the buildings. Lighting within loading areas (areas within the public view include the loading areas of Buildings 1, 2, and 3) will be directed downward so as to not Project lighting into the sky. The overall increase in ambient light in the area is expected to be incremental with compliance with the City's development standards for lighting. The proposed Project will incrementally increase the amount of daytime glare in the Project area from introducing windows and metal fixtures into the area. All development in the City, which includes light generated from warehouse buildings and parking lots, is required to adhere to lighting requirements contained in the City's Municipal Code. The Project is consistent with General Plan policies and

Municipal Code requirements regarding light and glare, therefore, no impacts associated with this issue would occur and no mitigation is required (DEIR, pgs. 4.1-8 to 4.1-9).

2. Air Quality

a. Construction-Chronic Health Risk Impacts

Potential Significant Impact: Whether the Project would expose sensitive receptors to substantial pollutant concentrations.

For Maximum Individual Cancer Risk (MICR), the applicable thresholds are:

- An increased cancer risk greater than 10 in 1 million (1.0×10^{-5}) at any receptor location; or
- A cancer burden greater than 0.5.

For non-cancer chronic Hazard Index (HI); the applicable threshold is:

- A cumulative increase for any target organ system exceeding 1.0 at any receptor location.

Findings: Potential impacts of the Project related to construction-chronic health risks are discussed in detail in Section 4.3 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to sensitive receptor health risks and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.3 of the DEIR, the only toxic air pollution emissions in any significant quantity associated with the construction of the Project occur from diesel-powered equipment exhaust. A screening health risk assessment was performed according to the published Office of Environmental Health Hazard Assessment (OEHHA) health risk techniques.[1] According to the health risk assessment, the cancer risk due to construction of the Project is less than the threshold of 10 in 1 million. Therefore, health risks would be less than significant and no mitigation is required. (DEIR, pgs. 4.3-13 to 4.3-14)

b. Operational-Acute Health Risk Emission Impacts

Potential Significant Impact: Whether the Project would expose sensitive receptors to substantial pollutant concentrations.

For MICR, the applicable thresholds are:

[1] OEHHA, *Air Toxics Hot Spots Program Risk Assessment Guidelines*, August 2003, Appendix D, *Risk Assessment Procedures to Evaluate Particulate Emissions from Diesel-Fueled Vehicles*.

- An increased cancer risk greater than 10 in 1 million (1.0×10^{-5}) at any receptor location; or

For non-cancer chronic and acute HI; the applicable threshold is:

- A cumulative increase for any target organ system exceeding 1.0 at any receptor location.

Findings: Potential impacts of the Project related to operational-acute health risks are discussed in detail in Section 4.3 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to operational-acute health risks and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.3 of the DEIR, a screening level health risk assessment was performed for the operational emissions associated with the proposed Project based on the SCAQMD's *Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis* guidance. The operations expected to occur at this facility will not emit any toxic chemicals in any significant quantity other than vehicle exhaust. According to the health risk assessment the nearest residences would experience a cancer risk of 4.33 in 1 million, which is below the 10 in 1 million threshold. The nearest residences would also experience a chronic HI of 0.0016 and an acute HI of 0.0000088. Both the chronic and acute HI would be below the chronic and acute HI threshold of 1.0. Since the operational phase of the proposed Project would not exceed any of the long-term acute health risk assessment thresholds, a less than significant impact would occur. No mitigation is required. (DEIR, pgs. 4.3-14 to 4.3-18)

c. Operational-Carcinogenic and Chronic Health Risk Emission Impacts

Potential Significant Impact: Whether the proposed Project would expose sensitive receptors to substantial pollutant concentrations.

For MICR, the applicable thresholds are:

- An increased cancer risk greater than 10 in 1 million (1.0×10^{-5}) at any receptor location; or

For non-cancer health risk HI; the applicable threshold is:

- A cumulative increase for any target organ system exceeding 1.0 at any receptor location.

Findings: Potential impacts of the Project related to operational-carcinogenic and chronic health risk emission impacts are discussed in detail in Section 4.3 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to health risks related to operational emissions and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.3 of the DEIR, the closest residences to the Project would be exposed to a lifetime inhalation cancer risk of no more than 4.33 in 1 million, a 30-year inhalation cancer risk of no more than 3.88 in 1 million, and nearby workers a 40-year career inhalation cancer risk of no more than 1.5 in 1 million. The chronic health risk index is significantly less than the threshold of 1.0, in this case 0.0016 for residents and workers. No significant carcinogenic or chronic health risks would occur from Project-related traffic. No significant health risk would occur from Project-related truck traffic, and no mitigation is necessary. (DEIR, pg. 4.3-18)

d. Air Quality Impacts to Adjacent Future Development

Potential Significant Impact: Whether the proposed Project would expose sensitive receptors to substantial pollutant concentrations.

Findings: Potential impacts of the Project related to air quality impacts to adjacent future developments are discussed in detail in Section 4.3 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to air quality impacts to adjacent future development and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.3 of the DEIR, based on the land use assumptions for the future L-Aquila D'Pietra (LADP) Project, residential development would be located along the southern Project boundary between the proposed Project and the proposed LADP. It is anticipated that the proposed Project site would be fully developed prior to the occupation of any dwelling units in LADP; therefore, no construction-related air quality impacts to adjacent sensitive receptors would result from development of the proposed Project.

The primary health risk is from heavy-duty truck emissions is diesel particulate exhaust. According to the screening-level assessment, the future residential units south of the Project site would be exposed to an unmitigated inhalation cancer risk of approximately 4.3 in 1 million, which is less than the threshold of 10 in 1 million. The corresponding chronic and acute hazard indices would be approximately 0.0016 and 0.000088, which is less than the threshold of 1.0 for the chronic hazard index and acute hazard index. Since the screening-level analysis overall Project health risks are below established thresholds, any

detailed assessment would also produce less than significant health risk levels. Therefore, a less than significant impact associated with future uses that may occupy adjacent properties subsequent to development of the proposed Project would occur. No mitigation is required. (DEIR, pgs. 4.3-18 to 4.3-19)

e. Long-Term Microscale (CO Hotspot) Impacts

Potential Significant Impact: Whether the proposed Project would violate any air quality standard or contribute substantially to an existing or projected air quality violation. For CO, the applicable thresholds are:

- California State one-hour CO standard of 20.0 ppm; and
- California State eight-hour CO standard of 9.0 ppm.

Findings: Potential impacts of the Project related to long-term microscale emissions are discussed in detail in Section 4.3 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to long-term microscale emissions and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.3 of the DEIR, the highest one-hour CO concentration experienced at any of the intersections in the Project vicinity would not exceed the one hour CO State standard of 20 ppm. Based on the *Air Quality Analysis* prepared for the proposed Project, the proposed Project would contribute, at most, a 0.1 ppm increase to the one-hour CO concentrations for all scenarios. This is below the 1.0 ppm increase threshold. Also the highest eight-hour CO concentration experienced at any of the intersections in the Project vicinity would not exceed the eight-hour CO state standard of 35 ppm. Based on the *Air Quality Analysis* prepared for the proposed Project, the proposed Project would contribute, at most, a 0.1 ppm increase to the eight-hour CO concentrations for all scenarios. This is below the 0.45 ppm increase threshold. Since the proposed Project would not exceed the one-hour or eight-hour CO concentration standards, it is reasonable to conclude that no CO hot spots would occur. Therefore, the proposed Project would not have a significant impact on local air quality for CO and no mitigation measures would be required. (DEIR, pgs. 4.3-19 to 4.3-20)

f. Odors

Potential Significant Impact: Whether the Project would create objectionable odors affecting a substantial number of people.

Findings: Potential impacts of the Project related to objectionable odors are discussed in detail in Section 4.3 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts due to objectionable odors and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.3 of the DEIR, the Project does not propose land uses typically associated with emitting objectionable odors. Potential odors during Project construction may result from heavy equipment exhaust and the application of asphalt and architectural coatings. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less-than-significant. Project-related operational odor sources such as vehicle exhaust and routine painting/ maintenance activities are typical of industrial/commercial activities and would be localized to the immediate Project vicinity, with little or no off-site effects. Accordingly, impacts related to objectionable odors will be less-than-significant and no mitigation is required. (DEIR, pg. 4.3-20)

3. Biological Resources

a. Habitat Fragmentation/Wildlife Movement

Potential Significant Impact: Whether the Project would interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.

Findings: Potential impacts of the Project related to habitat fragmentation and wildlife movement are discussed in detail in Section 4.4 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts to habitat and wildlife movement and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.4 of the DEIR, the proposed Project site is isolated from regional wildlife corridors by existing barriers including urban development, agricultural uses, and roadways. Land uses adjacent to the Project site include fallow agricultural land to the south and east, commercial uses to the west, and residential uses to the north across SR-60. Due to the nature of development occurring in the Project area and the current condition of the Project site, it is highly unlikely that the Project site is utilized as a wildlife movement corridor, with the exception of the Quincy Channel. The proposed Project will not affect the majority of Quincy Channel, thus allowing wildlife to continue using the existing channel to traverse the site. The quality of on-site habitat has been diminished

due to the previous and frequent ground disturbance and past agricultural activities. In addition, the existing roadways and infrastructure features further isolate the Project site from natural areas. Due to the disturbed condition of the Project site, the nature of development to the southeast and west, the intervening presence of roadways and infrastructure, and adherence to City development standards identified in the Municipal Code, development of the proposed Project will not result in significant habitat fragmentation or substantially affect established wildlife corridors or wildlife movement. A less than significant impact would result and no mitigation is required. (DEIR, pg. 4.4-23)

b. Adopted Policies and Ordinances

Potential Significant Impact: Whether the Project would conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

Findings: Potential impacts of the Project related to adopted policies and ordinances are discussed in detail in Section 4.4 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in conflict with local policies or ordinances and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.4 of the DEIR, city policies or ordinances identified in the General Plan protecting biological resources include: mitigation of impacts to riparian areas or other natural sensitive communities (Policy 7.4.1), preservation of natural drainage courses in their natural hydrological state (Policy 7.4.3), and City fulfillment of obligations set forth within any agreements and permits related to the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) implementation (Policy 7.4.5).

The Quincy Channel, located adjacent and to the east of the proposed Project site, is considered a sensitive natural habitat due to the value it provides as nesting sites and foraging sites for migratory birds. The proposed Project would be designed to minimize encroachment into this natural area through setback requirements established in Sections 9.16.120 and 9.05.040 of the City's Municipal Code, thus preserving this habitat area in its natural state pursuant to the City's General Plan. At the northeast corner of Building 2, the development plans call for a minimum setback from Quincy Channel due to the topography and alignment of the creek. From that point, the plan provides a setback and landscaped buffer area between the drainage area and the structures proposed on the site that widens and varies from 25 to 50 feet (including the flood control access road). Therefore, the proposed Project would not conflict with local policies or ordinances protecting biological resources and a less than significant impact would occur. No mitigation is required. (DEIR, pg. 4.4-24)

c. Adopted Habitat Conservation Plans

Potential Significant Impact: Whether the Project would conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

Findings: Potential impacts of the Project related to adopted habitat conservation plans are discussed in detail in Section 4.4 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in conflicts with local habitat conservation plans and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.4 of the DEIR, the Project site is located within the Western Riverside County MSHCP, however, the Project site is not within any MSHCP criteria cell or habitat linkage. Furthermore, the Project site is not located within an MSHCP mammal or amphibian survey area; a Narrow Endemic Plant Species Survey Area or Criteria Area Plant Species Survey Area; or a riparian, wetland, or vernal pool habitat/species survey area. A habitat assessment for the burrowing owl is required under the MSHCP. While the Project site is not within any MSHCP conservation areas, the Project is still subject to provisions of the MSHCP. In particular, the Project applicant will be required to provide payment of mitigation fees and adhere to the requirements established in the MSHCP. Pursuant to agreements with the USFWS and the CDFG, the payment of the mitigation fee prior to the issuance of a building permit by the City, and compliance with applicable provisions of the MSHCP provides full mitigation under CEQA, FESA, and CESA for impacts to the species and habitats covered by the MSHCP. Therefore, development of the proposed Project will not conflict with the provisions of the MSHCP. A less than significant impact would occur and no mitigation is required.

In addition to the MSHCP, the Project site is within the boundaries of the Stephens Kangaroo Rat Habitat Conservation Plan (SKR HCP) established by the County of Riverside. Development of the proposed Project will not conflict with the provisions of the SKR HCP. The payment of a local mitigation fee prior to issuance of a grading permit by the City will be required. There are no other requirements for the Project under the SKR HCP and a less than significant impact would occur with payment of the fee and no further mitigation is required. (DEIR, pg. 4.4-24)

d. Endangered and Threatened Species

Potential Significant Impact: Whether the Project would have a substantial adverse effect, either directly or through habitat modifications, on any species identified as endangered or threatened in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (CDFW) or U.S. Fish and Wildlife Service (USFWS).

Findings: Potential impacts of the Project related to endangered and threatened species are discussed in detail in Section 4.4 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts to endangered or threatened species and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.4 of the DEIR, no species listed by the State and/or Federal Government as Endangered or Threatened was identified on site during the field surveys; however, Swainson's hawk, a State-listed species, and Stephens' kangaroo rat, a federally and State-listed species, have a low potential to occur on the site.

The Project site is not located within any USFWS designated critical habitat . Swainson's hawk would be expected to occur on the site, if at all, only during migration as foraging individuals. Swainson's hawk is covered by the MSHCP. Mitigation for covered species consists of participation in the MSHCP.

The Project site is also within the SKR HCPFee Area. The proposed Project site is not within an SKR Core Area. The SKR HCP provides Take Authorization for the SKR within its boundaries, and no surveys or additional measures are required other than paying a development fee prior to issuance of a grading permit by the City. In the absence of a significant impact, no mitigation is warranted. (DEIR, pg. 4.4-25)

e. Cumulative Biological Impacts

Potential Significant Impact: Whether the Project in connection with past, current, and probably future projects would incrementally effect biological resources.

Findings: Potential impacts of the Project related to cumulative biological impacts are discussed in detail in Section 4.4 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant cumulative impacts to biological resources and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.4 of the DEIR, the proposed Project would not make a cumulatively considerable contribution to impacts on endangered or threatened species, riparian

habitat or natural plant communities, jurisdictional waters, habitat fragmentation, wildlife movement, local policies and ordinances, or habitat conservation plans. There are no projects that would, in combination with the proposed Project, produce a significant impact to non-listed sensitive species. Therefore, there are no significant cumulative impacts anticipated to occur that are associated with biological resources. With implementation of Project-level Mitigation Measures 4.4.6.1 through 4.4.6.3, the Project's contribution to cumulative biological impacts will not be cumulatively considerable and no additional mitigation is required. (DEIR, pgs 4.4-30 to 4.4-31)

4. Cultural Resources

a. Historical Structures and Features

Potential Significant Impact: Whether the Project would cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5.

Findings: Potential impacts of the Project related to historical structures and features are discussed in detail in Section 4.5 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts to historical structures and features and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.5 of the DEIR, no structures or unique features are currently located within the Project limits. An online title search was conducted and historic maps were reviewed to determine the potential for structures and/or the remains of former sites of buildings or resources within the Project limits. No evidence of past structures or historic features was identified, nor was evidence of such structures identified during the on-site cultural resource survey or the records search. As no evidence has been identified to suggest the presence of past or current structures on site, no impacts related to historic structures or features will occur. In the absence of a significant impact, no mitigation is warranted. (DEIR, pg.4.5-5)

b. Human Remains

Potential Significant Impact: Whether the Project would disturb any human remains, including those interred outside of formal cemeteries.

Findings: Potential impacts of the Project related to human remains are discussed in detail in Section 4.5 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts to human remains and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.5 of the DEIR, the Project site was utilized for agricultural production. No evidence suggesting the Project site has been utilized in the past for human burials has been identified.[2] In the unlikely event human remains are discovered during grading or construction activities, State law (Health and Safety Code §7050.5) requires that no further disturbance shall occur until the County Coroner has made determination of the origin and disposition pursuant to Public Resources Code 5097.98. Because adherence to provisions of Health and Safety Code §7050.5 is required of all development projects, and because adherence to the requirements in State law sufficiently mitigates for potential impacts to human remains, no significant impact related to this issue will occur. Because potential impacts associated with this issue are less than significant, no mitigation is required. (DEIR, pg. 4.5-5)

c. Cumulative Cultural Resources

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have a cumulative significant impact on cultural resources.

Findings: Potential impacts of the Project related to cumulative cultural resources are discussed in detail in Section 4.5 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant cumulative impacts to cultural resources and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.5 of the DEIR, on-site sediments and cumulative archaeological and paleontological discoveries elevate the potential for the on-site presence of archaeological and paleontological resources. The proposed Project includes measures to identify, recover, and/or record any archaeological or paleontological resource that may occur within the Project limits. Although unlikely to occur, potential impacts associated with human remains would be reduced to a less than significant level through adherence to existing State law. There are no projects that would, in combination with the proposed Project, result in any significant cumulative impacts on historical, archaeological, or paleontological resources, or cumulative impacts to human remains. Therefore, the Project will not make a significant contribution to any cumulatively considerable impacts associated with cultural resources, and no mitigation is required. (DEIR, pg. 4.5-8)

5. Hazards and Hazardous Materials

[2] *Chapter 5.10 Cultural Resources*, City of Moreno Valley General Plan Final EIR, July 2006.

a. Routine Transport, Use, or Disposal of Hazardous Materials and Reasonable Foreseeable Upset and Accident Conditions

Potential Significant Impact: Whether the Project would create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Also, whether the Project would create a significant hazard to the public through the routine transport, use, or disposal of hazardous materials.

Findings: Potential impacts of the Project related to routine transport, use or disposal of hazardous materials and/or the risk of upset or accidental release of hazardous materials into the environment are discussed in detail in Section 4.6 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to routine transport, use or disposal of hazardous materials and, therefore, no mitigation is required.

Facts in Support of the Findings: Two *Phase I Environmental Site Assessments* (ESAs) were prepared for the proposed Project site. During the on-site inspection, no hazardous materials handling, storage, or disposal areas were observed. Additionally, no evidence of stressed vegetation, discolored water, or pools of liquid was observed during the on-site reconnaissance. However, because the Project site has been historically utilized for agricultural production and because of the close proximity to SR-60, soil samples were taken in various parts of the Project site to further evaluate the potential contamination on the site. Laboratory results indicated no detectable concentrations of hydrocarbon compounds in the samples collected. However, there were detectable concentrations of organochlorine pesticides and PCBs in samples collected from possible drainage accumulation and pesticide usage on site. These concentrations were within the allowable Preliminary Remedial Goals (PRGs) for the Project.

During the Project's construction and operation, it is likely that materials such as fuels, lubricants, solvents, cleansers, and paints will be transported to and from the site. The use and transport of these materials and all potentially hazardous materials would be handled according to the appropriate State and Federal regulations. Adherence to existing regulations as they relate to the handling and transport of potentially hazardous materials during construction would reduce impacts associated with this issue to a less than significant level and no mitigation is required. (DEIR, pgs. 4.6-6 through 4.6-11)

b. Hazardous Material Sites

Potential Significant Impact: Whether the Project would be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment.

Findings: Potential impacts of the Project related to hazardous material sites are discussed in detail in Section 4.6 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts due to hazardous material sites and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.6 of the DEIR, a database review was conducted for both of the Phase 1 ESAs conducted for the Project site. Based on the database review, the Project site is not included on the State of California Hazardous Waste and Substances Site List (Cortese list) pursuant to the California Code (Section 65962.5). The Project site is not listed in the NPL; Corrective Action Order Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) list; Emergency Response Notification System (ERNS) list; Resource Conservation and Recovery Act System; Toxic Release Inventory System (TRIS); CAL-SITES Database for Annual Work Plan; California Department of Toxic Substances Control (DTSC); Regional Water Quality Control Board (RWQCB); California Waste Management Board (CWMB); Solid Waste Information System (SWIS); Waste Management Units Database System (WMUDS); California Border Zone Properties (Deed Restriction Properties); DTSC Hazardous Waste and Substances Site List (Cortese list); or any Leaking Underground Storage Tank (LUST) database.

Because the Project site is not identified on a list of hazardous materials sites, the potential that the development of the site would create a significant hazard to the public or environment is less than significant. In addition, the results of the site investigations performed by RM Environmental indicate that no significant amount of any hazardous material exists on site. Therefore, impacts associated with this issue are less than significant and no mitigation would be required. (DEIR, pgs. 4.6-11 through 4.6-12)

c. Existing or Proposed Schools

Potential Significant Impact: Whether the Project would create hazardous emissions or handle acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school.

Findings: Potential impacts of the Project related to existing or proposed schools are discussed in detail in Section 4.6 of the DEIR. Based on the entire record before us, this Council finds that development of

the Project will not result in significant impacts related to existing or proposed schools and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.6 of the DEIR, at the time the NOP for the proposed Project was released, the Moreno Valley Unified School District (MVUSD) had identified three potential school sites within the Project vicinity. Of these potential school sites, High School #5 was the closest planned school to the Project site as it was to be located on the adjacent parcel east of the Project site. Due to MVUSD concerns regarding the placement of schools in areas that may be rezoned with warehousing uses, MVUSD has made a decision to abandon the development of these school facility projects on the identified sites.[3] Therefore, no planned school facilities would be located adjacent to or within 0.25 mile of the Project site. Since there are no schools planned, proposed, or operating within 0.25 mile of the Project site, no impacts associated with this issue would occur and no mitigation is required. (DEIR, pgs. 4.6-12 through 4.6-13)

[3] *Resolution No. 2007-08-8,* Board of Education of the Moreno Valley Unified School District, April 15, 2008.

d. Emergency Response Plan

Potential Significant Impact: Whether the Project would impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan.

Findings: Potential impacts of the Project related to emergency response plans are discussed in detail in Section 4.6 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to emergency response plans and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.6 of the DEIR, in February 2006, the County of Riverside, in cooperation with the cities and special districts, completed its Emergency Operations Plan (EOP). The EOP establishes the emergency organization, assigns tasks, specifies general procedures, and provides for coordination of planning efforts of the various emergency staff and resources.

Construction activities that may temporarily restrict vehicular traffic would be required to implement adequate measures to facilitate the passage of people and vehicles through/around any required road closures. During the operational phase of the proposed Project, on-site access for fire and emergency vehicles would be required to comply with standards established by the City Public Works Department. The size and location of fire suppression facilities (e.g., hydrants) and fire access routes would be required to conform to Fire Department standards. As required of all development in the City, the operation of the proposed Project would be required to conform to applicable Uniform Fire Code standards. The submittal of such plans would be considered a condition of approval, which would be part of the permitting process initiated by the applicant and approved by the City in accordance with City standards. As with any development, access to and through the Project would be required to comply with the required street widths, as determined in the General Plan Circulation Element, and the Uniform Fire Code. Therefore, implementation of the proposed Project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. No significant impact would occur and no mitigation is required. (DEIR, pg. 4.6-13)

e. Wildland Fires

Potential Significant Impact: Whether the Project would expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildland.

Findings: Potential impacts of the Project related to wildland fires are discussed in detail in Section 4.6 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to wildland fires and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.6 of the DEIR, the Project site is not located within a "High Fire Hazard Area" or within an area susceptible to wildfires identified by the City of Moreno Valley. Areas surrounding the Project site consist of urban, built, and open space. Because of lack of abundant vegetation and the extensive amount of development within the vicinity of the Project site, on-site and adjacent areas do not have the capability to support a wildfire. The proposed uses on site do not typically create a fire hazards nor are they subject to wildland fire hazards due to the type of construction materials used. The Project will be designed and constructed to comply with adopted standards and guidelines for fire protection. Irrigated landscaping will surround Project buildings, and are required to include fire suppression features by law. Due to the location of the fire station adjacent to the Project in the northwest corner and the low probability that the Project site would be subject or susceptible to wildland fires, no significant impact related to this issue would occur. No mitigation is required. (DEIR, pgs. 4.6-13 through 4.6-14)

f. Cumulative Impacts from Hazards and Hazardous Materials

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would cumulatively increase the risk of hazardous materials and exposure to hazardous materials.

Findings: Potential impacts of the Project related to cumulative hazardous materials impacts are discussed in detail in Section 4.6 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to cumulative hazardous materials and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.6 of the DEIR, the proposed Project would not result in significant cumulative impacts associated with the routine transport, use, and disposal of hazardous materials; or the emission or handling of hazardous substances. As areas of the eastern portion of Moreno Valley continue to develop, the amount of truck traffic is expected to increase in proportion to the amount of industrial or commercial development that take place in the area. The trucks traveling in the area of the Project and the surrounding areas may contain hazardous materials as well as contribute to emission in the cumulative area. Accidental spills and leaks are unplanned occurrences. It is impossible to predict the occurrences of such events and the likelihood of such events occurring in close proximity to

each other at the same time is very small; therefore, such events cannot be considered cumulatively significant.

As anticipated in the City's General Plan, demographic increases, continued retail and service demands, and the availability of vacant property will lead to the new residential, commercial, and industrial development in the City and surrounding area. While the project-specific hazardous material impacts of individual development projects will be addressed separately in future CEQA documents, anticipated future development will contribute, through increases in the number of locations that sell, store, transport, or dispose of hazardous materials, to a cumulative increase in risk for hazardous material incidents. As with the proposed Project, it is anticipated that future development projects will be required to adhere to applicable local, State, and Federal requirements that regulate the use, release, storage, sale, and transport of hazardous materials. Such compliance would ensure that the proposed Project will not make a significant contribution to a cumulatively considerable impact in this regard, and no mitigation measures for cumulative impacts are required. (DEIR, pg. 4.6-14)

6. Hydrology, Drainage, and Water Quality

a. Groundwater

Potential Significant Impact: Whether the Project would substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level

Findings: Potential impacts of the Project related to groundwater are discussed in detail in Section 4.7 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to groundwater and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.7 of the DEIR, the proposed Project would obtain water service from the EMWD. It is anticipated that the proposed Project would primarily utilize imported water purchased from Metropolitan. In the event that imported water is not available, this imported water would be supplemented by local groundwater sources.

The implementation of the existing West San Jacinto Groundwater Basin Management Plan would ensure that local groundwater resources are conserved and groundwater overdraft does not occur. If the use of groundwater supplies was necessary, the proposed Project would be required to comply with any future water use restricting regulations further minimizing impacts to groundwater supply.

As identified in the City's General Plan, the proposed Project would not interfere with groundwater recharge as the Project site is not identified as a groundwater recharge area.[4] Therefore, the proposed Project would not interfere with groundwater recharge activities. Impacts associated with this issue are less than significant and no mitigation measure is required. (DEIR, pg. 4.7-14)

b. Flooding-Related Impacts

Potential Significant Impact: Whether the Project would place within a 100-year flood hazard area structures that would impede or redirect flood flows.

Findings: Potential impacts of the Project related to flooding are discussed in detail in Section 4.7 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to flooding and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.7 of the DEIR, flooding in the City of Moreno Valley could result from intense storms resulting in rapid runoff. The Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) identify areas subject to flooding during the 100-year storm.[5] Based on these FIRMs and the Project site does not fall within a 100-year flood zone.[6] The proposed Project is industrial in nature and the implementation of the proposed Project would not result in the placement of housing within a 100-year floodplain. Because the Project site does not lie within a 100-year floodplain and does not include housing, impacts related to this issue are less than significant. No further discussion or mitigation is required. (DEIR, pgs. 4.7-14 through 4.7-17)

c. Drainage Pattern-Related Impacts

Potential Significant Impact: Whether the Project would substantially alter the existing local drainage patterns of the site and substantially increase the rate or amount of surface runoff in a manner which would result in substantial erosion, siltation, or flooding on or off site.

Findings: Potential impacts of the Project related to drainage patterns are discussed in detail in Section 4.7 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to drainage patterns and, therefore, no mitigation is required.

---

4 *Section 5.7 Hydrology/Water Quality*, City of Moreno Valley General Plan Final Program EIR, City of Moreno Valley, July 2006.

5 The term "100-year" is a measure of the size of the flood, not how often it occurs. The "100-year flood" is a flooding event that has a one percent chance of occurring in any given year.

6 FEMA DFIRM Data, 2008.

Facts in Support of the Findings: According to Section 4.7 of the DEIR, the proposed Project would alter the existing drainage patterns and affect surface runoff; however, several BMPs would be designed and installed on site to minimize these alterations, resulting in a less than significant impact. Development of the Project site would result in increased impervious surfaces in the form of roadways, parking lots, and industrial warehouse buildings. The proposed Project incorporates six detention/sedimentation basins for both water quality and quantity control purposes. The Project would also include vegetated swales, detention/sedimentation basins, and sand filters.

Under post-development conditions, all on-site flows would be routed to Quincy Channel. This drainage pattern would mimic the existing drainage pattern, which has flows draining to the Quincy Channel and the unnamed dry wash to the south. Since the unnamed dry wash connects to Quincy Channel farther south of the Project, all flows under existing conditions drain into Quincy Channel. Flows in Quincy Channel are routed to the Perris Valley Storm Drain where flows continue onto the San Jacinto River and eventually reach Lake Elsinore.

Increased runoff from the site could result in substantial erosion of local drainage ways and siltation of downstream receiving waters. However, with the proposed drainage system installed on site, the proposed Project would not produce any post-development peak flow leaving the site larger than the pre-development peak flows leaving the site for the analyzed storms. In addition, because the implementation of various BMPs will reduce off-site flow velocity and volume, erosional runoff and silt volumes would be minimized to the greatest extent practical. Because the proposed Project would maintain existing drainage patterns on site and implement BMPs that would minimize erosion and generation of silt on site, impacts associated with this issue are less than significant and no mitigation measures are required. (DEIR, pg. 4.7-17)

d. Hydrology and Water Quality Cumulative Impacts

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts on hydrology and water quality.

Findings: Potential impacts of the Project related to cumulative hydrology and water quality impacts are discussed in detail in Section 4.7 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant cumulative impacts to hydrology and water quality and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.7 of the DEIR, increases in the amount and extent of development in the City and surrounding areas will increase the potential for pollutants in runoff, which in turn would affect water quality. The Project's water quality impacts will be mitigated through on-site detention/sedimentation basins and other water pollution control mechanisms such as vegetated swales, sand filters, and storm drain inlet filters. Similar requirements will be placed on all other development in the Project vicinity by the City and the RWQCB, further reducing the potential for cumulative impacts. Since all development within the City is required to account and mitigate for their individual water quality impacts before runoff leaves each individual site, it is reasonable to conclude that water quality would be maintained throughout the cumulative area. Adherence to NPDES, SWPPP, and WQMP requirements will reduce any such cumulative water quality impact to a less than significant level.

Groundwater recharge policies and practices implemented by the RWQCB and local agencies will ensure groundwater supplies are maintained at appropriate levels. As such, no significant cumulative groundwater supply impacts are anticipated to occur with the development of the proposed Project.

The drainage system for the proposed Project would be designed so that runoff from the Project site after Project development is directed to on-site treatment BMPs and flow volumes would be equal to or less than historic conditions at any given discharge location. This same requirement will be placed on all other development in the vicinity of the Project site by the City of Moreno Valley. Therefore, the proposed Project will not make a significant contribution to any cumulatively considerable impacts related to drainage or water quality and no mitigation is required. (DEIR, pgs. 4.7-28 through 4.7-29)

8. Land Use and Planning

a. Physically Divide an Established Community

Potential Significant Impact: Whether the Project would physically divide an established community.

Findings: Potential impacts of the Project related to the physically dividing an established community are discussed in detail in Section 4.8 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts due to a physical divide of an established community and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.8 of the DEIR, land uses adjacent to the Project site include residential uses to the southeast, vacant land to the south, commercial uses to the west, SR-60 and residential uses to the north, and active hay/alfalfa production uses to the east. The Project site

does not contain any existing housing, nor does the site complement or constitute part of a community or neighborhood. Based on this information, the proposed Project will physically divide an existing established community. No impact related to this issue would occur; therefore, no mitigation is required. (DEIR, pgs. 4.8-4 through 4.8-5)

b. Conflict with Any Applicable Habitat or Natural Community Conservation Plan

Potential Significant Impact: Whether the Project would conflict with any applicable habitat conservation plan or natural community conservation plan.

Findings: Potential impacts of the Project related to the conflict with any applicable habitat conservation plan are discussed in detail in Section 4.8 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts due to a conflict with any applicable habitat or natural community conservation plan and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.8 in the DEIR, the Project site is located within the MSHCP area.[7]. The Project site is not within an MSHCP criteria cell or habitat linkage. Furthermore, the Project site is not located within an MSHCP mammal or amphibian survey area, Narrow Endemic Plant Species Survey Area (NEPSSA), Criteria Area Plant Species Survey Area (CAPSSA), or a riparian, wetland, or vernal pool habitat/species survey area.[8]

While the Project site is not within any conservation area delineated in the MSHCP, the Project is still subject to provisions of the MSHCP. In particular, the Project proponent will be required to provide payment of mitigation fees and adhere to the requirements established in the MSHCP. Pursuant to agreements with the USFWS and the CDFW, the payment of the mitigation fees and compliance provisions of the MSHCP provides full mitigation under the CEQA, FESA, and CESA for impacts to the species and habitats covered by the MSHCP. Since the City has adopted the MSHCP and its requirements and provisions, and since the Project is within the City, the proposed Project would be required to adhere to applicable MSHCP requirements and fees. Therefore, the proposed Project would not conflict with any applicable HCP and no significant impact associated with this issue would occur. No mitigation would be required. (DEIR, pg. 4.8-4)

c. Cumulative Land Use Impacts

Potential Significant Impact: Whether the Project in connection with past, current, and foreseeable future projects would incrementally affect biological resources.

Findings: Potential impacts of the Project related to cumulative land use impacts are discussed in detail in Section 4.8 of the DEIR. Based on the entire record before us, this Council finds that development of

[7] City of Moreno Valley General Plan Final Program EIR, Figure 5.9-4 Reche Canyon/Badlands Area.
[8] http://www.rctlma.org/gis/rciprepgen.html, site accessed December 4, 2007.

the Project will not result in significant cumulative impacts related to land uses and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.8 of the DEIR, implementation of the proposed Project represents establishment of new land uses within the currently undeveloped Project site that would result in an intensification of permitted land uses associated with a land use change from Business Park and Residential to Light Industrial uses, changes to the General Plan Circulation Element, and the loss of the Primary Animal Keeping Overlay (PAKO) associated with the RA-2 zone. However, the proposed Project is generally consistent with regional plans and planning efforts, although it is not fully consistent with the SCAG's RTP and Compass Blueprint Plan because it eliminates some housing in favor of industrial employment uses. It will incrementally improve the City's long-standing jobs/housing ratio, which is also a regional goal of the various SCAG plans. It is also not consistent with existing General Plan land use designations, objectives and policies, nor is it consistent with existing zoning designations on the site. For these reasons, a General Plan Amendment and Zone Change are proposed for consideration by the City.

The proposed changes in land use will also result in a loss of up to 584 (R-15) multi-family residential units, many of which could have contributed to the City's affordable housing supply at some point in the future. However, this was determined to be a less than significant Project impact on local housing because the City's Housing Element identifies over twice as much potential affordable housing as the City's RHNA allocation, so it will not make a significant contribution to a cumulatively considerable impact on regional housing.

The Project would also not make a similar cumulatively considerable land use impact relative to dividing an established community or conflicting with an approved habitat conservation plan and no mitigation is required. (DEIR, pgs. 4.8-17 to 4.8-18)

8. <u>Noise</u>

a. Airport Noise

Potential Significant Impacts: Whether a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would results in exposure of people residing or working in the Project area to excessive noise levels. Or if a Project within the vicinity of a private airstrip, would expose people residing or working in the Project area to excessive noise levels.

Findings: Potential impacts of the Project relating to airport noise are discussed in detail in Section 4.9 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to airport noise will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.9 of the DEIR, the proposed Project site is located approximately 5 miles northeast of the March Air Reserve Base. Aircraft operations from the airport currently contribute intermittent single-event noise. However, the proposed Project is not identified as being within the noise or safety contours delineated for the MARB Airport. The proposed Project is not located within two miles of a public or private airport; therefore, the proposed Project would not have the potential to expose people to excessive noise levels from airport operations and no impact regarding this issue would occur with implementation of the proposed Project. No mitigation is required. (DEIR, pg. 4.9-10)

b. Ground-Borne Vibrations

Potential Significant Impact: Whether the Project would result in exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels.

Findings: Potential impacts of the Project relating groundborne vibration and groundborne noise are discussed in detail in Section 4.9 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to ground-borne vibration and groundborne noise will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.9 of the DEIR, the Project site is not located near steel-wheeled trains. Additionally, roadways in the Project area are either paved or would be paved and would not result in traffic driving over rough roads. Construction activities for the Project site do not include blasting or pile driving. The primary vibratory source during the construction of the proposed Project would be large bulldozers. Based on published data, typical bulldozer activities generate an approximate vibration level of 0.089 in/sec at a distance of 25 feet. At the distance of the nearest residence to the Project boundary (about 50 feet) the estimated vibration level will be 0.0415 in/sec. While heavy-duty earthmoving equipment would be used during the construction phase of the Project, the level of vibration would not be excessive or permanent, nor would it exceed the level at which building damage typically occurs. Therefore, impacts from construction-related groundborne vibration construction would be less than significant and no mitigation is required. (DEIR, pg. 4.-11)

c. Long-Term Traffic Noise

Potential Significant Impact: Whether the Project would result in a substantial temporary, periodic, and/or permanent increase in ambient noise levels in the Project vicinity above levels existing without the Project.

Findings: Potential impacts of the Project related to long-term noise are discussed in detail in Section 4.9 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to long-term noise will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.9 of the DEIR, the *Noise Impact Analysis* (Appendix H) indicates that implementation of the proposed Project would result in relatively minor changes in traffic noise levels except along Eucalyptus Avenue between Moreno Beach Drive and Driveway A. The largest Project-related increase in traffic noise would be along Eucalyptus Avenue/Fir Avenue between Auto Mall Drive and Redlands Boulevard. This segment would experience a 13.6 dBA increase over the baseline (with the Project) scenario and a 13.3 dBA increase over the baseline (with the Project) scenario in opening year (2012). In addition, the roadway segment along Eucalyptus Avenue between Moreno Beach Drive and Auto Mall Drive would experience a 4.5 dBA increase over the baseline scenario in 2012. However, no noise-sensitive uses exist or are planned near either roadway segment.

For the Project build out year (2035) analysis, the greatest increase in noise levels is along Eucalyptus Avenue between Auto Mall Drive and Redlands Boulevard, where an increase of up to 1.3 dBA is predicted, with the ambient noise level predicted to be 71.6 dBA at 50 feet from the centerline of the street. In addition, the greatest increases in noise levels associated with the General Plan Build Out Year is along Eucalyptus Avenue between Auto Mall Drive and Redlands Boulevard, where an increase of up to 0.9 dBA is predicted, with the ambient noise level predicted to be 73.0 dBA at 50 feet from the centerline of the street. However, no noise-sensitive uses exist or are planned near the roadway segment. Therefore, noise impacts at the roadway segments where an increase of more than 3.0 dBA would occur are considered less than significant because there are no sensitive receptors located along the roadway segments that would be affected. All other roadway segments would have an increase in noise of less than 3.0 dBA, which would not be perceptible to the human ear in an outdoor environment. Therefore, impacts would be less than significant and no mitigation measures would be required for off-site areas. (DEIR, pgs. 4.9-11 to 4.9-19)

d. Long-Term Operational Noise

Potential Significant Impact: Whether the Project would cause exposure of persons to or generation of noise levels in excess of standards established in the City of Moreno Valley General Plan, Moreno Valley Municipal Code, or applicable standards of other agencies.

Findings: Potential impacts of the Project related to long-term operational noise are discussed in detail in Section 4.9 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to long-term operational noise will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.9 of the DEIR, potential long-term stationary noise impacts would primarily be associated with operations at the proposed warehouse and the light industrial uses. The proposed on-site uses would generate noise from truck delivery, loading/unloading activities at the loading areas, and other noise-producing activities within the parking lot. Through distance divergence, attenuation, and building shielding these sources of noise would be reduced to less than significant levels; and no mitigation is required. (DEIR, pgs. 4.9-20 to 4.9-22)

e. Noise Impacts to Adjacent Future Development

Potential Significant Impact: Whether the Project would result in a substantial permanent increase in ambient noise levels in the Project vicinity above levels existing without the Project.

Findings: Potential impacts of the Project related to noise impacts to adjacent future development are discussed in detail in Section 4.9 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to noise impacts to adjacent future development and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.9 of the DEIR, based on the land use assumptions for the future LADP Project, residential development would be located along the southern Project boundary between the proposed Project and the proposed LADP. It is anticipated that the proposed Project site would be fully developed prior to the occupation of any dwelling units in LADP; therefore, no construction-related noise impacts to future adjacent sensitive receptors would result from development of the proposed Project. Also, the proposed on-site uses would generate noise from truck delivery, loading/unloading activities at the loading areas, and other noise-producing activities within the parking lot. Through distance divergence, attenuation, and building shielding these sources of noise

would be reduced to less than significant levels. Therefore, a less than significant impact would occur to adjacent future development and no mitigation is required. (DEIR, pgs. 4.9-23 to 4.9-24)

f. Cumulative Noise Impacts

Potential Significant Impact: Whether the Project in connection with past, current, and probable future Project would cause cumulative noise impacts within the City of Moreno Valley.

Findings: Potential impacts of the Project related to cumulative noise are discussed in detail in Section 4.9 of the DEIR. Based on the entire record before us, this Council finds that no significant cumulative impacts related to noise will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: Construction crew commutes and the transport of construction equipment, materials, and fill to the site for the proposed Project would incrementally increase noise levels on access roads leading to the site. Secondary sources of noise would include noise generated during excavation, grading, and building erection on the Project site. Although it is unlikely that adjacent properties will be developed at the same time as the proposed Project, if adjacent properties are developed at the same time as the proposed Project, implementation of the stated mitigation measures in Section 4.9 of the DEIR would render the cumulative impacts of the proposed Project to less than significant levels.

Section 4.9 of the DEIR compared cumulative noise levels that would occur both with and without the Project. According to the analysis the proposed Project would not expose sensitive uses located adjacent to area roadways to excessive noise levels. The future roadway noise assessment concludes that there will be no significant roadway noise impacts associated with cumulative and cumulative plus Project conditions. Therefore, there are no projects that would, in combination with the proposed Project, produce significant noise impacts to sensitive land uses from on-site operational noise. Thus, no cumulatively considerable noise impacts are expected to occur in this area, and the proposed Project will not make a significant contribution to cumulative noise impacts, so no mitigation measures are required. (DEIR, pg. 4.9-27)

9. <u>Population and Housing</u>

a. Population Growth

Potential Significant Impact: Whether the Project would induce substantial population growth in an area, either directly (e.g., new homes and businesses) or indirectly (e.g., extension of roads and infrastructure).

Findings: Potential impacts of the Project related to population growth are discussed in detail in Section 4.10 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to population growth will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.10 of the DEIR, the development of the proposed on-site warehouse distribution uses would create new jobs in the local economy. The proposed Project would generate up to 1,532 job opportunities.[9] The new employment opportunities resulting from development of the proposed warehouse uses would improve the City's current jobs-to-housing ratio by providing jobs to local residents. While the places of residence of the persons accepting employment provided by the proposed uses is uncertain, due to the City's projected jobs-to-housing ratio, it is reasonable that a large percentage of these jobs would be filled by persons already living within the City or Project area; therefore, no significant increase in population of the City would result from the development or operation of the proposed on-site uses. In the absence of a significant impact, no mitigation is required. (DEIR, pgs. 4.10-3 to 4.10-5)

b. Displace Substantial Housing/People

Potential Significant Impact: Whether the Project would displace substantial numbers of people or existing housing, necessitating the construction of replacement housing elsewhere.

Findings: Potential impacts of the Project related to displacement of housing or people are discussed in detail in Section 4.10 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to displacement of housing or people will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.10 of the DEIR, the Project site has not been historically utilized for residential uses, and no residential structures are currently located within the Project limits. The construction and operation of the proposed on-site uses would neither displace existing housing or residents nor require the construction of replacement housing elsewhere in the City. However, the areas currently zoned for residential uses on the site could support up to 681 units. Approximately 80

[9] 1 employee/1,465 square feet of warehouse use × 2,244,419 square feet of warehouse uses = 1,532 employees.

percent of that potential new housing was in the R15 category, which is considered high enough density to support affordable housing programs. In addition, a portion of the Project site is shown in the latest Housing Element for the City (2008–2014) as a potential location for affordable housing in the future (2011 Housing Element, Vacant Properties Inventory). Development of the site as proposed could eliminate as many as 681 housing units from the site, with 80 percent of those units (548) at a density that is generally accepted as helping to promote housing affordability (15 units per acre) on a regional level. These changes may incrementally hinder the City's ability to achieve its affordable housing goals in the future. However, the proposed Project would not reduce the City's potential pool of affordable housing to below its RHNA number; therefore, it would not create a significant impact related to the City's Housing Element, and no mitigation is required. (DEIR, pg. 4.10-6)

c. Cumulative Population and Housing Impacts

Potential Significant Impact: Whether the Project could cause an increase in population that is substantial in relation to the past, current, and probable future projects.

Findings: Potential impacts of the Project related to cumulative impacts of the proposed Project on housing or population are discussed in detail in Section 4.10 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to cumulative impacts on housing or population will occur as a result of development of the Project and, therefore, no mitigation is required.

Fact Supporting the Findings: The project includes development of 2.2 million square feet of new industrial uses, but would eliminate the potential for up to 681 new residential units, most of which would be in the R15 category, which can support affordable housing programs. The proposed industrial uses would provide additional employment opportunities for City and area residents. The proposed project, together with the other developments identified in Chapter 3, will serve existing and future cumulative demands for both housing and employment within the City. The proposed uses would not induce significant population or housing growth in areas where growth was not previously anticipated.

10. <u>Transportation</u>

a. Air Traffic Patterns

Potential Significant Impact: Whether the Project would result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks.

Findings: Potential impacts of the Project related to air traffic patterns are discussed in detail in Section 4.11 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to air traffic patterns will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.11 of the DEIR, the proposed Project site is located approximately 5.5 miles northwest of the March Air Reserve Base and is not within the designated safety zones or the flight paths established for this facility.[10] The proposed Project does not consist of any uses that would cause changes to air traffic volumes or otherwise affect air traffic patterns. Additionally, the proposed Project does not include any visual, electronic, or physical hazards to aircraft in flight and is not anticipated to disrupt or alter air traffic patterns, including either an increase in traffic levels or a change in location. As such, no impacts associated with this issue would occur and no mitigation is required. (DEIR, pg. 4.11-16)

b. Design Features or Incompatible Uses

Potential Significant Impact: Whether the proposed Project would substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

Findings: Potential impacts of the Project related to design features or incompatible uses are discussed in detail in Section 4.11 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to design features or incompatible uses will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.11 of the DEIR, roadway improvements in and around the Project site would be designed and constructed to satisfy all City requirements for street widths, corner radii, intersection control as well as incorporate design standards tailored specifically to site access requirements.

The final design of all roadways and intersections within the Project site access would be reviewed by a licensed professional civil engineer to ensure adequate safety when traveling to and from the Project site. The proposed Project does not include any sharp curves or dangerous intersections in its design. Adherence to applicable existing requirements of the City of Moreno Valley consistent with the City's

[10] March Air Reserve Compatibility Plan, December 29, 2004. http://www.rcaluc.org/filemanager/plan/old//March%20Air%20Reserve%20Base%20(MARB).pdf. Accessed June 3, 2008.

Circulation Element Objectives 5.1 (create a safe, efficient, and neighborhood-friendly street system), 5.5 (maximize efficiency of the local circulation system by using appropriate policies and standards to design, locate, and size roadways), and 5.11 (eliminate obstructions that impede safe movement of vehicles, bicyclists, and pedestrians) and other agencies would reduce impacts associated with this issue to a less than significant level and no mitigation is required. (DEIR, pgs. 4-17)

c. Inadequate Emergency Access

Potential Significant Impact: Whether the Project would result in inadequate emergency access.

Findings: Potential impacts of the Project related to emergency access are discussed in detail in Section 4.11 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to emergency access will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.11 of the DEIR, the developers of the proposed Project would be required to design, construct, and maintain structures, roadways, and facilities to provide for adequate emergency access and evacuation. Construction activities, which may temporarily restrict vehicular traffic, would be required to implement adequate and appropriate measures to facilitate the passage of persons and vehicles through/around any required road closures. The proposed Project design would be submitted to and approved by the City's Fire and Police Departments prior the issuance of building permits. Adherence to applicable existing requirements of the City of Moreno Valley and other agencies would reduce impacts associated with this issue to a less than significant level and no further discussion is required. (DEIR, pgs. 4.11-17 to 4.11-18)

d. Inadequate Parking Capacity

Potential Significant Impact: Whether the Project would result in inadequate parking capacity.

Findings: Potential impacts of the Project related to parking capacity are discussed in detail in Section 4.11 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to parking capacity will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.11 of the DEIR, the preliminary site plan indicates that 1,091 automobile parking spaces are provided, which includes spaces for employees, drivers, and handicap spaces, and is well above the minimum requirement of 562 spaces. The design of

the proposed Project would be required to comply with parking standards prior to final site plan approval. Adherence to parking standards contained in the Zoning Code would ensure that the proposed Project would not result in inadequate parking capacity. Impacts associated with parking capacity are less than significant and no mitigation is required. (DEIR, pg. 4.11-18)

e. Alternative Transportation

Potential Significant Impact: Whether the proposed Project would conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.

Findings: Potential impacts of the Project related to alternative transportation are discussed in detail in Section 4.11 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to alternative transportation will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.11 of the DEIR, the design of the Project would be required to adhere to applicable City of Moreno Valley standards that support and/or facilitate alternative modes of transportation, including but not limited to pedestrian pathways and sidewalks consistent with the City's Circulation Element Objective 5.8. Through the City's Project review process, policies, plans, and/or programs supporting alternative transportation would be reviewed and incorporated as applicable. Consequently, a less than significant impact would occur as a result of the proposed Project and no mitigation is required. (DEIR, pg. 4.11-18)

11. Utilities and Service Systems

a. Solid Waste Facilities

Potential Significant Impact: Whether the Project would be served by a landfill with insufficient permitted capacity to accommodate the Project's solid waste disposal needs.

Findings: Potential impacts of the Project related to solid waste facilities are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to solid waste facilities will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, based on a solid waste generation of 0.006 pound per square foot per day for industrial uses, the proposed Project is anticipated

to generate approximately 6.73 tons of solid waste per day (2,456 tons/year). Solid waste from the proposed Project would be hauled by Waste Management of Inland Valley and transferred to the Badlands Sanitary Landfill, located in Moreno Valley, northeast of the Project site. The volume of solid waste generated by the proposed Project per day represents 0.17 percent of the current permitted throughput and 0.29 percent of the current surplus capacity at the Badlands Sanitary Landfill. As adequate daily surplus capacity exists at the receiving landfill, development of the proposed Project would not significantly affect current operations or the expected lifetime of the landfill serving the Project area. No significant solid waste disposal impact would occur and no mitigation is required. (DEIR, pgs. 4.12-3 to 4.12-4)

b. Solid Waste Reduction

Potential Significant Impact: Whether the Project would fail to comply with applicable Federal, State, and local statutes and regulations related to solid waste.

Findings: Potential impacts of the Project related to solid waste reduction are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to solid waste reduction will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the proposed Project would be required to coordinate with the waste hauler to develop collection of recyclable materials for the Project on a common schedule as set forth in applicable local, regional, and State programs. Recyclable materials that would be recycled by the Project include paper products, glass, aluminum, and plastic.

Additionally, the proposed Project would be required to comply with applicable elements of AB 1327, Chapter 18 (California Solid Waste Reuse and Recycling Access Act of 1991) and other applicable local, State, and Federal solid waste disposal standards, thereby ensuring that the solid waste stream to the Badlands Sanitary Landfill is reduced in accordance with existing regulations. Impacts are considered less than significant and require no mitigation. (DEIR, pg. 4.12-4)

c. Solid Waste Cumulative Impacts

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have an incremental impact on solid waste.

Findings: Potential impacts of the Project related to cumulative solid waste are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant cumulative impacts related to solid waste will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the Badlands Sanitary Landfill has an estimated closure date of 2016, the City's waste hauler will also use other County landfills in the area (e.g., Lamb Canyon Landfill and El Sobrante Landfill). The estimated closure date of the Lamb Canyon Landfill is 2023 and the estimated closure date of the El Sobrante Landfill is 2030. With planned expansion activities of landfills in the Project vicinity and projected growth rates contained

within the City's General Plan EIR, sufficient landfill capacity would exist to accommodate future disposal needs through City build out in 2030. Therefore, build out of the City General Plan would not create demands for solid waste services that would exceed the capabilities of the County's waste management system. Consequently, cumulative impacts associated with solid waste within the City would be considered less than significant and no mitigation is required. (DEIR, pg. 4.12-5)

d. Construction or Expansion of Water Treatment Facility

Potential Significant Impact: Whether the Project would require the construction of new water treatment facilities or expansion of existing facilities, the construction of which would cause significant environmental effects.

Findings: Potential impacts of the Project related to construction or expansion of water treatment facilities are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts that would cause the construction or expansion of water treatment facilities will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the water demand required for the proposed Project totals 0.04 and 0.03 percent of the 2015 and 2035 projected Eastern Municipal Water District (EMWD) supplies. The amount of water demand would be within the existing available supply even with a reduction in deliveries from the State Water Project (SWP). Imported sources of water will be supplemented by an increase in desalination of brackish groundwater, recycled water use, and water use efficiency, and implementation of aggressive conservation measures by the EMWD. The proposed Project would not require the construction of new water treatment facilities or expansion of existing facilities, which could cause significant environmental effects. Impacts related to this issue would be less than significant and no mitigation is required. (DEIR, pgs. 4.12-15 to 4.12-16)

e. Adequate Water Supply

Potential Significant Impact: Whether the Project would have sufficient water supplies available to serve the Project from existing entitlements and resources, or are new or expanded entitlements needed.

Findings: Potential impacts of the Project related to adequate water supply are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to adequate water supply will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the anticipated water demand for the proposed Project is substantially less than what is identified for the General Plan land uses and what was used in the formulation of the 2010 Urban Water Management Plan. The water demand required for the proposed Project would total 0.05 and 0.04 percent of the EMWD's 2015 and 2035 supplies. The Project's water consumption represents substantially less than 1 percent of the consumption yearly capacity and because the EMWD indicates that water to service the Project's proposed industrial uses is available, no significant water supply impacts would occur with implementation of the industrial use, and no mitigation would be necessary. (DEIR, pg. 4.12-17 to 4.12-22)

f. Cumulative Impacts to Water Supply Services

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have a cumulative impact to water supply services.

Findings: Potential impacts of the Project related to cumulative water supply services are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant cumulative impacts related to water supply services will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the projected demand for the EMWD service area for the year 2015 is 213,900 acre-feet per year (AFY). The cumulative projects including the proposed Project would make up approximately 0.11 percent of the projected demand for 2015. For the year 2035, the EMWD service area projected demand is 302,200 AFY. The proposed Project would consist of 0.63 percent of the Project water demand. As the cumulative projects including the proposed Project constitute less than one percent of the projected water demand in both 2015 and 2025, the cumulative impact of the proposed Project would be less than significant.

Metropolitan Water District (Metropolitan) will continue to rely on the plans and policies outlined in its Regional Urban Water Master Plan (RUWMP) and Integrated Regional Water Plan (IRP) to address water supply shortages and interruptions (including potential shut downs of SWP pumps) to meet water demands. Metropolitan has also analyzed the reliability of water delivery through the SWP and the Colorado River Aqueduct. Metropolitan's IRP and RUWMP conclude that, with the storage and transfer programs developed by Metropolitan, there will be a reliable source of water to serve its member agencies' needs through 2035. The EWMD is a member agency of Metropolitan and would have water supplies for projected growth through 2035 in wet, dry, and multiple-dry years, so cumulative impacts to water supply would be less than significant. The proposed Project would connect to existing conveyance

infrastructure and adequate treatment capacity is available, so the proposed Project would not make a significant contribution to any cumulatively considerable impacts on water supply or infrastructure and no mitigation is required. (DEIR, pg 4.12-22)

g. Wastewater Treatment Requirements

Potential Significant Impact: Whether the Project would exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board (RWQCB).

Findings: Potential impacts of the Project related to wastewater treatment requirements are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to wastewater treatment requirements will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the proposed Project would result in a connection to the sewer line underlying the future Eucalyptus Avenue. The EMWD expects this sewer to be in service once it is necessary for demand expected from the proposed Project. It is anticipated that all wastewater generated by the proposed Project would be routed to and treated by the Moreno Valley Regional Water Reclamation Facility (MVRWRF). The MVRWRF is a Publically Owned Treatment Works (POTW), so operational discharge flows treated at the MVRWRF would be required to comply with the Waste Discharge Requirements (WDRs) for that facility. Compliance with condition or permit requirements established by the City and WDRs at the MVRWRF would ensure that discharges into the wastewater treatment facility system from the operation of the proposed Project would not exceed applicable Santa Ana RWQCB wastewater treatment requirements. Expected wastewater flows from the proposed Project will not exceed the capabilities of the serving treatment plant, so no significant impact related to this issue would occur and no mitigation would be required. (DEIR, pg. 4.12-24)

h. Wastewater Treatment Capacity and/or New or expanded Wastewater Treatment Facilities

Potential Significant Impact: Whether the Project would result in a determination by the wastewater treatment provider, which serves or may serve the Project, that it lacks adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments.

Also, whether the proposed Project would require the construction of new wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

Findings: Potential impacts of the Project related to wastewater capacity are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to wastewater capacity will occur as a result of development of the Project and no new wastewater treatment facilities or expansion of existing facilities would be required, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the proposed Project would result in a connection to the sewer line underlying the future Eucalyptus Avenue. The EMWD expects this sewer to be in service once it is necessary for demand expected from the proposed Project. It is anticipated that all wastewater generated by the proposed Project would be routed to and treated by the MVRWRF. The MVRWRF is a POTW, so operational discharge flows treated at the MVRWRF would be required to comply with the WDRs for that facility. Compliance with condition or permit requirements established by the City and WDRs at the MVRWRF would ensure that discharges into the wastewater treatment facility system from the operation of the proposed Project would not exceed applicable Santa Ana RWQCB wastewater treatment requirements. Expected wastewater flows from the proposed Project will not exceed the capabilities of the serving treatment plant, so no significant impact related to wastewater would occur and no mitigation would be required. (DEIR, pg. 4.12-25)

i. Cumulative Impacts to Wastewater Facilities

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would result in cumulative impacts to wastewater facilities.

Findings: Potential impacts of the Project related to cumulative wastewater facilities are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant cumulative impacts related to wastewater facilities will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the proposed Project would not have a cumulatively significant impact on wastewater infrastructure because the proposed Project would not require the expansion of existing infrastructure; only connections to existing infrastructure would be required by the Project. By adhering to the wastewater treatment requirements established by the Santa Ana RWQCB through the NPDES permit, wastewater from the Project site that is processed through the MVRWRF would meet established standards. As the wastewater from all development within the service area of the MVRWRF would be similarly treated under the NPDES, no cumulatively significant exceedance of Santa Ana RWQCB wastewater treatment requirements would occur.

The proposed Project would not result in significant impacts to wastewater treatment or wastewater treatment facilities. The MVRWRF also plans expand the capacity of the wastewater facility. The ultimate expansion of the MVRWRF will allow it to process 41 mgd of wastewater. The wastewater generation of the listed cumulative projects represents 4.8 percent of the future capacity of the 2013 expansion and 2.5 percent of the ultimate expansion of the MVRWRF. The projected wastewater generation of the cumulative projects represents a small percentage of the average wastewater capacity and, because there are no projects that would, in combination with the proposed industrial uses, result in any significant impact related to wastewater treatment or cause significant environmental effects, the Project will not make a significant contribution to any cumulatively considerable impacts associated with wastewater and no mitigation is required. (DEIR, pg. 4.12-26)

11. Global Climate Change

a. Greenhouse Gas Plan, Policy, Regulation Consistency

Potential Significant Impact: Whether the Project would conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases.

Findings: Potential impacts of the Project related to greenhouse gas plans, policies, or regulation consistency are discussed in detail in Section 4.13 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related greenhouse gas plans, policies or regulations will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.13 of the DEIR, the proposed Project includes a variety of physical attributes and operational programs that would generally contribute to a reduction in operational-source pollutant emissions including GHG emissions. Future development that would occur under the proposed Project would be consistent with state and local greenhouse gas emission reduction strategies and policies. The Project would implement appropriate GHG reduction strategies and would ensure that it does not conflict with or impede implementation of reduction goals identified in AB 32, Governor's Executive Order S-3-05, and other strategies to help reduce GHGs to the level proposed by the Governor. In addition, the Project would also be subject to all applicable regulatory requirements, which would also reduce the GHG emissions of the Project. Therefore, the proposed Project would not conflict with any applicable plan, program, policy, or regulation related to the reduction of GHG emissions. Impacts are considered less than significant and no mitigation is required. (DEIR, pgs. 4.13-10 to 4.13-17)

B. ENVIRONMENTAL IMPACTS MITIGATED TO A LEVEL OF LESS-THAN-SIGNIFICANT

Public Resources Code Section 21081 states that no public agency shall approve or carry out a project for which an EIR has been completed which identifies one or more significant effects unless the public agency makes one or more of the following findings:

I. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment.

II. Those changes or alterations are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency.

III. Specific economic, legal, social, technological, or other considerations make infeasible the mitigation measures or alternatives identified in the EIR, and overriding economic, legal, social, technological, or other benefits of the Project outweigh the significant effects on the environment.

Certain of the following issues from the environmental categories analyzed in the EIR, including biological resources, cultural and paleontological resources, hydrology, drainage, and water quality, noise (short-term construction), transportation (local intersections), utilities, and global climate change (individually and cumulatively) were found to be potentially significant, but can be mitigated to a less-than-significant level with the imposition of mitigation measures. This Council hereby finds pursuant to *Public Resources Code* Section 21081 that all potentially significant impacts listed below can and will be mitigated to below a level of significance by imposition of the mitigation measures in the EIR; and that these mitigation measures are included as Conditions of Approval and set forth in the Mitigation Monitoring and Reporting Program (MMRP) adopted by this Council. Specific findings of this Council for each category of such impacts are set forth in detail below.

1. <u>Air Quality</u>

a. Localized Construction Equipment Exhaust Emissions Impacts

Potentially Significant Impact: The EIR evaluated and concluded that the Project has the potential to exceed short-term construction thresholds.

Finding: Implementation of the following mitigation measures will reduce the potential adverse impacts to sensitive or special status species to less than significant:

4.3.6.3A *Prior to the issuance of grading permits, the project applicant shall require by contract specifications that all trucks hauling dirt, sand, soil, or other loose materials are to be covered or shall maintain at least 2 feet of freeboard in accordance with the requirements of California Vehicle Code (CVC) Section 23114 (freeboard means vertical space between the top of the load and top of the trailer).*

4.3.6.3B *Prior to the issuance of grading permits, the project applicant shall provide evidence to the City that construction access roads shall be paved at least 100 feet onto the site from the main road.*

4.3.6.3C *Prior to the issuance of grading permits, the project applicant shall require by contract specifications that all streets within the construction site shall be swept once per day if visible soil materials are carried to adjacent streets.*

Facts in Support of the Finding: SCAQMD has developed LST methodology that can be used to determine whether or not a project may generate significant adverse localized air quality impacts. LSTs represent the maximum emissions from a project that would not cause or contribute to an exceedance of the most stringent applicable Federal or State ambient air quality standard and are developed based on the ambient concentrations of that pollutant for each source receptor area. The emissions of concern from construction activities are NOX, CO, PM_{10}, and $PM_{2.5}$ resulting from on-site combustion emissions from construction equipment and on-site fugitive PM_{10} dust from construction site preparation activities.

According to Section 4.3 of the DEIR, the air pollutant emission rates for the proposed construction activities are below the localized construction thresholds at the nearest sensitive receptor for CO, NO_X, PM_{10}, and $PM_{2.5}$. Thus, no mitigation is required. However, implementation of **Mitigation Measures 4.3.6.2A through 4.3.6.2M** and the incorporation of these additional requirements as **Mitigation Measures 4.3.6.3A through 4.3.6.3C** are designed to track both standard requirements and mitigation measures as part of the project's Mitigation Monitoring and Reporting Program (MMRP). Therefore, impacts related to construction exhaust emissions are less than significant. (DEIR, pgs. 4.3-29 to 4.3-30)

2. Biological Resources

a. Candidate, Non-listed Sensitive, or Other Special Status Species

Potential Significant Impact: The EIR evaluated and concluded that the Project has the potential to affect migratory bird species and 15 non-listed special status species, including burrowing owl.

