F6. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.1 and 503.2.5)

F7. Prior to issuance of Building Permits, the applicant/developer shall provide the Fire Prevention Bureau with an approved site plan for Fire Lanes and signage. (MVMC 8.36.050 and CFC 501.3)

F8. Prior to construction and issuance of building permits, all locations where structures are to be built shall have an approved Fire Department emergency vehicular access road (all weather surface) capable of sustaining an imposed load of 80,000 lbs. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4 and MVMC 8.36.050 Section A)

F9. Prior to construction and issuance of Building Permits, fire lanes and fire apparatus access roads shall have an unobstructed width of not less the twenty–four (24) or thirty (30) feet as approved by the Fire Prevention Bureau and an unobstructed vertical clearance of not less the thirteen (13) feet six (6) inches. (CFC 503.2.1.1 and MVMC 8.36.050)

F10. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4 and MVMC 8.36.050 Section A)

F11. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.3 and MVMC 8.36.050)

F12. Prior to building construction, dead end roadways and streets which have not been completed shall have a turnaround capable of accommodating fire apparatus. (CFC 503.2.5 and MVMC 8.36.050)

F13. Prior to issuance of Building Permits, the applicant/developer shall participate in the Fire Impact Mitigation Program. (Fee Resolution as adopted by City Council)

F14. Prior to issuance of Building Permits, the applicant/developer shall furnish one copy of the water system plans to the Fire Prevention Bureau for review. Plans shall:

a) Be signed by a registered civil engineer or a certified fire protection engineer;
b) Contain a Fire Prevention Bureau approval signature block; and
c) Conform to hydrant type, location, spacing of new and existing hydrants and minimum fire flow required as determined by the Fire Prevention Bureau.

After the local water company signs the plans, the originals shall be presented to the Fire Prevention Bureau for signatures. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

Existing fire hydrants on public streets are allowed to be considered available. Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are established to prevent obstruction of such roads. (CFC 508.1 and MVMC 8.36.100)

F15. Prior to issuance of Certificate of Occupancy or Building Final, “Blue Reflective Markers” shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 510.1)

F16. Prior to issuance of Certificate of Occupancy or Building Final, all commercial buildings shall display street numbers in a prominent location on the street side and rear access locations. The numerals shall be a minimum of twelve (12) inches in height for buildings and six (6) inches in height for suite identification on

a contrasting background. Unobstructed lighting of the address(s) shall be by means approved by the Fire Prevention Bureau and Police Department. In multiple suite centers (strip malls), businesses shall post the name of the business on the rear door(s). (CFC 505.1)

F17. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9)

F18. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire alarm system monitored by an approved Underwriters Laboratory listed central station based on a requirement for monitoring the sprinkler system, occupancy or use. Fire alarm panel shall be accessible from exterior of building in an approved location. Plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9 and MVMC 8.36.070)

F19. Prior to issuance of a Certificate of Occupancy or Building Final, a "Knox Box Rapid Entry System" shall be provided. The Knox-Box shall be installed in an accessible location approved by the Fire Chief. The Knox-Box shall be supervised by the alarm system and all exterior security emergency access gates shall be electronically operated and be provided with Knox key switches for access by emergency personnel. (CFC 506.1)

F20. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall be responsible for obtaining underground and/or above ground tank permits for the storage of combustible liquids, flammable liquids, or any other hazardous materials from both the County of Riverside Community Health Agency Department of Environmental Health and the Fire Prevention Bureau. (CFC 3401.4 and 2701.5)

F21. Prior to issuance of Certificate of Occupancy, approval shall be required from the County of Riverside Community Health Agency (Department of Environmental Health) and Moreno Valley Fire Prevention Bureau to maintain, store, use, handle materials, or conduct processes which produce conditions hazardous to life or property, and to install equipment used in connection with such activities. (CFC 2701.5)

F22. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer must submit a simple plot plan, a simple floor plan, and other plans as requested, each as an electronic file in .dwg format, to the Fire Prevention Bureau. Alternate file formats may be acceptable with approval by the Fire Chief.

F23. The angle of approach and departure for any means of Fire Department access shall not exceed 1 ft drop in 20 ft (0.3 m drop in 6 m), and the design limitations of the fire apparatus of the Fire Department shall be subject to approval by the AHJ. (CFC 503.2.7 and MVMC 8.36.050 Section I)

F24. Prior to issuance of the building permit for development, independent paved access to the nearest paved road, maintained by the City shall be designed and constructed by the developer within the public right of way in accordance with City Standards. (MVMC 8.36.050)

F25. Prior to construction, "private" driveways over 150 feet in length shall have a turn-around as determined by the Fire Prevention Bureau capable of accommodating fire apparatus. Driveway grades shall not exceed 12 percent. (CFC 503 and MVMC 8.36.050)

F26. Complete plans and specifications for fire alarm systems, fire-extinguishing systems (including automatic sprinklers or standpipe systems), clean agent systems (or other special types of automatic fire-extinguishing systems), as well as other fire-protection systems and appurtenances thereto shall be submitted to the Moreno Valley Fire Prevention Bureau for review and approval prior to system installation. Submittals shall be in accordance with CFC Chapter 9 and associated accepted national standards.

F27. A permit is required to maintain, store, use or handle materials, or to conduct processes which produce conditions hazardous to life or property, or to install equipment used in connection with such activities. Such permits shall not be construed as authority to violate, cancel or set aside any of the provisions of this code. Such permit shall not take the place of any license required by law. Applications for permits shall be made to the Fire Prevention Bureau in such form and detail as prescribed by the Bureau. Applications for permits shall be accompanied by such plans as required by the Bureau. Permits shall be kept on the premises designated therein at all times and shall be posted in a conspicuous location on the premises or shall be kept on the premises in a location designated by the Fire Chief. Permits shall be subject to inspection at all times by an officer of the fire department or other persons authorized by the Fire Chief in accordance with Appendix Chapter 1 and MVMC 8.36.100.

F28. Approval of the safety precautions required for buildings being constructed, altered or demolished shall be required by the Fire Chief in addition to other approvals required for specific operations or processes associated with such construction, alteration or demolition. (CFC Chapter 14)

F29. Prior to issuance of Certificate of Occupancy, permits are required to store, dispense, use or handle hazardous material. Each application for a permit shall

include a hazardous materials management plan (HMMP). The location of the HMMP shall be posted adjacent to (other) permits when an HMMP is provided. The HMMP shall include a facility site plan designating the following:

a) Storage and use areas;
b) Maximum amount of each material stored or used in each area;
c) Range of container sizes;
d) Locations of emergency isolation and mitigation valves and devises;
e) Product conveying piping containing liquids or gases, other than utility-owned fuel gas lines and low-pressure fuel gas lines;
f) On and off positions of valves for valves which are of the self-indicating type;
g) Storage plan showing the intended storage arrangement, including the location and dimensions of aisles. The plans shall be legible and approximately to scale. Separate distribution systems are allowed to be shown on separate pages; and
h) Site plan showing all adjacent/neighboring structures and use.

NOTE: Each application for a permit shall include a hazardous materials inventory statement (HMIS).

F30. Before a Hazardous Materials permit is issued, the Fire Chief shall inspect and approve the receptacles, vehicles, buildings, devices, premises, storage spaces or areas to be used. In instances where laws or regulations are enforceable by departments other than the Fire Prevention Bureau, joint approval shall be obtained from all departments concerned. (CFC Appendix H)

F31. Construction or work for which the Fire Prevention Bureau's approval is required shall be subject to inspection by the Fire Chief and such construction or work shall remain accessible and exposed for inspection purposes until approved. (CFC Section 106)

F32. The Fire Prevention Bureau shall maintain the authority to inspect, as often as necessary, buildings and premises, including such other hazards or appliances designated by the Fire Chief for the purpose of ascertaining and causing to be corrected any conditions which would reasonably tend to cause fire or contribute to its spread, or any violation of the purpose or provisions of this code and of any other law or standard affecting fire safety. (CFC Section 106)

F33. Permit requirements issued, which designate specific occupancy requirements for a particular dwelling, occupancy, or use, shall remain in effect until such time as amended by the Fire Chief. (CFC Section 104)

F34. In accordance with the California Fire Code Appendix Chapter 1, where no applicable standards or requirements are set forth in this code, or contained within other laws, codes, regulations, ordinances or bylaws adopted by the jurisdiction, compliance with applicable standards of the National Fire Protection Association or other nationally recognized fire safety standards as are approved shall be deemed as prima facie evidence of compliance with the intent of this code as approved by the Fire Chief. (CFC Section 102.7)

F35. Any alterations, demolitions, or change in design, occupancy and use of buildings or site will require plan submittal to the Fire Prevention Bureau with review and approval prior to installation. (CFC Appendix Chapter 1)

F36. Emergency and Fire Protection Plans shall be provided when required by the Fire Prevention Bureau. (CFC Section 105)

F37. Prior to Certificate of Occupancy all locations where medians are constructed and prohibit vehicular ingress/egress into or away from the site, provisions must be made to construct a median-crossover at all locations determined by the Fire Marshal and the City Engineer. Prior to the construction, design plans will be submitted for review and approval by the City Engineer and all applicable inspections conducted by Land Development Division.

F38. Prior to construction, all traffic calming designs/devices must be approved by the Fire Marshal and City Engineer.

PUBLIC WORKS DEPARTMENT – LAND DEVELOPMENT DIVISION

The following are the Public Works Department – Land Development Division Conditions of Approval for this project and shall be completed at no cost to any government agency. All questions regarding the intent of the following conditions shall be referred to the Public Works Department – Land Development Division.

General Conditions

LD1. (G) The developer shall comply with all applicable City ordinances and resolutions including the City's Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). (MC 9.14.010)

LD2. (G) If the project involves the subdivision of land, maps may be developed in phases with the approval of the City Engineer. Financial security shall be provided for all improvements associated with each phase of the map. The

boundaries of any multiple map increment shall be subject to the approval of the City Engineer. The City Engineer may require the dedication and construction of necessary utilities, streets or other improvements outside the area of any particular map, if the improvements are needed for circulation, parking, access, or for the welfare or safety of the public. (MC 9.14.080, GC 66412 and 66462.5).

LD3. (G) It is understood that the tentative map correctly shows all existing easements, traveled ways, and drainage courses, and that their omission may require the map or plans associated with this application to be resubmitted for further consideration. (MC 9.14.040)

LD4. (G) In the event right-of-way or offsite easements are required to construct offsite improvements necessary for the orderly development of the surrounding area to meet the public health and safety needs, the developer shall make a good faith effort to acquire the needed right-of-way in accordance with the Land Development Division's administrative policy. In the event that the developer is unsuccessful, he shall enter into an agreement with the City to acquire the necessary right-of-way or offsite easements and complete the improvements at such time the City acquires the right-of-way or offsite easements which will permit the improvements to be made. The developer shall be responsible for all costs associated with the right-of-way or easement acquisition. (GC 66462.5)

LD5. (G) If improvements associated with this project are not initiated within two years of the date of approval of the Public Improvement Agreement, the City Engineer may require that the improvement cost estimate associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the Public Improvement Agreement or issuance of a permit.

LD6. (G) The developer shall monitor, supervise and control all construction and construction supportive activities, so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:

(a) Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.

(b) Observance of working hours as stipulated on permits issued by the Public Works Department.

(c) The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.

(d) All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements shall be adhered to during the grading operations.

Violation of any condition or restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedies as noted in the City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.

LD7. (G) The developer shall protect downstream properties from damage caused by alteration of drainage patterns, i.e., concentration or diversion of flow. Protection shall be provided by constructing adequate drainage facilities, including, but not limited to, modifying existing facilities or by securing a drainage easement. (MC 9.14.110)

LD8. (G) Public drainage easements, when required, shall be a minimum of 25 feet wide and shall be shown on the map and plan, and noted as follows: "Drainage Easement – no structures, obstructions, or encroachments by landfills are allowed." In addition, the grade within the easement area shall not exceed a 3:1 (H:V) slope, unless approved by the City Engineer.

LD9. (G) A detailed drainage study shall be submitted to the City Engineer for review and approval at the time of any improvement or grading plan submittal. The study shall be prepared by a registered civil engineer and shall include existing and proposed hydrologic conditions. Hydraulic calculations are required for all drainage control devices and storm drain lines. (MC 9.14.110). Prior to approval of the related improvement or grading plans, the developer shall submit the approved drainage study, on compact disk, in (.pdf) digital format to the Land Development Division of the Public Works Department.

LD10. (G) Prior to final map approval, commencing applicable street improvements, or obtaining the first building permit, the developer shall enter into a Development Impact Fee (DIF) Improvement Credit Agreement to secure credit and reimbursement for the construction of applicable arterial street, traffic signal, and/or interchange improvements. If the developer fails to complete this agreement prior to the timing as specified above, no credits or reimbursements will be given. The applicant shall pay Arterial Streets, Traffic Signals, and Interchange Improvements development impact fees adopted by the City Council by resolution. (Ord. 695 § 1.1 (part), 2005) (MC 3.38.030, .040, .050)

LD11. (G) The final conditions of approval issued by the Planning Division subsequent to Planning Commission approval shall be photographically or electronically

placed on mylar sheets and included in the Grading and Street Improvement plan sets on twenty-four (24) inch by thirty-six (36) inch mylar and submitted with the plans for plan check. These conditions of approval shall become part of these plan sets and the approved plans shall be available in the field during grading and construction.

Prior to Grading Plan Approval or Grading Permit

LD12. (GPA) Prior to approval of the grading plans, plans shall be drawn on twenty-four (24) inch by thirty-six (36) inch mylar and signed by a registered civil engineer and other registered/licensed professional as required.

LD13. (GPA) Prior to approval of grading plans, the developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:

(a) The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines shall be located at the top of slopes.

(b) Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.

(c) A grading permit shall be obtained from the Public Works Department Land Development Division prior to commencement of any grading outside of the City maintained road right-of-way.

(d) All improvement plans are substantially complete and appropriate clearance and at-risk letters are provided to the City. (MC 9.14.030)

(e) The developer shall submit a soils and geologic report to the Public Works Department – Land Development Division. The report shall address the soil's stability and geological conditions of the site.

LD14. (GPA) Prior to grading plan approval, the developer shall select and implement treatment control best management practices (BMPs) that are medium to highly effective for treating Pollutants of Concern (POC) for the project. Projects where National Pollution Discharge Elimination System (NPDES) mandates water quality treatment control best management practices (BMPs) shall be designed per the City of Moreno Valley guidelines or as approved by the City Engineer.

LD15. (GPA) Prior to approval of the grading plans for projects that will result in discharges of storm water associated with construction with a soil disturbance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's Identification number (WDID#) from the State Water Quality Control Board (SWQCB). The WDID# shall be noted on the grading plans prior to issuance of the first grading permit.

LD16. (GPA) Prior to the grading plan approval, or issuance of a building permit, if a grading permit is not required, the Developer shall submit two (2) copies of the final project-specific Water Quality Management Plan (WQMP) for review by the City Engineer that :

(a) Addresses Site Design Best Management Practices (BMPs) such as minimizing impervious areas, maximizing permeability, minimizes directly connected impervious areas to the City's street and storm drain systems, and conserves natural areas;

(b) Incorporates Source Control BMPs and provides a detailed description of their implementation;

(c) Incorporates Treatment Control BMPs and provides information regarding design considerations;

(d) Describes the long-term operation and maintenance requirements for BMPs requiring maintenance; and

(e) Describes the mechanism for funding the long-term operation and maintenance of the BMPs.

A copy of the final WQMP template can be obtained on the City's Website or by contacting the Land Development Division of the Public Works Department.

LD17. (GPA) Prior to the grading plan approval, or issuance of a building permit, if a grading permit is not required, the Developer shall record a "Stormwater Treatment Device and Control Measure Access and Maintenance Covenant," to provide public notice of the requirement to implement the approved final project-specific WQMP and the maintenance requirements associated with the WQMP.

A boilerplate copy of the "Stormwater Treatment Device and Control Measure Access and Maintenance Covenant," can be obtained by contacting the Land Development Division of the Public Works Department.

LD18. (GPA) Prior to the grading plan approval, or issuance of a building permit, if a grading permit is not required, the Developer shall secure approval of the final project-specific WQMP from the City Engineer. The final project-specific WQMP shall be submitted at the same time of grading plan submittal. The approved final WQMP shall be submitted to the Storm Water Program Manager on compact disk(s) in Microsoft Word format prior to grading plan approval.

LD19. (GPA) Prior to the grading plan approval, or issuance of a building permit as determined by the City Engineer, the approved final project-specific WQMP shall be incorporated by reference or attached to the project's Storm Water Pollution Prevention Plan as the Post-Construction Management Plan.

LD20. (GPA) Prior to grading plan approval, the developer shall prepare a Storm Water Pollution Prevention Plan (SWPPP) in conformance with the state's Construction Activities Storm Water General Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request. The SWPPP shall be submitted to the Storm Water Program Manager on compact disk(s) in Microsoft Word format.

LD21. (GPA) Prior to the approval of the grading plans, the developer shall pay applicable remaining grading plan check fees.

LD22. (GP) Prior to issuance of a grading permit, or building permit when a grading permit is not required, for projects that require a project-specific Water Quality Management Plan (WQMP), a project-specific final WQMP (F-WQMP) shall be approved. Upon approval, a WQMP Identification Number is issued by the Storm Water Management Section and shall be noted on the rough grading plans as confirmation that a project-specific F-WQMP approval has been obtained.

LD23. (GP) Prior to issuance of a grading permit, if the fee has not already been paid prior to map approval or prior to issuance of a building permit if a grading permit is not required, the developer shall pay Area Drainage Plan (ADP) fees. The developer shall provide a receipt to the City showing that ADP fees have been paid to Riverside County Flood Control and Water Conservation District. (MC 9.14.100)

LD24. (GP) Prior to issuance of a grading permit, security, in the form of a cash deposit (preferable), letter of credit, or performance bond shall be required to be submitted as a guarantee of the completion of the grading required as a condition of approval of the project.

LD25. (GP) Prior to issuance of a grading permit, the developer shall pay the applicable grading inspection fees.

Prior to Map Approval or Recordation

LD26. (MA) Prior to approval of the map, the developer shall submit a copy of the Covenants, Conditions and Restrictions (CC&Rs) to the Land Development Division for review and approval. The CC&Rs shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project.

LD27. (MA) Prior to approval of the map, all street dedications shall be irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer. All dedications shall be free of all encumbrances as approved by the City Engineer.

LD28. (MA) Prior to approval of the map, security shall be required to be submitted as a guarantee of the completion of the improvements required as a condition of approval of the project. A public improvement agreement will be required to be executed.

LD29. (MR) Prior to recordation of the map, the developer shall submit the map, on compact disks, in (.dxf) digital format to the Land Development Division of the Public Works Department.

Prior to Improvement Plan Approval or Construction Permit

LD30. (IPA) Prior to approval of the improvement plans, the improvement plans shall be drawn on twenty-four (24) inch by thirty-six (36) inch mylar and signed by a registered civil engineer and other registered/licensed professional as required.

LD31. (IPA) Prior to approval of the improvement plans, the developer shall submit clearances from all applicable agencies, and pay all outstanding plan check fees. (MC 9.14.210)

LD32. (IPA) All public improvement plans prepared and signed by a registered civil engineer in accordance with City standards, policies and requirements shall be approved by the City Engineer in order for the Public Improvement Agreement and accompanying security to be executed.

LD33. (IPA) Prior to approval of the improvement plans, securities and a public improvement agreement shall be required to be submitted and executed as a guarantee of the completion of the improvements required as a condition of approval of the project.

LD34. (IPA) The street improvement plans shall comply with all applicable City standards and the following design standards throughout this project:

(a) Corner cutbacks in conformance with City Standard 208 shall be shown on the final map or, if no map is to be recorded, offered for dedication by separate instrument.

(b) Lot access to major thoroughfares shall be restricted except at intersections and approved entrances and shall be so noted on the final map. (MC 9.14.100)

(c) The minimum centerline and flow line grades shall be one percent unless otherwise approved by the City Engineer. (MC 9.14.020)

(d) All street intersections shall be at ninety (90) degrees plus or minus five (5) degrees per City Standard No. 706A, or as approved by the City Engineer. (MC 9.14.020)

(e) All reverse curves shall include a minimum tangent of one hundred (100) feet in length.

LD35. (IPA) Prior to approval of the improvement plans, the plans shall be based upon a centerline profile, extending beyond the project boundaries a minimum distance of 300 feet at a grade and alignment approved by the City Engineer. Design plan and profile information shall include the minimum 300 feet beyond the project boundaries.

LD36. (IPA) Prior to approval of the improvement plans, the plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three years old and recently slurry sealed streets less than one year old. Pavement cuts for trench repairs may be allowed for emergency repairs or as specifically approved in writing by the City Engineer.

LD37. (IPA) Prior to approval of the improvement plans, the developer shall pothole to determine the exact location of existing underground utilities. The improvement plans shall be designed based on the pothole field investigation results. The developer shall coordinate with all affected utility companies and bear all costs of utility relocations.

LD38. (IPA) Prior to approval of the improvement plans, all dry and wet utility crossings shall be potholed to determine actual elevations. Any conflicting utilities shall be identified and addressed on the plans. The pothole survey data shall be submitted with the street improvement plans for reference purposes.

LD39. (IPA) Prior to approval of the improvement plans, drainage facilities with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided. (MC 9.14.110)

LD40. (IPA) Prior to the approval of the improvement plans, the hydrology study shall show that the 10-year storm flow will be contained within the curb and the 100-year storm flow shall be contained within the street right-of-way. In addition, one lane in each direction shall not be used to carry surface flows during any storm event for street sections equal to or larger than a minor arterial. When any of these criteria is exceeded, additional drainage facilities shall be installed. (MC 9.14.110 A.2)

LD41. (IPA) The project shall be designed to accept and properly convey all off-site drainage flowing onto or through the site. All storm drain design and improvements shall be subject to review and approval of the City Engineer. In the event that the City Engineer permits the use of streets for drainage purposes, the provisions of the Development Code will apply. Should the quantities exceed the street capacity or the use of streets be prohibited for drainage purposes, as in the case where one travel lane in each direction shall not be used for drainage conveyance for emergency vehicle access on streets classified as minor arterials and greater, the developer shall provide adequate facilities as approved by the Public Works Department – Land Development Division. (MC 9.14.110)

LD42. (CP) All work performed within the City right-of-way requires a construction permit. As determined by the City Engineer, security may be required for work within the right-of-way. Security shall be in the form of a cash deposit or other approved means. The City Engineer may require the execution of a public improvement agreement as a condition of the issuance of the construction permit. All inspection fees shall be paid prior to issuance of construction permit. (MC 9.14.100)

LD43. (CP) Prior to issuance of a construction permit, all public improvement plans prepared and signed by a registered civil engineer in accordance with City standards, policies and requirements shall be approved by the City Engineer.

LD44. (CP) Prior to issuance of construction permits, the developer shall submit all improvement plans on compact disks, in (.dxf) digital format to the Land Development Division of the Public Works Department.

LD45. (CP) Prior to issuance of construction permits, the developer shall pay all applicable inspection fees.

<u>Prior to Building Permit</u>

LD46. (BP) Prior to issuance of a building permit, all pads shall meet pad elevations per approved plans as noted by the setting of “Blue-top” markers installed by a registered land surveyor or licensed engineer.

Prior to Certificate of Occupancy

LD47. (CO) Prior to issuance of a certificate of occupancy, if the project involves a non-residential subdivision, the map shall be recorded.

LD48. (CO) Prior to issuance of the last certificate of occupancy or building final, the developer shall pay all outstanding fees.

LD49. (CO) Prior to issuance of a certificate of occupancy, this project is subject to requirements under the current permit for storm water activities required as part of the National Pollutant Discharge Elimination System **(NPDES)** as mandated by the Federal Clean Water Act. In compliance with Proposition 218, the developer shall agree to approve the City of Moreno Valley NPDES Regulatory Rate Schedule that is in place at the time of certificate of occupancy issuance. Following are the requirements:

a. Select one of the following options to meet the financial responsibility to provide storm water utilities services for the required continuous operation, maintenance, monitoring system evaluations and enhancements, remediation and/or replacement, all in accordance with Resolution No. 2002-46.

   i. Participate in the mail ballot proceeding in compliance with Proposition 218, for the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule and pay all associated costs with the ballot process; or
   ii. Establish an endowment to cover future City costs as specified in the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule.

b. Notify the Special Districts Division of the intent to request building permits 90 days prior to their issuance and the financial option selected. The financial option selected shall be in place prior to the issuance of certificate of occupancy. (California Government Code & Municipal Code)

LD50. (CO) The City of Moreno Valley has an adopted Development Impact Fee (DIF) nexus study. All projects unless otherwise exempted shall be subject to the payment of the DIF prior to issuance of occupancy. The fees are subject to the provisions of the enabling ordinance and the fee schedule in effect at the time of occupancy.

LD51. (CO) The City of Moreno Valley has an adopted area wide Transportation Uniform Mitigation Fee (TUMF). All projects unless otherwise exempted shall be subject to the payment of the TUMF prior to issuance of occupancy. The fees

are subject to the provisions of the enabling ordinance and the fee schedule in effect at the time of occupancy.

LD52. (CO) Prior to issuance of a certificate of occupancy or building final, the developer shall construct all public improvements in conformance with applicable City standards, except as noted in the Special Conditions, including but not limited to the following applicable improvements:

(a) Street improvements including, but not limited to: pavement, base, curb, gutter, cross gutter, spandrel, sidewalks, drive approaches, pedestrian ramps, street lights, signing, striping, landscaping and irrigation, pavement tapers/transitions and traffic control devices as appropriate.

(b) Storm drain facilities including, but not limited to: storm drain pipe, storm drain laterals, open channels, catch basins and local depressions.

(c) City-owned utilities.

(d) Sewer and water systems including, but not limited to: sanitary sewer, potable water and recycled water.

(e) Under grounding of existing and proposed utility lines less than 115,000 volts.

(f) Relocation of overhead electrical utility lines including, but not limited to: electrical, cable and telephone.

LD53. (CO) Prior to issuance of a certificate of occupancy or building final, all existing and new utilities adjacent to and on-site shall be placed underground in accordance with City of Moreno Valley ordinances. (MC 9.14.130)

LD54. (CO) Prior to issuance of a certificate of occupancy or building final for any Commercial/Industrial facility, whichever occurs first, the owner may have to secure coverage under the State's General Industrial Activities Storm Water Permit as issued by the State Water Resources Control Board.

LD55. (CO) Prior to issuance of a certificate of occupancy or building final, the applicant shall ensure the following, pursuant to Section XII. I. of the 2010 NPDES Permit:

(a) Field verification that structural Site Design, Source Control and Treatment Control BMPs are designed, constructed and functional in accordance with the approved Final Water Quality Management Plan (WQMP)

(b) Certification of best management practices (BMPs) from a state licensed civil engineer. An original WQMP BMP Certification shall be submitted to the City for review and approval.

Prior to Acceptance of Streets into the City Maintained Road System

LD56. (AOS) Aggregate slurry, as defined in Section 203-5 of Standard Specifications for Public Works Construction, may be required just prior to the end of the one-year warranty period of the public streets at the discretion of the City Engineer. If slurry is required, the developer/contractor must provide a slurry mix design submittal for City Engineer approval. The latex additive shall be Ultra Pave 70 (for anionic – per project geotechnical report) or Ultra Pave 65 K (for cationic – per project geotechnical report) or an approved equal. The latex shall be added at the emulsion plant after weighing the asphalt and before the addition of mixing water. The latex shall be added at a rate of two to two-and-one-half (2 to 2½) parts to one-hundred (100) parts of emulsion by volume. Any existing striping shall be removed prior to slurry application and replaced per City standards.

SPECIAL CONDITIONS

LD57. The following project engineering design plans (24"x36" sheet size) shall be submitted for review and approval as well as additional plans deemed necessary by the City during the plan review process. As-Built Plans of these plans are also required:

(a) Rough Grading Plan

(b) Precise Grading Plan

(c) Street Improvement Plan

(d) Storm Drain Plan

(e) Signing and Striping Plan

(f) Traffic Control Plan

(g) Final Drainage Study

(h) Final Water Quality Management Plan

LD58. Prior to rough grading plan approval, this project shall demonstrate, via a final drainage study, that the increased runoff resulting from the development of this site is mitigated. During no storm event shall the flow leaving the site in the developed condition be larger than that of the pre-developed condition. The drainage study shall analyze the following events: 1, 3, 6 and 24-hour durations for the 2, 5, 10 and 100-year storm events. The applicant understands that additional detention measures, beyond those shown on the tentative map and preliminary drainage study, may be required.

LD59. Prior to rough and precise grading plan approval, the plans shall clearly show the extents of all existing easements on the property. All building structures shall be constructed outside of existing easements. All on-site and off-site easements shall be shown on the grading plan.

LD60. Prior to rough and precise grading plan approval, the plans shall clearly show that any slope near the public right-of-way has a minimum set-back area at 2% maximum of 2 feet before the start of the top or toe of slope. If the vertical height of the slope exceeds 10 feet, this set-back area shall be 3 feet minimum.

LD61. Prior to precise grading plan approval, the grading plans shall show any proposed trash enclosure as dual bin; one bin for trash and one bin for recyclables. The trash enclosure shall be per City Standard Plan 627.

LD62. Prior to precise grading plan approval, the grading plans shall clearly show that the parking lot conforms to City standards. The parking lot shall be 5% maximum, 1% minimum, 2% maximum at or near any disabled parking stall and travel way. Ramps, curb openings and travel paths shall all conform to current ADA standards as outlined in Department of Justice's "ADA Standards for Accessible Design", Excerpt from 28 CFR Part 36. (www.usdoj.gov) and as approved by the City's Building and Safety Division.

LD63. Prior to parcel map approval, either reciprocal access easement(s) shall be shown on the map or a separate recorded copy of a reciprocal access agreement between parcels shall be submitted to the City for review and approval.

LD64. Prior to parcel map approval, the map shall show the following:

(a) A 100-foot right-of-way dedication for the construction of Eucalyptus Avenue.

(b) A 60-foot right-of-way dedication for the construction of Street "A".

(c) A 44-foot right-of-way dedication for the future construction of Encilia Street along the south boundary of Parcel 6 and Lot C Quincy Channel.

(d) A 4-foot right-of-way dedication for the future construction of Encilia Street along the south boundary of Parcel 5.

(e) An 80-foot street right-of-way vacation for the old alignment of Fir Avenue traversing Buildings 4 and 5 as well as parking lot areas of Buildings 3 and 6.

(f) A 40-foot street right-of-way vacation for the old alignment of Fir Avenue traversing and along the south boundary of Parcel 3.

(g) A 30-foot street right-of-way vacation for the west half of Quincy Street.

(h) A 16-foot right-of-way dedication along the north property line, excepting area already acquired by the City, for the future use by Caltrans.

(i) A drainage and access easement dedication to the City at the north boundary line at Quincy Channel for culvert maintenance and also at the north and south ends of proposed culverts at its crossing with Eucalyptus Avenue.

(j) A 4-foot minimum pedestrian right-of-way dedication behind any driveway approach per City Standard 118C.

(k) A 2-foot and varying width public access easement for the portions of sidewalk which are outside of the public right-of-way, along Eucalyptus Avenue necessary to accommodate curb separated sidewalk.

(l) A 6-foot wide trail easement on the north side of Eucalyptus Avenue at its proposed bridge culvert crossing over Quincy Channel.

(m) A varying wide trail easement 8.5-foot wide to 13.5-foot wide trail easement on the north side of Eucalyptus Avenue.

(n) An 18.5-foot wide multi-purpose trail easement along the west side of Quincy Channel.

(o) An easement along the west project boundary between SR-60 and Eucalyptus Avenue for proposed water line improvements required to relocate an existing 12-inch EMWD water line from along the north project boundary to within Eucalyptus Avenue.

(p) A reciprocal access easement between Parcels 4 and 5 and between Parcels 5 and 6.

(q) Corner cutback right-of-way dedications per City Standard 208.

(r) Retention of open space lots designated as Lot C and Lot D on the tentative map to be retained and maintained by the developer.

LD65. Prior to parcel map approval, the Developer shall guarantee the construction of the following improvements by entering into a public improvement agreement and posting security. The improvements shall be completed prior to occupancy of the first building or as otherwise determined by the City Engineer.

(a) Eucalyptus Avenue, Arterial, City Standard 104A (100-foot RW / 76-foot CC) shall be constructed to full-width, within the project's frontage and 32-feet wide (12-foot lanes and 4-foot shoulders) on center from the east map boundary at Quincy Channel easterly to Redlands Boulevard, including any transitions required at the intersection with Redlands Boulevard. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, drainage structures, bridge culvert crossing, culvert structures, rip rap, offsite improvement transition/joins to existing, streetlights, pedestrian ramps, undergrounding of any power poles with overhead utility lines less than 115,000 volts, signing, striping, and dry and wet utilities.

(b) Street "A", Local Street, City Standard 108A Modified (60-foot RW / 40-foot CC) shall be constructed full-width within the project's boundaries using a Traffic Index (TI) of 10. Improvements shall consist of, but not be limited to, pavement, base, eight-inch curb, gutter, sidewalk, driveway approaches, drainage structures, streetlights, pedestrian ramps, and dry and wet utilities.

(c) Quincy Channel improvements shall consist of, but not be limited to bridge culvert crossing including headwall, rip rap, access ramp from street to bottom of channel, multi-purpose trail and access road, buried concrete channel side slope, buried concrete channel

vertical wall, storm drain outlet structures (headwall and cut-off walls, sewer line crossing beneath the channel.

(d) Driveway approaches shall be constructed per City Standard No. 118C. The parcel map shall show an additional 4-foot right-of-way dedication behind driveway approaches. No decorative pavers shall be placed within the public right-of-way.

(e) Relocation of an existing water line along the north property boundary adjacent to State Route 60 to within Eucalyptus Avenue.

(f) Removal or relocation, as determined by SCE, of existing overhead power lines along the north property boundary adjacent to State Route 60.

LD66. Prior to building permit issuance, the precise grading plan for that building shall be approved by the City and Parcel Map 35679 shall record.

LD67. Prior to building permit issuance, this project shall cause the vacation of all existing easements, especially those easements underneath proposed building footprints. This shall include, but not be limited to, the 12-foot wide EMWD access easement, 20-foot wide EMWD water line easement, and easements for utilities and incidental purposes granted to Southern Sierras Power Company. All utilities shall be relocated, as necessary, prior to vacation of easements. All new easements shall be granted prior to utility relocations and vacation of existing easements. All utilities shall be relocated into the proposed public right-of-way or to a location as agreed upon by the developer, the easement holder and the City Engineer, as necessary, prior to vacation of easements. All new easements shall be granted prior to utility relocations and vacation of existing easements and/or street vacations. All utility locations shall be done at no expense to the City.

LD68. Prior to occupancy permit issuance, all overhead utility lines less than 115,000 volts fronting or within the entire project site boundary shall be placed underground per Section 9.14.130C of the City Municipal Code.

LD69. In accordance with the County of Riverside – Low Impact Development BMP Design Handbook (BMP Handbook) Appendix A – Infiltration Testing requirements, perform the required number of in-situ infiltration testing within the footprints of the proposed LID BMPs and provide the results in the first submittal of the Final-WQMP. Conceptually, the Engineer's proposed infiltration feasibility is acceptable for this Preliminary WQMP. Based on the field measured results of the additional infiltration tests, the

Applicant acknowledges that infiltration infeasibility may be presented which would require substantially more area than currently shown on the plans to retain the proposed design capture volumes (DCV) as required. Maximum required dedicated LID BMP area shall be in compliance with the County's WQMP Guidance document's effective area requirements indicated in Table 2-5, page 41.

LD70. All proposed LID BMP's shall be designed in accordance with the BMP Handbook. This includes, but is not limited to, forebay design and volumes, basin landscaping, retaining wall designs, soil media depths, etc. Tributary areas to all LID BMPs shall be in conformance with the BMP Handbook and/or at the discretion of the City's Land Development Division.

LD71. The Applicant shall prepare and submit for approval a final, project-specific water quality management plan (F-WQMP) for PA07-0084 – Prologis Inc. The F-WQMP shall be consistent with the approved P-WQMP and in full conformance with the document; "Water Quality Management Plan, A Guidance Document for the Santa Ana Region of Riverside County," with an approval date of October 22, 2012 (WQMP Guidance). The F-WQMP shall be submitted and approved prior to application for and issuance of grading permits or building permits. At a minimum, the F-WQMP shall include the following: Site design principles; Source control BMPs; LID BMPs; Operation and Maintenance requirements for BMPs; and sources of funding for BMP implementation.

LD72. Overall, the proposed LID BMP concept is accepted as the conceptual LID BMP implementation for the proposed site. The Applicant has proposed to incorporate the use of infiltration basins. Final design details of these basins must be provided in the first submittal of the F-WQMP. The sizes of all LID BMPs are to be determined using the current procedures set forth the Riverside County Flood Control and Water Conservation District's Design Handbook for Low Impact Development Best Management Practices. The Applicant acknowledges that more area than currently shown on the plans may be required to treat site runoff as required by the WQMP guidance.

LD73. The Applicant shall substantiate all applicable Hydrologic Condition of Concern (HCOC) issues in the first submittal of the F-WQMP.

LD74. The Applicant shall, prior to building or grading permit closeout or the issuance of a certificate of occupancy, demonstrate:

(a) That all structural BMPs have been constructed and installed in conformance with the approved plans and specifications;

(b) That all structural BMPs described in the F-WQMP have been implemented in accordance with approved plans and specifications;

(c) That the applicant is prepared to implement all non-structural BMPs included in the F-WQMP, conditions of approval, and building/grading permit conditions; and

(d) That an adequate number of copies of the approved F-WQMP are available for the future owners/occupants of the project.

PUBLIC WORKS DEPARTMENT – TRANSPORTATION ENGINEERING DIVISION

Based on the information contained in our standard review process we recommend the following conditions of approval be placed on this project:

GENERAL CONDITIONS

TE1. Future Eucalyptus Avenue is classified as an Arterial (100'RW/76'CC) per City Standard Plan No. 104A. Any modifications or improvements undertaken by this project shall be consistent with the City's standards for this facility. Sidewalk shall be curb separated. The project shall construct pavement improvements from the eastern property boundary to Redlands Boulevard consistent with Land Development conditions.

TE2. Future "A" Street is classified as a Modified Local Street (60'RW/40'CC) per City Standard Plan No. 108A. The T.I. shall be per Land Development's conditions. The southerly terminus of the roadway shall include an end of roadway treatment satisfactory to the City Engineer. The street shall be signed for no parking/no stopping. Any modifications or improvements undertaken by this project shall be consistent with the City's standards for this facility.

PRIOR TO IMPROVEMENT PLAN APPROVAL OR CONSTRUCTION PERMIT

TE3. The driveways less than or equal to 40 feet in width shall conform to Section 9.11.080, and Table 9.11.080-14 of the City's Development Code - Design Guidelines, and City Standard Plan No. 118C. Driveways wider than 40' shall be designed as intersections with pedestrian access ramps per City standards.

TE4. Prior to the final approval of the street improvement plans, a signing and striping plan shall be prepared per City of Moreno Valley Standard Plans - Section 4 for all streets with a cross section of 66'/44' and wider.

TE5. Prior to issuance of a construction permit, construction traffic control plans prepared by a qualified, Registered Civil or Traffic engineer shall be required.

TE6. Sight distance at driveways and on streets shall conform to City Standard Plan No. 125 A, B, and C at the time of preparation of final grading, landscape, and street improvements.

TE7. Prior to final approval of the street improvement plans, interim and ultimate alignment studies shall be approved by the City Traffic Engineer.

TE8. Prior to the final approval of the street improvement plans, the project applicant shall prepare traffic signal design plans for the following intersections:

- **Redlands Boulevard/SR-60 Westbound Ramp**
- **Redlands Boulevard/Future Eucalyptus Avenue**

TE9. Prior to the final approval of the street improvement plans, the project applicant shall design the intersection of Redlands Boulevard and Eucalyptus Avenue to provide the following geometrics:

Northbound: One left turn lane, one through lane
Southbound: One through lane, one right turn lane
Eastbound: One left turn lane, one right turn lane
Westbound: N/A

NOTE: All curb return radii shall be 50 feet.

TE10. Prior to final approval of the street improvement plans, the project applicant shall design the intersection of Redlands Boulevard and SR-60 Westbound Ramp to provide the following geometrics:

Northbound: One left turn lane, one through lane, one right turn lane
Southbound: One left turn lane, one shared through/right turn lane
Eastbound: One shared left turn/through/right turn lane
Westbound: One shared left turn/through/right turn lane

TE11. Prior to issuance of a construction permit, the project applicant shall pay to the City all applicable "Fair Share" impact fees per the findings of the Environmental Impact Report.

PRIOR TO CERTIFICATE OF OCCUPANCY OR BUILDING FINAL

TE12. (CO) Prior to issuance of a certificate of occupancy, all approved signing and striping shall be installed per current City Standards and the approved plans.

TE13. (CO) Each gated entrance from a public street will be provided with the following, or as approved by the City Engineer:

A. A storage lane with length sufficient to support the queuing predicted by the traffic study (minimum of 75 feet).
B. Signing and striping at the gate, including no parking signs.
C. A separate pedestrian entry, if pedestrian access is necessary.
D. Presence loop detectors (or another device) within 1 or 2 feet of the gates that ensures that the gates remain open while any vehicle is in the queue.

All of these features must be kept in working order.

TE14. (CO) Prior to issuance of a certificate of occupancy, the project applicant shall construct the intersection/roadway improvements identified in TE8, TE9, and TE10 per the approved plans.

TE15. (CO) Prior to issuance of the final certificate of occupancy, the project applicant shall submit a traffic calming study for Eucalyptus Avenue located between Moreno Beach Drive and the western property boundary (Specific Plan 209) for City review and approval. Any recommendations made in the study shall be implemented by the project applicant to the satisfaction of the City Traffic Engineer prior to issuance of the final certificate of occupancy.

PRIOR TO ACCEPTANCE OF STREETS INTO THE CITY-MAINTAINED ROAD SYSTEM

TE16. Prior to the acceptance of streets into the City-maintained road system, all approved traffic control and signing and striping shall be installed per current City Standards and the approved plans.

FINANCIAL & MANAGEMENT SERVICES DEPARTMENT

Special Districts Division

Note: All Special Conditions, Modified Conditions, or Clarification of Conditions are in bold lettering. All other conditions are standard to all or most development projects.

Acknowledgement of Conditions

The following items are Special Districts' Conditions of Approval for project **PA07-0084**; this project shall be completed at no cost to any Government Agency. All questions regarding Special Districts' Conditions including but not limited to, intent, requests for change/modification, variance and/or request for extension of time shall be sought from the Special Districts Division of the Financial & Management Services Department 951.413.3480 or by emailing specialdistricts@moval.org.

General Conditions

SD1. The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services Districts Zones A (Parks & Community Services) and C (Arterial Street Lighting). All assessable parcels therein shall be subject to annual parcel taxes for Zone A and Zone C for operations and capital improvements.

SD2. Any damage to existing landscape areas maintained by the City of Moreno Valley due to project construction shall be repaired/replaced by the Developer, or Developer's successors in interest, at no cost to the City of Moreno Valley.

SD3. The ongoing maintenance of any landscaping required to be installed behind the curb on **Fir Avenue, Quincy Street, and Eucalyptus Avenue** shall be the responsibility of the property owner.

SD4. Street light Authorization forms, for all street lights that are conditioned to be installed as part of this project, must be submitted to the Special Districts Division for approval, **prior to** street light installation. The Street light Authorization form can be obtained from the utility company providing electric service to the project, either Moreno Valley Utility or Southern California Edison.

Prior to Recordation of Final Map

SD5. (R) This project has been identified to be included in the formation of a Community Facilities District (Mello-Roos) for **Public Safety** services, including but not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and

Animal Control services. The property owner(s) shall not protest the formation; however, they retain the right to object to the rate and method of maximum special tax. In compliance with Proposition 218, the Developer shall agree to approve the mail ballot proceeding (special election) for either formation of the CFD or annexation into an existing district that may already be established. The Developer must notify Special Districts of intent to record final map 90 days prior to City Council action authorizing recordation of the map. (California Government Code)

SD6. *Commercial* (R) If Land Development, a Division of the Public Works Department, requires this project to supply a funding source necessary to provide, but not limited to, stormwater utilities services for the monitoring of on site facilities and performing annual inspections of the affected areas to ensure compliance with state mandated stormwater regulations, the developer must notify Special Districts of intent to record final map 90 days prior to City Council action authorizing recordation of the map and the financial option selected to fund the continued maintenance. (California Government Code)

SD7. (R) Prior to recordation of the final map, the Developer, or the Developer's successors or assignees, shall record with the County Recorder's Office a **Covenant of Assessments** for each assessable parcel therein, whereby the Developer covenants the existence of the City of Moreno Valley established benefit zones, and that said parcel(s) is (are) liable for payment of annual benefit zone charges and the appropriate National Pollutant Discharge Elimination System (NPDES) maximum regulatory rate schedule when due. A copy of the recorded Covenant of Assessments shall be submitted to the Special Districts Division. For a copy of the Covenant of Assessments form, please contact Special Districts, phone 951.413.3480.

Prior to Building Permit Issuance

SD8. (BP) This project has been identified to be included in the formation of a Map Act Area of Benefit Special District for the construction of **major thoroughfares and/or freeway** improvements. The property owner(s) shall participate in such District, and pay any special tax, assessment, or fee levied upon the project property for such District. At the time of the public hearing to consider formation of the district, the property owner(s) will not protest the formation, but the property owners(s) will retain the right to object if any eventual assessment is not equitable, that is, if the financial burden of the assessment is not reasonably proportionate to the benefit which the affected property obtains from the improvements which are to be installed. The Developer must notify Special Districts of intent to request building permits 90 days prior to their issuance. (Street & Highway Code, GP Objective 2.14.2, MC 9.14.100)

SD9. (BP) Prior to the issuance of the first building permit for this project, the Developer shall pay Advanced Energy fees for all applicable Zone B (Residential Street Lighting) and/or Zone C (Arterial Street Lighting and Intersection Lighting) street lights required for this development. Payment shall be made to the City of Moreno Valley, as collected by the Land Development Division, based upon the Advanced Energy fee rate in place at the time of payment, as set forth in the current Listing of City Fees, Charges and Rates, as adopted by City Council.

The Developer shall provide a receipt to the Special Districts Division showing that the Advanced Energy fees have been paid in full for the number of street lights to be accepted into the CSD Zone B and/or Zone C programs. Any change in the project which may increase the number of street lights to be installed will require payment of additional Advanced Energy fees at the then current fee.

PUBLIC WORKS DEPARTMENT – MORENO VALLEY UTILITY

Note: All Special Conditions, Modified Conditions, or Clarification of Conditions are in bold lettering. All other conditions are standard to all or most development projects.

Acknowledgement of Conditions

The following items are Moreno Valley Utilities' Conditions of Approval for project(s) PA07-0081, PA07-0082, PA04-0083, PA07-0084, PA07-0158, PA07-0159, PA07-0160, PA07-0161, and PA07-0162; this project shall be completed at no cost to any Government Agency. All questions regarding Moreno Valley Utilities' Conditions including but not limited to, intent, requests for change/modification, variance and/or request for extension of time shall be sought from Moreno Valley Utilities (the Electric Utility Division) of the Public Works Department 951.413.3500. The applicant is fully responsible for communicating with Moreno Valley Utilities staff regarding their conditions. Listed after each individual condition is a contact name of who can be reached for specific questions.

PRIOR TO RECORDATION OF FINAL MAP

MVU1. For single family subdivisions, a three foot easement along each side yard property line shall be shown on the final map and offered for dedication to the City of Moreno Valley for public utility purposes, unless otherwise approved by the City Engineer. If the project is a multi-family development, townhome, condominium, apartment, commercial or industrial project, and it requires the installation of electric distribution facilities within common areas, a non-exclusive easement shall be provided to Moreno Valley Utilities to include all such common areas. All easements shall include the rights of ingress and

egress for the purpose of operation, maintenance, facility repair, and meter reading.

PRIOR TO ENERGIZING MVU ELECTRIC UTILITY SYSTEM AND CERTIFICATE OF OCCUPANCY

MVU2. **City of Moreno Valley Municipal Utility Service – Electrical Distribution**: Prior to issuance of building permit, the developer shall submit a detailed engineering plan showing design, location and schematics for the utility system to be approved by the City Engineer. In accordance with Government Code Section 66462, the Developer **shall** execute an agreement with the City providing for the installation, construction, improvement and dedication of the utility system following recordation of final map and concurrent with trenching operations and other subdivision improvements so long as said agreement incorporates the approved engineering plan and provides financial security to guarantee completion and dedication of the utility system.

The Developer **shall** coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to the City, or the City's designee, all utility infrastructure (including but not limited to conduit, equipment, vaults, ducts, wires, switches, conductors, transformers, resistors, amplifiers, and "bring-up" facilities including electrical capacity to serve the identified development and other adjoining/abutting/ or benefiting projects as determined by Moreno Valley Utilities) – collectively referred to as "utility system" (to and through the development), along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and /or delivery of any and all "utility services" to each lot and unit within the Tentative Map. For purposes of this condition, "utility services" shall mean electric, cable television, telecommunication (including video, voice, and data) and other similar services designated by the City Engineer. "Utility services" shall not include sewer, water, and natural gas services, which are addressed by other conditions of approval.

The City, or the City's designee, shall utilize dedicated utility facilities to ensure safe, reliable, sustainable and cost effective delivery of utility services and maintain the integrity of streets and other public infrastructure. Developer shall, at developer's sole expense, install or cause the installation of such interconnection facilities as may be necessary to connect the electrical distribution infrastructure within the project to the Moreno Valley Utilities owned and controlled electric distribution system.

MVU3. This project may be subject to a Reimbursement Agreement. The project may be responsible for a proportionate share of costs associated with electrical distribution infrastructure previously installed that directly benefits the project.

The project may be subject to a system wide capacity charge in addition to the referenced reimbursement agreement. Payment(s) shall be required prior to issuance of building permit(s).

MVU4. For all new projects, existing Moreno Valley Utility electrical infrastructure shall be preserved in place. The developer will be responsible, at developer expense, for any and all costs associated with the relocation of any of Moreno Valley Utility's underground electrical distribution facilities, as determined by Moreno Valley Utility, which may be in conflict with any developer planned construction on the project site.

PARKS AND COMMUNITY SERVICES DEPARTMENT

Note: All Special Conditions, Modified Conditions, or Clarification of Conditions are in bold lettering. All other conditions are standard to all or most development projects.

Acknowledgement of Conditions

The following items are Parks and Community Services Department Conditions of Approval for project **PA07-0084, TTM 35679**; this project shall be completed at no cost to any Government Agency. All questions regarding Parks and Community Services Department Conditions including but not limited to, intent, requests for change/modification, variance and/or request for extension of time shall be sought from the Parks and Community Services Department 951.413.3280. The applicant is fully responsible for communicating with the Parks and Community Services Department project manager regarding the conditions.

SPECIFIC CONDITIONS OF APPROVAL

PCS1. A multi-use trail shall be located along the west side of Quincy Channel and east side of Quincy Street (or its alignment). Additionally, the trail is to be located over the Quincy Channel, on the south side of Fir Avenue, connecting to the Quincy trail. The trail shall be 14' in width, with a 2' stamped colored concrete section between curb and trail. The trail shall be dedicated as an easement to the City from a lettered lot owned by Riverside County Flood Control and Water Conservation District.

PCS2. Parks and Community Services Department – Standard Trail Conditions:

a. Trail construction shall adhere to: The City's Standard Plans, 'The Greenbook Standard Specifications for Public Works Construction', 'California Code of Regulations Title 24' (where applicable), and the Park and Community Services Specification Guide.

b. The General Contractor shall be a State of California Class 'A' General Engineering Contractor, per the Business and Professions Code Section 7056, or a combination of State of California Class 'C' licenses for which the work is being performed. Licenses must be current and in good standing, for the duration of the project.

c. All utility easements shall not interfere with the trail or its fencing. A map of all easements and the corresponding easement rights shall be presented to Parks and Community Services prior to scheduling the Tentative Map for approval.

d. (R) A restriction shall be placed on lots that are adjacent to the trail, preventing openings or gates accessing the trail. This shall be done through Covenants, Conditions, and Restrictions (CC&R's). A copy of the CC&R's with this/her restriction noted shall be submitted and approved by the Director of Parks and Community Services or his/her designee prior to the recordation of the Final Map.

e. Trails shall not be shared with any above ground utilities, blocking total width access.

f. The following plans require Parks and Community Services written approval: Tentative tract/parcel maps; rough grading plans (including all Delta changes); Final Map; precise grading plans; street improvement plans; traffic signal plans; fence and wall plans; landscape plans for areas adjacent to trails; trail improvement plans.

g. (GP) A detailed rough grading plan with profile for the trail shall be submitted and approved by the Director of Parks and Community Services or his/her designee prior to the issuance of grading permits.

h. Grading certification and compaction tests are required, prior to any improvements being installed.

i. A minimum two-foot graded bench is required where trails adjoin landscaped or open space areas.

j. (R) Prior to the approval of the Final Map, a detailed map of the trail and areas adjacent to the trail shall be submitted to the Director of Parks and Community Services or his/her designee prior for review and written approval.

k. (R) All necessary documents to convey to the City and/or the Community Services District any required dedications for parks or open space, as specified on the tentative map or in these Conditions of Approval shall be submitted by the developer to Parks and Community Services, prior to the recordation of the final map.

l. (R) Prior to recordation of the Final Map, the developer shall post security (bonds) to guarantee construction of the trail to the City's standards. Copies of the bonds shall be provided to Parks and Community Services, prior to the approval of the Final Map.

m. (BP) Prior to the issuance of the first Building Permit, final improvement plans (mylars and AutoCAD & PDF file on a CD-ROM) shall be reviewed and approved by the Community Development Department – Planning Division; the Public Works Department – Land Development and Transportation Division; Fire Prevention; and Parks and Community Services Department. Landscaped areas adjacent to the park shall be designed to prevent water on the park.

n. Eight sets of complete trail improvement plans shall be submitted to Parks and Community Services for routing. Adjacent landscaping and walls shall be shown on the plans. Final construction plans and details require wet stamped and signed Mylars, eight sets of bond copies and one Mylar copy from the City signed mylars, the AutoCAD file on CD, and a PDF file on CD. As-builts for the trails have the same requirements as final plan submittals.

o. All street crossings shall be signed with approved 'STOP' signs, trail signs, and posts. All improved equestrian trail crossings at signalized intersections that are constructed at their ultimate locations shall have high mounted push buttons. These shall be coordinated through the Transportation Division.

p. CSD Zone 'A' plan check fees shall be paid prior to the second plan check.

q. CSD Zone 'A' inspection fees shall be paid prior to signing of Mylars.

r. (BP) The trail shall be surveyed and staked by the developer. The trail shall be inspected and approved by the Director of Parks and Community Services or his/her designee prior to the issuance of any building permits for production units.

s. Any damage to trails or fencing during construction shall be repaired by the developer and inspected by the Director of Parks and Community Services or his/her designee; prior to the last phase of building permit issuance.

t. A minimum 38' radius shall be incorporated on all trails where a change of direction occurs (minor or major). Additionally, widening of the trail is necessary in most situations.

u. Drive approaches shall adhere to City Std. Plan #118C.

v. Concrete access areas to trails with decomposed granite surfaces shall be rough finished concrete (typically raked finish). The access shall extend to the main trail flat surface.

w. (BP) In order to prevent the delay of building permit issuance, any deviation from trail fencing materials or trail surface materials shall be submitted to Director of Parks and Community Services or his/her designee and approved in writing 60-days prior to the commencement of trail construction.

x. Any unauthorized deviation from the approved plan, specifications, City Standard Plans, or Conditions of Approval may result in the delay of building permit issuance and/or building Finals/ Certificate of Occupancy of the project conditioned for improvements.

y. Where required, decorative solid-grouted block wall (no precision block, stucco, veneer finishes, PVC, or wood fencing) with a minimum height of 72" on the trailside shall be installed along lots that adjoin the trail. Block walls

shall be located solely on private property. If landscaping is to be utilized between the block wall and the trail, a PVC fence shall be installed along the trail separating the landscaping from the trail (where required). All block walls that have public view shall have an anti-graffiti coating per Parks and Community Services specifications. Combination block/tubular steel fences shall only be utilized where approved by Parks and Community Services. Tubular steel shall comply with Parks and Community Services standards. Coating for tubular steel shall be anti-graffiti coating for metal per Parks and Community Services specifications. If alternate products are requested, the requested material(s) shall be presented to the Director of Parks and Community Services or his/her designee for review and approval. Under no circumstances can alternate products be utilized without prior written authorization from the Director of Parks and Community Services or his/her designee.

z. Any damage to existing landscape or hardscape areas due to project construction shall be repaired/replaced by the developer, or developer's successors in interest, at no cost to the City or Community Services District.

aa. All inspections shall be requested two (2) working days in advance from the Parks and Community Services Department at the time of rough and precise grading; fence and gate installation; curb and drainage; flatwork; D.G. installation; graffiti coating; and final inspection.

bb. (BP)Trail construction in single family developments shall commence prior to 30% of total building permit issuance. Trail completion and acceptance (single family developments) for maintenance shall be completed prior to 70% of total building permit issuance.

cc. (CO)Trail construction in multi-family or commercial developments shall commence with the rough grading. Trail completion and acceptance for maintenance shall be completed prior to the issuance of 50% of the total certificates-of-occupancy (for multi-family and/or commercial developments).

PCS3. (R) If Special Districts, a Division of the Public Works Department, requires this project to supply a funding source for the continued maintenance, enhancement, and or retrofit of neighborhood parks, open spaces, linear parks, and/or trails systems, the Developer must notify Special Districts of intent to record the final map 70 days prior to recordation of the final map and the financial option selected to fund the continued maintenance. (California Government Code, GP Chapter 2.7)

PCS3b. **(**BP) If Special Districts, a Division of the Public Works Department, requires this project to supply a funding source for the continued maintenance, enhancement, and or retrofit of neighborhood parks, open spaces, linear parks, and/or trails systems, the Developer must notify Special Districts of intent to request building permits 70 days prior to their issuance and the financial option selected to fund the continued maintenance. (California

Government Code, GP Chapter 2.7)

PCS4. The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services Districts Zones A (Parks and Community Services). All assessable parcels therein shall be subject to the annual Zone A charge for operations and capital improvements.

PCS5. (R) Prior to recordation of the final map, the developer, or the developer's successors or assignees, shall supply a copy of the recorded Declaration of Covenant and Acknowledgement of Assessments to the Parks and Community Services Department.

PCS6. (BP) Prior to release of building permit, the developer, or the developer's successors or assignees shall supply a copy of the recorded Declaration of Covenant and Acknowledgement of Assessments to the Parks and Community Services Department.

PCS7. (BP)This project is subject to current Development Impact Fees at time of building permit issuance.

PCS8. Any modified or newly created agreements shall be reviewed and approved by the Board of the Moreno Valley Community Services District.

POLICE DEPARTMENT

Note: All Special conditions are in bold lettering. All other conditions are standard to all or most development projects

Standard Conditions

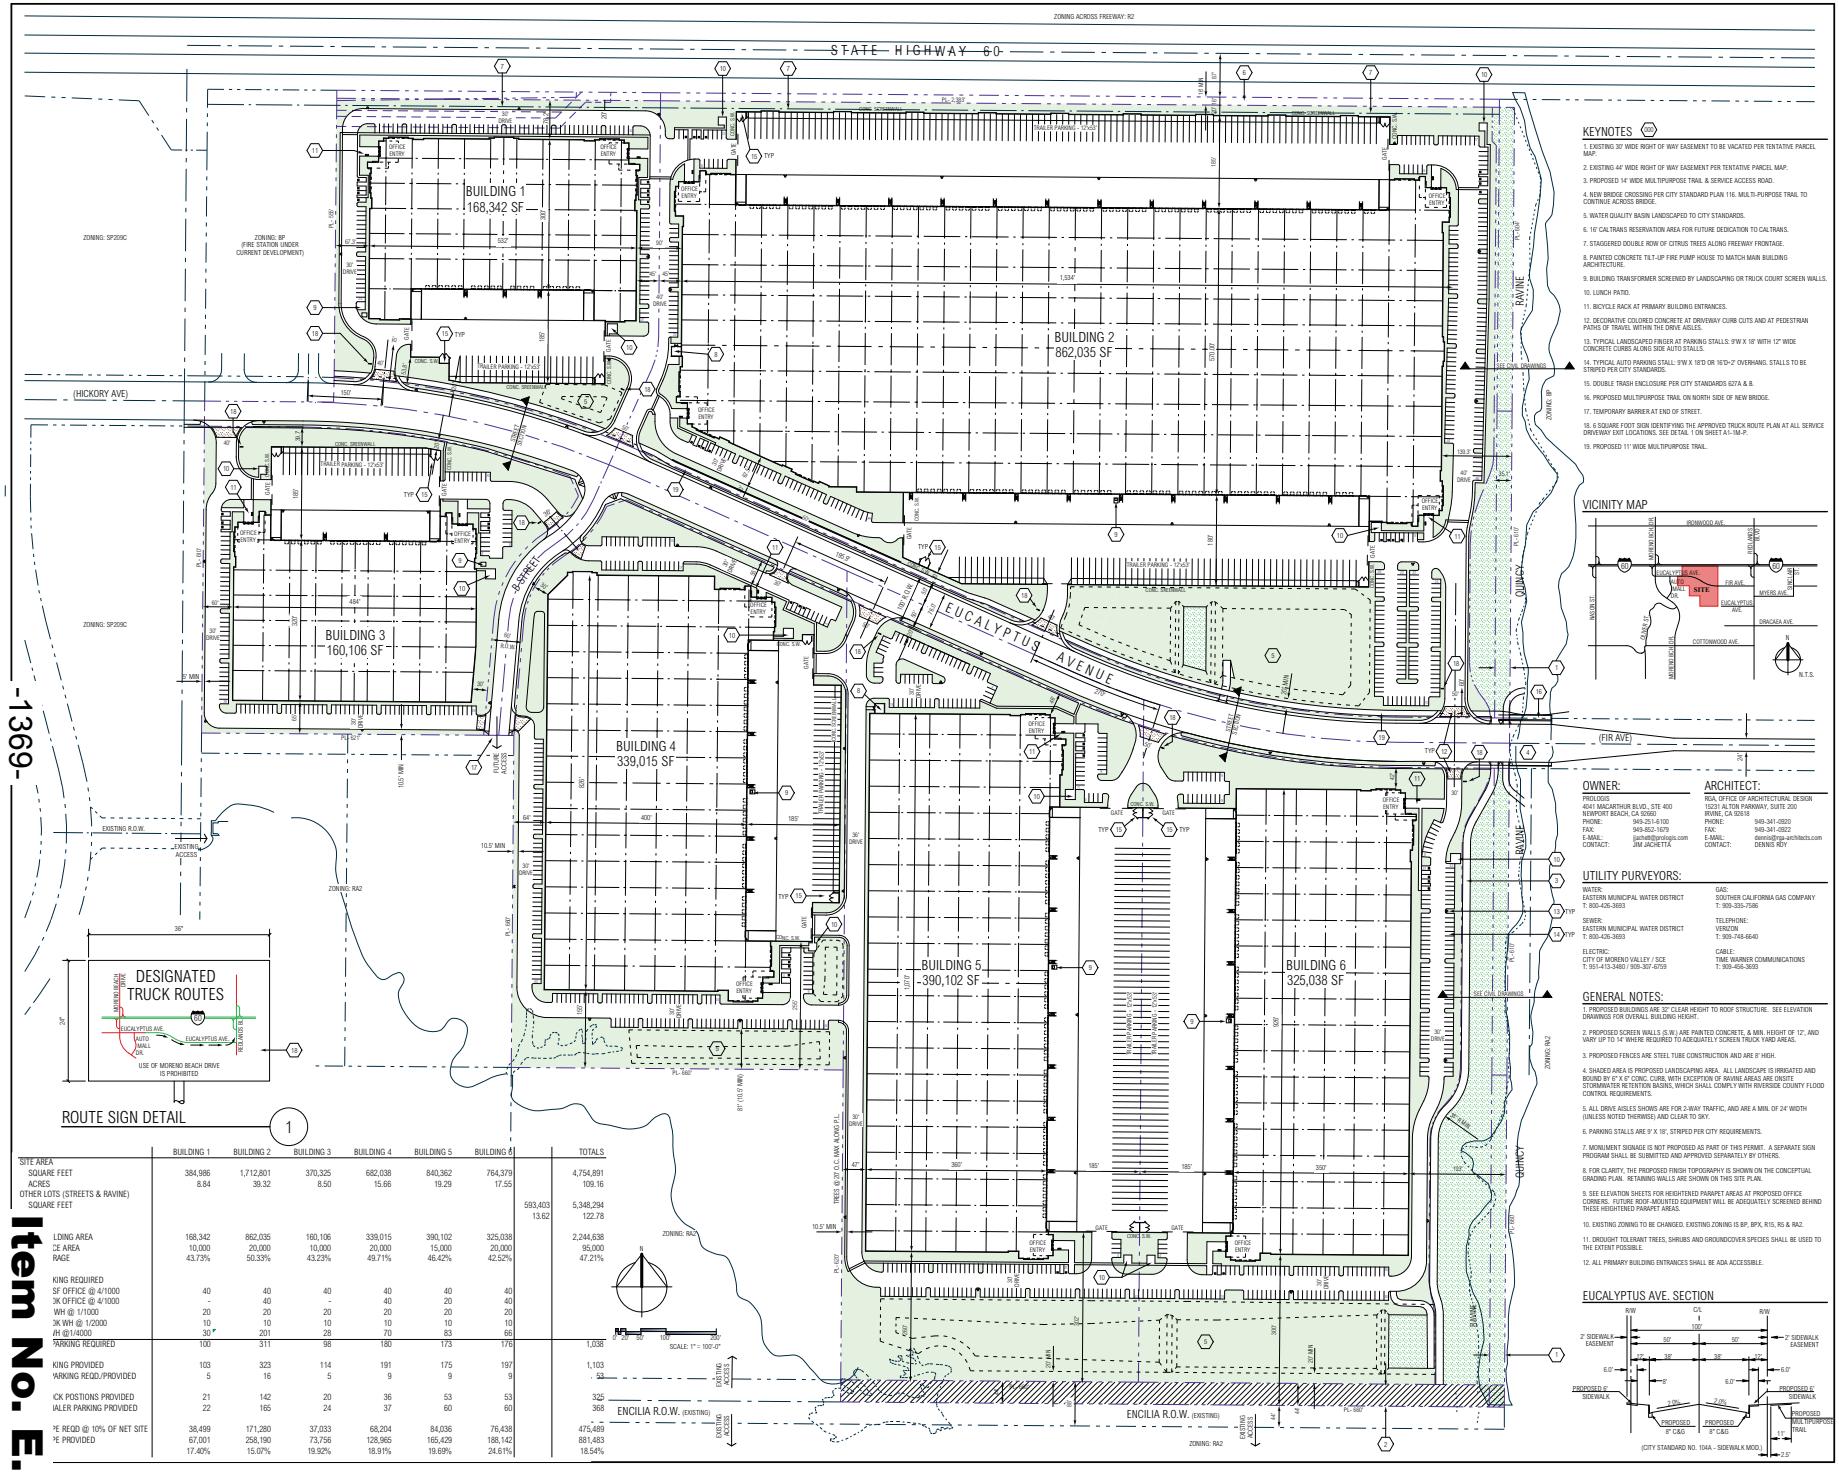
PD1. Prior to the start of any construction, temporary security fencing shall be erected. The fencing shall be a minimum of six (6) feet high with locking, gated access and shall remain through the duration of construction. Security fencing is required if there is: construction, unsecured structures, unenclosed storage of materials and/or equipment, and/or the condition of the site constitutes a public hazard as determined by the Public Works Department. If security fencing is required, it shall remain in place until the project is completed or the above conditions no longer exist. (MC 9.08.080)

PD2. (GP) Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following:

a. The name (if applicable) and address of the development.

b. The developer's name, address, and a 24-hour emergency telephone number. (MC 9.08.080)

PD3. (CO) Prior to the issuance of a Certificate of Occupancy, an Emergency Contact Information Form for the project shall be completed at the permit counter of the Community & Economic Development Department - Building Division for routing to the Police Department. (MC 9.08.080)



KEYNOTES

1. EXISTING 30' WIDE RIGHT OF WAY EASEMENT TO BE VACATED PER TENTATIVE PARCEL MAP.
2. EXISTING 44' WIDE RIGHT OF WAY EASEMENT PER TENTATIVE PARCEL MAP.
3. PROPOSED 14' WIDE MULTIPURPOSE TRAIL & SERVICE ACCESS ROAD.
4. NEW BRIDGE CROSSING PER CITY STANDARD PLAN 116. MULTI-PURPOSE TRAIL TO CONTINUE ACROSS BRIDGE.
5. WATER QUALITY BASIN LANDSCAPED TO CITY STANDARDS.
6. 16' CALTRANS RESERVATION AREA FOR FUTURE DEDICATION TO CALTRANS.
7. STAGGERED DOUBLE ROW OF CITRUS TREES ALONG FREEWAY FRONTAGE.
8. PAINTED CONCRETE TILT-UP FIRE PUMP HOUSE TO MATCH MAIN BUILDING ARCHITECTURE.
9. BUILDING TRANSFORMER SCREENED BY LANDSCAPING OR TRUCK COURT SCREEN WALLS.
10. LUNCH PATIO.
11. BICYCLE RACK AT PRIMARY BUILDING ENTRANCES.
12. DECORATIVE COLORED CONCRETE AT DRIVEWAY CURB CUTS AND AT PEDESTRIAN PATHS OF TRAVEL WITHIN THE DRIVE AISLES.
13. TYPICAL LANDSCAPED FINGER AT PARKING STALLS: 9'W X 18' WITH 12" WIDE CONCRETE CURBS ALONG SIDE AUTO STALLS.
14. TYPICAL AUTO PARKING STALL: 9'W X 18'D OR 16'D-2' OVERHANG. STALLS TO BE STRIPED PER CITY STANDARDS.
15. DOUBLE TRASH ENCLOSURE PER CITY STANDARDS 627A & B.
16. PROPOSED MULTIPURPOSE TRAIL ON NORTH SIDE OF NEW BRIDGE.
17. TEMPORARY BARRIER AT END OF STREET.
18. 6 SQUARE FOOT SIGN IDENTIFYING THE APPROVED TRUCK ROUTE PLAN AT ALL SERVICE DRIVEWAY EXIT LOCATIONS. SEE DETAIL 1 ON SHEET A1-1M-P.
19. PROPOSED 11' WIDE MULTIPURPOSE TRAIL.

GENERAL NOTES:

1. PROPOSED BUILDINGS ARE 32' CLEAR HEIGHT TO ROOF STRUCTURE. SEE ELEVATION DRAWINGS FOR OVERALL BUILDING HEIGHT.
2. PROPOSED SCREEN WALLS (S.W.) ARE PAINTED CONCRETE, & MIN. HEIGHT OF 12', AND VARY UP TO 14' WHERE REQUIRED TO ADEQUATELY SCREEN TRUCK YARD AREAS.
3. PROPOSED FENCES ARE STEEL TUBE CONSTRUCTION AND ARE 6' HIGH.
4. SHADED AREA IS PROPOSED LANDSCAPING AREA. ALL LANDSCAPE IS IRRIGATED AND BOUND BY 6" X 6" CONC. CURB, WITH EXCEPTION OF RAVINE AREAS ARE ONSITE STORMWATER RETENTION BASINS, WHICH SHALL COMPLY WITH RIVERSIDE COUNTY FLOOD CONTROL REQUIREMENTS.
5. ALL DRIVE AISLES SHOWS ARE FOR 2-WAY TRAFFIC, AND ARE A MIN. OF 24' WIDTH (UNLESS NOTED THERWISE) AND CLEAR TO SKY.
6. PARKING STALLS ARE 9' X 18', STRIPED PER CITY REQUIREMENTS.
7. MONUMENT SIGNAGE IS NOT PROPOSED AS PART OF THIS PERMIT. A SEPARATE SIGN PROGRAM SHALL BE SUBMITTED AND APPROVED SEPARATELY BY OTHERS.
8. FOR CLARITY, THE PROPOSED FINISH TOPOGRAPHY IS SHOWN ON THE CONCEPTUAL GRADING PLAN. RETAINING WALLS ARE SHOWN ON THIS SITE PLAN.
9. SEE ELEVATION SHEETS FOR HEIGHTENED PARAPET AREAS AT PROPOSED OFFICE CORNERS. FUTURE ROOF-MOUNTED EQUIPMENT WILL BE ADEQUATELY SCREENED BEHIND THESE HEIGHTENED PARAPET AREAS.
10. EXISTING ZONING TO BE CHANGED. EXISTING ZONING IS BP, BPX, R15, RS & RA2.
11. DROUGHT TOLERANT TREES, SHRUBS AND GROUNDCOVER SPECIES SHALL BE USED TO THE EXTENT POSSIBLE.
12. ALL PRIMARY BUILDING ENTRANCES SHALL BE ADA ACCESSIBLE.

GENERAL NOTES:

1. PROPOSED BUILDINGS ARE 32' CLEAR HEIGHT TO ROOF STRUCTURE. SEE ELEVATION DRAWINGS FOR OVERALL BUILDING HEIGHT.
2. PROPOSED SCREEN WALLS (S.W.) ARE PAINTED CONCRETE, & MIN. HEIGHT OF 12', AND VARY UP TO 14' WHERE REQUIRED TO ADEQUATELY SCREEN TRUCK YARD AREAS.
3. PROPOSED FENCES ARE STEEL TUBE CONSTRUCTION AND ARE 8' HIGH.
4. SHADED AREA IS PROPOSED LANDSCAPING AREA. ALL LANDSCAPE IS IRRIGATED AND BOUND BY 6" X 6" CONC. CURB, WITH EXCEPTION OF RAVINE AREAS ARE ONSITE STORMWATER RETENTION BASINS, WHICH SHALL COMPLY WITH RIVERSIDE COUNTY FLOOD CONTROL REQUIREMENTS.
5. ALL DRIVE AISLES SHOWS ARE FOR 2-WAY TRAFFIC, AND ARE A MIN. OF 24' WIDTH AND CLEAR TO SKY.
6. PARKING STALLS ARE 9' X 18', STRIPED PER CITY REQUIREMENTS.
7. MONUMENT SIGNAGE IS NOT PROPOSED AS PART OF THIS PERMIT. A SEPARATE SIGN PROGRAM SHALL BE SUBMITTED AND APPROVED SEPARATELY BY OTHERS.
8. FOR CLARITY, THE PROPOSED FINISH TOPOGRAPHY IS SHOWN ON THE CONCEPTUAL GRADING PLAN. RETAINING WALLS ARE SHOWN ON THIS SITE PLAN.
9. SEE ELEVATION SHEETS FOR HEIGHTENED PARAPET AREAS AT PROPOSED OFFICE CORNERS. FUTURE ROOF-MOUNTED EQUIPMENT WILL BE ADEQUATELY SCREENED BEHIND THESE HEIGHTENED PARAPET AREAS.
10. EXISTING ZONING TO BE CHANGED. EXISTING ZONING IS BP, BPX, R15, RS & RA2.
11. DROUGHT TOLERANT TREES, SHRUBS AND GROUNDCOVER SPECIES SHALL BE USED TO THE EXTENT POSSIBLE.

LEGAL DESCRIPTION:

THE LAND REFERRED TO HEREIN IS DESCRIBED AS FOLLOWS:

REAL PROPERTY IN THE CITY OF MORENO VALLEY, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS:

DIVISION 1:

LOTS 1 THROUGH 4, INCLUSIVE, IN BLOCK 38 AS SHOWN BY MAP NO. 1 OF MOOR VALLEY AND ALESSANDRO DEVELOPMENT CO., IN THE CITY OF MORENO VALLEY, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, RECORDED IN BOOK 11, PAGE 16 OF MAPS, SAN BERNARDINO COUNTY RECORDS.

EXCEPTING THEREFROM ALL THAT PORTION AS DESCRIBED IN THE DEED FROM C. H. LANTZ AND MARY LEE LANTZ TO LANDMARK LAND COMPANY, INC., A CALIFORNIA CORPORATION RECORDED AUGUST 31, 1989 AS INSTRUMENT NO. 298755, OFFICIAL RECORDS.

ALSO EXCEPT FROM LOTS 4 AND 5 THAT PORTION CONVEYED TO THE CITY OF MORENO VALLEY BY DEED RECORDED FEBRUARY 3, 2005 AS INSTRUMENT NO. 069841 OF OFFICIAL RECORDS.

DIVISION 2:

PARCEL A:

LOTS 5, 6 AND 7 OF BLOCK 38 OF MOOR VALLEY AND ALESSANDRO DEVELOPMENT CO., IN THE COUNTY OF RIVERSIDE, AS PER MAP RECORDED IN BOOK 11, PAGE 16, OF MAPS, RECORDS OF SAN BERNARDINO COUNTY, CALIFORNIA.

PARCEL B:

LOT 8 BLOCK 38 OF MAP NO. 1 MOOR VALLEY AND ALESSANDRO DEVELOPMENT CO., IN THE COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 11, PAGE 16 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAN BERNARDINO COUNTY.

TOGETHER WITH THOSE PORTIONS OF EUCALYPTUS AVENUE AND QUINCY CHANNEL ADJOINING SAID BLOCK LYING SOUTHERLY OF THE WESTERLY PROLONGATION OF THE NORTH LINE OF SAID LOT AND EASTERLY OF THE SOUTHERLY PROLONGATION OF THE WEST LINE OF SAID LOT.

PARCEL C:

LOT 1 BLOCK 3-A, AS SHOWN BY MAP NO. 1 OF MOOR VALLEY AND ALESSANDRO DEVELOPMENT CO., IN THE CITY OF MORENO VALLEY, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, RECORDED IN BOOK 11, PAGE 16 OF MAPS, SAN BERNARDINO COUNTY RECORDS.

PARCEL D:

PARCEL 1 AS SHOWN ON THE "LOT LINE ADJUSTMENT NO. 878J AND CERTIFICATE OF COMPLIANCE" AS EVIDENCED BY THE DOCUMENT RECORDED ON JANUARY 5, 2007 AS INSTRUMENT NO. 2007-0010081 OF OFFICIAL RECORDS, MORE PARTICULARLY DESCRIBED AS FOLLOWS:

PORTIONS OF LOTS 3 THROUGH 8, AND LOCAL OF BLOCK 38 OF MOOR VALLEY AND ALESSANDRO DEVELOPMENT COMPANY, AS SHOWN BY MAP ON FILE IN BOOK 11, PAGE 16, OF MAPS, RECORDS OF SAN BERNARDINO COUNTY, CALIFORNIA, LYING IN THE CITY OF MORENO VALLEY, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, MORE PARTICULARLY DESCRIBED AS FOLLOWS:

COMMENCING AT THE INTERSECTION OF THE EAST LINE OF SECTION 3, TOWNSHIP 3 SOUTH, RANGE 3 WEST SAN BERNARDINO BASE AND MERIDIAN AND THE NORTH LINE OF SAID LOT 5;

THENCE SOUTH 89°37'29" EAST, ALONG THE NORTH LINE OF SAID LOT 5, A DISTANCE OF 313.94 FEET TO THE BEGINNING OF A TANGENT CURVE CONCAVE TO THE SOUTH AND HAVING A RADIUS OF 1850.00 FEET, SAID POINT ALSO BEING THE TRUE POINT OF BEGINNING;

THENCE ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 23°37'34", A DISTANCE OF 658.69 FEET;

THENCE SOUTH 89°53'16" EAST, A DISTANCE OF 678.55 FEET TO THE BEGINNING OF A TANGENT CURVE CONCAVE TO THE NORTH AND HAVING A RADIUS OF 1950.00 FEET;

THENCE ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 23°37'42", A DISTANCE OF 803.84 FEET TO A POINT LYING ON THE SOUTH LINE OF SAID LOT 6;

THENCE SOUTH 89°37'08" EAST, ALONG SAID SOUTH LINE, A DISTANCE OF 180.78 FEET TO THE SOUTHEAST CORNER OF SAID LOT 6;

THENCE NORTH 00°34'12" EAST, ALONG THE EAST LINE OF SAID LOT 6, A DISTANCE OF 1660.08 FEET TO THE NORTHEAST CORNER OF SAID LOT 6;

THENCE NORTH 89°37'08" WEST, ALONG THE NORTH LINE OF SAID LOTS 6, 5 AND 4, A DISTANCE OF 1318.62 FEET TO THE POINT OF BEGINNING AND THE END OF THIS DESCRIPTION.

THE ABOVE DESCRIBED PARCEL CONTAINS 19.39 ACRES PLUS OR MINUS.

PARCEL D:

PARCEL 2 AS SHOWN ON THE "LOT LINE ADJUSTMENT NO. 878J AND CERTIFICATE OF COMPLIANCE" AS EVIDENCED BY THE DOCUMENT RECORDED ON JANUARY 5, 2007 AS INSTRUMENT NO. 2007-0010081 OF OFFICIAL RECORDS, MORE PARTICULARLY DESCRIBED AS FOLLOWS:

PORTIONS OF LOTS 3 THROUGH 8, INCLUSIVE, OF BLOCK 38 OF MOOR VALLEY AND ALESSANDRO DEVELOPMENT COMPANY, AS SHOWN BY MAP ON FILE IN BOOK 11, PAGE 16, OF MAPS, RECORDS OF SAN BERNARDINO COUNTY, CALIFORNIA, LYING IN THE CITY OF MORENO VALLEY, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, MORE PARTICULARLY DESCRIBED AS FOLLOWS:

BEGINNING AT THE INTERSECTION OF THE EAST LINE OF SECTION 3, TOWNSHIP 3 SOUTH, RANGE 3 WEST SAN BERNARDINO BASE AND MERIDIAN AND THE NORTH LINE OF SAID LOT 5;

THENCE SOUTH 89°37'29" EAST, ALONG THE NORTH LINE OF SAID LOT 5, A DISTANCE OF 313.94 FEET TO THE BEGINNING OF A TANGENT CURVE CONCAVE TO THE SOUTH AND HAVING A RADIUS OF 1850.00 FEET;

THENCE ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 23°37'34", A DISTANCE OF 658.69 FEET;

THENCE SOUTH 89°53'16" EAST, A DISTANCE OF 678.55 FEET TO THE BEGINNING OF A TANGENT CURVE CONCAVE TO THE NORTH AND HAVING A RADIUS OF 1950.00 FEET;

THENCE ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 23°37'42", A DISTANCE OF 803.84 FEET TO A POINT LYING ON THE SOUTH LINE OF SAID LOT 6;

THENCE NORTH 89°37'08" WEST, ALONG THE SOUTH LINE OF SAID LOTS 6 AND 5, A DISTANCE OF 2412.56 FEET TO THE WEST LINE OF SAID LOT 5 AND SAID EAST LINE OF SECTION 3 AND THE SOUTH LINE OF SAID LOT 5;

THENCE NORTH 00°32'37" EAST, ALONG THE EAST LINE OF SAID SECTION 3, A DISTANCE OF 2612.26 FEET TO THE POINT OF BEGINNING AND THE END OF THIS DESCRIPTION.

THE ABOVE DESCRIBED PARCEL CONTAINS 20.08 ACRES PLUS OR MINUS.

EXISTING LEGAL DESCRIPTION

REAL PROPERTY IN THE CITY OF MORENO VALLEY, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS:

DIVISION 1:

LOTS 1 THROUGH 4, INCLUSIVE, IN BLOCK 38 AS SHOWN BY MAP NO. 1 OF MORENO VALLEY, UNIT NO. 1, AS PER MAP RECORDED IN BOOK 11, PAGE 18 OF MAPS, SAN BERNARDINO COUNTY RECORDS.

EXCEPTING THEREFROM ALL THAT PORTION AS CONVEYED IN THE DEED TO THE CITY OF MORENO VALLEY, A MUNICIPAL CORPORATION RECORDED JULY 24, 1989 AS INSTRUMENT NO. 254703, OFFICIAL RECORDS.

ALSO EXCEPT FROM LOTS 1 AND 4 THAT PORTION CONVEYED TO THE CITY OF MORENO VALLEY BY DEED RECORDED FEBRUARY 3, 2005 AS INSTRUMENT NO. 069847, OFFICIAL RECORDS.

DIVISION 2:

PARCEL A:

LOTS 5, 6, 7 AND 12 OF BLOCK 53 OF BEAN VALLEY AND ALESSANDRO IRRIGATED DISTRICT, AS SHOWN BY MAP ON FILE IN BOOK 11, PAGE(S) 70 OF MAPS, RECORDS OF SAN BERNARDINO COUNTY, CALIFORNIA.

PARCEL B:

LOTS 8 AND 9 OF BLOCK 53, AS SHOWN ON MAP OF BEAN VALLEY AND ALESSANDRO IRRIGATED DISTRICT, IN THE CITY OF MORENO VALLEY, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AS SHOWN BY MAP RECORDED IN BOOK 11, PAGE 70, IN THE OFFICE OF THE COUNTY RECORDER OF SAN BERNARDINO COUNTY.

EXCEPTING THEREFROM THAT PORTION OF EUCALYPTUS AVENUE AND QUINCY STREET AS SHOWN ON MAP NO. 1 OF MORENO VALLEY UNIT NO. 1 AS PER MAP RECORDED IN BOOK 11, PAGE 18 OF MAPS, LYING SOUTHERLY AND EASTERLY OF THE SOUTHERLY PROLONGATION OF THE WEST LINE OF SAID LOT.

PARCEL C:

LOT 1, BLOCK 53, AS SHOWN BY MAP NO. 1 OF BEAN VALLEY AND ALESSANDRO IRRIGATED DISTRICT, IN THE CITY OF MORENO VALLEY, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, RECORDED IN BOOK 11, PAGE 70 OF MAPS, SAN BERNARDINO COUNTY RECORDS.

PARCEL D:

PARCEL 1 AS SHOWN ON THE "LOT LINE ADJUSTMENT NO. 8781" AND CERTIFICATE OF COMPLIANCE, AS EVIDENCED BY THE DOCUMENTS RECORDED JANUARY 17, 2012 AS INSTRUMENT NO. 2012-0021000 OF OFFICIAL RECORDS, MORE PARTICULARLY DESCRIBED AS FOLLOWS:

PORTIONS OF LOTS 3 THROUGH 6, INCLUSIVE, OF BLOCK 38 OF MAP NO. 1 OF MORENO VALLEY AND ALESSANDRO IRRIGATED DISTRICT, AS SHOWN ON FILE IN BOOK 11, PAGE 18, OF MAPS, RECORDS OF SAN BERNARDINO COUNTY, IN THE CITY OF MORENO VALLEY, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, MORE PARTICULARLY DESCRIBED AS FOLLOWS:

COMMENCING AT THE INTERSECTION OF THE EAST LINE OF SECTION 2, TOWNSHIP 3 SOUTH, RANGE 3 WEST SAN BERNARDINO BASE AND MERIDIAN AND THE NORTH LINE OF SAID LOT 6;

THENCE SOUTH 89°33'10" EAST, ALONG THE NORTH LINE OF SAID LOT 6, A DISTANCE OF 30.00 FEET TO THE NORTHEAST CORNER OF SAID LOT 6, A DISTANCE OF 30.00 FEET TO THE NORTHEAST CORNER OF SAID LOT 6, A DISTANCE OF 30.00 FEET TO THE NORTHEAST CORNER OF SAID LOT 6;

THENCE SOUTH 00°27'02" WEST, ALONG THE EAST LINE OF SAID LOT 6, A DISTANCE OF 30.00 FEET TO THE NORTHEAST CORNER OF SAID LOT 6;

THENCE NORTH 89°33'10" WEST, ALONG THE NORTH LINE OF SAID LOT 6, A DISTANCE OF 30.00 FEET TO THE NORTHWEST CORNER OF SAID LOT 6;

THENCE NORTH 00°27'02" EAST, ALONG THE EAST LINE OF SAID SECTION 2, A DISTANCE OF 30.00 FEET TO THE BEGINNING OF A TANGENT CURVE CONCAVE TO THE NORTHWEST AND HAVING A RADIUS OF 1960.00 FEET;

THENCE ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 01°37'04", A DISTANCE OF 55.36 FEET;

THENCE SOUTH 89°33'10" EAST, ALONG SAID SOUTH LINE, A DISTANCE OF 1320.00 FEET TO THE SOUTHEAST CORNER OF SAID LOT 6;

THENCE NORTH 00°27'02" EAST, ALONG THE NORTH LINE OF SAID LOT 6, A DISTANCE OF 660.00 FEET TO THE POINT OF BEGINNING.

THE ABOVE DESCRIBED PARCEL CONTAINS 19.28 ACRES PLUS OR MINUS.

PARCEL E:

PARCEL 2 AS SHOWN ON THE "LOT LINE ADJUSTMENT NO. 8781" AND CERTIFICATE OF COMPLIANCE, AS EVIDENCED BY THE DOCUMENTS RECORDED JANUARY 17, 2012 AS INSTRUMENT NO. 2012-0021000 OF OFFICIAL RECORDS, MORE PARTICULARLY DESCRIBED AS FOLLOWS:

PORTIONS OF LOTS 3 THROUGH 6, INCLUSIVE, OF BLOCK 38, OF MAP NO. 1 OF MORENO VALLEY AND ALESSANDRO IRRIGATED DISTRICT, AS SHOWN ON FILE IN BOOK 11, PAGE 18, OF MAPS, RECORDS OF SAN BERNARDINO COUNTY, IN THE CITY OF MORENO VALLEY, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, MORE PARTICULARLY DESCRIBED AS FOLLOWS:

BEGINNING AT THE INTERSECTION OF THE WEST LINE OF SECTION 2, TOWNSHIP 3 SOUTH, RANGE 3 WEST SAN BERNARDINO BASE AND MERIDIAN AND THE NORTH LINE OF SAID LOT 6;

THENCE SOUTH 89°33'10" EAST, ALONG THE NORTH LINE OF SAID LOT 6, A DISTANCE OF 30.00 FEET TO THE NORTHEAST CORNER OF SAID LOT 6, A DISTANCE OF 30.00 FEET TO THE NORTHEAST CORNER OF SAID LOT 6;

THENCE SOUTH 00°27'02" WEST, ALONG THE EAST LINE OF SAID LOT 6, A DISTANCE OF 30.00 FEET TO THE NORTHEAST CORNER OF SAID LOT 6;

THENCE NORTH 89°33'10" WEST, ALONG THE NORTH LINE OF SAID LOT 6, A DISTANCE OF 30.00 FEET TO THE NORTHWEST CORNER OF SAID LOT 6;

THENCE NORTH 00°27'02" EAST, ALONG THE EAST LINE OF SAID SECTION 3, A DISTANCE OF 660.00 FEET TO THE POINT OF BEGINNING AND THE END OF THIS DESCRIPTION.

THE ABOVE DESCRIBED PARCEL CONTAINS 19.28 ACRES PLUS OR MINUS.

RE: Comment on Draft Environmental Impact Report for ProLogis Eucalyptus Industrial Park (State Clearinghouse No. 2008021002)

Dear Mr. Bradshaw:

I am writing on behalf of Laborers International Union of North America, Local Union No. 1184 and its members living in Riverside County (collectively "LIUNA Local Union No. 1184" or "LIUNA" or "Commenters") regarding the Draft Environmental Impact Report ("DEIR") prepared for the ProLogis Eucalyptus Industrial Park, State Clearinghouse No. 2008021002 ("Project").

We have reviewed the DEIR with the assistance of:

1. Atmospheric Scientist, Dr. James Clark, Ph.D.
2. Hydrogeologist, Matthew Hagemann, C.Hg., MS.

These experts have prepared written comments that are attached hereto, and which are incorporated in their entirety. The City of Moreno Valley ("City") should respond to the expert comments separately. These experts and our own independent review demonstrate that the DEIR is woefully inadequate and that a new supplemental EIR is required to be prepared and recirculated for public comment. In particular, the EIR suffers from the following significant errors and omissions, among others:

- SEGMENTATION OF PROJECT: The DEIR improperly segments the Project by failing to include the infrastructure (e.g., roads, water, and sewer) as part of the Project.

- LOSS OF FARMLAND: The DEIR acknowledges that the Project's conversion of Prime Farmland is a significant impact, but the DEIR fails to adequately mitigate for the loss of farmland. The conclusion that mitigation measures are infeasible is unsupported.

- HAZARDOUS MATERIALS: The baseline of the physical environmental conditions in the vicinity of the Project is erroneous because the DEIR does not provide any details on the types of pesticides used on the Project site, relies on two outdated Phase I Environmental Site Assessments ("ESAs") that do not cover the entire Project site, and fails to disclose the status of an underground storage tank.

- GREENHOUSE GAS: The DEIR fails to provide support for the conclusion that greenhouse gas emissions after mitigation will be less than significant.

- AIR QUALITY: The DEIR fails to adequately analyze impacts to air quality because: (1) the DEIR underestimates the potential particulate emissions for the construction phase of the Project, (2) fails to accurately compare construction emissions to daily construction significance thresholds, (3) fails to consider health risks from contaminated dust, (4) fails to properly identify and address the Project's operational air quality impacts, (5) fails to disclose impacts to offsite receptors, and (6) fails to adequately analyze cumulative impacts.

Commenters urge the City to revise the EIR to adequately describe, analyze, and mitigate the Project and its impacts.[1] The revised EIR should be recirculated to allow public review and comment.

I. PROJECT DESCRIPTION

The Project site encompasses 122.8 acres of land located within the City of Moreno Valley, south of and adjacent to SR-60, east of Moreno Valley Auto Mall, and adjacent to and west of the Quincy Channel in Riverside County. (DEIR, p. 3-1). Single-family residential uses are located approximately 50 feet southeast of the southeastern corner of the Project site. (DEIR, p. 3-1). The Assessor's Parcel Numbers ("APNs") for this site are 488-330-011, 488-330-012, 488-330-013, 488-330-017, 488-330-018, 488-330-019, 488-330-022, 488-330-023, 488-330-024, and 488-330-025. (DEIR, p. 3-1).

[1] We reserve the right to supplement these comments at later hearings and proceedings for this Project. See, *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal. App. 4th 1109.

The Project would include the construction of a warehouse facility comprising six buildings consisting of a total of approximately 2,244,638 square feet. (DEIR, p. 3-2). The Project site is divided into 2 areas: (1) the northern area (north of future Eucalyptus Avenue) would contain approximately 1,030,377 square feet of warehouse uses divided between two buildings and (2) the southern area (south of the future Eucalyptus Avenue) would consist of approximately 1,214,261 square feet of warehouse uses divided among four separate buildings. (DEIR, p. 3-2). The specific uses/users are not known at this time. (DEIR, p. 3-11).

The Project site currently consists of 57 acres used to grow grapefruit, 36 acres used for hay and alfalfa production, as well as portions that are vacant. (DEIR p. 4.2-1). Approximately 82.5 acres of the Project site is designated as Prime Farmland. (DEIR, p. 4.2-6).

The Project would require significant changes to the General Plan and local zoning ordinances including:

- General Plan Amendment. The proposed project includes an amendment to the Land Use Element to change the General Plan designations for a portion of the project site from Residential 15, Residential 5 and Residential 2 to Business Park. (DEIR, p. 1-2). The project also proposes an amendment to the Circulation Element by making changes to the alignment of Encilia Street and the removal of Quincy Street from within the project boundaries. (DEIR, p. 1-2).

- Change of Zone. The proposed project includes a change to the project site zoning from Business Park (BP), Business Park Mixed-use (BPX), Residential Agriculture 2 (RA2), Residential 5 (R5), and Residential 15 (R15) to Light Industrial (LI). (DEIR, p. 1-2).

- Municipal Code Amendment. The project includes a Municipal Code Amendment to establish a minimum clearance of 250 feet between adjacent residential zoning districts and any truck court or primary truck circulation driveway in lieu of the buffer established by the Business Park zone. (DEIR, p. 1-2).

II. Standing

Members of Local Union No. 1184 live, work, and recreate in the immediate vicinity of the Project site. These members will suffer the impacts of a poorly executed or inadequately mitigated Project, just as would the members of any nearby homeowners association, community group, or environmental group. Hundreds of LIUNA Local Union No. 1184 members live and work in areas that will be affected by traffic, air pollution, and water pollution generated by the Project.

In addition, construction workers will suffer many of the most significant impacts from the Project as currently proposed, such as from air pollution emissions from poorly maintained or controlled construction equipment, possible risks related to hazardous materials on the Project site, and other impacts. Therefore, LIUNA Local Union No. 1184 and its members have a direct interest in ensuring that the Project is adequately analyzed and that its environmental and public health impacts are mitigated to the fullest extent feasible.

III. LEGAL STANDARDS

A. EIR

CEQA requires that an agency analyze the potential environmental impacts of its proposed actions in an environmental impact report ("EIR") (except in certain limited circumstances). (See, e.g., Pub. Res. Code § 21100). The EIR is the very heart of CEQA. (*Dunn-Edwards v. BAAQMD* (1992) 9 Cal.App.4th 644, 652). "The 'foremost principle' in interpreting CEQA is that the Legislature intended the act to be read so as to afford the fullest possible protection to the environment within the reasonable scope of the statutory language." (*Communities for a Better Environment v. Calif. Resources Agency* (2002) 103 Cal. App. 4th 98, 109).

CEQA has two primary purposes. First, CEQA is designed to inform decision makers and the public about the potential, significant environmental effects of a project. (14 Cal. Code Regs. ("CEQA Guidelines") § 15002(a)(1)). "Its purpose is to inform the public and its responsible officials of the environmental consequences of their decisions before they are made. Thus, the EIR 'protects not only the environment but also informed self-government.'" (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal. 3d 553, 564). The EIR has been described as "an environmental 'alarm bell' whose purpose it is to alert the public and its responsible officials to environmental changes before they have reached ecological points of no return." (*Berkeley Keep Jets Over the Bay v. Bd. of Port Comm'rs*. (2001) 91 Cal. App. 4th 1344, 1354 ("*Berkeley Jets*"); *County of Inyo v. Yorty* (1973) 32 Cal.App.3d 795, 810).

Second, CEQA requires public agencies to avoid or reduce environmental damage when "feasible" by requiring "environmentally superior" alternatives and all feasible mitigation measures. (CEQA Guidelines § 15002(a)(2) and (3); See also, *Berkeley Jets*, 91 Cal. App. 4th 1344, 1354; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564). The EIR serves to provide agencies and the public with information about the environmental impacts of a proposed project and to "identify ways that environmental damage can be avoided or significantly reduced." (Guidelines §15002(a)(2)). If the project will have a significant effect on the environment, the agency may approve the project only if it finds that it has "eliminated or substantially lessened all significant effects on the environment where feasible" and that

any unavoidable significant effects on the environment are "acceptable due to overriding concerns." (Pub.Res.Code § 21081; 14 Cal.Code Regs. § 15092(b)(2)(A) & (B)).

While the courts review an EIR using an "abuse of discretion" standard, "the reviewing court is not to 'uncritically rely on every study or analysis presented by a project proponent in support of its position. A 'clearly inadequate or unsupported study is entitled to no judicial deference.'" (*Berkeley Jets*, 91 Cal. App. 4th 1344, 1355 (emphasis added), quoting, *Laurel Heights Improvement Assn. v. Regents of University of California*, 47 Cal. 3d 376, 391 409, fn. 12 (1988)). As the court stated in *Berkeley Jets*, 91 Cal. App. 4th at 1355:

> A prejudicial abuse of discretion occurs "if the failure to include relevant information precludes informed decisionmaking and informed public participation, thereby thwarting the statutory goals of the EIR process." (*San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (1994) 27 Cal. App. 4th 713, 722; *Galante Vineyards v. Monterey Peninsula Water Management Dist*. (1997) 60 Cal. App. 4th 1109, 1117; *County of Amador v. El Dorado County Water Agency* (1999) 76 Cal. App. 4th 931, 946).

B. Supplemental EIR

Recirculation of an EIR prior to certification is required "when the new information added to an EIR discloses: (1) a new substantial environmental impact resulting from the project or from a new mitigation measure proposed to be implemented (cf. Guidelines, § 15162, subd. (a)(1), (3)(B)(1)); (2) a substantial increase in the severity of an environmental impact unless mitigation measures are adopted that reduce the impact to a level of insignificance (cf. Guidelines, § 15162, subd. (a)(3)(B)(2)); (3) a feasible project alternative or mitigation measure that clearly would lessen the environmental impacts of the project, but which the project's proponents decline to adopt (cf. Guidelines, § 15162, subd. (a)(3)(B)(3), (4)); or (4) that the draft EIR was so fundamentally and basically inadequate and conclusory in nature that public comment on the draft was in effect meaningless." *Laurel Heights Improvement Assn. v. Regents of University of California* (1993) 6 Cal. 4th 1112, 1130, citing *Mountain Lion Coalition v. Fish & Game Comm'n* (1989) 214 Cal.App.3d 1043.

Significant new information requiring recirculation can include:

(1) A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.

(2) A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.

> (3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project, but the project's proponents decline to adopt it.
>
> (4) The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.

(14 Cal. Code Regs. § 15088.5(a)).

The DEIR fails to analyze significant environmental impacts pertaining to the Project and to fully consider available mitigation measures to address those impacts. A revised EIR is required to be prepared and recirculated to address these deficiencies.

IV. THE DEIR IMPROPERLY SEGMENTS THE PROJECT

A. Legal Standard

The courts have repeatedly held that "an accurate, stable and finite project description is the *sine qua non* of an informative and legally sufficient [CEQA document]." *County of Inyo v. City of Los Angeles*, 71 Cal.App.3d 185, 193 (1977). Thus, CEQA mandates "that environmental considerations do not become submerged by chopping a large project into many little ones -- each with a minimal potential impact on the environment -- which cumulatively may have disastrous consequences." *Bozung v. LAFCO*, 13 Cal.3d 263, 283-84 (1975); *City of Santee v. County of San Diego*, 214 Cal.App.3d 1438, 1452 (1989). Before undertaking a project, the lead agency must assess the environmental impacts of all reasonably foreseeable phases of a project and a public agency may not segment a large project into two or more smaller projects in order to mask serious environmental consequences. As the Court of Appeal stated:

> The CEQA process is intended to be a careful examination, fully open to the public, of the environmental consequences of a given project, **covering the entire project, from start to finish**…the purpose of CEQA is not to generate paper, but to compel government at all levels to make decisions with environmental consequences in mind.

Natural Resources Defense Council v. City of Los Angeles, 103 Cal.App.4th 268 (2002) (emphasis added).

In *County of Amador v. City of Plymouth*, 149 Cal. App. 4th 1089, 1095 (2007) an Indian tribe intended to build a large gaming development comprised of a hotel, restaurants, and bars, on land located in or adjacent to the city. The Court held that the

construction of public works, including a city road to the casino hotel, constituted a project within the scope of CEQA. *Id*. at 1100. The Court cited to the CEQA Guideline § 15378(a)(1) which states that the following is included in the term "project": "public works construction and related activities, clearing or grading of land [and] improvements to existing public structures…" *Id*. at 1100.

B. The DEIR Improperly Segments the Project By Failing to Include the Infrastructure as Part of the Project

The DEIR states:

> If the proposed project is constructed prior to the West Ridge project, ProLogis will install the infrastructure necessary to serve its project (e.g., roads, water, and sewer) and will be reimbursed by the City from the West Ridge developer at the time that project is constructed. If the West Ridge project is constructed first, ProLogis will contribute an appropriate amount to the City for a reimbursement account to help off-site improvement costs installed by the West Ridge project that serve the ProLogis project. The timing of improvements shall be coordinated by the City in cooperation with ProLogis and the West Ridge.

(DEIR, p. 3-11). Instead of including the roads, water, and sewer lines required to serve the ProLogis Project as part of the Project, the DEIR treats these infrastructure improvements as a separate project included in the cumulative projects list provided in Table 3.C: Cumulative Projects. (DEIR, p. 3-16). The City is improperly chopping the ProLogis Project into different segments, which is prohibited by CEQA because proper analysis of the whole project is thwarted. Like the casino road in *County of Amador v. City of Plymouth*, the roads, water, and sewer lines that will serve the ProLogis Project must be included as part of the Project and properly analyzed as part of the whole Project.

V. THE DEIR FAILS TO ANALYZE AND MITIGATE ALL POTENTIALLY SIGNIFICANT IMPACTS

An EIR must disclose all potentially significant adverse environmental impacts of a project. (Pub. Res. Code § 21100(b)(1); 14 Cal.Code Regs. § 15126(a); *Berkeley Jets*, 91 Cal. App. 4th 1344, 1354). CEQA requires that an EIR must not only identify the impacts, but must also provide "information about how adverse the impacts will be." (*Santiago County Water Dist. v. County of Orange* (1981) 118 Cal.App.3d 818, 831). The lead agency may deem a particular impact to be insignificant only if it produces rigorous analysis and concrete substantial evidence justifying the finding. (*Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal.App.3d 692).

CEQA requires public agencies to avoid or reduce environmental damage when "feasible" by requiring mitigation measures. (CEQA Guidelines § 15002(a)(2) and (3); See also, *Berkeley Jets*, 91 Cal. App. 4th 1344, 1354; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564). The EIR serves to provide agencies and the public with information about the environmental impacts of a proposed project and to "identify ways that environmental damage can be avoided or significantly reduced." (Guidelines §15002(a)(2)). If the project will have a significant effect on the environment, the agency may approve the project only if it finds that it has "eliminated or substantially lessened all significant effects on the environment where feasible" and that any unavoidable significant effects on the environment are "acceptable due to overriding concerns." (Pub.Res.Code § 21081; 14 Cal.Code Regs. § 15092(b)(2)(A) & (B)).

In general, mitigation measures must be designed to minimize, reduce, or avoid an identified environmental impact or to rectify or compensate for that impact. (CEQA Guidelines § 15370). Where several mitigation measures are available to mitigate an impact, each should be discussed and the basis for selecting a particular measure should be identified. (*Id.* at § 15126.4(a)(1)(B)). A lead agency may not make the required CEQA findings unless the administrative record clearly shows that all uncertainties regarding the mitigation of significant environmental impacts have been resolved.

CEQA requires the lead agency to adopt feasible mitigation measures that will substantially lessen or avoid the Project's potentially significant environmental impacts (Pub. Res. Code §§ 21002, 21081(a)), and describe those mitigation measures in the CEQA document. (Pub. Res. Code § 21100(b)(3); CEQA Guidelines § 15126.4). A public agency may not rely on mitigation measures of uncertain efficacy or feasibility. (*Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal.App.3d 692, 727 (finding groundwater purchase agreement inadequate mitigation measure because no record evidence existed that replacement water was available)). "Feasible" means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social and technological factors. (CEQA Guidelines § 15364). To demonstrate economic infeasibility, "evidence must show that the additional costs or lost profitability are sufficiently severe as to render it impractical to proceed with the project." (*Citizens of Goleta Valley v. Board of Supervisors* (1988) 197 Cal.App.3d 1167, 1181). The EIR must provide evidence and analysis to show project cannot be economically implemented. (*Kings County, supra*, 221 Cal.App.3d at 734-737). This requires not just cost data, but also data showing insufficient income and profitability. (*See Burger v. County of Mendocino* (1975) 45 Cal.App.3d 322, 327 (infeasibility claim unfounded absent data on income and expenditures showing project unprofitable); *San Franciscans Upholding the Downtown Plan v. City and County of San Francisco* (2002) 102 Cal.App.4th 656, 694 (upholding infeasibility finding based on analysis of costs, projected revenues, and investment requirements)). Mitigation measures must be fully enforceable through permit conditions, agreements, or other legally binding instruments. (*Id.* at § 15126.4(a)(2)).

A lead agency may not conclude that an impact is significant and unavoidable without requiring the implementation of all feasible mitigation measures to reduce the impacts of a project to less than significant levels. (CEQA Guidelines §§ 15126.4, 15091).

A. The DEIR Fails to Adequately Mitigate for the Loss of Farmland

1. Preservation Is an Appropriate Mitigation Measure for the Loss of Agricultural Resources

Preservation can be used as a tool to mitigate impacts of urbanizing land and it is encouraged and supported by legislative pronouncements and case law. For example,

> [s]ee the following legislative pronouncements to the effect that conversion of agricultural land is of significant concern, and that the preservation of agricultural land is significant goal of the state. Gov. Code, § 51220 (Williamson Act findings that agricultural preservation is valuable and necessary); Civ. Code, § 815 (legislative declaration that preservation of agricultural lands "is among the most important environmental assets of California"); Pub. Resources Code, § 10200 *et seq.* (California Farmland Conservancy Program Act (formerly the Agricultural Land Stewardship Program of 1995), promoting the establishment of agricultural easements as a means to preserve agricultural land); Pub. Resources Code, §§ 21031.1, 21061.2, 21095 (CEQA provisions requiring the Resources Agency to take steps it to ensure that the environmental effects of agricultural land conversion are quantitatively and consistently considered in the environmental review process); Stats. 1993, ch. 812, § 1, subd. (d) (declaring a legislative intent that CEQA should play an important role in the preservation of agricultural lands).
>
> In *Mira Mar* [*Mobile Community v. City of Oceanside* (4th Dist. 2004) 119 Cal. App. 4th 477 [14 Cal. Rptr. 3d 176]], the court heard a challenge to the City of Oceanside's approval of a condominium project on 7.5 acres of private property. The project would cause the loss of about .86 acres of coastal sage scrub, which was identified as a significant impact to a sensitive resource. The EIR required the applicant to mitigate for this loss at a ratio of 3 to 1 (or 2.58 acres of mitigation for .86 acres of last habitat). In implementing this mitigation measure, the city required the preservation of .65 acres of undisturbed coastal sage scrub, the restoration and preservation of 2.3 acres of disturbed coastal sage scrub, and the creation of .63 acres of new coastal sage scrub on site. Petitioners argued that this mitigation was inadequate because *preservation* of coastal sage scrub does not mitigate for lost habitat, making the measure "illusory and

> inadequate." 119 Cal. App. 4th 477, 495. The Court of Appeal disagreed, citing CEQA Guildelines section 15370, as well as the opinions of various resource agencies, for the proposition that preservation can be a feasible means of reducing or eliminating the impact of lost habitat.
>
> While the *Mira Mar* case deals specifically with biological and habitat resources, the reasoning of this case seems to have more general applicability to mitigation for lost resources, including agricultural resources.

(Guide to CEQA, Michael H. Remy, et. al., eleventh edition, p. 549-550).

2. The DEIR Fails to Adopt Appropriate Mitigation Measures for the Loss of Farmland

Approximately 82.5 acres of the Project site is designated as Prime Farmland. (DEIR, p. 4.2-6). The DEIR states that "[b]ecause Prime Farmland is a finite resource, its conversion to a non-agricultural use is significant." (DEIR, p. 4.2-6). The DEIR identifies several mitigation measures including mitigation measures discussed in the City General Plan EIR:

- Enrolling productive agricultural land, not presently under contract, under a Williamson Act Contract;
- Providing protection to ongoing agricultural operations from complaints and nuisance complaints from adjacent new development;
- Protecting productive agricultural land subject to conversion through the purchase of or transfer of its development rights;
- Purchasing conservation easements on existing agricultural land to ensure that the land is never converted to urban uses; and
- Donating funds to a regional or statewide program that promotes and implements the use of agricultural land conservation easements.

(DEIR, p. 4.2-7 - 4.2-8). However, the DEIR states that

> [t]he potential mitigation measures identified by the City's General Plan have been deemed infeasible by the property owner under current economic conditions. In addition, supplementary analysis of the project

> site and local economic conditions indicates that continued citrus production and/or the raising of row crops would not be economically feasible on the project site (see Appendix L).

(DEIR, p. 4.2-8) (emphasis added).

The conclusion that the mitigation measures are infeasible is completely unsupported. The DEIR states the City General Plan EIR mitigation measure of enrolling productive land under Williamson Act contracts is infeasible because the "contracts are entered into voluntarily by property owners" and these contracts would "result only in temporary contracts at any time after the ten-year contract period ends." (DEIR, p. 4.2-8). Mitigation measures are designed to minimize significant environmental impacts, not necessarily to eliminate them. (Pub. Res. Code § 21100(b)(3); 14 Cal. Code Regs. § 15126.4(a)(1)). The minimum term for a Williamson Act contract is 10 years, however jurisdictions have the option of making them longer. (*Williamson Act Program - Basic Contract Provisions*, State of California Department of Conservation, available at http://www.conservation.ca.gov/dlrp/lca/basic_contract_provisions/Pages/index.aspx#what is a williamson act contract). Enrolling land into Williamson Act contracts would minimize the environmental impacts of converting Prime Farmland to warehouses.

In evaluating the feasibility of the mitigation measures: (1) purchasing conservation easements and (2) donating funds to a regional or statewide program, the DEIR states

> The purchase or transfer of development rights, purchase of conservation easements, or donation of funds to assist in the conservation of agricultural land would need to be implemented to ensure the preservation of agricultural land. As stated previously, the City anticipates the conversion of agricultural land within the City and does not set aside land for permanent preservation. The City expects that the majority of the land within the City will be converted to urban uses, although some agriculture will continue as interim uses, as allowed by the City's Development Code for all zoning categories.

(DEIR, p. 4.2-8 - 4.2-9). These "reasons" are flawed because the identified mitigation measure was to donate funds to *regional* or *statewide* programs that promote and implement the use of agricultural land conservation easements. The "reasons" do not address why donating funds to regional or statewide programs is infeasible.

A supplemental EIR is required to analyze and require implementation of these feasible mitigation measures to reduce the Project's impacts on agricultural land. The fact that the measures are set forth in the City's own General Plan itself makes a prima facie case that the measures are feasible and should be implemented. If the City

concludes that the measures are infeasible, then it must provide substantial evidence to demonstrate infeasibility. The EIR must provide evidence and analysis to show project cannot be economically implemented. (*Kings County, supra*, 221 Cal.App.3d at 734-737). This requires not just cost data, but also data showing insufficient income and profitability. (*See Burger v. County of Mendocino* (1975) 45 Cal.App.3d 322, 327 (infeasibility claim unfounded absent data on income and expenditures showing project unprofitable); *San Franciscans Upholding the Downtown Plan v. City and County of San Francisco* (2002) 102 Cal.App.4th 656, 694 (upholding infeasibility finding based on analysis of costs, projected revenues, and investment requirements)). The EIR is devoid of any such evidence and is therefore legally inadequate.

B. The DEIR Fails to Adequately Analyze Hazards and Hazardous Materials and Establishes an Erroneous Baseline

1. CEQA Baseline Standard

Every CEQA document must start from a "baseline" assumption. The CEQA "baseline" is the set of environmental conditions against which to compare a project's anticipated impacts. *Communities for a Better Environment v. So Coast Air Qual. Mgmnt. Dist*. (2010) 48 Cal. 4th 310, 321. Section 15125(a) of the CEQA Guidelines (14 C.C.R., § 15125(a)) states in pertinent part that a lead agency's environmental review under CEQA:

> …must include a description of the physical environmental conditions in the vicinity of the project, as they exist at the time [environmental analysis] is commenced, from both a local and regional perspective. This environmental setting will normally constitute the baseline physical conditions by which a Lead Agency determines whether an impact is significant.

(See, *Save Our Peninsula Committee v. County of Monterey* (2001) 87 Cal.App.4th 99, 124-125 ("*Save Our Peninsula*"). As the court of appeal has explained, "the impacts of the project must be measured against the 'real conditions on the ground,'" and not against hypothetical permitted levels. (*Save Our Peninsula*,87 Cal.App.4th 99, 121-123). As the court has explained, using such a skewed baseline "mislead(s) the public" and "draws a red herring across the path of public input." (*San Joaquin Raptor Rescue Center v. County of Merced* (2007) 149 Cal.App.4th 645, 656; *Woodward Park Homeowners v. City of Fresno* (2007) 150 Cal.App.4th 683, 708-711).

2. Residual Pesticides in the Soil May Pose Health Risks to Workers and Nearby Residents

According to the DEIR, 57 acres of the Project site are used to grow grapefruit and 36 acres of the Project site are used for hay and alfalfa production. (DEIR, p. 4.2-1).

The DEIR and supporting documents fail to provide any specific details on the types of pesticides that have been used on the Project site in association with these agricultural operations and therefore the DEIR fails to adequately describe the environmental setting for the Project. According to Mr. Hagemann,

> [o]ur review has shown known and potential pesticide use at the Project site as follows:
>
> - Data available online from the California Department of Pesticide Regulation show that 2,4-D, 2-Ethylhexyl Ester was used on the Project site.[2,3] Occupational exposure to 2,4-D, 2-Ethylhexyl Ester can occur via inhalation or dermal contact and can result in skin irritation, respiratory failure, hyperventilation, and pulmonary enemas.[4]
> - Organochlorine pesticides DDE and DDT were detected in soil samples collected at the Project site[5], indicating past use. Use of organochlorine pesticides in the area is common: review of the Department of Toxic Substances Control's (DTSC) Envirostor database shows that the surrounding lands have been surveyed for organochlorine pesticides, DDE and DDT.[6] These pesticides can persist in soil for hundreds of years despite being banned in the 1970s.[7] Exposure to DDT can result in headaches, nausea, and convulsions.[8] The U.S. EPA identifies DDT and DDE as probable human carcinogens.[9]
> - The EPA states that soils at fruit orchards, such as the grapefruit orchard on the Project site, may contain high levels of arsenic from application as a pesticide.[10] Another chemical used on fruit orchards is lead arsenate, a very persistent pesticide.[11] Arsenic is a known human carcinogen and even short-term inhalation of arsenic

[11] http://www.ncbi.nlm.nih.gov/pmc/articles/PMC1551991/

dust can cause gastrointestinal effects[12] while lead is known to cause neurotoxicological effects.[13]

Pesticide use at the Project site was not disclosed in the DEIR and the detection of pesticide residuals in soil were not described in the Hazards and Hazardous Materials section.

Failure to disclose the presence of pesticide residuals in Project site soils may pose significant health risks to construction workers. Construction of the Project requires grading and the disturbance of subsurface soils and removal of citrus groves (DEIR, p. 4.7-21). During earthmoving activities, construction workers will be exposed, via inhalation of dust and dermal contact, to Project site soils which may contain harmful levels of pesticide residuals associated with agricultural activities on the site. To protect worker safety, Project site soils must be sampled for pesticides. Sampling results should be compared to health-protective regulatory screening levels such as U.S. EPA Regional Screening Levels[14] and California Human Health Screening Levels.[15]

Soil sampling results should also be evaluated for the protection of nearby residents, located 50 feet from the southern boundary and 200 feet from the northern boundary of the Project site (DEIR, p. 4.3-6). Inhalation of pesticides has been linked to asthma in recent research.[16,17] A report prepared by the California Department of Health identifies pesticides as an asthma trigger.[18] Offsite receptors, including any children living in the neighboring residences, may be exposed to pesticide residuals via dust generated during Project construction.

Construction activities, such as grading and excavation of soils, may generate dust that contains pesticides in concentrations that are harmful to the health of workers and nearby residents and which may act as an asthma trigger. Project site soils should be sampled and results should be compared to human health screening levels. A revised DEIR should be prepared to disclose the results of sampling and include any necessary mitigation to reduce impacts to the health of construction workers and nearby residents.

3. The Phase I Environmental Site Assessments Completed for the Project Site are Outdated and Inadequate

According to Mr. Hagemann,

The DEIR relies on the findings from two Phase I Environmental Site Assessments (ESAs) that were completed in October and November 2003, nearly nine years ago. The Phase I ESAs surveyed 121 acres of the 123-acre Project site. The Applicant purchased the Project site more than five years ago.[19] A Phase I ESA, according to the U.S. EPA, must be conducted within one year of the acquisition of the property and on-site visual inspections must be completed within 180 days prior to acquiring ownership of the property.[20]

Because the Phase I ESAs are dated and omit two acres of the Project site, they cannot be used to evaluate conditions that are potentially hazardous to construction workers and future site personnel. Therefore, the DEIR's analysis of the Project site based on these Phase I ESAs is inadequate.

Review of Google Earth images shows that the Project site has been used for ongoing agricultural operations since the Phase I ESAs were completed in 2003. Limited pesticide sampling was conducted during the Phase I ESAs (a total of 8 soil samples for a 123-acre Project site) but because the samples were collected nine years ago and because they do not reflect continued agricultural use, the results are reflective of current site conditions.

The Phase I ESAs cover 121 acres of the 123-acre Project site. We have created a map to show the areas of the Project site surveyed by the two 2003 Phase I ESAs and the boundaries for the current Project site (Attachment A). As the map shows, not all areas of the current Project site were included in the 2003 Phase I ESAs' site assessments.

The DEIR fails to establish an adequate environmental setting for the Project site because it relies on Phase I ESAs that are outdated and do not cover the entire Project site. A revised DEIR is required, including a new Phase I ESA, to evaluate the Project site's current environmental conditions.

[19] http://www.pe.com/local-news/riverside-county/moreno-valley/moreno-valley-headlines-index/20120726-moreno-valley-officials-seek-comments-on-prologis-project.ece
[20] http://www.epa.gov/brownfields/aai/aaicerclafs.pdf

4. The DEIR Fails to Disclose the Status of an Underground Storage Tank

According to Mr. Hagemann,

> A 13,400 gallon underground storage tank (UST), abandoned in the 1950s, was removed from the Project site in 2004 (Appendix F, p. 3/191). The Phase I ESA recommended an additional investigation to be conducted in the area of the former UST (Appendix F, p. 10/191). Accordingly, a permit for removal of the UST was submitted to the Riverside County's Department of Environmental Health in December 2003 and soil samples around the area of the UST were analyzed in 2004. However, the DEIR and supporting documents did not include any documentation that the UST was properly closed by the Riverside County Department of Environmental Health. If the UST removal was not approved, an Underground Storage Tank Closure Application and Permit[21], per the Riverside County Department of Environmental Health Guidelines,[22] must be submitted.

The DEIR fails to establish an adequate baseline because it does not provide the status of a 13,400 gallon UST. A revised DEIR is required to disclose this important information (i.e., whether closure was granted by the Riverside County Department of Environmental Health).

C. The DEIR Fails to Adequately Analyze Greenhouse Gas Emissions

The DEIR states that the Project's operational greenhouse gas (GHG) emissions, before mitigation, are estimated to be 79,000 metric tons of CO_2e/year (MT CO_2e/yr) which exceed the SCAQMD threshold of 10,000 MT CO_2e/yr and are therefore considered significant. (DEIR, p. 4.13-19). The Project's GHG emissions exceed the SCAQMD threshold by nearly eight times. After mitigation, the DEIR states that GHG emissions will be less than significant. (DEIR, p. 4.13-21). This conclusion is completely unsupported. The DEIR fails calculate what the Project's GHG emissions will be after the mitigation measures are implemented. In fact, the DEIR and supporting documents, including a GHG Study (Appendix B), fail to provide any evidence that the proposed mitigation measures will reduce GHG emissions by a factor of eight.

According to Mr. Hagemann,

---

[21] http://www.rivcoeh.org/opencms/system/galleries/download/Environmental-Health/HMM/UST_Closure_App.pdf
[22] http://www.rivcoeh.org/opencms/system/galleries/download/Environmental-Health/HMM/Closure_by_removal_UST.pdf

A revised DEIR should be prepared to show the efficiency of the Project's proposed mitigation measures in reducing greenhouse gases. If these measures do not account for an eight-fold reduction in the Project's estimated GHG levels, additional mitigation measures (listed below) that are routinely considered in other CEQA projects should be implemented:

- Require preparation of a traffic control plan;
- Demonstrate proper inspection and maintenance of construction equipment;
- Implement a carpool program for construction workers;
- Employ a construction site manager to verify that engines are properly maintained and keep a maintenance log;
- Configure construction parking to minimize traffic interference;
- Consolidate truck deliveries when possible;
- Provide dedicated turn lanes for movement of construction trucks and equipment on and off site;
- Suspend use of all construction equipment operations during second stage smog alerts;
- Establish a staging zone for trucks that are waiting to load or unload material at the work zone in a location where diesel emissions from the trucks will have minimum impact on abutters and the general public;
- Locate construction equipment away from sensitive receptors such as fresh air intakes to buildings, air conditioners and operable windows;
- Require all diesel trucks used by construction contractor(s) at the site, or for on-road hauling of construction material, to be post-1996 models; Diesel portable generators less than 50 hp shall not be allowed at the construction site;
- Use of hybrid and fuel efficient construction equipment and support vehicles (e.g., pick-up trucks);
- Use of grid electricity for smaller equipment such as saws, pumps, and welders;[23]
- Reduction in vehicle miles travelled in construction crew commutes through trip carpooling, trip reduction, providing bus service for crews from work sites to carpool parking areas, and in providing incentives to carpool; and
- Use of a Heavy-Duty Off-Road Vehicle Plan to ensure compliances with construction mitigation measures (e.g., hourly meters on equipment, documenting the serial number, horsepower,

[23] http://www.capcoa.org/wp-content/uploads/2010/11/CAPCOA-Quantification-Report-9-14-Final.pdf, p. 47

> manufacture age, fuel, etc. of all onsite equipment and daily logging of the operating hours of the equipment).[24]

A supplemental EIR should be prepared that calculates the Project's GHG emissions after implementation of all feasible mitigation measures. The supplemental EIR should analyze all mitigation measures set forth in the GHG Guidance Document published by the California Attorney General, Addressing Climate Change at the Project Level (see attached exhibit, also available at http://ag.ca.gov/globalwarming/pdf/GW_mitigation_measures.pdf). If GHG impacts remain significant after implementation of all feasible mitigation measures, then the EIR must acknowledge that the impacts are significant an unavoidable, and the City must adopt a statement of overriding considerations.

D. The DEIR Fails to Adequately Analyze Impacts to Air Quality

1. The DEIR Underestimates the Potential Particulate Emissions for the Construction Phase of the Project

Computer modeling (e.g., the California Air Resource Board's ("CARB's") Urban Emission ("URBEMIS") and the California Emissions Estimator Model ("CalEEMod")) is used to estimate emissions of criteria pollutants during construction and operational phases of projects. The South Coast Air Quality Management District ("SCAQMD") permits the use of the outputs from both the URBEMIS and CalEEMOD in air quality analyses. According to Dr. Clark, there are significant differences between these two models that "must be highlighted in the DEIR." In pertinent part, Dr. Clark states:

> The changes in the method used to estimate construction impacts from the proposed project by using the CalEEMod model instead of the URBEMIS model include:
>
> - Failure to account for wind-blown fugitive dust[25]. According to the July, 2011 CalEEMod Technical Paper, wind-blown fugitive dust is not calculated in CalEEMod. For sites as large as the proposed project site, this can result in significant quantities of particulate matter being released.
> - SCAQMD's surveys of construction sites were limited to sites of 35 acres or less. For projects larger than 35 acres the data was extrapolated by increasing the number of construction days but not increasing the number of construction equipment pieces used on a

[24] Ibid., p. 431
[25] CalEEMod. Technical Paper: Methodology Reasoning and Policy Development of the California Emission Estimator Model. July, 2011. Pg 4.

given day. The impact is to reduce the construction PM estimates for the site as compared to URBEMIS[26].

- The acreage to be based upon Walker's Building Estimator's Reference Book. Grading in URBEMIS is based upon 25% of total project acreage in one day. The impact of this change is to decrease PM emissions from grading in the CalEEMod[27].

A revised DEIR should be prepared to highlight the differences between the two models so that the potential impacts are adequately analyzed.

2. The DEIR Fails to Accurately Compare Construction Emissions to Daily Construction Significant Thresholds

According to Dr. Clark, the CalEEMod results were not presented properly. The model shows CEQA significance levels were exceeded as well as South Coast Air Quality Management District Localized Significance Thresholds were exceeded. In pertinent part, Dr. Clark states:

> Unlike the operational emissions from most projects, which are typically more or less continuous, emissions from construction sites are highly variable depending on the type of construction that is being performed. For example, grading results in large quantities of fugitive dust and combustion emissions from diesel-powered equipment. Short-term emissions during the various construction phases can be considerable and may result in degradation of local and regional air quality and severe health effects.
>
> To determine whether short-term emissions may result in degradation of local and regional air quality and severe health effects, it is common practice for lead agencies to compare project emissions to quantitative significance thresholds developed by local air districts as a screening tool for CEQA review. Thresholds of significance for construction emissions are typically expressed on a short-term basis, *i.e.* daily or hourly basis to adequately capture impacts due to the high variability of emissions during different construction stages.
>
> Table 1 presents a summary of short-term emissions thresholds developed by SCAQMD and other air districts for assessing impacts on air quality from construction projects.

[26] CalEEMod. Technical Paper: Methodology Reasoning and Policy Development of the California Emission Estimator Model. July, 2011. Pg 5.

EDCAPCD = El Dorado County Air Pollution Control District, CEQA Guide, February 2002;
SLOCAPCD = San Louis Obispo County Air Pollution Control District, CEQA Air Quality Handbook, December 2009.
MBUAPCD = Monterey Bay Unified Air Pollution Control District, CEQA Air Quality Guidelines, June 2004,
FRAQMD = Feather River Air Quality Management District, http://www.fraqmd.org/CEQA_Thresholds.htm;
SMAQMD Sacramento Metropolitan Air Quality Management District, Guide to Air Quality Assessment, July 2004;
YSAQMD, Yolo-Solano Air Quality Management District, Air Quality Handbook, Guidelines for Determining Air Quality Thresholds of Significance and Mitigation Measures for Proposed Development Projects that Generate Emissions from Motor Vehicles, revised 2002

A review of the CalEEMod analysis for the project shows that the mitigated construction emissions of ROG and PM2.5 exhaust (a surrogate for diesel particulate emissions) are in excess of the CEQA significance thresholds listed above. During Year 2013, ROG and PM2.5 exhaust emissions are estimated to be 368.03 lbs/day and 7.95 lbs/day, respectively.

In addition to the Significant Thresholds above, SCAQMD recommends the use of Localized Significance Thresholds (LSTs) to determine potential impacts to receptors near projects. According to the Air Quality Analysis prepared by the proponent, Table I of the Air Quality Analysis shows that the emissions of the pollutants on the peak day of construction are below the SCAQMD LST. In this table the proponent uses the emission estimates from the grading phase of the construction. The proponent inaccurate asserts that the emission levels will be below the LST values.

Table 2:
Construction LST Impacts from Air Quality Analysis

Emission Sources	Pollutant Emissions, lbs/day			
	NOx	CO	PM_{10}	$PM_{2.5}$
On-Site (grading) Emissions	104	55	8.4	6.3
LST Threshold	270	1,577	13	8
Significant Emissions?	No	No	No	No

A review of the CalEEMod analysis shows that the highest emission values are not associated with the grading phase. In Section 2.0 Emission Summary of the CalEEMod analysis presented in the Air Quality Analysis the construction impacts are listed as:

Table 3:
Construction LST Impacts from CalEEMod Output

Emission Sources	Pollutant Emissions, lbs/day			
	NOx	CO	PM_{10}	$PM_{2.5}$
Mitigated Construction Emissions	139.84	166.77	29.2	8.28
LST Threshold	270	1,577	13	8
Significant Emissions?	No	No	**Yes**	**Yes**

The Proponent's analysis of air quality impacts clearly fails to accurately describe the impacts of the emissions on the receptors closest to the project site. Based on my expert opinion, applicable significance thresholds, and the CalEEMod analysis performed by the proponent, I conclude that the Project will have significant adverse impacts from construction air emissions of fugitive dust, ROG, and diesel emissions. The lead agency must re-evaluate the construction emissions and incorporate a phased approach to estimate the true impacts of construction activities on air quality, and propose all feasible mitigation measures to reduce these significant emissions, in a RDEIR.

3. The DEIR Fails to Consider Health Risks From Contaminated Dust

According to Dr. Clark:

Residual contaminants in soils at the site may be entrained in dust generated during construction activities. The release of residual contamination is a potentially significant impact, given the past use of the site for agricultural production. According to the California Department of Toxic Substances Control August 2002 Interim Guidance for Sampling Agricultural Fields for School Sites (known sensitive receptors), "the most commonly detected pesticides have been DDT and it's derivatives DDD and DDE, toxaphene, dieldrin, and aldrin. Of these pesticides, toxaphene has been the major pesticide driving unacceptable levels of risk requiring remediation by soil removal." Given the volume of soils to be graded at each of the sites it is imperative to understand whether particulate matter generated at the sites will pose a potential health risk to sensitive receptors in the vicinity of each site.

According to DTSC, "the guidance is applicable to agricultural land that is currently under cultivation with row, fiber or food crops, orchards, or pasture. It is also applicable to fallow and former agricultural land that is no longer in production and has not been disturbed beyond normal disking and plowing practices. Each field of the same crop is assumed to have been watered, fertilized, and treated with agricultural chemicals to the same degree across the field. Because of this homogeneous application, contaminant levels are expected to be similar at any given location within the field."

There is no indication of a sampling and analysis plan in the DEIR, or the Project documents provided by the lead agency, a serious deficiency in the documents. Prior to issuing a DEIR for the project, the Proponent should be required to complete a sampling and analysis plan to confirm or rule out the possibility of the presence of residual contaminants at the site. Identifying residual pesticides or other contaminants in soils at the site prior to construction activities will provide an opportunity for the Proponent to remove/mitigate the potential exposure of sensitive receptors within the vicinity of the sites. In the absence of any sampling or analysis, and given the past use of the Project site, I conclude that there is at least a fair argument that the Project may have significant impacts related to residual contaminants at the site.

4. The DEIR Fails to Properly Identify and Address the Project's Operational Air Quality Impacts

The DEIR states, without any evidentiary support, that the project's emissions of criteria pollutants will not result in a considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard. According to Dr. Clark,

> During the operational phase of the project the project will have the potential to generate significant quantities of criteria pollutants (NO_x, SO_x, Ozone precursors, PM). According to Table 3-1 of the most recent BAAQMD CEQA guidance, a construction of a 259,000 square foot light industrial or warehouse operation will typically violate NOx construction thresholds and GHG operational thresholds. The proposed Project's 2,000,000 square feet plus of warehouse and manufacturing buildings are nearly 8 times the size of the screening threshold, ensuring a violation of local air quality thresholds. I therefore conclude that the Project will have significant NOx and GHG emissions during Project operations.
>
> The air quality impacts from the traffic associated with a 2,000,000 square foot facility are significant. Typically the impacts are quantified by the number of vehicle trips per day. In the case of the proposed project, the primary concern will be the number of truck trips per day. A truck trip is one round trip (one trip segment to a site and one trip segment away from a site).
>
> According to one source, Bluffstone and Ouderkirk[28], a 500,000 square feet facility on 50 acres, will on average have 350 truck trips per day (or 700 trip segments) associated with its development. This figure is proportionate to estimates for an AMB Property Corporation center in Redlands (1,000 truck trips for a 1.3 million square feet structure); Wal-Mart distribution centers in Pueblo, Colorado (700 truck trips per day for an 880,000 square feet facility), Connecticut, and Delaware (both 1,000 truck trips per day for 1.2 million square feet structures); and a grocery distribution center in New York (Boas, 2002; Gasiewski, 2004; Hernandez, 2005; Pueblo Chieftain, 2004; Sholl, 2004).
>
> Estimates from other sources indicate approximately 1 truck per 1,000 square feet of the building, which means that the proposed project would require 1,000 trucks per day (or 1,000 trip segments per day) for the warehouse segment of the Project. The number of truck trips could be

[28]Bluffstone and Ouderkirk. 2007. Warehouses, trucks, and [PM.sub.2.5]: human health and logistics industry growth in the eastern Inland Empire. Contemporary Economic Policy 25(1):

higher at a new, more efficient facility where more inventory is moved per day. Without proper modeling of the emissions from these additional vehicles the impacts on the environment and the citizens of Moreno Valley is unknown. It is clear that the size of the Project will have significant NOx and GHG emissions during Project operations.

A proper cumulative impact analysis is vital for an environmental analysis because the full environmental impact of a proposed project cannot be gauged in a vacuum. One of the most important environmental lessons that has been learned is that the environmental damage often occurs incrementally from a variety of small sources with which they interact. The increase in PM in the region, even for short periods of time, will only exacerbate the already serious air quality issues in the region.

5. The DEIR Fails to Disclose Impacts to Offsite Receptors

The Project is located in the South Coast Air Basin and Riverside County,[29] both of which are designated non-attainment for PM10 and ozone. (DEIR, p. 4.3-6). According to Mr. Hagemann,

> [s]ignificant emissions of PM10 and ozone and contributing factors such as NOx and ROG will lead to a worsening of regional air quality. The Project's estimates of construction emissions need to be properly disclosed and mitigated to ensure that the Project has a less than significant impact on regional air quality.
>
> *Estimates and impacts of project's construction and operational emissions*
> Project construction and operation will result in significant emissions of ROG, NOx, and PM10 even after mitigation (DEIR, pp. 4.3-29, 4.3-34).
>
> Construction emissions
> The DEIR estimates that the Project's construction emissions of NOx and ROG will be significant as they exceed the SCAQMD thresholds of 100 lbs/day and 75 lbs/day, respectively (DEIR, p. 4.3-23) and identifies mitigation measures to reduce the Project's emissions (DEIR, pp. 4.3-23 – 4.3-29). Even with mitigation, the Project's emissions of NOx and ROG will still exceed SCAQMD thresholds and therefore are considered significant (DEIR, p. 4.3-29).
>
> Operational emissions
> The DEIR estimates that the Project's emissions of ROG, NOx, and PM10 from operational activities will be significant as they exceed the SCAQMD

[29] http://www.epa.gov/oaqps001/greenbk/ancl.html

thresholds of 55 lbs/day, 55 lbs/day, and 150 lbs/day, respectively (DEIR, p. 4.3-33). The DEIR proposes mitigation measures to reduce the Project's emissions (DEIR, pp. 4.3-33 – 4.3-34) but, even with mitigation, the Project's emissions will still exceed SCAQMD thresholds and therefore are considered significant (DEIR, p. 4.3-34).

Gaseous particles such as NOx can react in the atmosphere to form PM10.[30,31] Because Riverside County and the South Coast Air Basin are both designated non-attainment for PM10, significant emissions of NOx can lead to a further degradation of regional air quality. NOx emissions can also react to produce ground-level ozone.[32] Exposure to NOx emissions and its products (ozone and PM10) can lead to the airway inflammation and can cause or exacerbate conditions such as emphysema and bronchitis.[33]

ROG can react to form ozone and contributes to smog formation.[34,35] Exposure to ozone can result in coughing, throat irritation, and chest pain, burning, and discomfort.[36] Smog exposure can lead to sneezing, nausea, coughing, headaches, and chest constriction.[37] A study published in the New England Journal of Medicine concluded that the risk of dying from respiratory diseases is three times higher in areas of concentrated ozone.[38]

Exposure to PM10 can cause bronchitis, increase the number and severity of asthma attacks, damage to lung tissue, and even premature death.[39] Research identifies that dust from construction is a major contributor to PM10 and that PM10 exposure is associated with asthma.[40] Inhalation of PM10 can exacerbate asthma especially in children who are susceptible to higher risks from PM10 exposure.[41]

[41] http://www.co.imperial.ca.us/airpollution/attainment%20plans/final%20ic%202009%20pm10%20sip%20document.pdf

The Project will have significant emissions of ROG, NOx, and PM10. Because Riverside County and the South Coast Air Basin are designated non-attainment areas for ozone and PM10, Project construction and operation will further degrade regional air quality. Exposure to ROG, NOx, and PM10 has adverse health effects and can impact offsite receptors, especially children in the nearby residences – a significant and undisclosed public health impact that the DEIR does not consider.

A revised DEIR should be prepared to disclose impacts to offsite receptors from Project construction and operation. Additional mitigation measures must be implemented to ensure that Project emissions of ROG, NOx, and PM10 are reduced to the maximum extent feasible.

6. The DEIR Fails to Adequately Analyze Cumulative Impacts

1. Legal Standard

An EIR must discuss significant cumulative impacts. CEQA Guidelines section 15130(a). This requirement flows from CEQA section 21083, which requires a finding that a project may have a significant effect on the environment if "the possible effects of a project are individually limited but cumulatively considerable…'Cumulatively considerable' means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects." "Cumulative impacts" are defined as "two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts." CEQA Guidelines section 15355(a). "[I]ndividual effects may be changes resulting from a single project or a number of separate projects." (CEQA Guidelines section 15355(a)).

"The cumulative impact from several projects is the change in the environment which results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects. Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time." (*Communities for a Better Environment v. Cal. Resources Agency ("CBE v. CRA")*, (2002) 103 Cal.App.4th 98, 117). A legally adequate cumulative impacts analysis views a particular project over time and in conjunction with other related past, present, and reasonably foreseeable probable future projects whose impacts might compound or interrelate with those of the project at hand. "Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time." (CEQA Guidelines § 15355(b)).

As the court stated in *CBE v. CRA,* 103 Cal. App. 4th at 114:

> Cumulative impact analysis is necessary because the full environmental impact of a proposed project cannot be gauged in a vacuum. One of the most important environmental lessons that has been learned is that environmental damage often occurs incrementally from a variety of small sources. These sources appear insignificant when considered individually, but assume threatening dimensions when considered collectively with other sources with which they interact.

(Citations omitted).

In *Kings County Farm Bureau v. City of Hanford,* 221 Cal.App.3d at 718, the court concluded that an EIR inadequately considered an air pollution (ozone) cumulative impact. The court said: "The EIR concludes the project's contributions to ozone levels in the area would be immeasurable and, therefore, insignificant because the [cogeneration] plant would emit relatively minor amounts of [ozone] precursors compared to the total volume of [ozone] precursors emitted in Kings County. The EIR's analysis uses the magnitude of the current ozone problem in the air basin in order to trivialize the project's impact." The court concluded: "[t]he relevant question to be addressed in the EIR is not the relative amount of precursors emitted by the project when compared with preexisting emissions, but whether any additional amount of precursor emissions should be considered significant in light of the serious nature of the ozone problems in this air basin."[42] The *Kings County* case was reaffirmed in *CBE v. CRA,* 103 Cal.App.4th at 116, where the court rejected cases with a narrower construction of "cumulative impacts."

Similarly, in *Friends of Eel River v. Sonoma County Water Agency,* (2003) 108 Cal. App. 4th 859, the court held that the EIR for a project that would divert water from the Eel River had to consider the cumulative impacts of the project together with other past, present and reasonably foreseeable future projects that also divert water from the same river system. The court held that the EIR even had to disclose and analyze projects that were merely proposed, but not yet approved. The court stated, CEQA requires "the Agency to consider 'past, present, and probable future projects producing related or cumulative impacts . . . .'" (Guidelines, § 15130, subd. (b)(1)(A)). The Agency must interpret this requirement in such a way as to 'afford the fullest possible protection of the environment.'" (*Id.*, at 867, 869). The court held that the failure of the EIR to

[42] *Los Angeles Unified v. City of Los Angeles*, 58 Cal.App.4th at 1024-1026 found an EIR inadequate for concluding that a project's additional increase in noise level of another 2.8 to 3.3 dBA was insignificant given that the existing noise level of 72 dBA already exceeded the regulatory recommended maximum of 70 dBA. The court concluded that this "ratio theory" trivialized the project's noise impact by focusing on individual inputs rather than their collective significance. The relevant issue was not the relative amount of traffic noise resulting from the project when compared to existing traffic noise, but whether any additional amount of traffic noise should be considered significant given the nature of the existing traffic noise problem.

analyze the impacts of the project together with other proposed projects rendered the document invalid. "The absence of this analysis makes the EIR an inadequate informational document." (*Id.,* at 872).

The Court in *Citizens to Preserve the Ojai v. Bd. of Supervisors,* 176 Cal.App.3d 421 (1985), held that an EIR prepared to consider the expansion and modification of an oil refinery was inadequate because it failed to consider the cumulative air quality impacts of other oil refining and extraction activities combined with the project. The court held that the EIR's use of an Air District Air Emissions Inventory did not constitute an adequate cumulative impacts analysis. The court ordered the agency to prepare a new EIR analyzing the combined impacts of the proposed refinery expansion together with the other oil extraction projects.

2. The DEIR Fails to Adequately Analyze Cumulative Construction Impacts

As part of its cumulative impact analysis, the DEIR identifies 13 proposed projects encompassing approximately 7.3 million square feet of space within five miles of the Project site (DEIR, p. 3-16). However, the DEIR does not identify the construction schedule of these projects except to state that "a number of individual projects may be under construction simultaneously with the proposed project." (DEIR, p. 4.3-37). The WestRidge Commerce Center Project (which will be built adjacent to the proposed Project) is scheduled to be constructed in 2012, a schedule similar to the proposed Project. According to Mr. Hagemann,

> [s]imultaneous construction of these projects, along with other potential projects, is likely to result in PM10, NOx, and ROG emissions that will have a cumulatively significant impact. The construction timetables of all projects within the vicinity of the Project site should be identified. Any cumulatively significant emissions should be disclosed and impacts to workers and nearby residents should be addressed in a revised DEIR.

VI. CONCLUSION

For the foregoing reasons, LIUNA Local Union No. 1184 urge the City to continue the matter for future consideration pending completion of a supplemental EIR addressing the Project's significant impacts and mitigation measures. Thank you for your attention to these comments. Please include this letter and all attachments hereto in the record of proceedings for this project.

Sincerely,

Richard T. Drury
Christina M. Caro
Brooke C. O'Hanley
Lozeau Drury LLP
Attorneys for LIUNA Local Union No. 1184

Exhibit

Addressing Climate Change at the Project Level
California Attorney General's Office

Under the California Environmental Quality Act (CEQA), local agencies have a very important role to play in California's fight against global warming – one of the most serious environmental effects facing the State today. Local agencies can lead by example in undertaking their own projects, insuring that sustainability is considered at the earliest stages. Moreover, they can help shape private development. Where a project as proposed will have significant global warming related effects, local agencies can require feasible changes or alternatives, and impose enforceable, verifiable, feasible mitigation to substantially lessen those effects. By the sum of their actions and decisions, local agencies will help to move the State away from "business as usual" and toward a low-carbon future.

Included in this document are various measures that may reduce the global warming related impacts at the individual project level. (For more information on actions that local governments can take at the program and general plan level, please visit the Attorney General's webpage, "CEQA, Global Warming, and General Plans" at http://ag.ca.gov/globalwarming/ceqa/generalplans.php.)

As appropriate, the measures can be included as design features of a project, required as changes to the project, or imposed as mitigation (whether undertaken directly by the project proponent or funded by mitigation fees). The measures set forth in this package are examples; the list is not intended to be exhaustive. Moreover, the measures cited may not be appropriate for every project. The decision of whether to approve a project – as proposed or with required changes or mitigation – is for the local agency, exercising its informed judgment in compliance with the law and balancing a variety of public objectives.

Mitigation Measures by Category

Energy Efficiency

Incorporate green building practices and design elements.	The California Department of Housing and Community Development's Green Building & Sustainability Resources handbook provides extensive links to green building resources. The handbook is available at http://www.hcd.ca.gov/hpd/green_build.pdf. The American Institute of Architects (AIA) has compiled fifty readily available strategies for reducing fossil fuel use in buildings by fifty percent. AIA "50 to 50" plan is presented in both guidebook and wiki format at http://wiki.aia.org/Wiki%20Pages/Home.aspx.

Meet recognized green building and energy efficiency benchmarks.	For example, an ENERGY STAR-qualified building uses less energy, is less expensive to operate, and causes fewer greenhouse gas emissions than comparable, conventional buildings. http://www.energystar.gov/index.cfm?c=business.bus_index. California has over 1600 ENERGY STAR-qualified school, commercial and industrial buildings. View U.S. EPA's list of Energy Star non-residential buildings at http://www.energystar.gov/index.cfm?fuseaction=labeled_buildings.locator. Los Angeles and San Francisco top the list of U.S. cities with the most ENERGY STAR non-residential buildings. http://www.energystar.gov/ia/business/downloads/2008_Top_25_cities_chart.pdf. Qualified ENERGY STAR homes must surpass the state's Title 24 energy efficiency building code by at least 15%. Los Angeles, Sacramento, San Diego, and San Francisco-Oakland are among the top 20 markets for ENERGY STAR homes nationwide. http://www.energystar.gov/ia/new_homes/mil_homes/top_20_markets.html. Builders of ENERGY STAR homes can be more competitive in a tight market by providing a higher quality, more desirable product. See http://www.energystar.gov/ia/partners/manuf_res/Horton.pdf. There are a variety of private and non-profit green building certification programs in use in the U.S. See U.S. EPA's Green Building / Frequently Asked Questions website, http://www.epa.gov/greenbuilding/pubs/faqs.htm. Public-Private Partnership for Advancing Housing Technology maintains a list of national and state Green Building Certification Programs for housing. See http://www.pathnet.org/sp.asp?id=20978. These include the national Leadership in Energy and Environmental Design (LEED) program, and, at the state level, Build it Green's GreenPoint Rated system and the California Green Builder program. Other organizations may provide other relevant benchmarks.
Install energy efficient lighting (e.g., light emitting diodes (LEDs)), heating and cooling systems, appliances, equipment, and control systems.	Information about ENERGY STAR-certified products in over 60 categories is available at http://www.energystar.gov/index.cfm?fuseaction=find_a_product. The California Energy Commission maintains a database of all appliances meeting either federal efficiency standards or, where there are no federal efficiency standards, California's appliance efficiency standards. See http://www.appliances.energy.ca.gov/. The Electronic Product Environmental Assessment Tool (EPEAT) ranks computer products based on a set of environmental criteria, including energy efficiency. See http://www.epeat.net/AboutEPEAT.aspx. The nonprofit American Council for an Energy Efficient Economy maintains an Online Guide to Energy Efficient Commercial Equipment, available at http://www.aceee.org/ogeece/ch1_index.htm. Utilities offer many incentives for efficient appliances, lighting, heating and cooling. To search for available residential and commercial incentives, visit Flex Your Power's website at http://www.fypower.org/.

Use passive solar design, e.g., orient buildings and incorporate landscaping to maximize passive solar heating during cool seasons, minimize solar heat gain during hot seasons, and enhance natural ventilation. Design buildings to take advantage of sunlight.	See U.S. Department of Energy, Passive Solar Design (website) http://www.energysavers.gov/your_home/designing_remodeling/index.cfm/mytopic=10250. See also California Energy Commission, Consumer Energy Center, Passive Solar Design (website) http://www.consumerenergycenter.org/home/construction/solardesign/index.html. Lawrence Berkeley National Laboratories' Building Technologies Department is working to develop innovative building construction and design techniques. Information and publications on energy efficient buildings, including lighting, windows, and daylighting strategies, are available at the Department's website at http://btech.lbl.gov.
Install light colored "cool" roofs and cool pavements.	A white or light colored roof can reduce surface temperatures by up to 100 degrees Fahrenheit, which also reduces the heat transferred into the building below. This can reduce the building's cooling costs, save energy and reduce associated greenhouse gas emissions, and extend the life of the roof. Cool roofs can also reduce the temperature of surrounding areas, which can improve local air quality. See California Energy Commission, Consumer Energy Center, Cool Roofs (webpage) at http://www.consumerenergycenter.org/coolroof/. See also Lawrence Berkeley National Laboratories, Heat Island Group (webpage) at http://eetd.lbl.gov/HeatIsland/.
Install efficient lighting, (including LEDs) for traffic, street and other outdoor lighting.	LED lighting is substantially more energy efficient than conventional lighting and can save money. See http://www.energy.ca.gov/efficiency/partnership/case_studies/TechAsstCity.pdf (noting that installing LED traffic signals saved the City of Westlake about $34,000 per year). As of 2005, only about a quarter of California's cities and counties were using 100% LEDs in traffic signals. See California Energy Commission (CEC), Light Emitting Diode Traffic Signal Survey (2005) at p. 15, available at http://www.energy.ca.gov/2005publications/CEC 400 2005 003/CEC 400 2005 003.PDF. The California Energy Commission's Energy Partnership Program can help local governments take advantage of energy saving technology, including, but not limited to, LED traffic signals. See http://www.energy.ca.gov/efficiency/partnership/.
Reduce unnecessary outdoor lighting.	See California Energy Commission, Reduction of Outdoor Lighting (webpage) at http://www.energy.ca.gov/efficiency/lighting/outdoor_reduction.html.

Use automatic covers, efficient pumps and motors, and solar heating for pools and spas.	During the summer, a traditional backyard California pool can use enough energy to power an entire home for three months. Efficiency measures can substantially reduce this waste of energy and money. See California Energy Commission, Consumer Energy Center, Pools and Spas (webpage) at http://www.consumerenergycenter.org/home/outside/pools_spas.html. See also Sacramento Municipal Utilities District, Pool and Spa Efficiency Program (webpage) at http://www.smud.org/en/residential/saving-energy/Pages/poolspa.aspx.
Provide education on energy efficiency to residents, customers and/or tenants.	Many cities and counties provide energy efficiency education. See, for example, the City of Stockton's Energy Efficiency website at http://www.stocktongov.com/energysaving/index.cfm. See also "Green County San Bernardino," http://www.greencountysb.com at pp. 4-6. Businesses and development projects may also provide education. For example, a homeowners' association (HOA) could provide information to residents on energy-efficient mortgages and energy saving measures. See The Villas of Calvera Hills, Easy Energy Saving Tips to Help Save Electricity at http://www.thevillashoa.org/green/energy/. An HOA might also consider providing energy audits to its residents on a regular basis.

Renewable Energy and Energy Storage

Meet "reach" goals for building energy efficiency and renewable energy use.	A "zero net energy" building combines building energy efficiency and renewable energy generation so that, on an annual basis, any purchases of electricity or natural gas are offset by clean, renewable energy generation, either on-site or nearby. Both the California Energy Commission (CEC) and the California Public Utilities Commission (CPUC) have stated that residential buildings should be zero net energy by 2020, and commercial buildings by 2030. See CEC, 2009 Integrated Energy Policy Report (Dec. 2009) at p. 226, available at http://www.energy.ca.gov/2009publications/CEC-100-2009-003/CEC-100-2009-003-CMF.PDF; CPUC, Long Term Energy Efficiency Strategic Plan (Sept. 2008), available at http://www.cpuc.ca.gov/PUC/energy/Energy+Efficiency/eesp/.
Install solar, wind, and geothermal power systems and solar hot water heaters.	The California Public Utilities Commission (CPUC) approved the California Solar Initiative on January 12, 2006. The initiative creates a $3.3 billion, ten-year program to install solar panels on one million roofs in the State. Visit the one-stop GoSolar website at http://www.gosolarcalifornia.org/. As mitigation, a developer could, for example, agree to participate in the New Solar Homes program. See http://www.gosolarcalifornia.org/builders/index.html. The CPUC is in the process of establishing a program to provide solar water heating incentives under the California Solar Initiative. For more information, visit the CPUC's website at http://www.cpuc.ca.gov/puc/energy/solar/swh.htm. To search for available residential and commercial renewable energy incentives, visit Flex Your Power's website at http://www.fypower.org/.

Install solar panels on unused roof and ground space and over carports and parking areas.	In 2008 Southern California Edison (SCE) launched the nation's largest installation of photovoltaic power generation modules. The utility plans to cover 65 million square feet of unused commercial rooftops with 250 megawatts of solar technology – generating enough energy to meet the needs of approximately 162,000 homes. Learn more about SCE's Solar Rooftop Program at http://www.sce.com/solarleadership/solar-rooftop-program/general-faq.htm. In 2009, Walmart announced its commitment to expand the company's solar power program in California. The company plans to add solar panels on 10 to 20 additional Walmart facilities in the near term. These new systems will be in addition to the 18 solar arrays currently installed at Walmart facilities in California. See http://walmartstores.com/FactsNews/NewsRoom/9091.aspx. Alameda County has installed two solar tracking carports, each generating 250 kilowatts. By 2005, the County had installed eight photovoltaic systems totaling over 2.3 megawatts. The County is able to meet 6 percent of its electricity needs through solar power. See http://www.acgov.org/gsa/Alameda%20County%20-%20Solar%20Case%20Study.pdf. In 2007, California State University, Fresno installed at 1.1-megawatt photovoltaic (PV)-paneled parking installation. The University expects to save more than $13 million in avoided utility costs over the project's 30-year lifespan. http://www.fresnostatenews.com/2007/11/solarwrapup2.htm.
Where solar systems cannot feasibly be incorporated into the project at the outset, build "solar ready" structures.	U.S. Department of Energy, A Homebuilder's Guide to Going Solar (brochure) (2008), available at http://www.eere.energy.gov/solar/pdfs/43076.pdf.
Incorporate wind and solar energy systems into agricultural projects where appropriate.	Wind energy can be a valuable crop for farmers and ranchers. Wind turbines can generate energy to be used on-site, reducing electricity bills, or they can yield lease revenues (as much as $4000 per turbine per year). Wind turbines generally are compatible with rural land uses, since crops can be grown and livestock can be grazed up to the base of the turbine. See National Renewable Energy Laboratory, Wind Powering America Fact Sheet Series, Wind Energy Benefits, available at http://www.nrel.gov/docs/fy05osti/37602.pdf. Solar PV is not just for urban rooftops. For example, the Scott Brothers' dairy in San Jacinto, California, has installed a 55-kilowatt solar array on its commodity barn, with plans to do more in the coming years. See http://www.dairyherd.com/directories.asp?pgID=724&ed_id=8409 (additional California examples are included in article.)

Include energy storage where appropriate to optimize renewable energy generation systems and avoid peak energy use.	See National Renewable Energy Laboratory, Energy Storage Basics (webpage) at http://www.nrel.gov/learning/eds_energy_storage.html. California Energy Storage Alliance (webpage) at http://storagealliance.org/about.html. Storage is not just for large, utility scale projects, but can be part of smaller industrial, commercial and residential projects. For example, Ice Storage Air Conditioning (ISAC) systems, designed for residential and nonresidential buildings, produce ice at night and use it during peak periods for cooling. See California Energy Commission, Staff Report, Ice Storage Air Conditioners, Compliance Options Application (May 2006), available at http://www.energy.ca.gov/2006publications/CEC-400-2006-006/CEC-400-2006-006-SF.PDF.
Use on-site generated biogas, including methane, in appropriate applications.	At the Hilarides Dairy in Lindsay, California, an anaerobic-lagoon digester processes the run-off of nearly 10,000 cows, generating 226,000 cubic feet of biogas per day and enough fuel to run two heavy duty trucks. This has reduced the dairy's diesel consumption by 650 gallons a day, saving the dairy money and improving local air quality. See http://www.arb.ca.gov/newsrel/nr021109b.htm; see also Public Interest Energy Research Program, Dairy Power Production Program, Dairy Methane Digester System, 90-Day Evaluation Report, Eden Vale Dairy (Dec. 2006) at http://www.energy.ca.gov/2006publications/CEC 500 2006 083/CEC 500 2006 083.PDF. Landfill gas is a current and potential source of substantial energy in California. See Tom Frankiewicz, Program Manager, U.S. EPA Landfill Methane Outreach Program, Landfill Gas Energy Potential in California, available at http://www.energy.ca.gov/2009_energypolicy/documents/2009-04-21_workshop/presentations/05-SCS_Engineers_Presentation.pdf. There are many current and emerging technologies for converting landfill methane that would otherwise be released as a greenhouse gas into clean energy. See California Integrated Waste Management Board, Emerging Technologies, Landfill Gas-to-Energy (webpage) at http://www.ciwmb.ca.gov/LEACentral/TechServices/EmergingTech/default.htm.

Use combined heat and power (CHP) in appropriate applications.	Many commercial, industrial, and campus-type facilities (such as hospitals, universities and prisons) use fuel to produce steam and heat for their own operations and processes. Unless captured, much of this heat is wasted. CHP captures waste heat and re-uses it, e.g., for residential or commercial space heating or to generate electricity. See U.S. EPA, Catalog of CHP Technologies at http://www.epa.gov/chp/documents/catalog_of_%20chp_tech_entire.pdf and California Energy Commission, Distributed Energy Resource Guide, Combined Heat and Power (webpage) at http://www.energy.ca.gov/distgen/equipment/chp/chp.html. The average efficiency of fossil-fueled power plants in the United States is 33 percent. By using waste heat recovery technology, CHP systems typically achieve total system efficiencies of 60 to 80 percent. CHP can also substantially reduce emissions of carbon dioxide. http://www.epa.gov/chp/basic/efficiency.html. Currently, CHP in California has a capacity of over 9 million kilowatts. See list of California CHP facilities at http://www.eea-inc.com/chpdata/States/CA.html. The Waste Heat and Carbon Emissions Reduction Act (Assembly Bill 1613 (2007), amended by Assembly Bill 2791 (2008)) is designed to encourage the development of new CHP systems in California with a generating capacity of not more than 20 megawatts. Among other things, the Act requires the California Public Utilities Commission to establish (1) a standard tariff allowing CHP generators to sell electricity for delivery to the grid and (2) a "pay as you save" pilot program requiring electricity corporations to finance the installation of qualifying CHP systems by nonprofit and government entities. For more information, see http://www.energy.ca.gov/wasteheat/.

Water Conservation and Efficiency

Incorporate water-reducing features into building and landscape design.	According to the California Energy Commission, water-related energy use – which includes conveyance, storage, treatment, distribution, wastewater collection, treatment, and discharge – consumes about 19 percent of the State's electricity, 30 percent of its natural gas, and 88 billion gallons of diesel fuel every year. See http://www.energy.ca.gov/2007publications/CEC 999 2007 008/CEC 999 2007 008.PDF. Reducing water use and improving water efficiency can help reduce energy use and greenhouse gas emissions.
Create water-efficient landscapes.	The California Department of Water Resources' updated Model Water Efficient Landscape Ordinance (Sept. 2009) is available at http://www.water.ca.gov/wateruseefficiency/landscapeordinance/technical.cfm. A landscape can be designed from the beginning to use little or no water, and to generate little or no waste. See California Integrated Waste Management Board, Xeriscaping (webpage) at http://www.ciwmb.ca.gov/organics/Xeriscaping/.

Install water-efficient irrigation systems and devices, such as soil moisture-based irrigation controls and use water-efficient irrigation methods.	U.S. Department of Energy, Best Management Practice: Water-Efficient Irrigation (webpage) at http://www1.eere.energy.gov/femp/program/waterefficiency_bmp5.html. California Department of Water Resources, Landscape Water Use Efficiency (webpage) at http://www.water.ca.gov/wateruseefficiency/landscape/. Pacific Institute, More with Less: Agricultural Water Conservation and Efficiency in California (2008), available at http://www.pacinst.org/reports/more_with_less_delta/index.htm.
Make effective use of graywater. (Graywater is untreated household waste water from bathtubs, showers, bathroom wash basins, and water from clothes washing machines. Graywater to be used for landscape irrigation.)	California Building Standards Commission, 2008 California Green Building Standards Code, Section 604, pp. 31-32, available at http://www.documents.dgs.ca.gov/bsc/2009/part11_2008_calgreen_code.pdf. California Department of Water Resources, Dual Plumbing Code (webpage) at http://www.water.ca.gov/recycling/DualPlumbingCode/. See also Ahwahnee Water Principles, Principle 6, at http://www.lgc.org/ahwahnee/h2o_principles.html. The Ahwahnee Water Principles have been adopted by City of Willits, Town of Windsor, Menlo Park, Morgan Hill, Palo Alto, Petaluma, Port Hueneme, Richmond, Rohnert Park, Rolling Hills Estates, San Luis Obispo, Santa Paula, Santa Rosa, City of Sunnyvale, City of Ukiah, Ventura, Marin County, Marin Municipal Water District, and Ventura County.
Implement low-impact development practices that maintain the existing hydrology of the site to manage storm water and protect the environment.	Retaining storm water runoff on-site can drastically reduce the need for energy-intensive imported water at the site. See U.S. EPA, Low Impact Development (webpage) at http://www.epa.gov/nps/lid/. Office of Environmental Health Hazard Assessment and the California Water and Land Use Partnership, Low Impact Development at http://www.coastal.ca.gov/nps/lid-factsheet.pdf.
Devise a comprehensive water conservation strategy appropriate for the project and location.	The strategy may include many of the specific items listed above, plus other innovative measures that are appropriate to the specific project.
Design buildings to be water-efficient. Install water-efficient fixtures and appliances.	Department of General Services, Best Practices Manual, Water-Efficient Fixtures and Appliances (website) at http://www.green.ca.gov/EPP/building/SaveH2O.htm. Many ENERGY STAR products have achieved their certification because of water efficiency. See California Energy Commission's database, available at http://www.appliances.energy.ca.gov/.

Offset water demand from new projects so that there is no net increase in water use.	For example, the City of Lompoc has a policy requiring new development to offset new water demand with savings from existing water users. See http://www.cityoflompoc.com/utilities/pdf/2005_uwmp_final.pdf at p. 29.
Provide education about water conservation and available programs and incentives.	See, for example, the City of Santa Cruz, Water Conservation Office at http://www.ci.santa-cruz.ca.us/index.aspx?page=395; Santa Clara Valley Water District, Water Conservation at http://www.valleywater.org/conservation/index.shtm; and Metropolitan Water District and the Family of Southern California Water Agencies, Be Water Wise at http://www.bewaterwise.com. Private projects may provide or fund similar education.

Solid Waste Measures

Reuse and recycle construction and demolition waste (including, but not limited to, soil, vegetation, concrete, lumber, metal, and cardboard).	Construction and demolition materials account for almost 22 percent of the waste stream in California. Reusing and recycling these materials not only conserves natural resources and energy, but can also save money. For a list of best practices and other resources, see California Integrated Waste Management Board, Construction and Demolition Debris Recycling (webpage) at http://www.ciwmb.ca.gov/condemo/.
Integrate reuse and recycling into residential industrial, institutional and commercial projects.	Tips on developing a successful recycling program, and opportunities for cost-effective recycling, are available on the California Integrated Waste Management Board's Zero Waste California website. See http://zerowaste.ca.gov/. The Institute for Local Government's Waste Reduction & Recycling webpage contains examples of "best practices" for reducing greenhouse gas emissions, organized around waste reduction and recycling goals and additional examples and resources. See http://www.ca-ilg.org/wastereduction.
Provide easy and convenient recycling opportunities for residents, the public, and tenant businesses.	Tips on developing a successful recycling program, and opportunities for cost effective recycling, are available on the California Integrated Waste Management Board's Zero Waste California website. See http://zerowaste.ca.gov/.
Provide education and publicity about reducing waste and available recycling services.	Many cities and counties provide information on waste reduction and recycling. See, for example, the Butte County Guide to Recycling at http://www.recyclebutte.net. The California Integrated Waste Management Board's website contains numerous publications on recycling and waste reduction that may be helpful in devising an education project. See http://www.ciwmb.ca.gov/Publications/default.asp?cat=13. Private projects may also provide waste and recycling education directly, or fund education.

Land Use Measures

Ensure consistency with "smart growth" principles – mixed-use, infill, and higher density projects that provide alternatives to individual vehicle travel and promote the efficient delivery of services and goods.	U.S. EPA maintains an extensive Smart Growth webpage with links to examples, literature and technical assistance, and financial resources. See http://www.epa.gov/smartgrowth/index.htm. The National Oceanic and Atmospheric Administration's webpage provides smart growth recommendations for communities located near water. See Coastal & Waterfront Smart Growth (webpage) at http://coastalsmartgrowth.noaa.gov/. The webpage includes case studies from California. The California Energy Commission has recognized the important role that land use can play in meeting our greenhouse gas and energy efficiency goals. The agency's website, Smart Growth & Land Use Planning, contains useful information and links to relevant studies, reports, and other resources. See http://www.energy.ca.gov/landuse/. The Metropolitan Transportation Commission's webpage, Smart Growth / Transportation for Livable Communities, includes resources that may be useful to communities in the San Francisco Bay Area and beyond. See http://www.mtc.ca.gov/planning/smart_growth/. The Sacramento Area Council of Governments (SACOG) has published examples of smart growth in action in its region. See Examples from the Sacramento Region of the Seven Principles of Smart Growth / Better Ways to Grow, available at http://www.sacog.org/regionalfunding/betterways.pdf.
Meet recognized "smart growth" benchmarks.	For example, the LEED for Neighborhood Development (LEED-ND) rating system integrates the principles of smart growth, urbanism and green building into the first national system for neighborhood design. LEED-ND is a collaboration among the U.S. Green Building Council, Congress for the New Urbanism, and the Natural Resources Defense Council. For more information, see http://www.usgbc.org/DisplayPage.aspx?CMSPageID=148.
Educate the public about the many benefits of well-designed, higher density development.	See, for example, U.S. EPA, Growing Smarter, Living Healthier: A Guide to Smart Growth and Active Aging (webpage), discussing how compact, walkable communities can provide benefits to seniors. See http://www.epa.gov/aging/bhc/guide/index.html. U.S. EPA, Environmental Benefits of Smart Growth (webpage) at http://www.epa.gov/dced/topics/eb.htm (noting local air and water quality improvements). Centers for Disease Control and Prevention (CDC), Designing and Building Healthy Places (webpage), at http://www.cdc.gov/healthyplaces/. The CDC's website discusses the links between walkable communities and public health and includes numerous links to educational materials. California Department of Housing and Community Development, Myths and Facts About Affordable and High Density Housing (2002), available at http://www.hcd.ca.gov/hpd/mythsnfacts.pdf.

Incorporate public transit into the project's design.	Federal Transit Administration, Transit-Oriented Development (TOD) (webpage) at http://www.fta.dot.gov/planning/planning_environment_6932.html (describing the benefits of TOD as "social, environmental, and fiscal.") California Department of Transportation (Caltrans), Statewide Transit-Oriented Development Study: Factors for Success in California (2002), available at http://transitorienteddevelopment.dot.ca.gov/miscellaneous/StatewideTOD.htm Caltrans, California Transit-Oriented Development Searchable Database (includes detailed information on numerous TODs), available at http://transitorienteddevelopment.dot.ca.gov/miscellaneous/NewHome.jsp. California Department of Housing and Community Development, Transit Oriented Development (TOD) Resources (Aug. 2009), available at http://www.hcd.ca.gov/hpd/tod.pdf.
Preserve and create open space and parks. Preserve existing trees, and plant replacement trees at a set ratio.	U.S. EPA, Smart Growth and Open Space Conservation (webpage) at http://www.epa.gov/dced/openspace.htm.
Develop "brownfields" and other underused or defunct properties near existing public transportation and jobs.	U.S. EPA, Smart Growth and Brownfields (webpage) at http://www.epa.gov/dced/brownfields.htm. For example, as set forth in the Local Government Commission's case study, the Town of Hercules, California reclaimed a 426-acre brownfield site, transforming it into a transit-friendly, walkable neighborhood. See http://www.lgc.org/freepub/docs/community_design/fact_sheets/er_case_studies.pdf. For financial resources that can assist in brownfield development, see Center for Creative Land Recycling, Financial Resources for California Brownfields (July 2008), available at http://www.cclr.org/media/publications/8-Financial_Resources_2008.pdf.
Include pedestrian and bicycle facilities within projects and ensure that existing non-motorized routes are maintained and enhanced.	See U.S. Department of Transportation, Federal Highway Administration, Bicycle and Pedestrian Program (webpage) at http://www.fhwa.dot.gov/environment/bikeped/. Caltrans, Pedestrian and Bicycle Facilities in California / A Technical Reference and Technology Transfer Synthesis for Caltrans Planners and Engineers (July 2005), available at http://www.dot.ca.gov/hq/traffops/survey/pedestrian/TR_MAY0405.pdf. This reference includes standard and innovative practices for pedestrian facilities and traffic calming.

Transportation and Motor Vehicles

Meet an identified transportation-related benchmark.	A logical benchmark might be related to vehicles miles traveled (VMT), e.g., average VMT per capita, per household, or per employee. As the California Energy Commission has noted, VMT by California residents increased "a rate of more than 3 percent a year between 1975 and 2004, markedly faster than the population growth rate over the same period, which was less than 2 percent. This increase in VMT correlates to an increase in petroleum use and GHG production and has led to the transportation sector being responsible for 41 percent of the state's GHG emissions in 2004." CEC, The Role of Land Use in Meeting California's Energy and Climate Change Goals (Aug. 2007) at p. 9, available at http://www.energy.ca.gov/2007publications/CEC-600-2007-008/CEC-600-2007-008-SF.PDF. Even with regulations designed to increase vehicle efficiency and lower the carbon content of fuel, "reduced VMT growth will be required to meet GHG reductions goals." *Id.* at p. 18.
Adopt a comprehensive parking policy that discourages private vehicle use and encourages the use of alternative transportation.	For example, reduce parking for private vehicles while increasing options for alternative transportation; eliminate minimum parking requirements for new buildings; "unbundle" parking (require that parking is paid for separately and is not included in rent for residential or commercial space); and set appropriate pricing for parking. See U.S. EPA, Parking Spaces / Community Places, Finding the Balance Through Smart Growth Solutions (Jan. 2006), available at http://www.epa.gov/dced/pdf/EPAParkingSpaces06.pdf. Reforming Parking Policies to Support Smart Growth, Metropolitan Transportation Commission (June 2007) at http://www.mtc.ca.gov/planning/smart_growth/parking_seminar/Toolbox_Handbook.pdf. See also the City of Ventura's Downtown Parking and Mobility Plan, available at http://www.cityofventura.net/community_development/resources/mobility_parking_plan.pdf, and Ventura's Downtown Parking Management Program, available at http://www.ci.ventura.ca.us/depts/comm_dev/downtownplan/chapters.asp.
Build or fund a major transit stop within or near the development.	"'Major transit stop' means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods." (Pub. Res. Code, § 21064.3.) Transit Oriented Development (TOD) is a moderate to higher density development located within an easy walk of a major transit stop. http://transitorienteddevelopment.dot.ca.gov/miscellaneous/NewWhatisTOD.htm. By building or funding a major transit stop, an otherwise ordinary development can become a TOD.

Provide public transit incentives such as free or low-cost monthly transit passes to employees, or free ride areas to residents and customers.	See U.S. Department of Transportation and U.S. EPA, Commuter Choice Primer / An Employer's Guide to Implementing Effective Commuter Choice Programs, available at http://www.its.dot.gov/JPODOCS/REPTS_PR/13669.html. The Emery Go Round shuttle is a private transportation service funded by commercial property owners in the citywide transportation business improvement district. The shuttle links a local shopping district to a Bay Area Rapid Transit stop. See http://www.emerygoround.com/. Seattle, Washington maintains a public transportation "ride free" zone in its downtown from 6:00 a.m. to 7:00 p.m. daily. See http://transit.metrokc.gov/tops/accessible/paccessible_map.html#fare.
Promote "least polluting" ways to connect people and goods to their destinations.	Promoting "least polluting" methods of moving people and goods is part of a larger, integrated "sustainable streets" strategy now being explored at U.C. Davis's Sustainable Transportation Center. Resources and links are available at the Center's website, http://stc.ucdavis.edu/outreach/ssp.php.
Incorporate bicycle lanes, routes and facilities into street systems, new subdivisions, and large developments.	Bicycling can have a profound impact on transportation choices and air pollution reduction. The City of Davis has the highest rate of bicycling in the nation. Among its 64,000 residents, 17 percent travel to work by bicycle and 41 percent consider the bicycle their primary mode of transportation. See Air Resources Board, Bicycle Awareness Program, Bicycle Fact Sheet, available at http://www.arb.ca.gov/planning/tsaq/bicycle/factsht.htm. For recommendations on best practices, see the many resources listed at the U.S. Department of Transportation, Federal Highway Administration's Bicycle and Pedestrian website at http://www.fhwa.dot.gov/environment/bikeped/publications.htm. See also Caltrans Division of Research and Innovation, Designing Highway Facilities To Encourage Walking, Biking and Transit (Preliminary Investigation) (March 2009), available at http://www.dot.ca.gov/research/researchreports/preliminary_investigations/docs/pi-design_for_walking_%20biking_and_transit%20final.pdf.
Require amenities for non-motorized transportation, such as secure and convenient bicycle parking.	According to local and national surveys of potential bicycle commuters, secure bicycle parking and workplace changing facilities are important complements to safe and convenient routes of travel. See Air Resources Board, Bicycle Awareness Program, Bicycle Fact Sheet, available at http://www.arb.ca.gov/planning/tsaq/bicycle/factsht.htm.

Ensure that the project enhances, and does not disrupt or create barriers to, non-motorized transportation.	See, e.g., U.S. EPA's list of transit-related "smart growth" publications at http://www.epa.gov/dced/publications.htm#air, including Pedestrian and Transit-Friendly Design: A Primer for Smart Growth (1999), available at www.epa.gov/dced/pdf/ptfd_primer.pdf. See also Toolkit for Improving Walkability in Alameda County, available at http://www.acta2002.com/ped toolkit/ped_toolkit_print.pdf. Pursuant to the California Complete Streets Act of 2008 (AB 1358, Gov. Code, §§ 65040.2 and 65302), commencing January 1, 2011, upon any substantive revision of the circulation element of the general plan, a city or county will be required to modify the circulation element to plan for a balanced, multimodal transportation network that meets the needs of all users.
Connect parks and open space through shared pedestrian/bike paths and trails to encourage walking and bicycling. Create bicycle lanes and walking paths directed to the location of schools, parks and other destination points.	Walk Score ranks the "walkability" of neighborhoods in the largest 40 U.S. cities, including seven California cities. Scores are based on the distance to nearby amenities. Explore Walk Score at http://www.walkscore.com/. In many markets, homes in walkable neighborhoods are worth more than similar properties where walking is more difficult. See Hoak, *Walk appeal / Homes in walkable neighborhoods sell for more: study*, Wall Street Journal (Aug. 18, 2009), available at http://www.marketwatch.com/story/homes-in-walkable-neighborhoods-sell-for-more-2009-08-18. By creating walkable neighborhoods with more transportation choices, Californians could save $31 million and cut greenhouse gas emissions by 34 percent, according to a study released by Transform, a coalition of unions and nonprofits. See Windfall for All / How Connected, Convenient Neighborhoods Can Protect Our Climate and Safeguard California's Economy (Nov. 2009), available at http://transformca.org/windfall-for-all#download-report.
Work with the school districts to improve pedestrian and bike access to schools and to restore or expand school bus service using lower-emitting vehicles.	In some communities, twenty to twenty-five percent of morning traffic is due to parents driving their children to school. Increased traffic congestion around schools in turn prompts even more parents to drive their children to school. Programs to create safe routes to schools can break this harmful cycle. See California Department of Public Health, Safe Routes to School (webpage) and associated links at http://www.cdph.ca.gov/HealthInfo/injviosaf/Pages/SafeRoutestoSchool.aspx. See also U.S. EPA, Smart Growth and Schools (webpage), available at http://www.epa.gov/dced/schools.htm. California Center for Physical Activity, California Walk to School (website) at http://www.cawalktoschool.com Regular school bus service (using lower-emitting buses) for children who cannot bike or walk to school could substantially reduce private vehicle congestion and air pollution around schools. See Air Resources Board, Lower Emissions School Bus Program (webpage) at http://www.arb.ca.gov/msprog/schoolbus/schoolbus.htm.

Institute teleconferencing, telecommute and/or flexible work hour programs to reduce unnecessary employee transportation.	There are numerous sites on the web with resources for employers seeking to establish telework or flexible work programs. These include U.S. EPA's Mobility Management Strategies: Commuter Programs website at http://www.epa.gov/otaq/stateresources/rellinks/mms_commprograms.htm; and Telework, the federal government's telework website, at http://www.telework.gov/. Through a continuing FlexWork Implementation Program, the Traffic Solutions division of the Santa Barbara County Association of Governments sponsors flexwork consulting, training and implementation services to a limited number of Santa Barbara County organizations that want to create or expand flexwork programs for the benefit of their organizations, employees and the community. See http://www.flexworksb.com/read_more_about_the_fSBp.html. Other local government entities provide similar services.
Provide information on alternative transportation options for consumers, residents, tenants and employees to reduce transportation-related emissions.	Many types of projects may provide opportunities for delivering more tailored transportation information. For example, a homeowner's association could provide information on its website, or an employer might create a Transportation Coordinator position as part of a larger Employee Commute Reduction Program. See, e.g., South Coast Air Quality Management District, Transportation Coordinator training, at http://www.aqmd.gov/trans/traing.html.
Educate consumers, residents, tenants and the public about options for reducing motor vehicle-related greenhouse gas emissions. Include information on trip reduction; trip linking; vehicle performance and efficiency (e.g., keeping tires inflated); and low or zero-emission vehicles.	See, for example U.S. EPA, SmartWay Transport Partnership: Innovative Carrier Strategies (webpage) at http://www.epa.gov/smartway/transport/what-smartway/carrier-strategies.htm. This webpage includes recommendations for actions that truck and rail fleets can take to make ground freight more efficient and cleaner. The Air Resources Board's Drive Clean website is a resource for car buyers to find clean and efficient vehicles. The web site is designed to educate Californians that pollution levels range greatly between vehicles. See http://www.driveclean.ca.gov/. The Oregon Department of Transportation and other public and private partners launched the Drive Less/Save More campaign. The comprehensive website contains fact sheets and educational materials to help people drive more efficiently. See http://www.drivelesssavemore.com/.
Purchase, or create incentives for purchasing, low or zero-emission vehicles.	See Air Resources Board, Low-Emission Vehicle Program (webpage) at http://www.arb.ca.gov/msprog/levprog/levprog.htm. Air Resource Board, Zero Emission Vehicle Program (webpage) at http://www.arb.ca.gov/msprog/zevprog/zevprog.htm. All new cars sold in California are now required to display an Environmental Performance (EP) Label, which scores a vehicle's global warming and smog emissions from 1 (dirtiest) to 10 (cleanest). To search and compare vehicle EP Labels, visit www.DriveClean.ca.gov.

Create a ride sharing program. Promote existing ride sharing programs e.g., by designating a certain percentage of parking spaces for ride sharing vehicles, designating adequate passenger loading and unloading for ride sharing vehicles, and providing a web site or message board for coordinating rides.	For example, the 511 Regional Rideshare Program is operated by the Metropolitan Transportation Commission (MTC) and is funded by grants from the Federal Highway Administration, U.S. Department of Transportation, the Metropolitan Transportation Commission, the Bay Area Air Quality Management District and county congestion management agencies. For more information, see http://rideshare.511.org/. As another example, San Bernardino Associated Governments works directly with large and small employers, as well as providing support to commuters who wish to share rides or use alternative forms of transportation. See http://www.sanbag.ca.gov/commuter/rideshare.html. Valleyrides.com is a ridesharing resource available to anyone commuting to and from Fresno and Tulare Counties and surrounding communities. See http://www.valleyrides.com/. There are many other similar websites throughout the state.
Create or accommodate car sharing programs, e.g., provide parking spaces for car share vehicles at convenient locations accessible by public transportation.	There are many existing car sharing companies in California. These include City CarShare (San Francisco Bay Area), see http://www.citycarshare.org/; and Zipcar, see http://www.zipcar.com/. Car sharing programs are being successfully used on many California campuses.
Provide a vanpool for employees.	Many local Transportation Management Agencies can assist in forming vanpools. See, for example, Sacramento Transportation Management Association, Check out Vanpooling (webpage) at http://www.sacramento-tma.org/vanpool.html.
Create local "light vehicle" networks, such as neighborhood electric vehicle systems.	See California Energy Commission, Consumer Energy Center, Urban Options - Neighborhood Electric Vehicles (NEVs) (webpage) at http://www.consumerenergycenter.org/transportation/urban_options/nev.html. The City of Lincoln has an innovative NEV program. See http://www.lincolnev.com/index.html.
Enforce and follow limits idling time for commercial vehicles, including delivery and construction vehicles.	Under existing law, diesel-fueled motor vehicles with a gross vehicle weight rating greater than 10,000 pounds are prohibited from idling for more than 5 minutes at any location. The minimum penalty for an idling violation is now $300 per violation. See http://www.arb.ca.gov/enf/complaints/idling_cv.htm.
Provide the necessary facilities and infrastructure to encourage the use of low or zero-emission vehicles.	For a list of existing alternative fuel stations in California, visit http://www.cleancarmaps.com/. See, e.g., Baker, *Charging-station network built along 101*, S.F. Chron. (9/23/09), available at http://articles.sfgate.com/2009-09-23/news/17207424_1_recharging-solar-array-tesla-motors.

Agriculture and Forestry (additional strategies noted above)

Require best management practices in agriculture and animal operations to reduce emissions, conserve energy and water, and utilize alternative energy sources, including biogas, wind and solar.	Air Resources Board (ARB), Economic Sectors Portal, Agriculture (webpage) at http://www.arb.ca.gov/cc/ghgsectors/ghgsectors.htm. ARB's webpage includes information on emissions from manure management, nitrogen fertilizer, agricultural offroad equipment, and agricultural engines. "A full 90% of an agricultural business' electricity bill is likely associated with water use. In addition, the 8 million acres in California devoted to crops consume 80% of the total water pumped in the state." See Flex Your Power, Agricultural Sector (webpage) at http://www.fypower.org/agri/. Flex Your Power, Best Practice Guide / Food and Beverage Growers and Processors, available at http://www.fypower.org/bpg/index.html?b=food_and_bev. Antle et al., Pew Center on Global Climate Change, Agriculture's Role in Greenhouse Gas Mitigation (2006), available at http://www.pewclimate.org/docUploads/Agriculture's%20Role%20in%20GHG%20Mitigation.pdf.
Preserve forested areas, agricultural lands, wildlife habitat and corridors, wetlands, watersheds, groundwater recharge areas and other open space that provide carbon sequestration benefits.	"There are three general means by which agricultural and forestry practices can reduce greenhouse gases: (1) avoiding emissions by maintaining existing carbon storage in trees and soils; (2) increasing carbon storage by, e.g., tree planting, conversion from conventional to conservation tillage practices on agricultural lands; (3) substituting bio-based fuels and products for fossil fuels, such as coal and oil, and energy-intensive products that generate greater quantities of CO2 when used." U.S. EPA, Carbon Sequestration in Agriculture and Forestry, Frequently Asked Questions (webpage) at http://www.epa.gov/sequestration/faq.html. Air Resources Board, Economic Sectors Portal, Forestry (webpage) at http://www.arb.ca.gov/cc/ghgsectors/ghgsectors.htm.
Protect existing trees and encourage the planting of new trees. Adopt a tree protection and replacement ordinance.	Tree preservation and planting is not just for rural areas of the state; suburban and urban forests can also serve as carbon sinks. See Cal Fire, Urban and Community Forestry (webpage) at http://www.fire.ca.gov/resource_mgt/resource_mgt_urbanforestry.php.

Off-Site Mitigation

If, after analyzing and requiring all reasonable and feasible on-site mitigation measures for avoiding or reducing greenhouse gas-related impacts, the lead agency determines that additional mitigation is required, the agency may consider additional off-site mitigation. The project proponent could, for example, fund off-site mitigation projects that will reduce carbon emissions, conduct an audit of its other existing operations and agree to retrofit, or purchase verifiable carbon "credits" from another entity that will undertake mitigation.

The topic of off-site mitigation can be complicated. A full discussion is outside the scope of this summary document. Issues that the lead agency should consider include:

- The location of the off-site mitigation. (If the off-site mitigation is far from the project, any additional, non-climate related co-benefits of the mitigation may be lost to the local community.)

- Whether the emissions reductions from off-site mitigation can be quantified and verified. (The California Registry has developed a number of protocols for calculating, reporting and verifying greenhouse gas emissions. Currently, industry-specific protocols are available for the cement sector, power/utility sector, forest sector and local government operations. For more information, visit the California Registry's website at http://www.climateregistry.org/.)

- Whether the mitigation ratio should be greater than 1:1 to reflect any uncertainty about the effectiveness of the off-site mitigation.

Offsite mitigation measures that could be funded through mitigation fees include, but are not limited to, the following:

- Energy efficiency audits of existing buildings.

- Energy efficiency upgrades to existing buildings not otherwise required by law, including heating, ventilation, air conditioning, lighting, water heating equipment, insulation and weatherization (perhaps targeted to specific communities, such as low-income or senior residents).

- Programs to encourage the purchase and use of energy efficient vehicles, appliances, equipment and lighting.

- Programs that create incentives to replace or retire polluting vehicles and engines.

- Programs to expand the use of renewable energy and energy storage.

- Preservation and/or enhancement of existing natural areas (e.g., forested areas, agricultural lands, wildlife habitat and corridors, wetlands, watersheds, and groundwater recharge areas) that provide carbon sequestration benefits.

- Improvement and expansion of public transit and low- and zero-carbon transportation alternatives.

Oakland, CA 94607

Subject: **Comments on the Prologis Eucalyptus Industrial Park Project, Riverside County, California**

Dear Ms. O'Hanley:

We have reviewed the July 2012 Draft Environmental Impact Report (DEIR) for Prologis Eucalyptus Industrial Park Project ("Project"). The Project would construct six buildings encompassing approximately 2.3 million square feet (or 53 acres) of warehouse space. The Project site would be located on a 123-acre lot in the eastern portion of the City of Moreno Valley in Riverside County, California.

We have reviewed the DEIR for issues associated with hazards and hazardous materials, greenhouse gases, air quality, and cumulative impacts. Project construction will result in potentially significant impacts to construction workers and nearby residents that are not adequately disclosed in the DEIR. A revised DEIR needs to be prepared to fully disclose, evaluate, and mitigate these impacts.

Hazards and Hazardous Materials:

Construction workers and nearby residents may be at risk during construction from failure to disclose baseline soil conditions at the Project site.

Residual pesticides in soil may pose health risks to workers and nearby residents

Currently, 57 acres of the Project site are used to grow grapefruit and 36 acres of the Project site are used for hay and alfalfa production (DEIR, p. 4.2-1). The DEIR and supporting documents do not provide any specific details on the types of pesticides that have been used on the Project site in association with

these agricultural operations. Our review has shown known and potential pesticide use at the Project site as follows:

- Data available online from the California Department of Pesticide Regulation show that 2,4-D, 2-Ethylhexyl Ester was used on the Project site.[1,2] Occupational exposure to 2,4-D, 2-Ethylhexyl Ester can occur via inhalation or dermal contact and can result in skin irritation, respiratory failure, hyperventilation, and pulmonary enemas.[3]
- Organochlorine pesticides DDE and DDT were detected in soil samples collected at the Project site[4], indicating past use. Use of organochlorine pesticides in the area is common: review of the Department of Toxic Substances Control's (DTSC) Envirostor database shows that the surrounding lands have been surveyed for organochlorine pesticides, DDE and DDT.[5] These pesticides can persist in soil for hundreds of years despite being banned in the 1970s.[6] Exposure to DDT can result in headaches, nausea, and convulsions.[7] The U.S. EPA identifies DDT and DDE as probable human carcinogens.[8]
- The EPA states that soils at fruit orchards, such as the grapefruit orchard on the Project site, may contain high levels of arsenic from application as a pesticide.[9] Another chemical used on fruit orchards is lead arsenate, a very persistent pesticide.[10] Arsenic is a known human carcinogen and even short-term inhalation of arsenic dust can cause gastrointestinal effects [11] while lead is known to cause neurotoxicological effects.[12]

Pesticide use at the Project site was not disclosed in the DEIR and the detection of pesticide residuals in soil were not described in the Hazards and Hazardous Materials section.

Failure to disclose the presence of pesticide residuals in Project site soils may pose significant health risks to construction workers. Construction of the Project requires grading and the disturbance of subsurface soils and removal of citrus groves (DEIR, p. 4.7-21). During earthmoving activities, construction workers will be exposed, via inhalation of dust and dermal contact, to Project site soils which may contain harmful levels of pesticide residuals associated with agricultural activities on the site. To protect worker safety, Project site soils must be sampled for pesticides. Sampling results should be

[12] http://www.epa.gov/lead/pubs/learn-about-lead.html#effects

compared to health-protective regulatory screening levels such as U.S. EPA Regional Screening Levels[13] and California Human Health Screening Levels.[14]

Soil sampling results should also be evaluated for the protection of nearby residents, located 50 feet from the southern boundary and 200 feet from the northern boundary of the Project site (DEIR, p. 4.3-6). Inhalation of pesticides has been linked to asthma in recent research.[15,16] A report prepared by the California Department of Health identifies pesticides as an asthma trigger.[17] Offsite receptors, including any children living in the neighboring residences, may be exposed to pesticide residuals via dust generated during Project construction.

Construction activities, such as grading and excavation of soils, may generate dust that contains pesticides in concentrations that are harmful to the health of workers and nearby residents and which may act as an asthma trigger. Project site soils should be sampled and results should be compared to human health screening levels. A revised DEIR should be prepared to disclose the results of sampling and include any necessary mitigation to reduce impacts to the health of construction workers and nearby residents.

Phase I ESAs completed for the Project site are outdated and inadequate

The DEIR relies on the findings from two Phase I Environmental Site Assessments (ESAs) that were completed in October and November 2003, nearly nine years ago. The Phase I ESAs surveyed 121 acres of the 123-acre Project site. The Applicant purchased the Project site more than five years ago.[18] A Phase I ESA, according to the U.S. EPA, must be conducted within one year of the acquisition of the property and on-site visual inspections must be completed within 180 days prior to acquiring ownership of the property.[19]

Because the Phase I ESAs are dated and omit two acres of the Project site, they cannot be used to evaluate conditions that are potentially hazardous to construction workers and future site personnel. Therefore, the DEIR's analysis of the Project site based on these Phase I ESAs is inadequate.

Review of Google Earth images shows that the Project site has been used for ongoing agricultural operations since the Phase I ESAs were completed in 2003. Limited pesticide sampling was conducted during the Phase I ESAs (a total of 8 soil samples for a 123-acre Project site) but because the samples were collected nine years ago and because they do not reflect continued agricultural use, the results are reflective of current site conditions.

[18] http://www.pe.com/local-news/riverside-county/moreno-valley/moreno-valley-headlines-index/20120726-moreno-valley-officials-seek-comments-on-prologis-project.ece
[19] http://www.epa.gov/brownfields/aai/aaicerclafs.pdf

The Phase I ESAs cover 121 acres of the 123-acre Project site. We have created a map to show the areas of the Project site surveyed by the two 2003 Phase I ESAs and the boundaries for the current Project site (Attachment A). As the map shows, not all areas of the current Project site were included in the 2003 Phase I ESAs' site assessments.

The Phase I ESAs are outdated and do not cover the entire Project site; therefore, they cannot be used to define baseline conditions for the DEIR's Hazards and Hazardous Materials section. A revised DEIR should be prepared to include a new Phase I ESA that evaluates current Project site conditions.

Status of an underground storage tank is uncertain

A 13,400 gallon underground storage tank (UST), abandoned in the 1950s, was removed from the Project site in 2004 (Appendix F, p. 3/191). The Phase I ESA recommended an additional investigation to be conducted in the area of the former UST (Appendix F, p. 10/191). Accordingly, a permit for removal of the UST was submitted to the Riverside County's Department of Environmental Health in December 2003 and soil samples around the area of the UST were analyzed in 2004. However, the DEIR and supporting documents did not include any documentation that that the UST was properly closed by the Riverside County Department of Environmental Health. If the UST removal was not approved, an Underground Storage Tank Closure Application and Permit[20], per the Riverside County Department of Environmental Health Guidelines,[21] must be submitted. A revised DEIR should be prepared to disclose whether closure was granted by the Riverside County Department of Environmental Health.

Greenhouse Gas Emissions:

The Project's operational greenhouse gas (GHG) emissions, before mitigation, are estimated to be 79,000 metric tons of CO_2e/year (MT CO_2e/yr) which exceed the SCAQMD threshold of 10,000 MT CO_2e/yr and are therefore considered significant (DEIR, p. 4.13-19). After mitigation, the DEIR states that GHG emissions will be less than significant (DEIR, p. 4.13-21). However, the DEIR does not calculate what the Project's GHG emissions will be after the mitigation measures are implemented.

The Project's GHG emissions exceed the SCAQMD threshold by nearly eight times. The DEIR and its supporting documents, including a Greenhouse Gas Study attached as Appendix B, do not provide any evidence that the proposed mitigation measures will reduce GHG emissions by a factor of eight.

A revised DEIR should be prepared to show the efficiency of the Project's proposed mitigation measures in reducing greenhouse gases. If these measures do not account for an eight-fold reduction in the Project's estimated GHG levels, additional mitigation measures (listed below) that are routinely considered in other CEQA projects should be implemented:

- Require preparation of a traffic control plan;

[20] http://www.rivcoeh.org/opencms/system/galleries/download/Environmental-Health/HMM/UST_Closure_App.pdf
[21] http://www.rivcoeh.org/opencms/system/galleries/download/Environmental-Health/HMM/Closure_by_removal_UST.pdf

- Demonstrate proper inspection and maintenance of construction equipment;
- Implement a carpool program for construction workers;
- Employ a construction site manager to verify that engines are properly maintained and keep a maintenance log;
- Configure construction parking to minimize traffic interference;
- Consolidate truck deliveries when possible;
- Provide dedicated turn lanes for movement of construction trucks and equipment on and off site;
- Suspend use of all construction equipment operations during second stage smog alerts;
- Establish a staging zone for trucks that are waiting to load or unload material at the work zone in a location where diesel emissions from the trucks will have minimum impact on abutters and the general public;
- Locate construction equipment away from sensitive receptors such as fresh air intakes to buildings, air conditioners and operable windows;
- Require all diesel trucks used by construction contractor(s) at the site, or for on-road hauling of construction material, to be post-1996 models; Diesel portable generators less than 50 hp shall not be allowed at the construction site;
- Use of hybrid and fuel efficient construction equipment and support vehicles (e.g., pick-up trucks);
- Use of grid electricity for smaller equipment such as saws, pumps, and welders;[22]
- Reduction in vehicle miles travelled in construction crew commutes through trip carpooling, trip reduction, providing bus service for crews from work sites to carpool parking areas, and in providing incentives to carpool; and
- Use of a Heavy-Duty Off-Road Vehicle Plan to ensure compliances with construction mitigation measures (e.g., hourly meters on equipment, documenting the serial number, horsepower, manufacture age, fuel, etc. of all onsite equipment and daily logging of the operating hours of the equipment).[23]

Air Quality:

The Project is located in the South Coast Air Basin and Riverside County[24], both of which are designated non-attainment for PM10 and ozone (DEIR, p. 4.3-6). Significant emissions of PM10 and ozone and contributing factors such as NOx and ROG will lead to a worsening of regional air quality. The Project's estimates of construction emissions need to be properly disclosed and mitigated to ensure that the Project has a less than significant impact on regional air quality.

Estimates and impacts of project's construction and operational emissions

[22] http://www.capcoa.org/wp-content/uploads/2010/11/CAPCOA-Quantification-Report-9-14-Final.pdf, p. 47
[23] Ibid., p. 431
[24] http://www.epa.gov/oaqps001/greenbk/ancl.html

Project construction and operation will result in significant emissions of ROG, NOx, and PM10 even after mitigation (DEIR, pp. 4.3-29, 4.3-34).

Construction emissions

The DEIR estimates that the Project's construction emissions of NOx and ROG will be significant as they exceed the SCAQMD thresholds of 100 lbs/day and 75 lbs/day, respectively (DEIR, p. 4.3-23) and identifies mitigation measures to reduce the Project's emissions (DEIR, pp. 4.3-23 – 4.3-29). Even with mitigation, the Project's emissions of NOx and ROG will still exceed SCAQMD thresholds and therefore are considered significant (DEIR, p. 4.3-29).

Operational emissions

The DEIR estimates that the Project's emissions of ROG, NOx, and PM10 from operational activities will be significant as they exceed the SCAQMD thresholds of 55 lbs/day, 55 lbs/day, and 150 lbs/day, respectively (DEIR, p. 4.3-33). The DEIR proposes mitigation measures to reduce the Project's emissions (DEIR, pp. 4.3-33 – 4.3-34) but, even with mitigation, the Project's emissions will still exceed SCAQMD thresholds and therefore are considered significant (DEIR, p. 4.3-34).

Gaseous particles such as NOx can react in the atmosphere to form PM10.[25,26] Because Riverside County and the South Coast Air Basin are both designated non-attainment for PM10, significant emissions of NOx can lead to a further degradation of regional air quality. NOx emissions can also react to produce ground-level ozone.[27] Exposure to NOx emissions and its products (ozone and PM10) can lead to the airway inflammation and can cause or exacerbate conditions such as emphysema and bronchitis.[28]

ROG can react to form ozone and contributes to smog formation.[29,30] Exposure to ozone can result in coughing, throat irritation, and chest pain, burning, and discomfort.[31] Smog exposure can lead to sneezing, nausea, coughing, headaches, and chest constriction.[32] A study published in the New England Journal of Medicine concluded that the risk of dying from respiratory diseases is three times higher in areas of concentrated ozone.[33]

Exposure to PM10 can cause bronchitis, increase the number and severity of asthma attacks, damage to lung tissue, and even premature death.[34] Research identifies that dust from construction is a major

[25] http://www.fhwa.dot.gov/resourcecenter/teams/airquality/brochure/particulatebrochure.pdf

[27] *Ibid.*
[28] http://www.epa.gov/air/nitrogenoxides/health.html
[29] http://www.arb.ca.gov/research/health/fs/fs2/fs2.htm
[30] http://www.arb.ca.gov/html/gloss.htm#smog
[31] http://www.epa.gov/o3healthtraining/population.html
[32] http://are.berkeley.edu/courses/EEP101/spring03/AllThatSmog/extern.html
[33] http://www.nytimes.com/gwire/2009/03/12/12greenwire-study-links-smog-exposure-to-premature-death-10098.html
[34] http://www.epa.gov/airtrends/aqtrnd95/pm10.html and http://www.arb.ca.gov/html/brochure/pm10.htm

contributor to PM10 and that PM10 exposure is associated with asthma.[35] Inhalation of PM10 can exacerbate asthma especially in children who are susceptible to higher risks from PM10 exposure.[36]

The Project will have significant emissions of ROG, NOx, and PM10. Because Riverside County and the South Coast Air Basin are designated non-attainment areas for ozone and PM10, Project construction and operation will further degrade regional air quality. Exposure to ROG, NOx, and PM10 has adverse health effects and can impact offsite receptors, especially children in the nearby residences – a significant and undisclosed public health impact that the DEIR does not consider.

A revised DEIR should be prepared to disclose impacts to offsite receptors from Project construction and operation. Additional mitigation measures must be implemented to ensure that Project emissions of ROG, NOx, and PM10 are reduced to the maximum extent feasible.

Cumulative Impacts:

The DEIR identifies 13 proposed projects encompassing approximately 7.3 million square feet of space within five miles of the Project site (DEIR, p. 3-16). The DEIR does not identify the construction schedule of these projects except to state that "a number of individual projects may be under construction simultaneously with the proposed project" (DEIR, p. 4.3-37). The WestRidge Commerce Center Project (which will be built adjacent to the proposed Project) is scheduled to be constructed in 2012, a schedule similar to the proposed Project. Simultaneous construction of these projects, along with other potential projects, is likely to result in PM10, NOx, and ROG emissions that will have a cumulatively significant impact.

The construction timetables of all projects within the vicinity of the Project site should be identified. Any cumulatively significant emissions should be disclosed and impacts to workers and nearby residents should be addressed in a revised DEIR.

Sincerely,

Uma Bhandaram

Matt Hagemann, P.G., C.Hg.

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
CEQA Review
Investigation and Remediation Strategies
Litigation Support and Testifying Expert

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.
B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certification:

California Professional Geologist
California Certified Hydrogeologist
Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – present;
- Senior Environmental Analyst, Komex H2O Science, Inc (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Partner, SWAPE:

With SWAPE, Matt's responsibilities have included:

- Lead analyst and testifying expert in the review of numerous environmental impact reports under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, greenhouse gas emissions and geologic hazards.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Technical assistance and litigation support for vapor intrusion concerns.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt's duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.
- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.
- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the dischrge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt currently teaches Physical Geology (lecture and lab) to students at Golden West College in Huntington Beach, California.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Coloradao.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

The following Overview, *** CHLOROPHENOXY COMPOUNDS ***, is relevant for this

HSDB record chemical.

Life Support:

o This overview assumes that basic life support measures have been instituted.

Clinical Effects:

0.2.1 SUMMARY OF EXPOSURE
0.2.1.1 ACUTE EXPOSURE
A) WITH POISONING/EXPOSURE
1) ACUTE INGESTION - Miosis, coma, fever, hypotension, emesis, tachycardia, bradycardia, ECG abnormalities, muscle rigidity, possible respiratory failure, pulmonary edema, and rhabdomyolysis may occur. Deaths have resulted from cardiorespiratory arrest.
a) Concentrated formulations of 2,4-D-esters may contain petroleum solvents, contributing to the overall toxicity. Please refer to the HYDROCARBONS management for further information.
2) PATHOPHYSIOLOGY - These agents are primarily irritants, but one case of degenerative brain cell changes and CNS toxicity has been reported.

0.2.3 VITAL SIGNS
0.2.3.1 ACUTE EXPOSURE
A) WITH POISONING/EXPOSURE
1) Fever of sudden but delayed onset may occur following ingestion.

0.2.4 HEENT
0.2.4.1 ACUTE EXPOSURE
A) WITH POISONING/EXPOSURE
1) Eye, nose, and mouth irritation are possible with direct contact.

0.2.5 CARDIOVASCULAR
0.2.5.1 ACUTE EXPOSURE
A) WITH POISONING/EXPOSURE
1) Tachycardia, bradycardia, ECG abnormalities, asystole, other dysrhythmias, and hypotension have been reported with overdose. Deaths have resulted from cardiorespiratory arrest.

0.2.6 RESPIRATORY
0.2.6.1 ACUTE EXPOSURE
A) WITH POISONING/EXPOSURE
1) Ingestion of large amounts may cause bradypnea, respiratory failure, hyperventilation, or pulmonary edema.

0.2.7 NEUROLOGIC
0.2.7.1 ACUTE EXPOSURE
A) WITH POISONING/EXPOSURE
1) LOW DOSE EXPOSURES - Vertigo, headache, malaise, and paresthesias may occur depending on the specific compound involved.
2) HIGH DOSE EXPOSURES - Muscle twitching, spasms, profound weakness, polyneuritis, and unconsciousness may occur depending on the specific compound involved.
3) IDIOSYNCRATIC REACTIONS - Peripheral neuropathies

0.2.8 GASTROINTESTINAL
0.2.8.1 ACUTE EXPOSURE
A) WITH POISONING/EXPOSURE
1) Nausea, vomiting, and diarrhea have been reported. Necrosis of the gastrointestinal mucosa has been reported.

0.2.9 HEPATIC
0.2.9.1 ACUTE EXPOSURE
A) WITH POISONING/EXPOSURE
1) Elevated LDH, AST (SGOT), and ALT (SGPT) have been reported.
0.2.10 GENITOURINARY
0.2.10.1 ACUTE EXPOSURE
A) WITH POISONING/EXPOSURE
1) Albuminuria and porphyria may occur; renal failure due to rhabdomyolysis is also possible.
0.2.12 FLUID-ELECTROLYTE
0.2.12.1 ACUTE EXPOSURE
A) WITH POISONING/EXPOSURE
1) Ingestion of 2,4-D has produced hypocalcemia, hyperkalemia, and hypophosphatemia.
0.2.13 HEMATOLOGIC
0.2.13.1 ACUTE EXPOSURE
A) WITH POISONING/EXPOSURE
1) Thrombocytopenia is the primary hematologic effect. Leukopenia has also been reported.
0.2.14 DERMATOLOGIC
0.2.14.1 ACUTE EXPOSURE
A) WITH POISONING/EXPOSURE
1) Direct contact may cause skin irritation. Chlorodioxin contamination of products may produce chloracne with heavy exposure.
0.2.15 MUSCULOSKELETAL
0.2.15.1 ACUTE EXPOSURE
A) WITH POISONING/EXPOSURE
1) Muscle cramps, muscle rigidity, elevated creatine kinase, and rhabdomyolysis were reported after ingestion of MCPP. EMG abnormalities, elevated creatine kinase, and proximal muscle weakness have been described following 2,4-D ester exposure.
0.2.16 ENDOCRINE
0.2.16.1 ACUTE EXPOSURE
A) WITH POISONING/EXPOSURE
1) Hypoglycemia has been reported in cases of acute 2,4-D poisoning. Animal studies showed decreased T3 and T4 levels, but this effect has not been reported in humans.
0.2.20 REPRODUCTIVE HAZARDS
A) 2,4-D and 2,4,5-T have caused adverse reproductive effects in experimental animals. Allegations of human birth defects due to these compounds have not been confirmed.
0.2.21 CARCINOGENICITY
0.2.21.1 IARC CATEGORY
A) IARC Carcinogenicity Ratings for CAS94-75-7 (IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, 2006; IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, 2007; IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, 2010; IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, 2010a; IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, 2008; IARC, 2004):

0.2.21.2 HUMAN OVERVIEW

A) Human studies show conflicting results. Some studies have suggested a relationship between chlorophenoxy herbicides and both soft tissue sarcoma and non-Hodgkin's lymphoma, while others have not.

0.2.21.3 ANIMAL OVERVIEW

A) Animal studies are limited, but have generally been negative.

0.2.22 GENOTOXICITY

A) The chlorophenoxy herbicides have produced mixed negative and positive responses in various genotoxicity test systems. A recent review found no evidence of genotoxic or mutagenic potential in vitro and in vivo for 2,4-D.

B) One study was conducted to determine whether or not New Zealand Vietnam War veterans showed evidence of genetic disturbances arising as a consequence of their now confirmed exposure to chlorophenoxy herbicides. During 1965 to 1971, more than 76 million liters of phenoxylic herbicides were sprayed over parts of Southern Vietnam and Laos. A sample group of 24 New Zealand Vietnam War veterans and 23 control volunteers were compared using a sister chromatid exchange (SCE) analysis. The results showed a significant difference between the mean of the experimental group and the mean of the control group (11.05 vs 8.18; $p<0.001$). The experimental group also had an extremely elevated proportion of cells with high SCE frequencies (HFCs) above the 95th percentile compared to the controls (11% and 0.07%, respectively) (Rowland et al, 2007).

Laboratory:

A) These herbicides can be measured in the urine, but the values are not clinically useful. Plasma levels also appear to be poorly correlated with clinical effects.

B) Erythrocyte cholinesterase is not affected by these herbicides.
C) Obtain baseline CBC, platelet count, serum electrolytes, and renal/hepatic function tests. Monitor LDH, AST (SGOT), ALT (SGPT), alkaline phosphatase, CPK, arterial pH, and bicarbonate.
D) Monitor urine for pH, protein, RBC's, myoglobin, and urinary output.
E) Monitor the patient for at least 6 to 12 hours as there is a potential for delayed onset of symptoms.

Treatment Overview:

0.4.2 ORAL EXPOSURE

A) Treat ingestions of greater than 40 mg/kg with gastric decontamination if within 4 hours of ingestion.
B) ACTIVATED CHARCOAL: Administer charcoal as a slurry (240 mL water/30 g charcoal). Usual dose: 25 to 100 g in adults/adolescents, 25 to 50 g in children (1 to 12 years), and 1 g/kg in infants less than 1 year old.
C) URINARY ALKALINIZATION: May enhance elimination. Should be considered with severe poisoning.
D) VENTRICULAR DYSRHYTHMIAS/SUMMARY: Institute continuous cardiac monitoring, obtain an ECG, and administer oxygen. Evaluate for hypoxia, acidosis, and electrolyte disorders. Lidocaine and amiodarone are generally first line agents for stable monomorphic ventricular tachycardia, particularly in patients with underlying impaired cardiac function. Amiodarone should be used with caution if a substance that prolongs the QT interval and/or causes torsades de pointes is involved in the overdose. Unstable rhythms require immediate cardioversion.
E) LIDOCAINE: ADULT: LOADING DOSE: 1 to 1.5 mg/kg IV push; for refractory VT/VF may give an additional bolus of 0.5 to 0.75 mg/kg over 3 to 5 min. Do not exceed 3 mg/kg or 200 to 300 mg over one hour. INFUSION: Once circulation restored begin infusion of 1 to 4 mg/min. PEDIATRIC: LOADING DOSE: 1 mg/kg; INFUSION: 20 to 50 mcg/kg/min. Monitor ECG continuously.

0.4.3 INHALATION EXPOSURE

A) INHALATION: Move patient to fresh air. Monitor for respiratory distress. If cough or difficulty breathing develops, evaluate for respiratory tract irritation, bronchitis, or pneumonitis. Administer oxygen and assist ventilation as required. Treat bronchospasm with inhaled beta2 agonist and oral or parenteral corticosteroids.
B) ACUTE LUNG INJURY: Maintain ventilation and oxygenation and evaluate with frequent arterial blood gas or pulse oximetry monitoring. Early use of PEEP and mechanical ventilation may be needed.

0.4.4 EYE EXPOSURE

A) DECONTAMINATION: Irrigate exposed eyes with copious amounts of room temperature water for at least 15 minutes. If irritation, pain, swelling, lacrimation, or photophobia persist, the patient should be seen in a health care facility.

0.4.5 DERMAL EXPOSURE

A) OVERVIEW

1) DECONTAMINATION: Remove contaminated clothing and jewelry. Wash the skin, including hair and nails, vigorously; do repeated soap washings. Discard

contaminated clothing.
2) Treat dermal irritation or burns with standard topical therapy. Patients developing dermal hypersensitivity reactions may require treatment with systemic or topical corticosteroids or antihistamines.

Range of Toxicity:

A) Limited data are available.
B) Fatalities have been seen following ingestion of 80 mg/kg.
C) Intravenous injection of 28 mg/kg of 2,4-D was tolerated; 50 mg/kg produced toxicity.

[Rumack BH POISINDEX(R) Information System Micromedex, Inc., Englewood, CO, 2012; CCIS Volume 154, edition expires Nov, 2012. Hall AH & Rumack BH (Eds): TOMES(R) Information System Micromedex, Inc., Englewood, CO, 2012; CCIS Volume 154, edition expires Nov, 2012.] **PEER REVIEWED**

Antidote and Emergency Treatment:

Skin decontamination: Flush contaminating chemicals from eyes with copious amounts of water for 10 to 15 minutes. If irritation persists, an ophthalmological examination should be performed. /Chlorophenoxy Herbicides/
[U.S. Environmental Protection Agency/Office of Prevention, Pesticides, and Toxic Substances. Reigart, J.R., Roberts, J.R. Recognition and Management of Pesticide Poisonings. 5th ed. 1999. EPA Document No. EPA 735-R-98-003, and available in electronic format at: http://www.epa.gov/pesticides/safety/healthcare p. 97] **PEER REVIEWED**

Ingestions of these herbicides are likely to be followed by vomiting and diarrhea due to the irritant properties. ... Activated charcoal is probably effective in limiting irritant effects and reducing absorption of most or all of these herbicides. Aluminum hydroxide antacids may be useful in neutralizing the irritant actions of mose acidic agents. Sorbitol should be given to induce catharsis if bowel sounds are present and if spontaneous diarrhea has not already commenced. Dehydration and electrolyte disturbances may be severe enough to require intravenous fluids. There are no specific antidotes for poisoning by these herbicides. /Other Herbicides/
[U.S. Environmental Protection Agency/Office of Prevention, Pesticides, and Toxic Substances. Reigart, J.R., Roberts, J.R. Recognition and Management of Pesticide Poisonings. 5th ed. 1999. EPA Document No. EPA 735-R-98-003, and available in electronic format at: http://www.epa.gov/pesticides/safety/healthcare p. 123] **PEER REVIEWED**

Administer intravenous fluids to accelerate excretion of the chlorophenoxy compound, and to limit concentration of the toxicant in the kidney. A urine flow of 4-6 mL/minute is desirable. Intravenous saline/dextrose has sufficed to rescue comatose patients who drank 2,4-D and mecoprop several hours before hospital admission. CAUTION: Monitor urine protein, cells. BUN, serum creatine,serum electrolytes, and fluid intake/output carefully to insure that renal function remains unimpaired and that fluid overload does not occur. /Chlorophenoxy Herbicides/
[U.S. Environmental Protection Agency/Office of Prevention, Pesticides, and Toxic Substances. Reigart, J.R., Roberts, J.R. Recognition and Management of Pesticide Poisonings. 5th ed. 1999. EPA Document No. EPA 735-R-98-003, and available in electronic format at: http://www.epa.gov/pesticides/safety/healthcare p. 97] **PEER REVIEWED**

Forced alkaline diuresis has been used successfully in management of suicidal ingestions of chlorophenoxy compounds, especially when initiated early. Alkalinizing the urine by including sodium bicarbonate ... in the intravenous solution accelerates excretion of 2,4-D dramatically and mecoprop excretion substantially. Urine pH should be maintained between 7.6 and 8.8. Include potassium chloride to offset increased potassium losses. ... It is crucial to monitor serum electrolytes carefully, especially potassium and calcium. There may possibly be some hazard to the kidneys when urine concentrations of toxicant are very high, so the integrity of renal function and fluid balance should be monitor carefully as the chlorophenoxy compound is excreted. Renal failure has occured in patients with severe intoxication during alkaline diuresis. /Chlorophenoxy Herbicides/
[U.S. Environmental Protection Agency/Office of Prevention, Pesticides, and Toxic Substances. Reigart, J.R., Roberts, J.R. Recognition and Management of Pesticide Poisonings. 5th ed. 1999. EPA Document No. EPA 735-R-98-003, and available in electronic format at: http://www.epa.gov/pesticides/safety/healthcare p. 97] **PEER REVIEWED**

Hemodialysis is not likely to be of significant benefit in poisonings by chlorophenoxy compounds. It has been used in four patients who survived intoxication. However, given the highly protein-bound nature of these herbicides and lack of any other evidence , hemodialysis is not recommended. /Chlorophenoxy Herbicides/
[U.S. Environmental Protection Agency/Office of Prevention, Pesticides, and Toxic Substances. Reigart, J.R., Roberts, J.R. Recognition and Management of Pesticide Poisonings. 5th ed. 1999. Animal Toxicity Studies:

Non-Human Toxicity Excerpts:

/LABORATORY ANIMALS: Acute Exposure/ English pointer dogs dosed po with encapsulated 2,4-dichlorophenoxyacetic acid (2,4-D) at 1.3, 8.8, 43.7, 175 or 220 mg/kg body weight failed to exhibit abnormalities in hematologic, serum biochemical, urinalysis, or electrocardiographic parameters. At the 3 lowest doses, no changes were noted in electro-encephalograms (EEGs). In the dog given 175 mg/kg, at 24 h postdosing mild sedation was accompanied by excessive slowing in the EEG with loss of low voltage fast activity. In the dog given 220 mg/kg, nonspecific alterations in the EEG suggestive of irritation and mild seizure activity was detected 7 hr, but the EEG returned to normal by 24 hr. /2,4-D/
[Arnold EK et al; Vet Hum Toxicol 33 (5): 446-9 (1991)] **PEER REVIEWED** PubMed Abstract

/LABORATORY ANIMALS: Acute Exposure/ The acute toxicity of 2,4-dichlorophenoxyacetic acid (2,4-D), a herbicide, was studied in chicks dosed with 100, 300, 500, or 600 mg 2,4-D/kg BW, by the oral route. Clinical, laboratory, and histopathological methods were used as indicators of toxicity. After acute exposure, the herbicide decreased motor activity and induced muscular weakness and motor incoordination; decreased weight gain; increased serum creatine kinase (CK) and alkaline phosphatase (AP) activities and serum uric acid (UA), creatinine (CR), and total proteins (TP) levels; and did not change serum aspartate aminotransferase (AST) or alanine aminotransferase (ALT) activities. These changes were time- and dose-dependent and reversible. The LD50 (lethal dose 50%) calculated for oral 2,4-D in chicks was 420 mg/kg BW (385 to 483). Chromatographic analysis of the serum of the intoxicated chicks showed the presence of the herbicide; the amount found was dose- and time-dependent, increasing from 2 to 8 hr after exposure and decreasing afterwards. Histopathological post-mortem studies conducted on intoxicated chicks showed hepatic (vacuolar degeneration of the hepatocytes), renal (tubular nephrosis), and intestinal (hemorrhagic) lesions. /2,4-D/
[Morgulis MS, et al; Poult Sci 77 (4): 509-515 (1998)] **PEER REVIEWED** PubMed Abstract

/LABORATORY ANIMALS: Subchronic or Prechronic Exposure/ Forms of 2,4-dichlorophenoxyacetic acid (collectively known as 2,4-D) are herbicides used to control a wide variety of broadleaf and woody plants. Subchronic toxicity studies in rats were conducted on three forms of 2,4-D: the parent form, 2,4-D acid; 2,4-D dimethylamine salt (DMA); and 2,4-D 2-ethylhexyl ester (2-EHE). Doses in the subchronic studies (on an acid equivalent basis) were 0, 1, 15, 100, and 300 mg/kg/day. Major treatment related findings in the three studies included decreases in red cell mass, decreases in T3 and T4 levels, decreases in ovary and testes weights, increases in liver, kidney, and thyroid weights, and cataracts and retinal degeneration (high-dose females). These data demonstrated the comparable toxicities of 2,4-D acid, DMA, and 2-EHE and support a subchronic no-observed-effect level of 15 mg/kg/day for all three forms.
[Charles JM, et al; Fundam Appl Toxicol 33 (2): 161-165 (1996)] **PEER REVIEWED** PubMed Abstract

/LABORATORY ANIMALS: Subchronic or Prechronic Exposure/ The influence of sublethal doses of 2,4-dichlorophenoxyacetic acid (2,4-D) on serum T3 & T4 concns in Hsd Cpb: Wistar rats of both sexes was studied. The trial was performed on 24 males & females respectively, each divided into three groups of 8 animals (control, groups 1 & 2). Aqueous soln of the compound (11 mg/kg bw--group 1 & 110 mg/kg bw--group 2) or clean tap water (control group) was used. Aliquots of 2.4 mL/kg bw were administered with a stomach tube from the 1st-10th day of the experiment. Three days before the first treatment & on the 6th & 13th day of the experiment the serum T3 & T4 concns were determined by commercial radioimmunoassay kits (Byk-Sangtec Diagnostica), validated for rats. A significant decr of serum T4 ($P<0.01$) & T3 ($P<0.001$) was determined in males of groups 1 & 2 during the experiment. On the 6th day of experiment serum T4 & T3 values were significantly lower ($P<0.001$ & 0.01 respectively) in group 2 than in the controls & group 1 of both males & females. During the whole experiment serum T4 levels were lower in females than in males ($P<0.05$). /2,4-D/

/LABORATORY ANIMALS: Developmental or Reproductive Toxicity/ When 2,4-D was administered at a concentrations of 500 mg/kg of diet during entire pregnancy of a sow, anorexia was noted; newborn piglets were underdeveloped & apathetic & 10/15 died within 24 hr. Continued feeding of 50 mg/kg of diet to survivors until ... 8 months of age caused growth depression, persistent anemia, & moderate degenerative changes of liver & kidneys. /2,4-D/
[IARC. Monographs on the Evaluation of the Carcinogenic Risk of Chemicals to Man. Geneva: World Health Organization, International Agency for Research on Cancer, 1972-PRESENT. (Multivolume work). Available at: http://monographs.iarc.fr/index.php p. V15 123 (1977)] **PEER REVIEWED**

/LABORATORY ANIMALS: Developmental or Reproductive Toxicity/ The reproductive toxicity of 2,4-D has been studied at dietary doses of 0, 5, 20, and 80 mg/kg/day in a two generation reproductive study in Fischer 344 rats. The parental Fo group was treated with 2,4-D for 15 weeks prior to mating. No adverse effects on fertility were observed in the 5 and 20 mg/kg daily dose groups, although reduced pup weights were noted in the 20 mg/kg F2a litters. A daily NOAEL of 5 mg/kg for reproductive toxicity was established from this study. In addition to this reproduction study, recent subchronic and chronic studies in rats, mice and dogs produced no evidence of treatment related histopathological changes in the testes at any of the dose levels ... . /2,4-D/
[Bingham, E.; Cohrssen, B.; Powell, C.H.; Patty's Toxicology Volumes 1-9 5th ed. John Wiley & Sons. New York, N.Y. (2001)., p. V4 493] **PEER REVIEWED**

/LABORATORY ANIMALS: Developmental or Reproductive Toxicity/ The cytogenetic effect of 2,4-dichlorophenoxy acetic acid (2,4-D) & its metabolite 2,4-dichlorophenol (2,4-DCP) was studied in bone-marrow, germ cells & sperm head abnormalities in the treated mice. Swiss mice were treated orally by gavage with 2,4-D at 1.7, 3.3 and 33 mg kg(-1)BW (1/200, 1/100 and 1/10 of LD(50)). 2,4-DCP was intraperitoneally (i.p.) injected at 36, 72 and 180 mg kg(-1)BW (1/10, 1/5, 1/2 of LD(50)). A significant increase in the percentage of chromosome aberrations in bone-marrow and spermatocyte cells was observed after oral administration of 2,4-D at 3.3 mg kg(-1)BW for three and five consecutive days. This percentage increased and reached 10.8+/-0.87 ($P<0.01$) in bone-marrow and 9.8+/-0.45 ($P<0.01$) in spermatocyte cells after oral administration of 2,4-D at 33 mg kg(-1)BW for 24 hr. This percentage was, however, lower than that induced in bone-marrow and spermatocyte cells by mitomycin C (positive control). 2,4-D induced a dose-dependent increase in the percentage of sperm head abnormalities. The genotoxic effect of 2,4-DCP is weaker than that of 2,4-D, as indicated by the lower percentage of the induced chromosome aberrations (in bone-marrow and spermatocyte cells) and sperm head abnormalities. /2,4-D/
[Amer SM, Aly FA; Mutat Res 25; 494 (1-2): 1-12 (2001)] **PEER REVIEWED**

/LABORATORY ANIMALS: Neurotoxicity/ The acute effects of 2,4-dichlorophenoxyacetic acid (2,4-D) administered orally to female mongrel dogs in doses of 25, 50, 75, 100 or 125 mg/kg were investigated by means of neurological examinations, electromyography and motor nerve conduction velocity tests carried out at various times following treatment. On day one after treatment with 125 mg/kg, one of four dogs was lethargic but recovered by day three. Also on day one, myotonic dimpling was evident in one dog each in the groups treated with 50, 100, 125 mg/kg. Dogs treated with more than 50 mg/kg had generalized myotonic discharges which increased according to the dose and were resolved by day 14 but not day seven. Treatment failed to affect motor nerve conduction velocity. Pathologic changes in teased nerve fibers involved occasional fiber degeneration, paranodal demyelination and intercalated internodes. Transverse semi-thin sections showed mild focal fiber degeneration and eventual medial plantar nerve depletion in five dogs treated with 25, 100 and 125 mg/kg and in lateral plantar nerve of two dogs treated with 125 mg/kg and one control. A single exposure to sublethal oral doses of 2,4-D is not associated with evidence of polyneuropathy. /2,4-D/
[Steiss JE et al; J Neurol Sci 78 (3): 295-301 (1987)] **PEER REVIEWED** PubMed Abstract

/LABORATORY ANIMALS: Neurotoxicity/ Forms of 2,4-dichlorophenoxyacetic acid ... are herbicides used to control a wide variety of broadleaf and woody plants. Single-dose acute and 1-year chronic neurotoxicity screening studies in male and female Fischer 344 rats (10/sex/dose) were conducted on 2,4-D according to the U.S. EPA 1991 guidelines. The studies emphasized a Functional Observational Battery (which included grip performance and hindlimb splay tests), automated motor activity testing, and comprehensive neurohistopathology of perfused tissues. Dosages were up to 250 mg/kg by gavage for the single-dose study, and up to 150 mg/kg/day in the diet for 52 weeks in the repeated-dose study. In the acute study, gavage with 250 mg/kg test material caused slight transient gait and coordination changes and clearly decreased motor activity at the time of maximal effect on the day of treatment (day 1). Mild locomotor effects occurred in one mid-dose rat (75 mg/kg), on Day 1 only. No gait, coordination, or motor activity effects were noted by day 8. In the chronic study, the only finding of neurotoxicologic significance was retinal degeneration in females in the high-dose group (150 mg/kg/day). Body weights of both sexes were slightly less than controls in the mid-dose group, and 10% less than controls in the high-dose group. /2,4-D/

/OTHER TOXICITY INFORMATION/ The effects of daily dosing with the 2-ethyl hexyl ester of 2,4-D and its components at 250 mg/kg on blood urea nitrogen and plasma Mg:Ca ratios in cattle and sheep are tabulated. The formulation of the herbicide (emulsifiable concentrate or technical grade) showed no difference in the effects. Treatment with the compound resulted in a decrease in plasma Ca and an increase in plasma Mg significantly changing the ratio in the plasma of two sheep and a yearling heifer that died. In some cases, there was a 50% ratio decrease. Increased blood urea nitrogen (in one case increased from 4 to 40 mg/100 mL) was noted in the herbicide-treated animals. Kidney damage and swollen blood-engorged thyroids were commonly noted during the postmortem examinations.

Ecotoxicity Excerpts:

/AQUATIC SPECIES/ In studies conducted according to the guidelines of the US Environmental Protection Agency, 2,4-D acid and ethylhexyl ester had no effect on the early life stages, embryo hatch, larval weight, or larval length of the fathead minnow (Pimephales promelas) at concentrations of 12.6-102 mg/L for up to 32 days (acid). The 32-day NOEC for the acid was 63.4 mg/L, comparable to the 33-day NOEC for the diethanolamine salt of 29.1 mg/L. The ethylhexyl ester was more toxic, with a 32-day NOEC of 0.12 mg/L... .
[FAO/WHO; Pesticide Residues in Food: Toxicological and Environmental Evaluations: 2,4-Dichlorophenoxyacetic acid (2,4-D), salts and esters (1997). Available from, as of February 1, 2005: http://www.inchem.org/documents/jmpr/jmpmono/v097pr16.htm **PEER REVIEWED**

/AQUATIC SPECIES/ The esters of 2,4-D are clearly more toxic to invertebrate species such as the tidewater silverside (Menidia beryllina), Atlantic silverside (Menidia menidia), grass shrimp (Palaemonetes puqio), pink shrimp (Panaeus duorarum), and Dungeness crab (Cancer magister) than is the dimethylamine salt or the acid. The same is true for formulated 2-ethylhexyl ester.

Metabolism / Pharmacokinetics:

Metabolism / Metabolites:

The pharmacokinetics of the 2-ethylhexyl ester of 2,4-D were investigated following a single oral administration of 130 mg/kg body weight dose to both male and female Fischer 344 rats. Blood samples were drawn from 24 rats per sex in serial groups of 3 at intervals of 0.25, 0.5, 1, 2, 4, 8, 24, and 72 hours post dosing and urine was collected from the 72 hours group at 12 hour intervals. The most significant finding from this evaluation was the absence of any 2-ethylhexyl ester of 2,4-D in either the blood or urine for either sex evaluated (limit of quantification 10 ppb). Conversely 2,4-D acid was detected in both blood and urine. The present data indicate that the 2-ethylhexyl ester of 2,4-D is converted very rapidly to 2,4-D acid, and that the acid is then excreted into the urine. A similarity exists in interval excretion data with that seen in previous investigations with 2,4-D acid. Indications are that the 2,4-D acid is probably derived via the hydrolysis of the 2-ethylhexyl ester moiety and is eliminated from the body in the same manner as the orally administered 2,4-D acid. It is therefore anticipated from these results that the 2-ethylhexyl ester of 2,4-D should be toxicologically comparable to 2,4-D acid itself.
[European Chemicals Bureau; IUCLID Dataset, 2-ethylhexyl 2,4-dichhlorophenoxyacetate (1928-43-4) (2000 CD-ROM edition). Available from, as of January 13, 2005: http://esis.jrc.ec.europa.eu/ **PEER REVIEWED**

2,4-D 2-ethylhexyl ester is hydrolysed to 2,4-D by esterase enzymes present in the gut wall, in blood plasma, in liver cells and in skin. Any 2,4-D /ethylhexyl ester/ absorbed orally or dermally is hydrolysed to 2,4-D, the acid ionic form.

Pharmacology:

Environmental Fate & Exposure:

Environmental Fate/Exposure Summary:
2,4-D, 2-ethylhexyl ester's production may result in its release to the environment through various waste streams; its use as a herbicide will result in its direct release to the environment. If released to air, a vapor pressure of 3.59X10-4 mm Hg at 25 deg C indicates 2,4-D, 2-ethylhexyl ester will exist solely as a vapor in the ambient atmosphere. Vapor-phase 2,4-D, 2-ethylhexyl ester will be degraded in the atmosphere by reaction with photochemically-produced hydroxyl radicals; the half-life for this reaction in air is estimated to be 27 hours. If released to soil, 2,4-D, 2-ethylhexyl ester is expected to have no mobility based upon an estimated Koc of 33,000. Volatilization from moist soil surfaces is expected to be an important fate process based upon a Henry's Law constant of 1.8X10-5 atm-cu m/mole. If released into water, 2,4-D, 2-ethylhexyl ester is expected to adsorb to suspended solids and sediment based upon the estimated Koc. 2,4-D, 2-ethylhexyl ester is expected to hydrolyze and form the parent compound 2,4-D acid. The estimated hydrolysis half-lives of this reaction are 35 and 3.5 days at pH values of 7 and 8, respectively. Field studies have resulted in half-lives of 1 to 51 days when applied as a spray and 4-16 days when applied in granule form. These results are similar to those found in the parent compound, 2,4-D acid. Volatilization from water surfaces is expected to be an important fate process based upon this compound's Henry's Law constant. Estimated volatilization half-lives for a model river and model lake are 94 hours and 821 hours, respectively. However, volatilization from water surfaces is expected to be attenuated by adsorption to suspended solids and sediment in the water column. The estimated volatilization half-life from a model pond is 51 months if adsorption is considered. An estimated BCF of 5,600 suggests the potential for bioconcentration in aquatic organisms is very high. Occupational exposure to 2,4-D, 2-ethylhexyl ester may occur through inhalation and dermal contact with this compound at workplaces where 2,4-D, 2-ethylhexyl ester is produced or used. (SRC)
PEER REVIEWED

Probable Routes of Human Exposure:
Occupational exposure to 2,4-D, 2-ethylhexyl ester may occur through inhalation and dermal contact with this compound at workplaces where 2,4-D, 2-ethylhexyl ester is produced or used. (SRC)
PEER REVIEWED

Artificial Pollution Sources:
2,4-D, 2-ethylhexyl ester production may result in its release to the environment through various waste streams; its use as a herbicide(1) will result in its direct release to the environment(SRC).

Environmental Bioconcentration:
An estimated BCF of 5,600 was calculated for 2,4-D, 2-ethylhexyl ester(SRC), using a log Kow of 5.78(1) and a regression-derived equation(2). According to a classification scheme(3), this BCF suggests the potential for bioconcentration in aquatic organisms is very high(SRC), provided the compound is not altered physically or chemically once released into the environment(SRP).
[(1) Tomlin CDS, ed; The e-Pesticide Manual. 2,4-D-2-ethylhexyl. 13th ed. PC CD-ROM, Version 3.0, 2003-04. Surrey, UK: British Crop Protection Council (2003) (2) Meylan WM et al; Environ Toxicol Chem 18: 664-72 (1999) (3) Franke C et al; Chemosphere 29: 1501-14 (1994)] **PEER REVIEWED**

Soil Adsorption/Mobility:
The Koc of 2,4-D, 2-ethylhexyl ester is estimated as 33,000(SRC), using a log Kow of 5.78(1) and a regression-derived equation(2). According to a classification scheme(3), this estimated Koc value suggests that 2,4-D, 2-ethylhexyl ester is expected to be immobile in soil.
[(1) Tomlin CDS, ed; The e-Pesticide Manual. 2,4-D-2-ethylhexyl. 13th ed. PC CD-ROM, Version 3.0, 2003-04. Surrey, UK: British Crop Protection Council (2003) (2) Lyman WJ et al; Handbook of Chemical Property Estimation Methods. Washington, DC: Amer Chem Soc pp. 4-9 (1990) (3) Swann RL et al; Res Rev 85: 17-28 (1983)] **PEER REVIEWED**

Volatilization from Water/Soil:
The Henry's Law constant for 2,4-D, 2-ethylhexyl ester is 1.8X10-5atm-cu m/mole(1). This Henry's Law constant indicates that 2,4-D, 2-ethylhexyl ester is expected to volatilize from water surfaces(2). Based on this Henry's Law constant, the volatilization half-life from a model river (1 m deep, flowing 1 m/sec, wind velocity of 3 m/sec)(2) is estimated as 94.4 hours(SRC). The volatilization half-life from a model lake (1 m deep, flowing 0.05 m/sec, wind velocity of 0.5 m/sec)(2) is

estimated as 34.2 days(SRC). However, volatilization from water surfaces is expected to be attenuated by adsorption to suspended solids and sediment in the water column. The estimated volatilization half-life from a model pond is 51 months when adsorption is considered(3). Volatilization of 2,4-D, 2-ethylhexyl ester from moist soil surfaces is expected to be an important fate process(SRC) given a Henry's Law constant of 1.8X10-5 atm-cu m/mole(1). However, adsorption to soil is expected to attenuate volatilization(SRC). 2,4-D, 2-ethylhexyl ester is not expected to volatilize from dry soil surfaces(SRC) based upon its vapor pressure of 3.59X10-4 mm Hg(1).

As the federal pesticide law FIFRA directs, EPA is conducting a comprehensive review of older pesticides to consider their health and environmental effects and make decisions about their future use. Under this pesticide reregistration program, EPA examines health and safety data for pesticide active ingredients initially registered before November 1, 1984, and determines whether they are eligible for reregistration. In addition, all pesticides must meet the new safety standard of the Food Quality Protection Act of 1996. Isooctyl(2-ethylhexyl) 2,4-dichlorophenoxyacetate is found on List A, which contains most food use pesticides and consists of the 194 chemical cases (or 350 individual active ingredients) for which EPA issued registration standards prior to FIFRA '88. Case No: 0073; Pesticide type: fungicide, herbicide (growth regulator); Registration Standard Date: 9/1/88 PB89-102396; Case Status: OPP is reviewing data from the pesticide's producers regarding its human health and/or environmental effects, or OPP is determining the pesticide's eligibility for reregistration and developing the RED document.; Active ingredient (AI): isooctyl(2-ethylhexyl) 2,4-dichlorophenoxyacetate; Data Call-in (DCI) Date(s): 3/25/94; AI Status: The producers of the pesticide have made commitments to conduct the studies and pay the fees required for reregistration, and are meeting those commitments in a timely manner. /RED scheduled for May 2005/

Disposal Methods:
SRP: The most favorable course of action is to use an alternative chemical product with less inherent propensity for occupational exposure or environmental contamination. Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations.

SOIL

Site History

The Site comprises approximately 0.42-acres within the existing Mountain View Middle School property. The Site has been historically used for agricultural purposes from approximately 1938 to 1980. The school was constructed in 1980. Surrounding properties consist of Valley View High School to the east, and residential to the north, south, and west. To evaluate the impact from historical operations, the site was investigated for arsenic and organochlorine pesticides. DTSC concurred with the conclusion in the PEA that no further action is necessary for the Site.

Site History

The Site is approximately 55.6-acres and has historically been used for agricultural purposes since 1938. Surrounding properties consist of vacant land to the north, residential properties to the east, residential and agricultural properties to the west (across Quincy Wash), and residential and agricultural properties to the south (across Ironwood Avenue). To evaluate the impact from historical operations, the site was investigated for arsenic, copper and organochlorine pesticides. The PEA concludes that no further action is necessary for the Site. DTSC concurred with a No Further Action determination.

TOXICOLOGICAL PROFILE FOR
DDT, DDE, and DDD

U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES
Public Health Service
Agency for Toxic Substances and Disease Registry

September 2002

Large amounts of DDT were released into the air and on soil or water when it was sprayed on crops and forests to control insects. DDT was also sprayed in the environment to control mosquitos. Although the use of DDT is no longer permitted in the United States, DDT may be released into the atmosphere in other countries where it is still manufactured and used, including Mexico. DDT, DDE and DDD may also enter the air when they evaporate from contaminated water and soil. DDT, DDE, and DDD in the air will then be deposited on land or surface water. This cycle of evaporation and deposition may be repeated many times. As a result, DDT, DDE, and DDD can be carried long distances in the atmosphere. These chemicals have been found in bogs, snow, and animals in the Arctic and Antarctic regions, far from where they were ever used. Some DDT may have entered the soil from waste sites. DDT, DDE, and DDD may occur in the atmosphere as a vapor or be attached to solids in air. Vapor phase DDT, DDE, and DDD may break down in the atmosphere due to reactions caused by the sun. The half-life of these chemicals in the atmosphere as vapors (the time it takes for one-half of the chemical to turn into something else) has been calculated to be approximately 1.5–3 days. However, in reality, this half-life estimate is too short to account for the ability of DDT, DDE, and DDD to be carried long distances in the atmosphere.

DDT, DDE, and DDD last in the soil for a very long time, potentially for hundreds of years. Most DDT breaks down slowly into DDE and DDD, generally by the action of microorganisms. These chemicals may also evaporate into the air and be deposited in other places. They stick strongly to soil, and therefore generally remain in the surface layers of soil. Some soil particles with attached DDT, DDE, or DDD may get into rivers and lakes in runoff. Only a very small amount, if any, will seep into the ground and get into groundwater. The length of time that DDT will last in soil depends on many factors including temperature, type of soil, and whether the soil is wet. DDT lasts for a much shorter time in the tropics where the chemical evaporates faster and where microorganisms degrade it faster. DDT disappears faster when the soil is flooded or wet than when it is dry. DDT disappears faster when it initially enters the soil. Later on, evaporation slows down and some DDT moves into spaces in the soil that are so small that microorganisms cannot reach the DDT to break it down efficiently. In tropical areas, ΣDDT may disappear in much less than a year. In temperate areas, half of the ΣDDT initially present

DDE

DDE (1,1-DICHLORO-2,2-BIS(p-CHLOROPHENYL) ETHYLENE) (A)

72-55-9

Hazard Summary-Created in April 1992; Revised in January 2000

1,1-Dichloro-2,2-bis(p-chlorophenyl) ethylene (DDE) is a breakdown product of DDT, which was used in the past as an insecticide. No information is available on the acute (short-term) or chronic (long-term) effects of DDE. Acute, oral exposure to high doses of DDT in humans results in central nervous system (CNS) effects, such as headaches, nausea, and convulsions. The only effect noted in epidemiologic studies of workers exposed to DDT and other pesticides was an increase in activity of liver enzymes. Animal studies have reported effects on the liver, immune system, and CNS from chronic oral exposure to DDT. Human studies are inconclusive regarding DDE and cancer. Animal studies have reported an increased incidence of liver tumors in mice and hamsters, and thyroid tumors in female rats from oral exposure to DDE. EPA has classified DDE as a Group B2, probable human carcinogen.

Please Note: The main source of information for this fact sheet is the Agency for Toxic Substances and Disease Registry's (ATSDR's) *Toxicological Profile for 4,4-DDT, 4,4-DDE, and 4,4-DDD* and EPA's Integrated Risk Information System (IRIS), which contains information on the carcinogenic effects of DDE including the unit cancer risk for oral exposure.

Uses

- DDT was extensively used in the past for the control of malaria, typhus, and other insect-transmitted diseases. It was banned for use in the United States in 1972, except in the case of a public health emergency. (1)
- DDE is a breakdown product of DDT and has no uses. (1)

Sources and Potential Exposure

- DDE is found in the environment as a result of the breakdown of DDT, an insecticide. (1)
- Human exposure to DDE appears to be primarily through food; in the United States in 1981, consumption of DDE in foods was estimated to be 0.001 parts per million per day (ppm/d). However, the levels of DDE in foods have been decreasing and are expected to continue to decrease. (1)
- Levels of DDE in air and water samples are very low. (1)
- DDE has been listed as a pollutant of concern to EPA's Great Waters Program due to its persistence in the environment, potential to bioaccumulate, and toxicity to humans and the environment (2).

Assessing Personal Exposure

- DDE can be detected in fat, blood, urine, semen, and breast milk. (1)

Health Hazard Information

Acute Effects:

- No studies are available on the acute effects of DDE in humans. (1)
- Acute oral exposure to high doses of DDT in humans results in CNS effects, such as headaches, nausea, and convulsions. (1)
- Case reports in humans have noted that doses as high as 285 milligrams DDT per kilogram body weight per day (mg/kg/d) have been ingested accidentally with no fatal results. (1)
- Tests involving acute exposure of rats, guinea pigs, and rabbits have shown DDT to have moderate acute toxicity from oral exposure. (3)

Chronic Effects (Noncancer):

- The only effect noted in epidemiologic studies of workers exposed to DDT and other pesticides was an increase in activity of liver enzymes. No adverse effects on the blood, liver, heart, or CNS were noted. (1)
- Animal studies have reported effects on the liver, immune system, and CNS from chronic oral administration of DDT. (1,4,9)
- EPA has not established a Reference Concentration (RfC) or a Reference Dose (RfD) for DDE. (5)
- EPA has established an RfD of 0.0005 milligrams per kilogram body weight per day (mg/kg/d) for DDT based on liver effects in rats. The RfD is an estimate (with uncertainty spanning perhaps an order of magnitude) of a continuous ingestion exposure to the human population (including sensitive subgroups), that is likely to be without appreciable risk of deleterious noncancer effects during a lifetime. It is not a direct estimator of risk but rather a reference point to gauge the potential effects. At exposures increasingly greater than the RfD, the potential for adverse health effects increases. Lifetime exposure above the RfD does not imply that an adverse health effect would necessarily occur. (5)

Reproductive/Developmental Effects:

- No information is available on the reproductive or developmental effects of DDT or DDE in humans via inhalation exposure. (1)
- No studies are available on the developmental effects in humans after oral exposure to DDT or DDE. However, DDT and DDE have been found in human blood, placental tissue, and umbilical cord blood. (1)
- Epidemiologic studies did not find an association between DDT maternal blood levels and miscarriages or premature rupture of fetal membranes in humans. (1)
- Oral animal studies have reported reproductive effects, such as reduced fertility, adverse effects on spermatogenesis, and decreased testicular and ovarian weights from DDT exposure. Developmental effects, such as embryotoxicity and fetotoxicity, but not teratogenicity (birth defects) have also been observed in oral animal studies. (1)
- DDT has been shown to elicit estrogenic activity in rats after oral exposure (1).

Cancer Risk:

- Studies of workers exposed to DDT have yielded conflicting results. Three studies reported that tissue levels of DDT and DDE were higher in cancer victims than in those dying of other diseases. In other studies, no such relationship was seen. (5,9)
- Animal studies have reported an increased incidence of liver tumors in mice and hamsters and thyroid tumors in female rats from oral exposure to DDE. (5)
- EPA has classified DDE as a Group B2, probable human carcinogen. (5)
- EPA uses mathematical models, based on animal studies to estimate the probability of a person developing cancer from ingesting water containing a specified concentration of a chemical. EPA has calculated an oral cancer slope factor of 0.34 $(mg/kg/d)^{-1}$ and a unit risk estimate of 9.7×10^{-6} $(\mu g/L)^{-1}$. EPA estimates that, if an individual were to continuously ingest water containing an average of DDE at 0.1 µg/L over his or her entire lifetime, that person would theoretically have no more than a one-in-a-million increased chance of developing cancer as a direct result of ingesting water containing this chemical. Similarly, EPA estimates that ingesting water containing 1.0 µg/L would result in not greater than a one-in-a-hundred-thousand increased chance of developing cancer, and water containing 10.0 µg/L would result in not greater than a one-in-ten thousand increased chance of developing cancer. For a detailed discussion of confidence in the potency estimates, please see IRIS. (5)

Physical Properties

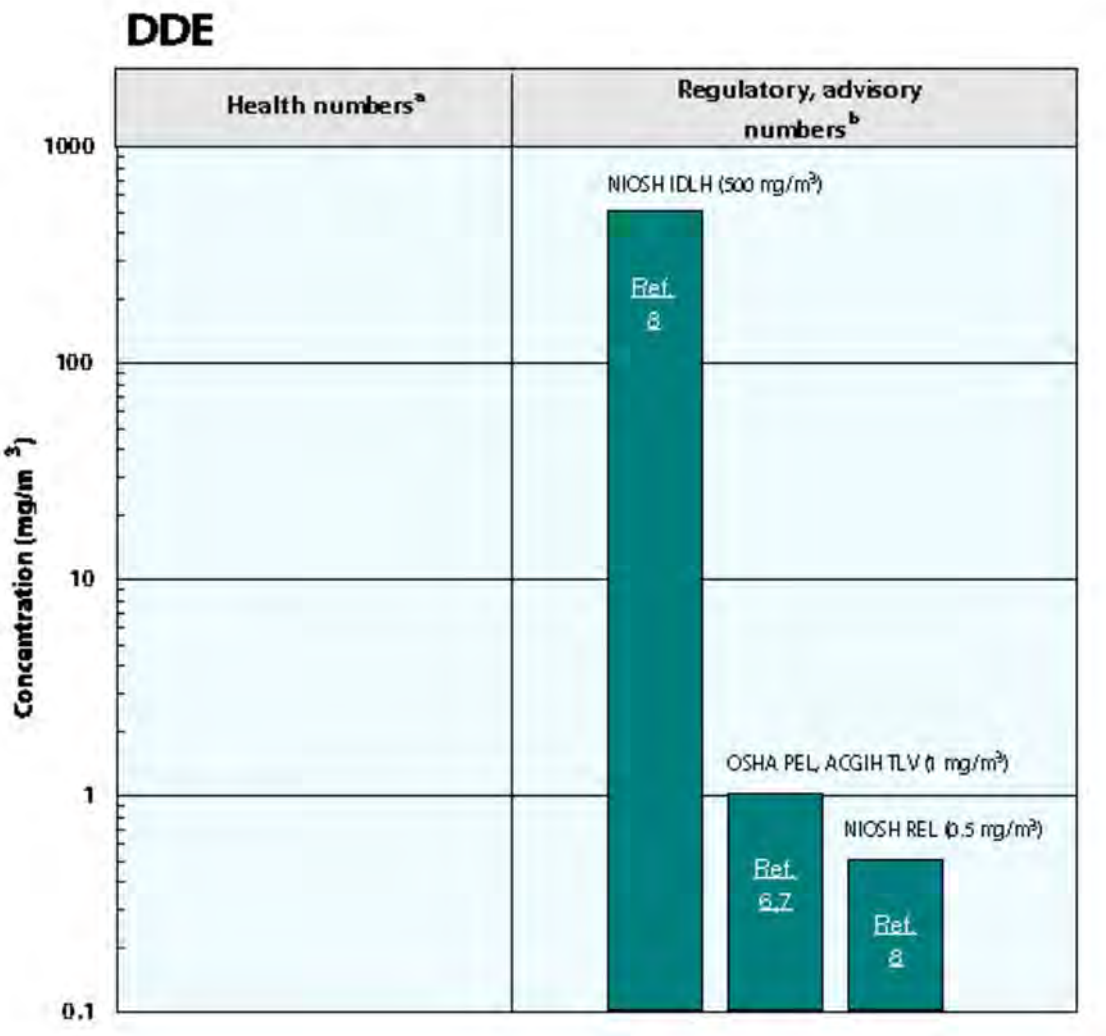
- DDE is also known as 1,1-dichloro-2,2-bis(p-chlorophenyl) ethylene and *p,p*-dichlorodiphenyldichloroethylene.

- DDE is a white crystalline solid. (1)
- The odor threshold for DDE is not available. (1)
- The chemical formula for DDE is $C_{14}H_8Cl_4$, and the molecular weight is 318.03 g/mol. (1)
- The vapor pressure for DDE is 6.5×10^{-6} torr at 20 °C, and it has a log octanol/water partition coefficient (log K_{ow}) of 7.0. (1)

Conversion Factors:

To convert concentrations in air (at 25 °C) from ppm to mg/m^3: mg/m^3 = (ppm) × (molecular weight of the compound)/(24.45). For DDE: 1 ppm = 13.0 mg/m^3; for DDT: 1 ppm = 14.5 mg/m^3.

Health Data from Inhalation Exposure*



ACGIH TLV--American Conference of Governmental and Industrial Hygienists' threshold limit value expressed as a time-weighted average; the concentration of a substance to which most workers can be exposed without adverse effects.
NIOSH IDLH--National Institute of Occupational Safety and Health's immediately dangerous to life or health limit; NIOSH recommended exposure limit to ensure that a worker can escape from an exposure condition that is likely to cause death or immediate or delayed permanent adverse health effects or prevent escape from the environment.
NIOSH REL--NIOSH's recommended exposure limit; NIOSH-recommended exposure limit for an 8- or 10-h time-weighted-average exposure and/or ceiling.

OSHA PEL--Occupational Safety and Health Administration's permissible exposure limit expressed as a time-weighted average; the concentration of a substance to which most workers can be exposed without adverse effect averaged over a normal 8-h workday or a 40-h workweek.

* All health and regulatory numbers are for DDT.
The health and regulatory values cited in this fact sheet were obtained in December 1999.

[a] Health numbers are toxicological numbers from animal testing or risk assessment values developed by EPA.

[b] Regulatory numbers are values that have been incorporated in Government regulations, while advisory numbers are nonregulatory values provided by the Government or other groups as advice. OSHA numbers are regulatory, whereas NIOSH and ACGIH numbers are advisory.

This fact sheet answers the most frequently asked health questions about DDT, DDE, and DDD. For more information, you may call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. This information is important because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

Highlights

Exposure to DDT, DDE, and DDD occurs mostly from eating foods containing small amounts of these compounds, particularly meat, fish and poultry. High levels of DDT can affect the nervous system causing excitability, tremors and seizures. In women, DDE can cause a reduction in the duration of lactation and an increased chance of having a premature baby. DDT, DDE, and DDD have been found in at least 441 of the 1,613 National Priorities List sites identified by the Environmental Protection Agency (EPA).

What are DDT, DDE, and DDD?

DDT (dichlorodiphenyltrichloroethane) is a pesticide once widely used to control insects in agriculture and insects that carry diseases such as malaria. DDT is a white, crystalline solid with no odor or taste. Its use in the U.S. was banned in 1972 because of damage to wildlife, but is still used in some countries.

DDE (dichlorodiphenyldichloroethylene) and DDD (dichlorodiphenyldichloroethane) are chemicals similar to DDT that contaminate commercial DDT preparations. DDE has no commercial use. DDD was also used to kill pests, but its use has also been banned. One form of DDD has been used medically to treat cancer of the adrenal gland.

What happens to DDT, DDE, and DDD when they enter the environment?

- DDT entered the environment when it was used as a pesticide; it still enters the environment due to current use in other countries.
- DDE enters the environment as contaminant or breakdown product of DDT; DDD also enters the environment as a breakdown product of DDT.
- DDT, DDE, and DDD in air are rapidly broken down by sunlight. Half of what's in air breaks down within 2 days.
- They stick strongly to soil; most DDT in soil is broken down slowly to DDE and DDD by microorganisms; half the DDT in soil will break down in 2-15 years, depending on the type of soil.
- Only a small amount will go through the soil into groundwater; they do not dissolve easily in

water.
- DDT, and especially DDE, build up in plants and in fatty tissues of fish, birds, and other animals.

How might I be exposed to DDT, DDE, and DDD?

- Eating contaminated foods, such as root and leafy vegetable, fatty meat, fish, and poultry, but levels are very low.
- Eating contaminated imported foods from countries that still allow the use of DDT to control pests.
- Breathing contaminated air or drinking contaminated water near waste sites and landfills that may contain higher levels of these chemicals.
- Infants fed on breast milk from mothers who have been exposed.
- Breathing or swallowing soil particles near waste sites or landfills that contain these chemicals.

How can DDT, DDE, and DDD affect my health?

DDT affects the nervous system. People who accidentally swallowed large amounts of DDT became excitable and had tremors and seizures. These effects went away after the exposure stopped. No effects were seen in people who took small daily doses of DDT by capsule for 18 months.

A study in humans showed that women who had high amounts of a form of DDE in their breast milk were unable to breast feed their babies for as long as women who had little DDE in the breast milk. Another study in humans showed that women who had high amounts of DDE in breast milk had an increased chance of having premature babies.

In animals, short-term exposure to large amounts of DDT in food affected the nervous system, while long-term exposure to smaller amounts affected the liver. Also in animals, short-term oral exposure to small amounts of DDT or its breakdown products may also have harmful effects on reproduction.

How likely are DDT, DDE, and DDD to cause cancer?

Studies in DDT-exposed workers did not show increases in cancer. Studies in animals given DDT with the food have shown that DDT can cause liver cancer.

The Department of Health and Human Services (DHHS) determined that DDT may reasonable be anticipated to be a human carcinogen. The International Agency for Research on Cancer (IARC) determined that DDT may possibly cause cancer in humans. The EPA determined that DDT, DDE, and DDD are probable human carcinogens.

How can DDT, DDE, and DDD affect children?

There are no studies on the health effects of children exposed to DDT, DDE, or DDD. We can assume that children exposed to large amounts of DDT will have health effects similar to the effects seen in adults. However, we do not know whether children differ from adults in their susceptibility to these substances.

There is no evidence that DDT, DDE, or DDD cause birth defects in people. A study showed that teenage boys whose mothers had higher DDE amounts in the blood when they were pregnant were taller than those whose mothers had lower DDE levels. However, a different study found the opposite in preteen girls. The reason for the discrepancy between these studies is unknown.

Studies in rats have shown that DDT and DDE can mimic the action of natural hormones and in this way affect the development of the reproductive and nervous systems. Puberty was delayed in male

rats given high amounts of DDE as juveniles. This could possibly happen in humans. A study in mice showed that exposure to DDT during the first weeks of life may cause neurobehavioral problems later in life.