Finding: Implementation of the following mitigation measures will reduce the potential adverse impacts to sensitive or special status species to less than significant:

4.4.6.1A *If tree removal or clearing and grubbing activities must take place during the general nesting season (February 1 through August 31), a nesting bird survey shall be conducted within seven (7) days prior to any vegetation disturbance activities. If passerine birds are found to be nesting or there is evidence of nesting behavior inside the impact area, an exclusion buffer, to be determined by the appropriate agency (e.g. the City, County, and/or CDFG), shall be set in place around the nest where no vegetation disturbance will be permitted. For raptor species, such as hawks and owls, this buffer may be as large as 500 feet. A qualified biologist shall closely monitor nests until it is determined that they are no longer active, at which time construction activity in the vicinity of nests may continue.*

4.4.6.1B *Prior to site grading, a pre-construction survey shall be required for the burrowing owl to confirm the presence/absence of this species from the site. The survey shall be conducted by a qualified biologist within 30 days prior to ground disturbance, and in accordance with MSHCP survey requirements, to avoid direct take of burrowing owls. If burrowing owls are determined to occupy the project site or immediate vicinity, the City of Moreno Valley Planning Department shall be notified and avoidance measures as identified in Mitigation Measure 4.4.6.1C shall be implemented. Implementation of avoidance measures shall be executed pursuant to the MSHCP, the California Fish and Game Code, and the MBTA, and according the Burrowing Owl Survey Protocol and Mitigation Guidelines (CBOC 1993) and reviewed the City of Moreno Valley, the County of Riverside, and/or by the CDFG.*

4.4.6.1C *As recommended in the BUOW Survey and Mitigation Guidelines prepared by the CBOC, no disturbance to an occupied burrow shall occur within approximately 160 feet*

of an occupied burrow during the non-breeding season (September 1 through January 31), or within approximately 250 feet of an occupied burrow during the breeding season (February 1 through August 31). For unavoidable impacts, passive relocation of burrowing owls shall be implemented. Passive relocation shall be conducted by a qualified biologist in accordance with procedures set forth by the MSHCP and California Burrowing Owl Consortium. Passive relocation of occupied burrows supporting a breeding pair of burrowing owls shall be conducted outside of the breeding season pursuant to the California Fish and Game Code and the MBTA.

Facts in Support of the Finding: According to Section 4.4 of the DEIR, one non-listed special status species, grasshopper sparrow, was observed on the site during the burrowing owl survey. Fourteen other non-listed special status species, including burrowing owl, have a low to moderate potential to occur on the site based on existing habitat quality. None of these species is listed as Threatened or Endangered under State or Federal law, all are relatively widespread, and the site does not contain high quality habitat for any of them. Therefore, any impacts to these species by the Project would not be considered significant. Neither additional surveys nor additional conservation measures for these species will be required for the proposed Project, with the exception of burrowing owl.

The planning area may support habitat for bird species protected under the California Fish and Game Code and Migratory Bird Treaty Act (MBTA). If clearing and grubbing activities take place during the general bird nesting season (February 1 through August 31), potential impacts to bird species protected under the California Fish and Game Code and MBTA may occur, therefore **Mitigation Measure 4.4.6.1A** is required.

The Project site also contains habitat suitable to support the burrowing owl. Although burrowing owl was not found on the site during the focused survey, the species is highly mobile, so there is a potential that at some future date prior to Project development, this species may occupy the site. This is a potentially significant impact requiring **Mitigation Measures 4.4.6.1B and 4.4.6.1C.** Implementation of the above-listed mitigation measures would reduce impacts to migratory bird species and non-listed sensitive species to a less than significant level. (DEIR, pgs. 4.4-25 to 4.4-27).

b. Riparian Habitat or Other Sensitive Natural Communities

Potential Significant Impact: The EIR evaluated and concluded that the Project has the potential to permanently affect 0.36 acre of riparian/riverine habitat and to temporarily affect 0.35 acre of riparian/riverine habitat.

Finding: Implementation of the following mitigation measures will reduce the potential adverse impacts to riparian habitat or other sensitive natural communities to less than significant:

4.4.6.2A *As outlined in the project's Determination of a Biologically Equivalent or Superior Preservation (DBESP) report, the project applicant shall compensate for the temporary and permanent impact on and loss of jurisdictional waters and streambeds by providing a minimum 2:1 off-site replacement of equivalent riverine/riparian habitat prior to project construction. Offsite restoration, enhancement, and/or land purchase mitigation for the drainage impacts will occur at an offsite location through one or more of the following: an USACE approved mitigation bank, through an in lieu fee mitigation program, and/or land purchase and conservation. CDFW and USFWS will need to provide concurrence that this mitigation is equivalent or superior to that proposed for impact through their review and acceptance of the DBESP.*

4.4.6.2B *Riparian/riverine resources that are temporarily impacted by project construction shall be returned to their preconstruction contours and hydroseeded, as outlined in the DBESP.*

Facts in Support of the Findings: According to Section 4.4 of the DEIR, the Project site consists of highly disturbed land from which most natural vegetation has been removed by regular disking for weed abatement and historical citrus cultivation. No special status species plants were recorded on site within the southern and western drainages due to the site's long-standing disturbances and the fact that on-site soils may not be capable of supporting most sensitive plant species.

However, implementation of the proposed Project would result in permanent impacts on 0.36 acre of riparian/riverine areas as a result of the construction of the detention basins, and drain outlets. In addition to permanent impacts, the proposed Project would result in temporary impacts on 0.35 acre of riparian/riverine areas associated with construction activities. Minimal intrusion into the drainages would be necessary and no construction is anticipated in the drainages themselves.

Following construction, temporary impact areas would be restored to their pre-construction contours and revegetated per a Habitat Mitigation and Monitoring Plan (HMMP) to be written for the Project site. The HMMP would be developed to address temporary impacts on riverine/riparian areas subject to jurisdiction under the MSHCP, waters of the United States subject to jurisdiction under Section 404 of the Clean Water Act (CWA), waters of the state subject to jurisdiction under Section 401 of the CWA, and

jurisdictional streambeds subject to jurisdiction under Sections1600–1616 of the California Fish and Game Code. Therefore, the proposed mitigation design is directed at providing adequate mitigation based on impacts on the largest jurisdictional area (namely, CDFW jurisdictional streambeds). Because implementation of the proposed Project would have impacts on riparian/riverine areas on site, mitigation would be required. Implementation of the **Mitigation Measures 4.4.6.2A and 4.4.6.2B** would reduce impacts to riparian habitat to a less than significant level. (DEIR, pgs. 4.4-29 to 4.4-27)

c. Jurisdictional Waters/Wetlands

Potential Significant Impact: The EIR evaluated and concluded that the Project has the potential to permanently affect 0.051 non-wetland waters of the United States (US) and 0.362 acre of CDFW jurisdictional area, and to temporarily affect 0.054 acre of non-wetland waters of the U.S. and 0.33 acre of CDFW jurisdictional area.

Findings: Implementation of the following mitigation measures will reduce the potential adverse impacts to jurisdictional waters and wetlands to less than significant:

4.4.6.3A *The project applicant shall obtain a Section 404 Nationwide or Individual Permit, as appropriate, from the USACE, a Section 401/Porter-Cologne Water Quality Certification from the RWQCB, and a Section 1602 Streambed Alteration Agreement from the CDFW. Offsite restoration, enhancement, and/or land purchase mitigation of jurisdictional drainage impacts will occur at an off-site location through one or more of the following: an USACE approved mitigation bank, through an in-lieu fee mitigation program, and/or land purchase and conservation.*

Facts in Support of the Findings: According to Section 4.4 of the DEIR, there is a clear connection to drainages associated with the San Jacinto watershed, and all three drainages (western, southern, and eastern) located on or adjacent to the Project site are determined to be jurisdictional waters of the United States. Implementation of the proposed Project would result in permanent impacts to 0.051 acre (354 linear feet) of non-wetland waters of the US and waters of the State and 0.362 acre (440 linear feet) of state streambed associated with the eastern, southern, and western drainages. In addition to permanent impacts, the proposed Project would result in temporary impacts to 0.054 acre (332 linear feet) of non-wetland waters of the US and waters of the State and 0.33 acre (547 linear feet) of State streambed associated with construction activities. This is a significant impact requiring mitigation.

The proposed on-site restoration of temporary impact areas and the long-term enhancement of off-site riparian/riverine habitat managed by Santa Ana Water Authority provides adequate mitigation for identified impacts to on-site jurisdictional areas. Implementation of the recommended **Mitigation Measure 4.4.6.3A** would reduce impacts to jurisdictional waters to less than significant levels. (DEIR, pgs. 4.4-29 to 4.4-30)

3. Cultural Resources

a. Prehistoric Cultural Resources

Potential Significant Impact: The EIR evaluated and concluded that the Project could have an adverse effect on significant archaeological resource pursuant to Section 15064.5.

Finding: Implementation of the following mitigation measures will reduce the impact to unique archaeological resources to less than significant:

4.5.6.1A *Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a Cultural Resources Monitoring Agreement has been secured for qualified Tribal representatives, and that a professional archaeological monitor meeting Secretary of Interior standards has been retained by the Applicant to conduct monitoring of all mass grading and trenching activities and has the authority to temporarily halt and redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project Archaeologist and Tribal representatives shall attend the pre-grading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.*

4.5.6.1B *Prior to the issuance of a grading permit, the Applicant shall provide evidence to the City of Moreno Valley that appropriate Native American representative(s), Project Archaeologist, and the Tribal representative(s) shall be allowed to monitor and have received a minimum of 30 days advance notice of all mass grading and trenching activities. During grading and trenching operations, the Tribal representatives and the project archaeological monitor shall observe all mass grading and trenching activities per the Cultural Resources Monitoring Agreement. If the Tribal representatives suspect that an archaeological resource may have been unearthed, the archaeologist, in consultation with the tribal representative, shall immediately halt and redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. In consultation with the appropriate Native American Tribe(s), the archaeological monitor shall evaluate the suspected resource and make a*

determination of significance pursuant to California Public Resources Code Section 21083.2.

4.5.6.1C *If a significant archaeological resource(s) is discovered on the property, ground disturbing activities shall be suspended 100 feet around the resource(s). The archaeological monitor and representatives of the appropriate Native American Tribe(s), the Project Applicant, and the City Planning Division shall confer regarding mitigation of the discovered resource(s). A treatment plan and/or preservation plan shall be prepared and by the archaeological monitor and reviewed by representatives of the appropriate Native American Tribe(s), the Project Applicant, and the City Planning Division and implemented by the archaeologist to protect the identified archaeological resource(s) from damage and destruction. The landowner shall relinquish ownership of all archaeological artifacts that are of Native American origin found on the Project site to the culturally affiliated Native American tribe(s) for proper treatment and disposition. A final report containing the significance and treatment findings shall be prepared by the archaeologist and submitted to the City Planning Division, the appropriate Native American tribe(s), and the Eastern Information Center at the University of California, Riverside. All cultural material, excluding sacred, ceremonial, grave goods and human remains, collected during the grading monitoring program and from any previous archaeological studies or excavations on the project site shall be curated, as determined by the treatment plan, according to the current professional repository standards and may include the Pechanga Bands curatorial facility.*

4.5.6.1D *Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan:*

"If any suspected archaeological resources are discovered during ground-disturbing activities and the archaeological monitor or Tribal representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the project archaeologist and the Tribal representatives to the site to assess the significance of the find."

4.5.6.1E *If human remains are encountered, California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to California Public*

Resources Code Section 5097.98(b), remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made by the Coroner. If the Riverside County Coroner determines the remains to be Native American, the California Native American Heritage Commission must be contacted within 24 hours. The Native American Heritage Commission must then immediately notify the "most likely descendant(s)" of receiving notification of the discovery. The most likely descendant(s) shall then make recommendations within 48 hours, and engage in consultations concerning the treatment of the remains as provided in Public Resources Code §5097.98.

Facts in Support of the Finding: Based on Section 4.5 of the DEIR, a reconnaissance pedestrian-survey for the Project site was conducted in November 2007. Although the Project site is located within the Moreno Hills Complex, no archaeological resources were identified on the Project site during the field survey, and the cultural resource assessment concluded the Project would have no significant impacts; however, there is a potential for Project grading to disturb previously undiscovered cultural resources. While there is no recorded or surface evidence that archaeological resources are present on site, the Project is located in an area with a high potential of containing prehistoric archaeological resources. Therefore, a potential exists that excavation and construction activities may uncover previously undetected prehistoric or historic cultural resources. This is a potentially significant impact under CEQA and requires mitigation. Adherence to the above **Mitigation Measures 4.5.6.1A** through **4.5.6.1E** would reduce potential impacts to archaeological resources to a less than significant level. (DEIR, pgs. 4.5-6 to 4.5-7)

b. Paleontological Resources

Potential Significant Impact: The EIR evaluated and concluded that the Project could have an adverse effect on significant paleontological resource or site or unique geologic feature.

Findings: Implementation of the following mitigation measures will reduce the impact to unique paleontological resource or unique geologic feature to less than significant:

4.5.6.2A *Prior to the issuance of grading permits, the project applicant shall submit to and receive approval from the City, a Paleontological Resource Impact Mitigation Program (PRIMP). The PRIMP shall include the provision of a trained paleontological monitor during on-site soil disturbance activities. The monitoring for paleontological resources shall be conducted during the rough-grading phase of the project. In the event that*

paleontological resources are unearthed or discovered during excavation, Mitigation Measure 4.5.6.2C shall apply. Conversely, if no paleontological resources are unearthed or discovered on site during excavation, no additional action is required.

4.5.6.2B *The paleontological monitor shall be equipped to rapidly remove any large fossil specimens encountered during excavation. During monitoring, samples of soil shall be collected and processed to recover microvertebrate fossils. Processing shall include wet screen washing and microscopic examination of the residual materials to identify small vertebrate remains.*

4.5.6.2C *If paleontological resources are unearthed or discovered during excavation of the project site, the monitoring for paleontological resources shall be conducted on a full-time basis for the duration of the rough-grading of the project site. The following recovery processes shall apply:*

- *Upon encountering a large deposit of bone, salvage of all bone in the area shall be conducted with additional field staff and in accordance with modern paleontological techniques.*
- *All fossils collected during the project shall be prepared to a reasonable point of identification. Excess sediment or matrix shall be removed from the specimens to reduce the bulk and cost of storage. Itemized catalogs of all material collected and identified shall be provided to the museum repository along with the specimens.*
- *A report documenting the results of the monitoring and salvage activities and the significance of the fossils shall be prepared.*
- *All fossils collected during this work, along with the itemized inventory of these specimens, shall be deposited in a museum repository for permanent curation and storage.*

4.5.6.2D *Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan:*

"If any suspected paleontological resources are discovered during ground-disturbing activities, the construction supervisor is obligated to halt work in a 100-foot radius

around the find and call a qualified paleontologist to the site to assess the significance of the find. A qualified paleontologist shall evaluate the suspected resource. If the paleontologist determines that the find is not unique, construction shall be permitted to proceed. However, if the paleontologist determines that further information is needed to evaluate significance, the City of Moreno Valley shall be notified and a treatment plan shall be prepared and implemented in consultation with the City to protect the identified paleontological resource(s) from damage and destruction."

Facts in Support of the Findings: According to Section 4.5 of the DEIR, the proposed Project site is located within an area that has a high potential to contain near-surface Pleistocene fossils.[11] The paleontological literature search indicated that there is potential for significant, nonrenewable resources that to encountered during onsite construction activities. Therefore, a paleontological resources impact mitigation program (PRIMP), including excavation monitoring by a qualified paleontologist, is recommended for earthmoving activities in Pleistocene sediments on the Project site with potential to contain significant, nonrenewable paleontological resources. Although no paleontological resources were identified on site during the field survey, because of the location of the Project site and associated sensitivity for paleontological resources, the potential exists that paleontological resources maybe uncovered during construction. Adherence to the **Mitigation Measures 4.5.6.2A through 4.5.6.2D** will reduce potential impacts to paleontological resources to a less than significant level. (DEIR, pgs. 4.5-7 to 4.5-8)

4. Hydrology, Drainage, and Water Quality

a. Construction-Related Water Quality Impacts

Potential Significant Impact: The EIR evaluated and concluded that the Project could violate water quality standards or waste discharge requirements during construction phases of the Project in form of increased soil erosion, sedimentation, or storm water discharges.

Findings: Implementation of the following mitigation measures will reduce the impact to construction-related water quality to less than significant:

4.7.6.1A *Prior to grading plan approval and the first issuance of a grading permit by the City, the project applicant shall provide evidence to the City that a Notice of Intent (NOI) has been filed with the Regional Water Quality Control Board for coverage under the State*

[11] Ibid.

NPDES General Construction Permit for discharge of storm water associated with construction activities.

4.7.6.1B *Prior to grading plan approval and the first issuance of a grading permit by the City, the project applicant shall submit to the City of Moreno Valley a Storm Water Pollution Prevention Plan (SWPPP). The SWPPP shall include a surface water control plan and erosion control plan citing specific measures to control on-site and off-site erosion during the entire grading and construction period. Additionally, the SWPPP shall identify structural and nonstructural BMPs to control sediment and nonvisible discharges from the site. BMPs to be implemented in the SWPPP may include (but shall not be limited to) the following:*

- *Sediment discharges from the site may be controlled by the following: sandbags, silt fences, straw wattles and temporary debris basins (if deemed necessary), and other discharge control devices. The construction and condition of the BMPs will be periodically inspected during construction, and repairs will be made when necessary as required by the SWPPP.*
- *No materials of any kind shall be placed in drainage ways.*
- *Materials that could contribute nonvisible pollutants to storm water must be contained, elevated, and placed in temporary storage containment areas.*
- *All loose piles of soil, silt, clay, sand, debris, and other earthen material shall be protected per RWQCB standards to eliminate any discharge from the site. Stockpiles will be surrounded by silt fences.*
- *The SWPPP will include inspection forms for routine monitoring of the site during the construction phase to ensure NPDES compliance.*
- *Additional BMPs and erosion control measures will be documented in the SWPPP and utilized if necessary.*
- *The SWPPP will be kept on site for the entire duration of project construction and will also be available to the local RWQCB for inspection at any time.*

In the event that it is not feasible to implement the above BMPs, the City of Moreno Valley can make a determination that other BMPs will provide equivalent or superior treatment either on or off site.

4.7.6.1C *Prior to the issuance of grading permits, the project applicant shall provide evidence to the City that the following provisions have been added to construction contracts for the project:*

- *The Construction Contractor shall be responsible for performing and documenting the application of BMPs identified in the SWPPP. Weekly inspections shall be performed on sediment control measures called for in the SWPPP. Monthly reports shall be maintained by the Contractor and submitted to the City for inspection. In addition, the Contractor will also be required to maintain an inspection log and have the log on site to be reviewed by the City of Moreno Valley and the representatives of the Regional Water Quality Control Board.*

Facts in Support of the Findings: According to Section 4.7 of the DEIR, the construction and grading phases of the project site would require the disturbance of surface soils and removal of existing orange groves and vegetative cover. During the construction period, grading and excavation activities would result in exposure of soil to storm runoff, potentially causing erosion and sediment in runoff. If not managed through Best Management Practices (BMPs), the runoff could cause erosion and increased sedimentation in local drainage ways such as the Quincy Channel. The potential for chemical releases is present at most construction sites in the form of fuels, solvents, glues, paints, and other building construction materials. However, implementation of construction practices and adherence to existing water quality regulations and **Mitigation Measures 4.7.6.1A** through **4.7.6.1C** would reduce these impacts to a less than significant level. (DEIR, pgs. 4.7-21 to 4.7-23)

b. Operational-Related Water Quality Impacts

Potential Significant Impact: The EIR evaluated and concluded that the Project could violate water quality standards or waste discharge requirements during the operational phases of the project in the form of increased soil erosion, sedimentation, or urban runoff.

Findings: Implementation of the following mitigation measure will reduce the impact to operational-related water quality to less than significant:

4.7.6.2A *Prior to grading plan approval and the first issuance of a grading permit by the City, the project applicant shall receive approval from the City of Moreno Valley for a Final Water Quality Management Plan (F-WQMP). The F-WQMP shall specifically identify*

pollution prevention, site design, source control, and treatment control BMPs that shall be used on site to control predictable pollutant runoff in order to reduce impacts to water quality to the maximum extent practicable. BMPs to be implemented in the F-WQMP may include (but shall not be limited to) the following:

- *Required landscaped areas shall not use decorative concrete or impervious surfaces.*
- *Landscape plans shall incorporate native and drought-tolerant plants, trees, and shrubs. Landscaping shall be maintained weekly and maintenance contractor will properly dispose of all landscape wastes.*
- *Irrigation systems shall be inspected monthly by the landscape contractor to check for overwatering, leaks, or excessive runoff to paved areas. Timers will be used to prevent overwatering.*
- *Signage will be inspected and maintained twice a year for legibility.*
- *Outdoor Loading/Unloading truck docks shall be kept in a clean and orderly condition with weekly inspections, continuous monitoring and immediate cleanup of spills.*
- *Parking area maintenance shall be swept or vacuumed at least quarterly, if there is any trash or debris in between the routine sweeping, it shall be swept or vacuumed immediately.*
- *Trash enclosures will be inspected and maintained weekly or as needed by maintenance contractor.*
- *On-site extended detention/sedimentation basins and sand filters will treat all of the site's runoff via vegetated swales and will be maintained and inspected at least twice a year and prior to October 1.*
- *Additional BMPs will be documented in the WQMP and utilized if necessary.*

In the event that it is not feasible to implement the above BMPs, the City of Moreno Valley can make a determination that other BMPs will provide equivalent or superior treatment either on or off site.

Facts in Support of the Findings: According to Section 4.7 of the DEIR, the proposed Project would result in the conversion of existing on-site permeable surfaces to impermeable surfaces, thereby altering the current drainage pattern. Upon development of the proposed on-site uses, storm runoff from the roadways, parking lots, and buildings may carry a variety of pollutants such as sediment, pathogens, petroleum products, commonly utilized construction materials, landscaping chemicals, and (to a lesser extent) trace metals such as zinc, copper, lead, cadmium, and iron, which may lead to the degradation of storm water in downstream channels. These impacts to water quality are considered significant impacts that require mitigation. **Mitigation Measure 4.7.6.2A** has been identified to reduce impacts to water quality to less than significant.

The proposed Project would also incorporate on-site drainage that would have hydrodynamic infrastructure components that would meet City and County water quality requirements. Through the use of site design BMPs, source control BMPs, and treatment control BMPs, the resulting pollutant loads coming from the proposed Project would be reduced thereby ultimately reducing pollutants discharged from urban storm water runoff to surface water bodies. Because adherence to the requirements of the NPDES permit, which include implementation of the BMPs outlined in the WQMP, would be required by the City during the operation of the proposed Project, potential water quality impacts resulting from storm water and urban runoff would be reduced to a less than significant level. (DEIR, pgs. 4.7-23 to 4.7-26)

c. Drainage Capacity-Related Impacts

Potential Significant Impact: The EIR evaluated and concluded that the Project could create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff.

Findings: Implementation of the following mitigation measure will reduce the impact to drainage to less than significant:

4.7.6.3A *Prior to the approval of a rough grading plan, the project proponent shall receive approval on a project-specific Final Hydrology Study, with supporting engineering calculations, from the City Engineer. The Final Hydrology Study shall incorporate relevant requirements identified by the City, and/or site-specific geotechnical investigations.*

Facts in Support of the Findings: According to Section 4.7 of the DEIR, development and operation of the proposed Project would result in the generation of the additional storm water flows that would be

above those generated in existing site conditions. With the construction and maintenance of adequate storm water drainage systems, through the adherence of **Mitigation Measure 4.7.6.3A**, impacts would be less than significant. In addition, the design and installation of the proposed drainage improvements will be required to adhere to applicable City and County standards. (DEIR, pgs. 4.7-26 to 4.7-28)

5. Noise

a. Short-Term Construction Noise

Potential Significant Impact: The EIR evaluated and concluded that noise levels from grading and other construction activities for the proposed Project may range up to 91 dBA at the closest residences southeast of the Project site for very limited times when construction occurs near the Project's boundary. Construction-related noise impacts from the proposed Project would be potentially significant.

Finding: Implementation of the following mitigation measures will reduce potential short-term construction noise impacts to less than significant:

4.9.6.1A *During all project site excavation and grading on site, the project contractor shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers consistent with manufacturers' standards.*

4.9.6.1B *The project contractor shall place all stationary construction equipment so that emitted noise is directed away from sensitive receptors nearest to the project site.*

4.9.6.1C *The construction contractor shall locate equipment staging in areas that will create the greatest distance between construction-related noise sources and noise-sensitive receptors nearest to the project site during all project construction.*

4.9.6.1D *During all project site construction activities at Building 6 (i.e., closest to existing residences), the construction contractor shall limit all construction-related activities that would result in high noise levels to between the hours of 6:00 a.m. and 8:00 p.m. on weekdays and between the hours of 7:00 a.m. to 8:00 p.m. on weekends and holidays, unless written approval is obtained from the City Building Official or City Engineer for specific construction activities that must be conducted outside of the permitted time periods.*

Facts in Support of the Finding: According to Section 4.9 of the DEIR, two types of short-term noise impacts could occur during the construction of the Project. First, construction crew commutes and the

transport of construction equipment and materials to the site for the proposed Project would incrementally increase noise levels on access roads leading to the site. The second type of short-term noise impact is related to noise generated during excavation, grading, and building erection on the Project site. Construction of the proposed Project is expected to require the use of scrapers, bulldozers, and water and pickup trucks. The site preparation phase, which includes excavation and grading of the site, tends to generate the highest noise levels, because the noisiest construction equipment is earthmoving equipment. Earthmoving equipment includes excavating machinery such as backfillers, bulldozers, draglines, and front loaders. Earthmoving and compacting equipment includes compactors, scrapers, and graders. Typical operating cycles for these types of construction equipment may involve one or two minutes of full-power operation followed by three to four minutes at lower power settings. The maximum noise level generated by each scraper on the proposed Project site is assumed to be approximately 87 dBA L_{max} at 50 feet from the scraper. Each bulldozer would generate approximately 85 dBA Lmax at 50 feet. The maximum noise level generated by water and pickup trucks is approximately 86 dBA L_{max} at 50 feet from these vehicles. Each doubling of the sound sources with equal strength increases the noise level by three (3) dBA. Assuming that each piece of construction equipment operates at some distance from the other equipment, the worst-case composite noise level during this phase of construction would be 91 dBA L_{max} at a distance of 50 feet from the active construction area.

The nearest noise-sensitive receptor locations to the Project site are existing residences approximately 50 feet to the southeast. These nearest residents may be subject to short-term, intermittent, maximum noise reaching 91 dBA L_{max}, generated by construction activities on the Project site. This noise level would exceed the City's exterior noise standard of 60 dBA[12] CNEL for residential uses. However, no significant construction noise impacts would occur if construction of the proposed Project would occur within the permitted hours of 6:00 a.m. to 8:00 p.m. of any working day, and within the permitted hours of 7:00 a.m. and 8:00 p.m. on Sundays and Federal holidays. Compliance with the construction hours specified in the City's Municipal Code would result in construction noise impacts that are less than significant. While impacts would be considered less than significant as long as construction activities occur within the designated hours identified in the City's Municipal Code, mitigation measures have been identified to reduce the noise levels that would expose nearby sensitive receptors to noise levels in excess of the City's noise standards.

[12] *Chapter 11.80.030 Table 11.80.030-2, City of Moreno Valley Municipal Code,* City of Moreno Valley.

With adherence to the City's designated construction hours and with implementation of the proposed **Mitigation Measures 4.9.6.1A through 4.9.6.1D**, potential short-term construction noise impacts would be reduced below the level of significance. (DEIR, pgs. 4.9-25 to 4.9-27)

6. <u>Transportation</u>

a. Future Year 2035 with Project Conditions (Intersection) Traffic and Level of Service

Potential Significant Impact: The EIR evaluated and concluded that the Project could cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system.

Findings: Implementation of the following mitigation measures will reduce the impact related to future traffic LOS to less than significant:

4.11.6.4A. *Prior to issuance of a Certificate of Occupancy the project applicant shall construct the following traffic improvements:*

- *Redlands Boulevard/SR-60 Westbound Ramps. Install a traffic signal. This improvement is currently approved, and permitted by Caltrans. If not otherwise completed prior to project opening, the required traffic signal shall be constructed by the Applicant prior to issuance of the first Certificate of Occupancy.*
- *Redlands Boulevard/Fir Avenue/Eucalyptus Avenue. If not otherwise completed prior to project opening, prior to issuance of the first Certificate of Occupancy, the Applicant shall construct the following improvements: Install a traffic signal and add a northbound left-turn lane and a southbound left-turn lane.*

If the improvements are constructed by others prior to the Certificate of Occupancy, the applicant shall pay its fair share towards the improvements through the City's DIF program.

4.11.6.4B *Prior to issuance of building permits, the project applicant shall pay the fair-share contribution toward the following traffic improvements through fees paid to the City of Moreno Valley based on the City's DIF system and the County's TUMF program:*

- ***Moreno Beach Drive/SR-60 Eastbound Ramps.*** *The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the*

design phase. Therefore, payment of the TUMF would mitigate the significant impact at this location. This project is scheduled to go into construction by the end of this year and completed by the end of 2013.

- ***Redlands Boulevard/SR-60 Westbound Ramps.*** *Install a traffic signal. This improvement is currently approved, and permitted by Caltrans. If not otherwise completed prior to project opening, the required traffic signal shall be constructed by the Applicant prior to issuance of the first Certificate of Occupancy.*

- ***Redlands Boulevard/Fir Avenue/Eucalyptus Avenue****. If not otherwise completed prior to project opening, prior to issuance of the first Certificate of Occupancy, the Applicant shall construct the following improvements: Install a traffic signal. This improvement is listed in the City's DIF program. Add a northbound left-turn lane and a southbound left-turn lane.*

4.11.6.4C *Prior to issuance of building permits, the project applicant shall pay the fair-share contribution toward the following traffic improvements through fees paid to the City of Moreno Valley based on the City's DIF system and the County's TUMF program:*

- ***Moreno Beach Drive/SR-60 Eastbound Ramps.*** *The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF would mitigate the significant impact at this location.*

- ***Moreno Beach Drive/Cottonwood Avenue.*** *Add a southbound through lane. This improvement is listed in the City's DIF program. Therefore, payment of the DIF would mitigate the significant impact at this location.*

- ***Moreno Beach Drive/Alessandro Boulevard.*** *Add a southbound through lane. This improvement is listed in the City's DIF program. Therefore, payment of the DIF would mitigate the significant impact at this location.*

- ***Redlands Boulevard/SR-60 Westbound Ramps.*** *Install a traffic signal. This improvement is listed in the City's DIF program and will be installed before building occupancy since it was identified as a direct project impact. Add a northbound through lane. The Redlands Boulevard/SR-60 Interchange reconstruction would implement the*

northbound through lane. The interchange reconstruction project is programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.

- ***Redlands Boulevard/SR-60 Eastbound Ramps.*** *The Redlands Boulevard/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF. Therefore, payment of the TUMF would mitigate the significant impact at this location.*
- ***Redlands Boulevard/Fir Avenue/Eucalyptus Avenue.*** *Install a traffic signal. Add a westbound right-turn lane and provide overlap phasing for the westbound right turns. Add a westbound left-turn lane and an eastbound left-turn lane. These improvements are programmed in the City's DIF program. Add a northbound left-turn lane a southbound through lane and a southbound left-turn lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.*
- ***Redlands Boulevard/Eucalyptus Avenue.*** *Add a southbound right-turn lane. This improvement is programmed in the TUMF. Therefore, payment of the TUMFs would mitigate the significant impact at this location.*
- ***Redlands Boulevard/Alessandro Boulevard.*** *Add a southbound left-turn lane. This improvement is programmed in the TUMF. Therefore, payment of the TUMFs would mitigate the significant impact at this location.*

4.11.6.4D *Prior to issuance of building permits, the project applicant shall pay the fair-share contribution toward the following traffic improvements through fees paid to the City of Moreno Valley based on the City's DIF system and the County's TUMF program. At some locations, the DIF and TUMFs would not fully mitigate the projects impact. For these locations, additional improvements shall be implemented by the project applicant prior to the issuance of a certificate of occupancy for the project:*

- ***Nason Street/Eucalyptus Avenue.*** *Add a northbound right-turn lane. This improvement is programmed in the City's DIF; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, the project shall contribute a fair*

share (calculated to be 1.76%) toward restriping the westbound approach to provide dual left-turn lanes

- ***Nason Street/Alessandro Boulevard.*** *Add an eastbound through lane and a westbound through lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, the project shall contribute a fair share (calculated to be 1.4%) toward modification of the traffic signal to provide overlap phasing for the eastbound right-turn lane.*

- ***Moreno Beach Drive/SR-60 Westbound Ramps.*** *The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF would mitigate the significant impact at this location.*

- ***Moreno Beach Drive/SR-60 Eastbound Ramps.*** *The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF would mitigate the significant impact at this location.*

- ***Moreno Beach Drive/Eucalyptus Avenue.*** *Convert the existing eastbound through lane to a left-turn lane and the eastbound right-turn lane to a shared through/right-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, the project shall contribute a fair share (calculated to be 8.63%) toward modification of the traffic signal to provide right-turn overlap phasing for the westbound right turn.*

- ***Moreno Beach Drive/Cottonwood Avenue.*** *Add a southbound through lane. This improvement is programmed in the City's DIF program. Therefore, payment of the DIF would mitigate the significant impact at this location.*

- ***Moreno Beach Drive/Alessandro Boulevard.*** *Add 2 southbound through lanes, 2 northbound through lanes, an eastbound through lane, and a westbound through lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would mitigate the significant impact at this location.*

- ***Redlands Boulevard/SR-60 Westbound Ramps.*** *Install a traffic signal. This improvement is programmed in the City's DIF program and will be installed before building occupancy since it was identified as a direct project impact.*

- ***Redlands Boulevard/SR-60 Eastbound Ramps.*** *The Redlands Boulevard/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF. Therefore, payment of the TUMF would mitigate the significant impact at this location.*

- ***Redlands Boulevard/Fir Avenue-Eucalyptus Avenue.*** *Install a traffic signal and add a westbound left-turn lane, eastbound through lane, eastbound left-turn lane, and a westbound right-turn lane with overlap phasing. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a southbound through lane, southbound left-turn lane, northbound through lane, northbound left-turn lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.*

- ***Redlands Boulevard/Eucalyptus Avenue.*** *Install a traffic signal and add a westbound left-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a northbound left-turn lane and a southbound left-turn lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.*

- ***Redlands Boulevard/Alessandro Boulevard.*** *Install a traffic signal. This improvement is programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a southbound left-turn lane, a northbound left-turn lane, a westbound left-turn lane, an eastbound left-turn lane, a westbound right-turn lane, and a southbound through lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.*

4.11.6.4E *Prior to issuance of building permits, the project applicant shall implement the following improvements, either through fees paid to the City of Moreno Valley based on the City's DIF*

system and the County's TUMF program, or through a fair-share contribution to the City of Moreno Valley as noted below:

- ***Nason Street/Eucalyptus Avenue.*** *Add a northbound right-turn lane and an eastbound right-turn lane. These improvements are programmed in the City's DIF; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. Implementation of the improvements identified for this intersection in* ***Mitigation Measure 4.11.6.4D*** *would also partially mitigate the significant impact at this intersection. In addition, the project shall pay a fair share (calculated to be 1.6%) toward modification of the traffic signal to provide right-turn overlap phasing for the eastbound and northbound right turns.*

- ***Nason Street/Alessandro Boulevard.*** *Add an eastbound through lane and westbound through lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. Implementation of the improvements identified for this intersection in* ***Mitigation Measure 4.11.6.4D*** *would also partially mitigate the significant impact at this intersection. In addition, the project shall pay a fair share (calculated to be 1.35%) toward the addition of an eastbound left-turn lane and modification of the traffic signal to provide overlap phasing for the westbound right-turn lane.*

- ***Moreno Beach Drive/SR-60 Westbound Ramps.*** *The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF would mitigate the significant impact at this location.*

- ***Moreno Beach Drive/SR-60 Eastbound Ramps.*** *The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF would mitigate the significant impact at this location.*

- ***Moreno Beach Drive/Eucalyptus Avenue.*** *Restripe eastbound approach to dual left-turn lanes and add a northbound through lane, a westbound through lane, and a southbound right-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this*

intersection. Implementation of the improvements identified for this intersection in ***Mitigation Measure 4.11.6.4D*** *would also partially mitigate the significant impact at this intersection. In addition, the project shall pay a fair share (calculated to be 5.17%) toward modification of the traffic signal to provide right-turn overlap phasing for the southbound right-turn lane.*

- ***Moreno Beach Drive/Cottonwood Avenue.*** *Add a southbound through lane, a northbound through lane, an eastbound left-turn lane, an eastbound through lane, a westbound through lane, and a westbound left-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would mitigate the significant impact at this location.*

- ***Moreno Beach Drive/Alessandro Boulevard.*** *Add 2 southbound through lanes, add 2 northbound through lanes, an eastbound through lane, and a westbound through lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would mitigate the significant impact at this location.*

- ***Auto Mall Drive/Eucalyptus Avenue.*** *Install a traffic signal. This improvement is programmed in the City's DIF program; therefore, payment of the DIF would mitigate the significant impact at this location.*

- ***Redlands Boulevard/SR-60 Westbound Ramps.*** *Install a traffic signal. This improvement is programmed in the City's DIF program and will be installed before building occupancy since it was identified as a direct project impact. Therefore, payment of the DIF would mitigate the significant impact at this location.*

- ***Redlands Boulevard/SR-60 Eastbound Ramps.*** *The Redlands Boulevard/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF. Therefore, payment of the TUMF would mitigate the significant impact at this location.*

- ***Redlands Boulevard/Fir Avenue-Eucalyptus Avenue.*** *Install a traffic signal and add a westbound left-turn lane, eastbound through lane, eastbound left-turn lane, a westbound right-turn lane with overlap phasing, and a southbound right-turn lane with overlap phasing. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a southbound through lane, a southbound left-turn lane, a northbound*

through lane, a northbound left-turn lane, and a northbound right-turn lane. These improvements are programmed in the TUMF. Therefore, payment of the TUMF would also partially mitigate the significant impact at this location. In addition, the project shall pay a fair share (calculated to be 10.44%) of the cost of adding a southbound left-turn lane.

- ***Redlands Boulevard/Eucalyptus Avenue.*** *Install a traffic signal and add a westbound left-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a northbound left-turn lane, a northbound through lane, a southbound left-turn lane, and a southbound through lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.*

- ***Redlands Boulevard/Cottonwood Avenue.*** *Add an eastbound through lane and westbound through lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a northbound through lane, and a southbound through lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.*

- ***Redlands Boulevard/Alessandro Boulevard.*** *Install a traffic signal. This improvement is programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a southbound left-turn lane, a northbound left-turn lane, a westbound left-turn lane, an eastbound left-turn lane, a westbound right-turn lane, a southbound through lane, a westbound through lane, and an eastbound through lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.*

4.11.6.4F *If the Encilia Avenue and Quincy Street Connection plan is implemented as part of the proposed project, then prior to issuance of building permits, the project applicant shall implement the following improvements: In addition to those identified in* ***Mitigation Measure 4.11.6.4E****, either through fees paid to the City of Moreno Valley based on the City's DIF*

system and the County's TUMF program, or through a fair-share contribution to the City of Moreno Valley as noted below:

- ***Moreno Beach Drive/Eucalyptus Avenue.*** *Restripe the southbound shared through/right-turn lane to a southbound through lane. This improvement is programmed in the City's DIF program; therefore, payment of the DIF would mitigate the impacts of the project at this intersection.*
- ***Redlands Boulevard/Fir Avenue-Eucalyptus Avenue.*** *Pay the fair share (calculated to be 10.84%) to add a southbound right-turn lane.*
- ***Redlands Boulevard/Encilia Avenue-Eucalyptus Avenue.*** *Install a traffic signal and add a westbound left-turn lane. These improvements are programmed in the City's DIF program. In addition, add a northbound left-turn lane, northbound through lane, southbound left-turn lane, and a southbound through lane. These improvements are programmed in the TUMF program. Therefore, payment of the DIF and TUMF would fully mitigate the impact of the project at this intersection.*
- ***Moreno Beach Drive/Encilia Avenue.*** *Install a traffic signal, add a northbound through lane, southbound left-turn lane, and a southbound through lane. This improvement is programmed in the City's DIF program; therefore, payment of the DIF would mitigate the impacts of the project at this intersection.*

Facts in Support of the Findings: Future Year (2035) with Project conditions considers the addition of traffic generated by the proposed project to Future Year (2035) Baseline conditions. The addition of project traffic to the Future Year (2035) scenario would result in conditions exceeding City and Caltrans LOS standards at twelve intersections.

All of the intersections that are forecast to experience a deficient LOS with the proposed project would also operate with a deficient LOS without the proposed project. Although the proposed project does not cause these intersections to operate at an unsatisfactory LOS, it does contribute to the worsening of the intersections' LOS and therefore mitigation would be required to offset the cumulative impact of the project.

Freeway mainline and ramp junctions were evaluated in the Future Year 2035 plus Project condition. Nine segments are forecast to operate at an unsatisfactory level of service in the Future Year 2035 Cumulative plus Project condition. The Traffic Study for the proposed Project also analyzes the Future

Year 2035 plus Project conditions a.m. and p.m. peak hour ramp merge-diverge volumes and levels of service for the freeway segments on SR-60. Nine ramp junctions are forecast to operate at an unacceptable level of service in the future Year 2035 plus Project condition. (DEIR pgs. 4.11-25 to 4.11-27)

According to Section 4.11 in the DEIR, with the implementation of the recommended improvements, the minimum level of service standards would be maintained for the Future Year (2035) with Project scenario and impacts would be reduced to a less than significant level for all identified intersections. In addition, reconstruction of the interchanges at the location of the deficient freeway ramp intersections identified in **Mitigation Measure 4.11.6.2D** are already programmed into the TUMF program. It is anticipated that by future year (2035) improvement to the identified freeway ramps and intersections would be built through the TUMF process and coordination by Caltrans, WRCOG, and the City of Moreno Valley. Because the project would pay its fair-share cost associated with these improvements and because such improvements are anticipated to be constructed by the future year (2035), impacts associated with this issue are less than significant after the identified mitigation measures have been implemented. (DEIR, pg. 4.11-35)

b. General Plan Build Out With Project Conditions (Intersection) Traffic and Level of Service Impacts

Potential Significant Impact: The EIR evaluated and concluded that the Project could cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system.

Findings: Implementation of **Mitigation Measure 4.11.6.4E** will reduce the impact related to General Plan buildout to less than significant.

Facts in Support of the Findings: General Plan Build Out with project conditions considers the addition of traffic generated by the proposed project to General Plan Build Out baseline conditions. An intersection LOS analysis was conducted to determine General Plan Build Out intersection performance. The addition of project traffic to the General Plan Build Out scenario would result in conditions exceeding City and Caltrans LOS standards at 13 intersections.

All of the intersections that are forecast to experience a deficient LOS with the proposed project would also operate with a deficient LOS without the proposed project. Although the proposed project does not cause these intersections to operate at an unsatisfactory LOS, it does contribute to the worsening of the intersections' LOS and therefore mitigation would be required to offset the cumulative impact of the project. (DEIR, pg. 4.11-28)

According to Section 4.11of the DEIR, with the implementation of the recommended improvements, the minimum level of service standards would be maintained for the General Plan Build Out with Project scenario and impacts would be reduced to a less than significant level for all identified intersections. However, as noted previously, improvements to the freeway intersections and infrastructure are under the authority of Caltrans. In addition, the deficient freeway ramp intersections identified in **Mitigation Measure 4.11.6.2E** are already programmed into the TUMF program. It is anticipated that by the General Plan Build Out, improvements to the identified freeway ramps and intersections would be built through the TUMF process and coordination by Caltrans, WRCOG, and the City of Moreno Valley. Because the project would pay its fair-share cost associated with these improvements and because such improvements are anticipated to be constructed by the future year (2035), impacts associated with this issue are less than significant after the identified mitigation measures have been implemented. (DEIR, pg. 4.11-37)

7. Utilities and Service Systems

a. Storm Water Drainage Requirements

Potential Significant Impact: The EIR evaluated and concluded that the Project could result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

Findings: Implementation of the following mitigation measures will reduce the impact to storm water drainage to less than significant:

4.7.6.3A *Prior to the approval of associated project rough grading plan, the project proponent shall receive approval on a project-specific Final Hydrology Study, with supporting engineering calculations, from the City Engineer. The Final Hydrology Study shall incorporate relevant requirements identified by the City, and/or site-specific geotechnical investigations.*

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the proposed Project would route storm water flows from the Project site into Quincy Channel after flows are routed through a combination of water quality basins and sand filters. Due to the installation of impervious surfaces on the Project site, the post-development flows would be higher than the pre-development flows. To avoid a significant impact to the existing drainage capacity, the post-development flows coming from the

proposed Project site are required to be equal to or less than pre-development flows.[13] To reduce flows to below or equal to pre-development conditions, the on-site storm water flows would be routed to the on-site detention basins[14] before flows are routed off site. While the increase in impervious surfaces attributable to the proposed Project would contribute to a greater volume and higher velocity of storm water flows, the proposed Project's water quality basins would accept and accommodate runoff that would result from project construction at pre-project conditions.

As identified in the Preliminary Hydrology Calculations[15] prepared for the Project, to adequately contain and store the greatest volume that would be generated, the Project site would require a minimum storage volume of 13.6 acre-feet. The proposed amount of storage area (20.3 acre-feet) is greater than the required amount of storage area. Based on this, it appears there is excess capacity of 6.7 acre-feet (20.3 acre-feet – 13.6 acre-feet = 6.7 acre-feet) of storage area available from the on-site detention basins; therefore, the proposed Project appears to have adequate drainage capacity that would result in post-development flows being reduced to pre-development flows before leaving the Project site. However, to ensure that impacts associated with on-site drainage capacity are reduced to a less significant level, the **Mitigation Measure 4.7.6.3A** has been identified to reduce potential impacts to less than significant levels. (DEIR, pgs. 4.12-16 to 4.12-17)

8 Global Climate Change

a. Greenhouse Gas Emissions

Potential Significant Impact: The EIR evaluated and concluded that the Project could have an adverse effect due to the generation of greenhouse gas emissions (GHGs).

Findings: Implementation of the following mitigation measures will reduce the impact related to greenhouse gas emissions to less than significant:

4.13.6.1A *Prior to the issuance of building permits, the project applicant shall provide evidence to the City of Moreno Valley that building features have been incorporated in building*

---

[13] As part of the MS4 Permit issuance requirements, projects must identify any Hydrologic Conditions of Concern and demonstrate that changes to hydrology are minimized to ensure that post-development runoff rates and velocities from a site do not adversely affect downstream erosion, sedimentation, or stream habitat.

[14] A detention basin is an area where excess storm water is stored or held temporarily and then slowly drains when water levels in the receiving channel recede. In essence, the water in a detention basin is temporarily detained until additional room becomes available in the receiving channel.

[15] *Preliminary Hydrology Calculations for ProLogis Park Moreno Valley-Eucalyptus TPM 35679*, Thienes Engineering, November 4, 2008.

plans as required by Title 24 of the California Code of Regulations. These features include but are not limited to the following:

- *Exterior windows shall utilize window treatments for efficient energy conservation.*
- *Per CALGreen Code requirements, water-efficient fixtures and appliances, including but not limited to low-flow faucets, dual-flush toilets minimizing water consumption by 20 percent from the Building Standards Code baseline water consumption shall be used.*
- *Per CALGreen Code requirements, a Commissioning Plan shall be prepared and all building systems (e.g., heating, ventilation, and air-conditioning [HVAC], irrigation systems, lighting, and water heating) shall be commissioned by the Commissioning Authority.*
- *Per CALGreen Code, restrict watering methods (e.g., prohibit systems that apply water to non-vegetated surfaces) and control runoff.*

4.13.6.1B *Prior to the issuance of building permits, the project applicant shall provide evidence to the City of Moreno Valley that the following measures have been incorporated into the design and construction of the project:*

- *Use of locally produced and/or manufactured building materials for at least 10 percent of the construction materials used for the project.*
- *Use of "Green Building Materials," such as those materials that are resource efficient, and recycled and manufactured in an environmentally friendly way, for at least 10 percent of the project.*
- *Limit unnecessary idling of construction equipment. A reduction in equipment idling would reduce fuel consumption, and therefore, GHG emissions.*
- *Maximize the use of electricity from the power grid by replacing diesel- or gasoline-powered equipment. This would reduce GHG emissions because electricity can be produced more efficiently at centralized power plants.*
- *Design the project building to exceed the California Building Code's (CBC) Title 24 energy standard, including, but not limited to, any combination of the following:*

- *Increase insulation such that heat transfer and thermal bridging is minimized.*
- *Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.*
- *Incorporate ENERGY STAR or better rated windows, space heating and cooling equipment, light fixtures, appliances, or other applicable electrical equipment.*

- *Provide a landscape and development plan for the project that takes advantage of shade, prevailing winds, and landscaping.*
- *Install efficient lighting and lighting control systems. Use daylight as an integral part of the lighting systems in buildings.*
- *Install light-colored "cool" roof) and cool pavements.*
- *Install energy-efficient heating and cooling systems, appliances and equipment, and control systems.*
- *Install solar or light-emitting diodes (LEDs) for outdoor lighting for auto parking areas.*

4.13.6.1C *Prior to the issuance of occupancy permits, the project applicant shall provide evidence to the City of Moreno Valley that the following measures have been be incorporated into the operation of the project:*

- *The project applicant shall use less than 3,900 Global Warming Potential (GWP) hydrofluorocarbon (HCF) refrigerants or natural refrigerants (ammonia, propane, carbon dioxide [CO_2]) for refrigeration and fire suppression equipment.*
- *Provide vegetative or man-made exterior wall shading devices for east-, south-, and west facing walls with windows.*
- *Devise a comprehensive water conservation strategy appropriate for the project and its location. The strategy may include the following, plus other innovative measures that may be appropriate:*
  - *Install drought-tolerant plants for landscaping.*

- *Use reclaimed water for landscape irrigation within the project. Install the infrastructure to deliver and use reclaimed water.*
- *Install water-efficient irrigations systems, such as weather-based and soil-moisture-based irrigation controllers and sensors for landscaping according to the California Department of Water Resources Model Efficient Landscape Ordinance.*

- *Provide employee education about reducing waste and available recycling services.*

Facts in Support of the Findings: Future development that could occur on the proposed Project site could generate GHG emissions during construction and operation activities. It is anticipated that the majority of energy consumption (and associated generation of GHG emissions) would occur during the project's operation (as opposed to its construction). The total GHG emissions over the entire construction process are expected to be 2,700 metric tons. Based on a comparison of the proposed Project to the South Coast Air Quality Management District tiered interim GHG significance criteria, the most applicable screening threshold listed is the Industrial at 10,000 ton per year (tpy) CO_2e. The long-term project operational GHG emissions for the proposed Project are 79,000 tpy CO_2e and exceed this threshold; therefore, the project operational GHG emissions are significant. In order to ensure that the proposed Project complies with and would not conflict with or impede the implementation of reduction goals identified in AB 32, the Governor's EO S-3-05, and other strategies to help reduce GHGs to the level proposed by the Governor, **Mitigation Measures 4.13.6.1A** through **4.13.6.1C** shall be implemented. The mitigation measure would contribute to a reduction in GHG emissions from energy, mobile, and water usage sources. With implementation of the identified mitigation measures, the proposed Project's GHG emissions would be reduced to less than significant levels.

C. ENVIRONMENTAL IMPACTS NOT FULLY MITIGATED TO A LEVEL OF LESS-THAN-SIGNIFICANT

The Moreno Valley City Council finds the following environmental impacts identified in the EIR remain significant even after application of all feasible mitigation measures: aesthetics (individually and cumulative), agricultural resources (individually and cumulative), air quality (individually and cumulative), cumulative population and housing, and transportation. In accordance with CEQA Guidelines Section 15092(b)(2), the City Council of the City of Moreno Valley cannot approve the Project unless it first finds (1) under *Public Resources Code* Section 21081(a)(3), and CEQA Guidelines Section 15091(a)(3), that specific economic, legal, social technological, or other

considerations, including provisions of employment opportunities to highly trained workers, make infeasible the mitigation measures or Project alternatives identified in the EIR; and (2) under CEQA Guidelines section 15092(b), that the remaining significant effects are acceptable due to overriding concerns described in the CEQA Guidelines Section 15093 and, therefore, a statement of overriding considerations is included herein.

1. Aesthetics (Individual and Cumulative Impacts)

a. Scenic Vistas

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could have adverse effects on one or more scenic vistas, notably views of the Box Springs Mountains, the Badlands, Moreno Peak, and the Russell Mountains.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts to scenic vistas will remain significant and unavoidable.

Facts in Support of the Finding: According to Section 4.1 of the DEIR, the nearest sensitive permanent visual receptor to the Project would be the existing single-family residences to the southeast across future Encilia Avenue. In general, views for the residences southeast of the site will change from vacant land to industrial buildings with extensive landscaping including rows of citrus trees to help provide a visual buffer. Permanent views for residences north of SR-60 and transient views for travelers on SR-60 will change as the tops of the proposed industrial buildings will partially block views of the mountains to the south. Despite the provision of ornamental landscaping and citrus trees along the northern, western, and southern boundaries, implementation of the proposed Project would obstruct background views of the distant Box Springs Mountains for residences southeast of the Project, foreground and midground views of travelers on SR-60, and background views of the Mount Russell Range for residences north of SR-60 and along Pettit Street. This obstruction of views is a significant visual impact of the proposed Project. The sizes, heights, and general locations of buildings on the site are limited by the types of uses being proposed as part of this Project. Therefore, there is no feasible mitigation available to reduce impacts related to the loss of this viewshed. Since there is no feasible mitigation available to reduce adverse effects on scenic vistas, impacts associated with this issue would remain significant and unavoidable. (DEIR, pgs. 4.1-9 to 4.1-17)

b. Scenic Resources and Scenic Highways

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could have adverse effects on one or more scenic vistas, including views of the Box Springs Mountains and the Badlands for both residents and travelers on SR-60.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts to scenic vistas and scenic highways will remain significant and unavoidable.

Facts in Support of the Finding: According to Section 4.1 of the DEIR, the City of Moreno Valley identifies SR-60 as a local scenic road.[16] According to the City's General Plan, the man-made environment is equally important as natural landforms in terms of scenic values (e.g., buildings, landscaping and signs). Agricultural uses, such as citrus groves, are one example of a man-made environment that constitutes a visually pleasing feature.

Existing views for motorists traveling eastbound and westbound on SR-60 consist of noise attenuation walls, commercial and residential development, landscaping, parking lots, open space, and orange groves in addition to the mountains and badlands in the distance. Development of the proposed Project would alter the existing view by introducing large industrial buildings adjacent to the freeway. Existing eastbound views on SR-60 would be altered with the development of the proposed Project. Motorists would still view noise attenuation walls, urban development, landscaping, and scattered trees as they look to the south, although these views would be of short duration for motorists traveling at normal freeway speeds.

The proposed Project would have highly reflective surfaces at the taller (43 feet) glass veneered office towers, but would not result in development along ridge lines. The proposed Project would result in an increased number of large bulk structures, but would include colors and materials that are compatible with the existing environment. The proposed ornamental landscaping and citrus trees would provide some visual screening. However, the proposed Project would result in the obstruction of most of the Mount Russell Range for motorists traveling on SR-60, so the proposed buildings would obstruct the view of a scenic feature. The proposed Project meets criteria in both the moderate and major visual intrusion categories. In an overabundance of caution, the worst-case scenario is utilized. Therefore, it is anticipated that based on Project design features, the proposed Project would have a major visual intrusion (i.e., significant impact) for motorists traveling on SR-60. Incorporation of the proposed building façades and

[16] *Conservation Element, Figure 7-2 Major Scenic Resources,* City of Moreno Valley General Plan, adopted July 11, 2006.

ornamental landscaping design features will soften the visual appearance of the buildings from SR-60; however, the obstruction of local views will still be significant, and there are no feasible mitigation measures available that would reduce these impacts to less than significant levels. Therefore, impacts associated with this issue would remain significant and unavoidable. (DEIR, pgs. 4.1-17 to 4.1-19)

c. Existing Visual Character or Quality of Site and its Surroundings

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could have adverse effects that change the general character of the Project site (e.g., loss of open area), the components of the visual settings (e.g., landscaping and architectural elements), and the visual compatibility between proposed site uses and adjacent land uses.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts to the existing visual character of the site will remain significant and unavoidable.

Facts in Support of the Finding: The significance of visual impacts is inherently subjective as individuals respond differently to changes in the visual characteristics of an area. Development of the proposed Project would change the existing character of the Project site from open space to a more urbanized setting with large industrial buildings. The change in the character of the site would constitute a significant alteration of the existing visual character of the Project site.

According to Section 4.1 of the DEIR, the proposed Project features a variety of architectural elements including façade accents such as corner treatments and roof trim. The Project also provides variation in wall planes that serve to avoid an institutional appearance and break up the bulk of the buildings. This variation would create shadow lines at various times of the day. The proposed ornamental landscaping would replace the scattered weedy vegetation. Landscaping on the site would be provided in accordance with City Municipal Code Chapter 9.17, which requires the installation of landscaping on site and the planting of one tree for every 30 linear feet of building dimension that is visible from the parking lot or public right-of-way. As part of conditions of approval for the proposed Project, orange trees would be planted on the northern portion of the Project site adjacent to SR-60 and along the perimeter of the proposed Project site adjacent to the public right-of-way or residential zoning.

Since the Project site is currently vacant, suburban development of any type would cause a fundamental change in the visual characteristics of the Project site. In addition, the site is currently planned for industrial, business park, single-family, and multifamily uses, which would be different in appearance from the proposed industrial warehouse buildings. Of these uses, the lower density housing (R2) is currently designated adjacent to the existing residences southeast of the Project site.

The proposed Project would replace the existing vacant parcel and citrus groves with development that is visually compatible with the existing commercial development to the west and the existing and the approved Ridge industrial development to the east, but it will not be compatible with the residential uses to the southeast or farther to the north across SR-60.

Incorporation of the proposed building façades and landscaping design features will soften the visual appearance of the buildings from both SR-60 and nearby residences; however, the fundamental change in visual character of the area will still be significant. Even with compliance with the City's General Plan and Municipal Code development guidelines for industrial development, including the 250-foot buffer between industrial and residential land uses, the anticipated fundamental change in views expected in this area will be significant. Due to the heights and masses of buildings needed to accommodate the proposed land uses, no feasible mitigation is available that would reduce these potential impacts to less than significant levels. Therefore, impacts associated with this issue would remain significant and unavoidable. (DEIR, pgs. 4.1-19 to 4.1-21)

d. Cumulative Aesthetics Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could in connection with past, present, and probable future projects adversely affect one or more scenic vistas.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this cumulative impact to a level of less than significant. Accordingly, Project-related cumulative impacts to scenic vistas will remain significant and unavoidable.

Facts in Support of the Finding: The development of the proposed Project would partially obstruct views of surrounding mountain ranges from current vantage points near the Project structures. However, vistas would not be completely obstructed from viewpoints through parking circulation areas, openings between rows of buildings or trees, or at the end of vehicular rights-of-way. Development of lands within the City, particularly along SR-60, would result in the cumulative conversion from open space to a more urbanized land use. The proposed Project would continue a recent development trend in the City to expand industrial uses along the south side of SR-60 east of the City's Auto Center. This development trend has not yet been incorporated into the City's General Plan. The proposed Project, in conjunction with other cumulative projects, would be developed in a manner consistent with existing development trends in the City. Since other cumulative projects in the area would include similar distribution uses, it can be anticipated that such uses would have a similar design and massing as the proposed Project. Since

the proposed Project would obstruct views of the surrounding mountains, it can be reasonable to conclude that similar warehouse distribution uses would also obstruct views of the surrounding mountains. In addition, General Plan Policy 7.7.4 in the Conservation Element requires the designation of SR-60 as a local scenic roadway. Therefore, the proposed Project, in combination with other cumulative projects in the eastern portion of the City and along SR-60 would have a cumulatively significant and unavoidable impact on aesthetics (i.e., views and scenic resources) in this portion of the City. (DEIR, pgs. 4.1-21 to 4.1-22)

2. Agricultural Resources (Individual and Cumulative Impacts)

a. Conversion of State Designated Farmland

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could impact 82.5 acres of Prime Farmland.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts to state designated farmland will remain significant and unavoidable.

Facts in Support of the Finding: Section 4.2 of the DEIR identifies several potential agricultural conservation measures contained in the City's General Plan that include: enrolling productive agricultural land into a Williamson Act Contract; providing protection to ongoing agricultural operations from complaints and nuisance complaints from adjacent new development; protecting productive agricultural land subject to conversion through the purchase of or transfer of its development rights; purchasing conservation easements on existing agricultural land to ensure that the land is never converted to urban uses; and donating funds to a regional or statewide program that promotes and implements the use of agricultural land conservation easements.

The potential agricultural conservation measures identified in the DEIR are not considered to be feasible by the City for the following reasons:

Williamson Act Contracts: Williamson Act contracts are entered into voluntarily by property owners and the City cannot force owners to participate in this program. In addition, Williamson Act contracts will result only in temporary preservation of agricultural land since property owners have the option of non-renewal of these contracts at any time after the ten-year contract period ends.

Protecting Existing Agricultural Operations: Providing protection for ongoing agricultural activities from new developments, such as buffers between agricultural operations and new development or requiring the notification and disclosure of agricultural activities to the purchasers adjacent properties, will not permanently protect agricultural land.

Transfer of Development Rights, Conservation Easements, or Agricultural Conservation Bank: The purchase or transfer of development rights, purchase of conservation easements, or donation of funds to assist in the conservation of agricultural land would need to be implemented to ensure the preservation of agricultural land. As stated previously, the City anticipates the conversion of agricultural land within the City and does not set aside land for permanent preservation. The current General Plan does not include any agricultural designations. The City allows agricultural uses in all land use designations as an interim use until such time as the land is developed per the vision identified in the General Plan. One of the goals stated in the City's recent General Plan is the "…orderly conversion of agricultural lands." For this reason, the City expects that the majority of the land within the City will be converted to urban uses, although some agriculture will continue as interim uses, as allowed by the City's Development Code for all zoning categories. The existing and continued reduction in productive agricultural operations within the City is produced by several factors including; urbanization in the City and Inland Empire resulting in dramatically increasing land prices; high water and labor costs; environmental regulation (e.g., insects, odors, groundwater contamination, and solid waste removal); and competition from Kern County and the Central Valley with lower land costs and reduced regulations. (DEIR, pgs. 4.1-10 to 4.1-14)

The City has determined that these measures are economically infeasible and that they are contrary to the City's vision (as stated in its General Plan) for the Project site and alternative mitigation has not been identified, and impacts related to this issue remain significant and unavoidable. (DEIR, pgs. 4.2-6 to 4.2-9)

b. Conversion of Farmland to a Non-Agricultural Use

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would result in the development of industrial uses on land that has historically been utilized for citrus production.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts from the conversion of farmland to a non-agricultural use will remain significant and unavoidable.

Facts in Support of the Finding: According to Section 4.2 of the DEIR, the Project site has historically been in agricultural production and was most recently used to grow citrus. The conversion of the Project site to a non-agricultural use is a result of various economic and demographic factors. Increased cost for water and a continuing demand for housing and other development in the City and region are the primary reasons for this agricultural land conversion. A LESA model was also used to evaluate the site. It was determined that the Project LESA score is 85.3, which is considered significant. The Project does not include design features that would prevent the existing agricultural operations in the area from continuing. The Project would convert land that was previously used for agriculture and the development of the proposed Project may contribute to the conversion of adjacent lands. However, the Project is a logical extension of development in the City and does not create leapfrog development or islands of agricultural land that would be difficult to farm. The City recognizes development pressures within the City, and that these pressures will increase as the City continues to build out. Additionally, while the Project would not directly cause the conversion of adjacent agricultural land to non-agricultural uses because in has lied fallow for several years, it would contribute to development pressure within the City that could potentially lead to the conversion of agricultural land off site. However, as stated in the previous discussion of these Findings regarding the conversion of state designated farmland, the City has determined the agricultural conservation measures identified by the City are economically infeasible and that they are contrary to the City's vision (as stated in its General Plan) for the Project site and alternative mitigation has not been identified. Therefore, impacts associated with this issue remain significant and unavoidable. (DEIR, pgs. 4.1-9 to 4.1-10)

c. Cumulative Agricultural Resource Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would have a significant cumulative impact on agricultural resources in Riverside County.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts to cumulative state designated farmland will remain significant and unavoidable.