How can families reduce the risk of exposure to DDT, DDE, and DDD?

- Most families will be exposed to DDT by eating food or drinking liquids contaminated with small amounts of DDT.
- Cooking will reduce the amount of DDT in fish.
- Washing fruit and vegetables will remove most DDT from their surface.
- Follow health advisories that tell you about consumption of fish and wildlife caught in contaminated areas.

Is there a medical test to show whether I've been exposed to DDT, DDE, and DDD?

Laboratory tests can detect DDT, DDE, and DDD in fat, blood, urine, semen, and breast milk. These tests may show low, moderate, or excessive exposure to these compounds, but cannot tell the exact amount you were exposed to, or whether you will experience adverse effects. These tests are not routinely available at the doctor's office because they require special equipment.

Has the federal government made recommendations to protect human health?

The Occupational Safety and Health Administration (OSHA) sets a limit of 1 milligram of DDT per cubic meter of air (1 mg/m^3) in the workplace for an 8-hour shift, 40-hour workweek.

The Food and Drug Administration (FDA) has set limits for DDT, DDE, and DDD in foodstuff at or above which the agency will take legal action to remove the products from the market.

Water: Private Wells

Human Health

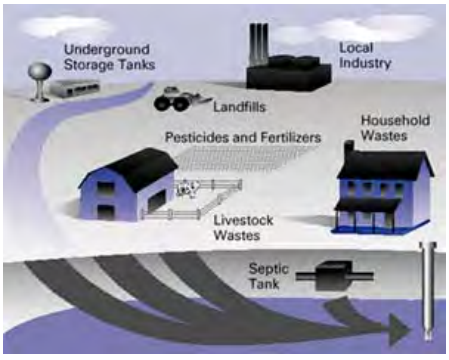
The first step to protect your health and the health of your family is learning about what may pollute your source of drinking water. Potential contamination may occur naturally, or as a result of human activity.

What are Some Naturally Occurring Sources of Pollution?

- **Microorganisms**: Bacteria, viruses, parasites and other microorganisms are sometimes found in water. Shallow wells — those with water close to ground level — are at most risk. Runoff, or water flowing over the land surface, may pick up these pollutants from wildlife and soils. This is often the case after flooding. Some of these organisms can cause a variety of illnesses. Symptoms include nausea and diarrhea. These can occur shortly after drinking contaminated water. The effects could be short-term yet severe (similar to food poisoning) or might recur frequently or develop slowly over a long time.
- **Radionuclides**: Radionuclides are radioactive elements such as uranium and radium. They may be present in underlying rock and ground water
- **Radon**: Radon isa gas that is a natural product of the breakdown of uranium in the soil — can also pose a threat. Radon is most dangerous when inhaled and contributes to lung cancer. Although soil is the primary source, using household water containing Radon contributes to elevated indoor Radon levels. Radon is less dangerous when consumed in water, but remains a risk to health.
- **Nitrates and Nitrites**: Although high nitrate levels are usually due to human activities (see below), they may be found naturally in ground water. They come from the breakdown of nitrogen compounds in the soil. Flowing ground water picks them up from the soil. Drinking large amounts of nitrates and nitrites is particularly threatening to infants (for example, when mixed in formula).
- **Heavy Metals**: Underground rocks and soils may contain arsenic, cadmium, chromium, lead, and selenium. However, these contaminants are not often found in household wells at dangerous levels from natural sources.
- **Fluoride**: Fluoride is helpful in dental health, so many water systems add small amounts to drinking water. However, excessive consumption of naturally occurring fluoride can damage bone tissue. High levels of fluoride occur naturally in some areas. It may discolor teeth, but this is not a health risk.

What Human Activities Can Pollute Ground Water?

- **Bacteria and Nitrates**: These pollutants are found in human and animal wastes. Septic tanks can cause bacterial and nitrate pollution. So can large numbers of farm animals. Both septic systems and animal manures must be carefully managed to prevent pollution. Sanitary landfills and garbage dumps are also sources. Children and some adults are at extra risk when exposed to water-born bacteria. These include the elderly and people whose immune systems are weak due to AIDS or treatments for cancer. Fertilizers can add to nitrate problems. Nitrates cause a health threat in very young infants called “blue baby” syndrome. This condition disrupts oxygen flow in the blood.
- **Concentrated Animal Feeding Operations (CAFOs)**: The number of CAFOs, often called “factory farms,” is growing. On these farms thousands of animals are raised in a small space. The large amounts of animal wastes/manures from these farms can threaten water supplies. Strict and careful manure management is needed to prevent pathogen and nutrient problems. Salts from high levels of manures can also pollute ground water.
- **Heavy Metals**: Activities such as mining and construction can release large amounts of heavy metals into nearby ground water sources. Some older fruit orchards may contain high levels of arsenic, once used as a pesticide. At high levels, these metals pose a health risk.
- **Fertilizers and Pesticides**: Farmers use fertilizers and pesticides to promote growth and reduce insect damage. These products are also used on golf courses and suburban lawns and gardens. The chemicals in these products may end up in ground water. Such pollution depends on the types and amounts of chemicals used and how they are applied. Local environmental conditions (soil types, seasonal snow and rainfall) also affect this pollution. Many fertilizers contain forms of nitrogen that can break down into harmful nitrates. This could add to other sources of nitrates mentioned above. Some underground agricultural drainage systems collect fertilizers and pesticides. This polluted water can pose problems to ground water and local streams and rivers. In addition, chemicals used to treat buildings and homes for termites or other pests may also pose a threat. Again, the possibility of problems depends on the amount and kind of chemicals. The types of soil and the amount of water moving through the soil also play a role.



Septic tanks are designed to have a “leach field” around them — an area where wastewater flows out of the tank. This wastewater can also move into the ground water.

- **Industrial Products and Wastes**: Many harmful chemicals are used widely in local business and industry. These can become drinking water pollutants if not well managed. The most common sources of such problems are:
  - **Local Businesses**: These include nearby factories, industrial plants, and even small businesses such as gas stations and dry cleaners. All handle a variety of hazardous chemicals that need careful management. Spills and improper disposal of these chemicals or of industrial wastes can threaten ground water supplies.
  - **Leaking Underground Tanks & Piping**: Petroleum products, chemicals, and wastes stored in underground storage tanks and pipes may end up in the ground water. Tanks and piping leak if they are constructed or installed improperly. Steel tanks and piping corrode with age. Tanks are often found on farms. The possibility of leaking tanks is great on old, abandoned farm sites. Farm tanks are exempt from the EPA rules for petroleum and chemical tanks.
  - **Landfills and Waste Dumps**: Modern landfills are designed to contain any leaking liquids. But floods can carry them over the barriers. Older dumpsites may have a wide variety of pollutants that can seep into ground water.
- **Household Wastes**: Improper disposal of many common products can pollute ground water. These include cleaning solvents, used motor oil, paints, and paint thinners. Even soaps and detergents can harm drinking water. These are often a problem from faulty septic tanks and septic leaching fields.
- **Lead & Copper**: Household plumbing materials are the most common source of lead and copper in home drinking water. Corrosive water may cause metals in pipes or soldered joints to leach into your tap water. Your water’s acidity or alkalinity (often measured as pH) greatly affects corrosion. Temperature and mineral content also affect how corrosive it is. They are often used in pipes, solder, or plumbing fixtures. Lead can cause serious damage to the brain, kidneys, nervous system, and red blood cells. The age of plumbing materials — in particular, copper pipes soldered with lead — is also important. Even in relatively low amounts these metals can be harmful. EPA rules under the Safe Drinking Water Act limit lead in drinking water to 15 parts per billion. Since 1988 the Act only allows “lead free” pipe, solder, and flux

in drinking water systems. The law covers both new installations and repairs of plumbing.
  - For more information on avoiding lead in drinking water, visit the EPA's Lead in Drinking Water web site.
- **Water Treatment Chemicals**: Improper handling or storage of water-well treatment chemicals (disinfectants, corrosion inhibitors, etc.) close to your well can cause problems.

The Apple Bites Back: Claiming Old Orchards for Residential Development

Ernie Hood

Copyright and License information ►

This article has been cited by other articles in PMC.

As the U.S. population continues to grow, increasing demand for housing and related community resources means more land is being converted from agricultural uses to residential applications. According to the revised 1997 National Resources Inventory conducted by the USDA Natural Resources Conservation Service, more than 6 million acres of American farmland were converted to developed uses between 1992 and 1997. That is an annual conversion rate of roughly 1.2 million acres per year—a 51% increase over the average annual rate reported for the preceding decade.

Naturally, many of these areas were routinely treated with pesticides and other chemicals during their agricultural lifetimes. Although this legacy has been problematic in a wide variety of land conversion scenarios, one in particular seems to have attracted the attention and concern of environmental officials and property buyers in several states across the country: the residential development of historic orchard properties. In state after state, these old orchards (which most often produced apples, but also peaches, cherries, pears, and other tree crops) are metamorphosing into highly desirable subdivisions—desirable, that is, until it emerges that the soil beneath the feet of the proud new residents may be contaminated with lead and arsenic. These toxic by-products are left from the days before DDT and before organophosphates, when arsenical pesticides, particularly lead arsenate (LA), were the treatment of choice to prevent the ravages of insect damage.

They Loved LA

Go to:

LA was introduced in 1892 in Massachusetts for use against the gypsy moth. Two other arsenical pesticides (copper acetoarsenite, known as “Paris green,” and calcium arsenate) also were in use, although LA largely replaced them in the 1930s due to lower cost, greater efficacy, and lower phytotoxicity. Even though arsenic residue was recognized as a problem as early as 1919, LA was the most widely used pesticide in the nation—recommended by the USDA and applied to millions of acres of crops—until the late 1940s, when DDT (considered at the time to be safer and more effective) became available. LA continued to be used in some locations into the 1970s, and was ultimately banned in 1988.

LA was perhaps most commonly applied in apple orchards, due to its excellent control of the codling moth, a major apple pest. Today, apple orchard properties that were in production during the heyday of LA use are the focal point of environmental concerns; given the nature of the pests peculiar to orchard crops, growers tended to apply the chemicals frequently and in high concentrations, often over many years. “In some cases, they dusted the apple trees or peach trees every week, whereas most field crops may have had one or two applications during the growing season,” says Kevin Schick, a bureau chief with the Site Remediation and Waste Management Program in the New Jersey Department of Environmental Protection.

LA and the other arsenical pesticides were designed to be persistent, and it is that persistence that is causing environmental contamination problems decades after their use ended. “These chemicals have just tremendously long half-lives in the ground,” says North Carolina state toxicologist Ken Rudo. “They bind very tightly to the soil.”

Once LA reached the soil through over-spray, spillage, rainfall wash-off, or simply fallen fruit and leaves, the lead arsenate underwent hydrolysis, separating into lead and arsenic bound to organic particles in the soil. The lead, being poorly soluble, was immobilized, typically within the top 12 to 18 inches of topsoil. The fate of the arsenic was similar, but a bit more complicated. “Arsenic, as arsenate, even though somewhat sparingly soluble, *is* soluble, and it will move in water,” says Washington State University soil scientist Frank Peryea. “I've seen some sites where almost all of the arsenic is still in the topsoil, in the tillage zone, and I've seen sites where I've measured arsenic movement as deep as a meter or so.”

Carl Renshaw, a hydrogeologist at Dartmouth College, published a study in the January/February 2006 issue of the *Journal of Environmental Quality* showing that arsenate in the soil can be remobilized by being disturbed. He compared two fields in the same historic New Hampshire orchard. One field had never been disturbed, whereas the other had been tilled and replanted in the early 1990s. “What we found was that in the field that had been replanted, there was somewhat less arsenic on it than in the undisturbed field,” he says.

Given the assumption of virtually identical application rates over the years, the discrepancy apparently arose from a portion of the arsenic in the disturbed field having been mobilized and removed by surface water. Renshaw found arsenic in the sediment of a nearby stream in amounts that very closely matched the arsenic missing from the tilled field.

“The implication from our study,” says Renshaw, “is that if you’re not really careful about erosion, you’re going to end up sending a lot of arsenic down into the stream channel.” To date, researchers have seen no evidence of direct health effects in humans, animals, or plants exposed to this stream-bound arsenic. However, more study is needed to fully understand the ramifications—if any—of the mobilization.

How Dangerous?

Go to:

The potential danger posed to human health by lead and arsenic contamination in historic orchards is a complex issue, fraught with scientific uncertainties and competing interests. Arsenic is a known human carcinogen. Exposure to lead, especially prenatally and in childhood, can lead to neurological damage. There is no doubt that excessive exposure to either substance can adversely impact health, but in this case any risks are almost exclusively long-term—virtually no instances of acute adverse health effects have been documented in people living on historic orchard properties.

Regulatory agencies such as the EPA and state health and environmental departments determine allowable levels of chemicals in soils and water based upon formulas that take into account criteria such as toxicity, exposure, and naturally occurring background concentrations of the chemicals. For carcinogens such as arsenic, the calculations are based upon the amount of a chemical that is predicted to result in 1 additional cancer case occurring in 1 million people exposed over their lifetimes. But there is some flexibility in the standards based on local conditions and

practical considerations. In New Jersey, for example, where background arsenic concentrations are often high, the criterion for residential soil cleanup is set at 20 ppm—50 times the EPA's level of 0.4 ppm.

In historic orchard properties, cleanup action is often triggered when a so-called "hot spot" is discovered—typically an area where the pesticides had been mixed and loaded or stored, and where repeated spills or disposal of excess materials may have occurred. The contaminant concentrations in those hot spots can be significantly higher than in the tree crop areas. But locating hot spots after many decades can be very difficult.

The ATSDR is often called in to analyze the health risks at contaminated historic orchard properties. "We look at the contaminants, the concentrations, the pathway, how long [residents] are exposed to it—all of the different aspects of an exposure," says Robert Safay, an environmental health scientist with the agency. "For example, when you're looking at lead contamination in the soil, you're primarily concerned about young children playing out in the soil."

In all but the most extreme cases, the health risks of living atop contaminated historic orchard soil are ultimately characterized as very low and manageable. Exposure is the critical element. "The real issue here is direct contact—you want to limit the direct contact," says Lori Bowman, director of the Agrichemical Management Bureau in the Wisconsin Department of Agriculture, Trade, and Consumer Protection. As Safay explains, there must be a completed exposure pathway for there to be even the potential for health effects. Ultimately, the amount of risk depends on the level of contamination and the use of the land.

For the most part, residents are advised to limit their direct exposure to the soil if it's unremediated and to take simple measures such as wearing gardening gloves and wiping their feet before entering the house. Peryea says there is little risk from eating plants grown in this type of soil, but advises that home gardeners rinse off produce before bringing it into the home, then wash it again with a detergent and scrub brush to remove any remaining soil particles, paying particular attention to rough vegetables like broccoli and leafy vegetables like lettuce, which can trap and retain dust. He also advises paring root and tuber crops such as potatoes, carrots, and radishes, and not composting the peelings or other unused plant parts.

The risks involved may be modest and long-term in most cases, but low risk is not the same as no risk, and regulatory agencies across the country are finding themselves in a thorny situation as more and more contaminated historic orchard properties are developed. They are caught between their duty to protect public health and the environment, and the fact that the risks presented by most of these properties pale in comparison to those associated with other, more acute contamination sites, such as lands near smelters or toxic waste dumps. Naturally, budgets are limited, and priorities must be set. Yet the orchard situation cannot be ignored, and several states have been wrestling with how to deal with this issue for several years.

The sheer scope of the phenomenon adds another layer to the challenge of how to most effectively deal with it. "The magnitude of the problem is just staggering," says Peryea. Millions of acres across the nation are involved. In the state of Washington alone, Peryea says, some 188,000 acres are affected. In Wisconsin, 50,000 acres may be affected, and in New Jersey, up to 5% of the state's acreage is estimated to be impacted by the historical use of arsenical pesticides. Both New Jersey and Washington have had multistakeholder task forces examine the problem and issue recommendations and guidelines.

Wisconsin is likely to convene a similar task force later in 2006, according to Bowman. "We want to develop a protective, economical, and practical strategy to address potential residues of lead and arsenic in soils related to historic orchard use," she says. "The charge of the task force would be to evaluate the health and environmental impacts, and [also evaluate] what kind of alternatives and strategies we could put into place to limit exposure and to educate and provide outreach to homeowners and developers as to what types of precautions can be taken at these orchard sites to mitigate any risk."

What Can, Should, or Must Be Done

Go to:

Because contamination can be spread over large areas, remediation measures vary widely, depending upon the level of contamination, the current or intended use of the property, and state or local regulations. Each method has its advantages and its drawbacks, and each site has its own unique circumstances that will often dictate how, when, and even if the situation will be dealt with.

Excavation is the quickest and most thorough remediation method. This involves scraping up the contaminated topsoil, hauling it away to an approved landfill, and replacing it with clean dirt. Realistically, says Peryea, removal is the only way to eliminate risk, "but it's very expensive." Such total remediation can cost $1 million per acre or more. And it's a huge undertaking. Peryea does the math for 1 acre: "If you have contamination down to three feet, you're looking at getting rid of three acre-feet of soil—that's twelve million pounds of soil."

Capping, which involves simply putting a 12- to 18-inch layer of clean soil over the contaminated soil, has been used in some locations. However, this requires enormous amounts of clean dirt. Further, capping cannot be considered a permanent solution—plants will grow on the soil caps, their roots will penetrate the contaminated soil, and the vegetation will eventually redistribute the lead and arsenic to the clean soil. Also, it is common for the soil caps to be disturbed by construction activities.

Soil blending is another alternative, and one that is growing in popularity, particularly when contaminant concentrations are only minimally in excess of actionable levels. This involves bringing clean soil to a site and mixing it with the existing topsoil, with the intent of reducing concentrations below levels that require health-protective actions. Although relatively effective, blending can be a hit-or-miss operation. The main reason is that operators can't always achieve 100% blending, and it very much matters where the subsequent samples are taken—even a few inches can make a difference. Sometimes it is necessary to repeat the procedure, which, of course, drives up costs. Also, disturbing the soil in this way could actually mobilize the arsenic, as Renshaw's research showed. Regardless of its shortcomings, however, blending is an option many states have chosen in recent years.

In some instances, a simple solution can be adequate. "What seems to do a good job of reducing exposure in areas where people aren't digging in the soil is just to keep turf on it, or keep it vegetated somehow," says Peryea. At some sites, simply moving the contaminated soil to another location on the site and capping it—for example, by burying it under a roadway—has been acceptable, although this option requires that a deed notice be executed, so that all of the records of the sampling and disposal of the contamination become part of the property's permanent title record.

Thus far, other remediation methods have proven to be ineffective, impractical, or counterproductive on these sites. Researchers such as David Butcher, a professor of analytical chemistry at Western Carolina University in Cullowhee, North Carolina, have explored the possibility of phytoremediation of these properties, in which plants are used to suck the contaminants out of the soil, after which the contaminated biomass is destroyed. But this method, though effective in certain remediation situations, doesn't appear to hold much promise in lead- and arsenic-contaminated orchard soils. Phytoremediation is quite slow, potentially taking decades or longer to effectively remove contaminants.

Butcher also was unable to discover a method of removing the lead from the soil without the addition of other chemicals (such as EDTA) to release the tightly bound element.

One way to release the lead is by adding phosphorus to the soil, but this also mobilizes the arsenic. “That creates an even bigger problem,” Peryea says. “If you get the arsenic moving, and it moves down into the ground-water, cleanup becomes much more difficult than trying to keep it in the topsoil.”

According to Peryea, you can scratch microbial volatization as well. In that method, native soil microorganisms are stimulated to volatilize arsenic. The gaseous arsenic can then be trapped. But for this method to be effective, soils must be kept quite wet. Many of the historic orchard properties are well-drained, sloping sites, where it would be difficult to keep the soil adequately flooded. Plus, of course, as Peryea points out, “if you are evolving arsenic off your soil, and it flows down and contaminates your neighbor’s property, that’s going to create some problems.”

Cleanup and real estate disclosure issues are usually handled at the state and local levels, where approaches vary considerably. As public awareness of the potential contamination of historic orchards increases in the affected areas, state agencies are fielding more and more calls from concerned property owners or prospective buyers. Chuck Warzecha, a risk assessor with the Wisconsin Department of Health and Family Services, fields 10 to 15 such calls a year. He tries to give concerned citizens a balanced message. “My first statement is that it’s not a real scary issue and doesn’t have to be a big problem on their property,” he says. “It’s something that now that they know about it, it’s worth doing something about, but they shouldn’t be concerned that past exposure is going to be a real serious issue for their families.”

If callers haven’t had their soil tested yet, Warzecha recommends that they do so. Then he advises them on how to manage the problem if there is one. If contamination hot spots are identified, cleanup may be required under Wisconsin’s Agricultural Chemical Cleanup Program. In such cases the property owner would pay a 25% deductible, with the rest of the costs covered by the state, according to Bowman.

In Washington, the Model Toxics Control Act requires the reporting, study, and cleanup of sites where hazardous substances are above state-set cleanup levels. In residential developments, the state is working to increase awareness of the potential for contamination on historic orchard lands, particularly among developers. The goal is to get developers to incorporate that consideration at the outset of projects, when there are opportunities to deal with problems more easily than could be done once housing is in place. As in other states, several departments are involved in providing consultation, health assessment, and technical assistance on a case-by-case basis.

Washington has also chosen to be proactive in its cleanup efforts at sites where children are especially likely to be affected. “We have elected to focus on schools, child care facilities, and parks where groups of young children might be present, trying to take steps to reduce exposures for kids,” says Dave Bradley, a toxicologist and risk assessor with the Toxics Cleanup Program in the Washington State Department of Ecology. “We've focused on a handful of counties, and have further focused on schools, trying to integrate with existing community processes such as school construction, and then trying to prioritize how we use either our authority or funds out of the state Superfund to actually perform some of the cleanup actions.”

In New Jersey, the recommendations and guidelines put forth in the 1999 report of the Historic Pesticide Contamination Task Force set the agenda. Schick, whose department handles historic orchard contamination cases, says there’s no excuse for ignorance on the part of New Jersey developers at this point, and it should be a standard element of their due diligence.

“It’s common knowledge, the guidance is out there, it already involved the real estate agents, the bankers, the insurers, the farm bureau,” Schick says. “It’s been out there long enough that anyone making any kind of investment in developing farmland should have known about it, and they will be held at fault for not coming to the department or cleaning prior to development.”

Paradise Lost, Paradise Regained?

Go to:

Today, Barber Orchard, a 500-acre subdivision located a few miles west of Waynesville, North Carolina, is “not a place where it looks like there are any problems,” says Butcher. “It’s not a place like where there’s been a lot of mining and it looks like a moonscape. It looks beautiful up there.” It may look beautiful, but that doesn’t change the fact that Barber Orchard has had a troubled history.

Barber Orchard was a commercial apple orchard from 1903 until the mid-1980s, when the operation went bankrupt and the land was parceled off for development. In 1999, a pregnant resident heard rumors of birth defects from neighbors and friends in the area. She contacted Rudo, who, with the county health department, initiated an extensive investigation that included soil and water sampling and a series of public meetings with residents. In late 1999 through mid-2000, the federal EPA conducted a $4 million emergency removal of a foot of topsoil from 28 residents’ yards.

Reflecting the tremendous variation in contamination typical of historic orchard sites, the EPA found only trace amounts of lead and arsenic in some sampling locations, but several others were well in excess of the agency’s cleanup goals of 40 ppm arsenic and 400 ppm lead. Samples came in as high as 400 ppm arsenic and 1,200 ppm lead. The highest levels were detected at spots where trees were still located, or had been cultivated in the past, reflecting the cumulative impact of long years of pesticide applications.

In 2001, the site was placed on the National Priorities List under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), an unusual step for a historic orchard. “CERCLA authority is hobbled when it comes to normal use of pesticides,” says James Bateson, branch head of the Superfund Site Evaluation and Removal Branch of the North Carolina Department of Environment and Natural Resources. “In cases where [a pesticide has] been spilled or dumped in large quantities or misused, that’s when CERCLA can have some authority. At Barber Orchard, the case was made that there was enough spillage associated with the way they handled things up there that it wasn’t normal application of pesticide.”

“The way they handled things” was by distributing the pesticides through a unique underground high-pressure piping system, with aboveground nozzles at the tree sites where sprayers were hooked up. The system left pesticide hot spots at several locations throughout the orchard property. “If there was spillage at a particular location above-ground where that particular distribution pipe was located, or if there was a fracture in the pipe, or a joint in the pipe that got a crack or leak in it, then we may have contamination locally at that one particular site, or along the connections along the way,” explains Haywood County Health Department director Carmine Rocco. According to Bateson, the EPA has in fact found several places where pesticides had leaked into the soil because of poor maintenance of the piping system.

In 2004 the EPA issued a record of decision (a document specifying how the agency planned to clean up the site) for the orchard’s soil, calling for much more removal of contaminated dirt, mainly from vacant lots on the property. “What we’re doing right now is waiting

for funding to implement the cleanup for soil," says Jon Bornholm, the EPA's project manager for the Barber Orchard site. That phase of the cleanup, which should take less than a year, is projected to cost $20 million, and there's no telling when the funds will be released by the EPA for it to take place.

The EPA is expected to render a record of decision for dealing with groundwater contamination on the site before the end of 2006. Bornholm expects that the agency will opt for "monitored natural attenuation"—in other words, let Mother Nature take care of the problem, and hope that contaminant concentrations will decrease over time through natural processes such as biodegradation and dispersion. He guesses that could take 30 to 50 years, with the EPA monitoring the situation continually. Residents have been advised to filter their well water since the problem was uncovered, and city water is now available to the site, although not all of the current homeowners have elected to hook up to the service.

Since the problem arose, the ATSDR has also been involved at Barber Orchard, evaluating the health situation. In April 2002, the agency released its official public health assessment for the site, which concluded that "current exposures to site contaminants are not likely to result in adverse health effects. . . . The exposure pathways for lead and arsenic were disrupted within a relatively short time frame, so past exposures are not likely to lead to health effects at this time."

Meanwhile, Barber Orchard's tax values have increased, and buying and selling of homes in the subdivision has not been hurt by the site's Superfund status. "The heat of the moment has passed, and I think we've gotten over the panic mode," says Ellis Morris, president of the Haywood County Board of Realtors. "Initially, people were tentative about buying in to that particular neighborhood, but that's been resolved, there's a comfort level now, and the real estate there is keeping pace with all of the other areas of Haywood County in terms of days on the market and selling price."

David Miller would agree with that assessment. He and his wife retired to Barber Orchard from Florida in 1997, and his 1.4-acre lot was one of the properties cleaned up by the EPA. He is unconcerned about the contamination at the site and thinks the whole situation has been overblown. "I haven't changed the way I live," he says. "I work in the garden just about every day, I've planted a vegetable garden and eaten the vegetables, I've planted some fruit and eaten the fruit. So it has not affected me or my wife in any way."

So it appears that Barber Orchard was paradise lost for a time, but is now paradise regained. Now, however, some neighbors just down the road may be facing a similar situation. In May 2006 residents of the Tan Woods and Orchard Estates subdivisions, built on what was once Francis Orchard, were notified that soil samples from a vacant lot at the site had tested positive for lead, arsenic, and other pesticides—a mix similar to that found at Barber Orchard. And like Barber Orchard, Francis Orchard was equipped with an underground pesticide piping system.

It's still early in the process, and the results of more thorough sampling and testing are not yet available, so it's too soon to predict whether Francis Orchard may eventually become a Superfund site. But this time around, according to Bateson, both residents and involved officials can benefit from the Barber Orchard experience. At Francis Orchard, he says, "the residents are well schooled after seeing what's gone on at Barber Orchard, and of course the county and state people have been around the block now too."

Questions Remain

Go to:

Despite the large scale scope of the problem, it appears that living on a historic orchard property contaminated by lead and arsenic does not constitute an immediate threat to human health. So it is still an open question whether it's really necessary to spend huge amounts of money, often from tax dollars, to ameliorate these sites.

Peryea thinks that what is needed is a solid epidemiologic study to document whether there really is a problem with people living on these arsenical pesticide–contaminated soils. "If that sort of study was done," he says, "and it was to show that there's no problem, or that the problem is controllable by setting up some sort of engineering controls or behavioral controls, like they do with urban lead nowadays, that would probably take care of a lot of the problem. The response—rather than trying to force a cleanup that would probably be wildly impractical, very expensive, and potentially ruin property values—would be that people would change their behavior a bit and end up minimizing the risk."

Online Resources

Go to:

New Jersey, Washington, and Wisconsin offer detailed advice to residents, developers, and other interested parties about what to do if they suspect or know their land is contaminated. Wisconsin has posted a variety of publications (**http://www.datcp.state.wi.us/arm/agriculture/pestfert/pesticides/accp/lead_arsen_resources.jsp**), including tips for safe gardening in lead- and arsenic-contaminated soil. Washington provides a comprehensive toolbox of resources stemming from its Area-Wide Soil Contamination Project, a task force that addressed not only historical orchard contamination, but also lead and arsenic contamination over widespread areas of the state from smelters and leaded gasoline combustion; see **http://www.ecy.wa.gov/programs/tcp/area_wide/area_wide_hp.html**. New Jersey offers the report of the Historic Pesticide Contamination Task Force (**http://www.state.nj.us/dep/special/hpctf/index.html**) and i-MapNJ, an environmental mapping tool that lets residents obtain detailed contamination information for specific locations (**http://www.state.nj.us/dep/gis/depsplash.htm**).

You spray, you pay?

A blooming problem?

Arsenic Compounds

ARSENIC COMPOUNDS[(A)]

107-02-8

Hazard Summary-Created in April 1992; Revised in January 2000

Arsenic, a naturally occurring element, is found throughout the environment; for most people, food is the major source of exposure. Acute (short-term) high-level inhalation exposure to arsenic dust or fumes has resulted in gastrointestinal effects (nausea, diarrhea, abdominal pain); central and peripheral nervous system disorders have occurred in workers acutely exposed to inorganic arsenic. Chronic (long-term) inhalation exposure to inorganic arsenic in humans is associated with irritation of the skin and mucous membranes. Chronic oral exposure has resulted in gastrointestinal effects, anemia, peripheral neuropathy, skin lesions, hyperpigmentation, and liver or kidney damage in humans. Inorganic arsenic exposure in humans, by the inhalation route, has been shown to be strongly associated with lung cancer, while ingestion of inorganic arsenic in humans has been linked to a form of skin cancer and also to bladder, liver, and lung cancer. EPA has classified inorganic arsenic as a Group A, human carcinogen.

Arsine is a gas consisting of arsenic and hydrogen. It is extremely toxic to humans, with headaches, vomiting, and abdominal pains occurring within a few hours of exposure. EPA has not classified arsine for carcinogenicity.

Please Note: The main sources of information for this fact sheet are EPA's Integrated Risk Information System (IRIS), which contains information on inhalation chronic toxicity and the RfC for arsine, oral chronic toxicity and the RfD for inorganic arsenic, and the carcinogenic effects of inorganic arsenic including the unit cancer risk for inhalation exposure, and the Agency for Toxic Substances and Disease Registry's (ATSDR's) *Toxicological Profile for Arsenic*.

Uses

- The major use for inorganic arsenic is in wood preservation; arsine is used in the microelectronics industry and in semiconductor manufacture. (2)
- Until the 1940s, inorganic arsenic solutions were widely used in the treatment of various diseases, such as syphillis and psoriasis. Inorganic arsenic is still used as an antiparasitic agent in veterinary medicine and in homeopathic and folk remedies in the United States and other countries. (2)

Sources and Potential Exposure

- Inorganic arsenic is found throughout the environment; it is released into the air by volcanoes, the weathering of arsenic-containing minerals and ores, and by commercial or industrial processes. (1,2)
- For most people, food is the largest source of arsenic exposure (about 25 to 50 micrograms per day [µg/d]), with lower amounts coming from drinking water and air. Among foods, some of the highest levels are found in fish and shelfish; however, this arsenic exists primarily as organic compounds, which are essentially nontoxic. (1)

- Elevated levels of inorganic arsenic may be present in soil, either from natural mineral deposits or contamination from human activities, which may lead to dermal or ingestion exposure. (1)
- Workers in metal smelters and nearby residents may be exposed to above-average inorganic arsenic levels from arsenic released into the air. (1)
- Other sources of inorganic arsenic exposure include burning plywood treated with an arsenic wood preservative or dermal contact with wood treated with arsenic. (2)
- Most arsenic poisoning incidents in industry have involved the production of arsine, a short-lived, extremely toxic gas. (3)

Assessing Personal Exposure

- Measurement of inorganic arsenic in the urine is the best way to determine recent exposure (within the last 1 to 2 days), while measuring inorganic arsenic in hair or fingernails may be used to detect high-level exposures that occurred over the past 6-12 months. (1)

Health Hazard Information

Acute Effects:

Inorganic Arsenic

- Acute inhalation exposure of workers to high levels of arsenic dusts or fumes has resulted in gastrointestinal effects (nausea, diarrhea, abdominal pain), while acute exposure of workers to inorganic arsenic has also resulted in central and peripheral nervous system disorders. (1)
- Acute oral exposure to inorganic arsenic, at doses of approximately 600 micrograms per kilogram body weight per day (µg/kg/d) or higher in humans, has resulted in death. Oral exposure to lower levels of inorganic arsenic has resulted in effects on the gastrointestinal tract (nausea, vomiting), central nervous system (CNS) (headaches, weakness, delirium), cardiovascular system (hypotension, shock), liver, kidney, and blood (anemia, leukopenia). (1,2)
- Acute animal tests in rats and mice have shown inorganic arsenic to have moderate to high acute toxicity. (5)

Arsine

- Acute inhalation exposure to arsine by humans has resulted in death; it has been reported that a half-hour exposure to 25 to 50 parts per million (ppm) can be lethal. (4)
- The major effects from acute arsine exposure in humans include headaches, vomiting, abdominal pains, hemolytic anemia, hemoglobinuria, and jaundice; these effects can lead to kidney failure. (4,8)
- Arsine has been shown to have extreme acute toxicity from acute animal tests. (5)

Chronic Effects (Noncancer):

Inorganic arsenic

- Chronic inhalation exposure to inorganic arsenic in humans is associated with irritation of the skin and mucous membranes (dermatitis, conjunctivitis, pharyngitis, and rhinitis). (1,2)
- Chronic oral exposure to inorganic arsenic in humans has resulted in gastrointestinal effects, anemia, peripheral neuropathy, skin lesions, hyperpigmentation, gangrene of the extremities, vascular lesions, and liver or kidney damage. (1,2)
- No chronic inhalation exposure studies have been performed in animals for any inorganic arsenic compound. (1)
- Some studies have suggested that inorganic arsenic is an essential dietary nutrient in goats, chicks, and rats. However, no comparable data are available for humans. EPA has concluded that essentiality, although not rigorously established, is plausible. (1,6)
- EPA has not established a Reference Concentration (RfC) for inorganic arsenic. (6)

- The California Environmental Protection Agency (CalEPA) has established a chronic inhalation reference level of 0.00003 milligrams per cubic meter (mg/m^3) based on developmental effects in mice. The CalEPA reference exposure level is a concentration at or below which adverse health effects are not likely to occur. It is not a direct estimator of risk, but rather a reference point to gauge the potential effects. At lifetime exposures increasingly greater than the reference exposure level, the potential for adverse health effects increases. (7)
- The Reference Dose (RfD) for inorganic arsenic is 0.0003 milligrams per kilogram body weight per day (mg/kg/d) based on hyperpigmentation, keratosis, and possible vascular complications in humans. The RfD is an estimate (with uncertainty spanning perhaps an order of magnitude) of a daily oral exposure to the human population (including sensitive subgroups) that is likely to be without appreciable risk of deleterious noncancer effects during a lifetime. (6)
- EPA has medium confidence in the study on which the RfD for inorganic arsenic was based because, although an extremely large number of people were included in the assessment (>40,000), the doses were not well characterized and other contaminants were present. The supporting human toxicity database, while extensive, is somewhat flawed and, consequently, EPA has assigned medium confidence to the RfD. (6)

Arsine

- No information is available on the chronic effects of arsine in humans.
- The RfC for arsine is 0.00005 mg/m^3 based on increased hemolysis, abnormal red blood cell morphology, and increased spleen weight in rats, mice, and hamsters. (4)
- EPA has medium confidence in the RfC based on: (1) high confidence in the studies on which the RfC for arsine was based because the sample sizes were adequate, statistical significance was reported, concentration dose-response relationships were documented, three species were investigated, and both a no-observed-adverse-effect level (NOAEL) and a lowest-observed-adverse-effect level (LOAEL) were identified, and (2) medium confidence in the database because while there were three inhalation animal studies and a developmental/reproductive study, there were no data available on human exposure. (4)

Reproductive/Developmental Effects:

Inorganic arsenic

- Several studies have suggested that women who work in, or live near, metal smelters may have higher than normal spontaneous abortion rates, and their children may exhibit lower than normal birthweights. However, these studies are limited because they were designed to evaluate the effects of smelter pollutants in general, and are not specific for inorganic arsenic. (1)
- Ingested inorganic arsenic can cross the placenta in humans, exposing the fetus to the chemical. (2)
- Oral animal studies have reported inorganic arsenic at very high doses to be fetotoxic and to cause birth defects. (1)

Arsine

- Human studies have indicated higher than expected spontaneous abortion rates in women in the microelectronics industry who were exposed to arsine. However, these studies have several limitations, including small sample size and exposure to other chemicals in addition to arsine. (4)

Cancer Risk:

Inorganic arsenic

- Human, inhalation studies have reported inorganic arsenic exposure to be strongly associated with lung cancer. (1,2,6)
- Ingestion of inorganic arsenic in humans has been associated with an increased risk of nonmelanoma skin cancer and also to an increased risk of bladder, liver, and lung cancer. (1,6)

- Animal studies have not associated inorganic arsenic exposure via the oral route with cancer, and no cancer inhalation studies have been performed in animals for inorganic arsenic. (1)
- EPA has classified inorganic arsenic as a Group A, human carcinogen. (6)
- EPA used a mathematical model, using data from an occupational study of arsenic-exposed copper smelter workers, to estimate the probability of a person developing cancer from continuously breathing air containing a specified concentration of inorganic arsenic. EPA calculated an inhalation unit risk estimate of $4.3 \times 10^{-3}(\mu g/m^3)^{-1}$. EPA estimates that, if an individual were to continuously breathe air containing inorganic arsenic at an average of 0.0002 $\mu g/m^3$ (2×10^{-7} mg/m^3) over his or her entire lifetime, that person would theoretically have no more than a one-in-a-million increased chance of developing cancer as a direct result of breathing air containing this chemical. Similarly, EPA estimates that continuously breathing air containing 0.002 $\mu g/m^3$ (2×10^{-6} mg/m^3) would result in not greater than a one-in-a-hundred thousand increased chance of developing cancer, and air containing 0.02 $\mu g/m^3$ (2×10^{-5} mg/m^3) would result in not greater than a one-in-ten thousand increased chance of developing cancer. For a detailed discussion of confidence in the potency estimates, please see IRIS. (6)
- EPA has calculated an oral cancer slope factor of 1.5 $(mg/kg/d)^{-1}$ for inorganic arsenic. (6)

Arsine

- No cancer inhalation studies in humans or animals are available for arsine. (1)
- EPA has not classified arsine for carcinogenicity. (4)

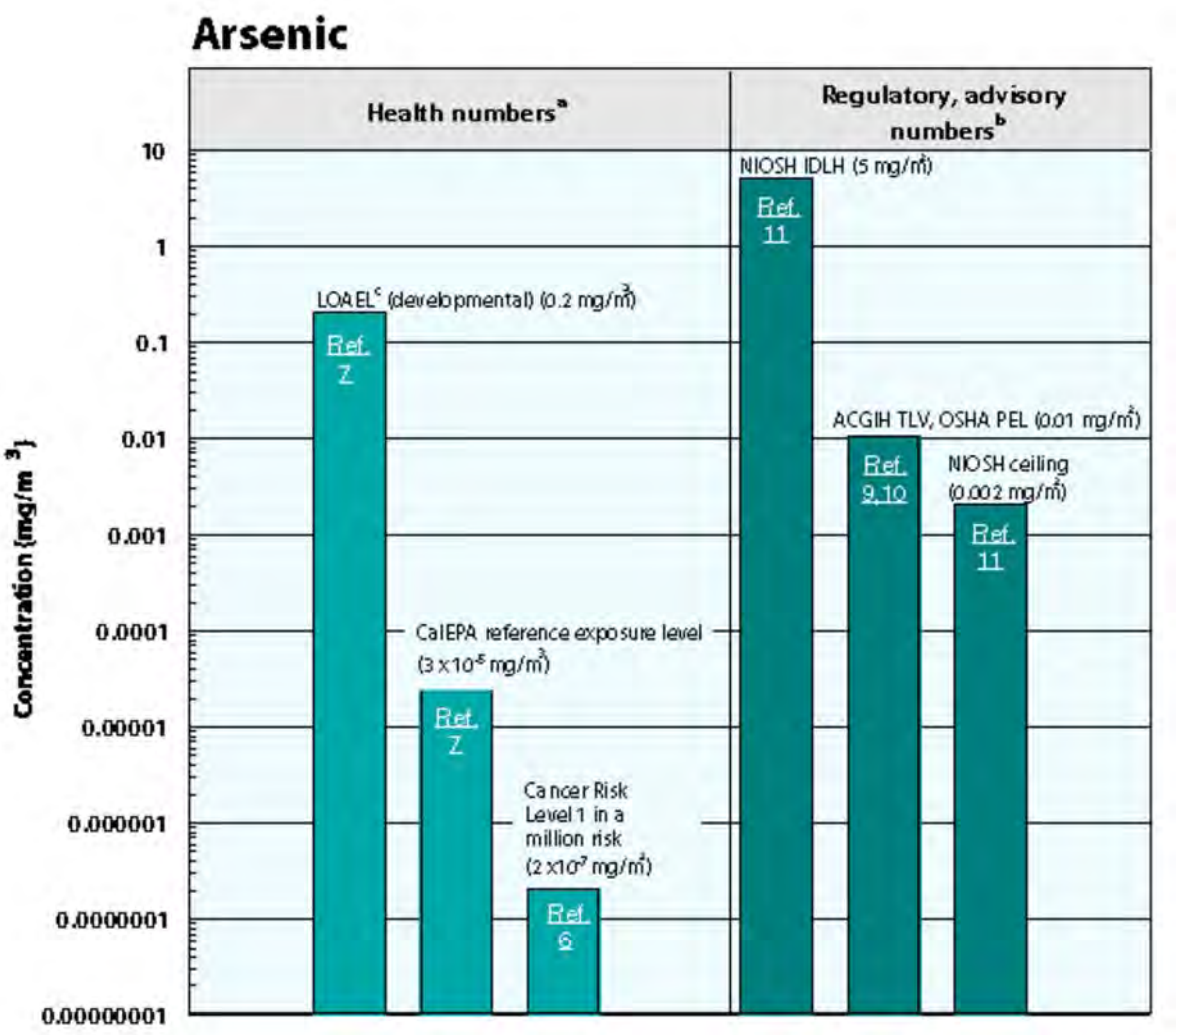
Physical Properties

- Inorganic arsenic is a naturally occurring element in the earth's crust.(1)
- Pure inorganic arsenic is a gray-colored metal, but inorganic arsenic is usually found combined with other elements such as oxygen, chlorine, and sulfur. (1)
- The chemical symbol for inorganic arsenic is As, and it has an atomic weight of 74.92 g/mol. (3)
- The chemical formula for arsine is AsH_3, and it has a molecular weight of 77.95 g/mol. (8)
- Arsine is a colorless gas with a disagreeable garlic odor. (8)
- Arsenic combined with elements such as oxygen, chlorine, and sulfur forms inorganic arsenic; inorganic arsenic compounds include arsenic pentoxide, arsenic trioxide, and arsenic acid. Arsenic combined with carbon and hydrogen forms organic arsenic; organic arsenic compounds include arsanilic acid, arsenobetaine, and dimethylarsinic acid. (1)

Conversion Factors (only for the gaseous form):

To convert concentrations in air (at 25°C) from ppm to mg/m^3: mg/m^3 = (ppm) × (molecular weight of the compound)/(24.45). For inorganic arsenic: 1 ppm = 3.06 mg/m^3. For arsine: 1 ppm = 3.19 mg/m^3. To convert concentrations in air from $\mu g/m^3$ to mg/m^3: mg/m^3 = ($\mu g/m^3$) × (1 mg/1,000 µg).

Health Data from Inhalation Exposure (Inorganic Arsenic)



ACGIH TLV--American Conference of Governmental and Industrial Hygienists' threshold limit value expressed as a time-weighted average; the concentration of a substance to which most workers can be exposed without adverse effects.
NIOSH IDLH--National Institute of Occupational Safety and Health's immediately dangerous to life or health concentration; NIOSH recommended exposure limit to ensure that a worker can escape from an exposure condition that is likely to cause death or immediate or delayed permanent adverse health effects or prevent escape from the environment.
NIOSH REL ceiling value--NIOSH's recommended exposure limit ceiling; the concentration that should not be exceeded at any time.
OSHA PEL--Occupational Safety and Health Administration's permissible exposure limit expressed as a time-weighted average; the concentration of a substance to which most workers can be exposed without adverse effect averaged over a normal 8-h workday or a 40-h workweek.

The health and regulatory values cited in this factsheet were obtained in December 1999.

[a] Health numbers are toxicological numbers from animal testing or risk assessment values developed by EPA.

[b]Regulatory numbers are values that have been incorporated in Government regulations, while advisory numbers are nonregulatory values provided by the Government or other groups as advice. OSHA numbers are regulatory, whereas NIOSH and ACGIH numbers are advisory.

[c]The LOAEL is from the critical study used as the basis for the CalEPA chronic reference exposure level.

Lead

Learn about Lead

- What is lead?
- Where is lead found?
- How can people be exposed to lead?
- Possible adverse health effects of exposures to lead
- Lead exposure data

What is Lead?

Lead is a highly toxic metal and it is all around us. Lead was used for many years in paints and other products found in and around our homes. Lead-based paint and lead contaminated dust are the main sources of exposure for lead in U.S. children. Lead-based paints were banned for use in housing in 1978. There is a good chance that any home, building, school or day care center built before 1978 contains some lead paint.

One million children are affected by lead poisoning, but when you know what to look for and what to do, lead poisoning is entirely preventable.

Top of page

Where is Lead Found?

The most common source of lead is from paint in homes and buildings built before 1978. Lead also can be emitted into the air from industrial sources and leaded aviation gasoline, and lead can enter drinking water through plumbing materials.

It is also used in the production of batteries, ammunition, metal products (solder and pipes), and devices to shield X-rays. Because of health concerns, lead from paints and ceramic products, caulking, and pipe solder has been dramatically reduced in recent years. The use of lead as an additive to automobile gasoline was banned in 1996 in the United States.

Lead is also a naturally occurring element. Natural levels of lead in soil range between 50 parts per million (ppm) and 400 ppm. Mining, smelting, and refining activities have resulted in substantial increases in lead levels in the environment, especially near mining and smelting sites. For example, near some types of industrial and municipal facilities, and adjacent to highways (Chaney et al., 1984; Schacklette et al., 1984) soil lead concentrations have been reported to be more than 11,000 ppm (National Research Council, 1980).

- At home
- At schools and childcare facilities
- In products
- In drinking water
- In outdoor air
- In soil

Top of page

How Can People Be Exposed to Lead?

Children

Lead is dangerous to children because babies and young children often put their hands and other objects that can have lead dust on them in their mouths. Also, children's growing bodies absorb more lead than adult bodies do, and their brains and nervous systems are more sensitive to the damaging effects of lead.

Children living at or below the poverty line who live in older housing are at greatest risk. Children of some racial and ethnic groups, and those living in older housing, are disproportionately affected by lead.

Learn more about sources of lead exposure.

Pregnant Women

Pregnant women can be exposed to lead by spending time in areas where lead-based paints are deteriorating into lead dust that they then breathe in. Likewise, eating and drinking from dishes or glasses that contain lead water, or using certain folk remedies to which lead is intentionally added can cause exposures to lead. In addition, working in a job or engaging in hobbies where lead is used, such as making stained glass, can increase exposure.

Adults

Adults are also susceptible to lead exposure. This may be from:

- Breathing in lead dust, especially during renovation or repair work that disturbs painted surfaces in older homes and buildings.
- Putting their hands or other objects covered with lead dust in their mouths.
- Eating or drinking contaminated food or water or using certain folk remedies.

- Working in a job or engaging in hobbies where lead is used.

Learn more about sources of lead exposure.

Lower Your Chances of Exposure to Lead

Simple steps like keeping your home clean and feeding your family a well-balanced diet will go a long way in preventing lead poisoning. You can lower the chances of exposure to lead in your home, both now and in the future, by taking these steps:

- Use only cold water to prepare food and drinks.
- Flush all water outlets used for drinking or food preparation.
- Clean debris out of all outlet screens or aerators on faucets on a regular basis.
- Keep your home clean and dust-free.
- Wipe up any paint chips or visible dust with a wet sponge or rag. Clean dust around areas where there is friction and dust can be generated, such as doors, windows, and drawers.
- Wash children's hands, bottles, pacifiers and toys often.
- Teach children to wipe and remove their shoes and wash hands after playing outdoors.
- Ensure that your family members eat well-balanced meals. Lead interferes with some of the body's basic functions. Our bodies can't tell the difference between lead and calcium, which is a mineral that strengthens bones. Children with healthy diets absorb less lead.
- Make sure your contractor is Lead Safe Certified.

Determine if your family is at risk for lead poisoning with the Lead Poisoning Home Checklist (PDF) (1 pg, 47K, About PDF).

Possible Adverse Health Effects of Exposures to Lead

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk.

Children

If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Pregnant Women

Lead can accumulate in our bodies over time, where it is stores in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Find out more about lead's effects on pregnancy:

- March of Dimes Healthy Pregnancy EXIT Disclaimer
- Effects of Workplace Hazards on Female Reproductive Health, National Institute for Occupational Safety and Health.

Adults

Lead is also harmful to adults. Adults can suffer from:

- Hearing and vision impairment,
- Reproductive problems (in both men and women),
- High blood pressure and hypertension,
- Nerve disorders,
- Memory and concentration problems,
- Poor muscle coordination, and
- Muscle and joint pain.

Read more on the health effects of lead at the Agency for Toxic Substances and Disease Registry (ATSDR).

Use of California Human Health Screening Levels (CHHSLs) in Evaluation of Contaminated Properties

January 2005

California Environmental Protection Agency

Item No. E.6

DISCLAIMER

Use of California Human Health Screening Levels in Evaluation of Contaminated Properties has been prepared by the California Environmental Protection Agency (Cal/EPA). This document is not intended to establish policy or regulation. The Human Health Screening Levels presented here are not to serve as: 1) a stand-alone decision making tool, 2) a substitute for guidance for the preparation of baseline human health risk assessments, 3) a rule to determine if a waste is hazardous under the state or federal regulations, 4) a rule to determine when the release of hazardous chemicals must be reported to the overseeing regulatory agency, 5) set of final cleanup or action levels to be applied at contaminated sites or 6) a guarantee that an oversight regulatory agency will determine that a project is adequately studied or agree with the conclusions of the site investigation and risk assessment report.

The information presented in this document is not final Cal/EPA action. Cal/EPA may update this information as needed without public notice. This document is not intended, nor can it be relied upon, to create any rights enforceable by any party in litigation in the State of California. Staff in overseeing regulatory agencies may decide to follow the information provided herein or act at a variance with the information, based on an analysis of site-specific circumstances.

The CHHSLs should NOT be used to determine when impacts at a site should be reported to a regulatory agency. The list of CHHSLs is also not a comprehensive list of all potential chemicals of concern that may be found at a property. All releases of hazardous substances to the environment should be reported to the appropriate regulatory agency in accordance with governing regulations. Staff overseeing work at a specific site should be contacted prior to use of the information in this document to ensure that the document is applicable to the site and that the user has the most up-to-date version available.

This document is not copyrighted. Copies may be freely made and distributed. However, reference to or use of the screening levels presented in this document without adequate review of the accompanying narrative could result in misinterpretation and misuse of the information.

1 HUMAN-EXPOSURE-BASED SCREENING NUMBERS DEVELOPED TO AID ESTIMATION OF CLEANUP COSTS FOR CONTAMINATED SOIL, NOVEMBER 2004, JANUARY 2005 REVISION

Overview

What are the CHHSLs?

The California Human Health Screening Levels (CHHSLs or "Chisels") are concentrations of 54 hazardous chemicals in soil or soil gas that the California Environmental Protection Agency (Cal/EPA) considers to be below thresholds of concern for risks to human health. The CHHSLs were developed by the Office of Environmental Health Hazard Assessment (OEHHA) on behalf of Cal/EPA, and are contained in their report entitled "Human-Exposure-Based Screening Numbers Developed to Aid Estimation of Cleanup Costs for Contaminated Soil" (Appendix 1). The thresholds of concern used to develop the CHHSLs are an excess lifetime cancer risk of one-in-a-million (10^{-6}) and a hazard quotient of 1.0 for noncancer health effects. The CHHSLs were developed using standard exposure assumptions and chemical toxicity values published by the U.S. Environmental Protection Agency (USEPA) and Cal/EPA.

How can the CHHSLs help facilitate restoration of contaminated properties?

The CHHSLs can be used to screen sites for potential human health concerns where releases of hazardous chemicals to soils have occurred. Under most circumstances, and within the limitations described in this document, the presence of a chemical in soil, soil gas or indoor air at concentrations below the corresponding CHHSLs can be assumed to not pose a significant health risk to people who may live (residential CHHSLs) or work (commercial/industrial CHHSLs) at the site. As discussed below, however, evaluation of other potential environmental concerns must also be addressed.

The presence of a chemical at concentrations in excess of a CHHSL does not indicate that adverse impacts to human health are occurring or will occur but suggests that further evaluation of potential human health concerns is warranted. Residential CHHSLs may be used in conjunction with the human health screening evaluation described in the Department of Toxic Substances Control (DTSC) Preliminary Endangerment Assessment (PEA) Guidance Manual to assist the risk manager in deciding whether further site characterization, risk assessment, or remediation is necessary (Cal/EPA 1994b). Further evaluation may include additional sampling at the site, consideration of ambient levels in the environment, or a reassessment of the assumptions used to calculate the CHHSLs

or PEA estimates. This stepwise approach expedites judgments about the degree of effort that may be necessary to remediate contaminated properties and restore the properties to productive use.

How do the CHHSLs differ from cleanup standards?

The CHHSLs presented in the lookup tables are NOT regulatory "cleanup standards". Use of the CHHSLs and this document is voluntary on the part of those who choose to use them. At sites where cleanup of contaminated soils to levels at or below the CHHSLs would be costly, the time and effort to develop more site-specific cleanup may be desired. At sites where the extent of contaminated soil is limited or the timeframe available to carry out cleanup actions is very short, use of the CHHSLs as final soil cleanup standards may be cost-beneficial. However, this would require the concurrence of both the responsible party and the overseeing regulatory agency and can only be done after a full evaluation of site conditions and other potential environmental concerns. Regulatory agencies cannot be compelled to use the CHHSLs as final cleanup standards for a contaminated property.

If contaminant concentrations are below the CHHSLs am I finished?

As discussed above, the CHHSLs cannot be used as a stand-alone tool for final cleanup and closure decisions. In addition, using only the CHHSLs may not be protective of groundwater resources or address other potential environmental concerns. Therefore, a thorough investigation of site conditions must also be performed to ensure that: 1) all potential human exposure pathways and exposure scenarios at the site are fully accounted for; 2) groundwater resources are protected; 3) terrestrial and aquatic habitats are protected, including the erosion of contaminated soils and subsequent runoff into a nearby wetland, stream or other aquatic habitat; and 4) that nuisance (e.g., odors and staining) and gross contamination concerns are addressed. These and other issues related to environmental contamination that are identified at the site must be evaluated separately. If a formal regulatory decision or determination is desired, additional assessment or cleanup of contaminated soils to address these concerns may ultimately be required.

How should the CHHSLs be integrated into the DTSC PEA process?

The human health screening evaluation presented in the DTSC Preliminary Endangerment Assessment (PEA) document is intended to provide a preliminary evaluation of potential risk and hazard to human health. The PEA process uses models and exposure assumptions similar to those used to develop the residential CHHSLs but does not provide actual risk-based screening levels based on these models. The PEA screening evaluation assumes that the land use of the site will be residential, regardless of the current use and zoning for the site. Therefore, residential CHHSLs for specific chemicals may be utilized in a PEA. Chemicals that do not have CHHSLs should be evaluated using the DTSC PEA methodology for their potential to pose human health risks. Chemicals found at a site should be evaluated separately for other potential environmental concerns, using the PEA guidance and other references as appropriate. The user should consult DTSC for additional information about use of the CHHSLs in the PEA process.

How are the CHHSLs related to the USEPA Preliminary Remediation Goals (PRGs) and to the San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels (ESLs)?

The soil and soil gas CHHSLs are modeled after the USEPA Region IX "Preliminary Remediation Goals (PRGs)" for these media (http://www.epa.gov/region09/waste/sfund/prg/index.htm). The primary difference between the CHHSLs and the PRGs is the use of Cal/EPA-specific "toxicity factors" (estimates of a chemical's toxicity to humans) in development of the CHHSLs, when available, rather than toxicity factors published by the USEPA. For volatile chemicals, soil gas CHHSLs were developed to evaluate the potential intrusion of subsurface vapors (soil gas) into buildings and subsequent impacts to indoor air quality.

The San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) Environmental Screening Levels (ESLs) are a compilation of screening levels for not only risk to human health but also a number of other environmental concerns. The ESLs are intended for use only at sites overseen by that agency. These ESLs may be found at the SFRWQCB web site at http://www.waterboards.ca.gov/sanfranciscobay/esl.htm. The SFBRWQCB refers to the comprehensive evaluation of all potential environmental concerns as an "Environmental Risk Assessment," as opposed to a more focused "Human Health Risk Assessment" reflected in development of the CHHSLs and this

document in general. The soil, soil gas and indoor air ESLs and CHHSLs for human health concerns were developed using similar methodology and are essentially identical. In addition, the SFBRWQCB document provides soil screening levels for leaching of contaminants into groundwater, toxicity to flora and fauna and nuisance or gross contamination concerns. These concerns are not addressed by the CHHSLs and must be evaluated separately.

Because many different sets of screening levels are now available, the overseeing regulatory agency should be consulted before using any screening levels in a human health screening evaluation. The regulatory agency may have specific recommendations with respect to which screening levels it prefers to use at sites under their jurisdiction.

If I am in the jurisdiction of the San Francisco Bay Regional Water Quality Control Board, can I continue to use that office's Environmental Screening Levels (ESLs) document?

At sites in the jurisdiction of and overseen by the SFBRWQCB, the reader should consult the SFBRWQCB regarding continued use of the ESLs versus use of the CHHSLs.

How often are the CHHSLs updated?

The CHHSLs will be updated as needed to incorporate new toxicity information of referenced chemicals as well as new information regarding the exposure or potential exposure of humans to potentially hazardous chemicals in soils. CHHSLs for additional chemicals will also be included as they become available.

Who can I contact for more information?

Refer to the CHHSL link posted on the Cal/EPA website (www.calepa.ca.gov) for further information and local contacts. The document will also be posted on the OEHHA web site (www.oehha.ca.gov), the DTSC web site (www.dtsc.ca.gov), the SWRCB web site (www.waterboards.ca.gov) and at the SFBRWQCB web site (www.waterboards.ca.gov/sanfranciscobay/), as well as other Regional Boards' web sites.

1 Introduction

1.1 Purpose and Development

The California Human Health Screening Levels (CHHSLs) were developed as a tool to assist in the evaluation of contaminated sites for potential adverse threats to human health. Residential and commercial/industrial land use screening levels for soil, soil gas and indoor air are provided in Tables 1 and 2. The screening levels in Table 1 pertain to direct exposure of humans to contaminants in soil via incidental soil ingestion, dermal contact and inhalation of vapors or dust in outdoor air. The soil gas and indoor air screening levels in Table 2 pertain to the emission of volatile chemicals from contaminated soil or groundwater and their potential intrusion into overlying buildings.

Preparation of the CHHSLs by the California Environmental Protection Agency (Cal/EPA) was required under the California Land Environmental Restoration and Reuse Act of 2001 (CLERRA 2001). CLERRA also required that a guidance document be prepared to explain how the CHHSLS may be used in California to aid in making judgments about the degree of effort (or costs) that might be necessary to remediate contaminated properties, facilitate the restoration and revitalization of contaminated properties, and assist local-level remediation programs in making more efficient and effective decisions.

Appendix 1 is the Office of Environmental Health Hazard Assessment's (OEHHA) report entitled "Human-Exposure-Based Screening Numbers Developed to Aid Estimation of Cleanup Costs for Contaminated Soil" which contains the CHHSLs, and describes the approach used to develop the human-health-risk-based screening levels, the comments received regarding the draft document and OEHHA's response to those comments. The approach reflected in OEHHA's report is based on the USEPA *Risk Assessment Guidance for Superfund, Volume 1, Human Health Evaluation Manual (Part A)* (USEPA 1989) and is essentially equivalent to the approach used by USEPA Region IX in developing their *Preliminary Remediation Goals* (USEPA 2004), the San Francisco Bay Area Regional Water Quality Control Board (SFRWQCB) in developing their Environmental Screening Levels for human health (SFRWQCB 2003), and the Department of Toxic Substances Control (DTSC) in their Preliminary Endangerment Assessment (PEA) guidance (Cal/EPA 1994b).

Soil and soil gas data collected at a site can be directly compared to CHHSLs for each chemical of concern. Under most circumstances, and within the limitations described, the presence of a chemical in soil or soil gas at concentrations below the corresponding CHHSLs can be assumed to not pose a significant health risk to people who may live or work at the site. The presence of a chemical at concentrations in excess of a CHHSL does not necessarily indicate that adverse impacts to human health are occurring but indicates that a potential for adverse risk may exist and that additional evaluation is warranted.

Residential CHHSLs are appropriate for other types of sensitive property use, including hospitals, day care centers and schools. In order to assess the maximum, future beneficial use of a property, data collected at commercial or industrial sites should be compared to both residential and commercial sets of screening levels. A formal restriction to the deed may be required for sites that meet requirements for commercial/industrial use but not residential use. Regulatory agency oversight would be needed in this circumstance.

The scope of the CHHSLs is limited to human health concerns. For this reason, the CHHSLs cannot be used as a stand-alone tool to determine the extent of remedial actions needed at sites with contaminated soils. Depending on site conditions and the chemicals present, additional cleanup of contaminated soils may be required to protect groundwater resources, prevent toxicity to flora and fauna, address uptake in edible plants, and address nuisance and aesthetic concerns posed by odors and staining. A brief summary of these concerns and a list of references for evaluating these issues are provided at the end of the text.

1.2 Tiered Approach to Environmental Risk Assessments

Human health risk assessments for regulatory purposes are usually carried out using a step-wise or "tiered" approach. Comparison of site data to residential soil or soil gas CHHSLs (e.g., in a screening health risk evaluation performed using the DTSC PEA guidance) usually represents "Tier 1". If multiple chemicals with similar health effects are present at a site then "forward mode," cumulative health risks may also need to be calculated and compared to target Tier 1 goals before an evaluation of potential human health concerns can be completed (refer to Section 2.8).

If the results of the Tier 1 assessment indicate that further evaluation of human health risks is warranted, site-specific exposure assumptions, target risks, etc., can

be substituted for default parameter values used to develop the Tier 1 CHHSLs and alternative screening levels developed under a Tier 2 assessment. This assessment can be incorporated into the guidelines presented in the DTSC PEA document. Prior to modifying the Tier 1 default assumptions, concurrence from the appropriate regulatory agency should be obtained. Site data can then be compared to the revised screening levels. This provides an intermediate but still relatively rapid and cost-effective option for preparing more site-specific screening or cleanup levels. Cumulative health risks or hazards should also be presented under a Tier 2 assessment, as described in Section 2.8.

If exposure pathways of concern and conditions at the site do not match those taken into account by the CHHSL framework or PEA methodology, a Tier 3, baseline human health and ecological risk assessment should be performed. In a baseline human health and ecological risk assessment, alternative models and site-specific assumptions are used to quantify the risk/hazard posed to human and/or ecological receptors by the impacted media in the "forward" mode. After a baseline health risk assessment is accepted by the regulatory agency, the assessment may be used in the "backward' model to develop site-specific screening or cleanup levels. An understanding of the methodologies used to develop the CHHSLs is important to ensure consistency between all tiers of assessments and to expedite their preparation and review.

1.3 Chemicals Not Listed In CHHSL Lookup Tables

The lookup tables list 54 chemicals, including many that are commonly found at sites where releases of hazardous chemicals have occurred. Cal/EPA will incorporate CHHSLs for additional chemicals in future updates of this document as needed and practical. Prior to that time, the PEA methodology should be used to evaluate those chemicals for which CHHSLs do not exist. Toxicity factors published by Cal/EPA should be utilized in the PEA when available, unless otherwise instructed by the overseeing regulatory agency.

1.4 Limitations

The CHHSLs presented in this document are NOT regulatory "cleanup standards." Use of the CHHSLs as final cleanup levels to address human health concerns should be discussed with the overseeing regulatory agency and evaluated in terms of the cost/benefit of developing more site-specific cleanup levels through a risk assessment.

The CHHSLs presented in this document are NOT adequate to evaluate ALL environmental conditions at ALL contaminated sites. Other environmental concerns posed by the presence of contamination at a site may include:

- Leaching of contaminants from soil to groundwater and subsequent impacts to groundwater quality;
- Intrusion of subsurface vapors into basements or buildings with substandard ventilation systems and subsequent impacts to indoor air;
- Uptake of contaminants in edible fruit and vegetables and subsequent intake by humans;
- Exposure of children and teachers at school sites;
- Toxicity to terrestrial flora and fauna;
- Gross contamination, including nuisance (odors, etc.) and aesthetic concerns.

A summary of potential environmental concerns that may also be relevant at a site for a particular chemical is also provided in Table 1.

The CHHSLs specifically do not address contamination in groundwater, surface water or sediment or the erosion of contaminated soils and subsequent runoff into a nearby wetland, stream or other aquatic habitat. Contamination identified in these media or that may threaten these media must be considered separately. References for evaluation of contaminants in these media are provided in Chapter 4.

The soil gas CHHSLs for the intrusion of vapors into buildings may not be adequately conservative for estimating impacts to indoor air in poorly ventilated basements or buildings with substandard ventilation systems in general. Additional guidance on this subject is provided in Section 2.5.2.

The CHHSLs for direct-exposure to soils concerns are calculated assuming that specific exposure pathways are complete for the human receptor: incidental soil ingestion, dermal absorption of chemicals in soil, and inhalation of vapors or particulate matter in ambient (outdoor) air. For volatile chemicals, the soil gas CHHSLs are calculated assuming that the exposure pathway of inhalation of

indoor air contaminated with vapors intruding from the subsurface is complete. If these pathways are not congruent with site conditions, the CHHSLs should not be used. The PEA guidance should then be followed.

The CHHSLS for inorganic chemicals (metals) are based on human health risks. However, metals are naturally occurring in the soil. Therefore, metals concentrations should be compared to local background levels as discussed in Section 2.7.

(Page intentionally left blank)

2 CHHSL Lookup Tables

2.1 Organization of Lookup Tables

CHHSLS for soil, soil gas and indoor air are presented in Tables 1 and 2. Soil CHHSLs address the potential direct exposure of residents and workers to contaminants in soil. Indoor air and soil gas screening levels address the potential intrusion of subsurface vapors into buildings and subsequent impacts to indoor air quality (and resulting potential exposure of residents and workers in those buildings).

Separate CHHSLs are presented for residential and commercial/industrial land uses. A summary of models and exposure assumptions used for each land use is in Appendix 1. The category "Residential Land Use" applies to sites where unrestricted land use is desired. This includes use for residences, hospitals, day-care centers and other sensitive purposes (Cal/EPA 2002). Residential CHHSLs incorporate conservative assumptions regarding the long-term, frequent exposure of children and adults to contaminated soils in a residential setting. In contrast, "Commercial/Industrial Use Only" assumes that only working age adults will be present at the site on a regular basis. Exposure assumptions incorporated into these CHHSLs are less conservative than assumptions used in the residential land-use scenario.

In a DTSC PEA, the land use of the site under a Tier 1 assessment is assumed to be residential, regardless of the current use and zoning for the site. Other regulatory agencies may evaluate land use with respect to the current and foreseeable future use of the site in question. Reference to adopted General Plan zoning maps and local redevelopment plans is an integral part of this evaluation.

If chemicals at a site exceed residential CHHSLs but are below CHHSLs for commercial/industrial land-use, restrictions on the use of affected property will likely be necessary (refer to Section 2.10). The need for such restrictions should be weighed against the cost-benefit of remediating the property to meet the CHHSLs for unrestricted land use.

Although schools may also be a sensitive land use, proposed school sites must be evaluated using the OEHHA Guidance for Assessing Exposures and Health Risks at Existing and Proposed School Sites (Cal/EPA 2004a) rather than the CHHSLs. Refer to Section 2.9 for a discussion of school-specific risk evaluations. Use of

the lookup tables for sites with other land uses (e.g., agriculture, parkland, etc.) should be discussed with and approved by the overseeing regulatory agency.

2.2 Developing a Conceptual Site Model

The primary condition for use of CHHSLs is that exposure pathways of concern and conditions at the site match those taken into account in the development of the CHHSLs. Thus, it is always necessary to develop a conceptual site model (CSM) to identify likely contaminant source areas, exposure pathways, and potential receptors to determine the applicability of CHHSLs at the site and the need for additional information. The conceptual site model summarizes information about site conditions in a schematic presentation in terms of: 1) primary sources (e.g., leaking tanks); 2) secondary sources (e.g., contaminated soil); 3) contaminant transport mechanisms (e.g., volatilization and intrusion into buildings); 4) contaminated exposure media (e.g., indoor air); and 5) potentially complete exposure pathways.

The CSM can be used to provide a rationale for additional site investigation, as a basis for a more detailed CSM, and/or to select screening levels or cleanup levels for specific environmental concerns. An example model is shown in Figure 2-1. The example model represents a hypothetical release of petroleum-based fuels and pesticides to soil and groundwater at a large housing redevelopment project with open spaces accessible to residents (direct exposure), enclosed buildings (vapor intrusion), wetlands (ecotoxicity) and communal garden areas where fruits and vegetables are grown (uptake in edible plants). Potential environmental concerns at the hypothetical site are identified by a check mark in the appropriate column. In addition, xylene and other compounds in petroleum often cause odor and aesthetic concerns (nuisances). Cleanup to address these and other gross contamination concerns may be required even after all other potential concerns have been adequately addressed.

If completed exposure pathways at a site match those pathways considered in the development of the CHHSLs, the appropriate soil and soil gas data can be directly compared to the CHHSLs to determine if the magnitude of exposure may pose a potential threat to human health. If the exposure pathways at a site do not match those pathways used in the development of the CHHSLs, these screening levels may not be used, and a site-specific human health risk evaluation should be performed.

Other potential environmental concerns must be evaluated separately, either through use of a comparable set of screening levels or through a more detailed, site-specific environmental risk assessment. Additional information regarding the preparation of conceptual site models is provided in the DTSC *Preliminary Endangerment Assessment Manual* (Cal/EPA 1994b), the USEPA Region IX *Preliminary Remediation Goals* document (USEPA 2004), the USEPA *Guidance for Conducting Remedial Investigations and Feasibility Studies Under CERCLA*, Interim Final Document (USEPA 1988) and the Region 2 Environmental Screening Levels document (SFBRWQCB 2003).

2.3 Using the Lookup Tables

A step-by-step approach for using the CHHSLs is summarized below.

Step 1 – Check for CHHSL Updates and Applicability

Check with the overseeing regulatory agency to determine if the CHHSLs can be applied to the subject site. Ensure that the most up-to-date CHHSLs are being used.

Step 2 - Prepare a Conceptual Site Model

The purpose of the conceptual site model is to present information about site conditions and potential impacts to receptors. All potential environmental concerns at the site (e.g., contaminant sources, pathways, exposure routes and receptors) should be clearly identified in a conceptual site model (Section 2.2 and Chapter 4). Identification of these concerns helps to provide the rationale for the type and location for site sampling. The level of detail required in a conceptual site model will vary from site to site. The presentation and scope of the model should be discussed with the overseeing regulatory agency. The conceptual site model should be continually updated as additional data for the site is obtained.

Step 3 – Collect Data

An environmental risk assessment is based on the results of a thorough site investigation, where all chemicals of potential concern have been identified. The scope and type of site investigation will vary depending on the site specific history and the nature of the actual or suspected chemical release. Sampling objectives should be defined in advance of field activities. For example, the objective may be to document whether a release has occurred; to identify hot spots that may require an expedited removal action; to provide sufficient data to determine whether site remediation is necessary; or to evaluate whether site conditions would be consistent with proposed or potential land uses.

Steps 4 - Determine the Desired Land Use

Screening levels for residential land use are generally appropriate for other sensitive uses of the property (e.g., day-care centers, hospitals, etc.). If preparing a DTSC PEA, residential land use CHHSLs should be used. **For evaluation of commercial/industrial properties, it is highly recommended that site data be compared to CHHSLs for both unrestricted/residential and commercial/industrial land use.** Commercial/industrial CHHSLs should be used only under the oversight of a regulatory agency, as that agency will likely require a land use covenant that restricts use of the property to these purposes.

Steps 5 - Select CHHSLs

Based on the actual or proposed land use, select the appropriate soil and/or soil gas CHHSLs. Replace CHHSLs with naturally occurring, background concentrations of chemicals of concern (e.g., arsenic) or laboratory method reporting levels if appropriate (see Sections 2.6 and 2.7).

Step 6 - Compare Site Data To CHHSLs; calculate cumulative risks as necessary

Compare site data to CHHSLs to identify areas where concentrations of contaminants pose potential human health concerns. For sites where sample data are limited and/or if preparing a DTSC PEA, compare the maximum-detected concentrations of chemicals of concern to the CHHSLs.

For sites where an adequate number of data points are available, statistical methods can be used to estimate site-specific exposure point concentrations. The exposure point concentration is the lesser of the maximum-detected concentration and the 95% upper confidence limit (UCL) of the arithmetic mean of sample data (Cal/EPA 1996a). The USEPA guidance document *Calculating Upper Confidence Limits for Exposure Point Concentrations at Hazardous Waste Sites* recommends evaluating the distribution of the data and choosing the best UCL estimate for the data set (USEPA 2002). Guidance for the estimation of exposure point concentrations, use of "non-detect" data, and other issues is also provided in the Cal/EPA documents *Preliminary Endangerment Assessment Guidance Manual* (Cal/EPA 1994b), *Supplemental Guidance For Human Health Multimedia Risk Assessments of Hazardous Waste Sites and Permitted Facilities* (Cal/EPA 1996a), among other sources. As discussed in these documents, sample data collected outside of impacted areas should generally not be included in estimation of exposure point concentrations.

For residential land use scenarios, soil sample data should be averaged over no more than a 1,000 ft^2 area (assumed area of a typical, urban area back yard and footprint area of typical residence). For commercial/industrial properties, soil sample data can be averaged within affected areas of open spaces.

Use the maximum soil gas concentration over an area of the footprint of existing or assumed future buildings to compensate for potentially isolated rooms within a building and the uncertainties in soil gas collection.

If multiple chemicals with similar heath effects are present at a site, the cumulative excess cancer risk and/or noncancer hazard index should be calculated before final consideration of the site for closure. This will be of particular concern at sites where residual concentrations of chemicals with similar noncancer health effects may approach CHHSLs following the proposed, final cleanup of contaminated soil. Calculation of cumulative risks and hazard indices is discussed in Section 2.8. The need to include calculation of cumulative health risks in final closure reports should be discussed with the overseeing regulatory agency.

Steps 7 - Evaluate the Need for Additional Investigation or Actions to Address Human Health Concerns

Based on a comparison of available site data to the CHHSLs, the objectives identified in Step 3 should be evaluated. For example, comparison to CHHSLs may show that a site does not pose an unacceptable health risk to residential users, or it may show that additional investigation is warranted. Summarize the results of this evaluation in the Tier 1 Human Health Risk Assessment report (or preliminary endangerment assessment), and include recommendations for additional investigations or remediation as needed. Decisions for or against additional actions should always be made in coordination with the overseeing regulatory agency.

Step 8 - Evaluate Other Potential Environmental Concerns

The soil CHHSLs presented in Table 1 are limited to human health concerns associated with direct exposure to contaminated soil. In many instances, the presence of a potential hazardous chemical in soil may pose other environmental concerns that outweigh the risk to human health through direct exposure (see Sections 1.4 and 2.2, Chapter 4 and Table 1). The purpose of the Conceptual Site Model (Step 2) is to assist the user in identifying these concerns early in the process. For example, many metals and pesticides are significantly more toxic to flora and fauna than they are to humans (e.g., copper and nickel). Chemicals that easily leach from soils (e.g., MTBE) may pose a threat to shallow groundwater

resources even though direct exposure to the soils does not pose a significant health risk. Since the CHHSLs do not address impacts to groundwater, surface water or sediment, these and other potential environmental concerns should be addressed as part of a comprehensive environmental risk assessment.

2.4 Screening For Soil Direct-Exposure Concerns

The soil screening levels presented in Table 1 address potential exposure of humans to contaminants in soil through incidental soil ingestion, dermal absorption and inhalation of dust or vapors in outdoor air. These soil screening levels are given in milligrams (mg) of chemical per kilogram (kg) of dry soil. Therefore, the analytical laboratory must be instructed to report their results accordingly. Models and assumptions used to develop the soil CHHSLs are summarized in Appendix 1. The CHHSLs represent a combination of standard assumptions regarding exposure of residents and workers to contaminants in soil and outdoor air and toxicity factors for each of the specific chemicals listed. CHHSLs for chemicals that are known or suspected carcinogens were calculated using a target excess lifetime cancer risk of one-in-one-million (10^{-6}). A target hazard quotient of 1.0 was used to calculate CHHSLS for noncancer health effects.

The presence of a chemical in soil at concentrations below its corresponding CHHSL can be assumed to not pose a significant health risk to people who may live or work at the site. Since sites usually have multiple contaminants, the cumulative, or total risk and hazards posed by all the hazardous chemicals a site should also be estimated using the approach described in Section 2.8.

Residential and commercial/industrial soil CHHSLs are applicable to soils that are at the ground surface or could be brought to the ground surface at some time in the future, with subsequent potential exposure by human receptors. A depth of more than three meters (approximately 10 feet) is generally used to delineate "deep" soils that are likely to remain isolated in the subsurface versus "shallow" soils that may be exposed during future redevelopment activities (Cal/EPA 1996a). Exposure of workers to deeper soils could still occur during periodic construction and utility maintenance work. Even if deep soil contamination does not present a human health risk, the overseeing regulatory agency may require preparation of a formal land-use covenant in order to allow such contamination to remain on site.

2.4.1 Evaluating Lead

In Table 1, the Commercial/Industrial Soil CHHSL for lead is listed as 3,500 mg/kg. This number was calculated using the methods described in Appendix 1. It should be noted, however, that this screening number is above the Total Threshold Limit Concentration for lead (1,000 mg/kg) as defined in Title 22 of the California Code of Regulations. It is also above the USEPA Region IX Preliminary Remediation Goal (PRG) of 800 mg/kg for commercial land use.

OEHHA is evaluating the method it used to derive its health-based screening number for a commercial/industrial scenario. Until this evaluation is complete, the commercial/industrial Soil CHHSL for lead in Table 1 should be considered an interim value, and the overseeing regulatory agency should be consulted on the appropriate screening number to be used at a site under investigation.

2.5 Screening of Volatile Organic Chemicals

2.5.1 Soil Screening Levels for Direct Exposure Concerns

Screening levels for direct exposure to volatile organic compounds (VOCs) in soil were not developed by OEHHA and are not included in this edition of the CHHSLs document. Direct-exposure models such as those used by USEPA Region IX do not take into account the total amount (mass) of a volatile chemical that might be present at a site (refer to Appendix 2). This is important, since the direct-exposure models assume a continuous off-gassing of vapors throughout a 30-year exposure period. In addition, the models assume exposure both via inhalation of vapors emitted to outdoor air and via incidental ingestion of volatile chemicals in soil. These assumptions may be overly conservative for highly volatile chemicals that are not expected to remain at significant concentrations in the soil over time following off-gassing to the outdoor air.

Bulk soil screening levels (i.e. concentrations measured in soil) for volatile chemicals are not presented in this document. The restricted size of soil samples limits the ability to use soil data to evaluate vapor intrusion concerns except at sites with very minor releases. At sites where significant releases of volatile chemicals have occurred, the collection of soil gas data in conjunction with bulk soil data is strongly recommended. For sites characterized by only minor releases of volatile chemicals and limited impacts to soil (e.g., minor spills around the fill ports of underground storage tanks), cleanup of soils to meet direct-exposure

concerns should generally be adequate to address vapor intrusion concerns (see also Table 1).

2.5.2 Soil Gas Screening Levels for Vapor Intrusion Concerns

The indoor air and soil gas screening levels presented in Table 2 address the potential emission of volatile chemicals from contaminated soil or groundwater and subsequent intrusion into the indoor air of overlying buildings. A full discussion of the development of the soil gas screening levels, and the models and assumptions used, is discussed in Appendix 1.

The soil gas CHHSLs for the intrusion of vapors into buildings were developed assuming that buildings have a "slab on grade" construction. The screening levels are also considered to be adequately conservative for buildings with crawl space or underground parking construction. These reflect the most common type of building designs in California. The soil gas screening levels may not be adequately conservative for estimating impacts to indoor air in structures with basements, however, or buildings with substandard ventilation systems in general. Field data suggest that attenuation of vapors in such scenarios may be an order of magnitude below that expected in rooms or buildings with normal ventilation systems. Therefore, at sites where significant vapor intrusion concerns may exist, the collection and evaluation of samples from both basement areas and overlying living spaces may be warranted.

Additional information on subsurface vapor intrusion into buildings is provided the USEPA document *User's Guide for the Johnson and Ettinger (1991) Model for Subsurface Vapor Intrusion into Buildings* (USEPA 2003) and in the following section.

2.5.3 Evaluating Vapor Intrusion Concerns

If the concentration of a volatile chemical in soil gas at a site exceeds its CHHSL, the exposure pathway of soil vapor intrusion into indoor air should be further evaluated using the Cal/EPA *Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air* (Cal/EPA 2004b). The investigation of this pathway can be complex. The identification of sources of indoor air contaminants is often complicated by the presence of the same or similar chemicals products found and used in many households and industrial buildings (e.g., aerosol sprays, dry-cleaned clothing, cleaners, and tobacco smoke). Elevated levels of the same chemicals in ambient, outdoor air also pose a

Item No. E.6
-1556-

problem. Plumes of groundwater contaminated with volatile chemicals can also serve as the source of volatile chemicals found in soil gas and extend over significant areas. If there is strong evidence that the intrusion of vapors into buildings may exceed levels of potential concern, the collection and analysis of indoor air samples may be necessary. The inevitable effect of indoor air studies on the personal lives of residents and building workers will further require that risk issues be carefully communicated.

Guidance on the collection of soil gas and indoor air samples is provided in the following documents, among other sources:

- *Soil Gas Advisory* (January 2003): Department of Toxic Substances Control and Los Angeles Regional Water Quality Control Board; http://www.dtsc.ca.gov/policyAndProcedures/SiteCleanup/SMBR_ADV_activesoilgasinvst.pdf.

- *Indoor Air Sampling And Evaluation Guide* (2002): Massachusetts Department of Environmental Protection, Office of Research and Standards, WSC Policy #02-430; http://www.state.ma.us/dep/bwsc/finalpol.htm.

Properly collected indoor air sample data may be compared to the indoor air screening levels. Averaging of indoor air data within a single building may not be appropriate beyond the specific room being tested. Screening levels for indoor air (Table 2) are based on standard exposure models for long-term inhalation of contaminants in air at a target excess cancer risk of 10^{-6} and a target hazard quotient of 1.0. The indoor air CHHSLs do not account for potential cumulative effects posed by the presence of multiple contaminants in air (see Section 2.8).

2.6 Substitution of Laboratory Reporting Limits for CHHSLs

The overseeing regulatory agency should review and agree to the analytical methods used to quantify chemicals in soil samples to make sure that the methods are sensitive enough to detect low concentrations of chemicals of potential concern. The attainment of detection limits that are at or below the screening levels should be part of the Data Quality Objectives. If all agreed-upon methods have been used, the overseeing regulatory agency may allow the use of the method reporting limit in place of the screening level in cases where a CHHSL for a specific chemical is less than its laboratory method reporting limit. Potential

examples include the soil direct-exposure CHHSL for dioxin (e.g., 0.0000046 mg/kg for residential exposure).

2.7 Substitution of Naturally Occurring Concentrations for CHHSLs

Naturally occurring background concentrations of arsenic, beryllium, cadmium, chromium and other metals in soils may exceed their respective soil CHHSLs. Cal/EPA generally does not require cleanup of soil to below background levels. This issue is frequently encountered with arsenic. Natural background concentrations of arsenic in California are often well above the health-based, direct-exposure goals in soil of 0.07 mg/kg for residential land use and 0.24 mg/kg for commercial/industrial land use (e.g., Bradford et. al, 1996; LBNL 2002). Background concentration of arsenic or other metals of potential concern at a site should be determined from analysis of site-specific samples in uncontaminated areas using guidance published by Cal/EPA and/or reference to published data for nearby sites (Cal/EPA 1997). However, background data for nearby sites may only be used as a surrogate for uncontaminated site data if those data are obtained from soil of the same lithology as that found on-site.

2.8 Cumulative Risks at Sites with Multiple Contaminants

Risks posed by exposure to multiple chemicals with similar health affects are considered to be additive or "cumulative." For example, the total excess lifetime risk of cancer posed by the presence of several carcinogenic chemicals in all exposure media is the sum of the risk posed by each individual chemical. The same is true for chemicals that cause noncarcingenic health effects.

A stepwise approach for screening of sites with multiple contaminants is suggested (after USEPA 2004):

Step 1: Identify potential chemicals of concern.

Step 2: Record CHHSLs for each chemical separated by media type (soil, soil gas and/or indoor air). Include CHHSLs for both cancer and noncancer effects, if available (refer to Appendix 1). If CHHSLs are not available for specific chemicals, evaluate those chemicals using the approaches discussed in Appendix 1 and in the PEA manual.

Step 3: Calculate cumulative cancer risk estimates by taking the assumed exposure point concentration for each chemical (maximum or approved 95% UCL) and divide by the respective CHHSL concentration designated for cancer evaluation. Multiply the ratio by 10^{-6} (the target risk used to develop the CHHSLs) to calculate the estimated cancer risk for that specific chemical for a reasonable maximum exposure (RME).

$$Risk = [\left(\frac{conc_x}{CHHSL_x}\right) + \left(\frac{conc_y}{CHHSL_y}\right) + \left(\frac{conc_z}{CHHSL_z}\right)] \times 10E-06$$

For multiple chemicals, simply add the risks for individual chemicals or sum individual ratios and multiply the total by a factor of 10^{-6}:

Step 4: Calculate cumulative noncancer hazard estimates by taking the assumed exposure point concentration for each chemical (maximum or approved 95% UCL) and divide by the respective CHHSL concentration designated for noncancer effects. This generates an individual Hazard Quotient for that chemical. Calculate a cumulative Hazard Index by adding the individual Hazard Quotients. A Hazard Index of one or less is generally considered "safe". A ratio that is greater than one suggests that further evaluation is necessary. (Note that carcinogens may have CHHSLs for both cancer effects as well as noncancer effects. Refer to Appendix 1).

For more information, refer to the USEPA Preliminary Remediation Goals

$$Hazard\,Index = [\left(\frac{conc_x}{CHHSL_x}\right) + \left(\frac{conc_y}{CHHSL_y}\right) + \left(\frac{conc_z}{CHHSL_z}\right)]$$

document (USEPA 2002). OEHHA has also developed a spread sheet tool for calculating cumulative risk. This spread sheet is available on Cal/EPA's, DTSC's, the State Board's and OEHHA's web pages.

2.9 Evaluation of School Sites

DTSC's Schools Property Evaluation and Cleanup Division is the lead agency for the environmental assessment of potential contamination at new, expanding, or existing schools. Since January 2000, school districts have been required to conduct an environmental assessment under the oversight and approval of DTSC prior to the construction of new schools. By law, DTSC uses specific guidance and protocols for school projects. Because of this, the CHHSLs may not be applicable for these sites. Contact DTSC for further information and direction for

the evaluation of potential contamination on school properties and the application of the CHHSLs.

2.10 Use of CHHSLs as Cleanup Levels and Land Use Restrictions

As stated earlier in this guidance, these CHHSLs are not stand-alone decision making tools, a set of final cleanup or action levels to be applied at contaminated sites or a guarantee that an oversight regulatory agency will determine that a project is adequately studied or agree with the conclusions of the site investigation and risk assessment report. Cleanup decisions are at the discretion of the overseeing regulatory agency and can only be made after a full evaluation of site conditions and potential human health and environmental concerns.

While regulatory agencies cannot be compelled to use the CHHSLs as final cleanup standards for a contaminated property, there may be circumstances where the residential CHHSLS would be sufficiently protective and considered as appropriate cleanup levels with the following caveats.

- The overseeing regulatory agency has determined that the site has been adequately characterized and agrees that the use of CHHSLs is appropriate.

- The potentially complete exposure pathways at the site match the exposure pathways used to develop the CHHSLs and no additional completed exposure pathways or receptors were identified.

- All other environmental concerns have been addressed to the satisfaction of the overseeing regulatory agency (refer to Section 1.4 and Table 1).

In a similar manner, there may be circumstances where the Commercial/Industrial CHHSLS would be sufficiently protective and considered as appropriate cleanup goals under regulatory agency oversight. Their use at a site in this context must also be coupled with the understanding that such a use of these CHHSLs may be subject to existing regulations and land-use covenants. In addition, the following should also be considered:

- **Concentrations of chemicals in soils left in place at a commercial/industrial site should always be compared to both commercial/industrial AND residential CHHSLs.** If the soils meet

CHHSLs for residential land use after cleanup then this should be clearly stated in the site closure report. This point may prove important should the site unexpectedly become desirable for other uses in the future (e.g., residential, day care, health care, etc.).

- Sites cleaned up to commercial CHHSLs only are not suitable for unrestricted land use without further evaluation. The appropriate regulatory agency should be consulted to determine actions necessary to remove land-use restrictions.

(Page intentionally left blank)

3 Conditions Warranting Site Specific Human Health Risk Assessments

3.1 Site Considerations

Use of the CHHSLs is optional and a standard human health risk assessment may be undertaken for any site. Site conditions may prevent the full use of the CHHSLs and require preparation of a more site-specific, health risk evaluation or baseline risk assessment (refer to Section 1.2). Examples of site conditions that may warrant site-specific or detailed human health risk assessment include:

- Sites that have a high public profile and need a detailed, fully documented human health risk assessment for public review;
- Sites where multiple contaminants with similar health effects are present and cumulative health risks (or hazards) must be calculated;
- Sites with contaminants for which CHHSLs have not been developed.
- Sites where alternative target risk levels or chemical-specific toxicity factors may be acceptable to the regulatory agency (Appendix 1);
- Sites where direct-exposure concerns for residents and workers may not need to be considered (Section 2.4);
- Sites where site conditions may be engineered to eliminate or reduce specific exposure pathways;
- Sites where field observations or site conditions indicate that the CHHSLs may not be adequately protective or may be excessively conservative.

Additional considerations should be evaluated on a site-by-site basis and discussed with the overseeing regulatory agency.

3.2 Tier 2 Human Health Risk Assessments

3.2.1 Purpose

The Tier 1 CHHSLs were developed with default or generic assumptions that are not specific to any particular site condition. If site soil concentrations exceed CHHSLs, site-specific exposure assumptions may be used in the standard risk models described in Appendix 1 or the PEA guidance to estimate risk and/or develop site-specific CHHSLs. Using alternative exposure assumptions in these standard risk models could reduce the time and cost incurred by both the regulated business and the overseeing responsible party in finalizing the risk assessment. Modifications to the default assumptions must be described and justified in the text of the report, presented with the revised set of screening or cleanup levels, and agreed to beforehand with the regulatory agency.

3.2.2 Examples of Site-Specific Adjustments

Potential site-specific modifications include:

- Use of alternative target risk levels, and/or alternative exposure assumptions;
- Elimination of direct-exposure concerns through imposition of institutional controls;
- Inclusion of potential exposure of construction and trench workers to contaminated soil not likely to be exposed at the ground surface in the future (e.g., capped soils or soils isolated at depth);
- Consideration of method reporting limits or natural background or ambient concentrations of a chemical in place of the CHHSL.

After incorporating site-specific parameter values into the Tier 1 direct-exposure models, alternative human-health-based screening levels can be calculated and re-compared to site data.

3.3 Tier 3 (Baseline) Human Health Risk Assessments

3.3.1 Purpose

In a site-specific baseline human health risk assessment, alternative models and assumptions are used and fully justified to develop a detailed, comprehensive

human health risk assessment. Portions of the models and assumptions used to develop the CHHSLs may still be retained for some components of the risk assessment. Any baseline human health risk assessment should be carried out under the oversight of the regulatory agency.

Detailed guidance on the preparation of and information for use in site-specific baseline environmental risk assessments is provided in the following references:

(Page intentionally left blank)

4 Evaluation of Other Potential Environmental Concerns

The importance of identifying all environmental concerns at sites where releases of hazardous chemicals have occurred is discussed in Sections 1.4 and 2.2. The CHHSLs provided in Tables 1 and 2 specifically address risks to human health posed by exposure to contaminated soil and indoor air. At sites affected by highly toxic but relatively immobile chemicals (e.g., PCBs, DDT, arsenic, etc.), cleanup of contaminated soils to address human health concerns will generally be sufficient to address other potential environmental concerns provided that sensitive ecological habitats are not threatened. In other cases or for other chemicals, additional environmental concerns may still be present even after impacted soils have been remediated to levels sufficient to address risks to human health. This could include leaching of contaminants from soil and subsequent impacts on groundwater resources, toxicity to terrestrial biota, uptake of contaminants in edible fruits or vegetables and nuisance or gross contamination concerns.

A summary of other environmental concerns potentially posed by contaminants in soil is incorporated into Table 1. This summary compares the CHHSLs to the SFBRWQCB's ESLs for leaching, ecotoxicity and nuisance concerns. The ESLs can be found at http://www.waterboards.ca.gov/sanfranciscobay/esl.htm.

For example, the residential CHHSL for endrin in soil (21 mg/kg) is much higher than the corresponding ESL for ecotoxicity concerns (0.06 mg/kg). This means that ecotoxicity concerns may outweigh human health concerns at sites where potentially sensitive habitats are present (designated by an "X" in the Table 1). This is not surprising, since endrin, a pesticide, was specifically formulated to be highly toxic to terrestrial biota.

Additional evaluation should be carried out at sites where the basic conceptual site model indicates that the presence of contaminated soils may pose other environmental concerns or where potential impacts to groundwater, surface water or sediment are identified. It is beyond the scope of this document to present guidance on the proper evaluation of these additional concerns. However, useful references are provided in Figure 4-1. Additional risk assessment guidance should be consulted as needed.

Notes:

1. Direct-exposure screening levels address human exposure to chemicals in soil via incidental ingestion, dermal absorption and inhalation of vapors and particulates emitted to outdoor air (refer to Appendix 1). Assumes impacted soil is situated at or near the ground surface or could be at some time in the future. Volatile chemicals not included at this time (refer to Section 2.5).
   "Residential Land Use" screening levels generally considered appropriate for other sensitive uses (e.g., day-care centers, hospitals, etc.).
   Commercial/industrial properties should be evaluated using both residential and commercial/industrial CHHSLs. A deed restriction that prohibits use of the property for sensitive purposes may be required at sites that are evaluated and/or remediated under a commercial/industrial land use scenario only.
   Carcinogens: CHHSLs based on target cancer risk of 10^{-6}. Cal/EPA cancer slope factors used when available.
   Noncarcinogens: CHHSLs based on target hazard quotient of 1.0.
   Calculation of cumulative risk may be required at sites where multiple contaminants with similar health effects are present (see Section 2.8).
   Residential and C/I soil CHHSLs for arsenic below background for most sites in California (0.07 mg/kg and 0.24 mg/kg, respectively - see Appendix 1). Use identified or anticipated background as screening level (see Section 2.7).
2. Environmental concerns in addition to direct exposure that may need to be considered in evaluation of contaminated soil. Based on a comparison of soil CHHSLs to soil screening levels for noted concerns compiled by the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB 2003). The need to address other environmental concerns must be evaluated separately in coordination with the lead regulatory agency (See Sections 1.4, 2.2 and Chapter 4).
   "X": Noted concern may outweigh direct-exposure risks at many sites and drive decisions for cleanup actions.
   "o": Potential concern but generally will be addressed if cleanup of contaminated soils to meet direct-exposure CHHSLs is carried out.
   "site specific": Potential concern, but evaluation as to whether this factor is a potential concern must be done on a site specific basis.
3. Leaching of chemicals from soil and subsequent impacts to groundwater. Soil ESLs consider of impacts to drinking water resources, re-emission of volatile chemicals from groundwater into overlying buildings and discharges of contaminated groundwater to surface water. Leaching of metals from soil should be evaluated on a site-specific basis, depending on the potential mobility of the metal species present. Laboratory-based leaching studies are generally preferred over model-derived screening levels.
4. Toxicity to terrestrial flora and fauna. Need to consider ecotoxicity concerns generally determined on a site-by-site basis.
5. Nuisance and gross contamination concerns address odors and aesthetic concerns as well as general resource degradation and presence of potentially mobile free product.
6. Other pertinent environmental concerns and considerations as determined on a site-specific basis.
   Health risk to construction workers may outweigh risk to residents or commercial/industrial workers for chemicals that are carcinogenic due to increased exposure to airborne dust particles and incidental ingestion of soil. Uptake of chemicals in edible fruits and vegetables from soil may need to be considered in some cases for noted chemicals.
7. These metal salts are significantly (greater than 10-fold) more toxic than the values for the metals in general. If it is known that this chemical was used at the site, the screening number for this chemical should be used instead of the screening number for the metal and its compounds.
8. Calculation of a screening number for the chemical has been postponed (pp) until the toxicity criterion currently being developed by OEHHA is published as a final document.
9. This screening number is above the Total Threshold Limit Concentration for lead of 1000 mg/kg, as defined in Title 22, California Code of Regulations. It is also above the US EPA Region IX PRG of 800 mg/kg.

p-Xylene	7.30 E+02	1.02 E+03	3.17 E+05	8.87 E+05

Reference: Appendix 1, OEHHA Target Indoor Air Concentrations and Soil-Gas Screening Numbers for Existing Buildings under Residential and Industrial/Commercial land uses.

Notes:

1. "Residential Land Use" screening levels generally considered adequate for other sensitive uses (e.g., day-care centers, hospitals, etc.). Commercial/industrial properties should be evaluated using both residential and commercial/industrial CHHSLs. A deed restriction that prohibits use of the property for sensitive purposes may be required at sites that are evaluated and/or remediated under a commercial/industrial land use scenario only.
Calculation of cumulative risk may be required at sites where multiple contaminants with similar health effects are present.
Carcinogens: CHHSLS based on target cancer risk of 10-6. Cal/EPA cancer slope factors used when available.
Noncarcinogens: CHHSLS based on target hazard quotient of 1.0.
2. Soil Gas: Screening levels based on soil gas data collected <1.5 meters (five feet) below a building foundation or the ground surface. Intended for evaluation of potential vapor intrusion into buildings and subsequent impacts to indoor-air. Soil gas data should be collected and evaluated at all sites with significant areas of VOC-impacted soil. Screening levels also apply to sites that overlie plumes of VOC-impacted groundwater.
3. Calculation of a screening number for the chemical has been postponed (pp) until the toxicity criterion currently being developed by OEHHA is published as a final document.
4. Representative Screening Numbers for mixed xylenes. The representative value for mixed xylenes is based on the calculated lowest one amongst the three isomers.

APPENDIX 2: Comparison of CHHSLs to Existing Screening Levels and Standards

(Page intentionally left blank)

Comparison of CHHSLs to Existing Screening Levels and Standards

The U.S. Environmental Protection Agency Region IX office in San Francisco publishes "Preliminary Remediation Goals (PRGs)" for soil, drinking water and ambient air with a focus on risks to human health (USEPA 2004). The San Francisco Bay Area Regional Water Quality Control Board (SFBRWQCB) publishes Environmental Screening Levels (ESLs) for soil, groundwater, surface water and air that provide screening levels for other common environmental concerns as well (SFBRWQCB 2003).

Methods used by the USEPA and the SFBRWQCB to assess potential human exposure to contaminants in soil and air are very similar. The resulting screening levels are therefore almost identical. Similarities and differences between the CHHSLs and these suites of screening levels are summarized below. In addition, federal and state agencies publish screening levels or regulatory standards for hazardous waste that are sometimes confused with environmental screening levels. The applicability of these criteria to contaminated sites is also briefly described.

USEPA Region IX PRGs

The USEPA Region IX "Preliminary Remediation Goals" or "PRGs" address the direct exposure of residents and commercial workers to contaminants found in soil, drinking water and air (USEPA 2004). These PRGs may be found at http://www.epa.gov/region09/waste/sfund/prg/index.htm. Equations and assumptions used to develop the PRGs are consistent with the human health risk assessment guidance prepared by Cal/EPA, including the CalTOX model (Cal/EPA 1994a) and the *Preliminary Endangerment Assessment Guidance Manual* (Cal/EPA 1994b) and *Supplemental Guidance for Human Health Multimedia Risk Assessments of Hazardous Waste Sites and Permitted Facilities* (Cal/EPA 1996a).

The USEPA approach for developing the PRGs was adopted to develop the CHHSLs with minor modifications. The CHHSLs are an adjustment of soil and ambient air PRGs by using Cal/EPA-specific toxicity factors. For the majority of the chemicals listed, Cal/EPA toxicity factors are slightly more stringent or equal to those used by the USEPA to develop the PRGs. Some CHHSLs are significantly more restrictive.

A detailed discussion of the USEPA Region IX PRGs models is provided in Appendix 1. As discussed in the USEPA Region IX document, the PRGs are intended to address human direct-exposure with impacted soil and "...do not consider impact to groundwater or address ecological concerns" and cannot be used

as a stand-alone tool for the evaluation of contaminated sites (USEPA 2004). The same is true for the CHHSLs.

USEPA Soil Screening Levels

The USEPA Office of Emergency and Remedial Response document *Soil Screening Guidance: Technical Background Document* presents methodologies and related soil screening levels for evaluation of direct-exposure concerns, leaching of contaminants from soil and subsequent impacts to groundwater, uptake of contaminants into plants and the intrusion of volatile chemicals into buildings (USEPA 1996). Although subsequent guidance documents on specific topics have since been prepared by USEPA and other agencies (USEPA PRGs, USEPA vapor intrusion guidance document, etc.), the Soil Screening Guidance nonetheless provides a valuable resource for evaluation of these environmental concerns.

Soil screening levels for direct exposure concerns are based on USEPA toxicity factors and similar exposure models used to develop the USEPA Region IX PRGs and the Cal/EPA CHHSLs. Screening levels are presented for specific pathways (e.g., ingestion, inhalation of outdoor air, etc.), rather than for combined exposure routes as now presented in the PRGs and the CHHSLs. Dermal absorption was not considered in calculation of the direct-exposure screening levels. This pathway was included in calculation of the PRGs and CHHSLs, however. The ultimate difference in screening levels is in most cases minimal.

Soil screening levels for leaching concerns are based on a simplistic contaminant equilibrium partitioning model. The model uses USEPA maximum contaminant levels (MCLs) for drinking water as target groundwater impact goals. Generic dilution factors of "1" and "20" are presented for mixing of leachate in groundwater and subsequent dilution of contaminant concentrations. The leaching based soil screening levels are presented in the USEPA Region IX PRG document.

The Soil Screening Guidance model does not take into account fate and transport of leachate in the vadose zone and can be excessively conservative for highly volatile or highly sorptive chemicals or for use at sites where groundwater is greater than ten meters or more below the base of contaminated soil. The document also presents leaching based screening levels for inorganic (contaminants, primarily metals). Leaching of metals from soil is highly dependent on the actual specifies of the metal present and site-specific soil factors. Laboratory-based studies are generally preferable over model-based approaches for evaluation of leaching of metals and other inorganic chemicals from soil.

The uptake of contaminants in edible plants is briefly discussed in the Soil Screening Guidance document. Screening levels are presented for a limited number of inorganic contaminants. The report concludes that uptake of contaminants into plants may be of particular concern for arsenic and cadmium. With the exception of these compounds, the report notes that inorganic contaminants in soil are likely to be toxic to the plants themselves at levels far lower than would be of concern for uptake and consumption of the plants by humans. (DTSC also considers the uptake of lead in edible plants. Refer to Table 1 of the main document).

A brief discussion of the Johnson and Ettinger model for vapor intrusion from contaminated soils into buildings is provided in the Soil Screening Guidance document. Soil screening levels for this concern are not presented, however, due to concerns that the soil model significantly overestimates potential impacts to indoor air. The document instead recommends that soil gas data be used to evaluate this concern, although screening levels are likewise not provided. Soil gas CHHSLs presented in Table 2 of this document reflect more up-to-date USEPA methods for evaluation of vapor intrusion concerns (see Appendix 1). The USEPA is currently developing additional guidance on this subject.

SFBRWQCB Environmental Screening Levels (ESLs)

The SFBRWQCB ESLs are a compilation of screening levels specific for use at sites overseen by that agency in the San Francisco bay area for a number of different environmental concerns, including risk to human health. The July 2003 edition (updated February 2004) of the SFBRWQCB ESLs includes screening levels for the following exposure pathways and/or environmental concerns:

Soil:

- Protection of human health
- Direct/indirect exposure to impacted soil (ingestion, dermal absorption, inhalation of vapors and dust in outdoor air);
- Emission of subsurface vapors to building interiors;
- Protection of groundwater quality (leaching of chemicals from soil);
- Protection of terrestrial (nonhuman) biota;
- Protection against nuisance concerns (odors, etc.) and general resource degradation;

Indoor Air:

- Protection of human health;

Shallow Soil Gas:

- Emission of subsurface vapors to building indoor air.

Similar ESLs are also provided for the environmental media of groundwater and surface water. In the ESL document, soil screening levels for individual environmental concerns are compared and the lowest of these levels (i.e., the concentration of the chemical at which all other environmental concerns would likewise be addressed) is presented in the ESL summary lookup tables.

By comparison, the CHHSLs reflect a subset of the screening levels considered in the ESL document specific to human health concerns. CHHSLs were developed for the follow concerns only:

Soil:

- Direct/indirect exposure to impacted soil (nonvolatile chemicals only - ingestion, dermal absorption, inhalation of vapors and dust in outdoor air);

Indoor Air:

- Protection of human health;

Shallow Soil Gas:

- Emission of subsurface vapors to building indoor air.

For comparative purposes, the most current ESLs may be found at http://www.waterboards.ca.gov/sanfranciscobay/esl.htm. The soil direct exposure CHHSLs and ESLs for nonvolatile chemicals and soil gas CHHSLs and ESLs for volatile chemicals are essentially identical. Soil and indoor air ESLs for human health concerns were developed by incorporating Cal/EPA toxicity factors into the USEPA PRG models for direct exposure to contaminated soil and USEPA models for the intrusion of soil gas into buildings. Since this mimics the approach used to develop the CHHSLs, the resulting screening levels are very similar.

The primary difference is the assumption in the ESL soil and indoor air screening levels for human health that up to five chemicals with similar noncancer health effects may be present at a given site. This allows potential cumulative health risks to be conservatively taken into account at most sites without requiring that the screening levels be adjusted on a site-by-site basis (see Section 2.8). This was done by simply dividing the initial screening level based on a hazard quotient of 1.0 by a factor of five (adjusting the target Hazard Quotient to 0.2). Future editions of the ESL document will directly incorporate the Cal/EPA CHHSLs for soil and indoor air as part of that document, again adjusted to address cumulative risk concerns at a Tier 1 level.

Hazardous Waste Regulations

California Total Threshold Limit Concentrations (TTLC) criteria for solids and Soluble Threshold Limit Concentration (STLC) are used to determine whether a waste is a hazardous waste (Title 22, California Code of Regulations, section 66261.24(a)(2)(A) and (B)). If a waste is determined to be a hazardous waste, specific regulations and statues regarding the management, storage, transportation and disposal must be met.

In most cases, TTLC values exceed the most conservative environmental screening levels presented in this document. In the case of Endrin and DDT/DDE/DDD, however, the TTLC is somewhat lower than the screening levels for human health concerns. The TTLC for combined DDT/DDE/DDD is 1.0 mg/kg while the residential, direct-exposure soil screening for each compound ranges from 1.6 mg/kg to 2.3 mg/kg, for a sum of 5.5 mg/kg (see Table 1).

In practice, the extent of soil contaminated above 1.0 mg/kg versus 5.5 mg/kg total DDT/DDE/DDD may not be significant in the field following cleanup to the risk-based CHHSLs. However, it may be prudent to use TTLCs as final cleanup values for residential sites where the TTLC is less than cleanup values that were based on actual risk to human health and the environment. This may help to avoid potential future problems with soil management and disposal.

TSCA Cleanup Levels for PCBs

The treatment, storage and disposal of polychlorinated biphenyls (PCBs) are regulated under the federal Toxics Substance Control Act (TSCA), as described in 40 CFR Part 761 (revised 7/1/99), which is administered by the USEPA Toxics Section. If PCBs are found at a site, the regulation should be consulted to determine its applicability and to ensure that the appropriate notifications are provided to and approvals are obtained from USEPA (refer also to *Guidance on remedial Actions for Superfund Sites with PCB Contamination,* USEPA 1990). To obtain more information regarding regulations and guidance, the USEPA's PCB web page can be accessed at: http://www.epa.gov/opptintr/pcb/

Within each USEPA Region, the Regional Administrator has designated Regional PCB Coordinators to oversee the development of PCB efforts. The staff of the Region IX PCB Program is available to members of the regulated community and others who have questions concerning the manufacture, processing, distribution in commerce, use, cleanup, storage and disposal of PCBs and PCB articles. The Region IX PCB web page can be accessed at:
http://www.epa.gov/region09/toxic/pcb/index.html

USEPA Region IX staff can be contacted at:

Asthma, Pests, and Pesticides

DRAFT

Asthma
Asthma is a long-term condition causing inflammation of the lung's airways. Symptoms of asthma include wheezing, coughing, feeling of tightness in the chest, difficulty breathing, and itching neck, throat and ears. While the causes of asthma are not fully understood, a combination of genetic susceptibility and environmental factors are involved. Although we cannot control our genetic make-up, we *can* help prevent asthma attacks by paying attention to the environmental conditions that irritate lungs and set off an attack.

Why be Concerned?
Approximately 20 million Americans have asthma and it is the most common chronic childhood disease – afflicting over 6 million children nationally and over 100,000 children in Southeastern Pennsylvania. In Philadelphia, the asthma rates among school-aged children are more than twice the rates for Pennsylvania and the nation as a whole. Asthma is the leading cause of school absences. Parents, in turn, must miss work to stay home with their sick children. In Philadelphia, 16,000 children visit emergency rooms each year. African-American and Hispanic/Latino children have asthma rates 2-3 times that of white children. A bad asthma attack can be fatal.

Asthma Triggers
Asthma attacks are usually started by exposure to certain substances called ***triggers***. Triggers are either allergens or lung irritants. Airborne allergens are substances such as pollen, animal dander, cigarette smoke, aerosols, or mold that cause an allergic reaction. Chemical lung irritants include pesticides, perfumes, air fresheners and household and industrial cleaning products. Repeated exposure to allergens or irritants, such as cockroach and/or mouse allergens, can "sensitize" people - making them more likely to experience allergic reactions. Awareness of asthma triggers can help you take steps to reduce them, and thereby preventing asthma symptoms or attacks.

Pests Trigger Asthma
Pests are unwanted creatures that invade our homes. Once they have gotten inside, some of these pests, notably, mice, rats and cockroaches, can contribute to an asthma attack. In fact, research is going on to determine whether or not these pests can actually cause asthma to develop.

The **single major factor** contributing to asthma in urban-dwelling children in the Northeastern US has been found to be **exposure to cockroach allergens**. Cockroaches shed skins, leave behind feces, and when cockroaches are dead, their bodies turn into dust – all things that can trigger an asthma attack. To make matters worse, when pesticide sprays or "bug bombs" are used to combat roaches, they can also irritate lungs and potentially cause an attack. Rodents, such as

rats and mice, can trigger asthma as well. These rodents shed dead skin cells and produce waste products that can trigger attacks if someone with asthma breathes them in.

Pesticides and Human Health
Pesticides are substances designed to kill, control or repel pests, including insects, rodents, weeds, and molds. The US Environmental Protection Agency lists pesticides as one of four environmental pollutants that may influence the induction and exacerbation of asthma symptoms. Pesticides do this by irritating the lungs as they are breathed in. In laboratory tests with animals, commonly used pesticides have been linked to cancer, birth defects, reproductive disorders, and neurological, kidney and liver damage. To be safe, it is important to limit children's exposures to toxins of all kinds, including pesticides.

What Can You Do to Safely Control Pests?
Integrated Pest Management (IPM) is an approach to pest control that focuses on *eliminating the root causes of pest problems* and *using the safest, most effective methods available* to get rid of active infestations. IPM prevents pest by using a combination of physical and chemical methods. Because **IPM focuses on prevention**, it is more effective than reactive, spray-based approach to pest control and reduces the need to use pesticides.

Pest Prevention
These methods are at the heart of an IPM program:

- **Keeping watch:** Certain areas of the house are more susceptible to pests such as the kitchen, basement or bathroom. Small sticky traps or glue boards can be used in these areas as an "early warning" system. The goal is to quickly find any pests and how they are getting in, *before* they become a big problem.
- **Prevent pest access:** Caulk the cracks and crevices pests may use to move or hide in. For larger holes, use stainless steel or copper mesh to plug the holes, and then use a silicone caulk to seal it. Pay special attention to areas where pipes and wires come in through the wall. Make sure to use window screens and that they are in good repair.
- **Prevent harborage:** Reduce clutter – get rid of the things you do not need such as old clothes, newspapers, magazines and cardboard boxes where pests can easily hide.
- **Prevent food sources:** Store food in plastic or glass containers with tight-fitting lids to prevent pests from eating it. Keep dirty dishes in soapy water so that pests cannot eat the scraps. Clean thoroughly, with particular attention to the floor under the refrigerator, stove/oven and other places where food crumbs and spills may be collecting. Remove and store pet foods in pest-proof containers at night. Use a trash can with a tight-fitting lid and empty regularly.
- **Prevent water sources:** Fix any water leaks, wipe up spills and remove pet's water dishes at night.

Physical Controls
Sticky traps for insects and snap-traps for rodents are safe and good tools for catching the occasional invader. Be sure they are placed correctly for maximum benefit. Roaches and rodents run along the wall in concealed spaces, so make sure the traps are flush with the wall. Snap traps should snap toward the wall.

DRAFT

Chemical Controls: Less-Risky Pesticides
After using all of the above methods, you may need to consider using a pesticide. Try to select products that limit human exposures to the product. Aerosols, liquid sprays, mothballs or "bug bombs" all pose *more* risk of chemical exposure and cause lung irritation. Instead, look for pesticides in tamper-resistant bait stations or a "gel" formula. Boric acid dust can be used, if *carefully* puffed gently and in small amounts behind wall voids and socket covers to eliminate insects hiding behind these areas. Avoid spreading any kind of pesticidal dust in and around the rooms of the home.

Safety First!
ALWAYS read the entire label on any pesticide product before you buy and use them in your home. Ask yourself: does this product control the pest I have? Can I use this product without exposing myself and/or my family to the pesticide? If pesticides are stored in the home, store in a **locked** cabinet at least 4 feet up and out of the reach of children.
NEVER buy pesticides in unmarked containers or that do not have an EPA registration number on the container. These products are **illegal** and potentially very dangerous to your family.

Eliminating pests *safely* will help reduce the number one asthma trigger in the home!

Pesticides and asthma.

Hernández AF, Parrón T, Alarcón R.

University of Granada School of Medicine, Granada, Spain. ajerez@ugr.es

Abstract

PURPOSE OF REVIEW: Several clinical and epidemiological studies have reported an association between exposure to pesticides, bronchial hyper-reactivity and asthma symptoms. This article reviews the mechanistic evidence lending support to the concept that either acute or chronic low-level inhalation of pesticides may trigger asthma attacks, exacerbate asthma or increase the risk of developing asthma.

RECENT FINDINGS: Pesticide aerosols or gases, like other respiratory irritants, can lead to asthma through interaction with functional irritant receptors in the airway and promoting neurogenic inflammation. Cross-talk between airway nerves and inflammatory cells helps to maintain chronic inflammation that eventually damages the bronchial epithelium. Certain organophosphorus insecticides cause airway hyper-reactivity via a common mechanism of disrupting negative feedback control of cholinergic regulation in the lungs. These pesticides may interact synergistically with allergen sensitization rendering individuals more susceptible for developing asthma.

SUMMARY: Many pesticides are sensitizers or irritants capable of directly damaging the bronchial mucosa, thus making the airway very sensitive to allergens or other stimuli. However, most pesticides are weakly immunogenic so that their potential to sensitize airways in exposed populations is limited. Pesticides may increase the risk of developing asthma, exacerbate a previous asthmatic condition or even trigger asthma attacks by increasing bronchial hyper-responsiveness.

Strategic Plan for Asthma in California

2008–2012

February 2008

CDPH California Department of PublicHealth

Item No. E.6

d. Asthma management strategies that lead to a reduction in asthma morbidity and mortality.

e. Identification, translation, and implementation of evidence-based best practices in health care service delivery, at the levels of the individual practitioner, group practice and insurance plan.

2.4.2. CDPH will convene an asthma research symposium every two years to summarize recent important research findings, to assess their implications and to address current interests, and research questions as suggested by stakeholders. The symposium will provide an opportunity to track etiologic research and foster communication among researchers to increase the chances of crosscutting research (Figure 5. Possible Research Areas for Future Research Symposia).

Sample Performance Indicator

An asthma research symposium is convened every two years starting in 2008.

2.5. Policy regarding asthma in California will be informed by analysis and interpretation of data.

2.5.1. The determination of priority data to be collected will be guided by both availability and the need for developing and evaluating specific policies and interventions.

2.5.2. Data analysis, reports, and key findings will be disseminated to policy makers, health care providers, employers, community based organizations and the public.

2.5.3. Data will be identified, analyzed, and interpreted to support policy development for goals 1–5 of this *Plan*.

2.5.4. When data is limited or unavailable, expert opinion and the best available evidence will be used to assess policy proposals and to guide policy development.

Sample Performance Indicator

Data is considered in policy decisions and policy is considered in setting data priorities.

Figure 4. Potential Indoor and Outdoor Research Areas

- Research related to air pollution (e.g., traffic and industrial facilities); link data from the Air Resources Board and the Air Quality Management Districts.
- Research on the pathways, drift patterns, and exposure levels of second hand smoke and the health effects associated with this trigger in multi-unit housing settings.
- Research on the connections between global warming, air pollution, and asthma.
- Research on specific asthma triggers, sensitizers, and irritants such as cleaning chemicals, pesticides, pollens, landscaping practices, and fragrances.

MORENO VALLEY: Officials seek comments on ProLogis project

BY LORA HINES
STAFF WRITER
lhines@pe.com

Published: 26 July 2012 07:45 PM

Text Size

Public comments are being accepted on a draft environmental impact report for a proposed 2.2 million square-foot warehouse project in Moreno Valley that officials began discussing about five years ago.

City planning officials recently released the report for the proposed ProLogis Eucalyptus Industrial Park Project, which would consist of six warehouses south of Highway 60 and east of the Moreno Valley Auto Mall. Residents, state and local agencies and community and environmental groups have until Sept. 4 to submit comments on the report.

ProLogis, a San Francisco-based international warehouse developer, bought more than 125 acres in the 28000 block of Eucalyptus Avenue more than five years ago. Almost all of it will be used for the project, which will require amendments to the city's general plan and zoning requirements.

When it was initially proposed, ProLogis officials estimated the project could cost as much as $150 million to develop and would create between 1,000 and 1,500 jobs. No one from the corporation could be reached Thursday, July 26, to offer a cost or job update or comment on the project.

According to the draft environmental impact report, the poor economy in 2008 stalled the project. ProLogis recently decided to pursue the process, the report states.

City planning official John Terell said there is nothing unusual about the project or its potential impacts that have delayed it.

In March 2008, city planning officials received 25 responses from state and local agencies, residents and environmental groups about concerns with the proposed project, including increased traffic, pollution and its proximity to schools.

The report states the project could affect areas such as air and water quality, animal habitat, Native American prehistoric sites, drainage and traffic.

Resident Marti Orth was among those who submitted comment about the proposed project in 2008. She said she is as opposed to it now as she was then, but she believes her opinion will have little effect on the City Council, which will decide whether to approve the project later this year.

"I think it's a forgone conclusion," said Orth, a resident of more than 40 years. "First, decisions are made. Then they ask for opinions."

On Wednesday, July 25, city manager Henry Garcia told hundreds of Inland area officials and business owners that warehouse development and health care will be Moreno Valley's job growth focus areas because they have the most potential to employ the city's primarily blue-collar workforce.

Orth said residents have little reason to believe that the proposed project will bring as many jobs as officials claimed because the Skechers warehouse didn't.

"I don't know why (ProLogis) would be any better," she said.

Skechers had employed about 1,000 people in five smaller warehouses in Ontario before consolidating and moving to Moreno Valley. Moreno Valley officials and project supporters promised that Skechers warehouse would bring more than 1,000 jobs. It employs about 600 people.

City officials have said they expect the number of employees to increase as the economy improves.

Comments about the ProLogis project are to be sent to associate city planner Jeff Bradshaw, Moreno Valley Planning Division, 14177 Frederick St., Moreno Valley 92553 or send e-mail to jeffreyb@moval.org.

EPA Brownfields Grants, CERCLA Liability, and All Appropriate Inquiries

To be eligible for an EPA brownfields grant to address contamination at brownfields properties, eligible entities must demonstrate that they are not liable under CERCLA for the contamination at the site. Accordingly, eligible entities who may be considered "potentially responsible parties" under CERCLA must demonstrate they meet one of the liability protections or defenses set forth in CERCLA by establishing that they are (1) an innocent landowner, (2) a contiguous property owner, (3) a bona fide prospective purchaser, or (4) a government entity that acquired the property involuntarily through bankruptcy, tax delinquency, or abandonment, or by exercising its power of eminent domain.

To claim protection from liability as an innocent landowner, contiguous property owner, or bona fide prospective purchaser, property owners, including state and local governments, must conduct all appropriate inquiries prior to acquiring the property.

What is CERCLA?

The Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), also known as "Superfund," was established to address abandoned hazardous waste sites. Among other things, CERCLA establishes a liability scheme for determining who can be held accountable for releases of hazardous substances. CERCLA also establishes the authority for EPA's Brownfields Program and sets forth which entities and properties are eligible for brownfields grants.

Can state and local governments be found liable for contamination at brownfields?

Yes. Under CERCLA, persons (including state and local governments) can be liable by virtue of property ownership, or by virtue of their actions with respect to a particular site. For sites from which there is a release or threatened release of hazardous substances, the categories of "potentially responsible parties" include any person or party who:

- Currently owns or operates the property, or owned or operated the property at the time of disposal of hazardous substances;
- Arranged for hazardous substances to be disposed of or transported to the site for disposal; or
- Transported hazardous substances to the site.

Applicants should note that CERCLA employs a "strict liability" scheme—that means it is without regard to fault. Accordingly, a person who owns a property from which there is a release of hazardous substances can be held liable just by virtue of ownership.

If I am applying for a brownfields grant, do I have to worry about CERCLA liability?

Yes. Brownfields grantees are prohibited from using grant money to pay response costs at a brownfield site for which the grantee is potentially liable under CERCLA.

Therefore, all brownfields grantees who may be potentially liable at the site for which they are seeking funds must demonstrate that they are not liable for the contamination that will be addressed by the grant, subgrant, or loan. Applicants who own or operate the property for which they are seeking funding, or who may have owned or operated the property at the time of disposal of hazardous substances, must demonstrate they fall within one of the liability protections.

Cleanup grant applicants in particular should take note of this prohibition. Because cleanup grantees are required to own a site to receive brownfields funding—and because owners of contaminated property are liable under CERCLA—cleanup grant applicants ***must*** demonstrate they meet one of the liability protections described above. Some grant applicants who do not own the property for which they are seeking funding, or who are not seeking site-specific grant funds, may not fall within one of the categories of "potentially responsible parties," and thus may not have to demonstrate they meet a liability protection.

Please contact your Regional Brownfields representative if you are not sure whether you will need to demonstrate a liability protection to be eligible for a grant.

Who may be protected from liability under CERCLA?

The CERCLA statute provides protection from liability for certain parties, provided they comply with specific criteria outlined in the statute. Parties provided protection from CERCLA liability include:

- Innocent landowners (CERCLA §101(35)(A))
- Contiguous property owners (CERCLA §107(q))
- Bona fide prospective purchasers (CERCLA §§101(40) and 107(r))
- Units of state or local government that acquire ownership or control involuntarily through bankruptcy, tax delinquency, or abandonment (CERCLA §101(20)(D))

Government entities that acquire property by eminent domain (CERCLA §101(35)(A)(ii))

- Not be affiliated with any liable party through any familial relationship or any contractual, corporate or financial relationship (other than a relationship created by the instrument by which title to the property is conveyed or financed).

NOTE: Property acquisition includes properties acquired by gifts and zero price transactions.

How can a state or local government demonstrate that it is not liable for contamination at a brownfield?

All state and local governments that may be potentially liable at a site for which they are applying for funding (including site-specific assessment grants, cleanup grants, or subgrants or loans from revolving loan funds), ***must*** demonstrate that they qualify for one of the CERCLA liability protections. All non-profit entities applying for brownfields cleanup grants also must make this demonstration.

Eastern Manufacturer Brewer, Maine, prior to cleanup (above) and after (right)

What are the conditions for attaining liability protection under CERCLA?

To be eligible for liability protection under CERCLA as an innocent landowner, contiguous property owner or bona fide prospective purchaser, prospective property owners must:

- Conduct All Appropriate Inquiries in compliance with 40 CFR Part 312, prior to acquiring the property;
- Comply with all Continuing Obligations after acquiring the property. (CERCLA §§101(40)(C – G) and §§107(q)(A)(iii – viii)); and

To demonstrate that it qualifies as an innocent landowner, contiguous landowner, or bona fide prospective purchaser, the applicant must:

- Conduct All Appropriate Inquires prior to acquiring the property, ***and***
- Comply with all Continuing Obligations after acquiring the property.

State and local governments that acquired a property involuntarily through bankruptcy, tax delinquency, or abandonment, or by exercising their power of eminent domain, do not have

to conduct all appropriate inquiries prior to acquiring the property, but must exercise "due care" after acquiring the property (CERCLA §101(35)(A) and §§107(b)(3)(a – b)). [Note: One threshold criteria for applicants seeking cleanup grant funding is that a Phase I must be conducted prior to application submission. Accordingly, although state and local governments that acquired property involuntarily are not required to conduct all appropriate inquiries for purposes of establishing a liability protection, they may have to conduct all appropriate inquiries anyway to be eligible for a cleanup grant.]

What is "All Appropriate Inquiries"?

"All Appropriate Inquiries," or AAI is the process of conducting due diligence or a Phase I Environmental Site Assessment to determine prior uses and ownership of a property and assess conditions at the property that may be indicative of releases or threatened releases of hazardous substances at, on, in, or to the property.

The standards and practices established as comprising "All Appropriate Inquiries" are set forth in regulations promulgated at 40 CFR Part 312.

EPA recognizes two ASTM International Standards as compliant with the AAI requirements: ASTM E1527-05 "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" and E2247-08 "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process for Forestland or Rural Property."

When must All Appropriate Inquiries be conducted?

- All Appropriate Inquiries must be conducted or updated within one year ***prior to acquiring ownership of a property.***
- Certain aspects or provisions of All Appropriate Inquiries (i.e., interviews of current and past owners, the review of government records, the on-site visual inspection, and searches for environmental cleanup liens) must be conducted or updated ***within 180 days prior to acquiring ownership of a property.***

Who can perform All Appropriate Inquiries?

The individual who supervises or oversees the conduct of the AAI investigation and signs the final report required in the AAI regulation must meet the definition of an "Environmental Professional" provided in the AAI Final Rule (40 CFR §312.10).