Facts in Support of the Finding: According to Section 4.2 of the DEIR, the Project-related impacts to Prime Farmland and the conversion of agricultural land to a non-agricultural use cannot be mitigated through a local or regional program to mitigate impacts to agricultural resources. As stated previously, the City does not maintain a General Plan or zoning designation for agricultural uses and there are no Project-

level feasible mitigation measures that would help reduce cumulative impacts. The cumulative effect of development in the region will continue to result in the conversion of agricultural lands to non-agricultural uses. Because agricultural land, including Prime Farmland, Farmland of Statewide Importance, and Farmland of Local Importance are finite resource, the conversion of approximately 122.8 acres of farmland to industrial uses, combined with planned and future development in the City and region, represents a significant cumulative impact to agricultural operations and resources. As stated in the previous discussion of these Findings regarding the conversion of state designated farmland and conversion of agricultural land to a non-agricultural land use, the City has determined the agricultural conservation measures identified by the City are economically infeasible and that they are contrary to the City's vision (as stated in its General Plan) for the Project site and alternative mitigation has not been identified. Therefore, cumulative impacts to agricultural resources are considered significant and unavoidable. (DEIR, pg. 4.1-11)

2. Air Quality (Project-Specific and Cumulative Impact)

a. Air Quality Management Plan Consistency

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project has the potential to conflict with implementation of regional Air Quality Management Plan and the SIP.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that **Mitigation Measures 4.3.6.2A** through **4.3.6.2M** and **4.3.6.3A** through **4.3.6.3C** are incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, the proposed Project will not be consistent with AQMP and the SIP and therefore impacts are considered significant and unavoidable.

Facts in Support of the Finding: An Air Quality Management Plan (AQMP) describes air pollution control strategies to be taken by counties or regions classified as nonattainment areas. The AQMP's main purpose is to bring the area into compliance with the requirements of Federal and State air quality standards. The AQMP uses the assumptions and projections by local planning agencies to determine control strategies for regional compliance status. Therefore, any projects causing a significant impact on air quality would impede the progress of the AQMP. CEQA requires that projects resulting in a General Plan Amendment be analyzed for consistency with the AQMP.

For a Project in the Basin to be consistent with the AQMP, the pollutants emitted from the Project must not exceed the South Coast AQMD significant threshold or cause a significant impact on air quality. One measurement tool in determining consistency with the AQMP is to determine how a Project accommodates the expected increase in population or employment. The proposed Project site is located in an urbanizing area of the City of Moreno Valley along SR-60, which accommodates traffic in the area. In addition, the proposed warehouse uses would be within walking distance of existing homes and commercial areas in the local vicinity. The proposed Project would add jobs resulting from the development of the warehouse uses to the City, with the potential to minimize the VMT traveled within the Project site and community.

The SCAQMD also has the following consistency criteria: the proposed Project cannot result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP; and the proposed Project cannot exceed the assumptions in the AQMP in 2010 or increments based on the year of Project build-out phase.

Implementation of the proposed Project would require a zone change from Business Park (BP), Business Park Mixed Use (BPX), Multi-Family Residential (R-15), Suburban Residential (R-5), and Residential Agriculture (RA-2) to Light Industrial for the entire 122.8 acres. Since the proposed Project will require a General Plan Amendment, the Project has not been considered in preparation of the General Plan and therefore it is uncertain if it is consistent with the AQMP.

Because the Project site is located in a nonattainment air basin for ozone, PM_{10} and $PM_{2.5}$, the proposed Project's emission of ozone precursors (CO, ROG, and NO_X), PM_{10} and $PM_{2.5}$ would contribute to the existing nonattainment status in the Basin. Thus, according to the SCAQMD Consistency Criterion No. 1, the proposed Project in not consistent with the AQMP.

The proposed Project would have significant impacts. **Mitigation Measures 4.3.6.2A** through **4.3.6.2M** and **Mitigation Measures 4.3.6.3A** through **4.3.6.3C** shall be implemented as part of the proposed Project. The proposed Project would be considered to be consistent only after the City of Moreno Valley General Plan Amendment is approved. Once the City's General Plan Amendment and the required zoning changes are approved, the proposed Project would be included in the next SCAG and SCAQMD AQMP projections. When that occurs, the proposed Project would be consistent with the regional AQMP and the SIP. However, until that occurs, the Project is inconsistent with the regional AQMP and the impacts are considered significant and unavoidable. (DEIR, pgs. 4.3-21 to 4.3-22)

b. Equipment Exhaust from Construction-Related Activities

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project has the potential to exceed applicable daily thresholds that may affect sensitive receptors.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that Mitigation Measures 4.3.6.2A through 4.3.6.2M are incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, the proposed Project will have a significant impact due to equipment exhaust from construction related activities and therefore impacts are considered significant and unavoidable.

4.3.6.2A *Prior to the issuance of a grading permit, the Project developer shall require by contract specifications that contractors shall place construction equipment staging areas at least 200 feet away from sensitive receptors. Contract specifications shall be included in the proposed Project construction documents, which shall be reviewed by the City.*

4.3.6.2B *Prior to the issuance of a grading permit, the Project developer shall require by contract specifications that contractors shall utilize power sources (e.g., power poles) or clean-fuel generators. Contract specifications shall be included in the proposed Project construction documents, which shall be reviewed by the City.*

4.3.6.2C *Prior to the issuance of a grading permit, the Project developer shall require by contract specifications that contractors shall utilize California Air Resources Board (CARB) Tier II Certified equipment or better during the rough/mass grading phase for the following pieces of equipment: rubber-tired dozers and scrapers. Contract specifications shall be included in the proposed Project construction documents, which shall be reviewed by the City.*

Project start to December 31, 2014: All off-road diesel-powered construction equipment greater than 50 horsepower shall meet Tier 3 off-road emission standards. In addition, all construction equipment shall be outfitted with Best Available Control Technology (BACT) devices certified by CARB. Any emission control devises used by the contractor shall achieve emission reductions that are no less than what would be achieved by a Level 3 diesel emission control strategy for a similarly sized engine as defined by CARB regulations.

Post January 1, 2015: All off-road diesel–powered construction equipment greater than 50 horsepower shall meet Tier 4 emission standards, where available. In addition, all construction equipment shall be outfitted with Best Available Control Technology (BACT) devices certified by CARB. Any emission control devises used by the contractor shall achieve emission reductions that are no less than what would be achieved by a Level 3 diesel emission control strategy for a similarly sized engine as defined by CARB regulations.

A copy of each unit's certified tier specifications, BACT documentation, and CARB or SCAQMD operating permit shall be provided at the time of mobilization of each applicable unit of equipment.

4.3.6.2D *All clearing, grading, earthmoving, or excavation activities shall cease when winds (as instantaneous gusts) exceed 25 mph per SCAQMD guidelines in order to limit fugitive dust emissions.*

4.3.6.2E *The contractor shall ensure that all disturbed unpaved roads and disturbed areas within the Project are watered at least three times daily during dry weather. Watering, with complete coverage of disturbed areas, shall occur at least three times a day, preferably in the mid-morning, afternoon, and after work is done for the day.*

4.3.6.2F *The contractor shall ensure that traffic speeds on unpaved roads and Project site areas are reduced to 15 miles per hour or less to reduce PM_{10} and $PM_{2.5}$ fugitive dust haul road emissions. Speed limit signs (15 mph maximum) shall be posted at entry points to the Project site, and along any unpaved roads providing access to or within the Project site and/or any unpaved designated on-site travel routes.*

4.3.6.2G *Groundcover shall be replaced, and/or non-toxic soil stabilizers shall be applied (according to manufacturers' specifications) to any inactive construction areas (previously graded areas inactive for ten days or more).*

4.3.6.2H *The contractor shall minimize pollutant emissions by maintaining equipment engines in good condition and in proper tune according to manufacturer's specifications and by not allowing construction equipment to be left idling for more than five minutes (per California law).*

4.3.6.2I *The contractor shall ensure use of low-sulfur diesel fuel in construction equipment as required by the California Air Resources Board (CARB) (diesel fuel with sulfur content of 15 ppm by weight or less).*

4.3.6.2J *Grading plans, construction specifications and bid documents shall also include the following requirements:*

- *Off-road construction equipment shall utilize alternative fuels where feasible e.g., biodiesel fuel (a minimum of B20), natural gas (CNG), liquefied natural gas (LNG), propane, except for equipment where use of such fuels would void the equipment warranty;*
- *Gravel pads shall be provided at all access points to prevent tracking of mud onto public roads;*
- *Install and maintain trackout control devices at all access points where paved and unpaved access or travel routes intersect;*
- *The contractor or builder shall designate a person or person(s) to monitor the dust control program and to order increased watering, as necessary, to prevent transport of dust off site;*
- *The contractor or builder shall post a publicly visible sign with the telephone number and person to contact regarding dust complaints. The contact person shall take corrective action within 24 hours;*
- *High-pressure injectors shall be provided on diesel construction equipment if feasible;*
- *Engine size of construction equipment shall be limited to the minimum practical size;*
- *Substitute gasoline-powered for diesel powered construction equipment where gasoline powered equipment is available;*
- *Use electric construction equipment where it is practical to use such equipment;*
- *Install catalytic converters on gasoline-powered equipment where this type of equipment is available;*

- *Ride-sharing program for the construction crew shall be supported by contractor(s) via incentives or other inducement;*
- *Documentation shall be provided to the City of Moreno Valley indicating that construction workers have been encouraged to carpool or otherwise reduce VMT to the greatest extent practical, including providing information on available park and ride programs;*
- *Lunch vendor services shall be allowed on site during construction to minimize the need for off-site vehicle trips; and*
- *All forklifts used during construction and in subsequent operation of the Project shall be electric or natural gas powered.*

4.3.6.2K *Throughout Project construction, a construction relations officer/community liaison, appointed by the Applicant, shall be retained on site. In coordination and cooperation with the City, the construction relations officer/community liaison shall respond to any concerns related to PM_{10} (fugitive dust) generation or other construction-related air quality issues.*

4.3.6.2L *All Project entrances shall be posted with signs which state:*

- *Truck drivers shall turn off engines when not in use;*
- *Diesel delivery trucks servicing the Project shall not idle for more than three (3) minutes; and*
- *Telephone numbers of the building facilities manager and CARB, to report violations.*

These measures shall be enforced by the on-site facilities manager (or equivalent).

4.3.6.2M *During Project grading and construction, the various Project contractors shall adhere to the control measures listed in Tables 1 and 2.*

Air Quality Measure 4.3.6.2M Table 1: Best Available Control Measures for Fugitive Dust (Applicable to All Construction Activity Sources)

Source Category	*Control Measures*	*Guidance*
Backfilling	• *Stabilize backfill material when not actively handling; and* • *Stabilize backfill material during handling; and* • *Stabilize soil at completion of activity.*	• *Mix backfill soil with water prior to moving; and* • *Dedicate water truck or high capacity hose to backfilling equipment; and* • *Empty loader bucket slowly so that no dust plumes are generated; and* • *Minimize drop height from loader bucket.*
Clearing and grubbing	• *Maintain stability of soil through pre-watering of site prior to clearing and grubbing; and* • *Stabilize soil during clearing and grubbing activities; and* • *Stabilize soil immediately after clearing and grubbing activities.*	• *Maintain live perennial vegetation where possible; and* • *Apply water in sufficient quantity to prevent generation of dust plumes.*
Clearing forms	• *Use water spray to clear forms; or* • *Use sweeping and water spray to clear forms; or* • *Use vacuum system to clear forms.*	• *Use of high pressure air to clear forms may cause exceedance of Rule requirements.*
Crushing	• *Stabilize surface soils prior to operation of support equipment; and* • *Stabilize material after crushing.*	• *Follow permit conditions for crushing equipment; and* • *Pre-water material prior to loading into crusher; and* • *Monitor crusher emissions*

Air Quality Measure 4.3.6.2M Table 1: Best Available Control Measures for Fugitive Dust (Applicable to All Construction Activity Sources)

Source Category	***Control Measures***	***Guidance***
		opacity; and • *Apply water to crushed material to prevent dust plumes.*
Cut and fill	• *Pre-water soils prior to cut and fill activities; and* • *Stabilize soil during and after cut and fill activities.*	• *For large sites, pre-water with sprinklers or water trucks and allow time for penetration; and* • *Use water trucks/pulls to water soils to depth of cut prior to subsequent cuts.*
Demolition – mechanical/ manual	• *Stabilize wind erodible surfaces to reduce dust; and* • *Stabilize surface soil where support equipment and vehicles will operate; and* • *Stabilize loose soil and demolition debris; and* • *Comply with AQMD Rule 1403.*	• *Apply water in sufficient quantities to prevent the generation of visible dust plumes.*
Disturbed soil	• *Stabilize disturbed soil throughout the construction site; and* • *Stabilize disturbed soil between structures.*	• *Limit vehicular traffic and disturbances on soils where possible; and* • *If interior block walls are planned, install as early as*

Air Quality Measure 4.3.6.2M Table 1: Best Available Control Measures for Fugitive Dust (Applicable to All Construction Activity Sources)

Source Category	*Control Measures*	*Guidance*
		possible; and • *Apply water or a stabilizing agent in sufficient quantities to prevent the generation of visible dust plumes.*
Earthmoving activities	• *Pre-apply water to depth of proposed cuts; and* • *Re-apply water as necessary to maintain soils in a damp condition and to ensure that visible emissions do not exceed 100 ft in any direction; and* • *Stabilize soils once earthmoving activities are complete.*	• *Grade each Project phase separately, timed to coincide with construction phase; and* • *Upwind fencing can prevent material movement on site; and* • *Apply water or a stabilizing agent in sufficient quantities to prevent the generation of visible dust plumes.*
Importing/ exporting of bulk materials	• *Stabilize material while loading to reduce fugitive dust emissions; and* • *Maintain at least 6 inches of freeboard on haul vehicles; and* • *Stabilize material while transporting to reduce fugitive dust emissions; and* • *Stabilize material while unloading to reduce fugitive dust emissions; and*	• *Use tarps or other suitable enclosures on haul trucks; and* • *Check belly-dump truck seals regularly and remove any trapped rocks to prevent spillage; and* • *Comply with track-out prevention/mitigation requirements; and*

Air Quality Measure 4.3.6.2M Table 1: Best Available Control Measures for Fugitive Dust (Applicable to All Construction Activity Sources)

Source Category	***Control Measures***	***Guidance***
	• *Comply with CVC Section 23114.*	• *Provide water while loading and unloading to reduce visible dust plumes.*
Landscaping	*Stabilize soils, materials, slopes*	• *Apply water to materials to stabilize; and* • *Maintain materials in a crusted condition; and* • *Maintain effective cover over materials; and* • *Stabilize sloping surfaces using soil binders until vegetation or ground cover can effectively stabilize the slopes; and* • *Hydroseed prior to rain season.*
Road shoulder maintenance	• *Apply water to unpaved shoulders prior to clearing; and* • *Apply chemical dust suppressants and/or washed gravel to maintain a stabilized surface after completing road shoulder maintenance.*	• *Installation of curbing and/or paving of road shoulders can reduce recurring maintenance costs; and* • *Use of chemical dust suppressants can inhibit vegetation growth and reduce future road shoulder maintenance costs.*

Air Quality Measure 4.3.6.2M Table 1: Best Available Control Measures for Fugitive Dust (Applicable to All Construction Activity Sources)

Source Category	***Control Measures***	***Guidance***
Screening	• *Pre-water material prior to screening; and* • *Limit fugitive dust emissions to opacity and plume length standards; and* • *Stabilize material immediately after screening.*	• *Dedicate water truck or high capacity hose to screening operation; and* • *Drop material through the screen slowly and minimize drop height; and* • *Install wind barrier with a porosity of no more than 50 percent upwind of screen to the height of the drop point.*
Staging areas	• *Stabilize staging areas during use; and* • *Stabilize staging area soils at Project completion.*	• *Limit size of staging area; and* • *Limit vehicle speeds to 15 miles per hour; and* • *Limit number and size of staging area entrances/exits.*
Stockpiles/ bulk material handling	*Stabilize stockpiled materials, and stockpiles within 100 yards of off-site occupied buildings must not be greater than 8 ft in height; or must have a road bladed to the top to allow water truck access or must have an operational water irrigation system that is capable of complete stockpile coverage.*	• *Add or remove material from the downwind portion of the storage pile; and* • *Maintain storage piles to avoid steep sides or faces.*
Traffic areas for construction	• *Stabilize all off-road traffic and parking areas; and*	• *Apply gravel/paving to all haul routes as soon as possible to*

Air Quality Measure 4.3.6.2M Table 1: Best Available Control Measures for Fugitive Dust (Applicable to All Construction Activity Sources)

Source Category	***Control Measures***	***Guidance***
activities	• *Stabilize all haul routes; and* • *Direct construction traffic over established haul routes.*	*all future roadway areas; and* • *Barriers can be used to ensure vehicles are only used on established parking areas/haul routes.*
Trenching	• *Stabilize surface soils where trencher or excavator and support equipment will operate; and* • *Stabilize soils at the completion of trenching activities.*	• *Pre-watering of soils prior to trenching is an effective preventive measure. For deep trenching activities, pre-trench to 18 inches, soak soils via the pre-trench and resuming trenching; and* • *Washing mud and soils from equipment at the conclusion of trenching activities can prevent crusting and drying of soil on equipment.*
Truck loading	• *Pre-water material prior to loading; and* • *Ensure that freeboard exceeds 6 inches (CVC 23114).*	• *Empty loader bucket such that no visible dust plumes are created; and* • *Ensure that the loader bucket is close to the truck to minimize drop height while loading.*
Turf overseeding	• *Apply sufficient water immediately prior to conducting turf vacuuming activities to meet opacity and*	• *Haul waste material immediately off site.*

Air Quality Measure 4.3.6.2M Table 1: Best Available Control Measures for Fugitive Dust (Applicable to All Construction Activity Sources)

Source Category	*Control Measures*	*Guidance*
	plume length standards; and • *Cover haul vehicles prior to exiting the site.*	
Unpaved roads/parking lots	• *Stabilize soils to meet the applicable performance standards; and* • *Limit vehicular travel to established unpaved roads (haul routes) and unpaved parking lots.*	• *Restricting vehicular access to established unpaved travel paths and parking lots can reduce stabilization requirements.*
Vacant land	*In instances where vacant lots are 0.10 ac or larger and have a cumulative area of 500 sf or more that are driven over and/or used by motor vehicles and/or off-road vehicles, prevent motor vehicle and/or off-road vehicle trespassing, parking and/or access by installing barriers, curbs, fences, gates, posts, signs, shrubs, trees, or other effective control measures.*	

ac = acre(s) *AQMD = Air Quality Management District*

CVC = California Vehicle Code *ft = feet* *sf = square feet*

Air Quality Measure 4.3.6.2M Table 2: Contingency Control Measures for Fugitive Dust (During High Winds in Excess of 25 mph)

Fugitive Dust Source Category	*Control Measures*
Earthmoving	• *Cease all active operations; or* • *Apply water to soil not more than 15 minutes prior to moving such soil.*
Disturbed surface areas	• *On the last day of active operations prior to a weekend, holiday, or any other period when active operations will not occur for not more than 4 consecutive days: apply water with a mixture of chemical stabilizer diluted to not less than $^{1}/_{20}$ of the concentration required to maintain a stabilized surface for a period of 6 months; or* • *Apply chemical stabilizers prior to wind event; or* • *Apply water to all unstabilized disturbed areas 3 times per day. If there is any evidence of wind driven fugitive dust, watering frequency is increased to a minimum of 4 times per day; or* • *Establish a vegetative ground cover within 21 days after active operations have ceased. Ground cover must be of sufficient density to expose less than 30 percent of unstabilized ground within 90 days of planting, and at all times thereafter; or* • *Utilize any combination of these control actions such that, in total, these actions apply to all disturbed surface areas.*
Unpaved roads	• *Apply chemical stabilizers prior to wind event; or* • *Apply water 2 times per hour during active operation; or* • *Stop all vehicular traffic.*
Open storage piles	• *Apply water 2 times per hour; or* • *Install temporary coverings.*
Paved road track-out	• *Cover all haul vehicles; or* • *Comply with the vehicle freeboard requirements of Section 23114 of the CVC*

Air Quality Measure 4.3.6.2M Table 2: Contingency Control Measures for Fugitive Dust (During High Winds in Excess of 25 mph)

	for both public and private roads.
All categories	• *Executive Officer and the USEPA as equivalent to the methods specified in this table may be used.*

CVC = California Vehicle Code

USEPA = United States Environmental Protection Agency

Facts in Support of the Finding: Grading and other construction activities produce combustion emissions from various sources such as site grading, utility engines, on-site heavy-duty construction vehicles, equipment hauling materials to and from the site, asphalt paving, and motor vehicles transporting the construction crew. The use of construction equipment on site would result in localized exhaust emissions. Activity during peak grading days typically generates a greater amount of air pollutants than other Project construction activities.

Section 4.3 of the DEIR indicates construction equipment/vehicle emissions during proposed on-site grading periods would exceed the SCAQMD daily thresholds for ROG and NO_X. Although construction of the structures uses different types of equipment on site than during grading periods, similarities do exist in terms of equipment exhaust emissions and fugitive dust emissions. While it is anticipated that total emissions during construction would be below the peak grading day emissions, construction emissions of ROG and NO_X would still exceed the SCAQMD daily threshold. This is a significant impact requiring **Mitigation Measures 4.3.6.2A** through **4.3.6.2M.** The use of low-NO_X diesel fuel in construction equipment typically reduces NO_X emissions by 16 percent.[17] Use of this fuel would reduce NO_X emissions but not below SCAQMD thresholds. However, there is no reasonable way to ensure that that retrofitted diesel-powered equipment, low- NO_X diesel fuel, and alternative fuel sources would be available during the construction period; therefore, it is not possible to quantify reductions in NO_X emissions that would result from **Mitigation Measures 4.3.6.2A** through **4.3.6.2M**. Because no additional feasible mitigation is available to reduce construction-related NO_X emissions, this impact remains significant and unavoidable. Furthermore, there is no feasible mitigation to reduce the ROG

[17] http://www.aqmd.gov/ceqa/igr/2006/feb/10-01.pdf, site accessed December 30, 2011.

emissions during architectural coating phase to less than the daily threshold. Thus, the emissions during construction of NO_X and ROG will remain significant. (DEIR, pgs. 4.3-22 to 4.3-29)

c. Architectural Coating Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could potentially exceed applicable daily thresholds for VOC.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that Mitigation Measure 4.2.6.4A is incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of this mitigation measures, impacts related to architectural coatings are considered significant and unavoidable.

4.3.6.4A *The Project applicant shall use "Low-Volatile Organic Compounds" paints, coatings, and solvents with a VOC content lower than required under Rule 1113 (not to exceed 150 grams/liter; 1.25 pounds/gallon). High Pressure Low Volume (HPLV) applications of paints, coatings, and solvents shall be consistent with South Coast Air Quality Management District Rule 1113. Alternatively, the Project applicant shall use materials that do not require painting or are pre-painted.*

Facts in Support of the Finding: Architectural coatings contain volatile organic compounds (VOC) that are similar to ROG and are part of the O_3 precursors. Rule 1113 is applicable to any person who applies or solicits the application of any architectural coating within the Basin. Rule 1113 sets limits on the amount of VOC emissions allowed for all types of architectural coatings, along with a time table for tightening the emissions standards in the future.

According to Section 4.3 of the DEIR, approximately 344 pounds of ROG would be generated during the architectural coating phase of the Project. Manual applications such as paintbrush, hand roller, trowel, spatula, dauber, rag, or sponge have 100 percent transfer efficiency. Construction of the Project using the required HVLP spray method reduces the daily VOC emissions to 224 pounds per day during the architectural coatings application period. The amount of VOC generated per day from the application of architectural coating even with the use of the required HVLP spray method (224 pounds) during the application of architectural coatings would exceed the SCAQMD VOC threshold of 75 lbs/day. Emissions associated with architectural coatings can be reduced by using precoated/natural-colored building materials, water-based or low VOC coating or by using coating transfer or spray equipment with

high transfer efficiency. Adherence to SCAQMD Rule 1113 and **Mitigation Measure 4.3.6.4A** would reduce the Project's architectural coatings emissions impact. However, even with adherence to SCAQMD Rule 1113, the SQAQMD VOC threshold would still be exceeded. Therefore, impacts associated with this issue would remain significant and unavoidable. (DEIR, pg. 4.3-31)

d. Long-Term Project-Related Emissions Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could potentially exceed applicable daily thresholds for operational activities.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that Mitigation Measures 4.3.6.5A and 4.3.6.5B are incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, long term construction emissions-related air quality impacts are considered significant and unavoidable.

4.3.6.5A *Prior to issuance of building permits, the Project applicant shall provide evidence to the City that applicable (as determined by the City) Transportation Demand Management (TDM)/Transportation Control Measure (TCM) strategies such as preferential parking for employee vanpooling/carpooling, bicycle parking facilities (such as bicycle lockers and racks), bus turnouts, and other strategies are incorporated into the design of the proposed Project.*

4.3.6.5B *Prior to issuance of building permits, the Project applicant shall provide evidence to the City that energy-efficient and low-emission methods and features of building construction shall be incorporated into the Project design. These methods and features may include (but are not limited to) the following:*

- *Construction of buildings that exceed statewide energy requirements beyond 20 <u>10</u> percent of that identified in Title 24<u>, Part 6 Energy Efficiency Standards:</u>*
    - *Use of low-emissions water heaters;*
    - *Use of central water-heating systems;*
    - *Use of energy-efficient appliances;*

- *Use of increase insulation;*
- *Use of automated controls for air conditioners;*
- *Use of energy-efficient parking lot lighting; and*
- *Use of lighting controls and energy-efficient lighting.*

- *Utilize low-VOC interior and exterior coatings during Project repainting.*
- *Provide on-site improvements such as sidewalks or pedestrian walkways to promote pedestrian activity and reduce the amount of vehicle trips.*
- *Installation of skylights and energy-efficient lighting that exceeds California Title 24 standards where feasible, including electronic dimming ballasts and computer-controlled daylight sensors in the buildings.*
- *Shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and building shall be planted at the proposed Project site. These strategies will minimize the heat island effect and thereby reduce the amount of air conditioning required.*
- *Strategies to be considered include fans to assist natural ventilation, centralized water and space conditioning systems, high efficiency individual heating and cooling units, and automatic setback thermostats.*
- *Reduction of energy demand associated with potable water conveyance through the following methods:*
  - *Incorporating drought-tolerant plants into the landscaping palette; and*
  - *Use of water-efficient irrigation techniques.*

- *Energy-efficient low-pressure sodium parking lot lights or lighting equivalent as determined by the City, shall be used;*
- *Buildings shall be oriented north-south where feasible;*
- *Implement an on-site circulation plan in parking lots to reduce vehicle queuing;*

- *Develop a trip reduction plan to achieve 1.5 average vehicle ridership (AVR) for businesses with fewer than 250 employees or multitenant worksites;*
- *Include bicycle parking facilities such as bicycle lockers and racks;*
- *Include showers for bicycling employees use; and*
- *Construct on-site pedestrian facility improvements such as building access that is physically separated from street and parking lot traffic and walk paths.*

Facts in Support of the Finding: Although implementation of **Mitigation Measures 4.3.6.5A** through **4.3.6.5B** may reduce vehicle trips associated with the proposed Project, it is not possible to quantify the reduction in the amount of emissions that may occur. Considering the volume of emissions generated and current commuter habits, it is unlikely the implementation of TDMs/TCMs will result in a reduction of operational Project emissions to below existing SCAQMD thresholds. Application of Leadership in Energy and Environmental Design (LEED) standards and green building design principles could reduce emissions from building operations such as heating and cooling; however, such standards and principles would not reduce emissions of CO, ROG, NO_X, PM_{10}, and $PM_{2.5}$ to below SCAQMD thresholds. No other feasible mitigation measures have been identified to reduce the operational emissions of CO, ROG, NO_X, PM_{10}, and $PM_{2.5}$ to a less than significant level. Because the Project site is located in a nonattainment air basin for criteria pollutants, the addition of air pollutants resulting from operation of the proposed Project would contribute to the continuation of nonattainment status in the Basin. In the absence of mitigation to reduce the proposed Project's emission of contribution of CO, ROG, NO_X, PM_{10}, and $PM_{2.5}$ to below SCAQMD thresholds, long-term air quality impacts resulting from the operation of the proposed Project would remain significant and unavoidable. (DEIR, pgs. 4.2-26 to 4.2.28)

e. Project-Related Localized Operational Emissions Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could potentially exceed applicable long-term operational daily thresholds.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that **Mitigation Measures 4.3.6.6A** and **4.3.6.6B** are incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, long term operational-related emission impacts are considered significant and unavoidable.

4.3.6.6A *Prior to issuance of the first building permit, building and site plan designs shall ensure that the Project's energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of 10 percent until January 1, 2014. For building permits issued after that date, new state energy standards require a 20 percent reduction from 2008 Title 24, Part 6 Energy Efficiency Standards. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and reviewed and approved by the City. The following design features shall be used to fulfill this requirement:*

- *Buildings shall exceed California Title 24 Energy Efficiency performance standards for water heating and space heating and cooling, as deemed acceptable by the City.*
- *Increase in insulation such that heat transfer and thermal bridging is minimized.*
- *Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.*
- *Incorporate dual-paned or other energy efficient windows.*
- *Incorporate energy efficient space heating and cooling equipment.*
- *Interior and exterior energy efficient lighting which exceeds the California Title 24 Energy Efficiency performance standards shall be installed, as deemed acceptable by the City. Automatic devices to turn off lights when they are not needed shall be implemented.*
- *To the extent that they are compatible with landscaping guidelines established by the City, shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and buildings shall be planted at the Project site.*
- *Paint and surface color palette for the Project shall emphasize light and off-white colors which reflect heat away from the buildings.*
- *All buildings shall be designed to accommodate renewable energy sources, such as photovoltaic solar electricity systems, appropriate to their architectural design.*
- *To reduce energy demand associated with potable water conveyance, the Project shall implement the following:*
    - *Landscaping palette emphasizing drought-tolerant plants;*
    - *Use of water-efficient irrigation techniques; and,*

- *U.S. EPA Certified WaterSense labeled for equivalent faucets, high-efficiency toilets (HETs), and water-conserving shower heads.*

- *The Project shall provide secure, weather-protected, on-site bicycle storage/parking.*
- *The Project shall provide on-site showers (one for males and one for females). Lockers for employees shall be provided.*
- *The Project will establish a Transportation Management Association (TMA). The TMA will coordinate with other TMAs within the City to encourage and coordinate carpooling among building occupants. The TMA will advertise its services to building occupants, and offer transit and/or other incentives to reduce greenhouse gas (GHG) emissions. A plan will be submitted by the TMA to the City within two months of Project completion that outlines the measures implemented by the TMA, as well as contact information.*
- *The Project shall provide preferential parking for carpools and vanpools. Locations and configurations of proposed preferential parking for carpools and vanpools are subject to review and approval by the City. Prior to final site plan approval, preferential parking for carpools and vanpools shall be delineated on the Project site plan.*
- *The Project shall provide at least two electric vehicle charging stations. Locations and configurations of proposed charging stations are subject to review and approval by the City. Prior to issuance of the first building permit, stub outs for charging stations shall be indicated on the Project building plans.*
- *Lease/purchase documents shall identify that tenants are encouraged to promote the following:*
    - *Implementation of compressed workweek schedules.*
    - *SmartWay partnership;*
    - *Achievement of at least 20 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of consolidated trips carried by SmartWay carriers until it reaches a minimum of 90 percent of all long-haul trips carried by SmartWay 1.0 or greater carriers.*
    - *Achievement of at least 15 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of long-haul trips carried by SmartWay carriers until it reaches a minimum of 85 percent of all consolidator trips carried by*

SmartWay 1.0 or greater carriers.

- *Use of fleet vehicles conforming to 2010 air quality standards or better.*
- *Installation of catalytic converters on gasoline-powered equipment.*
- *Inclusion of electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets.*
- *Establishment and use of carpool/vanpool programs, complemented by parking fees for single-occupancy vehicles.*
- *Provision of preferential parking for EV and CNG vehicles.*
- *Use of electrical equipment (instead of gasoline-powered equipment) for landscape maintenance.*
- *Use of electric (instead of diesel or gasoline-powered) yard trucks.*
- *Use of SmartWay 1.25 rated trucks.*
- *Each facility operator shall provide regular sweeping of onsite parking and drive areas using street sweepers that comply with applicable SCAQMD Rules.*
- *Each facility operator shall maintain a log of all trucks entering the facility to ensure that, on average, the daily truck fleet meets applicable air quality emission standards. This log shall be available for inspection by City staff at any time.*
- *Each facility operator shall prohibit all vehicles from idling in excess of five minutes in all onsite areas.*
- *Each facility operator shall ensure that onsite staff in charge of keeping the daily log and monitoring for excess idling will be trained and certified in diesel health effects and technologies, such as by requiring attendance at CARB-approved courses.*
- *Each facility operator which upon occupancy does not already operate 2077 and newer trucks shall in good faith be required to apply for funding to replace or retrofit their trucks such as Carl Moyer, VIP, Prop 1B or similar funds. Should funds be awarded, the tenant shall be required to accept and use them.*

4.3.6.6B *The Project shall be designed to facilitate the reduction of waste generated by building occupants that is hauled to and disposed of in landfills by providing easily accessible areas that are dedicated to the collection and storage of recyclable materials including*

paper, cardboard, glass, plastics, and metals. Locations of proposed recyclable materials collection areas are subject to review and approval by the City. Prior to Final Site Plan approval, locations of proposed recyclable materials collection areas shall be delineated on the Project site plan.

f. Cumulative Air Quality Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could potentially result in a cumulatively considerable net increase of criteria pollutants for which the Project region is in non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors).

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts cumulative air quality impacts will remain significant and unavoidable.

Facts in Support of the Finding: Included in Section 4.3 of the DEIR, the Project would contribute criteria pollutants to the area during Project construction. A number of individual projects in the area may be under construction simultaneously with the proposed Project. Depending on construction schedules and actual implementation of projects in the area, generation of fugitive dust and pollutant emissions during construction would result in substantial short-term increases in air pollutants. This would be a contribution to short-term cumulative air quality impacts.

The traffic study included vehicular trips from all present and future projects in the Project vicinity; therefore, the CO hot spot concentrations calculated at these intersections include the cumulative traffic effect. Based on this, no significant cumulative CO impacts would occur.

Long-term operation of the Project would exceed the standards for CO, ROC, NO_X, PM_{10}, and $PM_{2.5}$. The Basin is in nonattainment for PM_{10} and ozone at the present time; therefore, the construction and operation of the proposed Project would exacerbate nonattainment of air quality standards for PM_{10} and ozone within the Basin and contribute to cumulative air quality impacts. Therefore, long-term cumulative air quality impacts are considered to be significant and unavoidable.

The Health Risk Assessment (HRA) conducted for the proposed Project identified the increase in health risks to the nearby sensitive receptors from the proposed Project's air pollutant emissions. This HRA identified that the Project's incremental increase is only a very small fraction of the ambient condition.

Therefore, the concentration of diesel particulates at the Project site is below the established risk threshold. Individuals living and working in southern California may be exposed to levels of diesel emissions that are cumulatively significant; however, that circumstance is not created by the Project.

It is reasonable to anticipate that advancements in truck/transportation technology would reduce the amount of particulate matter in future years. However, a determination of the amount and extent of that reduction in diesel particulate matter from these types of activities is not available at this time. Therefore, in an overabundance of caution, because other cumulative projects in the area would also contribute diesel particulates in the area and because the Riverside area has a level of particulate matter that is above the SCAQMD's recommended cancer risk threshold of 10 in one million, regional impacts associated with diesel particulate matter are considered cumulatively considerable and the proposed Project will make a significant contribution to that cumulative impact. (DEIR, pgs. 4.3-37 to 4.3-38)

4. Land Use and Planning (Individual and Cumulative)

b. Conflict with Applicable Land Use Plans, Policies, or Regulations

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would potentially conflict with various land use plans, policies, or regulations.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce bring the Project into compliance with all land use plans. Accordingly, Project-related conflicts with land use plans will remain significant and unavoidable.

Facts in Support of the Finding: According to Section 4.8 of the DEIR, a discussion of the proposed Project's consistency with the 2007 AQMP has been analyzed in Section 4.3 (Air Quality) of this EIR. "Since the proposed Project will require a General Plan Amendment, the Project has not been considered in preparation of the City's General Plan and therefore is inconsistent with the AQMP. Amendments to the City of Moreno Valley General Plan, zoning reclassification, and plan approval are required before the affected portion of the proposed Project can be implemented. This is a significant impact requiring mitigation." That section of this EIR concluded that, despite the recommended mitigation, Project air quality impacts related to the AQMP would remain significant.

The Project proposes the development of warehouse uses, which would result in an inconsistency with the existing residential zoning on the southern portion of the site, and the BP zone on the northern portion of the site. The development that would occur with the zone change has the potential to create indirect

environmental impacts since the zone change would permit more intense and larger industrial/warehousing uses on the Project site, requiring a discretionary action based on an environmental determination of the Project. These environmental impacts are analyzed through this EIR for each of the environmental topics. The baseline for comparative analysis of environmental impacts would be the existing condition of the Project site. Currently, there is no existing development on the Project site, which represents the worst-case scenario on which the EIR analysis is based. With implementation of the zone change, the proposed Project would be consistent with zoning requirements identified by the City.

According to the latest development plans, the closest loading and unloading operations of the proposed Project (e.g., truck courts) would be located 395 feet northwest of the nearest single-family residence (see plans in Appendix K). In addition, the reconfigured roadways surrounding the Project site would discourage industrial traffic through the residential areas to the southeast. Despite these design characteristics, the fundamental change from residential/business park uses to industrial adjacent to residential represents an incremental adverse effect on the "quality of life" of existing residents in this area, which represents a potentially significant land use compatibility impact. This impact requires the City Council to approve a Zone Change to bring the proposed zoning designations into consistency with the Zoning Map and Municipal Code.

The Compass Growth Vision plan provides a framework for local and regional decision-making regarding growth, transportation, land use, and economic development. The main objective of the Compass Growth Vision is to manage the forecast growth while improving future living conditions for all people within the SCAG area, including live, work, and play activities.

The proposed Project may not be fully consistent with the growth principles of the Compass Growth Vision plan. The nature of the proposed Project allows the transport of commodities from a single area rather than multiple areas, minimizing vehicle trip generation. Conversely, trucks from the proposed Project may increase localized and freeway congestion. The Project eliminates a planned transition of land uses that may incrementally reduce livability in this portion of the City. The proposed Project does support increased prosperity by providing additional (mainly "blue collar") employment opportunities close to existing housing within the City of Moreno Valley. The proposed Project is located in an area where existing infrastructure (freeway, sewer, electrical, water, etc.) is present. The development of the proposed Project will augment existing services available in the City and region. In these ways, the Project is only partially consistent with the principles of the Compass Growth Vision. (DEIR, pgs. 4.8-5 to 4.8-17)

a. Cumulative Land Use and Planning

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would have a cumulative impact to land use and planning issues.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related cumulative impacts to land use and planning will remain significant and unavoidable.

Facts in Support of the Finding: Implementation of the proposed Project represents establishment of new land uses within the currently undeveloped Project site that would result in an intensification of permitted land uses associated with a land use change from Business Park and Residential to Light Industrial uses, changes to the General Plan Circulation Element, and the loss of the Primary Animal Keeping Overlay (PAKO) associated with the RA-2 zone. The proposed Project is generally consistent with regional plans and planning efforts, although it is not fully consistent with the SCAG's RTP and Compass Blueprint Plan because it eliminates some housing in favor of industrial employment uses. However, it will incrementally improve the City's long-standing jobs/housing ratio, which is also a regional goal of the various SCAG plans. It is also not consistent with existing General Plan land use designations, objectives and policies, nor is it consistent with existing zoning designations on the site. For these reasons, a General Plan Amendment and Zone Change are proposed for consideration by the City.

In addition, the proposed Project represents a fundamental change in community character for this portion of the City (i.e., mixed residential and business park to industrial warehouse buildings), which can represent an incremental adverse change in terms of public perception. This change would be particularly acute if both the proposed Project and the approved West Ridge Commerce Centre (an industrial Project just east of the proposed Project) were built within a relatively short period of time, as they would both follow relatively closely the completion of the Sketchers Logistics Center (another warehouse Project) east of both the proposed Project and the West Ridge Project, on the east side of Redlands Boulevard. Furthermore, the addition of industrial space from the proposed Project and the adjacent West Ridge (industrial) Project may create an over-supply of warehousing space in the City, based on current economic conditions.

The proposed changes in land use will also result in a loss of up to 584 (R-15) multi-family residential units. However, this was determined to be a less than significant Project impact on local housing because the City's Housing Element identifies over twice as much potential affordable housing as the City's

RHNA allocation, so it will not make a significant contribution to a cumulatively considerable impact on regional housing.

Similar to the proposed Project, some of the cumulative projects within the Project vicinity would also require amendments to the existing General Plan and zoning, which may in turn cause additional cumulative impacts. Therefore, planned industrial development in the City may contribute to a cumulatively considerable impact or change in the overall character of the surrounding area, and the proposed Project would make a significant contribution to that change in terms of consistency with adopted land use plans. No feasible mitigation is available to reduce this significant contribution. However, the Project would not make a similar cumulatively considerable land use impact relative to dividing an established community or conflicting with an approved habitat conservation plan. (DEIR, pgs. 4.8-17 to 4.8-18)

5. <u>Transportation</u>

a. Existing (2011) With Project Conditions (Intersection) Traffic and Level of Service Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that **Mitigation Measure 4.11.6.4A** is incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, existing (2011) with Project LOS impacts are considered significant and unavoidable.

Facts in Support of the Finding: As indicated in Section 4.11 of the DEIR, with the addition of Project traffic, the following intersections are forecast to operate at unsatisfactory levels of service: Redlands Boulevard/SR-60 Westbound Ramps (a.m. and p.m. peak hours); and Redlands Boulevard/Eucalyptus Avenue-Fir Avenue (p.m. peak hour).

The Project would contribute to the worsening of the already unsatisfactory LOS at the intersection of Redlands Boulevard/SR-60 Westbound Ramps and would create a significant impact at the intersection of Redlands Boulevard/Eucalyptus Avenue-Fir Avenue. Therefore, mitigation is required at both intersections.

Also, the following segments are forecast to operate at an unsatisfactory level of service in the Existing plus Project condition: SR-60 Eastbound: Pigeon Pass Road to Heacock Street (a.m. and p.m. peak hours); SR-60 Westbound: Heacock Street to Perris Boulevard (a.m. peak hour); and SR-60 Westbound: Perris Boulevard to Nason Street (a.m. peak hour).

The Project would add to the existing unsatisfactory LOS on these three freeway segments; therefore, the addition of Project traffic would be considered a cumulative impact. Neither the Project applicant nor the City has jurisdiction over Caltrans facilities; therefore, implementation of improvements to the freeway mainline cannot be guaranteed. Review of the SCAG Regional Transportation Improvement Plan (RTIP) indicates that there are no projects programmed on SR-60 within the study area. Furthermore, Caltrans does not have a mechanism for development projects to contribute to improvements on State Highways. Therefore, the cumulative impact to these three segments of SR-60 would be significant and unavoidable. (DEIR, pgs. 4.11-19)

b. Opening Year 2016 With Project Conditions (Intersection) Traffic and Level of Service Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that **Mitigation Measure 4.11.6.4B** is incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, existing (2016) with Project LOS impacts are considered significant and unavoidable.

Facts in Support of the Finding: Opening Year (2016) with Project conditions considers the addition of traffic generated by the proposed Project to Opening Year (2016) without Project conditions. Section 4.11 of the DEIR indicates that the following intersections would operate at unsatisfactory LOS: Moreno Beach Drive/SR-60 Westbound Ramps (p.m. peak hour); Redlands Boulevard/SR-60 Westbound Ramps (a.m. and p.m. peak hours); and Redlands Boulevard/Eucalyptus Avenue-Fir Avenue (p.m. peak hour). The Project would have a significant impact at all three intersections, and therefore mitigation would be required.

Freeway mainline and ramp junctions were evaluated in the Opening Year (2016) plus Project condition. The following segments are forecast to operate at an unsatisfactory level of service in the Opening Year (2016) plus Project condition: SR-60 Eastbound: Pigeon Pass Road to Heacock Street (a.m. and p.m. peak hours); SR-60 Eastbound: Heacock Street to Perris Boulevard (p.m. peak hour); SR-60 Westbound: Heacock Street to Perris Boulevard (a.m. peak hour); and SR-60 Westbound: Perris Boulevard to Nason Street (a.m. peak hour).

The Project would add to the existing unsatisfactory LOS on these four freeway segments; therefore, the addition of Project traffic would be considered a cumulative impact. Neither the Project applicant nor the City has jurisdiction over Caltrans facilities; therefore, implementation of improvements to the freeway mainline cannot be guaranteed. Review of the RTIP indicates that there are no projects programmed on SR-60 within the study area. Furthermore, Caltrans does not have a mechanism for development projects to contribute to improvements on State Highways. Therefore, the cumulative impact to these three segments of SR-60 would be significant and unavoidable.

c. Opening Year 2016 Cumulative With Project Conditions (Intersection) Traffic and Level of Service Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that **Mitigation Measure 4.11.6.4C** is incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, existing (2016) cumulative with Project LOS impacts are considered significant and unavoidable.

Facts in Support of the Finding: According to Section 4.11 of the DEIR, an intersection LOS analysis was conducted to determine Opening Year (2016) Cumulative intersection performance. The addition of Project traffic to the Opening Year (2016) Cumulative scenario would result in conditions exceeding the established LOS standard at the following intersections: Moreno Beach Drive/SR-60 Eastbound Ramps (p.m. peak hour); Moreno Beach Drive/Cottonwood Avenue (p.m. peak hour); Moreno Beach Drive/Alessandro Avenue (p.m. peak hour); Redlands Boulevard/SR-60 Westbound Ramps (a.m. and p.m. peak hours); Redlands Boulevard/SR-60 Eastbound Ramps (a.m. and p.m. peak hours); Redlands Boulevard/Fir Avenue-Eucalyptus Avenue (a.m. and p.m. peak hours); Redlands Boulevard/Encilia

Avenue-Eucalyptus Avenue (p.m. peak hour); and Redlands Boulevard/Alessandro Boulevard (p.m. peak hour).

While these intersections are forecast to exceed satisfactory levels of service in Opening Year (2016) Cumulative with Project conditions, with the exception of the intersection of Redlands Boulevard/Eucalyptus Avenue-Fir Avenue and Redlands Boulevard/Encilia Avenue-Eucalyptus Avenue, these intersections already exceeded established LOS standards in the Opening Year (2016) Cumulative without-Project condition. Because the proposed Project would contribute to and would cause intersections to operate at unsatisfactory levels, mitigation is required.

Freeway mainline and ramp junctions were evaluated in the Opening Year 2016 Cumulative plus Project condition. The following segments are forecast to operate at an unsatisfactory level of service in the Opening Year 2016 Cumulative plus Project condition: SR-60 Eastbound: Pigeon Pass Road to Heacock Street (a.m. and p.m. peak hours); SR-60 Eastbound: Heacock Street to Perris Boulevard (a.m. and p.m. peak hours); SR-60 Eastbound: Perris Boulevard to Nason Street (a.m. and p.m. peak hours); SR-60 Westbound: Heacock Street to Perris Boulevard (a.m. and p.m. peak hours); SR-60 Westbound: Perris Boulevard to Nason Street (a.m. and p.m. peak hours); and SR-60 Westbound: Nason Street to Moreno Beach Drive (a.m. peak hour).

The Project would add to the existing unsatisfactory LOS on these six freeway segments; therefore, the addition of Project traffic would be considered a cumulative impact. Review of the RTIP indicates that there are no projects programmed on SR-60 within the study area. Furthermore, neither the Project applicant nor the City has jurisdiction over Caltrans facilities; therefore, implementation of improvements to the freeway mainline cannot be guaranteed. Furthermore, Caltrans does not have a mechanism for development projects to contribute to improvements on State Highways. Therefore, the cumulative impact to these segments of SR-60 would be significant and unavoidable.

d. Cumulative Transportation Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would have a cumulative significant impact to transportation.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that Mitigation **Measure 4.11.6.4C** is incorporated into the MMRP for the Project, and will be implemented as specified

therein. However, the Council finds that even with application of these mitigation measures, cumulative transportation impacts are considered significant and unavoidable.

Facts in Support of the Finding: Cumulative impacts associated with traffic volumes are determined based the addition of traffic volumes from approved and pending projects in the area and projected traffic growth to existing traffic volumes. The cumulative analysis forecasts that, with the development of the proposed Project and the cumulative projects, eight intersections would require improvements in order to maintain the City's LOS standard of D.

Those intersections are as follows: Moreno Beach Drive/SR-60 Eastbound Ramps (p.m. peak hour); Moreno Beach Drive/Cottonwood Avenue (p.m. peak hour); Moreno Beach Drive/Alessandro Avenue (p.m. peak hour); Redlands Boulevard/SR-60 Westbound Ramps (a.m. and p.m. peak hours); Redlands Boulevard/SR-60 Eastbound Ramps (a.m. and p.m. peak hours); Redlands Boulevard/Fir Avenue-Eucalyptus Avenue (a.m. and p.m. peak hours); Redlands Boulevard/Encilia Avenue-Eucalyptus Avenue (p.m. peak hour); and Redlands Boulevard/Alessandro Boulevard (p.m. peak hour).

Although the suggested improvements are consistent with the City's General Plan, the Project will be responsible for contributing its fair share toward the funding of the future improvements via payment of the City's DIF. Of these eight affected intersections, five intersections are under the jurisdiction of the City of Moreno Valley.

Three intersections are under the jurisdiction of Caltrans. The improvements identified in **Mitigation Measure 4.11.6.4C** would reduce impacts at these intersections to a less than significant level. However, since the affected freeway ramp intersections are under the jurisdiction of Caltrans, neither the Project proponent nor the City has control over the specific timing of when the improvements would be constructed. It is anticipated that by opening year (2016), improvements at these intersections would not be constructed, as they are not currently planned for near-term construction. Therefore, this cumulative impact in opening year (2016) remains significant and unavoidable until such time as the improvements to this interchange are constructed by Caltrans, WRCOG, and the City of Moreno Valley through the TUMF process.

Because TUMF provides a mechanism for collecting fees from all development projects in the area that would contribute traffic to the existing roadway network, fees for the improvements to the affected freeway intersections would be collected. Therefore, it is anticipated that since these freeway intersection improvements are programmed into the TUMF program, such improvements would be constructed by

future year (2035) and would be able to accommodate future year (2035) traffic levels, resulting in a less than significant cumulative impact.

Resolutic Item No. E.6
Date Adopted: June 24, 2014

D. ADEQUACY OF THE RANGE OF PROJECT ALTERNATIVES

The EIR analyzed four alternatives to the Project as proposed, and evaluated these alternatives for their ability to meet the Project's objectives as described in Section II.B above. CEQA requires the evaluation of a "No Project Alternative" to assess a maximum net change in the environment as a result of implementation of the Project. The No Project Alternative, referred to as the No Project/Existing Zoning Alternative, makes a reasoned assessment as to the future development of the subject site should the Project under consideration not be developed yet the site would be developed in a similar manner to the proposed Project and consistent with existing zoning for the site. A Reduced Intensity Alternative, a Commercial Center (mixed retail/office) Alternative, and an Off-site Alternative were also selected for analysis. CEQA requires the evaluation of alternatives that can reduce the significance of identified impacts and "feasibly attain most of the basic objectives of the proposed Project." Thus, in order to develop a range of reasonable alternatives, the Project Objectives must be considered when this Council is evaluating the alternatives.

1. Alternative 1 – No Project/Existing Zoning Alternative

Description: The No Project/Existing Zoning Alternative (hereinafter referenced as the "No Project" Alternative), considers the environmental conditions that would occur if the subject site were developed consistent with its existing Specific Plan 208 zoning designation, consisting of an underlying land use of Business Park/Industrial. To allow for quantified comparison of potential impacts, the No Project Alternative was assumed to result in the development of approximately 1,420,000 square feet of industrial warehouse uses on approximately 63 acres and approximately 180,000 square feet of commercial service uses on approximately 8 acres as would be allowed under the existing zoning and land use designations. The commercial service component of this alternative would be located along the frontage of Perris Boulevard while the industrial warehouse uses would occupy the remaining portion of the site. (DEIR, pg. 6-12)

Impacts: The No Build Alternative, as referenced in Section 6.0 of the DEIR, would result in similar impacts when compared to the proposed Project. Similar to the Project, the No Build Alternative would result in less than significant impacts in the following areas: Aesthetics; Williamson Act Contracts/Agricultural Zoning and Forestry Resources; Biological Resources; Cultural Resources; Geology and Soils; Hazards and Hazardous Materials; Hydrology and Water Quality; Land Use; Mineral Resources; Noise; Population and Housing; Public Services; Recreation and Parks; and Utilities and Service Systems. The Project's significant and unavoidable agricultural impacts, air quality impacts,

climate change and GHG impacts, and transportation impacts would also occur in the same manner as the proposed Project. However, under the No Build Alternative, potential air quality, climate change, and traffic/transportation impacts would be greater than the proposed Project because of the higher trip generation potential of the commercial uses.

Objectives: Under the No Build Alternative, the subject site would develop in a similar manner as the proposed Project, and most of the Project Objectives would be achieved. However, the objectives specifically oriented towards warehouse and industrial uses would be met at a reduced level due to the commercial component included in this Alternative.

Finding: Under the No Build Alternative, the Project site would be developed with approximately 1,420,000 square feet of industrial warehouse uses on approximately 63 acres and approximately 180,000 square feet of commercial service uses on approximately 8 acres. This Alternative would result in the same significant and unavoidable impacts associated with agricultural resources, air quality, climate change and greenhouse gases, and traffic that have been identified within the DEIR. However, potential air quality, climate change, and traffic/transportation impacts would be greater than the proposed Project because of the higher trip generation potential of the commercial uses. Because the No Build Alternative results in an increase in potential significant and unavoidable impacts in comparison to the proposed Project, the City Council hereby rejects the No Build Alternative.

2. Alternative 2 – Reduced Intensity Alternative

Description: The Reduced Intensity Alternative assumes the same general land use type as the Project, but at a development intensity scoped to reduce the extent of regional threshold exceedances for air pollution and greenhouse gas emissions that would otherwise result from the Project. In that the same type of development is proposed, most if not all the Project Objectives would be achieved to a certain extent but at a reduced level. Implementation of the Reduced Intensity Alternative would yield approximately 1,212,100 square feet of development, a reduction of approximately 25 percent or approximately 434,033 square feet, when compared to the approximately 1,616,133 square-foot Project analyzed in the EIR.

Impacts: Under the Reduced Intensity Alternative, impacts related to agricultural resources would be similar to the proposed Project as the same amount of land would be disturbed. Similarly, impacts related to short-term construction-related air quality would be similar to the proposed Project as the same amount of land would be disturbed and the same mix of equipment would be utilized. Because of the decrease in vehicle trips achieved under this alternative, impacts to the operation of local roadways and intersections

would be proportionally reduced from what was identified for the proposed Project; however, long-term traffic impacts to state freeway segments and merge/diverge areas would remain significant and unavoidable. Long-term operational-related air quality impacts would be reduced in magnitude when compared to the Project but would remain significant and unavoidable. Impacts associated with the generation of greenhouse gas emissions would also be reduced proportionate to the reduction in building area in comparison to the proposed Project, but would remain significant and unavoidable.

Objectives: The Reduced Intensity Alternative would, to some degree, realize the Project Objectives. However, because the scale of the development would be diminished under this Alternative, the resulting generation of sales tax, the number of jobs created, and potential second tier economic benefits to the City and region (e.g. wholesale/retail support sales; temporary and long-term construction jobs, and facilities maintenance employment opportunities) would likely be reduced when compared to the Project.

Finding: Under the Reduced Intensity Alternative, a light industrial warehouse/ distribution facility reduced by approximately 25 percent (or 434,033 square feet) would be realized as compared to the Project. The City Council hereby finds that the Reduced Intensity Alternative will not avoid or substantially reduce the significant and unavoidable agricultural resources impacts, construction and operational air quality impacts, and cumulative greenhouse gas impacts identified in the EIR. This Alternative would not meet Project Objectives to the same extent as the Project. Furthermore, the scale of the reduction in intensity would not maximize or realize the economic potential of the site. Based on the reduced scope of development, the Reduced Intensity Alternative would diminish capacities and capabilities to satisfy existing and projected unmet market demands within the trade area. The Reduced Intensity Alternative would also result in comparatively fewer opportunities to provide jobs, as compared to the Project. Therefore, the City Council rejects the Reduced Intensity Alternative on the basis that it fails to avoid or substantially reduce the significant and unavoidable impacts of the Project and does not meet the Project Objectives as well as the Project. The City Council also finds that each of these considerations constitutes a ground for rejecting this alternative that is independently sufficient to support the City Council's rejection of this alternative.

3. Alternative 3 - Commercial Center (Mixed Commercial/Office)

Description: As identified in Section 6.0 of the DEIR, the Commercial Center Alternative would result in the development of commercial service and office uses on the Project site. Although business and professional offices, financial institutions, and medical clinics are permitted in SP208, they are permitted only in the industrial support areas while commercial service-oriented uses are a permitted throughout the

SP208 Industrial designation. For this reason, the General Plan and zoning designations for the site would need to be amended to accommodate the business and professional offices. Permitted commercial service uses include, but are not limited to, Automotive Sales/Rental/Leasing & Accessories, Automotive/Truck Repair, Business Supply/Equipment Sales/Rental & Services, and Repair Services. Approximately 760,000 square feet of commercial service uses would be developed on approximately 35 acres. The balance of the site (35 acres) would be developed with up to approximately 760,000 square feet of office uses.

Impacts: As identified in Section 6.0 of the DEIR, the Commercial Center Alternative would result in similar impacts for the following eight environmental issues: Agriculture and Forestry Resources; Biological Resources; Cultural Resources; Geology and Soils; Hazards and Hazardous Materials; Hydrology and Water Quality; Land Use and Planning; and Mineral Resources. Because of the increase in vehicle trips under this alternative, impacts to the operation of local roadways and intersections would be proportionally greater than what was identified for the proposed Project. Long-term traffic impacts to state freeway mainline segments and merge/diverge areas would remain significant and unavoidable. Under the Commercial Center Alternative, impacts related to short-term construction emissions would be similar to the proposed Project as the same amount of land would be disturbed and the same mix of equipment would be utilized. Long-term operational-related air quality emissions would be increased in magnitude because of the increase in vehicle trips when compared to the Project and would remain significant and unavoidable. Traffic-related noise would be increased in magnitude but would be similarly mitigated like the proposed Project and would remain less than significant.

Objectives: Under this alternative, some of the proposed Project objectives are not met as warehouse uses would not be built. However, development of this alternative would provide new employment opportunities for residents of Moreno Valley, but not within the industrial employment sector.

Findings: Under the Commercial Center Alternative, development of commercial service and office uses would occur. This Alternative would have similar impacts that have been identified within the DEIR. However, the Commercial Center Alternative would result in an increase in trip generation in comparison to the proposed Project, and would result in an increase in the severity of the significant and unavoidable impacts to construction and operational air pollution emissions, climate change and greenhouse gas emission, and traffic. The City Council finds that the Commercial Center Alternative would fulfill some but not all of the Project Objectives. Moreno Valley residents would have more opportunities for employment but a warehouse would not be built. Because the Commercial Center Alternative will not fulfill the primary objective of the Project and the severity of significant and unavoidable impacts would

be increased in comparison to the proposed Project, the Council hereby rejects the Commercial Center Alternative.

4. Alternative 4 - Off-Site Location

Description: As identified in Section 6.0 of the DEIR, this alternative would result in the same intensity of development of approximately 1,616,133 square feet of warehouse uses on approximately 70.3 acres. The alternative Project site identified by the City is bounded by Krameria Street (extended) to the north, vacant and partially developed property and March Air Reserve Base to the west, Indian Street to the east, and the Perris Valley Storm Drain and vacant land to the south. The off-site location is approximately 1.0 miles northwest of the Project site and is within the same Industrial Area Specific Plan as the proposed Project. This alternative off-site property is not owned or under the control of the applicant. The off-site location is currently zoned SP 208 I and is designated Business Park in the City's General Plan, identical to the proposed Project development of this site would not require soil import, inherently reducing impacts form air pollution emissions during construction.

Impacts: Section 6.0 of the DEIR, identifies nine environmental issues that would have similar impacts as the proposed Project. These issues are: Cultural Resources; Geology and Soils; Hydrology and Water Quality; Land Use and Planning; Mineral Resources; Population and Housing; Public Services; Recreation; and Utilities and Service Systems. With the Off-Site Location Alternative, impacts related to air quality and traffic impacts would be similar to those identified with the proposed Project. Short-term construction and long-term air quality operational and climate change/greenhouse gas emissions impacts under this alternative would remain significant and unavoidable and would result in similar conditions as identified for the proposed Project. Additionally, due to adjacent sensitive receptors, potential impacts to these receptors would be greater in magnitude when compared to the proposed Project. Similarly, noise impacts would be greater in magnitude due to the adjacent sensitive receptors. Operational traffic would result in increased traffic on vanity roadways and may impact different intersection and roadways in comparison to the proposed Project. Under this Alternative, impacts to agricultural resources would be eliminated.

Objectives: The Off-Site Alternative would meet most of the Project objectives. The location of the Off-Site Alternative further north of Harley Knox Boulevard would not meet the Project objectives of locating distribution services near transportation corridors and clustering such uses near the state highway system.

Finding: Under the Off-Site Alternative, development of the warehouse would occur in a different location. This Alternative would have similar impacts that have been identified within the DEIR. And most of the objectives of the proposed Project would be met, would not meet the Project objectives of locating distribution services near transportation corridors and clustering such uses near the state highway

system. The Council finds that the Off-Site Alternative would have similar impacts to all environmental issues except for agriculture because this Alternative would eliminate the significant and unavoidable impacts to agricultural resources.. Because the Off-Site Alternative will not substantially reduce the environmental impact of the Project and it would not meet the Project objectives of locating distribution services near transportation corridors and clustering such uses near the state highway system, the Council hereby rejects the Off-Site Alternative.

5. Alternatives Considered and Rejected

A variety of additional alternatives were considered as part of the DEIR's Alternatives Analysis. (DEIR, pgs. 6-3 through 6-5) Three possible alternatives were considered and rejected because they could not accomplish the basic objectives of the Project or they were considered infeasible. Per the *CEQA Guidelines* (Section 15126.6(c)), factors that may be considered when addressing the feasibility of alternatives include failure to meet most of the stated Project objectives, infeasibility, or inability to avoid significant environmental effects. The purpose of the proposed Project is to provide for and expand employment and revenue opportunities within the City of Moreno Valley. The proposed Project would expand employment options in a location that is convenient to existing transportation corridors, convenient to existing and future City residents and would augment the City's economic base. The following provides and discussion of the three development scenarios that were considered and rejected as potential alternatives to implementation of the proposed Project based on Section 15126.6 of the *CEQA Guidelines* because they did not feasibly attaining most of the basic objectives of the Project while reducing or avoiding any of the significant effects of the proposed Project:

- No Build Alternative: No development would take place within the Project limits and no impacts would occur. However, disallowing development of the site, as suggested by this alternative, would not fulfill the primary objectives of the proposed Project and the site would likely be developed in accordance with existing zoning should the Project not move forward. Retention of the Project site in its current condition would not expand employment opportunities to residents of the City. Retaining the site in its current undeveloped condition would not generate the revenue (e.g., property tax) that could augment the City's current revenue stream. Therefore, the No Build Alternative was rejected from further consideration in the EIR.
- Residential Alternative: The Residential Alternative would develop the 71-acre Project site with approximately 355 single-family units based on the City's R5 zone. The R5 zone was utilized as this is the zoning designation of the nearest residential uses to the north along Perris Boulevard

and north of the Perris Valley Storm Drain channel. A zone change, General Plan Amendment, and Specific Plan Amendment would be required for this alternative to change the Project site from its existing Business Park/Light Industrial (BP) General Plan designation and Industrial Area Plan (SP208 I) zoning designation to a residential R5 designation. Furthermore, a Specific Plan Amendment would be required to remove the Project site from the underlying Industrial Specific Plan 208. Since the Residential Alternative consists only of residential uses, employment-generating opportunities would not occur aside from temporary construction work, which would be filled predominantly by those already residing in the area. The residential uses would produce demand for public services that would exceed the amount of municipal revenues it would generate. The Project's full potential to utilize the area's close proximity to various freeways and transportation corridors would not be realized as only residential uses would occur under the Residential Alternative. Additionally, the development of the entire 71-acre Project site under this alternative would result in the placement of the residential uses within an area planned for industrial uses which could result in additional adverse impacts such as exposure to air pollutants, noise, and land use incompatibilities. This alternative has been rejected because it would result in greater impacts and would not satisfy the basic City employment generating objectives for development of the Project site.

- Mixed Commercial/Residential Alternative: The Mixed Commercial/Residential Alternative would develop the 71-acre Project site with approximately 690,000 square feet of Community Commercial uses and 532 multiple-family units. A zone change, General Plan Amendment, and Specific Plan Amendment would be required for this alternative to change the Project site from its existing Business Park/Light Industrial (BP) General Plan designation and SP208 I zoning designation to a residential designation and commercial designation. Additionally, a Specific Plan Amendment would be required to remove the Project site from the underlying Industrial Specific Plan 208. While the commercial component of this Alternative would utilize the Project site's close proximity to nearby transportation corridors, the development of the remainder of the site with residential uses would not provide the varied employment and service uses and revenue associated with the proposed Project. The development of approximately half of the Project site under this alternative with residential uses would result in the placement of the residential uses adjacent to SP208 I industrial/business park uses which could potentially result in additional adverse impacts such as exposure to air pollutants, noise, and land use incompatibilities. The residential component of this alternative would produce demand for public services that would exceed the amount of municipal revenues it would generate, and there would be little to no

employment opportunities created. Therefore, the mixed commercial/residential alternative would not meet the Project objectives of providing new employment and revenue generation options in close proximity to local consumers to the same degree as the proposed Project. The employment opportunities and economic benefits derived from the proposed Project are superior to the Mixed Commercial/Residential Alternative. This alternative has been rejected because it would result in greater impacts and would not satisfy the basic City employment generating objectives for development of the Project site.

6. Environmentally Superior Alternative

As explained by Section 6.0 in the DEIR, Alternative 2 (Reduced Intensity Alternative) reduces the severity of Project related air quality impacts. However, long-term air quality impacts, would remain significant after mitigation for this alternative for ROG, NO_x, PM_{10} and $PM_{2.5}$. In a similar manner, Alternative 2 would reduce the volume of daily traffic trips when compared to the proposed Project; however, such impacts to state freeway mainline segments and merge/diverge areas would remain significant and unavoidable until freeway improvements are completed by the state. Alternative 2 would also reduce the quantity of greenhouse gas emission when compared to the proposed Project; however, impacts to Climate Change would remain significant and unavoidable. The remaining environmental issues would ultimately be similar to the proposed Project through adherence to existing standards and mitigation measures. Based on the analysis in Section 6.0 and the summary contained in Table 6.K, Alternative 2, the Reduced Intensity Alternative, is the environmentally superior alternative. The amount of development under this alternative would be reduced when compared to the proposed Project; however, the Alternative 2 would not satisfy several of the Project objectives because it would reduce the level at which it meets the employment generating Project objectives. Because the Reduced Intensity Alternative allows the development of warehouse uses and the provision of new employment opportunities, it meets many of the City's stated Project objectives, while at the same time reduces the impacts associated with the proposed Project. However, because of the lower industrial density, the Alternative fails to meet several key employment generating objectives related to density efficiencies in the same manner as the proposed Project.

E. GROWTH-INDUCING IMPACTS

CEQA requires a discussion of ways in which the proposed Project could be growth inducing. Specifically, CEQA Guidelines Section 1512602(d) states than an EIR must describe the ways

in which the proposed Project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment.

Section 5.0 of the DEIR identifies the extent to which the new jobs created by a Project are filled by existing residents is a factor that tends to reduce the growth inducing effect of a Project. Construction of the proposed Project will create short-term construction jobs. Due to the existing high unemployment levels that exist in the City, the potential exists for these short-term positions to be filled by workers who, for the most part, reside in the City or neighboring communities to the Project area. Therefore, construction of the proposed Project will not generate a permanent increase in population within the Project area.

As previously identified, the proposed Project is expected to employ 646 people. These full-time positions are also anticipated to be filled by workers who, for the most part, reside in the Project area due to high unemployment levels that exist in the City. Operations of the proposed Project will not generate a permanent increase in population within the Project area.

The area surrounding the Project site is governed by the City of Moreno Valley General Plan and the area is guided by Specific Plan 208. Specific Plan 208 guides land use within the Project area to ensure that new development and redevelopment is implemented consistent with the land use policies, controls, and standards contained in Specific Plan 208. Any development of remaining undeveloped land adjacent to the Project site would require its own discretionary approvals and is not reliant on the proposed Project. However, development of the Project site may lead to indirect growth in the Specific Plan area by making available the extension of infrastructure such as water, sewer, drainage, etc. This growth has been planned for and is guided by Specific Plan 208.

The proposed Project would occur within an area currently designated for industrial uses. The proposed Project would not require a General Plan Amendment nor does it require a change in the underlying zoning designation. In addition, the Project reflects the City of Moreno Valley's vision for the area and is consistent with Specific Plan 208. Land uses surrounding the Project site would be in conformance with the City's General Plan and Specific Plan 208. Impacts to population and housing are less than significant; see Section 13 Population and Housing of the Initial Study (Appendix A of the DEIR).

The proposed Project would not eliminate a constraint for development of an approved Project within the City of Moreno Valley. There are no projects in the City of Moreno Valley or surrounding cities that have been approved but are conditioned or dependent on additional improvements

at the Project site. Specific Plan 208 guides land uses surrounding the Project site to ensure compatibility between existing operations and adjacent surrounding development. Additionally, the proposed Project would not add capacity to urban services or infrastructure that would be utilized by other Project proponents in the surrounding area.

The proposed Project would not result in any significant pressure to redevelop the area around the Project site at a higher density. As previously stated, the development of remaining undeveloped land adjacent to the Project site is independent and not reliant on the proposed Project. Therefore, implementation of the proposed Project would not result in redevelopment of adjacent lands at a higher intensity than already prescribed in the City of Moreno Valley's General Plan and Specific Plan 208.

F. SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL CHANGES

Public Resources Code Section 21100(b)(2)(B) and CEQA Guidelines Sections 15126(c), 15126.2(c), and 15127, require that for certain types or categories of projects, an EIR must address significant irreversible environmental changes that would occur should the Project be implemented. As presented at CEQA Guidelines Section 15127, the topic of Significant Irreversible Environmental Changes needs to be addressed in EIRs prepared in connection with any of the following activities:

(a) The adoption, amendment, or enactment of a plan, policy, or ordinance of a public agency;

(b) The adoption by a local agency formation commission of a resolution making determinations; or

(c) A Project which will be subject to the requirements for preparing of an environmental impact statement pursuant to the requirements of the National Environmental Policy Act of 1969, 42 U.S.C. Sections 4321-4347.

The Project does not trigger any of the conditions cited in Guidelines §15127. Nonetheless, this EIR analysis addresses any significant irreversible environmental changes which would be involved in the proposed action should it be implemented [Guidelines, Sections 15126(e) and 15127]. An impact would fall into this category if:

- The Project would involve a large commitment of nonrenewable resources;

- The primary and secondary impacts of the Project would generally commit future generations of people to similar uses;
- The Project involves uses in which irreversible damage could result from any potential environmental incidents associated with the Project; and/or
- The proposed consumption of resources is not justified (e.g., the Project could waste energy).

Determining whether the proposed Project may result in significant irreversible effects requires a determination of whether key resources would be degraded or destroyed in such a way that there would be little possibility of restoring them. The Project site is generally fallow agricultural land with the site historically used for sod farming operations. However, as identified within the City's General Plan, the City anticipates the eventual conversion of agricultural uses to urban uses and the proposed Project would permanently alter the site by converting predominantly agricultural uses to urban uses. This is a significant irreversible environmental change that would occur as a result of Project implementation. Because no significant mineral resources were identified within the Project limits, no significant impacts related to these issues would result from development of the Project site. Natural resources in the form of construction materials would be utilized in the construction of the proposed Project and energy resources in the form of electricity and natural gas would be used during the long-term operation of the Project; however, their use is justified in supporting the City's planned use of the site and is not expected to negatively impact the availability of these resources.

In addition, this industrial warehouse Project, in concert with the other built or approved industrial warehouse projects, will fundamentally change the character and land use pattern of this portion of the City. Many of the Project-specific impacts are addressed, as outlined above, but the change in the use of the land from agricultural to industrial represents a substantial irreversible change for this area. However, this is an intended change a verified by the City's General Plan land use designations and zoning for the area. (DEIR pgs. 5-2 and 5-3)

VI. STATEMENT OF OVERRIDING CONSIDERATIONS

The Moreno Valley City Council adopts this Statement of Overriding Considerations with respect to the significant unavoidable impacts associated with adoption of the Project as addressed in the EIR, specifically:

1. Aesthetics - Scenic Vistas;
2. Aesthetics - Scenic Resources and Scenic Highways;
3. Aesthetics - Existing Visual Character or Quality of Site and its Surroundings;
4. Aesthetics – Cumulative;
5. Agricultural Impacts - Conversion of State Designated Farmland;
6. Agricultural Impacts - Conversion of Farmland to a Non-Agricultural Use;
7. Agricultural Impacts - Cumulative;
8. Air Quality Impact - Air Quality Management Plan Consistency;
9. Air Quality Impact - Equipment Exhaust from Construction-Related Activities;
10. Air Quality Impact - Architectural Coatings;
11. Air Quality Impact - Long-Term Project-Related Emissions;
12. Air Quality Impact - Project-Related Localized Operational Emissions;
13. Air Quality Impact - Cumulative;
14. Land Use and Planning Impact - Conflict with Applicable Land Use Plans, Policies, or Regulations;
15. Land Use and Planning - Impact Cumulative;
16. Transportation Impact - Existing With Project Conditions (Intersection) Traffic and Level of Service;

17. Transportation Impact - Opening Year With Project Conditions (Intersection) Traffic and Level of Service;

18. Transportation Impact - Opening Year 2016 Cumulative With Project Conditions (Intersection) Traffic and Level of Service; and

19. Transportation Impact – Cumulative.

The Moreno Valley City Council hereby declares that, pursuant to CEQA Guidelines Section 15093, the City Council has balanced the benefits of the proposed Project against any significant and unavoidable environmental impacts in determining whether to approve the proposed Project. If the benefits of the proposed Project outweigh the unavoidable adverse environmental impacts, those impacts are considered "acceptable."

The City Council hereby declares that the EIR has identified and discussed significant effects that may occur as a result of the Project. With the implementation of the mitigation measures discussed in the EIR, these impacts can be mitigated to a level of less than significant except for the unavoidable and significant impacts discussed in Section V(C) herein.

The City Council hereby declares that it has made a reasonable and good faith effort to eliminate or substantially mitigate the potential impacts resulting from the Project.

The City Council hereby declares that to the extent any mitigation measures recommended to the City are not incorporated, such mitigation measures are infeasible because they would impose restrictions on the Project that would prohibit the realization of specific economic, social, and other benefits that this City Council finds outweigh the unmitigated impacts.

The City Council further finds that except for the Project, all other alternatives set forth in the EIR are infeasible because they would prohibit the realization of the Project objectives and/or specific economic, social or other benefits that this City Council finds outweigh any environmental benefits of the alternatives or the other alternatives do not substantively reduce the severity of unavoidable and significant impacts.

The City Council hereby declares that, having reduced the adverse significant environmental effects of the Project, to the extent feasible by adopting the proposed mitigation measures, having considered the entire administrative record on the Project and having weighed the benefits of the Project against its unavoidable significant impact after mitigation, the City Council has determined that the social,

economic and environmental benefits of the Project outweigh the potential unavoidable significant impacts and render those potential significant impacts acceptable based on the following considerations:

- The Project will provide development consistent municipal standards, codes and policies;
- The Project provides development that improves and maximizes economic viability of a vacant site by transitioning the Project site into a productive light industrial use;
- The Project creates additional employment-generating opportunities for the City of Moreno Valley and surrounding communities; and
- The Project provides adequate infrastructure and public amenities, including upgrading and widened streets, signal upgrades and utility improvements.

As the CEQA Lead Agency for the proposed action, the City of Moreno Valley has reviewed the Project description and the alternatives presented in the EIR, and fully understands the Project and Project alternatives proposed for development. Further, this Council finds that all potential adverse environmental impacts and all feasible mitigation measures to reduce the impacts from the Project have been identified in the Draft EIR, the Final EIR and public testimony. This Council also finds that a reasonable range of alternatives was considered in the EIR and this document, Section V(E) above, and finds that approval of the Project is appropriate.

This Council has identified economic and social benefits and important policy objectives, Section V above, which result from implementing the Project. The Council has balanced these substantial social and economic benefits against the unavoidable significant adverse effects of the Project. Given the substantial social and economic benefits that will accrue from the Project, this Council finds that the benefits identified herein override the unavoidable environmental effects.

California Public Resource Code 21002 provides: "In the event specific economic, social and other conditions make infeasible such Project alternatives or such mitigation measures, individual projects can be approved in spite of one or more significant effects thereof." Section 21002.1(c) provides: "In the event that economic, social, or other conditions make it infeasible to mitigate one or more significant effects of a Project on the environment, the Project may nonetheless be approved or carried out at the discretion of a public agency…" Finally, California Administrative Code, Title 4, 15093 (a) states: "If the benefits of a proposed Project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered „acceptable.""

The City Council hereby declares that the foregoing benefits provided to the public through approval and implementation of the Project outweighs the identified significant adverse environmental impacts of the Project that cannot be mitigated. The City Council finds that each of the Project benefits outweighs the unavoidable adverse environmental impacts identified in the EIR and, therefore, finds those impacts to be acceptable.

Facts in Support of the Finding (Overriding Considerations). The ProLogis project has four overriding considerations: (1) development consistent with City standards; (2) economic viability; (3) employment generation; and (4) infrastructure improvements.

(1) Consistency with City Goals. The City's Development Review process will assure the proposed development is consistent with the City's General Plan, zoning, and Municipal Code upon approval of the requested General Plan Amendment, Zone Change, and other development applications. The analysis in the DEIR indicates the ProLogis project is generally consistent with the following development goals of the City's General Plan and the requirements of the City zoning code and municipal code for the five environmental issues that were determined to be significant even after implementation of proposed mitigation:

- **DEIR Section 4.1 Aesthetics - Consistency with General Plan Policies.** The project is consistent with Objective 2.5 and Policy 2.5.1 by providing industrial uses near SR-60 and within the FAR limits outlined. The project does not appear to be fully consistent with Policies 2.5.2 and 2.5.3 because it places industrial uses adjacent to lower density residential uses without the typical buffering land uses (e.g., higher density residential or business park). The project is consistent with Policy 2.5.4 as it precludes industrial traffic through residential areas by eliminating Quincy Street south of the new Eucalyptus Avenue road alignment and eliminating the new Encilia Avenue (old Eucalyptus Avenue) west of the Quincy Channel. The project is generally consistent with Objective 2.10 and Policies 2.10.1 through 2.10.5 by providing detailed architectural and landscaping themes for the proposed buildings and grounds, including adjacent to SR-60. The project is consistent with Policies 2.10.7 and 2.10.8 relative to lighting, although the tower accent features at the corners of the buildings may produce new off-site glare. The project appears to be consistent with Policy 2.10.9 as its fences and walls will incorporate landscaping and materials designed to reduce graffiti (see design details in DEIR Appendix K). The project may not be fully consistent with Policy 2.10.11 in terms of buffering for nearby residential uses, although it does comply with the new Municipal Code requirement of a 250-foot

buffer between industrial and residential uses. Policies 2.10.12 and 2.10.13 require screening for parking areas and the project is consistent with that policy.

- **DEIR Section 4.1 Aesthetics -Consistency with Municipal Code Requirements.** The previous analysis indicates the project is not consistent with Objective 7.7 and Policies 7.7.4 and 7.7.5 as it does not fully preserve significant views and vistas, including those along SR-60. Signage will be consistent with Municipal Code requirements so it is consistent with Policy 7.7.3. Finally, the project appears to be consistent with the various Municipal Code requirements for the proposed land uses outlined in Section 4.1.2 related to landscaping, setbacks, parking, storage, etc.

- **DEIR Section 4.2 Agriculture – Consistency with General Plan Policies -** The Moreno Valley General Plan policies and zoning designations support agriculture only as an interim use, and no land in the City is designated solely for agricultural use or for agricultural preservation. Despite this, the proposed zone change would conflict with the existing zone and Primary Animal Keeping Overlay (PAKO) designation for this portion of the project site; however, this change would remove less than one percent of the PAKO-designated land and would not represent a significant loss of land under this overlay designation. Based on the recent trends of urban development in the City, development pressures will eventually lead to the conversion of agricultural land in the City to suburban uses.

  The City's General Plan recognizes that these conversions will eventually occur, and the proposed project is a demonstration of that trend. The proposed project would result in the conversion of Prime Farmland, development of this site and the surrounding area is consistent with the long-term vision of the City as outlined in the General Plan. The Moreno Valley General Plan policies support agriculture as an interim use, and no land in the City is designated for agricultural preservation.

- **DEIR Section 4.3 Air Quality – Consistency with General Plan Policies –** Chapter 9 of the City's General Plan defines goals and policies related to air quality within the City of Moreno Valley. The specific policies of the General Plan that are relevant to the proposed project are as follows:

  - ***Objective 6.7:*** *Reduce mobile and stationary source air pollutant emissions.*

- ***Policy 6.7.1:*** *Cooperate with regional efforts to establish and implement regional air quality strategies and tactics.*
- ***Policy 6.7.5:*** *Require grading activities to comply with South Coast Air Quality Management District's Rule 403 regarding the control of fugitive dust.*
- ***Policy 6.7.6:*** *Require building construction to comply with the energy conservation requirements of Title 24 of the California Administrative Code.*

The proposed project site is located in an urbanizing area of the City along SR-60 which accommodates traffic in the area. In addition, the proposed warehouse uses would be within walking distance of existing homes and commercial areas in the local vicinity. The proposed project will incrementally reduce overall vehicle miles traveled (VMT) in the region by introducing employment into an area (i.e., the City of Moreno Valley) with a low jobs/housing ratio as monitored by the Southern California Association of Governments (SCAG). This reduction in VMT will consequently reduce air pollutant emissions so the project is consistent with City General Plan Objective 6.7 and Policies 6.7.1. Mitigation Measures 4.3.6.2A through 2M to control dust, and Mitigation Measure 4.3.6.5B requires the project to exceed Title 24 energy conservation requirements, so the project is consistent with General Plan Policies 6.7.5 and 6.7.6.

- **DEIR Section 4.8 Land Use and Planning – Consistency with General Plan Policies –** Section 9.2.2 Community Development of the General Plan contains the following goals and objectives:
    - *Goal 2.1: A pattern of land uses which organizes future growth, minimizes conflicts between land uses, and which promotes the rational utilization of presently underdeveloped and undeveloped parcels.*
    - *Goal 2.2: An organized, well-designed, high quality, and functional balance of urban and rural land uses that will meet the needs of a diverse population, and promote the optimum degree of health, safety, well-being, and beauty for all areas of the community, while maintaining a sound economic base.*
    - *Objective 2.1: Balance the provision of urban and rural lands within Moreno Valley by providing adequate land for present and future urban and economic development needs, while retaining the significant natural features and the rural character and lifestyle of the northeastern portion of the community.*

- *Objective 2.5: Promote a mix of industrial uses which provide a sound and diversified economic base and ample employment opportunities for the citizens of Moreno Valley with the establishment of industrial activities that have good access to the regional transportation system, accommodate the personal needs of workers and business visitors; and which meets the service needs of local businesses.*
- *Policy 2.5.1: The primary purpose of areas designated Business Park/Light Industrial is to provide for manufacturing, research and development, warehousing and distribution, as well as office and support commercial activities. The zoning regulations shall identify the particular uses permitted on each parcel of land. Development intensity should not exceed a Floor Area Ratio of 1.00 and the average floor area ratio should be significantly less.*
- *Policy 2.5.2: Locate manufacturing and industrial uses to avoid adverse impacts on surrounding land uses.*
- *Policy 2.5.3: Screen manufacturing and industrial uses where necessary to reduce glare, noise, dust, vibrations and unsightly views.*
- *Policy 2.5.4: Design industrial development to discourage access through residential areas.*

In addition, General Plan Section 9.6.2 Safety Element contains the following applicable objective:

- *Objective 6.6: Promote land use patterns that reduce daily automotive trips and reduce trip distance for work, shopping, school, and recreation.*

The City's adopted General Plan Land Use Map designations for the existing project area largely reflect the existing land use pattern. The northern portion of the proposed project site is designated Business Park/Light Industrial, while the southern area, south of proposed Eucalyptus Avenue, is designated Residential in the City's General Plan. The primary purpose of areas designated Business Park/Light Industrial is to provide for manufacturing, research and development, warehousing and distribution, as well as office and support commercial activities.[18] The proposed project is not consistent with the current General Plan and zoning, and includes a General Plan Amendment (and related Zone Change) so the project will be consistent with the General Plan. Impacts relative to the City's Primary Animal Keeping Overlay (PAKO) are addressed in the discussion of DEIR Section 4.2 Agriculture.

[18] Moreno Valley General Plan. *Chapter 9 Goals and Objectives. Policy 2.5.1*. Pg. 9-7.

General Plan Objective 2.1 and Policy 2.5.1 require a transition of buffer of land uses between residential and industrial uses. In this area, the R5 and R15 zone areas in the southern portion of the site act as a buffer from the BP uses near the freeway and the RA2 residential uses. It should be noted that, while there is an existing transition of land uses from BP to R2 in the vicinity of the project site, it is not the function of either the R-5 or R-15 zones to act as a buffer between non-residential land uses and low density residential uses.

The project provides light industrial uses close to freeway access that will generate short- and long-term employment for the City while minimizing conflicts with existing residential land uses to the southeast through planned changes in the circulation network, so it is consistent with Land Use Goals 2.1 and 2.2, Objectives 2.1 and 2.5, Policies 2.5.1 through 2.5.4, and Safety Objective 6.6. In addition, the proposed project is generally consistent with SR-60 East Corridor Study and can accommodate limited expansions of the Moreno Valley Auto Mall if necessary in the next two years.

- Relative to the City's Housing Element, the proposed project would result in the loss of potential housing units as the General Plan Amendment (GPA) and Zone Change (ZC) request a change to industrial uses. Development of the site as proposed could eliminate as many as 681 housing units from the site, with 80 percent of those units (548) at a density that is generally accepted as helping to promote housing affordability (15 units per acre) on a regional level. The loss of the (max) potential 548 units (R-15 land) from the proposed project would reduce the total potential affordable units from 20,894 to 20,346 or still 2.7 times the RHNA number. The proposed project would not reduce the City's potential pool of affordable housing to below its RHNA number; therefore, it would not create a significant impact related to the City's Housing Element.

- **DEIR Section 4.8 Land Use and Planning – Consistency with the Municipal Code.** Section 9.05, Industrial Districts, of the City Municipal Code requires a minimum 250-foot buffer between residential uses and truck activity areas of industrial uses. The site plan of the proposed project provides a buffer of almost 400 feet from the closest residence to the southeast, so the project is consistent with this adopted land use buffer requirement.

- **DEIR Section 4.11 Transportation – Consistency with General Plan Policies –** The project is consistent with Community Development Policy 2.2.17 because the proposed amendment to the Circulation Element will prevent industrial traffic from traveling through existing residential areas southeast of the site. The project is also consistent with most of the relevant policies of the Circulation Element, including: providing adequate emergency access (Policy 5.1.1); minimizing traffic conflicts (Policies 5.1.2, 5.5.3, and 5.5.4); providing adequate off-street parking (Policy 5.1.3), ADA and Title 24 consistency (Policy 5.1.5); promoting through access (Policies 5.1.6, 5.2.2, 5.3.1, and Objective 5.5); mitigating project-related traffic impacts (Policy 5.5.8); allow for bicycle, pedestrian, and non-vehicular access options (Objective 5.8 and Policy 5.8.4, Objective 5.10 and Policy 5.10.1, Objective 5.11 and Policies 5.11.1 and 5.11.2); and using safe project design procedures (Policies 5.5.5, 5.5.9, and 5.5.10) plus applicable Municipal Code requirements.

  The project is not fully consistent with Objective 5.2 which requires Level of Service C or roadways or Level of Service D on local freeway segments, but will make improvements, pay City Development Impact Fees, and make contributions to the County's Traffic Uniform Mitigation Fee (TUMF) program to offset project impacts, which is consistent with City Policies 5.3.5, 5.3.6, and 5.3.7).

(2) Economic Viability. ProLogis estimates the project would result in a property tax increase from $282,058 in 2013 to $1.4 million at project buildout, representing an increase of $1.2 million. Although a fiscal/economic study was not prepared for the ProLogis project, a comprehensive fiscal study was recently prepared by David Taussig and Associates (DTA[19]) for 41 million square feet of logistics warehousing proposed east of the ProLogis project site. This study indicated that logistics warehousing in Moreno Valley generates a surplus of City revenues versus costs. Since the ProLogis project is also logistics warehousing, it is reasonable to assume similar ratios of revenues and costs as outlined in the DTA study. Based on data in the DTA study, the ProLogis project could be expected to generate a surplus of approximately $330,000 per year to the City at buildout.[20] This estimate is supported by data from a

[19] "Fiscal and Economic Impact Study for the World Logistics Center Specific Plan." David Taussig and Associates, Inc. January 15, 2013. See Appendix C.

[20] The DTA 2013 study estimated a surplus of $6 million for 41 million square feet of logistics warehousing in the City, so the ProLogis project (2.25 million square feet) would generate a surplus of approximately $330,000 using similar data and assumptions. See Appendix A.

similar fiscal study prepared for a recent warehouse project in the City of Perris[21]. That study estimated 1.7 million square feet of warehousing would generate an annual surplus of $216,500 which would equal $331,000 if a similar cost/revenue ratio was applied to the proposed ProLogis project[22].

(3) Employment Generation. ProLogis estimates the project would generate a need for approximately 1,400 temporary construction—related workers[23] and approximately 600 permanent full-time employee positions at buildout of the proposed warehousing.

(4) Traffic and Infrastructure Improvements. The DEIR[24] indicated that the ProLogis project would produce an estimated 4,408 or 37 percent fewer Passenger Car Equivalent or PCE trips per day compared to the site as presently zoned (7,527 trips for ProLogis compared to 11,935 trips under current zoning). Note the PCE calculation takes into account large trucks in the vehicle mix.

ProLogis estimates the proposed project would pay approximately $4.5 million for onsite road improvements including mainly Eucalyptus Avenue as an arterial street. In addition, ProLogis will provide $9.2 million in Development Impact Fees (DIFs) to the City and other agencies in the following categories:

* Moreno Valley Unified School District school impact fees
* Arterial Streets
* Traffic Signals
* Interchange Improvements
* Fire Facilities
* Police Facilities
* City Hall
* Corporate Yard
* Maintenance Equipment
* Transportation Uniform Mitigation Fee (TUMF-separate from DIF)(see below)
* Multi-Species Habitat Conservation Plan (MSHCP-County)
* Riverside County Area Drainage Fee
* Stephen's Kangaroo Rat Habitat Conservation Plan Fee (SKR HCP)
* SR-60/Moreno Beach Drive/Redlands Blvd. Improvement Fee

---

21 Andrew Chang and Company, LLC. Stratford Ranch Industrial Development, Fiscal and Economic Impacts, City of Perris. September 2012. See Appendix D.

22 $216,500 for 1.7 million square feet (Stratford Ranch) is equal to $331,000 for 2.6 million square feet (ProLogis).

23 Estimate of construction-related employees generated by the ProLogis Ontario project, May 2014. See Appendix B.

24 ProLogis trip generation on DEIR Table 4.11.E, page 4.11-15, and existing zoning trip generation outlined on Table 6.B, page 6-9.

* Fair Share for DIF and TUMF improvements per project traffic study
* Santa Ana Watershed Authority (SAWA) mitigation for Quincy Channel impacts
* Eastern Municipal Water District (various – water, sewer, landscaping, etc.)

The ProLogis project will also make a variety of improvements (e.g., utilities, streets) both onsite and in the surrounding area, and offsite improvements, or contributions to needed roadway and intersection improvements, are shown below as summarized from the project Traffic Impact Assessment[25] and as outlined in Mitigation Measures 4.11.6.4A-4F:

Make Improvements or Fully Fund Before Project Opening

- Redlands Boulevard/SR-60 Westbound Ramps – Install traffic signal.
- Redlands Boulevard/Fir Avenue/Eucalyptus Avenue – Install a traffic signal, add a northbound left-turn lane, and add a southbound left-turn lane.
- Moreno Beach Drive/SR-60 Eastbound Ramps – TUMF fee includes interchange.

Make a Fair Share Contribution (Year 2016 Impacts)

- Moreno Beach Drive/SR-60 Eastbound Ramps – TUMF fee contributes to a planned interchange upgrade.
- Moreno Beach Drive/Cottonwood Avenue – DIF fee contributes to the addition of a southbound though lane.
- Moreno Beach Drive/Alessandro Blvd. – DIF fee contributes to the addition of a southbound through lane.
- Redlands Blvd./SR-60 Westbound Ramps – DIF and TUMF fees contribute to installation of a traffic signal and add a northbound through lane.
- Redlands Blvd./SR-60 Eastbound Ramps – TUMF fee contributes to improvement costs.
- Redlands Blvd./Fir Avenue/Eucalyptus Avenue – DIF fee contributes to installation of a traffic signal, adding a westbound right-turn lane, and adding an eastbound left-turn lane. TUMF fee will cover installation of a northbound left-turn lane and a southbound through lane.
- Redlands Blvd./Eucalyptus Avenue – TUMF fee contributes to the addition of a southbound right-turn lane.
- Redlands Blvd./Alessandro Blvd. – TUMF fee contributes to the addition of a southbound left-turn lane.

[25] LSA Associates, Inc. April 24, 2012 as summarized in the ProLogis Draft EIR Section 4.15, Transportation and Traffic.

Make a Fair Share Contribution (Year 2035 Impacts)

- Nason Street/Eucalyptus Avenue – DIF fee will contribute to installation of a northbound right-turn lane and restriping the westbound approach to provide dual left-turn lanes.
- Nason Street/Alessandro Blvd. **–** DIF fee will contribute to installation of an eastbound through lane, westbound through lane, and overlap phasing for the eastbound right-turn lane.
- Moreno Beach Drive/SR-60 Westbound Ramps – TUMF fee contributes to improvements.
- Moreno Beach Drive/SR-60 Eastbound Ramps – TUMF fee contributes to improvements.
- Moreno Beach Drive/Eucalyptus Avenue – DIF fee contributes to traffic signal and various lane improvements/restriping.
- Moreno Beach Drive/Cottonwood Avenue – DIF fee contributes to addition of a southbound lane.
- Moreno Beach Drive/Alessandro Blvd. – DIF fee contributes to various lane improvements and restriping.
- Redlands Blvd./SR-60 Westbound Ramps – DIF fee contributes to installation of a traffic signal.
- Redlands Blvd./SR-60 Eastbound Ramps – TUMF fee contributes to various interchange improvements at this location.
- Redlands Blvd./Fir Avenue/Eucalyptus Avenue – DIF and TUMF fees contribute to installation of a traffic signal and various lane improvements.
- Redlands Blvd./Eucalyptus Avenue – DIF and TUMF fees contribute to installation of a traffic signal and various lane improvements.
- Redlands Blvd./Alessandro Blvd. - DIF and TUMF fees contribute to installation of a traffic signal and various lane improvements.

- **Make a Fair Share Contribution (General Plan Buildout Impacts)(In addition to 2035)**
  - Nason Street/Eucalyptus Avenue – DIF fee will contribute to installation of a northbound right-turn lane and eastbound right-turn lane.
  - Nason Street/Alessandro Blvd. **–** DIF fee will contribute to installation of an eastbound left-turn lane and traffic signal improvements,
  - Moreno Beach Drive/Eucalyptus Avenue – DIF fee contributes to various lane improvements/restriping.

- Moreno Beach Drive/Cottonwood Avenue – DIF fee contributes to addition of a southbound lane.
- Moreno Beach Drive/Alessandro Blvd. – DIF fee contributes to various lane improvements and restriping.
- Auto Mall Drive/Eucalyptus Avenue – DIF fee contributes to installation of a traffic signal.
- Redlands Blvd./Alessandro Blvd. - DIF and TUMF fees contribute to installation of various lane improvements.

If the Encilia Avenue/Quincy Street Connection is Approved, the project will make the following improvements:

- Moreno Beach Drive/Eucalyptus Avenue – DIF fee will contribute to installation of various lane improvements and restriping.
- Redlands Blvd./Fir Avenue/Eucalyptus Avenue – Fair share contribution toward the addition of a southbound right-turn lane.
- Redlands Blvd./Encilia Avenue/Eucalyptus Avenue – DIF and TUMF fees contribute to installation of a traffic signal and various lane improvements.
- Moreno Beach Drive/Encilia Avenue - DIF fee contributes to installation of a traffic signal and various lane improvements.

VII. CERTIFICATION OF THE FINAL ENVIRONMENTAL IMPACT REPORT

The Moreno Valley City Council finds that it has reviewed and considered the FEIR in evaluating the Project, that the FEIR is an accurate and objective statement that fully complies with CEQA and the CEQA Guidelines, and that the FEIR reflects the independent judgment of the City Council.

The City Council declares that no new significant information as defined by CEQA Guidelines Section 15088.5 has been received by the City Council after the circulation of the DEIR that would require recirculation. All of the information added to the FEIR merely clarifies, amplifies or makes insignificant modifications to an already adequate DEIR pursuant to CEQA Guidelines Section 15088.5(b).

The City Council hereby certifies the EIR based on the following findings and conclusions:

A. Findings

1. CEQA Compliance

As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the Findings and supporting documentation. The City Council determines that the Findings contain a complete and accurate reporting of the environmental impacts and mitigation measures associated with the Project, as well as complete and accurate reporting of the unavoidable impacts and benefits of the Proposed Project as detailed in the Statement of Overriding Considerations. The City Council finds that the EIR was prepared in compliance with CEQA and that the City Council complied with CEQA‟s procedural and substantive requirements.

2. Significant Unavoidable Impacts/Statement of Overriding Considerations

The Project will have significant adverse impacts even following adoption of all feasible mitigation measures which are required by the City Council. The following significant environmental impacts have been identified in the FEIR and will require mitigation but cannot be mitigated to a level of insignificance as set forth in Section V(C) of these Findings:

- *Aesthetics Impacts (Scenic Vistas; Scenic Resources and Scenic Highways; Existing Visual Character or Quality of Site and its Surroundings; and Cumulative Impacts)* as a result of substantial change in visual characteristics of the proposed project compared to the existing site and the fact that the site was planned for Business Park and Residential uses and no feasible mitigation measures are available.

- *Agricultural Impacts (Conversion of State Designated Farmland; Conversion of Farmland to a Non-Agricultural Use; and Cumulative Impacts)* due to loss of 82.5 of Prime Farmland and Former Agriculture Activities and there is not an established regional mitigation program available.

- *Air Quality Impacts (Air Quality Management Plan Consistency; Equipment Exhaust from Construction-Related Activities; Architectural Coatings; Long-Term Project-Related Emissions; Project-Related Localized Operational Emissions; and Cumulative Impacts;)* due to the size and

type of project, the proposed project would exceed SCAQMD thresholds and available mitigation would not reduce impacts to less than significant levels.

- *Land Use and Planning Impacts (Conflicts with Applicable Land Use Plans, Policies, or Regulations; and Cumulative Impacts)* due to the proposed project not being consistent with current General Plan land use and zoning designation

- *Transportation Impacts (Existing With Project Conditions (Intersection) Traffic and Level of Service; Opening Year With Project Conditions (Intersection) Traffic and Level of Service; Opening Year Cumulative With Project Conditions (Intersection) Traffic and Level of Service; and Cumulative Impacts.)* due to various mitigation measures being under the jurisdiction of Caltrans and so implementation cannot be guaranteed by the Lead Agency (City).

The City Council has eliminated or substantially reduced environmental impacts where feasible as described in the Findings, and the City Council determines that the remaining unavoidable significant adverse impacts are acceptable due to the reasons set forth in the preceding Statement of Overriding Considerations.

3. Conclusions

a. All potentially significant environmental impacts from implementation of the proposed Project have been identified in the EIR and, with the implementation of the mitigation measures defined herein and set forth in the MMRP, will be mitigated to a less-than-significant level, except for the impacts identified in Section V(C) above.

b. Other reasonable alternatives to the proposed Project that could feasibly achieve the basic objectives of the proposed Project have been considered and rejected in favor of the proposed Project.

c. Environmental, economic, social and other considerations and benefits derived from the development of the proposed Project override and make infeasible any alternatives to the proposed Project or further mitigation measures beyond those incorporated into the proposed Project.

VII. ADOPTION OF MITIGATION MONITORING AND REPORTING PROGRAM

Pursuant to *Public Resources Code* Section 21081.6, the City Council hereby adopts, as conditions of approval of the Project, the Mitigation Monitoring and Reporting Plan (MMRP) set forth in Section 4.0 of the Final EIR. In the event of any inconsistencies between the mitigation measures as set forth herein and the MMRP, the MMRP shall control, except to the extent that a mitigation measure contained herein is inadvertently omitted from the MMRP, in which case such mitigation measure shall be deemed as if it were included in the MMRP.

EXECUTIVE SUMMARY

I. PURPOSE OF STUDY

The objective of this Fiscal and Economic Impact Study (the "Study") is to analyze the fiscal and economic impacts of the proposed development of the World Logistics Center (the "Center") on the City of Moreno Valley ("City") and the County of Riverside ("County"). The Center is comprised of 41.4 million building square feet of high-cube industrial land use, 200,000 building square feet of general warehouse space, and 3,000 building square feet of light retail space for the sale of fuel, food, and convenience items. The Study analyzes the recurring fiscal impacts of the Center's development on the City General Fund, and also identifies the general economic impacts on the City in terms of employment, gross receipts, and earnings creation for City residents and workers.

II. TYPES OF FISCAL AND ECONOMIC IMPACTS TO CITY OF MORENO VALLEY EVALUATED IN THE STUDY

A. FISCAL IMPACTS ON CITY OF MORENO VALLEY GENERAL FUND

The purpose of the fiscal analysis component of this Study is to estimate the net fiscal impacts of the Center's proposed development and construction on the City General Fund. The fiscal impacts identified in this Study include recurring municipal revenues and costs to the City General Fund that result from the land use scenario analyzed. City General Fund revenues are generated from a variety of revenue sources, including property taxes, sales taxes, fees, and fines. Costs to the City General Fund are associated with a variety of services, such as police protection, fire protection, public works maintenance, and general government services.

B. ECONOMIC IMPACTS ON CITY OF MORENO VALLEY

The Study also identifies the general economic impacts on the City that would occur and quantifies these impacts wherever possible. General economic impacts include additions to the City's employment (number of average annual full- & part-time jobs), economic output (e.g., gross receipts), and earnings (the sum of wages, salaries and benefits, other labor income, and employer and employee contributions to social security). The Study also distinguishes between one-time impacts and permanent impacts. One-time impacts include benefits to the City that occur on a non-recurring basis as a result of construction activity, while permanent impacts refer to benefits that occur on a continuing basis, year after year.

III. DESCRIPTION OF WORLD LOGISTICS CENTER

The World Logistics Center (the "Center") is located in the County of Riverside and is comprised of approximately 41.6 million building square feet of industrial land use. The specific land uses are broken down into three categories: Logistics Development ("LD"), Light Logistics ("LL"), and Logistics Support ("LS"). The LD category covers 2,636 acres and is designated for high-cube logistics uses. Traffic analyses presume that buildings in this area will be a minimum of 500,000 square feet in size. The Center includes up to 41.4 million square feet of logistics uses in the LD category.

Correspondingly, the LL category covers 29 acres and is designated for general warehouse uses. There is no minimum building size in this category. The Center's Specific Plan ("Specific Plan") permits up to 200,000 square feet of general warehouse space in the LL category. The LS category will be allocated 3,000 square feet of building area and will be a "floating site" in the Specific Plan; the final site will be determined when development plans/tentative maps are designed. LS will accommodate fueling facilities, fast food, and convenience retail.

The Center is located in Rancho Belago, California, at the eastern edge of the City of Moreno Valley (the "City"). The Center will require the construction of significant new infrastructure, financed through public and/or private funds, to be ultimately owned by the City and maintained by the City's General Fund. At this time, it is estimated that these public infrastructure improvements will consist of 54 lane miles of roadways, 75 acres of landscaped parkways and medians, 4 signalized intersections, 699 streetlights, 18.1 linear miles of storm drains, and 17.2 linear miles of sidewalks/trails. Please refer to **Table 2E** for further information on these public improvements.

IV. CONCLUSIONS OF ANALYSIS RELATED TO CENTER

Following are the major conclusions related to the fiscal and economic impacts of the Center:

A. FISCAL IMPACTS

As reflected in **Table A** and **Figure A** below, the positive Net Fiscal Impact is estimated to be $5,999,678 annually, based on $11,560,771 in fiscal revenues and $5,561,094 in fiscal costs. The fiscal surplus results primarily from property tax in lieu of VLF revenues (40.1% of total) and property tax revenues (secured and unsecured) (31.9%), together constituting approximately 72.0% of total recurring revenues to the City General Fund. The Annual Revenue/Cost Ratio of 2.08 is especially impressive, and demonstrates, inter alia, that the Center will have a very positive impact on the City's General Fund. In comparison, the City's General Fund currently runs a Revenue/Cost Ratio of ~0.94. Notably, the City's costs are limited due to the fact that the Center will not create any new residents, i.e., it is a purely industrial development.

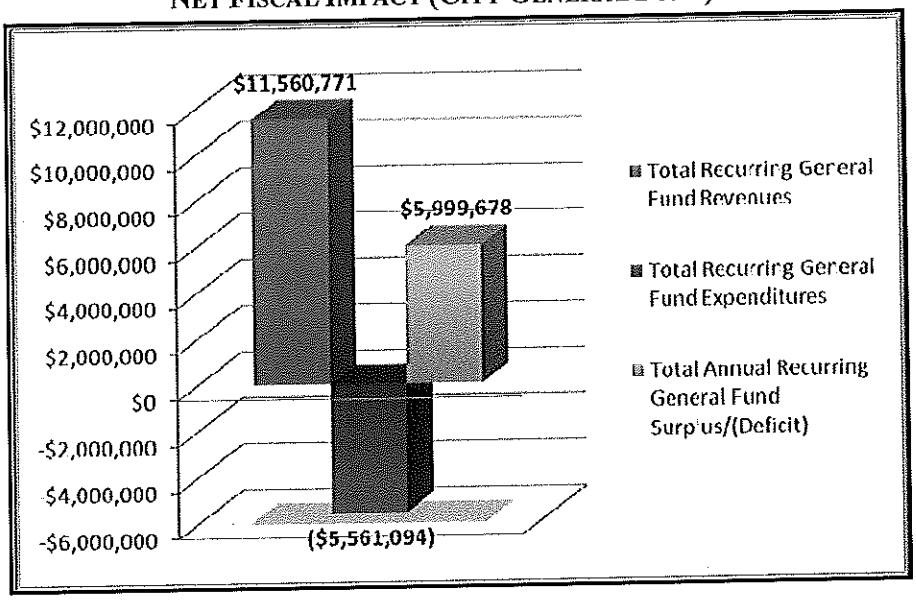
TABLE A
NET FISCAL IMPACT (CITY GENERAL FUND)

Category	Amount
Total Recurring Revenues	$11,560,771
Total Recurring Costs	($5,561,094)
Annual Recurring Surplus/(Deficit)	**$5,999,678**
Total Annual Revenue/Cost Ratio	*2.08*

Resolutic **Item No. E.6**
Date Adopted: June 24, 2014

FIGURE A

NET FISCAL IMPACT (CITY GENERAL FUND)



B. ECONOMIC IMPACTS

As noted previously, the economic impacts of the Center that are analyzed within the Study are (1) Permanent Employment – direct-on-site and indirect/induced (which supplies or supports direct employment); (2) Permanent Output (Gross Receipts) – total direct output *plus* output produced by suppliers and employee spending; and (3) One-Time Construction Impacts. As reflected in **Tables B** and **C** below, the City's Permanent Employees and Permanent Gross Receipts, as well as its One-Time Construction Employees, Gross Receipts, and Gross Earnings are all substantially higher following Center development.

1. PERMANENT (RECURRING) EMPLOYMENT, WAGES, AND GROSS RECEIPTS

TABLE B

(ALL NUMBERS SUBJECT TO ROUNDING)

Recurring Impact	Direct	Indirect/Induced	Total
Employees			
Countywide	20,808	7,569	28,377
Within City	20,808	3,785	24,593
Employee Wages			
Countywide	$881 Million	$307 Million	$1.2 Billion
Within City	$881 Million	$154 Million	$1.0 Billion
Overall Output			
Countywide	$1.5 Billion	$891 Million	$2.4 Billion
Within City	$1.5 Billion	$446 Million	$2.0 Billion

2. CONSTRUCTION (ONE-TIME) EMPLOYMENT, WAGES, AND GROSS RECEIPTS

TABLE C
(ALL NUMBERS SUBJECT TO ROUNDING)

Recurring Impact	Direct	Indirect/Induced	Total
Construction Employees			
Countywide	13,123	7,610	20,733
Within City	13,123	3,805	16,928
Construction Wages			
Countywide	$641 Million	$309 Million	$950 Million
Within City	$641 Million	$154 Million	$795 Million
Construction Output			
Countywide	$1.7 Billion	$955 Million	$2.7 Billion
Within City	$1.7 Billion	$477 Million	$2.2 Billion

Given a buildout period of approximately 10 years, with projected even absorption, the construction of the Center will create approximately 1,300 full-time equivalent ("FTE") direct annual construction/one-time jobs in the City.

3. OTHER IMPACT CONCLUSIONS

TABLE D

Jobs-Housing Balance	Balance with Center	% Increase /(Decrease)
Countywide	0.74	5.15%
Within City	0.92	97.90%

Although the Center is expected to demand a high level of public infrastructure, the Center is also expected to generate sizeable revenues to the City of Moreno Valley. As **Tables A, B, C,** and **D** illustrate, the Center's logistics component is expected to generate sizeable, substantial, and lasting employment, wage, output, and revenue impacts. Accordingly, it is critical that the Center's high property and sales tax generating logistics uses be entirely built out to ensure that the Center generates the benefits as forecasted in this Study.

SECTION 1 INTRODUCTION

David Taussig and Associates, Inc. ("DTA") has been engaged by Highland Fairview to prepare a Fiscal and Economic Impact Study (the "Study") that evaluates the likely fiscal and economic impacts of the proposed development and construction of the Center on the City of Moreno Valley (the "City"). The impact of the Center on the City's General Fund was thoroughly analyzed, although City enterprise and special funds were not explicitly considered within the Study.

I. SCOPE AND METHODOLOGY

A. RECURRING FISCAL IMPACTS

Fiscal impacts arising from a land development plan can be broadly categorized as one of two types: one-time impacts or recurring impacts. Each of these broad types may, in turn, be divided into a revenue component and a cost component. For purposes of this Study, it has been assumed that one-time revenues would directly offset one-time costs; thus, the fiscal impacts considered in this Study focus on ongoing, or recurring, fiscal impacts of the Center on the City General Fund. To the extent that revenues are generated outside of the City's General Fund (e.g., special district revenues) or costs are incurred by the City outside of the General Fund (e.g., costs financed through a special district), they are not included within this fiscal analysis.

As previously mentioned, the fiscal impacts projected for the Study are based generally on the *Multiplier Methodology.* The primary *Multiplier Methodology* used to project the fiscal impacts in this Study was the *Per Capita-Employee ("Persons Served") Methodology.* The Persons Served Methodology considers the fact that the exact relationship of service demands and revenue-generating potential between residents and employees is difficult to measure. Thus, utilizing a service population, or Persons Served population, comprised of all residents and 50% of employees is common fiscal practice, and suggests that a resident generally has twice the fiscal impact of an employee. This methodology involves calculating the *average City-wide* revenues/costs per Persons Served, utilizing the fiscal year 2012-2013 City budget, and applying these revenue/cost factors to the specific number of Persons Served projected for the Center.

DTA also used a *Per Employee Methodology* in the Study to project recurring fiscal factors based on employment only, such as business license tax revenues. Similar to the Persons Served Methodology discussed above, the Per Employee Methodology involves calculating the *average City-wide* revenues/costs per employee, utilizing the fiscal year 2012-2013 City budget, and applying these factors to the specific number of employees projected under the given scenario.

While most recurring revenues analyzed in the Study are projected using the *Multiplier Methodology,* some major revenue sources, including property taxes and sales taxes, are calculated using a *Case Study Methodology* that involves calculating the *marginal revenues* to be specifically generated by a particular land use, instead of applying an *average City-wide* revenue factor. For purposes of the Study, all recurring revenues and costs are stated in constant (un-inflated) 2012 dollars, based on the assumption that the relative impacts of inflation in future years will be the same for both of these fiscal impact categories.

B. GENERAL ECONOMIC IMPACTS

The Study also identifies the general economic impacts on the City that would occur due to the Center, and quantifies these impacts wherever possible. General economic impacts include additions to the City's employment (number of average annual full- & part-time jobs), economic output (e.g., gross receipts), and earnings (the sum of wages, salaries and benefits, other labor income, and employer and employee contributions to social security). The Study also distinguishes between one-time economic impacts and permanent economic impacts. One-time impacts include benefits to the community that occur on a non-recurring basis as a result of construction and development activity, while permanent, recurring impacts refer to benefits that occur on a continuing basis, year after year. Additionally, for purposes of the Study, all economic impacts are stated in constant (un-inflated) 2012 dollars, based on the assumption that the relative impacts of inflation in future years may be difficult to gauge.

In evaluating economic impacts, the Study quantifies both direct and indirect/induced economic impacts on the City. Direct economic impacts reflect the initial or first-round increases in jobs, earnings, and output, all of which occur directly on-site. Indirect/induced economic impacts are the secondary and other additional rounds of economic activity that occur as a consequence of the direct impacts, and can occur elsewhere within the City. The **indirect** impacts represent the economic activity – buying and selling of goods and services – of *suppliers* to the land use types analyzed. In this Study, suppliers to the Center consist primarily of maintenance and repair professionals, utilities' providers, wholesale trade companies, and business support services; while suppliers to retail/office developments consist mainly of real estate firms, computer and other technology firms, accounting and bookkeeping professionals, and utilities' providers. Furthermore, the suppliers representing the indirect one-time impacts are mainly heavy industrial and construction suppliers for the actual development of buildings and facilities. The **induced** impacts represent the economic activity that results from household spending by *employees* of all companies directly and indirectly affected by the construction and operation of the land uses analyzed in this Study. Indirect and induced impacts can occur throughout all industries of the economy, and have been categorized using the North American Industry Classification System (NAICS). Adopted by the Office of Management and Budget (OMB) in 1997 to replace the Standard Industrial Classification System (SIC), NAICS is a widely-used system to classify business establishments for the collection, analysis, and publication of statistical data in Canada, Mexico, and the United States. NAICS industries are identified using a six-digit coding system to classify all economic activity into twenty broad sectors, five of which are mainly goods-producing sectors and fifteen of which are services-producing sectors. This six-digit hierarchical structure allows for the identification of nearly 1,170 industries. The broad NAICS sectors include the Construction, Retail Trade, and Administrative and Support Services classifications, which are the focal NAICS categories analyzed within this Study to determine the indirect and induced economic impacts generated under the analysis.

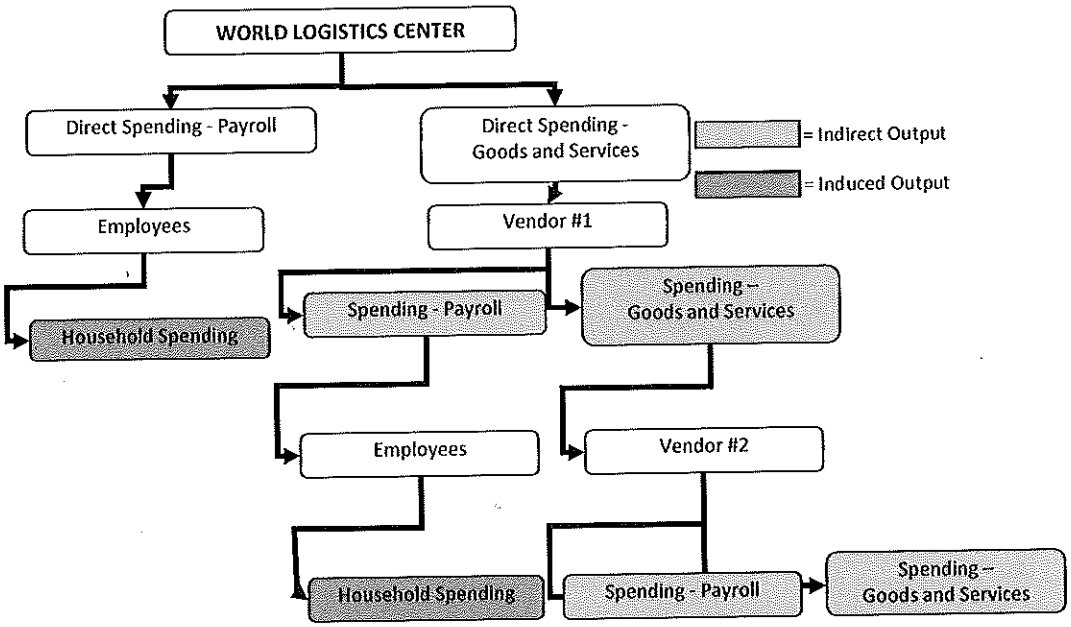
(i) IMPLAN MULTIPLIER METHOD

Although most economists agree that indirect and induced, or "multiplier" effects exist, most economists also agree that such effects are difficult to measure. Patterns on spending and employment among suppliers and employee households often vary over

time and from one region to another. Nevertheless, there are certain input-output models that can be used to estimate indirect and induced effects.

In quantifying the indirect and induced economic impacts for the Study, DTA utilized the Impact Analysis for Planning ("IMPLAN") Input/Output Modeling System, a type of quantitative economic model that provides an approximate measure of the "multiplier effect" of a firm's spending on payroll and the purchasing of goods and services. Like similar econometric models, IMPLAN helps to calculate the flow of payments for goods and services across different industry sectors, and between households and industries. The IMPLAN model can be envisioned simply as a large spreadsheet with hundreds of industries (plus the household sector) arrayed across the top as producers, and the same industries and households listed down the side as consumers. Each million dollars (output) in spending by any one consumer (i.e. the Center) is allocated across the producing industries from which it buys goods and services. These producing industries, in turn, spend money buying goods and services from their own distinct sets of suppliers. Thus, the IMPLAN multiplier model allows one to gauge the effect on each dollar an industry spends as it diffuses through a regional economy. Furthermore, it allows one to translate the overall regional impact of spending into jobs and employee compensation. Please refer to **Table 1** for a diagram of the multiplier effect.

TABLE 1
EXAMPLE OF THE MULTIPLIER EFFECT (INDIRECT AND INDUCED OUTPUT)



The multiplier factors available to determine indirect/induced impacts are intended to reflect impacts for entire areas within a zip code. Therefore, the indirect/induced impacts identified in this Study to occur within the City boundaries are based on assumptions established by DTA and are subject to change. Please refer to **Appendix B** for further information.

II. LIMITATIONS

A. ACCURACY OF INFORMATION

The fiscal and economic models in the Study contain an analysis of revenues, costs, and impacts to the City resulting from the Center. These models are based on both (i) information provided to DTA by Highland Fairview staff and (ii) certain DTA assumptions taken from DTA's municipal cost database, as compiled by DTA from previous fiscal impact studies prepared by the firm. The sources of information and basis of the estimates calculated in the Study are stated herein. While DTA is confident that the sources of information are reliable, DTA does not express an opinion or any other form of assurance on the accuracy of such information. The analysis of fiscal impacts contained in this report is not considered to be a "financial forecast" or a "financial projection" as technically defined by the American Institute of Certified Public Accountants. The word "projection" used within this report relates to broad expectations of future events or market conditions. Since the analyses contained herein are based on estimates and assumptions that are inherently subject to uncertainty and variation depending on evolving events, DTA cannot represent that such estimates will definitely be achieved. Some assumptions inevitably will not materialize, and unanticipated events and circumstances may occur; therefore, the actual results achieved may vary from these projections stated throughout the Study.

SECTION 2 DESCRIPTION OF RECURRING FISCAL REVENUES/COSTS

The following section presents the recurring revenue and cost impacts to the City General Fund and the methodology and assumptions utilized in the Study to project these impacts. Detailed numerical analyses of the revenue and cost impacts subsequently discussed in this section are contained in **Appendix A.**

I. ANALYSIS OF RECURRING REVENUES

CASE STUDY METHOD:

A. PROPERTY TAXES – SECURED AND UNSECURED

Property tax revenues are conservatively projected based on the City's estimated share of the general 1% property tax levy. Total secured property tax revenues received by the City from the land uses will equal approximately 8.97% of the basic 1% property tax levy from the Tax Rate Areas ("TRAs") encompassing the Center. Please note that the gross tax increment, as calculated by the Riverside County (the "County") Auditor-Controller, has been reduced to account for the projected Education Revenue Augmentation Fund ("ERAF") property tax shifts. Please refer to **Table 2A** below and **Exhibit 4** of **Appendix A** for details regarding the secured and unsecured property tax assumptions utilized in the fiscal impact analysis.

Unsecured property taxes are levied on tangible personal property that is not secured by real estate. Examples of unsecured property includes trade fixtures (e.g., manufacturing equipment and computers), as well as airplanes, boats, and mobile homes on leased land. In generating the fiscal impact models for this Study, DTA has assumed that unsecured property values average 10.00% of the secured value for non-residential land uses.

(1). ANNEXATION

According to the Riverside County Local Agency Formation Commission ("Riverside County LAFCO"), the Master Property Tax Transfer Agreement for the County of Riverside and the City of Moreno Valley (the "Property Tax Agreement") will determine the tax apportionment factors for the proposed annexation of elements of the Center to the City. Only one (1) parcel is to be annexed per the Specific Plan, however, this analysis still assumes that the annexation of this parcel will be carried out according to the terms of that agreement. Please refer to **Appendix C** for further information regarding that parcel. As the vast majority of elements of the Center are currently within the City, the overall TRA breakdown described above is weighted both by TRA, subject to the Property Tax Agreement, and acreage.

Of the property tax apportionment that is currently dedicated to the County's General Fund, 25% will be allocated to the City's General Fund upon annexation of the Center to the City, while the remaining 75% will be remitted to the County to pay for services that the County provides to City residents. For a detailed breakdown of the tax sharing assumptions, please refer to **Exhibit 4** of **Appendix A.**

B. PROPERTY TRANSFER TAX

Per California Revenue & Taxation Code §11901, *et seq.* and the Moreno Valley Municipal Code §3.22.020, sales of real property are taxed by the County at a rate of $1.10 per $1,000 of property value, whereas for property located in the City, the property transfer tax is divided equally between the City and the County, with the City receiving $0.55 per $1,000 of transferred property sale or resale value, excluding assumed liens or encumbrances. Per typical baseline assumptions, DTA assumes that non-residential development changes ownership at an average rate of 5% per year, and that continuing liens and encumbrances are insignificant.

C. PROPERTY TAX IN-LIEU OF VEHICLE LICENSE FEE

The passage of Proposition 1A in California in 2004 enacted a constitutional amendment that introduced a new methodology to calculate property taxes in-lieu of VLF. Per California Revenue and Taxation Code §97.70, the property tax in-lieu of VLF amount now grows in proportion to the growth rate of gross assessed valuation in a city or county. Property taxes in-lieu of VLF revenues are projected to grow with the change in the City-wide gross assessed valuation of taxable property from the prior fiscal year. Property tax in-lieu of VLF revenues constitute an addition to other property tax apportionments and were calculated for purposes of this Study at $1.26 per $1,000 increase in assessed valuation on a City-wide basis. Please refer to **Table 2A** below and **Exhibit 4** of **Appendix A** for details regarding the property tax assumptions utilized in the fiscal impact analysis.

TABLE 2A – PROPERTY TAX ASSUMPTIONS

Property Tax Assumptions	
Property Tax	
Industrial Sales Price / Square Foot	$90.00
Retail Sales Price / Square Foot	$200.00
Secured Property Tax – Net Apportionment Factor to the City of Moreno Valley as a Fraction of 1.0% Property Tax Rate (Net of ERAF)	8.97%
Unsecured Property Tax – Unsecured Taxes as a % of Secured Property Value	10.00%
Property Transfer Tax	
Non-Residential Property Turnover Rate	5.00%
Transfer Tax as a % of Price	0.11%
Property Transfer Tax Passed Through to City	50.00%
Property Tax In-Lieu of VLF	
City of MV – Total Assessed Value (FY 2011-2012)	$10,445,118,397
City of MV – VLF Prop. Tax In-Lieu Revenues (FY 2012-2013)	$13,195,000
VLF Property Tax In-Lieu per $1,000 Assessed Value	$1.26

D. MOTOR VEHICLE LICENSE FEES

(I). BACKGROUND

Prior to June 1, 2004, the Motor Vehicle License Fee ("VLF") tax rate was equal to 2.00% of the value of a vehicle, with 0.65% paid by the vehicle owner and an additional 1.35% supplemented with a backfill from the State General Fund. A large portion of those funds was allocated to cities (42.50%) and counties (42.50%) based on population, while newly-incorporated cities received an additional population subvention based on three (3) times the number of registered voters for the first seven (7) years after incorporation.

As discussed earlier, in 2004, the VLF allocation was altered. The California Legislature implemented the "VLF Swap" in which the VLF was lowered to 0.65%. The resultant loss of city revenue was swapped with an augmentation of property tax, termed property tax in-lieu of VLF. These amounts grow annually based on the annual increase in assessed value within each respective jurisdiction (see above).

(II). SUPPLEMENTAL LAW ENFORCEMENT FUNDING ("SLESF") AND OTHER STATE LAW ENFORCEMENT GRANTS

As a part of the 2009 state budget agreement, a number of law enforcement grant programs previously funded by the state general fund were instead funded in fiscal year ("FY") 2009-10 and FY 2010-11 by a temporary 0.15% state VLF increase, which ended on June 30, 2011. The additional 0.15% VLF rate was intended to generate around $500 million annually – the tax generated $414 million in FY 2009-10 and $442 million in FY 2010-11.

(III). SENATE BILL (SB) 89 - FEES SHIFTED TO FUND STATE LAW ENFORCEMENT GRANTS

SB89, signed in 2010 by Governor Brown, effectively eliminates the 0.65% VLF revenue that was being allocated as a general fund revenue source to California cities. Provisions in SB89 shift hundreds of millions of VLF revenues to fund the state law enforcement grants beginning FY 2011-12. The SB89 plan operates as follows:

- The "Vehicle License Registration Fee" is increased by $12 to produce approximately $300 million in FY 2011-12. This fee will fund state DMV vehicle license registration operations, thereby "freeing up" $300 million of VLF revenue that had been used to fund DMV operations. This money will be transferred to a new Local Law Enforcement Services Account ("LLESA)" to fund the law enforcement grants.

- In addition, beginning July 1, 2011, SB89 transfers the remaining VLF revenue (after the Local Revenue Fund allocation for county health and welfare programs) previously allocated to cities and the County of Riverside to the LLESA.

SB89 takes $130 million of city general revenue and shifts it to save state law enforcement grant programs. Less than $100 million of these grant funds will come back to cities, earmarked for police services. But these funds will likely be offset by the loss of city VLF. Therefore, VLF (as

opposed to property tax in-lieu of VLF) revenue was not analyzed as a Center revenue source in this Study.

E. SALES AND USE TAXES

Direct sales tax revenues are generated by retail sales from businesses within City limits, with 1% of taxable sales receipts passed through to the City. **Exhibit 5** of **Appendix A** reflects taxable sales receipts per square foot for each on-site non-residential land use type, based on data from the *Urban Land Institute's Dollars & Cents of Shopping Centers (2008)* publication and total taxable sales receipts for the Center, based on information provided by Highland Fairview and the City.

Indirect sales tax revenues, as summarized in **Exhibit 5** of **Appendix A**, are generated by the purchases made by the Center's employees within the City. Based on studies outlined in the *International Council of Shopping Centers' Office Worker Local Retail Spending Patterns,* DTA assumed that each on-site employee spends nearly $4,168 annually within the City.

TABLE 2B – SALES TAX ASSUMPTIONS

Sales Tax Assumptions	
% Sales Tax Passed Through to City of MV	1%
Local Employee Spending (Annual)	$4,168
Capture Rate of Employee Spending (within City of MV)	*50%*
Displacement Rate (of existing taxable sales within City)	*20%*
Taxable Sales per Square Foot – Retail	$250

F. INVESTMENT INCOME REVENUES

Investment Income revenues are generated by the increase in General Fund Revenues resulting from the Center. This increase reflects growth in the following revenue categories: property taxes, sales taxes, and multiplier revenues (as discussed below).

Revenues from this source are estimated by multiplying the Projected Recurring General Fund Revenues Available for Investment of $11,537,696 by the Local Agency Investment Fund ("LAIF") investment fund rate of return of 0.40% by the LAIF Percentage of Earnings Cost factor of 50%. This calculation results in estimated Investment Income (less Earnings Cost) of $23,075 (which when added to $11,537,696 equals $11,560.771). LAIF factors are determined quarterly by the California State Treasurer whose office governs the investment of revenues by municipalities.

Please refer to **Table 2C** below and **Exhibit 6** of **Appendix A** for details regarding the investment income assumptions utilized in the fiscal impact analysis.