A person that does not qualify as an "Environmental Professional" as defined in 40 CFR §312.10, may assist in the conduct of the investigation if he or she is under the responsible charge of a person meeting the definition.

What are "Continuing Obligations?"

After acquiring a property, to maintain the liability protections, landowners must comply with "continuing obligations" during their property ownership. The continuing obligations include:

1. Provide all legally required notices with respect to the discovery or release of a hazardous substance;
2. Exercise appropriate care with respect to the hazardous substances by taking reasonable steps to stop or prevent continuing or threatened future releases and exposures, and prevent or limit human and environmental exposure to previous releases;
3. Provide full cooperation, assistance, and access to persons authorized to conduct response actions or natural resource restoration;
4. Comply with land use restrictions and not impede the effectiveness of institutional controls; and
5. Comply with information requests and subpoenas.

Where can I get additional information?

For general information, see the EPA Brownfields website at: **www.epa.gov/brownfields**

For more information on the AAI requirements, see: **http://www.epa.gov/brownfields/regneg.htm**

For more information on continuing obligations, see:

DEPARTMENT OF ENVIRONMENTAL HEALTH

Underground Storage Tank Closure Application and Permit

A permit will be issued for closure or abandonment in place of UST when a work plan is submitted. In addition to this permit, all applicable permits required by the local fire department, building department, and the Air Quality Management District must be obtained and should be available for review at the closure site. **A WORK PLAN MUST BE SUBMITTED TO OBTAIN A PERMIT**. All tank closures must, at a minimum, comply with the California Underground Storage Tank Regulations and the appropriate section of the California Health and Safety Code.

UNDERGROUND STORAGE TANK GUIDELINES TO CLOSURE BY REMOVAL

NOTE: This Division strongly urges applicants to contact the local Fire Department Jurisdiction prior to the removal of any Underground Storage Tank (UST) as local fire restrictions may be more stringent.

A. General Information

1. A completed permit application must be submitted to the Division. Permit fees for UST closure are required.

2. The State Contractors License Board requires contractors who install or remove USTs and piping to have the **Hazardous Substance Certification** and one of the following licenses: General Engineering "A"; Limited Specialty C-61/D-40 for UST's and pipelines; Pipeline Contractor C-34 for pipelines only; or General Building "B" (limited).

3. It is the responsibility of the UST owner or duly authorized representative, to notify other governmental agencies that may have applicable permit requirements. This includes, but is not limited to, the following: Local Fire Agency; Local Building Department; and Air Quality Management District (AQMD).

4. Between cessation of use/storage and the actual closure, monitoring shall be continued as required by the operating permit.

5. **The permitted (i.e. UST owner, contractor) shall be responsible for site safety.**

B. Closure Requirements

1. A completed UST closure application and four (4) copies of a UST removal work plan must be submitted and applicable closure fees paid. A closure permit, valid for ninety (90) days, will be issued upon **RECEIPT** of the work plan. If closure is not completed within ninety (90) day, the closure permit shall expire. Additional fees will be assessed for a new closure permit.

2. A UST closure inspection must be scheduled with the Division at least **FIVE (5) WORKING DAYS IN ADVANCE** of the proposed closure.

3. All liquids, solids, and sludge shall be removed and handled according to the provisions of Chapter 6.5, Division 20 of the Health and Safety Code and Title 22, Chapter 32, Section 67383.1 of the California Code of Regulations. The UST shall be properly cleaned, which usually requires the pressure washing/rinsing of the UST and removal of the contents via a vacuum type pump system that is designed to safely handle flammable liquids. The Division can provide a list of licensed hazardous waste haulers/tank rinsing companies.

4. Flammable vapors must be purged from the UST and the UST must be inerted to prevent an explosion or fire. The Division must verify LEL is ‹ 10% prior to the inerting of the UST with 22.2 lbs. of dry ice per 1,000 gallons of UST capacity. The UST must then promptly be removed and transported to its final destination accompanied by the UST Closure Certification Form. The local fire and AQMD regulations may be more restrictive.

5. All associated piping must be removed. Product or residue spillage must be prevented.

6. Proper UST disposal documentation, in accordance with the requirements of Chapter 6.5, Division 20 of the Health and Safety Code, shall be provided to the Division.

7. Applicant must demonstrate to the satisfaction of the Division whether or not an unauthorized release has occurred. Demonstration will be based upon results of soil/water samples obtained during UST closure activities.

8. The sample analysis must be performed by a California state certified laboratory. The sample analysis, along with the Division Sample Receipt form and a chain of custody must be received by the Division within thirty (30) days.

9. Soil samples shall be taken below the UST/piping system at the time of UST removal. At a minimum, samples are required 2' (feet) and 6' (feet) below the fill end of the tank, with a separate 2' sample taken at the opposite end of the tank. A separate sample for each 20 lineal feet of piping and at each dispenser shall be taken. (It is strongly recommended that 6' samples be taken at each piping and dispenser sampling location.) Division personnel may require additional sampling.

10. The soil samples shall be analyzed for all constituents of the previously stored hazardous substances and their breakdown constituents or transformation products according to the Table titled "Laboratory Analysis for Samples Collected at UST Sites".

11. The Division will evaluate all sample results and determine if any further corrective action is required.

12. The detection limit, in accordance with the table titled "Laboratory Analysis for Samples Collected at UST Sites", shall be reported to the Division in accordance with Article 5 of the California Underground Storage Tank Regulations, Title 23, Division 3, Chapter 16, California Code of Regulations.

C. Work Plan Guidelines

1. A work plan must be submitted (with permit application) to the Division prior to UST removal.

2. The work plan should include the following information:
   - A. Site Description: the physical address along with a site plot plan.
   - B. On-Site Security: indicate who will be on site (what agencies, contractors, etc.), and how site security will be maintained.
   - C. Contacts: Indicate the responsible party's name and phone number, contractor's name and phone number.
   - D. Treatment of USTs prior to removal--indicate the following:
     1) How the USTs will be cleaned. Indicate name and credential of certified UST cleaner, as well as final destination of rinsate.
     2) How you will inert the UST. Indicate the quantity of dry ice to be used, and that it will not be placed into the UST until the Division representative is on site.
     3) If the USTs are to be saw cut. If so, this needs to be detailed.
     4) Destination of UST—indicate where the USTs are going and how they will be transported. All openings in the UST shall be plugged, except for a 1/8" inch vent hole.
     5) Air/vapor monitoring—type of monitoring equipment to be used and date of last calibration.

E. Depth to groundwater: region specific. If tank is in ground water, indicate safety precautions that will be taken.

F. Equipment to be used on site:
   1) Heavy equipment: indicate the type of equipment to be used to physically remove the USTs from the excavation. Ensure the equipment is rated to handle the weight of the UST.
   2) Sampling: indicate the type of equipment to be used to gather the soil/water samples. Ensure equipment is able to reach at least 6' below the bottom of the UST, piping, and dispensers. Indicate the type of container that will be used to hold the samples. Demonstrate how contamination of samples is to be avoided. Provide the name of the California certified lab that will be analyzing the samples. Indicate when the samples will be analyzed and how you will hold the samples in the interim. Ensure a chain of custody accompanies the samples to the lab.

G. Excavation status: indicate the disposition of the excavation upon removal of the tank (i.e. open and fenced, backfilled with new and excavated soil, etc.)

H. Safety—indicate the following:
   1) The type of personal protective equipment to be required for all persons on site.
   2) The safety items that will be available on site (fire extinguisher, first aid, etc.).
   3) The nearest emergency medical facility to be used in the event of an accident or emergency.
   4) That all tools to be used to clean the exterior of the tank will be non-sparking. Give examples and be specific.
   5) Whether shoring is necessary/required.
   6) The person who will be responsible for safety (Safety Officer).
   7) The presence of any overhead hazards (electrical lines, etc.). Indicate how the hazard will be addressed/mitigated.
   8) The presence of any underground hazards (gas pipes, sewer lines, water mains, etc.) and how the hazard will be addressed/mitigated.

NOTE: THIS DOCUMENT IS FOR GUIDANCE ONLY AND IS NOT INTENDED TO SUPERSEDE ANY SAFETY OR OTHER LEGAL REQUIREMENTS. OWNER / CONTRACTOR RETAINS ALL RESPONSIBILITY ASSOCIATED WITH ACTIVITIES SURROUNDING THE SAFE AND LEGAL REMOVAL OF THE TANK(S).

Fehr & Peers

the land types. A third way to increase sequestration is by planting new trees on either developed or undeveloped land.

The increase in carbon sequestration capacity is determined by calculating the total sequestration capacity of converted land, new vegetated land and trees; and then subtracting the combined capacity of vegetated land or trees that are removed. Carbon sequestration capacities for different land types (e.g. cropland, forest land) and for different tree species classes are available from IPCC guidelines, and summarized in Table E-2, in Appendix E.

Construction Equipment

Construction equipment typically uses diesel fuel and releases emissions based on the amount of fuel combusted and emission factor of the equipment. Emissions can be reduced by using equipment that emits fewer pollutants for the same amount of work.

This is typically equipment powered through grid electricity or hybrid technology. The exclusive use of grid electricity eliminates the diesel emissions at the site but would increase indirect electricity emissions. However, grid-based emissions are typically small compared to the emissions from the diesel-fueled equipment (depending on the source of grid power). Hybrid-powered equipment would decrease but not completely eliminate fuel use. The electricity for hybrid equipment is self-generated unless the equipment has plug-in capability, so it would not increase grid-based electrical generation and the associated emissions there.

The emissions reductions in this category are determined by finding the difference between the estimated mitigation emissions and the baseline emissions for construction equipment. Emissions for the mitigated scenario may consist of direct emissions from combustion fuel use, and/or indirect emissions from grid electricity. These would be calculated using resources described previously, such as the OFFROAD database and literature-based methodologies and values.

Transportation

Transportation emissions can be reduced by improving the emissions profile of the vehicle fleet that travels the roads, or by reducing the vehicle miles traveled by the fleet. The majority of the measures quantified for this report focus on the reduction of VMT. This can be accomplished by optimizing the location and types of land uses in the project and its immediate vicinity, and by site enhancements to roads, and to bike and pedestrian networks to encourage the use of alternative modes of transportation. Mode shifts are also encouraged by implementing parking policies, transit system improvements, and trip reduction coordination or incentive programs.

8.1.4 Institute a Heavy-Duty Off-Road Vehicle Plan

Range of Effectiveness:

Not applicable on its own. This measure ensures compliances with other mitigation measures.

Measure Description:

The Project Applicant should provide a detailed plan that discusses a construction vehicle inventory tracking system to ensure compliances with construction mitigation measures. The system should include strategies such as requiring hour meters on equipment, documenting the serial number, horsepower, manufacture age, fuel, etc. of all onsite equipment and daily logging of the operating hours of the equipment.

Measure Applicability:

- This measure ensures compliances with other mitigation measures.
- Construction vehicles.

Human Health and Environmental Effects of Emissions from Power Generation

CLEAN AIR MARKET PROGRAMS

Power generation is a significant source of pollutants that can impair human health and the environment, including sulfur dioxide (SO_2), nitrogen oxide (NOx), and mercury. The Clean Air Act has been successful in reducing these emissions, but power generation still contributes approximately 70% of SO_2, 20% of NOx, and 40% of mercury emissions into the environment. These emissions from power generation contribute to a range of human health and environmental problems, and interstate and long range transport of emissions continue to play significant roles in these problems. Cap and trade programs benefit human health and the environment and address transport by significantly reducing emissions over large geographic areas.

When emitted into the atmosphere, SO_2 and NOx react with water and other compounds to form various acidic compounds, fine particles, and ozone. These pollutants can remain in the air for days or even years. Prevailing winds can transport them hundreds of miles, often across state and national borders. The pollutants then fall to the earth in either a wet form (rain, snow, and fog) or a dry form (gases and particles). Impacts include impaired air quality; damage to public health; degradation of visibility; acidification of lakes and streams; harm to sensitive forest and coastal ecosystems; and accelerated decay of materials, paints, and cultural artifacts such as buildings, statues, and sculptures nationwide.

Emissions from power generation contribute to a range of human health and environmental concerns.

Mercury, a product of coal-burning, can be deposited locally or it can be transported through the atmosphere for days to years before being deposited into water bodies. Once mercury reaches lakes, rivers and oceans, it can be transformed into methylmercury and bioaccumulate in the food chain. This results in predatory fish and fish-eating birds and mammals accumulating mercury concentrations millions of times higher than what is found in the water or air.

How Do Power Plant Emissions Impact Human Health?

SO_2 and NOx emissions form fine particles in the atmosphere. Particulate matter is the term used for a mixture of solid particles and liquid droplets found in the air; fine particles ($PM_{2.5}$) are smaller than 2.5 microns (millionths of a meter) in diameter. Power plants emit particles directly into the air, but their major contribution to particulate matter air pollution is emissions of SO_2 and NOx, which are converted into sulfate and nitrate particles in the atmosphere. These particles make up a large proportion of the fine particle pollution in most parts of the country. A substantial body of published scientific literature recognizes a correlation between elevated fine particulate matter and increased incidence of illness and premature mortality. The health effects of $PM_{2.5}$ include:

- Increased incidence of premature death, primarily in the elderly and those with heart or lung disease;
- Aggravation of respiratory and cardiovascular illness, leading to hospitalizations and emergency room visits for children and individuals with heart or lung disease;
- Decreased lung function and symptomatic effects, including acute bronchitis, particularly in children and asthmatics;
- New cases of chronic bronchitis;
- Increased work loss days, school absences, and emergency room visits.

NOx emissions react in the atmosphere to form ozone. NOx and volatile organic compounds react in the atmosphere in the presence of sunlight to form ground-level ozone. Ground-level ozone is a major component of smog in our cities and in many rural areas as well. Though naturally occurring ozone in the stratosphere provides a protective layer high above the earth, the ozone that we breathe at ground level has been linked to respiratory illness and other health problems, including:

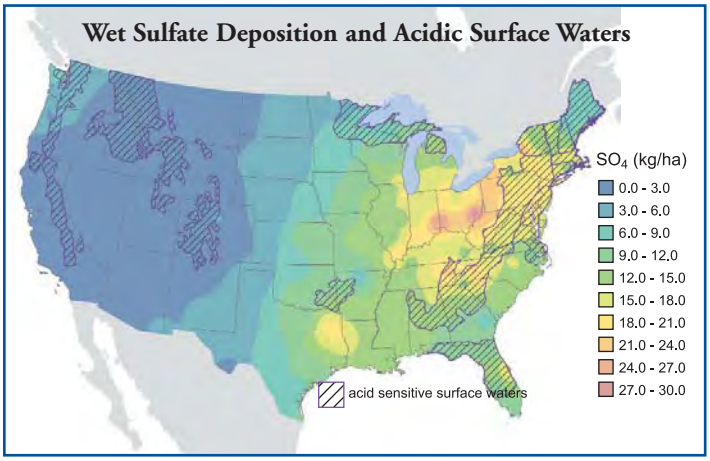
- Decreases in lung function, resulting in difficulty breathing, shortness of breath, and other symptoms;
- Respiratory symptoms, including bronchitis, aggravated coughing, and chest pain;
- Increased incidence/severity of respiratory problems (e.g. aggravation of asthma, susceptibility to respiratory infection) resulting in more hospital admissions and emergency room visits;
- Chronic inflammation and irreversible structural changes in the lungs, that, with repeated exposure, can lead to premature aging of the lungs and other respiratory illness.

Mercury emissions are deposited in watersheds and transformed into methylmercury, which contaminates fish. In the U.S., human exposure to mercury is primarily the result of consumption of fish contaminated with methylmercury. Other fish-eating

mammals and birds are also exposed in this manner. The primary symptoms of mercury exposure are neurological, including brain damage, lack of motor skills, impaired cognitive skills, and difficulty speaking and hearing. These effects are most pronounced on those exposed during the development of the nervous system, such as fetuses and young children. Forty-four states have advisories warning the public to restrict eating fish from their lakes, rivers, streams, and/or coastal waters due to methylmercury. EPA estimates that 12 million acres of lakes and 475,000 miles of rivers, as well as the coastal waters of 11 states, are impaired by mercury.

How Do Power Plant Emissions Impact the Environment?

SO_2 and NOx emissions react in the atmosphere to form acidic compounds that harm lakes and streams. When the acidic compounds that are formed as a result of SO_2 and NOx emissions are deposited to the earth's surface, they can acidify lakes and streams. Acidification (low pH) and the chemical changes that result, including higher aluminum levels, make it difficult for some fish and other aquatic species to survive, grow, and reproduce. In the 1980s, acid rain was found to be the dominant cause of acidification in 75% of acidic lakes and 50% of acidic streams. Areas especially sensitive to acidification include portions of the Northeast (particularly the Adirondack and Catskill Mountains, portions of New England, and streams in the mid-Appalachian highlands) and Southeastern streams. Today in the Adirondack Mountains, Appalachian plateau, and upper Midwest regions, there are 25-30% fewer chronically acidic lakes and streams than in the early 1990s, although these waterbodies remain sensitive to acid rain. Lakes and streams in New England and the Southeast showed little decrease in acidification throughout the 1990s.



Wet Sulfate deposition is highest in many acid sensitive regions.
Source: National Atmospheric Deposition Program.

Acid deposition harms forests and trees. Acid rain can harm forest ecosystems by directly damaging plant tissues. One of the best examples of direct damage involves the leaching of nutrients from the needles of red spruce, which reduces the ability of the trees to tolerate cold winter temperatures and has contributed to the decline of red spruce forests throughout the mountains of the eastern U.S. In other cases, acid rain can combine with other pollutants, such as ozone, to weaken trees and make them vulnerable to threats such as pests, which cause mortality. Acid deposition can also affect forest ecosystems indirectly by changing the chemistry of forest soils, including the leaching of plant nutrients from soils. It can also elevate levels of aluminum in soil water, which impairs the ability of trees to use soil nutrients and can be directly toxic to plant roots.

Nitrogen deposition contributes to impaired coastal water quality. Nitrogen deposited from the atmosphere is a substantial source of nitrogen in many estuaries and coastal waters. Large amounts of nitrogen in estuaries and coastal waters can have significant ecological impacts, including massive die-offs of estuarine and marine plants and animals, loss of biological diversity, and degradation of essential coastal ecosystem habitat such as seagrass beds. For many species of fish and shellfish, these seagrass beds are essential nurseries and places to escape from predators. Excessive amounts of nitrogen in coastal waters from atmospheric deposition are thought to be a contributor to harmful algal blooms, such as red tides, that kill millions of fish each year and can be toxic to humans as well.

Fine particles impair visibility and increase regional haze. Fine particles formed in the atmosphere by the conversion of SO_2 and NOx emissions scatter light and create hazy conditions, decreasing visibility and contributing to regional haze. Visibility impairment spoils scenic vistas across broad regions of the country, including in many National Parks and wilderness areas. Regional haze is also responsible for impaired urban vistas nationwide. In the western U.S., the level of visibility impairment for the worst days remained unchanged through the 1990s. Visibility in the eastern U.S. improved in some areas during the 1990s, but remains significantly impaired overall.

Acid deposition and particles damage materials and cultural resources. A significant number of properties of aesthetic and historical value in the United States, including monuments, buildings, and statues, are potentially at risk for damage from air pollution. Structures made of limestone and marble are particularly sensitive to acid deposition. Acid particles and deposition increase the rate of weathering for these materials, eventually resulting in aesthetic and/or structural damage.

Modeled visibility conditions on the National Mall, Washington, D.C.

Nitrogen Dioxide

Health

Current scientific evidence links short-term NO_2 exposures, ranging from 30 minutes to 24 hours, with adverse respiratory effects including airway inflammation in healthy people and increased respiratory symptoms in people with asthma.

Also, studies show a connection between breathing elevated short-term NO_2 concentrations, and increased visits to emergency departments and hospital admissions for respiratory issues, especially asthma.

NO_2 concentrations in vehicles and near roadways are appreciably higher than those measured at monitors in the current network. In fact, in-vehicle concentrations can be 2-3 times higher than measured at nearby area-wide monitors. Near-roadway (within about 50 meters) concentrations of NO_2 have been measured to be approximately 30 to 100% higher than concentrations away from roadways.

Individuals who spend time on or near major roadways can experience short-term NO_2 exposures considerably higher than measured by the current network. Approximately 16% of U.S housing units are located within 300 ft of a major highway, railroad, or airport (approximately 48 million people). This population likely includes a higher proportion of non-white and economically-disadvantaged people.

NO_2 exposure concentrations near roadways are of particular concern for susceptible individuals, including people with asthma asthmatics, children, and the elderly

The sum of nitric oxide (NO) and NO_2 is commonly called nitrogen oxides or NOx. Other oxides of nitrogen including nitrous acid and nitric acid are part of the nitrogen oxide family. While EPA's National Ambient Air Quality Standard (NAAQS) covers this entire family, NO_2 is the component of greatest interest and the indicator for the larger group of nitrogen oxides.

NOx react with ammonia, moisture, and other compounds to form small particles. These small particles penetrate deeply into sensitive parts of the lungs and can cause or worsen respiratory disease, such as emphysema and bronchitis, and can aggravate existing heart disease, leading to increased hospital admissions and premature death.

Ozone is formed when NOx and volatile organic compounds react in the presence of heat and sunlight. Children, the elderly, people with lung diseases such as asthma, and people who work or exercise outside are at risk for adverse effects from ozone. These include reduction in lung function and increased respiratory symptoms as well as respiratory-related emergency department visits, hospital admissions, and possibly premature deaths.

Emissions that lead to the formation of NO_2 generally also lead to the formation of other NOx. Emissions control measures leading to reductions in NO_2 can generally be expected to reduce population exposures to all gaseous NOx. This may have the important co-benefit of reducing the formation of ozone and fine particles both of which pose significant public health threats.

ARB Fact Sheet: Air Pollution Sources, Effects and Control

This page reviewed December 2, 2009.

Where does air pollution come from? How does it effect people and the environment? How can we control, or better yet, prevent it? The following table summarizes the sources, effects and prevention and control methods for ten of the most important air pollutants in California.

Pollutant	Sources	Effects	Prevention and Control
Ozone (O3)	Formed when reactive organic gases (ROG) and nitrogen oxides react in the presence of sunlight. ROG sources include any source that burns fuels, (e.g., gasoline, natural gas, wood, oil) solvents, petroleum processing and storage and pesticides.	Breathing Difficulties, Lung Tissue Damage, Damage to Rubber and Some Plastics	Reduce motor vehicle reactive organic gas (ROG) and nitrogen oxide emissions through emissions standards, reformulated fuels, inspections programs and reduced vehicle use. Limit ROG emissions from commercial operations and consumer products. Limit ROG and NOx emissions from industrial sources such as power plants and refineries. Conserve energy.
Respirable Particulate	Road Dust, Windblown	Increased Respiratory	Control Dust Sources,

Matter (PM10)	Dust (Agriculture) and Construction (Fireplaces) Also formed from other pollutants (acid rain, NOx, SOx, organics). Incomplete combustion of any fuel.	Disease, Lung Damage, Cancer, Premature Death, Reduced Visibility, Surface Soiling	Industrial Particulate Emissions, Wood Burning Stoves and Fireplaces Reduce secondary pollutants which react to form PM10. Conserve energy.
Fine Particulate Matter (PM2.5)	Fuel Combustion in Motor Vehicles, Equipment and Industrial Sources, Residential and Agricultural Burning. Also formed from reaction of other pollutants (acid rain, NOx, SOx, organics).	Increases Respiratory Disease, Lung Damage, Cancer, Premature Death, Reduced Visibility, Surface Soiling	Reduces Combustion Emissions from Motor Vehicles, Equipment, Industries and Agriculture and Residential Burning. Precursor controls, like those for ozone, reduce fine particle formation in the atmosphere.
Carbon Monoxide (CO)	Any source that burns fuel such as automobiles, trucks, heavy construction equipment, farming equipment and residential heating.	Chest Pain in Heart Patients, Headaches, Reduced Mental Alertness	Control motor vehicle and industrial emissions. Use oxygenated gasoline during winter months. Conserve energy.
Nitrogen Dioxide (NO2)	See Carbon Monoxide	Lung Irritation and Damage. Reacts in the atmosphere to form ozone and acid rain	Controls motor vehicle and industrial combustion emissions. Conserve energy.
Lead	Metal Smelters, Resource Recovery, Leaded Gasoline,	Learning Disabilities, Brain and Kidney Damage	Control metal smelters, no lead in gasoline. Replace leaded paint with non-lead

	Deterioration of Lead Paint		substitutes.
Sulfur Dioxide (SO2)	Coal or Oil Burning Power Plants and Industries, Refineries, Diesel Engines	Increases lung disease and breathing problems for asthmatics. Reacts in the atmosphere to form acid rain.	Reduces the use of high sulfer fuels (e.g., use low sulfer reformulated diesel or natural gas). Conserve energy.
Visibility Reducing Particles	See PM2.5	Reduces visibility (e.g., obscures mountains and other scenery), reduced airport safety, lower real estate value, discourages tourism.	See PM2.5
Sulfates	Produced by the reaction in the air of SO2 (see SO2 sources), a component of acid rain.	Breathing Difficulties, Aggravates Asthma, Reduced Visibility	See SO2
Hydrogen Sulfide	Geothermal Power Plants, Petroleum Production and Refining, Sewer Gas	Nuisance Odor (Rotten Egg Smell), Headache and Breathing Difficulties (Higher Concentrations)	Control emissions from geothermal power plants, petroleum production and refining, sewers, sewage treatment plants.

GLOSSARY OF AIR POLLUTION TERMS

Have you ever wondered what a baghouse is or what NMOG stands for? That cold ironing is not a new way to get wrinkles out of a shirt or that a SIP isn't a beverage taste-test? You're not alone. ARB has updated its glossary of air pollution terms and lists of acronyms to help.

Keep in mind that we are not trying to create an exhaustive list, nor are we giving legal terminology. This glossary is simply a resource for the general public.

A | B | C | D | E | F | G | H | I | J | K | L | M | N | O | P | Q | R | S | T | U | V | W | X | Y | Z

A

AB 1807 (Tanner)

A California state law (Health and Safety Code section 39650 et seq.) that became effective in January of 1984 and established the framework for California's toxic air contaminant identification and control program. For more information, please see our toxics summary.

AB 998

Assembly Bill 998 established the Non-Toxic Dry Cleaning Incentive Program to provide the dry cleaning industry with $10,000 grant funds to switch from systems using perchloroethylene (Perc), an identified toxic air contaminant and potential human carcinogen, to non-toxic and non-smog forming alternatives. The legislation also requires ARB to establish a demonstration program to showcase these non-toxic and non-smog forming technologies.

AB 2588 (Connelly) Air Toxics "Hot Spots" Information and Assessment Program

A California program (Health and Safety Code Section 44300 et seq.) that requires certain stationary sources to report the type and quantity of specific toxic substances they routinely release into the air. The program identifies high priority facilities and requires facilities posing significant risks to notify all exposed individuals. For more information, visit our AB 2588 website.

AB 2766 (Sher) Motor Vehicle Fee Program

A program that permits air districts and local governments to allocate vehicle registration surcharge fees to projects that reduce motor vehicle emissions such as zero-emission vehicles, bike lanes and trip reduction programs.

AB 32(The Global Warming Solutions Act of 2006)

The Legislature passed and Governor Schwarzenegger signed AB 32, which set the 2020 greenhouse gas emissions reduction goal into law. It directed ARB to develop discrete early actions to reduce greenhouse gases while also preparing a scoping plan to identify how best to reach the 2020 limit on greenhouse gas emissions.

Abatement

The reduction or elimination of pollution.

Acceptable Daily Intake (ADI)

The highest daily amount of a substance that may be consumed over a lifetime without adverse effects.

Acid Deposition

A workshop held by a public agency for the purpose of informing the public and obtaining its input on the development of a regulatory action or control measure by that agency.

Back to the top

R

Radon

A colorless, naturally occurring, radioactive, inert gaseous element formed by radioactive decay of radium atoms in soil or rocks.

Reactive Organic Gas (ROG)

A photochemically reactive chemical gas, composed of non-methane hydrocarbons, that may contribute to the formation of smog. Also sometimes referred to as Non-Methane Organic Gases (NMOGs). (See also Volatile Organic Compounds and Hydrocarbons.)

Reactivity (or Hydrocarbon Photochemical Reactivity)

A term used in the context of air quality management to describe a hydrocarbon's ability to react (participate in photochemical reactions) to form ozone in the atmosphere. Different hydrocarbons react at different rates. The more reactive a hydrocarbon, the greater potential it has to form ozone.

Reasonably Available Control Measures (RACM)

A broadly defined term referring to technologies and other measures that can be used to control pollution. They include Reasonably Available Control Technology and other measures. In the case of PM10, RACM refers to approaches for controlling small or dispersed source categories such as road dust, woodstoves and open burning.

Reasonably Available Control Technology (RACT)

Control techniques defined in U.S. EPA guidelines for limiting emissions from existing sources in nonattainment areas. RACTs are adopted and implemented by states. For more information, visit our RACT website.

Reasonably Available Retrofit Control Technology (RARCT)

(See also Best Available Control Technology.)

Reciprocating Internal Combustion Engine

An engine in which air and fuel are introduced into cylinders, compressed by pistons and ignited by a spark plug or by compression. Combustion in the cylinders pushes the pistons sequentially, transferring energy to the crankshaft, causing it to rotate.

Reference Dose (RfD)

An estimate delivered by the U.S. EPA (with uncertainty spanning perhaps an order of magnitude) of the daily exposure to the human population, (including sensitive subpopulations) that is likely to be without deleterious effects during a lifetime. The RfD is reported in units of mg of substance/kg body weight/day for oral exposures.

Reference Exposure Concentration (RfC)

An estimate, derived by the U.S. EPA with an uncertainty spanning perhaps an order of magnitude) of a daily exposure to the human population, (including sensitive subgroups) that is likely to be without

Ozone and Your Patients' Health Training for Health Care Providers

Health Effects of Ozone in the General Population

- Introduction
- How are people exposed to ozone?
- How does ozone react in the respiratory tract?
- What are ozone's acute physiological and symptom effects?
- What effects does ozone have at the cellular level?
- How does response vary among individuals?
- What are the effects of ozone on mortality?
- What are other potential effects of short-term ozone exposure?
- At what exposure levels are effects observed?
- What are the effects of recurrent or long-term exposure to ozone?

Review Key Points

Introduction

Breathing ground-level ozone can result in a number of health effects that are observed in broad segments of the population. Some of these effects include:

- Induction of respiratory symptoms
- Decrements in lung function
- Inflammation of airways

Respiratory symptoms can include:

- Coughing
- Throat irritation
- Pain, burning, or discomfort in the chest when taking a deep breath
- Chest tightness, wheezing, or shortness of breath

In addition to these effects, evidence from observational studies strongly indicates that higher daily ozone concentrations are associated with increased asthma attacks, increased hospital admissions, increased daily mortality, and other markers of morbidity. The consistency and coherence of the evidence for effects upon asthmatics suggests that ozone can make asthma symptoms worse and can increase sensitivity to asthma triggers.

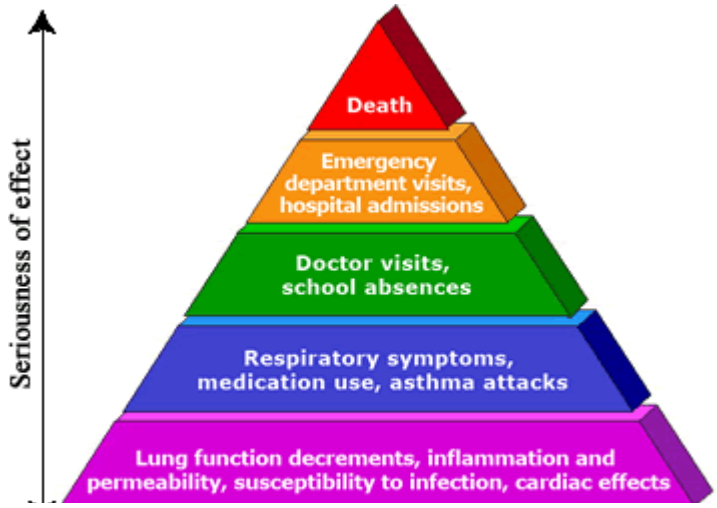

Figure 2: Pyramid of effects caused by ozone
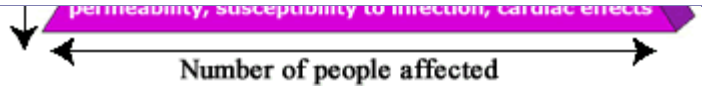
The relationship between the severity of the effect and the proportion of the population experiencing the effect can be presented as a pyramid. Many individuals experience the least serious, most common effects shown at the bottom of the pyramid. Fewer individuals experience the more severe effects such as hospitalization or death.



Enlarge or print this figure

This section of the course addresses exposure and health effects issues common to all people. The next section of the course, Health Effects in Patients with Asthma and Other Chronic Respiratory Disease, addresses those issues specific to people with asthma and other chronic lung disease.

How are people exposed to ozone?

Primary exposure occurs when people breathe ambient air containing ozone. The rate of exposure for a given individual is related to the concentration of ozone in the surrounding air and the amount of air the individual is breathing per minute (minute ventilation). The cumulative amount of exposure is a function of both the rate and duration of exposure.

Although ozone concentrations in the outside (ambient) air are generally similar across many locations in a particular airshed, a number of factors can affect ozone concentration in "microenvironments" within the larger airshed (e.g., inside a residence, inside a vehicle, along a roadway). Ozone concentrations indoors typically vary between 20% and 80% of outdoor levels depending upon whether windows are open or closed, air conditioning is used, or other factors such as indoor sources. People with the greatest cumulative exposure are those heavily exercising outdoors for long periods of time when ozone concentrations are high. In addition, during exercise people breathe more deeply, and ozone uptake may shift from the upper airways to deeper areas of the respiratory tract, increasing the possibility of adverse health effects. People with the lowest cumulative exposure are those resting for most of the day in an air-conditioned building with little air turnover.

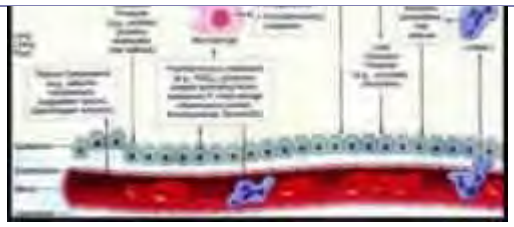
Ozone levels may also affect indoor levels of some aldehydes formed as reaction products of ozone with indoor substances (Apte et al 2008). This provides a potential pathway for people indoors to experience respiratory effects mediated by ozone reaction products. Further research is needed to test the importance of these exposures on health effects.

How does ozone react in the respiratory tract?

Because ozone has limited solubility in water, the upper respiratory tract is not as effective in scrubbing ozone from inhaled air as it is for more water soluble pollutants such as sulfur dioxide (SO_2) or chlorine gas (Cl_2). Consequently, the majority of inhaled ozone reaches the lower respiratory tract and dissolves in the thin layer of epithelial lining fluid (ELF) throughout the conducting airways of the lung.

In the lungs, ozone reacts rapidly with a number of biomolecules, particularly those containing thiol or amine groups or unsaturated carbon-carbon bonds. These reactions and their products are poorly characterized, but it is thought that the ultimate effects of ozone exposure are mediated by free radicals and other oxidant species in the ELF that then react with underlying epithelial cells, with immune cells, and with neural receptors in the airway wall. In some cases, ozone itself may react directly with these structures. Several effects with distinct mechanisms occur simultaneously following a short-term ozone exposure and will be described below.

Figure 3: Ozone is highly reactive in the respiratory tract
When breathed into the airways, ozone



interacts with proteins and lipids on the surface of cells or present in the lung lining fluid, which decreases in depth from 10 µm in the large airways to 0.2 µm in the alveolar region. Epithelial cells lining the respiratory tract are the main target of ozone and its products. These cells become injured and leak intracellular enzymes such as lactate dehydrogenase into the airway lumen, as well as plasma components. Epithelial cells also release a variety of inflammatory mediators that can attract polymorphonuclear leukocytes (PMNs) into the lung, activate alveolar macrophages, and initiate a train of events leading to lung inflammation. Antioxidants present in cells and lining fluid may protect the epithelial barrier against damage by ozone or its reaction products.

What are ozone's acute physiological and symptom effects?

The predominant physiological effect of short-term ozone exposure is being unable to inhale to total lung capacity. Controlled human exposure studies have demonstrated that short-term exposure - up to 8 hours - causes lung function decrements such as reductions in forced expiratory volume in one second (FEV1), and the following respiratory symptoms:

- Cough
- Throat irritation
- Pain, burning, or discomfort in the chest when taking a deep breath
- Chest tightness, wheezing, or shortness of breath

The effects are reversible, with improvement and recovery to baseline varying from a few hours to 48 hours after an elevated ozone exposure.

Current thinking is that changes in symptoms and lung function are due to stimulation of airway neural receptors (probably airway C-fibers) and transmission to the central nervous system via afferent vagal nerve pathways. Although ozone exposure results in some airway narrowing, neural inhibition of inhalation effort at high lung volumes is believed to be the primary cause of being unable to inhale to total lung capacity.

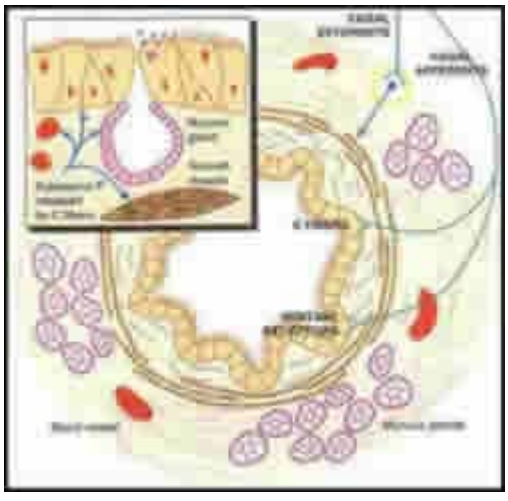

Figure 4: Ozone induces neurally mediated responses in the bronchial airways
Stimulation of nociceptive interepithelial nerve fibers by ozone leads to reflex cough and a decrease in maximal inspiration that is relieved by opioid agonists, which block sensory pathways. Two possible mechanisms are involved: (1) stimulation of irritant receptors contributes to cough and induces a vagally mediated reflex that increases airway resistance, probably via airway smooth muscle contraction that is blocked by atropine; (2) C fiber stimulation releases neurokinins such as substance P that dilate nearby capillaries, activate mucous glands, and contract airway smooth muscle via neurokinin receptors. Prostaglandin E2 released by epithelial cells exposed to ozone or to ozone reaction products also sensitizes C fibers.
Source: Devlin et al. (1997)

Enlarge or print this figure

The overall effect is thus primarily restrictive in nature with a smaller obstructive component that reflects itself in decreases in forced vital capacity (FVC), FEV1 and other spirometric measures that require a full inspiration. It is likely that these lung function changes and respiratory symptoms are responsible for observations that short-term ozone exposure limits maximal exercise capability.

Ozone-induced changes in breathing pattern to more rapid shallow breathing may also be a manifestation of C-fiber stimulation and may be a protective response to limit penetration of ozone deep into the respiratory tract. Such effects may also contribute to changes in deposition pattern and retention of other inhaled substances such as allergens and particle pollution (also called particulate matter).

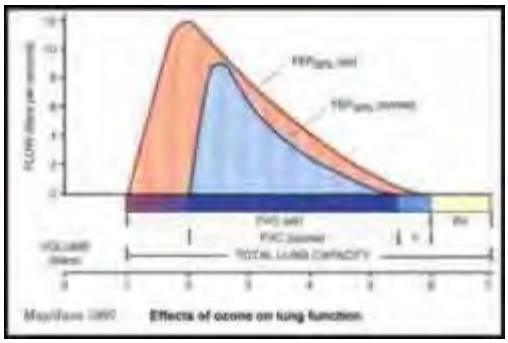

Figure 5: Effects of ozone on lung function
Ozone reduces the maximal inspiratory position (at the left of the curves) and may slightly increase the residual volume (at the right). Reduction in maximum inspiration reduces forced vital capacity (FVC), and this causes a reduction in expiratory flow measurements, such as flow at 50% of FVC expired (FEF50%). Because ozone causes only a small change in resistance, the relationship between flow and volume is not changed to a large extent.
Source: Devlin et al. (1997)

Enlarge or print this figure

What effects does ozone have at the cellular level?

As a result of short-term exposure, ozone and/or its reactive intermediates cause injury to airway epithelial cells followed by a cascade of other effects. These effects can be measured by a technique known as bronchoalveolar lavage (BAL), in which samples of epithelial lining fluid (ELF) are collected during bronchoscopy on volunteers experimentally exposed to ozone. Cells and biochemical markers in the lavage fluid and in the blood can be analyzed to provide insight into the effects of exposure.

Evidence for airway inflammation following ozone exposure includes visible redness of the airway seen during bronchoscopy as well as an increase in the numbers of neutrophils in the lavage fluid. Cellular injury is suggested by an increase in the concentration of lactate dehydrogenase (LDH), an enzyme released from the cytoplasm of injured epithelial cells, in the ELF. Mediators (e.g., cytokines, prostaglandins, leukotrienes) that are released by injured cells include a number that attract inflammatory cells resulting in a neutrophilic inflammatory response in the airway. In addition, ozone reaction products as well as some mediators produced in the lung can be detected in the blood providing a possible mechanism for extrapulmonary effects of ozone exposure.

Figure 6: Effects of ozone on lung function
These photos show a healthy lung airway (left) and an inflamed lung airway (right). *Photos courtesy of PENTAX Medical Company.*

Enlarge or print this figure

Other documented ozone-induced effects that may be related to the underlying injury and

inflammatory response are:

- An increase in small airway obstruction
- A decrease in the integrity of the airway epithelium
- An increase in nonspecific airway reactivity
- A decrease in phagocytic activity of alveolar macrophages

The decrease in epithelial integrity can be measured by an increase in the concentration of plasma proteins appearing in the ELF following exposure and by more rapid clearance of inhaled radio-labeled markers from the lung to the blood. This has the potential for allowing increased movement of inhaled substances (e.g. allergens or particulate air pollution) from the airway to the interstitium or the blood and could modify the known effects of inhaled allergen on asthma and particulate matter on mortality.

Although the significance of increased nonspecific airway reactivity to substances such as methacholine or histamine is not understood in healthy individuals, it is clearly of concern for people with asthma, as increased airway reactivity is a predictor for asthma exacerbations. (See section entitled How does ozone affect people with asthma?).

A decrease in macrophage function has the potential to interfere with host defense. Over a period of several days following a single short-term exposure, inflammation, small airway obstruction, and increased epithelial permeability resolve; damaged ciliated airway epithelial cells are replaced by underlying cells; and damaged type I alveolar epithelial cells are replaced by more ozone-resistant type II cells. Over a period of weeks, the type II cells differentiate into type I cells, and following this single exposure, the airway appears to return to the pre-exposure state.

How does response vary among individuals?

One striking characteristic of the acute responses to short-term ozone exposure is the large amount of variability that exists among individuals. For example, for a 2-hour exposure to 40 ppb ozone (note: 40 ppb is equal to .04 ppm) that includes 1 hour of heavy exercise, the least responsive individual may experience no symptom or lung function changes while the most responsive individual may experience a 50% decrement in FEV1 and have severe coughing, shortness of breath, or pain on deep inspiration. A similar range of response is evident for a 6.6-hour exposure to 80 ppb with 5 hours of moderate activity. Other individual responses fall into what appears to be a unimodal distribution between these two extremes. Those with large responses following exposure on one day also tend to have large responses upon re-exposure. Similarly, those with small responses following exposure on one day tend to have small responses upon re-exposure. A small fraction of the observed variability in lung function and symptom responsiveness can be explained by differences in age and in body mass index (BMI) with young adults (teens to thirties) and those with high BMI being much more responsive than older adults (fifties to eighties) and those with low BMI. Results similar to those in Figure 8 are also seen with longer duration exposures to concentrations more relevant to ambient levels (e.g. over a range of 60 to 120 ppb).

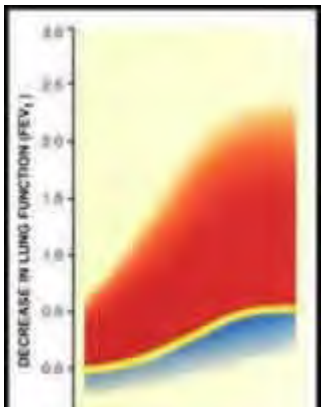

Figure 7: Variability of response to ozone exposure
Source: Devlin et al. (1997)

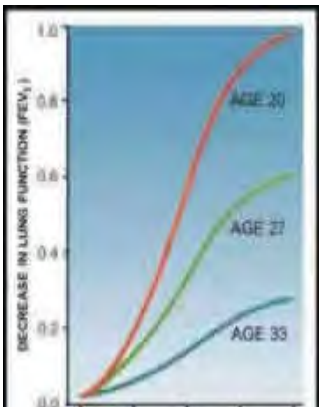

Figure 8: Sensitivity to ozone exposure is age related
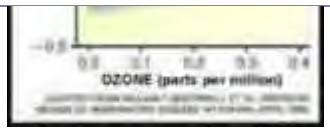
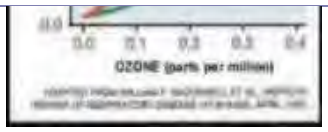
Source: Devlin et al. (1997)





Enlarge or print this figure

Individual differences in the intensity of the inflammatory response also exist, and it appears that these differences in response are also stable over time. The magnitude of the neurally-mediated lung function response, however, is not related to the degree of cell injury and inflammation for a given individual suggesting that these two effects are the result of different mechanisms of action. Further evidence for multiple mechanisms of action is provided by drug intervention studies. There is some evidence that Vitamin C and E supplements may slightly reduce the lung function effects of ozone but not the inflammatory or symptom responses. Pre-treatment with non-steroidal anti-inflammatory drugs (NSAID) reduces lung function and symptom responses but not the inflammatory responses in non-asthmatics. In asthmatic volunteers NSAID pretreatment did not block the restrictive lung function changes seen in nonasthmatics, but did blunt some of the changes due to airway obstruction. Pre-treatment with high doses of inhaled steroids has been shown to reduce the neutrophil influx following ozone exposure in people with asthma, but not in those without asthma.

True differences in individual responsiveness to ozone can be the result of either environmental or genetic factors. Research has demonstrated that genetic differences among strains of mice can explain the large range of inflammatory responses seen. Some preliminary evidence suggests that genetic polymorphisms for antioxidant enzymes and for genes regulating the inflammatory response may modulate the effect of ozone exposure on pulmonary function and airway inflammation.

What are the effects of ozone on mortality?

Studies show:

- Ozone is associated with increased mortality
- The absolute effect of ozone on mortality is considerably higher in older adults
- The ozone-mortality relationship is most prominent during the warm season

Recent epidemiologic research has clearly demonstrated that both short-term and longer-term exposures to low concentrations of particle pollution, a common air pollutant, are associated with increased mortality. Re-examination of the data upon which those findings are based as well as new studies indicate that short-term exposure to ozone is also associated with increased daily mortality.

The study most representative of the U.S. population (Bell et al 2004) evaluated the relationships between daily mortality counts and ambient ozone concentration for 95 large U.S. communities over the period of 1987-2000. Although there was considerable heterogeneity in the magnitude of effect among the various communities, a 0.5 % overall excess risk in non-accidental daily mortality was observed for each 20 ppb increase in the 24-hour average ozone concentration (approximately equal to a 30 ppb increase in the 8-hour average) on the same day. There was evidence that the effect was greatest on the day of exposure with smaller residual effects being evident for several days. A cumulative 1.04% excess risk was observed for each 20 ppb increase in the 24-hour average concentration during the previous week. The ozone-mortality relationship was robust even after controlling for possible effects of particulate matter and other air pollutants.

Although ozone mortality risk estimates tend to be only slightly higher for the older population compared to the younger population (based predominantly on Medicare studies of people 65 and older), the absolute effect of ozone on mortality is considerably higher in older adults due to their

higher baseline death rates. Even for older adults, however, the risk of dying on any given day as a result of ozone exposure is quite small. However, because of the large number of individuals at risk across the country, an effect of this magnitude has meaningful public health implications.

A preponderance of other time series studies supports the existence of an ozone-mortality relationship although with a wider range of effect estimates primarily due to the smaller sizes of the studies. An independent review of this literature by the National Research Council concludes that short-term ozone is likely to be associated with premature mortality.

Other observations made in these studies include the finding that the ozone-mortality relationship is most prominent during the warm season, with few or smaller effects in the winter. It also appears that the ozone-mortality association persists when deaths are limited to those caused by either cardiac or pulmonary disease or to those caused by cardiovascular disease alone. Risk estimates for other causes of death are generally inconsistent across studies probably reflecting the lower statistical power associated with smaller daily death rates. In the Bell study of 95 cities, the observed city-specific effect rates varied widely. The degree to which this variability reflects different ozone-mortality relationships in the different cities is not clear, but it does raise the question as to whether a single average 0.5% increase in daily mortality rates should be applied to all cities. Other unanswered questions pertain to the lowest concentrations at which these effects occur and the possible mechanisms of action responsible for increased mortality among many who spend much of their time indoors where ozone levels are generally quite low. Bell et al. divided days into those with a 24-hour average ozone concentration above and below 60 ppb and found that the relationship was similar for both subsets suggesting that the relationship is present at even very low levels of ozone. Biological mechanisms responsible for the ozone-mortality relationship are largely unknown although effects of ozone on the autonomic control of the cardiovascular system, on coagulation mechanisms, and on vasoactive substances in the blood are being actively investigated.

What are the other potential effects of short-term ozone exposure?

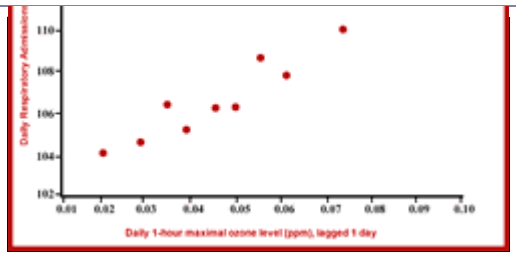
Other potential effects of short-term ozone exposure include:

- hospital admissions and emergency room visits for respiratory causes
- school absences

There is consistent epidemiologic evidence that ambient ozone levels are associated with other markers of respiratory morbidity, particularly during the warm season. In general, studies have reported positive relationships between short-term ozone concentrations and hospital admissions and emergency room visits for respiratory causes. Although not all studies have found significant effects, risk estimates for the majority of studies are positive. It is likely that those most at risk of serious respiratory morbidity are those with underlying respiratory disease. The evidence indicates that some of the increase in hospital visits for respiratory morbidity is due to exacerbations of asthma and possibly chronic obstructive pulmonary disease (COPD). Because of the small numbers of daily hospital admissions, the effects of ozone on other subcategories of respiratory disease are not clear.

A relationship has also been observed between ozone and school absences in two studies. However, in one case the absences were related to a measure of longer-term exposure, and in the other case absences were not limited to those due to illness. Although these latter results are consistent with increased infections secondary to impaired host defense, more research needs to be done before reaching any conclusion regarding any effect of ozone exposure on respiratory infection.

Figure 9: The number of emergency or urgent daily respiratory admissions to acute care hospitals is related to



estimated ozone exposure
Respiratory admission rates to 168 hospitals in Ontario, Canada during the period 1983 through 1988 are plotted against the distribution (deciles) of the daily 1-hour maximum ozone concentration, lagged by 1 day. Admission rates were adjusted for seasonal patterns, day-of-week effects, and hospital effects. Ozone displayed a positive and statistically significant association with respiratory admissions for 91% of the hospitals during the Spring through Fall seasons, but not during the Winter months of December to March when ozone levels were low. *Source: Burnett et al., 1994; U.S. EPA, 1996*

Enlarge or print this figure

Ozone has been associated with daily hospitalizations for cardiovascular disease in some studies but it is not a consistent finding. A number of studies have explored the relationships between ozone and various other aspects of cardiovascular pathophysiology including heart rate variability, acute myocardial infarction, and tachyarrhythmias in those with implanted cardiac devices. Although some data are suggestive of a relationship, the results at this time do not fully substantiate a relationship between ozone exposure and adverse cardiovascular events.

At what exposure levels are effects observed?

The concentration of ozone at which effects are first observed depends upon the level of sensitivity of the individual as well as the dose delivered to the respiratory tract. The dose, in turn, is a function of the ambient concentration, the minute ventilation, and the duration of exposure. This can be expressed as a rough formula:

Dose = Ambient concentration X Level of exertion (minute ventilation) X Duration of exposure.

Thus individuals performing strenuous activity (higher minute ventilation) for several hours are likely to respond to lower concentrations than when exposed at rest (lower minute ventilation) for a shorter time. The following examples illustrate this point:

- An average young adult playing an active sport such as soccer or full court basketball outdoors for 2 hours would be expected to experience small to moderate lung function and symptom effects as well as lung injury and inflammation following exposure to 120 ppb ozone.
- If the same average young adult is at rest outdoors for the two hours, such effects would not be expected until exposures reach 300-400 ppb.
- An average outdoor laborer doing intermittent work might experience similar small to moderate lung function and symptom effects as well as lung injury and inflammation following an 8-hour exposure to 60 to 70 ppb ozone.

More sensitive individuals will experience such effects at lower concentrations while less sensitive individuals will experience these effects only at higher concentrations.

Children without asthma experience lung function decrements similar to those of young adults. But children often do not report respiratory symptoms at the lowest ozone concentrations. It is not clear whether this is the result of reduced sensitivity with regard to symptoms or whether children are less likely to recognize and report symptoms.

There are chamber studies and field studies that look at the ozone exposure level at which effects are first observed. It is not surprising that field studies show effects at much lower levels than chamber studies. This is because field studies can look at sensitive populations (including children), include exposure to all oxidant species of pollution, and may include longer exposure times. For

example, field studies of agricultural workers and hikers suggest that lung function changes may be associated with prolonged ozone exposures at lower levels than those observed in chamber studies. Below are findings from key field and observational studies.

Although the results vary somewhat, several field studies suggest that the lung function of highly active asthmatic and ozone sensitive children and the exercise performance of endurance athletes may be affected on days when the 8-hour maximum ozone concentration is less than 80 ppb ozone.

Emergency room data from one study indicate that asthma attacks in the most sensitive population (e.g., children with asthma or reactive airway disease) increase following days on which the 1-hour maximum ozone concentrations exceeded 110 ppb (approximately equivalent to an 8-hour average of 82 ppb). (White et al., 1994) Another study observed increased emergency room visits for asthma on days following those when 7-hour averages exceeded 60 ppb compared to those with lower ozone concentrations. (Weisel et. al., 1995).

For effects measured in some other types of observational studies, the lowest levels at which effects are expected to occur are more difficult to identify for a number of reasons. Effects of ozone on daily mortality have been detected even when study days are restricted to those with a 24-hour average ozone concentration below 60 ppb (approximately equivalent to an 8-hour average below 90 ppb). In one study, hospital admissions for respiratory causes appear to follow a linear relationship down to background levels. (Figure 9). Limited exposure-response modeling suggests that if a population threshold for these ozone effects exists, it is likely near the lower limit of ambient ozone concentrations in the United States.

What are the effects of recurrent or long-term exposure to ozone?

One of the major unanswered questions about the health effects of ozone is whether repeated episodes of damage, inflammation, and repair induced by years of recurrent short-term ozone exposures result in adverse health effects beyond the acute effects themselves.

Daily ozone exposure for a period of 4 days results in an attenuation of some of the acute, neurally-mediated effects (e.g., lung function changes and symptoms) for subsequent exposures occurring within 1 to 2 weeks. Some health experts have, therefore, suggested that individuals living in high ozone areas may be protected from any harmful effects of long-term ozone exposure. Others suggest, however, that the attenuation of the ozone-induced tendency to take rapid and shallow breaths may blunt a protective mechanism, resulting in greater delivery and deposition of ozone deeper in the respiratory tract and other airway responses described below.

Studies including bronchoalveolar lavage and bronchial mucosal biopsies indicate that, unlike the neurally-mediated lung function changes, the processes of airway injury, inflammation, and repair continue to occur during repeated exposure. After either 4 or 5 days of exposure, markers of cell injury and increased epithelial permeability remain elevated, and an increase in airway mucosal PMN, which was not present following a single exposure, has been noted. Also, unlike the neurally-mediated effects, small airway function has been observed to remain depressed over the course of exposures and is thought to be related to the ongoing inflammation.

Studies of laboratory animals have consistently demonstrated that long-term exposure to ozone concentrations above ambient levels results in persistent morphological changes that could be a marker of chronic respiratory disease. Exposed animals experience mucous cell metaplasia and epithelial cell hyperplasia in the upper airway as well as structural changes in the lower airway including an increase in fibrous tissue in the basement membrane area and a remodeling of the distal conducting airways. In addition to airway remodeling and basement membrane changes, concurrent long-term exposure of very young primates to ozone and house dust mite allergen has been observed to result in changes in the innervation of the airways as well as an accumulation of

eosinophils in the distal airways suggesting induction of an allergic phenotype. Other studies indicate that sensitization of animals to antigen occurs more easily during ongoing ozone exposures. Based on traditional measures, there is little evidence that long-term exposure in animals results in substantial changes in airway function. However, these morphological findings suggest that long-term ozone exposure might play a role in the development or progression of chronic lung disease and/or asthma.

The epidemiologic evidence is inconclusive with regard to whether long-term exposure of humans is related to chronic respiratory health effects in humans. Several cross-sectional studies have found that young adults who spent their childhoods in locales with high ozone concentrations had lower measures of lung function than those from locales with lower ozone. Similar results have not been observed, however, in a recent well-conducted longitudinal study of lung function in children or in other cross-sectional studies. Two longitudinal studies have observed associations between development of asthma and long-term ozone concentrations in subgroups of the population. These findings have not been confirmed in other longitudinal or cross-sectional studies, but they are consistent with the animal toxicological literature. Part of the difficulty in evaluating such associations has been the small number of longitudinal epidemiologic studies specifically designed to evaluate respiratory health in samples with differing ozone exposures. The mobility of the population as well as the inability to precisely estimate exposure to ozone and other potential confounders over a period of many years degrades the power of, and leads to bias in, both longitudinal and cross-sectional studies.

In spite of the inconclusive nature of the epidemiologic literature, the repeated cycles of damage, inflammation, and repair in humans and the morphological findings from the animal toxicological studies suggest that it would be prudent to avoid repeated short-term exposures, particularly in young children, until more is known about the effects of long-term ozone exposure.

Left Blank

We often do not drive a car thinking of all the hazardous emissions we would release. Nor do we turn on the light with thought as to how that energy was generated. Yet, when we do all these activities subconsciously, we indirectly contribute to the growing amounts of hazardous air pollutants in our atmosphere that are responsible for many adversities.

Smog as a Negative Externality

Depending upon various factors, including location, season, and source of generation, the price an entity pays for a given amount of energy can vary. Typically, the price would account for all costs incurred within the value chain-research and development, design, production, marketing, distribution, and customer services-plus a markup. Unfortunately, this price, the cost charged to consumers, is what is known as the market price, and therefore may not accurately reflect the total costs inflicted upon society as a whole (Baird). In such a case as where the actions of one party directly affecting another are not accounted for, an externality arises.

In the case of energy, both productive and consumptive activities result in smog, a negative externality imposed on the environment and the welfare of society. The production of an output of energy through the process of burning coal or other fossil fuels, for example, releases two main air pollutants: sulfur dioxide and nitrogen oxides. Similarly, the consumption of energy-either for self-consumptive or other productive purposes-releases primary pollutants VOCs and nitrogen dioxides, which in turn can undergo chemical reactions to yield secondary pollutants such as ground level ozone and PAN. All these air pollutants are responsible for adverse effects in both humans and plants and on materials and aesthetics, as well as the negative impacts on the environment, namely acid rain. In whichever case, the stated price of either energy or an intermediate form of energy, such as gas, or a finished output that uses energy as an input, rarely reflects the complete burden placed upon society. This neglect of externalities, in turn, often results in an over-production or over-consumption of energy and other related goods. Here, we take a closer look at these externalities as to see what costs to society the market fails to account for.

Back to top

Smog and its Effects on Human Health

We, as humans, can live a few days without food and water, but can only live a few minutes without air. The fact that an active adult inhales 10,000 to 20,000 liters of air each day, or 7 to 14 liters every minute, highlights a critical point in the fight for clean air (Elsom 30).

While the effects of smog vary according to factors such as age, state of health, time of exposure, and dosage, the general symptoms include coughing, sneezing, headaches, tiredness, irritation, nausea, and hoarseness of the throat, nose, and eyes, and constrictions of the chest (Lewis 37; Elsom 31).

Additionally, nitrogen dioxide and ground-level ozone were found to cause reductions in the immune system's ability to fight bacteria and viruses in the respiratory system (Nebel and Wright 530; EPA, "Smog-Who Does it Hurt?" 3). These effects are all considered to be short-term in that once exposure ceases, the symptoms are no longer present. However, in most cases, it is the long-term effects of air pollutants that bring the greatest concerns, since these effects are often the most severe.

Unsurprisingly, most acute effects of smog are related to the respiratory system. Some components of smog such as nitrogen dioxide, sulfur dioxide, and ground-level ozone are found to have caused damages to the mucociliary system responsible for cleaning the air tracts (Elsom 56). As a result, the lung's ability to resist disease is reduced, and illnesses, such as bronchitis and emphysema, can be aggravated (Gow and Pidwirny; Elsom 56). Likewise, while some VOCs were found to be carcinogenic, the main problem with VOCs was its role in the formation of ground-level ozone. Present in ambient concentrations, ground-level ozone can cause inflammation and fibrosis to the lungs, resulting in permanent morphological changes to the lungs (Nebel and Wright 530; EPA, "Smog-Who Does it Hurt?" 3). Consequently, these air pollutants can not only decrease lung function, elasticity, and capacity by as much as 5%, but can also lead to the premature aging of the lungs (Elsom 33, 63; "Smog").

While continuous research is being made as to link the long-term effects of smog to human health, scientists in general have agreed on several findings. By and large, children, asthmatics, people with chronic respiratory or pulmonary and heart disease, and the elderly are the most susceptible to air pollutants (Nebel and Wright 530). Because the lungs of children are not yet fully developed and because children inhale more air per unit of body weight than adults, they are prone to greater health effects as well as long-term damage to the lungs (Elsom 42). Similarly, because asthmatics and those suffering from chronic diseases are already in a weakened state, smog adds stress to their bodies (Nebel and Wright 532). For the elderly, smog increases their susceptibility to viral and bacterial attacks, as both lung and immune system functions decrease with age (Elsom 42). Healthy adults who work actively outdoors or who have higher levels of exposure to air pollutant are also considered, by the EPA, to be in a "sensitive group" (EPA, "Smog-Who Does it Hurt?" 3).

In all these cases, it is important to note that contrary to popular belief, death as a result of a smog siege is often not a result of air pollutant poisoning, but rather, a result of increasing susceptibility to diseases. Equally important, however, is the fact that a great level of uncertainty exists in identifying a cause-and-effect relationship between smog and smog-related illnesses. At most, we can often only say that pollutants are contributing factors to related illnesses. Consequently, this makes the exact measurements of externalities difficult, if not impossible.

Estimates have been made, however, to provide a monetary value of the costs and benefits of smog. In several studies conducted by the American Lung Association, the costs of premature deaths, hospital stays and emergency room visits, productivity loss as a result of missing work or school, and other air pollutant related health effects were an indication of inefficiency within the economy ("Air"). The reports went so far as to argue that economic growth was correlated with environmental protection by demonstrating that human health benefits of cleaner air outweighed the costs industries would have to incur as a result of higher standards (ibid). It was estimated that enforcement of all parts of the Clean Air Act between 1970 and 1990 would result in minimum benefits of $23 trillion over the twenty years, an average of over $1 trillion annually (ibid).

In a similar study conducted by the EPA for United States Congress in 1999, it was estimated that if the Clean Air Act Amendments were enforced in the 48 contingent states for the twenty-year period between 1990 and 2010, the total human health benefits in 2000 would be $68 billion and $118 billion in 2010 (EPA, "The Benefits and Costs" H-27). These benefits represent underestimates, since, in the words of the EPA itself, "there is insufficient information from both the medical and the economic sciences to satisfactorily resolve these issues from a theoretically/analytical standpoint" (ibid. H-36).

Apparently, smog is a costly externality from a human health perspective alone.

Back to top

Smog and its Effects on Agriculture and Forests

The adverse effects of smog are not limited to humans alone. As it turns out, plants are perhaps more sensitive to air pollutants than humans. In particular, acid rain has left areas barren or with severely damaged vegetation (Nebel and Wright 533). Yet, perhaps the greatest damage has been from ground-level ozone and PAN. Entering leaves of plants from the stomata during normal gas exchange, both ground-level ozone and PAN can cause discoloration, damage, and loss of leaves-reducing photosynthesis by as much as 50% (Munster; Gow and Pidwirny). Plants also become more vulnerable to attacks by pests, disease, and other environmental disasters (Shaw). Consequently, the plant's ability to store food, grow, and reproduce is hindered (ibid).

In numerical terms, ground-level ozone, alone, has been estimated to cause 10% to 40% growth loss, premature aging, and a decrease in pollen lifespan resulting in an estimable cost in agriculture of $2 billion to $6 billion per year (Nebel and Wright 533; "Smog"). Losses in crop yields were estimated to be 20% to 30% between 1989 and 1992 (Nebel and Wright 533). In Ontario alone, smog was attributed to reduce crop yields equivalent to $70 million per year ("Smog"). In a study conducted by the EPA to Congress, continuous implementation of a Clean Air Act Amendments over the period 1990 to 2010 would accumulate a minimum 1999 net present value of agricultural benefits of at least $4 billion (EPA, "The Benefits and Costs" F-8). Along with the fact that 60% of the world's food is produced in countries that also produce 60% of the world's air pollution, the significance of clean air is clearly seen (Nebel and Wright 533).

In a forestry aspect, smog incurs a cost on the existence value of trees and wild plants. In Los Angeles, smog was attributed to the deaths of 50% of trees in nearby areas (ibid.). Similarly, ground-level ozone from the Central Valley and San Francisco-Oakland metropolitan areas was responsible for increasing stress and vulnerability on the ponderosa and Jeffrey pines in the Sierra Nevada (ibid.). An attack by western pine beetles subsequently diminished the number of these trees.

As it perhaps can be predicted, the monetary costs of the loss of forests are difficult to measure, if measurable at all. Yet, it may still be worthwhile to keep in mind the option value benefits, non-consumptive use benefits, and existence value of forests, when making a balance sheet of costs and benefits of reducing smog. In another aspect, the damage to trees can have direct economic costs-as Canada discovered when it was found that ground-level ozone was the cause of damage to its sugar maple trees and other trees in its forestry industry ("Smog").

Back to top

Smog and its Effects on Materials and Aesthetics

It is said that cleaning is just as destructive as it is costly. Perhaps this is even more so when considering the material and aesthetic aspects of smog. Besides the fact that most people derive a psychological benefit of seeing a clear sky and a clean surrounding, the costs of smog can be millions of dollars.

The most visible characteristic of cities smothered by smog is perhaps the black and soot-covered windows, walls, drapes and curtains, and other exposed surfaces. Yet, other damages can be seen. Sulfur dioxide corrodes metal and stone-damaging machinery and industrial instruments, as well as destroying buildings, statues, and monuments (Lewis 33; EPA, "The Plain English"). Ground-level ozone, destroying synthetic materials, can cause leather to become brittle and rubber to lose its elasticity, resulting in

cracks (Lewis 33). Moreover, ground-level ozone has been found to damage cotton, acetate, nylon, polyester, and other textiles, while bleaching dyes, paints, and coatings ("Smog").

While it is uncertain as to how much is exactly spent on the cleaning or replacement of materials, a couple of million dollars is considered to be a reasonable estimate. Canada, alone, estimates that the increase in ground-level ozone from the United States has cost it up to one billion dollars in material damages ("Smog"). Considering that cleaning and replacement costs do not include materials that are irreplaceable and the observation that people have actually spent more to move further away from cities, these costs of pollution most likely will be underestimates (Nebel and Wright 534).

Back to top

Smog and its Effects on Ecological Systems

Sulfur dioxide and nitrogen oxides are largely responsible for the sources of acid precipitation. Because it results in acid rain with a pH of 5.5 or less, smog can have serious widespread ecological impacts on aquatic systems, forests, and on humans far away from its point of origin.

As a basic biology course will explain, slight deviations from pH values in the environment can be critical to the proper functioning of enzymes, hormones, and other proteins. In aquatic systems with a normal pH of 6 to 8, a slight deviation in most cases will pose no threat, as organisms adapt (Nebel and Wright 541). However, an organism's ability to successfully reproduce may be hindered, and in more extreme cases, a population of an organism may actually become extinct (ibid.). In forests, acid precipitation not only damages trees and plants, but also affects soil contents, which can thwart growth towards acid-tolerant species (ibid. 542). For humans, the effects of acid rain may vary from aesthetic values to the issue of clean water and air. In all of these cases, no exact monetary value can be assigned.

The fact that everyone and everything in the environment is interlinked in a chain demonstrates the difficulty in measuring an externality such as smog. Yet the simple recognition that such externalities exist can work wonders in policies attempting to ensure a more sustainable and healthier future.

Study links smog exposure to premature death

By ROBIN BRAVENDER, Greenwire

Long-term exposure to concentrated smog significantly raises the risk of dying from lung disease, a new study shows.

The **study (pdf)**, published today in the *New England Journal of Medicine*, found that the risk of dying from respiratory disease is more than three times higher in metropolitan areas with the most concentrated ozone -- a precursor of smog -- than in those with the lowest ozone concentrations.

The report is the first nationwide study to evaluate the effects of long-term impacts of ozone on human health and the first to separate the effects of ozone pollution from those of fine particle pollution, or soot, according to a statement from New York University's Langone Medical Center.

"Many studies have shown that a high ozone day leads to an increase in risk of acute health effects the next day, for example, asthma attacks and heart attacks," said co-author George Thurston, a professor at NYU's Department of Environmental Medicine, in the statement.

"What this study says is that to protect the public's health, we can't just reduce the peaks, we must also reduce long-term, cumulative exposure."

The study was co-authored by scientists from Health Canada, Brigham Young University, New York University's School of Medicine, the University of Ottawa, the American Cancer Society and the University of California, Berkeley.

Ozone is formed by a chemical reaction between nitrogen oxides and volatile organic compounds in the presence of sunlight. It is considered beneficial in the earth's stratosphere, where it forms a shield that blocks the sun's harmful rays. But ground-level ozone -- which can come from tailpipes, coal-fired utilities and other industries -- can trigger health problems including chest pain, coughing, throat irritation and congestion, according to U.S. EPA. It can also damage vegetation and ecosystems.

'Substantial risk' under EPA limits

Thurston said the study shows that EPA's current standards for airborne ozone -- measured over eight-hour periods -- do not protect against the long-term effects of ozone exposure.

"It seems clear that even in cities that are approaching meeting the existing standard, you still have a substantial risk from the cumulative long-term exposure that's not addressed by the acute standard," he said.

New York City's air, for example, is nearly in compliance with EPA's short-term ozone standard of 75 parts

per billion, he said. Still, New Yorkers face a 25 percent increased risk of respiratory death as a result of their ozone exposures, he said.

Yesterday, the Obama administration asked a federal appeals court to stall a pending court case over EPA's current smog standards to give the agency more time to consider whether to revise the controversial Bush-era air quality standards (*E&ENews PM*, March 11). Environmental groups have blasted the Bush-era standard for being too weak, while industry groups have argued that the current standard is too stringent.

Frank O'Donnell, president of the advocacy group Clean Air Watch, said the study adds fuel to clean air advocates' argument that the federal standards should be stricter.

"There's certainly a great weight of evidence to document that tougher ozone standards are needed," O'Donnell said.

AIRTrends 1995 Summary

Particulate Matter (PM-10)

Note: EPA no longer updates this information, but it may be useful as a reference or resource.

Please see www.epa.gov/airtrends for the latest information on Air Quality Trends.

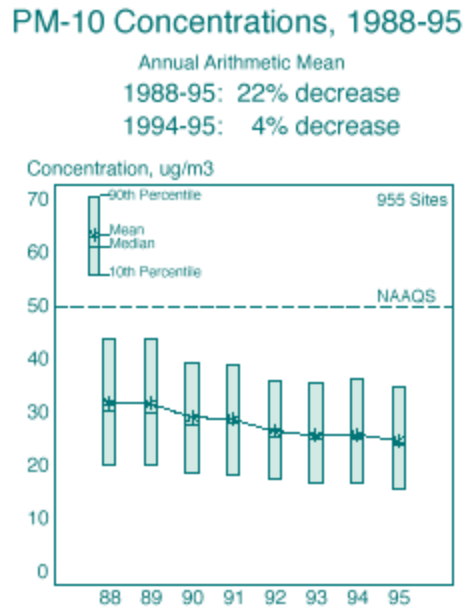
Nature and Sources of the Pollutant:

Particulate matter is the term for solid or liquid particles found in the air. Some particles are large or dark enough to be seen as soot or smoke. Others are so small they can be detected only with an electron microscope. Because particles originate from a variety of mobile and stationary sources (diesel trucks, woodstoves, power plants, etc.), their chemical and physical compositions vary widely. Particulate matter can be directly emitted or can be formed in the atmosphere when gaseous pollutants such as SO_2 and NOx react to form fine particles.

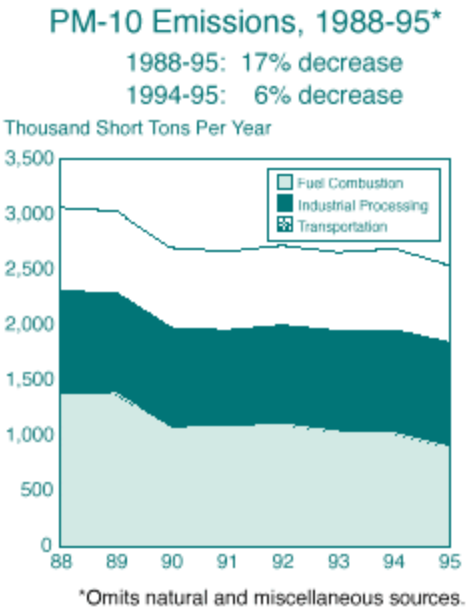
Health and Environmental Effects: In 1987, EPA replaced the earlier Total Suspended Particulate (TSP) air quality standard with a PM-10 standard. The new standard focuses on smaller particles that are likely responsible for adverse health effects because of their ability to reach the lower regions of the respiratory tract. The PM-10 standard includes particles with a diameter of 10 micrometers or less (0.0004 inches or one-seventh the width of a human hair). EPA's health-based national air quality standard for PM-10 is 50 $\mu g/m^3$ (measured as an annual mean) and 150 $\mu g/m^3$ (measured as a daily concentration). Major concerns for human health from exposure to PM-10 include: effects on breathing and respiratory systems, damage to lung tissue, cancer, and premature death. The elderly, children, and people with chronic lung disease, influenza, or asthma, are especially sensitive to the effects of particulate matter. Acidic PM-10 can also damage human-made materials and is a major cause of reduced visibility in many parts of the U.S. New scientific studies suggest that fine particles (smaller than 2.5 micrometers in diameter) may cause serious adverse health effects. As a result, EPA is considering setting a new standard for PM-2.5. In addition, EPA is reviewing whether revisions to the current PM-10 standards are warranted.

Trends in PM-10 Levels: Air monitoring networks were changed in 1987 to measure PM-10 (replacing the earlier TSP monitors).

Between 1988 and 1995, average PM-10 concentrations decreased 22 percent. Short-term trends between 1994 and 1995 showed a decrease of 4 percent in monitored PM-10 concentration levels.



Emissions of PM-10 shown in the chart are based on estimates from fuel combustion sources, industrial processes, and transportation sources, which account for only 6 percent of the total PM-10 emissions nationwide. Between 1988 and 1995, PM-10 emissions for these sources decreased 17 percent. Short-term emissions trends between 1994 and 1995 showed a 6 percent decrease.



The emissions estimates presented below do not include emissions from natural and miscellaneous sources which are fugitive dust (unpaved and paved roads), agricultural and forestry activities, wind erosion, wildfires and managed burning. These emissions estimates also do not account for particulate matter that is secondarily formed in the atmosphere from gaseous pollutants (e.g., SO_2 and NOx).

Air Pollution - Particulate Matter Brochure

This page last reviewed May 6, 2009

What is Particulate Matter (PM10)?

Particulate matter (PM10) pollution consists of very small liquid and solid particles floating in the air. Of greatest concern to public health are the particles small enough to be inhaled into the deepest parts of the lung. These particles are less than 10 microns in diameter - about 1/7th the thickness of the a human hair - and are known as PM10. This includes fine particulate matter known as PM2.5.

PM10 is a major component of air pollution that threatens both our health and our environment.

Where does PM10 come from?

In the western United States, there are sources of PM10 in both urban and rural are as, major sources include:

1. Motor vehicles.
2. Wood burning stoves and fireplaces.
3. Dust from construction, landfills, and agriculture.
4. Wildfires and brush/waste burning.
5. Industrial sources.
6. Windblown dust from open lands.

PM10 is a mixture of materials that can include smoke, soot, dust, salt, acids, and metals. Particulate matter also forms when gases emitted from motor vehicles and industry undergo chemical reactions in the atmosphere.

How does PM10 affect our health?

PM10 is among the most harmful of all air pollutants. When inhaled these particles evade the respiratory system's natural defenses and lodge deep in the lungs.

Health problems begin as the body reacts to these foreign particles. PM10 can increase the number and severity of asthma attacks, cause or aggravate bronchitis and other lung diseases, and reduce the body's ability to fight infections.

Although particulate matter can cause health problems for everyone, certain people are especially vulnerable to PM10's adverse health effects. These "sensitive populations" include children, the elderly, exercising adults, and those suffering from asthma or bronchitis.

Of greatest concern are recent studies that link PM10 exposure to the premature death of people who already have heart and lung disease, especially the elderly.

Does PM10 affect our view?

PM10 is often responsible for much of the haze that we think of as smog. This is a problem in our cities, rural areas and pristine areas - such as national parks and forests.

What is being done to reduce PM10 pollution?

The United States Environmental Protection Agency has set air quality standards for PM10. Based on health research, these identify acceptable levels of PM10. Currently, these standards are violated in many parts of the western United States.

Air quality agencies in several states have developed, or are now developing, air quality plans to bring PM10 concentrations down to healthful levels. These plans include a variety of programs to reduce emissions, including:

1. Dust control for roads, construction, and landfills.
2. Landscaping, barrier, and fencing to reduce windblown dust.
3. Programs to reduce emission from wood stoves and fireplaces.
4. Cleaner - burning gasoline and diesel fuels.
5. Emission control devices for motor vehicles.
6. Controls for industrial facilities.

What can you do?

Here are a few things individuals, business, and other organizations can do immediately to reduce the threat of PM10:

1. Reduce travel on days with poor air quality.
2. Avoid vigorous physical activity on days that have poor air quality.
3. Avoid using your wood stove and fireplace on days that have poor air quality.
4. Avoid using leaf blowers and other dust - producing equipment.
5. Drive slowly on unpaved roads and other dirt surfaces.
6. Get involved with air quality improvement programs in your community.
7. If you own or operate an industrial source of PM10, comply with local rules that apply to your operation. Work with local agencies to develop strategies that will further reduce PM10 emissions.

2009 IMPERIAL COUNTY STATE IMPLEMENTATION PLAN FOR PARTICULATE MATTER LESS THAN 10 MICRONS IN AERODYNAMIC DIAMETER

FINAL

Prepared for

Imperial County Air Pollution Control District
150 South 9th Street
El Centro, CA. 92243-2801

Prepared by

ENVIRON International Corporation
707 Wilshire Blvd., Suite 4950
Los Angeles, CA 90017

August 11, 2009

PM_{10} is respirable, with fine and ultrafine particles reaching the alveoli deep in the lungs, and larger particles depositing principally in the nose and throat area. PM_{10} deposition in the lungs results in irritation that triggers a range of inflammation responses, such as mucus secretion and bronchoconstriction, and exacerbates pulmonary dysfunctions, such as asthma, emphysema, and chronic bronchitis. Sufficiently small particles may penetrate into the bloodstream and impact functions such as blood coagulation, cardiac autonomic control, and mobilization of inflammatory cells from the bone marrow. Individuals susceptible to higher health risks from exposure to PM_{10} airborne pollution include children, the elderly, smokers, and people of all ages with low pulmonary/cardiovascular function. For these individuals in particular, adverse health effects of PM_{10} pollution include coughing, wheezing, shortness of breath, phlegm, bronchitis, and aggravation of lung or heart disease, leading for example to increased risks of hospitalization and mortality from asthma attacks and heart attacks.[1]

1.2 Imperial County

1.2.1 Geography, Population, and Land Use

Imperial County extends over 4,597 square miles[2] in the southeastern portion of California, bordering Mexico to the south, Riverside County to the north, San Diego County to the west, and the State of Arizona to the east. The Imperial Valley runs approximately north-to-south through the center of the county and extends into Mexico. The terrain elevation varies from as low as 230 feet below sea level at the Salton Sea to the north to more than 2,800 feet above sea level at the mountain summits to the east.

Imperial County's population is about 173,000 people,[3] and its principal industries are farming and retail trade. Most of the population, farming, and retail trade exist in a band of land that, on average, comprises less than one-fourth the width of the county, stretching from the south shore of the Salton Sea to the Mexican border. The road network is densest within this strip, as shown in Figure 1.1. The rest of Imperial County is the Salton Sea and mostly dry, barren desert area with little or no human population. Imperial County's population distribution and population growth in recent years are reported in Appendix V.

Imperial County's agricultural industry[4] grew to $1.37 billion in 2007, led by cattle farming at $334 million. More than 40 types of crops and commodities are grown in the county, ranking Imperial County 11th among California counties.[5] The total acreage of famed land has remained fairly constant at ~500,000 acres over the last decade, and nearly 25% of the county's labor force works in the Agricultural Sector during the high season.

---

Lozeau | Drury LLP
410 12th Street, Suite 250
Oakland, CA 94607

Attn: Mr. Michael Lozeau

Subject: Comment Letter on the Draft Environmental Impact Report for the Prologis Eucalyptus Industrial Park, SCH No. 2008021002.

Dear Mr. Lozeau:

At the request of Lozeau | Drury LLP **(**Lozeau Drury), Clark and Associates (Clark) has reviewed materials related to the above referenced project, including the Draft Environmental Impact Report[1] (DEIR) for the Prologis Eucalyptus Industrial Park (hereafter called the Project), SCH No. 2008021002 and its appendices. The proposed project site is located in the eastern portion of the City of Moreno Valley, in Riverside County, California. The 122.8-acre project site is located south of State Route 60 (SR-60) east of the Moreno Valley Auto Mall, and adjacent to and west of the Quincy Channel. According to the DEIR the proposed project would result in the construction and operation of a warehouse facility, consisting of approximately 2,244,638 square feet (sq ft).

Currently the site is used undeveloped for commercial uses and has two citrus groves in the northeastern and northwestern portions of the site, while the central and southern portions are vacant and support mainly weedy vegetation. According to a March, 2012 Memo from LSA

[1] LSA. 2012. Draft Environmental Impact Report, State Clearinghouse No. 2008021002, Prologis Eucalyptus Industrial Park (formerly Prologis Park Moreno Valley Eucalyptus Project), City of Moreno Valley, Riverside County, California. LSA Associates, Inc. 1500 Iowa Ave, Suite 200, Riverside, CA LAS Project No. PLO1101. Prepared July 2012 pg. 1-2

Associates[2], the project site contains 57-acres of citrus (Grapefruit) trees with the rest of the site vacant. The surrounding area has been dry-farmed in the past, and the eastern end of the City has historically supported a variety of crops, including citrus, melon, potatoes, etc[3]. There are three small natural drainage features on site, two ephemeral channels in the southwestern portion of the site and the larger Quincy Channel along the eastern edge of the property. According to the DEIR[4], there is some minor amount of refuse is present in the southwest and southeast corners of the site from unauthorized dumping.

Land adjacent to the project site includes vacant land east and south of the proposed project site, SR- 60 to the north, and the Moreno Valley Auto Mall and the City of Moreno Valley Fire Station No. 58 northwest of the project site. Existing single-family residential uses are located approximately 50 feet southeast of the southeastern corner of the project site[5].

The proposed project has had and will have significant impacts on the community prior to the approval of the DEIR. The proposed project will require significant changes in the local zoning ordinances (General Plan for the City of Moreno Valley) including:

---

Draft Environmental Impact Report, State Clearinghouse No. 2008021002, Prologis Eucalyptus Industrial Park (formerly Prologis Park Moreno Valley Eucalyptus Project), City of Moreno Valley, Riverside County, California. LSA Associates, Inc. 1500 Iowa Ave, Suite 200, Riverside, CA LAS Project No. PLO1101. Prepared July 2012 pg 3-1

[5] LSA. 2012. Draft Environmental Impact Report, State Clearinghouse No. 2008021002, Prologis Eucalyptus Industrial Park (formerly Prologis Park Moreno Valley Eucalyptus Project), City of Moreno Valley, Riverside County, California. LSA Associates, Inc. 1500 Iowa Ave, Suite 200, Riverside, CA LAS Project No. PLO1101. Prepared July 2012 pg 3-1

- Approval of a General Plan Amendment to change the land use designation of 71.3 acres of the project site from Residential (R15, R5, and R2) to Business Park (BP) so the entire site would then be designated Business Park (BP).
- Approval of a Zone Change of the entire 122.8 acres from its current zoning designations of Business Park (BP), Business Park/Mixed Use (BPX), Residential 15 District (R15), Residential 5 District (R5), and Residential Agriculture 2 (RA-2) to all Light Industrial (LI).
- Zone Change will also be used to redraw the boundary of the Primary Animal Keeping Overlay (PAKO) district.
- Approval of an amendment to the City's Master Plan of Trails to relocate the Eucalyptus Avenue Trail to the north side of future Eucalyptus Avenue and eliminate the planned trail segment on Quincy Avenue from SR-60 to Fir Avenue (future Eucalyptus Avenue), based on discussion with the City Trails Commission.
- Approval of an amendment to the Circulation Element of the General Plan. These changes include the following:
    - Eliminate the undeveloped Quincy Street from Eucalyptus Avenue south to Encilia Avenue;
    - Realign Encilia Avenue from its current alignment such that its westerly terminus is located at Moreno Beach Drive instead of the current General Plan westerly terminus at Eucalyptus Avenue; and
    - The segment between Quincy Channel and Moreno Beach Drive would be classified as a Collector.

In addition, to the changes above, the proposal of the project has forced the Moreno Valley Unified School District (MVUSD) to abandon plans to locate an elementary school (MVUSD Elementary School #24), a middle school (MVUSD Middle School #7), and a high school (MVUSD

High School #5) in the vicinity of Redlands Boulevard and future Eucalyptus Avenue, in close proximity to the proposed. After the Notice of Preparation (NOP) for the proposed project was released, MVUSD decided to abandon plans for these school sites and relocate the future school facilities in a different area of the City[6]. Students who live in the area to be serviced by the proposed schools will now have to travel farther to attend schools.

The DEIR for the Project, determined that the proposed project's construction and operational phases would have impacts on air quality that would be less than significant with mitigation incorporated. These conclusions are premature and based upon a flawed analysis of the potential emissions at the site. The proponents should re-evaluate the impacts of the project and present them in a revised draft environmental impact report (RDEIR).

Clark's review of the materials in no way constitutes a validation of the conclusions or materials contained within the plan. If we do not comment on a specific item this does not constitute acceptance of the item.

This DEIR was issued prematurely without considering the serious flaws in the Proponent's analysis of the project. The flaws include:

1. The proponent's use of the CalEEMod ensures an underestimation of the potential particulate emission for the construction phase of the proposed project.
2. Failure of the proponent to compare construction emissions to daily construction significance thresholds;
3. Failure to consider health risks from contaminated dust; and
4. Failure to properly identify and address the Project's operational air quality impacts.

Draft Environmental Impact Report, State Clearinghouse No. 2008021002, Prologis Eucalyptus Industrial Park (formerly Prologis Park Moreno Valley Eucalyptus Project), City of Moreno Valley, Riverside County, California. LSA Associates, Inc. 1500 Iowa Ave, Suite 200, Riverside, CA LAS Project No. PLO1101. Prepared July 2012 pg 4.3-6.

COMMENTS

1. The Proponent's Use Of The CalEEMod Ensures An Underestimation Of The Potential Particulate Emission For The Construction Phase Of The Proposed Project.

The California Air Resource Board's (CARB's) Urban Emission (URBEMIS) model and the California Emissions Estimator Model (CalEEMod) are computer models designed to estimate emissions of criteria pollutants during construction and operational phases of projects. Currently, South Coast Air Quality Management District (SCAQMD) accepts the outputs from both models in their air quality analyses. Significant differences in the models must be highlighted in the DEIR. The changes in the method used to estimate construction impacts from the proposed project by using the CalEEMod model instead of the URBEMIS model include:

- Failure to account for wind-blown fugitive dust[7]. According to the July, 2011 CalEEMod Technical Paper, wind-blown fugitive dust is not calculated in CalEEMod. For sites as large as the proposed project site, this can result in significant quantities of particulate matter being released.
- SCAQMD's surveys of construction sites were limited to sites of 35 acres or less. For projects larger than 35-acres the data was extrapolated by increasing the number of construction days but not increasing the number of construction equipment pieces used on a given day. The impact is to reduce the construction PM estimates for the site as compared to URBEMIS[8].

[7] CalEEMod. Technical Paper: Methodology Reasoning and Policy Development of the California Emission Estimator Model. July, 2011. Pg 4.

[8] CalEEMod. Technical Paper: Methodology Reasoning and Policy Development of the California Emission Estimator Model. July, 2011. Pg 5.

- Grading in URBEMIS is based upon 25% of total project acreage in one day. Grading in CalEEMod is based upon Walker's Building Estimator's Reference Book. The impact of this change is to decrease PM emissions from grading in the CalEEMod[9] by tying the emissions to the number of pieces of equipment present at the site.

The proponent's must include an analysis of these impacts in a revised DEIR (RDEIR) to ensure that an accurate analysis of the potential impacts from the proposed project are presented as required by CEQA.

2. Failure To Accurately Compare Construction Emissions To Daily Construction Significance Thresholds.

Unlike the operational emissions from most projects, which are typically more or less continuous, emissions from construction sites are highly variable depending on the type of construction that is being performed. For example, grading results in large quantities of fugitive dust and combustion emissions from diesel-powered equipment. Short-term emissions during the various construction phases can be considerable and may result in degradation of local and regional air quality and severe health effects.

To determine whether short-term emissions may result in degradation of local and regional air quality and severe health effects, it is common practice for lead agencies to compare project emissions to quantitative significance thresholds developed by local air districts as a screening tool for CEQA review. Thresholds of significance for construction emissions are typically expressed on a short-term basis, *i.e.* daily or hourly basis to adequately capture impacts due to the high variability of emissions during different construction stages.

[9] CalEEMod. Technical Paper: Methodology Reasoning and Policy Development of the California Emission Estimator Model. July, 2011. Pg 5.

Table 1 presents a summary of short-term emissions thresholds developed by SCAQMD and other air districts for assessing impacts on air quality from construction projects.

Table 1:
CEQA significance thresholds for construction emissions from various air districts

Air district construction thresholds*	**NOx** (lbs/day)	**ROG** (lbs/day)	**PM_{10}** (lbs/day)	**DPM** (lbs/day)	**$PM_{2.5}$** (lbs/day)	**CO** (lbs/day)
SCAQMD	100	75	150		55	550
BAAQMD	54	54	82		54	
EDCAPCD	82	82				
SLOCAPCD				7		
MBUAPCD			82			550
FRAQMD	25	25	80			
SMAQMD	85					
YSAQMD	82	82	150

EDCAPCD = El Dorado County Air Pollution Control District, CEQA Guide, February 2002;
SLOCAPCD = San Louis Obispo County Air Pollution Control District, CEQA Air Quality Handbook, December 2009.
MBUAPCD = Monterey Bay Unified Air Pollution Control District, CEQA Air Quality Guidelines, June 2004,
FRAQMD = Feather River Air Quality Management District, http://www.fraqmd.org/CEQA_Thresholds.htm;
SMAQMD Sacramento Metropolitan Air Quality Management District, Guide to Air Quality Assessment, July 2004;
YSAQMD, Yolo-Solano Air Quality Management District, Air Quality Handbook, Guidelines for Determining Air Quality Thresholds of Significance and Mitigation Measures for Proposed Development Projects that Generate Emissions from Motor Vehicles, revised 2002

According to the DEIR[10], "criteria pollutant emissions during project construction would exceed the SCAQMD emission thresholds for oxides of nitrogen (NO_X) and reactive organic gases (ROG). Compliance with SCAQMD Rules and Regulations during construction will minimize construction-related air quality impacts from fugitive dust emissions and construction equipment emissions. Mitigation is required. The proposed

[10] LSA. 2012. Draft Environmental Impact Report, State Clearinghouse No. 2008021002, Prologis Eucalyptus Industrial Park (formerly Prologis Park Moreno Valley Eucalyptus Project), City of Moreno Valley, Riverside County, California. LSA Associates, Inc. 1500 Iowa Ave, Suite 200, Riverside, CA LAS Project No. PLO1101. Prepared July 2012 pg 1.

project would not exceed any of the localized significance thresholds (LSTs) during construction periods." This statement is incorrect and misleading.

A review of the CalEEMod analysis for the project shows that the mitigated construction emissions of ROG and particulate matter less than 2.5 microns ($PM_{2.5}$) exhaust (a surrogate for diesel particulate emissions) are in excess of the CEQA significance thresholds listed above. During Year 2013, ROG and $PM_{2.5}$ exhaust emissions are estimated to be 368.03 lbs/day and 7.95 lbs/day, respectively.

In addition to the Significant Thresholds above, SCAQMD recommends the use of LSTs to determine potential impacts to receptors near projects. According to the Air Quality Analysis prepared by the proponent, Table I of the Air Quality Analysis (Table 2 below) shows that the emissions of the pollutants on the peak day of construction are below the SCAQMD LST. In this table the proponent uses the emission estimates from the grading phase of the construction. The proponent inaccurate asserts that the emission levels will be below the LST values.

Table 2:

Construction LST Impacts from Air Quality Analysis

Emission Sources	Pollutant Emissions, lbs/day			
	NOx	CO	PM_{10}	$PM_{2.5}$
On-Site (grading) Emissions	104	55	8.4	6.3
LST Threshold	270	1,577	13	8
Significant Emissions?	No	No	No	No

A review of the CalEEMod analysis shows that the highest emission values are not associated with the grading phase. In Section 2.0 Emission Summary of the CalEEMod analysis presented in the Air Quality Analysis the construction impacts are listed as:

Table 3:

Construction LST Impacts from CalEEMod Output

Emission Sources	Pollutant Emissions, lbs/day			
	NOx	CO	PM_{10}	$PM_{2.5}$
Mitigated Construction Emissions	139.84	166.77	29.2	8.28
LST Threshold	270	1,577	13	8
Significant Emissions?	No	No	**Yes**	**Yes**

The Proponent's analysis of air quality impacts clearly fails to accurately describe the impacts of the emissions on the receptors closest to the project site (homes within 50 feet of the site boundary and the fire station immediately adjacent to the site boundary). Emissions of $PM_{2.5}$ (surrogate for diesel exhaust) and PM_{10} from the construction site may have lasting impacts on the receptors nearby.

Diesel exhaust contains nearly 40 toxic substances including toxic air contaminants (TACs) and may pose a serious public health risk for residents in the vicinity of the facility. TACs are airborne substances that are capable of causing short-term (acute) and/or long-term (chronic or carcinogenic, i.e., cancer causing) adverse human health effects (i.e., injury or illness). TACs include both organic and inorganic chemical substances. The current California list of TACs[11] includes approximately 200 compounds, including particulate emissions from diesel-fueled engines.

DPM and TAC emissions may affect numerous sensitive receptors in the region including onsite construction workers, fire personnel at the station adjacent to the site and the single-family residences located near the site. Evidence exists that clouds of soot emitted by heavy-duty

[11] URS. 2012. Impacts to Air Quality from the Construction and Operation of the Brannon Solar, LLC Solar Energy Generation Project. Dated Febraury 7, 2012. Table A-7

construction equipment can travel downwind for miles, then drift into heavily populated areas. For example, health impact studies from the SCAQMD[12] have documented that diesel emissions travel miles from the sources impacting residents.

Diesel exhaust has been linked to a range of serious health problems including an increase in respiratory disease, lung damage, cancer, and premature death[13,14,15]. Fine diesel particles are deposited deep in the lungs in the smallest airways and can result in increased respiratory symptoms and disease; decreased lung function, particularly in children and individuals with asthma; alterations in lung tissue and respiratory tract defense mechanisms; and premature death.[16] Exposure to diesel exhaust increases the risk of lung cancer. It also causes non-cancer effects including chronic bronchitis, inflammation of lung tissue, thickening of the alveolar walls, immunological allergic reactions, and airway constriction.[17]

[12] SCAQMD MATES I, II, and III have documented the impacts for DPM in the SCAB.

[16] California Air Resources Board , Initial Statement of Reasons for Rulemaking, Proposed Identification of Diesel Exhaust as a Toxic Air Contaminant, Staff Report, June 1998.

[17] Findings of the Scientific Review Panel on The Report on Diesel Exhaust as adopted at the Panel's April 22, 1998 Meeting.

A recent analysis found that air pollution from diesel construction equipment is already taking a heavy toll on the health and economic well-being of Californians[18,19].

PM_{10} emissions from the construction phase of the proposed project may be extremely troublesome for receptors near the site (i.e., homes near the site boundary and the fire station next to the site) since they will act as carriers for residual pesticides/herbicides from the site (see comment below). The project site currently contains 57-acres of citrus (Grapefruit) trees and the surrounding area has been dry-farmed in the past, and the eastern end of the City of Moreno Valley historically supported a variety of other crops[20]. Given the proximity of receptors to the site and the estimated emission rates of particulate matter from the site after mitigation, it is clear that construction activities at the project site will adversely impact the previously identified receptors.

Based on my expert opinion, applicable significance thresholds, and the CalEEMod analysis performed by the proponent, I conclude that the Project will have significant adverse impacts from construction air emissions of fugitive dust, ROG, and diesel emissions. The lead agency must re-evaluate the construction emissions and incorporate a phased approach to estimate the true impacts of construction activities on air quality, and propose all feasible mitigation measures to reduce these significant emissions, in a RDEIR.

---

[18] These estimates are conservative because they do not include emissions from a large number of small construction projects (residential and commercial and projects smaller than 1 acre in size). Further, John Hakel, vice president of the Associated General Contractors, which represents construction equipment fleet owners and general contractors, indicated that the report appeared to underestimate the sheer volume of construction equipment.

[19] Union of Concerned Scientists, Digging up Trouble: Construction Pollution in the Bay Area; http://www.ucsusa.org/assets/documents/clean_vehicles/Bay-Area-Fact-Sheet.pdf, accessed March 27, 2008.

[20] LSA. 2012. Project Memorandum: Agricultural Use of ProLogis Industrial Property. Memorandum from Kent Norton, LSA Riverside Office to Jeff Bradshaw, City of Moreno Valley. Dated March 21, 2012.

3. Failure To Consider Health Risks From Contaminated Dust.

Residual contaminants in soils at the site may be entrained in dust generated during construction activities. The release of residual contamination is a potentially significant impact, given the past use of the site for agricultural production. According to the California Department of Toxic Substances Control August 2002 Interim Guidance for Sampling Agricultural Fields for School Sites (known sensitive receptors), "the most commonly detected pesticides have been DDT and it's derivatives DDD and DDE, toxaphene, dieldrin, and aldrin. Of these pesticides, toxaphene has been the major pesticide driving unacceptable levels of risk requiring remediation by soil removal." Given the volume of soils to be graded at each of the sites it is imperative to understand whether particulate matter generated at the sites will pose a potential health risk to sensitive receptors in the vicinity of each site.

According to DTSC, "the guidance is applicable to agricultural land that is currently under cultivation with row, fiber or food crops, orchards, or pasture. It is also applicable to fallow and former agricultural land that is no longer in production and has not been disturbed beyond normal disking and plowing practices. Each field of the same crop is assumed to have been watered, fertilized, and treated with agricultural chemicals to the same degree across the field. Because of this homogeneous application, contaminant levels are expected to be similar at any given location within the field."

There is no indication of a sampling and analysis plan in the DEIR, or the Project documents provided by the lead agency, which is a serious deficiency. Prior to issuing a DEIR for the project, the Proponent should be required to complete a sampling and analysis plan to confirm or rule out the possibility of the presence of residual contaminants at the site. Identifying residual pesticides or other contaminants in soils at the site

prior to construction activities will provide an opportunity for the Proponent to remove/mitigate the potential exposure of sensitive receptors within the vicinity of the sites. In the absence of any sampling or analysis, and given the past use of the Project site, I conclude that there is at least a fair argument that the Project may have significant impacts related to residual contaminants at the site.

4. Failure To Properly Identify and Address the Project's Operational Air Quality Impacts.

The DEIR asserts with no analysis whatsoever that the project's emissions of criteria pollutants will not result in a considerable net increase of any criteria pollutant for which the project region is in no-attainment under an applicable federal or state ambient air quality standard.

During the operational phase of the project the project will have the potential to generate significant quantities of criteria pollutants (NO_x, SO_x, Ozone precursors, PM). According to Table 3-1 of the most recent BAAQMD CEQA guidance, a construction of a 259,000 square foot light industrial or warehouse operation will typically violate NOx construction thresholds and GHG operational thresholds. The proposed Project's 2,000,000 square feet plus of warehouse and manufacturing buildings are nearly 8 times the size of the screening threshold, ensuring a violation of local air quality thresholds. I therefore conclude that the Project will have significant NOx and GHG emissions during Project operations.

The air quality impacts from the traffic associated with a 2,000,000 square foot facility are significant. Typically the impacts are quantified by the number of vehicle trips per day. In the case of the proposed project, the primary concern will be the number of truck trips per day. A truck trip is one round trip (one trip segment to a site and one trip segment away from a site).

According to one source, Bluffstone and Ouderkirk[21], a 500,000 square feet facility on 50 acres, will on average have 350 truck trips per day (or 700 trip segments) associated with its development. This figure is proportionate to estimates for an AMB Property Corporation center in Redlands (1,000 truck trips for a 1.3 million square feet structure); Wal-Mart distribution centers in Pueblo, Colorado (700 truck trips per day for an 880,000 square feet facility), Connecticut, and Delaware (both 1,000 truck trips per day for 1.2 million square feet structures); and a grocery distribution center in New York (Boas, 2002; Gasiewski, 2004; Hernandez, 2005; Pueblo Chieftain, 2004; Sholl, 2004).

Estimates from other sources indicate approximately 1 truck per 1,000 square feet of the building, which means that the proposed project would require 1,000 trucks per day (or 1,000 trip segments per day) for the warehouse segment of the Project. The number of truck trips could be higher at a new, more efficient facility where more inventory is moved per day. Without proper modeling of the emissions from these additional vehicles the impacts on the environment and the citizens of Moreno Valley is unknown. It is clear that the size of the Project will have significant NOx and GHG emissions during Project operations.

A proper operational impact analysis is vital for an environmental analysis because the full environmental impact of a proposed project cannot be gauged in a vacuum. One of the most important environmental lessons that has been learned is that the environmental damage often occurs incrementally from a variety of small sources with which they interact. The increase in PM in the region, even for short periods of time, will only exacerbate the already serious air quality issues in the region.

[21]Bluffstone and Ouderkirk. 2007. Warehouses, trucks, and [PM.sub.2.5]: human health and logistics industry growth in the eastern Inland Empire. Contemporary Economic Policy 25(1):

Conclusion

The facts identified and referenced in this comment letter lead me to reasonably conclude that the Project will result in significant adverse impacts that were not identified in the DEIR and that are not adequately mitigated. Many of the DEIR's conclusions that environmental impacts are not significant or less than significant with mitigation are unsupported or contradicted by the evidence. As a result, several analyses presented in the DEIR, including impacts on air quality fail to identify or disclose the magnitude of significant adverse impacts. To protect air quality and public health the Proponent must prepare a RDEIR for the Project.

Sincerely,

James Clark, Ph.D.

James J. J. Clark, Ph.D.

Principal Toxicologist

Toxicology/Exposure Assessment Modeling

Risk Assessment/Analysis/Dispersion Modeling

Education:

Ph.D., Environmental Health Science, University of California, 1995

M.S., Environmental Health Science, University of California, 1993

B.S., Biophysical and Biochemical Sciences, University of Houston, 1987

Professional Experience:

Dr. Clark is a well recognized toxicologist, air modeler, and health scientist. He has 20 years of experience in researching the effects of environmental contaminants on human health including environmental fate and transport modeling (SCREEN3, AEROMOD, ISCST3, Johnson-Ettinger Vapor Intrusion Modeling); exposure assessment modeling (partitioning of contaminants in the environment as well as PBPK modeling); conducting and managing human health risk assessments for regulatory compliance and risk-based clean-up levels; and toxicological and medical literature research.

Significant projects performed by Dr. Clark include the following:

LITIGATION SUPPORT

Case: James Harold Caygle, et al, v. Drummond Company, Inc. Circuit Court for the Tenth Judicial Circuit, Jefferson County, Alabama. Civil Action. CV-2009

Client: Environmental Litgation Group, Birmingham, Alabama

Dr. Clark performed an air quality assessment of emissions from a coke factory located in Tarrant, Alabama. The assessment reviewed include a comprehensive review of air quality standards, measured concentrations of pollutants from factory, an inspection of the facility and detailed assessment of the impacts on the community. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Rose Roper V. Nissan North America, et al. Superior Court of the State Of California for the County Of Los Angeles – Central Civil West. Civil Action. NC041739

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to multiple chemicals, including benzene, who later developed a respiratory distress. A review of the individual's medical and occupational history was performed to prepare an exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to respiratory irritants. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: O'Neil V. Sherwin Williams, et al. United States District Court Central District of California

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to petroleum distillates who later developed a bladder cancer. A review of the individual's medical and occupational history was performed to prepare a quantitative exposure assessment. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Summary judgment for defendants.

Case: Moore V., Shell Oil Company, et al. Superior Court of the State Of California for the County Of Los Angeles

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to chemicals while benzene who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a quantitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Raymond Saltonstall V. Fuller O'Brien, KILZ, and Zinsser, et al. United States District Court Central District of California

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to benzene who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a quantitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Richard Boyer and Elizabeth Boyer, husband and wife, V. DESCO Corporation, et al. Circuit Court of Brooke County, West Virginia. Civil Action Number 04-C-7G.

Client: Frankovitch, Anetakis, Colantonio & Simon, Morgantown, West Virginia.

Dr. Clark performed a toxicological assessment of a family exposed to chlorinated solvents released from the defendant's facility into local drinking water supplies. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to chlorinated solvents. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: JoAnne R. Cook, V. DESCO Corporation, et al. Circuit Court of Brooke County, West Virginia. Civil Action Number 04-C-9R

Client: Frankovitch, Anetakis, Colantonio & Simon, Morgantown, West Virginia.

Dr. Clark performed a toxicological assessment of an individual exposed to chlorinated solvents released from the defendant's facility into local drinking water supplies. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to chlorinated solvents. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Patrick Allen And Susan Allen, husband and wife, and Andrew Allen, a minor, V. DESCO Corporation, et al. Circuit Court of Brooke County, West Virginia. Civil Action Number 04-C-W

Client: Frankovitch, Anetakis, Colantonio & Simon, Morgantown, West Virginia.

Dr. Clark performed a toxicological assessment of a family exposed to chlorinated solvents released from the defendant's facility into local drinking water supplies. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to chlorinated solvents. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Michael Fahey, Susan Fahey V. Atlantic Richfield Company, et al. United States District Court Central District of California Civil Action Number CV-06 7109 JCL.

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to refined petroleum hydrocarbons who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Constance Acevedo, et al., V. California Spray-Chemical Company, et al., Superior Court of the State Of California, County Of Santa Cruz. Case No. CV 146344

Dr. Clark performed a comprehensive exposure assessment of community members exposed to toxic metals from a former lead arsenate manufacturing facility. The former manufacturing site had undergone a DTSC mandated removal action/remediation for the presence of the toxic metals at the site. Opinions were presented regarding the elevated levels of arsenic and lead (in attic dust and soils) found throughout the community and the potential for harm to the plaintiffs in question.

Case Result: Settlement in favor of defendant.

Case: Michael Nawrocki V. The Coastal Corporation, Kurk Fuel Company, Pautler Oil Service, State of New York Supreme Court, County of Erie, Index Number I2001-11247

Client: Richard G. Berger Attorney At Law, Buffalo, New York

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to refined petroleum hydrocarbons who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the

known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Judgement in favor of defendant.

SELECTED AIR MODELING RESEARCH/PROJECTS

Client – Confidential

Dr. Clark performed a comprehensive evaluation of criteria pollutants, air toxins, and particulate matter emissions from a carbon black production facility to determine the impacts on the surrounding communities. The results of the dispersion model will be used to estimate acute and chronic exposure concentrations to multiple contaminants and will be incorporated into a comprehensive risk evaluation.

Client – Confidential

Dr. Clark performed a comprehensive evaluation of air toxins and particulate matter emissions from a railroad tie manufacturing facility to determine the impacts on the surrounding communities. The results of the dispersion model have been used to estimate acute and chronic exposure concentrations to multiple contaminants and have been incorporated into a comprehensive risk evaluation.

Client – Los Angeles Alliance for a New Economy (LAANE), Los Angeles, California

Dr. Clark is advising the LAANE on air quality issues related to current flight operations at the Los Angeles International Airport (LAX) operated by the Los Angeles World Airport (LAWA) Authority. He is working with the LAANE and LAX staff to develop a comprehensive strategy for meeting local community concerns over emissions from flight operations and to engage federal agencies on the issue of local impacts of community airports.

Client – City of Santa Monica, Santa Monica, California

Dr. Clark is advising the City of Santa Monica on air quality issues related to current flight operations at the facility. He is working with the City staff to develop a comprehensive strategy for meeting local community concerns over emissions from flight operations and to engage federal agencies on the issue of local impacts of community airports.

Client: Omnitrans, San Bernardino, California

Dr. Clark managed a public health survey of three communities near transit fueling facilities in San Bernardino and Montclair California in compliance with California Senate Bill 1927. The survey included an epidemiological survey of the effected communities, emission surveys of local businesses, dispersion modeling to determine potential emission concentrations within the communities, and a comprehensive risk assessment of each community. The results of the study were presented to the Governor as mandated by Senate Bill 1927.

Client: Confidential, San Francisco, California

Summarized cancer types associated with exposure to metals and smoking. Researched the specific types of cancers associated with exposure to metals and smoking. Provided causation analysis of the association between cancer types and exposure for use by non-public health professionals.

Client: Confidential, Minneapolis, Minnesota

Prepared human health risk assessment of workers exposed to VOCs from neighboring petroleum storage/transport facility. Reviewed the systems in place for distribution of petroleum hydrocarbons to identify chemicals of concern (COCs), prepared comprehensive toxicological summaries of COCs, and quantified potential risks from carcinogens and non-carcinogens to receptors at or adjacent to site. This evaluation was used in the support of litigation.

Client – United Kingdom Environmental Agency

Dr. Clark is part of team that performed comprehensive evaluation of soil vapor intrusion of VOCs from former landfill adjacent residences for the United Kingdom's Environment

Agency. The evaluation included collection of liquid and soil vapor samples at site, modeling of vapor migration using the Johnson Ettinger Vapor Intrusion model, and calculation of site-specific health based vapor thresholds for chlorinated solvents, aromatic hydrocarbons, and semi-volatile organic compounds. The evaluation also included a detailed evaluation of the use, chemical characteristics, fate and transport, and toxicology of chemicals of concern (COC). The results of the evaluation have been used as a briefing tool for public health professionals.

EMERGING/PERSISTENT CONTAMINANT RESEARCH/PROJECTS

Client: Ameren Services, St. Louis, Missouri

Managed the preparation of a comprehensive human health risk assessment of workers and residents at or near an NPL site in Missouri. The former operations at the Property included the servicing and repair of electrical transformers, which resulted in soils and groundwater beneath the Property and adjacent land becoming impacted with PCB and chlorinated solvent compounds. The results were submitted to U.S. EPA for evaluation and will be used in the final ROD.

Client: City of Santa Clarita, Santa Clarita, California

Dr. Clark is managing the oversight of the characterization, remediation and development activities of a former 1,000 acre munitions manufacturing facility for the City of Santa Clarita. The site is impacted with a number of contaminants including perchlorate, unexploded ordinance, and volatile organic compounds (VOCs). The site is currently under a number of regulatory consent orders, including an Immanent and Substantial Endangerment Order. Dr. Clark is assisting the impacted municipality with the development of remediation strategies, interaction with the responsible parties and stakeholders, as well as interfacing with the regulatory agency responsible for oversight of the site cleanup.

Client: Confidential, Los Angeles, California

Prepared comprehensive evaluation of perchlorate in environment. Dr. Clark evaluated the production, use, chemical characteristics, fate and transport, toxicology, and remediation of perchlorate. Perchlorates form the basis of solid rocket fuels and have recently been detected in water supplies in the United States. The results of this research

were presented to the USEPA, National GroundWater, and ultimately published in a recent book entitled *Perchlorate in the Environment.*

Client – Confidential, Los Angeles, California

Dr. Clark is performing a comprehensive review of the potential for pharmaceuticals and their by-products to impact groundwater and surface water supplies. This evaluation will include a review if available data on the history of pharmaceutical production in the United States; the chemical characteristics of various pharmaceuticals; environmental fate and transport; uptake by xenobiotics; the potential effects of pharmaceuticals on water treatment systems; and the potential threat to public health. The results of the evaluation may be used as a briefing tool for non-public health professionals.

PUBLIC HEALTH/TOXICOLOGY

Client: Brayton Purcell, Novato, California

Dr. Clark performed a toxicological assessment of residents exposed to methyl-tertiary butyl ether (MTBE) from leaking underground storage tanks (LUSTs) adjacent to the subject property. The symptomology of residents and guests of the subject property were evaluated against the known outcomes in published literature to exposure to MTBE. The study found that residents had been exposed to MTBE in their drinking water; that concentrations of MTBE detected at the site were above regulatory guidelines; and, that the symptoms and outcomes expressed by residents and guests were consistent with symptoms and outcomes documented in published literature.

Client: Confidential, San Francisco, California

Identified and analyzed fifty years of epidemiological literature on workplace exposures to heavy metals. This research resulted in a summary of the types of cancer and non-cancer diseases associated with occupational exposure to chromium as well as the mortality and morbidity rates.

Client: Confidential, San Francisco, California

Summarized major public health research in United States. Identified major public health research efforts within United States over last twenty years. Results were used as a briefing tool for non-public health professionals.

Client: Confidential, San Francisco, California

Quantified the potential multi-pathway dose received by humans from a pesticide applied indoors. Part of team that developed exposure model and evaluated exposure concentrations in a comprehensive report on the plausible range of doses received by a specific person. This evaluation was used in the support of litigation.

Client: Covanta Energy, Westwood, California

Evaluated health risk from metals in biosolids applied as soil amendment on agricultural lands. The biosolids were created at a forest waste cogeneration facility using 96% whole tree wood chips and 4 percent green waste. Mass loading calculations were used to estimate Cr(VI) concentrations in agricultural soils based on a maximum loading rate of 40 tons of biomass per acre of agricultural soil. The results of the study were used by the Regulatory agency to determine that the application of biosolids did not constitute a health risk to workers applying the biosolids or to residences near the agricultural lands.

Client – United Kingdom Environmental Agency

Oversaw a comprehensive toxicological evaluation of methyl-*tertiary* butyl ether (M*t*BE) for the United Kingdom's Environment Agency. The evaluation included available data on the production, use, chemical characteristics, fate and transport, toxicology, and remediation of M*t*BE. The results of the evaluation have been used as a briefing tool for public health professionals.

Client – Confidential, Los Angeles, California

Prepared comprehensive evaluation of *tertiary* butyl alcohol (TBA) in municipal drinking water system. TBA is the primary breakdown product of M*t*BE, and is suspected to be the primary cause of M*t*BE toxicity. This evaluation will include available information on the production, use, chemical characteristics, fate and transport in the environment, absorption, distribution, routes of detoxification, metabolites, carcinogenic potential, and remediation of TBA. The results of the evaluation were used as a briefing tool for non-public health professionals.

Client – Confidential, Los Angeles, California

Prepared comprehensive evaluation of methyl *tertiary* butyl ether (MTBE) in municipal drinking water system. MTBE is a chemical added to gasoline to increase the octane

rating and to meet Federally mandated emission criteria. The evaluation included available data on the production, use, chemical characteristics, fate and transport, toxicology, and remediation of MTBE. The results of the evaluation have been were used as a briefing tool for non-public health professionals.

Client – Ministry of Environment, Lands & Parks, British Columbia

Dr. Clark assisted in the development of water quality guidelines for methyl tertiary-butyl ether (MTBE) to protect water uses in British Columbia (BC). The water uses to be considered includes freshwater and marine life, wildlife, industrial, and agricultural (e.g., irrigation and livestock watering) water uses. Guidelines from other jurisdictions for the protection of drinking water, recreation and aesthetics were to be identified.

Client: Confidential, Los Angeles, California

Prepared physiologically based pharmacokinetic (PBPK) assessment of lead risk of receptors at middle school built over former industrial facility. This evaluation is being used to determine cleanup goals and will be basis for regulatory closure of site.

Client: Kaiser Venture Incorporated, Fontana, California

Prepared PBPK assessment of lead risk of receptors at a 1,100-acre former steel mill. This evaluation was used as the basis for granting closure of the site by lead regulatory agency.

RISK ASSESSMENTS/REMEDIAL INVESTIGATIONS

Client: Confidential, Atlanta, Georgia

Researched potential exposure and health risks to community members potentially exposed to creosote, polycyclic aromatic hydrocarbons, pentachlorophenol, and dioxin compounds used at a former wood treatment facility. Prepared a comprehensive toxicological summary of the chemicals of concern, including the chemical characteristics, absorption, distribution, and carcinogenic potential. Prepared risk characterization of the carcinogenic and non-carcinogenic chemicals based on the exposure assessment to quantify the potential risk to members of the surrounding community. This evaluation was used to help settle class-action tort.

Client: Confidential, Escondido, California

Prepared comprehensive Preliminary Endangerment Assessment (PEA) of dense non-aqueous liquid phase hydrocarbon (chlorinated solvents) contamination at a former printed circuit board manufacturing facility. This evaluation was used for litigation support and may be used as the basis for reaching closure of the site with the lead regulatory agency.

Client: Confidential, San Francisco, California

Summarized epidemiological evidence for connective tissue and autoimmune diseases for product liability litigation. Identified epidemiological research efforts on the health effects of medical prostheses. This research was used in a meta-analysis of the health effects and as a briefing tool for non-public health professionals.

Client: Confidential, Bogotá, Columbia

Prepared comprehensive evaluation of the potential health risks associated with the redevelopment of a 13.7 hectares plastic manufacturing facility in Bogotá, Colombia The risk assessment was used as the basis for the remedial goals and closure of the site.

Client: Confidential, Los Angeles, California

Prepared comprehensive human health risk assessment of students, staff, and residents potentially exposed to heavy metals (principally cadmium) and VOCs from soil and soil vapor at 12-acre former crude oilfield and municipal landfill. The site is currently used as a middle school housing approximately 3,000 children. The evaluation determined that the site was safe for the current and future uses and was used as the basis for regulatory closure of site.

Client: Confidential, Los Angeles, California

Managed remedial investigation (RI) of heavy metals and volatile organic chemicals (VOCs) for a 15-acre former manufacturing facility. The RI investigation of the site included over 800 different sampling locations and the collection of soil, soil gas, and groundwater samples. The site is currently used as a year round school housing approximately 3,000 children. The Remedial Investigation was performed in a manner

that did not interrupt school activities and met the time restrictions placed on the project by the overseeing regulatory agency. The RI Report identified the off-site source of metals that impacted groundwater beneath the site and the sources of VOCs in soil gas and groundwater. The RI included a numerical model of vapor intrusion into the buildings at the site from the vadose zone to determine exposure concentrations and an air dispersion model of VOCs from the proposed soil vapor treatment system. The Feasibility Study for the Site is currently being drafted and may be used as the basis for granting closure of the site by DTSC.

Client: Confidential, Los Angeles, California

Prepared comprehensive human health risk assessment of students, staff, and residents potentially exposed to heavy metals (principally lead), VOCs, SVOCs, and PCBs from soil, soil vapor, and groundwater at 15-acre former manufacturing facility. The site is currently used as a year round school housing approximately 3,000 children. The evaluation determined that the site was safe for the current and future uses and will be basis for regulatory closure of site.

Client: Confidential, Los Angeles, California

Prepared comprehensive evaluation of VOC vapor intrusion into classrooms of middle school that was former 15-acre industrial facility. Using the Johnson-Ettinger Vapor Intrusion model, the evaluation determined acceptable soil gas concentrations at the site that did not pose health threat to students, staff, and residents. This evaluation is being used to determine cleanup goals and will be basis for regulatory closure of site.

Client –Dominguez Energy, Carson, California

Prepared comprehensive evaluation of the potential health risks associated with the redevelopment of 6-acre portion of a 500-acre oil and natural gas production facility in Carson, California. The risk assessment was used as the basis for closure of the site.

Kaiser Ventures Incorporated, Fontana, California

Prepared health risk assessment of semi-volatile organic chemicals and metals for a fifty-year old wastewater treatment facility used at a 1,100-acre former steel mill. This evaluation was used as the basis for granting closure of the site by lead regulatory agency.

ANR Freight - Los Angeles, California

Prepared a comprehensive Preliminary Endangerment Assessment (PEA) of petroleum hydrocarbon and metal contamination of a former freight depot. This evaluation was as the basis for reaching closure of the site with lead regulatory agency.

Kaiser Ventures Incorporated, Fontana, California

Prepared comprehensive health risk assessment of semi-volatile organic chemicals and metals for 23-acre parcel of a 1,100-acre former steel mill. The health risk assessment was used to determine clean up goals and as the basis for granting closure of the site by lead regulatory agency. Air dispersion modeling using ISCST3 was performed to determine downwind exposure point concentrations at sensitive receptors within a 1 kilometer radius of the site. The results of the health risk assessment were presented at a public meeting sponsored by the Department of Toxic Substances Control (DTSC) in the community potentially affected by the site.

Unocal Corporation - Los Angeles, California

Prepared comprehensive assessment of petroleum hydrocarbons and metals for a former petroleum service station located next to sensitive population center (elementary school). The assessment used a probabilistic approach to estimate risks to the community and was used as the basis for granting closure of the site by lead regulatory agency.

Client: Confidential, Los Angeles, California

Managed oversight of remedial investigation most contaminated heavy metal site in California. Lead concentrations in soil excess of 68,000,000 parts per billion (ppb) have been measured at the site. This State Superfund Site was a former hard chrome plating operation that operated for approximately 40-years.

Client: Confidential, San Francisco, California

Coordinator of regional monitoring program to determine background concentrations of metals in air. Acted as liaison with SCAQMD and CARB to perform co-location sampling and comparison of accepted regulatory method with ASTM methodology.

Client: Confidential, San Francisco, California

Analyzed historical air monitoring data for South Coast Air Basin in Southern California and potential health risks related to ambient concentrations of carcinogenic metals and volatile organic compounds. Identified and reviewed the available literature and calculated risks from toxins in South Coast Air Basin.

IT Corporation, North Carolina

Prepared comprehensive evaluation of potential exposure of workers to air-borne VOCs at hazardous waste storage facility under SUPERFUND cleanup decree. Assessment used in developing health based clean-up levels.

Santa Barbara County Air Pollution Control District
San Luis Obispo Air Pollution Control District

The following sections discuss the three primary emission source sectors (construction, area, and operational), the factors and methodology used in CalEEMod that were different from other models such as URBEMIS, and the justification if different from the URBEMIS model, which has been widely used it the past for calculating criteria pollutant emissions from land use development projects.

Construction

A construction schedule is critical in determining the appropriate CARB OFFROAD emission factors for construction equipment because the emission factors changes each year. In addition, the peak daily emissions will be different if the schedule between construction phases (e.g., site preparation, grading, building construction, etc.) overlaps. CalEEMod was developed using a construction survey to determine the construction profile (equipment type, number of equipment, hours of activity, etc.) for each construction phase. When changing the construction schedule, the model does not automatically change the default construction equipment type. The equipment type dictates construction phase activity, such as acres graded per day. Fugitive dust is generated when material (e.g., from demolition objects) and soil (e.g., from site preparation and grading) are transported to and from the site.

For non-residential land uses, the default lot acreage value corresponds to the building footprint. The lot acreage is used to calculate grading values. Therefore, any additional graded area must be entered separately as "other paved surfaces" or other land use to ensure an accurate grading calculation. For residential land uses, the default lot acreage value is greater than the default square footage value because the values are derived from different sources. The default lot acreage per residential dwelling unit is from the ITE Trip Generation and the square footage per dwelling unit is from the California Energy Commission's Residential Appliance Saturation Survey (RASS). Thus, the lot acreage includes building footprint, paved areas and undeveloped areas, so no additional grading area need to be entered separately.

Wind-blown fugitive dust is not calculated in CalEEMod because of the number of input parameters required such as soil type, moisture content, wind speed, etc. This limitation could result in underestimated fugitive dust emissions if high wind and loose soil are substantial characteristics for a given land use/construction scenario.

Construction activity also involves on-road mobile source emissions from vehicles driven to and from the construction site by workers, vendors (e.g., water trucks, product deliveries, etc.), and haulers. In addition, fugitive dust is generated by these vehicles.

Finally, volatile organic compound (VOC) emissions are generated when the interior and exterior surface walls of the structures are painted.

Differences in methodology between CalEEMod and URBEMIS for the construction emissions sector are summarized in the following table.

Table 1 – Updated/New Features in CalEEMod during Construction Phase

CalEEMod Updated/New Feature	Justification for Change in Methodology	General Trends in CalEEMod as compared to URBEMS
Uses a construction profile (equipment type, hours of activity) based on SCAQMD construction survey	Uses documented data (URBEMIS survey data is not well documented). During the development of its localized significance thresholds, SCAQMD staff worked with construction and building industries to conduct a construction site survey gathering accurate information to better estimate emissions from construction equipment based on their typical operations. The SCAQMD hired a consultant to conduct construction site surveys throughout the South Coast Air Basin. The consultant surveyed approximately 50 construction sites and compiled information on the various construction phases including demolition, site preparation, construction of structures, etc. The survey was limited to 35 acres or less. For those projects sized larger, the data was extrapolated by increasing the number of construction phase days but not increasing the number of construction equipment on a given day.	• Increase in construction ROG, NOx, CO and SO2 • Decrease in construction PM (see grading activity)
Revises amount of acres graded	Acreage graded based on construction equipment ability (i.e., maximum acres a piece of equipment can pass over land in an 8-hr day) from Walker's Building Estimator's Reference Book. Grading in URBEMIS is based on 25% of total project acreage in one day.	• Decrease in PM emissions from grading
Modifies calculation methodology from material hauling	Provides a more specific calculation based on actual construction equipment and amount of material hauled. Although the user inputs the amount of material hauled, the model calculates exhaust and fugitive dust emissions based on 16 cubic yards per truck (an industry average). The model credits "phased" trips (i.e., the truck enters and leaves with a load, thus reducing the total number of trips in half).	• PM emissions increase or decrease depending upon user input

INITIAL STATEMENT OF REASONS FOR RULEMAKING

STAFF REPORT

PROPOSED IDENTIFICATION OF DIESEL EXHAUST AS A TOXIC AIR CONTAMINANT

Prepared by the Staff of
the Air Resources Board and
the Office of Environmental Health Hazard Assessment

June 1998

Item No. E.6

specific compounds emitted from a variety of engine technologies, operating cycles, and fuel to characterize better any differences between old and new fuels and technologies and the potential impact on the toxicity of diesel exhaust.

HEALTH EFFECTS OF DIESEL EXHAUST EXPOSURE

The OEHHA reviewed and evaluated the potential for diesel exhaust to affect human health, and the associated scientific uncertainties. The OEHHA considered acute and chronic noncancer health impacts, and potential cancer health impacts. The SRP approved the OEHHA's health assessment at its April 22, 1998, meeting.

A number of adverse short-term (acute) health effects have been associated with exposures to diesel exhaust. Occupational exposures to diesel exhaust particles have been associated with significant cross-shift decreases in lung function. Increased cough, labored breathing, chest tightness, and wheezing have been associated with exposure to diesel exhaust in bus garage workers. A significant increase in airway resistance and increases in eye and nasal irritation were observed in human volunteers following one-hour chamber exposure to diesel exhaust. In acute and subchronic animal studies, exposure to diesel exhaust particles induced inflammatory airway changes, lung function changes, and increased the animals' susceptibility to infection.

A number of adverse long-term (chronic) noncancer effects have been associated with exposures to diesel exhaust. Occupational studies have shown that there may be a greater incidence of cough, phlegm and chronic bronchitis among those exposed to diesel exhaust than among those not exposed. Histopathological changes in the lung of diesel-exposed test animals reflect inflammation of the lung tissue. Reduced pulmonary function was noted in monkeys during long-term exposure. Reductions in pulmonary function have also been reported following occupational exposures in chronic studies.

Diesel exhaust particles can induce immunological allergic reactions and localized inflammatory responses in humans, as well as acting as an adjuvant for pollen allergy. Intranasal challenge with diesel exhaust particles in human volunteers resulted in an immunological response. Co-exposure to diesel exhaust particles and ragweed pollen resulted in an immune response greater than that following pollen or diesel exhaust particles alone. Effects of intratracheal, intranasal, and inhalation exposures of laboratory animals are supportive of the findings in humans. These effects include allergic reactions and inflammation, increased mucus secretion and respiratory resistance, and airway constriction.

The World Health Organization and the OEHHA have conducted further analyses of the dose-response relationships for several of the non-cancer, adverse effects of chronic exposures to diesel exhaust on the rat lung. These analyses gave a range of health risk guidance values of 2 to 21 $\mu g/m^3$ and support the adoption of 5 $\mu g/m^3$ which is also the 1993 U.S. EPA Reference Concentration. A U.S. EPA Reference Concentration or California Reference Exposure Level (REL) of a chemical is an estimate, with uncertainty spanning perhaps an order of magnitude, of the air concentration below which no noncancer adverse health effects are likely to occur from

lifetime exposure. This estimate takes into consideration persons who may be more sensitive than others to the effects of a chemical. The OEHHA concurs with the U.S. EPA in recommending 5 $\mu g/m^3$ as the chronic REL for diesel exhaust.

Diesel exhaust contains genotoxic compounds in both the vapor phase and the particle phase. Diesel exhaust particles or extracts of diesel exhaust particles are mutagenic in bacteria and in mammalian cell systems, and can induce adverse chromosomal changes. DNA adducts (representing genotoxins bound chemically to DNA) have been shown to increase following inhalation exposure of rodents and monkeys to whole diesel exhaust and have been found in mammalian cells following treatment with diesel exhaust particle extract. Elevated levels of DNA adducts have been associated with occupational exposure to diesel exhaust.

Over 30 human epidemiological studies have investigated the potential carcinogenicity of diesel exhaust. These epidemiological studies provide evidence consistent with a causal relationship between occupational diesel exhaust exposure and lung cancer. These studies, on average, found that long-term occupational exposures to diesel exhaust were associated with a 40 percent increase in the relative risk of lung cancer. The OEHHA analyzed the lung cancer findings for consistency and found that the association was unlikely to be due to bias or chance. Results of inhalation bioassays in the rat, and with less certainty in mice, have demonstrated the carcinogenic potential of diesel exhaust in animals, although the mechanisms by which diesel exhaust induces lung tumors in animals remain uncertain.

Other agencies or scientific bodies have studied the health effects of diesel exhaust. The National Institute of Occupational Safety and Health first recommended that whole diesel exhaust be regarded as a potential occupational carcinogen based upon animal and human evidence in 1988. The IARC concluded that diesel engine exhaust is probably carcinogenic to humans (Group 2A). Based upon the IARC findings, in 1990, the State of California under the Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65) identified diesel exhaust as a chemical "known to the State to cause cancer." (Title 22, California Code of Regulations, section 12000.) The 1998 draft U.S. EPA document (Health Assessment Document for Diesel Emissions, Review Draft, February 1998) similarly concluded that diesel exhaust be considered a "probable" human carcinogen (category B1). This conclusion evolves from positive yet "limited" evidence in the human studies, a "sufficient" level of evidence in bioassays, and consideration of the supporting information from mutagenicity and genotoxicity data.

Risk assessments can use carcinogenicity data from either animal or human studies. For diesel exhaust, there are data from human epidemiological studies of occupationally exposed populations which are useful for quantitative risk assessment. On balance, the OEHHA concluded that available human data lend more confidence in the prediction of human risks than the data from the available animal studies because of the uncertainties in the animal studies and of extrapolating from animals to humans. Thus, the OEHHA preferred to derive the range of human risk estimates based only upon the epidemiological findings and not the animal data. Using data from a case-control study and a cohort study, the OEHHA estimated the risk (95 percent upper confidence limit) of lung cancer in the general population due to diesel exhaust. Because of

uncertainties in the actual workplace exposures, the OEHHA developed a variety of exposure scenarios to bracket the exposures that were plausible. Based on these exposure estimates, presented in Table 1-1, the range of resulting estimates of cancer unit risk is 1.3×10^{-4} to 2.4×10^{-3} $(\mu g/m^3)^{-1}$. The unit risk represents the 95 percent upper confidence limit of cancer risk per million people exposed per microgram of diesel exhaust particulate in a cubic meter of air over a 70-year lifetime. The SRP approved the range of risk estimated by the OEHHA. In addition, the SRP concluded that a value of 3×10^{-4} $(\mu g/m^3)^{-1}$ is a reasonable estimate of unit risk expressed in terms of diesel particulate (see Appendix II).

The OEHHA and ARB staffs recognize that the limited exposure information available contributes to the uncertainty of the dose response risk assessment based on the human studies. However, the overall magnitude of uncertainty is not atypical of the types of uncertainty encountered when the Board identified other TACs. The greater than usual uncertainty in the exposure estimates is substantially offset by the much smaller than usual range of extrapolation from the occupational exposures to the ambient air concentrations. Interspecies extrapolation uncertainty is not an issue in this diesel exhaust risk assessment. In addition, there are more than 30 human studies of more than one occupation that show overall an increase in lung cancer from diesel exhaust exposure.

Based on available scientific evidence, a level of diesel exhaust exposure below which no carcinogenic effects are anticipated has not been identified. This finding was approved by the SRP at its meeting on April 22, 1998.

As with other substances evaluated by the SRP and after reviewing the field of published peer reviewed research studies on diesel exhaust, the SRP indicated that additional research is appropriate to further clarify the health effects of diesel exhaust. The OEHHA and ARB staffs recognize that diesel exhaust health studies will continue. For example, the HEI, which is jointly funded by industry and the U.S. EPA, has started a five-year study to review key epidemiologic studies and make recommendations for the design of new studies. The OEHHA and ARB staffs will follow these efforts closely, and will provide support to the extent resources are available. If the outcome of this, or other future health studies, ultimately reduces uncertainties or improves the scientific basis for estimating diesel exhaust risk, the OEHHA and ARB staffs would consider such information. When research results become available, the TAC program has a process in place for further evaluation of new scientific evidence pertaining to a previously completed TAC risk assessment. The process specifically addresses the evaluation and response to submittals of new scientific information as evidence for review of a TAC risk assessment.

atmosphere. It is not clear what the overall toxicological consequences of DE's transformations are because some compounds in the DE mixture are altered to more toxic forms while others are made less toxic.

1.5. EXPOSURE TO DIESEL EXHAUST

DPM mass (expressed as μg DPM/m^3) has historically been used as a surrogate measure of exposure for whole DE. Although uncertainty exists as to whether DPM is the most appropriate parameter to correlate with human health effects, it is considered a reasonable choice until more definitive information about the mechanisms of toxicity or mode(s) of action of DE becomes available. In the ambient environment, human exposure to DE comes from both on-road and nonroad engine exhaust. A large percentage of the U.S. population also is exposed to ambient $PM_{2.5}$, of which DPM is typically a significant constituent. Although this document does not provide an exposure assessment, DE exposure information is included to provide a context for the health effects information. Exposure estimates for the early to mid-1990s suggest that national annual average DE exposure from on-road engines alone was in the range of about 0.5 to 0.8 μg DPM/m^3 of inhaled air in many rural and urban areas, respectively. Exposures could be higher if there is a nonroad DE source that adds to the exposure from on-road vehicles. For example, preliminary estimates show that, on a national average basis, accounting for nonroad DE emissions adds another twofold to the on-road exposure. For localized urban areas where people spend a large portion of their time outdoors, the exposures are higher and, for example, may range up to 4.0 μg DPM/m^3 of inhaled air.

1.6. HEALTH EFFECTS OF DIESEL EXHAUST

Available evidence indicates that there are human health hazards associated with exposure to DE. The hazards include acute exposure-related symptoms, chronic exposure-related noncancer respiratory effects, and lung cancer. The health hazard conclusions are based on exhaust emissions from diesel engines built prior to the mid-1990s. With current engine use including some new and many more older engines (engines typically stay in service for a long time), the health hazard conclusions, in general, are applicable to engines currently in use. As new and cleaner diesel engines, together with different diesel fuels, replace a substantial number of existing engines, the general applicability of the health hazard conclusions will need to be re-evaluated. With new engine and fuel technology expected to produce significantly cleaner engine exhaust by 2007 (e.g., in response to new federal heavy duty engine regulations), significant reductions in public health hazards are expected for those engine uses affected by the regulations.

1.6.1. Acute (Short-Term Exposure) Effects

Information is limited for characterizing the potential health effects associated with acute or short-term exposure. However, on the basis of available human and animal evidence, it is concluded that acute or short-term (e.g., episodic) exposure to DE can cause acute irritation (e.g., eye, throat, bronchial), neurophysiological symptoms (e.g., lightheadedness, nausea), and respiratory symptoms (cough, phlegm). There also is evidence for an immunologic effect–the exacerbation of allergenic responses to known allergens and asthma-like symptoms. The lack of adequate exposure-response information in the acute health effect studies precludes the development of recommendations about levels of exposure that would be presumed safe for these effects.

1.6.2. Chronic (Long-Term Exposure) Noncancer Respiratory Effects

Information from the available human studies is inadequate for a definitive evaluation of possible noncancer health effects from chronic exposure to DE. However, on the basis of extensive animal evidence, DE is judged to pose a chronic respiratory hazard to humans. Chronic-exposure, animal inhalation studies show a spectrum of dose-dependent inflammation and histopathological changes in the lung in several animal species including rats, mice, hamsters, and monkeys.

This assessment provides an estimate of inhalation exposure of DE (as measured by DPM) to which humans may be exposed throughout their lifetime without being likely to experience adverse noncancer respiratory effects. This exposure level, known as the reference concentration (RfC) for DE of 5 $\mu g/m^3$ of DPM was derived on the basis of dose-response data on inflammatory and histopathological changes in the lung from rat inhalation studies. In recognition of the presence of DPM in ambient $PM_{2.5}$, it also is appropriate to consider the wealth of $PM_{2.5}$ human health effects data. In this regard, the 1997 National Ambient Air Quality Standard for $PM_{2.5}$ of 15 $\mu g/m^3$ (annual average concentration) also would be expected to provide a measure of protection from DPM, reflecting DPM's current approximate proportion to $PM_{2.5}$.

1.6.3. Chronic (Long-Term Exposure) Carcinogenic Effects

This assessment concludes that DE is "likely to be carcinogenic to humans by inhalation" and that this hazard applies to environmental exposures. This conclusion is based on the totality of evidence from human, animal, and other supporting studies. There is considerable evidence demonstrating an association between DE exposure and increased lung cancer risk among workers in varied occupations where diesel engines historically have been used. The human evidence from occupational studies is considered strongly supportive of a finding that DE

exposure is causally associated with lung cancer, though the evidence is less than that needed to definitively conclude that DE is carcinogenic to humans. There is some uncertainty about the degree to which confounders are having an influence on the observed cancer risk in the occupational studies, and there is uncertainty evolving from the lack of actual DE exposure data for the workers. In addition to the human evidence, there is supporting evidence of DPM's carcinogenicity and associated DPM organic compound extracts in rats and mice by noninhalation routes of exposure. Other supporting evidence includes the demonstrated mutagenic and chromosomal effects of DE and its organic constituents, and the suggestive evidence for bioavailability of the DPM organics in humans and animals. Although high-exposure chronic rat inhalation studies show a significant lung cancer response, this is not thought predictive of a human hazard at lower environmental exposures. The rat response is considered to result from an overload of particles in the lung resulting from the high exposure, and such an overload is not expected to occur in humans at environmental exposures.

Although the available human evidence shows a lung cancer hazard to be present at occupational exposures that are generally higher than environmental levels, it is reasonable to presume that the hazard extends to environmental exposure levels. While there is an incomplete understanding of the mode of action for DE-induced lung cancer that may occur in humans, there is the potential for a nonthreshold mutagenic mode of action stemming from the organics in the DE mixture. A case for an environmental hazard also is shown by the simple observation that the estimated higher environmental exposure levels are close to, if not overlapping, the lower range of occupational exposures for which lung cancer increases are reported. These considerations taken together support the prudent public health choice of presuming a cancer hazard for DE at environmental levels of exposure. Overall, the evidence for a potential cancer hazard to humans resulting from chronic inhalation exposure to DE is persuasive, even though assumptions and uncertainties are involved. While the hazard evidence is persuasive, this does not lead to similar confidence in understanding the exposure/dose-response relationship.

Given a carcinogenicity hazard, EPA typically performs a dose-response assessment of the human or animal data to develop a cancer unit risk estimate that can be used with exposure information to characterize the potential cancer disease impact on an exposed population. The DE human exposure-response data are considered too uncertain to derive a confident quantitative estimate of cancer unit risk, and with the chronic rat inhalation studies not being predictive for environmental levels of exposure, EPA has not developed a quantitative estimate of cancer unit risk.

In the absence of a cancer unit risk, simple exploratory analyses were used to provide a perspective of the range of possible lung cancer risk from environmental exposure to DE. The analyses make use of reported lung cancer risk increases in occupational epidemiologic studies,

and the differences between occupational and environmental exposure. The purpose of having a risk perspective is to illustrate and have a sense of the possible significance of the lung cancer hazard from environmental exposure. The risk perspective cannot be viewed as a definitive quantitative characterization of cancer risk nor is it suitable for estimation of exposure-specific population risks.

1.7. SOURCES OF UNCERTAINTY

Even though the overall evidence for potential human health effects of DE is persuasive, many uncertainties exist because of the use of assumptions to bridge data and knowledge gaps about human exposures to DE and the general lack of understanding about underlying mechanisms by which DE causes observed toxicities in humans and animals. A notable uncertainty of this assessment is whether the health hazards identified from studies using emissions from older engines can be applied to present-day environmental emissions and related exposures, as some physical and chemical characteristics of the emissions from certain sources have changed over time. Available data are not sufficient to provide definitive answers to this question because changes in DE composition over time cannot be confidently quantified, and the relationship between the DE components and the mode(s) of action for DE toxicity is/are unclear. While recognizing the uncertainty, for this assessment a judgment is made that prior-year toxicologic and epidemiologic findings can be applied to more current exposures, both of which use DPM mass in air as the measure of DE exposure.

Other uncertainties include the assumptions that health effects observed at high doses may be applicable to low doses, and that toxicologic findings in laboratory animals generally are predictive of human responses. In the absence of a more complete understanding of how DE may cause adverse health effects in humans and laboratory animals, related assumptions (i.e., the presence of a biological threshold for chronic respiratory effects based on cumulative dosage and absence of a threshold for lung cancer stemming from subtle and irreversible effects) are considered reasonable and prudent.

Although parts of this assessment, particularly the noncancer RfC estimate, have been derived with a generic consideration of sensitive subgroups within the population, the actual spectrum of the population that may have a greater susceptibility to DE is unknown and cannot be better characterized until more information is available regarding the adverse effects of DPM in humans. Increased susceptibility, for example, could result from above-average increases in DE deposition and retention in the respiratory system or intrinsic differences in respiratory system tissue sensitivity. There is no DE-specific information that provides direct insight to the question of differential human susceptibility. Given the nature of DE's noncancer effects on the respiratory system it would be reasonable, for example, to consider possible vulnerable

The Report on Diesel Exhaust

This page last reviewed July 29, 2008

Findings of the Scientific Review Panel On

The Report on Diesel Exhaust

As Adopted at the Panel's April 22, 1998 Meeting

Pursuant to Health and Safety Code section 39661, the Scientific Review Panel (SRP / Panel) has reviewed the report *Proposed Identification of Diesel Exhaust as a Toxic Air Contaminant* by the staffs of the California Air Resources Board (ARB or Board) and the Office of Environmental Health Hazard Assessment (OEHHA) describing the public exposure to, and health effects of, diesel exhaust. The Panel members also reviewed the public comments received on this report.

Panel members participated in workshops devoted to discussion of the exposure and health issues associated with diesel exhaust in September 1994, January 1996, July 1997, and March 1998. The SRP reviewed the issues at its meetings in October 1997 and April 1998. A special meeting of the SRP was held on March 11, 1998, to hear testimony on health issues including the quantitative risk assessment from highly respected scientists invited by the Panel. Based on these reviews and information provided at scientific workshops and meetings, the SRP makes the following findings pursuant to Health and Safety Code section 39661:

Exposure Related Conclusions:

1. Diesel exhaust is a complex mixture of gases and fine particles emitted by a diesel-fueled internal combustion engine.
2. The gaseous fraction is composed of typical combustion gases such as nitrogen, oxygen, carbon dioxide, and water vapor. However, as a result of incomplete combustion, the gaseous fraction also contains air pollutants such as carbon monoxide, sulfur oxides, nitrogen oxides, volatile organics, alkenes, aromatic hydrocarbons, and aldehydes, such as formaldehyde and 1,3-butadiene and low-molecular weight polycyclic aromatic hydrocarbons (PAH) and PAH-derivatives.
3. One of the main characteristics of diesel exhaust is the release of particles at a markedly greater rate than from gasoline-fueled vehicles, on an equivalent fuel energy basis. The particles are mainly aggregates of spherical carbon particles coated with inorganic and organic substances. The inorganic fraction primarily consists of small solid carbon (or elemental carbon) particles ranging from 0.01 to 0.08 microns in diameter. The organic fraction consists of soluble organic compounds such as aldehydes, alkanes and alkenes, and high-molecular weight PAH and PAH-derivatives, such as nitro-PAHs. Many of these PAHs and PAH-derivatives, especially nitro-PAHs, have been found to be potent mutagens and carcinogens. Nitro-PAH compounds can also be formed during transport through the

atmosphere by reactions of adsorbed PAH with nitric acid and by gas-phase radical-initiated reactions in the presence of oxides of nitrogen.

4. Diesel exhaust includes over 40 substances that are listed by the United States Environmental Protection Agency (U.S. EPA) as hazardous air pollutants and by the ARB as toxic air contaminants. Fifteen of these substances are listed by the International Agency for Research on Cancer (IARC) as carcinogenic to humans, or as a probable or possible human carcinogen. Some of these substances are: acetaldehyde; antimony compounds; arsenic; benzene; beryllium compounds; bis(2-ethylhexyl)phthalate; dioxins and dibenzofurans; formaldehyde; inorganic lead; mercury compounds; nickel; POM (including PAHs); and styrene.
5. Almost all of the diesel particle mass is in the fine particle range of 10 microns or less in diameter (PM10). Approximately 94 percent of the mass of these particles are less than 2.5 microns in diameter. Because of their small size, these particles can be inhaled and a portion will eventually become trapped within the small airways and alveolar regions of the lung.
6. The estimated population-weighted average outdoor diesel exhaust PM10 concentration in California for 1995 is 2.2 microgram per cubic meter ($\mu g/m^3$). Several independent studies have reported similar outdoor air diesel exhaust PM10 concentrations. The 1995 estimated average indoor exposure concentration is approximately 1.5 $\mu g/m^3$.
7. The population time-weighted average total air exposure to diesel exhaust particle concentrations across all environments (including outdoors) is estimated to be 1.5 $\mu g/m^3$ in 1995. This total exposure estimate may underestimate many Californians' actual total exposure because it excludes elevated exposures near roadways, railroad tracks, and inside vehicles. Near-source exposures to diesel exhaust may be as much as five times higher than the 1995 population time-weighted average total air exposure. It also excludes other routes of exposure to diesel exhaust, such as ingestion and dermal absorption.
8. Diesel engine exhaust contains small carbonaceous particles and a large number of chemicals that are adsorbed onto these particles or present as vapors. These particles have been the subject of many studies because of their adverse effects on human health and the environment. A recent study conducted for the Health Effects Institute showed that, despite a substantial reduction in the weight of the total particulate matter, the total number of particles from a 1991-model engine was 15 to 35 times greater than the number of particles from a 1988 engine when both engines were operated without emission control devices. This suggests that more fine particles, a potential health concern, could be formed as a result of new technologies. Further study is needed since the extent of these findings only measured exhaust from two engines and engine technologies.
9. The major sources of diesel exhaust in ambient outdoor air are estimated to emit approximately 27,000 tons per year in 1995. On-road mobile sources (heavy-duty trucks, buses, light-duty cars and trucks) contribute the majority of total diesel exhaust PM10 emissions in California. Other mobile sources (mobile equipment, ships, trains, and boats) and stationary sources contribute the remaining emissions.
10. Significant progress has been made as a result of federal and state regulations that have addressed particulate matter levels from diesel engines. Emissions of on-road mobile source diesel exhaust PM10 in California are expected to decline by approximately 85 percent from 1990 to 2010 as a result of mobile source regulations already adopted by the ARB.
11. The results of a study funded by the ARB at the University of California, Riverside, indicate that the diesel exhaust from the new fuel tested contained the same toxic air contaminants as the old fuel, although their concentrations and other components may differ. Further research would be helpful to quantify the amounts of specific compounds emitted from a variety of

engine technologies, operating cycles, and fuel to characterize better any differences between old and new fuels and technologies.

Health Effects Associated with Diesel Exhaust:

12. A number of adverse short-term health effects have been associated with exposures to diesel exhaust. Occupational exposures to diesel exhaust particles have been associated with significant cross-shift decreases in lung function. Increased cough, labored breathing, chest tightness, and wheezing have been associated with exposure to diesel exhaust in bus garage workers. A significant increase in airway resistance and increases in eye and nasal irritation were observed in human volunteers following one-hour chamber exposure to diesel exhaust. In acute or subchronic animal studies, exposure to diesel exhaust particles induced inflammatory airway changes, lung function changes, and increased the animals' susceptibility to infection.

13. A number of adverse long-term noncancer effects have been associated with exposure to diesel exhaust. Occupational studies have shown that there may be a greater incidence of cough, phlegm and chronic bronchitis among those exposed to diesel exhaust than among those not exposed. Reductions in pulmonary function have also been reported following occupational exposures in chronic studies. Reduced pulmonary function was noted in monkeys during long-term exposure. Histopathological changes in the lung of diesel-exposed test animals reflect inflammation of the lung tissue. These changes include dose-dependent proliferations of Type II epithelial cells, marked infiltration of macrophages, plasma cells and fibroblasts into the alveolar septa, thickening of the alveolar walls, alveolar proteinosis, and focal fibrosis.

14. Studies have shown that diesel exhaust particles can induce immunological reactions and localized inflammatory responses in humans, as well as acting as an adjuvant for pollen allergy. Intranasal challenge with diesel exhaust particles in human volunteers resulted in increased nasal IgE antibody production and a significant increase in mRNA for pro-inflammatory cytokines. Co-exposure to diesel exhaust particles and ragweed pollen resulted in a nasal IgE response greater than that following pollen or diesel exhaust particles alone. Effects of intratracheal, intranasal, and inhalation exposures of laboratory animals are supportive of the findings in humans. These effects include eosinophilic infiltration into bronchi and bronchioles, elevated IgE response, increased mucus secretion and respiratory resistance, and airway constriction.

15. Based on the animal studies, the U.S. EPA determined a chronic inhalation Reference Concentration value of 5 $\mu g/m^3$ for noncancer effects of diesel exhaust. This estimate takes into consideration persons who may be more sensitive than others to the effects of diesel exhaust. The report supports the recommendation of 5 $\mu g/m^3$ as the California Reference Exposure Level (REL) (Table 1). It should be noted that this REL may need to be lowered further as more data emerge on potential adverse noncancer effects from diesel exhaust.

16. Diesel exhaust contains genotoxic compounds in both the vapor phase and the particle phase. Diesel exhaust particles or extracts of diesel exhaust particles are mutagenic in bacteria and in mammalian cell systems, and can induce chromosomal aberrations, aneuploidy, and sister chromatid exchange in rodents and in human cells *in vitro*. Diesel exhaust particles induced unscheduled DNA synthesis *in vitro* in mammalian cells. DNA adducts have been isolated from calf thymus DNA *in vitro* following treatment with diesel exhaust particle extracts. DNA adducts have been shown to increase following inhalation exposure of rodents and monkeys to whole diesel exhaust. Elevated levels of DNA adducts have been associated with occupational exposure to diesel exhaust. Results of inhalation bioassays in the rat, and with lesser certainty in mice, have demonstrated the carcinogenicity of diesel exhaust in test animals, although the mechanisms by which diesel exhaust induces lung tumors in animals

remains uncertain.

17. Over 30 human epidemiological studies have investigated the potential carcinogenicity of diesel exhaust. These studies, on average, found that long-term occupational exposures to diesel exhaust were associated with a 40 percent increase in the relative risk of lung cancer. The lung cancer findings are consistent and the association is unlikely to be due to chance. These epidemiological studies strongly suggest a causal relationship between occupational diesel exhaust exposure and lung cancer.

18. Other agencies or scientific bodies have evaluated the health effects of diesel exhaust. The National Institute of Occupational Safety and Health first recommended in 1988 that whole diesel exhaust be regarded as a potential occupational carcinogen based upon animal and human evidence. The International Agency for Research on Cancer (IARC) concluded that diesel engine exhaust is probably carcinogenic to humans and classified diesel exhaust in Group 2A. Based upon the IARC findings, in 1990, the State of California under the Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65) identified diesel exhaust as a chemical "known to the State to cause cancer." The U.S. EPA has proposed a conclusion similar to IARC in their draft documents. The 1998 draft U.S. EPA document concluded similarly that there was sufficient animal evidence of carcinogenicity and that the human evidence was limited.

19. There are data from human epidemiological studies of occupationally exposed populations which are useful for quantitative risk assessment. The estimated range of lung cancer risk (upper 95% confidence interval) based on human epidemiological data is 1.3×10^{-4} to 2.4×10^{-3} $(\mu g/m^3)^{-1}$ (Table 2). After considering the results of the meta-analysis of human studies, as well as the detailed analysis of railroad workers, the SRP concludes that 3×10^{-4} $(\mu g/m^3)^{-1}$ is a reasonable estimate of unit risk expressed in terms of diesel particulate. Thus this unit risk value was derived from two separate approaches which yield similar results. A comparison of estimates of risk can be found in Table 3.

20. Based on available scientific information, a level of diesel exhaust exposure below which no carcinogenic effects are anticipated has not been identified.

21. Based on available scientific evidence, as well as the results of the risk assessment, we conclude that diesel exhaust be identified as a Toxic Air Contaminant.

22. As with other substances evaluated by this Panel and after reviewing the field of published peer reviewed research studies on diesel exhaust, additional research is appropriate to clarify further the health effects of diesel exhaust. This research may have significance for estimating the unit risk value.

23. The Panel, after careful review of the February 1998 draft SRP version of the ARB report, *Proposed Identification of Diesel Exhaust as a Toxic Air Contaminant*, as well as the scientific procedures and methods used to support the data, the data itself, and the conclusions and assessments on which the Report is based, finds this report with the changes specified during our October 16, 1997, meeting and as a result of comments made at the March 11, 1998, meeting, is based upon sound scientific knowledge, methods, and practices and represents a complete and balanced assessment of our current scientific understanding.

For these reasons, we agree with the science presented in Part A by ARB and Part B by OEHHA in the report on diesel exhaust and the ARB staff recommendation to its Board that diesel exhaust be listed by the ARB as a Toxic Air Contaminant.

I certify that the above is a true and correct copy of the findings adopted by the Scientific Review

Panel on April 22, 1998.

Sincerely,
/s/
John R. Froines, Ph.D.
Acting Chairman
Scientific Review Panel

Interim Guidance for Sampling Agricultural Fields for School Sites (Second Revision)

California Department of Toxic Substances Control
California Environmental Protection Agency

August 26, 2002

Preface

Effective January 1, 2000, new California Department of Education statutes require the Department of Toxic Substances Control (DTSC) of the California Environmental Protection Agency (CalEPA) to review environmental assessments for proposed new school sites and/or new construction school expansion projects. Some of these sites are situated on agriculture land where residual agricultural chemicals may remain in the soil. In June 2000, DTSC issued "Interim Guidance for Sampling Agricultural Soils" to provide a uniform approach for evaluating former agricultural properties where pesticides have been applied. Since this guidance was issued, over 75 agricultural sites have been evaluated across California with the majority in the Sacramento-San Joaquin Valley, Oxnard Plains, and Imperial Valley. The most commonly detected pesticides have been DDT and it's derivatives DDD and DDE, toxaphene, dieldrin, and aldrin. Of these pesticides, toxaphene has been the major pesticide driving unacceptable levels of risk requiring remediation by soil removal. These results and the experience of working with the guidance has allowed for refinement of the original guidance. The revised guidance contained in this document reflects these refinements.

This guidance is intended to supplement the DTSC Preliminary Endangerment Assessment (PEA) Guidance Manual (Manual), CalEPA 1994

(Second Printing, June 1999). Data obtained from the investigations should be evaluated for potential health risks according the PEA Manual. This guidance is not intended to diminish the need to take focused, authoritative samples at site locations commonly associated with hazardous substances releases nor replace guidance provided by the PEA Guidance Manual. This guidance in not applicable to areas where pesticides were mixed, stored, disposed, or areas where pesticides may have accumulated, such as ponds and drainage ditches.

The scope of this document is limited to evaluating only agricultural fields during a PEA or other initial sampling investigation related to proposed new and/or expanded school sites. These are properties (or portions of properties) where pesticides were uniformly applied for agricultural purposes consistent with normal application practices, and where other non-agriculturally related activities have been absent. The data obtained from the sampling analyses will be incorporated into the PEA Report, including performing a risk analysis in accordance with the guidance in the PEA Manual.

This guidance does not apply to disturbed land, such as, land that has been graded in preparation for construction, areas where imported soil has been brought in, or any other activity that would redistribute or impact the soil, other than normal disking and plowing.

This guidance is an on-going effort to streamline the characterization of agricultural sites. As additional knowledge and experience is obtained, DTSC may modify this guidance, as appropriate.

1.0 PURPOSE

This guidance was prepared for use in evaluating soil at proposed new school sites and/or new school construction expansion projects that are currently, or were previously used for certain types of agricultural activities where residual agricultural chemicals may pose a threat to human health and the environment. This guidance is intended to supplement the DTSC Preliminary Endangerment Assessment (PEA) Guidance Manual (Manual), CalEPA 1994 (Second Printing, June 1999), and provide a uniform and streamlined approach for evaluating agricultural soils. It is intended to assist environmental assessors in designing initial investigations or developing Preliminary Endangerment Assessment (PEA) Work Plans for sites with certain historical agricultural uses. The analytical data obtained are to be incorporated into a risk analysis and PEA Report performed in accordance with the guidance in the PEA Manual.

2.0 IDENTIFYING ELIGIBLE AGRICULTURAL SITES

2.1 Eligible Sites

This guidance is specific to agricultural lands where pesticides and/or fertilizers were presumably applied, more or less uniformly, for agricultural purposes consistent with normal application practices. It is applicable to agricultural land that is currently under cultivation with row, fiber or food crops, orchards, or pasture. It is also applicable to fallow and former agricultural land that is no longer in production and has not been disturbed beyond normal disking and plowing practices. Each field of the same crop is assumed to have been watered, fertilized and treated with agricultural chemicals to the same degree across the field. Because of this homogeneous application, contaminant levels are expected to be similar at any given location within the field. This is the underlying premise of the guidance, and one that must be verified at the scoping stage of the PEA process.

2.2 Sites To Which The Guidance Does Not Apply

This guidance is not applicable to agricultural land under or adjacent to structures such as residences, barns, or other outbuildings. Pesticide mixing/loading areas, fence lines, ditches, canals, berms, and other areas that may have been treated differently from an agricultural field are not considered in this guidance. Also excluded are animal facilities such as cattle and poultry barns, settling ponds, and manure piles. This guidance does not apply to former agricultural land that has been graded for construction or other purposes, that has received fill, or has had parking lots or structures placed on it following active use as an agricultural field. An urban residential area that was agricultural land in the past does not qualify for this guidance since the construction of the residences would have resulted in the disturbance and redistribution of potential agricultural contaminants in the soil. These excluded areas require biased, discrete sampling as opposed to the sampling for agricultural fields discussed in this document.

3.0 SAMPLING STRATEGIES

3.1 Sampling Frequency

Sampling frequency may vary depending on the size of the site and conditions found. When the site has been uniformly used for a single agricultural crop, the presumption is that agricultural chemicals were applied equally to the site in any given year and that their distribution will be relatively uniform. **When differing agricultural crops were produced on different areas of the site, each area should be**

addressed separately and the sampling rate should be sufficient to characterize each area.

The sampling pattern should be sufficient to characterize the site. Recommended numbers of sampling locations are provided in Table 1. For sites two acres or less, discrete samples should be collected on ¼ acre centers. For sites between two and four acres, a total of eight locations, evenly spaced across the site, should be sampled. For sites greater than four acres and up to 20 acres, discrete samples should be collected on ½ acre centers, and for sites between 21 and 100 acres, on 1-acre centers. For sites greater than 100 acres, DTSC should be consulted for the appropriate number of sampling locations. Compositing of samples is discussed in Section 4.5.

Table 1: Recommended Number of Sampling Locations

Land Size	Suggested Minimum Sampling Locations
One (1) to two (2) acres	Discrete samples taken on ¼ acre centers
Greater than two (2) up to four (4) acres	Discrete samples taken from eight (8) locations evenly spaced across the site
Greater than four (4) up to twenty (20) acres	Eight (8) composite samples from discrete samples taken on half-acre centers.
Twenty-one (21) to sixty (60) acres	Fifteen (15) composite samples from discrete samples taken on one (1) acre centers.
Sixty-one (61) to one hundred (100) acres	Twenty five (25) composite samples from discrete samples taken on one (1) acre centers
Greater than one hundred (100) acres	Consult with DTSC

3.2 Sampling Depth

Each location should be sampled to include one surface sample (0 to 6 inches) and one subsurface sample (2 to 3 foot range). [Note: 0 inches means first encountered soil. Thick mats of vegetable material, roots, and other extraneous material should not be sampled.]

3.3 Sample Collection

Sampling both the furrows and beds of existing rows will detect the greatest variability in the residuals. Some methods of pesticide application will favor residuals in the beds while others favor the furrows. In fields where rows remain, roughly half of the samples should be gathered from the furrows and half from the beds in an alternating pattern. Orchards should have the sampling locations placed at the current drip line for the trees, under the canopy, between the tree rows, and between the trees within a row. For sites with slopes, swales, or other uneven topography, sampling from centers should be modified to include samples from those areas where surface water would be expected to flow and accumulate.

3.4 Offsite Background Samples

A minimum of four offsite locations must be sampled at the surface (0 to 6 inches) to determine background or ambient levels of heavy metals in the area. The samples must be collected near the site, preferably one from each of the four sides. The soil type of the offsite samples should be the same as the site samples, and if possible, the offsite samples should be collected from areas that have not been impacted by agricultural or industrial chemicals. If other properties in the area have gone through the PEA process, it may be possible to use data from these sites for establishing background metal concentrations providing that soil types are compatible. This may only be done in consultation with the DTSC Project Manager.

4.0 ANALYSES

4.1 Identifying Agricultural Chemicals Used on the Site

When the land is under active agricultural production, the grower should be interviewed to determine the types and amounts of pesticides historically used at the site. The County Agricultural Commissioner should also be consulted to verify pesticide usage on the property. The Agricultural Commissioner is required to maintain this information for three years, but often will have extensive knowledge of the farming practices over many years. A local or specialized farm advisor such as the University of California Cooperative Extension Agent is another source of information for farming practices in the area. These consultations should occur during the scoping phase of the investigation. For those sites that have not been actively farmed in the past three years, obtaining accurate information is more difficult. Information from surrounding or neighboring agricultural operations on the types of crops grown in the area during the time of active farming can provide clues on what chemicals may have been applied.

4.2 Chemicals of Potential Concern (COPC): Pesticides

The chemicals of greatest concern are those that persist in the environment. For the majority of newer pesticides persistence is limited to a few days; however, organochlorine pesticides (OCPs) can still persist in soil at levels of health concern for many years following application. Unless it can be documented that OCPs were not used on the property, they must be considered COPC. Paraquat also has a relatively long persistence in the soil. Paraquat should also be considered a COPC if there is a history of its use on the property. Under certain conditions, such as in rice growing fields, near surface conditions exist that establish anaerobic soil over an extended time. For these situations, anaerobically stable pesticides such as ametryn, cryomazine, and thiabendazole should also be considered as COPC. The selection of COPCs should be done in consultation with the DTSC project manager and toxicologist assigned to the project.

4.3 Chemicals of Potential Concern (COPC): Metals (Inorganic Elements)

Heavy metals have been applied to agricultural fields, both as pesticides and fertilizers. To ensure that the concentrations of these metals in site soils do not pose a potential heath risk or hazard, the CAM 17 metals must be considered as COPC. Heavy metals are also evaluated to detect natural mineral deposits that may pose an unacceptable risk.

4.4 Discrete Samples

For sites four acres or less, each of the surface discrete samples must be analyzed for OCPs and CAM 17 metals. Analysis for other pesticides may be necessary, depending on the history of agricultural activities at the site. Offsite background samples should be analyzed for CAM 17 metals only. Subsurface samples should be frozen and held for analysis pending the outcome of the surface sampling results. No deterioration is expected during the time period required to complete the PEA.

4.5 Composite Samples

While the analysis of discrete samples is preferred, it is recognized that for large sites this may not be practical. Since this guidance assumes a relatively even distribution of chemicals across the site, compositing of discrete samples may be considered when the area to be sampled is greater than four acres.

4.5.1 Number of Composite Samples

The minimum number of composite samples analyzed is dependent on the size of the site (see Table 1). Compositing is not applicable for sites four acres or less. For sites greater than four acres and up to 20 acres, a minimum of eight composite samples is required. For sites 21 to 60 acres, a minimum of 15 composite samples is required. For sites between 61 and 100 acres, the minimum number of composite samples is 25. For sites over 100 acres, DTSC should be consulted for the appropriate number of composite samples.

4.5.2 Makeup of Composite Samples

Composite surface samples may be made up of a maximum of four discrete surface samples. The discrete samples must be from adjacent sampling locations. In cases where two crops were grown on the site, only discrete samples from within the same crop area may be composited.

4.5.3 Preparation of Composite Samples

The discrete samples should be individually mixed and uniformly split by the laboratory or trained field staff prior to compositing. Mixing and compositing should be performed under uniform, controlled conditions. The unused portion of each discrete sample should be frozen and archived in case additional analysis is warranted from the composite results. The samples may be discarded when the PEA process has been completed and approved by the DTSC.

4.6 Laboratory Analyses

4.6.1 Methods

The analytes of primary concern are OCPs and some of the CAM 17 metals. Depending on the site history, analysis of other types of pesticides may be required. OCPs should be analyzed using U.S. EPA 8081A or equivalent. Metals must be analyzed using the U.S. EPA 6000/7000 series. If the site history indicates other classes of persistent pesticides should be evaluated, DTSC should be consulted for the acceptable method of analysis and appropriate detection limits.

4.6.2 Detection Limits

The actual detection limits obtained will vary depending on the particular analyte. For OCPs, the analytes typically causing detection limit concerns in agricultural fields

are aldrin, dieldrin, and toxaphene. The detection limits should be 0.005 mg/kg for aldrin, dieldrin, and 0.100 mg/kg for toxaphene. Table 3 lists the detection limits for several OCPs and paraquat.

In samples with elevated DDT, the detected concentration may be above the range of calibration. This can result in the analytical laboratory diluting the sample for reanalysis, and then reporting only the final result. In these cases, the reported detection limits for aldrin, dieldrin, and toxaphene may exceed the detection limits needed for determining potential health effects. Ideally the laboratory should be asked to report if those three analytes were detected in the first analysis prior to dilution. Multiple analyses of the same samples may be required to obtain the data necessary for risk assessment purposes.

Table 2. Analytical Methods and Detection Limits for Selected OCPs and Paraquat

Pesticide	Methods	CAS No.[1]	DL[2] mg/kg
ALDRIN	8081A, 8270C	309-00-2	0.005
CHLORDANE	8081A	57-74-9	0.10
CHLORONEB	8081A (R)	2675-77-6	100
DBCP	8081A	96-12-8	0.01
DDD	8081A	72-54-8	0.10
DDE	8081A	72-55-9	0.10
DDT	8081A	50-29-3	0.10
DIELDRIN	8081A	60-57-1	0.005
HEPTACHLOR	8081A, 8270C	76-44-8	0.10
HEXACHLOROBENZENE	8081A, 8121, 8270C, 8275, 8410	118-74-1	0.30
LINDANE	8081A	58-89-9	0.10
METHOXYCHLOR	8081A	72-43-5	0.40
MIREX	8081A(R), 8270C	2385-85-5	0.10
PARAQUAT_DICHLORIDE	Zeneca SOP RAM 272/01; Chevron RM 8-10; 549.1*	4685-14-7	270
TOXAPHENE	8081A, 8270C	8001-35-2	0.1
TRIFLURALIN	8091, 8081A(R), 8270C	1582-09-8	63

*Water and Wastewater Methods. Soil must be extracted and the method validated by the laboratory for a soil matrix.
(R) = must be requested for inclusion in the method
CAS No[1] = Chemical Abstract Service registry number
DL[2] = Detection Limit recommended for risk assessment purposes

4.6.3 Pesticide Analyses

Each of the surface samples, discrete or composite, must be analyzed for OCPs. Analysis for other classes of persistent pesticides may be required as indicated by the agricultural history of the site. When using composites, each discrete sample associated with the composite sample having the highest detected concentration of OCPs must be analyzed.

4.6.4 Metal Analyses (Inorganic Elements)

Each of the background and a minimum of four (4) on-site surface samples must be analyzed for the CAM 17 metals. In addition, each of the on-site discrete surface samples must be analyzed for arsenic. When samples are composited, one (1) discreet sample from each composite must be analyzed for arsenic. The number of discrete samples analyzed for arsenic does not need to be greater than the number of total composite samples used for OCP analysis. The subsurface samples need only be analyzed for CAM 17 metals and arsenic if the concentration of an element detected is above the background concentration for that element. Analysis of additional subsurface samples may be requested by DTSC.

4.6.5 Quality Control

Quality control procedures specified in SW-846 must be followed. A matrix spike/matrix spike duplicate on one soil sample per batch of samples must be performed to demonstrate that the targeted pesticide(s) can be recovered from the soil investigated. Highly organic topsoil may interfere with proper extraction of pesticides. The laboratory data package must include a summary of the quality control sample results: blanks, matrix spike/matrix spike duplicate, surrogate recoveries, laboratory control samples, etc., as specified by the method. The laboratory should provide a signed narrative stating whether the QC was met and listing any discrepancies.

5.0 REPORTING

5.1 Format

The results of the sampling effort are to be reported in a Preliminary Endangerment Assessment (PEA) as described in the DTSC Preliminary Endangerment Assessment (PEA) Guidance Manual (Manual), CalEPA 1994 (Second Printing, June 1999).

5.2 Evaluating Metals (Inorganic Elements) Data

Using a robust statistical procedure to determine if on-site metal concentrations are indicative of background conditions or the result of site-related activities can be problematic because of the limited number of background samples collected at any one site. DTSC is in the process of establishing background metals concentrations for specific school districts. If the site is in a school district for which DTSC background levels have been established, those values should be used. If DTSC background levels are not available, then a defensible procedure for comparing on-site with background metals should be used. The Staff Toxicologist assigned to the project should be consulted on the most appropriate method of comparison.

5.3 Data Interpretation

All detected pesticides, and any onsite metals above background must be evaluated in a risk assessment as described in the DTSC PEA Guidance Manual. In the initial screening analysis, the highest concentration of each detected pesticide and metal above background must be used as the exposure point concentration in the risk assessment. If the maximum concentrations detected on site pose an unacceptable risk or hazard, a spatial analysis should be conducted to determine if the elevated levels represent a “hot spot”, or are representative of concentrations across the site. In those cases where the elevated concentrations are determined to be one or more “hot spots”, risk or concentration isopleths should be constructed to differentiate between those areas of the site in need of further action, and those where no further action is required. Any deviations from these analyses must be approved by the Staff Toxicologist assigned to the project. For sites with elevated levels of chlordane, it may be necessary to determine if the concentrations detected would pose an unacceptable risk from indoor air exposures, as evaluated with the Johnson and Ettinger Indoor Air Model. The DTSC Staff Toxicologist assigned to the project should be consulted for further guidance if necessary.

Re: NOA of DEIR, Prologis Eucalyptus Industrial Park
PA07-0081,82,83,84,142,158,159,160,161,162,&186

Attn: Jeff Bradshaw, Associate Planner, City Of Moreno Valley

Thank you for the opportunity to review the Notice of Public Hearing for the above referenced project. The project is generally described as General Plan Amendment and Zone Change from existing Business Park, to Business Park Mixed-Use, R15, R5, and RA-2 land use designations to Light Industrial for 116.99-net acres. The land use changes are required for development of six distribution warehouse facilities totaling 2,244,419 square feet with building sizes that range from 160,106 square feet to 862,035 square feet. The applicant also proposes Tentative Parcel Map No. 35679 to subdivide the project into six parcels corresponding to the six warehouse facilities. A General Plan Amendment is also required for proposed changes to the City's circulation element and the master Plan of Trails. Eastern Municipal Water District (EMWD) offers the following comments:

The subject project requires water, sewer and recycled water services from EMWD. The details of said service connection points will be further detailed in a separate document, known as EMWD's Plan of Service (POS), which is still not yet developed by the project proponent. To that end, EMWD requires dialog with the project proponent, to develop the EMWD Plan of Service, as clarified herein.

EMWD requires beginning dialogue with the project proponent at an early stage in site design and development, via a one-hour complimentary Due Diligence meeting. To set up this meeting, the project proponent should complete a Project Questionnaire (form NBD-058) and submit to EMWD. For additional information, please visit our "New Development Process" web page, under the "Businesses" tab, at www.emwd.org. To download forms, please select "New Development Process: Print Page". This meeting will offer the following benefits:

Mailing Address: Post Office Box 8300 Perris, CA 92572-8300 Telephone: (951) 928-3777 Fax: (951) 928-6177
Location: 2270 Trumble Road Perris, CA 92570 Internet : www.emwd.org

Item No. E.6

1. Describe EMWD's development work-flow process
2. Identify project scope and parameters
3. Preliminary, high level review of the project within the context of existing infrastructure
4. Discuss potential candidacy for recycled water service

Following the Due Diligence meeting, to proceed with this project, a Plan Of Service (POS) will need to be developed by the developer's engineer, and reviewed/approved by EMWD prior to submitting improvement plans for Plan Check. The POS process will provide the following:

1- Technical evaluation of the project's preliminary design
2- Defined facility requirements, i.e. approved POS
3- Exception: for feasibility evaluation of a purchase acquisition, only a conceptual facilities assessment may be developed.

Again, EMWD appreciates the opportunity to comment on this project. Please forward the Final Environmental Impact Report to the attention of Helen Stratton at the mailing address shown on page one. If you have questions concerning these comments, please feel free to contact Maroun El-Hage, Ext. 4468.

Sincerely,

Maroun El-Hage, M.S., P.E.

Notice of PUBLIC HEARING

This may affect your property. Please read.

Notice is hereby given that a Public Hearing will be held by the Planning Commission of the City of Moreno Valley on the following item(s):

CASE: PA07-0081 - Zone Change
PA07-0082 - General Plan Amendment
PA07-0083 - Master Plot Plan including Building 2
PA07-0084 - Tentative Parcel Map 35679
PA07-0158 - Plot Plan for Building 1
PA07-0159 - Plot Plan for Building 3
PA07-0160 - Plot Plan for Building 4
PA07-0161 - Plot Plan for Building 5
PA07-0162 - Plot Plan for Building 6
P07-186 - Environmental Impact Report

APPLICANT: Prologis

OWNER: Prologis

REPRESENTATIVE: Prologis

LOCATION: South of State Route 60 and east of Moreno Valley Auto Mall, at Fir Avenue (Future Eucalyptus Avenue) and between Pettit Street and the Quincy Channel.

PROPOSAL: General Plan Amendment and Zone Change from existing Business Park, Business Park Mixed-use, R15, R5, and RA-2 land use designations to Light Industrial for 116.99-net acres. The land use changes are required for development of six distribution warehouse facilities totaling 2,244,419 square feet with building sizes that range from 160,106 square feet to 862,035 square feet. The applicant also proposes Tentative Parcel Map No. 35679 to subdivide the project site into six parcels. A General Plan Amendment is also required for proposed changes to the City's circulation element and the Master Plan of Trails. Approval of this project will require certification of an EIR.

ENVIRONMENTAL DETERMINATION: Environmental Impact Report

COUNCIL DISTRICT: 3

Any person interested in any listed proposal can contact the Community & Economic Development Department, Planning Division, at 14177 Frederick St., Moreno Valley, California, during normal business hours (7:30 a.m. to 6:00 p.m., Monday through Thursday and 2nd and 4th Fridays from 7:30 a.m. to 1:30 p.m.), or may telephone (951) 413-3206 for further information. The associated documents will be available for public inspection at the above address.

In the case of Public Hearing items, any person may also appear and be heard in support of or opposition to the project or recommendation of adoption of the Environmental Determination at the time of the Hearing.

The Planning Commission, at the Hearing or during deliberations, could approve changes or alternatives to the proposal.

If you challenge any of these items in court, you may be limited to raising only those items you or someone else raised at the Public Hearing described in this notice, or in written correspondence delivered to the Planning Commission at, or prior to, the Public Hearing.

Subject: Prologis & Tell Moreno Valley's Skechers to Stop Sweatshop Conditions in America! | CREDO Mobilize

http://www.credomobilize.com/petitions/tell-skechers-to-stop-sweatshop-conditions-in-america

Good afternoon/evening Moreno Valley Planning Commissioners,

re: Prologis FEIR & economic benefits to our residents

You will be asked to vote in favor of the Statement of Overriding Considerations where all of Prologis' unmitigated environmental impacts are overridden by mainly its economic benefits to our residents. I home you have reviewed the sections of the FEIR I pointed out in my email yesterday which includes those unmitigated impacts to Transportation/our roadways, Air Quality, Green House Gas (GHG), and Climate Change or as the Sierra Club likes to say Climate Disruption. Please read the links in this email and ask yourself if warehousing is really an economic benefit to Moreno Valley residents.

Moreno Valley is getting a lot of publicity with the following online petition which over 4,000 people have already signed. You should be able to use the above link to read what is happening with Skechers' approval and to send a message to support this former Moreno Valley Skechers truck driver. There are additional links at the bottom if you wish to know more.

Take care,

George Hague
Sierra Club
Moreno Valley Group
Conservation Chair

Tell Skechers to Stop Sweatshop Conditions in America!

To: CEO Robert Greenberg, Skechers Shoes

Campaign created by Mateo Mares

Campaign Facebook Page

Campaign Website

Facebook

Twitter

Email

End the sweatshop conditions for workers who haul your shoes from the Port of Los Angeles to your distribution center in the Moreno Valley. Hold your trucking contractor, Green Fleet Systems, accountable by demanding that it stop the harassment and intimidation of workers, and immediately rehire all illegally fired workers. It is time to reverse your track record of sweatshop working conditions around the globe.

Why is this important?

My name is Mateo Mares. Until early January of this year, my coworker Amilcar Cardona and I hauled Skechers shoes from the Port of Los Angeles to their national distribution center 80 miles/130 KM away. We were fired for trying to improve our working conditions and for standing up for our rights.

Our job is like a sweatshop-on-wheels. We work long hours, face safety hazards, endure harassment, and have our wages stolen from us. Drivers like us are standing up for our rights by filing legal claims with the government for wage theft, wage violations, retaliation for union and protected concerted activities, and illegal harassment. We were fired by our Skechers' trucking contractor, Green Fleet Systems, after we exercised our rights to engage in union activities at our workplace and after we refused to withdraw our claims for wage theft when we were pressured to do so by our boss.

Now our families are struggling to survive. We worked hard for many years hauling Skechers shoes and other foreign-made products from the docks to warehouses, but now we don't have any work and don't have any money to buy food or pay rent - much less help our kids get through college to make a better life for themselves.

Our struggle is like the men and women who manufacture Skechers shoes in places like China, Vietnam, and Cambodia. Like workers in Skechers' overseas factory, we are mistreated, deal with safety hazards, and don't get paid what we deserve. When we learned that Skechers has a record for bad treatment of its workers overseas*, we realized that Skechers is spreading sweatshop conditions to America.

Our children and wives are frightened about our future. It's time for Skechers to do the right thing, get us back to work, and end the sweatshop-on-wheels conditions for workers like us.

Add your name and tell Skechers to end the spread of sweatshops in America. Skechers has the power to demand that its trucking contractor stop violating workers' rights and U.S. labor laws. By signing, you are making a real difference in the lives of workers like me.

RE: Opposition to Prologis Eucalyptus Industrial Park Project and Comments on Final EIR (SCH No. 2008021002)

Greetings:

On behalf of the Sierra Club, Moreno Valley Group, and Residents for a Livable Moreno Valley, I hereby submit these comments on the Prologis Eucalyptus Industrial Park Final Environmental Impact Report (EIR). (SCH No. 2008021002)

Independently Prepared EIR
The City failed to independently prepare the EIR. CEQA requires a draft EIR be prepared by a lead agency or prepared independently under contract to the lead agency. Before using an EIR prepared by another person, the lead agency must subject the draft to the agency's own review and analysis. The lead agency is responsible for the adequacy and objectivity of the EIR, and an EIR sent out for public review must reflect the independent judgment of a lead agency. (Guidelines § 15084) Moreover, CEQA provides a lead agency shall prepare the final EIR; CEQA grants no authority for the preparation of the final EIR by the applicant, consultant, or other entity. (Guidelines § 15089)

Responses to Comments
The FEIR fails to adequately respond to the significant environmental points raised in public comments pursuant to CEQA Guidelines. Particularly, Guidelines § 15088 (c) requires that a response to comments evince a "good faith, reasoned analysis." "Conclusory statements unsupported by factual information will not suffice." (Guidelines § 15088 (c).) The FEIR fails to properly respond to comments and instead makes these conclusory statements and often makes statements unrelated to the comments made. The FEIR also groups together several comments and responds to only a portion of the issues raised by commenters. This is contrary to

the policy of CEQA. The following responses to comments were glaringly inadequate or failed to resolve the significant defects in the EIR raised by the commenters:

CDFW Comment Letter A-2

- CDFW commented that impacts to streams and riparian habitat should be compensated by 3:1 replacement of in-kind habitat on- or off-site. (CDFW Comment 7) The response to this comment states that "there are times when small eroded ephemeral drainage courses must be channelized or incorporated into the overall drainage management of a site to provide effective erosion and flood control." This response insinuates that the Project proposed is not the direct cause of the removal of onsite habitat. The Response also states that 2:1 mitigation is "sufficient mitigation under CEQA" whit out demonstrating impacts will be reduced below significance (according to CDFW they will not) or that 3:1 mitigation is infeasible.

- CDFW Commented that the EIR failed to consider regional impacts to other highways SR-91, I-10, etc. and failed to consider projects outside a 5-mile radius where these project would cumulatively affect these local and regional traffic conditions. CDFW noted the scale of these projects shows they are designed as regional warehousing centers, so consideration of regional impacts is essential. (CDFW Comment 8)

The Response to this comment is not on point. The Response states that, to the contrary, the 2035 conditions were reliant on General Plan forecasts. It is, however, apparent that the commenter was referring to the list of projects relied on for the cumulative impact analysis. While buildout conditions may also have been considered, the fact remains that cumulative effects of the Project and others in the area were reliant on consideration of those projects within a five mile radius.

The Response to Comment 8 ignores the comment that regional traffic impacts along other highways including SR-91 and I-10 need to be considered where the Project and cumulative projects are being developed with a regional purpose.

- CDFW also commented the traffic study failed to consider impacts from the World Logistics Project, instead only looking at 13 mil. total sf of warehousing. Also failed to include Villages of Lakeview Specific Plan and residential development proposed near Lamb Canyon Rd. and SR-60. CDFW commented the traffic study should be revised and recirculated to include these projects. (CDFW Comment 8.)

The Response to this comment notes that the NOP was prepared in 2008 for this Project, so that the World Logistics Center was not considered. While generally an NOP establishes the baseline and environmental setting for the Project, there is no such hardline limitation for what cumulative projects should be considered; instead CEQA provides that the discussion of cumulative impacts should be guided by standards of practicality and reasonableness. (Guidelines §§ 15125, 15130; *Association of Irritated Residents v. County of Madera* (2003) 107 Cal.App.4th 1383, 1404) Where the NOP was prepared six (6) years ago and a large number and scope of cumulative projects have been added in the vicinity, the EIR must be updated and

recirculated to account for these projects where they will likely result in cumulative impacts not considered in either this EIR of the Moreno Valley General Plan.

Further, the fact that the Moreno Highlands Specific Plan was considered is a red herring. While the Moreno Highlands Specific Plan may generate more "trips" generally, that does not mean that traffic impacts will be the same or less with the World Logistics Center. The World Logistics Center would generate a significant number of regional truck trips on regional highways to/from the ports and other known locales similar to this Project, instead of more localized trips indicative of the Moreno Highlands Specific Plan. The vehicle mix would also be significantly weighted toward heavy duty trucks, as with this Project, and add cumulative diesel emissions which may cause additional unconsidered health risks. These issues were not considered in the cumulative impact analysis. Similarly, the Villages at Lakeview project was not included in the cumulative impact analysis.

The consideration of General Plan Buildout 2035 traffic based on General Plan predictions (the RivTam Model) is not the same as addressing cumulative effects with respect to existing conditions or opening year conditions. Moreover, where many of the cumulative projects are seeking/ will seek General Plan Amendments to go forward, the General Plan is increasingly becoming an inaccurate predictor of cumulative effects in Moreno Valley.

- CDFW commented increase in traffic on surface streets from congestion on SR-60 not adequately considered, particularly Gilman Hot Springs Rd. and the Ramona Expressway. (CDFW Comment 8.)

The Response to this Comment states that such diversion will not occur based on 2035 conditions and modeling, but fails to show based on substantial evidence that diversion trips will not occur under existing or opening year conditions.

- CDFW commented potential impacts to San Jacinto Wildlife Area not adequately evaluated. Impacts from increased traffic, lighting, noise, windblown trash, emissions, and surface road runoff were not adequately considered. (CDFW Comment 8.) The Response to this comment ignores potential direct and indirect impacts from lighting, noise, trash, air quality emissions, etc., focusing only on vehicle trips.

<u>SCAQMD Comments Letter B-3</u>

Introduction Letter

- Response to comment 1-: the Response to this comment purports to resolve the issue raised by SCAQMD that mitigation is unenforceable. Comment 1- in the "Technical Evaluation" further clarified that mitigation is unenforceable where, for example, tenants are "encouraged to promote" certain actions but not actually required to implement them. Response to Comment 1- Introduction utterly fails to resolve this issue as the Response to this comment absurdly states that the City is eliminating the "encouraged" language with enforceable language; however any additional mitigation is placed under the

"requirement" at page 58 that "lease/purchase documents shall identify ***that tenants are encouraged to promote the following***." [emphasis added].

Technical Evaluation

- Response to comment 1-. First, this response fails to respond to the comment made by SCAQMD relative to the unenforceability of mitigation (see above). Second, the claim that the recommendation of SCAQMD are beyond the scope of the project level EIR is incorrect, particularly where SCAQMD recommended measures relative to vehicles to be used exclusively onsite.

  Third, the four measures recommended by SCAQMD have *not* been adopted, contrary to the claims in the Response to comments, or shown to be infeasible based on substantial evidence:

  1. Requiring all on-site vehicles (hostlers, forklifts, etc.) to utilize zero or near zero emission technology. The Response to this mitigation claims Mitigation Measure 4.3.6.6A "requires the inclusion of electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets." This is incorrect- MM 4.3.6.6A only requires that "lease/purchase documents shall identify that tenants are encouraged to promote" "the inclusion of electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets." Moreover, even if inclusion of electric or CNG trucks was actually required by MM 4.3.6.6A (it is not), there is no term requiring that *all on-site vehicles* use this zero or near zero emission technology; as little as one electric or CNG vehicle would suffice. There is no reasoning or evidence that this mitigation measures is infeasible.
  2. Requiring the installation of sufficient alternative fueling infrastructure (e.g., electric charging, CNG/LNG, hydrogen, etc.) for trucks on-site or within close proximity to the site to facilitate the use of these technologies. The Response to this comment states that these technologies do not yet represent a significant share of truck fleets and would be burdensome. If, however, all on-site vehicles also use zero-emission technology (e.g. electric), these modifications may not be burdensome. There is no evidence that this measure is technically or financially infeasible.
  3. Providing a phase-in schedule and goals for the introduction of zero or near zero technology trucks (e.g., 10% by 2020, 20% by 2025, etc.) that visit warehouses. The Response to this suggested mitigation states that MM 4.3.6.6.encourages Smartway participation and states that participation in a SmartWay program may not be feasible. The Response, however, does not actually address the comment made regarding phase in of zero or nearzero technology trucks. There is no evidence or reasoning provided showing that this mitigation is infeasible.
  4. Prohibiting the placement of loading docks or major truck routes within 500

feet of sensitive receptors. The Response to this comment does not address truck travel from the loading docks nearest sensitive receptors to the truck route.

- Response to Comment 2- The response to this comment is unresponsive to the comment made re: requirement that all trucks entering the property meet or exceed 2010 standards or the phase in of clean trucks.
- Response to Comments 3: The recommended mitigation has not been incorporated. MM 4.3.6.6A only requires that "lease/purchase documents shall identify that tenants are encouraged to promote" a truck log.
- Response to Comments 4: The recommended mitigation has not been incorporated. MM 4.3.6.6A only requires that "lease/purchase documents shall identify that tenants are encouraged to promote" idling limits.
- Response to Comments 5: The recommended mitigation has not been incorporated. MM 4.3.6.6A only requires that "lease/purchase documents shall identify that tenants are encouraged to promote" log monitoring training.
- Response to Comments 7: is unresponsive to the comment made re: limiting to non-refrigerated uses.
- Response to Comment 8: the City does not show that the mitigation recommended by SCAQMD that "at least a portion of the fleet" use alternatively fueled technologies is infeasible. Mitigation could feasibly require that 1% of the fleet be alternatively fueled.
- Response to Comment 9 is unresponsive to the comment made about applying for funding to retrofit trucks. As CEQA requires that all feasible mitigation be adopted for a project which will result in significant environmental effects, and as this Project will result in significant effect to operational air quality, the claim that the additions to 4.3.6.6 "are adequate to reduce project emissions to the extent practical" is legally and effectively incorrect.
- Response to Comment 10 is unresponsive to the comment made that the warehouse should be designed to place a check-in point for trucks inside the facility property. The fact that there's sufficient distance does not mean the project is designed in this manner.
- Response to Comment 12 fails to consider the installation of solar panels at this Project. The fact that ProLogis has installed solar projects on other buildings does not mean it will install solar on this building or that solar has been incorporated as mitigation.
- Response to Comment 13: The recommended mitigation has not been incorporated. MM 4.3.6.6A.
- Response to Comment 14 states that the recommendation for trucking support services is beyond the scope of the EIR. In fact many of the recommended mitigation measures apply directly to this project to avoid trips within the project neighborhood

and prevent idling including: (1) establish area(s) within the facility for repair needs; (2) post signs outside of the facility providing a phone number where neighbors can call if there is a specific issue; (3) provide food options, fueling, truck repair or convenience store onsite to minimize the need for trucks to traverse through residential neighborhoods; (4) improve traffic flow by signal synchronization; and (5) design the warehouse/distribution centers to ensure the truck traffic within the facility is located away from the property line(s) closest to its residential or sensitive receptor neighbors.

- Response to Comment 15 fails to address the issues raised by SCAQMD that the impacts from on-site equipment is not accounted for in the HRA. Additionally, the response states that the project does not plan to use diesel generators or TRUs during normal operations but does not prohibit the use of this equipment where the end user of the project is unknown.
- Response to Comment 17 fails to address the comment that the HRA fails to validate the assumption that 2025 is a representative year where diesel emissions will be significantly higher in the years preceding 2025. The HRA should evaluate impacts based on current emissions to provide a conservative assumption.
- Response to comment 18 fails to provide evidence to support the claim that onsite travel was included in the emissions calculations. The response also claims: "There are no diesel generators planned and TRUs will not burn diesel fuel because any refrigerated trucks will plug in and their TRUs run off that electricity. There are also no plans for onsite diesel-powered hostlers or other diesel-powered equipment." While such uses may not be *planned* because the project tenant is unknown, at least some of the uses should be *expected* and considered in the modeling. AQMD found an average rate of 3.1 hostlers per million square feet of warehousing in studying high cube warehouses, so at least 6 hostlers are likely with this Project. (High Cube Warehouse Truck Study (October 11, 2013), http://www.aqmd.gov/ceqa/Warehouse/Stakeholder/SWG_10-11-13-print.pdf.)
- Response to comment 20 acknowledges that the EIR erroneously assumes a 50/50 trip distribution east and west on Eucalyptus where only 33% are expected to travel west. While this may provide conservative estimates at the residences adjacent to the Project site, it may skew evaluation of health risks along the truck route east. The HRA should be updated to evaluate health risks with an accurate east-west truck distribution and to evaluate health risk along Project truck routes.
- Response to Comment 21 acknowledges that the EIR fails to assume that 100% of trucks accessing the Project site will be diesel as recommended by AQMD. SCAQMD further notes that the kind of trucks that typically serve warehouses are not necessarily the same mix as those on the road- i.e. they are diesel. The EIR understates project greatly understates project health risk impacts by this assumption.

- Comment 22 provides a rate of 9.27E-05 g/s for heavy duty trucks. The HRA should be updated to reflect us of this rate.
- Response to Comment 25 that the number of occurrences of >5 minutes of idling is "so small as to not affect the health risk assessment" is absurd. Even if queuing will not occur entering the site, traffic may existing exiting the site plus any idling time at the loading dock. SCAQMD recommends 15 minutes be presumed for onsite idling based on their expert opinion and considerable experience. The HRA should be updated to presume 15 minutes of onsite idling.
- Response to Comment 26 is unresponsive to the comment made. The air quality analysis appears to severely understate emissions.
- Response to Comment 29 is unresponsive to the comment made. Moreover, if the EIR is not indicative of the grading onsite, then the EIR should be updated.

City of Riverside Letter C-1

- Response to Comment 1 is unresponsive to the excellent comment made that because the TUMF model is based on the existing Moreno Valley General Plan and this Project would change the General Plan designation on 71 acres of the site, payment of TUMF is not shown to sufficiently mitigate Project traffic impacts. While the project may generate fewer trips when compared to residential uses, the vehicle mix will be entirely different and be comprised, in large amount, of heavy trucks. Trucks cause a substantial amount of wear and tear to streets not considered in the TUMF, are noisier, and result in other effects that may impact improvements of streets scheduled in the TUMF (E.g. need for barriers/wall with expansion, weight limits, etc.). Hence even improvements planned in the TUMF may be insufficient to accommodate this increased need.
- Response to Comment 2 fails to resolve the issue raised- that cumulative traffic impacts were not well considered. As discussed above, where the NOP for this project was prepared in 2008 and a significant number and scope of new Projects have since been proposed (e.g. are past, current, or probable future projects), the excuse that cumulative projects were not yet initiated falls flat. While usually a cut-off date may be appropriate, that is simply not the case here, and the City fails to show any reasonable basis or evidence supporting the decision to ignore these cumulatively important projects. Moreover, some projects not included in the cumulative analysis are now "current" projects e.g. RPT Centerpointe West Project.
- Response to Comment 3 focuses only on 2035 buildout projections and not forecasted impacts to roadways under existing or opening year conditions. While "spill-over" traffic may not be explicitly required, disclosure of significant impacts is required by CEQA. The EIR is inadequate for failing to consider these potential impacts, particularly with updated consideration of cumulative projects.

///

Sierra Club, San Gorgonio Chapter

- Response to Comment 1 is unresponsive to the comment made that it is feasible to require as mitigation that the Project be developed to LEED Silver or Gold standards to reduce the Project's GHG and air quality impacts.
- Response to Comment 2 is unresponsive to the comments made. First, the response fails to consider the feasibility of installing solar panels offset GHG impacts. Second, the response fails to address the unenforceability and complete failure to mitigate impacts where words such as "will be considered" are used instead of actually requiring implementation of such mitigation. Third, the response ignores the proposed mitigation that the Project be required to exceed current Title 24 standards by at least 25%.
- Response to Comment 3 is unresponsive to the issue raised that the EIR fails to consider the impacts from losing citrus groves on GHG emissions. While the GHG analysis assumes such groves are not present onsite, it fails to evaluate the impacts from reducing the carbon dioxide removal and storage that these agricultural trees will no longer be providing.

  Furthermore, while contributions to the Riverside Land Conservancy or San Jacinto Basin Resource Conservation District are not required as part of a mitigation plan, they would mitigate an otherwise significant impact and are not shown to be infeasible. As such, CEQA requires this feasible mitigation be adopted to reduce project impacts to agriculture.
- Response to Comment 11 See above re: baseline conditions and the need for consideration of cumulative impacts. Also, *San Franciscans for Reasonable Growth v. City & County of San Francisco* (1984) 151 Cal.App.3d 61, 74 fn. 14, *City of Maywood v. Los Angeles Unified School Dist.* (2012) 208 Cal. App. 4th 362.
- Response to Comment 22 fails to respond to the comment that climate change may increase air pollution formation due to rising temperature and impact to/from water supply reduction.

Johnson & Sedlack- Letter D-3

- Response to Comment 10 fails to adequately address the mitigation proposed that buildings be more widely dispersed or that setbacks be incorporated. The Project could remain quite large while incorporating this mitigation.
- Response to Comment 12 fails to evaluate the project's inconsistency with other policies at page 4.1-21.
- Response to Comment 14 fails to respond to the comment that the EIR fails to disclose the signs proposed and thereon evaluate impacts. An EIR is foremost an information and disclosure document, and the EIR has failed in this respect.
- Response to Comment 15 fails to provide a good faith response to the comment that although the buildings have a maximum height of 50 feet the aesthetic evaluation considered an average height of 39 ft.

- Response to Comment 19 fails to address whether cumulative impacts to the PAKO were adequately considered, particularly where a large portion of the City is being converted to industrial uses.
- Response to Comment 22 fails to detail why purchase of conservation easements or payment of in-lieu fees in neighboring regions where agriculture may be less costly is infeasible. There is also no explanation of why conservation easements or payment of in-lieu fees are infeasible where they are set up specifically to maintain farming even as the costs push out agricultural uses.
- Response to Comment 24 does not resolve the issue raised that at least two sites near the project have not been abandoned by MVUSD. The potential for these sensitive receptors to be located near the project must be considered in the EIR.
- Response to Comment 27 acknowledges that the modeling of health risks does not included dedicated emissions sources from the loadings docks along the building and driveways onto Eucalyptus Avenue.
- Response to Comment 28 acknowledges that the commenter is correct that onsite project operations will occur 365 days a year, yet the HRA did not account for this increased exposure compared to the standard 350 day/year assumption.
- Response to Comment 30 fails to respond to the comment made that the Project may contribute to a severe existing health risks environment. Moreover, the EIR fails to adequately evaluate and quantify cumulative health risks of this Project and other projects in the area, which will doubtless exceed the 10 in 1 million threshold.
- Response to Comment 32 again fails to resolve the issue raised by the commenters (Johnson & Sedlack and SCAQMD) that the use of projected 2025 emissions understates health risks based on current rates and is unsupported by evidence for use in the EIR. The EIR should provide modeling based on SCAQMD's recommendation.
- Response to Comment 45 does not resolve the issue raised- that construction could occur 14+ hours per day but that equipment usage was only evaluated for 6-8 hours per day.
- Response to Comment 46 fails to make a good faith effort to respond to the comment made.
- Response to Comment 47 is unresponsive to the comment made re: odors. The odor threshold question of CEQA is at issue, not whether the Project will result in a nuisance pursuant to SCAQMD Rule 402. The EIR must consider whether odors from construction may be significant.
- Response to Comment 48 is unresponsive to the comment made. As specifically stated by SCAQMD, "The LST mass rate look-up tables only apply to projects that are less than or equal to five acres.…In the event that the project area exceeds five acres, it is recommended that lead agencies perform project-specific air quality modeling for these larger projects." (http://www.aqmd.gov/ceqa/handbook/lst/lst.html, *see also,* http://www.aqmd.gov/ceqa/handbook/lst/Method_final.pdf at p. 3-3 ["Large industrial projects… are beyond the scope of these LST lookup tables."]) The EIR's use of the LST table for a 5-acre project site is improper. Project- specific modeling should be performed.

- Response to Comment 50 fails to resolve the issues raised regarding the vagueness of the terms used.
- Response to Comment 55 fails to resolve the issue raised that the mere requirement that a term be in a construction document does not actually mandate its incorporation into construction of the Project for purposes of enforceability. MM 4.3.6.2J must be amended to read: "Grading plans, construction specifications, and bid documents shall also include the following requirements, and such requirements shall be incorporated into construction of the Project." The amendment to replace "where feasible" with "where it is practical" makes not difference in improving enforceability. Further, the change to not provide lunch vendor services reduces project mitigation.
- Response to Comment 60 is unresponsive to the comment made that each of the suggested mitigation measures that are permitted in the EIR should be *required* of the Project to reduce its significant and unmitigated air quality impacts. As written such mitigation is uncertain and unenforceable. The response additionally fails to consider many of the mitigation measures proposed by the commenter by lumping them into one giant comment.
- Response to Comment 61 fails to respond to the comment made which references the Air Quality Analysis of Appendix B, not the Air Quality section of the EIR.
- Response to Comment 62 in no way responds to the comment made, but appears to be the response to comment 61. Comment 62 raised the issue that the EIR and HRA failed to evaluate potential cumulative health risks from this Project and other projects in the vicinity; and failed to cite the accurate current risk in the project area according to the MATES Study of SCAQMD. According to SCAQMD's MATES III study, the existing cancer risk in the project area is up to 497 in one million, well over levels disclosed in the EIR. (http://www3.aqmd.gov/webappl/matesiii/) This number does not include proposed or expected future projects that would be considered with an adequate cumulative impact evaluation.
- Response to Comment 66 is unresponsive to the comment made that the payment of in lieu fees shall be for the purpose of acquiring equivalent habitat.
- Response to Comment 67 is unresponsive to the comment made that preparation of a Habitat Mitigation and Monitoring Plan in the future defers mitigation without establishing that there is a practical reason for doing so.
- Response to Comment 69 is unresponsive to the comment made that the EIR fails to consider cumulative biological effects. Contrary to the response's implications, it is the duty of the lead agency to provide an adequate environmental document including an evaluation of cumulative impacts.
- Response to Comment 73 fails to provide any reasoning or evidence that the preparation of a paleontological resource impact mitigation program does not improperly defer mitigation, particularly when it appears that many of the issues to be covered are already known. This Response also fails to respond to the remainder of the comment re: salvage.
- Response to Comment 79 is unresponsive to the comment made that the EIR itself, not the commenter acknowledges the Project may create an oversupply of warehousing so that overriding considerations and project benefits may not exist.

- Response to Comment 81 fails to account for the fact that noise will result from both the loading areas and internal truck operation. While loading area noise may be greater, accumulation of noise from both activities may be greater still.
- Response to Comment 83 is unresponsive to the comment made which considered noise increases over existing ambient levels and not exceedences of the Municipal Code Maximum levels. Increases over ambient levels should be measured at the property line to accurately predict noise impacts.
- Response to Comment 84 again confuses the City's two noise criteria- whether the Project would exceed noise standards or whether the Project would result in a substantial increase in ambient noise over existing levels. It is clear the Project would significantly increase noise above existing levels. The same is true for response to comments 85 through 87.
- Response to Comment 86 fails to respond to the issue raised regarding exceedences of General Plan noise levels for residences.
- Response to Comments 88 and 89 are unresponsive to the comment made. It is clear Project construction will significantly increase ambient noise levels and exceed the residential noise levels set out in the General Plan and that the EIR relies entirely on compliance with construction hours to reduce these impacts. Mitigation is inadequate, and this impact should be deemed significant.
- Response to Comment 90 fails to resolve the issue raised that Mitigation Measure 4.9.6.1D provides that construction may occur outside construction hours with City approval. Project construction noise impacts are not shown to be mitigated below a level of significance. The mitigation suggested in comment 91 should be implemented as the measures are not found to be infeasible and are plainly needed.
- Response to Comment 100 ignores the majority of the comment regarding inadequacy of DIF or TUMF funding where roadways are not scheduled for improvements and improvements may not timely occur. I concur with the City of Riverside's comment with that compliance in the TUMF may provide inadequate mitigation where the TUMF is based on the General Plan, and the Project requires a General Plan Amendment. Similar issues will likely result with DIF as well.
- Response to Comment 101 also fails to resolve or respond to the issue raised as trip generation is not the only influence on traffic or the need of the roadway system and as there is no evidence the prioritization, programming, and allocation of funding will be sufficient to make needed roadway improvements.
- Response to Comment 107 is unresponsive to the comment made that the listed potentially feasible mitigation for the project's significant air quality impacts must be adopted.
- Response to Comment 109 states that new state energy standards *now in effect* require 20% savings above 2008 Title 24 standards. This "mitigation" in the EIR is thus not mitigation at all but a legal requirement.
- Response to Comment 110 is unresponsive to the comment made. CEQA requires that mitigation be certain, enforceable, and not vague. MM 4.13.6.1.C fails to meet this requirement where it merely requires implementation of some strategy, however ineffectual.
- Cumulative GHG effects are improperly considered in the EIR, as noted at comment 112.

- Trip generation rates used for the Project are understate the Project's trip rate and misstate the vehicle mix. SCAQMD recommends a trip rate of 2.57 trips/1,000 sf and, more importantly, 40% trucks.

Additional Comments:

Not all feasible mitigation has been required as set out in great detail by EIR commenters. Many mitigation measures are incorporated in language only with no requirement that they ever be implemented with Project construction or operation. Numerous commenters noted the inadequacy and ineffectiveness of mitigation for transportation, air quality, greenhouse gases, biological resources, etc. Moreover, no mitigation has been required for impacts to/from aesthetics or agricultural resources.

It is feasible to require the additional mitigation of this Project including, but not limited to, those measures recommended by commenters in the FEIR and the following:

1. The building and site plan designs shall demonstrate that the project's energy efficiencies represent a 25% reduction from current Title 24 energy efficiency standard. The Project shall be built in compliance with the building and site plans.
2. Require by contract provision that Project tenant/purchaser implement compressed workweek schedules.
3. Require that all heavy trucks accessing the Project site are Smartway 1.25 (or 1.0) or greater.
4. Alternatively to the above, require by contract provision that Project tenant/ purchaser achieve at least 20 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of consolidated trips carried by SmartWay carriers until it reaches a minimum of 90 percent of all long-haul trips carried by SmartWay 1.0 or greater carriers.
5. Require that all heavy trucks accessing the Project site conform to CARB 2010 air quality standards or better.
6. Install catalytic converters on all gasoline-powered equipment.
7. Include 10% electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets.
8. Require by contract provision that Project tenant/ purchaser establish a carpool/vanpool program.
9. Require by contract provision that Project tenant/purchaser charge parking fees for single-occupancy vehicles.
10. Provide preferential parking for EV and CNG vehicles across at minimum of 10% of auto parking spaces in locations nearest to the Project entrances.
11. Install EV charging stations, including at least one Quickcharge unit, on the Project site.
12. Require use of electrical equipment (instead of gasoline-powered equipment) for landscape maintenance.

13. Diesel or gasoline powered yard trucks, hostlers, yard goats, and forklifts shall be prohibited. Only electric yard trucks, hostlers, yard goats, and forklifts shall be used.
14. Each facility operator shall provide regular sweeping of onsite parking and drive areas using street sweepers that comply with applicable SCAQMD Rules.
15. Each facility operator shall maintain a log of all trucks entering the facility to ensure that, on average, the daily truck fleet meets applicable air quality emission standards. This log shall be available for inspection by City staff at any time.
16. Each facility operator shall prohibit all vehicles from idling in excess of three minutes in all onsite areas.
17. Each facility operator shall ensure that onsite staff in charge of keeping the daily log and monitoring for excess idling will be trained and certified in diesel health effects and technologies, such as by requiring attendance at CARB-approved courses.
18. Each facility operator which upon occupancy does not already operate 2077 and newer trucks shall in good faith be required to apply for funding to replace or retrofit their trucks such as Carl Moyer, VIP, Prop 1B or similar funds. Should funds be awarded, the tenant shall be required to accept and use them.

As an important note, merely incorporating any of these feasible mitigation measures within the requirement that "lease/purchase documents shall identify that tenants are encouraged to promote the following" or requiring only a writing or notation without requiring compliance therewith immediately renders them uncertain, unenforceable, and ineffective.

Thank you for your consideration of these additional comments.

Sincerely,

Raymond W. Johnson

Subject: Warehouses in East Moreno Valley
Dear Sir:

I have lived in Moreno Valley for forty five years. I voted for incorporation under the threat of being annexed by Riverside. I have watched as our new city grew. The city is now blocked from expansion to the north by a natural boundary and residential occupancy. The cities of Riverside and Perris block expansion to the west and south. Now you want to limit future expansion by authorizing a warehouse project covering the entire eastern boundary of the city. This adventure dooms the city as a haven for transients and other undesirable elements of society not to mention the environmental impact. It will not encourage more lucrative development and investment by other ventures. I urge this project be abandoned. Much of our area is already devoted to warehouses which exist on all major streets both north/south and east/west. I do not believe any of the promises touted by council members or its developer who support the project.

Sent: Wednesday, March 05, 2014 2:02 PM
To: Jeffrey Bradshaw
Subject: FW: Prologis Project and other warehouse/logistics projects

From: Peggy Hadaway [mailto:phadaway@roadrunner.com]
Sent: Wednesday, March 5, 2014 11:43 AM
To: 'jefferyb@moval.org'
Subject: Prologis Project and other warehouse/logistics projects

Dear Mr. Bradshaw,
I understand the Moreno Valley city planners intend to present their recommendation on the Prologis Project on 13 March 2014. I am unable to attend meetings to voice my position on Prologis . I want to take this opportunity in email form to do just that.

We have a perfectly good general plan that has let everyone know the zoning permitted in all areas of Moreno Valley. Based on the general plan many people have made decisions on when and where to make purchases of various types of parcels of land, etc. Just because the city council allowed Sketchers to be built should in no way means other warehouses should allowed to be built on the east side of Moreno Valley and especially if any such project would require any zoning changes from the general plan. I realize the city council can ignore the city planners, as they did with the Sketchers project if I recall that situation correctly.

I am adamantly opposed to building more of the behemoth warehouse/logistics building in Moreno Valley. We already have too many which are negatively impacting the environment. More to the point, the current members of logistics organizations advocate only building warehouses/ logistic centers where rail lines can be used (as opposed to using trucks on streets and highways} to transport products to and from these warehouses. The reason is that the logistics" industry" is concerned about the very negative responses to the" older style" warehouse/logistics centers built to use the surface streets and highways from the general public and especially from people who live close to these centers who directly and personally experience the very real downside to these centers. In the case of Sketchers the possible number of new jobs for Moreno Valley people there just did NOT materialize, nor will it with any of the highly mechanized warehouse/logistics centers.

I would expect Prologis to be another highly mechanized center. I urge you to recommend NOT approving the Prologia Project as well as any other such logistics center on the east side of Moreno Valley as clearly there is no rail service there to be used. The current city council has a couple of members who may very well be removed when the voters have a chance to legally register their opinions very soon. One member was placed there in illegal contravention of the Brown Act according to my reading of that law. If nothing else this decision should be delayed until the membership of the city council is decided, because this is a very important decision that will affect this city for many years to come. Moreno Valley already has a very poor reputation as a city. I would hate to see our reputation further tarnished by expediting the Prologis Project under these adverse circumstances.

IT's my opinon that Prologis Warehouse Corporation is looking to make a fast buck at the expense of the citizens of Moreno Valley.

Skechers warehouse project was to produce 1000 new jobs as stated by Moreno Valley officals. It only employs roughly 600, & most of these employees came from the five smaller Skechers warehouses in Ontario, consolidating them in Moreno Valley.

The current freeway system is very congested, due to the wall to wall homes that developers were allow to construct now you want to increase the volume of traffic with large truck.

Please remember that you are all Public Service employee working on behalf of the citizens of Moreno Valley

Karen Penrow

I am not in favor of this Project

RECEIVED
AUG - 7 2012
CITY OF MORENO VALLEY
Planning Division

Dear Mr. Bradshaw

I am writing you concerning the various warehouse projects proposed for Moreno Valley. More to the point. I am writing to point out what I feel are errors made by the cities so called experts. I am neither for or against the projects. Build them or don't build. I don't care. What I don't like is to hear so called facts that I don't feel are accurate. I have enclosed a 2010 article about the Fontana logistics warehouses for you to read. It has a union slant to it but the facts on how the logistics warehouses are run is accurate. Only when the city has all the facts, pro & con, can it decide what is best for Moreno Valley.

Some time back my wife & I watched the city counsel meeting on TV. I didn't write down the names & dates but it was one of the meetings on the proposed Highland Fairview World Logistics Center. The first "expert" said the average logistics job pays around $42,000.00 per year. This maybe true for the few people employed by the logistics company but not the majority of the workers, who in fact are low paid temps. As a rule logistics companies do not provide good blue collar jobs. Their whole reason for being is to drive down costs. Labor costs.

The second expert is the one I really take issue with. He is the professor from the University Of Redlands. Now let me say my step daughter just graduated from the University Of Redlands so I have great respect for the University. I do not feel the "expert" professor knows what he is talking about when he talks about Moreno Valley being the ideal location and how this ideal location will reduce truck traffic in the So. Cal. Area. Ontario and Fontana are ideal locations because of all the freeway access that surround those cities. From a truckers view point Moreno Valley is a bad location. One way in & one way out. The 60/215 freeway. He states in his presentation that trucks will come from the east to Moreno Valley to pickup loads and then return east never having to go into the So. Cal. area. This maybe true in a few cases but not in the majority. The reason is this. Most trucks come here loaded. Those loads will deliver in the So. Cal area. Not many loads deliver in the Banning area. So when these trucks are empty they will have to come up the 60/215 freeway to get to Moreno Valley. Pulling that hill, with all the other trucks, is not fun. Leaving heading east thru the hills in the bad lands is not fun. Traffic will be a mess on the 60/215 freeway for a number of other reasons. One, most trucks coming to any logistics warehouse come from the ports. Two, other trucks from UPS, Fedex, YRC, JB Hunt, Swift, ABF, Conway, Schneider, Knight, England and others that all have yards in the Inland basin will all be coming & leaving via the 60/215 freeway. The more warehouses you build in Moreno Valley the more truck traffic you will have on the 60/215 freeway. Not less as the "experts" would like you to believe. One way in and one way out. When a ship hits the port some large logistics warehouses can get 20, 30 or more containers a day and take back as many empty

containers to the ports. Once in the warehouse the goods must be sorted to fill orders & shipped out. Those trucks coming to pick up those orders will come from the Inland basin area to the west not from the east. And most like UPS & Fedex will return to their yards in the Inland area basin.

After you review all this information if you agree with what I have said and still plan to build all there warehouses I have one suggestion. One most truck drivers will hate me for but one I feel needs to be done. This suggestion will involve contacting CalTrans and dealing with them will be harder then dealing with the people of Moreno Valley. What I suggest is a restricted truck lane coming up (east) the 60/215 freeway. Cal Trans built the truck bypass at the top of the hill. At the 60/215 split. But they did not restrict the trucks to the right lane to force them to use the truck by pass. A "trucks must stay in the right lane. No passing" lane restriction would go a long way to helping traffic in the long run. This restriction should run from the MLK off ramp up to the truck bypass. Right now a truck going 45 mph up the hill can pass a slower truck even if he later moves back over to use the truck bypass. The more trucks you have the more this will cause traffic problems. Heck, right now the old 60 east sign at the top of the hill still has a "trucks ok lane" on it. Which can be confusing. That needs to be removed as well as adding the lane restriction. Any cost for signs, painting, and any lane realignment should be picked and paid for by the different warehouse projects under consideration now and in the future. The same idea of a lane restriction can be used leaving Moreno Valley going down the hill with a speed restriction. But without a truck bypass for trucks merging from the 215 north to the 60 west this probably would not work.

Thank you for your time. I have lived in Moreno Valley for 26 years. I have been driving a truck for a living for 36 years. I have driven long haul & local. I have been a member of the Teamsters Union for 27 years. I work for YRC Freight and have been with them for 20 years. So I would like to think I know a little about the transportation industry. At least from the end where the truck meets the dock.

Thank you again

Meetcha Dating with a twist.

Holding Wal-Mart Accountable

HAROLD MEYERSON | *September 6, 2010*

Nobody, it seems, is responsible for the conditions of work in the warehouses of Fontana -- even though warehouse work is mainly what Fontana has to offer. The Los Angeles exurb is part of California's Inland Empire, which boasts the world's largest concentration of warehouses, to which thousands of trucks make a daily 70-mile trek from the ports of Long Beach and Los Angeles, carrying Asian-made goods for market. Thousands more trucks depart daily from Fontana, carrying those goods, re-sorted and repackaged, to Wal-Marts, Targets, Loews, and Home Depots up to a thousand miles away. Close to 90,000 people work in those warehouses. But no one is responsible for the conditions of their work.

Homero Lovato loaded trucks for several years in one of the many warehouses containing goods bound for Wal-Mart's shelves. With one other worker, he loaded three or four truckloads a day, making $42.50 per truckload. Even before unemployment began to skyrocket, he says, the terms of work were hard and degrading: "If people get sick, they have to stay on the job. If people have to go to the bathroom, they have to wait until the break." It was, he says, a rush job, with workers frequently falling behind the loading schedules and then racing to finish their tasks.

Workers in other Fontana warehouses tell similar stories. Blanca Cortes, who worked in quality control at a warehouse for UPS Mail Innovations, a nonunion subsidiary of United Parcel Service, once fainted on the job when she was six months pregnant. The warehouse wasn't air-conditioned even though temperatures in Fontana frequently exceed 100 degrees. "There were about 10 faintings that year," she recalls. "They wouldn't even buy a fan." Olga Romero, who worked in a warehouse that shipped shoes to Wal-Mart, also remembers the heat -- and the cold. "It would be over 100 in the summer and in the 40s in the winter," she says. "Something's wrong when you have to work with a couple of jackets."

Fontana's warehouse workers never made a decent wage, even when the economy was robust. Cortes made $9.50 an hour with no benefits, until she was replaced last year by a new hire who was paid $7 an hour. In their 2008 book, *Getting The Goods: Ports, Labor and the Logistics Revolution*, Edna Bonacich and Jake B. Wilson report that direct hires at Fontana's Target warehouses started at $12.80 an hour and could work their way up to $17, while temps started at $8.50 and maxed out at $12. (Of course, these figures date from the bubble years. Today, unemployment in the Fontana area is close to 15 percent.) And by one estimate, 53,000 of the 90,000 Fontana warehouse workers -- even though they may hold down the same job year after year -- are temps.

When you drive through Fontana on Interstates 10 or 15, it doesn't seem hard to tell whose warehouse is whose. One warehouse has hundreds of Wal-Mart trucks lined up at its bays; another, hundreds of Home Depot trucks. But, as far as Wal-Mart, Home Depot, and the law are concerned, these are not the companies' warehouses.

The warehouses, in fact, are part of an elaborate system enabling Wal-Mart and its competitors to keep their prices low and their revenues high by depressing wages and labor costs all along their supply chains -- and to protect outfits like Wal-Mart from responsibility for working conditions. The giant retailers that have come to dominate much of the American economy don't own many of the hundreds of warehouses in Fontana or anyplace else.

In Fontana, the warehouses are owned by local commercial realtors and operated by logistics companies. But the logistics companies don't formally employ a majority of the warehouse workers, either. Rather, the workers are employed by some of the region's 270 temp agencies. The way a famously demanding employer like Wal-Mart ensures that the warehouses are running as it sees fit is to contract with a few large logistics companies (Wal-Mart likes Exel, a British firm), which in turn contract with a few large temp agencies (Exel likes Staffmark).

Thus are the goods moved with dispatch, while workers receive low pay, no benefits, can't readily join a union, and can be let go at a moment's notice. Theirs is a situation that the workers themselves -- almost entirely Hispanic, largely immigrant, and between a quarter to 40 percent of them, in the assessment of one union organizer, undocumented -- cannot easily remedy. And theirs is a

situation for which their real employers -- the Targets, the Sears, and above all the Wal-Marts -- can and do deny all responsibility.

***

The warehouse workers of Fontana constitute a key link in both the global supply chain and the American political economy. For the American labor movement to experience a rebirth and American workers to enjoy a rising share of the nation's wealth, it's imperative that unions make gains among America's new working class and its dominant and standard-setting employer: Wal-Mart. And the road to a unionized Wal-Mart runs straight through Fontana: Shut down the temp warehouses, and Wal-Mart's shelves will soon be bare.

Last year, the Change to Win labor federation waged an ambitious campaign to organize Fontana's warehouse workers, a campaign it then wound down after local unemployment soared and Congress failed to pass the Employee Free Choice Act. But Change to Win has not given up on Fontana, much less Wal-Mart, and is looking at ways that the government can help the warehouse workers ease their plight.

It's not an easy task. By the standard of common sense, the tens of thousands of full-time warehouse workers who are employed by temp agencies are misclassified. Clarissa Lua, who worked alongside Blanca Cortes at UPS Mail Innovations, went through 10 staffing agencies in the five years she worked there. Or rather, the agencies went through her, since UPS, not she, switched her agencies. At each agency the job was always the same: "Sometimes we didn't even know which agnecy we worked for," she said.

Like millions of American workers, Lua was a perma-temp, trapped in a work arrangement common not only to bottom-feeders like Wal-Mart but to such presumably high-end employers as Microsoft. So while unionists and other worker advocates are asking President Barack Obama's Department of Labor and Middle Class Task Force to remedy misclassification violations at major employers, it's tricky to apply that remedy to warehouse workers unless they can be shown to be permanent workers misclassified as temps. Neither can the government deny contracts to the middlemen -- the logistics firms or employment agencies -- for these companies don't have government contracts.

Instead, the unions are asking the government for two things: First, to enforce the Fair Labor Standards Act (FLSA) rigorously inside the warehouses, tallying and fining them for violations of minimum-wage and maximum-hours laws. And second, to hold accountable not the temp agencies or the logistics companies or the local real-estate companies but, rather, the big-box retailers -- the companies that structured and benefit from this byzantine system.

"At the very least," one union official says, the Department of Labor can "enforce the FLSA on warehouse workers not being paid for overtime. The temp agencies can fudge on this by not listing hours-worked on their paychecks." In fact, at the direction of Labor Secretary Hilda Solis, the department hired 250 new wage and hour investigators last year, an increase that brings the Wage and Hour Division, after years of neglect, close to its all-time high.

"The department is willing to spend more on enforcement: It's asking for $25 million more in the president's 2011 budget," another union official says. "The question is where they'll focus their resources. They haven't yet said they're going after the biggest offenders. They need to go after Wal-Mart and FedEx, not some bodega owners."

There's a precedent for targeting the retailers who design and control the supply chains. In 1996, at the direction of Labor Secretary Robert Reich (yes, *our* Robert Reich), the Wage and Hour Division began a "No Sweat" campaign, which held retailers responsible for the sweatshop wages and conditions its inspectors had found in the small garment factories (chiefly in Los Angeles) that turn out their products. When the contractors and subcontractors who employed the seamstresses were unable to come up with money for the back-pay settlements that the division had ordered them to make, the Labor Department held the retailers -- in this case, Macy's -- liable for the payments. To persuade Macy's to settle with the workers, Reich threatened to seize the Macy's-bound garments they had sewn, under the "hot goods" provision of the FLSA that permits the department to take goods produced under conditions prohibited by the act. Macy's settled, and, with Target, then signed an agreement taking responsibility to see that the working conditions all along their supply chains conformed to the FLSA's standards.

"Invoking 'hot goods' is the nuclear option," one union staffer says. "But we want Labor to be open to using it. We want them to go after the top of the food chain."

***

Going after the top of the chain to improve working conditions should fit comfortably within President Obama's stated economic goals, paramount among which is reversing the long-term decline of jobs and worker compensation in America. An administration trying to bolster green jobs and green manufacturing cannot remain indifferent to jobs in the service and retail sectors, which employ far more people than manufacturing and construction combined.

Raising the Wal-Mart wage -- and the Wal-Mart wage is paid not just to the company's direct employees but to many of its competitors' employees and, in one form or another, to all those who work along its, and its competitors', supply chains -- is a key step in re-creating the broadly shared prosperity America once enjoyed. To that end, the president supported the Employee Free Choice Act. To that end -- all the more because EFCA failed to become a law -- he should support enforcement actions that compel Wal-Mart to become a more responsible employer.

Wal-Mart is not the only company at the top of its respective food chain, of course. Another is FedEx, which as a point of both law and common sense looks to be misclassifying its 30,000 "ground drivers," who pick up and deliver packages that are not shipped by air, as independent contractors, not eligible for benefits, though their routes, hours, pay, and vacations are all determined by FedEx. The Teamsters union, which represents truck drivers at rival UPS, was stymied by the hostility of the George W. Bush administration (FedEx CEO Fred Smith is a Republican mega-donor). So the Teamsters over the past decade succeeded in getting roughly 30 state attorneys general to investigate FedEx's misclassification of drivers.

With a number of those attorneys general closing in, FedEx has shifted its employment model in several states -- not to one in which it finally assumes responsibility for its workers, however, but to a system of "super contractors" who purchase multiple routes and then hire drivers who travel them -- all under FedEx's careful, if unacknowledged, supervision. Organized labor wants the administration to build on the work of the state attorneys general, to determine on its own that FedEx is misclassifying 30,000 employees, and then to declare that violations of labor law -- such as misclassification -- constitute grounds to reduce or terminate its business with companies guilty of such practices. (See "A Long Haul" by David Bensman and Molly Greenberg, Page A9.)

In taking on the Wal-Marts and FedExes, of course, the administration would be challenging some of the most powerful institutions in the land. Then again, in the America that Obama has pledged to rebuild, someone should always be responsible for the conditions of work.

Officials seek comments on warehouses

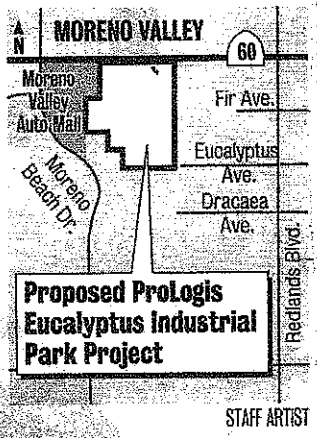
mments are being cepted on a proposal for massive project in oreno Valley

BY LORA HINES
STAFF WRITER
lhines@pe.com

Public comments are be- g accepted on a draft envi- nmental impact report for proposed 2.2 million uare-foot warehouse pro- ct in Moreno Valley that of- cials began discussing out five years ago.

City planning officials re- ntly released the report for e proposed ProLogis Euca- ptus Industrial Park Pro- ct, which would consist of x warehouses south of ighway 60 and east of the oreno Valley Auto Mall. esidents, state and local gencies and community and nvironmental groups have ntil Sept. 4 to submit com- ents on the report.

ProLogis, a San Francisco- ased international ware- ouse developer, bought ore than 125 acres in the 000 block of Eucalyptus Av- nue more than five years go. Almost all of it will be sed for the project, which ill require amendments to he city's general plan and oning requirements.



STAFF ARTIST

posed, ProLogis officials esti- mated the project could cost as much as $150 million to de- velop and would create be- tween 1,000 and 1,500 jobs. No one from the corporation could be reached Thursday, July 26, to offer a cost or job update or comment on the project.

According to the draft en- vironmental impact report, the poor economy in 2008 stalled the project. ProLogis recently decided to pursue the process, the report states.

City planning official John Terell said there is nothing unusual about the project or its potential impacts that have delayed it.

In March 2008, city plan- ning officials received 25 re- sponses from state and local

SEE WAREHOUSE/A11

WAREHOUSE

CONTINUED FROM A8

agencies, residents and envi- ronmental groups about con- cerns with the proposed pro- ject, including increased traffic, pollution and its prox- imity to schools.

The report states the pro- ject could affect areas such as air and water quality, ani- mal habitat, Native Ameri- can prehistoric sites, drain- age and traffic.

Resident Marti Orth was among those who submitted comment about the proposed project in 2008. She said she is as opposed to it now as she was then, but she believes her opinion will have little ef- fect on the City Council, which will decide whether to approve the project later this year.

"I think it's a forgone con- clusion," said Orth, a resi- dent of more than 40 years. "First, decisions are made. Then they ask for opinions."

On Wednesday, July 25, city manager Henry Garcia told hundreds of Inland area officials and business own- ers that warehouse develop- ment and health care will be Moreno Valley's job growth focus areas because they have the most potential to employ the city's primarily blue-collar workforce.

Orth said residents have little reason to believe that the proposed project will bring as many jobs as offi- cials claimed because the Skechers warehouse didn't.

"I don't know why (ProLo- gis) would be any better," she said.

Skechers had employed about 1,000 people in five smaller warehouses in On- tario before consolidating and moving to Moreno Val- ley. Moreno Valley officials and project supporters promised that Skecher warehouse would brin more than 1,000 jobs. It en ploys about 600 people.

City officials have sai they expect the number employees to increase as th economy improves.

Comments about the Pro ogis project are to be sent associate city planner Je Bradshaw, Moreno Vall Planning Division, 141 Frederick St., Moreno Vall 92553 or send e-mail to je freyb@moval.org.

ProLogis Eucalyptus Industrial Park (formerly ProLogis Park Moreno Valley Eucalyptus Project)
SCH # 2008021002

Mr. Bradshaw,

We have completed our review for above named project located south of State Route 60, east of Moreno Valley Auto Mall, and adjacent to and west of the Quincy Channel. The proposed project consists of construction of a warehouse facility with six individual warehouses of varying sizes with a total of 2,244,638 square feet on 122.8 acres. The project includes construction of parking and driving areas, detention basins, erosion protection and bridge over Quincy Channel, offsite road and utility improvements, and landscaping along the perimeter and roadway frontages.

As the owner and operator of the State Highway System (SHS), it is our responsibility to coordinate and consult with local jurisdictions when proposed development may impact our facilities. As the responsible agency under the California Environmental Quality Act (CEQA), it is also our responsibility to make recommendations to offset associated impacts with the proposed project. Although the project is under the jurisdiction of the City of Moreno Valley due to the Project's potential impact to State facilities it is also subject to the policies and regulations that govern the SHS.

We recommend the following to be provided:

- It is recommended that a system of coordinating these fees with a state sponsored program of collecting transportation mitigation fees from development projects be developed to implement the necessary improvements and mitigation measures on the State Highway System.

We appreciate the opportunity to offer comments concerning this project. If you have any questions regarding this letter, please contact Talvin Dennis at (909) 383-6908 or myself at (909) 383-4557 for assistance.

Sincerely,

DANIEL KOPULSKY
Office Chief
Community Planning/IGR-CEQA

Grace Espino-Salcedo

Subject:	ProLogis & Cumulative Noise impacts of the World Logistic Center (WLC)
Attachments:	North of SR 60 WILL THE WORLD LOGISTIC CENTER TRUCK TRAFFIC IMPACT YOUR HOME OR NEIGHBORHOOD.docx; WILL THE WORLD LOGISTIC CENTER TRUCK TRAFFIC IMPACT YOUR HOME OR NEIGHBORHOOD.docx; 4.12 Noise (1-31).pdf

Good afternoon Moreno Valley Planning Commissioners,

This email and attachments mention one of several reasons why the Prologis warehouse project does not want to include the Wold Logistic Center (WLC) truck traffic in their analysis. They need to analyze the cumulative impacts of their project's traffic along with that of the WLC or all of their studies are inadequate. Our City will need sound walls in many neighborhoods to try and protect the residents from significant WLC truck noise and sadly other areas will not be able to mitigate the noise with a wall. Some of these walls will block views that the homeowners paid big money to enjoy.

All attachments are from the Wold Logistic Center's (WLC) DEIR noise study section. It explains that there are quite a few streets which have homes that are well away from the project site, but will be impacted by the WLC's project noise -- such as from diesel trucks. Their mitigation is to build six foot sound walls with some being 500 ft to 5,000 ft in length to protect residents who use their yards. Starting on Page 4.12-46 the document explains in words what is shown on previous pages in just numbers. Page 4.12-51 begins explaining some of the walls this project will need to protect existing residents. In some cases they need to tear down existing view fences and put in 6 foot solid sound walls (4.12-51). Many times they get away with six feet walls because the average hight of people is below six feet, but for those taller than six feet these walls probably will not mitigate much of the noise. There is a least one neighborhood that is only two tenths below requiring a fence and they will feel the noise impact from the WLC project traffic. All of the sections sited above can be found in the last attachment.

Most believe they are not near the project and therefore they do not need to worry. While most are south of SR 60 there are some which are well north such as a 2,000 foot wall along Moreno Beach between Locust and Ironwood Ave (page 4.12-52). The next page summarizes most of these and also explain other streets which the WLC will significantly impact and "cannot be feasibly mitigated and it will remain significant and unavoidable."

You must realize that while walls may lower the sound, which mainly come form trucks, they will not prevent toxic diesel emissions from those trucks from entering yards and homes. It is also sad that many stretches of roadway and nearby homes are significantly impacted by noise generated by the WLC but "cannot be mitigated". Many roads in our city are going to be torn up by the WLC traffic.

The first two attachments are short one page summaries from the WLC's DEIR and the third is longer and is taken from the WLC DEIR. Please read at least the first two.

Please vote NO on the Prologis Eucalyptus Industrial Park Project.

Take care,

George Hague

Some of the noise impacts north of SR-60

Some of the noise impacts south of SR-60

Locust Avenue between Moreno Beach Drive and Smiley Boulevard (54). Only the 2035 case results in a significant noise increase for this area. In 2035 the project will result in a 3.5 dB increase raising the noise level up to 68.9 CNEL. There are three single-family homes along this roadway and they front onto the roadway. As discussed above, homes that front onto a street cannot be effectively mitigated with a soundwall. ***Therefore, this potentially significant impact feasibly cannot be mitigated.***

Moreno Beach Drive between Locust Avenue and Ironwood Avenue (56). Only the 2035 case results in a significant noise increase for this area. In 2035 the project will result in a 3.3 dB increase raising the noise level up to 66.6 CNEL. There are 18 single-family homes along this roadway. Some homes front onto the roadway, but most backup to the roadway. Currently there are no soundwalls along these homes. The walls would need to be 6 feet tall with respect to the rear yard**. Roughly 2,000 feet of six foot tall barrier** would need to be provided for mitigation for 15 of the 18 impacted homes (Exhibit 18). With the retrofit the noise levels would drop at least 5 dB, with the resultant noise levels around 62 CNEL in rear yard areas. Approximately 3 homes would remain unmitigated, because these homes front onto Moreno Beach.

Ironwood Avenue between Redlands Boulevard and Highland Boulevard (36). A significant noise increase is projected for all four study years on this roadway link. In 2035, the noise level will increase 5 dB to 63.6 CNEL. There are two single-family homes that front onto Ironwood Avenue. There are also two churches along this roadway, however, the churches are setback from the roadway far enough that no significant impacts will occur. Although the noise levels remain below the City's 65 CNEL standard, the noise levels will increase substantially above those without the project. As discussed above, homes that front onto a street cannot be effectively mitigated with a soundwall. ***This potentially significant impact feasibly cannot be mitigated.***

Redlands Boulevard from State Route 60 to San Timoteo Canyon Road (35, 42). The noise analysis shows significant noise increases along this roadway segment for the 2012, 2022, and 2035 cases. The increases in noise are around 2 dB with a resultant noise level in the 71 to 72 CNEL range. There are 28 homes along this roadway that would be affected. The single-family homes are scattered and generally front the roadway. As discussed above, homes that front onto a street cannot be effectively mitigated with a soundwall. ***Therefore, this potentially significant impact feasibly cannot be mitigated.***

San Timoteo Canyon Road from Alessandro Road to Live Oak Canyon Road to Redlands Boulevard (177, 179). The noise analysis shows a significant impact in the existing (2012) to existing plus project comparison. The noise increases by a little over 3 dB with resultant noise levels in the 65 to 66 CNEL range. There are four scattered residences along the roadway that would be impacted. As discussed above, homes that are scattered cannot be effectively mitigated with a soundwall. ***Therefore, this potentially significant impact feasibly cannot be mitigated.***

Theodore Street from State Route 60 to Highland Blvd (38). The noise analysis indicates that the project will cause a 2.9 dB increase in the year 2035 with a resulting noise level of 67.9 CNEL. There are 4 homes on Theodore Street that front onto the roadway. As discussed above, homes that front onto a street cannot be effectively mitigated with a soundwall**.** ***This potentially significant impact feasibly cannot be mitigated***

State Route 60 from Moreno Beach Drive to Redlands Boulevard (33). A significant increase is shown for the existing case and for 2035. It is not feasible to modify the existing residential block wall to lower the increase in project generated noise because block walls are designed for the height that they are built. It is also infeasible for the Lead Agency to demolish the existing walls on private property and build new ones of increased height so that the noise level increases are lowered**.** ***Therefore, this potentially significant impact feasibly cannot be mitigated.***

Cactus Avenue from Redlands Boulevard to Street D (*Towards eastern end of Cactus Avenue*)(50). A significant noise increase is project for all four case years. Currently there is no soundwall along these homes. The homes along Cactus Avenue are elevated above the roadway. A soundwall will need to be located at the top of the slope along the residents rear yards. At the top of slope the residents currently have wrought iron fencing. The wrought iron fencing would need to be replaced with a masonry wall or retrofitted with a glass barrier. The walls would need to be 6 feet tall with respect to the rear yard. Roughly 1,000 feet of barrier would need to be provided depending on where Street D intersects Cactus Avenue. With the retrofit the noise levels would drop at least 5 dB, with the resultant noise levels around 63 CNEL in rear yard areas. A new 6 foot high wall at the top of slope for the existing residences that are on the south side of Cactus Avenue between Street D and Redlands Boulevard is needed for mitigation. The 6 foot wall will need to extend roughly 1,000 feet. Prior to the opening of Street D, the soundwall should be in place.

Cactus Avenue West of Redlands Boulevard (32). This area shows noise increases ranging from 1.5 dB to 5.1 dB depending on the study year. Only the 2035 case results in a significant noise increase. Single-family residences back up to this street with rear yards facing Cactus Avenue. Soundwalls are located along the residences that are approximately 6 foot high. Rear yard areas are approximately 60 feet from the centerline of the roadway. In 2035, the noise levels projected for the yard area, including the effects of the soundwall, will be 64.8 CNEL which will be below the City standard of 65 CNEL. The significant impact is not creating noise levels above the noise standard, but rather creating a significant increase in noise levels above the ambient noise level that would not occur without the project. It will be necessary to modify the existing residential block wall, or to remove and replace the wall to lower the increase in project generated noise.

John F. Kennedy Drive South of Cactus Avenue (9). The homes along John F. Kennedy Drive south of Cactus Avenue will experience significant noise increases for all four study years. Similar to the area along Cactus Avenue, this noise increase will be due to cars and light trucks, and not heavy trucks. The homes along the west side of the roadway are generally lower than the adjacent roadway have a roughly 6 foot soundwall. The homes on the east side of the roadway do not have any soundwalls and are elevated with respect to the roadway. Rear yards areas on both sides of the street generally are in the range of 60 to 90 feet from the centerline of the roadway. Without any sound barrier exterior noise levels at the residences along John F. Kennedy Drive will be 67.9 CNEL. The homes on the west side of the roadway have soundwalls and slope conditions that will reduce noise levels 6 to 10 dB, putting these homes well under the City criteria. Homes on the west side of the street will not be impacted. Homes on the east side of the street do not have soundwalls, and there will be a significant impact unless adequately mitigated.

The homes on the east side of John F. Kennedy Drive are elevated with respect to the road. Their rear yard area sits above the roadway, so there is a slope going up to their yards. At the top of slope the residents have wrought iron fencing. The wrought iron fencing would need to be replaced with a masonry wall or retrofitted with a glass barrier. The walls would need to 6 feet tall with respect to the rear yard. Roughly 5,000 feet of barrier would need to be provided. With the retrofit the noise levels would drop at least 5 dB, with the resultant noise levels around 62.6 CNEL in rear yard areas. A new 6 foot high wall at the top of slope for the existing residences that are on the east side of John F. Kennedy Drive between Cactus Avenue and Bay Hill Drive will be needed for mitigation. The 6 foot wall will need to extend roughly 5,000 feet.

Perris Boulevard between John F. Kennedy Drive and Iris Avenue (303). Only the 2035 case results in a significant noise increase for this area. In 2035 the project will result in a 1.7 dB increase raising the noise level to 72.2 CNEL for areas without a soundwall. This is a mixed area in terms of residential land use. There are 36 single-family homes along this roadway, some with a soundwall and some without. There is also a large multi-family development without a soundwall. Most of the homes either back up to the roadway or side-on to the roadway, making a soundwall feasible. Approximately half of the homes along this roadway do have a soundwall in place. For these homes, there would not be a significant noise impact since for the year 2035 the noise would increase by 1.7 dB going up to 66.2 CNEL.

The walls would need to be 6 feet tall with respect to the rear yard. Roughly 1,500 feet of barrier would need to be provided (Exhibit 19). With the retrofit the noise levels would drop at least 5 dB, with the resultant noise levels around 61 CNEL in rear yard areas. A new 6 foot high wall along the property line for the existing residences that are on Perris Boulevard between John F. Kennedy Drive and Iris Avenue is needed for mitigation (Exhibit 19). The 6 foot wall will need to extend roughly 2,000 feet. The impact is not anticipated to occur until sometime after 2022 and before 2035.

Redlands Boulevard from Dracaea Avenue to State Route 60 (12, 13). The noise analysis shows significant noise increases along this roadway segment for the 2012, 2022, and 2035 cases. There are scattered homes in this area that either face Redlands Boulevard (actually on Shubert Street) or are on Redlands Boulevard. As discussed above, homes that front onto a street cannot be effectively mitigated with a soundwall. *Therefore, this potentially significant*

4.12 NOISE

This section of the EIR is intended to satisfy the City's requirements for a project-specific noise impact analysis by examining the short-term and long-term noise impacts of the proposed project on sensitive uses adjacent to the proposed project area and by evaluating the effectiveness of mitigation measures. This includes the potential for the proposed project to result in impacts associated with a substantial temporary and/or permanent increase in ambient noise levels in the vicinity of the project area; exposure of people to excessive noise levels, groundborne vibration, or groundborne noise levels.

CEQA requires an analysis of the proposed project's impacts on the existing environment; not an analysis on the existing environment's impacts on the proposed project. The occasional blow downs that occur at the Southern California Gas Company (SCGC) are part of the existing conditions and have been part of the existing conditions for years. Thus, for purposes of clarity, it should be noted that the impact analysis below goes beyond the requirements of CEQA and provided as part of an analysis to ensure worker safety. All mitigation measures imposed in this analysis are the responsibility of future developers and not SCGC.

For the reader's reference, this EIR and each of the technical reports and analyses contained herein have been written to address a series of planning entitlements, which affect several separate, adjacent and related properties. The overall project site covers 3,918 acres in the Rancho Belago area of the City of Moreno Valley. It includes 3,814 acres of land, which is the subject of various entitlements, plus 104 acres of land affected by off-site improvements needed to support the proposed development. The proposed entitlements are summarized below.

A General Plan Amendment is proposed covering 3,814 acres, which redesignates approximately 71 percent of the area (2,710 acres) for logistics warehousing and the remaining 29 percent (1,104 acres) for permanent open space and public facilities. The following elements of the General Plan are included in the proposed Amendment: Community Development (land use); Circulation; Parks, Recreation, and Open Space; Safety; Conservation; and the General Plan Goals and Objectives.

A new Specific Plan will be adopted to govern development of the World Logistics Center for the 2,710 acres. A separate zoning amendment will also be processed and adopted to rezone 1,104 acres for open space and public facilities uses and to incorporate the Specific Plan into the City's Zoning Map.

In addition to the General Plan Amendment, Specific Plan, and Zone Change, the project includes a Tentative Parcel Map covering 1,539 acres (property owned by the project applicant, Highland Fairview) within the project site. This subdivision map is for financing purposes only and will not confer any development rights to the property owner.

The project includes pre-annexation zoning for an 85-acre parcel of land within the project area.

Finally, a Development Agreement between the City and Highland Fairview (the project applicant) is included as one of the project entitlements. The details of all the project entitlements are included in Section 3.4 of the EIR, *Project Characteristics*. The environmental impacts of all of these entitlements on the entire project area are addressed in this EIR and the accompanying technical reports and analyses.

The analysis contained in this section is based on the following technical study prepared for the proposed project:

- *Noise Assessment for the World Logistic Center Specific Plan,* Mestre Greve Associates, January 24, 2013 (Appendix K of this EIR); and

In addition to these project-specific technical studies, the analysis contained in this section is also based on the following reference documents:

- *California Noise Insulation Standards,* California Code of Regulations, Title 24, Part 2, §3501;
- *Highway Traffic Noise Prediction Model (FHWA-RD-77-108)*, Federal Highway Administration (FHWA);
- *City of Moreno Valley General Plan*, City of Moreno Valley, July 2006;
- *Moreno Valley Municipal Code,* City of Moreno Valley, current through Ordinance 836 and the February 2012 code supplement; and
- *State of California General Plan Guidelines*, Governor's Office of Planning and Research, October 2003, pages 249 and 250.

4.12.1 Existing Setting

4.12.1.1 Background

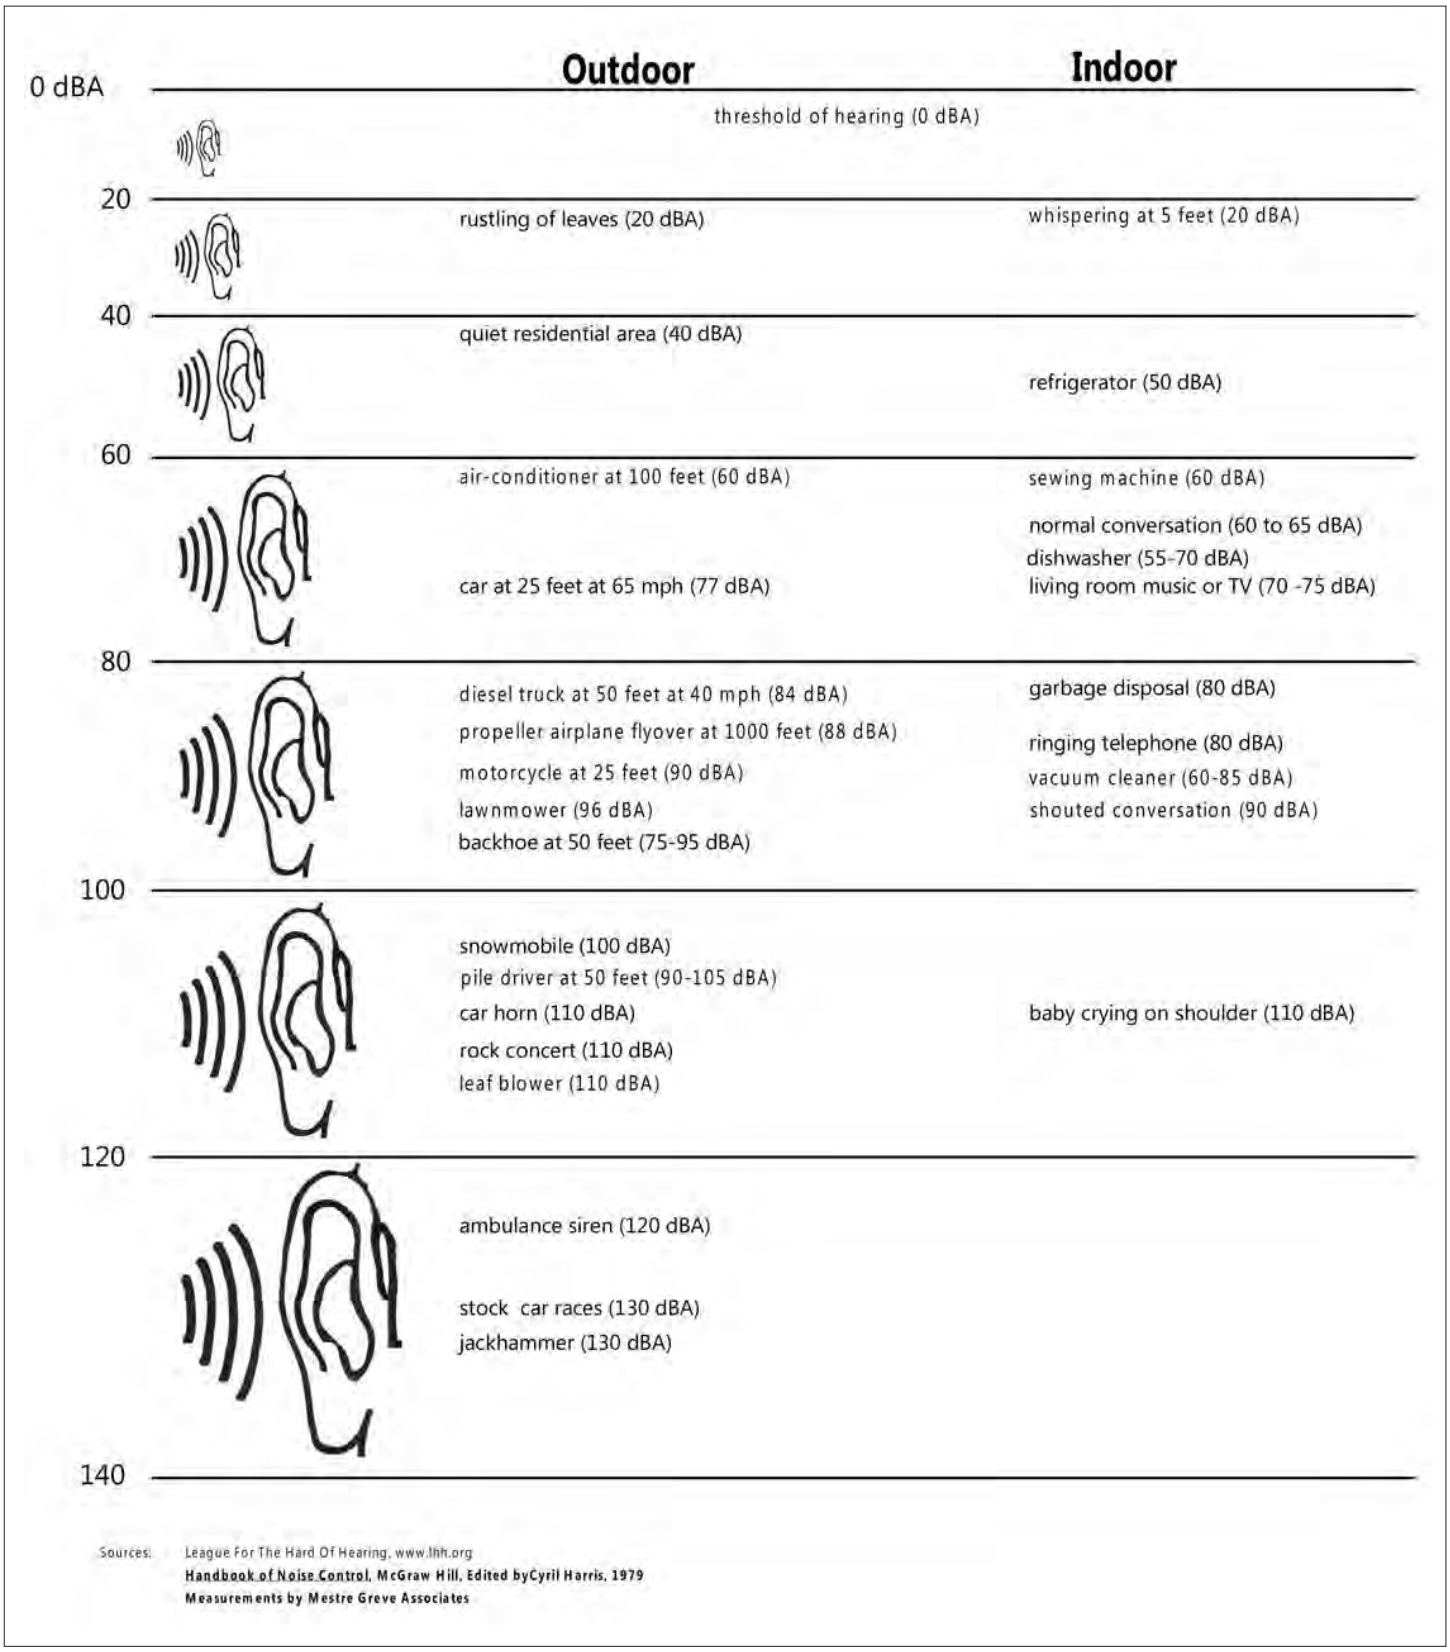
Characteristics of Noise. To the human ear, sound is technically described in terms of its loudness (amplitude) and pitch (frequency). Pitch is generally an annoyance, while loudness can affect our ability to hear. Noise is usually defined as unwanted sound; it consists of any sound that may produce physiological or psychological damage and/or interfere with communication, work, rest, recreation, and sleep.

Measurement of Noise. The standard unit of measurement of the loudness of sound is the decibel (dB). Decibels are based on a logarithmic scale. The logarithmic scale compresses the wide range in sound levels resulting in a more usable range of sound level values, similar to the Richter scale used to measure earthquakes. To humans, a sound 10 dB higher than another is considered to be twice as loud; a sound 20 dB higher than another is considered four times as loud; etc. Typical daily sounds in the environmental range from 30 dB (very quiet) to 100 dB (very loud).

Since the human ear is not equally sensitive to sound at all frequencies, a special frequency-dependent rating scale has been devised to relate noise to human sensitivity. The A-weighted decibel (dBA) scale performs this compensation by discriminating against frequencies in a manner approximating the sensitivity of the human ear. Community noise levels are measured in terms of the dBA. Figure 4.12.1 shows examples of various noises sources and their typical dBA noise level.

There are two categories of noise that are measured to characterize noise conditions: single event noise and community, or cumulative, noise. Single event measurements describe the noise levels from an individual event such as a passing airplane or a heavy-duty truck. Cumulative measurements average the total noise in a community over a specific time period, which is typically 1 or 24-hours. The noise impact analysis performed for this EIR is based on assessment of both single event noise and community or cumulative, noise.

Several rating scales have been developed for measurement of community noise. These account for: (1) the parameters of noise that have been shown to contribute to the effects of noise on humans; (2) the variety of noises found in the environment; (3) the variations in noise levels that occur as a person moves through the environment; and (4) the variations associated with the time of day. They are designed to account for the known health effects of noise on people described previously. Based on these effects, the observation has been made that the potential for a noise to affect people is



LSA

I:\HFV1201\Reports\EIR\fig4-12-1_WeightedNoise.cdr (12/21/12)

THIS PAGE INTENTIONALLY LEFT BLANK

dependent on the total acoustical energy content of the noise. A number of noise scales have been developed to account for this observation. Two of the predominant noise scales are the Equivalent Noise Level (L_{eq}) and the Community Noise Equivalent Level (CNEL). L_{eq} is the sound level corresponding to a steady-state sound level containing the same total energy as a time-varying signal over a given sample period. L_{eq} is the "energy" average noise level during the time period of the sample. L_{eq} can be measured for any time period, but is typically measured for 1 hour. This 1-hour noise level can also be referred to as the Hourly Noise Level (HNL). It is the energy sum of all the events and background noise levels that occur during that time period.

CNEL is the predominant rating scale now in use in California for land use noise compatibility assessment. The CNEL scale represents a time weighted 24-hour average noise level based on the dBA. Time weighted refers to the inclusion of penalties for noise that occurs during certain noise-sensitive time periods. The evening time period (7 p.m. to 10 p.m.) penalizes noises by 5 dBA, while nighttime (10 p.m. to 7 a.m.) noises are penalized by 10 dBA, reflecting people's increased sensitivity to noise during these time periods. A CNEL noise level may be reported as a CNEL of 60 dBA, 60 dBA CNEL, or simply 60 CNEL.