TABLE 2C – INVESTMENT INCOME ASSUMPTIONS

Investment Income Assumptions	
Investment Period for Recurring Non-Interest General Fund Revenues	12 Months
Local Agency Investment Fund (LAIF) Rate of Return	0.40%
Local Agency Investment Fund (LAIF) Percentage of Earnings	50%
Projected Recurring General Fund Revenues Available for Investment	$11,537,696

MULTIPLIER METHOD:

G. OTHER TAX REVENUES

The Utility Users Tax ("UUT") and the Transient Occupancy Tax ("TOT") were forecasted at $59.85 per Persons Served using the *Per Capita-Employee Multiplier Method.* Please note that this revenue multiplier has been reduced by 25% to account for only the portion of the UUT and TOT revenues that are expected to be variable with population and employee growth in the City. Historically, UUT is one of the General Fund's largest revenue sources, as well as one of the most stable due to trends in the natural gas, wireless telephone, and cable industries.

H. BUSINESS RECEIPTS TAX & LICENSES

Business Receipts Tax and Business Licenses revenues to the City General Fund are anticipated to grow due to employment growth only. Therefore, Business Receipts Tax and Business Licenses revenues were projected at $59.63 per Employee using the *Per Employee Multiplier Method.* However, the future addition of new retail businesses will have a particularly positive effect on the Business Receipts Tax.

I. FRANCHISE TAXES

Franchise Taxes, including Cable TV, Sewer, etc., were forecasted at $24.81 per Persons Served using the *Per Capita-Employee Multiplier Method.*

J. LICENSES AND PERMITS

Licenses and Permits are based on the City's collection of fees for various types of permits and community programs. Revenues are forecasted using a *Per Capita-Employee Multiplier Method* that results in a total multiplier of $5.69 per Persons Served.

K. INTERGOVERNMENTAL REVENUES

Intergovernmental Revenues are forecasted using a *Per Capita-Employee Multiplier Method* that results in a total multiplier of $6.00 per Persons Served.

L. CHARGES FOR CURRENT SERVICES

Current Services, including parking control fees, plan check fees, and inspections fees, were projected at $38.12 per Persons Served, based on the *Per Capita-Employee Multiplier Method.*

M. USE OF MONEY AND PROPERTY (NON-INTEREST REVENUES)

Use of Money and Property Revenues, including Park and Community Building Rentals, were forecasted at $0.25 per Persons Served using the *Per Capita-Employee Multiplier Method.*

N. FINES AND FORFEITURES

This revenue category represents fines and penalties collected by the City for various infractions, including Vehicle, Code, and certain Parking Fines. Fines and Forfeitures were forecasted at $0.64 per Persons Served using the *Per Capita-Employee Multiplier Method.*

O. TRANSFERS IN

Direct cost of development related services and all development services revenue are budgeted in special funds, and the portion of the fee revenues that are attributable to overhead costs are shown as a transfer into the General Fund to reimburse the City for general support. Transfers In revenue is forecasted at $0.37 per Persons Served, using the *Per Capita-Employee Multiplier Method.*

P. OTHER REVENUE

Other Revenues, including Miscellaneous Revenues, Donations, and Mandated Cost Reimbursements, were projected at $1.21 per Persons Served utilizing the *Per Capita-Employee Multiplier Method.*

TABLE 2D – OTHER GENERAL FUND REVENUES (MULTIPLIER METHOD)

Category	Amount	Methodology
Other Tax Revenues	**$59.85**	Persons Served plus 25% Discount
Business Receipts Tax & Licenses	**$59.63**	Per Employee
Franchise Taxes	**$24.81**	Persons Served
Licenses and Permits	**$5.69**	Persons Served
Intergovernmental Revenues	**$6.00**	Persons Served
Charges for Current Services	**$38.12**	Persons Served
Use of Money and Property (Non-Interest Revenues)	**$0.25**	Persons Served
Fines and Forfeitures	**$0.64**	Persons Served

Category	Amount	Methodology
Transfers In	**$0.37**	Persons Served
Other Revenues	**$1.21**	Persons Served

Please refer to **Exhibit 7** of **Appendix A** for more details on the case study assumptions and revenue multipliers utilized in the Study.

II. ANALYSIS OF RECURRING COSTS

CASE STUDY METHOD:

A. INFRASTRUCTURE AND PARKS MAINTENANCE

The Center will require the construction of new infrastructure to be ultimately owned by the City and maintained by the City's General Fund. At this time, it is estimated that these public infrastructure improvements will consist of 54 lane miles of roadways, 75 acres of landscaped parkways and medians, 4 signalized intersections, 699 streetlights, 18.1 linear miles of storm drains, and 17.2 linear miles of sidewalks/trails. Notably, other improvements to be maintained by other City Funds, i.e., Enterprise Funds, Special Funds, etc., were disregarded for purposes of this Study.

These improvements were multiplied by estimated annual cost figures for each category derived from the DTA Public Works Database, resulting in annual Infrastructure and Parks Maintenance costs of $1,839,878.

Finally, Measure A funding – a half-cent sales tax for roadway funding administered by the Riverside County Transportation Commission – was incorporated, based on the percentage of total Measure A funds allocated to the City of Moreno Valley. Following a $21,997 Measure A set-off, the annual Infrastructure and Parks Maintenance forecast is $1,817,881.

TABLE 2E – INFRASTRUCTURE/PARKS REQUIREMENTS (CASE STUDY METHOD)

Infrastructure/Parks to be Maintained by City General Fund	Quantity	Cost/Unit
Roadways (Lane Miles)	**54**	**$7,834**
Signalized Intersections	**4**	**$4,938**
Street Lights	**699**	**$126**
Parkways/Medians (Acres)	**75**	**$14,953**
Storm Drains (Lineal Miles)	**18.1**	**$1,177**
Sidewalks/Trails (Lineal Miles)	**17.2**	**$3,497**

B. General Government Costs

General Government costs are projected at a marginal rate of 7.58% of the City General Fund recurring costs, based on the assumption that the FY 2012-2003 General Government expenditures, equaling $7.1 million, will remain at the same relative proportion of the FY 2012-2013 City General Fund non-governmental expenditures of approximately $70.0 million in future years. The current percentage of General Government expenditures to City General Fund non-governmental expenditures is approximately 10.1%; however, these General Government costs are not expected to increase on a one-for-one basis as a result of the land use development depicted in this Study. Therefore, this Study assumes that General Government costs increase at an estimated marginal rate of 75%, or 7.58%, of the existing General Government cost overhead rate. This approach results in annual General Government costs of $391,956.

MULTIPLIER METHOD:

C. Police and Fire Protection

Police services include those costs associated with Law Enforcement and Patrol, Administration, Traffic Enforcement, Crime Prevention, Volunteer Programs, and Community-Based Policing. Police Services costs are forecasted at $196.20 per Persons Served using the *Per Capita-Employee Multiplier Method.* Fire services include those costs associated with Fire Suppression, Fire Prevention, Equipment and Vehicles, Outreach, and Training. Fire Services costs are forecasted at $72.84 per Persons Served using the *Per Capita-Employee Multiplier Method.*

D. Animal Services

Animal Control Services costs were projected at $4.70 per Persons Served using the *Per Capita-Employee Multiplier Method.* Please note that this cost multiplier has been reduced by 50% to account for only the portion of Animal Services costs that are expected to be variable with population and employee growth in the City.

E. Development Services

Development Services costs, including elements of the Planning and Building Divisions, Land Development services, and certain Public Works (non-overhead/department) services related to new growth, were forecasted at $20.87 per Employee using the *Per Capita-Employee-Multiplier Method.*

F. Other Uses

Other Uses costs, including Records Management, Sign Programs, and the Office of Emergency Management and Volunteers, were forecasted at $6.27 per Persons Served based on the *Per Capita-Employee Multiplier Method.* Please note that this cost multiplier has been reduced by 50% to account for only the portion of Other Uses costs that are expected to be variable with population and employee growth in the City.

G. COMMUNITY DEVELOPMENT

Community Development costs, including certain costs associated with existing City Planning and Building Safety, were forecasted at $4.17 per Persons Served based on the *Per Capita-Employee Multiplier Method.* Please note that this cost multiplier has been reduced by 50% to account for only the portion of Community Development costs that are expected to be variable with population and employee growth in the City.

H. PUBLIC WORKS – OVERHEAD/DEPARTMENT COSTS

Public Works costs, including Administration, Engineering, and Operations and Maintenance expenses, were projected at $10.79 per Persons Served using the *Per Capita-Employee Multiplier Method.* This category includes those Public Works costs not directly associated with Center-related roadway maintenance, signalized intersections, park rehabilitation, and other infrastructure (i.e. 54 lane miles of roadways, 75 acres of landscaped parkways and medians, 4 signalized intersections, 699 streetlights, 18.1 linear miles of storm drains, and 17.2 linear miles of sidewalks/trails).

I. TRANSFERS OUT

Transfers Out costs were forecasted at $6.28 per Persons Served using the *Per Capita-Employee-Multiplier Method.*

TABLE 2F – OTHER GENERAL FUND COSTS (MULTIPLIER METHOD)

Category	Amount	Methodology
Police Services	$196.20	Persons Served
Fire Services	$72.84	Persons Served
Animal Services	$4.70	Persons Served plus 50% Discount
Development Services	$20.87	Persons Served
Other Uses	$6.27	Persons Served plus 50% Discount
Community Development	$4.17	Persons Served plus 50% Discount
Public Works	$10.79	Persons Served
Transfers Out	$6.28	Persons Served

SECTION 3 FISCAL IMPACTS

I. TOTAL RECURRING REVENUES: CITY OF MORENO VALLEY

Total recurring revenues to the City equal approximately $11,560,771 per year. As illustrated in **Table 3A** below, the largest percentage of revenue is attributed to the property tax in lieu of VLF revenues (40.1% of total) and property tax revenues (secured and unsecured) (31.9%), together constituting approximately 72.0% of total recurring revenues to the City General Fund. **Exhibits 1-6** of **Appendix A** provide additional details about all recurring revenues and the assumptions used in their derivation.

TABLE 3A
RECURRING FISCAL REVENUES (CITY GENERAL FUND)

Category	Amount	Percent*
Property Tax In-Lieu of Vehicle License Fee	$4,636,853	40.1%
Secured Property Tax	$3,357,120	29.0%
Business Receipts Tax & Licenses	$1,240,751	10.7%
Tax Revenues (UUT & TOT)	$622,664	5.4%
Indirect Sales Tax	$433,594	3.8%
Charges for Services	$396,591	3.4%
Unsecured Property Tax	$335,712	2.9%
Franchises	$258,117	2.2%
Property Transfer Tax	$102,977	0.9%
Intergovernmental Revenues	$62,423	0.5%
Licenses/Permits	$59,197	0.5%
Investment Income	$23,075	0.2%
Other Revenues	$12,589	0.1%
Fines and Forfeitures	$6,658	0.1%
Direct Sales Tax	$6,000	0.1%
Transfers In	$3,849	0.0%
Use of Money & Property	$2,601	0.0%
Motor Vehicle Licensing Fees	$0	0.0%
Total Revenues	**$11,560,771**	**100.0%**

**Numbers may not sum due to rounding*

II. TOTAL RECURRING SERVICES COSTS: CITY OF MORENO VALLEY

As illustrated in **Table 3B** below, total annual recurring costs to the City are estimated at **$5,561,094** per year. A majority of the costs are estimated to result from police services, fire

services, and Center-specific infrastructure and parks maintenance costs. **Exhibits 2 and 7-10** of **Appendix A** provide additional details about all recurring costs and the assumptions used in their derivation.

TABLE 3B
RECURRING FISCAL COSTS (CITY GENERAL FUND)

Category	Amount	Percent*
Police	$2,041,216	36.7%
Infrastructure & Parks Maintenance Costs	$1,817,881	32.7%
Fire Services	$757,809	13.6%
General Government	$391,956	7.0%
Development Services	$217,126	3.9%
Public Works	$112,256	2.0%
Transfers Out	$65,336	1.2%
Other Uses	$65,232	1.2%
Animal Services	$48,898	0.9%
Community Development	$43,384	0.8%
Total Costs	**$5,561,094**	**100.00%**

**Numbers may not sum due to rounding*

III. OVERALL NET FISCAL IMPACT TO THE CITY OF MORENO VALLEY

As shown in **Table 3C** below, the overall fiscal impact to the City as a result of revenues generated by the Center is a recurring annual fiscal surplus of **$5,999,678** based on the generation of **$11,560,771** in recurring annual revenues and **$5,561,094** in recurring annual costs. Annual revenues are projected to equal **2.08** times the associated City General Fund costs. A summary of the overall fiscal impacts to the City is provided in **Exhibit 11** of **Appendix A.**

TABLE 3C
NET FISCAL IMPACT (CITY GENERAL FUND)

Category	Amount
Total Recurring Revenues	$11,560,771
Total Recurring Costs	($5,561,094)
Annual Recurring Surplus/(Deficit)	**$5,999,678**
Total Annual Revenue/Cost Ratio	*2.08*
Surplus per 1,000 SF Industrial	$144

SECTION 4 ECONOMIC IMPACTS

The Study also identifies the general economic impacts on the City that would occur due to the Center, and quantifies these impacts wherever possible. General economic impacts include additions to the City's employment (number of average annual full- & part-time jobs), economic output (e.g., gross receipts), and earnings (the sum of wages, salaries and benefits, other labor income, and employer and employee contributions to social security). The Study also distinguishes between one-time economic impacts and permanent economic impacts. One-time impacts include benefits to the community that occur on a non-recurring time basis as a result of construction and development activity, while permanent, recurring impacts refer to benefits that occur on a continuing basis, year after year.

I. RECURRING ECONOMIC IMPACTS

A. ASSUMPTIONS

In evaluating economic impacts, the Study quantifies both direct and indirect/induced economic impacts on the City. Direct economic impacts reflect the initial or first-round increases in jobs, earnings, and output, all of which occur directly on-site. Indirect/induced economic impacts are the secondary and other additional rounds of economic activity that occur as a consequence of the direct impacts, and can occur elsewhere within the City. The **indirect** impacts represent the economic activity – buying and selling of goods and services – of *suppliers* to the land use types analyzed. In this Study, suppliers to the Center consist primarily of maintenance and repair professionals, utilities' providers, wholesale trade companies, and business support services; while suppliers to retail/office developments consist mainly of real estate firms, computer and other technology firms, accounting and bookkeeping professionals, and utilities' providers. Furthermore, the suppliers representing the indirect one-time impacts are mainly heavy industrial and construction suppliers for the actual development of buildings and facilities. The **induced** impacts represent the economic activity that results from household spending by *employees* of all companies directly and indirectly affected by the construction and operation of the land uses analyzed in this Study. Indirect and induced impacts can occur throughout all industries of the economy, and have been categorized using the North American Industry Classification System (NAICS). Adopted by the Office of Management and Budget (OMB) in 1997 to replace the Standard Industrial Classification System (SIC), NAICS is a widely-used system to classify business establishments for the collection, analysis, and publication of statistical data in Canada, Mexico, and the United States. NAICS industries are identified using a six-digit coding system to classify all economic activity into twenty broad sectors, five of which are mainly goods-producing sectors and fifteen of which are services-producing sectors. This six-digit hierarchical structure allows for the identification of nearly 1,170 industries. The broad NAICS sectors include the Construction, Retail Trade, and Administrative and Support Services classifications, which are the focal NAICS categories analyzed within this Study to determine the indirect and induced economic impacts generated under the analysis.

Based on information provided by Highland Fairview, the Center is comprised of 41.4 million building square feet of high-cube industrial land use, 200,000 building square feet of general warehouse space, and 3,000 building square feet of light retail. DTA estimated the number of direct employees in the proposed development based upon an average employee per SF ratio for

similar land uses in the region. Other assumptions used to analyze the economic impact of the Center are summarized in **Table 4A** below.

TABLE 4A
ASSUMPTIONS

Assumptions	
Land Use Assumptions	*Sq. Ft.*
Logistics Development ("LD")	**41,400,000**
Light Logistics ("LL")	**200,000**
Logistics Support ("LS")	**3,000**
Employment Assumptions [1]	*per 1,000*
Logistics (LD/LL)	**0.50**
Retail (LS)	**2.50**
Wage Assumptions [2]	*Annual $*
Warehousing/Transportation (Logistics) [3]	**$42,341**
Construction	**$48,825**
Retail [4]	**$22,885**
Riverside County Average (2010)	**$40,602**

[1] Source: DTA Public Works Database; confirmed by "Employment Density Study," SCAG (2001), and "Logistics Trends and Specific Industries," NAIOP Research Foundation (March 2010).

- *Identical to metric utilized in fiscal impact analysis, please see Exhibit 3 of Appendix A (0.50 Employees/KSF = 2,000 SF per Employee).*

[3] Standard Warehousing/Transportation Salary (~$41,229) plus a small salary bump for 10% of employees (~$52,346) to account for presence of high-level management and related office personnel.

[4] Reflects a blended average, by employee count, of local "Retail" and "Food Service/Accommodation" salary codes.

B. JOB CREATION & EMPLOYEE WAGES

Development will contribute to the creation of new jobs in the City and County. As shown below in **Table 4B**, development of the Center is projected to generate approximately 20,808 estimated new on-site jobs within the City. Since the analyses contained herein are based on estimates and assumptions that are inherently subject to uncertainty and variation depending on evolving events, DTA cannot represent that such estimates will definitely be achieved. Some assumptions inevitably will not materialize, and unanticipated events and circumstances may

occur; therefore, the actual results achieved may vary from these projections stated throughout the Study.

In addition to these employment opportunities, DTA estimates that the Center will generate new off-site jobs in all industries of the economy, which constitute the indirect/induced employment impacts of the project. Seven thousand five hundred sixty nine (7,569) indirect/induced jobs are expected to be created in the County, of which 3,785 are projected to be within the City, as a result of the development of the Center. This estimate was derived utilizing the Impact Analysis for Planning ("IMPLAN") Input/Output Modeling System, a type of quantitative economic model that provides an approximate measure of the "multiplier effect" of a firm's spending on payroll and the purchasing of goods and services. Like similar econometric models, IMPLAN helps to calculate the flow of payments for goods and services across different industry sectors, and between households and industries. Unlike similar econometric models, e.g., the Regional Input-Output Modeling System ("RIMS II"), IMPLAN is the industry standard. RIMS II and IMPLAN both include induced effects, but RIMS II differs from IMPLAN in two ways: (i) RIMS II uses a single household type for induced personal consumption while IMPLAN uses nine (9) household types; and (ii) RIMS II uses the traditional single row/column Type II formulation whereas IMPLAN uses a more robust mapping of factor income to household consumption using several sub-matrices. RIMS II uses location quotients to regionalize the national technical coefficients, a method which underestimates inter-regional trade and overestimates regional multipliers when cross-hauling is present.

The IMPLAN model can be envisioned simply as a large spreadsheet with hundreds of industries (plus the household sector) arrayed across the top as producers, and the same industries and households listed down the side as consumers. Each million dollars (output) in spending by any one consumer (i.e. the Center) is allocated across the producing industries from which it buys goods and services. These producing industries, in turn, spend money buying goods and services from their own distinct sets of suppliers. Thus, the IMPLAN multiplier model allows one to gauge the effect on each dollar an industry spends as it diffuses through a regional economy. Furthermore, it allows one to translate the overall regional impact of spending into jobs and employee compensation.

While the specific location of the additional indirect jobs created within the County cannot be specifically determined, experience and modeling indicate that a large percentage of these jobs will be support service jobs, and are likely to be located close to the Center, and therefore within the City itself. For purposes of this Study, it is conservatively modeled that one-half of these indirect jobs will be located within the City. **Table 4B** shown below, and **Exhibits 1** and **3** of **Appendix B** summarize the direct and indirect employment impacts of the Center.

TABLE 4B
RECURRING EMPLOYMENT AND WAGES
(ALL NUMBERS SUBJECT TO ROUNDING)

Recurring Impact	Direct	Indirect	Induced	Total
Employees				
Countywide	20,808	3,349	4,219	28,377
Within City	20,808	1,675	2,110	24,593
Employee Wages				
Countywide	$881 Million	$136 Million	$171 Million	$1.2 Billion
Within City	$881 Million	$68 Million	$86 Million	$1.0 Billion

Overall, the creation of new jobs will provide many benefits to the City. More jobs will lead to more consumer spending by employees in existing retail establishments within the City, as well as new retail development that will be attracted to the City as a result of this spending. Job creation also results in increased tax revenues to the City through increased property taxes and sales taxes related to this new development.

However, because of the difference in timing of the various Center developments, the number of employees summarized above will not be realized at the same time. It is estimated the build-out of the Center will occur over many years, as many individual elements have not yet begun and the demand for such elements may fluctuate.

C. OVERALL ECONOMIC OUTPUT

Total Output (i.e., total expenditures including sales or gross receipts, or other operating income) within the City will increase substantially with development. Total output is estimated based on the different types of development projected to occur. As stated in Section I, this Study analyzes direct and indirect/induced impacts. Regarding gross receipts, the direct impact reflects the initial or first-round increases in output (total spending/gross receipts, including payroll), all of which occur directly on the Center site. Indirect/induced economic impacts are the secondary and other additional rounds of economic activity that occur as a consequence of the direct output impacts, and can occur outside of the Center. The indirect impacts represent the economic activity – buying and selling of goods and services – of suppliers and/or supporting businesses. The induced impacts represent the economic activity that results from household spending by employees of all companies directly and indirectly affected by the Center (please see **Table 1** on *Page 3* for a graphical representation of the indirect and induced effects). **Table 4C** shown below and **Exhibit 2 of Appendix B** summarize the Total Output projections anticipated.

Based again on IMPLAN multipliers and other assumptions utilized in the fiscal impact model, DTA estimated that the direct and indirect/induced effects total $2.4 billion for the County, of which $2.0 billion is attributable to the City.

TABLE 4C
RECURRING TOTAL OUTPUT
(ALL NUMBERS SUBJECT TO ROUNDING)

Recurring Impact	Direct	Indirect	Induced	Total
Overall Output				
Countywide	$1.5 Billion	$386 Million	$506 Million	$2.4 billion
Within City	$1.5 Billion	$193 Million	$253 Million	$2.0 billion

However, similar to the effect that Center absorption will have on employment, it will have a similar effect on the generation of total output, specifically due to the difference in timing of the various Center developments. As a result, the overall output summarized above will not be realized at the same time.

II. ONE-TIME EMPLOYMENT, WAGES, AND OUTPUT IMPACTS (CONSTRUCTION)

According to IMPLAN, development of the Center is also projected to create 16,928 estimated construction-related full-time equivalent ("FTE") jobs within the City. Therefore, given a buildout period of approximately 10 years, with projected even absorption, the construction of the Center will create approximately 1,700 FTE total annual construction/one-time jobs in the City. One-time construction and development costs will also have multiplier effects on the economy, generating one-time increases in output and wages from construction of the non-residential buildings and all related site improvements.

As with recurring economic impacts, experience and modeling indicate that a large percentage of these jobs will be support service jobs, and are likely to be located close to the Center, and therefore within the City itself. For purposes of this Study, it is conservatively modeled that one-half of these indirect jobs will be located within the City. **Table 4D** and **Table 4E** below and **Exhibit 5** of **Appendix B** summarize the projected increases in employment, wages, and output that are generated directly from construction of the Center land uses, based on DTA wage and construction cost assumptions.

TABLE 4D
ONE-TIME INCREASES IN EMPLOYMENT AND WAGES
(ALL NUMBERS SUBJECT TO ROUNDING)

One-Time Impact	Direct	Indirect	Induced	Total
Employees				
Countywide	13,123	3,367	4,243	20,733
Within City	13,123	1,683	2,122	16,928
Employee Wages				
Countywide	$641 Million	$137 Million	$172 Million	$950 Million
Within City	$641 Million	$68 Million	$86 Million	$795 Million

TABLE 4E

ONE-TIME TOTAL OUTPUT

(ALL NUMBERS SUBJECT TO ROUNDING)

One-Time Impact	Direct	Indirect	Induced	Total
Overall Output				
Countywide	$1.7 billion	$446 million	$509 million	$2.7 Billion
Within City	$1.7 billion	$223 million	$254 million	$2.2 Billion

III. OTHER IMPACTS (JOBS-HOUSING BALANCE)

As stated earlier, the Center is estimated to create approximately 20,808 new on-site jobs, and DTA estimates that an additional 7,569 new off-site jobs will be created County-wide (of which 3,785 will be located within the City). As depicted in **Table 4F** and **Figure B** below, as well as in **Exhibit 4** of **Appendix B**, because the Center does not involve a residential component, the jobs generated by the Center do not need to support new households as a result of direct employment or indirect employment. This results in a Jobs-Housing balance calculation wherein the numerator increases (as described above), while the denominator remains constant.

The Jobs-Housing balance is an indicator of the balance between employment and housing opportunities. Defining what constitutes a balance between jobs and housing is not an easy task. Assuming a simple ratio of one job to one household is inappropriate today when so many households include more than one person in the workforce. A study prepared by the Southern California Association of Governments ("SCAG") suggests that if an area has a Jobs-Household balance that significantly diverges from a regional standard of 1.0–1.29, it can be considered out of balance.

At build-out, the Center will significantly affect the Jobs-Housing balance. As described in **Exhibit 4** of **Appendix B**, moving forward with the Center will increase total employment in the City from 25,120 (current, per California Employment Development Department, Labor Market Information Division) to 49,713 (projected), increasing the City Jobs-Housing balance from 0.47 to 0.92, a metric now largely in line with the SCAG standard. The 28,377 new County employees from the Center will increase total County employment to 579,869 (projected) from 551,492 (current), resulting in an increase in the County Jobs-Housing balance as well, up to 0.74 from 0.70. **Table 4F** and **Figure B** below, and **Exhibit 4** of **Appendix B** summarize the pre- and post-Center Jobs-Housing Balance.

TABLE 4F

Jobs-Housing Balance	Balance without Center	Balance with Center	% Increase /(Decrease)
Countywide	0.70	0.74	5.15%
Within City	0.47	0.92	97.90%

However, as development of the Center is expected to occur over many years, the Jobs-Housing balance will not be significantly changed in the earlier years due to the Center. As the City's current Jobs-Housing balance is exceptionally low according to SCAG standards, the need for employment is immediate. A balance between jobs and housing has a positive impact on the City by decreasing costs associated with commuting and traffic congestion. A balanced Jobs-Housing ratio provides, inter alia, reduced commute times, improved social and cultural involvement, a more attractive work/life balance to residents, and savings to local public agencies in terms of the need to construct and maintain new road improvements and other facilities. For example, the lower transportation facility costs experienced by local public agencies will enable these agencies to invest their tax proceeds in other facilities that can improve the quality of life within the City, such as libraries, recreational centers, and other community amenities.

GENERAL GOVERNMENT EXPENDITURES ANALYSIS

ASSUMPTIONS

Total Recurring General Fund Expenditures (excluding General Government Overhead) [1]	$70,075,883
Recurring General Government Overhead Expenditures (as a % of Total Recurring General Fund Expenditures) [2]	10%
Marginal Increase in General Government Costs [3]	75%

FISCAL IMPACT CALCULATION

I. Fiscal Impact Category	Fiscal Impact Amount
Total Multiplier Expenditures (Exhibit 8)	$3,351,257
Total Case Study Expenditures (Exhibit 9)	$1,817,881
Projected Recurring General Fund Expenditures	**$5,169,138**
Plus: General Government Costs	$391,956
Total Recurring Expenditures	**$5,561,094**

NOTES:

[1] Based on City of Moreno Valley Operating Budget, Fiscal Year 2012-2013.

[2] General Government Overhead Expenditures defined as costs for City Council, City Manager, City Clerk, Administrative Services, City Treasurer, etc.

[3] Estimate, subject to change. Current City staffing numbers are likely artificially low and are thus not suitable for serving new development.

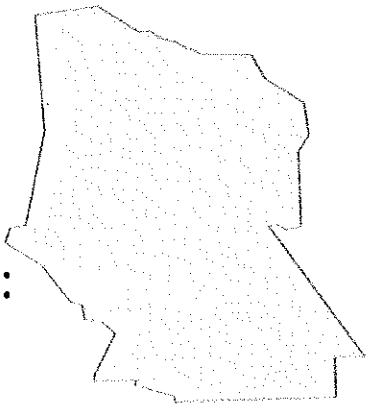
The Logistics Industry of Inland Empire:

A Fiscal and Economic Impact Study

DAVID TAUSSIG & ASSOCIATES

BEACON ECONOMICS



The Logistics Industry of the Inland Empire: A Fiscal and Economic Impact Study

PURPOSE:

The purpose of the Fiscal and Economic Impact Study is to provide (i) a general review of the impact of the Logistics Industry on the Inland Empire region of California and (ii) a detailed summary of the projected fiscal and economic impacts to four cities (Jurupa Valley, Chino, Moreno Valley, and Fontana, collectively the "Cities") as a result of the hypothetical development of a 500,000 sq. ft. "high cube" logistics facility in each jurisdiction. The hypothetical facilities in Moreno Valley and Fontana were assumed to be highly automated, while the facilities in Jurupa Valley and Chino were assumed to be not as automated, and staffed by more employees.

METHODOLOGY:

The Study analyzes both the recurring fiscal impacts of the facilities' development on the General Funds of the Cities. Importantly, because one-time revenues typically offset one time impacts, the Study does not address one time revenues (except for estimating development impact fees) and focuses primarily on recurring revenues. The Study also identifies the general economic impacts on the Cities in terms of employment, gross receipts, and earnings creation for residents and workers of the Cities.

Fiscal Impacts:

The fiscal impacts projected are based generally on the *Multiplier Methodology* and in particular the *Per Capita-Employee ("Persons Served") Methodology*. To project most recurring fiscal factors, the Study employed the *Per Capita-Employee ("Persons Served") Methodology* and for major revenue sources, e.g. property tax and sales tax, the Study employed the *Case Study Methodology*. In order to provide conservative results, the Study does not assume that any of the facilities would generate "point of sale" sales tax revenues.

Economic Impacts:

Beacon Economic's economic impact analysis incorporates three stages of the development process: construction, tenant improvements, and operations. To conduct the economic impact analysis, the Study used Version 3 of the IMPLAN economic modeling system and operated under the assumption that each phase has three economic effects:

1. Direct: Caused by the additional output of goods and services from a logistics facility.
2. Indirect: Ripple effect among all of the industries whose outputs are used by the logistics center and its overall supply chain
3. Induced: Arise when employment increases in a region and stimulates greater household spending.

RESULTS:

Recurring Fiscal Impact:

The model reflects the estimated recurring surplus to the general fund of each of the Cities that will result from the development of a 500,000 sq. ft. logistics facility. Results are summarized below:

Fiscal Impact	Moreno Valley	Fontana	Jurupa Valley	Chino
	High-Tech	High-Tech	Low-Tech	Low-Tech
Total Annual Recurring Fund Revenues	$113,532	$100,510	$45,537	$111,411
Total Annual Recurring Fund Costs	($62,171)	($55,881)	($22,909)	($81,017)
Total Annual Recurring Surplus/(Deficit)	**$51,361**	**$44,629**	**$22,628**	**$30,394**
Total Annual Revenue/Cost Ratio	*1.83*	*1.80*	*1.99*	*1.38*

Each jurisdiction will enjoy a positive fiscal impact as a result of new development of a 500,000 sq. ft. logistics facility. As an example, in the case of Jurupa Valley, for every one dollar incurred by the City in providing City services to the facility, the City will get $1.99 back in new facility revenues.

Development Impact Fees:

Development fees are one-time revenues to the City. New development is generally required to pay these fees prior to the construction of a project. Although non-recurring and not technically a part of the fiscal or economic impacts presented by the Study, they are substantial as indicated in the table below:

Impact Fees	Moreno Valley	Fontana	Jurupa Valley	Chino
	High-Tech	High-Tech	Low-Tech	Low-Tech
Capital Facilities Fees	$1,671,440	$1,920,560	$1,152,898	$3,094,800
Schools Fees	$255,000	$255,000	$255,000	$255,000
Sewer/Water Connection Fees	$234,838	$452,090	$329,169	$467,725
Other/Misc. Fees	$537,194	$298,813	$426,545	N/A
Total Development Impact Fees	**$2,698,472**	**$2,926,463**	**$2,163,612**	**$3,817,525**

Recurring Economic Impact:

Each of the tenants for the logistics facility will have ongoing operating expenses. These annual operating costs drive additional spending in the economy. The spending creates recurring economic impacts that once again have direct, indirect, and induced expenses. The results of the economic phase of Study are summarized below:

Recurring Economic Impact	Moreno Valley	Fontana	Jurupa Valley	Chino
	High-Tech	High-Tech	Low-Tech	Low-Tech
Direct Number of Employees within the City	192	192	305	305
Indirect/Induced Number of Employees within the City	71	65	63	76
Total Recurring Number of Employees within the City	263	257	368	381
Additional Jobs Outside City within the Inland Empire	40	46	42	29
Total Recurring Number of Employees	**303**	**303**	**410**	**410**
Direct Economic Impact	$19,162,236	$19,162,236	$18,161,890	$18,161,890
Indirect/Induced Economic Impact	$8,129,476	$8,635,107	$7,412,746	$9,767,757
Total Recurring Economic Impact within the City	$27,291,712	$27,797,343	$25,574,636	$27,919,647
Additional Impact Outside City within the Inland Empire	$4,380,235	$3,874,604	$4,443,906	$2,098,895
Total Recurring Economic Impact	**$31,671,947**	**$31,671,947**	**$30,018,542**	**$30,018,542**

One-Time/Construction Economic Impact:

Each of the tenants for the logistics facility will also have substantial construction, development, and tenant improvement expenses. Again, the spending creates economic impacts that have direct, indirect, and induced expenses. The results of the economic phase of the Study are summarized below:

Total One-Time Economic Impact	Moreno Valley	Fontana	Jurupa Valley	Chino
	High-Tech	High-Tech	Low-Tech	Low-Tech
Direct Number of Employees within the City	403	403	304	305
Indirect/Induced Number of Employees within the City	138	133	112	139
Total One-Time Number of Employees within the City	541	536	416	444
Additional Jobs Outside City within the Inland Empire	93	98	63	35
Total One-Time Number of Employees	**634**	**634**	**479**	**479**
Direct Economic Impact	$50,000,000	$50,000,000	$37,500,000	$37,500,000
Indirect/Induced Economic Impact	$16,457,246	$18,750,303	$14,366,256	$18,335,554
Total One-Time Economic Impact within the City	$66,457,246	$68,750,303	$51,866,256	$55,835,554
Additional Impact Outside City within the Inland Empire	$10,717,683	$8,424,626	$6,045,116	$2,075,819
Total One-Time Economic Impact	**$77,174,929**	**$77,174,929**	**$57,911,372**	**$57,911,372**

Simply put, the logistics industry serves as an invaluable anchor for the Inland Empire economy. The increase in the volume of trade in the Southern California customs districts has created stronger demand for logistics services. As a result, the logistics industry in the Inland Empire has expanded over the past few decades and significantly enhanced the regional economy through improved productivity and higher wages. As can be seen by the results of this Study, individual developments alone provide a large, long term economic benefit for the Cities where they are located as well as their surrounding area.

Stratford Ranch Industrial Development: Fiscal & Economic Impact

September 2012

Andrew Chang & Company, LLC

1301 H Street Sacramento ▪ CA 95814 ▪ 916-538-6091

About Andrew Chang & Company, LLC:

The professionals at Andrew Chang & Company work with our clients to achieve tangible results by combining best-in-class research and analyses with unique insights into public policy and government operations and business strategy. Using advanced economic, statistical and business administration techniques, we provide strategy and operations consulting to Fortune 1000 firms and provide policy, economic, fiscal and operations consulting to public sector agencies and non-profit organizations. We are a California State Department of General Services certified small business and CMAS vendor. Andrew Chang & Company are recognized experts in State and local government revenue projection modeling and have performed revenue projection modeling for cities and State government agencies throughout California The professional qualifications of the staff who worked on this report are set forth as Exhibit A.

Proposed Stratford Ranch Industrial Development in the City of Perris:
Fiscal & Economic Impacts
(Key Findings)

- The Stratford Ranch Industrial Development will increase City revenues by approximately $216,500 or 0.4% annually. Over a 5-year period after construction, City revenues will increase by $1.1 million cumulatively. The new revenue from the development will be driven by: property tax, business license fees, and indirect sales tax.

- During the construction phase, 486 direct jobs will be created that will support 595 indirect jobs in the City and 933 indirect jobs in the economic region. Additionally, over a two-year period, construction spending will add an additional $74.8 million to local output and $306.2 million to regional output. Construction spending will also increase local earnings by $21.4 million and regional earnings by $87.6 million.

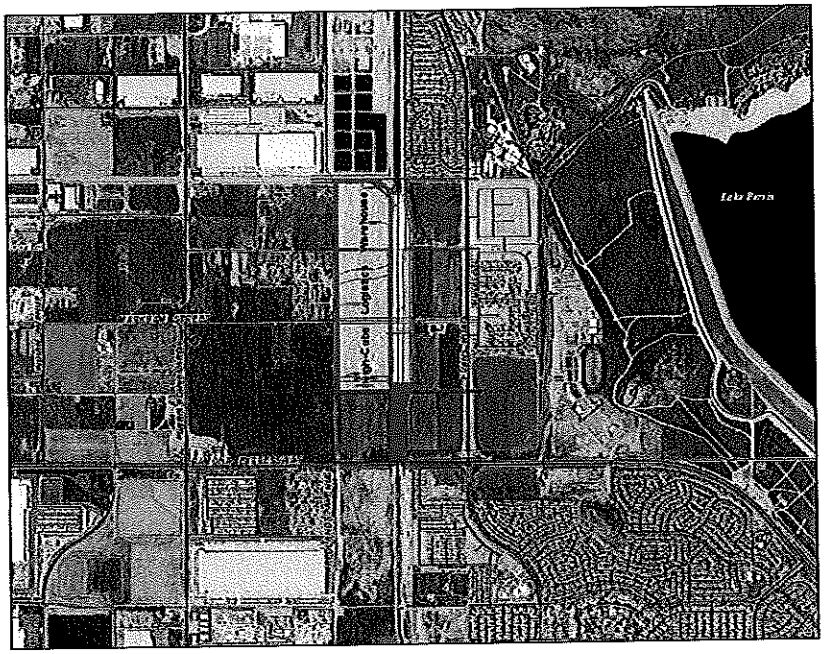
- After construction, the development will create 685 new on-site jobs and have estimated annual revenue of $19.2 million. The 685 new jobs will support 841 indirect jobs within the City and 1066 jobs within the economic region. The revenue generated from the development will add an additional $27.1 million to the local economy and $34.3 million to the regional economy. Additionally, local earnings will increase by $9 million and regional earnings will increase by $11.4 million

Proposed Stratford Ranch Industrial Development in the City of Perris:
Fiscal & Economic Impacts

1. Scope

The proposed Stratford Ranch Industrial project is located in the northern portion of the City of Perris and totals approximately 133.3 gross acres (Figure 1.1). The project involves development of approximately 79.23 net acres for two high-cube logistics warehouse buildings totaling up to 1,712,880 square feet, improvements to the adjacent Perris Valley Storm Channel (PVSC) including utility roads covering approximately 45.7 acres and construction of the Lateral D Channel. In summary, the project site will be developed with high-cube logistics warehouse uses; street, water, drainage, and sewer infrastructure to accommodate the logistics warehouse project; widening and associated improvements to the PVSC; and Lateral D Channel from Redlands Avenue to the PVSC.

Figure 1.1
Location of Development Site



Source: AirPhotoUSA, 2008; Albert A Webb, Assoc., 2011; County of Riverside, 2011

The project vicinity is characterized as a mix of developed and undeveloped properties. Developed properties in the vicinity include an industrial/warehouse building in Moreno Valley to the northwest, agricultural irrigation ponds in Moreno Valley to the north, residential subdivisions to the northeast, an RV and trailer camping facility to the southwest, and a residential subdivision to the southeast. The nearest residences to the warehouse component of the project are located to the northeast at approximately 400 feet, to the east at approximately 1,720 feet, and to the southeast at approximately 1,700 feet.[1]

In order to inform the decision making process, Andrew Chang and Company, LLC has been retained to determine the fiscal and economic impacts for the city and the region, resulting from the proposed development.

Importantly, the fiscal and economic benefits of the proposed Project as set forth in this report are independent of the payment of any host or franchise fee. In other words, this economic benefits analysis does not include any host or franchise fee payment.

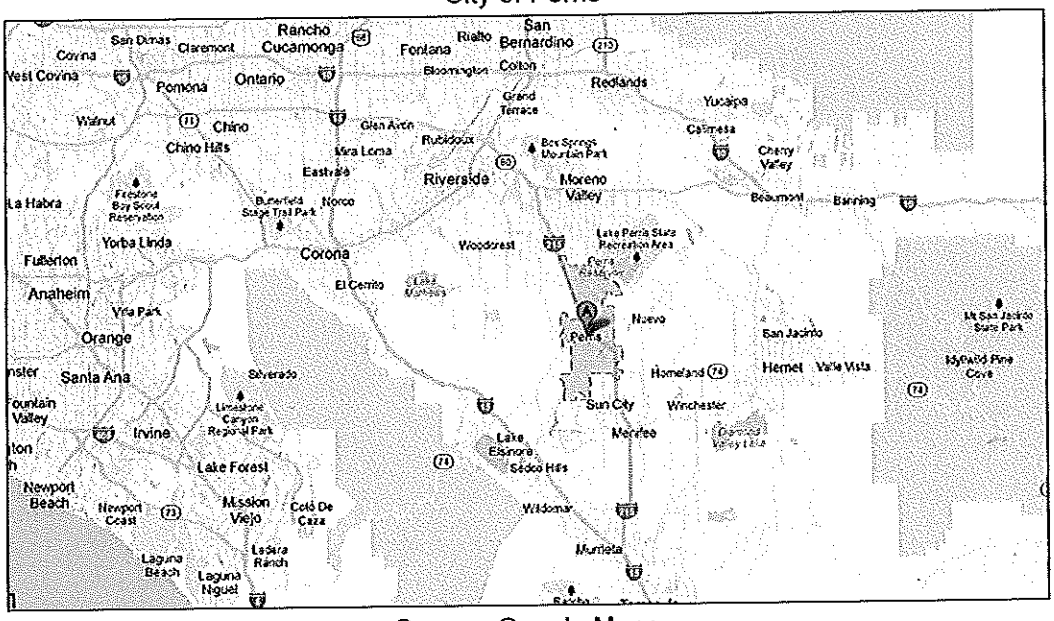
2. Background

The City of Perris is located in Riverside County and encompasses 31.5 sq. miles. The population of Perris is 69,967 with a population growth of 42% since 2000.[2] Figure 2.1 below shows the general geography of the region surrounding Perris.

Figure 2.1
City of Perris



Source: Google Maps

Since 2006, total City revenues have averaged $75.7 million, but have declined from a high of $100.9 million in 2008 to a low of $54.2 million in 2011[3]. The labor force of Perris is estimated to be 27,754 with a median household income of $ 50,471.[4] Currently the 5 largest employers in the City are Ross Stores Inc., Starcrest, Lowes, Perris Union High School District and Hanes.[5]

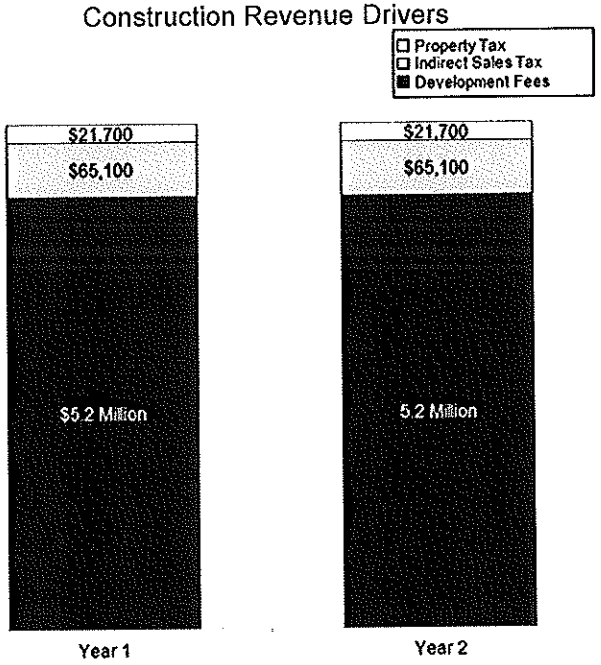
3. Fiscal Impact

The fiscal impact of the proposed Stratford Ranch Industrial Development on the City of Perris will occur over two phases. The first phase will be temporary and occur during the projected two-year construction and development phase. The second phase will be indefinite and will begin once construction and development of the site is complete.

3.1 Construction and Development Phase

This analysis assumes that the construction and development of the project site will take two years to complete. It is projected that construction will begin at the start of 2013 and finish at the end of 2014. The fiscal impact of the construction and development period was measured by the increased revenues that the project would generate for the City. The increased revenue is driven by indirect sales tax, property tax and one-time development fees. Figure 3.1 outlines the respective annual revenue increases for each driver.

Figure 3.1
Construction Revenue Drivers



Source: United States Bureau of Economic Analysis, RIMS II Multipliers, 2008; Andrew Chang & Company Analysis

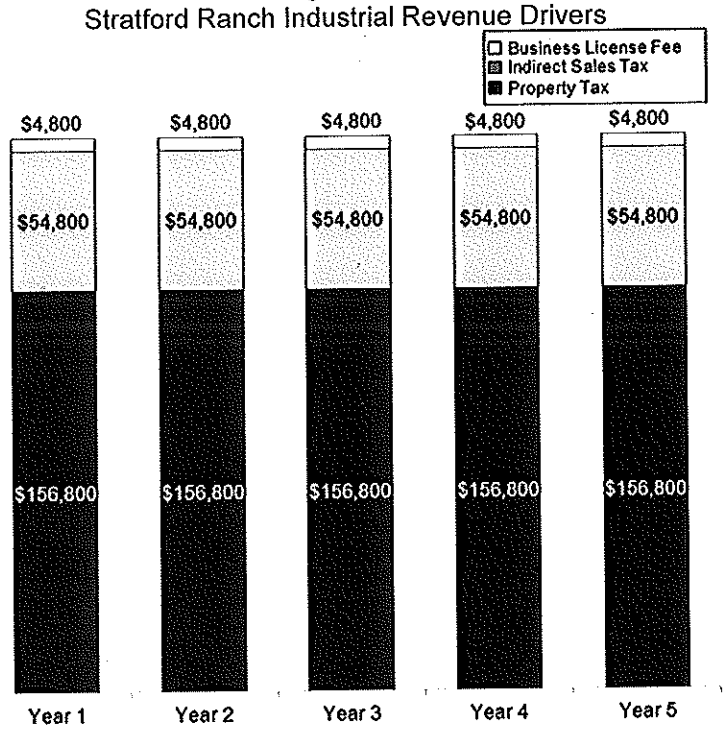
During the construction and development phase the largest revenue driver will be the one-time development fees. These fees include city fees, school fees, sewer and water fees and permits. Distributing these fees over the two-year construction period will increase City

revenues by $5.2 million annually. Additionally, the City will receive $65,100 each year in indirect sales tax resulting from the economic activity occurring during construction and $21,700 each year from property taxes. Overall, City revenues will increase by $11.2 million during the construction phase.

3.2 Post Build Out

After the development and construction of the site is completed, the two high-cubed warehouses will be fully functional and will continue to bring in additional revenues for the City. Figure 3.2 outlines the revenue drivers that will increase the City's revenues on an annual basis. As with the construction phase, additional City revenues will result from an increase in indirect sales tax and property taxes in addition to an annual business license fee.

Figure 3.2
Stratford Ranch Industrial Revenue Drivers

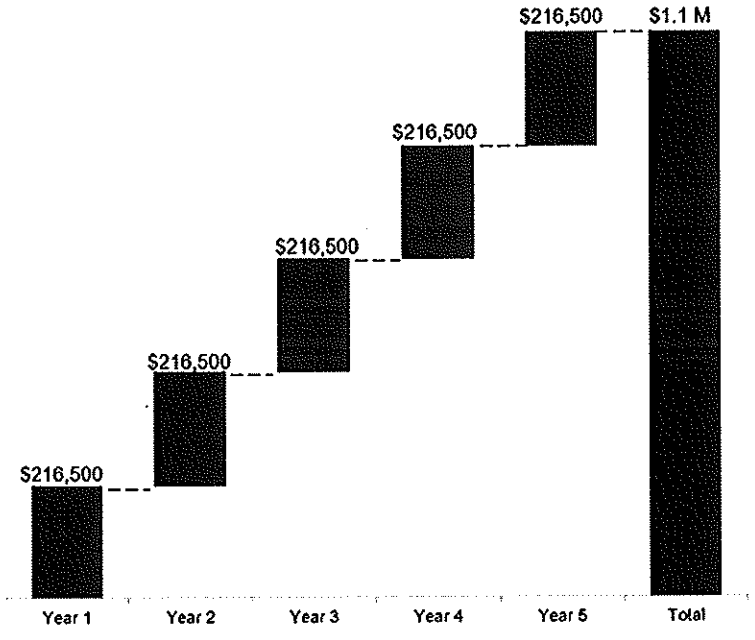


The largest revenue driver is the property tax. Currently the property tax for the proposed site totals approximately $21,700. After the site is developed, it is estimated that the property tax will increase to $178,500. After apportioning this increase to reflect the amount the City of Perris will actually receive, it is estimated that the increased property tax

will annually add $156,800 to City revenues. Indirect sales tax is the second largest revenue driver. After taking the estimated earnings growth the City will get from the development and multiplying it by the effective sales tax rate, it is estimated that the development will generate an additional $54,800 in indirect sales tax for the City. Lastly, increased City revenue from business license fees will total $4,800 annually.

Figure 3.3 shows that after totaling up all the revenue drivers, it is estimated that the development will increase City revenues by approximately $216,500 annually after the initial construction and development phase. In the City's 2011 Comprehensive Annual Financial Report, City revenues totaled $54.2 million. A revenue increase of $216,500 in FY 2013-14 (construction completion estimated to be end of 2013) will expand Perris revenues by 0.4%.

Figure 3.3
Yearly Revenue Added From Stratford Ranch Industrial



Source: United States Bureau of Economic Analysis, RIMS II Multipliers, 2008; Andrew Chang & Company Analysis

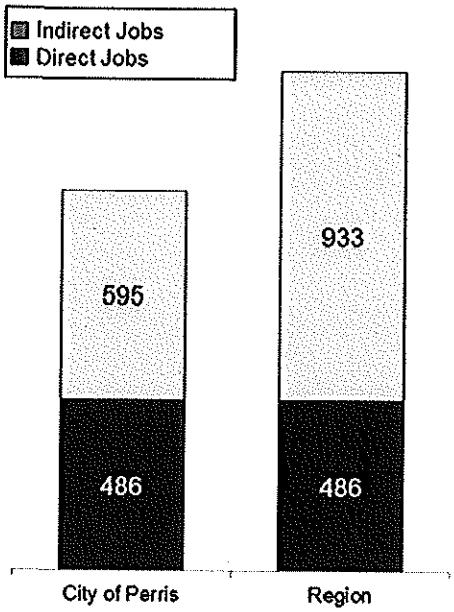
It is estimated that the additional revenue created by the development will remain stable on an annual basis. Therefore, over a five-year period after construction, City net revenues will increase by an estimated total of approximately $1.1 million. Over a ten year period after construction, City net revenues will increase by approximately $2.2 million.

4. Economic Impact

4.1 One-Time Construction & Development Impacts

Construction and development of the site will produce a temporary (2 year) economic stimulus as a result of one-time construction related spending. Construction and development costs are estimated to be approximately $160 million and the number of on-site construction jobs is estimated to be 486. To assess the economic impact of the temporary construction and development spending, RIMS II construction multipliers adjusted for both the City of Perris and the region were used. As seen in Figure 4.1, the approximate 486 on-site construction jobs will support 595 indirect jobs in the local economy (City of Perris) and 933 indirect jobs in the region (Riverside, San Bernardino and Ontario Metropolitan Statistical Area (MSA)).

Figure 4.1
Jobs Created by Construction of Transfer Station



Source: United States Bureau of Economic Analysis, RIMS II Multipliers, 2008; Andrew Chang & Company Analysis

The construction spending generated at the site will ripple through both the local and regional economy and create a one-time increase in output and earnings. Figure 4.2 shows the indirect increase in output (GDP) and earnings that the construction and development will create. Each year during the two-year phase, construction will create an additional $37.4 million in the local (City) economy and an additional $153.1 million in the regional economy.

Furthermore, annual City personal earnings will increase by approximately $10.7 million and regional personal earning will increase by approximately $43.8 million. In total, over the two-year period the construction and development will increase City output by $74.8 million and regional output by $306.2 million as well as increase City personal earnings by $21.4 million and regional earnings by $87.6 million.

Figure 4.2
Annual Indirect GDP and Earnings from Transfer Station

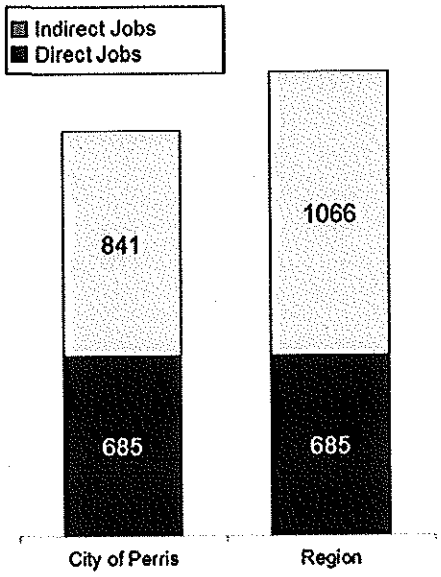
	GDP	Earnings
City of Perris	$37,400,000	$10,700,000
Region	$153,100,000	$43,800,000

Source: United States Bureau of Economic Analysis, RIMS II Multipliers, 2008; Andrew Chang & Company Analysis

4.2 Economic Impacts of Stratford Ranch Industrial

Estimated annual revenue for the transfer station is approximately $19.2 million annually. Additionally, approximately 685 permanent on-site jobs will be created. These 685 jobs will support 841 indirect jobs in the City of Perris and 1066 indirect jobs in the Riverside, San Bernardino and Ontario region (Figure 4.3).

Figure 4.3
Jobs Created by Transfer Station



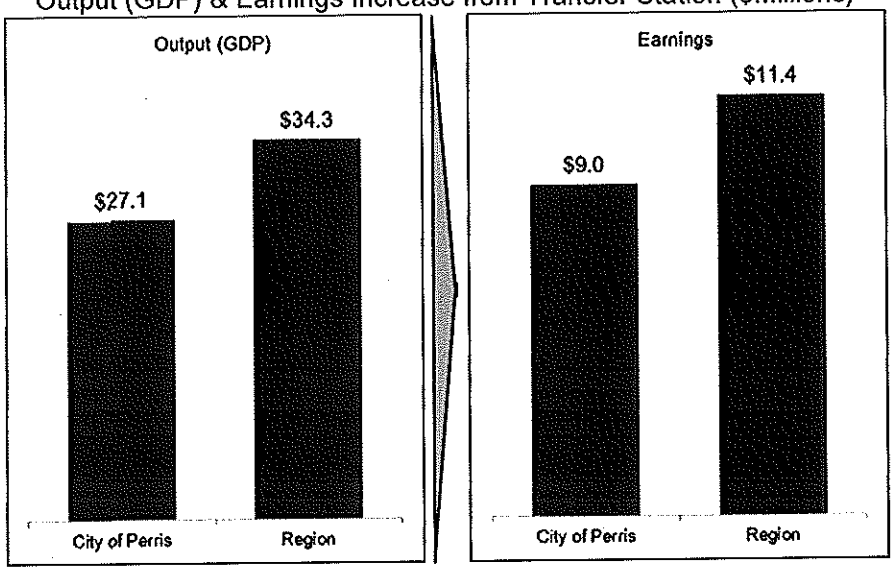
Source: United States Bureau of Economic Analysis, RIMS II Multipliers, 2008; Andrew Chang & Company Analysis

Resolutic Item No. E.6
Date Adopted: June 24, 2014

As with the one-time construction spending, the new revenue generated by development will ripple through both the local and regional economy and create additional output and earnings. However, unlike the temporary construction impact, the impact from the development will be reoccurring as long as the warehouses are in operation. As seen in Figure 4.4, the development will create an additional $27.1 million in local output and an additional $34.3 million in regional output. Furthermore, the development will increase local earnings by $9 million and regional earnings by $11.4 million.

Figure 4.4

Output (GDP) & Earnings Increase from Transfer Station ($Millions)



Source: United States Bureau of Economic Analysis, RIMS II Multipliers, 2008; Andrew Chang & Company Analysis

Proposed Stratford Ranch Industrial Development in the City of Perris:
Fiscal & Economic Impacts
(Conclusion)

- Development and construction of the site will create both temporary on-site jobs as well as indirectly support local and regional jobs. Additionally, construction spending will create a one-time stimulus to the local and regional economies.

- Once construction is completed, the facility will annually generate $216,500 in additional City revenue. This increased revenue from the development will be driven by indirect sales tax, property tax, and business license fees. After ten years the Project will create approximately $2.2 million in additional City revenue.

- The development will create approximately 685 new on-site jobs.

- The development will also indirectly support 841 local and 1066 regional jobs and add an additional $27.1 million to the local economy and $34.3 million to the regional economy. Additionally, local earnings will increase by $9 million and regional earnings will increase by $11.4 million.

- The development will ultimately spur the creation of both local and regional jobs, and there will be additional output and earnings to the local and regional economies.

Appendix A:
Methodology

Local multiplier adjustment:

We used RIMS II economic multipliers to determine the impacts on employment, wages and economic productivity for the surrounding region, defined as the Riverside, San Bernardino and Ontario Metropolitan Statistical Area (MSA). To apportion the added economic activity, we used regional and local employment data to determine whether the City of Perris is a net 'importer' or 'exporter' for each economic segment. In segments where the ratio of Perris Employment / Regional Employment is greater than one, we assume the City is a net exporter and, thus, can fulfill the additional demands locally. In segments where the ration is less than one, the surrounding communities will need to fulfill the demand. In these segments, we use the ratio to deflate the multipliers appropriately for the local economic activity.

Effective Sales Tax & Indirect Sales Tax:

In order to determine the impact additional economic activity will have on local sales tax revenue, we calculated an effective sales tax. This accounts for the portion of the statutory sales tax that is captured by other government entities and the portion of activity that is spent in surrounding communities or elsewhere and, thus, not applicable to the local sales tax. To determine the effective sales tax, we divide the 2010 sales tax revenue collected by the City of Perris by its 2010 GDP. Indirect sales tax was calculated by taking the estimated City GDP growth and multiplying it by the effective sales tax rate.

Property Tax:

First the present day property value was estimated by the purchase price of $22 million. Then the property value after build out was estimated by adding up the purchase price of $20 million, the development cost of $22 million, and the construction/building value of $140 million. Second, we calculated the estimated property tax of both the current day value and the after build out value. The after build out value resulted in an increase property tax of $156,800. We then took this estimate and apportioned it for the City of Perris based on the City's effective property tax rate.

Business License Fee:

To determine the business license fee for the warehouses the business license fee schedule of $0.25 per $1000 gross receipts was applied to the estimated facility annual revenue of $19.2 million.

EXHIBIT A
ANDREW J. CHANG
Managing Director

PROFILE: Seventeen years of experience working with both high-level executives and operations staff on sensitive issues under tight deadlines in both the private and public sectors. Eight years strategy and operations consulting experience with emphasis on customer analysis and market entry strategies. Twelve years public policy development and implementation experience in California State government. Extensive experience working with a broad array of stakeholders to design, implement and monitor organizational initiatives.

PROFESSIONAL EXPERIENCE:

10/11 – present **Andrew Chang & Co, LLC** Sacramento, CA
Managing Director
- Provide market entry and strategy consulting to Fortune 1000 companies with an emphasis on private sector interaction with government. Private sector specialization in assessing and identifying new market opportunities and developing strategies to enter new markets. Public sector emphasis on public policy, economic and public finance analysis and operations management consulting.

07/09 – 10/11 **Chang & Adams Consulting** Sacramento, CA
Managing Director
- Provide market entry and strategy consulting to Fortune 1000 companies with an emphasis on private sector interaction with government. Private sector specialization in assessing and identifying new market opportunities and developing strategies to enter new markets. Public sector emphasis on public policy, economic and public finance analysis and operations management consulting.

04/07 – 07/09 **Forward Observer, Inc.** Sacramento, CA
Vice President
- Provide business intelligence and strategy consulting to Fortune 1000 companies to support market entry initiatives. Provide business-political risk and due diligence assessment for investment companies. Conduct fiscal, economic and public policy assessments.

08/04 – 04/07 **California Department of General Services** Sacramento, CA
Chief Deputy Director
- Chief Financial and Operations Officer of a state department with $1 billion annual operating budget, thirteen business units and 4,000 employees. Oversaw the state's procurement and real estate operations. Also responsible for the state's telecommunications, automobile fleet, printing, warehousing, insurance and school construction operations.
- Special assignment to the Governor's Office to serve as chief staff economist for the Governor's Council of Economic Advisors. Facilitated Council meetings, prepared written briefings for the Governor on policy issues for consideration and assisted Council members with original research to present at the Council meetings.
- Special assignment to the California Department of Corrections and Rehabilitation to assess the agencies procurement operations and develop recommendations to improve procedures and operations.

06/00 – 08/04 **A.T. Kearney, Inc.** San Francisco, CA
Senior/Engagement Manager (06/02 – 08/04)
- Lead teams to develop strategies for new lines of business for a Fortune 1000 technology company, a national consumer products consortium and an international consumer products retail company.
- Lead teams to develop strategies to both acquire and sell technology services, R&D and manufacturing business units.
- Analytic and modeling methods subject matter expert. Finance and Accounting business processes subject matter expert.

Associate Management Consultant (06/00 – 06/02)
- Conduct research and develop recommendations for various clients in the high technology and consumer products industries.

08/03 – 10/03	**Californians for Schwarzenegger** (Temporary leave from A.T. Kearney, Inc.) ***Chief Economist/Deputy Policy Director*** ▪ Principal economic, tax, energy and budget staff advisor for Arnold Schwarzenegger's gubernatorial campaign.	Santa Monica, CA
12/98 – 02/00	**MGT of America, Inc.** ***Senior Management Consultant*** ▪ Implemented studies to improve finances and operations for Cleveland Unified School District, Florida State University and the California Resources Agency.	Sacramento, CA
10/95 – 12/98	**California State and Consumer Services Agency** ***Assistant Secretary for Policy and Operations*** ▪ Executive of a government agency with an annual operating budget of $1.3 billion, twelve departments and over 14,000 employees. ▪ Under supervision of the Secretary, guided agency and department policies, budgets and strategic plans.	Sacramento, CA
05/95 – 10/95	**Personal Staff of Governor Pete Wilson** ***Chief Economist/Deputy Issues Director*** ▪ Managed the development of national tax, trade, environment, agriculture and crime policies for Governor Pete Wilson's presidential campaign.	Sacramento, CA
09/93 – 05/95	**California Office of the Governor** ***Deputy Chief Economist*** ▪ Lead research teams to assess the economic and fiscal impact of tax, economic development, health care and immigration policies.	Sacramento, CA

4.3.6.2E The contractor shall ensure that all disturbed unpaved roads and disturbed areas within the project are watered at least three times daily during dry weather. Watering, with complete coverage of disturbed areas, shall occur at least three times a day, preferably in the mid-morning, afternoon, and after work is done for the day.	City of Moreno Valley Engineering and Building and Safety Planning Division	Ongoing throughout construction	During Construction	On-site inspection		Issuance of a Stop Work Order
4.3.6.2F The contractor shall ensure that traffic speeds on unpaved roads and project site areas are reduced to 15 miles per hour or less to reduce PM_{10} and $PM_{2.5}$ fugitive dust haul road emissions. Speed limit signs (15 mph maximum) shall be posted at entry points to the project site, and along any unpaved roads providing access to or within the project site and/or any unpaved designated on-site travel routes.	City of Moreno Valley Engineering and Building and Safety Planning Division	Ongoing throughout construction	During Construction	On-site inspection		Issuance of a Stop Work Order
4.3.6.2G Groundcover shall be replaced, and/or non-toxic soil stabilizers shall be applied (according to manufacturers' specifications) to any inactive construction areas (previously graded areas inactive for ten days or more).	City of Moreno Valley Engineering and Building and Safety Planning Division	Ongoing throughout construction	During Construction	On-site inspection		Issuance of a Stop Work Order
4.3.6.2H The contractor shall minimize pollutant emissions by maintaining equipment engines in good condition and in proper tune according to manufacturer's specifications and by not	City of Moreno Valley Engineering and Building and Safety	Ongoing throughout construction	During Construction	On-site inspection		Issuance of a Stop Work Order

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
allowing construction equipment to be left idling for more than five minutes (per California law).						
4.3.6.2I The contractor shall ensure use of low-sulfur diesel fuel in construction equipment as required by the California Air Resources Board (CARB) (diesel fuel with sulfur content of 15 ppm by weight or less).	City of Moreno Valley Engineering and Building and Safety	Ongoing throughout construction	During Construction	On-site inspection		Issuance of a Stop Work Order
4.3.6.2J. Grading plans, construction specifications and bid documents shall also include the following requirements: • Off-road construction equipment shall utilize alternative fuels where feasible e.g., biodiesel fuel (a minimum of B20), natural gas (CNG), liquefied natural gas (LNG), propane, except for equipment where use of such fuels would void the equipment warranty; • Gravel pads shall be provided at all access points to prevent tracking of mud onto public roads; • Install and maintain trackout control devices at all access points where paved and unpaved access or travel routes intersect; • The contractor or builder shall designate a person or person(s) to monitor the dust control program and to order increased watering, as necessary, to prevent transport of dust off site; • The contractor or builder shall post a publicly visible sign with the	City of Moreno Valley Engineering and Building and Safety Planning Division	Review plans, specifications, and bid documents prior to grading; conduct site inspections during construction operations.	Prior to Issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
telephone number and person to contact regarding dust complaints. The contact person shall take corrective action within 24 hours; • High-pressure injectors shall be provided on diesel construction equipment if available; • Engine size of construction equipment shall be limited to the minimum practical size; • Substitute gasoline-powered for diesel powered construction equipment where gasoline powered equipment is available; • Use electric construction equipment where it is practical to use such equipment; • Install catalytic converters on gasoline-powered equipment where this type of equipment is available; • Ride-sharing program for the construction crew shall be supported by contractor(s) via incentives or other inducement; • Documentation shall be provided to the City of Moreno Valley indicating that construction workers have been encouraged to carpool or otherwise reduce VMT to the greatest extent practical, including providing information on available park and ride programs; • Lunch vendor services shall be allowed on site during construction to minimize the need for off-site vehicle						

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
trips; and • All forklifts used during construction and in subsequent operation of the project shall be electric or natural gas powered.						
4.3.6.2K. Throughout project construction, a construction relations officer/community liaison, appointed by the Applicant, shall be retained on site. In coordination and cooperation with the City, the construction relations officer/community liaison shall respond to any concerns related to PM_{10} (fugitive dust) generation or other construction-related air quality issues within 24 hours.	City of Moreno Valley Engineering and Building and Safety	Ongoing throughout construction	During Construction	On-site inspection		Issuance of a Stop Work Order
4.3.6.2L. All project entrances shall be posted with signs which state: • Truck drivers shall turn off engines when not in use; • Diesel delivery trucks servicing the project shall not idle for more than three (3) minutes; and • Telephone numbers of the building facilities manager and CARB, to report violations. These measures shall be enforced by the on-site facilities manager (or equivalent).	City of Moreno Valley Engineering and Building and Safety	Ongoing throughout construction	During Construction	On-site inspection		Issuance of a Stop Work Order
4.3.6.2M. During project grading and construction, the various project contractors shall adhere to the control measures listed in Tables 1.D and 1.E (attached to the MMRP).	City of Moreno Valley Engineering and Building and Safety	Throughout construction	During Construction	On-site inspection		Issuance of a Stop Work Order

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
4.3.6.3A Prior to the issuance of grading permits, the project applicant shall require by contract specifications that all trucks hauling dirt, sand, soil, or other loose materials are to e covered or shall maintain at least 2 feet of freeboard I accordance with the requirements of California Vehicle Code (CVC) Section 23114 (freeboard means vertical space between the top of the load and the top of the trailer).	City of Moreno Valley Engineering and Building and Safety	Throughout construction	During Construction	On-site inspection		Issuance of a Stop Work Order
4.3.6.3B. Prior to the issuance of grading permits, the project applicant shall provide evidence to the City that construction access roads shall be paved at least 100 feet onto the site from the main road.	City of Moreno Valley Engineering and Building and Safety	Throughout construction	Prior to issuance of Grading Permits	On-site inspection		Issuance of a Stop Work Order
4.3.6.3C. Prior to the issuance of grading permits, the project applicant shall require by contract specifications that all streets within the construction site shall be swept once per day if visible soil materials are carried to adjacent streets.	City of Moreno Valley Engineering and Building and Safety Planning Division	One time Review and Approval of Grading Plans Throughout construction	Prior to issuance of Grading Permits During Construction	Review and Approval of Grading Plans On-site inspection		Withhold Grading Permit Issuance of a Stop Work Order
4.3.6.4A. The project applicant shall use "Low-Volatile Organic Compounds" paints, coatings, and solvents with a VOC content lower than required under Rule 1113 (not to exceed 150 grams/liter; 1.25 pounds/gallon). High Pressure Low Volume (HPLV) applications of paints, coatings, and solvents shall be consistent with South Coast Air Quality Management District Rule 1113. Alternatively, the project applicant shall use materials that do not require painting or are pre-painted.	City of Moreno Valley Engineering and Building and Safety Planning Division	Throughout construction	During Construction	On-site inspection		Issuance of a Stop Work Order

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
4.3.6.5B. Prior to issuance of building permits, the project applicant shall provide evidence to the City that energy-efficient and low-emission methods and features of building construction shall be incorporated into the project design. These methods and features may include (but are not limited to) the following: ○ Construction of buildings that exceed statewide energy requirements beyond Construction of buildings that exceed statewide energy requirements beyond 10 percent of that identified in Title 24, Part 6 Energy Efficiency Standards: ○ Use of low-emissions water heaters; ○ Use of central water-heating systems; ○ Use of energy-efficient appliances; ○ Use of increased insulation; ○ Use of automated controls for air conditioners; ○ Use of energy-efficient parking lot lighting; and ○ Use of lighting controls and energy-efficient lighting. • Utilize low-VOC interior and exterior coatings during project repainting. • Provide on-site improvements such as sidewalks or pedestrian walkways to promote pedestrian activity and reduce the number of vehicle trips. • Installation of skylights and energy-efficient lighting that exceeds California	City of Moreno Valley Engineering and Building and Safety and Planning Division	Prior to building and during construction operations.	Prior to Issuance of Building Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
Title 24 standards where feasible, including electronic dimming ballasts and computer-controlled daylight sensors in the buildings. • Shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and building shall be planted at the proposed project site. These strategies will minimize the heat island effect and thereby reduce the amount of air conditioning required. • Strategies to be considered include fans to assist natural ventilation, centralized water and space conditioning systems, high efficiency individual heating and cooling units, and automatic setback thermostats. • Reduction of energy demand associated with potable water conveyance through the following methods: o Incorporating drought-tolerant plants into the landscaping palette; and o Use of water-efficient irrigation techniques. • Energy-efficient low-pressure sodium parking lot lights or equivalent as determined by the City shall be used; • Buildings shall be oriented north-south where feasible; • Implement an on-site circulation plan in parking lots to reduce vehicle queuing; • Develop a trip reduction plan to achieve 1.5 average vehicle ridership (AVR) for businesses with fewer than 250						

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
employees or multi-tenant worksites; • Include bicycle parking facilities such as bicycle lockers and racks; • Include showers for bicycling employees use; and • Construct on-site pedestrian facility improvements such as building access that is physically separated from street and parking lot traffic and walk paths.						
4.3.6.6A Prior to issuance of the first building permit, building and site plan designs shall ensure that the project's energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of 10 percent until January 1, 2014. For building permits issued after that date, new state energy standards require a 20 percent reduction from 2008 Title 24, Part 6 Energy Efficiency Standards. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and reviewed and approved by the City. The following design features shall be used to fulfill this requirement: • Buildings shall exceed California Title 24 Energy Efficiency performance standards for water heating and space heating and cooling, as deemed acceptable by the City. • Increase in insulation such that heat transfer and thermal bridging is minimized. • Limit air leakage through the structure or within the heating and	City of Moreno Valley Building and Safety Planning Division	Prior to Construction (once)	Prior to Issuance of Building Permits	Review of building plans and on-site inspection		Withhold Building Permits

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
cooling distribution system to minimize energy consumption. • Incorporate dual-paned or other energy efficient windows. • Incorporate energy efficient space heating and cooling equipment. • Interior and exterior energy efficient lighting which exceeds the California Title 24 Energy Efficiency performance standards shall be installed, as deemed acceptable by the City. Automatic devices to turn off lights when they are not needed shall be implemented. • To the extent that they are compatible with landscaping guidelines established by the City, shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and buildings shall be planted at the project site. • Paint and surface color palette for the project shall emphasize light and off-white colors which reflect heat away from the buildings. • All buildings shall be designed to accommodate renewable energy sources, such as photovoltaic solar electricity systems, appropriate to their architectural design. • To reduce energy demand associated with potable water conveyance, the project shall implement the following:						

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
○ Landscaping palette emphasizing drought-tolerant plants; ○ Use of water-efficient irrigation techniques; and, ○ U.S. EPA Certified WaterSense labeled for equivalent faucets, high-efficiency toilets (HETs), and water-conserving shower heads. • The project shall provide secure, weather-protected, on-site bicycle storage/parking. • The project shall provide on-site showers (one for males and one for females). Lockers for employees shall be provided. • The project will establish a Transportation Management Association (TMA). The TMA will coordinate with other TMAs within the City to encourage and coordinate carpooling among building occupants. The TMA will advertise its services to building occupants, and offer transit and/or other incentives to reduce greenhouse gas (GHG) emissions. A plan will be submitted by the TMA to the City within two months of project completion that outlines the measures implemented by the TMA, as well as contact information. • The project shall provide preferential parking for carpools and vanpools. Locations and configurations of						

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
proposed preferential parking for carpools and vanpools are subject to review and approval by the City. Prior to final site plan approval, preferential parking for carpools and vanpools shall be delineated on the project site plan. • The project shall provide at least two electric vehicle charging stations. Locations and configurations of proposed charging stations are subject to review and approval by the City. Prior to issuance of the first building permit, stub outs for charging stations shall be indicated on the project building plan. • Lease/purchase documents shall identify that tenants are encouraged to promote the following: o Implementation of compressed workweek schedules. o SmartWay partnership; o Achievement of at least 20 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of consolidated trips carried by SmartWay carriers until it reaches a minimum of 90 percent of all long-haul trips carried by SmartWay 1.0 or greater carriers. o Achievement of at least 15 percent per year (as a percentage of previous						

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
percentage, not total trips) increase in percentage of long-haul trips carried by SmartWay carriers until it reaches a minimum of 85 percent of all consolidator trips carried by SmartWay 1.0 or greater carriers. o Use of fleet vehicles conforming to 2010 air quality standards or better. o Installation of catalytic converters on gasoline-powered equipment. o Inclusion of electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets. o Establishment and use of carpool/vanpool programs, complemented by parking fees for single-occupancy vehicles. o Provision of preferential parking for EV and CNG vehicles. o Use of electrical equipment (instead of gasoline-powered equipment) for landscape maintenance. o Use of electric (instead of diesel or gasoline-powered) yard trucks. o Use of SmartWay 1.25 rated trucks. o Each facility operator shall provide regular sweeping of						

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
onsite parking and drive areas. o Each facility operator shall maintain a log of all trucks entering the facility to ensure that, on average, the daily truck fleet meets the quantities and emissions standards listed in the Draft EIR. This log shall be available for inspection by City staff at any time. o Each facility operator shall prohibit all vehicles from idling in excess of five minutes in all onsite areas. o Each facility operator shall ensure that onsite staff in charge of keeping the daily log and monitoring for excess idling will be trained and certified in diesel health effects and technologies, such as by requiring attendance at CARB-approved courses. o Each facility operator upon occupancy that do not already operate 2007 and newer trucks shall in food faith apply for funding to replace or retrofit their trucks such as Carl Moyer, VIP, Prop 1B or similar funds. Should funds be awarded, the tenant shall be required to accept and use them.

4.4 BIOLOGICAL RESOURCES						
4.4.6.1A. If tree removal or clearing and grubbing activities must take place during the general nesting season (February 1 through August 31), a nesting bird survey shall be conducted within seven (7) days prior to any vegetation disturbance activities. If passerine birds are found to be nesting or there is evidence of nesting behavior inside the impact area, an exclusion buffer, to be determined by the appropriate agency (e.g. the City, County, and/or CDFG), shall be set in place around the nest where no vegetation disturbance will be permitted. For raptor species, such as hawks and owls, this buffer may be as large as 500 feet. A qualified biologist shall closely monitor nests until it is determined that they are no longer active, at which time construction activity in the vicinity of nests may continue.	City of Moreno Valley Planning Division	Prior to grading and periodic site inspections during grading	Prior to Issuance of Grading Permit	Review of Evidence that a qualified biologist has been hired and the pre-construction survey has been completed. Review of a report of the survey findings. Periodic site inspections during construction activities during the nesting season to ensure compliance.		Withhold Grading Permit
4.4.6.1B. Prior to site grading, a pre-construction survey shall be required for the burrowing owl to confirm the presence/absence of this species from the site. The survey shall be conducted by a qualified biologist within 30 days prior to ground disturbance, and in accordance with MSHCP survey requirements, to avoid direct take of burrowing owls. If burrowing owls are determined to occupy the project site or immediate vicinity, the City of Moreno Valley Planning Department shall be notified and avoidance measures as identified in **Mitigation Measure 4.4.6.1C,** shall be implemented. Implementation of avoidance measures	City of Moreno Valley Planning Division	Once prior to grading	Prior to Issuance of Grading Permit	Review of Evidence that a qualified biologist has been hired and the pre-construction survey has been completed. Review of a report of the survey findings.		Withhold Grading Permit

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
shall be executed pursuant to the MSHCP, the California Fish and Game Code, and the MBTA, and according the Burrowing Owl Survey Protocol and Mitigation Guidelines (California Burrowing Owl Consortium 1993) and reviewed the City of Moreno Valley, the Riverside Conservation Authority, and/or by the CDFG.						
4.4.6.1C. As recommended in the BUOW Survey and Mitigation Guidelines prepared by the California BUOW Consortium, no disturbance to an occupied burrow shall occur within approximately 160 feet of an occupied burrow during the non-breeding season (September 1 through January 31), or within approximately 250 feet of an occupied burrow during the breeding season (February 1 through August 31). For unavoidable impacts, passive relocation of burrowing owls shall be implemented. Passive relocation shall be conducted by a qualified biologist in accordance with procedures set forth by the MSHCP and California Burrowing Owl Consortium. Passive relocation of occupied burrows supporting a breeding pair of burrowing owls shall be conducted outside of the breeding season pursuant to the California Fish and Game Code and the MBTA.	City of Moreno Valley Planning Division	Prior to grading	Prior to Issuance of Grading Permit	Provide evidence to the City that the passive relocation plan has been approved by CDFG and USFWS.		Withhold Grading Permit
4.4.6.2A. As outlined in the project's Determination of a Biologically Equivalent or Superior Preservation (DBESP) report, the project applicant shall compensate for the temporary and permanent impact on and loss of jurisdictional waters and streambeds by providing a minimum 2:1 off-site replacement of equivalent riverine/riparian habitat prior to project	City of Moreno Valley Planning Division	As outlined in the approved DBESP	Prior to Issuance of Certificate of Occupancy	Demonstrate completion of DBESP implementation measures		Withhold Grading Permit

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
construction. Offsite restoration, enhancement, and/or land purchase mitigation for the drainage impacts will occur at an offsite location through one or more of the following: an USACE approved mitigation bank, through an in lieu fee mitigation program, and/or land purchase and conservation. DFG and USFWS will need to provide concurrence that this mitigation is equivalent or superior to that proposed for impact through their review and acceptance of the DBESP.						
4.4.6.2B. Riparian/riverine resources that are temporarily impacted by project construction shall be returned to their preconstruction contours and hydroseeded, as outlined in the DBESP.	City of Moreno Valley Planning Division	Once, prior to issuance of Certificate of Occupancy	Prior to Issuance of Certificate of Occupancy	Applicant to demonstrate compliance with DBESP		Withhold Certificate of Occupancy
4.4.6.3A. The project applicant shall obtain a Section 404 Nationwide or Individual Permit, as appropriate, from the USACE, a Section 401/Porter-Cologne Water Quality Certification from the RWQCB, and a Section 1602 Streambed Alteration Agreement from the CDFG. Offsite restoration, enhancement, and/or land purchase mitigation of jurisdictional drainage impacts will occur at an off-site location through one or more of the following: an USACE approved mitigation bank, through an in-lieu fee mitigation program, and/or land purchase and conservation.	City of Moreno Valley Planning Division	Once, prior to issuance of Certificate of Occupancy	Prior to Issuance of Certificate of Occupancy	Project applicant to submit to the City a copy of the USACE Section 404 Permit and the Section 1602 Streambed Alteration Agreement from the CDFG		Withhold Certificate of Occupancy

CULTURAL RESOURCES						
4.5.6.1A Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a Cultural Resources Monitoring Agreement has been secured for qualified Tribal representatives, and that a professional archaeological monitor meeting Secretary of Interior standards has been retained by the Applicant to conduct monitoring of all mass grading and trenching activities and has the authority to temporarily halt and redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project Archaeologist and Tribal representatives shall attend the pre-grading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.	City of Moreno Valley Planning Division	Prior to grading	Prior to Issuance of Grading Permit	Provide evidence to the City that a qualified archaeological monitor has been retained to oversee all ground altering activities		Withhold Grading Permit
4.5.6.1B Prior to the issuance of a grading permit, the Applicant shall provide evidence to the City of Moreno Valley that appropriate Native American representative(s), Project Archaeologist, and the Tribal representative(s) shall be allowed to monitor and have received a minimum of 30 days advance notice of all mass grading and trenching activities. During grading and trenching operations, the Tribal representatives and the project archaeological monitor shall observe all mass grading and trenching activities per the Cultural Resources Monitoring Agreement. If the Tribal representatives suspect that an archaeological resource may have been unearthed, the archaeologist, in consultation with the	City of Moreno Valley Planning Division	Prior to grading and throughout ground disturbing activities.	Prior to Issuance of Grading Permit	Provide evidence to the City that a qualified archaeological monitor has been retained to oversee all ground altering activities and that the Soboba, Morongo, and Pechanga Tribes have been notified as to when ground altering activities will occur on site. Tthe		Withhold Grading Permit and/or Issuance of a Stop Work Order

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
tribal representative, shall immediately halt and redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. In consultation with the appropriate Native American Tribe(s), the archaeological monitor shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2.				archaeological monitor shall invite one or more Native American monitors to participate in the monitoring program at the expense of the applicant.		
4.5.6.1C If a significant archaeological resource(s) is discovered on the property, ground disturbing activities shall be suspended 100 feet around the resource(s). The archaeological monitor and representatives of the appropriate Native American Tribe(s), the Project Applicant, and the City Planning Division shall confer regarding mitigation of the discovered resource(s). A treatment plan and/or preservation plan shall be prepared and by the archaeological monitor and reviewed by representatives of the appropriate Native American Tribe(s), the Project Applicant, and the City Planning Division and implemented by the archaeologist to protect the identified archaeological resource(s) from damage and destruction. The landowner shall relinquish ownership of all archaeological artifacts that are of Native American origin found on the Project site to the culturally affiliated Native American tribe(s) for proper treatment and disposition. A final report containing the significance and treatment findings shall be prepared by the archaeologist and submitted to the City Planning Division, the appropriate Native American tribe(s),	City of Moreno Valley Planning Division	Throughout ground disturbing activities.	On-site Inspection during construction	If historic resources are found the archaeologist shall provide a recommendation to the City as to how to handle and evaluate the resources. If archaeological resources are found the archaeologist shall notify the applicant, City and local Native American representatives. A written disposition of the mitigation shall be provided to the City by the archaeologist.		Issuance of a Stop Work Order

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
and the Eastern Information Center at the University of California, Riverside. All cultural material, excluding sacred, ceremonial, grave goods and human remains, collected during the grading monitoring program and from any previous archaeological studies or excavations on the project site shall be curated, as determined by the treatment plan, according to the current professional repository standards and may include the Pechanga Bands curatorial facility.						
4.5.6.1D Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan: "If any suspected archaeological resources are discovered during ground-disturbing activities and the archaeological monitor or Tribal representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the project archaeologist and the Tribal representatives to the site to assess the significance of the find."	City of Moreno Valley Planning Division	Once prior to issuing permit	Prior to Issuance of Grading Permit.	Verify that plans contain specified language		Withhold Grading Permit.
4.5.6.1E If human remains are encountered, California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to California Public Resources Code Section 5097.98(b), remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made by the Coroner. If the Riverside County Coroner	City of Moreno Valley Planning Division	Ongoing during ground disturbing activities.	On-site Inspection during construction if human remains are discovered.	The contractor and/or archaeologist shall contact the applicant and City if human remains are discovered.		Issuance of a Stop Work Order

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
determines the remains to be Native American, the California Native American Heritage Commission must be contacted within 24 hours. The Native American Heritage Commission must then immediately notify the "most likely descendant(s)" of receiving notification of the discovery. The most likely descendant(s) shall then make recommendations within 48 hours, and engage in consultations concerning the treatment of the remains as provided in Public Resources Code §5097.98.						
4.5.6.2A. Prior to the issuance of grading permits, the project applicant shall submit to and receive approval from the City, a Paleontological Resource Impact Mitigation Program (PRIMP). The PRIMP shall include the provision of a trained paleontological monitor during on-site soil disturbance activities. The monitoring for paleontological resources shall be conducted during the rough-grading phase of the project. In the event that paleontological resources are unearthed or discovered during excavation, **Mitigation Measure 4.5.6.2C** shall apply. Conversely, if no paleontological resources are unearthed or discovered on site during excavation, no additional action is required.	City of Moreno Valley Planning Division	Prior to grading and on-going during ground disturbing activities.	Prior to Issuance of Grading Permit	Provide evidence to the City that a qualified paleontologist has been retained, and that the paleontologist(s) shall prepare a PRIMP for City approval. A qualified paleontologist(s) shall be retained by the applicant to monitor during rough grading. A report of findings shall be submitted to the City after the finalization of construction.		Withhold Grading Permit/ Issuance of a Stop Work Order

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
4.5.6.2B. The paleontological monitor shall be equipped to rapidly remove any large fossil specimens encountered during excavation. During monitoring, samples of soil shall be collected and processed to recover microvertebrate fossils. Processing shall include wet screen washing and microscopic examination of the residual materials to identify small vertebrate remains.	City of Moreno Valley Planning Division	Prior to grading and on-going during ground disturbing activities.	Prior to Issuance of Grading Permit	A qualified paleontologist(s) shall be retained by the applicant to monitor during rough grading. A report of findings shall be submitted to the City after the finalization of construction.		Withhold Grading Permit/ Issuance of a Stop Work Order
4.5.6.2C. If paleontological resources are unearthed or discovered during excavation of the project site, the monitoring for paleontological resources shall be conducted on a full-time basis for the duration of the rough-grading of the project site. The following recovery processes shall apply: • Upon encountering a large deposit of bone, salvage of all bone in the area shall be conducted with additional field staff and in accordance with modern paleontological techniques. • All fossils collected during the project shall be prepared to a reasonable point of identification. Excess sediment or matrix shall be removed from the specimens to reduce the bulk and cost of storage. Itemized catalogs of all material collected and identified shall be provided to the museum repository along with the specimens. • A report documenting the results of the monitoring and salvage activities	City of Moreno Valley Planning Division	Ongoing during ground disturbing activities.	When paleontological resources are unearthed or discovered	A qualified paleontologist(s) shall be retained by the applicant to monitor full time during the duration of ground disturbing activities. A report of findings shall be submitted to the City after the finalization of construction.		Issuance of a Stop Work Order

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
and the significance of the fossils shall be prepared. • All fossils collected during this work, along with the itemized inventory of these specimens, shall be deposited in a museum repository for permanent curation and storage.						
4.5.6.2D Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan: "If any suspected paleontological resources are discovered during ground-disturbing activities, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call a qualified paleontologist to the site to assess the significance of the find. A qualified paleontologist shall evaluate the suspected resource. If the paleontologist determines that the find is not unique, construction shall be permitted to proceed. However, if the paleontologist determines that further information is needed to evaluate significance, the City of Moreno Valley shall be notified and a treatment plan shall be prepared and implemented in consultation with the City to protect the identified paleontological resource(s) from damage and destruction."	City of Moreno Valley Planning Division	Once before issuing grading permit.	Prior to Issuance of Grading Permit	Verify plans contain specified language.		Withhold Grading Permit

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
HAZARDS AND HAZARDOUS MATERIALS						
4.6.6.1A Prior to issuance of a grading permit for the project, a qualified contractor shall test onsite soils for contamination by agricultural chemicals. If present in concentrations above established actionable levels or thresholds, these materials shall be removed and transported to an appropriate landfill by a licensed contractor. This measure shall be implemented to the satisfaction of the Building Division including written documentation of the disposal of any agricultural chemical residue in conformance with all applicable regulations.	City of Moreno Valley Planning Division	Prior to grading	Prior to Issuance of Grading Permit and receipt of supplemental Phase II soil testing	Applicant shall provide written results of subsequent soil testing for pesticides		Withhold Grading Permit
HYDROLOGY AND WATER QUALITY						
4.7.6.1A. Prior to grading plan approval and the issuance of a grading permit by the City, the project applicant shall provide evidence to the City that a Notice of Intent (NOI) has been filed with the Regional Water Quality Control Board for coverage under the State NPDES General Construction Permit for discharge of storm water associated with construction activities.	City of Moreno Valley Planning Division Building and Safety Engineering	Prior to grading	Prior to Issuance of Grading Permit and review of grading plan documents	Applicant shall provide written evidence that an NOI has been filed with the Regional Water Quality Control Board.		Withhold Grading Permit
4.7.6.1B. Prior to grading plan approval and the issuance of a grading permit by the City, the project applicant shall submit to the State Water Quality Control Board a Storm Water Pollution Prevention Plan (SWPPP). The SWPPP shall include a surface water control plan and erosion control plan citing specific measures to control on-site and off-site erosion during the entire grading and construction	City of Moreno Valley Planning Division Building and Safety Engineering	Prior to grading and onsite inspection during construction	Prior to Issuance of Grading Permit	Review of grading and construction documents and on-site inspection. Applicant shall provide written evidence that a SWPPP has been filed with the Regional Water		Withhold Grading Permit and/or Issuance of Stop Work Order

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
period. Additionally, the SWPPP shall identify structural and nonstructural BMPs to control sediment and nonvisible discharges from the site. BMPs to be implemented in the SWPPP may include, but shall not be limited to, the following: • Sediment discharges from the site may be controlled by the following: gravel bags, silt fences, straw wattles and temporary debris basins (if deemed necessary), and other discharge control devices. The construction and condition of the BMPs will be periodically inspected during construction, and repairs will be made when necessary as required by the SWPPP. • No materials of any kind shall be placed in drainage ways. • Materials that could contribute non-visible pollutants to storm water must be contained, elevated, and placed in temporary storage containment areas. • All loose piles of soil, silt, clay, sand, debris, and other earthen material shall be protected per RWQCB standards to eliminate any discharge from the site. Stockpiles will be surrounded by silt fences. The SWPPP will include inspection forms for routine monitoring of the site during the construction phase to ensure NPDES compliance. • Additional BMPs and erosion control measures will be documented in the				Quality Control Board.		

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
SWPPP and utilized if necessary. • The SWPPP will be kept on site for the entire duration of project construction and will also be available to the local RWQCB for inspection at any time. In the event that it is not feasible to implement the above BMPs, the City of Moreno Valley can make a determination that other BMPs will provide equivalent or superior treatment either on or off site.						
4.7.6.1C. Prior to the issuance of grading permits, the project applicant shall provide evidence to the City that the following provisions have been added to construction contracts for the project: • The Construction Contractor shall be responsible for performing and documenting the application of BMPs identified in the SWPPP. Weekly inspections shall be performed on sediment control measures called for in the SWPPP. Monthly reports shall be maintained by the Contractor and submitted to the City for inspection. In addition, the Contractor will also be required to maintain an inspection log and have the log on site to be reviewed by the City of Moreno Valley and the representatives of the Regional Water Quality Control Board.	City of Moreno Valley Planning Division Engineering	Once prior to grading	Prior to issuance of Grading Permit	City review and approval of grading plans.		Withhold Grading Permit
4.7.6.2A. Prior to grading plan approval and the issuance of a grading permit by the City, the project applicant shall receive approval from the City of Moreno Valley for a Final Water Quality Management Plan (F-WQMP). The F-	City of Moreno Valley Planning Division Engineering	Once prior to grading	Prior to issuance of Grading Permit	City review and approval of Final Water Quality Management Plan		Withhold Grading Permit

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
WQMP shall specifically identify pollution prevention, site design, source control, and treatment control BMPs that shall be used on site to control predictable pollutant runoff in order to reduce impacts to water quality to the maximum extent practicable. BMPs to be implemented in the F-WQMP may include (but shall not be limited to) the following: • Required landscaped areas shall not use decorative concrete or impervious surfaces. • Landscape plans shall incorporate native and drought-tolerant plants, trees, and shrubs. Landscaping shall be maintained weekly and maintenance contractor will properly dispose of all landscape wastes. • Irrigation systems shall be inspected monthly by the landscape contractor to check for over-watering, leaks, or excessive runoff to paved areas. Timers will be used to prevent over-watering. • Signage will be inspected and maintained twice a year for legibility. • Outdoor Loading/Unloading truck docks shall be kept in a clean and orderly condition with weekly inspections, continuous monitoring, and immediate clean up of spills. • Parking area maintenance shall be swept or vacuumed at least quarterly, if there is any trash or debris in between the routine sweeping, it shall be swept or						

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
vacuumed immediately. • Trash enclosures will be inspected and maintained weekly or as needed by maintenance contractor. • On-site extended detention/sedimentation basins and sand filters will treat all of the site's runoff via vegetated swales and will be maintained and inspected at least twice a year and prior to October 1. • Additional BMPs will be documented in the WQMP and utilized if necessary. In the event that it is not feasible to implement the above BMPs, the City of Moreno Valley can make a determination that other BMPs will provide equivalent or superior treatment either on or off site.						
4.7.6.3A. Prior to grading plan approval, the project proponent shall receive approval on a project-specific Final Hydrology Study, with supporting engineering calculations, from the City Engineer. The Final Hydrology Study shall incorporate relevant requirements identified by the City, and/or site-specific geotechnical investigations. A Preliminary Hydrology Study will be required prior to approval of the associated project tentative tract map. TRANSPORTATION						
4.11.6.4A. Prior to issuance of a Certificate of Occupancy the project applicant shall construct the following traffic improvements: • **Redlands Boulevard/SR-60 Westbound Ramps.** Install a traffic signal. This improvement is currently approved, and permitted by Caltrans. If not otherwise completed prior to project opening, the required traffic signal shall be constructed by the Applicant prior to issuance of the first Certificate of Occupancy. • **Redlands Boulevard/Fir Avenue/Eucalyptus Avenue.** If not otherwise completed prior to project opening, prior to issuance of the first Certificate of Occupancy, the Applicant shall construct the following improvements: Install a traffic signal and add a northbound left-turn lane and a southbound left-turn lane. If the improvements are constructed by others prior to the Certificate of Occupancy, the applicant shall pay its fair share towards the improvements through the City's DIF program.	City of Moreno Valley Building and Safety Engineering Planning Division	Prior to Certificate of Occupancy on the building.	Prior to the Issuance of a Certificate of Occupancy	Evidence of the construction of the improvements. If construction has already occurred by others evidence of payment of DIF fees.		Withhold Certificate of Occupancy

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
4.11.6.4B. Prior to issuance of building permits, the project applicant shall pay the fair-share contribution toward the following traffic improvements through fees paid to the City of Moreno Valley based on the City's DIF system and the County's TUMF program: • **Moreno Beach Drive/SR-60 Eastbound Ramps.** The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF fee would mitigate the significant impact at this location. • **Redlands Boulevard/SR-60 Westbound Ramps.** Install a traffic signal. This improvement is listed in the City's DIF program. Therefore, payment of the DIF fee would mitigate the significant impact at this location. • **Redlands Boulevard/Fir Avenue/Eucalyptus Avenue.** Install a traffic signal. This improvement is listed in the City's DIF program. Add a northbound left-turn lane and a southbound left-turn lane. These improvements are listed in the TUMF. Therefore, payment of the DIF and TUMF fees would mitigate the significant impact at this location.	City of Moreno Valley Building and Safety Engineering Planning Division	Once before construction	Prior to the Issuance of Building Permits	Evidence of Payment of City DIF fees and WRCOG TUMF fees. 4.11.6.4C. Prior to issuance of building permits, the project applicant shall pay the fair-share contribution toward the following traffic improvements through fees paid to the City of Moreno Valley based on the City's DIF system and the County's TUMF program: • **Moreno Beach Drive/SR-60 Eastbound Ramps.** The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF fee would mitigate the significant impact at this location. • **Moreno Beach Drive/Cottonwood Avenue.** Add a southbound through lane. This improvement is listed in the City's DIF program. Therefore, payment of the DIF fee would mitigate the significant impact at this location. • **Moreno Beach Drive/Alessandro Boulevard.** Add a southbound through lane. This improvement is listed in the City's DIF program. Therefore, payment of the DIF fee would mitigate the significant impact at this location. • **Redlands Boulevard/SR-60 Westbound Ramps.** Install a traffic signal. This improvement is listed in the City's DIF program. Add a northbound through lane. The	City of Moreno Valley Building and Safety Engineering Planning Division	Once before construction	Prior to the Issuance of Building Permits	Evidence of Payment of City DIF fees and WRCOG TUMF fees.		Withhold Building Permit

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
Redlands Boulevard/SR-60 Interchange reconstruction would implement the northbound through lane. The interchange reconstruction project is programmed in the TUMF. Therefore, payment of the DIF and TUMF fees would mitigate the significant impact at this location. • **Redlands Boulevard/SR-60 Eastbound Ramps.** The Redlands Boulevard/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF. Therefore, payment of the TUMF fee would mitigate the significant impact at this location. • **Redlands Boulevard/Fir Avenue/Eucalyptus Avenue.** Install a traffic signal. Add a westbound right-turn lane and provide overlap phasing for the westbound right turns. Add a westbound left-turn lane and an eastbound left-turn lane. These improvements are programmed in the City's DIF program. Add a northbound left-turn lane, a southbound through lane, and a southbound left-turn lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF fees would mitigate the significant impact at this location. • **Redlands Boulevard/Eucalyptus Avenue.** Add a southbound right-turn lane. This improvement is programmed in the TUMF.						

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
Therefore, payment of the TUMF fees would mitigate the significant impact at this location. • **Redlands Boulevard/Alessandro Boulevard.** Add a southbound left-turn lane. This improvement is programmed in the TUMF. Therefore, payment of the TUMF fees would mitigate the significant impact at this location.						
4.11.6.4D. Prior to issuance of building permits, the project applicant shall pay the fair-share contribution toward the following traffic improvements through fees paid to the City of Moreno Valley based on the City's DIF system and the County's TUMF program. At some locations, the DIF and TUMF fees would not fully mitigate the project's impact. For these locations, additional improvements shall be implemented by the project applicant prior to the issuance of a certificate of occupancy for the project: • **Nason Street/Eucalyptus Avenue.** Add a northbound right turn lane. This improvement is programmed in the City's DIF; therefore, payment of the DIF fee would partially mitigate the significant impact at this intersection. In addition, the project shall contribute a fair share (calculated to be 1.76%) toward restriping the westbound approach to provide dual left-turn lanes. • **Nason Street/Alessandro Boulevard.** Add an eastbound through lane and a westbound	City of Moreno Valley Building and Safety Engineering Planning Division	Once before construction and onsite inspection for improvements.	Prior to the Issuance of Building Permits Where improvements must be built by the developer – Prior to a Certificate of Occupancy on the first building.	Evidence of Payment to the City of fair share contribution in addition to payment of DIF, TUMF and build improvements where indicated in the mitigation measure.		Withhold Building Permit and/or Withhold Certificate of Occupancy.

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
through lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF fee would partially mitigate the significant impact at this intersection. In addition, the project shall contribute a fair share (calculated to be 1.4%) toward modification of the traffic signal to provide overlap phasing for the eastbound right-turn lane. • **Moreno Beach Drive/SR-60 Westbound Ramps.** The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF fee would mitigate the significant impact at this location. • **Moreno Beach Drive/SR-60 Eastbound Ramps.** The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF fee would mitigate the significant impact at this location. • **Moreno Beach Drive/Eucalyptus Avenue.** Convert the existing eastbound through lane to a left-turn lane and the eastbound right-turn lane to a shared through/right-turn

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
northbound left-turn lane, northbound through lane, southbound left-turn lane, and a southbound through lane. These improvements are programmed in the TUMF program. Therefore, payment of the DIF and TUMF fees would fully mitigate the impact of the project at this intersection. • **Moreno Beach Drive/Encilia Avenue.** Install a traffic signal and add a northbound through lane, southbound left-turn lane, and a southbound through lane. This improvement is programmed in the City's DIF program. Therefore, payment of the DIF fee would mitigate the impacts of the project at this intersection.						
GREENHOUSE GASES AND GLOBAL CLIMATE CHANGE						
4.13.6.1A. Prior to the issuance of building permits, the project applicant shall provide evidence to the City of Moreno Valley that building features have been incorporated in building plans as required by Title 24 of the California Code of Regulations. These features include but are not limited to the following: • Exterior windows shall utilize window treatments for efficient energy conservation. • Per CALGreen Code requirements, water-efficient fixtures and appliances, including but not limited to low-flow faucets, dual-flush toilets minimizing water consumption by 20 percent from the Building Standards	City of Moreno Valley Building and Safety Planning Division	Once prior to construction	Prior to issuance of building permits	Review of construction documents and on-site inspection		Withhold Building Permit

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
Code baseline water consumption shall be used. • Per CALGreen Code requirements, a Commissioning Plan shall be prepared and all building systems (e.g., heating, ventilation, and air-conditioning [HVAC], irrigation systems, lighting, and water heating) shall be commissioned by the Commissioning Authority. • Per CALGreen Code, restrict watering methods (e.g., prohibit systems that apply water to non-vegetated surfaces) and control runoff.						
4.13.6.1B. Prior to the issuance of building permits, the project applicant shall provide evidence to the City of Moreno Valley that the following measures have been incorporated into the design and construction of the project: • Use of locally produced and/or manufactured building materials for at least 10 percent of the construction materials used for the project. • Use of "Green Building Materials," such as those materials that are resource efficient, and recycled and manufactured in an environmentally friendly way, for at least 10 percent of the project. • Limit unnecessary idling of construction equipment. A reduction in equipment idling would reduce fuel	City of Moreno Valley Building and Safety Planning Division	Once prior to construction Once during on-site inspection	Prior to issuance of building permits	Review of construction documents/building plans and on-site inspection		Withhold Building Permit

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
consumption, and therefore, GHG emissions. • Maximize the use of electricity from the power grid by replacing diesel- or gasoline-powered equipment. This would reduce GHG emissions because electricity can be produced more efficiently at centralized power plants. • Design the project building to exceed the California Building Code's (CBC) Title 24 energy standard, including, but not limited to, any combination of the following: o Increase insulation such that heat transfer and thermal bridging is minimized. o Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption. o Incorporate ENERGY STAR or better rated windows, space heating and cooling equipment, light fixtures, appliances, or other applicable electrical equipment. • Provide a landscape and development plan for the project that takes advantage of shade, prevailing winds, and landscaping. • Install efficient lighting and lighting control systems. Use daylight as an integral part of the lighting systems in						

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
buildings. • Install reflective roof material (SRI >45) and cool pavements. • Install energy-efficient heating and cooling systems, appliances and equipment, and control systems. • Install solar or light-emitting diodes (LEDs) for outdoor lighting for auto parking areas.						
4.13.6.1C. Prior to the issuance of occupancy permits, the project applicant shall provide evidence to the City of Moreno Valley that the following measures have been be incorporated into the operation of the project: • The project applicant shall use less than 3,900 Global Warming Potential (GWP) hydrofluorocarbon (HCF) refrigerants or natural refrigerants (ammonia, propane, carbon dioxide [CO_2]) for refrigeration and fire suppression equipment. • Provide vegetative or man-made exterior wall shading devices for east-, south-, and west facing windows. • Devise a comprehensive water conservation strategy appropriate for the project and its location. The strategy may include the following, plus other innovative measures that may be appropriate: o Install drought-tolerant plants for landscaping.	City of Moreno Valley Building and Safety Planning Division	Once Prior to construction Once during on-site inspection	Prior to issuance of occupancy permit	Review of construction documents and on-site inspection		Withhold Occupancy Permit

Mitigation Measure No. / Implementing Action	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/ Initials	Sanctions for Non-Compliance
○ Use reclaimed water for landscape irrigation within the project. Install the infrastructure to deliver and use reclaimed water. ○ Install water-efficient irrigation systems, such as weather-based and soil-moisture-based irrigation controllers and sensors for landscaping according to the California Department of Water Resources Model Efficient Landscape Ordinance. • Provide employee education about reducing waste and available recycling services.						

RESOLUTION NO. 2014-57

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING A GENERAL PLAN AMENDMENT (PA07-0082) FROM R15, R5, AND RA-2 LAND USE DESIGNATIONS TO BUSINESS PARK FOR APPROXIMATELY 71 ACRES FOR DEVELOPMENT OF A 2,244,419 SQUARE FOOT INDUSTRIAL PARK LOCATED WITHIN ASSESSOR'S PARCEL NUMBERS 4880330-011, -012, -013, -017, -018, -019, -020 AND -021, AS SHOWN ON THE GENERAL PLAN AMENDMENT MAP INCLUDED AS EXHIBIT A

WHEREAS, the applicant, Prologis, filed Application No. PA07-0082, requesting a General Plan Amendment for approximately 71 acres from R15, R5, and RA-2 land use designations to Business Park for certain property, as described in the title of this resolution and the attached Exhibit A. A General Plan Amendment is also required for proposed changes to the City's Circulation Element and the Master Plan of Trails; and

WHEREAS, the Planning Commission of the City of Moreno Valley held public hearings on March 13, 2014 and April 24, 2014 to consider the subject application and all of the environmental documentation prepared for the project and recommended City Council approval on April 24th; and

WHEREAS, on June 24, 2014, the City Council of the City of Moreno Valley held a public hearing to consider the subject application and all of the environmental documentation prepared for the project; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred; and

WHEREAS, the City Council considered the Final Environmental Impact Report prepared for the project for the purpose of compliance with the California Environmental Quality Act (CEQA). The above application shall not be approved unless the Final Environmental Impact Report (P07-186) is certified and approved; and

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

A. This City Council hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this City Council during the above-referenced meeting on June 24, 2014, including written and oral staff reports, and the record from the public hearing, this City Council hereby specifically finds as follows:

1. Conformance with General Plan Policies – The proposed general plan amendment is consistent with the goals, objectives, policies and programs of the General Plan.

   FACT: The project proposes a General Plan Amendment for approximately 71 acres from R15, R5, and RA-2 land use designations to Business Park for development of 2,244,419 square foot industrial park. Potential impacts to traffic and air quality have been examined through the preparation of a Final Environmental Impact Report. The expansion of the Business Park land use designation as proposed by the General Plan amendment would provide employment opportunities for residents of Moreno Valley with the establishment of industrial activities that have good access to the regional transportation system, and is consistent with the goals, objectives, policies and program of the Community Development Element of the General Plan.

   The changes to the City's Circulation Element and Master Plan of Trails have also been reviewed for conformance with the goals, objectives, policies and programs of the Circulation Element and the Parks, Recreation and Open Space Element of the General Plan.

2. Health, Safety and Welfare – The proposed general plan amendment will not be detrimental to the public health, safety or welfare.

   FACT: The proposed General Plan Amendment will not adversely affect the public health, safety or general welfare. A Final EIR has been prepared to address the potential environmental impacts of the General Plan Amendment in accordance with the provisions of the California Environmental Quality Act (CEQA). Subject to approval of the Final EIR, the proposed General Plan Amendment will not have a significant affect on public health or be materially injurious to surrounding properties or the environment as a whole.

APPROVED AND ADOPTED this 24th day of June, 2014.

ORDINANCE NO. 880

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING A ZONE CHANGE (PA07-0081) FROM BUSINESS PARK, BUSINESS PARK MIXED-USE, R15, R5, AND RA-2 TO LIGHT INDUSTRIAL FOR APPROXIMATELY 122 ACRES FOR DEVELOPMENT OF A 2,244,419 SQUARE FOOT INDUSTRIAL PARK LOCATED WITHIN ASSESSOR'S PARCEL NUMBERS 488-330-011, 012, -013, -017, -018, -019, -020, AND -021, AS SHOWN ON THE ZONE CHANGE MAP INCLUDED AS EXHIBIT A

The City Council of the City of Moreno Valley does ordain as follows:

SECTION 1 GENERAL:

1.1 The applicant, Prologis, has filed application PA07-0081, requesting an amendment requesting an Amendment to Pages 61 and 74 of the Official Zoning Atlas, and proposes a Zone Change from existing Business Park, Business Park Mixed-use, R15, R5, and RA-2 land use designations to Light Industrial for certain property as described in this ordinance.

1.2 Pursuant to the provisions of the law, a public hearing was held before the City Council on June 24, 2014, for deliberations and decision.

1.3 The matter was fully discussed, and the public and other agencies presented testimony and documentation.

1.4 An Environmental Impact Report is proposed for the project under California Environmental Quality Act (CEQA) guidelines.

SECTION 2 FINDINGS:

2.1 Based upon substantial evidence presented to this City Council during the above-referenced meeting on June 24, 2014, including written and oral staff reports, and the record from the public hearing, this Planning Commission hereby specifically finds as follows:

1. Conformance with General Plan Policies – The proposed amendment is consistent with the General Plan, and its goals, objectives, policies and programs.

   FACT: The project proposes a change to the Zoning Atlas for properties located within Assessor's Parcel Numbers 488-330-011, 012, -013, -017, -

018, -019, -020, and -021 from Business Park, Business Park Mixed-use, R15, R5, and RA-2 land use designations to Light Industrial for development of 2,244,419 square foot industrial park on approximately 122 acres. A Final EIR has been prepared to address the potential environmental impacts of the Zone Change in accordance with the provisions of the California Environmental Quality Act (CEQA). Subject to approval of the General Plan Amendment and Final Environmental Impact Report, the proposed Zone Change is consistent with and does not conflict with the goals, objective, policies or programs of the General Plan.

2. Health, Safety and Welfare – The proposed amendment will not adversely affect the public health, safety or general welfare.

   FACT: The proposed Zone Change will not adversely affect the public health, safety or general welfare. A Final EIR has been prepared to address the potential environmental impacts of the Zone Change in accordance with the provisions of the California Environmental Quality Act (CEQA). Subject to approval of the Final EIR, the proposed Zone Change will not have a significant affect on public health or be materially injurious to surrounding properties or the environment as a whole.

3. Conformance with the Zoning Regulations – The proposed pre-zoning is consistent with the purposes and intent of Title 9 of the City of Moreno Valley Municipal Code.

   FACT: The Zone Change application has satisfied the City's Municipal Code and other regulations to change the zone. As proposed, the zone change from Business Park, Business Park Mixed-use, R15, R5, and RA-2 land use designations to Light Industrial for the 122 acre project site is consistent with the purposes and intent of Title 9.

SECTION 3 AMENDMENT OF THE OFFICIAL ZONING ATLAS:

3.1 The City of Moreno Valley Official Zoning Atlas, as adopted by Ordinance No. 359, on April 14, 1992, of the City of Moreno Valley, and as amended thereafter from time to time by the City Council of the City of Moreno Valley, is further amended by placing in effect the zone or zone classification as shown on the attached map (marked "Exhibit A" and included herein by reference and on file in the office of the City Clerk).

SECTION 4 EFFECT OF ENACTMENT:

4.1 Except as specifically provided herein, nothing contained in this ordinance shall be deemed to modify or supersede any prior enactment of the City Council which addresses the same subject addressed herein.

SECTION 5 NOTICE OF ADOPTION:

5.1 Within fifteen days after the date of adoption hereof, the City Clerk shall certify to the adoption of this ordinance and cause it to be posted in three public places within the city.

SECTION 6 EFFECTIVE DATE:

6.1 This ordinance shall take effect thirty days after the date of its adoption.

APPROVED AND ADOPTED this 8th day of July, 2014.

RESOLUTION NO. 2014-58

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING MASTER PLOT PLAN APPLICATION PA07-0083 AND PLOT PLAN APPLICATIONS PA07-0158 THROUGH PA07-0162 FOR DEVELOPMENT OF THE 2,244,419 SQUARE FOOT PROLOGIS EUCALYPTUS INDUSTRIAL PARK PROJECT WITHIN THE 122 ACRES OF ASSESSOR'S PARCEL NUMBERS 488-330-011, 012, -013, -017, -018, -019, -020, AND -021, SUBJECT TO THE CONDITIONS OF APPROVAL INCLUDED AS EXHIBIT A

Section 1:

WHEREAS, Prologis, has filed an application for the approval of Master Plot Plan PA07-0083 for development of an industrial park to include a total of 2,244,419 square feet of warehouse distribution space on 122 acres. This application also includes Building #2 on Parcel 2 of TPM 35679 for development of 862,035 square feet on 39.32. Related applications include Plot Plan PA07-0158 for Building #1 on Parcel 1 of TPM 35679 for development of a 168,342 square foot warehouse distribution building on 8.84 acres; Plot Plan PA07-0159 for Building #3 on Parcel 3 of TPM 35679 for development of a 160,106 square foot warehouse distribution building on 8.5 acres; Plot Plan PA07-0160 for Building #4 on Parcel 4 of TPM 35679 for development of a 339,015 square foot warehouse distribution building on 15.66 acres; Plot Plan PA07-0161 for Building #5 on Parcel 5 of TPM 35679 for development of a 390,102 square foot warehouse distribution building on 19.29 acres; and Plot Plan PA07-0162 for Building #6 on Parcel 6 of TPM 35679 for development of a 325,038 square foot warehouse distribution building on 17.55 acres, as described in the title of this Resolution; and

WHEREAS, on June 24, 2014, the City Council held a public hearing to consider the project; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred; and

WHEREAS, there is hereby imposed on the subject development project certain fees, dedications, reservations and other exactions pursuant to state law and City ordinances; and

WHEREAS, pursuant to Government Code Section 66020(d)(1), NOTICE IS HEREBY GIVEN that this project is subject to certain fees, dedications, reservations and other exactions as provided herein.

NOW, THEREFORE, BE IT RESOLVED, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

A. This City Council hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this City Council during the above-referenced meeting on June 24, 2014, including written and oral staff reports, and the record from the public hearing, this City Council hereby specifically finds as follows:

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

1. Conformance with General Plan Policies – The proposed use is consistent with the General Plan, and its goals, objectives, policies and programs.

   FACT: Subject to approval of the General Plan Amendment (PA07-0082), the proposed applications would be consistent with the General Plan. The General Plan encourages a mix of industrial uses to provide a diversified economic base and ample employment opportunities. Stated policies require the avoidance of adverse impacts on surrounding properties and the screening of industrial uses to reduce glare, noise, dust, vibrations and unsightly views. The project as designed and conditioned would achieve the objectives of the City of Moreno Valley's General Plan. The proposed project is consistent with the General Plan and does not conflict with the goals, objectives, policies, and programs established within the Plan.

2. Conformance with Zoning Regulations – The proposed use complies with all applicable zoning and other regulations.

   FACT: The project site is currently zoned Business Park, Business Park Mixed-Use, R15, R5 and RA-2. The project proposes a Zone Change to LI to allow for buildings larger than 50,000 square feet. Subject to approval of the related General Plan Amendment (PA07-0082) and Zone Change application (PA07-0081) the proposed use will comply with all applicable zoning other regulations. The project is designed in accordance with the provisions of Chapter 9.05 Industrial Districts of the City's Municipal Code.

3. Health, Safety and Welfare – The proposed use will not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the vicinity.

   FACT: The proposed 2,244,419 square foot warehouse facility as designed and conditioned will not adversely affect the public health, safety or general welfare. The project has been designed consistent with the

City's Municipal Code. A Final EIR has been prepared to address the potential environmental impacts of the project in accordance with the provisions of the California Environmental Quality Act (CEQA).

4. Location, Design and Operation – The location, design and operation of the proposed project will be compatible with existing and planned land uses in the vicinity.

FACT: The project is located on the south side of State Route 60 and east of the Moreno Valley Auto Mall. Land uses to the north include the freeway with Business Park and commercial zoned land within the Auto Mall to the west and Light Industrial and RA-2 zoned land to the east. South of the project site on the other side of Eucalyptus Avenue/Future Encilia Avenue is vacant RA-2 zoned land with tract homes in the RA-2 zone across the channel from the project site. The proposed warehouse distribution use is a permitted use in both the BP and LI zones, but the size of the buildings proposed by the project requires a Zone Change to LI for the warehouse facilities over 50,000 square feet. The project as designed and conditioned and subject to approval of the above mentioned Zone Change, is compatible with existing and proposed land uses in the vicinity.

Section 2:

A. FEES, DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

1. FEES

Impact, mitigation and other fees are due and payable under currently applicable ordinances and resolutions. These fees may include but are not limited to: Development Impact Fee, Transportation Uniform Mitigation Fee (TUMF), Multi-species Habitat Conservation Plan (MSHCP) Mitigation Fee, Stephens Kangaroo Habitat Conservation fee, Underground Utilities in lieu Fee, Area Drainage Plan fee, Bridge and Thoroughfare Mitigation fee (Future) and Traffic Signal Mitigation fee. The final amount of fees payable is dependent upon information provided by the applicant and will be determined at the time the fees become due and payable.

Unless otherwise provided for by this resolution, all impact fees shall be calculated and collected at the time and in the manner provided in Chapter 3.32 of the City of Moreno Valley Municipal Code or as so provided in the applicable ordinances and

resolutions. The City expressly reserves the right to amend the fees and the fee calculations consistent with applicable law.

2. DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

The adopted Conditions of Approval for PA07-0083 and PA07-0158 through PA07-0162, incorporated herein by reference, may include dedications, reservations, and exactions pursuant to Government Code Section 66020 (d) (1).

3. CITY RIGHT TO MODIFY/ADJUST; PROTEST LIMITATIONS

The City expressly reserves the right to establish, modify or adjust any fee, dedication, reservation or other exaction to the extent permitted and as authorized by law.

Pursuant to Government Code Section 66020(d)(1), NOTICE IS FURTHER GIVEN that the 90 day period to protest the imposition of any impact fee, dedication, reservation, or other exaction described in this resolution begins on the effective date of this resolution and any such protest must be in a manner that complies with Section 66020(a) and failure to timely follow this procedure will bar any subsequent legal action to attack, review, set aside, void or annul imposition.

The right to protest the fees, dedications, reservations, or other exactions does not apply to planning, zoning, grading, or other similar application processing fees or service fees in connection with this project and it does not apply to any fees, dedication, reservations, or other exactions of which a notice has been given similar to this, nor does it revive challenges to any fees for which the Statute of Limitations has previously expired.

BE IT FURTHER RESOLVED that the City Council HEREBY APPROVES Resolution No. 2014-58

APPROVING Master Plot Plan application PA07-0083 and Plot Plan applications PA07-0158 through PA07-0162, subject to the attached conditions of approval included as Exhibit A.

APPROVED AND ADOPTED this 24th day of June, 2014.

TPM 35679 for development of 862,035 square feet on 39.32 acres with 311 required employee parking spaces and 135 required truck parking spaces;

- **Plot Plan PA07-0158 for Building #1 on Parcel 1 of TPM 35679 for development of a 168,342 square foot warehouse distribution building on 8.84 acres with 100 required employee parking spaces and 21 required truck parking spaces;**

- **Plot Plan PA07-0159 for Building #3 on Parcel 3 of TPM 35679 for development of a 160,106 square foot warehouse distribution building on 8.5 acres with 98 required employee parking spaces and 20 required truck parking spaces;**

- **Plot Plan PA07-0160 for Building #4 on Parcel 4 of TPM 35679 for development of a 339,015 square foot warehouse distribution building on 15.66 acres with 180 required employee parking spaces and 36 required truck parking spaces;**

- **Plot Plan PA07-0161 for Building #5 on Parcel 5 of TPM 35679 for development of a 390,102 square foot warehouse distribution building on 19.29 acres with 173 required employee parking spaces and 53 required truck parking spaces; and**

- **Plot Plan PA07-0162 for Building #6 on Parcel 6 of TPM 35679 for development of a 325,038 square foot warehouse distribution building on 17.55 acres with 176 required employee parking spaces and 53 required truck parking spaces.**

P3. **No building permits shall be issued for the warehouse distribution buildings approved for Plot Plan PA07-0158 and Plot Plan PA07-0159 during the initial 18 months of this approval.**

P4. **A mitigation monitoring fee, as provided by City ordinance, shall be paid by the applicant within 30 days of project approval. No City permit or approval shall be issued until such fee is paid. (CEQA)**

P5. **The design of all swales and basins that are visible from the public right-of-way shall be integrated with the surrounding landscape areas.**

P6. **A double row of citrus trees shall be planted along the sites State Route 60 frontage. Citrus trees shall also be planted along the Quincy Channel, and in other areas throughout the industrial park.**

P7. Development of the industrial park is subject to approval of Tentative Parcel Map No. 35679 and the subsequent recordation of this map.

P8. Bicycle racks shall be provided at a minimum of five (5) percent of the required vehicular parking and shall be located near the office area(s). Eight percent of required parking shall be designated for any combination of low-emitting, fuel efficient and carpool/vanpool vehicles for all new nonresidential development.

P9. The gates into truck loading and parking areas that are within view of a public street shall be of solid metal construction or wrought iron with mesh to screen the interior of the loading area.

P10. This project shall comply with South Coast Air Quality Management District (SCAQMD) rules related to dust generation (Rule 403) and the use of architectural coatings (Rule 1113).

P11. Screening walls of decorative block or concrete tilt-up construction shall be provided to fully screen the truck loading and parking area for from view from Fir/Eucalyptus Avenue and State Route 60.

P12. Enhanced landscape shall be provided in the planter areas near each driveway and near the office portions of the facilities.

P13. All loudspeakers, bells, gongs, buzzers or other noise attention devices installed on the project site shall be designed to ensure that the noise level at all property lines will be at or below 55 dBA for consistency with the Municipal Code.

P14. Loading or unloading activities shall be conducted from the truck bays or designated loading areas only. (MC 9.10.140, CEQA)

P15. No outdoor storage is permitted on the project site, except for truck and trailer storage in designated areas within the screened truck courts.

P16. If the proposed project requires blasting, it shall be used only as a last resort. In such cases, it shall be approved by the Fire Marshall, and the developer shall comply with the current City ordinance governing blasting. (Ord)

P17. (CO) Prior to issuance of a Certificate of Occupancy, the developer shall install a segment of multi-use trail on the north side of Fir

Avenue/Eucalyptus Avenue from Quincy Channel to Fire Station #58.

General Conditions

P18. This approval shall expire three years after the approval date of this project unless used or extended as provided for by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever. Use means the beginning of substantial construction contemplated by this approval within the three-year period, which is thereafter pursued to completion, or the beginning of substantial utilization contemplated by this approval. (MC 9.02.230)

P19. The project shall be developed in accordance with the approved plans on file in the Community & Economic Development Department - Planning Division, the Municipal Code regulations, General Plan, and the conditions contained herein. Prior to any use of the project site or business activity being commenced thereon, all Conditions of Approval shall be completed to the satisfaction of the Planning Official. (MC 9.14.020)

P20. The developer, or the developer's successor-in-interest, shall be responsible for maintaining any undeveloped portion of the site in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)

P21. A drought tolerant, low water using landscape palette shall be utilized throughout the project to the extent feasible.

P22. All landscaped areas shall be maintained in a healthy and thriving condition, free from weeds, trash and debris. (MC 9.02.030)

P23. Any signs indicated on the submitted plans are not included with this approval. Any signs**, whether permanent (e.g. wall, monument) or temporary (e.g. banner, flag),** proposed for this development shall be designed in conformance with the sign provisions of the Development Code or approved sign program, if applicable, and shall require separate application and approval by the Planning Division. **No signs are permitted in the public right of way.** (MC 9.12)

Prior to Issuance of Grading Permits

P24. (GP) All site plans, grading plans, landscape and irrigation plans, fence/wall plans, lighting plans and street improvement plans shall be coordinated for consistency with this approval.

P25. (GP) If potential historic, archaeological, or paleontological resources are uncovered during excavation or construction activities at the project site, work in the affected area will cease immediately and a qualified person (meeting the

Secretary of the Interior's standards (36CFR61)) shall be consulted by the applicant to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, prehistoric, or paleontological resource. Determinations and recommendations by the consultant shall be implemented as deemed appropriate by the Community & Economic Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all affected Native American Tribes before any further work commences in the affected area.

If human remains are discovered**, no further disturbance shall occur until** the County Coroner **has made necessary findings as to origin**. If **the County Coroner** determine**s** that the remains are potentially Native American, the California Native American Heritage Commission **shall be contacted within a reasonable timeframe to identify the "most likely descendant." The "most likely descendant" shall then make recommendations, and engage in consultations concerning the treatment of the remains (California Public Resources Code 5097.98).** (GP Objective 23.3, CEQA).

P26. (GP) Prior to issuance of grading permits, the developer shall pay the applicable Stephens' Kangaroo Rat (SKR) Habitat Conservation Plan mitigation fee. (Ord)

P27. (GP) Prior to approval of any grading permit, local and master-planned multi-use trail easements shall be shown in accordance with the City's Master Trail Plan.

P28. (GP) For projects abutting State Highway 60, a sixteen foot reservation for future right-of-way shall be provided.

P29. (GP) Prior to approval of any grading permits, plans for any security gate system shall be submitted to the Planning Division for review and approval.

P30. (GP) Prior to issuance of any grading permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein.

P31. (GP) Prior to the issuance of grading permits, the grading plan shall show decorative concrete paving for all driveway ingress/egress locations of the project. Accessible pedestrian pathways interior to the site cannot be painted. If delineation is necessary, then an alternative material is required.

P32. (GP) Prior to the issuance of a grading permit, all required planter areas, curbs, including twelve-inch concrete step outs, and required parking space striping shall be shown on the precise grading plan.

P33. (GP) Prior to the issuance of grading permits, the following burrowing owl

survey requirements shall be incorporated into the grading plans in accordance with the Riverside County Multi-species Habitat Conservation Plan: Within 30 days of and prior to disturbance, a burrowing owl focused survey shall be conducted by a qualified biologist using accepted protocols. The survey shall be submitted to the Planning Division for review and approval.

P34. (GP) Prior to any physical disturbance of any natural drainage course, or any wetland determined to contain riparian vegetation, the applicant shall obtain a stream bed alteration agreement or permit, or a written waiver of the requirement for such an agreement or permit, from both the California Department of Fish and Game and the U.S. Army Corps of Engineers. Written verification of such a permit or waiver shall be provided to both the Planning Division and the Public Works Department - Land Development Division. (CEQA, State and Federal codes)

P35. (GP) Prior to issuance of grading permits, landscape plans (trees, shrubs and groundcover) for basins maintained by an POA or other private entity shall be submitted to the Planning Division for review and approval for the sides and/or slopes. A hydroseed mix with irrigation is acceptable for the bottom of all the basin areas. All detention basins shall include trees, shrubs and groundcover up to the concreted portion of the basin. A solid decorative wall with pilasters, tubular steel fence with pilasters or other fence or wall approved by the Community Development Director is required to secure all water quality and detention basins more than 18 inches in depth.

P36. (GP) Prior to issuance of grading permits, the developer shall submit wall/fence plans to the Planning Division for review and approval as follows:

- **A. A maximum 3 foot high decorative wall in lieu of a hedge or berm may be placed in setback areas adjacent to a parking lot facing a public right-of-way.**
- **B. Any proposed retaining walls shall also be decorative in nature, while the combination of retaining and other walls on top shall not exceed the height requirement per the Municipal Code.**
- **C. A 14 foot tall solid wall of decorative block with pilasters and a cap or concrete tilt-up construction shall be provided to screen the trucks, parked trailers and the loading areas and loading docks.**
- **D. A four foot tall three rail fence per Parks and Community Services standards is required adjacent the multi-use trail.**
- **E. If fencing is required around basins, then fence shall be wrought iron with pilasters or a four foot three rail fence to match the trail**

fencing.