L(%) is a statistical method of describing noise which accounts for variance in noise levels throughout a given measurement period. L(%) is a way of expressing the noise level exceeded for a percentage of time in a given measurement period. For example, since 5 minutes is 25 percent of 20 minutes, L(25) is the noise level that is equal to or exceeded for five minutes in a twenty-minute measurement period. It is L(%) that is used for most Noise Ordinance standards. For example most daytime County, State and City noise ordinances use a standard of 55 dBA for 30 minutes per hour, or an L(50) level of 55 dBA. In other words, the noise ordinance may state that no noise level should exceed 55 dBA for more than fifty percent of a given period.

The maximum noise level (L_{max}) is the highest exponential time averaged sound level that occurs during a stated time period. The noise levels discussed in this analysis for short-term noise impacts are specified in terms of maximum levels denoted by L_{max}, which reflects peak noise conditions and addresses the annoying aspects of intermittent noise. It is often used together with another noise scale, or noise standards in terms of percentile noise levels, in noise ordinances for enforcement purposes. For example, the L_{10} noise level represents the noise level exceeded 10 percent of the time during a stated period. The L_{50} noise level represents the median noise level. Half the time the noise level exceeds this level, and half the time it is less than this level. The L_{90} noise level represents the noise level exceeded 90 percent of the time and is considered the background noise level during a monitoring period. For a relatively constant noise source, the L_{eq} and L_{50} are approximately the same.

Fundamentals of Groundborne Vibration. Vibration refers to groundborne noise and perceptible motion of the earth. Similar to noise, vibration is transmitted in noise-like waves through the earth and solid objects.

There are several ways to categorize vibration sources. One way is to divide vibration into natural sources (e.g., earthquakes, volcanic eruptions, sea waves, and landslides) and human sources (e.g., explosions, machinery, traffic, trains, and construction equipment). Similar to noise sources, vibration sources can also be described as continuous (e.g., operating factory machinery) or transient (e.g., explosions).

As with noise, ground vibrations can be described by amplitude and frequency. Vibration amplitude is characterized by its displacement, velocity, and acceleration. Displacement is the distance that soil particles travel from their original location as a result of vibration, as measured in inches or millimeters. Velocity is the speed of the soil particles measured in inches per second or millimeters per second. Acceleration is the acceleration of the soil particles measured in inches per second per second or millimeters per second per second. Particle velocity is the most commonly used vibration

attribute used to describe vibration. Table 4.12.A presents the human reaction to various levels of peak particle velocity. Vibrations also vary in frequency. Traffic vibrations generally range in frequencies from 10 to 30 hertz (Hz), and tend to average around 15 Hz. As a point of reference, city buses often generate frequencies around 3 Hz at high vehicle speeds, due to their suspension systems.

Table 4.12.A: Human Reaction to Typical Vibration Levels

Vibration Level Peak Particle Velocity (inches/second)	Human Reaction
0.0059–0.0188	Threshold of perception, possibility of intrusion.
0.0787	Vibrations readily perceptible.
0.0984	Level at which continuous vibrations begin to annoy people.
0.1968	Vibrations annoying to people in buildings.
0.3937–0.5905	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges.

Source: Caltrans 1992.

Groundborne vibration is almost exclusively a concern inside buildings and is rarely perceived as a problem outdoors, where the motion may be discernable. However, without the effects associated with the shaking of a building, there is less adverse reaction. Building vibration may be perceived by the occupants as motion of building surfaces, rattling of items on shelves or hanging on walls, or as a low-frequency rumbling noise. Building damage is not a factor for normal projects, with the occasional exception of blasting and pile driving during construction or mining. Annoyance from vibration often occurs when the vibration exceeds the threshold of perception by up to 10 decibels. This is an order of magnitude below the damage threshold for normal buildings.

Typical sources of groundborne vibration are construction activities (e.g., blasting, pile driving, and operating heavy-duty earthmoving equipment), steel-wheeled trains, and occasional traffic on rough roads. Problems with groundborne vibration and noise from these sources are usually localized to within about 100 feet of the vibration source, although there are examples of groundborne vibration causing interference out to distances greater than 200 feet, as described in the FTA Transit Noise and Vibration Impact Assessment (FTA, May 2006). When roadways are smooth, vibration from traffic, even heavy trucks, is rarely perceptible.

Factors that influence groundborne vibration and noise include the following:

- *Vibration Source:* Vehicle suspension, wheel types and condition, track/roadway surface, track support system, speed, transit structure, and depth of vibration source.
- *Vibration Path:* Soil type, rock layers, soil layering, depth to water table, and frost depth.
- *Vibration Receiver:* Foundation type, building construction, and acoustical absorption.

Among the factors listed above, there are significant differences in the vibration characteristics when the source is underground versus at ground surface. In addition, soil conditions are known to have a strong influence on the levels of groundborne vibration. Among the most important factors are the stiffness and internal damping of the soil and the depth to bedrock. Vibration propagation is more efficient in stiff clay soils than in loose sandy soils, and shallow rock seems to concentrate the vibration energy close to the surface and can result in groundborne vibration problems at a great distance from the track. Factors such as layering of the soil and depth to water table can have significant effects on the propagation of groundborne vibration. Soft, loose, sandy soils tend to attenuate more vibration energy than hard, rocky materials. Vibration propagation through groundwater is more efficient than through sandy soils.

4.12.1.2 Sensitive Land Uses in the Project Vicinity

Certain land uses are considered more sensitive to noise than others. Examples include residential areas, educational facilities, hospitals, childcare facilities, and senior housing. The project vicinity and Specific Plan area are characterized by a mix of developed and undeveloped properties. Developed properties in the vicinity include an industrial/warehouse building in Moreno Valley to the northwest (Skechers) and several residential neighborhoods along Redlands Boulevard along the western boundary of the project site. An area of the City known as "Old Moreno" is situated near the southwest portion of the project site, around the intersection of Redlands and Alessandro Boulevards. The homes along Merwin Street, east of Redlands Boulevard, constitute the closest sensitive receptors to the project site (i.e., they are adjacent to the property).

4.12.1.3 Existing Noise Measurements

Existing noise levels in the vicinity of the proposed project are used establish baseline noise levels in key areas. Noise measurements within the project site and in the surrounding area were taken. The noise measurement locations were selected to provide coverage of the project's potential noise impact area. The noise measurement locations are shown Figure 4.12.2.

Noise measurements were taken at sixteen sites in the project vicinity during the daytime hours (between 7 a.m. and 10 p.m.) and during nighttime hours (between 10 p.m. and 7 a.m.). For each measurement site and time period, noise levels were measured for 15 minutes and calibrated to ensure that the measured sound level readings were accurate. The measurements were used to calculate existing L_{eq}, L_{min}, L_{max}, $L_{1.7}$, $L_{8.3}$, L_{25} and L_{50} values for the measurement locations. Table 4.12.B shows the results for the daytime measurements, and Table 4.12.C shows the nighttime measurements.

Table 4.12.B: Existing Daytime Noise Measurements (dBA)

Site	Date	Start Time	L_{eq}	L_{max}	$L_{1.7}$	$L_{8.3}$	L_{25}	L_{50}	L_{min}
1	1-25-12	9:38 a.m.	55.4	72.0	63.0	56.5	54.0	53.0	48.7

4.12.1.4 Existing Traffic Noise Environment

The primary existing noise sources in the project area are transportation facilities. Traffic on SR-60, Redlands Boulevard, Theodore Street, Gilman Springs Road, and other local streets is the dominant source contributing to the ambient noise levels in the project vicinity. Noise from motor vehicles is generated by engine vibrations, the interaction between the tires and the road, and the exhaust system. Table 4.12.D identifies the existing (2012) traffic noise levels adjacent to roadway segments in the project vicinity.

Table 4.12.D: Existing Traffic Noise Levels (dBA)

Roadway Segment	CNEL (dBA) at 100 feet

4.12.1.5 Existing SDG&E and SCGC Facilities

The proposed World Logistics Center Specific Plan area is currently occupied by one San Diego Gas and Electric Company (SDG&E) compressor station and two Southern California Gas Company (SCGC) facilities. These facilities are located within the boundaries of the Specific Plan as shown in previously referenced Figure 4.12.2. The SDG&E compressor station recompresses natural gas received from interstate gas pipelines and delivers the gas to Southern California via transmission pipelines. The two SCGC facilities contain flow valve and metering equipment facilities. The southern SCGC facility contains a maintenance functions as well. All of these facilities contain gas pipeline blow-down equipment. This equipment includes exhaust stacks that vent the high pressure gas into the atmosphere occur during emergencies, scheduled maintenance, and annual testing of the blow-down systems.

The SDG&E and SCGC facilities produce noise from three different sources that could affect future development within the proposed project: 1) the operation of the compressor station; 2) blow-down events at the compressor station; and 3) blow-down events at the SCGC facilities. The blow-down events generate infrequent high noise levels for relatively short periods. The compressor station generates a relatively constant noise level, although noise levels vary slightly when the compressors are turned on and off when the gas is conveyed to the transmission pipelines.

The SDG&E compressors are the primary source of operational noise generated by the compressor station. The facility contains two sets of three reciprocating natural gas combustion engines and one set of four natural gas-fired turbines, for a total of ten compressors with power ranging from 995 to 3,400 horsepower. The compressors are located within noise attenuation structures and are equipped

with intake and exhaust silencers. The facility routinely operates at maximum capacity 24 hours per day. It is anticipated that demand on the compressor station will increase in the future to the point where the facility operates 24 hours a day, year round.

The CNEL levels for the SDG&E compressor station presented in Figure 4.12.3 are based on a worst-case assumption that the compressor station is in full operation 24 hours a day. Figure 4.12.4 presents the average (L_{eq}) noise levels generated by the compressor station during full operation. Both the CNEL and L_{eq} metrics are used to assess the noise impacts from the facility.

There are several blow-down points within the SDG&E compressor station. As stated previously, these blow-down points allow for the release of pressurized gas during emergencies, scheduled maintenance, and annual testing. Blow-down events at the compressor station vent gas and last between 30 and 90 seconds. The maximum sound levels (L_{max} dBA) generated by the blow-down events is presented in Figure 4.12.5.

There are blow-down points in the SCGC facilities. Blow-down events at the SCGC facilities vent gas from miles of pipeline and are much longer than those at the compressor station, and can last up to 90 minutes. Approximately four blow-down events occur annually at the SCGC facilities. L_{max} noise levels (dBA) are shown in in Figure 4.12.6. The noise level will be at or near the L_{max} level during the entire blow-down event. It should also be noted that blow-down events generate ground vibrations and natural gas odors in the vicinity in the surrounding area when events occur. Again, it must be noted that these blow-down events are part of the existing conditions of the project site, and any impacts caused by development of new warehousing near these facilities, and any mitigation necessary, are not the responsibility of SCGC or SDG&E.

4.12.2 Existing Policies and Regulations

The applicable noise standards governing the project site are the criteria in the City of Moreno Valley General Plan Safety Element (Environmental Safety, Noise) and Municipal Code (Noise Ordinance). The City's Safety Element of the General Plan does not contain specific noise standards or significance thresholds. However, the General Plan does cite applicable State standards including the California Administrative Code, Section 1092 of Title 25, Chapter 1, Subchapter 1, Article 4 and Section 5014 of Title 21, Subchapter 6, Article 2. In addition, other applicable standards identified in the *California Noise Insulation Standards*[1] and the *State of California Vehicular Code*[2] are included below. The following sections list the General Plan policies, Municipal Code, and State standards relevant to noise for the proposed project.

4.12.2.1 City of Moreno Valley General Plan Policies

Chapter 9 of the *City of Moreno Valley General Plan*[3] defines goals, objectives, policies, and action items related to noise conditions in the City. The specific policies related to noise that are relevant to the proposed project are as follows:

Objective 6.3 Provide noise compatible land use relationships by establishing noise standards utilized for design and siting purposes.

Policy 6.3.5 Enforce the California Administrative Code, Title 24 noise insulation standards for new multi-family housing developments, motels and hotels.

Policy 6.3.6 Building shall be limited in areas of sensitive receptors.

1 California Code of Regulations, Title 24, Part 2, §3501, *California Noise Insulation Standards.*
2 Governor's Office of Planning and Research, *State of California General Plan Guidelines*, October 2003, pages 249 and 250.
3 *City of Moreno Valley General Plan*, City of Moreno Valley, July 2006.

THIS PAGE INTENTIONALLY LEFT BLANK

Objective 6.4 Review noise issues during the planning process and require noise attenuation measures to minimize acoustic impacts to existing and future surrounding land uses.

Policy 6.4.1 Site, landscape and architectural design features shall be encouraged to mitigate noise impacts for new developments, with a preference for noise barriers that avoid freeway sound barrier walls.

Objective 6.5 Minimize noise impacts from significant noise generators such as, but not limited to, motor vehicles, trains, aircraft, commercial, industrial, construction, and other activities.

Policy 6.5.1 New commercial and industrial activities (including the placement of mechanical equipment) shall be evaluated and designed to mitigate noise impacts on adjacent uses.

Policy 6.5.2 Construction activities shall be operated in a manner that limits noise impacts on surrounding uses.

4.12.2.2 City of Moreno Valley Municipal Code

The *Moreno Valley Municipal Code*[1] establishes a Noise Ordinance that describes the noise standards within the City. Chapter 11.80.030 (Title 11) lists specific prohibited acts.

The City's residential site development standards, as identified in Chapter 9.03.040 of the City's Planning and Zoning Code, state that in all residential districts, air conditioners, heating, cooling, and ventilating equipment and all other mechanical lighting or electrical devices shall be operated so that noise levels do not exceed 60 dBA (L_{dn}) at the property line.

The City's Municipal Code, Section 6.04.030.J states that "to create, allow or maintain any loud or unusual noise or operate or maintain any device, instrument, vehicle, or machinery in such a manner as to create loud or unusual noise, cause vibrations, or unreasonable light spillage or glare which causes discomfort or annoyance to reasonable persons of normal sensitivity, or which endangers the comfort, repose, health or peace of the public or of any person using or occupying other property in the vicinity" is prohibited.

The City's Municipal Code, Section 9.10.140, specifies that all commercial and industrial uses shall be operated so that noise created by any loudspeaker, bells, gongs, buzzers, or other noise attenuation or attracting devices shall not exceed 55 dBA at any one time beyond the boundaries of the property.

Chapter 11.80.030 of the City's Municipal Code also states:

> *Based on statistics from the Center for Disease Control and Prevention and the National Institute for Occupational Safety and Health, Table 1 and Table 1-A specify sound level limits which, if exceeded, will have a high probability of producing permanent hearing loss in anyone in the area where the sound levels are being exceeded. No sound shall be permitted within the City which exceeds the parameters set forth in Table 11.80.030-1* [Table 4.12.E] *and 11.80.030-1-A* [Table 4.12.F] *of this chapter.*
>
> *No person shall maintain, create, operate or cause to be operated on private property any source of sound in such a manner as to create any nonimpulsive sound which exceeds the limits set forth for the source land use category (as defined in Section 11.80.020) in Table 11.80.030-2* [Table 4.12.F] *when measured at a distance of two hundred (200) feet or more from the real property line of the source of the sound, if the sound occurs on privately owned property, or from the source of the sound, if the sound occurs on public right-of-way, public space or other publicly owned property. Any source of sound in violation of this subsection shall be deemed prima facie to be a noise disturbance.*

[1] *Moreno Valley Municipal Code,* City of Moreno Valley, current through Ordinance 836 and the November 2012 code supplement.

The following uses and activities shall be exempt from the sound level regulations except the maximum sound levels provided in Tables 11.80.030-1 [Table 4.12.E] *and 11.80.030-1A* [Table 4.12.F]*:*

1. *Sounds resulting from any authorized emergency vehicle when responding to an emergency call or acting in time of an emergency.*
2. *Sounds resulting from emergency work as defined in Section 11.80.020.*
3. *Any aircraft operated in conformity with, or pursuant to, federal law, federal air regulations and air traffic control instruction used pursuant to and within the duly adopted federal air regulations; and any aircraft operating under technical difficulties in any kind of distress, under emergency orders or air traffic control, or being operated pursuant to and subsequent to the declaration of an emergency under federal air regulations.*
4. *All sounds coming from the normal operations of interstate motor and rail carriers, to the extent that local regulation of sound levels of such vehicles has been preempted by the Noise Control Act of 1972 (42 U.S.C. § 4901 et seq.) or other applicable federal laws or regulations.*
5. *Sounds from the operation of motor vehicles, to the extent they are regulated by the California Vehicle Code.*
6. *Any constitutionally protected noncommercial speech or expression conducted within or upon any public right-of-way, public space or other publicly owned property constituting an open or a designated public forum in compliance with any applicable reasonable time, place and manner restriction on such speech or expression or otherwise pursuant to legal authority.*
7. *Sounds produced at otherwise lawful and permitted city-sponsored events, organized sporting events, school assemblies, school playground activities, by permitted fireworks, and by permitted parades on public right-of-way, public space, or other publicly owned property.*
8. *An event for which a temporary use permit or special event permit has been issued under other provisions of this code, where the provision of Section 11.80.010 are met, the permit granted expressly grants an exemption from specific standards contained in this chapter, and the permittee and all persons under the permitttee's reasonable control actually comply with all conditions of such permit. Violation of any condition of such permit related to sound or sound equipment shall be in violation of this chapter and punishable as such.*

Table 4.12.E and Table 4.12.F show the maximum sound levels that are permitted in the City for continuous and impulsive sounds, respectively.

Table 4.12.E: Maximum Continuous Sound Levels*

Duration Per Day Continuous Hours	Sound Level (dBA)
8	90
6	92
4	95
3	97
2	100
1.5	102
1	105
0.5	110
0.25	115

* When the daily sound exposure is composed of two or more periods of sound exposure at different levels, the combined effect of all such periods shall constitute a violation of this section if the sum of the percentage of allowed period of sound exposure at each level exceeds 100 percent.

Source: Chapter 11.80.030 Table 11.80.030-1, City of Moreno Valley Municipal Code, City of Moreno Valley.

Table 4.12.F: Maximum Impulsive Sound Levels

Number of Repetitions Per 24-Hour Period	Sound Level (dBA)
1	145
10	135
100	125

Source: Chapter 11.80.030 Table 11.80.030-1A, City of Moreno Valley Municipal Code, City of Moreno Valley.

The City also restricts the sound levels for non-impulsive sound on lands designated for residential and commercial land uses during the daytime and nighttime time periods. These levels are shown in Table 4.12.G. Section 11.80.050 (3) clearly identifies the measurement as an "average" noise level, and therefore, the noise limits shown in Table 4.12.G are interpreted as the L_{eq} noise level.

Table 4.12.G: Maximum Sound Levels (in dBA) for Source Land Uses

Residential		Commercial	
Daytime	Nighttime	Daytime	Nighttime
60	55	65	60

Source: Chapter 11.80.030 Table 11.80.030-2, City of Moreno Valley Municipal Code, City of Moreno Valley.

The City prohibits all construction and demolition activities between the hours of 8:00 p.m. and 7:00 a.m. the day following a noise disturbance. A noise disturbance is defined as any sound which that disturbs a reasonable person of normal sensitivities, exceeds the sound level limits set forth in the Noise Ordinance, or is plainly audible. A noise disturbance is defined as plainly audible measured at a distance of 200 feet from the real property line of the source of the sound if the sound occurs on privately owned property, or from the source of the sound, if the sound occurs on public right-of-way, public space or other publicly owned property.

4.12.2.3 State of California Vehicle Code

Recent studies have shown that the most objectionable feature of traffic noise is the sound produced by vehicles equipped with illegal or faulty exhaust systems. In addition, such vehicles are often operated in a manner that causes tire squeal and excessively loud exhaust noise. A number of California State vehicle noise regulations can be enforced by local authorities as well as the California Highway Patrol. These include § 27150 (mufflers) of the California Vehicle Code (CVC), as well as excessive speed laws, which may be applied to curtail traffic noise. The California Highway Patrol and the Department of Health Services (through local health departments) are available to aid local authorities in code enforcement and training pursuant to proper vehicle sound level measurements.

4.12.2.4 State of California Noise Compatibility Guidelines

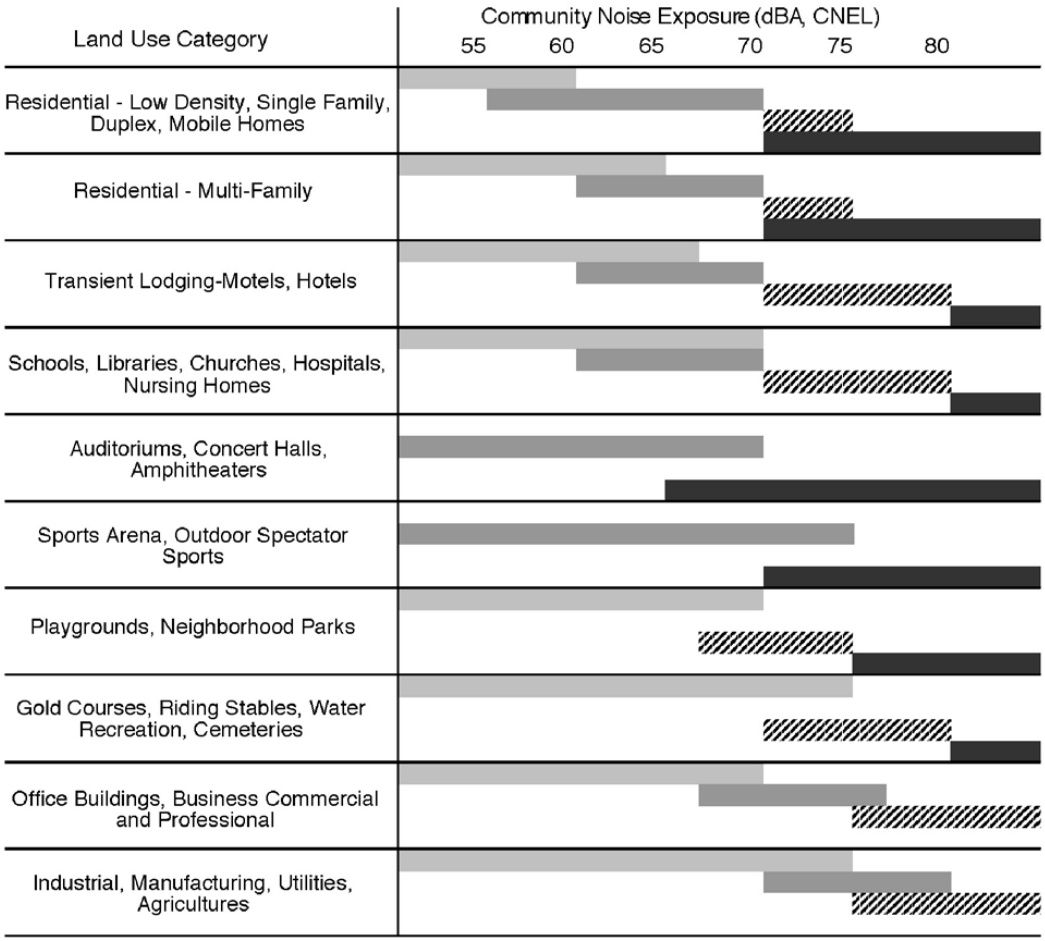
The State of California Noise Compatibility Guidelines, published by the Department of Health, Services provides guidance for use when siting land uses. The compatibility guidelines are shown in Figure 4.12.7. The guidelines will be used to evaluate the compatibility of the proposed land uses with the noise environment. The guidelines show compatibility of various land uses with different noise environments. The guidelines show that industrial uses are normally acceptable in noise environments up to 75 CNEL.

4.12.3 Methodology

Evaluation of noise impacts associated with the proposed project includes the following:

THIS PAGE INTENTIONALLY LEFT BLANK

Land Use/Noise Compatibility Guidelines



Normally Acceptable Specified land use is satisfactory based upon the assumption that any buildings involved are of normal conventional construction without any special noise insulation requirements.

ConditionallyAcceptable- New construction or development shall be undertaken only after a detailed analysis of the noise reduction requiremerts is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply system of air conditioning, will normally suffice.

Normally Unacceptable New construction or development should generally be discouraged. If new construction or devel opment does proceed, a detailed analysis of the noise reduction requirementsmust be made and needed noise insulation features included in the design.

ClearlyUnacceptable Newconstruction or development should generally not be undertaken.

Item No. E.6

THIS PAGE INTENTIONALLY LEFT BLANK

- Determination of the short-term construction noise impacts on off-site noise-sensitive uses;
- Determination of the long-term noise impacts, including vehicular traffic and stationary noise sources, on on-site and off-site noise-sensitive uses; and
- Determination of the required mitigation measures to reduce long-term noise impacts from all sources.

Because of the location of noise-sensitive receptors, the noise analysis evaluates the noise effects of the industrial development on the existing residential development (sensitive receptors) near the southwest portion of the proposed project area.

There are no Federal Highway Administration (FHWA), State, or local standards for vibration. According to the FHWA, highway traffic and construction vibrations pose no threat to buildings and structures; and annoyance to people is not considered any worse than other discomforts experienced from living near highways. However, a substantial amount of research has been completed to compare vibrations from single events such as dynamite blasts with architectural and structural damage. The U.S. Bureau of Mines has set a safe limit of 0.5 inch per second peak particle velocity to avoid structure damage in residential structures (U.S. Bureau of Mines 1980). Below this level, there is virtually no risk of building damage.

4.12.4 Thresholds of Significance

A project would have a significant effect on the environment related to noise if it would substantially increase the ambient noise levels for adjoining areas or if it would conflict with adopted environmental plans and goals of the community in which it is located.

The applicable noise standards and guidelines governing the project are those specified previously in Sections 4.12.2.1 through 4.12.2.4. In summary, these criteria are contained within the Safety Element of the General Plan, the Municipal Code, the California Vehicle Code, and the State Noise Compatibility Guidelines.

For this project, a noise impact is considered significant if the project would result in:

- Exposure of persons to or generation of noise levels in excess of standards established in the *City of Moreno Valley General Plan*, *Moreno Valley Municipal Code*, or applicable standards of other agencies;
- Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels;
- A substantial temporary, periodic, and/or permanent increase in ambient noise levels in the project vicinity above levels existing without the project;
- For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels; and/or
- For a project within the vicinity of a private airstrip, expose people residing or working in the project area to excessive noise levels.

The standards within the *City of Moreno Valley General Plan* and *Moreno Valley Municipal Code* determine the acceptable noise environment for proposed project and its vicinity. The standards are as follows:

- To the extent feasible, ensure through the design review process that exterior noise levels at commercial and industrial areas do not exceed 75 dBA CNEL.
- Consider the following uses noise-sensitive and discourage them in areas where exterior noise levels exceed 65 dBA CNEL unless measures are implemented that reduce the noise exposure below this level: single-family and multiple-family residential uses, group homes, hospitals, schools and other learning institutions, and parks and open space areas where quiet is a basis for use.

Long-term impacts from the project's traffic noise that affect existing sensitive land uses are considered to be substantial and, therefore, constitute a significant noise impact if the project would:

- Increase noise levels by 5 dB or more where the no project noise level is less than 60 CNEL;
- Increase noise level by 3 dB or more where the no project noise level is 60 CNEL to 65 CNEL; or
- Increase noise levels by 1.5 dB or more where the no project noise level is greater than 65 CNEL.

The project's incremental contribution to a cumulative noise increase would be considered cumulatively considerable and significant when ambient noise levels affect noise-sensitive land uses and when the project increases noise levels by 1 dB or more over pre-project conditions and the predicted future cumulative with project noise levels cause the following cumulative increases:

- Increase noise levels by 5 dB or more where the existing noise level is less than 60 CNEL;
- Increase noise levels by 3 dB or more where the existing noise level is 60 to 65 CNEL; or
- Increase noise levels by 1.5 dB or more where the existing noise level is greater than 65 CNEL.

4.12.5 No Impact/Less than Significant Impacts

The following impacts were identified as having a less than significant impact or no impact on the environment with implementation of the proposed project.

4.12.5.1 Groundborne Vibration Impacts

Threshold	Would the project result in exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?

Roadways in the vicinity of the project area are either paved or would be paved as the area develops, and would not result in project traffic driving over rough or dirt roads. Well maintained roads typically do not result in substantial vibration levels. Even roads with irregularities typically only generate substantial levels of vibration very near, less than 50 feet from the irregularity. Construction activities that would occur within the WLCSP area are not anticipated to require blasting or pile driving. Roadway vibrations are typically not perceptible more than 50 feet from the roadway except in very unusual circumstances. Generally, the interface between the soft tire of a truck or automobile will not generate significant vibration unless the road is in poor shape (e.g., potholes or pavement joints) Therefore, impacts associated with this issue are anticipated to be less than significant, and no mitigation is required.

4.12.5.2 Airport Noise Impacts

Threshold	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, results in exposure of people residing or working in the project area to excessive noise levels. For a project within the vicinity of a private airstrip, expose people residing or working in the project area to excessive noise levels.

The project area is located approximately 5.5 miles northeast of the March Airfield (MAF) and is not located within two miles of a private airstrip. The MAF is a joint-use airport, used for both military and civilian purposes. The March Air Reserve Base (MARB) is the military operator of the MAF and March Inland Port (MIP) is the civilian operator of the airport. This facility is anticipated to play an increasingly important role in the transportation of goods and cargo for the Southern California region. Existing flight patterns affect a large portion of the City of Moreno Valley, along a path that affects the western portion of the City in a northwest/southeast alignment. Aircraft operations from the airport currently contribute intermittent single-event noise.

There is potential for single-event noise exposure levels from MAF activity to affect the proposed project. The exposure levels will vary dependent upon the type of aircraft and flight track flown for each operation at MAF. However, the proposed project is not identified as being within the noise or safety contours delineated for the MARB Airport.[1] In addition, the proposed project is not considered to contain sensitive receivers and, therefore, the impacts from these single-event noise levels are considered to be below the level of significance. The City's exterior noise standard for industrial uses is 70 dBA CNEL. MAF noise levels are less than 60 dB CNEL within the project area. Therefore, the proposed project would not have the potential to expose people to excessive noise levels from airport operations. Therefore, no significant noise impacts would occur regarding these issues from implementation of the proposed project, and no mitigation is required.

4.12.6 Significant Impacts

4.12.6.1 Short-Term Construction Noise Impacts

Threshold	Would the project result in a substantial temporary, periodic, and/or permanent increase in ambient noise levels in the project vicinity above levels existing without the project?

Short-term noise would occur during the construction of the WLCSP. First, construction crew commutes and the transport of construction equipment and materials to the site for the proposed WLC project would incrementally increase noise levels on access roads in the WLC planning area. In addition, noise would be generated during excavation, grading, and building construction on various portions of the Specific Plan site. Construction is completed in discrete steps, each of which has its own mix of equipment, and consequently, its own noise characteristics. These various sequential phases would change the character of the noise generated on the site and, therefore, the noise levels surrounding the site as construction progresses. Despite the variety in the type and size of construction equipment, similarities in the dominant noise sources and patterns of operation allow construction-related noise ranges to be categorized by work phase. The site preparation phase, which includes excavation and grading of the site, tends to generate the highest noise levels, because the noisiest construction equipment is earthmoving equipment, which includes excavating machinery such as backfillers, bulldozers, draglines, and front loaders. Earthmoving and compacting equipment includes compactors, scrapers, and graders. Typical operating cycles for these types of construction equipment may involve one or two minutes of full-power operation followed by three to four minutes at

[1] *Figure 5.4-1 March Reserve Air Base Noise Impact Area*, City of Moreno Valley General Plan EIR, July 2006.

lower power settings. Implementation of the Specific Plan would result in construction activities that would require the use of scrapers, bulldozers, and water and pickup trucks within the WLCSP area.

Figure 4.12.8 presents construction noise levels measured at 50 feet. The peak noise level for the majority of the equipment that will be used during construction of the proposed project will range from 70 to 95 dBA. Based on the fact that noise levels dissipate with increases in distance from the noise source due to noise divergence, noise levels at greater distances are less than those presented in Figure 4.12.8. Noise measurements made by Mestre Greve Associates demonstrate that the noise levels generated by commonly used grading equipment (e.g., loaders, graders, and trucks) generate noise levels that typically do not exceed the middle of the range shown in Figure 4.12.8.[1] However, the noise levels shown in Figure 4.12.8 have been used as the basis for the noise analysis estimates presented in this EIR.

Construction activities that are associated with the proposed WLCSP project would occur in two general areas: on-site and off-site. Some phases of the on-site construction would occur for 24 hours a day for 7 days a week. It is anticipated that on-site construction would occur periodically over a nine-year period with a potential start year of 2013 and ending in 2021. Off-site construction (which would involve minor grading, drainage, interchange, utility, and roadway improvements) is anticipated to only during the daytime weekday hours and would have a shorter construction duration.

On-site Construction. Sensitive receptors that would be potentially affected by on-site construction activities would include residences located within and adjacent to the WLCSP area as well as residences located on the north side of SR-60. For residences on the opposite side of SR-60, existing daytime and nighttime freeway noise is anticipated to be greater than the noise generated by the construction activities that would occur within the WLCSP area. Although certain conditions at night, such as low inversions and very calm conditions, can increase the ability of construction noise to travel to the residences north of the freeway, these same conditions would also amplify the noise generated on the freeway. Since freeway noise would continue to be the dominant noise source in the area for these residences along SR-60, construction noise impacts on the residents north of the freeway will be less than significant and no mitigation is required.

Existing residences within the WLCSP area or adjacent to the Specific Plan area, such as those along Redlands Boulevard, Merwin Street, Bay Avenue, Cactus Avenue, and Gilman Springs Road, may be located within 50 feet or less from areas where intense construction (24 hours a day, 7 days a week) would occur. Although residential properties located within the WLCSP would be rezoned as Light Logistics, the existing residences are considered to be noise-sensitive uses that would be affected by intense construction activities. Similarly, residences located adjacent to the project site (i.e., along Redlands Boulevard, Merwin Street, Bay Avenue, Cactus Avenue, and Gilman Springs Road) would also be affected by intense construction activities. Based on a 50-foot noise attenuation distance, these residences may experience worst-case unmitigated peak construction noise levels (L_{max}) up to 97 dBA. The average noise levels are typically 5 to 15 dB lower than the peak noise levels. Average noise levels (L_{eq}) at 50 feet could easily be in the range of 82 to 92 dBA during most phases of construction.

The City of Moreno Valley Municipal Code does not include any exemptions for construction noise. Therefore, construction would be subject the limitations of 60 dBA during daytime and 55 dBA at nighttime measured at residential areas. According to Section 3.4.14, *Project Description*, WLC project construction may occur 24 hours a day, 7 days a week for certain activities. Significant noise impacts would be expected, especially if work with high noise levels occurs between 8:00 p.m. and 6:00 a.m.

I:\HFV1201\Reports\EIR\fig4-12-8_ConstructEquipNoise.ai (12/21/12)

Item No. E.6

THIS PAGE INTENTIONALLY LEFT BLANK

Based on these projections, anticipated worst-case construction noise levels would regularly be exceeded during daytime and nighttime hours at residences within the Specific Plan area. Based on an L_{eq} noise level of 90 dBA at 50 feet, an observer would need to be 1,580 feet from the construction to experience a noise level of 60 dBA (L_{eq}), or 2,800 feet for a noise level of 55 dBA (L_{eq}). Therefore, a residence within 1,580 feet during active construction during the daytime would be affected. Similarly, a residence within 2,800 feet during the nighttime would be affected by construction noise.

As set forth in Section 3.4.14 and as stated by the project applicant, construction could occur 24 hours per day, 7 days per week for these construction activities. Therefore, noise levels at the nearest residences would exceed the City's exterior noise standard of the 60 dBA[1] CNEL daytime standard and 55 dBA CNEL nighttime standard for residential uses. This is a significant impact requiring mitigation.

Off-site Construction. Construction activities associated with off-site construction include road improvements along Cactus Avenue and Redlands Boulevard, water and utility improvements, construction of a detention basin, debris basins, and interchange improvements. Roadway and interchange improvements are planned along Cactus Avenue, Redlands Boulevard, State Route 60, and Gilman Springs Road. Often the loudest pieces of equipment associated with this type of construction are the graders/scraper equipment. Peak noise levels at 50 feet can reach 96 dBA, with average noise levels (L_{eq}) in the 85 dBA range. Noise levels of 60 dBA (L_{eq}) could be exceeded for up to 900 feet from the construction area. Existing residences are located within 900 feet of the off-site construction areas and would be exposed to noise levels that would exceed of the Moreno Valley noise criteria for residential uses.

Other off-site construction improvements such as drainage, sewer, water, and utility features would also generate noise in close proximity to existing sensitive uses. However, these activities typically utilize less construction equipment, which results in lower noise levels. These construction activities may commonly employ a backhoe as the loudest piece of equipment. A backhoe may have a peak noise level that exceeds 90 dBA at 50 feet, but has an average noise level around 80 dBA (L_{eq}) at 50 feet. However, at this noise level one would need to be more than 500 feet away to experience a noise level (L_{eq}) of less than 60 dBA. This noise level would exceed the City's daytime criteria at the nearest existing residences and mitigation measures would be required.

Specific Plan Design Features. The WLCSP does not contain any design features that specifically address noise. Other features, such as perimeter setback requirements, will have the effect of reducing noise to certain residential areas.

Mitigation Measures. Construction of the proposed project would result in noise levels at the closest residences exceeding the maximum noise level allowed under the City's Municipal Code. The following measures[2] would reduce short-term construction-related noise impacts associated with the proposed WLC project:

4.12.6.1A Prior to issuance of any discretionary approvals for development in the WLCSP, the project applicant shall submit a Noise Reduction Compliance Plan (NRCP) to the City of Moreno Valley for review and approval. The NRCP shall show the limits of nighttime construction in relation to any then occupied residential dwellings. Conditions shall be added to any discretionary projects requiring that the limits of nighttime grading be shown on the NRCP and all grading plans submitted to the City.

[1] *Chapter 11.80.030 Table 11.80.030-2, City of Moreno Valley Municipal Code,* City of Moreno Valley.
[2] Measures 4.12.6.1B-F correspond to the noise study measures N-1 through N-5

The limits of construction allowed at night shall be clearly staked on site, and contractors will be provided with a copy of the plan showing the limits of nighttime construction.

4.12.6.1B During all project site grading, all construction equipment, fixed or mobile, shall be equipped with operating and maintained mufflers consistent with manufacturers' standards.

4.12.6.1C All discretionary approvals for development in the WLCSP shall prohibit construction vehicles from using Redlands Boulevard south of Fir Avenue during on-site construction for all phases of the Specific Plan.

4.12.6.1D All discretionary approvals for development in the WLCSP shall include conditions of approval stating that no nighttime grading shall occur within 2,800 feet of residences south of SR-60 (between 8 p.m. and 6 a.m. on weekends and 8 p.m. and 7 a.m. on weekends or holidays). These restrictions shall be included as part of the Noise Reduction Compliance Plan. As an alternative to this requirement, a temporary construction sound barrier may be used in lieu of the construction buffer, per Mitigation Measure 4.12.6.1E.

4.12.6.1E As an alternative to Mitigation Measure 4.12.6.1D, a 12-foot tall temporary construction sound barrier may be installed for residences within 1,580 feet of active nighttime construction areas. The temporary sound barrier shall be constructed of plywood with a total thickness of 1 to 1.5 inches, or a sound blanket wall may be used. If sound blankets are used, the curtains must have a Sound Transmission Class (STC) rating of 27. This shall be included as part of the Noise Reduction Compliance Plan required in Mitigation Measure 4.12.6.1A, which shall be reviewed and approved by the City prior to implementation.

4.12.6.1F As an alternative to Mitigation Measure 4.12.6.1D, actual noise measurements of construction areas may be taken by qualified personnel and recommend specific buffer distances between construction activities and existing residences based on actual noise levels. These measurements will be incorporated into the Noise Reduction Compliance Plan required in Mitigation Measure 4.12.6.1A, which shall be reviewed and approved by the City prior to implementation.

4.12.6.1G Any discretionary approvals for development that proposes grading within 1,580 feet of occupied residential units shall require that all grading equipment be equipped with residential grade mufflers (or better).

4.12.6.1H All material stockpiles in connection with any grading operations shall be located at least 1,200 feet from existing residences.

4.12.6.1I All project-related off-site construction shall be limited to 6 a.m. and 8 p.m. on weekdays only. Construction during City holidays shall not be permitted.

4.12.6.1J Prior to the issuance of grading permits for off-site construction activities in support of development in the WLCSP, the project developer shall provide evidence to the City that any off-site construction area adjacent to occupied residential units shall have a 12-foot temporary sound barrier installed for construction activities lasting more than one month.

Level of Significance after Mitigation. *On-site Construction*. Elimination of nighttime construction within 2,800 feet of residences would lower the noise levels to 55 dBA (L_{eq}) at the closest residences. The noise levels would just meet the 55 dBA (L_{eq}) nighttime criteria contained in the Moreno Valley Noise Ordinance resulting in a less than significant impact. With the implementation of **Mitigation Measures 4.12.6.1A** through **4.12.6.1J**, the loudest noise level that would be experienced at any

developed residential parcel would be less than the 55 dBA (L_{eq}) nighttime threshold and would be consistent with the limits established in the City's Noise Ordinance resulting in a less than significant impact. In addition, implementation of **Mitigation Measure 4.12.6.1H**, would reduce the noise experienced at existing residences, resulting in a less than significant impact.

As previously stated, construction within 1,580 feet of residential areas south of the freeway has the potential to exceed the daytime Moreno Valley Noise Ordinance criteria of 60 dBA (L_{eq}). With implementation of **Mitigation Measure 4.12.6.1E**, any existing residences within 1,580 feet of a construction area would be shielded from construction noise with a 12-foot temporary sound barrier. A sound barrier will reduce the noise levels by about 10 dB resulting in a reduction of noise below City thresholds at residences 500 feet or further from the construction area. Although the installation of the temporary sound barrier would reduce noise levels experienced at the closest residences, those residences that are located within 500 feet of a construction area would still be exposed to noise levels greater than 60 dBA (L_{eq}). Therefore, impacts associated with this issue would remain significant and unavoidable.

Off-site Construction. With the implementation of **Mitigation Measure 4.12.6.1I**, off-site construction activities would be limited to daytime hours while **Mitigation Measure 4.12.6.1J** would require the installation of a temporary sound barrier. With these mitigation measures in place, residences adjacent to construction activities (depending on the loudness of the construction equipment) could experience noise levels greater than 60 dBA (L_{eq}) for off-site construction projects lasting less than one month. These impacts would only occur during weekday, daytime hours. However, even with implementation of these mitigation measures, noise levels experienced at these residences would be above the City's threshold. Therefore, impacts would remain significant and unavoidable.

4.12.6.2 Long-Term Traffic Noise Impacts

Threshold	Would the project result in a substantial temporary, periodic, and/or permanent increase in ambient noise levels in the project vicinity above levels existing without the project?

The noise analysis for the proposed project is based on the traffic volume data contained in the Traffic Impact Analysis (TIA) prepared for the project (contained in its entirety as EIR Appendix L). The TIA addressed the intersections of surface streets in Moreno Valley of a collector or higher classification street with another collector or higher classification street, at which the proposed project will add 50 or more peak hour trips. The study area also included the main travel routes between the project and the neighboring cities of Riverside, Perris, Beaumont, San Jacinto, and Redlands. The study area extended west to the nearest ramps on SR-91 and as far south as the I-215 ramps at Redlands Avenue in Perris. The study area for freeways was selected to cover the freeway routes radiating from the project site to the north, south, east, and west. The traffic analysis covered SR-60 from SR-62 in the east to SR-71 in the west, SR-91 from I-215 in the east to I-15 in the west, and I-215 from SR-210 in the north to the Scott Road interchange in the south.

Three hundred and thirty nine (339) roadway links and eighty (80) freeway segments were analyzed in the noise analysis. The change in noise level was calculated for all 419 roadway and freeway links with and without the project for the existing case (2012), 2017, 2022, and 2035 time horizons. Links with noise increases less than 1.5 dB would not have a substantial noise increase and were not presented in the main body of the noise report (i.e., the tables and figures). Similarly, any links that do not have sensitive receptors (e.g., residential uses) were also not presented in the main body of the noise report. Based on this filtering process, of the 419 links analyzed, 72 links have sensitive receptors and an increase of 1.5 dB for at least one time horizon and were therefore addressed in the analysis.

The projected future daily traffic volumes (Parsons Brinckerhoff, Inc., December, 2012) for roadway segments in the project vicinity were used in the traffic noise impact analysis. Modeled noise levels represent the worst-case scenario, which assumes that no shielding is provided between the traffic and the location where the noise contours are drawn. As previously identified, the threshold for traffic noise is 65 dBA CNEL for sensitive receptors.

Operation of development that could occur within the proposed project area would generate traffic along roadways in the project vicinity. Table 4.12.H identifies existing with project roadway traffic noise levels with the project.

Year 2017 (Phase I) with and without project scenarios projected daily traffic volumes on roadway segments in the project vicinity were used to conduct the traffic noise modeling. The projected daily traffic volumes in the area were taken from the TIA prepared for the proposed project. Table 4.12.I identifies year 2017 without project and with project traffic noise levels.

Table 4.12.I: Phase I (2017) Plus Project Traffic Noise Levels (dBA)

Roadway Segment	CNEL (dBA) at 100 feet		
	Without Project	With Project	Change
Alessandro Boulevard (west of Redlands Boulevard)	61.4	61.3	-0.1
Alessandro Road (Crescent Avenue to Sunset Drive)	63.8	65.3	1.5

As identified in Table 4.12.I, implementation of the proposed WLC project would result in relatively minor changes in traffic noise levels in Year 2017 (Phase I). The largest project-related increase in traffic noise would be along Street D (Street E to Cactus Avenue) and Street E (north of Alessandro Boulevard), where increases of greater than 65 dBA are predicted for the 2017 With Project scenario over the Year 2017 without project scenario. The increase associated with these roadway segments is attributable in part to Streets D and E being new roads that will be constructed by the proposed project.

Future Year (2022) with and without project scenarios projected daily traffic volumes on roadway segments in the project vicinity were used to conduct the traffic noise modeling. The projected daily traffic volumes in the area were taken from the TIA prepared for the proposed project. Table 4.12.J identifies the future year (2022) without project and with project traffic noise levels.

Table 4.12.J: Future Year (2022) Plus Project Traffic Noise Levels (dBA)

Source: Mestre Greve Associates, November 2012.

Increases in noise levels associated with Buildout Year (2035) traffic conditions on area roadways range from 0.1 to 68.0 dBA. As identified in the Table 4.12.K, the greatest increase in noise levels would be along Street D (Street E to Cactus Avenue), Street E (north of Alessandro Boulevard), and

Street F west (of Street A), where increases of greater than 65 dBA are predicted for the Buildout Year 2035 With Project scenario over the Buildout Year 2035 Without Project scenario. The increase associated with these roadway segments is attributable in part to Streets D, E, and F being new roads that will be constructed by the proposed project.

Tables 4.12.H through 4.12.K identify the noise increases directly caused by the proposed project. These numbers represent the distance from the centerline of the road to the contour value shown. Note that the values given in Tables 4.12.H through 4.12.I do not take into account the effect of any existing noise attenuation in the form of barriers, soundwalls, or topography that may affect ambient noise levels.

For the reader's convenience, the significance threshold for a project-specific roadway noise impact as defined previously is:

- Project induced increase in noise levels by 5 dB or more where the no project noise level is less than 60 CNEL;
- Project induced increase in noise level by 3 dB or more where the no project noise level is 60 CNEL to 65 CNEL; or
- Project induced increase in noise levels by 1.5 dB or more where the no project noise level is greater than 65 CNEL.

For the reader's convenience, the significance threshold for a project's incremental contribution to a cumulative noise increase as defined previously is:

A project increase of the ambient (cumulative without project) noise level by 1 dB or more, and the predicted future cumulative with project noise levels cause the following cumulative increases:

- Increase noise levels by 5 dB or more where the existing noise level is less than 60 CNEL;
- Increase noise levels by 3 dB or more where the existing noise level is 60 to 65 CNEL; or
- Increase noise levels by 1.5 dB or more where the existing noise level is greater than 65 CNEL.

It should be noted that the same noise increase occurs at all locations along a roadway link. In other words, the same increase will occur at 50 feet from a roadway as it does at 100 feet. In addition, the noise contours cover a wider area around the local roadways than does the existing condition. State Route 60, however, continues to be the dominant noise source in the area.

In general, the project proposes logistics uses and will not be affected by these noise increases. However, there are a few scattered residences within the project area and adjacent to the WLCSP area that would be affected by the proposed logistics uses.

Within the Specific Plan Area. For locations within the WLCSP area, these include three groups of residences that may remain with the implementation of the proposed project. The Specific Plan would rezone the properties as Light Logistics, but it is anticipated that the residences may remain for some time. The Light Logistics use is not sensitive to noise. However, the existing residences, as long as they remain, must be considered sensitive land uses.

- *Redlands Boulevard (north of Brodiaea Avenue).* The first group of homes is located east of Redlands Boulevard north of the intersection with Brodiaea Avenue. The traffic on Redlands Boulevard will not increase significantly as a result of the project. Future Street E is proposed to be constructed west of these existing residences. However, as stated in the Noise Study

conducted for the Specific Plan, it is likely that there will be intervening buildings and that the distance from Street E will be so great that these homes will not experience significant noise from public roadways. Therefore, impacts are anticipated to be less than significant and no mitigation is required.

- *Street A/Theodore Street (Street B to Street F).* The second group of residences within the Specific Plan area is located on the east side of Street A (Theodore Street) midway between the future Street B and Street F. There are currently two residences in this area. These residences are anticipated to experience noise increases up to 18 dB due to the implementation of the Specific Plan. As a result, existing noise levels at these two residences will be changed significantly. The exact alignment of the roadway is yet to be determined, but the homes may be roughly 100 feet from the centerline on the roadway. As identified in Table 4.12.J, at this distance, the noise level by future year (2022) could be as high as 73.1 CNEL. This level of noise would be above the 65 CNEL threshold and would result in a greater than 1.5 dB noise increase when compared to without project conditions. This is a significant impact requiring mitigation.
- *Street F/Dracaea Avenue (east of Theodore Street).* The third area is a single residence located east of Theodore Street along what is currently Dracaea Avenue (future Street F). Existing conditions identify low levels of traffic noise on Dracaea Avenue. The 65 CNEL contour is projected to lie 84 feet from the centerline of Street F and it is likely that the one residence would lie within this zone. This level of noise would be above the 65 CNEL threshold and result in a greater than 1.5 dB noise increase when compared to without project conditions. Therefore, this is a significant impact requiring mitigation.

Off-Site Areas Adjacent to the Specific Plan Area. For areas adjacent to the Specific Plan area, 22 segments would experience a noise increase that would be greater than significance criteria specified previously. These seven areas are described below.

- *Cactus Avenue (Redlands Boulevard to Street D).* This area is occupied by a small group of single-family homes along Cactus Avenue between the future Street D and Redlands Boulevard. A significant noise increase is projected for all four time horizons. Currently, there is no soundwall along these homes. Therefore, this is a significant impact requiring mitigation.
- *Cactus Avenue (west of Redlands Boulevard).* As identified in the noise study, this area shows noise increases ranging from 1.5 dB to 5.1 dB depending on the time horizen. Only the 2035 case results in a significant noise increase.

  Existing residences are located along Redlands Boulevard with rear yards facing Cactus Avenue. Existing 6-foot high soundwalls are located along the residences and rear yard areas are approximately 60 feet from the centerline of the roadway. In buildout year (2035), the noise levels for 60 feet from the centerline of the roadway including the effects of the soundwall are projected to be 64.8 CNEL. This is below the City criteria of 65 CNEL and, therefore, a less than significant impact will occur and no mitigation is required.
- *Day Street (between Cottonwood Avenue and Alessandro Boulevard).* There are scattered single-family homes along this roadway that front onto Day Street. Only the 2035 time horizon results in a significant noise increase for this area. In 2035, the project is projected to increase noise levels by 1.7 dB, bringing the noise level up to 69.4 CNEL. Therefore, this is a significant impact requiring mitigation.
- *Fir Avenue (between Quincy Drive and Redlands Boulevard).* There is one single-family home along this roadway fronting Fir Avenue. Only the 2035 time horizon results in a significant noise increase for this area. In 2035, the project is projected to increase noise levels by 6.7 dB, bringing the noise level up to 68.3 CNEL. Therefore, this is a significant impact requiring mitigation.

- *Gilman Springs Road (between Eucalyptus Avenue and Street C, and between Jack Rabbit Trail and Bridge Street).* There are three single-family homes scattered along these roadway segments. All of the houses are set back from the roadway, but none has soundwalls. A significant noise increase is projected for at least one of these segments in three of the four case years. Therefore, this is a significant impact requiring mitigation.
- *Ironwood Avenue (between Redlands Boulevard and Highland Boulevard).* There are two single-family homes that front onto Ironwood Avenue. There are also two churches along this roadway. A significant noise increase is projected for all four study years. In 2035, the project is projected to increase noise levels by 5 dB, bringing the noise level to 63.6 CNEL. Therefore, this is a significant impact requiring mitigation.
- *John F. Kennedy Drive (south of Cactus Avenue).* The residences along John F. Kennedy Drive south of Cactus Avenue will experience significant noise increases in all four time horizons. Similar to the area along Cactus Avenue, this noise increase will be due to cars and light vehicles, and not heavy trucks. The residences along the west side of the roadway are generally depressed with respect to the road and have existing 6-foot soundwalls. Due to the presence of the existing soundwalls and slope conditions, noise levels would be reduced by 6 to 10 dB. This would result in noise levels being below the City threshold of 65 CNEL for residential uses. Therefore, residences on the west side of the street will not be affected. Impacts are considered to be less than significant and no mitigation is required.

  The residences on the east side of the roadway are elevated with respect to the roadway and do not have soundwalls. Rear yards areas on both sides of the street are approximately 60 to 90 feet from the centerline of the roadway and are bordered by wrought iron fencing. As identified in Tables 4.12.H through 4.12.K, the greatest noise levels that would be experienced at these residences would range up to 67.9 CNEL, which is above the City threshold of 65 CNEL. This is a significant impact requiring mitigation.
- *Locust Avenue (between Moreno Beach Drive and Smiley Boulevard).* There are three single-family homes along this roadway and they front onto the roadway. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 3.5 dB, bringing the noise level to 68.9 CNEL. This is a significant impact requiring mitigation.
- *Moreno Beach Drive (between Locust Avenue and Ironwood Avenue).* There are 18 single-family homes along this roadway. Some homes front onto the roadway, but most back up to the roadway. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 3.3 dB, bringing the noise level to 66.6 CNEL. This is a significant impact requiring mitigation.
- *Perris Boulevard (between John F. Kennedy Drive and Iris Avenue).* This is a mixed area in terms of residential land use. There are approximately 36 single-family homes along this roadway, some with a soundwall and some without. There is also a large multifamily development without a soundwall. Most of the homes either back up to the roadway or side-on to the roadway, making a soundwall feasible. Approximately half of the homes along this roadway do have a soundwall in place. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 1.7 dB, bringing the noise level up to 72.2 CNEL for areas without a soundwall. For the homes with a soundwall, there would not be a significant noise impact since the year 2035 the noise would increase by 1.7 dB and reaching up to 66.2 CNEL. For the homes on this roadway that do not have a soundwall, there would be a significant noise impact and mitigation is required.
- *Placentia Avenue (from El Nido Avenue to Evans Road, and on to Water Avenue).* There are scattered single-family homes along this roadway that front onto the roadway. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 10 to 14 dB, bringing the noise level up to 68 CNEL. This is a significant impact requiring mitigation.

- *Quincy Drive (from Cactus Avenue to Alessandro Boulevard, and on to Cottonwood Avenue).* The existing single-family homes along Quincy Drive have a soundwall. Quincy Drive currently only exists from Cottonwood to Bay Avenue, which is north of Alessandro Boulevard. The 2035 time horizon results in a significant noise increase. This is a significant impact requiring mitigation.
- *Reche Canyon Road (from Keissel Road to Reche Vista Drive, and on to High Country Drive).* There are roughly 22 single-family homes scattered along these two roadway segments. These homes are scattered along the roadway and front onto Reche Canyon Road. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 1.8 to 3.3 dB with resulting noise levels in the 67 to 68 CNEL range. This is a significant impact requiring mitigation.
- *Redlands Boulevard (from Dracaea Avenue to State Route 60).* There are scattered homes in this area that either face Redlands Boulevard (or Shubert Street) or are on Redlands Boulevard. The 2012, 2022, and 2035 time horizons result in a significant noise increase for this area. This is a significant impact requiring mitigation.
- *Redlands Boulevard (from State Route 60 to San Timoteo Canyon Road).* There are approximately 28 homes along this roadway that would be affected. The single-family homes are scattered and generally front the roadway. The 2012, 2022, and 2035 time horizons result in a significant noise increase for this area. The increases in noise are around 2 dB with a resultant noise level in the 71 to 72 CNEL range. This is a significant impact requiring mitigation.
- *San Timoteo Canyon Road (from Alessandro Road to Live Oak Canyon Road to Redlands Boulevard).* There are about four scattered residences along this roadway that would be affected. The existing baseline plus project time horizon results in a significant noise increase for this area. The noise increases by up to 3.3 dB with resultant noise levels in the 65 to 66 CNEL range. This is a significant impact requiring mitigation.
- *Theodore Street (State Route 60 to Highland Boulevard).* There are four existing homes on Theodore Street that front onto the roadway. Implementation of the Specific Plan would result in a 10.7 dB increase over baseline conditions (2012), a 7.4 dB increase in Opening Year (2017), and a 3.8 dB increase in future year (2022). By Buildout Year (2035), the noise increase associated with the proposed project is anticipated to be 2.9 dB, which would not be significant. In future year (2022), the 65 CNEL contour for this roadway link would lie approximately 138 feet from the centerline of the roadway. The four existing residences on Theodore Street are within 138 feet of the roadway. As a result, these existing residences could experience noise levels above the 65 CNEL threshold during all time horizens. This is a significant impact requiring mitigation.
- *Street D (from Street E to Cactus Avenue).* Street D, as shown in the Specific Plan, will come down the western side of the project parallel to Merwin Street. It then merges with Cactus Avenue traveling to the west until Redlands Boulevard. A specific alignment has not been determined for this roadway. There are approximately 14 homes that side-on to Merwin Street that could be affected by traffic on Street D. There are no soundwalls along these homes. There would be limited or no heavy trucks using this roadway. The 65 CNEL contour will lie 114 feet from the centerline of Street D. If the centerline of Street D is located closer than 114 feet to the residences, then a significant impact would occur. Outdoor living spaces for homes along Merwin Street would experience noise levels greater than 65 CNEL, and this would not be consistent with City criteria. This is a significant impact requiring mitigation.
- *State Route 60 (from Pigeon Pass Road to Perris Boulevard).* All residential areas along this stretch of freeway have soundwalls in place. The 2012 time horizon results in a significant noise increase for this area. The noise levels are projected to increase by 1.5 to 1.7 dB in this area with resultant noise levels in the 66.9 to 68.1 CNEL range. This is a significant impact requiring mitigation.
- *State Route 60 (from Perris Boulevard to Nason Street).* All residential areas along this stretch of freeway have soundwalls in place. The 2022 time horizon results in a significant noise increase

for this area. The noise level will go up by 1.6 dB with the project up to a level of 67.2 CNEL. This is a significant impact requiring mitigation.

- *State Route 60 (from Moreno Beach Drive to Redlands Boulevard).* There are soundwalls in place for all residences in this area. The existing 2012 and 2035 time horizons result in a significant noise increase for this area, reaching 67.1 CNEL by 2035. This is a significant impact requiring mitigation.
- *State Route 60 (from Redlands Boulevard to Theodore Street).* No soundwalls are present in this area. The residential area is set back from the freeway and is clustered along Redlands Boulevard north of the freeway. The existing 2012 time horizon results in a significant noise increase for this area. The resultant noise level will be 63.5 CNEL with an increase due to the project of 3.4 dB. This is a significant impact requiring mitigation.

Specific Plan Design Features. The WLCSP indicates there will be a 250-foot setback from existing housing along Redlands Boulevard. No additional design features to attenuate noise impacts are planned as part of the WLCSP.

Mitigation Measures. Construction of the proposed WLC project would result in noise levels at the closest residences within and adjacent to the WLCSP area exceeding the maximum noise level allowed under the City's Municipal Code. The following measures would reduce long-term traffic related noise impacts associated with the proposed project:

4.12.6.2A Within the WLCSP, Street D shall be designed such that exterior noise levels at existing residential areas shall not exceed 65 CNEL, which may require installation of a soundwall or other noise attenuation improvements. The design and calculations of such improvements shall be incorporated into a report that shall be submitted to the City for review and approval prior to the issuance of construction permits for Street D.

4.12.6.2B Prior to issuance of any discretionary approvals for development in the WLCSP, a WLC Noise Development Impact Fee study shall be submitted to the City for review and approval. The City shall require future development within the WLCSP to participate in a WLC Noise Development Impact Fee program to include soundwall attenuation to mitigate impacts from the proposed project based on the collection of fair-share fee payments from each increment of development and the implementation of each soundwall in accordance with Mitigation Measure 4.12.6.2C. The update to the DIF shall be based on a nexus study in conformance with State law (i.e., AB 1600). The Nexus study shall examine the soundwalls specified below, shall include detailed cost estimates for each soundwall, and shall establish a pro-rated fee to be paid per square foot by all development proposals within the WLCSP. The soundwalls to be included in this study include:

Cactus Avenue Soundwall from Redlands Boulevard to Street D. Construct an approximately 1,000-foot long, 6-foot high soundwall at the top of slope. The existing wrought-iron fencing will be removed and replaced with the soundwall (e.g., masonry wall, berming, glass barrier, or combinations of these barriers). The soundwall would need to measure 6 feet as measured from the rear yard of the residences.

John F. Kennedy Drive, east side, Soundwall from Cactus Avenue to Bay Hill Drive. Construct an approximately 5,000-foot long, 6-foot high soundwall at the top of slope for the existing residences that are on the east side of John F. Kennedy Drive. The existing wrought-iron fencing will be removed and replaced with the soundwall (e.g., masonry wall, berming, glass barrier, or combinations of these barriers). The

soundwall would need to measure 6 feet as measured from the rear yard of the residences.

Moreno Beach Drive Soundwall between Locust Avenue and Ironwood Avenue. Construct an approximately 2,000-foot long, 6-foot high soundwall at the top of slope for the existing residences that are on the east side of John F. Kennedy Drive. The soundwall would need to measure 6 feet as measured from the rear yard of the residences.

Perris Boulevard Soundwall between John F. Kennedy Drive and Iris Avenue. Construct an approximately 1,500-foot long, 6-foot high soundwall at the top of slope for the existing residences that are on the east side of John F. Kennedy Drive. The soundwall would need to measure 6 feet as measured from the rear yard of the residences.

State Route 60 Soundwall from Redlands Boulevard to Theodore Street. Construct an approximately 580-foot long, 6-foot high soundwall for the existing residences. The soundwall would need to measure 6 feet as measured from the rear yard of the residences.

Iris Avenue Soundwall from Nason Street to Oliver Street. Construct an approximately 3,000-foot long, 6-foot high soundwall along the property line for the existing residences.

Sycamore Canyon Boulevard Soundwall from College Boulevard and Central Avenue. Construct an approximately 1,000-foot long, 6-foot high soundwall at the top of slope for the existing residences. The soundwall would need to measure 6 feet as measured from the rear yard of the residences.

4.12.6.2C Prior to issuance of any building permits for development in the WLCSP, the City shall collect the Development Impact Fee (DIF) as modified in accordance with Mitigation Measure 4.12.6.2B. The City shall establish a schedule for installing the specific soundwalls listed in Mitigation Measure 4.12.6.2B consistent with the WLC Noise DIF program..

Level of Significance after Mitigation. *Within the WLC Specific Plan Area.* For areas within the WLCSP area, these include three groups of residences that may remain with the implementation of the proposed project. The level of significance after mitigation is provided for each of the two areas for which a significant impact has been identified.

- *Theodore Street/Street A (Street B to Street F).* There are two residences in this area. These residences are anticipated to experience noise increases up to 18 dB due to the implementation of the Specific Plan. As a result, existing noise levels at these two residences will be changed significantly. The exact alignment of the roadway is to be determined, but the homes may be roughly 100 feet from the centerline on the roadway. One residence fronts onto Street A (Theodore Street), and the driveway access would make a soundwall ineffective. The other residence is on to Street A. It is difficult to determine where an outdoor living area is for this residence. However, since it is a single residence, a soundwall would have a limited effectiveness. Since mitigation is not feasible, impacts remain significant and unavoidable.
- *Dracaea Avenue/Street F (east of Theodore Street).* There is one residence in this area fronting onto the future alignment of Street F (currently Dracaea Avenue). Existing conditions identify low levels of traffic noise on Dracaea Avenue. The 65 CNEL contour is projected to lie 84 feet from the centerline of Street F and it is likely that the one residence would lie within this zone. Installation of a soundwall would not be effective in reducing noise levels due to the opening for the driveway. Since mitigation is not feasible, impacts remain significant and unavoidable.

Off-Site Areas Adjacent to the Specific Plan Area. For areas adjacent to the WLCSP area, eight areas would experience noise increases that would be mitigated to a less than significant level with implementation of **Mitigation Measures 4.12.6.2A** through **4.12.6.2C**. These areas are as follows:

- Cactus Avenue from Redlands Boulevard to Street D;
- John F. Kennedy Drive, west side, from Cactus Avenue to Bay Hill Drive;
- Moreno Beach Drive between Locust Avenue and Ironwood Avenue (15 of 18 homes);
- Perris Boulevard between John F. Kennedy Drive and Iris Avenue;
- State Route 60 from Redlands Boulevard to Theodore Street;
- Iris Avenue from Nason Street to Oliver Street;
- Sycamore Canyon Boulevard from College Boulevard and Central Avenue; and
- Street D from Street E to Cactus Avenue (8).

For the remaining noise impact locations adjacent to the WLCSP area for which significant noise impacts have been identified, mitigation measures are not feasible or will not fully reduce the impact to less than significant levels. Each location that will remain significant and unavoidable with implementation of the proposed project is discussed below.

- *Cactus Avenue (west of Redlands Boulevard).* Existing soundwalls will reduce noise levels by an estimated 6 dB, lowering the ultimate noise levels to 64.8 CNEL in the rear yard areas along Cactus Avenue. This is below the City criteria of 65 CNEL. It is not feasible to modify the existing residential block wall to reduce the project increase in noise levels because the block walls are designed for the height that they are built. In addition, the projected noise levels in year 2035 are within the City's exterior noise level for residences. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Day Street (between Cottonwood Avenue and Alessandro Boulevard).* The scattered single-family homes along this roadway front onto Day Street. In 2035, the project is projected to increase noise levels by 1.7 dB, bringing the noise level up to 69.4 CNEL. Homes that are widely separated from other homes cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Fir Avenue (between Quincy Drive and Redlands Boulevard).* There is one single-family home along this roadway fronting Fir Avenue. Only the 2035 time horizon results in a significant noise increase for this area. In 2035, the project is projected to increase noise levels by 6.7 dB, bringing the noise level up to 68.3 CNEL. A single home that fronts on a roadway cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Gilman Springs Road (between Eucalyptus Avenue and Street C, and between Jack Rabbit Trail and Bridge Street).* There are three single-family homes scattered along these roadway segments. All of the houses are set back from the roadway, but none has soundwalls. A significant noise increase is projected for at least one of these segments in three of the four case years. Homes that are widely separated from other homes cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Ironwood Avenue (between Redlands Boulevard and Highland Boulevard).* There are two single-family homes that front onto Ironwood Avenue. There are also two churches along this roadway. A significant noise increase is projected for all four study years. In 2035, the project is projected to increase noise levels by 5 dB, bringing the noise level to 63.6 CNEL. Land uses that are widely

separated from one another cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.

- *Locust Avenue (between Moreno Beach Drive and Smiley Boulevard).* There are three single-family homes along this roadway and they front onto the roadway. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 3.5 dB, bringing the noise level to 68.9 CNEL. As discussed above, homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Moreno Beach Drive (between Locust Avenue and Ironwood Avenue.* There are 18 single-family homes along this roadway. Some homes front onto the roadway, but most back up to the roadway. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 3.3 dB, bringing the noise level to 66.6 CNEL. This is a significant impact requiring mitigation. Even with the soundwall that would be implemented as part of **Mitigation Measures 4.12.6.2A** through **4.12.6.2C**, sound levels at 3 of the 18 homes would exceed 65 CNEL. These homes front onto Moreno Beach Drive and cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Placentia Avenue (from El Nido Avenue to Evans Road, and on to Water Avenue).* There are scattered single-family homes that front onto the roadway. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 10 to 14 dB, bringing the noise level up to 68 CNEL. As discussed above, homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Quincy Drive (from Cactus Avenue to Alessandro Boulevard, and on to Cottonwood Avenue).* The existing single-family homes along Quincy Drive have a soundwall. Quincy Drive currently only exists from Cottonwood to Bay Avenue, which is north of Alessandro Boulevard. The 2035 time horizon results in a significant noise increase. It is not feasible to modify the existing residential block walls to reduce the project increase in noise levels because the block walls are designed for the height that they are built. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Reche Canyon Road (from Keissel Road to Reche Vista Drive, and on to High Country Drive).* There are approximately 22 single-family homes scattered along these two roadway segments. These homes front onto Reche Canyon Road. The 2035 time horizon results in a significant noise increase for this area. In 2035, the project will increase noise levels by 1.8 to 3.3 dB with resulting noise levels in the 67 to 68 CNEL range. Homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Redlands Boulevard (Dracaea Avenue to State Route 60).* There are scattered homes in this area that either face Redlands Boulevard (or Shubert Street) or are on Redlands Boulevard. The 2012, 2022, and 2035 time horizons result in a significant noise increase for this area. Homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Redlands Boulevard (State Route 60 to San Timoteo Canyon Road).* There are approximately 28 homes along this roadway that would be affected. The single-family homes are scattered and generally front the roadway. The 2012, 2022, and 2035 time horizons result in a significant noise increase for this area. The increases in noise are around 2 dB with a resultant noise level in the 71 to 72 CNEL range. Homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.

- *San Timoteo Canyon Road (from Alessandro Road to Live Oak Canyon Road to Redlands Boulevard).* There are approximately four scattered residences along this roadway that would be affected. The existing baseline plus project time horizon results in a significant noise increase for this area. The noise increases by up to 3.3 dB with resultant noise levels in the 65 to 66 CNEL range. Homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.
- *Theodore Street (State Route 60 to Highland Boulevard).* There are four existing homes on Theodore Street that front onto the roadway. Implementation of the Specific Plan would result in a 10.7 dB increase over baseline conditions (2012), a 7.4 dB increase in Opening Year (2017), and a 3.8 dB increase in future year (2022). By Buildout Year (2035), the noise increase associated with the proposed project is anticipated to be 2.9 dB, which would not be significant. In future year (2022), the 65 CNEL contour for this roadway link would lie approximately 138 feet from the centerline of the roadway. The four existing residences on Theodore Street are within 138 feet of the roadway. As a result, these existing residences could experience noise levels above the 65 CNEL threshold for all time horizons. Homes that are scattered and front onto a street cannot be effectively mitigated with a soundwall. Therefore, the significant impact cannot be feasibly mitigated and it will remain significant and unavoidable.

4.12.6.3 Long-Term Operational Noise Impacts

Threshold	Would the project cause exposure of persons to or generation of noise levels in excess of standards established in the *City of Moreno Valley General Plan, Moreno Valley Municipal Code*, or applicable standards of other agencies?

Potential long-term stationary noise impacts would primarily be associated with operations at logistics facilities within the WLCSP area. Logistics facility uses would generate noise from truck delivery, loading/unloading activities at the loading areas, heating, ventilation, and air-conditioning (HVAC) equipment and other noise-producing activities within the parking lot (e.g., doors slamming, vehicle engine start-ups, and conversing in the parking lot). These activities are potential point sources of noise that could affect noise-sensitive receptors adjacent to the loading areas and parking lots. As noise spreads from a source, it loses energy; therefore, the farther away the noise receiver is from the noise source, the lower the perceived noise level would be.

Noise levels were measured at similar facilities to determine representative noise levels that might be generated by this type of activity. Noise measurements were made at two facilities; specifically, Lowes Distribution Center (3984 Indian Avenue, Perris, CA) and Ross Distribution Center (3404 Indian Avenue, Perris, CA). Based on these representative noise measurements, Table 4.12.L provides the noise levels for various distances from the warehouse property line with no noise barrier in place and with an assumed 12-foot noise barrier.

Table 4.12.L: Representative Noise Levels for Warehousing Activities

Distance from Facility (feet)	Noise Level (dBA L_{eq})	
	No Barrier	With 12-foot barrier
50	56.9	48.6
100	54.9	47.8
250	50.8	44.7
500	46.6	40.9

Source: Mestre Greve Associates, November 2012.

The City of Moreno Valley Noise Ordinance requires that noise levels remain below 55 dBA (L_{eq}) during nighttime hours. To achieve this noise level, the warehouse property line would only need to be 100 feet from the nearest residential property and no soundwall would need to be present.

Another consideration is whether the proposed activity levels will be substantially higher than current ambient conditions. No matter what is developed in the Specific Plan area, ambient conditions would be higher in future years due to higher levels of traffic and activity. Ambient noise levels were measured at seven sites that could border the World Logistics Center (i.e., Measurement Sites 3 through 9). The nighttime ambient noise levels (L_{eq}) ranged from 35.8 to 61.8 dBA with an average for the sites of 46.6 dBA. To keep the noise levels at nearby residential areas less than typical ambient conditions, the logistics property line should be located a minimum distance of 250 feet and a 12-foot soundwall should be located along the perimeter of the property that faces any residential areas. This would keep the logistic use noise to less than 45 dBA (L_{eq}) at the residences. The implementation of this buffer between logistics uses and noise sensitive uses has been included as **Mitigation Measure 4.12.6.3A**.

Specific Plan Design Features. The WLCSP indicates there will be a 250-foot building setback from residentially zoned property along Redlands Boulevard, Bay Avenue, and Merwin Street.

Mitigation Measures. Operation of the proposed WLC project would result in noise levels at the closest residences within and adjacent to the WLC Specific Plan area exceeding the maximum noise level allowed under the City's Municipal Code. The following measure would reduce long-term operational noise impacts associated with the proposed WLC project:

4.12.6.3A All discretionary approvals for development in the area of Redlands Boulevard, Bay Avenue, Merwin Street, and Cactus Avenue shall provide a minimum 250-foot setback between residentially zoned property and logistics buildings within the WLCSP. In addition, all such discretionary approvals shall provide sound attenuation improvements that will reduce expected noise levels from development to within City standards.

Level of Significance after Mitigation. Implementation of **Mitigation Measure 4.12.6.3A** would eliminate any noise impacts on residential areas due to the operation of logistic activities. Through the provision of a 250-foot buffer, berms, and/or soundwalls, noise levels at the nearest residences would be reduced to below the City's thresholds. Therefore, with adherence to the identified mitigation measure, impacts associated with this issue would be less than significant.

4.12.6.4 Long-Term Utility Noise Impacts

Threshold	Would the project cause exposure of persons to or generation of noise levels in excess of standards established in the *City of Moreno Valley General Plan, Moreno Valley Municipal Code*, or applicable standards of other agencies?

As illustrated in previously referenced Figure 4.12.3 and Figure 4.12.6, there is one existing SDG&E compressor station and two existing SCGC facilities located within the WLC Specific Plan area.

Based on preliminary calculations as illustrated in Figure 4.12.3, the worst-case compressor station operational characteristics will result in a maximum noise level just above 65 CNEL within the project area proposed for development (i.e., not open space). Typical commercial construction results in buildings that achieve at least a 20 dB reduction of outdoor noise levels. Therefore, an office use

exposed to the highest noise level from the compressor station will be just above 45 CNEL and below the 50 CNEL limit prescribed by the City's General Plan, resulting in a less than significant impact and no mitigation is required.

As illustrated in previously referenced Figure 4.12.4, the L_{eq} noise level generated by the compressor station does not exceed 60 dBA L_{eq} beyond the property lines of the facility. Therefore, the compressor station is not considered a noise disturbance based on City criteria. Operation of the compressor station would not result in any interior noise levels exceeding the limits established by the City in the General Plan. Therefore, noise impacts associated with the operation of the compressor station would be less than significant and no mitigation is required.

As identified in previously referenced Figure 4.12.5, the maximum noise level from a blow-down at the SDG&E compressor station within the WLCSP area proposed for development (i.e., the Logistics Development land use) is 100 dBA. A person would need to be exposed to this level for more than two hours in a day before permanent hearing loss would be expected. As discussed above, blow-down events at the SDG&E compressor station typically do not last longer than 90 seconds. Therefore, the SDG&E blow-down events will not result in a significant impact to the uses proposed within the WLCSP area, and no mitigation is required.

For SCGC blow-down events, noise generated could reach as high as 130 dBA just outside the fence line of the southern facility and in excess of 135 dB just outside the fence line of the northern facility. People within approximately 250 feet of the blow-down points would be exposed to noise levels greater than 115 dBA, which would likely cause permanent hearing damage regardless of the exposure time. The SCGC blow-downs could last as long as 90 minutes. It is anticipated that people exposed to noise levels greater than 102 dBA, within approximately 1,300 feet from the blow-down point could experience permanent hearing loss based on this event duration. Noise generated by SCGC blow-down events has the potential to cause permanent hearing loss in persons in the developed area of the project. This is a significant impact and mitigation is required.

SCGC blow-down events also have the potential to produce groundborne vibration. However, the effect of the blow-down groundbourne vigbration would be limted to within 100 feet of the equipment and would not be perceived beyond the facility fenceline, resulting in a less than significant impact and no mitigation is required.

Specific Plan Design Features. The WLCSP provides a setback of open space and a street between the SCGC facility and planned warehouse buildings in the WLCSP. However, the separation may not be sufficient to prevent significant noise impacts during blow-down events.

Mitigation Measures. Operation of the proposed WLC project could result in exposure of people to noise levels as high as 130 dBA or greater during SCGC blow-down events. The following measure would reduce long-term utility related noise impacts associated with the proposed WLC project:

4.12.6.4A Prior to the issuance of building permits for projects within 500 feet of the SCGC and SDG&E facilities, documentation shall be submitted to the City confirming that sound attenuation devices or improvements for the blow-down facilities providing at least a 40 dB reduction in noise levels during blow-down events area available and will be installed for all planned blow-down events. This measure shall be implemented to the satisfaction of the City Planning Official.

Level of Significance after Mitigation. The SCGC blow-down equipment does not currently include a permanent silencer system. A review of the literature of a leading manufacturer of specialty silencer

systems (Industrial Acoustics Company) determined that a specialty silencer system added to the blow-down equipment could reduce noise levels by about 40 dB. With a silencer system providing 40 dB of noise reduction, blow-down noise levels would be less than 102 dBA approximately 30 feet from the blow-down point, which is within the property line of these facilities. 102 dBA is the noise level that could be experienced for up to 90 minutes without causing permanent hearing loss. Therefore, while occupants within the WLCSP in close proximity to the SCGC facilities would be subject to high noise levels during these infrequent noise events, they would not be subject to any permanent hearing damage. With implementation of **Mitigation Measure 4.12.6.4A**, SCGC blow-down events would not result in noise levels that could cause permanent hearing loss and the project would not be significantly affected by noise from the SCGC facilities, resulting in a less than significant impact.

4.12.7 Cumulative Impacts

The cumulative area for noise impacts is the City of Moreno Valley. Implementation of the Specific Plan would result in the introduction of new noise sources and levels from on-site activities and from increased traffic volumes on vicinity roadway and freeways.

Construction crew commutes and the transport of construction equipment, and materials to the WLCSP area would incrementally increase noise levels on access roads leading to the site. Secondary sources of noise would include noise generated during excavation, grading, and building erection on the project site. The net increase in project site noise levels generated by these activities and other sources has been quantitatively estimated and compared to the applicable noise standards and thresholds of significance. Although it is not possible to predict if contiguous properties may be constructed at the same time and create cumulative noise impacts that would be greater than if developed at separate times, it is unlikely that adjacent properties will be developed at the same time as the Specific Plan area. However, in the unlikely event that adjacent properties are developed at the same time as the proposed WLC project, adherence to the City's Municipal Code provisions that regulate construction activities and other development standards would render the cumulative impacts of the proposed project to less than significant levels.

The noise analysis contained in this section also provides an assessment of on-site operational noise level impacts on adjacent sensitive uses, both existing and future. Additionally, on-site operational noises are individual noise occurrences and are not typically additive in nature. It is extremely unlikely that adjacent properties will generate noises that would be additive in nature because of two important reasons. First, the noise sources would have to be adjacent or in close proximity to one another in order for the noises to intermingle. Second, the sensitive receptor or receptors would also have to be adjacent to or in close proximity to the noise generators. Although it is not possible to predict if contiguous or proximate properties may generate noise at the same time that would be additive in nature and thus create a significant cumulative noise impact at sensitive receptors, adherence to the City's Municipal Code provisions that regulate nuisance noise from land uses and other development standards would render the cumulative impacts of the proposed project to less than significant levels.

Cumulative traffic volumes contained in the TIA were developed for the Future Year 2022 and Buildout 2035 analysis time horizons. Traffic volumes for each time horizon were developed utilizing a combination of various future traffic growth methods as follows. For Future Year 2022, traffic volumes were developed by interpolating year 2035 traffic volume projections from the Riverside County Transportation and Analysis Model (RivTAM) to year 2022 plus traffic from a list of past, present, and reasonably foreseeable projects. For Buildout Year 2035, traffic volumes were developed by utilizing the year 2035 traffic volume projections from the RivTAM plus traffic from a list of past, present, and reasonably foreseeable projects.

Cumulative noise impacts associated with roadway noise have been addressed based on the cumulative traffic volumes. Previously referenced Tables 4.12.J and 4.12.K provide a comparison of Future Year (2022) and Buildout Year (2035) without and with project noise levels, and if a significant impact (project-specific or cumulatively significant) occurs.

The project calls for improvements to several of the roadways around the project area in order to accommodate the projected increase in project traffic volumes. There are no new noise-sensitive land uses proposed to be constructed within the area of analysis. However the presence of residential uses occurs within the WLCSP project and nearby area. These roadway segments are analyzed against the thresholds for determining significant impacts defined previously in Section 4.12.6.2. As described previously in Section 4.12.4, the project's incremental contribution to a cumulative noise increase would be considered cumulatively considerable and significant when ambient noise levels affect noise-sensitive land uses and when the proposed project increases noise levels by 1 dB or more over pre-project conditions and the predicted future cumulative with project noise levels cause the following cumulative increases:

- Increase noise levels by 5 dB or more where the existing noise level is less than 60 CNEL;
- Increase noise levels by 3 dB or more where the existing noise level is 60 to 65 CNEL; or
- Increase noise levels by 1.5 dB or more where the existing noise level is greater than 65 CNEL.

Cumulative noise impacts associated with roadway noise have been addressed based on the 2022 and 2035 time horizons analyses contained in Section 4.12.6.2. As identified in the preceding analysis, Tables 4.12.J and 4.12.K show the Future Year 2022 and Buildout Year 2035 CNEL values without and with the proposed project and if a significant impact would be produced based on the project-specific significance criteria identified in Seciton 4.12.4 and the cumulatively significant significance criteria identified in Section 4.12.4 and repeated above. Traffic noise level increases from the existing baseline condition and the future (2022 and 2035) time horizons are attributable to the intermingled effects of both the cumulative (i.e., past, present, and reasonably foreseeable projects) development projects in the project vicinity and region as well as the proposed project. As indicated in Section 4.12.6.2, roadway noise impacts have been identified and **Mitigation Measures 4.12.6.2A** through **4.12.6.2C** have been presented to reduce roadway noise impacts to the greatest extent feasible. As disclosed in Section 4.12.6.2, there are numerous instances in which there is no feasible means to reduce roadway noise impacts because of the existing developed nature of the affected roadway segment and/or the scattered nature of the sensitive receptors (i.e., residences), which prohibits the effectiveness of a soundwall. Therefore, no significant cumulative noise impacts would occur after implementation of the proposed mitigation measures. For those segments at which there is a cumulatively considerable impact and there is no feasible means to provide mitigation, the significant cumulative impact will remain significant and unavoidable.

To: Moreno Valley Planning Commission
re: Prologis Eucalyptus warehouse Project.

The developer states that even though a recent court case allows you to require Ag mitigation which will also serve raptor foraging, they are unable to find an AG mitigation bank in Riverside Co. I believe there will be an AG mitigation program by occupancy of the project and you could require mitigation at that time. The state does have such programs and the developer could use those — even if the County doesn't have an AG mitigation program.

Even though the developer ~~you~~ believes they ~~you~~ do not need to include the World Logistic Center (WLC) in their cumulative impacts, it is our opinion that the WLC was a foreseeable project based on newspaper articles and conversations in the community.

Caltrans wants a mitigation Bank. Will you require this project to participate in such. I am sure all in the room would appreciate anything you can do to mitigate noise on SR-60.

The WLC will casts a cancer plume over basically all of Moreno Valley - this project as you heard will add to it

(Page 1 of 2) Sierra Club Jorge Hague

Item No. E.6

This project is being honest – to a point with traffic impacts. Moreno Beach south will be impacted – including a new housing tract being build now near the substation. The environmental document also has impacts at Alessandro Blvd at Nason – but not further west because of the city's 5 mile limit which isn't far enough to address full impacts of its traffic

The City's General Plan is now internally inconsistant with all the changes since its adoption and this project only increases that problem.

Subject: SAN JACINTO VALLEY: Audubon booklet shows many species | Local News | PE.com

http://www.pe.com/local-news/columns/cassie-macduff-headlines/20140317-san-jacinto-valley-audubon-booklet-shows-many-species.ece

Good afternoon/evening Planning Commissioners,

The booklet I gave you at your last meeting is the subject of the below article. If you use the above link you will be able to see at least one picture that goes with the below. I hope you read both the article and the text of the booklet. The public has paid more than $80,000,000 in tax dollars for this wonderful area known as the San Jacinto Wildlife Area. If you wish to have a guided visit to the area, Google the Friends of the Northern San Jacinto Valley and read their latest newsletter which will provide you a list of walks during the next two months which are some of the best times to visit.

Take care,

George Hague

SAN JACINTO VALLEY: Audubon booklet shows many species

An Audubon photo booklet, “Birds of the San Jacinto Valley,” shows myriad species that share the wildlife area. Audubon put out the book to highlight the area’s importance.

A **Text Size** <size-up.png> <size-down.png>

BY CASSIE MACDUFF
March 17, 2014; 08:20 PM

When a friend gave me a free booklet about the birds of the San Jacinto Wildlife Area, I was stunned by the variety and beauty of the species that could be found so close to Riverside.

The booklet, published by the San Bernardino Valley Audubon Society, contains 86 color photos taken by Audubon members at the wildlife area and neighboring Lake Perris.

A vermilion flycatcher, a cinnamon teal duck, a snowy egret, Northern Harriers, bald eagles, a white-tailed kite poised to pounce on its prey, and an amazing variety of shorebirds with bills long and longer, all grace the booklet.

I had heard of the wildlife area, but had never seen it. Now I was determined to visit it and view the burgeoning avian population for myself.

I couldn't have picked a better time of year.

When I arrived last Tuesday morning, the rocky slopes surrounding the valley were turning green from the recent rain. And the warm spring weather was bringing out flocks and pairs of birds by the dozens.

A group of birders from Oceanside was just setting up. They let me look through their scope at a flock of ibis on a distant pond.

The area's former manager, Tom Paulek, and his wife, Susan Nash, showed me around, identifying the birds and explaining their significance.

The shallow ponds, flooded with reclaimed water from the Eastern Municipal Water District, attract all kinds of wading birds that skim the surface or probe the mud for insects, worms and grubs.

Some that we saw that day are rare in the inland area.

Long-billed curlews, their downward-curving bills almost as long as their bodies, were tiptoeing through the waters and pecking at invisible food sources.

American avocets with up-turned bills, and stilts with long red legs under petite black-and-white bodies, plied the same waters but at different depths, feeding on different bugs. Two kinds of egrets stood quietly and stared into the water, watching for prey.

At one point, a golden eagle swooped by.

By far, the highlight of the morning was seeing a pair of great horned owls.

I spotted one soaring over a newly plowed field, circling low then disappearing behind a stand of trees. As we came closer, a second owl flew out of the trees to a nearby limb, perching high and watching at us.

Wildlife advocates like Paulek and Nash are concerned that the water district will raise the discounted price the wildlife area has been paying since 1987.

The district already has said it plans to cut the area's annual water allocation from 4,500 acre-feet to 2,200 acre-feet. That's been enough to flood the ponds part of the year, but it won't be enough to expand the wildlife area as planned, Paulek and Nash said.

Audubon put out the booklet to highlight the importance of the area to birds migrating between Alaska and South America. The ponds attract shorebirds and ducks, which in turn, along with rodents in the fields, attract raptors — more than 20 species, according to the Audubon booklet.

The authors say the area is threatened by proposed developments to the north and south:

World Logistics Center, a 40 million square-foot warehouse complex, is proposed at the north end of the wildlife area in Moreno Valley.

The Villages of Lakeview, with more than 11,000 homes on 2,800 acres, was successfully challenged in court, sending the environmental report back for revisions. But the proposal is expected to return with the revisions.

Audubon members are worried surrounding development will eventually crowd out many of the species.

“You can’t just preserve the wildlife area alone and expect to maintain the numbers and diversity of birds,” said Dave Goodward, a naturalist and retired science teacher who wrote much of the booklet.

“The farmers’ fields are very important for a lot of birds to forage in, to look for food,” he said. If the agricultural land is developed, some species will no longer be able to find food, he said.

Environmentalists aren’t the only ones concerned.

Elmer Lackey of the wildlife area’s Little Ramona Duck Club said his group is “100 percent against” the projects.

“I think it’ll kill us,” he said. “It will affect our duck club. It will dry up this valley.”

If homes are built nearby, Lackey said, eventually residents will complain about the shooting. That’s what happened when the Irvine Co. was allowed to build next to the Irvine Duck Club, he said: A homeowner sued; the hunting club was shut down.

The Audubon Society sent copies of the San Jacinto Valley bird booklet to members of the Moreno Valley City Council and Riverside County Board of Supervisors, who will decide on the projects.

I called several to find out what they thought.

Supervisor Marion Ashley, whose district includes the area, said the birds are really important, and the wildlife area is core to Riverside County’s multi-species habitat plan.

“The main thing is to protect the birds we have and, if anything, grow them,” Ashley said. Any development will have to be consistent with the habitat plan, he said.

“It’s all part of the fabric of life,” he said. “I really appreciate (Audubon) doing the booklet. It will bring the board’s awareness of the importance of the birds and wildlife.”

Moreno Valley Councilman Richard Stewart didn’t remember seeing the booklet but said he is very familiar with the issues, adding, “We can’t stop development on thousands of acres of… just because there’s a wildlife area near it and Lake Perris.”

To see the booklet for yourself, log onto sbvas.net and scroll down to “Birds of the San Jacinto Valley.” That will take you to the conservation page. Then click on the booklet link to open it.

Key facts

San Jacinto Wildlife Area: Established in 1979 by the state Department of Fish and Wildlife to make up for wetlands and riparian habitat lost to the state water project. Consists of 19,000 acres east of Lake Perris. Attracts thousands of migrating ducks, shore birds, raptors and other species that co-exist on the flooded ponds and dry fields.

Villages of Lakeview: Proposed 2,800-acre, 11,350-home development south of wildlife area on unincorporated county land. Court struck down environmental report last summer. Project being revised.

World Logistics Center: Proposed 40 million square foot, distribution center complex north of the wildlife area in Moreno Valley. Environmental report being revised, may come to planning commission later this year.

Eastern Municipal Water District: Proposed to cut the wildlife area's allocation from 4,500 acre-feet of treated wastewater annually to 2,200 acre-feet. The water, which can't be used for drinking, is used to create ponds and wetlands as shelter, feeding grounds and breeding grounds for many species of birds and waterfowl.

Good afternoon/evening Planning Commissioner

re: Prologis Eucalyptus Industrial Park Final EIR

On page three of the Staff Report it reads that "the Planning Commission reviewed and considered the information contained in the Final EIR". This means as defined from the dictionary above you have conducted a formal assessment, examination and critical appraisal of the Final EIR. Read the first paragraph of page three of the Final EIR to know what you must read prior to voting. This specifically includes the Draft EIR and all the comment letters written on the document as well as the Statement of Overriding Consideration, Staff Reports and several other important sections. When you vote on this project you are affirming you are aware of all aspects of this project and believe it is worth all the impacts which can not be mitigated. It is important that in your review that you read pages 77-115 of exhibit A.

This project will not just make its 2,000 daily toxic diesel trucks (mentioned in the above link) go from SR-60 to/from the project by way of Redlands Blvd or Moreno Beach. A significant number of their trucks will head south to Alessandro Blvd as you can read on pages 256-260 of Appendix A. You can read how little their fair share is to improve these intersections which means it will take many years before full improvements will take place. They stop their impacts to Alessandro Blvd at Nason Street, because of the City's use of only a five mile radius for a projects's traffic impacts. The Sierra Club and some judges have stated such a limited range is not enough to show the true impacts of a project. Many of these trucks will use Alessandro Blvd all the way to/from the I-215 and in some cases going through the City of Riverside. Pages 111 - 115 will explain more about these five mile traffic impacts which may not, as stated, be fully mitigated until 2035. They continue to avoid doing the proper analysis which would include the 41,600,000 sq ft World Logistic Center with its more than 70,000 additional Daily trips added to our City and surrounding infrastructure. Two years ago in March of 2012 agencies/groups and individuals were writing comments about the WLC's Notice of Preparation and the City knew about the WLC in 2011 -- the Prologis Draft EIR didn't come out until July 2012. This makes their traffic analysis invalid and they cannot just say that we thought about

our project before the WLC formalized theirs. The fact that the existing traffic data is three years old (2011) also makes it an invalid analysis. They also do not address impacts to the 1-215, !-10 , or SR-91 which 2,000 daily diesel trucks and many other project related vehicles will impact -- in addition to many of City's surface streets.
Based on the Staff's recommendation you are suppose to believe the following quote about another toxic and traffic clogging warehouse added to our City and vote yes "c) Environmental, economic, social and other considerations and benefits derived from the development of the proposed Project OVERRIDE and make infeasible any alternatives to the proposed Project OR future mitigation measures beyond those incorporated into the proposed Project." (Page 130 Appendix A) Within everything you are suppose to read prior to voting they mention it is possible to approve a portion of the project and also allow the Auto Mall to expand. This shows an alternative is possible and invalidates the above quote.
The Sierra Club believes that the above is just one of a number of reasons to vote no or tell them to go back and redo their EIR to allow you to have valid data prior to voting. You represent the residents of Moreno Valley and your are our voices. I do not know many residents who would accept all of the Statement of Overriding Considerations for this project which displaces land zoned for homes and will make it impossible for other nearby lands also zoned for homes to be built. This is because it is recommended that sensitive receptors like homes should be 1,500 yards away from warehouses and their toxic diesel trucks. Will all current homes be 1,500 yards away from Prologis or even 1000 yards?
Take care,
George HagueSierra ClubMoreno Valley GroupConservation Chair

C. ENVIRONMENTAL IMPACTS NOT FULLY MITIGATED TO A LEVEL OF LESS-THAN-SIGNIFICANT

The Moreno Valley City Council finds the following environmental impacts identified in the EIR remain significant even after application of all feasible mitigation measures: aesthetics (individually and cumulative), agricultural resources (individually and cumulative), air quality (individually and cumulative), cumulative population and housing, and transportation. In accordance with CEQA Guidelines Section 15092(b)(2), the City Council of the City of Moreno Valley cannot approve the Project unless it first finds (1) under *Public Resources Code* Section 21081(a)(3), and CEQA Guidelines Section 15091(a)(3), that specific economic, legal, social technological, or other considerations, including provisions of employment opportunities to highly trained workers, make infeasible the mitigation measures or Project alternatives identified in the EIR; and (2) under CEQA Guidelines section 15092(b), that the remaining significant effects are acceptable due to overriding concerns described in the CEQA Guidelines Section 15093 and, therefore, a statement of overriding

considerations is included herein. (Page 77 of Exhibit A of Prologis Read pages 77-115)

VI. STATEMENT OF OVERRIDING CONSIDERATIONS

The Moreno Valley City Council adopts this Statement of Overriding Considerations with respect to the significant unavoidable impacts associated with adoption of the Project as addressed in the EIR, specifically:

1. Agricultural Impacts—Conversion of State Designated Farmland; 2. Agricultural Impacts—Conversion to a Non-Agricultural Use; and

a. Cumulative Agricultural Impacts 3. Air Quality Impact—Construction Air Pollutant Emissions;

4. Air Quality Impact—Operational Air Pollutant Emissions; and Cumulative Air Pollutant Emissions.

5. Climate Change and GHG Emissions

6. Transportation—Existing and Cumulative Impacts to State Freeway Segments and Freeway Merge/Diverge Areas

RE: Comments on Prologis Eucalyptus Industrial Park Project (PA07-0081 et al)

Greetings:

On behalf of the Sierra Club, Moreno Valley Group, and Residents for a Livable Moreno Valley, I hereby submit these comments on, and in opposition to, the Prologis Eucalyptus Industrial Park Project, Public Hearing Item 1. I hereby incorporate all comments previously submitted, and ask that the Planning Commission considered those prior comments as those set forth in full herein.

The FEIR has been updated to incorporate an August 31, 2012 letter from Lozeau Drury, LLP. The changes made and responses to comments in the updated FEIR illustrate, rather than resolve, defects of the EIR. For example, response to comment 12 at page 222 fails to address any of the proposed mitigation to further reduce GHG impacts where such effects are many times SCAQMD's proposed quantitative threshold. The addition of MM 4.6.6.1A provides for testing onsite for contamination by agricultural chemicals which should be done in the EIR prior to consideration by the City of Project approval due to the farming which occurred after the Phase 1 assessment and the risk of pesticides onsite not previously addressed. Air quality and health risk impacts are also shown to be understated, yet receive only brief responses in the FEIR. The responses to comments ignore/overlook whole portions of the comments made; for example, the responses made to Letter D-4B and D-4C fail to address the very important issues raised therein. Overall, the responses for this letter does not evidence good faith, reasoned analysis, or resolve the substantial concerns raised.

More importantly, this minor update to the FEIR does not address or resolve the many significant flaws raised in the other comments on the EIR and made previously, which demand the EIR and

its studies be significantly modified, updated, and recirculated prior to consideration of this Project for approval. The City should determine not to approve the Project and not to certify this defective EIR.

It is apparent that this Project is good only for the developer and bad for the environment and people of Moreno Valley. The Project requires City approval of ten applications for development including a General Plan Amendment and Zone Change, undermining future planning for development in the City. The existing General Plan designation and zoning for the project site consists of a balanced collection of land uses to meet a specific need of the City, which this Project would entirely obliterate. (i.e. by converting for Project development land presently designated in the General Plan R15, R5, and R2; Zoning BP, BPX, R15, R5, RA-2, and PAKO-land)

The Project will also result in, as disclosed in the EIR, significant and unmitigated impacts to aesthetics, agricultural resources, air quality, population and housing, and transportation. In addition, many commenters cited a lack of evaluation, disclosure, and adequate mitigation regarding numerous other impacts, including health risks, air quality, GHGs, biology, etc. Given the harm to the community and region expected to be caused by the Project, and the failures of the EIR prepared for the Project, Project denial is well supported. At a minimum, the EIR and its technical studies must be significantly updated and recirculated before this Project is even considered for approval by the City.

Additionally, Caltrans sent a letter to the City dated March 17, 2014 recommending that the City of Moreno Valley coordinate a state sponsored program of collecting transportation mitigation fees from development projects to make improvements to the State Highway System. I concur that such a fee program is essential to ensuring that all feasible traffic mitigation is adopted for this Project and others like it in the City. The City should take Caltrans' request to heart and work with the State in developing a mitigation fee program for highway impacts *prior to* making any approval relative to this Project. Until such a program is adopted, the City ignores its obligations to adopt all feasible mitigation for traffic impacts for this Project and others.

For these reasons and those previously set forth in comments provided on this Project, I respectfully request that you deny the Project and recommend denial of this Project to the City Council.

Sincerely,

Raymond W. Johnson

RE: Comment on Final Environmental Impact Report for ProLogis Eucalyptus Industrial Park (State Clearinghouse No. 2008021002)

Dear Mr. Bradshaw:

I am writing on behalf of Laborers International Union of North America, Local Union No. 1184 and its members living in Riverside County (collectively "LIUNA Local 1184") regarding the Final Environmental Impact Report ("FEIR") prepared for the ProLogis Eucalyptus Industrial Park, State Clearinghouse No. 2008021002 ("Project").

LIUNA Local 1184 appreciates the Planning Commission's decision to delay its consideration of the FEIR until staff and the EIR consultant reviewed and prepared responses to our comments of August 2012. Unfortunately, it appears the brief delay was not sufficient time for staff to adequately review and consider those comments as many of the concerns expressed about the DEIR still remain in regard to the FEIR. In addition, LIUNA Local 1184 is particularly concerned that the Commission's staff is proposing not to address the significant new information of the proposed nearby World Logistics Center which, when combined with the ProLogis project, the two projects alone will emit as much greenhouse gasses per year in 2020 as the City has established as its total GHG emission target for that year. In other words, the two projects together will emit as much GHGs as the entire City and will cause the City to emit twice as many GHGs as its announced goal as of 2020. Obviously, this is significant new information regarding a serious significant impact of the ProLogis Project's cumulative GHG emissions that must be addressed in a recirculated EIR for public review. These and other concerns are elaborated upon in the following comments.

In addition, LIUNA Local 1184 has had its consultants who prepared comments in 2012 review the staff's responses to comments. Matthew Hagemann, P.G., C.Hg. and Anders Sutherland, of SWAPE Consulting and Dr. James Clark, Ph.D., have reviewed the FEIR and prepared detailed comments regarding numerous technical shortcomings and omissions in the responses. SWAPE Comments (attached as Exhibit A); Clark Comments (attached as Exhibit B). Although this comment will highlight some of those technical comments below, the Commission should review each of the concerns raised in those expert comments.

LIUNA Local 1184 requests that the Planning Commission not certify the EIR at this time but request staff to reconsider the analyses and require additional mitigation measures in order to address the Project's significant air quality impacts, GHG emissions, health risks, farmland conversion, and hazardous material risks that the Project as proposed will cause in the City of Moreno Valley.

A. The FEIR's Failure To Tackle The Project's Massive GHG Emissions is an Abuse of Discretion.

The total GHG emissions that the City claims it will achieve by 2020 are 798,693 metric tons of CO2 equivalent per year for the entire City. *See* World Logistics Center DEIR, p. 4.7-9 (excerpts attached as Exhibit C). Yet the Prologis Project alone is projected to emit 79,000 metric tons of CO2e per year at full build-out – a full ten percent of the City's target. The FEIR basically relies upon a wish and a prayer that a number of air quality mitigations will miraculously reduce the Project by about 70,000 tons of GHGs per year down to 10,000 tons per year, the South Coast Air Quality Management District's ("SCAQMD") threshold of significance for GHG emissions. *See* FEIR, PDF p. 111 ("The mitigation measures discussed in the project-level impact analysis of GHG emissions indicated the measures would substantially reduce the project's emissions of greenhouse gases…."). No effort to rationally quantify or describe a reviewable basis for concluding that the smattering of air quality mitigations will come anywhere close to reducing the Project's GHG emissions by that level is provided or discussed. Moreover, when combined with the nearby World Logistics Center's GHG emissions of about 700,000 metric tons of CO2 equivalents per year, the City has essentially abandoned any GHG reduction strategy, instead taking steps to almost double its projected GHG emissions.

1. There is no substantial evidence to support the FEIR's remarkable assertion that the air quality mitigations applied to the Project will reduce GHG emissions by 70,000 tons per year.

It is not sufficient under CEQA for the City to pick a few air quality mitigations of unknown efficacy and then simply assume that they will miraculously reduce the Project's 79,000 metric tons of GHG emissions down to less than 10,000 metric tons. As SWAPE explains in its comments, there is nothing precluding the City from estimating quantitative reductions by any claimed mitigations and providing the public, this Commission, and the City Council with a rational means to evaluate whether the currently optimistic predictions have any basis in reality. SWAPE Comments, pp. 2-3. The FEIR must do more than make exaggerated

claims of mitigation effectiveness. *See Friends of Oroville v. City of Oroville* (2013) 219 Cal.App.4th 832. In *Oroville*, the court held that failing to calculate existing air emissions at the project site, and "failing to quantitatively or qualitatively ascertain or estimate the effect of the Project's mitigation measures on those emissions," amounted to misapplication of the threshold-of-significance standard. *Id*. at 842-843. Claiming to rely on a qualitative assessment, the City instead applies bald assumptions, assuming that the air quality mitigations will have a dramatic effect on reducing GHG emissions from the project all the way down to a level of insignificance, *i.e.* less than 10,000 metric tons per year. No rational discussion relying on explicable estimates, whether qualitative or quantitative, is provided to explain this unlikely result for this Project that will include upwards of 5,800 vehicle trips per day. *See* Clark & Associates Comments, p. 3 (attached as Exhibit B).

The FEIR all but admits the randomness of its GHG emission discussion, responding at one point to the Sierra Club's comments that "it is not possible to determine with certainty whether the project's emissions of greenhouse gases will be cumulatively considerable, within the meaning of CEQA Guidelines Sections 15065(a)(3) and 15130." FEIR, p. 109. A hundred pages later, that uncertainty appears to have vanished, the FEIR restating its two rationales for discounting the Project's 79,000 metric tons of GHGs per year. First, the EIR attempts to find solace in the claim that "the project's impacts alone would not cause or significantly contribute to global climate change…" FEIR, p. 222. This statement is entirely arbitrary given the SCAQMD's significance threshold of 10,000 metric tons per year. 79,000 metric tons per year is obviously very large compared to the threshold. And nothing in the EIR explains how or which mitigation measures will reduce the Project's GHG emissions to this level. The second rationale set forth in the EIR is that "the project has no substantial effect on consumption of fuels or other energy resources, especially fossil fuels that contribute to GHG emissions when consumed." *Id*. How a project that will generate upwards of 5,000 vehicle trips per day would have no substantial effect on consumption of fuels is not further elucidated in the EIR. What these two rationales mean in the end is that the world is already suffering from global warming and because this project's GHG contribution is small compared to the overall problem, there is no need to grapple with it in any meaningful way. Of course, as *Oroville* recognized, that capitulation renders the SCAQMD's expert threshold, which is a rational quantification of the point where a project's GHG emissions are significant and cumulatively considerable, a meaningless number.

2. The Proposed World Logistics Center and its massive GHG emissions is significant new information that must be addressed in the cumulative impact analysis.

The EIR's mishandling of the Project's large GHG emissions is exacerbated to a frightening level by the FEIR's refusal to account for the massive World Logistics Center project ("WLC"). WLC is expected to emit about 700,000 metric tons of GHGs per year from within the City. WLC and Prologis together all but scuttle the City's GHG reduction target. The FEIR, responding to comments about the WLC's cumulative impacts on traffic states that, because the WLC project was not proposed at the time of the Notice of Preparation ("NOP") for the Prologis

Project (in 2008), the EIR need not include WLC's impacts in its baseline. The City claims that the baseline traffic for the previous development proposed for the WLC site was actually higher at the time of the NOP. This response, in addition to steadfastly refusing to provide the City and its residents a realistic assessment of the Project's cumulative impacts, overlooks the City's responsibility to address significant new information that arises after a DEIR is released but prior to certification of the FEIR. Alternatively, it is simply unreasonable for the City to not adjust its baseline to reflect the impacts of the WLC project, especially given the long delay between the Project's 2008 NOP and the FEIR now six years later.

The CEQA Guidelines require recirculation of an EIR when significant new information, such as the processing of a nearby project that will drastically increase the City's GHG contributions inconsistent with its GHG reduction targets, as well as NOx and PM emissions. Section 15088.5 provides:

> (a) A lead agency is required to recirculate an EIR when significant new information is added to the EIR after public notice is given of the availability of the draft EIR for public review under Section 15087 but before certification. As used in this section, the term "information" can include changes in the project or environmental setting as well as additional data or other information. New information added to an EIR is not "significant" unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement. "Significant new information" requiring recirculation include, for example, a disclosure showing that:
> …
> (2) A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.
> (3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project, but the project's proponents decline to adopt it.
> (4) The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded. (Mountain Lion Coalition v. Fish & Game Com.(1989) 214 Cal.App.3d 1043).

14 CCR 15088.5. The processing of the WLC is significant new information requiring recirculation. It is plain that the WLC's emission of 700,000 metric tons of GHG per year would largely erase the City's GHG reduction target in 2020 and the additional Prologis GHG emissions will have a more profound cumulative impact on the City's GHG contributions than are evident without considering the WLC project. Likewise, because the DEIR was so basically inadequate and conclusory in asserting without any meaningful estimates that air quality mitigations uncoupled from any detailed information regarding their effectiveness at reducing GHG emissions would reduce the Prologis Project's GHG emissions by 70,000 metric tons per

year, the addition of WLC's 700,000 metric tons of GHG per year makes it imperative that the City revisit and recirculate the EIR's GHG analysis before the City further dooms its supposed GHG reduction targets.

The need to address this new information and/or adjust the baseline for GHGs is also supported by the fact that, unlike traffic levels purportedly included in the baseline, the GHG emissions for WLC increase any conceivable GHG emissions that may have been estimated for that project's location at the time of the WLC project's NOP by at least 60 percent, possibly more. *See* World Logistics EIR, p. 6-16 & Table 6.F (665,321 metric tons of GHG for WLC as compared to zero at site with no project or 228,719 metric tons if built out consistent with previous General Plan) (*see* Exhibit C). This massive addition of GHG emissions to the baseline is new information that must be addressed and recirculated or, alternatively, added to the Project's baseline in order to make sure the City's EIR remains realistic.

3. The substantial evidence in the record establishes that the Project will have a significant impact on GHG emissions, including the sheer volume of its GHG emissions and its adverse impact on the City's ever achieving its GHG reduction targets.

The FEIR confirms that the City has not gathered in any estimate of actual reductions of GHG emissions by any of the mitigation measures it purports will address those emissions. Hence, it is clear that there is no substantial evidence in the record to show that the Project will emit 10,000 metric tons or less per year of CO2 equivalents. As a result, the EIR cannot substantiate a conclusion that the Project's GHG emissions will result in less than significant impacts and, instead, must conclude that these emissions will result in significant impacts. The EIR must include additional feasible mitigations to address these GHG impacts, including electrified loading docks, mandating the installation of solar panels (rather than the mere possibility of solar panels), on-site industrial solar power storage, additional pollution control equipment on trucks utilizing the facility, and, where other feasible project specific mitigations are exhausted, the use of offset credits through recognized programs. SWAPE describes several mitigation measures in its comments as well as the availability of offset credits. SWAPE Comments, pp. 3-4.

Mitigation measures, including for a project's GHG emissions, must be fully enforceable through permit conditions, agreements or other legally binding instruments. 14 CCR § 15126.4(a)(2). *See Woodward Park Homeowners Assn., Inc. v. City of Fresno* (2007) 150 Cal. App. 4th 683, 730 (project proponent's agreement to a mitigation by itself is insufficient; mitigation measure must be an enforceable requirement). Especially given the uncertainty claimed by the City in measuring GHG reductions from various mitigation measures, the EIR must include a monitoring and verification process to confirm reductions in the Project's overall GHG emissions and include contingencies, *i.e.* additional mitigations including more offsets, if the measures do not achieve expected GHG reductions.

Lastly, because the evidence does not support a finding of no significant impact from the Project's GHG emissions, the City must acknowledge that significant impact and make a finding of overriding considerations that is supported by a showing that all feasible mitigation measures have been required. CEQA Guidelines §§ 15126.4, 15091, 15092(b)(2); Pub. Res. Code § 21002.

B. The EIR Significantly Underestimates the Project's Air Pollution Emissions From Mobile Sources.

The EIR makes a significant error in its air pollution emissions analysis by failing to rely upon substantial evidence regarding the veracity of the estimated truck trips for the Project. According to the review of Dr. James Clark, the EIR relies on an uncorroborated estimate of the Project's daily truck trips of 1.96 daily truck trips per 1,000 square feet. As Dr. Clark explains, "[i]n order to avoid underestimating the number of trips associated with large warehouse/distribution center operations without rail service, the SCAQMD staff recommended that lead agencies utilize a rate of 2.59 trips per TSF [thousand square feet] for large warehouse air quality analyses on a project specific basis." Clark Comments, p. 3. By using a value that is significantly reduced from SCAQMD's recommended value for the CalEEMod model, the EIR significantly understates the Project's air emissions:

> Based upon the trip generation rate of 2.59, the total number of trips associated with Project would increase from 4,400 to 5,813 trips per day. The net result is that the air quality analysis performed by the Proponent greatly underestimates the emissions from mobile sources by at least one-third during the operational phase of the Project. Those impacts are likely to lead to a significant impact that will be unmitigated and unaccounted for in the FEIR. Without proper modeling of the emissions from these additional vehicles the impacts on the environment and the citizens of the Moreno Valley are unknown.

Clark Comments, p. 4. Because the EIR fails to disclose the full extent of the Project's air pollution impacts, it should be revised to include an accurate discussion of those impacts and recirculated along with any necessary additional mitigation measures.

C. The EIR Does Not Include Additional Feasible Mitigation Measures to Further Reduce the Project's Significant Impacts From its Emissions of NOx and PM10 and, Without Requiring Additional Measures, the City Cannot Adopt a Statement of Overriding Considerations.

An agency may adopt a statement of overriding considerations only *after* it has imposed all feasible mitigation measures to reduce a project's impact to less than significant levels. CEQA Guidelines §§ 15126.4, 15091. CEQA prohibits agencies from approving projects with significant environmental impacts when feasible mitigation measures can substantially lessen or avoid such impacts. Pub. Res. Code § 21002. As explained in CEQA Guidelines section 15092(b)(2), an agency is prohibited from approving a project unless it has "[e]liminated or

substantially lessened all significant effects on the environment where feasible." The EIR states that the Project's direct and cumulative emissions of NOx and ROGs will remain significant after the identified mitigation measures are implemented. *See* DEIR, pp. 1-22, 1-28. As a result, the EIR must require all feasible mitigations to reduce these impacts. As explained by SWAPE, additional mitigation measures are available that are not included by the City. The measures include requiring electrified loading docks for all refrigeration units and the use of fuel cell trucks to reduce NOx emissions. SWAPE Comments, pp. 4-5. SCAQMD also provided a list of feasible mitigations that must be mandated for the Project. *See* FEIR, Letter B-3, pp. 3-4.

In addition, whether or not to implement several key measures included in the EIR is left to the future discretion of the City. *See, e.g.* DEIR, p. 1-22 (Mitigation Measure 4.3.6.5B) ("Prior to issuance of building permits, the project applicant shall provide evidence to the City that energy-efficient and low-emission methods and features of building construction shall be incorporated into the project design. These methods and features ***may include*** (but are not limited to) the following…") (emphasis added). The list of measures included in Mitigation Measure 4.3.6.5B should be mandatory and enforceable in order to be consistent with the CEQA Guidelines.

LIUNA Local 1184 appreciates the change in the FEIR to make the energy efficiency requirement set forth in Measure 4.3.6.5A mandatory rather than voluntary. However, a number of the requirements embedded within the mandatory efficiency standard should also be adjusted to be mandatory requirements or otherwise clarified. For example, there is a requirement that lease/purchase documents shall identify that tenants are merely encouraged to promote a list of air pollution reduction measures. *See* DEIR, 1-27 – 1-28, Table 1.C; FEIR, pp. 58-59, 61-62. The FEIR should be revised to make these feasible tenant/purchaser measures mandatory as well.

Measure 4.3.6.5A also includes a vague requirement to "[i]ncorporate energy efficient space heating and cooling equipment." This measure should be clarified to require that cooling for the main warehouse spaces at the Project shall be provided through evaporative coolers rather than air conditioners, or use new or different cooling technology that is at least as efficient. In addition, the mitigation should require the warehouse spaces to incorporate automated airflow and ventilation systems designed to minimize need for supplemental heating and cooling within the warehouse spaces. These measures are feasible, having been applied at other warehouse facilities. *See Coalition for Clean Air v. VWR Int'l LLC*, Consent Decree, attached as Exhibit D.

Currently, Measure 4.3.6.5A requires that "[a]ll buildings shall be designed to accommodate renewable energy sources, such as photovoltaic solar electricity systems, appropriate to their architectural design." FEIR, p. 197. This mitigation measure should be revised to require that photovoltaic, or comparable renewable energy sources, be actually installed on all buildings sufficient to provide all of the energy needs of the Project and, if feasible, surplus energy to help offset the Project's remaining pollution emissions. Given the size of the buildings' roofs, this measure is feasible and would reduce or help offset the Project's emissions of both ROGs, NOx, and GHGs.

Additionally, Mitigation Measure 4.3.6.5B currently appears inconsistent with Mitigation Measure 4.3.6.5A. Unlike Measure 4.3.6.5A, Measure 4.3.6.5B does not increase the improvement over energy efficiency standards to 20 percent as was proposed in the DEIR and which applies to the related Measure 4.3.6.5A. FEIR, pp. 194-201. In order to apply all feasible measures, Measure 4.3.6.5B's list of measures should be made mandatory (replace "may" with "shall") and the measure to exceed statewide energy efficiency requirements by 10 percent restored to a 20 percent exceedance. FEIR, pp. 194-96. In addition, a requirement that the Project use building automation systems to control and optimize the efficiency of its mechanical systems, including lighting, HVAC, exhaust dampers, fans, and ventilation louvers should be added to Measure 4.3.6.5B's list.

Until each of the above mitigation measures as well as those measures identified by SCAQMD are incorporated as enforceable measures into the Project approval, the City will not be in a position to make a finding of overriding considerations for the Project's NOx, ROG, and GHG emissions.

D. The EIR Does Not Include Additional Feasible Mitigation Measures to Further Reduce the Project's Significant Impacts From its Particulate Matter Emissions During Construction and, Without Requiring Additional Measures, the City Cannot Adopt a Statement of Overriding Considerations.

An additional feasible mitigation measure that also would assist in assuring that the Project's air quality pollution mitigations during construction are enforceable is a measure to require monitoring of dust plumes. SWAPE identifies "[m]onitoring for opacity for all construction activities, including grading, not just for "screening" and "turf overseeding" activities" as an additional feasible measure. Without such a measure, it is not clear how the implementation or effectiveness of many of the air pollution control measures during construction will be documented or enforced. SWAPE lays out the following monitoring requirement:

> Opacity monitoring should be conducted by qualified personnel using a Ringelmann chart. Monitoring with use of the Ringelmann Chart should be required when construction is occurring when wind speeds exceed 15 miles an hour, as gauged by a wind meter installed at the Project site. When a 20% opacity (Ringelmann 1) standard is exceeded, construction activities should cease until wind speeds drop to below 15 miles per hour. A log should be kept at the Project site to document when wind speeds exceed 15 miles per hour and the Ringelmann readings recorded during those periods, along with actions taken to comply when Ringelmann readings exceed the 20% opacity threshold.

SWAPE Comments, p. 4. Because this mitigation is feasible, would help to prevent any oversight of other mitigation measures, and would further reduce actual excessive emissions of PM10 at the Project site, it must be included in the mitigation requirements for construction-related air pollution.

E. The EIR Fails to Disclose the Project's Serious Cancer Risks to Neighbors and Workers.

a. The Project has significant air quality and health risk impacts because it will expose nearby residents to cancer risks of 22 cancers in one million for adults and 33 excess cancers in a million for children.

The EIR states that nearby residents and on-site workers will not be exposed to any significant health risks by the Project's construction. DEIR, p. 4.3-14. However, the EIR dramatically understates the health risks that will result from the Project's construction phase because the health risk assessment it relies upon assumes construction will only occur for four months rather than the 11.5 months reported in the EIR. SWAPE Comments, pp. 6-10. *See* DEIR, p. 4.3-13. This is despite the EIR's acknowledgement that "[a]lthough construction of the structures uses different types of equipment on site than during grading periods, similarities do exist in terms of equipment exhaust emissions and fugitive dust emissions." DEIR, p. 4.3-23. SWAPE prepared a screening-level HRA for construction-related DPM air quality impacts using the emissions and phasing data from the EIR and covering the full construction period. As SWAPE concludes, its risk assessment for nearby residences "shows that the adult exposure resulted in an additional 22 cancers in one million while the child exposure resulted in 33 excess cancers in a million. For both adult and child exposure parameters, the CEQA significance threshold of ten in one million excess cancer risk was exceeded during the construction period." SWAPE Comments, p. 9. In contrast to SWAPE's analysis, which fully discloses all of its inputs and models, "no modeling files or cancer risk calculations for the construction impacts analysis were provided in the DEIR or the FEIR" for the EIR's health risk assessment. *Id*., pp. 9-10. Hence, the substantial evidence available to the Commission and others indicates that cancer risks to the Project's neighbors are significant. This must be acknowledged in the EIR and additional mitigations required. As SWAPE concludes:

> An updated HRA should be prepared that incorporates all emissions from construction equipment over the entire duration of Project construction, and addresses the potential for significant air quality impacts to nearby sensitive receptors. Our analysis has demonstrated that by utilizing appropriate U.S. EPA and OEHHA exposure assessment methodologies, excess cancer risks consequent of Project construction have the potential to exceed CEQA thresholds of significance even under mitigated construction scenarios.

SWAPE Comments, p. 10.

b. The Project relied on a flawed health risk assessment in concluding that health risks to workers for the life of the Project would be insignificant.

The EIR also underestimates health risk impacts to workers to be employed at the Project site. SWAPE Comments, pp. 10-11. First, the Project's worker health risk assessment assumes

that trucks will be 87.5 percent diesel, explaining in its response to SCAQMD that the City believed such a number was appropriate because "[i]t is pure guesswork to predict how the diesel emissions will change over this period." FEIR, p. 66. Acknowledging uncertainty of future actions does not warrant then selecting a number based on the acknowledged guesswork. Rather than use the conditions that the City knows exist currently to prepare a reasonable estimate of future worker health risks, they made a guess that trucks using the Project would be 87.5 percent diesel. That number, by the FEIR's own admission, is not supported by substantial evidence. Likewise, SWAPE notes that the EIR suggests that a health risk assessment was prepared assuming operations were concentrated in 12-hours of each day rather than 24-hours. No such calculation was made in the health risk assessment for 12-hour days at the Project. SWAPE Comments, p. 11. A revised HRA for workers must be prepared and reviewed to determine if any changes to the EIR should be made prior to the Commission and City taking action on the EIR.

F. The EIR Continues to Fail to Require Feasible Mitigations to the Project's Destruction of Farmland, Including Requiring the Applicant to Locate and Purchase an Equivalent or More Acreage of Farmland Conservation Easements Outside of the City and Western Riverside County.

In response to LIUNA's comments noting the absence of any measures to mitigate the Project's destruction of 82.55 acres of Prime Farmland and 36.4 acres of Farmland of Local Importance, the City continues to claim that it is excused from mitigating this impact simply because it intends to eventually destroy all remaining farmland within the City and because there is no program established by either the City or the County of Riverside for those governmental entities to manage conservation easement or land purchases for mitigation. *See* FEIR, p. 218. Neither of these excuses relieves the City and the Project Applicant from having to mitigate the Project's significant impacts on farmland. Farmland conservation easements are feasible within Riverside County. The State of California has a program to facilitate such easements, providing grants and easement template applicable anywhere in the State of California, including Riverside County. *See* Exhibit E. There is no need for the City or County to create some bureaucratic program in order for the City to require the Project applicant to mitigate the 119-acres of farmland by purchasing easements or farmland of equivalent quality somewhere in Riverside or even other nearby counties. Private organizations also exist to facilitate the creation of farmland easements, including one located in Riverside County – the Riverside Land Conservancy. *See* Exhibit F.

The City claims that a 2010 Court of Appeal decision – *Building Industry Association of Central California v. County of Stanislaus* (2010) 190 Cal.App.4th 582 – conditioned the use of conservation easements as CEQA mitigation on the presence of a city- or county-wide program. FEIR, p. 218 ("That case concluded that it is appropriate to mitigate at a 1:1 ratio for the loss of prime agricultural land through the acquisition of an offsite agricultural easement if such a program is established by a county or regional governmental entity"). No such rule is found in the case. Instead, the pertinent rule is that the Court of Appeal upheld a requirement included in Stanislaus County's General Plan requiring either 1:1 mitigation of developed

farmland based primarily on private purchases of farmland conservation easements. *See* 190 Cal.App.4th at 601 ("Under the FMP, although the developer is required to arrange for the granting of a conservation easement in order to obtain a development approval, most likely by a purchase, ***no particular landowner*** is required to grant the conservation easement") (emphasis added). The case was not even a CEQA case so it certainly did not preclude mitigation under CEQA of destroyed farmland through a conservation easement unless some governmental program was in place. Nor is there any reason to restrict mitigation farmland to western Riverside County, given the county-wide and indeed statewide problem of farmland conversion. In short, there is no reason the applicant cannot take the steps necessary to purchase one or more farmland conservation easements for farmland of similar quality to that being destroyed by the Project somewhere in Riverside County or other nearby counties in southern California. Because the Project's destruction of farmland is significant and unavoidable, the City must incorporate all feasible mitigation measures. Requiring the applicant to obtain farmland conservation easements for comparable quality farmland in other areas is plainly feasible and must be included.

G. Additional Details for Sampling Soils for Residual Pesticides Should be Required.

The FEIR has added a mitigation measure to require additional soil sampling prior to issuance of a grading permit. FEIR, p. 222. LIUNA Local 1184 believes that, because the additional information will not be available prior to the certification of the EIR, this change does not cure the baseline concerns raised in their previous comment letter. In addition, unless additional details are added to the mitigation, it amounts to improper deferred mitigation. SWAPE recommends the following additional details:

> The mitigation measure (MM 4.6.6.1A) should be revised to include specifics on the number of samples to be collected, the chemical analytes, and to provide for documentation of the sampling and analysis of the results prior to FEIR certification. The mitigation measure should also include a commitment to compare sampling results to health-protective regulatory screening levels such as U.S. EPA Regional Screening Levels and California Human Health Screening Levels, and to mitigate any exceedances of the screening levels through further evaluation of health risks and the removal of any contaminated soil that may pose a risk to human health.

SWAPE Comments, p. 2. LIUNA Local 1184 request that the EIR's mitigation be changed to address these details.

VI. CONCLUSION

For the foregoing reasons, as well as each of the comments raised in LIUNA Local 1184's DEIR comments, LIUNA Local 1184 recommends that the Commission continue the matter for future consideration pending completion of a supplemental EIR addressing the above

concerns. Thank you for your attention to these comments. Please include this letter and all attachments hereto in the record of proceedings for this project.

Sincerely,

Michael Lozeau

Oakland, CA 94607

Subject: **Comments on the Final Environmental Impact Report, Prologis Eucalyptus Industrial Park Project, Riverside County, California**

Dear Mr. Drury:

We have reviewed the April 2, 2014 Revised Final Environmental Impact Report (FEIR) for the Prologis Eucalyptus Industrial Park Project ("Project"). We have found the FEIR fails to adequately address comments we made in an August 30, 2012 letter on the July 2012 Draft Environmental Impact Report (DEIR). The comments we made focused on issues related to hazardous waste, greenhouse gas emissions and air quality. The FEIR should not be certified until these concerns are adequately addressed.

Hazards and Hazardous Materials

Baseline Conditions Remain Undisclosed

Comments we made on the July 2012 Draft Environmental Impact Report (DEIR) focused on the inadequacy of ten year-old Phase I Environmental Site Assessments (ESAs) to represent conditions at the Project site that may pose risks to workers and the neighboring public. We also noted that the Phase I ESAs that had been completed did not cover the entire Project site and that potential residual pesticide risks had not been satisfactorily addressed.

In response to concerns we expressed about the potential for residual pesticides to be present (Comment 9), the FEIR adds a mitigation measure (MM 4.6.6.1A) to sample for agricultural chemicals prior to issuance of a grading permit. While we applaud the addition of this needed mitigation measure, it does not go far enough in that it does not specify the manner in which the samples will be collected (namely, the number of samples, the depths and the chemical analytes) and the sampling is not to occur until after certification of the project (and prior to grading).