P37. (GP) Prior to approval of any grading permits, water well(s) on the site shall be closed or maintained in accordance with requirements of the Riverside County Environmental Health Department. (CEQA)

Prior to Issuance of Building Permits

P38. (BP) Prior to issuance of building permits, the Planning Division shall review and approve the location and method of enclosure or screening of transformer cabinets, commercial gas meters and back flow preventers as shown on the final working drawings. Location and screening shall comply with the following criteria: transformer cabinets and commercial gas meters shall not be located within required setbacks and shall be screened from public view either by architectural treatment or landscaping; multiple electrical meters shall be fully enclosed and incorporated into the overall architectural design of the building(s); back-flow preventers shall be screened by landscaping. (GP Objective 43.30, DG)

P39. (BP) Prior to issuance of building permits, screening details shall be addressed on plans for roof top equipment and trash enclosures submitted for Planning Division review and approval. All equipment shall be completely screened so as not to be visible from public view, and the screening shall be an integral part of the building. For trash enclosures, landscaping shall be included on at least three sides. The trash enclosure, including any roofing, shall be compatible with the architecture for the building(s). (GP Objective 43.6, DG)

P40. (BP) Prior to issuance of building permits, two copies of a detailed, on-site, computer generated, point-by-point comparison lighting plan, including exterior building, parking lot, and landscaping lighting, shall be submitted to the Planning Division for review and approval. The lighting plan shall be generated on the plot plan and shall be integrated with the final landscape plan. The plan shall indicate the manufacturer's specifications for light fixtures used and shall include style, illumination, location, height and method of shielding. The lighting shall be designed in such a manner so that it does not exceed one-quarter foot-candle minimum maintained lighting measured from within five feet of any property line. The lighting level for all parking lots or structures shall be a minimum coverage of one foot-candle of light with a maximum of eight foot-candles. After the third plan check review for lighting plans, an additional plan check fee will apply. (MC 9.08.100, DG)

P41. (BP) Prior to issuance of building permits, the developer or developer's successor-in-interest shall pay all applicable impact fees, including but not limited to Transportation Uniform Mitigation fees (TUMF), Multi-species Habitat Conservation Plan (MSHCP) mitigation fees, and the City's adopted Development Impact Fees. (Ord)

P42. (BP) Prior to issuance of building permits, a phasing plan shall be submitted to the Planning Division for approval, if development is proposed to be phased.

P43. (BP) Prior to issuance of any building permits, final landscaping and irrigation plans shall be submitted for review and approval by the Planning Division. After the third plan check review for landscape plans, an additional plan check fee shall apply. The plans shall be prepared in accordance with the City's Landscape Standards and shall include:

- **A. A three (3) foot high decorative wall, solid hedge or berm shall be placed in any setback areas between a public right of way and a parking lot for screening.**
- **B. All finger and end planters shall be included at an interval of one per 12 parking stalls, be a minimum 5' x 16', and include additional 12" concrete step-outs and 6" curbing. (MC9.08.230, City's Landscape Standards)**
- **C. Diamond planters shall be provided every 3 parking stalls.**
- **D. Drought tolerant landscape shall be provided. Sod shall be limited to public gathering areas only and not be included along the perimeter of the project site.**
- **E. Street trees shall be provided every 40 feet on center in the right of way. Minimum 24 inch box Eucalyptus Nicholii shall be used for the street trees along the Fir Avenue/Eucalyptus Avenue frontage.**
- **F. On-site trees shall be planted at an equivalent of one (1) tree per thirty (30) linear feet of the perimeter of a parking lot and per thirty linear feet of a building dimension for the portions of the building visible from a parking lot or right of way. Trees may be massed for pleasing aesthetic effects.**
- **G. The design of all swales and basins that are visible from the public right-of-way shall be integrated with the surrounding landscape areas.**
- **H. Minimum container size for required trees planted along the SR-60 frontage shall be 24 inch box.**
- **I. Enhanced landscaping shall be included at all driveway and corner locations as well as along Highway 60.**
- **J. The review of all utility boxes, transformers etc. shall be coordinated to provide adequate screening from public view.**

K. Landscaping on three sides of any trash enclosure.

L. All site perimeter and parking lot landscape and irrigation shall be installed prior to the release of certificate of any occupancy permits.

P44. (BP) Prior to the issuance of building permits, the landscape plans shall include landscape treatment for trash enclosures located outside of a truck court, to include landscape on three sides, and trash enclosures shall include decorative enhancements such as an enclosed roof and other decorative features that are consistent with the architecture of the proposed commercial buildings on the site, subject to the approval of the Community & Economic Development Director.

P45. (BP) Prior to the issuance of building permits, all fences and walls required or proposed on site, shall be approved by the Community & Economic Development Director. (MC 9.08.070)

P46. (BP) Prior to the issuance of building permits, downspouts will be interior to the building, or if exterior, integrated into the architecture of the building to include compatible colors and materials to the satisfaction of the Community & Economic Development Director.

P47. (BP) Prior to the issuance of building permits the building site plan shall include decorative concrete or paving for all driveway ingress/egress locations for the project.

P48. (BP) Prior to issuance of any building permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein. (CEQA)

Prior to Issuance of a Certificate of Occupancy

P49. (CO) Prior to the issuance of Certificates of Occupancy or building final, all required and proposed fences and walls shall be constructed according to the approved plans on file in the Community & Economic Development Department – Planning Division. (MC 9.080.070).

P50. (CO) Prior to issuance of Certificate of Occupancy or building final, all required landscape and irrigation shall be installed in accordance with the City's Landscape Standards and the approved landscape plans.

P51. (CO) Prior to issuance of Certificate of Occupancy or building final, all rooftop equipment shall be appropriately screened from Highway 60 or the Eucalyptus/Fir Avenue rights-of-way.

P52. (CO) Prior to issuance of any Certificates of Occupancy or building final, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein.

MITIGATION MEASURES

Air Quality

P53. **4.3.6.2A.** Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall place construction equipment staging areas at least 200 feet away from sensitive receptors. Contract specifications shall be included in the proposed project construction documents, which shall be reviewed by the City.

P54. **4.3.6.2B** Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall utilize power sources (e.g., power poles) or clean-fuel (e.g., fuel other than diesel or gasoline) generators where feasible. Contract specifications shall be included in the proposed project construction documents, which shall be reviewed by the City.

P55. **4.3.6.2C** Prior to the issuance of a grading permit, the project developer shall require by contract specifications that contractors shall utilize California Air Resources Board (CARB) Tier III Certified equipment or better during the rough/mass grading phase for the following pieces of equipment: rubbertired dozers and scrapers. Contract specifications shall be included in the proposed project construction documents, which shall be reviewed by the City. Project start to December 31, 2014: All off-road diesel-powered construction equipment greater than 50 horsepower shall meet Tier 3 off-road emission standards. In addition, all construction equipment shall be outfitted with Best Available Control Technology (BACT) devices certified by CARB. Any emission control devises used by the contractor shall achieve emission reductions that are no less than what would be achieved by a Level 3 diesel emission control strategy for a similarly sized engine as defined by CARB regulations. Post January 1, 2015: All off-road diesel–powered construction equipment greater than 50 horsepower shall meet Tier 4 emission standards, where available. In addition, all construction equipment shall be outfitted with Best Available Control Technology (BACT) devices certified by CARB. Any emission control devises used by the contractor shall achieve emission reductions that are no less than what would be achieved by a Level 3 diesel emission control strategy for a similarly sized engine as defined by CARB regulations. A copy of each unit's certified tier specifications, BACT documentation, and CARB or SCAQMD operating permit shall be provided at the time of mobilization of each applicable unit of equipment.

P56. **4.3.6.2D** All clearing, grading, earthmoving, or excavation activities shall cease when winds (as instantaneous gusts) exceed 25 mph per SCAQMD guidelines in order to limit fugitive dust emissions. On-site truck idling shall be prohibited in excess of five minutes.

P57. **4.3.6.2E** The contractor shall ensure that all disturbed unpaved roads and disturbed areas within the project are watered at least three times daily during dry weather. Watering, with complete coverage of disturbed areas, shall occur at least three times a day, preferably in the midmorning, afternoon, and after work is done for the day.

P58. **4.3.6.2F** The contractor shall ensure that traffic speeds on unpaved roads and project site areas are reduced to 15 miles per hour or less to reduce PM10 and PM2.5 fugitive dust haul road emissions. Speed limit signs (15 mph maximum) shall be posted at entry points to the project site, and along any unpaved roads providing access to or within the project site and/or any unpaved designated on-site travel routes.

P59. **4.3.6.2G** Groundcover shall be replaced, and/or non-toxic soil stabilizers shall be applied (according to manufacturers' specifications) to any inactive construction areas (previously graded areas inactive for ten days or more).

P60. **4.3.6.2H** The contractor shall minimize pollutant emissions by maintaining equipment engines in good condition and in proper tune according to manufacturer's specifications and by not allowing construction equipment to be left idling for more than five minutes (per California law).

P61. **4.3.6.2I** The contractor shall ensure use of low-sulfur diesel fuel in construction equipment as required by the California Air Resources Board (CARB) (diesel fuel with sulfur content of 15 ppm by weight or less).

P62. **4.3.6.2J.** Grading plans, construction specifications and bid documents shall also include the following requirements:

• Off-road construction equipment shall utilize alternative fuels where feasible e.g., biodiesel fuel (a minimum of B20), natural gas (CNG), liquefied natural gas (LNG), propane, except for equipment where use of such fuels would void the equipment warranty;

• Gravel pads shall be provided at all access points to prevent tracking of mud onto public roads;

• Install and maintain trackout control devices at all access points where paved and unpaved access or travel routes intersect;

• The contractor or builder shall designate a person or person(s) to monitor the dust control program and to order increased watering, as necessary, to prevent transport of dust off site;

• The contractor or builder shall post a publicly visible sign with the telephone number and person to contact regarding dust complaints. The contact person shall take corrective action within 24 hours;
• High-pressure injectors shall be provided on diesel construction equipment if available;
• Engine size of construction equipment shall be limited to the minimum practical size;
• Substitute gasoline-powered for diesel powered construction equipment where gasoline powered equipment is available;
• Use electric construction equipment where it is practical to use such equipment;
• Install catalytic converters on gasoline-powered equipment where this type of equipment is available;
• Ride-sharing program for the construction crew shall be supported by contractor(s) via incentives or other inducement;
• Documentation shall be provided to the City of Moreno Valley indicating that construction workers have been encouraged to carpool or otherwise reduce VMT to the greatest extent practical, including providing information on available park and ride programs;
• Lunch vendor services shall be allowed on site during construction to minimize the need for off-site vehicle trips; and
• All forklifts used during construction and in subsequent operation of the project shall be electric or natural gas powered.

P63. **4.3.6.2K.** Throughout project construction, a construction relations officer/community liaison, appointed by the Applicant, shall be retained on site. In coordination and cooperation with the City, the construction relations officer/community liaison shall respond to any concerns related to PM10 (fugitive dust) generation or other construction related air quality issues within 24 hours.

P64. **4.3.6.2L.** All project entrances shall be posted with signs which state:
• Truck drivers shall turn off engines when not in use;
• Diesel delivery trucks servicing the project shall not idle for more than three (3) minutes; and
• Telephone numbers of the building facilities manager and CARB, to report violations. These measures shall be enforced by the on-site facilities manager (or equivalent).

P65. **4.3.6.2M.** During project grading and construction, the various project contractors shall adhere to the control measures listed in Tables 1.D and 1.E (attached to the MMRP).

P66. **4.3.6.3A** Prior to the issuance of grading permits, the project applicant shall require by contract specifications that all trucks hauling dirt, sand, soil, or other loose materials are to be covered or shall maintain at least 2 feet of freeboard in

accordance with the requirements of California Vehicle Code (CVC) Section 23114 (freeboard means vertical space between the top of the load and the top of the trailer).

P67. **4.3.6.3B.** Prior to the issuance of grading permits, the project applicant shall provide evidence to the City that construction access roads shall be paved at least 100 feet onto the site from the main road.

P68. **4.3.6.3C.** Prior to the issuance of grading permits, the project applicant shall require by contract specifications that all streets within the construction site shall be swept once per day if visible soil materials are carried to adjacent streets.

P69. **4.3.6.4A.** The project applicant shall use"Low-Volatile Organic Compounds" paints, coatings, and solvents with a VOC content lower than required under Rule 1113 (not to exceed 150 grams/liter; 1.25 pounds/gallon). High Pressure Low Volume (HPLV) applications of paints, coatings, and solvents shall be consistent with South Coast Air Quality Management District Rule 1113. Alternatively, the project applicant shall use materials that do not require painting or are pre-painted.

P70. **4.3.6.5B.** Prior to issuance of building permits, the project applicant shall provide evidence to the City that energy efficient and low-emission methods and features of building construction shall be incorporated into the project design. These methods and features may include (but are not limited to) the following:
• Construction of buildings that exceed statewide energy requirements beyond Construction of buildings that exceed statewide energy requirements beyond 10 percent of that identified in Title 24, Part 6 Energy Efficiency Standards:
• Use of low-emissions water heaters;
• Use of central water-heating systems;
• Use of energy-efficient appliances;
• Use of increased insulation;
• Use of automated controls for air conditioners;
• Use of energy-efficient parking lot lighting; and
• Use of lighting controls and energy efficient lighting.
• Utilize low-VOC interior and exterior coatings during project repainting.
• Provide on-site improvements such as sidewalks or pedestrian walkways to promote pedestrian activity and reduce the number of vehicle trips.
• Installation of skylights and energy efficient lighting that exceeds California Title 24 standards where feasible, including electronic dimming ballasts and computer-controlled daylight sensors in the buildings.
• Shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and building shall be planted at the proposed project site. These strategies will minimize the heat island effect and thereby reduce the amount of air conditioning required.

• Strategies to be considered include fans to assist natural ventilation, centralized water and space conditioning systems, high efficiency individual heating and cooling units, and automatic setback thermostats.
• Reduction of energy demand associated with potable water conveyance through the following methods:
-Incorporating drought-tolerant plants into the landscaping palette; and
-Use of water-efficient irrigation techniques.
• Energy-efficient low-pressure sodium parking lot lights or equivalent as determined by the City shall be used;
• Buildings shall be oriented north-south where feasible;
• Implement an on-site circulation plan in parking lots to reduce vehicle queuing;
• Develop a trip reduction plan to achieve 1.5 average vehicle ridership (AVR) for businesses with fewer than 250 employees or multi-tenant worksites;
• Include bicycle parking facilities such as bicycle lockers and racks;
• Include showers for bicycling employees use; and
• Construct on-site pedestrian facility improvements such as building access that is physically separated from street and parking lot traffic and walk paths.

P71. **4.3.6.6A** Prior to issuance of the first building permit, building and site plan designs shall ensure that the project's energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of 10 percent until January 1, 2014. For building permits issued after that date, new state energy standards require a 20 percent reduction from 2008 Title 24, Part 6 Energy Efficiency Standards. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and reviewed and approved by the City. The following design features shall be used to fulfill this requirement:
• Buildings shall exceed California Title 24 Energy Efficiency performance standards for water heating and space heating and cooling, as deemed acceptable by the City.
• Increase in insulation such that heat transfer and thermal bridging is minimized.
• Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.
• Incorporate dual-paned or other energy efficient windows.
• Incorporate energy efficient space heating and cooling equipment.
• Interior and exterior energy efficient lighting which exceeds the California Title 24 Energy Efficiency performance standards shall be installed, as deemed acceptable by the City. Automatic devices to turn off lights when they are not needed shall be implemented.
• To the extent that they are compatible with landscaping guidelines established by the City, shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and buildings shall be planted at the project site.
• Paint and surface color palette for the project shall emphasize light and offwhite colors which reflect heat away from the buildings.

• All buildings shall be designed to accommodate renewable energy sources, such as photovoltaic solar electricity systems, appropriate to their architectural design.

• To reduce energy demand associated with potable water conveyance, the project shall implement the following:

-Landscaping palette emphasizing drought-tolerant plants;

-Use of water-efficient irrigation techniques; and,

-U.S. EPA Certified WaterSense labeled for equivalent faucets, high-efficiency toilets (HETs), and water-conserving shower heads.

• The project shall provide secure, weather-protected, on-site bicycle storage/parking.

• The project shall provide on-site showers (one for males and one for females). Lockers for employees shall be provided.

• The project will establish a Transportation Management Association (TMA). The TMA will coordinate with other TMAs within the City to encourage and coordinate carpooling among building occupants. The TMA will advertise its services to building occupants, and offer transit and/or other incentives to reduce greenhouse gas (GHG) emissions. A plan will be submitted by the TMA to the City within two months of project completion that outlines the measures implemented by the TMA, as well as contact information.

• The project shall provide preferential parking for carpools and vanpools. Locations and configurations of proposed preferential parking for carpools and vanpools are subject to review and approval by the City. Prior to final site plan approval, preferential parking for carpools and vanpools shall be delineated on the project site plan.

• The project shall provide at least two electric vehicle charging stations. Locations and configurations of proposed charging stations are subject to review and approval by the City. Prior to issuance of the first building permit, stub outs for stations shall be indicated on the project building plan.

• Lease/purchase documents shall identify that tenants are encouraged to promote the following:

-Implementation of compressed workweek schedules.

-SmartWay partnership;

-Achievement of at least 20 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of consolidated trips carried by SmartWay carriers until it reaches a minimum of 90 percent of all long-haul trips carried by SmartWay 1.0 or greater carriers.

-Achievement of at least 15 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of longhaul trips carried by SmartWay carriers until it reaches a minimum of 85 percent of all consolidator trips carried by SmartWay 1.0 or greater carriers.

-Use of fleet vehicles conforming to 2010 air quality standards or better.

-Installation of catalytic converters on gasoline-powered equipment.

-Inclusion of electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets.
-Establishment and use of carpool/vanpool programs, complemented by parking fees for single-occupancy vehicles.
-Provision of preferential parking for EV and CNG vehicles.
-Use of electrical equipment (instead of gasoline-powered equipment) for landscape maintenance.
-Use of electric (instead of diesel or gasoline-powered) yard trucks.
-Use of SmartWay 1.25 rated trucks.
-Each facility operator shall provide regular sweeping of onsite parking and drive areas.
-Each facility operator shall maintain a log of all trucks entering the facility to ensure that, on average, the daily truck fleet meets the quantities and emissions standards listed in the Draft EIR. This log shall be available for inspection by City staff at any time.
-Each facility operator shall prohibit all vehicles from idling in excess of five minutes in all onsite areas.
-Each facility operator shall ensure that onsite staff in charge of keeping the daily log and monitoring for excess idling will be trained and certified in diesel health effects and technologies, such as by requiring attendance at CARB-approved courses.
-Each facility operator upon occupancy that do not already operate 2007 and newer trucks shall in food faith apply for funding to replace or retrofit their trucks such as Carl Moyer, VIP, Prop 1B or similar funds. Should funds be awarded, the tenant shall be required to accept and use them.

Biological Resources

P72. **4.4.6.1A.** If tree removal or clearing and grubbing activities must take place during the general nesting season (February 1 through August 31), a nesting bird survey shall be conducted within seven (7) days prior to any vegetation disturbance activities. If passerine birds are found to be nesting or there is evidence of nesting behavior inside the impact area, an exclusion buffer, to be determined by the appropriate agency (e.g. the City, County, and/or CDFG), shall be set in place around the nest where no vegetation disturbance will be permitted. For raptor species, such as hawks and owls, this buffer may be as large as 500 feet. A qualified biologist shall closely monitor nests until it is determined that they are no longer active, at which time construction activity in the vicinity of nests may continue.

P73. **4.4.6.1B.** Prior to site grading, a preconstruction survey shall be required for the burrowing owl to confirm the presence/absence of this species from the site. The survey shall be conducted by a qualified biologist within 30 days prior to ground disturbance, and in accordance with MSHCP survey requirements, to avoid direct

take of burrowing owls. If burrowing owls are determined to occupy the project site or immediate vicinity, the City of Moreno Valley Planning Department shall be notified and avoidance measures as identified in **Mitigation Measure 4.4.6.1C,** shall be implemented. Implementation of avoidance measures shall be executed pursuant to the MSHCP, the California Fish and Game Code, and the MBTA, and according the Burrowing Owl Survey Protocol and Mitigation Guidelines (California Burrowing Owl Consortium 1993) and reviewed the City of Moreno Valley, the Riverside Conservation Authority, and/or by the CDFG.

P74. **4.4.6.1C.** As recommended in the BUOW Survey and Mitigation Guidelines prepared by the California BUOW Consortium, no disturbance to an occupied burrow shall occur within approximately 160 feet of an occupied burrow during the non-breeding season (September 1 through January 31), or within approximately 250 feet of an occupied burrow during the breeding season (February 1 through August 31). For unavoidable impacts, passive relocation of burrowing owls shall be implemented. Passive relocation shall be conducted by a qualified biologist in accordance with procedures set forth by the MSHCP and California Burrowing Owl Consortium. Passive relocation of occupied burrows supporting a breeding pair of burrowing owls shall be conducted outside of the breeding season pursuant to the California Fish and Game Code and the MBTA.

P75. **4.4.6.2A**. As outlined in the project's Determination of a Biologically Equivalent or Superior Preservation (DBESP) report, the project applicant shall compensate for the temporary and permanent impact on and loss of jurisdictional waters and streambeds by providing a minimum 2:1 off-site replacement of equivalent riverine/riparian habitat prior to project construction. Offsite restoration, enhancement, and/or land purchase mitigation for the drainage impacts will occur at an offsite location through one or more of the following: an USACE approved mitigation bank, through an in lieu fee mitigation program, and/or landpurchase and conservation. DFG and USFWS will need to provide concurrence that this mitigation is equivalent or superior to that proposed for impact through their review and acceptance of the DBESP.

P76. **4.4.6.2B.** Riparian/riverine resources that are temporarily impacted by project construction shall be returned to their preconstruction contours and hydroseeded, as outlined in the DBESP.

P77. **4.4.6.3A.** The project applicant shall obtain a Section 404 Nationwide or Individual Permit, as appropriate, from the USACE, a Section 401/Porter-Cologne Water Quality Certification from the RWQCB, and a Section 1602 Streambed Alteration Agreement from the CDFG. Offsite restoration, enhancement, and/or land purchase mitigation of jurisdictional drainage impacts will occur at an off-site location through one or more of the following: an USACE approved mitigation bank, through an in-lieu fee mitigation program, and/or land purchase and conservation.

Cultural Resources

P78. **4.5.6.1A** Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a Cultural Resources Monitoring Agreement has been secured for qualified Tribal representatives, and that a professional archaeological monitor meeting Secretary of Interior standards has been retained by the Applicant to conduct monitoring of all mass grading and trenching activities and has the authority to temporarily halt and redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project Archaeologist and Tribal representatives shall attend the pregrading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.

P79. **4.5.6.1B** Prior to the issuance of a grading permit, the Applicant shall provide evidence to the City of Moreno Valley that appropriate Native American representative(s), Project Archaeologist, and the Tribal representative(s) shall be allowed to monitor and have received a minimum of 30 days advance notice of all mass grading and trenching activities. During grading and trenching operations, the Tribal representatives and the project archaeological monitor shall observe all mass grading and trenching activities per the Cultural Resources Monitoring Agreement. If the Tribal representatives suspect that an archaeological resource may have been unearthed, the archaeologist, in consultation with the tribal representative, shall immediately halt and redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. In consultation with the appropriate Native American Tribe(s), the archaeological monitor shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2.

P80. **4.5.6.1C** If a significant archaeological resource(s) is discovered on the property, ground disturbing activities shall be suspended 100 feet around the resource(s). The archaeological monitor and representatives of the appropriate Native American Tribe(s), the Project Applicant, and the City Planning Division shall confer regarding mitigation of the discovered resource(s). A treatment plan and/or preservation plan shall be prepared and by the archaeological monitor and reviewed by representatives of the appropriate Native American Tribe(s), the Project Applicant, and the City Planning Division and implemented by the archaeologist to protect the identified archaeological resource(s) from damage and destruction. The landowner shall relinquish ownership of all archaeological artifacts that are of Native American origin found on the Project site to the culturally affiliated Native American tribe(s) for proper treatment and disposition. A final report containing the significance and treatment findings shall be prepared by the archaeologist and submitted to the City Planning Division, the appropriate

Native American tribe(s), and the Eastern Information Center at the University of California, Riverside. All cultural material, excluding sacred, ceremonial, grave goods and human remains, collected during the grading monitoring program and from any previous archaeological studies or excavations on the project site shall be curated, as determined by the treatment plan, according to the current professional repository standards and may include the Pechanga Bands curatorial facility.

P81. **4.5.6.1D** Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan: “If any suspected archaeological resources are discovered during ground disturbing activities and the archaeological monitor or Tribal representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the project archaeologist and the Tribal representatives to the site to assess the significance of the find."

P82. **4.5.6.1E** If human remains are encountered, California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to California Public Resources Code Section 5097.98(b), remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made by the Coroner. If the Riverside County Coroner determines the remains to be Native American, the California Native American Heritage Commission must be contacted within 24 hours. The Native American Heritage Commission must then immediately notify the “most likely descendant(s)” of receiving notification of the discovery. The most likely descendant(s) shall then make recommendations within 48 hours, and engage in consultations concerning the treatment of the remains as provided in Public Resources Code §5097.98.

P83. **4.5.6.2A.** Prior to the issuance of grading permits, the project applicant shall submit to and receive approval from the City, a Paleontological Resource Impact Mitigation Program (PRIMP). The PRIMP shall include the provision of a trained paleontological monitor during on-site soil disturbance activities. The monitoring for paleontological resources shall be conducted during the rough-grading phase of the project. In the event that paleontological resources are unearthed or discovered during excavation, **Mitigation Measure 4.5.6.2C** shall apply. Conversely, if no paleontological resources are unearthed or discovered on site during excavation, no additional action is required.

P84. **4.5.6.2B.** The paleontological monitor shall be equipped to rapidly remove any large fossil specimens encountered during excavation. During monitoring, samples of soil shall be collected and processed to recover microvertebrate fossils. Processing shall include wet screen washing and microscopic examination of the residual materials to identify small vertebrate remains.

P85. **4.5.6.2C.** If paleontological resources are unearthed or discovered during excavation of the project site, the monitoring for paleontological resources shall be conducted on a full-time basis for the duration of the rough-grading of the project site. The following recovery processes shall apply:

• Upon encountering a large deposit of bone, salvage of all bone in the area shall be conducted with additional field staff and in accordance with modern paleontological techniques.

• All fossils collected during the project shall be prepared to a reasonable point of identification. Excess sediment or matrix shall be removed from the specimens to reduce the bulk and cost of storage. Itemized catalogs of all material collected and identified shall be provided to the museum repository along with the specimens.

• A report documenting the results of the monitoring and salvage activities and the significance of the fossils shall be prepared.

• All fossils collected during this work, along with the itemized inventory of these specimens, shall be deposited in a museum repository for permanent curation and storage.

P86. **4.5.6.2D** Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan: "If any suspected paleontological resources are discovered during ground disturbing activities, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call a qualified paleontologist to the site to assess the significance of the find. A qualified paleontologist shall evaluate the suspected resource. If the paleontologist determines that the find is not unique, construction shall be permitted to proceed. However, if the paleontologist determines that further information is needed to evaluate significance, the City of Moreno Valley shall be notified and a treatment plan shall be prepared and implemented in consultation with the City to protect the identified paleontological resource(s) from damage and destruction."

Hydrology and Water Quality

P87. **4.7.6.1A.** Prior to grading plan approval and the issuance of a grading permit bythe City, the project applicant shall provide evidence to the City that a Notice of Intent (NOI) has been filed with the Regional Water Quality Control Board for coverage under the State NPDES General Construction Permit for discharge of storm water associated with construction activities.

P88. **4.7.6.1B.** Prior to grading plan approval and the issuance of a grading permit by the City, the project applicant shall submit to the State Water Quality Control Board a Storm Water Pollution Prevention Plan (SWPPP). The SWPPP shall include a surface water control plan and erosion control plan citing specific measures to control on-site and off-site erosion during the entire grading and construction period. Additionally, the SWPPP shall identify structural and

nonstructural BMPs to control sediment and nonvisible discharges from the site. BMPs to be implemented in the SWPPP may include, but shall not be limited to, the following:

• Sediment discharges from the site may be controlled by the following: gravel bags, silt fences, straw wattles and temporary debris basins (if deemed necessary), and other discharge control devices. The construction and condition of the BMPs will be periodically inspected during construction, and repairs will be made when necessary as required by the SWPPP.

• No materials of any kind shall be placed in drainage ways.

• Materials that could contribute nonvisible pollutants to storm water must be contained, elevated, and placed in temporary storage containment areas.

• All loose piles of soil, silt, clay, sand, debris, and other earthen material shall be protected per RWQCB standards to eliminate any discharge from the site. Stockpiles will be surrounded by silt fences. The SWPPP will include inspection forms for routine monitoring of the site during the construction phase to ensure NPDES compliance.

• Additional BMPs and erosion control measures will be documented in the SWPPP and utilized if necessary.

• The SWPPP will be kept on site for the entire duration of project construction and will also be available to the local RWQCB for inspection at any time.

In the event that it is not feasible to implement the above BMPs, the City of Moreno Valley can make a determination that other BMPs will provide equivalent or superior treatment either on or off site.

P89. **4.7.6.1C.** Prior to the issuance of grading permits, the project applicant shall provide evidence to the City that the following provisions have been added to construction contracts for the project:

• The Construction Contractor shall be responsible for performing and documenting the application of BMPs identified in the SWPPP. Weekly inspections shall be performed on sediment control measures called for in the SWPPP. Monthly reports shall be maintained by the Contractor and submitted to the City for inspection. In addition, the Contractor will also be required to maintain an inspection log and have the log on site to be reviewed by the City of Moreno Valley and the representatives of the Regional Water Quality Control Board.

P90. **4.7.6.2A.** Prior to grading plan approval and the issuance of a grading permit by the City, the project applicant shall receive approval from the City of Moreno Valley for a Final Water Quality Management Plan (F-WQMP). The FWQMP shall specifically identify pollution prevention, site design, source control, and treatment control BMPs that shall be used on site to control predictable pollutant runoff in order to reduce impacts to water quality to the maximum extent practicable. BMPs to be implemented in the F-WQMP may include (but shall not be limited to) the following:

• Required landscaped areas shall not use decorative concrete or impervious surfaces.
• Landscape plans shall incorporate native and drought-tolerant plants, trees, and shrubs. Landscaping shall be maintained weekly and maintenance contractor will properly dispose of all landscape wastes.
• Irrigation systems shall be inspected monthly by the landscape contractor to check for over-watering, leaks, or excessive runoff to paved areas. Timers will be used to prevent overwatering.
• Signage will be inspected and maintained twice a year for legibility.
• Outdoor Loading/Unloading truck docks shall be kept in a clean and orderly condition with weekly inspections, continuous monitoring, and immediate cleanup of spills.
• Parking area maintenance shall be swept or vacuumed at least quarterly, if there is any trash or debris in between the routine sweeping, it shall be swept or vacuumed immediately.
• Trash enclosures will be inspected and maintained weekly or as needed by maintenance contractor.
• On-site extended detention/sedimentation basins and sand filters will treat all of the site's runoff via vegetated swales and will be maintained and inspected at least twice a year and prior to October 1.
• Additional BMPs will be documented in the WQMP and utilized if necessary. In the event that it is not feasible to implement the above BMPs, the City of Moreno Valley can make a determination that other BMPs will provide equivalent or superior treatment either on or off site.

P91. **4.7.6.3A.** Prior to grading plan approval, the project proponent shall receive approval on a project-specific Final Hydrology Study, with supporting engineering calculations, from the City Engineer. The Final Hydrology Study shall incorporate relevant requirements identified by the City, and/or site-specific geotechnical investigations. A Preliminary Hydrology Study will be required prior to approval of the associated project tentative tract map.

Noise

P92. **4.9.6.1A.** During all project site excavation and grading on site, the project contractor shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers consistent with manufacturers' standards.

P93. **4.9.6.1B.** The project contractor shall place all stationary construction equipment so that emitted noise is directed away from sensitive receptors nearest to the project site.

P94. **4.9.6.1C.** The construction contractor shall locate equipment staging in areas that will create the greatest distance between construction-related noise sources and

noise-sensitive receptors nearest to the project site during all project construction.

P95. **4.9.6.1D.** During project site construction activities at Building 6 (i.e., closest to existing residences), the construction contractor shall limit all construction related activities to between the hours of 6:00 a.m. and 8:00 p.m. on weekdays and between the hours of 7:00 a.m. to 8:00 p.m. on weekends and holidays, unless written approval is obtained from the City Building Official or City Engineer.

Transportation

P96. **4.11.6.4A.** Prior to issuance of a Certificate of Occupancy the project applicant shall construct the following traffic improvements:

• **Redlands Boulevard/SR-60 Westbound Ramps.** Install a traffic signal. This improvement is currently approved, and permitted by Caltrans. If not otherwise completed prior to project opening, the required traffic signal shall be constructed by the Applicant prior to issuance of the first Certificate of Occupancy.

• **Redlands Boulevard/Fir Avenue/Eucalyptus Avenue.** If not otherwise completed prior to project opening, prior to issuance of the first Certificate of Occupancy, the Applicant shall construct the following improvements: Install a traffic signal and add a northbound left-turn lane and a southbound leftturn lane. If the improvements are constructed by others prior to the Certificate of Occupancy, the applicant shall pay its fair share towards the improvements through the City's DIF program.

P97. **4.11.6.4B.** Prior to issuance of building permits, the project applicant shall pay the fair-share contribution toward the following traffic improvements through fees paid to the City of Moreno Valley based on the City's DIF system and the County's TUMF program:

• **Moreno Beach Drive/SR-60 Eastbound Ramps.** The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF fee would mitigate the significant impact at this location.

• **Redlands Boulevard/SR-60 Westbound Ramps.** Install a traffic signal. This improvement is listed in the City's DIF program. Therefore, payment of the DIF fee would mitigate the significant impact at this location.

• **Redlands Boulevard/Fir Avenue/Eucalyptus Avenue.** Install a traffic signal. This improvement is listed in the City's DIF program. Add a northbound left-turn lane and a southbound left-turn lane. These improvements are listed in the TUMF. Therefore, payment of the DIF and TUMF fees would mitigate the significant impact at this location.

P98. **4.11.6.4C.** Prior to issuance of building permits, the project applicant shall pay the fair-share contribution toward the following traffic improvements through fees paid to the City of Moreno Valley based on the City's DIF system and the County's TUMF program:

• **Moreno Beach Drive/SR-60 Eastbound Ramps.** The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF fee would mitigate the significant impact at this location.

• **Moreno Beach Drive/Cottonwood Avenue.** Add a southbound through lane. This improvement is listed in the City's DIF program. Therefore, payment of the DIF fee would mitigate the significant impact at this location.

• **Moreno Beach Drive/Alessandro Boulevard.** Add a southbound through lane. This improvement is listed in the City's DIF program. Therefore, payment of the DIF fee would mitigate the significant impact at this location.

• **Redlands Boulevard/SR-60 Westbound Ramps.** Install a traffic signal. This improvement is listed in the City's DIF program. Add a northbound through lane. The Redlands Boulevard/SR-60 Interchange reconstruction would implement the northbound through lane. The interchange reconstruction project is programmed in the TUMF. Therefore, payment of the DIF and TUMF fees would mitigate the significant impact at this location.

•**Redlands Boulevard/SR-60 Eastbound Ramps.** The Redlands Boulevard/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF. Therefore, payment of the TUMF fee would mitigate the significant impact at this location.

• **Redlands Boulevard/Fir Avenue/Eucalyptus Avenue.** Install a traffic signal. Add a westbound right-turn lane and provide overlap phasing for the westbound right turns. Add a westbound left-turn lane and an eastbound left-turn lane. These improvements are programmed in the City's DIF program. Add a northbound left-turn lane, a southbound through lane, and a southbound left-turn lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF fees would mitigate the significant impact at this location.

• **Redlands Boulevard/Eucalyptus Avenue.** Add a southbound right-turn lane. This improvement is programmed in the TUMF. Therefore, payment of the TUMF fees would mitigate the significant impact at this location.

• **Redlands Boulevard/Alessandro Boulevard.** Add a southbound leftturn lane. This improvement is programmed in the TUMF. Therefore, payment of the TUMF fees would mitigate the significant impact at this location.

P99. **4.11.6.4D.** Prior to issuance of building permits, the project applicant shall pay the fair-share contribution toward the following traffic improvements through fees paid to the City of Moreno Valley based on the City's DIF system and the County's TUMF program. At some locations, the DIF and TUMF fees would not

fully mitigate the project's impact. For these locations, additional improvements shall be implemented by the project applicant prior to the issuance of a certificate of occupancy for the project:

• **Nason Street/Eucalyptus Avenue.** Add a northbound right turn lane. This improvement is programmed in the City's DIF; therefore, payment of the DIF fee would partially mitigate the significant impact at this intersection. In addition, the project shall contribute a fair share (calculated to be 1.76%) toward restriping the westbound approach to provide dual left-turn lanes.

• **Nason Street/Alessandro Boulevard.** Add an eastbound through lane and a westbound through lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF fee would partially mitigate the significant impact at this intersection. In addition, the project shall contribute a fair share (calculated to be 1.4%) toward modification of the traffic signal to provide overlap phasing for the eastbound right-turn lane.

• **Moreno Beach Drive/SR-60 Westbound Ramps.** The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF fee would mitigate the significant impact at this location.

• **Moreno Beach Drive/SR-60 Eastbound Ramps.** The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF fee would mitigate the significant impact at this location.

• **Moreno Beach Drive/Eucalyptus Avenue.** Convert the existing eastbound through lane to a left-turn lane and the eastbound right-turn lane to a shared through/right-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF fee would partially mitigate the significant impact at this intersection. In addition, the project shall contribute a fair share (calculated to be 8.63%) toward modification of the traffic signal to provide right-turn overlap phasing for the westbound right-turn lane.

• **Moreno Beach Drive/Cottonwood Avenue.** Add a southbound through lane, This improvement is programmed in the City's DIF program. Therefore, payment of the DIF fee would mitigate the significant impact at this location.

• **Moreno Beach Drive/Alessandro Boulevard.** Add 2 southbound through lanes, 2 northbound through lanes, an eastbound through lane, and a westbound through lane. These improvements are programmed in the City's DIF program. Therefore, payment of the DIF fee would mitigate the significant impact at this location.

• **Redlands Boulevard/SR-60 Westbound Ramps.** Install a traffic signal. This improvement is programmed in the City's DIF program and will be installed before building occupancy since it was identified as a direct project impact.

• **Redlands Boulevard/SR-60 Eastbound Ramps.** The Redlands Boulevard/SR-60 Interchange reconstruction would fully mitigate the project

impact at this location. The interchange reconstruction project is programmed in the TUMF. Therefore, payment of the TUMF fee would mitigate the significant impact at this location.

• **Redlands Boulevard/Fir Avenue- Eucalyptus Avenue.** Install a traffic signal and add a westbound left-turn lane, eastbound through lane, eastbound left-turn lane, and a westbound right-turn lane with overlap phasing. These improvements are programmed in the City's DIF program; therefore, payment of the DIF fee would partially mitigate the significant impact at this intersection. In addition, add a southbound through lane, southbound left-turn lane, northbound through lane, and northbound left-turn lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF fees would mitigate the significant impact at this location.

• **Redlands Boulevard/Eucalyptus Avenue.** Install a traffic signal and add a westbound left-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF fee would partially mitigate the significant impact at this intersection. In addition, add a northbound leftturn lane and a southbound left-turn lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF fees would mitigate the significant impact at this location.

• **Redlands Boulevard/Alessandro Boulevard.** Install a traffic signal. This improvement is programmed in the City's DIF program; therefore, payment of the DIF fee would partially mitigate the significant impact at this intersection. In addition, add a southbound left-turn lane, a northbound left-turn lane, a westbound left-turn lane, an eastbound left-turn lane, a westbound right-turn lane, and a southbound through lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF fees would mitigate the significant impact at this location.

P100. 4.11.6.4E. Prior to issuance of building permits, the project applicant shall pay the fair-share contribution toward the following traffic improvements through fees paid to the City of Moreno Valley based on the City's DIF system and the County's TUMF program, or through a fair-share contribution to the City of Moreno Valley as noted below:

• **Nason Street/Eucalyptus Avenue.** Add a northbound right-turn lane and an eastbound right-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF fee would partially mitigate the significant impact at this intersection. Implementation of the improvements identified for this intersection in **Mitigation Measure 4.11.6.4D** would also partially mitigate the significant impact at this intersection. In addition, the project shall pay a fair share (calculated to be 1.6%) toward modification of the traffic signal to provide right-turn overlap phasing for the eastbound and northbound right turns.

• **Nason Street/Alessandro Boulevard.** Add an eastbound through lane and westbound through lane. These improvements are programmed in the City's DIF

program; therefore, payment of the DIF fee would partially mitigate the significant impact at this intersection. Implementation of the improvements identified for this intersection in **Mitigation Measure 4.11.6.4D** would also partially mitigate the significant impact at this intersection. In addition, the project shall pay a fair share (calculated to be 1.35%) toward the addition of an eastbound left-turn lane and modification of the traffic signal to provide overlap phasing for the westbound right-turn lane.

• **Moreno Beach Drive/SR-60 Westbound Ramps.** The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF fee would mitigate the significant impact at this location.

• **Moreno Beach Drive/SR-60 Eastbound Ramps.** The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF fee would mitigate the significant impact at this location.

• **Moreno Beach Drive/Eucalyptus Avenue.** Restripe eastbound approach to dual left-turn lanes and add a northbound through lane, a westbound through lane, and a southbound right-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF fee would partially mitigate the significant impact at this intersection. Implementation of the improvements identified for this intersection in **Mitigation Measure 4.11.6.4D** would also partially mitigate the significant impact at this intersection. In addition, the project shall pay a fair share (calculated to be 5.17%) toward modification of the traffic signal to provide right-turn overlap phasing for the southbound right-turn lane.

• **Moreno Beach Drive/Cottonwood Avenue.** Add a southbound through lane, a northbound through lane, an eastbound left-turn lane, an eastbound through lane, a westbound through lane, and a westbound left-turn lane. These improvements are programmed in the City's DIF program. Therefore, payment of the DIF fee would mitigate the significant impact at this location.

• **Moreno Beach Drive/Alessandro Boulevard.** Add 2 southbound through lanes, 2 northbound through lanes, an eastbound through lane, and a westbound through lane. These improvements are programmed in the City's DIF program. Therefore, payment of the DIF fee would mitigate the significant impact at this location.

• **Auto Mall Drive/Eucalyptus Avenue.** Install a traffic signal. This improvement is programmed in the City's DIF program. Therefore, payment of the DIF fee would mitigate the significant impact at this location.

• **Redlands Boulevard/SR-60 Westbound Ramps.** Install a traffic signal. This improvement is programmed in the City's DIF program and will be installed before building occupancy since it was identified as a direct project impact. Therefore, payment of the DIF fee would mitigate the significant impact at this location.

• **Redlands Boulevard/SR-60 Eastbound Ramps.** The Redlands Boulevard/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF. Therefore, payment of the TUMF fee would mitigate the significant impact at this location.

• **Redlands Boulevard/Fir Avenue-Eucalyptus Avenue.** Install a traffic signal and add a westbound left-turn lane, eastbound through lane, eastbound left-turn lane, a westbound right-turn lane with overlap phasing, and a southbound right-turn lane with overlap phasing. These improvements are programmed in the City's DIF program; therefore, payment of the DIF fee would partially mitigate the significant impact at this intersection. In addition, add a southbound through lane, a southbound left-turn lane, a northbound through lane, a northbound left-turn lane, and a northbound right-turn lane. These improvements are programmed in the TUMF. Therefore, payment of the TUMF fee would also partially mitigate the significant impact at this location. In addition, the project shall pay a fair share (calculated to be 10.44%) of the cost of adding a southbound left-turn lane.

• **Redlands Boulevard/Eucalyptus Avenue.** Install a traffic signal and add a westbound left-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF fee would partially mitigate the significant impact at this intersection. In addition, add a northbound leftturn lane, a northbound through lane, a southbound left-turn lane, and southbound through lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF fees would mitigate the significant impact at this location.

• **Redlands Boulevard/Cottonwood Avenue.** Add an eastbound through lane and westbound through lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF fee would partially mitigate the significant impact at this intersection. In addition, add a northbound through lane and a southbound through lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF fees would mitigate the significant impact at this location.

• **Redlands Boulevard/Alessandro Boulevard.** Install a traffic signal. This improvement is programmed in the City's DIF program; therefore, payment of the DIF fee would partially mitigate the significant impact at this intersection. In addition, and add a southbound leftturn lane, a northbound left-turn lane, a westbound left-turn lane, an eastbound left-turn lane, a westbound right-turn lane, a southbound through lane, a westbound through lane, and an eastbound through lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF fees would mitigate the significant impact at this location.

P101. 4.11.6.4F. If the Encilia Avenue and Quincy Street Connection plan is implemented as part of the proposed project, then prior to issuance of building permits, the project applicant shall implement the following improvements, in addition to those identified in **Mitigation Measure 4.11.6.4.E**, either through fees

paid to the City of Moreno Valley based on the City's DIF system and the County's TUMF program:

• **Moreno Beach Drive/Eucalyptus Avenue.** Restripe the southbound shared through/right-turn lane to a southbound through lane. This improvement is programmed in the City's DIF program. Therefore, payment of the DIF fee would mitigate the impacts of the project at this intersection.

• **Redlands Boulevard/Fir Avenue- Eucalyptus Avenue.** Pay the fair share (calculated to be 10.84%) to add a southbound right-turn lane. • **Redlands Boulevard/Encilia Avenue-Eucalyptus Avenue.** Install a traffic signal and add a westbound left-turn lane. These improvements are programmed in the City's DIF program. In addition, add a northbound left-turn lane, northbound through lane, southbound left-turn lane, and a southbound through lane. These improvements are programmed in the TUMF program. Therefore, payment of the DIF and TUMF fees would fully mitigate the impact of the project at this intersection.

• **Moreno Beach Drive/Encilia Avenue.** Install a traffic signal and add a northbound through lane, southbound left-turn lane, and a southbound through lane. This improvement is programmed in the City's DIF program. Therefore, payment of the DIF fee would mitigate the impacts of the project at this intersection.

Greenhouse Gases and Global Climate Change

P102. 4.13.6.1A. Prior to the issuance of building permits, the project applicant shall provide evidence to the City of Moreno Valley that building features have been incorporated in building plans as required by Title 24 of the California Code of Regulations. These features include but are not limited to the following:

• Exterior windows shall utilize window treatments for efficient energy conservation.

• Per CALGreen Code requirements, water-efficient fixtures and appliances, including but not limited to low-flow faucets, dual-flush toilets minimizing water consumption by 20 percent from the Building Standards Code baseline water consumption shall be used.

• Per CALGreen Code requirements, a Commissioning Plan shall be prepared and all building systems (e.g., heating, ventilation, and airc-onditioning [HVAC], irrigation systems, lighting, and water heating) shall be commissioned by the Commissioning Authority.

• Per CALGreen Code, restrict watering methods (e.g., prohibit systems that apply water to nonvegetated surfaces) and control runoff.

P103. 4.13.6.1B. Prior to the issuance of building permits, the project applicant shall provide evidence to the City of Moreno Valley that the following measures have been incorporated into the design and construction of the project:

• Use of locally produced and/or manufactured building materials for at least 10 percent of the construction materials used for the project.
• Use of "Green Building Materials," such as those materials that are resource efficient, and recycled and manufactured in an environmentally friendly way, for at least 10 percent of the project.
• Limit unnecessary idling of construction equipment. A reduction in equipment idling would reduce fuel consumption, and therefore, GHG emissions.
• Maximize the use of electricity from the power grid by replacing diesel- or gasoline-powered equipment. This would reduce GHG emissions because electricity can be produced more efficiently at centralized power plants.
• Design the project building to exceed the California Building Code's (CBC) Title 24 energy standard, including, but not limited to, any combination of the following:

-Increase insulation such that heat transfer and thermal bridging is minimized.

-Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.

-Incorporate ENERGY STAR or better rated windows, space heating and cooling equipment, light fixtures, appliances, or other applicable electrical equipment.

• Provide a landscape and development plan for the project that takes advantage of shade, prevailing winds, and landscaping.
• Install efficient lighting and lighting control systems. Use daylight as an integral part of the lighting systems in buildings.
• Install reflective roof material (SRI >45) and cool pavements.
• Install energy-efficient heating and cooling systems, appliances and equipment, and control systems.
• Install solar or light-emitting diodes (LEDs) for outdoor lighting for auto parking areas.

P104. 4.13.6.1C. Prior to the issuance of occupancy permits, the project applicant shall provide evidence to the City of Moreno Valley that the following measures have been be incorporated into the operation of the project:
• The project applicant shall use less than 3,900 Global Warming Potential (GWP) hydrofluorocarbon (HCF) refrigerants or natural refrigerants (ammonia, propane, carbon dioxide [CO2]) for refrigeration and fire suppression equipment.
• Provide vegetative or man-made exterior wall shading devices for east-, south-, and west facing windows.
• Devise a comprehensive water conservation strategy appropriate for the project and its location. The strategy may include the following, plus other innovative measures that may be appropriate:

-Install drought-tolerant plants for landscaping.

-Use reclaimed water for landscape irrigation within the project. Install the infrastructure to deliver and use reclaimed water.

-Install water-efficient irrigation systems, such as weather-based and soil-moisture-based irrigation controllers and sensors for landscaping according to the California Department of Water Resources Model Efficient Landscape Ordinance.

• Provide employee education about reducing waste and available recycling services.

Hazards and Hazardous Materials

P105. 4.6.6.1A Prior to issuance of a grading permit for the project, a qualified contractor shall test onsite soils for contamination by agricultural chemicals. If present in concentrations above established actionable levels or thresholds, these materials shall be removed and transported to an appropriate landfill by a licensed contractor. This measure shall be implemented to the satisfaction of the Building Division including written documentation of the disposal of any agricultural chemical residue in conformance with all applicable regulations.

Building and Safety Division

B1. The above project shall comply with the current California Codes (CBC, CEC, CMC, CPC and Green Building Standards) as well as City ordinances. All new projects shall provide a soils report as well. Plans shall be submitted to the Building Division as a separate submittal. Building permit applications (plan review) made on or after January 1, 2014, will be subject to the 2013 Edition of the California Building Standards Code.

B2. Prior to final inspection, all plans will be placed on a CD Rom for reference and verification. Plans will include “as built” plans, revisions and changes. The CD will also include Title 24 energy calculations, structural calculations and all other pertinent information. It will be the responsibility of the developer and or the building or property owner(s) to bear all costs required for this process. The CD will be presented to the Building and Safety Division for review prior to final inspection and building occupancy. The CD will become the property of the Moreno Valley Building and Safety Division at that time. In addition, a site plan showing the path of travel from public right of way and building to building access with elevations will be required.

B3. (BP) Prior to the issuance of a building permit, the applicant shall submit a properly completed “Waste Management Plan” (WMP), as required, to the Compliance Official (Building Official) as a portion of the building or demolition permit process.

B4. (BP) Prior to the issuance of a building permit, show on the plans that all exterior doors comply with the requirements of CBC 1133B.1.1.1 for accessible path of

travel from every exit door, especially in consideration of doors that may be designated as exits due to interior obstructions to path of travel due to racks, equipment and other interior obstruction to the exit path of travel.

B5. (BP) Prior to the issuance of a building permit, show on the plans that no gutter, drainage feature, swale or other deviation in the flat level surface at the accessible parking spaces exists within and for a minimum four foot extension beyond the outer dimensions of the parking space, loading zone and path of travel.

B6. (BP) Plans shall be prepared, stamped and signed by a licensed Architect or Registered Civil Engineer for submission for plan check review.

B7. (BP) Plumbing plans shall be prepared, including isometrics, for required plumbing fixtures based on California Plumbing Code, Chapter 4 and Table 4-1.

SCHOOL DISTRICT

S1. (BP) Prior to issuance of building permits, the developer shall provide to the Community Development Director a written certification by the affected school district that either: (1) the project has complied with the fee or other exaction levied on the project by the governing board of the district, pursuant to Government Code Section 65996; or (2) the fee or other requirement does not apply to the project.

UNITED STATES POSTAL SERVICE

PO1. (BP) Prior to the issuance of building permits, the developer shall contact the U.S. Postal Service to determine the appropriate type and location of mailboxes.

FIRE PREVENTION BUREAU

1. **Hydrant spacing shall be addressed in plan check.**
2. **The following Standard Conditions shall apply.**

With respect to the conditions of approval, the following fire protection measures shall be provided in accordance with Moreno Valley City Ordinances and/or recognized fire protection standards:

F1. Final fire and life safety conditions will be addressed when the Fire Prevention Bureau reviews building plans. These conditions will be based on occupancy,

use, California Building Code (CBC), California Fire Code (CFC), and related codes, which are in force at the time of building plan submittal.

F2. The Fire Prevention Bureau is required to set a minimum fire flow for the remodel or construction of all commercial buildings per CFC Appendix B and Table B105.1. The applicant/developer shall provide documentation to show there exists a water system capable of delivering 4000 GPM for 4 hour(s) duration at 20-PSI residual operating pressure. The required fire flow may be adjusted during the approval process to reflect changes in design, construction type, or automatic fire protection measures as approved by the Fire Prevention Bureau. Specific requirements for the project will be determined at time of submittal. (CFC 508.3, Appendix B and MVMC 8.36.100 Section D).

F3. Industrial, Commercial, Multi-family, Apartment, Condominium, Townhouse or Mobile Home Parks. A combination of on-site and off-site super fire hydrants (6" x 4" x 2 ½") and super enhanced fire hydrants (6" x 4" x 4" x 2 ½") shall not be closer than 40 feet and more than 150 feet from any portion of the building as measured along approved emergency vehicular travel ways. The required fire flow shall be available from any adjacent fire hydrant(s) in the system. Where new water mains are extended along streets where hydrants are not needed for protection of structures or similar fire problems, super or enhanced fire hydrants as determined by the fire code official shall be provided at spacing not to exceed 500 feet of frontage for transportation hazards. (CFC 508.5.7 & MVMC 8.36.050 Section O and 8.36.100 Section E)

F4. Maximum cul-de-sac or dead end road length shall not exceed 660 feet. The Fire Chief, based on City street standards, shall determine minimum turning radius for fire apparatus based upon fire apparatus manufacture specifications. (CFC 503.1)

F5. Prior to construction, all roads, driveways and private roads shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.050)

F6. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.1 and 503.2.5)

F7. Prior to issuance of Building Permits, the applicant/developer shall provide the Fire Prevention Bureau with an approved site plan for Fire Lanes and signage. (MVMC 8.36.050 and CFC 501.3)

F8. Prior to construction and issuance of building permits, all locations where structures are to be built shall have an approved Fire Department emergency vehicular access road (all weather surface) capable of sustaining an imposed

load of 80,000 lbs. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4 and MVMC 8.36.050 Section A)

F9. Prior to construction and issuance of Building Permits, fire lanes and fire apparatus access roads shall have an unobstructed width of not less the twenty–four (24) or thirty (30) feet as approved by the Fire Prevention Bureau and an unobstructed vertical clearance of not less the thirteen (13) feet six (6) inches. (CFC 503.2.1.1 and MVMC 8.36.050)

F10. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4 and MVMC 8.36.050 Section A)

F11. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.3 and MVMC 8.36.050)

F12. Prior to building construction, dead end roadways and streets which have not been completed shall have a turnaround capable of accommodating fire apparatus. (CFC 503.2.5 and MVMC 8.36.050)

F13. Prior to issuance of Building Permits, the applicant/developer shall participate in the Fire Impact Mitigation Program. (Fee Resolution as adopted by City Council)

F14. Prior to issuance of Building Permits, the applicant/developer shall furnish one copy of the water system plans to the Fire Prevention Bureau for review. Plans shall:

a) Be signed by a registered civil engineer or a certified fire protection engineer;
b) Contain a Fire Prevention Bureau approval signature block; and
c) Conform to hydrant type, location, spacing of new and existing hydrants and minimum fire flow required as determined by the Fire Prevention Bureau.

After the local water company signs the plans, the originals shall be presented to the Fire Prevention Bureau for signatures. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

Existing fire hydrants on public streets are allowed to be considered available.

Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are established to prevent obstruction of such roads. (CFC 508.1 and MVMC 8.36.100)

F15. Prior to issuance of Certificate of Occupancy or Building Final, "Blue Reflective Markers" shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 510.1)

F16. Prior to issuance of Certificate of Occupancy or Building Final, all commercial buildings shall display street numbers in a prominent location on the street side and rear access locations. The numerals shall be a minimum of twelve (12) inches in height for buildings and six (6) inches in height for suite identification on a contrasting background. Unobstructed lighting of the address(s) shall be by means approved by the Fire Prevention Bureau and Police Department. In multiple suite centers (strip malls), businesses shall post the name of the business on the rear door(s). (CFC 505.1)

F17. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9)

F18. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire alarm system monitored by an approved Underwriters Laboratory listed central station based on a requirement for monitoring the sprinkler system, occupancy or use. Fire alarm panel shall be accessible from exterior of building in an approved location. Plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9 and MVMC 8.36.070)

F19. Prior to issuance of a Certificate of Occupancy or Building Final, a "Knox Box Rapid Entry System" shall be provided. The Knox-Box shall be installed in an accessible location approved by the Fire Chief. The Knox-Box shall be supervised by the alarm system and all exterior security emergency access gates shall be electronically operated and be provided with Knox key switches for access by emergency personnel. (CFC 506.1)

F20. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall be responsible for obtaining underground and/or above ground tank permits for the storage of combustible liquids, flammable liquids, or any other hazardous materials from both the County of Riverside Community Health Agency Department of Environmental Health and the Fire Prevention Bureau. (CFC 3401.4 and 2701.5)

F21. Prior to issuance of Certificate of Occupancy, approval shall be required from the County of Riverside Community Health Agency (Department of Environmental Health) and Moreno Valley Fire Prevention Bureau to maintain, store, use, handle materials, or conduct processes which produce conditions hazardous to life or property, and to install equipment used in connection with such activities. (CFC 2701.5)

F22. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer must submit a simple plot plan, a simple floor plan, and other plans as requested, each as an electronic file in .dwg format, to the Fire Prevention Bureau. Alternate file formats may be acceptable with approval by the Fire Chief.

F23. The angle of approach and departure for any means of Fire Department access shall not exceed 1 ft drop in 20 ft (0.3 m drop in 6 m), and the design limitations of the fire apparatus of the Fire Department shall be subject to approval by the AHJ. (CFC 503.2.7 and MVMC 8.36.050 Section I)

F24. Prior to issuance of the building permit for development, independent paved access to the nearest paved road, maintained by the City shall be designed and constructed by the developer within the public right of way in accordance with City Standards. (MVMC 8.36.050)

F25. Prior to construction, “private” driveways over 150 feet in length shall have a turn-around as determined by the Fire Prevention Bureau capable of accommodating fire apparatus. Driveway grades shall not exceed 12 percent. (CFC 503 and MVMC 8.36.050)

F26. Complete plans and specifications for fire alarm systems, fire-extinguishing systems (including automatic sprinklers or standpipe systems), clean agent systems (or other special types of automatic fire-extinguishing systems), as well as other fire-protection systems and appurtenances thereto shall be submitted to the Moreno Valley Fire Prevention Bureau for review and approval prior to system installation. Submittals shall be in accordance with CFC Chapter 9 and associated accepted national standards.

F27. A permit is required to maintain, store, use or handle materials, or to conduct processes which produce conditions hazardous to life or property, or to install equipment used in connection with such activities. Such permits shall not be construed as authority to violate, cancel or set aside any of the provisions of this code. Such permit shall not take the place of any license required by law. Applications for permits shall be made to the Fire Prevention Bureau in such form and detail as prescribed by the Bureau. Applications for permits shall be

accompanied by such plans as required by the Bureau. Permits shall be kept on the premises designated therein at all times and shall be posted in a conspicuous location on the premises or shall be kept on the premises in a location designated by the Fire Chief. Permits shall be subject to inspection at all times by an officer of the fire department or other persons authorized by the Fire Chief in accordance with Appendix Chapter 1 and MVMC 8.36.100.

F28. Approval of the safety precautions required for buildings being constructed, altered or demolished shall be required by the Fire Chief in addition to other approvals required for specific operations or processes associated with such construction, alteration or demolition. (CFC Chapter 14)

F29. Prior to issuance of Certificate of Occupancy, permits are required to store, dispense, use or handle hazardous material. Each application for a permit shall include a hazardous materials management plan (HMMP). The location of the HMMP shall be posted adjacent to (other) permits when an HMMP is provided. The HMMP shall include a facility site plan designating the following:

a) Storage and use areas;
b) Maximum amount of each material stored or used in each area;
c) Range of container sizes;
d) Locations of emergency isolation and mitigation valves and devises;
e) Product conveying piping containing liquids or gases, other than utility-owned fuel gas lines and low-pressure fuel gas lines;
f) On and off positions of valves for valves which are of the self-indicating type;
g) Storage plan showing the intended storage arrangement, including the location and dimensions of aisles. The plans shall be legible and approximately to scale. Separate distribution systems are allowed to be shown on separate pages; and
h) Site plan showing all adjacent/neighboring structures and use.

NOTE: Each application for a permit shall include a hazardous materials inventory statement (HMIS).

F30. Before a Hazardous Materials permit is issued, the Fire Chief shall inspect and approve the receptacles, vehicles, buildings, devices, premises, storage spaces or areas to be used. In instances where laws or regulations are enforceable by departments other than the Fire Prevention Bureau, joint approval shall be obtained from all departments concerned. (CFC Appendix H)

F31. Construction or work for which the Fire Prevention Bureau's approval is required shall be subject to inspection by the Fire Chief and such construction or work

shall remain accessible and exposed for inspection purposes until approved. (CFC Section 106)

F32. The Fire Prevention Bureau shall maintain the authority to inspect, as often as necessary, buildings and premises, including such other hazards or appliances designated by the Fire Chief for the purpose of ascertaining and causing to be corrected any conditions which would reasonably tend to cause fire or contribute to its spread, or any violation of the purpose or provisions of this code and of any other law or standard affecting fire safety. (CFC Section 106)

F33. Permit requirements issued, which designate specific occupancy requirements for a particular dwelling, occupancy, or use, shall remain in effect until such time as amended by the Fire Chief. (CFC Section 104)

F34. In accordance with the California Fire Code Appendix Chapter 1, where no applicable standards or requirements are set forth in this code, or contained within other laws, codes, regulations, ordinances or bylaws adopted by the jurisdiction, compliance with applicable standards of the National Fire Protection Association or other nationally recognized fire safety standards as are approved shall be deemed as prima facie evidence of compliance with the intent of this code as approved by the Fire Chief. (CFC Section 102.7)

F35. Any alterations, demolitions, or change in design, occupancy and use of buildings or site will require plan submittal to the Fire Prevention Bureau with review and approval prior to installation. (CFC Appendix Chapter 1)

F36. Emergency and Fire Protection Plans shall be provided when required by the Fire Prevention Bureau. (CFC Section 105)

F37. Prior to Certificate of Occupancy all locations where medians are constructed and prohibit vehicular ingress/egress into or away from the site, provisions must be made to construct a median-crossover at all locations determined by the Fire Marshal and the City Engineer. Prior to the construction, design plans will be submitted for review and approval by the City Engineer and all applicable inspections conducted by Land Development Division.

F38. Prior to construction, all traffic calming designs/devices must be approved by the Fire Marshal and City Engineer.

PUBLIC WORKS DEPARTMENT – LAND DEVELOPMENT DIVISION

The following are the Public Works Department – Land Development Division Conditions of Approval for this project and shall be completed at no cost to any

government agency. All questions regarding the intent of the following conditions shall be referred to the Public Works Department – Land Development Division.

General Conditions

LD1. (G) The developer shall comply with all applicable City ordinances and resolutions including the City's Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). (MC 9.14.010)

LD2. (G) If the project involves the subdivision of land, maps may be developed in phases with the approval of the City Engineer. Financial security shall be provided for all improvements associated with each phase of the map. The boundaries of any multiple map increment shall be subject to the approval of the City Engineer. The City Engineer may require the dedication and construction of necessary utilities, streets or other improvements outside the area of any particular map, if the improvements are needed for circulation, parking, access, or for the welfare or safety of the public. (MC 9.14.080, GC 66412 and 66462.5).

LD3. (G) It is understood that the tentative map correctly shows all existing easements, traveled ways, and drainage courses, and that their omission may require the map or plans associated with this application to be resubmitted for further consideration. (MC 9.14.040)

LD4. (G) In the event right-of-way or offsite easements are required to construct offsite improvements necessary for the orderly development of the surrounding area to meet the public health and safety needs, the developer shall make a good faith effort to acquire the needed right-of-way in accordance with the Land Development Division's administrative policy. In the event that the developer is unsuccessful, he shall enter into an agreement with the City to acquire the necessary right-of-way or offsite easements and complete the improvements at such time the City acquires the right-of-way or offsite easements which will permit the improvements to be made. The developer shall be responsible for all costs associated with the right-of-way or easement acquisition. (GC 66462.5)

LD5. (G) If improvements associated with this project are not initiated within two years of the date of approval of the Public Improvement Agreement, the City Engineer may require that the improvement cost estimate associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the Public Improvement Agreement or issuance of a permit.

LD6. (G) The developer shall monitor, supervise and control all construction and construction supportive activities, so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:

(a) Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.

(b) Observance of working hours as stipulated on permits issued by the Public Works Department.

(c) The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.

(d) All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements shall be adhered to during the grading operations.

Violation of any condition or restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedies as noted in the City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.

LD7. (G) The developer shall protect downstream properties from damage caused by alteration of drainage patterns, i.e., concentration or diversion of flow. Protection shall be provided by constructing adequate drainage facilities, including, but not limited to, modifying existing facilities or by securing a drainage easement. (MC 9.14.110)

LD8. (G) Public drainage easements, when required, shall be a minimum of 25 feet wide and shall be shown on the map and plan, and noted as follows: “Drainage Easement – no structures, obstructions, or encroachments by landfills are allowed.” In addition, the grade within the easement area shall not exceed a 3:1 (H:V) slope, unless approved by the City Engineer.