The mitigation measure (MM 4.6.6.1A) should be revised to include specifics on the number of samples to be collected, the chemical analytes, and to provide for documentation of the sampling and analysis of the results prior to FEIR certification. The mitigation measure should also include a commitment to compare sampling results to health-protective regulatory screening levels such as U.S. EPA Regional Screening Levels[1] and California Human Health Screening Levels,[2] and to mitigate any exceedances of the screening levels through further evaluation of health risks and the removal of any contaminated soil that may pose a risk to human health.

The FEIR should also provide the closure documentation we requested in DEIR comments for a 13,400 gallon underground storage tank (UST) that was reportedly removed from the Project site in 2004. As we requested, the documentation should be produced to disclose if closure for the UST removal was granted by the County.

Greenhouse Gas Emissions

In DEIR comments (Comment 12), we expressed concern that estimates of the Project's operational greenhouse gas (GHG) emissions, following mitigation, were not quantified. We commented that the need to show the efficacy of the mitigation was necessary because pre-mitigation operational GHG emissions were well above any applicable South Coast Air Quality Management District thresholds. The Response to Comment 12 states:

> This comment states that the EIR did not show the GHG emissions with mitigation. The reductions with mitigation were not calculated because the GHG-related mitigation measures included in the EIR do not have quantified reduction amounts.

The mitigation in the DEIR, for which emissions reductions were not quantified, included:

- Establishment of a Transportation Management Association (TMA) to encourage and coordinate carpooling among building occupants (p. 1-26).
- Green building and maintenance provisions (MMs 4.13.6.1A, 4.13.6.1B, 4.13.6.1C)

Other measures identified in the DEIR to reduce GHG emissions include recommended actions within the Transportation, Electricity and Natural Gas, Green Buildings, and Water sectors. Again, no effort was made to quantify the reductions in GHG emissions from the incorporation of these measures.

It is simply not good enough for the Responses to assert, qualitatively, that mitigation measures and recommended actions will reduce GHG emissions from 79,000 MTCO2e/yr to below 10,000 MTCO2e/yr, the applicable South Coast Air Quality Management District (SCAQMD) threshold. Without quantifying the reductions, there is absolutely no basis to say that reductions will be below the applicable threshold.

Likewise, it is non-responsive to state that mitigation could not be quantified "because the GHG-related mitigation measures included in the EIR do not have quantified reduction amounts" (Response to Comment 12). Numerous means to quantify GHG mitigation emissions reductions are available,

[1] http://www.epa.gov/region9/superfund/prg/
[2] http://www.calepa.ca.gov/brownfields/documents/2005/CHHSLsGuide.pdf

including methods as published in an August 2010 guidance document published by the California Air Pollution Control Officers Association (CAPCOA), entitled "Quantifying Greenhouse Gas Mitigation Measures".[3] The CAPCOA document has numerous separate methodologies to quantify GHG mitigation emission reductions for activities related to the project, and for the mitigation measures identified for the Project. The reductions cited below, from the CAPCOA guidance document, are for operational activities relevant to the Project:

Transportation

- Use of electrified loading docks to reduce the need for diesel auxiliary engines to run in order to keep refrigerated transportation units temperature controlled to achieve a 26-71% reduction in GHG emissions;
- Use of electric or hybrid vehicles to achieve a 0.4-20% reduction in GHG emissions; and
- Use of alternative fueled vehicles (reductions vary).

Water Use

- Install low-flow water fixtures (as identified in MM 4.13.6.1A) to achieve a 17-31% reduction in GHG emissions;
- Design water-efficient landscapes (as identified in MM 4.13.6.1C) to achieve up to 70% in GHG emissions reductions; and
- Use reclaimed water for up to 81% GHG emissions reductions.

The need to quantify GHG reductions is critical to show that the Project's emissions will meet the SCAQMD threshold of 10,000 MTCO2e/yr. The examples from the CAPCOA guidance, as cited above, are just a few of those measures that can be quantified to estimate GHG emissions reductions, demonstrating that Response to Comment 12 is inadequate when it states mitigation could not be quantified "because the GHG-related mitigation measures included in the EIR do not have quantified reduction amounts."

The FEIR should not be certified until GHG mitigation measures are quantified to demonstrate estimates that are below the SCAQMD threshold of 10,000 MTCO2e/yr. If the threshold is not met, additional mitigation or use of credits (offsets) would be necessary, consistent with other Southern California projects where the SCAQMD threshold was exceeded, after mitigation.[4]

If emissions reductions estimates do not demonstrate that the threshold is met, additional measures should be undertaken, to include credits for all GHG emissions generated above the threshold of 10,000 MTCO2e per year. To ensure GHG emissions reductions are real and verifiable, a GHG reporting and reduction plan should be submitted to the SCAQMD and the City detailing the measures to be implemented to achieve the required reductions. Credits should comply with

Air Quality

Mitigation of Criteria Air Pollutants is Inadequate

The Responses fail to address to the concerns we expressed about the need to employ all available mitigation to address what the FEIR identifies as significant emissions of criteria air pollutants from construction and operation. The specific response to the comment we made on this issue (Letter D-4C, Response to Comment 5) stated:

> For a detailed response on comparing construction emissions to daily construction thresholds, see the Responses to Comments D-4A-13 and D-4A-14 in the previous Letter D-4A from Lozeau Drury. For a detailed response on operational impacts of the project, see the Response to Comment D-4A-16 in the previous Letter D-4A from Lozeau Drury.

Responses to Comments D-4A-13, D-4A-14 and D-4A-16 have nothing to do with the issue of the inadequacy of mitigation measures to reduce construction emissions of NOx and ROG and operational emissions of ROG, NOx, and PM10 to less-than-significant levels. Some responses to other comments did address the need for additional mitigation (see Responses 1-12, Comment Letter B-3 and Responses 49-60, Comment Letter D-3) but we find these measures do not incorporate all measures that are feasible to reduce criteria air pollutant emissions.

Applicable Construction Mitigation Measures

- Monitoring for opacity for all construction activities, including grading, not just for "screening" and "turf overseeding" activities (as cited in the Air Quality Measure 4.3.6.2M Best Available Control Measures for Fugitive Dust). Opacity monitoring should be conducted by qualified personnel using a Ringelmann chart. Monitoring with use of the Ringelmann Chart should be required when construction is occurring when wind speeds exceed 15 miles an hour, as gauged by a wind meter installed at the Project site. When a 20% opacity (Ringelmann 1) standard is exceeded, construction activities should cease until wind speeds drop to below 15 miles per hour. A log should be kept at the Project site to document when wind speeds exceed 15 miles per hour and the Ringelmann readings recorded during those periods, along with actions taken to comply when Ringelmann readings exceed the 20% opacity threshold.

Applicable Operation Mitigation Measures

[5] http://www.aqmd.gov/rules/reg/reg27_tofc.html
[6] http://www.capcoa.org/

- Use of electrified loading docks for all refrigeration units;
- Use fuel cell trucks that use hydrogen produced primarily from natural gas show only slightly lower net PM emissions (11 percent) relative to new diesel trucks, largely due to the steam reformation process to produce hydrogen from natural gas; NOx emissions are reduced 84 percent in total and GHGs are cut in half. Greater use of renewable hydrogen or improved hydrogen production methods could cut fuel cell emissions relative to conventional technology.[7]

Cumulative Impacts have not been Adequately Addressed

We commented that the DEIR identified 13 proposed projects within five miles of the Project but failed to identify a construction schedule for the projects. The Responses (Comment D-4A-19) did not provide this schedule and simply states:

> The EIR includes a complete cumulative air quality impacts analysis that satisfies all CEQA requirements and that includes the conclusion that the long-term cumulative air quality impacts would be significant and avoidable.

The FEIR does not go far enough to address concerns about emissions of criteria air pollutants. For example, to meet air quality standards required by 2023, NOx emissions must be reduced by approximately two thirds beyond existing rules and regulations. The largest source of NOx emissions in the SCAQMD are heavy duty trucks. Without meeting air quality standards, the Southern California area faces federally mandated sanctions, including possible loss of transportation funding.

Other major projects in Moreno Valley, which involve significant trucking operations, include the WestRidge Commerce Center Project (which will be built adjacent to the proposed Project), the VIP Moreno Valley Project and the March Business Center. Along with the Project, these projects may be constructed simultaneously, highlighting the need for an estimate of the combined emissions of these projects.

Although the FEIR states that cumulative impacts are significant, additional measures are available to mitigate cumulative impacts on air quality. Perhaps most important is to quantify the emissions that will stem from the construction of other projects and, using those emissions estimates, identify how the construction of the projects might be staged to reduce temporal impacts. The US EPA has commented on the benefit of this approach to prevent violations of air quality standards.[8]

The FEIR should not be certified until cumulative emissions data from all projects have been complied, by month, for construction in a six-mile radius that would overlap with the Project. From use of this data, a phased construction schedule, for projects that will undergo construction concurrently, should be derived so that violations of local, state or federal air quality regulations will not result. Consistent

[8] U.S. Environmental Protection Agency, Comments on the Alta East Wind Project, September 27, 2012 http://www.epa.gov/region9/nepa/letters/blm/ca/alta-east-wind-project-kern-county-deis.pdf, p. 2

with US EPA's recommendations, the Project should be scheduled for constructed in light of the other planned construction activities to ensure air quality standards are not exceeded.

Diesel Particulate Matter Emissions have not been Evaluated and Addressed Adequately

Emissions of diesel particulate matter (DPM) associated with activities occurring on the Project site both during construction and operations have not been adequately characterized in estimating risks to human health. We have re-reviewed the DEIR documents, the 2012 LSA Air Quality Analysis (AQA) report, and the FEIR Responses to Comments and determined that impacts of DPM emissions on human health should be reevaluated before certification of the FEIR. Our evaluation has shown that construction of the Project has the potential to result in DPM exposures at nearby residences that exceed CEQA significance thresholds, and DPM exposure to workers on-site during operations warrants additional investigation by the Lead Agency.

Construction of the Project Will Result in Significant Air Quality Impacts

The Project location is situated just south of the Moreno Valley Freeway (SR60), with residential neighborhoods located within 50 feet to the southeast and 200 feet to the north of the Project boundary. The 2012 LSA AQA relied upon several inaccurate assumptions in preparing the Health Risk Assessment (HRA) for off-site residential exposure that accompanied the DEIR:

> "The anticipated level of diesel-powered equipment use will, on average for the entire construction period, emit approximately 6.0 lbs/day of diesel exhaust particulate. A screening health risk assessment was performed using this emission rate and assuming the mobile equipment operates for 22 days per month and 4 months continuously at this high rate. This is considered conservative even though the total construction period will be longer than 4 months due to the extreme variation from day to day of heavy-duty construction equipment usage. **All of these values are deliberately higher than expected so that the risk levels will not be underestimated**.[9]" [*emphasis added*]

This statement contradicts itself in saying that even though average daily emissions of DPM were assumed to be 6 pounds, the duration of construction utilized for the exposure model was actually less than half of the total anticipated length. Therefore, it is impossible that all values are deliberately higher than expected, as LSA admits that the Project construction will in fact take longer than 4 months. By a simple calculation, the total pounds of DPM emissions evaluated in the HRA for construction-related activities is: $\frac{6\ lbs}{day} \times \frac{22\ days}{month} \times \frac{4\ months}{Project} = 528\ lbs\ DPM$ from construction. We believe that this represents a significant underestimate of actual construction-related DPM emissions, as the total length of Project construction is approximately 11.5 months. We have prepared a revised estimate that more accurately represents the exposures that nearby residents will be subjected to during Project construction.

[9] LSA Associates, Inc., 2012. Air Quality Analysis, Eucalyptus Industrial Park, City of Moreno Valley, California. March 2012. Page 43.

We extracted only the estimates of mitigated on-site daily construction exhaust emissions provided in the CalEEMod output files (shown in the table below from the FEIR[10]), and multiplied the daily emissions estimates for each phase by the number of days given in AQA Table E: Construction Schedule, also shown below. The total pounds of construction-related DPM emissions was calculated to be 934.37 pounds, or 177% of the emissions that LSA incorporated into their HRA for off-site residential exposure. The HRA and FEIR should be revised to include more accurate estimates of total construction-related DPM emissions, as well as the appropriate exposure duration for nearby sensitive receptors in the residential communities.

Paving	6/1/2013	8/16/2013	55

Source: Project Plans

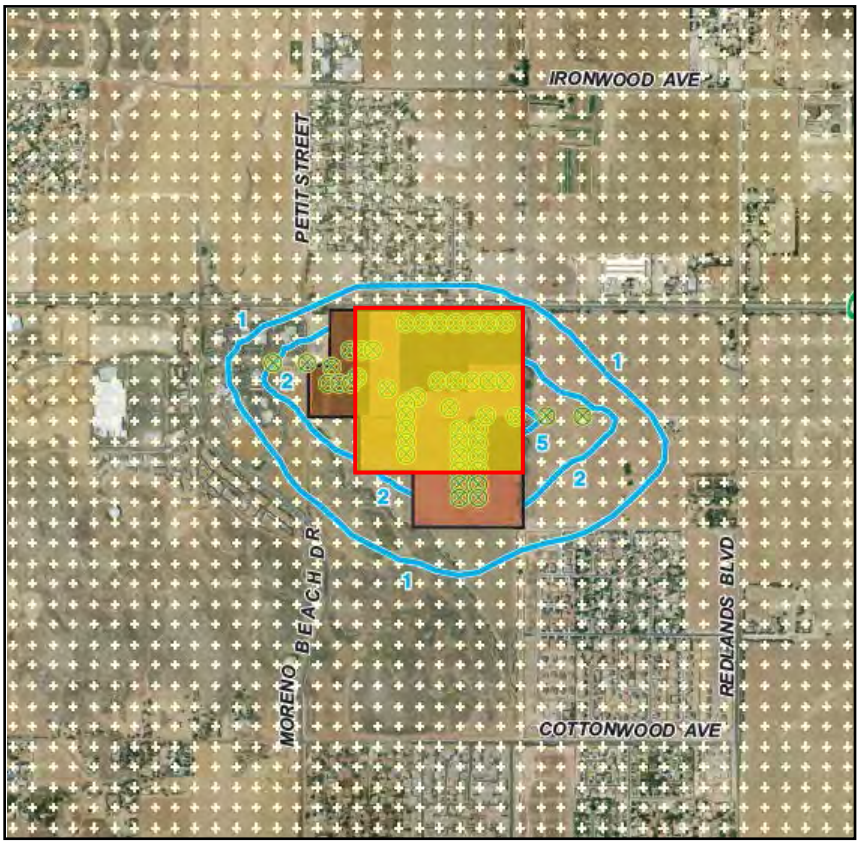
We have prepared our own screening-level HRA for construction-related DPM air quality impacts using the emissions and phasing data from the above tables. From the AQA appendices, we determined that diesel-fueled construction equipment would be operated for no more than 8 hours per day, and 5 days per week. The total number of construction days was 250 (weekdays between 9/1/2012 and 8/16/2013, or 18+44+188 as the last three phases of the Project in Table E overlap entirely). The emission rate derived for our screening model was therefore:

$$Emission\ Rate\left({}^{grams}/_{second}\right) = \frac{934.37\ lbs \times 453.6\ {}^{grams}/_{lb}}{250\ days \times 8\ {}^{hours}/_{day} \times 3600\ {}^{seconds}/_{hour}} = \mathbf{0.05886}\ {}^{\boldsymbol{g}}/_{\boldsymbol{s}}$$

This value represents the average DPM emission rate during hours that construction activities are occurring for the entire Project

[10] Response to Letter D-4A, Final EIR - Response to Comments, Prologis Eucalyptus Industrial Park, City of Moreno Valley. Page 223.

We used the EPA-recommended screening model AERSCREEN to evaluate off-site impacts to residential receptors during construction[11]. As of 2011, AERSCREEN replaced SCREEN3 as the official screening model of the EPA due to its enhanced ability to simulate near-field dispersion from emissions sources. When detailed data pertaining to specific locations of emissions sources are unavailable, it is acceptable to model the average emission rate over the entire area of project construction. However, the Project boundary is geometrically complicated, and so our analysis focused on a subset of the Project site for screening-level modeling and HRA. The figure below depicts the portion of the site that was considered for the screening model. The yellow rectangle measures approximately 570 meters by 600 meters, with an area of approximately 84.51 acres.



The total Project boundary encompasses an area of 122.8 meters. For the purposes of our screening model, we multiplied the emission rate of 0.05886 g/s by the fraction $\frac{84.51}{122.8} = 0.6882$ to arrive at an average emission rate of 0.0405 g/s for the designated area over the course of Project construction. Due to lack of available information describing the anticipated sequencing of Project construction by area within the boundary, we assumed that averaging the emissions over the total duration was the best methodology to prepare this screening-level HRA.

The AERSCREEN model predicts the maximum single-hour concentration of a pollutant downwind of an emissions source. The maximum downwind concentration of DPM will be encountered during hours of

[11] U.S. Environmental Protection Agency Air Quality Modeling Group, C439-01 , MEMORANDUM: AERSCREEN Released as the EPA Recommended Screening Model, April 11, 2011.

construction equipment use, during which air quality impacts to sensitive receptors will also be highest. EPA screening methodology states that to estimate the maximum reasonable annualized concentration of an air pollutant, the maximum single-hour concentration can be multiplied by a scaling factor of 0.1[12]. The maximum single-hour concentration of DPM produced by the AERSCREEN model during construction hours of the Project was 50.89 µg/m^3 at 402 meters (1,319 feet) downwind. Residential receptors in the community to the southeast of the Project boundary are situated at this downwind distance.

The following table provides our estimations for a screening-level HRA for excess cancer risk at downwind residential receptors. The maximum single-hour concentration was multiplied by 0.1 to represent a maximum reasonable estimate of the annualized DPM concentration from construction. 80th percentile breathing rates were obtained from OEHHA guidance on HRA, as utilized in the LSA AQA[13]. Instead of incorporating the 4-month exposure considered by LSA, we utilized an 11.5 month exposure duration based on anticipated start and end dates of Project construction given in the tables presented above.

402-Meter Downwind Exposure

Parameter	Description	Units	Adult Exposure	Child Exposure
CPF	Cancer Potency Factor	1/(mg/kg-day)	1.1	1.1
Cair	Concentration in Air	µg/m^3	5.09	5.09
DBR	Daily Breathing Rate	L/kg-day	302	452
EF	Exposure Frequency	days/year	350	350
ED	Exposure Duration	years	0.95	0.95
AT	Averaging Time	days	25550	25550
	Inhaled Dose		2.0E-05	3.0E-05
	Cancer Risk		**2.20E-05**	**3.29E-05**

The table shows that the adult exposure resulted in an additional 22 cancers in one million while the child exposure resulted in 33 excess cancers in a million. For both adult and child exposure parameters, the CEQA significance threshold of ten in one million excess cancer risk was exceeded during the construction period. The maximum calculated inhalation cancer risk estimate provided in Table Q of the AQA report was 0.53 in one million at approximately 50-56 feet downwind. However, there is no modeling files or cancer risk calculations for the construction impacts analysis were provided in the DEIR

[12] U.S. Environmental Protection Agency Office of Air Quality Planning and Standards, Screening Procedures for Estimating the Air Quality Impacts of Stationary Sources, Revised, , October 1992.
[13] Office of Environmental Health Hazard Assessment, The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments, Air Toxics Hot Spots Program Risk Assessment Guidelines, August 2003.

or the FEIR. In fact, the 2012 LSA AQA report references a November 2011 Traffic Impact Study as the source of the information, however this report does not mention cancer risk a single time[14].

There is a considerable discrepancy between the 0.53 in one million calculated by LSA and the 22 in one million calculated in our analysis. An updated HRA should be prepared that incorporates all emissions from construction equipment over the entire duration of Project construction, and addresses the potential for significant air quality impacts to nearby sensitive receptors. Our analysis has demonstrated that by utilizing appropriate U.S. EPA and OEHHA exposure assessment methodologies, excess cancer risks consequent of Project construction have the potential to exceed CEQA thresholds of significance even under mitigated construction scenarios.

A Health Risk Assessment for On-Site Workers Should be Prepared Using Appropriate Parameters

Neither the FEIR, the DEIR, nor the AQA provides a detailed description of the methodologies utilized in arriving at the on-site worker excess cancer risk reported to be 1.5 in one million in Table 4.3.F of the DEIR. Response to Comment 13 of Letter D-2 addresses the lack of available data that made the assessment of operational DPM exposure to workers difficult in making a reference to the AQA:

> Due to lack of data, precise evaluation of vehicle exhaust impacts is not feasible; however, based on the limited amount of TAC from vehicle exhaust associated with the project operations in relation to background levels, the impact is not expected to be significant.

This conclusion relied upon several inappropriate assumptions, and a revision to the on-site worker HRA should be prepared. An example of an appropriate HRA for on-site workers can be found in the ENVIRON HHRA for the proposed Stanford University Medical Center[15], which clearly demonstrates that evaluation of vehicle exhaust impacts is indeed feasible.

The fleet of trucks that will be passing through the facility on a daily basis is expected to include 1,246 heavy-duty trailer trucks. In Response to Comment 21 of Letter B-3 the Lead Agency defends its assumption that the heavy-duty trailer trucks will be 87.5% diesel based on fuel use percentages from the URBEMIS model. However, the SCAQMD website clearly states that, " Emissions calculated using URBEMIS are now outdated and SCAQMD staff recommends all projects now evaluate emissions with CalEEMod if they use software for their analysis."[16] Furthermore, the SCAQMD Comment Letter directly asserts that the fleet should be assumed 100% diesel.[17] The FEIR admits that adjusting the fuel use of the fleet will increase the carcinogenic health risks to workers during Project operations (Comment 21, Response to Letter B-3) , and this adjustment should be made in a revised iteration of the worker HRA.

[14] LSA Associates, Inc., Draft Traffic Study, Eucalyptus Industrial Park, City of Moreno Valley, California, April 24, 2012.
[15] ENVIRON, Human Health Risk Assessment, Construction and Incremental Operational Emissions, Proposed Stanford University Medical Center, Facilities Renewal and Replacement Project, Palo Alto, California, February 22, 2010.
[16] SCAQMD, Air Quality Modeling. http://www.aqmd.gov/ceqa/models.html.
[17] Comment 21, Letter B-3: South Coast Air Quality Management District, Final EIR - Response to Comments, ProLogis Eucalyptus Industrial Park, City of Moreno Valley, p. 54.

Additionally, the methodology by which daily operational emissions associated with the heavy-duty truck fleet were quantified is unclear. In the AQA, page 44 clearly states that, "Deliveries are assumed to occur 24 hours per day and 7 days per week." This was confirmed by reviewing the HRA emission worksheet in Appendix C to the AQA. However, the FEIR claims that, "Modeling the actual number of trucks that are planned to operate over 24 hours as if they operated over 12 hours results in much higher hourly emissions. Thus, the HRA is protective of human health in case there is a change in the project operations to only operate 12 hours per day" (Comment 19, Response to Letter B-3). There is no evidence to suggest that the HRA utilized an emission rate assumed over 12 hours per day instead of 24.

A revised iteration of the HRA during Project operations should be prepared prior to FEIR certification to clearly identify how the emissions generated by truck idling and movement were quantified. Incorporation of the SCAQMD comments regarding the use of a 100% diesel-fueled fleet, as well as the increased idle time per truck of fifteen minutes per trip instead of five, will unquestionably increase the estimates of emissions from Project operations. Adjustment of these parameters will provide a more accurate characterization of air quality impacts to on-site workers during Project operations, as current assumptions may have resulted in underestimated exposures.

Sincerely,

Matt Hagemann, P.G., C.Hg.

Attn: Mr. Richard Drury

Subject: Comment Letter on the Final Environmental Impact Report for the Prologis Eucalyptus Industrial Park, SCH No. 2008021002

Dear Mr. Drury:

At the request of Lozeau | Drury LLP **(**Lozeau Drury), Clark and Associates (Clark) has reviewed materials related to the above referenced project, including the Final Environmental Impact Report[1] (FEIR) for the Prologis Eucalyptus Industrial Park (hereafter called the Project), SCH No. 2008021002 and its appendices. The proposed project site is located in the eastern portion of the City of Moreno Valley, in Riverside County, California. The 122.8-acre project site is located south of State Route 60 (SR-60) east of the Moreno Valley Auto Mall, and adjacent to and west of the Quincy Channel. According to the FEIR the proposed project would result in the construction and operation of a warehouse facility, consisting of approximately 2,244,638 square feet (sq ft).

[1] LSA. 2014. Final Environmental Impact Report, State Clearinghouse No. 2008021002, Prologis Eucalyptus Industrial Park (formerly Prologis Park Moreno Valley Eucalyptus Project), City of Moreno Valley, Riverside County, California. LSA Associates, Inc. 1500 Iowa Ave, Suite 200, Riverside, CA LAS Project No. PLO1101. Prepared February 12, 2014 and revised April 2, 2014

Clark's review of the materials in no way constitutes a validation of the conclusions or materials contained within the plan. If we do not comment on a specific item this does not constitute acceptance of the item.

Project Description

This FEIR was issued prematurely without considering the serious flaws in the Proponent's analysis of the project by failing to accurately characterize truck traffic at the site

The air quality impacts from the traffic associated with an approximately 2,250,000 square foot facility are significant. The most significant factor used to quantify air quality impacts from project traffic is the vehicle trip rate, or the number of vehicle trips per day. A vehicle trip is one round trip (one trip segment to a site and one trip segment away from a site). In the case of the proposed Project, the primary concern will be the number of truck trips per day.

In the analysis of this Project, the Proponent estimates the vehicle trip rate used a truck trip rate of 1.96 trips per 1,000 square feet of land use to estimate operational air quality impacts instead of the default Cal EEMod land use model trip rate of 2.59 (an underestimation of operational emissions by 32%).

According to SCAQMD[2], for CEQA purposes, the volume of truck traffic predicted to serve a new large warehouse project has historically been derived using the ITE Trip Generation manual's general rate for warehouse projects (land use type 150), which is 4.96 trips per 1,000

[2] As reported in Appendix E, p. 10, Technical Source Documentation for the CalEEMod, prepared for the CAPCOA by Environ International Corporation and the California Air Districts, July 2013, *available at* : http://www.aqmd.gov/caleemod/doc/AppendixE.pdf

square feet (TSF). This is the same source of traffic data used in the URBEMIS air quality model.[3] This value is from the 7th Edition of the ITE Trip Generation manual, published in 2003. Several developers of high-cube warehouses in recent years have questioned the validity of this value for modern warehousing operations and commissioned local studies to investigate these trip rates[4]. As a result, in the most recent version of the ITE Trip Generation manual (8th Edition, 2008), additional data has been included to provide a new high-cube warehouse (land use type 152) trip rate of 1.44 trips/TSF[5].

This greatly reduced trip rate has been criticized in California. In order to avoid underestimating the number of trips associated with large warehouse/distribution center operations without rail service, the SCAQMD staff recommended that lead agencies utilize a rate of 2.59 trips per TSF for large warehouse air quality analyses on a project specific basis[6]. According to SCAQMD and based on a review of warehouse studies and operations, this value provides a reasonable default rate for individual new warehouses in the absence of more project-specific data.[7] This trip rate has been accepted by CAPCOA and incorporated into the CalEEMod model.

Another way to illustrate how the DEIR greatly underestimates truck traffic associated with the Project is to review the estimated number of daily truck trips per 1,000 square feet of warehouse. As described above, the DEIR estimates 1.96 daily truck trips per 1,000 square feet.

---

[3] *Ibid.*

[4] *Ibid.*

[5] *Ibid.*

[6] *Ibid.*

[7] *Ibid.*

The results of utilizing the CalEEMOD method for estimating the traffic impacts from the Project are substantial. Based upon the trip generation rate of 2.59, the total number of trips associated with Project would increase from 4,400 to 5,813 trips per day.

The net result is that the air quality analysis performed by the Proponent greatly underestimates the emissions from mobile sources by at least one-third during the operational phase of the Project. Those impacts are likely to lead to a significant impact that will be unmitigated and unaccounted for in the FEIR. Without proper modeling of the emissions from these additional vehicles the impacts on the environment and the citizens of the Moreno Valley are unknown.

Conclusion

The facts identified and referenced in this comment letter lead me to reasonably conclude that the Project will result in significant adverse impacts that were not identified in the FEIR and that are not adequately mitigated. Many of the FEIR's conclusions that environmental impacts are not significant or less than significant with mitigation are unsupported or contradicted by the evidence. As a result, several analyses presented in the FEIR, including impacts on air quality, fail to identify or disclose the magnitude of significant adverse impacts. To protect air quality and public health the Proponent must prepare a revised FEIR for the Project.

Sincerely,

James Clark, Ph.D.

EXHIBIT C

4.7.1.4 Greenhouse Gas Inventories

The City of Moreno Valley estimated greenhouse gas emissions for the community for 2007 and 2010 and projected emissions for 2020 are shown in Table 4.7.B, which shows the reduced 2020 emissions are below the reduction target.

Table 4.7.B: City of Moreno Valley Projected Greenhouse Gas Emissions

Source Category	Moreno Valley Greenhouse Gas Emissions ($MTCO_2e$ per year)			
	2007	2010	BAU 2020	Reduced 2020
Transportation	517,098	513,581	788,267	421,561
Energy	287,261	277,230	356,192	251,372
Area	69,390	69,437	84,665	73,046
Water and Wastewater	21,595	16,831	20,216	14,158
Solid Waste	44,294	43,633	49,203	38,000
Total	**939,638**	**920,712**	**1,298,543**	**798,137**
Reduction Target	—	—	**798,693**	**798,693**

Notes: $MTCO_2e$ = metric tons of carbon dioxide equivalents BAU = business as usual
Source: Table 9, City of Moreno Valley Greenhouse Gas Analysis, 2012., MBA 2013

The existing WLC project site is largely vacant with scattered dry farming that generates minimal greenhouse gas emissions. For the purposes of this analysis, a zero baseline will be assumed to identify the "worst case" emissions (i.e., GHG emissions from the entire WLC project without removal of any existing GHG emissions).

4.7.2 Regulatory Setting

4.7.2.1 International Regulation of Climate Change

Intergovernmental Panel on Climate Change (IPCC). In 1988, the United Nations created the IPCC to provide independent scientific information regarding climate change to policymakers. The IPCC does not conduct research itself, but rather compiles information from a variety of sources into reports regarding climate change and its impacts. The IPCC has thereafter periodically released reports on climate change, and in 2007 released its Fourth Assessment Report which concluded most global climate change was the result of human activity, mainly the burning of fossil fuels (see Section 4.7.1.1).

United Nations Framework Convention on Climate Change. On March 21, 1994, the United States joined a number of countries around the world in signing the United Nations Framework Convention on Climate Change (Convention). Under the Convention, governments gather and share information on greenhouse gas emissions, national policies, and best practices; launch national strategies for addressing greenhouse gas emissions and adapting to expected impacts, including the provision of financial and technological support to developing countries; and cooperate in preparing for adaptation to the impacts of climate change.

Kyoto Protocol. The Kyoto Protocol is an international agreement linked to the United Nations Framework Convention on Climate Change. The major feature of the Kyoto Protocol is that it sets binding targets for 37 industrialized countries and the European community for reducing greenhouse gas emissions at average of five per cent against 1990 levels over the five-year period 2008-2012. The Convention (discussed above) encouraged industrialized countries to stabilize emissions; however, the Protocol commits them to do so. Developed countries have contributed more emissions

Table 4.7.I: Project Operational GHG Emissions (Year by Year with Mitigation)

Source	Emissions with Mitigation and Project Design Features ($MTCO_2e$/year)								
	2014	2015	2016	2017	2018	2019	2020	2021	2022
Vehicles	10,638	21,784	28,283	39,632	52,154	57,836	61,228	65,730	66,329

When compared with the proposed project, air quality impacts associated with the No Project/Existing General Plan Alternative would be correspondingly decreased in magnitude. Similar to the proposed project, the generation of these emissions would still result in a cumulative contribution of air pollutants in a nonattainment basin; therefore, impacts remain significant and unavoidable.

Table 6.E: No Project/Existing General Plan Alternative Operational Emissions

Source	Pollutant Emissions, lbs/day					
	CO	VOC	NO_X	SO_X	PM_{10}	$PM_{2.5}$
Proposed Project[1]	3,466	729	3,059	21	1,685	153
No Project/Existing General Plan[2]	4,853	1,114	1072	14	1,231	86

[1] MBA 2013 Air Quality Assessment for the proposed project
[2] From Moreno Highlands Specific Plan updated by MBA using CalEEMod software

Global Climate Change: GHG emissions associated with the No Project/Existing General Plan Alternative are correspondingly decreased as this alternative does not include a logistics warehouse component. In addition, the No Project/Existing General Plan Alternative would decrease the amount of water utilized and wastewater generated. As identified in Table 6.F, the No Project/Existing General Plan Alternative would generate 228,719 metric tons of total CO_2 equivalent[1] (mt CO_2e), which is approximately 60 percent less than what was identified for the proposed project.

Table 6.F: Comparison of Greenhouse Gas Emissions

Type of Development	Annual $MTCO_2e$ Emissions	Change
Proposed Project	665,321	100%
No Project/No Build[1]	—	0%
No Project/Existing General Plan[2]	228,719	35%
Alternative 1: Reduced Density	465,725	70%
Alternative 2: Mixed Use A	794,828	120%
Alternative 3: Mixed Use B	318,808	48%
Alternative Sites	665,321	100%

$MTCO_2e$ is metric tons of carbon dioxide equivalents, which is a standard unit of measure for greenhouse gases.
[1] Estimated based on existing on-site rural residential uses.
[2] Based on approved Moreno Highland Specific Plan.
Source: MBA 2013 project air quality study, alternatives analysis (see Appendix D).

Hazards and Hazardous Materials: Development of the No Project/Existing General Plan Alternative would still result in the on-site handling of hazardous substances, both during project construction and operation. It is reasonable to assume that, like any current use, these substances would continue to be used in accordance with applicable local, State, and Federal standards. Impacts associated with the transport or use of hazardous materials or potential upsets or accidents would not be increased in magnitude because the intensity of development is still below what is envisioned under the proposed project. Therefore, it is not expected that increased quantities of hazardous materials would be present on site. With the adherence to existing hazardous materials regulations,

[1] Carbon dioxide equivalent (CO_2e) is an internationally accepted measure that expresses the amount of other greenhouse gases (e.g., methane and nitrous oxide) in terms of the amount of carbon dioxide (CO_2). The CO_2e measure is used as a way to measure the warming potential of a greenhouse gas as compared to CO_2, which has the highest global warming potential.

Attorneys for Defendant and Real Party in Interest
VWR International, LLC

UNITED STATES DISTRICT COURT

EASTERN DISTRICT OF CALIFORNIA

COALITION FOR CLEAN AIR, et al.,

Plaintiff,

v.

VWR INTERNATIONAL, LLC, et al.,

Defendant.

Case No. 1:12-CV-1569-LJO-BAM

CONSENT JUDGMENT

Pursuant to Rules 54 and 58 of the Federal Rules of Civil Procedure, the Court hereby ORDERS, ADJUDGES AND DECREES as follows:

1. Defendant VWR International, LLC ("VWR") shall install two (2) electric vehicle charging stations at its warehousing and distribution facility located at 8711 West Riggin Avenue in the City of Visalia (the "Project"). VWR shall make said electric vehicle charging stations available to VWR employees and/or customers.

2. VWR shall maintain the following features of the Project until June 11, 2022 (10 years after the Project became operational), unless VWR ceases to own and operate the Project in its present form and for its present function prior to that time:

a. The emergency generator for the Project shall be powered by natural gas and

include a catalytic converter.

b. Ninety percent of the truck carriers contracted to service the Project by VWR shall be Environmental Protection Agency SmartWay partners, provided however, that temporary variances from this percentage due to circumstances not created by VWR shall not be a violation of this order.

c. The Project shall utilize energy efficient interior lighting, *i.e.*, light-emitting diodes ("LED"), and T5 and T8 fluorescent lamps, provided, however, that this order shall not prohibit VWR from incorporating new or different lighting technology that is at least as efficient.

d. The Project shall utilize energy efficient exterior lighting, *i.e.*, LED, and T5 and T8 fluorescent lamps, provided, however, that this order shall not prohibit VWR from incorporating new or different lighting technology that is at least as efficient.

e. The air conditioning system for the management offices at the Project shall use non-chlorofluorocarbon refrigerant.

f. Cooling for the main warehouse space at the Project shall be provided through evaporative coolers rather than air conditioners, provided, however, that this order shall not prohibit VWR from incorporating new or different cooling technology that is at least as efficient.

g. The warehouse space at the Project shall incorporate automated airflow and ventilation systems designed to minimize need for supplemental heating and cooling within the warehouse space.

h. Forklifts and interior vehicles at the Project shall be electric powered.

i. The Project shall use a building automation system to control and optimize the efficiency of its mechanical systems, including lighting, HVAC, exhaust dampers, fans, and ventilation louvers

j. Interior lights shall incorporate motion sensors that turn them off when not in use.

k. The Project shall incorporate a light colored "cool roof" membrane to reduce surface temperature, heat island effect, and heat transfer to the interior of the structure.

l. The landscape design and irrigation system shall be in compliance with LEED Silver certification standards to reduce water consumption.

m. The warehouse shall incorporate water-efficient building design with water efficient fixtures and appliances meeting LEED Silver certification standards.

n. The Project shall have an operational recycling program covering paper, corrugated cardboard, glass, plastics and metals.

o. A bicycle rack shall be provided at the Project for employees who wish to bicycle commute.

p. Five (5) premium car/vanpool spaces shall be provided at the Project.

3. Notwithstanding the provisions of paragraph 2, above, this order shall not prohibit VWR from incorporating new or different technology at its facility instead of the specific technology specified in paragraph 2, provided that is no less efficient than the technology specified.

4. VWR need not take further action to comply with San Joaquin Valley Air Pollution Control District Rule 9510, as incorporated into the California State Implementation Plan under the Clean Air Act (42 U.S.C. Section 7604(a)).

5. VWR need not take further action to comply with Visalia Municipal Code Section 17.28.040A.

6. VWR shall pay no civil penalties.

7. Nothing in this judgment shall prohibit VWR from selling, transferring, demolishing, rebuilding, or repurposing the Project, in whole or in part, or the real property upon which it sits.

8. Except as may otherwise be provided by written agreement, each party shall bear their own fees and costs.

/ / /

9. This judgment shall be entered by the clerk of the court forthwith. The Clerk is directed to close this action.

IT IS SO ORDERED, ADJUDGED, AND DECREED.

IT IS SO ORDERED.

Dated: **September 11, 2013**

DEED OF AGRICULTURAL CONSERVATION EASEMENT

This Deed of Agricultural Conservation Easement is granted on this _____ of _____ 2012, by [*Landowner's name*], [*Ownership status*], having an address at [*Landowner's address*] ("Landowner"), to [*Grantee's name*], a California nonprofit public benefit corporation, having an address at [*Grantee's address*] ("Grantee"), for the purpose of forever conserving the agricultural productive capacity and open space character of the subject property.

RECITALS

A. The Landowner is the sole owner in fee simple of the [*farm*/*rangeland*] property ("Property") legally described in Exhibit A ("Legal Description") and generally depicted in Exhibit B ("Vicinity Map"), attached to and made a part of this Agricultural Conservation Easement ("Easement"). The Property consists of approximately [*acres*] acres of land and is commonly known as the "[*Farm/Ranch name*]," together with buildings and other improvements, is located in [*County name*] County, California, and is identified by assessor's parcel number(s) [*parcel numbers*]. The existing buildings and improvements on the Property are shown within the Building Envelope as depicted in Exhibit C ("Building Envelope and Existing Improvements"), also attached to and made a part of this Easement. Except as shown in Exhibit C, the Property is open farmland, whose soils have been classified as [*prime farmland, farmland of statewide importance, etc.*] by the U.S. Department of Agriculture's Natural Resources Conservation Service, and by the California Department of Conservation's Farmland Mapping and Monitoring Program, because this land has the soil quality, growing season, and water supply needed for sustained agricultural production.

B. The agricultural and other characteristics of the Property, its current use and state of improvement, are documented and described in a Baseline Documentation Report ("Baseline Report"), prepared by the Grantee with the cooperation of the Landowner and incorporated herein by this reference. The Landowner and the Grantee acknowledge that the Baseline Report is complete and accurate as of the date of this Easement. Both the Landowner and the Grantee shall retain duplicate original copies of the Baseline Report. The Baseline Report may be used to establish whether or not a change in the use or condition of the Property has occurred, but its existence shall not preclude the use of other evidence to establish the condition of the Property as of the date of this Easement.

C. The Department of Conservation's California Farmland Conservancy Program (hereinafter alternatively referred to as the "Department" or "Department of Conservation") has made a grant of funds to the Grantee to support the acquisition of this Agricultural Conservation Easement. The Department's funds represent a substantial investment by the people of the State of California in the long-term conservation of valuable agricultural land and the retention of agricultural land in perpetuity. The Property and this Easement have met the California Farmland Conservancy Program's mandatory eligibility criteria and certain selection criteria and have multiple natural resource conservation objectives. The rights vested herein in the State of California arise out of the State's statutory role in fostering the conservation of agricultural land in California and its role as fiduciary for the public investment represented by the Department's funds.

D. The Landowner grants this Easement for valuable consideration to the Grantee for the purpose of assuring that, under the Grantee's perpetual granteeship, the agricultural productive capacity and open space character of the Property will be conserved and maintained forever, and that uses of the land that are inconsistent with these conservation purposes will be prevented or corrected. The parties agree, however, that the current agricultural use of, and improvements to, the Property are consistent with the conservation purposes of this Easement.

E. The conservation purposes of this Easement are recognized by, and the grant of this Easement will serve, the following clearly delineated governmental conservation policies:

> The Farmland Protection Policy Act, P.L. 97-98, 7 U.S.C. section 4201 et seq., whose purpose is "to minimize the extent to which Federal programs and policies contribute to the unnecessary and irreversible conversion of farmland to nonagricultural uses, and to assure that Federal programs are administered in a manner that, to the extent practicable, will be compatible with State, unit of local government and private programs and policies to protect farmland;"
>
> California Civil Code at Part 2, Chapter 4, (commencing with section 815), which defines and authorizes perpetual conservation easements;
>
> California Constitution Article XIII, section 8, California Revenue and Taxation Code sections 421.5 and 422.5, and California Civil Code section 815.1, under which this Agricultural Conservation Easement is an enforceable restriction, requiring that the Property's tax valuation be consistent with restriction of its use for purposes of food and fiber production and conservation of natural resources;
>
> Section 10200 et seq. of the California Public Resources Code, which creates the California Farmland Conservancy Program within the Department;

Section 51220 of the California Government Code, which declares a public interest in the preservation of agricultural lands, by providing that “agricultural lands have a definitive public value as open space" and "that the discouragement of premature and unnecessary conversion of agricultural land to urban uses is a matter of public interest”;

California Food and Agriculture Code Section 821 states that one of the major principles of the State's agricultural policy is "to sustain the long-term productivity of the State's farms by conserving and protecting the soil, water, and air, which are agriculture's basic resources;"

The California General Plan law section 65300 et seq. and Section 65400 et seq. of the California Government Code, and the [*County name*] County General Plan, as updated on [*Update date*], which includes as one of its goals to protect farmlands designated as prime, of statewide importance, unique, or of local importance from conversion to and encroachment of non-agricultural uses; and,

Resolution No. [*Resolution number*], approved by the Board of Supervisors of [*County name*] County on the [*day*] of [*month*], [*year*], which expresses support for the acquisition of this Easement and finds that the acquisition is consistent with the County’s General Plan and the Resolution’s findings. (NOTE: If the Property lies within the Sphere of Influence of an incorporated city, both the city and county must pass resolutions of support.)

F. The Grantee is a California nonprofit organization within the meaning of California Public Resources Code section 10221 and California Civil Code section 815.3 and is a tax exempt and “qualified conservation organization” within the meaning of Sections 501(c)(3) and 170(b)(1)(A)(iv) as defined by the United States Internal Revenue Code. Grantee, as certified by a resolution of Grantee's Board of Trustees, accepts the responsibility of enforcing the terms of this Easement and upholding its conservation purposes forever.

GRANT OF AGRICULTURAL CONSERVATION EASEMENT

Now, therefore, for the reasons given, and in consideration of their mutual promises and covenants, terms, conditions and restrictions contained herein, and other good and valuable consideration, the receipt and adequacy of which are hereby acknowledged, the Landowner voluntarily grants and conveys to the Grantee, and the Grantee voluntarily accepts, a perpetual conservation easement, as defined by Section 815.1 and 815.2 of the California Civil Code and California Public Resources Code section 10211, and of the nature and character described in this Easement for the purpose described below, and agree as follows:

1. *Conservation Purpose.*

The conservation purpose (“Conservation Purpose” or “Purpose”) of this Easement is to

enable the Property to remain in productive agricultural use in perpetuity by preventing and correcting uses of the Property prohibited by the provisions of this Easement. To the extent that the preservation of the open space character and [*scenic, habitat, natural, or historic, etc*.] values of the Property are consistent with such use, it is within the Purpose of this Easement to protect those values.

2. *Right to Use Property for Agricultural Purposes.*

The Landowner retains the right to use the Property for agricultural purposes, or to permit others to use the Property for agricultural purposes, in accordance with applicable law and this Easement.

3. *Prohibited Uses.*

The Landowner shall not perform, nor knowingly allow others to perform, any act on or affecting the Property that is inconsistent with this Easement. Any use or activity that would diminish or impair the agricultural productive capacity and open space character [*or scenic, habitat, natural, historic etc. values*] of the Property, or that would cause significant soil degradation or erosion, restrict agricultural husbandry practices, or that is otherwise inconsistent with the Conservation Purpose is prohibited ("Prohibited Use"). "Husbandry practices" means agricultural activities, such as those specified in Section 3482.5(e) of the California Civil Code, conducted or maintained for commercial purposes in a manner consistent with proper and accepted customs and standards, as established and followed by similar agricultural operations in the same locality. This Easement authorizes the Grantee to enforce these covenants in the manner described herein. However, unless otherwise specified, nothing in this Easement shall require the Landowner to take any action to restore the condition of the Property after any Act of God or other event over which it had no control. The Landowner understands that nothing in this Easement relieves it of any obligation or restriction on the use of the Property imposed by law.

4. *Permission of the Grantee.*

Where the Landowner is expressly required to obtain the Grantee's permission for a proposed use hereunder, said permission (a) shall not be unreasonably delayed or withheld by the Grantee, (b) shall be sought and given in writing, with copies of all documents to be provided to the Department, and (c) shall in all cases be obtained by the Landowner prior to the Landowner's undertaking of the proposed use. The Grantee shall grant permission to the Landowner only where the Grantee, acting in the Grantee's sole reasonable discretion and in good faith, determines that the proposed use is not a "Prohibited Use" per Section 3.

5. *Construction or Placement of Buildings and Other Improvements.*

The Landowner may undertake construction, erection, installation, or placement of buildings, structures, or other improvements on the Property only as provided in

subsections (a) through (d) below. All other construction, erection, installation, or placement of buildings, structures, or other improvements on the Property is prohibited. Before undertaking any construction, erection, installation or placement that requires permission, the Landowner shall notify the Grantee and obtain prior written permission from the Grantee.

For purposes of this section, the term "improvements" shall not refer to, and specifically excludes, crops, plants, trees, vines, or other living improvements planted for agricultural purposes, nor shall it refer to irrigation improvements necessary or desirable to irrigate the Property for agricultural purposes, all of which may be made without permission of the Grantee.

(a) Fences – Existing fences may be repaired and replaced without permission of the Grantee. New fences may be built anywhere on the Property for purposes of reasonable and customary agricultural management, and for security of farm produce, livestock, equipment, and improvements on the Property, without permission of the Grantee.

(b) Agricultural Structures and Improvements – Existing agricultural structures and improvements as shown in Exhibit C and more fully described in the Baseline Report, may be repaired, reasonably enlarged, and replaced at their current locations within the Building envelope for agricultural purposes without permission from the Grantee. New buildings and other structures and improvements to be used solely for agricultural production on the Property or sale of farm products predominantly grown or raised on the Property, including barns and equipment sheds, but not including any dwelling or farm labor housing, may be built on the Property within the Building Envelope depicted in Exhibit B, without permission of the Grantee. All permissible new agricultural structures may be repaired, reasonably enlarged, and replaced without permission of the Grantee. Any other agricultural production or marketing-related structures may be constructed only with permission of the Grantee pursuant to Section 4.

(c) Residential Dwellings – The single-family dwelling shown in Exhibit C may be repaired, enlarged or replaced at the current location entirely within the Building Envelope shown in Exhibit C without permission of the Grantee. Said single-family dwelling shall not exceed three thousand square feet (3,000 sq. ft.) of living area. No other residential structures may be constructed or placed on the Property except for agricultural employee housing per Section 5(d).

(NOTE: With approval of the funder(s), this section may need to be modified depending on the circumstances of the property and other factors)

(d) Agricultural Employee Housing – The agricultural employee house shown in Exhibit C may be repaired, enlarged or replaced at the current location entirely within the Building Envelope shown in Exhibit C without permission of the Grantee. No additional agricultural employee housing may be constructed or

placed on the Property without permission of the Grantee. Grantee may only grant permission pursuant to Section 4 and only if the Landowner can demonstrate to the Grantee's satisfaction that such additional agricultural employee housing is reasonable and necessary for the agricultural operation of the Property. The aggregate living area of agricultural employee housing shall not exceed two thousand five hundred square feet (2,500 sq ft.). All agricultural employee housing must be located entirely within the Building Envelope shown in Exhibit C.

(NOTE: With approval of the funder(s), this section may need to be modified depending on the circumstances of the property and other factors)

(e) Utilities and Septic Systems. Wires, lines, pipes, cables or other facilities providing electrical, gas, water, sewer, communications, energy generation, or other utility services solely to serve the improvements permitted herein or to transmit power generated on the Property may be installed, maintained, repaired, removed, relocated and replaced. In addition, septic or other underground sanitary systems serving the improvements permitted herein may be installed, maintained, repaired, replaced, relocated or improved, but must be located within the Building Envelope. Power generation and transmission facilities primarily for agricultural and other permitted uses on the Property may be constructed within the Building Envelope. Power generated in excess of requirements on the Property may be sold to appropriate public utilities. Notwithstanding the foregoing, commercial power generation, collection or transmission facilities, including wind or solar farms outside of Building Envelope, and the conveyance of any rights-of-way over, under or on the Property for any such purpose, are prohibited.

6. *No Subdivision.*

The division, subdivision, defacto subdivision, or partition of the Property, including transfer of development rights, whether by physical, legal, or any other process, is prohibited.

The Landowner and Grantee acknowledge and understand that the Property consists of [*number*] legal parcel(s), and that no additional, separate legal parcels currently exist within the Property that may be recognized by a certificate of compliance or conditional certificate of compliance pursuant to California Government Code section 66499.35 based on previous patent or deed conveyances, subdivisions, or surveys. The Landowner will not apply for or otherwise seek recognition of additional legal parcels within the Property based on certificates of compliance or any other authority. The Landowner shall continue to maintain the legal parcels comprising the Property, and all interests therein, under common ownership, as though a single legal parcel.

Lot line adjustment may be permitted only with the written approval of the Grantee pursuant to Section 4, in conjunction with the approval of the local jurisdiction, and for

purposes of maintaining, enhancing or expanding agricultural practices or productivity on the Property.

7. *Extinguishment of Development Rights.*

The Landowner hereby grants to the Grantee all development rights except as specifically reserved in this Easement, that were previously, are now or hereafter allocated to, implied, reserved, appurtenant to, or inherent in the Property, and the parties agree that such rights are released, terminated, and extinguished, and may not be used on or transferred by either party to any portion of the Property as it now or later may be bounded or described, or to any other property adjacent or otherwise, or used for the purpose of calculating permissible lot yield of the Property or any other property. This Easement shall not create any development rights.

8. *Mining.*

The mining or extraction of soil, sand, gravel, rock, oil, natural gas, fuel, or any other mineral substance, using any method that disturbs the surface of the land, is prohibited.

(NOTE: With approval of the funder(s), this section may need to be modified depending on the circumstances of the property and other factors)

9. *Paving and Road Construction.*

Other than existing roads shown within the Building Envelope as identified in the Baseline Report, no portion of the Property presently unpaved shall be paved or otherwise covered with concrete, asphalt, or any other impervious paving material, unless such measures are required by air quality laws or regulations applicable to the Property. Except as otherwise permitted herein, no road for access or other purposes shall be constructed without the permission of the Grantee pursuant to Section 4. Notwithstanding the foregoing, construction of unpaved farm roads, as necessary or desirable by agricultural operations, is permitted without permission from the Grantee. The Landowner shall notify the Grantee of any significant net relocation or addition of unpaved farm roads.

10. *Trash and Storage.*

The dumping or accumulation on the Property of any kind of trash, refuse, vehicle bodies or parts, or "Hazardous Materials," as defined in Section 25 is prohibited. Farm-related trash and refuse produced on the Property may be temporarily stored on the Property subject to all applicable laws. The storage of agricultural products and byproducts produced on the Property and materials reasonably required for agricultural production on the Property, including Hazardous Materials, is permitted as long as it is done in accordance with all applicable government laws and regulations.

11. *Commercial Signs.*

Commercial signs (including billboards) unrelated to permitted activities conducted on the Property are prohibited.

12. *Recreational Uses; Motorized Vehicle Use Off Roadways*

Resort structures, athletic fields, golf courses, non-residential swimming pools, public or commercial airstrips, commercial equestrian facilities, public or commercial helicopter pads, and any other non-agricultural recreational structures or facilities are prohibited on the Property. Recreational structures or improvements for the personal use of the Landowner and its guests (e.g. swimming pool, tennis court) are permitted only within the Building Envelope. The use of motorized vehicles off roadways and outside of the Building Envelope is prohibited except where used for agricultural production, property maintenance and security, or for the purpose of monitoring this Easement.

13. *Water Rights.*

The Landowner shall retain and reserve all ground water, and all appropriative, prescriptive, contractual or other water rights appurtenant to the Property at the time this Easement becomes effective. The Landowner shall not permanently transfer, encumber, lease, sell, or otherwise separate such quantity of water or water rights from title to the Property itself. Permanent separation of water or water rights is prohibited. All water shall be retained in [*County name*] County for agricultural production and used in conjunction with the improvements permitted by Section 5 of this Easement only. Water may be distributed to a contiguous property or other property owned or leased by the Landowner on an annual basis for agricultural production only. Any temporary distribution of water shall not impair the long-term agricultural productive capacity or open space character of the Property.

14. *Rights Retained by the Landowner.*

Subject to Section 7 and to interpretation under Section 22, as owner of the Property, the Landowner reserves all interests in the Property not transferred, conveyed, restricted, prohibited or extinguished by this Easement. These ownership rights include, but are not limited to, the right to sell, lease, or otherwise transfer the Property to anyone the Landowner chooses, as well as the right to privacy, the right to exclude any member of the public from trespassing on the Property, and any other rights consistent with the Purpose of this Easement. Nothing contained herein shall be construed as a grant to the general public of any right to enter upon any part of the Property.

Nothing in this Easement relieves the Landowner of any obligation or restriction on the use of the Property imposed by law.

15. *Responsibilities of the Landowner and the Grantee Not Affected.*

Other than as specified herein, this Easement is not intended to impose any legal or other responsibility on the Grantee, or in any way to affect any existing obligation of the Landowner as owner of the Property. Among other things, this shall apply to:

(a) Taxes – The Landowner shall be solely responsible for payment of all taxes and assessments levied against the Property. If the Grantee ever pays any taxes or assessments on the Property, or if the Grantee pays levies on the Landowner's interest in order to protect Grantee's interests in the Property, the Landowner will reimburse the Grantee for the same. It is intended that this Easement constitute an enforceable restriction within the meaning of Article XIII, Section 8 of the California Constitution and that this Easement qualify as an enforceable restriction under the provisions of California Revenue and Taxation Code Sections 402.1(a)(8) and 423.

(b) Upkeep and Maintenance – The Landowner shall be solely responsible for the upkeep and maintenance of the Property, to the extent it may be required by law. The Grantee shall have no obligation for the upkeep or maintenance of the Property. If the Grantee acts to maintain the Property in order to protect the Grantee's interest in the Property, the Landowner will reimburse the Grantee for any such costs.

(c) Liability and Indemnification – In view of the Grantee's and the Department of Conservation's negative rights, limited access to the land, and lack of active involvement in the day-to-day management activities on the Property, the Landowner shall indemnify, protect, defend and holds harmless the Grantee, the Department of Conservation, their officers, directors, members, employees, contractors, legal representatives, agents, successors and assigns (collectively, "Agents and Assigns") from and against all liabilities, costs, losses, orders, liens, penalties, claims, demands, damages, expenses, or causes of action or cases, including without limitation reasonable attorneys' fees, arising out of or in any way connected with or relating to the Property or the Easement. The Landowner shall be solely liable for injury or the death of any person, or physical damage to any property, or any other costs or liabilities resulting from any act, omission, condition, or other matter related to or occurring on or about the Property, regardless of cause, unless due to the negligence or willful misconduct of the Grantee, the Department of Conservation, and/or their respective Agents and Assigns. The Grantee shall be named as an additional insured on Landowner's general liability insurance policy.

Neither the Grantee, the Department of Conservation, nor their Agents and Assigns shall have responsibility for the operation of the Property, monitoring of hazardous conditions on it, or the protection of the Landowner, the public or any third parties from risks relating to conditions on the Property. Without limiting the foregoing, neither the Grantee, the Department, nor their respective Agents

and Assigns shall be liable to the Landowner or other person or entity in connection with consents given or withheld, or in connection with any entry upon the Property occurring pursuant to this Easement, or on account of any claim, liability, damage or expense suffered or incurred by or threatened against the Landowner or any other person or entity, except as the claim, liability, damage, or expense is the result of the gross negligence or intentional misconduct of the Grantee, the Department, and/or their respective Agents and Assigns.

16. *Monitoring.*

The Grantee shall manage its responsibilities as holder of this Easement in order to uphold the Purpose of this Easement. The Grantee's responsibilities include, but are not limited to, annual monitoring, such additional monitoring as circumstances may require, record keeping, and enforcement of this Easement, for the purpose of preserving the Property's agricultural productive capacity and open space character in perpetuity. Failure of the Grantee to carry out these responsibilities shall not impair the validity of this Easement or limit its enforceability in any way. With reasonable advance notice (except in the event of an emergency circumstance or prevention of a threatened breach), Grantee shall have the right to enter upon, inspect, observe, monitor and evaluate the Property to identify the current condition of, and uses and practices on the Property and to determine whether the condition, uses and practices are consistent with this Easement.

Grantee shall indemnify, defend with counsel of Landowner's choice, and hold Landowner harmless from, all expense, loss, liability, damages and claims, including Landowner's attorneys' fees, if necessary, arising out of Grantee's entry on the Property, unless caused by a violation of this Easement by Landowner or by Landowner's negligence or willful misconduct.

The Grantee shall report to the Department of Conservation by June 30 of each year after the annual monitoring visit, describing method of monitoring, condition of the Property, stating whether any violations were found during the period, describing any corrective actions taken, the resolution of any violation, and any transfer of interest in the Property. Failure to do so shall not impair the validity of this Easement or limit its enforceability in any way.

17. *Enforcement.*

The Grantee may take all actions that it deems necessary to ensure compliance with the terms, conditions, covenants, and purposes of this Easement. The Grantee shall have the right to prevent and correct violations of the terms, conditions, covenants, and purposes of this Easement. If the Grantee finds what it believes is a violation or potential violation, it may at its discretion take appropriate legal action to ensure compliance with the terms, conditions, covenants, and purposes of this Easement and shall have the right to correct violations and prevent the threat of violations. Except when an ongoing or imminent violation could irreversibly diminish or impair the agricultural productive capacity and open space character of the Property, the Grantee shall give the Landowner

written notice of the violation or potential violation, and thirty (30) days to correct it, before filing any legal action.

If a court with jurisdiction determines that a violation may exist, has occurred, or is about to occur, the Grantee may obtain an injunction, specific performance, or any other appropriate equitable or legal remedy, including (i) money damages, including damages for the loss of the agricultural conservation values protected by this Easement, (ii) restoration of the Property to its condition existing prior to such violation, and (iii) an award for all of the Grantee's expenses incurred in stopping and correcting the violation, including but not limited to reasonable attorney's fees. The failure of the Grantee to discover a violation or potential violation, or to take immediate legal action to prevent or correct a violation or potential violation known to the Grantee, shall not bar the Grantee from taking subsequent legal action. The Grantee's remedies under this section shall be cumulative and shall be in addition to all remedies now or hereafter existing at law or in equity.

Without limiting the Landowner's liability therefor, the Grantee shall apply damages recovered to the cost of undertaking any corrective action on the Property. Should the restoration of lost values be impossible or impractical for whatever reason, the Grantee shall apply any and all damages recovered to furthering its mission, with primary emphasis on agricultural conservation easement acquisition and enforcement.

In the event the Grantee fails to enforce any term, condition, covenant or purpose of this Easement, as determined by the Director of the Department of Conservation, the Director of the Department and his or her successors and assigns shall have the right to enforce the Easement after giving notice to the Grantee and the Landowner and providing a reasonable opportunity under the circumstances for the Grantee to enforce any term, condition, covenant, or purpose of the Easement. In the event that the Director of the Department determines that the Grantee has failed to enforce any of the terms, conditions, covenants, or purposes of the Easement, the Director of the Department and his or her successors and assigns shall be entitled to exercise the same right to enter the Property granted to the Grantee, including right of immediate entry in the event of an emergency or suspected emergency where the Director of the Department or his or her successor or assign determines that immediate entry is required to prevent, terminate or mitigate a violation of this Easement.

Failure or refusal to exercise any rights under the terms of this Easement by the Grantee in the event of a violation by the Landowner of any term herein shall not constitute a waiver or forfeiture of the Grantee's right to enforce any term, condition, covenant, or purpose of this Easement.

18. *Transfer of Easement.*

This Easement may only be assigned or transferred to a private nonprofit organization that, at the time of transfer, is a "qualified organization" under Section 170(h) of the United States Internal Revenue Code and meets the requirements of Section 815.3(a) of

the California Civil Code and has similar purposes to preserve agricultural lands and open space. If no such private nonprofit organization exists or is willing to assume the responsibilities imposed by this Easement, then this Easement may be transferred to any public agency authorized to hold interests in real property as provided in Section 815.3(b) of the California Civil Code. Such an assignment or transfer may proceed only if the organization or agency expressly agrees to assume the responsibility imposed on the Grantee by the terms of this Easement and is expressly willing and able to hold this Easement for the Purpose for which it was created. All assignment and assumption agreements transferring the Easement shall be duly recorded in <*County name*> County.

If the Grantee should desire to assign or transfer this Easement, the Grantee must obtain written permission from the Landowner and the Department of Conservation, which permission shall not be unreasonably withheld.

If the Grantee or its successors ever ceases to exist or no longer qualifies under Section 170(h) of the U.S. Internal Revenue Code, or applicable state law, the Department of Conservation, in consultation with the Landowner, shall identify and select an appropriate private or public entity to whom this Easement shall be transferred.

19. *Perpetual Duration and No Merger of Title.*

Pursuant to California Civil Code at Part 2, Chapter 4, (commencing with section 815), which defines and authorizes perpetual conservation easements; this Easement shall run with the land in perpetuity. Every provision of this Easement that applies to the Landowner or the Grantee shall also apply to their respective agents, heirs, executors, administrators, assigns, and all other successors as their interests may appear.

No merger of title, estate or interest shall be deemed effected by any previous, contemporaneous, or subsequent deed, grant, or assignment of an interest or estate in the Property, or any portion thereof, to the Grantee, or its successors or assigns. It is the express intent of the parties that this Easement not be extinguished by, merged into, modified, or otherwise deemed affected by any other interest or estate in the Property now or hereafter held by the Grantee or its successors or assigns.

20. *Transfer of Property Interest.*

Any time the Property itself, or any interest in it, is transferred by the Landowner to any third party, the Landowner shall notify the Grantee and the Department of Conservation in writing at least thirty (30) days prior to the transfer of the Property or interest, and the document of conveyance shall expressly incorporate by reference this Easement. Any document conveying a lease of the Property shall expressly incorporate by reference this Easement. Failure of the Landowner to do so shall not impair the validity of this Easement or limit its enforceability in any way.

21. *Amendment of Easement.*

This Easement may be amended only with the written consent of the Landowner, the Grantee, and the Director of the Department of Conservation. Any such amendment shall be consistent with the Purpose of this Easement and with the Grantee's easement amendment policies, and shall comply with all applicable laws, including Section 170(h) of the Internal Revenue Code, or any regulations promulgated in accordance with that section, and with Section 815 et seq. of the California Civil Code, and the California Farmland Conservancy Program Act as codified in Section 10200 et seq. of the California Public Resources Code, and any regulations promulgated thereunder. No amendment shall diminish or affect the perpetual duration or the Purpose of this Easement, nor the status or rights of the Grantee under the terms of this Easement.

This Easement and any amendment to it shall be recorded in [*County name*] County. Copies of any amendments to this Easement shall be provided to the Department of Conservation within 30 days of recordation.

22. Termination of Easement.

(NOTE: Landowners may waive the administrative termination provision defined in Public Resources Code sections 10270-77, in which case Scenario A shall be used below, with potential easement termination shall be governed solely by judicial termination proceedings. Otherwise, Scenario B on page 15 shall be used.)

[*Scenario A: Landowner's Administrative Termination Rights Waived*]

(a) It is the intention of the parties that the Conservation Purpose of this Easement shall be carried out forever as provided in the Section 10211 of the Public Resources Code and Section 815 et seq. of the Civil Code. Accordingly, Landowner hereby waives on behalf of the Landowner and the Landowner's successors and assigns all rights at law or inequity to request a termination of this Easement pursuant to Public Resources Code Sections 10270 et seq.

Waiver of Right to Request Administrative Termination:

Landowner's Initials: _____ [*and* _____]

(b) Other than pursuant to eminent domain or purchase in lieu of eminent domain, no other voluntary or involuntary sale, exchange, conversion, or conveyance of any kind of all or part of the Property, or of any interest in it, shall limit or terminate the provisions of this Easement. This Easement can only be terminated or extinguished, whether in whole or in part, by judicial proceedings in a court of competent jurisdiction. The fact that the land is not in agricultural use is not reason for termination of this Easement.

Termination of the Easement through condemnation is subject to the requirements

of Section 10261 of the Public Resources Code, the eminent domain laws of the State of California, federal law, and this Easement. The Property may not be taken by eminent domain or in lieu of eminent domain if the planned use is more than seven (7) years in the future (California Code of Civil Procedure section 1240.220). Grantee shall be paid by the condemnor the value of the Easement at the time of condemnation (Public Resources Code section 10261(a)(2)). Purchase in lieu of condemnation, or settlement of an eminent domain proceeding, shall occur pursuant to applicable laws and procedures, including but not limited to California Government Code sections 7267.1 and 7267.2, and shall require approval of the Grantee, the Director of the Department, and the [*match funder*]. Grantee shall have an opportunity to accompany the appraiser for the condemning agency when the appraiser goes on the Property with Landowner. Should this Easement be condemned or otherwise terminated on any portion of the Property, the balance of the Property shall remain subject to this Easement. In this event, all relevant related documents shall be updated and re-recorded by the Grantee to reflect the modified easement area. Encumbrances junior to this Easement shall remain subordinate to the Easement as amended.

(c) In the event the Landowner is notified that a public entity intends or proposes to acquire the Easement Area in whole or in part by eminent domain, the Landowner shall provide the Grantee, the Department, and the [*match funder*] with a copy of the notification within five (5) business days of having received such notification. In the event the Landowner intends to seek termination of the easement pursuant to initiation of a judicial proceeding which is not based on eminent domain, the Landowner shall notify the Grantee, the Department and the [*match funder*] of such intent no later than sixty (60) days before initiating such proceedings. No inaction or silence by the Grantee, the Department, or the [*match funder*] shall be construed as abandonment of the Easement.

(d) The grant of this Easement gives rise to a property right immediately vested in the Grantee. For the purpose of determining the amount to be paid by the Landowner in a repurchase of the Easement pursuant to judicial proceedings, and for the purpose of allocating proceeds from a sale or other disposition of the Property at the time of termination, the Easement and the Grantee's property right therein shall have a value equal to the difference between the current fair market value of the Property as if unencumbered by this Easement and the current fair market value of the Property encumbered by this Easement, each as determined on or about the date of termination. The values shall be determined by an appraisal performed by an appraiser jointly selected by the Landowner and the Grantee. The Landowner shall pay the cost of the appraisal, and it is subject to approval by the Department and the [*match funder*]. Nothing herein shall prevent the Landowner, the Grantee, the Department, or the [*match funder*] from having an appraisal prepared at its own expense.

(e) Upon approval of termination of this Easement or any portion thereof, the Landowner shall reimburse the State of California, Department of Conservation

California Farmland Conservancy Program Fund and [*match funder*], the amount equal to the value of the Easement that is terminated. If the entire Easement is terminated, the amount required to be paid in connection with the Landowner's repurchase shall be distributed as follows: (i) to the State of California, Department of Conservation, California Farmland Conservancy Program Fund, ?%; and (ii) to the [*match funder*], ?%, representing the proportion of easement value originally contributed by these agencies for the purchase of this Easement. If only a portion of the Easement is so terminated, the reimbursement shall be pro-rated. This Easement shall not be deemed terminated under a judicial termination proceeding until such payment is received by the State of California, Department of Conservation California Farmland Conservancy Program Fund, the [*match funder*] and Grantee [*if any bargain sale occurred*]. Grantee, in using any funds received from the termination of this Easement, shall use the funds in a manner consistent with the Purpose of this Easement.

(*NOTE: Additional language IRS language may need to be used for landowners seeking IRS recognition of a charitable donation*)

(f) If the Grantee obtains payment on a claim under a title insurance policy insuring this Easement, payment shall be distributed as set forth in Section 22(e).

[Scenario B: Landowner's Administrative Termination Rights NOT Waived]

(a) Other than pursuant to eminent domain or purchase in lieu of eminent domain, no other voluntary or involuntary sale, exchange, conversion, or conveyance of any kind of all or part of the Property, or of any interest in it, shall limit or terminate the provisions of this Easement. This Easement can only be terminated or extinguished, whether in whole or in part, by judicial proceedings in a court of competent jurisdiction or by administrative termination pursuant to Section 10270-10277 of the Public Resources Code. The fact that the land is not in agricultural use is not reason for termination of this Easement.

Termination of the Easement through condemnation is subject to the requirements of Section 10261 of the Public Resources Code, the eminent domain laws of the State of California, federal law, and this Easement. The Property may not be taken by eminent domain or in lieu of eminent domain if the planned use is more than seven (7) years in the future (California Code of Civil Procedure section 1240.220). Grantee shall be paid by the condemnor the value of the Easement at the time of condemnation (Public Resources Code section 10261(a)(2)). Purchase in lieu of condemnation, or settlement of an eminent domain proceeding, shall occur pursuant to applicable laws and procedures, including but not limited to California Government Code sections 7267.1 and 7267.2, and shall require approval of the Grantee, the Director of the Department, and the [*match funder*]. Grantee shall have an opportunity to accompany the appraiser for the condemning agency when the appraiser goes on the Property with Landowner. Should this Easement be condemned or otherwise terminated on any portion of the Property,

the balance of the Property shall remain subject to this Easement. In this event, all relevant related documents shall be updated and re-recorded by the Grantee to reflect the modified easement area. Encumbrances junior to this Easement shall remain subordinate to the Easement as amended.

(b) In the event the Landowner is notified that a public entity intends or proposes to acquire the Easement Area in whole or in part by eminent domain, the Landowner shall provide the Grantee, the Department, and the [*match funder*] with a copy of the notification within five (5) business days of having received such notification. In the event the Landowner intends to seek termination of the easement pursuant to administrative termination or judicial proceeding that is not based on eminent domain, the Landowner shall notify the Grantee, the Department and the [*match funder*] of such intent no later than sixty (60) days before initiating such proceedings. No inaction or silence by the Grantee, the Department, or the [*match funder*] shall be construed as abandonment of the Easement.

(c) The grant of this Easement gives rise to a property right immediately vested in the Grantee. For the purpose of determining the amount to be paid by the Landowner in a repurchase of the Easement at the time of a administrative termination or pursuant to judicial proceedings, and for the purpose of allocating proceeds from a sale or other disposition of the Property at the time of termination, the Easement and the Grantee's property right therein shall have a value equal to the difference between the current fair market value of the Property as if unencumbered by this Easement and the current fair market value of the Property encumbered by this Easement, each as determined on or about the date of termination. The values shall be determined by an appraisal performed by an appraiser jointly selected by the Landowner and the Grantee. The Landowner shall pay the cost of the appraisal, and it is subject to approval by the Department and the [*match funder*]. Nothing herein shall prevent the Landowner, the Grantee, the Department, or the[*match funder*] from having an appraisal prepared at its own expense.

(d) Upon approval of termination of this Easement or any portion thereof, the Landowner shall reimburse the State of California, Department of Conservation California Farmland Conservancy Program Fund and [*match funder*], the amount equal to the value of the Easement that is terminated. If the entire Easement is terminated, the amount required to be paid in connection with the Landowner's repurchase shall be distributed as follows: (i) to the State of California, Department of Conservation, California Farmland Conservancy Program Fund, ?%; and (ii) to the [*match funder*], ?%, representing the proportion of easement value originally contributed by these agencies for the purchase of this Easement. If only a portion of the Easement is so terminated, the reimbursement shall be pro-rated. This Easement shall not be deemed terminated under a judicial termination proceeding until such payment is received by the State of California, Department of Conservation California Farmland Conservancy Program Fund, the

[*match funder*] and Grantee [*if any bargain sale occurred*]. Grantee, in using any funds received from the termination of this Easement, shall use the funds in a manner consistent with the Purpose of this Easement.

(*NOTE: Additional language IRS language may need to be used for landowners seeking IRS recognition of a charitable donation*)

(s) If the Grantee obtains payment on a claim under a title insurance policy insuring this Easement, payment shall be distributed as set forth in Section 22(d).

23. *Interpretation.*

(a) This Easement shall be interpreted under the laws of the State of California, resolving any ambiguities and questions of the validity of specific provisions so as to give maximum effect to its conservation purposes.

(b) References to specific authorities in this Easement shall be to the statute, rule, regulation, ordinance, or other legal provision that is in effect at the time this Easement becomes effective.

(c) No provision of this Easement shall constitute governmental approval of any improvements, construction or other activities that may be permitted under this Easement.

24. *Notices.*

Any notices to the Landowner and the Grantee required by this Easement shall be in writing and shall be personally delivered or sent by First-Class Mail to the following addresses, unless a party has been notified by the other of a change of address:

To the Landowner:

_____
_____
_____

To the Grantee:

_____
_____
_____

Any notices required by this Easement to be sent to the Department shall be in writing and shall be personally delivered or sent by first class mail, at the following address, unless a party has been notified by the Department of a change of address:

To the Department of Conservation:

Department of Conservation
801 K Street, MS 18-01
Sacramento, CA 95814
Attn: California Farmland Conservancy Program

25. *The Landowner's Environmental Warranty.*

(a) Nothing in this Easement shall be construed as giving rise to any right or ability in the Grantee or the Department of Conservation to exercise physical or management control over the day-to-day operations of the Property, or any of the Landowner's activities on the Property, or otherwise to become an "owner" or "operator" with respect to the Property as those words are defined and used in environmental laws, including the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 ("CERCLA"), as amended or any corresponding state and local statute or ordinance.

(b) The Landowner warrants that it has no actual knowledge of a release or threatened release of any Hazardous Materials on, at, beneath or from the Property. Moreover the Landowner hereby promises to defend and indemnify the Grantee and the Department of Conservation against all litigation, claims, demands, penalties and damages, including reasonable attorneys' fees, arising from or connected with the release or threatened release of any Hazardous Materials on, at, beneath or from the Property, or arising from or connected with a violation of any Environmental Laws. The Landowner's indemnification obligation shall not be affected by any authorizations provided by the Grantee to the Landowner with respect to the Property or any restoration activities carried out by the Grantee at the Property; provided, however, that the Grantee shall be responsible for any Hazardous Materials contributed after this date to the Property by the Grantee.

(c) The Landowner warrants that it shall remain in compliance with, all applicable Environmental Laws. The Landowner warrants that there are no notices by any governmental authority of any violation or alleged violation of, non-compliance or alleged non-compliance with or any liability under any Environmental Law relating to the operations or conditions of the Property.

(d) "Environmental Law" or "Environmental Laws" means any and all Federal, state, local or municipal laws, rules, orders, regulations, statutes, ordinances, codes, guidelines, policies or requirements of any governmental authority regulating or imposing standards of liability or standards of conduct (including common law) concerning air, water, solid waste, Hazardous Materials, worker and community right-to-know, hazard communication, noise, radioactive material, resource protection, subdivision, inland wetlands and watercourses, health protection and similar environmental health, safety, building and land use

as may now or at any time hereafter be in effect.

(e) "Hazardous Materials" means any petroleum, petroleum products, fuel oil, waste oils, explosives, reactive materials, ignitable materials, corrosive materials, hazardous chemicals, hazardous wastes, hazardous substances, extremely hazardous substances, toxic substances, toxic chemicals, radioactive materials, infectious materials and any other element, compound, mixture, solution or substance which may pose a present or potential hazard to human health or the environment or any other material defined and regulated by Environmental Laws.

(f) If at any time after the effective date of this Easement there occurs a release, discharge or other incident in, on, or about the Property of any substance now or hereafter defined, listed, or otherwise classified pursuant to any federal, state, or local law, regulation, or requirement as hazardous, toxic, polluting, or otherwise contaminating to the air, water, or soil, or in any way harmful or threatening to human health or the environment, the Landowner agrees to take any steps that are required of the Landowner with respect thereto under federal, state, or local law necessary to ensure its containment and remediation, including any cleanup.

26. *The Landowner's Title Warranty; No Prior Conservation Easements.*

The Landowner represents and warrants that it owns the entire fee simple interest in the Property, including the entire mineral estate, and hereby promises to defend this Easement against all claims that may be made against it. Any and all financial liens or financial encumbrances with priority over this Easement existing as of the date of the recording of this Easement have been subordinated. Exhibit C (Prior Encumbrances) sets forth all prior encumbrances. The Landowner represents and warrants that the Property is not subject to any other conservation easement whatsoever.

27. *Granting Subsequent Easements, Interests in Land, or Use Restrictions.*

With permission of the Grantee pursuant to Section 4, the Landowner may grant subsequent easements, including conservation easements, interests in land, or use restrictions on the Property. Under no circumstances shall the Grantee approve the granting of subsequent easements, interests in land, or use restrictions that might diminish or impair the agricultural productive capacity or open space character of the Property. The Grantee's written approval shall be obtained at least thirty (30) days in advance of the Landowner's execution of any proposed subsequent easement, interests in land, or use restriction on the Property, and such subsequent easements, interests in land, and use restrictions shall make reference to and be subordinate to this Easement. The Grantee shall notify the Department immediately upon receipt of request by the Landowner to grant a subsequent easement, interest in land, or use restriction on the Property. The Grantee shall notify the Department in the event that it approves the grant of any subsequent easement, interest in land, or use restriction on the Property.

28. *Severability.*

If any term, provision, covenant, condition, or restriction of this Easement is held by a court of competent jurisdiction to be unlawful, invalid, void, unenforceable, or not effective the remainder of this Easement shall remain in full force and effect and shall in no way be affected, impaired, or invalidated.

29. *Entire Agreement.*

This Easement is the final and complete expression of the agreement between the parties with respect to the subject matter contained herein. Any and all prior or contemporaneous agreements with respect to this subject matter, written or oral, are merged into and superseded by this written instrument.

30. *Acceptance.*

As attested by the signature of its [*Position title*] affixed hereto, as authorized by Grantee's Board of Directors/Trustees, in exchange for consideration, the Grantee hereby accepts without reservation the rights and responsibilities conveyed by this Deed of Agricultural Conservation Easement.

To Have and To Hold, this Deed of Agricultural Conservation Easement unto the Grantee, its successors and assigns, forever.

In Witness Whereof, the Landowner and the Grantee, intending to legally bind themselves, have set their hands on the date first written above.

Conservation Easements

The Riverside Land Conservancy is increasingly making use of conservation easements as a conservation tool. A conservation easement (or conservation restriction) is a legal agreement between a landowner and a land trust or government agency that permanently limits uses of the land in order to protect its conservation value. It allows landowners to continue to own and use their land and to sell it or pass it on to heirs. Future owners continue to be bound by the easement's terms. Currently, RLC holds conservation easements on 801 acres in western Riverside and San Bernardino Counties including a conservation easement on the 150 acre Colton Dehli sands flower-loving fly Conservation Bank. RLC is in active negotiations to accept an additional 375 acres of conservation easements on sensitive open space and natural habitat areas.

PROJECT MEMORANDUM

Date: June 10, 2014

To: Jeff Bradshaw, City of Moreno Valley

From: Kent Norton, LSA Associates

Project: ProLogis Eucalyptus Industrial Park FEIR

Subject: PC Comment Letters

On April 24, 2014, the City Planning Commission held a continued public hearing on the ProLogis Eucalyptus Industrial Park project, including the Final Environmental Impact Report (FEIR). Just prior to the meeting, the following three additional comment letters were received from: (1) the law firm of Johnson & Sedlack (J&S) dated April 24; (2) George Hague, a local Sierra Club representative; and (3) the law firm of Lozeau Drury LLP dated April 23. It should be noted that these letters are attached for the reader's reference.

While the comments in these letters were similar in nature and scope to those made by these same firms on the Draft EIR, they focused on the responses to their many comments on the DEIR. The following responses are general in nature and mainly intended to clarify the information already provided in the Draft and Final EIR documents. There were no new issues raised by these additional comments as outlined in the California Environmental Quality Act (CEQA). Please let me know if you need any additional information in this regard.

1. Johnson & Sedlack Letter (April 24, 2014)

Comment A (page 1): *The FEIR has been updated to incorporate an August 31, 2012 letter from Lozeau Drury, LLP. The changes made and responses to comments in the updated FEIR illustrate, rather than resolve, defects of the EIR. For example, response to comment 12 at page 222 fails to address any of the proposed mitigation to further reduce GHG impacts where such effects are many times SCAQMD's proposed quantitative threshold.*

Response to Comment A: The response to comment 12 on page 222 of the FEIR does not address any of the proposed mitigation because, as explained in that response, the emissions of greenhouse gases by the proposed project are determined to be less-than-significant and therefore no mitigation is needed.

Comment B (page 1): *The addition of MM 4.6.6.1A provides for testing onsite for contamination by agricultural chemicals which should be done in the EIR prior to consideration by the City of Project approval due to the farming which occurred after the Phase 1 assessment and the risk of pesticides onsite not previously addressed.*

Response to Comment B: Responses 8 and 9 to Letter D-4A in the Final EIR go into great detail about the potential for contamination by agricultural chemicals on the project site, and the conclusion is there is only a low or minor potential. There is no indication that contamination is widespread, and almost of the site was previously surveyed for soil contamination, including soil tests for such chemicals. However, Mitigation Measure 4.6.6.1A was added to address this potential impact, as explained in the responses. There is no evidence that would lead a reasonable person to conclude that the potential for soil contamination by agricultural chemicals on this site was so high as to require soil testing and remediation prior to approval of the project. It is common in this portion of Riverside County to find former agricultural sites that have low or negligible levels of some agricultural chemicals as may be present on the project site. However, as outlined in

the indicated responses, these do not represent a significant environmental impact (i.e., one that would prevent approval of the project), and the additional mitigation measure will assure there will be no significant impacts in this regard as it will be implemented prior to grading or development of the site.

Comment C (page 1): *Air quality and health risk impacts are also shown to be understated, yet receive only brief responses in the FEIR. The responses to comments ignore/overlook whole portions of the comments made; for example, the responses made to Letter D-4B and D-4C fail to address the very important issues raised therein.*

Response to Comment C: The air quality and health risk impacts are all well documented and thoroughly analyzed. Nowhere has either been shown to be understated. In fact, as explained in the health risk assessment, the potential air quality and health risk impacts shown in the FEIR are analyzed using conservative assumptions so that they are intentionally overstated to be protective of the health of any individual affected by the air emissions from the projects construction and/or operation.

Comment D (pages 1 and 2): *Overall, the responses for this letter does not evidence good faith, reasoned analysis, or resolve the substantial concerns raised. More importantly, this minor update to the FEIR does not address or resolve the many significant flaws raised in the other comments on the EIR and made previously, which demand the EIR and its studies be significantly modified, updated, and recirculated prior to consideration of this Project for approval. The City should determine not to approve the Project and not to certify this defective EIR. It is apparent that this Project is good only for the developer and bad for the environment and people of Moreno Valley. The Project requires City approval of ten applications for development including a General Plan Amendment and Zone Change, undermining future planning for development in the City. The existing General Plan designation and zoning for the project site consists of a balanced collection of land uses to meet a specific need of the City, which this Project would entirely obliterate. (i.e. by converting for Project development land presently designated in the General Plan R15, R5, and R2; Zoning BP, BPX, R15, R5, RA-2, and PAKO-land).*

Response to Comment D: The EIR does provide a reasoned and reasonable assessment of the potential impacts of the proposed project, including changes in the General Plan and zoning designations for the site. The EIR identifies the significant environmental impacts that will result from implementation of the project even with the proposed feasible mitigation, as required by CEQA. It will be up to the discretion of the City to take appropriate action on the project in light of the whole record of evidence presented in the Draft and Final EIR documents.

Comment E (page 2): *The Project will also result in, as disclosed in the EIR, significant and unmitigated impacts to aesthetics, agricultural resources, air quality, population and housing, and transportation. In addition, many commenters cited a lack of evaluation, disclosure, and adequate mitigation regarding numerous other impacts, including health risks, air quality, GHGs, biology, etc. Given the harm to the community and region expected to be caused by the Project, and the failures of the EIR prepared for the Project, Project denial is well supported. At a minimum, the EIR and its technical studies must be significantly updated and recirculated before this Project is even considered for approval by the City.*

Response to Comment E: As required by CEQA, the EIR identifies the significant environmental impacts that will result from implementation of the project even with the proposed feasible mitigation. It should be noted that much of the delay in processing the project environmental documents in a timely fashion are due to the City's moratorium on development processing within the eastern SR-60 corridor during 2013, and responding to comments on the CEQA documents raised by conservation groups. There has been no empirical evidence submitted that would indicate updated technical studies would identify any new or different significant impacts of the project.

Comment F (page 2): *Additionally, Caltrans sent a letter to the City dated March 17, 2014 recommending that the City of Moreno Valley coordinate a state sponsored program of collecting transportation mitigation fees from development projects to make improvements to the State Highway System. I concur that such a fee program is essential to ensuring that all feasible traffic mitigation is adopted for this Project and others like it in the City. The City should take Caltrans' request to heart and work with the State in developing a mitigation fee program for highway impacts prior to making any approval relative to this Project. Until such a program is adopted, the City ignores its obligations to adopt all feasible mitigation for traffic impacts for this Project and others.*

Response to Comment F: The EIR outlines mitigation that is needed for project-related impacts, but a number of the recommended improvements are under the jurisdiction of Caltrans, not the City. It would be up to Caltrans to develop a regional mitigation program for freeway-related improvements, and certainly the City can encourage Caltrans to initiate such a program. However, as previously stated, the Caltrans-related improvements are not feasible according to the definition of CEQA since the lead agency (i.e., the City) does not have control over them. Therefore, the mitigation has to be determined to be infeasible at this time and the impacts determined to be significant.

2. George Hague Letter (April 24, 2014)

Comment A (page 1): *The developer states that even though a recent court case allows you to require Ag mitigation which will also serve raptor foraging, they are unable to find an AG mitigation bank in Riverside Co. I believe there will be an AG mitigation program by occupancy of the project and you could require mitigation at that time. The state does have such programs and the developer could use those—even if the county doesn't have an AG mitigation program.*

Response to Comment A: An Appeals Court decision (*Building Industry Association of Central California v. County of Stanislaus*) certified in November 29, 2010 may be more applicable to this situation. That case concluded that it is appropriate to mitigate at a 1:1 ratio for the loss of prime agricultural land through the acquisition of an offsite agricultural easement if such a program is established by a county or regional governmental entity. However, as outlined in the DEIR section, there is no established County or regional program, and active agriculture in western Riverside County is no longer economically viable or feasible. It should be noted that the State provides information on how to establish agricultural easements and mitigation banks, but the State does not fund or maintain such programs in western Riverside County.

Comment B (page 1): *Even though the developer believes they do not need to include the World Logistics Center (WLC) in their cumulative impacts, it is our opinion that the WLC was a foreseeable project based on newspaper articles, and conversations in the community.*

Response to Comment B: According to the procedures identified in CEQA, the list of cumulative projects is established at the time the baseline environmental conditions are set, which is the time the Notice of Preparation (NOP) is issued for the EIR. The NOP for the ProLogis EIR was issued on February 4, 2008 which was four years before the NOP for the World Logistics Center EIR which was issued on February 3, 2012. As much as the commenter would like the ProLogis project and EIR to be connected to the World Logistics Center project, CEQA does not allow the lead agency to "cherry pick" development information that occurs subsequent to issuing the NOP. In addition, the World Logistics Center project is highly controversial and it is not clear or reasonable to conclude at this time that project would be approved.

Comment C (page 1): *Caltrans wants a mitigation Bank. Will you require this project to participate in such? I am sure all in the room would appreciate anything you can do to mitigate noise on SR-60.*

Response to Comment C: The EIR outlines mitigation that is needed for project-related impacts, but a number of the recommended traffic improvements are under the jurisdiction of Caltrans, not the City. It would be up to

Caltrans to develop a regional mitigation program for freeway-related improvements, including noise walls, and certainly the City can encourage Caltrans to initiate such a program. However, as previously stated, the Caltrans-related improvements are not feasible according to the definition of CEQA since the lead agency (i.e., the City) does not have control over them. Therefore, the mitigation has to be determined to be infeasible at this time and the impacts determined to be significant. It should also be noted that there are already sound walls along the SR-60 freeway through much of the City, so it is unclear to what specific noise mitigation on the SR-60 the commenter is referring.

Comment D (page 1): *The WLC will caste a cancer plume over basically all of Moreno Valley. This project as you heard will add to it.*

Response to Comment D: The EIR examined the potential health risks of the ProLogis project which are relatively limited due to the size of the project, and as explained above in Response B, the ProLogis EIR was not able to include any information on potential impacts of the World Logistics Center project. The reader should note however that the World Logistics Center Specific Plan EIR does include an extensive analysis of potential project and cumulative health risks related to that project, which does include the ProLogis project in its cumulative projects list because the ProLogis project was in the City's development review process when the NOP for the World Logistics Center project was issued.

Comment E (page 1): *This project is being honest to a point with traffic impacts. Moreno Beach South will be impacted, including a new housing tract being built now near the substation. The environmental document also has impacts at Alessandro Blvd at Nason but not further west because of the City's 5 mile limit which isn't far enough to address full impacts of its traffic.*

Response to Comment E: The radius for cumulative projects that could contribute traffic to City streets was adequate for determining the significance of traffic impacts from the proposed ProLogis project. The commenter has not provided any empirical evidence that would suggest the traffic study parameters and methodology were not appropriate or not consistent with the City's long-established requirements for such studies.

Comment F (page 1): *The City's General Plan is now internally inconsistent with all the changes since its adoption and this project only increases that problem.*

Response to Comment F: The City has the discretion to determine at what point its General Plan must be updated to incorporate General Plan Amendments that have occurred since the last update of the General Plan. In addition, CEQA requires projects that propose any amendments to the General Plan to evaluate the potential environmental impacts of those changes in their CEQA compliance documents, which was included in the EIR for the ProLogis project. The commenter has provided no empirical evidence to indicate this or other General Plan Amendments would result in significant adverse impacts on the environment that have not either been mitigated to less than significant levels or that cannot be mitigated but the project provides various benefits to the community that outweigh the identified impacts (see the Findings of Fact and Statement of Overriding Considerations for this project).

3. Lozeau Drury Letter (April 23, 2014)

NOTE: This letter was too long to include in its entirety in this brief response memo, but the reader is encouraged to refer to that letter for the specific text of each comment as appropriate.

Comment A (page 2): *There is no substantial evidence to support the FEIR's remarkable assertion that the air quality mitigations applied to the Project will reduce GHG emissions by 70,000 tons per year. It is not sufficient under CEQA for the City to pick a few air quality mitigations of unknown efficacy and then simply assume that*

they will miraculously reduce the Project's 79,000 metric tons of GHG emissions down to less than 10,000 metric tons.

Response to Comment A: The FEIR never claims that the project-related emissions of GHGs will be reduced to an annual rate of 10,000 metric tons of CO_2e. As stated in the FEIR on page 109, "The Draft EIR (Section 4.3) made a determination that the proposed project would not conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases and no mitigation is required. However, it was determined that the proposed project would generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment and mitigation was proposed to reduce these project-specific effects to less that significant (Draft EIR, page 4.3-21 through 4.3-26)." It should also be noted that the 10,000 metric ton "limit" is a guideline and only a threshold used by the SCAQMD for evaluating its own projects – it has not been adopted as a legal standard for the City of Moreno Valley or other cities at this point.

Comment B (pages 2-3): *The FEIR must do more than make exaggerated claims of mitigation effectiveness.*

Response to Comment B: The FEIR does not make any claims related to the effectiveness of mitigation of project-related emissions of GHGs. The significance conclusions are not based on the effectiveness of any mitigation, but rather as described in Section 4.13.6, "…project-related GHG emissions and their contribution to global climate change impacts in the State are less than significant and less than cumulatively considerable because: (1) the project's impacts alone would not cause or significantly contribute to global climate change, and (2) the project has no substantial effect on consumption of fuels or other energy resources, especially fossil fuels that contribute to GHG emissions when consumed."

Comment C (page 3): *Claiming to rely on a qualitative assessment, the City instead applies bald assumptions, assuming that the air quality mitigations will have a dramatic effect on reducing GHG emissions from the project all the way down to a level of insignificance, i.e. less than 10,000 metric tons per year.*

Response to Comment C: See the Response to Comment B.

Comment D (page 3): *The second rationale set forth in the EIR is that "the project has no substantial effect on consumption of fuels or other energy resources, especially fossil fuels that contribute to GHG emissions when consumed." How a project that will generate upwards of 5,000 vehicle trips per day would have no substantial effect on consumption of fuels is not further elucidated in the EIR.*

Response to Comment D: The basis for this assertion in the FEIR is that the project is not manufacturing vehicles, thus the vehicles that will travel to and from the project site are vehicles that already exist and are in use. The project will only cause them to be used in a different location. When analyzing local or even regional impacts this relocation of vehicles is important, however, when analyzing a global impact, the location of vehicles does not matter.

Comment E (page 3): The commenter suggests the cumulative analysis in the ProLogis EIR must include the World Logistics Center project.

Response to Comment E: According to the procedures identified in CEQA, the list of cumulative projects is established at the time the baseline environmental conditions are set, which is the time the Notice of Preparation (NOP) is issued for the EIR. The NOP for the ProLogis EIR was issued on February 4, 2008 which was four years before the NOP for the World Logistics Center EIR which was issued on February 3, 2012. As much as the commenter would like the ProLogis project and EIR to be connected to the World Logistics Center project, CEQA does not allow the lead agency to "cherry pick" development information that occurs subsequent to issuing the NOP. In addition, the World Logistics Center project is highly controversial and it is not clear or reasonable to conclude at this time that project would be approved. Therefore, the World Logistics Center project does not constitute "significant new information" at this time within the definition of CEQA.

Comment F (page 5): *The substantial evidence in the record establishes that the Project will have a significant impact on GHG emissions, including the sheer volume of its GHG emissions and its adverse impact on the City's ever achieving its GHG reduction targets. The FEIR confirms that the City has not gathered in any estimate of actual reductions of GHG emissions by any of the mitigation measures it purports will address those emissions. Hence, it is clear that there is no substantial evidence in the record to show that the Project will emit 10,000 metric tons or less per year of CO_2 equivalents.*

Response to Comment F: The FEIR does not use 10,000 metric tons of CO_2 equivalents as a threshold of significance nor make any claims that GHG emissions would be reduced to that level.

Comment G (page 6): The commenter believes the EIR underestimates the air quality impacts of the project because the project traffic study used the wrong trip generation rates.

Response to Comment G: The commenter is incorrect, the traffic study for the project did use appropriate trip generation rates as described in the Draft EIR Section 4.11 and the project Traffic Impact Assessment (TIA)(DEIR Appendix I). The City requires TIAs to use the latest trip generation rates established by the International Traffic Engineers (ITE) which was done in this case, based on similar kinds of projects in the region. The SCAQMD trip rates have not been vetted through regional traffic modeling maintained by the Southern California Association of Governments (SCAG) or the Western Riverside Council of Governments (WRCOG). Until they are, the City will continue to require the use of appropriate ITE trip rates for TIAs within the City.

Comment H (page 6): *The EIR Does Not Include Additional Feasible Mitigation Measures to Further Reduce the Project's Significant Impacts From its Emissions of NOx and PM_{10} and, Without Requiring Additional Measures, the City Cannot Adopt a Statement of Overriding Considerations. The measures include requiring electrified loading docks for all refrigeration units and the use of fuel cell trucks to reduce NOx emissions.*

Response to Comment H: The FEIR includes all feasible mitigation available to reduce the emissions of NO_X and PM_{10}; however, these are not sufficient to reduce the emissions levels to less than significant. Regarding the two measures cited, the first would not reduce the emissions of trucks driving to and from the project site, only those from trucks while loading or unloading, a very small portion of the overall truck emissions. The second is not feasible until fuel cell trucks become commercially available.

Comment I (page 8): *The list of measures included in Mitigation Measure 4.3.6.5B should be mandatory and enforceable in order to be consistent with the CEQA Guidelines.*

Response to Comment I: The measures listed in Mitigation Measure 4.3.6.5B are intended to be suggestions for the developer to choose from to reduce energy consumption by 10% above Title 24 standards (as described in the FEIR Response to Comment D-3, No. 109).

Comment J (page 8): *LIUNA Local 1184 appreciates the change in the FEIR to make the energy efficiency requirement set forth in Measure 4.3.6.5A mandatory rather than voluntary. However, a number of the requirements embedded within the mandatory efficiency standard should also be adjusted to be mandatory requirements or otherwise clarified. For example, there is a requirement that lease/purchase documents shall identify that tenants are merely encouraged to promote a list of air pollution reduction measures. See DEIR, 1-27 – 1-28, Table 1.C; FEIR, pp. 58-59, 61-62. The FEIR should be revised to make these feasible tenant/purchaser measures mandatory as well.*

Response to Comment J: The measures listed in Mitigation Measure 4.3.6.5A (in the DEIR, the revised mitigation measure in the FEIR is 4.3.6.6.A) are intended to be suggestions for the developer to choose from to reduce energy consumption by 10% above Title 24 standards (as described in the FEIR Response to Comment D-3, No. 109).

Comment K (page 8): *Measure 4.3.6.5A also includes a vague requirement to "[i]ncorporate energy efficient space heating and cooling equipment." This measure should be clarified to require that cooling for the main warehouse spaces at the Project shall be provided through evaporative coolers rather than air conditioners, or use new or different cooling technology that is at least as efficient. In addition, the mitigation should require the warehouse spaces to incorporate automated airflow and ventilation systems designed to minimize need for supplemental heating and cooling within the warehouse spaces. These measures are feasible, having been applied at other warehouse facilities.*

Response to Comment K: As described in the Response to SCAQMD Comment 1 on page 57 of the FEIR, the City desires to address the District's recommendations to the extent feasible, so the applicant has agreed to allow the following modifications to Mitigation Measure 4.3.6.6A to incorporate the District's recommendations to eliminate "encouraged" with stronger enforceable language. This is sufficient to satisfy the SCAQMD. The building HVAC system will be built in compliance with all California building codes resulting in a highly efficient system.

Comment L (page 8): *Currently, Measure 4.3.6.5A requires that "[a]ll buildings shall be designed to accommodate renewable energy sources, such as photovoltaic solar electricity systems, appropriate to their architectural design." FEIR, p. 197. This mitigation measure should be revised to require that photovoltaic, or comparable renewable energy sources, be actually installed on all buildings sufficient to provide all of the energy needs of the Project and, if feasible, surplus energy to help offset the Project's remaining pollution emissions.*

Response to Comment L: The GHG emissions resulting from project-related energy demand increases is approximately 2.75% of the total GHG emissions predicted from project operations. While the installation of photovoltaic (or comparable renewable energy sources) would reduce the energy demand somewhat, it would only affect this small percentage of the total project emissions. Thus, adding photovoltaic panels would have a negligible effect on the total GHG emissions.

Comment M (page 8): *Additionally, Mitigation Measure 4.3.6.5B currently appears inconsistent with Mitigation Measure 4.3.6.5A. Unlike Measure 4.3.6.5A, Measure 4.3.6.5B does not increase the improvement over energy efficiency standards to 20 percent as was proposed in the DEIR and which applies to the related Measure 4.3.6.5A. FEIR, pp. 194-201. In order to apply all feasible measures, Measure 4.3.6.5B's list of measures should be made mandatory (replace "may" with "shall") and the measure to exceed statewide energy efficiency requirements by 10 percent restored to a 20 percent exceedance. FEIR, pp. 194-96. In addition, a requirement that the Project use building automation systems to control and optimize the efficiency of its mechanical systems, including lighting, HVAC, exhaust dampers, fans, and ventilation louvers should be added to Measure 4.3.6.5B's list.*

Response to Comment M: These mitigation measures were totally updated in the FEIR, as described in the Response to Comment 14 on page 103 of the FEIR: "Mitigation Measure 4.3.6.6A was modified and Mitigation Measure 4.3.6.6B was added to address construction equipment and vehicles operating for the project (see Final EIR, Section 3.0, *EIR Errata and Additions*)." These updates resolve the apparent inconsistencies.

Comment N (page 8): *The EIR Does Not Include Additional Feasible Mitigation Measures to Further Reduce the Project's Significant Impacts From its Particulate Matter Emissions During Construction and, Without Requiring Additional Measures, the City Cannot Adopt a Statement of Overriding Considerations. An additional feasible mitigation measure that also would assist in assuring that the Project's air quality pollution mitigations during construction are enforceable is a measure to require monitoring of dust plumes. SWAPE identifies "[m]onitoring for opacity for all construction activities, including grading, not just for "screening" and "turf overseeding" activities" as an additional feasible measure.*

Response to Comment N: The fugitive emissions of particulate matter (PM_{10} and $PM_{2.5}$) during construction was shown to be very small compared to the SCAQMD significance thresholds - 18 lbs/day compared to the 150 lbs/day threshold for PM_{10}, 3.9 lbs/day compared to 55 lbs/day for $PM_{2.5}$. There is no need to take any actions to further reduce these already small emission rates.

Comment O (page 9): *The EIR dramatically understates the health risks that will result from the Project's construction phase because the health risk assessment it relies upon assumes construction will only occur for four months rather than the 11.5 months reported in the EIR.*

Response to Comment O: The rationale used for the screening-level HRA of construction emissions is that, while the total construction period will be about 11 ½ months, the only portion of that time that will have large diesel-powered construction equipment operating regularly is the 2 month grading phase. Assuming that there will be large diesel-powered construction equipment operating occasionally during the other phases, it was assumed that using 4 months of daily use of the large diesel-powered construction equipment would conservatively characterize the overall construction process.

Comment P (page 9): *In contrast to SWAPE's analysis, which fully discloses all of its inputs and models, "no modeling files or cancer risk calculations for the construction impacts analysis were provided in the DEIR or the FEIR" for the EIR's health risk assessment. Id., pp. 9-10. Hence, the substantial evidence available to the Commission and others indicates that cancer risks to the Project's neighbors are significant.*

Response to Comment P: The commenter is incorrect, the DEIR includes the full Air Quality technical analysis which contains the full documentation of the inputs, modeling and results files in Appendix C. The project HRA is based on recommendations and methodologies established by the SCAQMD for such studies, including reasonable worst case assumptions for project construction and operation. Certainly making other worst case assumptions as SWAPE has done would yield different results, but the City as the lead agency must ultimately make the determination as to what expert information it uses on which to base its evaluation of project impacts.

Comment Q (page 9): *The EIR also underestimates health risk impacts to workers to be employed at the Project site.*

Response to Comment Q: The HRA in the EIR fully documents the projected health risk levels to nearby residents, however, CEQA does require an analysis of impacts to onsite workers as these individuals are protected by OSHA regulations. In addition, CEQA requires an analysis of impacts of a project on the existing or baseline environment, and future workers of the project do not constitute baseline conditions.

Comment R (page 10): The commenter states the EIR fails to recommend feasible mitigation for loss of agricultural land.

Response to Comment R: As documented in Section 4.2 of the Draft EIR, farming is no longer a viable economic activity in this portion of Riverside County, and the General Plans of the County and City both identify land uses that will a transition from historical agricultural land to appropriate suburban land uses. This proposed project represents a step in that anticipated transition. Gail Egenes, Executive Director of the Riverside Land Conservancy, has indicated the agency does not have any established program to purchase agricultural easements or lands. Also, in consultation with the National Conservation Easement Database, Riverside County does not have any established agricultural easements.[1]

Contributions to Riverside County Land Conservancy or the San Jacinto Basin Resource Conservation District by private land owners are not required as part of a City or regional mitigation plan for loss of agricultural land. Therefore, the decision whether to make any contributions in this regard would be at the discretion of the

[1] http://nced.conservationregistry.org/browse/map, accessed October 4, 2012.

developer in consultation with the City. For additional detailed analysis on this issue, see Responses 22 and 23 in the letter from Johnson & Sedlack (D-3) in the Final EIR. Since there is no feasible mitigation available, the impact has been identified as significant and unavoidable, and the City will have to adopt a Statement of Overriding Considerations as part of its Findings on the EIR prior to action on the project.

Comment S (page 11): The commenter requests additional information regarding soil sampling for residual pesticides.

Response to Comment S: Responses 8 and 9 to Letter D-4A from the same commenter in the Final EIR go into great detail about the potential for contamination by agricultural chemicals on the project site, and the conclusion is there is only a low or minor potential. There is no indication that contamination is widespread, and almost of the site was previously surveyed for soil contamination, including soil tests for such chemicals. However, Mitigation Measure 4.6.6.1A was added to address this potential impact, as explained in the responses. There is no evidence that would lead a reasonable person to conclude that the potential for soil contamination by agricultural chemicals on this site was so high as to require soil testing and remediation prior to approval of the project. It is common in this portion of Riverside County to find former agricultural sites that have low or negligible levels of some agricultural chemicals as may be present on the project site. However, as outlined in the indicated responses, these do not represent a significant environmental impact (i.e., one that would prevent approval of the project), and the additional mitigation measure will assure there will be no significant impacts in this regard as it will be implemented prior to grading or development of the site.

Regarding the proposed additional requirements for Mitigation Measure 4.6.6.1A, the City may adopt one or more of these items at their discretion and incorporate them into the Mitigation Monitoring Plan or Conditions of Approval as appropriate.

Appendix A –SWAPE Letter dated April 21, 2014

Response to Appendix A: The air quality data in this letter was used to prepare the Lozeau Drury comment letter addressed above. The specific comments made by SWAPE have been addressed in appropriate sections of the Lozeau Drury letter.

Appendix B – Clark & Associates Letter dated April 22, 2014

Response to Appendix B: The trip generation data in this letter was used to prepare the Lozeau Drury comment letter addressed above. The specific comments made by Clark & Associates have been addressed in appropriate sections of the Lozeau Drury letter.

Appendix C –World Logistics Center EIR: Selected excerpts of the air quality analysis were provided as a comparison to the ProLogis project.

Response to Appendix C: The data in this appendix was referred to by the commenter in relation to greenhouse gas emissions (GHG) and the City's GHG inventory. There were no specific comments in this appendix, only background info for certain comments by Lozeau Drury in this letter.

PLANNING COMMISSION STAFF REPORT

Case:	PA07-0081 - Zone Change PA07-0082 - General Plan Amendment PA07-0083 - Master Plot Plan including Building 2 PA07-0084 - Tentative Parcel Map 35679 PA07-0158 - Plot Plan for Building 1 PA07-0159 - Plot Plan for Building 3 PA07-0160 - Plot Plan for Building 4 PA07-0161 - Plot Plan for Building 5 PA07-0162 - Plot Plan for Building 6 P07-186 - Environmental Impact Report
Date:	March 13, 2014
Applicant:	Prologis
Representative:	Prologis
Location:	South of State Route 60 and east of Moreno Valley Auto Mall, at Fir Avenue (Future Eucalyptus Avenue) and between Pettit Street and the Quincy Channel.
Proposal:	General Plan Amendment and Zone Change from existing Business Park, Business Park Mixed-use, R15, R5, and RA-2 land use designations to Light Industrial for 122 acres. The land use changes are required for development of six distribution warehouse facilities totaling 2,244,419 square feet with building sizes that range from 160,106 square feet to 862,035 square feet. The applicant also proposes Tentative Parcel Map No. 35679 to subdivide the project site into six parcels. A General Plan Amendment is also required for proposed changes to the City's circulation element and the Master Plan of Trails. Approval of this project will require certification of an EIR.
Recommendation:	Approval

SUMMARY

The applicant proposes to develop a 2.2 million square foot industrial park on 122 acres subject to approval of a General Plan Amendment and Zone Change from BP, BPX, R15, R5 and RA-2 to LI, and certification of a Final EIR.

PROJECT DESCRIPTION

The applicant, Prologis, has submitted ten applications for development of the Prologis Eucalyptus Industrial Park Project, which include a General Plan Amendment, Zone Change, Master Plot Plan, related Plot Plans, a Tentative Parcel Map, and an Environmental Impact Report, in order to develop a 2,244,419 square foot industrial park on a 122 acre site (Assessor's Parcel Numbers 488-330-011, 012, -013, -017, -018, -019, -020, and -021) located South of State Route 60 and east of Moreno Valley Auto Mall, at Fir Avenue (Future Eucalyptus Avenue) and between Pettit Street and the Quincy Channel.

General Plan Amendment

The project site has current General Plan land use designations that include approximately 50 acres of Business Park, 36 acres of R15 (Residential – up to 15 units per acre), 23 acres of R5 (Residential – up to 5 units per acre), and 12 acres of RA-2 (Residential/Agriculture – up to 2 units per acre). The applicant proposes to change the land use designation for the entire project site to Business Park. The proposed change would expand the Business Park designation onto approximately 71 acres that is currently designated for residential development.

Land uses to the north include the adjacent freeway with Office Commercial, R2 and RA-2 zoned land north of the freeway. Land uses to the east include a mix of Light Industrial and Community Commercial zoned land and RA-2 zoned land with an approved warehouse facility located immediately to the east and a developed warehouse facility further to the east between Redlands Boulevard and Theodore Street. Land uses to the south include vacant RA-2 zone with developed tract homes across the channel from the project site.

The General Plan Amendment also proposes a change to the Circulation Element that would eliminate the connection from Fir Avenue/Future Eucalyptus Avenue to Eucalyptus Avenue/Future Encilia Avenue to the south. The change ensures that traffic generated by existing and proposed non-residential uses is kept separate from residents that live along Eucalyptus Avenue/Future Encilia Avenue to the southeast.

Additionally, the General Plan Amendment proposes changes to the Master Plan of Trails. The proposed change would remove an existing trail segment that runs north/south along the west side of the Quincy Channel between Fir Avenue/Future Eucalyptus Avenue to State Route 60. This trail segment was originally intended to cross the freeway on an overpass at Quincy Street. This overpass is no longer on the City's General Plan Circulation element. With the loss of the overpass, trail would end in a cul-de-sac at State Route 60.

Staff met with the City's Recreational Trails Board in February 2012 to discuss replacement of the dead end segment of the trail with a new segment of trail on the north side of Fir Avenue/Eucalyptus Avenue that would run from the Quincy Channel west to the site's western boundary ending at the Fire Station #58. The Board was supportive of the change. The applicant has agreed to install the new segment of trail.

Zone Change

The project site has current zoning designations that include approximately 49.5 acres of Business Park, 0.5 acre of Business Park Mixed-use, 36 acres of R15, 23 acres of R5, and 12 acres of RA-2. The applicant proposes to change the Zoning for the entire project site to Light Industrial. The proposed change to Light Industrial is compatible with the 50 acres that is currently within a Business Park General Plan designation but would replace approximately 71 acres of residential zone land with a Light Industrial zone. The proposal would also result in the removal of a portion of the site from the PAKO (Primary Animal Keeping Overlay).

Land uses to the north include the adjacent freeway with Office Commercial, R2 and RA-2 zoned land north of the freeway. Land uses to the east include a mix of Light Industrial and Community Commercial zoned land and RA-2 zoned land with an approved warehouse facility located immediately to the east and a developed warehouse facility further to the east between Redlands Boulevard and Theodore Street. Land uses to the south include vacant RA-2 zone with developed tract homes across the channel from the project site.

Warehouse distribution uses are permitted in both the Business Park and Light Industrial zones, but the size of the buildings proposed by the project requires a Zone Change to Light Industrial to allow for the warehouse facilities over 50,000 square feet.

Plot Plans

Master Plot Plan PA07-0083 proposes the development of an industrial park to include a total of 2,244,419 square feet of warehouse distribution on 122 acres. This application also includes Building #2 on Parcel 2 of TPM 35679 for development of an 862,035 square foot warehouse distribution building on 39.32 acres with 311 required employee parking spaces and 135 required truck parking spaces.

Plot Plan PA07-0158 for Building #1 on Parcel 1 of TPM 35679 proposes development of a 168,342 square foot warehouse distribution building on 8.84 acres with 100 required employee parking spaces and 21 required truck parking spaces.

Plot Plan PA07-0159 for Building #3 on Parcel 3 of TPM 35679 proposes development of a 160,106 square foot warehouse distribution building on 8.5 acres with 98 required employee parking spaces and 20 required truck parking spaces.

Plot Plan PA07-0160 for Building #4 on Parcel 4 of TPM 35679 proposes development of a 339,015 square foot warehouse distribution building on 15.66 acres with 180 required employee parking spaces and 36 required truck parking spaces.

Plot Plan PA07-0161 for Building #5 on Parcel 5 of TPM 35679 proposes development of a 390,102 square foot warehouse distribution building on 19.29 acres with 173 required employee parking spaces and 53 required truck parking spaces.

Plot Plan PA07-0162 for Building #6 on Parcel 6 of TPM 35679 proposes development of a 325,038 square foot warehouse distribution building on 17.55 acres with 176 required employee parking spaces and 53 required truck parking spaces.

The loading and truck parking areas have been oriented away from adjacent residential zoned partials and meet/exceed the Municipal Codes minimum buffer distance of 250 feet.

All truck courts are screened by perimeter concrete tilt-up walls with a citrus tree row required along the State Route 60 frontage as an extension of the tree plantings along the rear of Fire Station #58. A tree row is also required along the Quincy Channel and southern property lines.

The project has been conditioned to provide standard parking lot and setback landscape to include ground cover shrubs and trees. Detention/water quality basins will be extensively landscaped. The project's Fir Avenue/Future Eucalyptus Avenue frontage will be developed with curb, gutter, parkway, sidewalk and a segment of multi-use trail. A segment of multi-use trail will also be installed on the west side of the Quincy Channel from Fir Avenue/Future Eucalyptus Avenue south to Eucalyptus Avenue/Future Encilia Avenue.

Tentative Parcel Map

Tentative Parcel Map No. 35679 proposes to re-configure the eight parcels located within the project site into six parcels with lettered lots to convey property to Caltrans for future development and to the City for public streets.

Site

The project site is comprised of vacant land that is mostly level and at grade with Fir Avenue/Future Eucalyptus Avenue and at or below grade of adjacent State Route 60. There are no trees, rock outcroppings or existing structures located within the limits of the project site. The project site includes a portion of the Quincy Channel which includes some riparian vegetation.

Surrounding Area

The project is located in an area that includes a mix of business park, office, commercial, residential and agricultural uses.

Developed land within proximity to the project site includes the Moreno Valley Auto Mall and Moreno Beach Plaza (Walmart) center to the west at Moreno Beach Drive, the 1.8 million square foot Highland Fairview Business Park (Skechers) warehouse facility to the east between Redlands and Theodore and large lot subdivisions in the RA-2 zone across the channel from the project site. Also immediately to the east is the site of the recently approved 800,340 square foot regional headquarters for ALDI Foods.

Access/Parking

The project site will be accessed directly from Fir Avenue/Future Eucalyptus Avenue via Moreno Beach Boulevard or Redlands Boulevard and State Route 60. This portion of Fir Avenue/Future Eucalyptus Avenue, including the bridge crossing at the Quincy Channel would be constructed by the applicant/developer as a condition of the project.

The driveways and interior drive aisles associated with the project have been approved by the Fire Prevention Bureau for fire truck access and turnaround. The site has also been designed for adequate truck maneuvering and turnaround within the designated loading zones. The project as designed satisfies all parking requirements of the City's Municipal Code.

Design/Landscaping

Site design of the proposed warehouse distribution facility is consistent with requirements of the City's Municipal Code.

The architectural design of the buildings is concrete tilt-up construction. Building and wall colors include earthtones, with varying amounts of accent colors and vertical features to break up the architecture of building. Roof top equipment will be screened from public view by parapet walls.

Staff worked with the applicant to ensure that all sides of the buildings include architectural treatment. The loading bays and trailer storage areas have been screened from view. The screen walls are of concrete tilt-up construction which will match the building designs and colors.

Landscaping for the project as proposed is at around 18% of the site area including the water quality/detention basins. The City's Municipal Code does not require a minimum percentage of landscape on a site. Instead, there are requirements for landscape setback areas along perimeter streets, parking lot landscape, street trees and landscape treatments around the perimeter of the buildings where visible from the public right-of-way. The project as designed meets the City's current landscape criteria.

Signs are not a part of this approval and will be reviewed and approved under separate administrative permit.

This project design conforms to all development standards of the Light Industrial zone and the design guidelines for industrial uses as required within the City's Municipal Code.

REVIEW PROCESS

The project was originally reviewed by the Project Review Staff Committee (PRSC) in September 2007. Modifications were required to the plot plan exhibits and preliminary grading plan.

Revised plans were submitted in January and August 2008 and again in July and November 20011 and July and October 2012. Upon review of a final draft of the site plan and completion of the Final Environmental Impact Report in early 2014, a determination was made to schedule this project for a Planning Commission public hearing on March 13, 2014.

Community outreach efforts by the applicant in 2012 included mail distribution of project brochures to area residents, neighborhood walks to pass out brochures and open house invitations for an open house held in August 2012 at the Moreno Valley Ranch Golf Club.

State Route 60 East Corridor Study

The City Council imposed a 45 day moratorium on development for properties located along the State Route 60 corridor on January 23, 2013. The moratorium was later extended for a year by Council through adoption of Ordinance 861.

The moratorium was imposed to allow time for staff to work with a consultant to prepare a highest and best use analysis of the area. The State Route 60 East Corridor Study was prepared to identify land use alternatives for vacant and underutilized parcels within four sub-areas or study areas of the corridor.

The completed study was presented to the City Council as a report item on January 14, 2014. The study presented three alternatives including a preferred alternative. The City Council received the study but took no action to approve the study. The study becomes a resource document for consideration in the review of land use change applications. The City Council also recognized that the moratorium would expire on January 23, 2014. The land use changes proposed by the preferred alternative included expansion of the Auto Mall and warehouse uses.

Automobile dealerships which are a permitted use within the Auto Mall Specific Plan to the west are not a permitted use in existing Business Park zone. A change in zone to Light Industrial as proposed by the project would allow for automobile sales as a permitted use.

In recognition of the guidance provided by the SR 60 East Corridor study and based on discussions with City staff, the applicant has agreed to a condition of approval that would state that no building permits could be issued for the warehouse distribution buildings for plot plans located immediately adjacent to the Auto Mall (Plot Plan PA07-0158 and Plot Plan PA07-0159) during the initial 18 months if approved. This would allow for the potential expansion of the Auto Mall in the short term.

ALTERNATIVES DISCUSSION

The following scenarios or alternatives are presented for the Planning Commissions consideration.

1. Approve the project as proposed. As stated previously, the project has been conditioned to not build the two warehouses (Buildings 1 and 3) located adjacent to the Auto Mall for the first 18 months of the approval. This would allow for the potential expansion of the Auto Mall in the short term. The staff report has been prepared in support of this alternative;

2. Deny the General Plan Amendment and Zone Change for the two sites (Buildings 1 and 2) located adjacent to the Auto Mall but approve the proposed land changes for the remainder of the project site. This would prevent warehouse facilities from being built on potential Auto Mall expansion sites, but would still allow for warehouse development to occur on most of the project site. However, denial of the land use changes would also prevent future development of automobile sales since auto dealerships are not permitted within the BP and R15 zones.

3. Deny the proposed land use changes and thereby deny the proposed industrial park. Denial of the land use changes would prevent the warehouses from being approved. Denial of the land use changes would also prevent future development of automobile sales since auto dealerships are not permitted within the BP and R15 zones.

ENVIRONMENTAL

Initial Study/Notice of Preparation

An Initial Study was completed after all discretionary applications were deemed complete. Based on the information within the Initial Study, an Environmental Impact Report (EIR) was recommended to be prepared. A Notice of Preparation for the EIR was issued on February 4, 2008, with the public comment period beginning on February 4, 2008 and ending on March 4, 2008. A public meeting to receive input on the issues to be covered by the EIR was held at City Hall on February 13, 2008.

Draft Environmental Impact Report

Subsequent to that meeting, draft environmental documents were prepared by the applicant's consultant LSA Associates, Inc. and submitted to the City and its peer consultant for review.

City staff and the peer review consultant reviewed the draft environmental documents for compliance with the California Environmental Quality Act (CEQA) Guidelines and required revisions to address identified questions and concerns. After revisions were incorporated into the document, the Draft EIR was circulated for a 45-day public review period, starting on July 18, 2012, and ending on September 4, 2012.

The Draft EIR was sent to all required State and local agencies and numerous interested parties on July 17, 2012, as well as to the City's Environmental and Historical Preservation Board. Thirteen comment letters were provided during the 45-day review period.

Final Environmental Impact Report

Responses to the thirteen comments received during the 45 day review period are included in the Response to Comments. The Response to Comments and related documents were mailed to all interested parties and responsible agencies on February 26, 2014, to allow for their review prior to the Planning Commission hearing, within the minimum notice period of 10 days required by CEQA. As was the case with the Draft EIR, the draft Final EIR was provided for public review at City Hall, the City Library and posted on the City's website.

Significant and Unavoidable Impacts

Analysis presented in the EIR indicates that the proposed project will have a number of potentially significant impacts. The EIR includes a number of proposed mitigation measures to reduce or eliminate potential significant impacts. Even with proposed mitigation, a number of potential impacts cannot be reduced to a less than significant level. As identified in the Final EIR document, these impacts are considered to be significant and unavoidable.

Where a project's impacts cannot be reduced to less than significant levels, CEQA allows a decision making body to consider a statement of overriding considerations and findings. CEQA requires the decision making agency to balance the economic, legal, social, technological or other benefits of a proposed project against its unavoidable environmental impacts when determining whether to approve the proposed project. This would include project benefits such as the creation of jobs or other beneficial project features versus project impacts that cannot be mitigated to less than significant levels. If the decision making body determines that the benefits of a proposed project outweigh the unavoidable adverse environmental effects, it may approve a statement of overriding considerations and approve the project.

Mitigation Measures

The EIR includes mitigation measures intended to reduce project-specific and cumulative impacts for Air Quality, Biological Resources, Cultural Resources, Hydrology and Water Quality, Noise, Transportation, and Greenhouse Gases and Global Climate Change. All other environmental effects evaluated in the EIR are considered to be less than significant, or can be adequately mitigated below significant thresholds.

Mitigation measures are included to reduce the environmental impacts where possible, even where the impacts could not be reduced to less than significant levels. All mitigation measures have also been included as conditions of approval for the project.

Approval and Certification

The Planning Commission will take public testimony on the EIR and project and forward a recommendation to City Council. Before the proposed project can be acted upon, the City Council will need to review the final environmental document, receive public testimony and either certify or reject the EIR and project Mitigation Monitoring Program.

NOTIFICATION

Public notice was sent to all property owners of record within 300' of the project. The public hearing notice for this project was also posted on the project site and published in the local newspaper. As of the date of report preparation, staff had one comment letter stating opposition to the project.

A copy of the above referenced letter is included in the staff report as part of Attachment #7. Attachment #7 also includes opposition letters submitted in 2012 in response to eh circulation of the Draft Environmental Impact Report.

STAFF RECOMMENDATION

Staff recommends that the Planning Commission **APPROVE** Resolution No's. 2014-09 and 2014-10 and thereby recommend that the City Council take the following actions:

1. **CERTIFY** that the Environmental Impact Report (EIR) for the Prologis Eucalyptus Industrial Park Project (Attachments 9 and 10) has been completed in compliance with the California Environmental Quality Act; and

2. **ADOPT** the Findings and Statement of Overriding Considerations regarding the Final EIR for the Prologis Eucalyptus Industrial Park Project, attached hereto as Exhibit A to Attachment 2; and

3. **APPROVE** the Mitigation Monitoring Program for the Final EIR for the proposed Prologis Eucalyptus Industrial Park Project, attached hereto as Exhibit B to Attachment 2; and

4. **APPROVE** General Plan Amendment application PA07-0082 as shown on Exhibit A to Attachment 3; and

5. **APPROVE** Zone Change application PA07-0081 as shown on Exhibit B to Attachment 3; and

6. **APPROVE** Master Plot Plan PA07-0083 and related Plot Plans PA07-0158 through PA07-0162, subject to the attached conditions of approval included as Exhibit C to Attachment 3; and

7. **APPROVE** Tentative Parcel Map 35679 (PA07-0084), subject to the attached conditions of approval included as Exhibit D to Attachment 3.

PLANNING COMMISSION STAFF REPORT

Cases:	PA07-0081 - Zone Change PA07-0082 - General Plan Amendment PA07-0083 - Master Plot Plan including Building 2 PA07-0084 - Tentative Parcel Map 35679 PA07-0158 - Plot Plan for Building 1 PA07-0159 - Plot Plan for Building 3 PA07-0160 - Plot Plan for Building 4 PA07-0161 - Plot Plan for Building 5 PA07-0162 - Plot Plan for Building 6 P07-186 - Environmental Impact Report
Date:	April 24, 2014 – Continued from the March 13, 2014 meeting
Applicant:	Prologis
Representative:	Prologis
Location:	South of State Route 60 and east of Moreno Valley Auto Mall, at Fir Avenue (Future Eucalyptus Avenue) and between Pettit Street and the Quincy Channel.
Proposal:	General Plan Amendment and Zone Change from existing Business Park, Business Park Mixed-use, R15, R5, and RA-2 land use designations to Light Industrial for 122 acres. The land use changes are required for development of six distribution warehouse facilities totaling 2,244,419 square feet with building sizes that range from 160,106 square feet to 862,035 square feet. The applicant also proposes Tentative Parcel Map No. 35679 to subdivide the project site into six parcels. A General Plan Amendment is also required for proposed changes to the City's circulation element and the Master Plan of Trails. Approval of this project will require certification of an EIR.
Recommendation:	Approval

SUMMARY

The applicant proposes to develop a 2.2 million square foot industrial park on 122 acres subject to approval of a General Plan Amendment and Zone Change from BP, BPX, R15, R5 and RA-2 to LI, and certification of a Final EIR.

PROJECT DESCRIPTION

The applicant, Prologis, has submitted ten applications for development of the Prologis Eucalyptus Industrial Park Project, which include a General Plan Amendment, Zone Change, Master Plot Plan, related Plot Plans, a Tentative Parcel Map, and an Environmental Impact Report, in order to develop a 2,244,419 square foot industrial park on a 122 acre site (Assessor's Parcel Numbers 488-330-011, 012, -013, -017, -018, -019, -020, and -021) located South of State Route 60 and east of Moreno Valley Auto Mall, at Fir Avenue (Future Eucalyptus Avenue) and between Pettit Street and the Quincy Channel.

Background

A public hearing for this project was held on March 13, 2014. At the meeting information about the project and the related Final Environmental Impact Report (FEIR) was presented to the Planning Commission by Planning Division staff and representatives from LSA Associates, Inc. who prepared the FEIR. Following the staff report, comments were taken from the applicant and interested parties and residents.

The speakers included Gideon Kracov, an attorney representing Laborers International Union of North America (LIUNA). He was concerned that a second of two comment letters submitted by Lozeau Drury, LLP on behalf of LIUNA in response to the Draft Environmental Impact Report was not included in the Final Environmental Impact Report.

It was verified at the meeting that the City had received a second letter dated August 31, 2012, that should have been included in the FEIR. Following discussion with staff, the Planning Commission determined that the most appropriate action was to continue the item to the Commission's April 24, 2014 agenda, to allow for time to update the FEIR to include the August 31, 2012 letter and responses to the letter.