LD9. (G) A detailed drainage study shall be submitted to the City Engineer for review and approval at the time of any improvement or grading plan submittal. The study shall be prepared by a registered civil engineer and shall include existing and proposed hydrologic conditions. Hydraulic calculations are required for all drainage control devices and storm drain lines. (MC 9.14.110). Prior to approval of the related improvement or grading plans, the developer shall submit the

approved drainage study, on compact disk, in (.pdf) digital format to the Land Development Division of the Public Works Department.

LD10. (G) Prior to final map approval, commencing applicable street improvements, or obtaining the first building permit, the developer shall enter into a Development Impact Fee (DIF) Improvement Credit Agreement to secure credit and reimbursement for the construction of applicable arterial street, traffic signal, and/or interchange improvements. If the developer fails to complete this agreement prior to the timing as specified above, no credits or reimbursements will be given. The applicant shall pay Arterial Streets, Traffic Signals, and Interchange Improvements development impact fees adopted by the City Council by resolution. (Ord. 695 § 1.1 (part), 2005) (MC 3.38.030, .040, .050)

LD11. (G) The final conditions of approval issued by the Planning Division subsequent to Planning Commission approval shall be photographically or electronically placed on mylar sheets and included in the Grading and Street Improvement plan sets on twenty-four (24) inch by thirty-six (36) inch mylar and submitted with the plans for plan check. These conditions of approval shall become part of these plan sets and the approved plans shall be available in the field during grading and construction.

Prior to Grading Plan Approval or Grading Permit

LD12. (GPA) Prior to approval of the grading plans, plans shall be drawn on twenty-four (24) inch by thirty-six (36) inch mylar and signed by a registered civil engineer and other registered/licensed professional as required.

LD13. (GPA) Prior to approval of grading plans, the developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:

(a) The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines shall be located at the top of slopes.

(b) Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.

(c) A grading permit shall be obtained from the Public Works Department Land Development Division prior to commencement of any grading outside of the City maintained road right-of-way.

(d) All improvement plans are substantially complete and appropriate clearance and at-risk letters are provided to the City. (MC 9.14.030)

(e) The developer shall submit a soils and geologic report to the Public Works Department – Land Development Division. The report shall address the soil's stability and geological conditions of the site.

LD14. (GPA) Prior to grading plan approval, the developer shall select and implement treatment control best management practices (BMPs) that are medium to highly effective for treating Pollutants of Concern (POC) for the project. Projects where National Pollution Discharge Elimination System (NPDES) mandates water quality treatment control best management practices (BMPs) shall be designed per the City of Moreno Valley guidelines or as approved by the City Engineer.

LD15. (GPA) Prior to approval of the grading plans for projects that will result in discharges of storm water associated with construction with a soil disturbance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's Identification number (WDID#) from the State Water Quality Control Board (SWQCB). The WDID# shall be noted on the grading plans prior to issuance of the first grading permit.

LD16. (GPA) Prior to the grading plan approval, or issuance of a building permit, if a grading permit is not required, the Developer shall submit two (2) copies of the final project-specific Water Quality Management Plan (WQMP) for review by the City Engineer that :

(a) Addresses Site Design Best Management Practices (BMPs) such as minimizing impervious areas, maximizing permeability, minimizes directly connected impervious areas to the City's street and storm drain systems, and conserves natural areas;

(b) Incorporates Source Control BMPs and provides a detailed description of their implementation;

(c) Incorporates Treatment Control BMPs and provides information regarding design considerations;

(d) Describes the long-term operation and maintenance requirements for BMPs requiring maintenance; and

(e) Describes the mechanism for funding the long-term operation and maintenance of the BMPs.

A copy of the final WQMP template can be obtained on the City's Website or by contacting the Land Development Division of the Public Works Department.

LD17. (GPA) Prior to the grading plan approval, or issuance of a building permit, if a grading permit is not required, the Developer shall record a "Stormwater Treatment Device and Control Measure Access and Maintenance Covenant," to provide public notice of the requirement to implement the approved final project-specific WQMP and the maintenance requirements associated with the WQMP.

A boilerplate copy of the "Stormwater Treatment Device and Control Measure Access and Maintenance Covenant," can be obtained by contacting the Land Development Division of the Public Works Department.

LD18. (GPA) Prior to the grading plan approval, or issuance of a building permit, if a grading permit is not required, the Developer shall secure approval of the final project-specific WQMP from the City Engineer. The final project-specific WQMP shall be submitted at the same time of grading plan submittal. The approved final WQMP shall be submitted to the Storm Water Program Manager on compact disk(s) in Microsoft Word format prior to grading plan approval.

LD19. (GPA) Prior to the grading plan approval, or issuance of a building permit as determined by the City Engineer, the approved final project-specific WQMP shall be incorporated by reference or attached to the project's Storm Water Pollution Prevention Plan as the Post-Construction Management Plan.

LD20. (GPA) Prior to grading plan approval, the developer shall prepare a Storm Water Pollution Prevention Plan (SWPPP) in conformance with the state's Construction Activities Storm Water General Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request. The SWPPP shall be submitted to the Storm Water Program Manager on compact disk(s) in Microsoft Word format.

LD21. (GPA) Prior to the approval of the grading plans, the developer shall pay applicable remaining grading plan check fees.

LD22. (GP) Prior to issuance of a grading permit, or building permit when a grading permit is not required, for projects that require a project-specific Water Quality Management Plan (WQMP), a project-specific final WQMP (F-WQMP) shall be approved. Upon approval, a WQMP Identification Number is issued by the Storm Water Management Section and shall be noted on the rough grading plans as confirmation that a project-specific F-WQMP approval has been obtained.

LD23. (GP) Prior to issuance of a grading permit, if the fee has not already been paid prior to map approval or prior to issuance of a building permit if a grading permit is not required, the developer shall pay Area Drainage Plan (ADP) fees. The developer shall provide a receipt to the City showing that ADP fees have been paid to Riverside County Flood Control and Water Conservation District. (MC 9.14.100)

LD24. (GP) Prior to issuance of a grading permit, security, in the form of a cash deposit (preferable), letter of credit, or performance bond shall be required to be submitted as a guarantee of the completion of the grading required as a condition of approval of the project.

LD25. (GP) Prior to issuance of a grading permit, the developer shall pay the applicable grading inspection fees.

Prior to Map Approval or Recordation

LD26. (MA) Prior to approval of the map, the developer shall submit a copy of the Covenants, Conditions and Restrictions (CC&Rs) to the Land Development Division for review and approval. The CC&Rs shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project.

LD27. (MA) Prior to approval of the map, all street dedications shall be irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer. All dedications shall be free of all encumbrances as approved by the City Engineer.

LD28. (MA) Prior to approval of the map, security shall be required to be submitted as a guarantee of the completion of the improvements required as a condition of approval of the project. A public improvement agreement will be required to be executed.

LD29. (MR) Prior to recordation of the map, the developer shall submit the map, on compact disks, in (.dxf) digital format to the Land Development Division of the Public Works Department.

Prior to Improvement Plan Approval or Construction Permit

LD30. (IPA) Prior to approval of the improvement plans, the improvement plans shall be drawn on twenty-four (24) inch by thirty-six (36) inch mylar and signed by a registered civil engineer and other registered/licensed professional as required.

LD31. (IPA) Prior to approval of the improvement plans, the developer shall submit clearances from all applicable agencies, and pay all outstanding plan check fees. (MC 9.14.210)

LD32. (IPA) All public improvement plans prepared and signed by a registered civil engineer in accordance with City standards, policies and requirements shall be approved by the City Engineer in order for the Public Improvement Agreement and accompanying security to be executed.

LD33. (IPA) Prior to approval of the improvement plans, securities and a public improvement agreement shall be required to be submitted and executed as a guarantee of the completion of the improvements required as a condition of approval of the project.

LD34. (IPA) The street improvement plans shall comply with all applicable City standards and the following design standards throughout this project:

(a) Corner cutbacks in conformance with City Standard 208 shall be shown on the final map or, if no map is to be recorded, offered for dedication by separate instrument.

(b) Lot access to major thoroughfares shall be restricted except at intersections and approved entrances and shall be so noted on the final map. (MC 9.14.100)

(c) The minimum centerline and flow line grades shall be one percent unless otherwise approved by the City Engineer. (MC 9.14.020)

(d) All street intersections shall be at ninety (90) degrees plus or minus five (5) degrees per City Standard No. 706A, or as approved by the City Engineer. (MC 9.14.020)

(e) All reverse curves shall include a minimum tangent of one hundred (100) feet in length.

LD35. (IPA) Prior to approval of the improvement plans, the plans shall be based upon a centerline profile, extending beyond the project boundaries a minimum distance of 300 feet at a grade and alignment approved by the City Engineer. Design plan and profile information shall include the minimum 300 feet beyond the project boundaries.

LD36. (IPA) Prior to approval of the improvement plans, the plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three years old and recently slurry sealed streets less than one year old. Pavement cuts for trench repairs

may be allowed for emergency repairs or as specifically approved in writing by the City Engineer.

LD37. (IPA) Prior to approval of the improvement plans, the developer shall pothole to determine the exact location of existing underground utilities. The improvement plans shall be designed based on the pothole field investigation results. The developer shall coordinate with all affected utility companies and bear all costs of utility relocations.

LD38. (IPA) Prior to approval of the improvement plans, all dry and wet utility crossings shall be potholed to determine actual elevations. Any conflicting utilities shall be identified and addressed on the plans. The pothole survey data shall be submitted with the street improvement plans for reference purposes.

LD39. (IPA) Prior to approval of the improvement plans, drainage facilities with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided. (MC 9.14.110)

LD40. (IPA) Prior to the approval of the improvement plans, the hydrology study shall show that the 10-year storm flow will be contained within the curb and the 100-year storm flow shall be contained within the street right-of-way. In addition, one lane in each direction shall not be used to carry surface flows during any storm event for street sections equal to or larger than a minor arterial. When any of these criteria is exceeded, additional drainage facilities shall be installed. (MC 9.14.110 A.2)

LD41. (IPA) The project shall be designed to accept and properly convey all off-site drainage flowing onto or through the site. All storm drain design and improvements shall be subject to review and approval of the City Engineer. In the event that the City Engineer permits the use of streets for drainage purposes, the provisions of the Development Code will apply. Should the quantities exceed the street capacity or the use of streets be prohibited for drainage purposes, as in the case where one travel lane in each direction shall not be used for drainage conveyance for emergency vehicle access on streets classified as minor arterials and greater, the developer shall provide adequate facilities as approved by the Public Works Department – Land Development Division. (MC 9.14.110)

LD42. (CP) All work performed within the City right-of-way requires a construction permit. As determined by the City Engineer, security may be required for work within the right-of-way. Security shall be in the form of a cash deposit or other approved means. The City Engineer may require the execution of a public improvement agreement as a condition of the issuance of the construction permit. All inspection fees shall be paid prior to issuance of construction permit. (MC 9.14.100)

LD43. (CP) Prior to issuance of a construction permit, all public improvement plans prepared and signed by a registered civil engineer in accordance with City standards, policies and requirements shall be approved by the City Engineer.

LD44. (CP) Prior to issuance of construction permits, the developer shall submit all improvement plans on compact disks, in (.dxf) digital format to the Land Development Division of the Public Works Department.

LD45. (CP) Prior to issuance of construction permits, the developer shall pay all applicable inspection fees.

Prior to Building Permit

LD46. (BP) Prior to issuance of a building permit, all pads shall meet pad elevations per approved plans as noted by the setting of "Blue-top" markers installed by a registered land surveyor or licensed engineer.

Prior to Certificate of Occupancy

LD47. (CO) Prior to issuance of a certificate of occupancy, if the project involves a non-residential subdivision, the map shall be recorded.

LD48. (CO) Prior to issuance of the last certificate of occupancy or building final, the developer shall pay all outstanding fees.

LD49. (CO) Prior to issuance of a certificate of occupancy, this project is subject to requirements under the current permit for storm water activities required as part of the National Pollutant Discharge Elimination System **(NPDES)** as mandated by the Federal Clean Water Act. In compliance with Proposition 218, the developer shall agree to approve the City of Moreno Valley NPDES Regulatory Rate Schedule that is in place at the time of certificate of occupancy issuance. Following are the requirements:

a. Select one of the following options to meet the financial responsibility to provide storm water utilities services for the required continuous operation, maintenance, monitoring system evaluations and enhancements, remediation and/or replacement, all in accordance with Resolution No. 2002-46.

i. Participate in the mail ballot proceeding in compliance with Proposition 218, for the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule and pay all associated costs with the ballot process; or

ii. Establish an endowment to cover future City costs as specified in the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule.

b. Notify the Special Districts Division of the intent to request building permits 90 days prior to their issuance and the financial option selected. The financial option selected shall be in place prior to the issuance of certificate of occupancy. (California Government Code & Municipal Code)

LD50. (CO) The City of Moreno Valley has an adopted Development Impact Fee (DIF) nexus study. All projects unless otherwise exempted shall be subject to the payment of the DIF prior to issuance of occupancy. The fees are subject to the provisions of the enabling ordinance and the fee schedule in effect at the time of occupancy.

LD51. (CO) The City of Moreno Valley has an adopted area wide Transportation Uniform Mitigation Fee (TUMF). All projects unless otherwise exempted shall be subject to the payment of the TUMF prior to issuance of occupancy. The fees are subject to the provisions of the enabling ordinance and the fee schedule in effect at the time of occupancy.

LD52. (CO) Prior to issuance of a certificate of occupancy or building final, the developer shall construct all public improvements in conformance with applicable City standards, except as noted in the Special Conditions, including but not limited to the following applicable improvements:

(a) Street improvements including, but not limited to: pavement, base, curb, gutter, cross gutter, spandrel, sidewalks, drive approaches, pedestrian ramps, street lights, signing, striping, landscaping and irrigation, pavement tapers/transitions and traffic control devices as appropriate.

(b) Storm drain facilities including, but not limited to: storm drain pipe, storm drain laterals, open channels, catch basins and local depressions.

(c) City-owned utilities.

(d) Sewer and water systems including, but not limited to: sanitary sewer, potable water and recycled water.

(e) Under grounding of existing and proposed utility lines less than 115,000 volts.

(f) Relocation of overhead electrical utility lines including, but not limited to: electrical, cable and telephone.

LD53. (CO) Prior to issuance of a certificate of occupancy or building final, all existing and new utilities adjacent to and on-site shall be placed underground in accordance with City of Moreno Valley ordinances. (MC 9.14.130)

LD54. (CO) Prior to issuance of a certificate of occupancy or building final for any Commercial/Industrial facility, whichever occurs first, the owner may have to secure coverage under the State's General Industrial Activities Storm Water Permit as issued by the State Water Resources Control Board.

LD55. (CO) Prior to issuance of a certificate of occupancy or building final, the applicant shall ensure the following, pursuant to Section XII. I. of the 2010 NPDES Permit:

(a) Field verification that structural Site Design, Source Control and Treatment Control BMPs are designed, constructed and functional in accordance with the approved Final Water Quality Management Plan (WQMP)

(b) Certification of best management practices (BMPs) from a state licensed civil engineer. An original WQMP BMP Certification shall be submitted to the City for review and approval.

Prior to Acceptance of Streets into the City Maintained Road System

LD56. (AOS) Aggregate slurry, as defined in Section 203-5 of Standard Specifications for Public Works Construction, may be required just prior to the end of the one-year warranty period of the public streets at the discretion of the City Engineer. If slurry is required, the developer/contractor must provide a slurry mix design submittal for City Engineer approval. The latex additive shall be Ultra Pave 70 (for anionic – per project geotechnical report) or Ultra Pave 65 K (for cationic – per project geotechnical report) or an approved equal. The latex shall be added at the emulsion plant after weighing the asphalt and before the addition of mixing water. The latex shall be added at a rate of two to two-and-one-half (2 to 2½) parts to one-hundred (100) parts of emulsion by volume. Any existing striping shall be removed prior to slurry application and replaced per City standards.

SPECIAL CONDITIONS

LD57. The following project engineering design plans (24"x36" sheet size) shall be submitted for review and approval as well as additional plans deemed necessary by the City during the plan review process. As-Built Plans of these plans are also required:

(a) Rough Grading Plan

(b) Precise Grading Plan

(c) Street Improvement Plan

(d) Storm Drain Plan

(e) Signing and Striping Plan

(f) Traffic Control Plan

(g) Final Drainage Study

(h) Final Water Quality Management Plan

LD58. Prior to rough grading plan approval, this project shall demonstrate, via a final drainage study, that the increased runoff resulting from the development of this site is mitigated. During no storm event shall the flow leaving the site in the developed condition be larger than that of the pre-developed condition. The drainage study shall analyze the following events: 1, 3, 6 and 24-hour durations for the 2, 5, 10 and 100-year storm events. The applicant understands that additional detention measures, beyond those shown on the tentative map and preliminary drainage study, may be required.

LD59. Prior to rough and precise grading plan approval, the plans shall clearly show the extents of all existing easements on the property. All building structures shall be constructed outside of existing easements. All on-site and off-site easements shall be shown on the grading plan.

LD60. Prior to rough and precise grading plan approval, the plans shall clearly show that any slope near the public right-of-way has a minimum set-back area at 2% maximum of 2 feet before the start of the top or toe of slope. If the vertical height of the slope exceeds 10 feet, this set-back area shall be 3 feet minimum.

LD61. Prior to precise grading plan approval, the grading plans shall show any proposed trash enclosure as dual bin; one bin for trash and one bin for recyclables. The trash enclosure shall be per City Standard Plan 627.

LD62. Prior to precise grading plan approval, the grading plans shall clearly show that the parking lot conforms to City standards. The parking lot shall be 5% maximum, 1% minimum, 2% maximum at or near any disabled parking stall and travel way. Ramps, curb openings and travel paths shall all conform to current ADA standards as outlined in Department of Justice's "ADA Standards for Accessible Design", Excerpt from 28 CFR Part 36.

(www.usdoj.gov) and as approved by the City's Building and Safety Division.

LD63. Prior to parcel map approval, either reciprocal access easement(s) shall be shown on the map or a separate recorded copy of a reciprocal access agreement between parcels shall be submitted to the City for review and approval.

LD64. Prior to parcel map approval, the map shall show the following:

(a) A 100-foot right-of-way dedication for the construction of Eucalyptus Avenue.

(b) A 60-foot right-of-way dedication for the construction of Street "A".

(c) A 44-foot right-of-way dedication for the future construction of Encilia Street along the south boundary of Parcel 6 and Lot C Quincy Channel.

(d) A 4-foot right-of-way dedication for the future construction of Encilia Street along the south boundary of Parcel 5.

(e) An 80-foot street right-of-way vacation for the old alignment of Fir Avenue traversing Buildings 4 and 5 as well as parking lot areas of Buildings 3 and 6.

(f) A 40-foot street right-of-way vacation for the old alignment of Fir Avenue traversing and along the south boundary of Parcel 3.

(g) A 30-foot street right-of-way vacation for the west half of Quincy Street.

(h) A 16-foot right-of-way dedication along the north property line, excepting area already acquired by the City, for the future use by Caltrans.

(i) A drainage and access easement dedication to the City at the north boundary line at Quincy Channel for culvert maintenance and also at the north and south ends of proposed culverts at its crossing with Eucalyptus Avenue.

(j) A 4-foot minimum pedestrian right-of-way dedication behind any driveway approach per City Standard 118C.

(k) A 2-foot and varying width public access easement for the portions of sidewalk which are outside of the public right-of-way, along Eucalyptus Avenue necessary to accommodate curb separated sidewalk.

(l) A 6-foot wide trail easement on the north side of Eucalyptus Avenue at its proposed bridge culvert crossing over Quincy Channel.

(m) A varying wide trail easement 8.5-foot wide to 13.5-foot wide trail easement on the north side of Eucalyptus Avenue.

(n) An 18.5-foot wide multi-purpose trail easement along the west side of Quincy Channel.

(o) An easement along the west project boundary between SR-60 and Eucalyptus Avenue for proposed water line improvements required to relocate an existing 12-inch EMWD water line from along the north project boundary to within Eucalyptus Avenue.

(p) A reciprocal access easement between Parcels 4 and 5 and between Parcels 5 and 6.

(q) Corner cutback right-of-way dedications per City Standard 208.

(r) Retention of open space lots designated as Lot C and Lot D on the tentative map to be retained and maintained by the developer.

LD65. Prior to parcel map approval, the Developer shall guarantee the construction of the following improvements by entering into a public improvement agreement and posting security. The improvements shall be completed prior to occupancy of the first building or as otherwise determined by the City Engineer.

(a) Eucalyptus Avenue, Arterial, City Standard 104A (100-foot RW / 76-foot CC) shall be constructed to full-width, within the project's frontage and 32-feet wide (12-foot lanes and 4-foot shoulders) on center from the east map boundary at Quincy Channel easterly to Redlands Boulevard, including any transitions required at the intersection with Redlands Boulevard. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, drainage structures, bridge culvert crossing, culvert structures, rip rap, offsite improvement transition/joins to existing, streetlights, pedestrian ramps, undergrounding of any

power poles with overhead utility lines less than 115,000 volts, signing, striping, and dry and wet utilities.

(b) Street "A", Local Street, City Standard 108A Modified (60-foot RW / 40-foot CC) shall be constructed full-width within the project's boundaries using a Traffic Index (TI) of 10. Improvements shall consist of, but not be limited to, pavement, base, eight-inch curb, gutter, sidewalk, driveway approaches, drainage structures, streetlights, pedestrian ramps, and dry and wet utilities.

(c) Quincy Channel improvements shall consist of, but not be limited to bridge culvert crossing including headwall, rip rap, access ramp from street to bottom of channel, multi-purpose trail and access road, buried concrete channel side slope, buried concrete channel vertical wall, storm drain outlet structures (headwall and cut-off walls, sewer line crossing beneath the channel.

(d) Driveway approaches shall be constructed per City Standard No. 118C. The parcel map shall show an additional 4-foot right-of-way dedication behind driveway approaches. No decorative pavers shall be placed within the public right-of-way.

(e) Relocation of an existing water line along the north property boundary adjacent to State Route 60 to within Eucalyptus Avenue.

(f) Removal or relocation, as determined by SCE, of existing overhead power lines along the north property boundary adjacent to State Route 60.

LD66. Prior to building permit issuance, the precise grading plan for that building shall be approved by the City and Parcel Map 35679 shall record.

LD67. Prior to building permit issuance, this project shall cause the vacation of all existing easements, especially those easements underneath proposed building footprints. This shall include, but not be limited to, the 12-foot wide EMWD access easement, 20-foot wide EMWD water line easement, and easements for utilities and incidental purposes granted to Southern Sierras Power Company. All utilities shall be relocated, as necessary, prior to vacation of easements. All new easements shall be granted prior to utility relocations and vacation of existing easements. All utilities shall be relocated into the proposed public right-of-way or to a location as agreed upon by the developer, the easement holder and the City Engineer, as necessary, prior to vacation of easements. All new easements shall be granted prior to utility relocations and vacation of existing easements

and/or street vacations. All utility locations shall be done at no expense to the City.

LD68. Prior to occupancy permit issuance, all overhead utility lines less than 115,000 volts fronting or within the entire project site boundary shall be placed underground per Section 9.14.130C of the City Municipal Code.

LD69. In accordance with the County of Riverside – Low Impact Development BMP Design Handbook (BMP Handbook) Appendix A – Infiltration Testing requirements, perform the required number of in-situ infiltration testing within the footprints of the proposed LID BMPs and provide the results in the first submittal of the Final-WQMP. Conceptually, the Engineer's proposed infiltration feasibility is acceptable for this Preliminary WQMP. Based on the field measured results of the additional infiltration tests, the Applicant acknowledges that infiltration infeasibility may be presented which would require substantially more area than currently shown on the plans to retain the proposed design capture volumes (DCV) as required. Maximum required dedicated LID BMP area shall be in compliance with the County's WQMP Guidance document's effective area requirements indicated in Table 2-5, page 41.

LD70. All proposed LID BMP's shall be designed in accordance with the BMP Handbook. This includes, but is not limited to, forebay design and volumes, basin landscaping, retaining wall designs, soil media depths, etc. Tributary areas to all LID BMPs shall be in conformance with the BMP Handbook and/or at the discretion of the City's Land Development Division.

LD71. The Applicant shall prepare and submit for approval a final, project-specific water quality management plan (F-WQMP) for PA07-0084 – Prologis Inc. The F-WQMP shall be consistent with the approved P-WQMP and in full conformance with the document; "Water Quality Management Plan, A Guidance Document for the Santa Ana Region of Riverside County," with an approval date of October 22, 2012 (WQMP Guidance). The F-WQMP shall be submitted and approved prior to application for and issuance of grading permits or building permits. At a minimum, the F-WQMP shall include the following: Site design principles; Source control BMPs; LID BMPs; Operation and Maintenance requirements for BMPs; and sources of funding for BMP implementation.

LD72. Overall, the proposed LID BMP concept is accepted as the conceptual LID BMP implementation for the proposed site. The Applicant has proposed to incorporate the use of infiltration basins. Final design details of these basins must be provided in the first submittal of the F-WQMP. The sizes of all LID BMPs are to be determined using the current procedures set forth

the Riverside County Flood Control and Water Conservation District's Design Handbook for Low Impact Development Best Management Practices. The Applicant acknowledges that more area than currently shown on the plans may be required to treat site runoff as required by the WQMP guidance.

LD73. The Applicant shall substantiate all applicable Hydrologic Condition of Concern (HCOC) issues in the first submittal of the F-WQMP.

LD74. The Applicant shall, prior to building or grading permit closeout or the issuance of a certificate of occupancy, demonstrate:

(a) That all structural BMPs have been constructed and installed in conformance with the approved plans and specifications;

(b) That all structural BMPs described in the F-WQMP have been implemented in accordance with approved plans and specifications;

(c) That the applicant is prepared to implement all non-structural BMPs included in the F-WQMP, conditions of approval, and building/grading permit conditions; and

(d) That an adequate number of copies of the approved F-WQMP are available for the future owners/occupants of the project.

PUBLIC WORKS DEPARTMENT – TRANSPORTATION ENGINEERING DIVISION

Based on the information contained in our standard review process we recommend the following conditions of approval be placed on this project:

GENERAL CONDITIONS

TE1. Future Eucalyptus Avenue is classified as an Arterial (100'RW/76'CC) per City Standard Plan No. 104A. Any modifications or improvements undertaken by this project shall be consistent with the City's standards for this facility. Sidewalk shall be curb separated. The project shall construct pavement improvements from the eastern property boundary to Redlands Boulevard consistent with Land Development conditions.

TE2. Future "A" Street is classified as a Modified Local Street (60'RW/40'CC) per City Standard Plan No. 108A. The T.I. shall be per Land Development's conditions. The southerly terminus of the roadway shall include an end of roadway treatment satisfactory to the City Engineer. The street shall be signed for no parking/no stopping. Any modifications or improvements

undertaken by this project shall be consistent with the City's standards for this facility.

PRIOR TO IMPROVEMENT PLAN APPROVAL OR CONSTRUCTION PERMIT

TE3. The driveways less than or equal to 40 feet in width shall conform to Section 9.11.080, and Table 9.11.080-14 of the City's Development Code - Design Guidelines, and City Standard Plan No. 118C. Driveways wider than 40' shall be designed as intersections with pedestrian access ramps per City standards.

TE4. Prior to the final approval of the street improvement plans, a signing and striping plan shall be prepared per City of Moreno Valley Standard Plans - Section 4 for all streets with a cross section of 66'/44' and wider.

TE5. Prior to issuance of a construction permit, construction traffic control plans prepared by a qualified, Registered Civil or Traffic engineer shall be required.

TE6. Sight distance at driveways and on streets shall conform to City Standard Plan No. 125 A, B, and C at the time of preparation of final grading, landscape, and street improvements.

TE7. Prior to final approval of the street improvement plans, interim and ultimate alignment studies shall be approved by the City Traffic Engineer.

TE8. Prior to the final approval of the street improvement plans, the project applicant shall prepare traffic signal design plans for the following intersections:

- **Redlands Boulevard/SR-60 Westbound Ramp**
- **Redlands Boulevard/Future Eucalyptus Avenue**

TE9. Prior to the final approval of the street improvement plans, the project applicant shall design the intersection of Redlands Boulevard and Eucalyptus Avenue to provide the following geometrics:

Northbound: One left turn lane, one through lane
Southbound: One through lane, one right turn lane
Eastbound: One left turn lane, one right turn lane
Westbound: N/A

NOTE: All curb return radii shall be 50 feet.

TE10. Prior to final approval of the street improvement plans, the project applicant shall design the intersection of Redlands Boulevard and SR-60 Westbound Ramp to provide the following geometrics:

Northbound: One left turn lane, one through lane, one right turn lane
Southbound: One left turn lane, one shared through/right turn lane
Eastbound: One shared left turn/through/right turn lane
Westbound: One shared left turn/through/right turn lane

TE11. Prior to issuance of a construction permit, the project applicant shall pay to the City all applicable "Fair Share" impact fees per the findings of the Environmental Impact Report.

PRIOR TO CERTIFICATE OF OCCUPANCY OR BUILDING FINAL

TE12. (CO) Prior to issuance of a certificate of occupancy, all approved signing and striping shall be installed per current City Standards and the approved plans.

TE13. (CO) Each gated entrance from a public street will be provided with the following, or as approved by the City Engineer:

A. A storage lane with length sufficient to support the queuing predicted by the traffic study (minimum of 75 feet).
B. Signing and striping at the gate, including no parking signs.
C. A separate pedestrian entry, if pedestrian access is necessary.
D. Presence loop detectors (or another device) within 1 or 2 feet of the gates that ensures that the gates remain open while any vehicle is in the queue.

All of these features must be kept in working order.

TE14. (CO) Prior to issuance of a certificate of occupancy, the project applicant shall construct the intersection/roadway improvements identified in TE8, TE9, and TE10 per the approved plans.

TE15. (CO) Prior to issuance of the final certificate of occupancy, the project applicant shall submit a traffic calming study for Eucalyptus Avenue located between Moreno Beach Drive and the western property boundary (Specific Plan 209) for City review and approval. Any recommendations made in the study shall be implemented by the project applicant to the satisfaction of the City Traffic Engineer prior to issuance of the final certificate of occupancy.

PRIOR TO ACCEPTANCE OF STREETS INTO THE CITY-MAINTAINED ROAD SYSTEM

TE16. Prior to the acceptance of streets into the City-maintained road system, all approved traffic control and signing and striping shall be installed per current City Standards and the approved plans.

FINANCIAL & MANAGEMENT SERVICES DEPARTMENT

Special Districts Division

Note: All Special Conditions, Modified Conditions, or Clarification of Conditions are in bold lettering. All other conditions are standard to all or most development projects.

Acknowledgement of Conditions

The following items are Special Districts' Conditions of Approval for project **PA07-0083**; this project shall be completed at no cost to any Government Agency. All questions regarding Special Districts' Conditions including but not limited to, intent, requests for change/modification, variance and/or request for extension of time shall be sought from the Special Districts Division of the Financial & Management Services Department 951.413.3480 or by emailing specialdistricts@moval.org.

General Conditions

SD1. The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services Districts Zones A (Parks & Community Services) and C (Arterial Street Lighting). All assessable parcels therein shall be subject to annual parcel taxes for Zone A and Zone C for operations and capital improvements.

SD2. Any damage to existing landscape areas maintained by the City of Moreno Valley due to project construction shall be repaired/replaced by the Developer, or Developer's successors in interest, at no cost to the City of Moreno Valley.

SD3. The ongoing maintenance of any landscaping required to be installed behind the curb on **Fir Avenue, Quincy Street, and Eucalyptus Avenue** shall be the responsibility of the property owner.

SD4. Street light Authorization forms, for all street lights that are conditioned to be installed as part of this project, must be submitted to the Special Districts Division for approval, **prior to** street light installation. The Street light Authorization form

can be obtained from the utility company providing electric service to the project, either Moreno Valley Utility or Southern California Edison.

Prior to Building Permit Issuance

SD5. (BP) This project has been identified to be included in the formation of a Map Act Area of Benefit Special District for the construction of **major thoroughfares and/or freeway** improvements. The property owner(s) shall participate in such District, and pay any special tax, assessment, or fee levied upon the project property for such District. At the time of the public hearing to consider formation of the district, the property owner(s) will not protest the formation, but the property owners(s) will retain the right to object if any eventual assessment is not equitable, that is, if the financial burden of the assessment is not reasonably proportionate to the benefit which the affected property obtains from the improvements which are to be installed. The Developer must notify Special Districts of intent to request building permits 90 days prior to their issuance. (Street & Highway Code, GP Objective 2.14.2, MC 9.14.100)

SD6. (BP) This project has been identified to be included in the formation of a Community Facilities District (Mello-Roos) for **Public Safety** services, including but not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. The property owner(s) shall not protest the formation; however, they retain the right to object to the rate and method of maximum special tax. In compliance with Proposition 218, the Developer shall agree to approve the mail ballot proceeding (special election) for either formation of the CFD or annexation into an existing district that may already be established. The Developer must notify Special Districts of intent to request building permits 90 days prior to their issuance. (California Government Code)

SD7. *Commercial* (BP) If Land Development, a Division of the Public Works Department, requires this project to supply a funding source necessary to provide, but not limited to, stormwater utilities services for the monitoring of on-site facilities and performing annual inspections of the affected areas to ensure compliance with state mandated stormwater regulations, the Developer must notify Special Districts 90 days prior to the City's issuance of a building permit and the financial option selected to fund the continued maintenance. (California Government Code)

SD8. (BP) Prior to the issuance of the first building permit for this project, the Developer shall pay Advanced Energy fees for all applicable Zone B (Residential Street Lighting) and/or Zone C (Arterial Street Lighting and Intersection Lighting) street lights required for this development. Payment shall be made to the City of Moreno Valley, as collected by the Land Development Division, based upon the

Advanced Energy fee rate in place at the time of payment, as set forth in the current Listing of City Fees, Charges and Rates, as adopted by City Council.

The Developer shall provide a receipt to the Special Districts Division showing that the Advanced Energy fees have been paid in full for the number of street lights to be accepted into the CSD Zone B and/or Zone C programs. Any change in the project which may increase the number of street lights to be installed will require payment of additional Advanced Energy fees at the then current fee.

SD9. (BP) Prior to release of building permit, the Developer, or the Developer's successors or assignees, shall record with the County Recorder's Office a **Covenant of Assessments** for each assessable parcel therein, whereby the Developer covenants the existence of the Moreno Valley Community Services District), its established benefit zones, and that said parcel(s) is (are) liable for payment of annual benefit zone charges and the appropriate National Pollutant Discharge Elimination System (NPDES) maximum regulatory rate schedule when due. A copy of the recorded Covenant of Assessments shall be submitted to the Special Districts Division. For a copy of the Covenant of Assessments form, please contact Special Districts, phone 951.413.3480.

PUBLIC WORKS DEPARTMENT – MORENO VALLEY UTILITY

Note: All Special Conditions, Modified Conditions, or Clarification of Conditions are in bold lettering. All other conditions are standard to all or most development projects.

Acknowledgement of Conditions

The following items are Moreno Valley Utilities' Conditions of Approval for project(s) PA07-0081, PA07-0082, PA04-0083, PA07-0084, PA07-0158, PA07-0159, PA07-0160, PA07-0161, and PA07-0162; this project shall be completed at no cost to any Government Agency. All questions regarding Moreno Valley Utilities' Conditions including but not limited to, intent, requests for change/modification, variance and/or request for extension of time shall be sought from Moreno Valley Utilities (the Electric Utility Division) of the Public Works Department 951.413.3500. The applicant is fully responsible for communicating with Moreno Valley Utilities staff regarding their conditions. Listed after each individual condition is a contact name of who can be reached for specific questions.

PRIOR TO RECORDATION OF FINAL MAP

MVU1. For single family subdivisions, a three foot easement along each side yard property line shall be shown on the final map and offered for dedication to the City of Moreno Valley for public utility purposes, unless otherwise approved by

the City Engineer. If the project is a multi-family development, townhome, condominium, apartment, commercial or industrial project, and it requires the installation of electric distribution facilities within common areas, a non-exclusive easement shall be provided to Moreno Valley Utilities to include all such common areas. All easements shall include the rights of ingress and egress for the purpose of operation, maintenance, facility repair, and meter reading.

PRIOR TO ENERGIZING MVU ELECTRIC UTILITY SYSTEM AND CERTIFICATE OF OCCUPANCY

MVU2. **City of Moreno Valley Municipal Utility Service – Electrical Distribution**: Prior to issuance of building permit, the developer shall submit a detailed engineering plan showing design, location and schematics for the utility system to be approved by the City Engineer. In accordance with Government Code Section 66462, the Developer **shall** execute an agreement with the City providing for the installation, construction, improvement and dedication of the utility system following recordation of final map and concurrent with trenching operations and other subdivision improvements so long as said agreement incorporates the approved engineering plan and provides financial security to guarantee completion and dedication of the utility system.

The Developer **shall** coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to the City, or the City's designee, all utility infrastructure (including but not limited to conduit, equipment, vaults, ducts, wires, switches, conductors, transformers, resistors, amplifiers, and "bring-up" facilities including electrical capacity to serve the identified development and other adjoining/abutting/ or benefiting projects as determined by Moreno Valley Utilities) – collectively referred to as "utility system" (to and through the development), along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and /or delivery of any and all "utility services" to each lot and unit within the Tentative Map. For purposes of this condition, "utility services" shall mean electric, cable television, telecommunication (including video, voice, and data) and other similar services designated by the City Engineer. "Utility services" shall not include sewer, water, and natural gas services, which are addressed by other conditions of approval.

The City, or the City's designee, shall utilize dedicated utility facilities to ensure safe, reliable, sustainable and cost effective delivery of utility services and maintain the integrity of streets and other public infrastructure. Developer shall, at developer's sole expense, install or cause the installation of such interconnection facilities as may be necessary to connect the electrical

distribution infrastructure within the project to the Moreno Valley Utilities owned and controlled electric distribution system.

MVU3. This project may be subject to a Reimbursement Agreement. The project may be responsible for a proportionate share of costs associated with electrical distribution infrastructure previously installed that directly benefits the project. The project may be subject to a system wide capacity charge in addition to the referenced reimbursement agreement. Payment(s) shall be required prior to issuance of building permit(s).

MVU4. For all new projects, existing Moreno Valley Utility electrical infrastructure shall be preserved in place. The developer will be responsible, at developer expense, for any and all costs associated with the relocation of any of Moreno Valley Utility's underground electrical distribution facilities, as determined by Moreno Valley Utility, which may be in conflict with any developer planned construction on the project site.

PARKS AND COMMUNITY SERVICES DEPARTMENT

Note: All Special Conditions, Modified Conditions, or Clarification of Conditions are in bold lettering. All other conditions are standard to all or most development projects.

Acknowledgement of Conditions

The following items are Parks and Community Services Department Conditions of Approval for project **PA07-0084, TTM 35679**; this project shall be completed at no cost to any Government Agency. All questions regarding Parks and Community Services Department Conditions including but not limited to, intent, requests for change/modification, variance and/or request for extension of time shall be sought from the Parks and Community Services Department 951.413.3280. The applicant is fully responsible for communicating with the Parks and Community Services Department project manager regarding the conditions.

SPECIFIC CONDITIONS OF APPROVAL

PCS1. A multi-use trail shall be located along the west side of Quincy Channel and east side of Quincy Street (or its alignment). Additionally, the trail is to be located over the Quincy Channel, on the south side of Fir Avenue, connecting to the Quincy trail. The trail shall be 14' in width, with a 2' stamped colored concrete section between curb and trail. The trail shall be dedicated as an easement to the City from a lettered lot owned by Riverside County Flood Control and Water Conservation District.

PCS2. Parks and Community Services Department – Standard Trail Conditions:

- **a.** Trail construction shall adhere to: The City's Standard Plans, 'The Greenbook Standard Specifications for Public Works Construction', 'California Code of Regulations Title 24' (where applicable), and the Park and Community Services Specification Guide.
- **b.** The General Contractor shall be a State of California Class 'A' General Engineering Contractor, per the Business and Professions Code Section 7056, or a combination of State of California Class 'C' licenses for which the work is being performed. Licenses must be current and in good standing, for the duration of the project.
- **c.** All utility easements shall not interfere with the trail or its fencing. A map of all easements and the corresponding easement rights shall be presented to Parks and Community Services prior to scheduling the Tentative Map for approval.
- **d.** (R) A restriction shall be placed on lots that are adjacent to the trail, preventing openings or gates accessing the trail. This shall be done through Covenants, Conditions, and Restrictions (CC&R's). A copy of the CC&R's with this/her restriction noted shall be submitted and approved by the Director of Parks and Community Services or his/her designee prior to the recordation of the Final Map.
- **e.** Trails shall not be shared with any above ground utilities, blocking total width access.
- **f.** The following plans require Parks and Community Services written approval: Tentative tract/parcel maps; rough grading plans (including all Delta changes); Final Map; precise grading plans; street improvement plans; traffic signal plans; fence and wall plans; landscape plans for areas adjacent to trails; trail improvement plans.
- **g.** (GP) A detailed rough grading plan with profile for the trail shall be submitted and approved by the Director of Parks and Community Services or his/her designee prior to the issuance of grading permits.
- **h.** Grading certification and compaction tests are required, prior to any improvements being installed.
- **i.** A minimum two-foot graded bench is required where trails adjoin landscaped or open space areas.
- **j.** (R) Prior to the approval of the Final Map, a detailed map of the trail and areas adjacent to the trail shall be submitted to the Director of Parks and Community Services or his/her designee prior for review and written approval.
- **k.** (R) All necessary documents to convey to the City and/or the Community Services District any required dedications for parks or open space, as specified on the tentative map or in these Conditions of Approval shall be submitted by the developer to Parks and Community Services, prior to the recordation of the final map.

- **l.** (R) Prior to recordation of the Final Map, the developer shall post security (bonds) to guarantee construction of the trail to the City's standards. Copies of the bonds shall be provided to Parks and Community Services, prior to the approval of the Final Map.
- **m.** (BP) Prior to the issuance of the first Building Permit, final improvement plans (mylars and AutoCAD & PDF file on a CD-ROM) shall be reviewed and approved by the Community Development Department – Planning Division; the Public Works Department – Land Development and Transportation Division; Fire Prevention; and Parks and Community Services Department. Landscaped areas adjacent to the park shall be designed to prevent water on the park.
- **n.** Eight sets of complete trail improvement plans shall be submitted to Parks and Community Services for routing. Adjacent landscaping and walls shall be shown on the plans. Final construction plans and details require wet stamped and signed Mylars, eight sets of bond copies and one Mylar copy from the City signed mylars, the AutoCAD file on CD, and a PDF file on CD. As-builts for the trails have the same requirements as final plan submittals.
- **o.** All street crossings shall be signed with approved 'STOP' signs, trail signs, and posts. All improved equestrian trail crossings at signalized intersections that are constructed at their ultimate locations shall have high mounted push buttons. These shall be coordinated through the Transportation Division.
- **p.** CSD Zone 'A' plan check fees shall be paid prior to the second plan check.
- **q.** CSD Zone 'A' inspection fees shall be paid prior to signing of Mylars.
- **r.** (BP) The trail shall be surveyed and staked by the developer. The trail shall be inspected and approved by the Director of Parks and Community Services or his/her designee prior to the issuance of any building permits for production units.
- **s.** Any damage to trails or fencing during construction shall be repaired by the developer and inspected by the Director of Parks and Community Services or his/her designee; prior to the last phase of building permit issuance.
- **t.** A minimum 38' radius shall be incorporated on all trails where a change of direction occurs (minor or major). Additionally, widening of the trail is necessary in most situations.
- **u.** Drive approaches shall adhere to City Std. Plan #118C.
- **v.** Concrete access areas to trails with decomposed granite surfaces shall be rough finished concrete (typically raked finish). The access shall extend to the main trail flat surface.
- **w.** (BP) In order to prevent the delay of building permit issuance, any deviation from trail fencing materials or trail surface materials shall be submitted to Director of Parks and Community Services or his/her designee and approved in writing 60-days prior to the commencement of trail construction.

x. Any unauthorized deviation from the approved plan, specifications, City Standard Plans, or Conditions of Approval may result in the delay of building permit issuance and/or building Finals/ Certificate of Occupancy of the project conditioned for improvements.

y. Where required, decorative solid-grouted block wall (no precision block, stucco, veneer finishes, PVC, or wood fencing) with a minimum height of 72" on the trailside shall be installed along lots that adjoin the trail. Block walls shall be located solely on private property. If landscaping is to be utilized between the block wall and the trail, a PVC fence shall be installed along the trail separating the landscaping from the trail (where required). All block walls that have public view shall have an anti-graffiti coating per Parks and Community Services specifications. Combination block/tubular steel fences shall only be utilized where approved by Parks and Community Services. Tubular steel shall comply with Parks and Community Services standards. Coating for tubular steel shall be anti-graffiti coating for metal per Parks and Community Services specifications. If alternate products are requested, the requested material(s) shall be presented to the Director of Parks and Community Services or his/her designee for review and approval. Under no circumstances can alternate products be utilized without prior written authorization from the Director of Parks and Community Services or his/her designee.

z. Any damage to existing landscape or hardscape areas due to project construction shall be repaired/replaced by the developer, or developer's successors in interest, at no cost to the City or Community Services District.

aa. All inspections shall be requested two (2) working days in advance from the Parks and Community Services Department at the time of rough and precise grading; fence and gate installation; curb and drainage; flatwork; D.G. installation; graffiti coating; and final inspection.

bb. (BP)Trail construction in single family developments shall commence prior to 30% of total building permit issuance. Trail completion and acceptance (single family developments) for maintenance shall be completed prior to 70% of total building permit issuance.

cc. (CO)Trail construction in multi-family or commercial developments shall commence with the rough grading. Trail completion and acceptance for maintenance shall be completed prior to the issuance of 50% of the total certificates-of-occupancy (for multi-family and/or commercial developments).

PCS3. (R) If Special Districts, a Division of the Public Works Department, requires this project to supply a funding source for the continued maintenance, enhancement, and or retrofit of neighborhood parks, open spaces, linear parks, and/or trails systems, the Developer must notify Special Districts of intent to record the final map 70 days prior to recordation of the final map and the financial option selected to fund the continued maintenance. (California Government Code, GP Chapter 2.7)

PCS3b. **(**BP) If Special Districts, a Division of the Public Works Department, requires this project to supply a funding source for the continued maintenance, enhancement, and or retrofit of neighborhood parks, open spaces, linear parks, and/or trails systems, the Developer must notify Special Districts of intent to request building permits 70 days prior to their issuance and the financial option selected to fund the continued maintenance. (California Government Code, GP Chapter 2.7)

PCS4. The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services Districts Zones A (Parks and Community Services). All assessable parcels therein shall be subject to the annual Zone A charge for operations and capital improvements.

PCS5. (R) Prior to recordation of the final map, the developer, or the developer's successors or assignees, shall supply a copy of the recorded Declaration of Covenant and Acknowledgement of Assessments to the Parks and Community Services Department.

PCS6. (BP) Prior to release of building permit, the developer, or the developer's successors or assignees shall supply a copy of the recorded Declaration of Covenant and Acknowledgement of Assessments to the Parks and Community Services Department.

PCS7. (BP)This project is subject to current Development Impact Fees at time of building permit issuance.

PCS8. Any modified or newly created agreements shall be reviewed and approved by the Board of the Moreno Valley Community Services District.

POLICE DEPARTMENT

Note: All Special conditions are in bold lettering. All other conditions are standard to all or most development projects

Standard Conditions

PD1. Prior to the start of any construction, temporary security fencing shall be erected. The fencing shall be a minimum of six (6) feet high with locking, gated access and shall remain through the duration of construction. Security fencing is required if there is: construction, unsecured structures, unenclosed storage of materials and/or equipment, and/or the condition of the site constitutes a public hazard as determined by the Public Works Department. If security fencing is required, it shall remain in place until the project is completed or the above

conditions no longer exist. (MC 9.08.080)

PD2. (GP) Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following:

a. The name (if applicable) and address of the development.

b. The developer's name, address, and a 24-hour emergency telephone number. (MC 9.08.080)

PD3. (CO) Prior to the issuance of a Certificate of Occupancy, an Emergency Contact Information Form for the project shall be completed at the permit counter of the Community & Economic Development Department - Building Division for routing to the Police Department. (MC 9.08.080)

RESOLUTION NO. 2014-59

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING TENTATIVE PARCEL MAP 35679 (PA07-0084) FOR DEVELOPMENT OF THE 2,244,419 SQUARE FOOT PROLOGIS EUCALYPTUS INDUSTRIAL PARK PROJECT WITHIN THE 122 ACRES OF ASSESSOR'S PARCEL NUMBERS 488-330-011, 012, -013, -017, -018, -019, -020, AND -021, SUBJECT TO THE CONDITIONS OF APPROVAL INCLUDED AS EXHIBIT A

Section 1:

WHEREAS, the applicant, Prologis, has filed an application for the approval of PA07-0084 or Tentative Parcel Map No. 35679 to re-configure the existing eight parcels located within the project site into six parcels; and

WHEREAS, on June 24, 2014, the City Council of the City of Moreno Valley held a public hearing to consider the subject applications and the environmental documentation prepared for the project; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred; and

WHEREAS, there is hereby imposed on the subject development project certain fees, dedications, reservations and other exactions pursuant to state law and City ordinances; and

WHEREAS, pursuant to Government Code Section 66020(d)(1), NOTICE IS HEREBY GIVEN that this project is subject to certain fees, dedications, reservations and other exactions as provided herein.

NOW, THEREFORE, BE IT RESOLVED, it is hereby found, determined and resolved by the City Council of the City of Moreno Valley as follows:

A. This City Council hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this City Council during the above-referenced meeting on June 24, 2014, including written and oral staff reports, and the record from the public hearing, this City Council hereby specifically finds as follows:

1. Conformance with General and Specific Plans – That the proposed land division is consistent with applicable general and specific plans.

FACT: The proposed tentative parcel map is consistent with the existing General Plan designations (BP, BPX, R15, R5 and RA-2) of the project site as well as the proposed change to Light Industrial. The proposed parcel map will re-configure the existing eight parcels located within the project site into six parcels. The proposed land division is consistent with existing goals, objectives, policies and programs of the general plan.

2. Design Conformance with General and Specific Plans – That the design or improvement of the proposed land division is consistent with applicable general and specific plans.

   FACT: The tentative parcel map as designed and conditioned will provide improvements that are consistent with the requirements of the project site's existing General Plan land use designations (BP, BPX, R15, R5 and RA-2) as well as the proposed change to Light Industrial.

3. Physically Suitable for Proposed Development – That the site of the proposed land division is physically suitable for the type of development.

   FACT: The project site is comprised of multiple vacant rectangular shaped parcels that are mostly flat with seasonal washes along the sites eastern and southern boundaries. The project is located on the south side of State Route 60 and east of the Moreno Valley Auto Mall. Land uses to the north include the adjacent freeway with Office Commercial, R2 and RA-2 zoned land north of the freeway. Land uses to the east include a mix of Light Industrial and Community Commercial zoned land and RA-2 zoned land with a developed warehouse facility further to the east. Land uses to the south include vacant RA-2 zone with developed tract homes across the channel from the project site. Overall, the project site is well suited for the proposed subdivision.

4. Physically Suitable for Proposed Density – That the site of the proposed land division is physically suitable for the proposed density of the development.

   FACT: The project site is mostly flat with seasonal washes along the sites eastern and southern boundaries. The parcel map is designed in accordance with the provisions of the City's Municipal Code. The project site is physically suitable for the subdivision.

5. Protection of Fish or Wildlife Habitat – That the design of the proposed land division or the proposed improvements are not likely to cause substantial environmental damage or substantially and unavoidably injure fish or wildlife or their habitat.

FACT: A Final EIR has been prepared in accordance with the provisions of the California Environmental Quality Act (CEQA), concluding that with mitigation and as conditioned and designed, the proposed subdivision would result in less than significant impacts to Fish and Wildlife resources. The project has also been determined to be consistent with the Multiple Species Habitat Conservation Plan (MSHCP).

6. Health, Safety and Welfare – That the design of the proposed land division or the type of improvements are unlikely to cause serious public health problems.

   FACT: As conditioned, the proposed parcel map would not cause serious public health problems. The Eastern Municipal Water District will provide water and sewer services to the project site. There are no known hazardous conditions associated with the property, the design of the land division or the type of improvements.

7. Easements – That the design of the land division or the type of improvements will not conflict with easements acquired by the public at large for access through or use of property within the proposed subdivision.

   FACT: The tentative parcel map has been designed to accommodate and not conflict with existing easements on the subject site including utility and storm drain easements.

8. Consistent with Applicable City Ordinances – That the proposed land division and the associated design and improvements are consistent with applicable ordinances of the city.

   FACT: The tentative parcel map is designed in accordance with the provisions of the City's Municipal Code.

9. Passive or Natural Heating and Cooling – That the design of the land division provides, to the extent feasible, for future passive or natural heating and cooling opportunities in the subdivision.

   FACT: The design of this parcel map, to the extent feasible, allows solar access for passive heating and opportunities for placement of shade trees and other vegetation for cooling.

10. Regional Housing – That the effect of the proposed land division on the housing needs of the region were considered and balanced against the public service needs of the residents of Moreno Valley and available fiscal and environmental resources.

FACT: The project does not exceed the planned density, the associated public service demand, or the demand for environmental resources envisioned by the Moreno Valley General Plan. The project will supplement the City's fiscal resources by paying impact fees for public facilities.

Section 2:

FEES, DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

1. FEES

Impact, mitigation and other fees are due and payable under currently applicable ordinances and resolutions. These fees may include but are not limited to: Development Impact Fee, Transportation Uniform Mitigation Fee (TUMF), Multi-species Habitat Conservation Plan (MSHCP) Mitigation Fee, Stephens Kangaroo Habitat Conservation fee, Underground Utilities in lieu Fee, Area Drainage Plan fee, Bridge and Thoroughfare Mitigation fee (Future) and Traffic Signal Mitigation fee. The final amount of fees payable is dependent upon information provided by the applicant and will be determined at the time the fees become due and payable.

Unless otherwise provided for by this resolution, all impact fees shall be calculated and collected at the time and in the manner provided in Chapter 3.32 of the City of Moreno Valley Municipal Code or as so provided in the applicable ordinances and resolutions. The City expressly reserves the right to amend the fees and the fee calculations consistent with applicable law.

2. DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

The adopted Conditions of Approval for PA07-0083, PA07-0158 to PA07-0162 and PA07-0084, incorporated herein by reference, may include dedications, reservations, and exactions pursuant to Government Code Section 66020 (d) (1).

3. CITY RIGHT TO MODIFY/ADJUST; PROTEST LIMITATIONS

The City expressly reserves the right to establish, modify or adjust any fee, dedication, reservation or other exaction to the extent permitted and as authorized by law.

Pursuant to Government Code Section 66020(d)(1), NOTICE IS FURTHER GIVEN that the 90 day period to protest the imposition of any impact fee, dedication, reservation, or other exaction described in this resolution begins on the effective date of this resolution and any such protest must be in a manner that complies with Section 66020(a) and failure to timely follow this procedure will bar any subsequent legal action to attack, review, set aside, void or annul imposition.

The right to protest the fees, dedications, reservations, or other exactions does not apply to planning, zoning, grading, or other similar application processing fees or service fees in connection with this project and it does not apply to any fees, dedication, reservations, or other exactions of which a notice has been given similar to this, nor does it revive challenges to any fees for which the Statute of Limitations has previously expired.

BE IT FURTHER RESOLVED that the City Council HEREBY APPROVES Resolution No. 2014-59

APPROVING Tentative Parcel Map No. 35679 (PA07-0084), subject to the attached conditions of approval included as Exhibit A.

APPROVED AND ADOPTED this 24th day of June, 2014.

COMMUNITY & ECONOMIC DEVELOPMENT DEPARTMENT

Planning Division

P1. Tentative Parcel Map No. 35679 is approved for the purposes of re-configuring the 116.99 acres of Assessor's Parcel Numbers 488-330-011, 012, -013, -017, -018, -019, -020, and -021 and creating a six parcels.

P2. Development within Tentative Parcel Map No. 35679 shall be subject to the requirements of the City's Municipal Code.

P3. This approval shall comply with all applicable requirements of the City of Moreno Valley Municipal Code.

Timing Mechanisms for Conditions (see abbreviation at beginning of affected condition):

R - Map Recordation	GP - Grading Permits	CO - Certificate of Occupancy or building final
WP - Water Improvement Plans	BP - Building Permits	P - Any permit

Governing Document (see abbreviation at the end of the affected condition):

GP - General Plan	MC - Municipal Code	CEQA - California Environmental Quality Act
Ord - Ordinance	DG - Design Guidelines	Ldscp - Landscape Development Guidelines and Specs
Res - Resolution	UFC - Uniform Fire Code	UBC - Uniform Building Code
	SBM - Subdivision Map Act	

P4. The site shall be developed in accordance with the approved tentative map on file in the Community & Economic Development Department -Planning Division, the Municipal Code regulations, General Plan, the Moreno Valley Industrial Area Plan and the conditions contained herein. (MC 9.14.020)

P5. This tentative map shall expire three years after the approval date of this tentative map unless extended as provided by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever in the event the applicant or any successor in interest fails to properly file a final map before the date of expiration. (MC 9.02.230, 9.14.050, 080)

P6. All undeveloped portions of the site shall be maintained in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)

P7. All landscaped areas shall be maintained in a healthy and thriving condition, free from weeds, trash and debris. (MC 9.02.030)

Prior to Issuance of Grading Permits

P8. (GP) Prior to issuance of grading permits, the developer shall pay the applicable Stephen's' Kangaroo Rat (SKR) Habitat Conservation Plan mitigation fee. (Ord)

P9. (GP) All site plans, grading plans, landscape and irrigation plans, fence/wall plans, lighting plans and street improvement plans shall be coordinated for consistency with this approval.

P10. (GP) If potential historic, archaeological, or paleontological resources are uncovered during excavation or construction activities at the project site, work in the affected area will cease immediately and a qualified person (meeting the Secretary of the Interior's standards (36CFR61)) shall be consulted by the applicant to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, prehistoric, or paleontological resource. Determinations and recommendations by the consultant shall be implemented as deemed appropriate by the Community Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all affected Native American Tribes before any further work commences in the affected area.

If human remains are discovered, work in the affected area shall cease immediately and the County Coroner shall be notified. If it is determined that the remains are potentially Native American, the California Native American Heritage Commission and any and all affected Native American Indians tribes such as the Morongo Band of Mission Indians or the Pechanga Band of Luiseno Indians shall be notified and appropriate measures provided by State law shall be

implemented. (GP Objective 23.3, DG, CEQA).

P11. (GP) Prior to the issuance of grading permits, final erosion control landscape and irrigation plans for all cut or fill slopes over 3 feet in height shall be submitted to the Planning Division for review and approval for the phase in process. This shall include slopes associated with swales and basins. The plans shall be designed in accordance with the slope erosion plan as required by the City Engineer for that phase. Man-made slopes greater than 10 feet in height shall be "land formed" to conform to the natural terrain and shall be landscaped and stabilized to minimize visual scarring. Graded slopes shall have variations that do not exceed 2:1 (GP Objective 1.5, MC 9.08.080, DG)

P12. (GP) Prior to the issuance of a precise grading permit, the plan shall show decorative concrete paving for all driveway ingress/egress locations of the project. Accessible pedestrian pathways interior to the site cannot be painted. If delineation is necessary, then an alternative material is required.

P13. (GP) Prior to the issuance of a precise grading permit, all required planter areas, curbs, including twelve-inch concrete step outs, and required parking space striping shall be shown on the precise grading plan.

P14. (GP) Prior to the issuance of any grading permits, the following burrowing owl survey requirements shall be incorporated into the grading plans in accordance with the Riverside County Multi-Species Habitat Conservation Plan: Within 30 days of and prior to disturbance, a burrowing owl focused survey shall be conducted by a qualified biologist using accepted protocols. The survey shall be submitted to the Planning Division for review and approval.

Prior to Recordation of Final Map

P15. (R) Prior to final map recordation, subdivision phasing (including any proposed common open space or improvement phasing, if applicable), shall be subject to the Planning Division approval. Any proposed phasing shall provide for adequate vehicular access to all lots in each phase as determined by the City Transportation Engineer or designee and shall substantially conform to all intent and purpose of the subdivision approval. (MC 9.14.080)

Building and Safety Division

B1. The above project shall comply with the current California Codes (CBC, CEC, CMC, CPC and Green Building Standards) as well as City ordinances. All new projects shall provide a soils report as well. Plans shall be submitted to the Building Division as a separate submittal. Building permit applications (plan review) made on or after January 1, 2014, will be subject to the 2013 Edition of the California Building Standards Code.

B2. Prior to final inspection, all plans will be placed on a CD Rom for reference and verification. Plans will include "as built" plans, revisions and changes. The CD will also include Title 24 energy calculations, structural calculations and all other pertinent information. It will be the responsibility of the developer and or the building or property owner(s) to bear all costs required for this process. The CD will be presented to the Building and Safety Division for review prior to final inspection and building occupancy. The CD will become the property of the Moreno Valley Building and Safety Division at that time. In addition, a site plan showing the path of travel from public right of way and building to building access with elevations will be required.

B3. (BP) Prior to the issuance of a building permit, the applicant shall submit a properly completed "Waste Management Plan" (WMP), as required, to the Compliance Official (Building Official) as a portion of the building or demolition permit process.

B4. (BP) Prior to the issuance of a building permit, show on the plans that all exterior doors comply with the requirements of CBC 1133B.1.1.1 for accessible path of travel from every exit door, especially in consideration of doors that may be designated as exits due to interior obstructions to path of travel due to racks, equipment and other interior obstruction to the exit path of travel.

B5. (BP) Prior to the issuance of a building permit, show on the plans that no gutter, drainage feature, swale or other deviation in the flat level surface at the accessible parking spaces exists within and for a minimum four foot extension beyond the outer dimensions of the parking space, loading zone and path of travel.

B6. (BP) Plans shall be prepared, stamped and signed by a licensed Architect or Registered Civil Engineer for submission for plan check review.

B7. (BP) Plumbing plans shall be prepared, including isometrics, for required plumbing fixtures based on California Plumbing Code, Chapter 4 and Table 4-1.

SCHOOL DISTRICT

S1. (BP) Prior to issuance of building permits, the developer shall provide to the Community Development Director a written certification by the affected school district that either: (1) the project has complied with the fee or other exaction levied on the project by the governing board of the district, pursuant to Government Code Section 65996; or (2) the fee or other requirement does not apply to the project.

UNITED STATES POSTAL SERVICE

PO1. (BP) Prior to the issuance of building permits, the developer shall contact the U.S. Postal Service to determine the appropriate type and location of mailboxes.

FIRE PREVENTION BUREAU

1. **Hydrant spacing shall be addressed in plan check.**
2. **The following Standard Conditions shall apply.**

With respect to the conditions of approval, the following fire protection measures shall be provided in accordance with Moreno Valley City Ordinances and/or recognized fire protection standards:

F1. Final fire and life safety conditions will be addressed when the Fire Prevention Bureau reviews building plans. These conditions will be based on occupancy, use, California Building Code (CBC), California Fire Code (CFC), and related codes, which are in force at the time of building plan submittal.

F2. The Fire Prevention Bureau is required to set a minimum fire flow for the remodel or construction of all commercial buildings per CFC Appendix B and Table B105.1. The applicant/developer shall provide documentation to show there exists a water system capable of delivering 4000 GPM for 4 hour(s) duration at 20-PSI residual operating pressure. The required fire flow may be adjusted during the approval process to reflect changes in design, construction type, or automatic fire protection measures as approved by the Fire Prevention Bureau. Specific requirements for the project will be determined at time of submittal. (CFC 508.3, Appendix B and MVMC 8.36.100 Section D).

F3. Industrial, Commercial, Multi-family, Apartment, Condominium, Townhouse or Mobile Home Parks. A combination of on-site and off-site super fire hydrants (6" x 4" x 2 ½") and super enhanced fire hydrants (6" x 4" x 4" x 2 ½") shall not be closer than 40 feet and more than 150 feet from any portion of the building as measured along approved emergency vehicular travel ways. The required fire flow shall be available from any adjacent fire hydrant(s) in the system. Where new water mains are extended along streets where hydrants are not needed for protection of structures or similar fire problems, super or enhanced fire hydrants as determined by the fire code official shall be provided at spacing not to exceed 500 feet of frontage for transportation hazards. (CFC 508.5.7 & MVMC 8.36.050 Section O and 8.36.100 Section E)

F4. Maximum cul-de-sac or dead end road length shall not exceed 660 feet. The Fire Chief, based on City street standards, shall determine minimum turning radius for fire apparatus based upon fire apparatus manufacture specifications. (CFC 503.1)

F5. Prior to construction, all roads, driveways and private roads shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.050)