Following the March 13, 2014 meeting it was determined that there was an inadvertent omission in the distribution and tracking of the August 31, 2012 letter. Planning worked with LSA Associates, Inc. to update the FEIR to address the concerns raised in the letter. The FEIR was then redistributed to all agencies and interested parties and published on the City's webpage. Notice of the status of the FEIR and the Planning Commission's April 24, 2014 meeting was published in the newspaper, posted at the project site and sent to all property owners within 300 feet and all interested parties.

ENVIRONMENTAL

Final Environmental Impact Report

Responses to the fourteen comments received during the 45 day review period, including the August 31, 2012 letter from Lozeau Drury, LLP, are included in the Response to Comments. The updated Final Environmental Impact Report (FEIR) was mailed to all interested parties and responsible agencies on April 4, 2014, to allow for their review prior to the Planning Commission hearing on April 24, 2014.

The City issued a press release referencing the updated FEIR and the continued Planning Commission meeting and the updated Final EIR along with the Draft EIR and technical studies were provided for public review at City Hall, the City Library and posted on the City's website.

The concerns raised in the August 31, 2012 letter including segmentation of the project, loss of farmland, hazardous materials and soils, greenhouse gas, and air quality, have been addressed in detail in LSA Associate's response to comments.

Planning worked with LSA Associates, Inc. to provide responses to each of the concerns raised in the letter.

The site was previously surveyed for pesticides and removal of a former underground storage tank was documented and determined to result in no significant impacts in the Draft EIR. The following mitigation measure has been added by LSA Associates, Inc., in response to concerns raised in the letter, even though impacts would remain less than significant without the additional measure:

- **4.6.6.1A** Prior to issuance of a grading permit for the project, a qualified contractor shall test onsite soils for contamination by agricultural chemicals. If present in concentrations above established actionable levels or thresholds, these materials shall be removed and transported to an appropriate landfill by a licensed contractor. This measure shall be implemented to the satisfaction of the Building Division including written documentation of the disposal of any agricultural chemical residue in conformance with all applicable regulations.

The above mitigation measure has also been added to the conditions of approval for the project.

<u>Significant and Unavoidable Impacts</u>

Analysis presented in the EIR indicates that the proposed project will have a number of potentially significant impacts. The EIR includes a number of proposed mitigation measures to reduce or eliminate potential significant impacts. Even with proposed mitigation, a number of potential impacts cannot be reduced to a less than significant level. As identified in the Final EIR document, these impacts are considered to be significant and unavoidable.

Where a project's impacts cannot be reduced to less than significant levels, CEQA allows a decision making body to consider a statement of overriding considerations and findings. CEQA requires the decision making agency to balance the economic, legal, social, technological or other benefits of a proposed project against its unavoidable environmental impacts when determining whether to approve the proposed project. This would include project benefits such as the creation of jobs or other beneficial project features versus project impacts that cannot be mitigated to less than significant levels. If the decision making body determines that the benefits of a proposed project outweigh the unavoidable adverse environmental effects, it may approve a statement of overriding considerations and approve the project.

Mitigation Measures

The EIR includes mitigation measures intended to reduce project-specific and cumulative impacts for Air Quality, Biological Resources, Cultural Resources, Hydrology and Water Quality, Noise, Transportation, and Greenhouse Gases and Global Climate Change. All other environmental effects evaluated in the EIR are considered to be less than significant, or can be adequately mitigated below significant thresholds.

Mitigation measures are included to reduce the environmental impacts where possible, even where the impacts could not be reduced to less than significant levels. All mitigation measures have also been included as conditions of approval for the project.

Approval and Certification

The Planning Commission will take public testimony on the EIR and project and forward a recommendation to City Council. Before the proposed project can be acted upon, the City Council will need to review the final environmental document, receive public testimony and either certify or reject the EIR and project Mitigation Monitoring Program.

NOTIFICATION

Public notice of the April 24, 2014 Planning Commission hearing was sent to all property owners of record within 300' of the project. The public hearing notice for this project was also posted on the project site and published in the local newspaper. As of the date of report preparation, staff received a comment letter from Caltrans which is included as an attachment to the staff report.

STAFF RECOMMENDATION

Staff recommends that the Planning Commission **APPROVE** Resolution No's. 2014-09 and 2014-10 and thereby recommend that the City Council take the following actions:

1. **CERTIFY** that the Environmental Impact Report (EIR) for the Prologis Eucalyptus Industrial Park Project (Attachments 5 and 6) has been completed in compliance with the California Environmental Quality Act; and

2. **ADOPT** the Findings and Statement of Overriding Considerations regarding the Final EIR for the Prologis Eucalyptus Industrial Park Project, attached hereto as Exhibit A to Attachment 2; and

3. **APPROVE** the Mitigation Monitoring Program for the Final EIR for the proposed Prologis Eucalyptus Industrial Park Project, attached hereto as Exhibit B to Attachment 2; and

4. **APPROVE** General Plan Amendment application PA07-0082 as shown on Exhibit A to Attachment 3; and

5. **APPROVE** Zone Change application PA07-0081 as shown on Exhibit B to Attachment 3; and

6. **APPROVE** Master Plot Plan PA07-0083 and related Plot Plans PA07-0158 through PA07-0162, subject to the attached conditions of approval included as Exhibit C to Attachment 3; and

7. **APPROVE** Tentative Parcel Map 35679 (PA07-0084), subject to the attached conditions of approval included as Exhibit D to Attachment 3.

Warmington to make sure that happened and unlike what sometimes the Mayor will try to make people believe, the Sierra Club and Audubon does not receive any financial benefit from our negotiations on that project or the present warehouses we're dealing with. It doesn't happen. None of that goes on. In fact there is a deficit if anything to the environmental community for these negotiations. I hope you'll take a minute and look through this. Don't bury it under a pile of papers and if you would like to go on one of these walks or see this area closer, my name is on enough emails to you that you can contact me, so please do. I'd appreciate showing them to you. You have a good evening.

CHAIR VAN NATTA – Thank you very much and it is a beautiful book.

P07-186 (Environmental Impact Report)

Case Planner: Jeff Bradshaw

CHAIR VAN NATTA – Okay we're going on now to our first Public Hearing Item; well actually the Public Hearing Item for today. Case Description PA07-0081 Zone Change, PA07-0082 General Plan Amendment, PA07-0083 Master Plot Plan including Building 2, PA07-0084 Tentative Parcel Map 35679, PA07-0158 Plot Plan for Building 1, PA07-0159 Plot Plan for Building 3, PA07-0160 Plot Plan for Building 4, PA07-0161 Plot Plan for Building 5, PA07-0162 Plot Plan for Building 6 and P07-186 Environmental Impact Report. The Applicant and Owner and Representative are all Prologis. The Case Planner is Jeff Bradshaw. Could we have the report please?

ASSOCIATE PLANNER BRADSHAW – Thank you. Good evening Chair Van Natta and members of the Planning Commission. The item before you this evening is a proposal for a 2.2 million square foot industrial park to be developed on 122 acres located on the south side of State Route 60 east of the Moreno Valley Auto Mall at Fir or what is sometimes referred to as future Eucalyptus Avenue, between Petit and Quincy Street. The net acreage for this site is about 116 acres and I think you see both acreages referred to in the Staff Report.

As described in the title of the Agenda, applications for this project include a General Plan Amendment and Zone Change to establish a Business Park, General Plan designation in a Light Industrial Zone for the entire site. Plot Plan applications were also submitted for six warehouse distribution facilities as well as a Tentative Parcel Map to create six parcels for development within the Industrial Park. A General Plan Amendment is also required for proposed changes to the City's General Plan Circulation Element as well as changes to the Master Plan of Trails.

Approval of this project would require certification of an Environmental Impact Report and the project presented to you this evening is for your review and for recommendation to the City Council. The project site does have a current… includes current General Plan and zoning designations for approximately 50 acres of the site are currently designated Business Park or Business Park Mixed Use, 36 acres are designated R15 which is a multi-family zone, 23 acres are designated R5 and 12 acres are designated RA2. Both of those are single family residential zones.

The proposal would be to replace the 71 acres that is under the residential land use designation with Business Park land use designation over the top. This designation would then be compatible with the City's Industrial Zone categories. The proposed Zone Change for the 50 acres that are BP would be compatible with the General Plan; the proposal for the remaining 71 acres that is a residential zone would be for Light Industrial zoning. This proposal would also result in the removal of a portion of the site from what referred to as the PAKO or the Primary Animal Keeping Overlay Zone. Warehouse distribution uses are currently permitted in both Business Park and Light Industrial Zones. The limitation within a Business Park is size. Structure are not allowed greater than 50,000 square feet. In the case of this proposal the structures are larger than that and so the Light Industrial Zone is required in order to accommodate the proposal.

The change in the General Plan Circulation Element would propose to eliminate what is currently a connection from what is known as Fir or future Eucalyptus Avenue. That road alignment currently curves down and connects through to what is currently called Eucalyptus and would in the future would be Encilia. The proposal here is to remove the connection to ensure that traffic… that either existing traffic or traffic generated by the proposed project would be kept separate from residents living to the southeast of the project. The additional General Plan Amendment I refer to is a change to the Master Plan of Trails. There is currently a trail segment on the west side of the Quincy Channel. That trail segment runs… it is undeveloped that runs from Fir Avenue north to the south side of State Route 60. The idea in the past was to provide a crossing at the freeway. The General Plan Circulation Element has since been updated and that overpass is no longer scheduled to be developed. With the loss of the overpass, the trail would essentially be a dead end or end in a cul-de-sac on the

south side of the freeway. Staff met with the Recreational Trails Board in February of 2012 to discuss replacing that segment with a segment of trail that would run across or through the project site, it would tie into an existing trail segment on Fir Avenue and continue across the project on the north side of Fir and ending at the Auto Mall at Fire Station 58. The applicant has agreed to a condition of approval to both remove the trail segment along Quincy and replace that the longer trail segment through the project.

The Industrial Park itself proposes six warehouse buildings. They range in size from approximately 160,000 square feet up to approximately 860,000 square feet. The total building area upon completion would be approximately 2.2 million square feet for the six buildings. The architectural design for the facility is similar to other warehouse uses that you have reviewed in the past. It's concrete tilt-up construction. The building and the screen wall colors would be earth-tones with varying amounts of accent colors and vertical features to break up the architecture. Staff worked with the applicant to ensure that that all sides of the buildings would include architectural treatment, that the screen walls would be designed in way that is compatible with the main building. We also worked on a design that would ensure that the loading bays and truck storage areas were all screened from view and all turned or oriented from adjacent residential zones. The project as designed conforms to the City standard for Light Industrial Zone as well as for development standards for industrial development here in the City. Staff worked with LSA Associates in preparation of an Initial Study back in February of 2008; through that exercise, identified those issues that needed to be carried into an Environmental Impact Report.

Notice of preparation was distributed to the public for comment in early 2008. Those comments were then used in the preparation of a Draft Environmental Impact Report. Staff worked with the consultant in the preparation of that document and it was provided to the public for public review for a 45 day period beginning in July of 2012 and ending September 4th, 2012. That was circulated to all State and local agencies, to any interested parties that had asked to be kept informed of the process. In response to that, the City received 13 comment letters during that time period. The consultant worked with Staff in the preparation of responses to those comments that were prepared. Those documents were provided to you. Prior to this evening's meeting, both the Draft and the Final document; the Final including responses to the comments that were submitted during the 45 day review. It is important to note I think that through this process; the analysis; the EIR analysis for this project will have noted a number of potentially significant impacts.

The document that was prepared includes mitigation measures that are proposed to reduce the impacts or eliminate significant impacts to the extent possible. There are circumstances or even cases with mitigation certain are not reduced to a less than significant level and those are identified in both the Draft and the Final EIR. Where those impacts cannot be reduced, the California

Environmental Quality Act does allow decision makers to consider a Statement of Overriding Considerations that has also been provided to you guys for review. It requires the decision making body to balance benefits to the community against those potential environmental impacts when making a decision and if the decision making body does determine that those benefits outweigh the environmental impacts, then a Statement of Overriding Considerations would need to be adopted and certified ultimately by City Council. Again the document does include Mitigations Measures. Those are referenced both in the conditions of approval for the project as well as the Mitigation Monitoring Program and it is included in the documentation before you this evening.

Public Notice was provided for the Hearing this evening by our standard practice to everyone within 300 feet of the project. The site was posted and notice was also provided in the newspaper. Additionally notices of the hearing as well as preparation of the Final EIR were provided to those that commented on the draft as well as any interested parties that indicated that they wanted to receive copies of those documents. Leading up to this evening, we did receive comment letters which have been provided to you guys I think during the week by email and hard copies available to you again this evening. There is also a memo that has been prepared identifying conditions of approval for the Tentative Parcel Map that are the preferred conditions. The conditions included in the Staff Report for the map are more specific to a Plot Plan and so the replacement conditions are more appropriate for the map and so Staff would be recommending those conditions as the set to approve for Special Districts. Additionally there was another letter provided this evening. I think most of the Commissioners have copies of that and Staff hasn't time really to review the content of that letter. With us this evening is our representatives from LSA Associates, the Consulting firm that prepared the environmental document and with that, that will conclude my part of the presentation. I'd like to turn some time over to Kent Norton with LSA who has something he wanted to present on the environmental side. Additionally the Traffic Consultant has prepared a traffic simulation or model for what the traffic would look like within this facility that they are prepared to show you this evening if you are interested in that and with that, I'll turn the time over to Kent Norton.

CHAIR VAN NATTA – Thank you

SPEAKER NORTON – Thank you Jeff. Good evening Commissioners. My name is Kent Norton. I'm with LSA Associates. We prepared the Environmental Impact Report. I was the Project Manager. The EIR represents 530 pages and dozens of appendices. The Final EIR was 280 pages with additional appendices, so I appreciate the effort you've gone to review that. I wanted to make a few comments about some of the letters that were submitted prior to this hearing. Most of the letters we've already responded to in the Final EIR; the Response to Comments document, but there were a number of emails and brief letters and then a few longer letters that were submitted this week. I would say most of the issues have been dealt with in the EIR and the Final EIR Response to Comments

already, but there were a few items that were additional. One is there were a couple of… a number of comments about independent review and the response to comments providing evidence on its comments and we believe the documents we prepared represent the independent judgment of the City and do represent adequate information, that the decision makers such as the Planning Commission can make an informed decision on. There were some comments about the EIR needs to evaluate the cumulative impacts of the World Logistics Center now that that has been put into the CEQA process, but if you'll recall this EIR started its CEQA process far and well in advance of the World Logistics Center document and CEQA… the process basically sets the baseline. When the notice of preparation goes out for the environmental analysis and that was back in 2008, so there is no CEQA requirement to analyze that additional project as part of the cumulative growth. There were a number of comments about mitigation and air quality, energy conservation. As outlined in the Final EIR there were a whole host, almost a dozen mitigation measures in various sections including air quality, traffic and energy that were modified and quite a bit of additional text added to address comments by the AQMD as well as a number of conservation organizations, so we believe we've answered a lot of the comments about additional mitigation.

We provided documentation of what is feasible and what is infeasible and we've added information about solar. The buildings will be solar ready and the project is going to provide a 10 percent reduction from the green building code, Title 24 Energy Conservation Standards and just want to note, in doing some research on solar facilities, Prologis, a lot of their other facilities, when they do these types of buildings, the users that eventually come into them, do install their own solar systems, but because there is no specific users designated for this project at present, that can't be identified at this particular time. Along with energy conservation, there were some comments about making it a LEED certified project. The applicant has indicated they are buildings will and meet the requirements of LEED certified buildings, but again they don't have specific users, so that would be incumbent upon individual users to apply for that process, but they will meet a lot of standards of the LEED process. There were a number of comments and I'll just mention this in passing, a number of articles attached to some of the comments about Sketchers and Walmart warehouses and a lot of the comments were kind of trying to draw a comparison between the two. There is really no comparison. This is a different applicant; and however people feel about those particular warehouse developers, this project stands on its own and we believe the documents we provided give you the information you need to make an informed decision. With me tonight, I have Megan Macias who is head of our Traffic group and Ron Brugger with our Air Quality group and all of us are available to answer any questions you have following your review and discussion of the EIR.

CHAIR VAN NATTA – If it's okay with the Commissioners, I'd like to hear the various different reports and then we can go back and ask questions of the

different ones rather than taking them one by one. Is that okay with everybody? Okay yes we would like to see the traffic study next.

SPEAKER BRUGGER – At this time… okay.

INTERIM PLANNING OFFICIAL ORMSBY – While we're switching speakers, I'd just wanted to add that the City completed independent review of the Environmental Impact Report and there was also a peer review completed by Wildan and Associates under their contact with the City.

SPEAKER MACIAS – Good evening. While the simulation plays, I can say a few words about the Traffic Study and if you have any particular questions I could answer those. The traffic simulation that we put together is intended to represent the 2035 traffic volumes. It is the 2035 with the proposed project, so this includes a number cumulative projects that are proposed to be built, both in the vicinity of the project as well as south on Moreno Beach Drive east and west of the project as well. Some of the things you'll notice is on Eucalyptus east of Moreno Beach Drive there is not as much traffic as we have actually coming north on Moreno Beach as well as coming from the west, so the majority of the traffic movements that we were seeing in that area is not necessarily coming from the project, but there is a significant amount of background traffic out there both in the short term cumulative as well as in the 2035 conditions. And then also while the traffic simulation is playing, I could say a words about the findings of the Traffic Study.

We did look at opening year cumulative. We looked at 2035 which is the build out year or I should say it is the horizon year of RIV (?) Town Traffic Model. We also looked at the build out conditions for the entire City and what we found is that the opening year conditions and the opening year cumulative conditions, the payment of both the City's development impact fee as well as the Regional TUMF fee would mitigate any impacts of the proposed project with the exception of some level of service deficiencies which were on the freeway mainlines. Those were identified in the EIR as significant and unavoidable impacts and the reason being is that the City does not have control over CalTrans facilities, nor is there a mechanism for the applicant to either pay into a program to improve those or to make the improvements on their own. In the 2035 and the build out conditions there were some additional improvements that are required beyond the DIF and the TUMF fees. Those improvements are identified in the 2035. They're minor improvements involving signal modifications and minor changes to striping at a couple of intersections. We've identified the project's fair share of those improvements in the Traffic Study and those are feasible improvements and can be implemented. The simulation goes on for several more minutes, so if you want we can continue to leave this in the background while you continue with the Public Hearing or if you have any specific questions, I can answer them.

VICE CHAIR GIBA – Is that simulation; can you move that up to the 60 freeway? Is that part of the simulation or is it just…

SPEAKER MACIAS – The 60 freeway is not simulation because the City does not have control over that and we're not proposing improvements to the 60 freeway, so therefore we didn't include it in the simulation. Many of the issues that we discussed with Staff had to do with the trip generation of the project and questions about whether local intersections such as at Moreno Beach Drive and Eucalyptus, what the contribution of the project was at those locations, so we did not include the freeway in the simulation.

CHAIR VAN NATTA – Did you include Redlands in the simulation?

SPEAKER MACIAS – We did include Redlands and I think if we hang in there long enough, I could pull up the actual simulation. We could move over to there. This what you are seeing is just a video presentation of it. So what you'll notice is that Redlands looks much less congested in this traffic simulation and as a matter of fact there are many fewer vehicles on Redlands in this condition which is what we reported in the Traffic Study as well. What I can do is I'm going to speed up the simulation because when you are watching it in real time like now, it is sort of like watching grass grow so that way you can see the cars a little bit faster. This is the pm peak hour and of course this includes all improvements that are noted as mitigation measures in the Traffic Study, so that's why it seems better than what you experience today at the intersection because it is significantly improved and there is additional capacity that has been provided which is what will be provided with the improvements that are noted as the mitigation measures of the report.

COMMISSIONER LOWELL – I read in the report that there were upwards of 2,000 truck trips a day. Is that true? Is that included in the traffic model?

SPEAKER MACIAS – I'm referencing the trip generation so I can give you the correct numbers. So the total trip generation… the trip generation is looked at in two ways. It's looked at as total vehicles and we also break it out in what we call passenger car equivalence, which recognizes the impact of a truck is much greater than the impact of a passenger car, so the total daily trip generation is 4,409 vehicles, so when you ask is there is actually 2,000 trucks per day, there are approximately 2,000 truck trips per day and that's two-way trips, so that would mean 1,000 trucks in and 1,000 trucks out and that is 2, 3 and 4 axle trucks, so that is not 2,000 four axle trucks, it is actually broken out into 2 axle trucks which is 238 and 3 axle is 505 and the large trucks is 1,246 and remember that is one way trucks, so it's really 600 in and out of the project.

COMMISSIONER LOWELL – That compares to a residential development I believe; average residential house and residential development car trips a day.

SPEAKER MACIAS – It actually generates about 9 ½ per unit, for single family residential.

COMMISSIONER LOWELL – For a 150 lot tract like I live in, you are talking about 1,500 car trips, so we're talking this entire development is going to generate about 3 ½ times more traffic than my little housing development.

SPEAKER – Yes but you have to look at it in terms of the size of the…

COMMISSIONER LOWELL – That's what I was implying that this is a larger area and mine is only about 40 acres and we're generating that much trip traffic generation on the 40 acres as opposed to this large proposed project, so the density of trips per acre is a lot less than my housing tract.

SPEAKER MACIAS– Yes that's correct and I was going to point out we also did look at doing a comparison between if the General Plan designation for the project site was built, how many trips would the General Plan generate in comparison to the project and what we found is that the project actually generates 885 fewer and peak hour 939 fewer pm peak hour and 6,702 fewer daily trips, so it is a less intense use of the site than it would be under the General Plan designation, which includes 845 dwelling units and 41 acres of industrial business park.

COMMISSIONER LOWELL – In the Traffic Study, how far of a sphere of influence did you reference?

SPEAKER MACIAS – Well the Traffic Study includes… we did a sensitivity analysis looking at the 215/60 interchange at the request of City Staff just to know what percentage of vehicles would we be adding to the interchange. We didn't analyze that as part of the study. About the farthest we went within… looking at intersections, we looked at Nason Street and Redlands Blvd., so one interchange to the east and west and then in terms of our freeway analysis let me look and make sure I don't tell you the wrong thing…we went from Pigeon Pass Road to Redlands Blvd. looking at the freeways.

COMMISSIONER SIMS – What was the traffic… what was the effect at Pigeon Pass and what was the easterly intersection?

SPEAKER MACIAS – Well there is a lot of different numbers here so… would you like to know… should we be talking about the 2035 condition? Would you like to know existing? We'll talk about the 2035 since that it is the worst case.

COMMISSIONER SIMS – Well I guess what would be current; what is it today and what would it be at 2035?

COMMISSIONER LOWELL – Well 2035 is the ultimate condition. Does that also include World Logistics? Does that include the residential or just this Prologis development in 2035?

SPEAKER MACIAS – Well 2035 is based on the RIV Town Traffic Model so it would include pretty much the General Plan designation for not only land in Moreno Valley but in other cities in the area, so it is kind of considered the General Plan build out. Now there is recognizing that the City of Moreno Valley may not be built out by 2035. We do look at a build out condition but in terms of the horizon year of the RIV Town Model, we're pretty safe to say that that's a build out condition for the area, so that's when we talk about 2035. You asked about existing…

COMMISSIONER SIMS – So my question would be information that I'd like is what would be on the 60 freeway at the most westerly intersection, what would be the current truck traffic or I guess total traffic and then do you have that broken down into truck traffic and then could you then also tell me what it is at the most easterly section of the 60… did you say Theodore?

SPEAKER MACIAS – You know what, unfortunately I don't have it broken down into truck traffic. I can tell you what the total vehicles are and I can tell you what the level of service is.

COMMISSIONER SIMS – That would be perfect. That was going to be my next question is, what the current and then future level of service at those two intersections.

SPEAKER MACIAS – Okay, so the current level of service… this is looking at the freeway segments which is what you wanted; the freeway mainline… okay, so the freeway mainline on Pigeon Pass, we'll say at the am peak hour it is level of service D and the pm peak hour it is level of service E. That is the existing condition. That is going eastbound. In the westbound direction and actually this is at Heacock Street, the am peak hour is F and the pm peak hour is C. That is existing conditions without the project. If we look at existing conditions with the project in the eastbound direction at Pigeon Pass, with the project it is level of service D in the am peak hour and it is level of service E in pm peak hour, so there is no change in the level of service. In the westbound direction in the am peak hour it is still level of service F. There is no change in the westbound direction and in the pm peak hour it is level of service D, so there is one level of service change on the freeway mainline. And then you asked about the east limits as well, so in the east limits…

COMMISSIONER SIMS – What intersection is that?

SPEAKER MACIAS – Well it is a freeway segment, so it's the segment between Pigeon Pass Road and Heacock Street. I'm going to put up the map from our

Traffic Study so that I can reference that. Okay, you know what, unfortunately this is our study area intersection, so I don't have a map which is large enough to show the full extent of the freeway analysis on the screen, so I apologize for that. I didn't finish answering your question I believe, so we were on the…you wanted to know the easternmost boundary of our study area. Okay in the existing condition, this is the freeway segment between Moreno Beach Drive and Redlands Blvd. which is the farthest east that we looked, so in the eastbound direction in the am peak hour it is level of service C and in the pm peak hour is it is level of service B and in the westbound direction it is same; it's C in the am peak hour and B in the pm peak hour and if we look at it with the project this is still existing with the project, this shows the project's direct impact, eastbound in the am peak it is C and in the pm peak it's B, so there is no change and westbound in the am peak it is C and in the pm peak it is C, so there is one change in the westbound direction in the pm peak hour between Moreno Beach Drive and Redlands Blvd. Does that fully answer your question in regards to freeways?

COMMISSIONER SIMS – Yeah and the other question I have, so the way I understand from the Staff Report in reading through the piles of paper here, is that the notice of preparation for the project went out in 2008 prior to other projects in the area, so the cumulative effects of the project based on the transportation side of it are based on what was current land use planned and General Plan designations at the time the notice of preparation went out.

SPEAKER MACIAS – It is also based on… it is really based on applications that the City had received at the time of the notice of preparation, so for example the full World Logistics Center was not an application at that time, however the full General Plan build out or what we are calling the 2035 analysis, it would not have changed significantly between then and now, because as I said it is based on the RIV Town Traffic Model and so there has not been a major update to the traffic model in the last few years and so therefore the socio economic data and the model has not significantly changed for the build out condition.

COMMISSIONER SIMS – Can you explain to us and everybody that is listening what designations of level of service in a qualitative way what that means, so if I'm sitting on the 60 and I'm going from B to a C or E to a D, what does that mean to me? Am I sitting there going hmmm, I can't get off the freeway for 20 minutes or what does that mean?

SPEAKER MACIAS – Okay, generally you'll be experiencing somewhat free flow conditions up through level of service C, I would say. At level of service C you'll start to notice some friction, so between C and F we're going to say that F is where you are stopped… F is you know there is very little through put, so E is that condition before F where you've got some stop and go and D is sort of that transition between stop and go and we're completely stopped, so I think that is something you can kind of you know relate with. F is the condition you

absolutely don't want to be in and E is the sort of like this is tolerable and I think I can kind of see I am going to get there at some point. In extreme layman's terms is how I'll put that.

COMMISSIONER SIMS – Yeah can you put up… is there a map that shows the improvements on… when I was looking at this there were so many mitigations and things and kind of hard to get your mind around what each of the improvements are and when they are going to happen, so it does not appear that there is any improvement to the freeway in itself and we heard from Staff that that is because there is no jurisdictional way to acquire and it is through TUMF fees I assume that money would be paid, so you are showing on your traffic simulation, you were showing improvements on the eastbound Redlands off-ramp. How do those fit into the timing and phasing of the improvements?

SPEAKER MACIAS – Okay there are three…

COMMISSIONER SIMS – The timing and phasing of the project, so you know is the off-ramp built or is that an assumption that the off-ramp is built, that the use of the TUMF fees are going to be prioritized to fix that problem in Cal Trans right away or how does that get done?

SPEAKER MACIAS – Well the TUMF fees are based on a priority list that is established by WRCOG and so the priority list is already established and I printed out the latest short term projects before I came here tonight, so for example the Moreno Beach Drive interchange is in two phases. Phase one as you know is already beginning and included and is already built. Phase two, the north side, is still to be programmed; however the money is there in the program. I don't know that the approval of one project you know hastens the implementation of that improvement and an interesting thing to note was I was re-reading the cumulative analysis in the study as I was sitting here and the cumulative projects in this area, so residential projects, there is a Lowe's Center. There are several other projects we've included. Cumulatively, they generate quite a few more trips than this project does, so the question of would the interchange construction be hastened by this project, I think is you have to look at the fact of this project in relation to everything else in the area is I don't want to say it's insignificant because it not, but it is not the majority of the trips that currently have applications into the City.

COMMISSIONER SIMS – I thank you for that explanation, but my question is the improvements on the off-ramps at Redlands Blvd., when would those be implemented as part of phasing of the project?

SPEAKER MACIAS – The improvements to the off-ramps at Redlands Blvd. I believe are part of the TUMF improvements. I believe they are part of TUMF improvements which I do not know when those… I could find out before the end of meeting.

CHAIR VAN NATTA – That was also a condition of a different project.

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Commissioner Sims, is there a particular item?

COMMISSIONER SIMS – I don't have the map in front of me here but I saw it on the simulation. You were showing the off-ramp improvements and so forth. I guess what I'm just kind of… the TUMF fees; the pro rata share of the TUMF fees is going to propose to pay for mitigation improvements, but is there any linkage with the improvements to the project or is it just when the TUMF fees get allocated and programmed to do the work.

SPEAKER MACIAS – It is when the TUMF fees get allocated and the Redlands Blvd. improvements are not programmed in the short term program of the TUMF, so it is going to be some time in the future after Moreno Beach is implemented and I don't know the year, but like I said I could get that information for you, but it doesn't have anything to do with the timing of the project.

COMMISSIONER SIMS – In your analysis of the traffic, so the Traffic Study and the simulation shows traffic based on the situation with the implemented improvements; anticipated implementation of improvements and so if we go; that's only about 15 or 20 years from now if TUMF fees aren't generated and don't get applied here, is there a traffic analysis in the absence of the improvements that shows the level of service for Redlands and Moreno Beach and the freeway?

SPEAKER MACIAS – Yes, with project analysis and the Traffic Study does not include all of the improvements. The improvements are added as mitigation measures because they are both adopted fee programs and so therefore they are available to be considered as project mitigation and quite frankly especially for the DIF, that is the purpose of that program is to mitigate impacts of future development within the City, so our analysis wherein we identify the impacts of the project does not assume that those improvements are in place.

COMMISSIONER BARNES – Excuse me, I have a question regarding going back to the TUMF improvements and schedule. You had mentioned that there weren't improvements currently on the schedule. Is there anything within the sphere of influence of this project on the current TUMF construction schedule that would impact any of your analysis? So are there any TUMF funds being spent in the locale or area of this project?

SPEAKER MACIAS – Yes there are TUMF funds being spent in the area of the project. They are included as part of our project mitigation because the project will pay its fair share of the TUMF fees, so they'll be paying into those improvements which are the Moreno Beach Drive interchange, the Redlands Blvd. interchange.

COMMISSIONER BARNES – I think what I'm asking is are there any actual projects in the schedule for TUMF that you are aware of? Is there a published schedule of upcoming TUMF funded projects?

SPEAKER MACIAS – There is a published schedule and what I'm holding here is the five year transportation improvement program and included in that is the Nason Street interchange as well as the Moreno Beach Drive interchange.

COMMISSIONER BARNES – Okay so with both of those are in the five year schedule.

SPEAKER MACIAS – Correct. It is the Redlands Blvd. that is farther than five years and I don't know what the year is.

COMMISSIONER BARNES – Thank you, that was my question.

COMMISSIONER LOWELL – If I'm not mistaken, I believe Nason Street over-crosses… (Inaudible… no sound)

COMMISSIONER BARNES – So the five…that's right, so what she has mentioned, the five year plan has already been built actually, so there is nothing pending in that five year plan.

COMMISSIONER LOWELL – I believe it's more of a question for Staff, but I remember hearing at one of the City Council meetings…

CHAIR VAN NATTA – I believe there is still additional improvements yet being worked on Moreno Beach.

INTERIM PLANNING OFFICIAL ORMSBY – There is at Moreno Beach, but we'll have Michael Lloyd respond to the question.

VICE CHAIR GIBA – Am I reading this correctly, in your mitigation measures… otherwise completed prior to project opening that prior issuance to certificate of occupancy, the applicant shall construct the following improvements installing a traffic signal condition then those are not being finished, you'll at least put in traffic signals and add a northbound left turn lane, a southbound left turn lanes. If the improvements are constructed by others prior to the certificate of occupancy the applicant shall pay its fair share towards the DIF.

SPEAKER MACIAS – I believe that applies to the intersection of Redlands Blvd. and Fir.

VICE CHAIR GIBA – Redlands Blvd. and Fir Avenue

SPEAKER MACIAS – Eucalyptus… correct and I believe the project applicant has agreed to if… those are also conditions of another project to construct the traffic signal at that location and so whichever project is in first would construct that improvement, so if the applicant of this project does construct the improvement then they would be applying for some reimbursement of that through the City's Development Impact Fee program since that is programmed in the fee program.

CHAIR VAN NATTA – Okay I have one last question here on the traffic here. I'd like to hear some of the other presentation. We can always come back with additional questions and I'm sure there are other speakers who might have questions on that too, but on this traffic flow and traffic study pattern and so forth, what is the anticipated route that trucks of all sizes would be using to access this project both coming in and going back out. What are you seeing as the route they would take?

SPEAKER MACIAS – Trucks would be using both Redlands Blvd. as well as Moreno Beach Drive. It is anticipated that they are going to be and I'm looking for the trip distribution to make sure that I'm not speaking out of turn here, but they would be mostly using the two interchanges to access the freeway; that there would be very few trucks going south into the City or into residential areas as it would be mostly warehousing facilities to be shipping offsite into more regional areas.

CHAIR VAN NATTA – Okay that was my last question on that. Did we have another presentation by the applicant of any other phase?

ASSOCIATE PLANNER BRADSHAW – I believe that would conclude the Staff Report of the presentation and the applicant is here to speak when you are ready for the Public Hearing portion of the meeting.

CHAIR VAN NATTA – Then we are going to open the Public Hearing portion now and… I think the traffic one was the last one that was… At this point I think who we want to hear from is the applicant so we're opening the public comment portion and beginning with the applicant.

APPLICANT CAVANAGH – Good evening. My name is Pat Cavanagh. I'm with Prologis and I am joined tonight with other associates of mine from Prologis Tyson Chave, standing next to me who is the Vice President of Prologis responsible for development in the Inland Empire. Additionally we have Kim Snyder with us. Kim is the President of the Southwest Region for Prologis. Jim Jachetta is with us. Jim is the Project Manager who worked with Staff from the beginning on this project and who am I leaving out. I guess that's all and then we have Dennis Roy, the Architect on the project with RGA. I wanted to thank all of you; the Commissioners and Staff for and I know this is a special meeting and we took you out of your homes and lot more comfortable places than here tonight

and we don't take for granted and are very appreciative of that and in particular the Staff. I want to acknowledge them. They have been very responsive. They have been accommodating and very professional in every way to get us to where we are tonight, so John Terrell, Jeff Bradshaw and Chris Ormsby in particular. I wanted to cover four topics tonight and I'll try to be as brief as possible. I wanted to cover a few brief comments on Prologis for those who aren't familiar with us. I want to talk why we are here. I want to talk about project benefits and then I want to respond to some of the common concerns and questions that have been posed to us. I've asked Tyson Chave to cover the first two of those topics.

SPEAKER CHAVE – Thank you Pat. I wanted to briefly talk a little bit about who Prologis is for those of you who may not be familiar with us. Prologis is a publicly traded company with a strong balance sheet, low leverage and a global platform. We have a commitment to develop quality industrial buildings with a long term ownership structure as a public (?). Our focus is on quality, customer retention and corporate responsibility. I don't see the clicker, but just one slide forward. We put together just a brief slide to show a sample of some of our largest customers globally in the form of the logos that you see and there are some brief descriptions more specific to Southern California along the west side, but we've also included customer accounts on that slide as well. Locally Prologis owns 35 million square feet of industrial buildings in the Inland Empire and in February, Fortune Magazine named Prologis as one of the world's most admired companies and that was for 2014. Prologis was also ranked as the top real estate company for corporate or social responsibility and then finally I wanted to transition to why we are here.

In 2007, Prologis made a commitment to Moreno Valley for a variety of reasons but a few of the compelling reasons were that we felt at the time we would have the support of the community and the City for a quality industrial project that would bring jobs to Moreno Valley. We felt that at that time Moreno Valley was underserved and we still feel that Moreno Valley is underserved from an industrial perspective when compared with other cities within the Inland Empire. A lot has changed since 2007. The world has survived an economic disaster and we seem to be slowly recovering from that. Several recent industrial developments in Moreno Valley along the I-60 and I-215 corridor have occurred, but Prologis is here tonight to confirm that we are still committed to the development of a quality industrial project while being very sensitive and responsive to the issues surrounding a project of this magnitude. Now I'm going to have Pat Cavanagh finish the rest of our topics.

APPLICANT CAVANAGH - Thank you Tyson. I wanted to talk briefly about project benefits and also the response to questions and concerns. As it relates to the project benefits, we stated in our community outreach materials, which included the distribution of over 17,600 project brochures in early 2012 in an open house which we conducted in August of 2012 that the Prologis Park in Moreno Valley is expected to provide the capacity for a minimum of 600

permanent jobs and perhaps double that number when completed. This is based on a track record on our actual portfolio and not a hypothetical number. We have done research on this and we are comfortable making that representation.

As far as the fees and the improvements that are anticipated, we expect that the project will generate significant fees and street improvements and by way of example, a full build-out of the total impact fees and street improvements are estimated at 19.3 million dollars. That is just street improvements. That does not include buildings and it includes school fees at 1.1 million dollars, Police and Fire of 800 thousand dollars, nearly 3 million dollars in local flood control and area drainage improvements and street improvements of over 11 million dollars. That also includes a 2.5 million contribution to TUMF fees. The fee breakdown is located on our website. It is project specific and if people are interested in it, they can look at those fees referenced there.

There was a reference to solar and I wanted to comment that we have installed solar installations on over 12 million feet of buildings in the Inland Empire. There is not an industrial company that can probably come within; I mean it is clearly the most significant solar commitment of any company in the industry and that is a complicated subject that we probably shouldn't spend a lot of time on tonight, but it is something that we are focused on and we would certainly have all of buildings solar ready and LEED certified. That is a commitment that we make on any development project that we have. As far as the response to questions and concerns, the three most common that I hear are land use, job creation and traffic and air. I'm going to leave traffic and air alone because that has been addressed by the LSA Consultants.

As far as land use is concerned, the current zoning allows for development, so the issue really is the type of development that provides the greatest benefit for the community. Open space; at least in my opinion, when a General Plan has a designation for development is an unrealistic expectation over the long term, so I guess we ask what is the best use of the subject property for the community and I'll refer to the Rami and Associates Study that was done this last year. It was done to prepare a land use study for the City and the City leadership with a tool for future land uses in a defined area that included the Prologis property as well as other properties along the I-60 corridor. The consultant came up with three alternatives for consideration and a recommendation. Their preferred alternative included a suggested best use for the subject Prologis property which was consistent with our proposed plan and allowed for a possible expansion of the Auto Mall along the west side of the Prologis Project.

As an accommodation in working with Staff, we've come up with what I call the Auto Mall condition, which if we are approved would restrict us from developing the two westerly buildings for a period of 18 months from the approval date to allow us and the City to explore Auto Mall uses on those two properties. Job creation… I'm not going to spend a lot of time on this other than to say that

Tyson mentioned that the City seems to be underserved on industrial and to that end, we polled all the cities in the Inland Empire. There are 13 that we looked at. Moreno Valley is the fourth largest in terms of population and they are tenth in terms of industrial base. My interpretation of that is people are going elsewhere to work and they are living here and that I think hurts the City and the community at large. In conclusion, our intention and goal is to create an environment to allow us to grow our customer base in Moreno Valley and along with this will come jobs and increase the tax revenue, a best in class project, a finish to the industrial corridor already created with the Aldi and Sketchers projects on the south side of the 60 freeway, a buffer to future residential, infrastructure improvements and a more favorable impact to traffic compared to the current zoned alternative and an opportunity to expand the Auto Mall if the market supports that expansion. And with that I appreciate your time and we are certainly glad to answer any questions that you might have.

CHAIR VAN NATTA – Thank you

VICE CHAIR GIBA – I was curious. You started this project in 2007. Am I correct?

SPEAKER CAVANAGH – We acquired this property in 2007 and initiated the EIR process and in 2008 the market had virtually collapsed in the Inland Empire on all sectors, industrial included and we decided that if we continued with our entitlement we would get through the entitlement process and perhaps and most likely be in a situation where the entitlements we had would expire before the market recovered, so we stopped the entitlement process and waited for the market to return and in 2011 we started looking more seriously at re-engaging the entitlement process and got going full steam in 2012 and then there was a moratorium as you probably are aware put on a project area so that the City could do the land use study and that delayed us a year and so that expired in January of this year and we are re-engaged in where it gets us to where we are today.

VICE CHAIR GIBA – You referenced the Rami Study, so I'll come back to that at some point. I don't where that would be appropriate, where it is going to be you folks because we kind of jumped around a little bit. It's not the normal process we would do, but I was curious again. You started it in 2007, but that area out on the east side was never specifically zoned for warehouse, but more warehouse was specifically zoned for the 60, 215, Cactus and all that corridor out there, where in 2007 maybe you can answer this, when did Sketchers get built. Was that after 2007? Am I correct?

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Yes is was submitted around… it was already known at that time but it wasn't built until later.

SPEAKER CAVANAGH – I think Sketchers probably didn't get completed until…

VICE CHAIR GIBA – 2010… so in 2007 there was no warehousing or any plan, didn't even specify having warehousing out in that area. I remember when I was brought on as a Planning Commissioner and Mr. Terell took me for a ride and said this area over there is considered joint use. We were looking at future housing and apartments and that type of construction, so in 2007 what made you want to purchase land and look at a large 2.2 million warehouse in an area that wasn't specifically designated for that type of housing or that type of building at that time.

SPEAKER CAVANAGH – Well a good question. We looked at a number of things. One is the proximity to the freeway and good access to freeway circulation. The property was already partially zoned for industrial in the form of Business Park, so it appeared the City already had it in their General Plan concept that it would be industrial, so we were presented the opportunity and we came in and met with most of the members of City Council at that time and went through a discussion of what we would need to do to get to the end line of what our concept of the project and it's 2.2 million feet, but it's in six separate buildings, so it's not a Sketchers kind of project. Sketchers is one building and it's a big building and we felt that the location was as good, maybe even better than most of the locations down the 215 corridor because of its proximity to the freeway and the City seemed to agree that it would be a good use and they liked what we were proposing and so we moved forward on it.

VICE CHAIR GIBA – I understand that that was zoned for Business Park and of course what part of your proposal is to change this zoning in the definitions so that we can increase the size of the warehouse. That's not what I would normally call Business Park, that's called warehouse park, so even though it might have been zoned as Business Park, you guys began to still look at it warehouse park instead of business park, but if I may, just for one moment, off of your own website, it just caught my eye, unmatched global platform specializing in infill location, owning and operating logistics facilities near seaports, airports and major highway interchanges. That site doesn't necessarily specify any one of those key elements of what Prologis looks for. That's why it was kind of a curiosity to me when I reviewed your site and went over some of your key elements on where you put facilities and why you put them there, that didn't seem to match very well and I'll stop for now and give my other Commissioners a chance to speak or anybody else, but I would like to come to the Rami Report as well because you mentioned three alternatives and that was something we had discussed last year in conjunction with Prologis and I just want to re-visit that issue because you did make very, very good points that I appreciate; land use and job creation.

APPLICANT CAVANAGH – The only comment I'll make…

VICE CHAIR GIBA – If they're going to be using that and you did reference and cite it so I could do the same, and they did say this report was done as a guidance document, it was never approved by the Council was it?

INTERIM PLANNING OFFICIAL ORMSBY – Correct, it was received and filed, so it is a guidance document.

VICE CHAIR GIBA – It was received and filed and never approved, yet if I remember correctly when we were sitting here and discussing that last year, it was a request for us to approve it and approve one of the plans, at least that's how I interpreted it at the time and I may be in error.

CHAIR VAN NATTA –Yeah, I think the understanding might have been a little twisted there because it was really only for us to review and to except into the record and not as an approval of a specific plan.

VICE CHAIR GIBA – And I understand that and so there were the elements in here that were giving guidance to the direction of the land use in those specific areas and so I think that is important and I think we need to come back to it because I think that is a major element of…

APPLICANT CAVANAGH – The only comment I'll make and I appreciate your comment about where Prologis wants to locate projects is we look at the Inland Empire in totally. We have projects in Rialto that are off of I-210 freeway that have been very successful. They are comparable somewhat in their proximity to ports and airports and the things that you mentioned and we looked in the Moreno Valley market and you go down the I-215 all the way down to Perris and you look at this site in comparison to those sites and I would stack this site up very well against any of those because of proximity to the freeway, so that is the primary attraction. We try to stay away from going places that are away from freeways because that kind of creates all kinds of issues that cities have and we have and our customers have so the primary driver is comparatively speaking to I-215 corridor. We like the I-60 corridor every bit as much.

CHAIR VAN NATTA – Excuse me, this is not a time for comments from the public in general. When you have your moment to speak it will be when you are at the podium.

VICE CHAIR GIBA – And please, just so you understand, I'm trying to clarify the thinking that went into the land uses in this… I've lived here for 30 odd years so I changes. I'm just curious why in 2007 you didn't have the same level of warehouse building that went on in the I-215 corridor, why Staff didn't kind of direct you over there saying we have other uses for this over here. Now I'm not saying anything about your project. Your project is beautiful, but I'm concerned about land use and future land use to build out, so I want to understand the value of putting it there versus putting it somewhere else back in 2007 and now. I

know the economy had to wait, so I had several other questions, but these guys know I'll ask them and it will take too much time, so I'll come to it. Is that okay with you guys?

CHAIR VAN NATTA – Sure.

VICE CHAIR GIBA – So, everybody else can get their word in edgewise.

CHAIR VAN NATTA – We're going to on to some questions from Commissioner Lowell but I did want to comment on the questions that we're asking, we cannot pre-suppose that somebody has complete autonomy about where they are going to put something. Sometimes it has to do with where the land is available and can be purchased and not just say well wanted to build this, where do we want to put it. Sometimes it has to do with what land is available or owned.

VICE CHAIR GIBA – We want to look at the whole package here. We want to understand the whole package and I'm sure all the folks out there want to know the whole package.

CHAIR VAN NATTA – I'm sure they would and I would like to see more questions that are directed specifically to this project so that we have a good understanding of the project before we begin discussing the advisability of going ahead with it or not, so go ahead Commissioner Lowell.

COMMISSIONER LOWELL – I had a pretty simple question. Do you know what the construction timeline is from breaking ground to completing the project with all the improvements?

APPLICANT CAVANAGH – Well I'll answer it two ways. To build a building takes about seven months. The time that it takes to get to the point where you build the building probably takes an equivalent amount of time, so if you said green light, nothing in your way, get going, probably the earliest you'd see a building there if we built it on spec; speculative development; an empty building, would probably be in the twelve to fourteen month timeframe. Now our intention today is we don't intend to break ground the day you say yes. A lot of what we do is solicit build to suit activity and a lot of what we do is sort create a pipeline of buildings so that we are strategic in when we are building and what we are building and we have other sites that we are involved in and this would… so that is a building. The totally of the project, I would say a project of this size with the number of buildings is five years from start to finish. I would be pleased if we were done in totally in five years; all of it built; all of it leased.

COMMISSIONER LOWELL – One of the options that we have is to basically install a moratorium for 18 months on the westerly portion of the project to allow the Auto Mall to hum and haw and decide what they want to do. What benefit

would that be to us if allowed that since Prologis already owns the property and it would be in Prologis' best interest to keep the property for themselves.

APLICANT CAVANAGH – It would be a benefit if you feel that having an expansion to the Auto Mall benefits the City.

COMMISSIONER LOWELL – But would Prologis be willing to either sublet or sell that property to the Auto Mall if they were interested.

APPLICANT CAVANAGH – We would be open to selling the land to an Auto Mall use if there was demand for it; sure. I mean we've acknowledged that. That is something that we are not opposed to doing. I'll tell you quite honestly. We've explored this and I'm not sure what the demand is. I think 18 months would certainly be enough time to figure out what the demand is. There is still vacant lots over at the Auto Mall that have never been used, so I don't know if the Auto Mall use a realistic expectation or if it's not. I have no idea.

COMMISSIONER LOWELL – That is correct. There is still room over there for expansion. I was just curious what the feasibility was and what the logic was behind the 18 months.

APPLICANT CAVANAGH – It was trying to define a period of time to allow the City and the Auto Mall and Prologis to explore that alternative because it seemed to be part of the Rami Study recommended plan that was of interest to at least some of the people on the Council when it was presented to them.

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Yeah the other thing… John Terell, Community and Economic Development Director. The other issues was it was in all three of the alternative, the concept of allowing for the expansion of the Auto Mall, so it was consistent across all the particular alternatives that were presented there and that is why Staff in the report referenced that issue as opposed to any other land use issues that are identified in the study.

COMMISSIONER LOWELL – Is the Auto Mall the only option that we're looking for or is there any other kind of development like say a Jiffy Lube or some kind of small commercial business like development?

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – The SR60 Corridor Study specifically identified as it went through that process in talking to stakeholders and looking at various things about Auto Mall uses which could be that were loosely defined as dealerships.

COMMISSIONER LOWELL – Correct but the land is currently zoned as Business Park, so I was just curious if there was any interest in a Business Park type development…

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – I'm not quite sure…

COMMISSIONER LOWELL – Like Bob's Big Boy or a strip mall like a Subway sandwich shop or something along those lines that is more business park or more in line with the current zoning.

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – In any of those major uses that would have been permitted would still be possible. Let's put it that way. One of the uses that is not possible in a business park zone is an auto dealership.

VICE CHAIR GIBA – John could that at any given time though, just as we would request a zoning change or anything here, could the Auto Mall, even though… and part of this plan that you were specifying is one of reasons we need to change all the zoning is in case the Auto Mall wants to move forward and build a dealership, they would have to have that specific zoning. But a dealership could come forward and request a zoning change for a specific lot of property. Could they not independent of us doing anything with this…

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – That's correct yes. I think the point in the Staff Report points out that this proposed use as well as an auto dealership both require the same land use change. I think that's what really the Staff Report was meant to point out, you know whoever suggests or proposes that.

COMMISSIONER LOWELL – And then I had one more follow-up for the Applicant. I live fairly close to this area and I'm fairly familiar with the orange trees and orange groves that have been there for a long time and I drove by just about a month ago and I noticed that all the trees were gone. Do you know when the trees were removed?

APPLICANT CAVANAGH – We made the decision to remove the trees because there is a time of the year where you allowed to do that and then if you do not do it during that time of the year and the time of the year I think is from…

COMMISSIONER LOWELL – February 1 is the cutoff.

APPLICANT CAVANAGH – I think is September to February I believe it is. If you don't have them removed by February then you can't remove them until the following September.

COMMISSIONER LOWELL – That was actually what I was aiming towards; I was curious if you remembered the date they were removed if it was within that timeframe.

APPLICANT CAVANAGH – We had to remove them prior to the date that we were allowed to do it and I think that was February 1st.

COMMISSIONER LOWELL – So all the removals were completed before then?

APPLICANT CAVANAGH – Yeah

COMMISSIONER LOWELL – Did you happen to do any kind analysis that was required for post February 1st removal, if there was a specific environmental analysis and report that you have to do.

APPLICANT CAVANAGH – You have to do a nesting study. It's all related to…

COMMISSIONER LOWELL – Correct I was just curious because it is such a large area of trees that were removed. I was wondering if you did any kind of analysis on that anyway even though…

APPLICANT CAVANAGH – It was outside of the nesting season so there is nothing of that nature required.

COMMISSIONER LOWELL – It was just real close to that February 1st deadline, so just a little bit of a gray area. I was just curious if Prologis went ahead and did that study anyway or if not…

APPLICANT CAVANAGH – Well we were up against that day, so we wanted to be sure to have it done prior to that date so…

COMMISSIONER LOWELL – Just clarifying and I think that was it for my questions for the Applicant so far.

COMMISSIONER SIMS – I have a couple of questions on this. So I was looking through and I think was the Draft EIR and I want to go into the air quality questions, so I was looking at Section 4-4.3, specifically under the Section 4.3.1.3. There is a table in there that had data for ambient air quality in the project. Going back in looking at the monitoring station, it is not right at the project but it's in Riverside, Rubidoux area and it shows a listing of the ambient air quality for 2008, 2009 and 2010 and so I was wondering is there an analysis done with the air quality work that you've done supportive of the EIR that shows the delta of air quality between what we would consider pre-project and post-project.

APPLICANT CAVANAGH – I'm going to defer that to the air quality consultant with LSA if you don't mind.

SPEAKER BRUGGER – Good evening. My name is Ron Brugger. I'm with LSA and your question was did we analyze the air quality with and without the project?

COMMISSIONER SIMS – I'm not an air quality expert, so in looking at this I'm just asking the question. There was a table; your table 4.3.c ambient quality in the project and it is reflective of three years of data collected at Riverside Rubidoux monitoring station in Rubidoux I assume and anyhow it's showing a variety of different contaminants that is being monitored. The question is the project; is the ambient; has there been a model conducted showing what the effects to the air quality are and is there a delta plus or minus with or without the project that you could compare. So in essence with this table if you 2016 or you put 2035 what would that column through modelling be?

SPEAKER BRUGER – The simple answer to that is no. What the analysis focused on was several air quality effects primarily emissions. What the table is showing is are measured concentrations of pollutants at that location in Riverside Rubidoux area. That was the closest one. That is considered representative of the region even coming out this far. What you are asking is what the effects to those concentrations would be from adding this project and that analysis isn't done; that isn't really feasible. What we can do is analyze or predict based on the emissions models and so on what the total emission rates of pollutants will be and there are ambient air quality standards that say as long as the emissions stay below emission rates from the project, stay below rate thresholds, that the resulting concentrations at locations and that's what… the concentrations are what matter to health and to people breathing etc. and emissions are an indirect indicator. It depends on the wind. It depends on a variety of dispersion effects in terms of the pollutants getting become translated to concentration levels, so what the air quality analysis does is calculate the emissions from the project operations and says based on the regional thresholds that are set by the Air Quality Management Board for the area, these emission rates from the project are above and below thresholds. If they are above then that is considered a significant impact because their emission rates are high enough that the resulting concentrations will probably be above the ambient air quality standards and you know be significant from that standpoint.

COMMISSIONER SIMS – So in your analysis on the emissions have you exceeded any of the thresholds established by Air Quality Management District.

SPEAKER BRUGGER – Yes the project operations exceeds several I believe. It exceeded the emissions of NOX, CO and I'm sorry there are six criteria pollutants that we consider for which we have these thresholds. ROG is an organic gas and VOC is another name for it. NOX is an ozone precursor and CO is carbon monoxide, THOX is a result of the sulfur in fuel primarily, PM 10 and PM 10 2.5 are both sizes of particulate matter. This project operational

emissions are expected to exceed the emission rate thresholds for all of those except the THOX; the sulfur, because the sulfur content is so low these days.

COMMISSIONER SIMS – So with those exceedences of this, further into the report or before, I don't know which there was under 4.3.5.2, the operational acute health risk emissions impacts, there is a graphic that had contours of carcinogenic risk levels, so how does relate or how does a person in layman terms… when I read it I understand there is supposed to be risk of ten in one million people with potential for carcinogenic risk. The threshold in this project is acknowledged less than that in all cases but is there way to put it in layman's terms you know when you have an exceedence of an air quality limit, how is that dealt with, if at all through the mitigations that are proposed for the project and as far as this table 4.3.1 that shows these contours of carcinogenic risk, how does that kind of tie together… well it's too much of an open ended question but you're the expert.

SPEAKER BRUGGER – Well actually the health risk assessment you were referring to now is probably… the best way to answer your original question of how the operational emissions; how the operation of this project will affect the ambient air quality in the region in the area right around the project, so I guess we got sidetracked; I got sidetracked from your original question being based on the criteria pollutants and those ambient concentrations that are measured in Riverside Rubidoux. The health risk assessment is exactly focused on what the health effects to people living around this project will be from the air emissions from the operations of this project and it is focusing on all toxic air contaminants in that case, which is to say is a sort of special category of pollutants. Without getting into all those details the criteria pollutants; the NOX and PM 10 etc. are recognized as indicators of general problems and for the purposes of regional planning and other aspects that have very little to do with the effects of this individual project, that is where all those thresholds and emission rates have to do with is regional planning and regional air pollution.

The health risk on the other hand focuses exclusively on what the project does to the proximity of the area right around it and that is exactly what it shows is that all health risk assessments incorporate a lot of very conservative assumptions to ensure that they are protective of the health of the people that are in the area that is being analyzed such as the trucks; that the emission rates are expected or that are modelled for the diesel trucks; the big trucks that are going to be operating for this project, do not take advantage of what we truly anticipate to be regulatory improvements to reduce those emissions, so the health risk is assuming those improvements that are likely planned for and are likely to be incorporated but are not actually approved yet, those are ignored, so the health risk is protected in all ways that it can be and it comes up with what you can see in the report a health risk that is less than significant on the order of half of what the threshold being ten in a million, it is less than half of that.

COMMISSIONER SIMS – So that was kind of where I wanted to go, because when you read these numbers and you see carcinogenic risk is five in one million, you sure don't want to be one of the five, so…

SPEAKER BRUGGER – That's the problem with statistics

COMMISSIONER SIMS – Yeah so the pertinent perspective you have right in the heart of the project, there is a five, which is a five in one million and as you get out maybe 1,000 feet or so from the project you are down to one in one million risk. I guess can you put it in perspective what would be the air quality risk for a person just if you take the project away to kind of put in perspective, is a person's risk from emissions and contaminants that would be from emissions and just sitting in a room right here or being outside. If you are driving on the 60 freeway today is your risk one in a million or 20 in a million or is there a way to correlate that.

SPEAKER BRUGGER – Yes the South Coast Air Quality Management District has done three and is now in the process of a fourth study called the Mates Mobile Air Toxic Emission Standard (MATES) study where they in great detail measured monitored actual toxic contaminant concentrations throughout the whole south coast region, but here certainly as well and according to that report, while the toxic air contaminant levels and the health risks associated with those are better now than they were when they did the first study in the late 90's, there is still around 250 in a million cancer risk right ambient or the air we're standing in right here, that's about the health risk level of this ambient air; 250 in a million, so this project is going to affect that by a few, four or five… this isn't really valid but you could say we'll go from 250 to 254 or 255 in a million and that's a small percentage of the ambient health risk levels.

COMMISSIONER SIMS – Thank you

CHAIR VAN NATTA – Do we have any more specific questions about any of the presentation we've seen so far?

COMMISSIONER BARNES – Earlier when we were discussing transportation, there was a reference made to… it's for you, I'll get there in a second. There was a reference made to the impacts of the current land use designation and as it relates to this project, so there was kind of what we currently have and what we will have. Could you give us the same relationship in regards to air quality?

SPEAKER BRUGGER – I did not do that analysis. There wasn't an analysis made of anything other than what the project as proposed might do in the long term.

COMMISSIONER BARNES – Because there is a proposed use there and it will have an impact, so it's not like we're going from zero to this project, but we don't have quantified.

SPEAKER BRUGGER – Right

COMMISSIONER BARNES – Okay

COMMISSIONER SIMS – I do have one more. I'm switching from air quality. I'm done with air quality. The other one I had is that I live very, very close to this project. In fact my neighborhood touches your southeasterly corner of the project, so out of curiosity I was looking in the EIR on 4.1-10 and it's the view sheds from residents from the southeast of the site and there is and I don't know which… but it's a picture from if you are on Eucalyptus… now currently Eucalyptus looking it would be north and to the west, you no longer can see the hills from those homes. Is that because they are just blotted out, the buildings block the view shed from those property owners that live…basically is would these property owners…

APPLICANT CAVANAGH – Southeast… is that what you're talking about?

COMMISSIONER SIMS – All these people right in here no longer when they are looking out this way all they see is a wall of buildings.

APPLICANT CAVANAGH – Well let me… I don't know how much comfort I can give you in that regard, but I can give you some dimensions and that might tell you something. The distance from end of the cul-de-sac which is the street at the very southeast; the proposed cul-de-sac to the nearest point of the building is 366 feet, so if you were back from that it obviously gets further back. The buildings are going to be approximately 40 feet tall. That would be the height of the exterior wall, so I don't know what you would see if you were back 360 feet looking to the north.

COMMISSIONER SIMS – You're analysis shows what it looks like. You have a picture of it showing… you see the building and the pre-picture…you see; of course you see the mountains, the view shed you have out there. Here it's gone.

SPEAKER CHAVE – The line of sight study that you are referencing would be just one point where that was taken from, so the further you would go south along that residential neighborhood you know the building remains the same and so I don't know that it would definitively block the view of the mountains from the entirety of that project. The line of sight that you are looking at is from right on the property line.

COMMISSIONER SIMS – Yeah one specific spot. I get it. That property owner or that person that owns that property that has that current view shed is impacted directly to that property owner.

CHAIR VAN NATTA – Okay, I found that if I say Jeff instead of the last name I'm at least right half of the time. Okay, go ahead

VICE CHAIR GIBA – Just going back to the jobs issue, I just wanted to clarify a couple of things. You said there is anywhere from 600 to 1200 jobs that will be produced. Am I correct on that number that you were giving?

APPLICANT CAVANAGH – We feel real comfortable in that. We own as Tyson mentioned 35 million feet in the Inland Empire and we have polled a number of our buildings and business parks to get head counts on employees in those projects for the very purpose in making these kind of representations and I think 600 is conservative, but I don't want to promise something that doesn't happen. It's not one building; it's six buildings. They'll be a variety of uses. Some of the uses might be more intense and some less, but that is the main the project we polled, Prologis Park in San Bernardino County; the Kaiser Commerce Center; is five million plus square feet; nine buildings; Johnson and Johnson, LG Electronics, Sports Authority, Kellogg's, Walmart. Those are tenants in that park and the head count exceeded 600 by a lot in that project.

VICE CHAIR GIBA – All six buildings at final build out which could be as far as five years in the future, the estimate that you were discussing earlier is fairly accurate and are these automated warehouses or they standard types of warehousing.

APPLICANT CAVANAGH – They are very similar to what we are proposing to build here; same concept.

VICE CHAIR GIBA – I mean is level of automation in those warehouses or are these more… there is always a discussion of an automated warehouse versus a physical warehouse where you have the warehouse workers move things around versus… Do you follow me?

SPEAKER CHAVE - I think I understand your question. You know if you look at a snapshot of our 35 million square feet, we have very few on the order of magnitude of maybe five of the 90 buildings that make up that 35 million square feet that we would qualify as kind of highly automated. The vast majority of our projects are very typical warehouse distribution centers. They are automated to the extent that there is forklifts to pull product from the racking but they are not highly mechanized facilities, so I think there is a lot of buzz, talk about the Amazon's of the world and those type of facilities, but they are still a rarity and if you looked at the overall Inland Empire, you know that is 440 million square feet, I would say it's probably less than ten percent or probably less than five percent

facilities that are quote unquote highly automated, so if you looked at this project of 2.2 million square feet, I would venture to say that you know if a building was highly automated it would be probably above that kind of percentage of you know buildings that would have level of improvement.

VICE CHAIR GIBA – The labor necessary is not necessarily technical labor that they would have that would work at those sites or facilities. Am I correct in the context that they have to care of robotic equipment and things like that?

SPEAKER CHAVE – I think if you look at the job count that we created, I think you have you know basically every job that would make up that profile of how to run a warehouse distribution center, so you're question is somebody specially that would repair robotics within the facility and I don't know if we can answer that definitely within that job count.

VICE CHAIR GIBA – But do you have any kind of an average pay scale… I know these questions are going to come up at some point so I might as well air them know and get them out in the open so the folks can understand them. Prologis hires a lot of people so if there an average salary structure that people usually get hired at a Prologis facility but I think the better question for that is this may not be Prologis. Are these warehouses speculative type warehouses. You don't have somebody to move into them yet do you?

SPEAKER CHAVE – I guess just to clarify. Within the Inland Empire; you know the 35 million square feet, Prologis only employs 17 people within that 35 million square feet, so the actual employer would be the actual end tenant or customer within the facility, so it would be the…

VICE CHAIR GIBA – You don't have end tenant yet for these buildings that you are building at this point in time.

SPEAKER CHAVE – Correct

VICE CHAIR GIBA – Again referring to your website, there was many of those warehouse logistics buildings you built were built for a specific tenant, much like Sketchers was and Aldi's is going to, but these are not. Am I correct?

APPLICANT CAVANAGH – Well I mentioned earlier our intention initially would be to pursue build to suit opportunities in the market and at some point we would perhaps make the decision to build a speculative building within the project either the first building or maybe a second building in conjunction with the first building and we build, in a big year we might have two or three speculative projects going on. There is probably 15 or 20 speculative projects going on in the market right now that are marketed in its entirety and this market is primarily a speculative market. The companies that do what we do more often than not, would build speculative buildings. We wouldn't build two million feet of speculative buildings.

We would build a building and then we would lease it and we would build another one and then we would lease it and we would build another one and if we had a build to suit; fortunate enough to procure a build to suit on one of the buildings, we might do that building in conjunction with the speculative building and so that cycle I would guess would take four to five years to get it built out.

VICE CHAIR GIBA – So if I'm hearing you correctly then your intention is to build six buildings. Hopefully what you are trying to do is build to suit and as you get a tenant you build that next building. Is that your primary intention?

APPLICANT CAVANAGH – Well we would love that but that doesn't always work out that way.

VICE CHAIR GIBA – If that doesn't work can you give me an estimated timeframe that it usually takes for you guys to find a tenant for a speculative building?

APPLICANT CAVANAGH – Well we just finished a building in Redlands; an 800,000 square foot building and four months after the building was completed we had at least two; a company called Burlington Coat Factory. That is an example. We leased a building in Ontario. It was a 400,000 square foot building and that took longer. That probably took eight months to get leased. It ebbs and flows. The market is the market. We are in a competitive environment and we understand that but we are comfortable building speculative. We've made an enormous impact in this market doing that and I will tell you sort of one thing that I would… might give you some comfort is we have 35 million square feet and we have 98 percent occupancy. We have 2 percent vacancy, so we run very efficiently. We don't spend our money foolishly. We build it to own it and our job is to get them leased as fast as we can and the good news for us; the good news for you and the good news for the community is that the types of companies that we find gravitating to our projects are the largest companies in the world.

VICE CHAIR GIBA – The reason I bring that up is because there are going to be those that are going to be concerned about an empty warehouse sitting on land use that could have been used for something else while an empty building sits there.

APPLICANT CAVANAGH – Well my boss worries about that a lot more than you will.

VICE CHAIR GIBA – I bet he does. Okay, thank you very much.

CHAIR VAN NATTA – I guess the good news on that is as long as it is sitting there vacant, it's not creating many emissions, right?

VICE CHAIR GIBA – No, not a thing

CHAIR VAN NATTA – Some of these speculative questions are kind of like asking a girl when she plans to get married when she doesn't even have a boyfriend.

APPLICANT CAVANAGH – That's a good analogy; thank you.

CHAIR VAN NATTA – We don't really know till it happens. When we first saw the Aldi project, they didn't have a tenant, but then they hadn't built either until they had that built to suit tenant to go with it, so a lot of these things we're not necessarily going to have answers for but we are trying to get answers on as many of them as we can.

APPLICANT CAVANAGH – You know in answer to an earlier question you had about why we think this location is a good location and we didn't know in 2007, but I think the fact that Sketchers is out there and the fact that Aldi is out there, more or less support what we knew to be the case, which is the location that users would find acceptable and we feel that's going to be the case with our project as well.

CHAIR VAN NATTA – Okay do we have any other specific questions here?

COMMISSIONER RAMIREZ – Thank you gentlemen for coming out. I think my question might be directed towards Staff and has to do with the truck traffic flow. What measures do have in place to prohibit and prevent truck traffic from travelling south on Redlands Blvd. to Alessandro and Moreno Beach Drive to Alessandro and north to Ironwood?

TRANSPORTATION DIVISION ENGINEER LLOYD – Good evening Chair and Commissioners. This is Michael Lloyd with the Transportation Engineering Division. You're are referring to our truck routes which is governed within the City by our Municipal Code, so currently Redlands south of Eucalyptus is not a truck route, therefore they are prohibited from using the roadway and the enforcement mechanism would be working with the Police Department to enforce that, so they would either issue+ tickets, citations or whatever the means is to deter that from happening.

COMMISSIONER RAMIREZ – Very well, thank you.

CHAIR VAN NATTA – What about Moreno Beach, Alessandro, Cactus

TRANSPORTATION DIVISION ENGINEER LLOYD - Sure, I'll get out my figures so I can kind of expand my view.

CHAIR VAN NATTA – Thank you

TRANSPORTATION DIVISION ENGINEER LLOYD – Currently part of the Municipal Code; Moreno Beach Road is a truck route from the north side of State Route 60; the westbound ramps down to Alessandro Boulevard. Alessandro Boulevard is currently a truck route, all the way from Gilman Springs over to the I-215, so the entire distance across the City and Ironwood. I don't know if you asked about Ironwood, but Ironwood in the eastern part of the City is currently not classified as a truck route. Ironwood is only classified as a truck route between Pigeon Pass Road and Perris Boulevard. That's the extent of Ironwood being classified as a truck route.

CHAIR VAN NATTA – And Cactus

TRANSPORTATION DIVISION ENGINEER LLOYD – Cactus; the only place designed as a truck route is from the I-215 to Perris Boulevard, so once you're east of Perris Boulevard it is not classified as a truck route.

CHAIR VAN NATTA – So then if someone were to take Moreno Beach south, intending to take Cactus across, they would be at least for part of the way not on a truck route.

TRANSPORTATION DIVISION ENGINEER LLOYD – That is correct. They would need to utilize…

CHAIR VAN NATTA – But take Alessandro across which is commercial most of the way.

TRANSPORTATION DIVISION ENGINEER LLOYD – That is correct.

COMMISSIONER LOWELL – How about Nason Street?

TRANSPORTATION DIVISION ENGINEER LLOYD – Nason Street currently is not classified on any of it as a truck route. Now obviously trucks need to go from the freeway to say the shopping center adjacent to it, so they have the right to exit the freeway and go directly into the shopping center, however they do not have the right to say alright I need to go across the City or I need to go to Perris or some other locale and decide to utilize Perris or excuse me Nason to get that next destination.

COMMISSIONER LOWELL – How about long term parking overnight or over the weekends?

TRANSPORTATION DIVISION ENGINEER LLOYD – That would fall under… again we have locations within the City that accommodate commercial vehicle, the larger truck type parking areas. Off of the top of my head I do not recall all of them, however generally they tend to be located in an industrial areas with industrial collectors to provide that and the most immediate one that comes to

mind is down near Heacock and Iris. There is an existing collector roadway on the northeast corner and it's Revere Way. There is no buildings there currently, however the roadway is in place. Trucks are allowed to park there overnight.

CHAIR VAN NATTA – Okay, does the Applicant have any other presentations or reports that he wants to give us or if not we are going to move on with our public comments?

APPLICANT CAVANAGH – No I think we have said what we came to say.

CHAIR VAN NATTA – Okay did you have another question?

COMMISSIONER SIMS – What was the amount of TUMF fees that are being paid by the project in its entirety?

APPLICANT CAVANAGH – Approximately two and half million dollars.

CHAIR VAN NATTA – Okay thank you very much. At this point we are going to be open for public comments. I have a couple of pages of them here. Now do we have the timer working now? Okay can you keep the time and let us know because I get distracted if I'm trying to look at my watch, but you know if you can hold up a finger when are within a few seconds of the end and let me know so we can keep moving along. Okay our first speaker is Gideon Kracov.

SPEAKER KRACOV – Good evening Chair Van Natta and Commissioners. My name is Gideon Kracov. I'm an Environmental Lawyer appearing here on behalf of the Labor's Union, Local 1184 and there are 3,500 members who live and work in the County and I'm here respectfully to tell you that you cannot approve this project tonight. You must continue this item. Why… the Union timely submitted on August 31st, 2012, a 350 page comment letter. It included 29 pages of legal analysis, 22 pages of expert comments. It was the only letter to include comments from experts. I gave you copies of this letter. You have it tonight. It's not new. It's from 2012.

Unfortunately and I'm not pointing any fingers, our letter did not make it into the Final EIR as required by CEQA even though in the cover email I gave you and highlighted, it was received by your Staff timely, back in 2012. But a letter is not included and not responded to… nothing. There is a two page information request from us in the Final EIR; that's letter D1, but that is a different letter. It had a different cover email. The big letter of August 31st, 2012 that your Staff got, please look at the email I highlighted and also sent by overnight mail. It's not in your Final EIR. Staff told you tonight that the City received 13 timely Draft EIR comments. That's untrue. You got 14 and our email proves it. We brought this to Staff's attention, but it is very last minute, it's all very confused. We need time Commissioners to straighten this out. The City has to go back and continue this item, reopen the EIR with our letter.

CEQA requires that the City shall consider all EIR comments like ours. It shall prepare a written response that describes each issue. Failure to do so is terribly unfair and invalidates this EIR. None of that happened here. Our letter is not in the document. This would certainly invalidate any action, any findings, and any approvals that you take tonight. Now this is not something that can be ignored or punted to the City Council and it can't be sort of be ham and egged here on the fly tonight. On the Tract Map, you Commissioners are the decision makers; not the Council. How can you make that decision with a defective EIR? To sum up, mistakes happen. I don't know how this happened. We're trying to work through this with Staff. We haven't had a lot of time to figure this out. We have to face the facts and deal with it. Please, I know it's procedural. We not trying to play "got you" here and I know its last minute. It's no fun sometimes but in this instance unfortunately it means you have to continue this, reopen the EIR, respond to this very detailed comment letter, recirculate it and then it will come back to you. I'm sorry this is last minute, but we're trying to deal with this too in the most professional way possible and it's very unfortunate. Thank you.

CHAIR VAN NATTA – Thank you. Our next speaker is Tom Thornsley.

SPEAKER THORNSLEY – I'm still writing extra notes. Of course in three minutes I can't get that far; right? Okay I'm going to start out with a quick barrage of some questions. Don't need the answers right now? Will the project widen or pay the fees to widen Moreno Beach just south of the project site? You know all know where that bottleneck is. Also why is there no screen wall proposed along the freeway adjacent to building one? In the Statement of Overriding Considerations they used the economic benefit; the jobs benefit as part of why this project should go forward in light of the impacts that it imposes on the City.

Nowhere in this is there any form of economic analysis that indicates anything. There is no economic analysis provided to stipulate the economic benefits to the City that the City believes nor realize what source of revenues would be generated by this project. Additionally no analysis has been prepared to show the tax increment generated from this project that will keep up with inflation, increases for services to the property for such things as Police, Fire, sewer, water, road maintenance. Prologis maintains their properties. Prop 13 allows them to keep the tax rate at about one percent a year. Our inflationary rate as we've heard the Mayor mention for our Police alone is five percent, so it won't take too many years before our inflationary rate outstrips our ability to provide services.

Our City finally wrapped up its update of the General Plan sometime in 2006 and by 2007, one year later it appears now that Staff and Council began entertaining assaulting the General Plan and for the developers; for this developer and for Highland Fairview for considerations of Sketchers. All those areas that have been converted were Business Park. The current mix of land use creates…in this

area the current mix of land uses creates a community node with a Commercial, Residential and Business Park. Now we're being asked drastically to change to eliminate the mix which is in violation of our very General Plan goals cited in the EIR's goals number 2.1 and 2.5. They recommend a mix of uses. Over the past six years, the City has continually abandoned all the Business Park land use properties in favor of the Light Industrial for what now appears to be the soul purpose of allowing massive warehouses, completely displacing future opportunities for business development with a higher square foot job ratio. Recently the City analyzed this location with the SR 60 Corridor Study trying to find the highest and best uses that would benefit freeway exposure ergo the Auto Mall… so be it the Auto Mall or the… could utilize the exposure…

CHAIR VAN NATTA – That's the full three minutes. Thank you very much for your comments.

SPEAKER THORNSLEY – You should respect the General Plan at this time. Thank you.

CHAIR VAN NATTA – When we have very few speakers, sometimes we can allow a little bit of latitude, but we have a lot of people who want to speak. Thank you. George Hague is our next speaker. To save travel time, the next one is going to be Tyson Chave so you are aware.

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Oh Tyson Chave is the Applicant Representative.

CHAIR VAN NATTA – Well his name is on here, so I didn't know if there was something else he wanted to say. After that would be Scott Thompson. Okay go ahead Mr. Hague.

SPEAKER HAGUE – George Hague, Moreno Valley, Sierra Club. If anybody in the audience wants to speak, please fill out one of these green slips to do so. I'm going to hand this letter in, in a few minutes. It has come to the Sierra Club's attention that the Law Firm of Gideon Kracov submitted a Draft EIR comment letter of several hundred pages on the Prologis project. Originally comments for tonight were based on the Draft EIR comment letters and the responses to those found in the Final EIR. Since the Draft EIR comments are not in the Final EIR which is posted online and over on the table, the Sierra Club believes it has been denied a chance to read these responses. Our comment letter would have been different. The project may have been modified and the Mitigation Monitoring Plan may have been different than what is before you now.

The Sierra Club strongly recommends that a new Final EIR, which includes their letter with responses with any necessary revisions in the document or plan, then recirculated to the public and a lot of other comments other than that, but that is important for you to decide tonight.

You talked a lot about traffic. Imagine yourself trying to go out on Moreno Beach and you are going to pull out right and go east on 60, you go up a grade, you have three trucks there in front of you. Trucks take a lot of time to move. It's not the same as cars. They can't compare what's happening with what was there as supposedly as houses and what is going to be there for trucks. There is a huge difference. You should also be able to condition them to build an acceleration lane on the freeway to deal with this so we don't get stuck behind them and we can pull around them. Their traffic analysis only went three miles. That is why it stopped at Nason. It doesn't stop at Nason. It keeps going on to the 215 or from the 215 to Nason. We should know what's happening at all those other intersections. It should happen. There may need to be additional improvements just as they recommended at Moreno Beach and Nason. That's where they stopped because that's all the study did. You need to push them all the way so you have the knowledge before you actually vote on the project and hopefully you will.

With all the changes in the General Plan that have come forward and modified, in my opinion now, our General Plan is generally inconsistent and has become even more so and this project is just making this happen. Also our TUMF fees…they are based on our General Plan. Well this project helps change our General Plan and therefore our TUMF fees don't really recognize part of this project as part of what is supposed to happen. That's happened with other projects that are going on. We keep changing. I will submit a letter with all my other comments.

CHAIR VAN NATTA – Okay thank you very much. Okay then our next speaker will be Scott Thompson.

SPEAKER THOMPSON – Good evening. My name is Scott Thompson. I too live over on the east end of town. I'm right off of Redlands Blvd. and I have issues with all the warehouses that are going in over there. I don't know if you guys have been on the road in the morning at 7 o'clock since we put the stop sign in and the signal light in, but the traffic is already backed up clear to the stop light and even further. When I watching that little traffic report there, none of the cars are really stopping and gathering like they normally would today. Now some of that might be yielded because of the signals, but also over on Moreno Beach we have the same issue going on right now. You drive over there. You go all the way up to Alessandro. You've got traffic all the way back; almost to Cottonwood now, so I mean there are a lot of things that aren't happening that should be and I don't think that traffic report really represents what is going to happen. A lot of the flow was going on and it was moving and it wasn't really stopping. It wasn't gathering at the places where it should gather and when you add a truck and two trucks and three trucks, it gets even worse, so I see that as being one of the biggest problems.

The other problem is we're building warehouses right next to a neighborhood that was already developed. Again, Sketchers, you know and now this and I think that most of this area was meant to be residential, especially up Redlands Boulevard and you are kind of converting it into warehouse space and I don't think this is a great plan; a good idea and I think you can stop making some of these mistakes by stopping this project. Some other things I have is obviously the property values in this area have gone down as everybody's did in the economy. They are just now starting to come back up and then to put warehouses right next to it is not going to help the property values at all. Me trying to sell my house…

CHAIR VAN NATTA – Can you please not interrupt the speaker.

SPEAKER THOMPSON - …me trying to sell my house in five or ten years if I want to leave or want to leave because of all the warehouses being built and the possibility of the WLC being built you know I don't think I have a chance, so this community and your motto is dreams should soar, well this is becoming a nightmare for me. I'm watching all this stuff happen around me and I feel like even as an individual in this community, it's not getting respected that we have already have lived here and now you're developing these areas that are not for us. I don't know what they're for. Six hundred jobs; really? We have over six hundred homes in that area and all you're saying is one job; six hundred jobs? I know, I'm for jobs. I work for a living. I create jobs too, but six hundred jobs to develop all of this? All these stop signs; all these roads; all these improvements; all this and for what, six hundred jobs. Isn't there a better way to come up with six hundred jobs? We have vacant warehouses over by Lake Perris. We have vacant warehouses over by March Air Force Base. Why don't fill some of those up and those will bring you six hundred jobs. There is many more to say and I too will put my comments in through email, the rest of them and I'll let others speak.

CHAIR VAN NATTA – Thank you very much for your comments. Our next speaker is Hans Wolterbeek followed by Brandon Carne.

SPEAKER WOLTERBEEK – Good evening. Section 8.2 in the EIR asks how this project will affect SR 60 traffic and specifically I ask if WRC impact has been addressed. The response from Prologis states in the document that the 2035 analysis includes the evaluation on the effects on the City of a project larger than the WLC. I will assume that this has been done in such areas as trip generation and the associated impacts on air quality and the SR 60 truck traffic. The total impact of this facility and the Aldi facility will be about ten percent of the probable WLC facility in the next fifteen years. Ten percent is not an insignificant impact. I personally think that the traffic study should have included the 215/60 interstates. I think we need this as the current truck point. The 215 and the 215 is a target of Prologis. Daily truck trips will be 2,000 for this project alone. This is higher than my evaluation of the WLC. AQMD states that the result of these trips, the

impacts of the air quality of the Prologis project by itself exceeds Federal and State standards, so when we combine the ten percent of Aldi and this facility with the proposed WLC we'll have a real problem. The City states it believes that the trip generation rate for the Prologis is too high. The problem is we don't know the identity of the tenants so it's difficult to verify this assumption, but I tend to agree with the assessment with traffic evaluation based on some other recent studies. However there is no reason to assume that the air quality impacts from trucks will be less than stated in the response. No one knows the true impact on air quality due to trucks in a basin like ours… no one. All we can say is that will have a known degradation in air quality.

The City will control truck traffic trips from this facility through the City, but how will this prohibition be enforced and who will pay for it and how will various regulations such as idling time be enforced to citizens in the local area can be assured of proper control of the air quality. AQMD has stated they want to cooperate with the City and with the developer. We do not know what we will get in air quality. Will you agree to support and help finance the implementation and operation of an air quality station in the eastern part of Moreno Valley. This facility will provide jobs in Moreno Valley, but will you support and help finance the implementation and operation of a program in Moreno Valley to learn about warehousing so people can actually move up; the people you hire. Thank you.

CHAIR VAN NATTA – Thank you very much for your comments. Brandon Carn following by Darryl Terrell.

SPEAKER CARN – Good evening Planning Commission. I first want to make known that this project seems to be placed at a very silly geographical location in Moreno Valley. I think it was purchased in the short term wildness of cheap land prices during the real estate bubble that ended in 2008 in a national global recession and I don't think it was planned out very well because many of the projects like Walmart and other projects like residences and things were not built or planned at the time, so there was no long term planning when these warehouses were planned. Traffic cannot be mediated now at Moreno Beach Drive. If you don't believe me compare the school traffic, people commuting to San Bernardino County in the early morning hours around 8 o'clock in the morning. The light isn't working property. Sometimes there is construction going there and Nason. Now when they finally finish the Nason Street Bridge after two and half years that was overdue, so traffic realistically is not going to be mediated here or along Redlands Boulevard or any other structure that is going to be built. Another thing is we don't need more warehouses in Moreno Valley that have no tenants.

These are six buildings the tenth of the size are of what we probably have now available just in square footage in warehouses that have not been filled. People have easily a million to two to three million square footage of warehouses that are being leased out by Lee and Associates. If you don't believe me drive down

Frederick to Cactus. There are tons of buildings or land that is vacant lots now that is not yet been developed into warehouses. There is plenty of it. We also should not bring in tenants unless they are bringing in something in the on the retail commercial level. When Aldi is coming its bringing stores to the local area. It's also bringing more logistics and truck facilities in the area. We need to fill in a lot of vacant space that was left over from the urban sprawl from that real estate bubble.

Another thing is in five years there is going to be… the demand… the economy is going to be a lot more improved and what is going to be in demand then is residential development and retail once again as Moreno Valley is famous for. Warehouses are going to be a thing of the past unless they are supporting a local chain of businesses. There are going to be tons of more homeowners and retail businesses and parks and schools eventually built out there. That is Moreno Valley's end game when development… when build-out is completed in the 2030's.

Also we don't utilize any of the infrastructure that we currently have for warehouses. We have a March Global Port empty with almost no vacancy. We have land that could be annexed by the City from the GPA that could be a logistics facility. We could use… we're building a March… March is building a General Aviation Airport and that could be used for hangar space and logistics. Last month a program for the Perris Valley Line Project; the Metrolink service that is eventually coming to Moreno Valley next year to Perris, Menifee and other communities. The long term goal of that project is to build a freight line for rail back down to San Jacinto and other communities as it used to be many decades ago, so in the long term that's the area that's going to have the most right of way in logistics for logistics. The freeway is wide enough already, but we also need to keep in mind as that with recently President Obama was discussing cutting the budget and the military size. March is not going to be military facility forever. It was eventually downgraded in the 90's to reserve status but eventually it will not be an Air Force Base facility anymore. It is going to close someday.

CHAIR VAN NATTA – Thank you very much for your comments.

SPEAKER CARN – Norton, George and Victorville did the same thing, now their logistics. We need to build and counteract that negativity.

CHAIR VAN NATTA – Could I just comment to the public that if you have something you want to say, turn in a comment card and you can come up and speak, but when you are clapping over what the person is saying, it can sometimes interfere with our ability hear the presentation.

SPEAKER TERELL – My name is Darryl Terrell. I live in Moreno Valley. The Prologis group; this is your land, you can do whatever you want within the confines of the General Plan. I'm not against development, but I'm in favor of

responsible development. I'm here tonight because it's time to put our people and our kids and their future first for a change. We all share a common belief that we want our kid's dreams of tomorrow to eclipse our greatest hopes of today. As I said to the City Council Tuesday, Moreno Valley could be much more than a blue collar city. We could be a white, brown collar, green collar or any collar because I believe in our kids and our people and their God given ability to raise the bar and set their sights even higher beyond a blue collar City. There is nothing wrong with blue collar jobs because I have one and my dad as I said before, I've got two of them, but we could be much more than that. Our kids deserve more.

Our people deserve more for a brighter future and greater economic opportunities. We could be a City where all collars are welcome to our General Plan. We could be a 21st century city. We have all the tools to achieve this in the existing General Plan and diversify our economy and building a (inaudible) a green, a research and development light factory, a biomed (?) economy and creating everlasting prosperity, a sustainable economic growth that will provide our people with a living wage or a career that would lift them out of poverty and keep them off of the freeway and closer to home and most importantly provide a future for our kids to come home to after College. We must give our people hope and raise our kids and their aspirations and their future and their dreams in (inaudible) and not (inaudible).

It's time to raise the bar now. It's time to put our people; our kids and their future first for a change because we have enough warehouses right now. It's time for us to start thinking about building something. We have never attracted businesses that build, manufactured or building something that can lift people out of poverty because our kids don't want to come back here because there is nothing for them to come back to. It's time to start thinking forward to the new global economic frontier of the 21st century. That's where our future lies right now because we're going to be 21st century city. Then we've got to look forward; not backward. Logistics is going to have its time, but what about beyond that where our kids, if we want to have an establishment like Riverside, then that's what we have to look for bringing our kids home. Thank you.

CHAIR VAN NATTA – Thank you very much Mr. Terrell. Our next speaker is Lindsay Robinson followed by Jaime Moreno.

SPEAKER ROBINSON – I'm not a public speaker so bear with me. I'm not opposed to the business park being built as it zoned. I am opposed to them coming in and asking to change the zoning so more warehouses can go in when it should be residential. I researched the zoning before I purchased my property here. This is someplace I wanted to retire and stay. I don't know if I would be able to afford to leave. I participated in the process with City Staff and other residents to come up with the General Plan to build out the eastern end that was satisfactory to everyone. I think it is unfair that people with money and

speculators can come in and get these zone changes in. We had a great General Plan for that area; schools, small business, light industrial, business parks. Schools would have brought better paying jobs, longer term jobs than warehouses, however the zone change that allowed Sketchers to come in has negatively affected the whole area down there. I'm asking… well we know that warehouses; his warehouse in particular did not bring in the promised jobs nor the revenue to the City. We were told that it only brought in 200 thousand when he was telling us it going to bring two million. I'm asking that you please do what is morally right and ethically correct thing and do not permit any more zone changes for warehouses on the eastern end. They are detrimental to our health and wellbeing of the residents and don't bring the jobs and revenue.

Regarding traffic, she brought up if it was built out residential, how many vehicles it would be versus the trucks. I did not hear that they included for the 600 to 1200 employees; their vehicles added to that mix plus any clients, customers etc., we would have all that traffic also and then also the Rami Overlays. I attended that meeting and as we all know from Marcelo Co's testimony, overlays have been used to circumvent the zone change process. The current General Plan was not presented to the people, only these three alternatives that have been kind of crammed down everyone's throat as well as what are the three we can choose from and I still think the original General Plan is the best one for the eastern end of Moreno Valley. Thank you.

CHAIR VAN NATTA – Thank you for your comments. Our next speaker is Debra Coggins Ortiz followed by Melody Lardner.

SPEAKER COGGINS ORTIZ – Hello Commissioners. I love you guys; really I do. You have a lot of power in your hands and I know that a lot of what we are seeing pretty much doesn't have a chance against more warehouses being built in the area, but I love you guys anyway and I love Jeff too, wherever he is. I understand it's his property and he would like to make some money and do business and I'm sure he's a very smart businessman, however I have lived in Moreno Valley almost 30 years and raised my family here. We started out in a little biddy new house and moved to a second house as our family grew and then purchased our house in the east end 16 years ago where we absolutely loved it and I am north of the freeway off of Redlands Boulevard right on the corner of Juniper and Redlands Boulevard and nobody has brought up the fact that that is a truck route that goes through San Mateo Canyon and all the traffic goes through there as a short cut to get to Loma Linda, Redlands, the 10 freeway or whatever.

Ever since Sketchers has been built, truck traffic has increased past my house and either of you are welcome to come to my house anytime you like. When the trucks go by my windows rattle and I have to stop and think is that an earthquake or a truck and that's a hell of a way to live. If more warehouses get built there, that will increase as well. I keep hearing everyone talk for years about how we

all want to put Moreno Valley on the map. What kind of map? The king, world capital of warehouses? Is that what we want for our families and our community? I say no. I say logistics and all of California stinks and warehouses are just because we've lost all business and we're importing all of this junk from other countries that we are filling our stores with.
What I would like to see and what I would like the Commission to create is a possibility for making Moreno Valley a haven and have a reputation for being open and encouraging for small businesses to come here; for manufacturing to come here so that American products can be made here and so we don't have to import all this junk from overseas. Thank you.

CHAIR VAN NATTA – Thank you very much. Melody Lardner followed by Bob Palomarez.

SPEAKER LARDNER – I'm Melody Lardner. I live south of this project in Moreno Valley. I'm again concerned our City is trying to change our General Plan. The Plan was a document developed with the City in conjunction with the residents in a vision of how we wanted to City become and this warehouse complex is a far cry from our vision. I'm concerned that the high density housing that was supposed to be there is now going to have to be relocated which happening with every new project that changes our General Plan.

Truck traffic mixed with cars is a big concern. I commute through the Redlands warehouse area and traffic accidents are increasing between cars and trucks there. Potholes are increasing in the roads out there and this City here doesn't seem to have the money to always fix potholes and there is getting to be more and more of them around our City. I also am concerned about the traffic on Moreno Beach like was pointed out. It's a bottleneck and a truck route. I'm concerned… I won't repeat the Highway 60 stuff. I'm concerned with noise from this project because I read that it was going to be 24 hours operations and at night sound really travels. I can hear the freeway at night, so I'll hear this at night too.

I am concerned with the diesel exhaust as others have talked about. I am concerned this development may increase run-off into the Quincy Channel because they are taking away a couple of the smaller channels that absorb the water. I don't know if the detention basins can handle some of these storms we've been having. We've seen what the storms can do in just one event, how much soil can move; how much water can move. This project… I am concerned if this does get approved about lighting to make sure that the dark standards are enforced and also if they have skylights that the light is not coming up from those at night if they are operating 24 hours.

If you do approve this development, the landscaping looked pretty skimpy. Sketchers promised lush us landscaping and if that's the definition of lush landscaping then that's a far cry from what we need to see to screen these

buildings from view especially around the perimeter. There are nice apartments that have nice views. Right now they'll just see buildings and a little wimpy landscaping. There are some good examples of some warehouses in Redlands that have nice landscaping and setbacks and built below grade. I'm not sure if all that is going to be done here and then they said they would build them to accommodate solar panels but nowhere did they promise solar panels. I would like to see you know that is a lot of ground being covered with cement and asphalt and it would be nice if we take advantage to help with the climate change and global warming and maybe bring utility costs for residents in the area and make the City a greener City and I would like to see the parcels if you do approve this, closest to the Auto Mall, give the Auto Mall a little more chance than 18 months. The economy is just barely picking up and making a centralized Auto Mall makes sense for that area and that what was intended. So anyway, thanks for listening and I have a copy of the letter I can submit.

CHAIR VAN NATTA – Thank you very much. Okay Bob Palomarez is next followed by Craig Givens.

SPEAKER PALOMAREZ – Good evening Commissioners. I'm here to speak on my behalf. I am in support of this project. I am concerned with the size of it because a lot of this stuff that we've heard, even the gentleman who came up here at the last minute and professed that he has the answer to everything, those are the same people that said thing when Sketchers was on the drawing board; you know the same concerns; the bumper to bumper traffic on the 60 freeway. I don't see it. I know there are concerns but you know they just don't want it out there, but I know you'll make the right decision based on everything that you receive; you know paperwork. These people, that's their land and if they meet City, State and Federal guidelines and go beyond it, why should you deny them. They have been denied seven years, but this City has been denied since 1986 for these kinds of projects. I am concerned with the size, but I'm looking at the big picture. I mean the City of Riverside, threw their two cents in saying they are concerned with the pollution. I don't think they came to this City and told us we're going to build a lot of warehouses on the south side of the 215. Do you have any concerns? Of course we do. But they didn't give us a courtesy, but yet they'll get in the Press Enterprise and say that they're concerned. They aren't concerned. They just don't want anything here period. You know these people are entitled to their due. Thank you very much.

CHAIR VAN NATTA - Thank you. Craig Givens followed by Jonathan Lipscomb.

SPEAKER GIVENS – Good evening Planning Commission. I'm here to oppose approval of this project. If I can look and just read something that Highland Fairview sent out dated February 28th. It said that it's an opportunity, when they are talking about the World Logistics Center, for our City to meet its potential as one of the nation's leading warehouse centers. Now if that is the only potential that Moreno Valley has is warehouses, that's pathetic. You represent the people

of Moreno Valley and the Council. These projects are in the interest of the developers and not in the interest of the people of Moreno Valley.

The people want more than just warehouses and if we look at our industrial area; the Joint Powers area, we have plenty of warehouses and more room for more to come. The gentleman that came up here talking about the project said that normally they look for ports, freeways, airports and rail lines. Now there is no port here but three of those items are in the Joint Powers area. That's where our industrial section is and to the gentleman who says that he would have to leave. You don't have to leave. You can joint our movement to remove every single appointed and elected leader that believes we should be in an industrial warehouse city. The people out there, you need to support what we're out here doing in the community. You don't have to give up, you have to fight for the type of city you want. They have a view of a warehouse, industrial city. We don't share that view and we have to use our voice and our votes to make the changes that we need in Moreno Valley so that we will be a first rate city; a city that we can be proud of; that our young people can look forward to living in and that we can proposer in. We have a place for warehouses. It's in our industrial section.

CHAIR VAN NATTA – Thank you very much for your comments. Jonathon Lipscomb followed by Debra Craig.

SPEAKER LIPSCOMB – Good evening. I agree with many of the things that have been put forward tonight as far as the concerns with air quality and traffic and such. There were a few things that I'd like to direct my comments to. It came up while Pat Cavanagh was speaking. As mentioned by one of your Councilmembers, Prologis began this project as a warehouse park in 2007 when the property was zoned as a Business Park. Obviously Prologis in 2007 had no concern for the Moreno Valley General Plan or what the vision for the area was, or its business park intentions, but rather was solely concerned with its fiduciary vision for delivering dividends to its shareholders via development of a warehouse park.

Now obviously warehouses provide lots of jobs; 600 jobs at warehouse pay is not going to give you a whole lot of tax revenue. If the laws have already been structured to reduce tax revenue for large scale businesses and developers of this type, you can't count on that for revenue either, so you're at a loss and taking on a liability for the sake of a well moneyed and possibly well intentioned developer may be counterproductive to the community as a whole. Beyond that, the Sabian (?) site was and is that the ideal site for Prologis' project according to the company's website was spoke earlier today, is a major port or harbor or other sort of hub, which Moreno Valley really isn't, except for perhaps the fact that it does have a potential maybe airport in the future and a lot of highway access and some roads that can be converted over. With that idea then, this project was created to exploit the region as a hub even before the idea of the development or the General Plan was presented.

This vision that they wanted to share with us has nothing to do with us except for the fact that we have a potential for an airport and a bunch of highways that they want to exploit. Beyond that strategic hub, perhaps their Moreno Valley vision was seen to be more to exploit us than anything and I would think that you're responsibility to us as a community would be beyond that and that focusing on small business and manufacturing would help get us beyond a short sided goal. Thank you.

CHAIR VAN NATTA – Thank you for your comments. Debra Craig followed by Scott Heveran.

SPEAKER CRAIG – Good evening. I came here just to get information. I didn't plan on speaking tonight, but then when I heard the presentation on the traffic report and they said they didn't include the traffic leading up to the 215 and 60 freeway, I had to speak. For the record I live in District 2. I don't even live on the east side but I am against this project. I am teacher in the District. I live a mile from my school. I don't even have to get on the freeways and I'm sure Prologis is a really good company but the City Council they just recently approved Aldi warehouse and they said they might have 250 stores that they will be delivering to and that's already adding truck traffic to our freeways, so I don't know how in good conscientious this City Planning Commission can approve this project. How could you do this to the people who are already sitting on the 60 freeway sitting stuck in traffic? I just don't understand why. It's not worth the 600 jobs we might gain. I've often that the right thing to do is often the hard thing to do, but in this case I think the right thing to do is really easy. You should just say no to this project. It's really a no-brainer. Thank you.

CHAIR VAN NATTA – Thank you for your comments. Okay our next speaker is Scott Heveran followed by Brian Sharrow.

SPEAKER HEVERAN – Good evening. First of all I'd like to thank the Commission and I guess the City Council for televising these things. I watched my first one last week. Chairwoman Natta said Moreno Valley is a beautiful town surrounded on three sides by beautiful views, beautiful mountains and it is and during that meeting that was about possibly bringing in higher end homes. Of course you know it seems to be the motto of this City is aim low. You know it was said that we can't build high end homes because we're not Temecula. We're not 30 miles closer to San Diego and I believe one the Commissioners said we're 30 miles closer to Vegas. What happens in Vegas stays in Vegas, but what I would suggest to you is that we're 30 miles closer to the mountains. We're 30 miles closer to Coachella Valley, to Palm Springs, but the logic of that is anybody closer to San Diego would be a more affluent City and that's just not true. The problem with Moreno Valley is that we don't choose to be; we don't choose to aim high. We choose to aim low. I don't understand why you would go to such trouble of re-branding a section of the City as Rancho Belago and then turning it into warehouses.

Nobody I know bought a house in Moreno Valley thinking well one day we'll just have all these warehouses here. How can you turn a bedroom community into a warehouse community and just expect the citizens to go along with it. The whole idea of changing the General Plan is a bad idea. First of all, the City is under a cloud of corruption. Now the Council can blame the citizens for drawing attention to that, but by not looking at that and not trying to show the City and the rest of the community that we are thinking of the citizens. We're not giving the developers whatever they want. That's how you clean up the City's image, not by changing the General Plan at the whim of the developer. Now they say that this project is going to bring in x amount of traffic and pollution. Well that's not cumulative. You have all these warehouses going in with the big monster coming down the road of the World Logistics Center. All of these things are going to brand Moreno Valley as a warehouse City. That's not a good thing.

CHAIR VAN NATTA – Thank you for your comments. Our final speaker is Bryan Sharrow.

SPEAKER SHARROW – Hi, thank you for your time. I'm probably maybe one of the newest residents here. I've lived here for about three months. I've been out here since 1979, grew up in Nuevo, went to Perris High School, moved out to the May Ranch Development out there when it was just nothing more than potato fields all around where I lived and I saw the bigger master plan businesses coming in and it was proposed that they wouldn't be a burden to our community. Well they were. The noise was horrible. I mean you can argue whatever you want on any kind of study, but I was a resident and I sat there listened to these trucks in the middle of the night going beep, beep, beep backing up and what not. Well that wasn't the big problem. The big problem was really the freeways that weren't designed to hold that. Not only the roads and the damage they did to it, but the freeways was really a problem to where I see it's going to be a huge problem where I live now up on Moreno Beach Drive just north of there.

That exit is designed for two people going left and right and they are night timed properly, especially on the north side. If you guys could do something about that, that would be great, but anyhow the problem that I see that really should be looked into, aside from this whole concept which I'm not a fan of; sorry, is that on the Ramona Expressway where I lived off of, the added truck traffic alone, not to mention all the vehicles that were involved backed up that freeway oh I'd say a good mile and unfortunately there were a lot of accidents caused because people would try to get way up front and dive in there and it wasn't designed ever to hold all the people on the side of the shoulder, which is actually for emergencies not for regular traffic stopped, so then you come up here to where you're out on the freeway, which your study didn't really cover and I'm thinking guys you've got to deal with that because we're merging from Nason onto Moreno Beach to the freeway and then you've got people exiting on Moreno Beach Drive and I see a lot of truck traffic going to be piling that up and I'm trying to get in there as a resident and not to mention there are 600 jobs.

I'm for job creation; absolutely fabulous, but how many people are going to suffer. You know when I leave in the morning for traffic purposes, it's a nightmare. So now all the people coming from LA for this 2,000 trucks or whatever, going to be coming in here and creating more traffic in the morning for me and then leaving, more traffic at night. I don't see how that helps us. I think there is maybe better ideas hopefully on putting this location out at March or something like that. I think there are areas that are developed for this. I'm not here to point fingers or to say you guys are doing a bad job or anything, I would just hope that you would take it into consideration what the people here are saying and maybe do due diligence and so thanks.

CHAIR VAN NATTA – Thank you very much for your comments. Seeing no other speaker slips having been handed in, I'm going to close the Public Comment Section and I do have a couple of questions for Staff on a couple of the items that were brought up during the public comment if I may.

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Do you want to ask those in advance of the rebuttal by the Applicant?

CHAIR VAN NATTA – Oh, actually I would because there might be something that could be included in their rebuttal. So one of them was and this would be for our Economic Development Director here. There was some comments about all the vacant warehouses we have in town. Do we? Are there a lot of warehouses that haven't been leased or spoken for?

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – As of today, there are two vacant warehouses in Moreno Valley. One is on Cactus and the other is down in the south industrial area. Together one is about half a million square feet and the other is about 600,000 square feet and those are recently completed and are not leased, so yes there are two vacant buildings in Moreno Valley. That is approximately five percent of the current inventory in town.

CHAIR VAN NATTA – Would that be considered a good percentage of occupancy factors?

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Well I'm sure for those people who own those buildings, it's not a good percentage. Across the region the vacancy rate on warehouse logistics, which also includes manufacturing, they all use the same kinds of buildings is right around 10 percent or a little bit less, so the vacancy rate in Moreno Valley is not higher than average. It's somewhat lower than average, so it's not an anomaly.

CHAIR VAN NATTA – The other question that was brought up was about the trucks going north on Redlands and we had asked about truck routes and you

had mentioned that south Redlands is not a truck route. Is it still a truck route north?

TRAFFIC DIVISION ENGINEER LLOYD – Yes that is correct.

CHAIR VAN NATTA – And that's because it goes through to Redlands and…

TRAFIC DIVISION ENGINEER LLOYD – Correct into the County.

CHAIR VAN NATTA – Okay then at this point the rebuttal from the Applicant if there was anything that they want to address that was brought up in the public comments.

APPLICANT CAVANAGH – There was a couple of things that I wanted to comment and I'm not going to go deep on all the comments. A lot of it is dealt with in the Traffic Study and I'll leave that alone. There is a couple of things. One is the notion that it would be much better to have business park designation and build business parks as the General Plan allows for and I would tell you that that segment of the market was probably the hardest hit; maybe as bad or worse than the residential market. It's still slowly recovering. It will take a long time to recover and it's a different kind of market. We have an average size building in the Inland Empire of about 300,000 feet. That's our average building size. In Los Angeles our average building size is about 60,000 feet, so we know this market. We know the market for business parks because we own a lot of it in Los Angeles and you generally end up with smaller companies, poor credit and more vacancy. It just comes with some baggage so I guess my only comment is that if we thought that business park was a viable good workable idea in this location, we would be pursuing that and we just don't think that makes a whole lot of sense in this location for anytime in the near or long term.

One of the things that was cited in the Traffic Study and I want to just make a point of it is the Traffic Study conducted for the proposed project shows a 47 percent reduction in daily trips when the proposed project is compared to the General Plan build out condition. According to the study, it can be reasonable to conclude that air pollution emissions would be correspondingly reduced, so I'm just pointing that out because it seems like I hear a lot of comments that if we just build it to General Plan it will be so much better and what will happen if you build it to the General Plan is that you will have a significantly larger amount of traffic to deal with, so it doesn't go away, as a matter of fact it gets worse and I wanted to make that point. They were comments about landscaping. I mean I would invite anybody that was interested to be objective to look at the projects in Redlands that we built that's close by. We own five million feet in Redlands. I think they are beautiful buildings. They are landscaped with a high degree of care and I think the comment was we need more landscaping. Look at what they did in Redlands; not they being us, but I think the buildings that they are talking about are the buildings we own.

COMMISSIONER LOWELL – Are those buildings typical of your … sorry Commissioner Lowell up here. Are those buildings typical of the landscaping that you'd be proposing here on this project?

APPLICANT CAVANAGH – Very much so; yes.

COMMISSIONER LOWELL – Could you provide a couple of addresses for now or after the meeting? I'd like check those out?

APPLICANT CAVANGH – I'd be glad to do that. And I stayed away from solar in my earlier discussion because it is a complicated concept and the reason I stayed away from is that generally speaking for you to install solar on a roof there has to be a buyer and the buyer is typically the utility company and Moreno Valley has their own utility company. We have met with your utility company and we've talked about our solar program. There is an opportunity to do something there, but it is more on Moreno Valley's initiative than ours. We just wouldn't build a solar installation for millions of dollars on a roof and not have anybody to use it, so I don't want to get too deep into the weeds on it, but solar is complicated. There is nobody doing more of it than us. We would love to have a further discussion with your utility provider to see if we can incorporate that into what we are doing, but the one thing that we do is we set the buildings up so that they can accommodate solar, so that down the road if the utility decides that they want to have that installation we can do that. And the last comment is there was no subterfusion in 2007. We were not trying to undermine the General Plan. We did not have an agenda that was inconsistent with what the City Council members knew about and bought into at the time and you know a lot of time has gone by and the Council is different and we understand all that. We sat down with the Council members at the time before we made the decision to spend 40 million dollars on this site and we had buy in. They felt the plan was good. The concept was good and the product was the right product and here we are today and there is a lot of people pointing fingers at people that I don't think is entirely appropriate, so thank you.

CHAIR VAN NATTA – Thank you very much. Okay at this point normally we would go into our Commissioner Discussion, but I think we have an issue here that we need to talk about and decide what to do and that is that we were given a large piece of information here, five minutes before the meeting started and I'm trying to get some direction as to was this submitted in a timely manner? Do we have… does the email confirm that and if it was, do we have a defective Environmental Impact Report because this information was not addressed and I'm going to ask the Attorney?

CITY ATTORNEY CURLEY – I'm glad you did. Well I'll give you a good lawyerly answer. I can't answer that. The point being because it did just come in; CEQA is a complex law as you well know. We would want to be able to thoughtfully and carefully look at the history of this, look at what their letter covers, look at what

our responses have done. Perhaps those items are already addressed and isn't known. The two main issues are was the information received timely? Was the letter received and does the current environmental information address it? If it doesn't; yes the re-circulation reprocessing would be in order. You do it when there is significant new information. That is the CEQA buzz word that you use. If there isn't significant new information, then you don't. You would just augment the Final EIR that you have and move it along. With that amount of paper and the care that we want to attribute to this, shooting from the hip tonight is not what we would recommend. A recommendation is you can continue it to a date certain and I'd say to the next meeting unless Staff thinks otherwise. Let everybody get their arms around the facts and details; give you the right information so that you can make the right decision. That's how we could properly advise you. It may be just hunky dory and it may not; we'll sort that out.

CHAIR VAN NATTA – That was kind of my take on it, that continuing this meeting to a date certain. I didn't want to do this earlier in the meeting because we have a lot of people here who had things they wanted to say and we want to be able to get that information without telling them you came out here for nothing and come back another day, but I think receiving this amount of information, not having any opportunity to even look at it and see if it is something that should have been included, I don't think those of us who got it at the last minute are comfortable with that.

CITY ATTORNEY CURLEY – And Staff echoes that and I echo that.

CHAIR VAN NATTA – Okay, then this particular Agenda item, do we have motion to… would we do it that way… a motion to continue it to a specific date?

INTERIM PLANNING OFFICIAL ORMSBY – Yes but we would recommend it to a date specific which would be your next regular meeting of April 24th.

VICE CHAIR GIBA – I thought it was the 27th?

CHAIR VAN NATTA – Okay, we have another meeting

INTERIM PLANNING OFFICIAL ORMSBY – We do, but that would not be adequate time and if we did need to re-notice the Final EIR it wouldn't be adequate time to that.

CHAIR VAN NATTA – Okay, so then would I ask for a motion to continue this Agenda item to our meeting of April 24th and then we would take action on that?

CITY ATTORNEY CURLEY – That would be in order

VICE CHAIR GIBA – I make that motion that we continue it to April 24th.

COMMISSIONER BAKER – I'll second it.

COMMISSIONER LOWELL – I wanted to second it

CHAIR VAN NATTA – Okay you can third it

COMMISSIONER LOWELL – I third it

CHAIR VAN NATTA – Okay all those in favor and we'll do it by roll call vote.

COMMISSIONER SIMS – Yes

COMMISSIONER LOWELL – In light of the information, I vote yes

COMMISSIONER BAKER – Yes

COMMISSIONER RAMIREZ – Yes

COMMISSIONER BARNES – Yes

VICE CHAIR GIBA – Yes

CHAIR VAN NATTA – Yes. All ayes and the motion passes. This item now goes to our next; not the meeting scheduled for March but the meeting scheduled for April 24th and Staff is requested to give us a report on what has been discovered as far as when this was received and if it should have had an impact on the EIR. Okay so other business.

STAFF COMMENTS

INTERIM PLANNING OFFICIAL ORMSBY – With regard to Staff Comments I would just mention that for the March 27th meeting you have the same two items I believe I briefed you on last time which is smaller warehouse project not too far from City Hall; Veteran and New Hope area, which is 366,000 square feet approximately and then you have also an Amended CUP for a use on Sunnymead Boulevard. So you'll be seeing that as well and those will be the two items. We're also hoping to bring forward the Study Session to at least begin talking or discussion on the Overlay Zones that we already have in place and introduce the concept of Overlay Zone and so forth at that meeting as well.

CHAIR VAN NATTA – Are there any other Staff Comments?

INTERIM PLANNING OFFICIAL ORMSBY – I didn't have any other Staff Comments?

PUBLIC HEARING ITEMS

1. This item is continued from the March 13th, 2014 Agenda

Case Description:	PA07-0081	Zone Change
	PA07-0082	General Plan Amendment
	PA07-0083	Master Plot Plan including Building 2
	PA07-0084	Tentative Parcel Map 35679
	PA07-0158	Plot Plan for Building 1
	PA07-0159	Plot Plan for Building 3
	PA07-0160	Plot Plan for Building 4
	PA07-0161	Plot Plan for Building 5
	PA07-0162	Plot Plan for Building 6
	P07-186	Environmental Impact Report
Case Planner:	Jeff Bradshaw	

CHAIR VAN NATTA – Okay now we're going into our Public Hearing Items and the first Public Hearing Item is Case Description and this was continued from our March 13th, 2014 Agenda and it's PA07-0081 Zone Change, PA07-0082 General Plan Amendment, PA07-0083 Master Plot Plan including Building 2, PA07-0084 Tentative Parcel Map 35679, PA07-0158 Plot Plan for Building 1, PA07-0159 Plot Plan for Building 3, PA07-0160 Plot Plan for Building 4, PA07-0161 Plot Plan for Building 5, PA07-0162 Plot Plan for Building 6 and P07-186 Environmental Impact Report. The Applicant is Prologis. The Case Planner is Jeff Bradshaw and could we have the Staff Report please?

ASSOCIATE PLANNER BRADSHAW – Thank you. Good evening Chair Van Natta and members of the Planning Commission. This item was presented to you as described originally on March 13th, 2014. We were able to provide a Staff Report and information on the project as well as the project Environmental Impact Report. During the Public Hearing portion of the meeting one of the speakers Gideon Kracov representing the Laborers International Union expressed a concern that one of the comment letters prepared on behalf of his client had not made it into the Final Environmental Impact Report nor were there responses. We were able to determine that that in fact was correct, that there had been an error in the preparation of the Final and we used the time between the March 13th meeting and this evening to bring that comment letter into the Final and we worked with LSA Associates to provide appropriate responses to the comments and concerns raised in that letter. That document was recirculated to the public for comment with re-noticing also completed for tonight's meeting. In response to that we did receive a number of comment letters. Copies of those letters have been made available to you by email originally and then hardcopies were provided for you this evening as well. With us this evening again is the project applicant with his development team and also available is the Environmental Consultant Kent Norton with LSA Associates who

has worked with the City to prepare that document. I wanted to keep my portion of this very brief and with that I'll introduce Kent Norton. He had some comments he wanted to be able to present to you as part of the Staff Report on the Impact Report itself.

SPEAKER NORTON – Thank you Jeff. Goo evening Madam Chairman and Commissioners. My name is Kent Norton. I'm an Environmental Planner with LSA Associates. We prepared the Environmental Impact Report for the Prologis, Eucalyptus Industrial Park Project. I wanted to bring to your attention and I believe Jeff already indicated you received copies of the correspondence that was transmitted this week regarding additional comments in the Final EIR. I'd like to clarify some of our responses to some of those comments. There were four emails or letters I believe you received. One from Johnson and Sedlak, one from Lozeau Drury, an email from George Hague and I believe a series of emails from Mr. Wolterbeek. I'll address the Johnson and Sedlak letter first. There were four main comments contained in that. That letter was received today. The first comment was about trying to again tie the Prologis project to the World Logistics Center project in terms of cumulative analysis and as much as the commenter would probably like to do that, that's really not allowed under CEQA because the notice of preparation which is when the baseline is set for the Prologis project was circulated in 2008, well before any applications for the World Logistics Center project. The Johnson and Sedlak letter also indicated there were a number of problems with the air quality assessment both for criteria pollutants, for the health risk assessment and greenhouse gases. We believe that we use the most appropriate data assumptions and methodologies, in fact those recommended by the South Coast Air Quality Management District to prepare our analysis, so we are very confident that those are accurate. Those accurately depict the potential impacts of the project. Pesticides were raised, the potential for contamination on the site by hazardous materials. That has been addressed both in the original and the Final or the revised Final EIR. We actually even added mitigation measures to help assure that there wouldn't be any issues regarding pesticides and finally there was a comment about a new fee program supposedly recommended or suggested by Cal Trans to fund freeway improvements, but under CEQA Guidelines if a mitigation program has not been established for a particular purpose or specific improvements, the project is not responsible for contributions to that and we believe that's the case with this project. The second letter was from Lozeau Drury. Their first letter from August 12th as Mr. Bradshaw indicated was inadvertently left out of the Final EIR. We have corrected that and responded to all of their specific comments. They primarily focused on… also the cumulative analysis with the World Logistics Center as well as air quality assumptions and pesticides and hazardous materials. Their second letter which was submitted yesterday now focuses also on the World Logistics Center, but also more detail on the health risk assessment, the criteria pollutant assessment of the air quality study and greenhouse gas assessment. As I stated previously we believe that we used the proper assumptions and methodologies for that assessment. Lozeau Drury did

their own calculations and hired some independent consultants to help them with that and not surprisingly they got different results than we did, however as I said, we believe we used appropriate guidance and assumptions and methodologies for that analysis and we believe that it accurately represents the potential air quality impacts of the project. The EIR did determine that air quality impacts were significant but not health risk impacts of the project on local residents mainly due to the size and the type of the project that is proposed and the AQMD thresholds that are provided. There were a number of mitigation measures proposed. In fact, eight of the mitigation measures were modified, two of them extensively in response to a number of comments including those from Lozeau Drury and also some of the other environmental organizations in the area and also the project would be required to implement those mitigation measures as well as comply with standard AQMD requirements regarding air pollution. As an example of some of the additional mitigation that was suggested by Lozeau Drury, they said that construction dust emissions should have plume monitoring even though and I can bring up our air quality expert to explain, but quickly that type of monitoring; the efficiency of the effectiveness of that has not been demonstrated in typical air quality monitoring situations. Also there was a concern about long term dust impacts on residents and the health risks of that, but even if construction lasted a year, the assessment period for the health risk assessment is a seventy year period and you can probably easily assume from that that construction during that period of time would not have a cumulative significant effect on individuals living in that area. As I said our health risk assessment was comprehensive and did look at those issues and we feel comfortable that the analysis and the mitigation measures that are recommended in the EIR will effectively reduce pollutants from the project. A couple of other items raised by the Lozeau Drury letter; the greenhouse gases. They brought up a lot of additional information on estimating impacts. There are mitigation measures proposed. The project will have to comply with the latest requirements of the California Green Building Code as well as the latest Title 24 energy requirements. Farm land was indicated as we haven't changed the determination on that. It is a significant impact, but the Final EIR does explain in detail why we concluded that mitigation for that impact is not feasible based on information in the City's General Plan and the decline of farming in Western Riverside County. Finally, their letter brought up as their original letter did the issue of pesticides and potential hazmat contamination. As I indicated, we have proposed mitigation measures. We actually added some measures to help make sure that that would not be a significant impact, but apparently it is probably still not enough for the commenter. I imagine that if this Hearing gets continued, I have no doubt that that commenter will probably continue to submit letters before those hearings as well. The third email communication was from George Hague. In fact he actually mentioned some of his concerns tonight about cumulative noise impacts, but those are directly related to the World Logistics Center project and Mr. Hague and others have continued to try to directly connect the World Logistics Center project to the Prologis Project and it is simply inappropriate under CEQA as I explained. The final issue was some emails I believe Mr.

Bradshaw received in the last day or two from Mr. Wolterbeek, a member of the public, regarding SP18 consultation with Native American tribes. The last communication was actually received even today on that. During the circulation of the EIR, prior to that, LSA assisted the City in sending additional notices to Native American Tribes to try and seek or find out if local tribes wanted additional consultation and we believe that the City has met the requirements under SP18 for Native American Consultation. Several of the tribes have expressed interest in that and the City is communicating with them and essentially all of the mitigation measures in the Draft EIR were modified to meet the suggestions or the requirements of the Native American Tribes to better define how the monitoring for culture resources would occur during grading. With that I would just conclude and say that we believe the information in the EIR, the Draft EIR and response to comments in the Final EIR are accurate and can be relied upon for decision making purposes and we believe they meet the intent as well as all of the requirements of CEQA. We have several people here tonight to answer questions if you have any regarding air quality, traffic or I can handle any of the other issues if you have questions of our team. Thank you.

CHAIR VAN NATTA – Thank you very much. Are there any more items to the Staff Report?

ASSOCIATE PLANNER BRADSHAW – Not from Staff at this time and the applicant is here as well.

CHAIR VAN NATTA – Okay and I'm going to open the Public Comment and begin with the applicant if there is anything he wants to say prior to hearing from the other speakers.

APPLICANT CAVANAGH – Good evening Madam Chairman and Council and Staff and the group of citizens that have taken the time to come here tonight. I don't want to spend a lot of time talking about what we've already covered in the last month's meeting or restating that, but I did want to touch on a few points that I think are important. In 2007 we acquired this property. After an extensive amount of due diligence, which included measuring the City Council support at that time, the community support and also market demand studies that showed that Moreno Valley was underserved in industrial. What has changed since then is that we've gone through significant economic downturn as everybody in this room knows I'm sure. We have a new City Council and one of the things that has happened that has created a lot of comments and concerns is the introduction of the World Logistics Center and in some fashion people confusing them with us and I will make that point more than once tonight, that we are not connected with the World Logistics Center. I have no involvement with that project or that company and we are totally independent of them. That project happens to be about 18 times larger than ours and I can understand why people raise concerns about a project of that magnitude, but that is not our project. Also during that time period, Prologis merged with A&B, so the two largest companies

in the industrial sector merged together to create the company that now exists and continued to be called Prologis and then in 2012 we emerged from the recession and we emerged with a focus on development and growing our platform and in particular in the Inland Empire. I won't talk about Prologis, I've already done that, but the Moreno Valley project is the first sizable project that we are endeavoring in Moreno Valley and it is an important project to us obviously. In regards to land use, I believe that the question that should be asked is what is best for the City and the community and to that end the City contracted with Rami and Associates last year to do a land use study and that study was done for the purpose of giving not only the Planning Commission, but the City Council a guidance tool, not a legislation, but a guidance tool to help them better understand what a third party expert would consider for land uses and they came up with three alternatives and the preferred alternative just happened to be a plan that coincided with the plan that we have been proposing from the beginning. That land use study was a setback in many ways for us because it delayed our project for a full year because a moratorium was put in place and that has been fairly well discussed and I don't need to say more about that, but the preferred alternative is the plan that we are proposing and I think that is meaningful in many respects because that was what the City was after, to find out if there a consistency with the General Plan or maybe there was a better way of looking at it and least to the degree that the consultant that was hired by the City came up with an opinion that our project seemed to be from a land use perspective, the best plan or alternative that they were viewing. In regards to traffic, our proposed project would generate less traffic than the current existing zoning, so there is much discussion about traffic, but I think that is an important point to make and then I touched on it last time, but I'll just mention it again. The fees and street improvements for our project would total approximately 19 million dollars based on the build out that we are anticipating and that includes a lot of fees that don't really accrue to our benefit. That includes over a million dollars in school fees and TUMF fees of two and a half million dollars and 800 for Police and Fire Department and 3 million dollars for flood control and drainage improvements and then the one other piece of this is property tax. The current property tax that is charged this land versus what the property tax that would be generated at the project completion represents about a million and half dollars a year of additional property tax billings. And then I guess lastly, we talked a lot about jobs and the project would be a job generating opportunity for the City and not only for the construction portion of it, but long term permanent jobs which I think are something that everybody seems to have a focus on. Industrial is the primary driver, economic driver in the Inland Empire and right now Moreno Valley is exporting jobs because they're underserving the nature of our business is based on population. Moreno Valley's representation within the industrial sector is low relative to other cities in the Inland Empire. I think industrial would be well served in this location. There was some discussion about that last time and I think that is evidenced by Sketchers locating out here and also Aldi making a commitment to be out here as well, so that has firmed our belief going back to 2007 that it's a very good location for building warehouse buildings that we would

intend to build. Many of the concerns that have been raised have been in context of the World Logistics Center and we should not be viewed as part of Highland Fairview's proposed project. I believe that most of the concerns that exist regarding the project would be eliminated or greatly reduced if the World Logistics Center had not been introduced after our project had been submitted. It has been a great frustration to us that we've been viewed as part of their project since we are in no way connected to the World Logistics Center project. In closing, Prologis is committed to developing a best in class project. A great deal of thought and time has gone into design, landscaping, the positioning of buildings and providing functionality and aesthetics at the same time. We look forward to bringing our experience, our financial strength and our global customer platform to Moreno Valley. Thank you and I'd be glad to answer any questions.

CHAIR VAN NATTA – Thank you. Does anyone have questions of the applicant? Okay at this time if you'd like to take a seat we will go on to our other speakers. We have several speaker slips here. The first one is Pat Cavanagh. That was you. Of course it was, alright. I'm sorry. The next one is Thomas Jelinec.

SPEAKER JELINEC – Good evening Madam Chairwoman and Planning Commission. Thank you for the opportunity to speak before you this evening. My name is Thomas Jelinec. I'm with Highland Fairview. I am not here so much to speak about this project as much as a comment letter that was submitted on it. As you've already heard today a comment letter was submitted about the noise impacts and truck impacts associated with the World Logistics Center. That information unfortunately is very misleading. As you know trucks in Moreno Valley are restricted to designated truck routes. Most of the streets that were listed in the information that was provided to you are not part of the designated truck routes within Moreno Valley and trucks would not be on any of those streets and in fact the World Logistics Center has been designed in a way that prevents trucks from moving through residential communities. Access at the World Logistics Center would only be through three areas, Theodore via SR60, Redlands north of Eucalyptus via SR60 and Gilman Springs Road and so what you are seeing here, there are noise impacts from the proposed World Logistics Center but those impacts are the result of passenger vehicles. People who would be travelling to the site to work and that is an important distinction to make, because when you look at what the site is currently zoned at and if it was built out as it currently zoned, there would be thousands more vehicle trips from that property than would be under the proposed World Logistics Center and so this is not a matter of trucks moving through the community. The World Logistics Center has been consciously designed to keep trucks out of residential neighborhoods and we just regret that information has not been properly represented to you and we wanted to set the record straight. We provided to the Planning Commission a letter that outlines these facts and we're always available to discuss this information with you. So thank you very much.

CHAIR VAN NATTA – Thank you for your comments. Our next speaker is Michael Lozeau.

SPEAKER LOZEAU – Thank you Madam Chair and Commissioners. Good evening. My name is Mike Lozeau. I'm with the firm Lozeau Drury and I'm here on behalf of LIUNA Local 1184 tonight. We did submit some comments and I'm glad to hear you received the email as well and I dropped off some hardcopies, so I suspect you've not had a chance to look at the hard copy in the few moments you've had, but I'll quickly just go through some of the concerns in our letter. For the greenhouse gas emissions, what we're concerned about is what we perceive as almost as an assumption that somehow the mitigations in there are going to drop the GHG emissions per year from 79,000 metric tons down 70,000 to less than 10,000. We just don't think there is any rationale that has been explained in the document; certainly not a quantification nor kind of an objective qualified explanation of how you could possibly with those mitigations go from 79,000 metric tons down to 10. It's just kind of a conclusory assertion. We don't think it is supported by substantial evidence, so that's the main concern we had. The World Logistics concern we had was simply, you heard your consultant say that CEQA prevents you from including it in the baseline. Well that's not true. You certainly have the discretion to include it. It's has been a long time since this project has been on the table, so you should feel comfortable if you desired to update your baseline. The other issue we raised about that is that it qualifies as new information under CEQA. It is significant new information. The context of this project does entirely change with that very large proposed project and just looking at the greenhouse gas emissions and you add those together and the targets that are described in the EIR for that one that apparently the City is hoping to achieve someday. Those two projects alone equal everything the City will be discharging, everything else in 2020, at least according to the numbers that we were looking at. So that's our concern. It's new information. You have to take it into account whether you change your baseline or not. You can change your baseline if you like. Either way you've got to deal with that changed circumstance. In terms of the air emissions, what we were worried about especially NOX, ROG and PM10 is that EIR admits that there is an impact, but all the mitigations you could do aren't there. All the feasible mitigations have not been included and in our letter we go through the EIR and we point out where things aren't mandatory, they are sort of optional, there not enforceable because you aren't even sure they are going to happen. We do list those out hoping that you can affirm those up and do all the feasible mitigation measures to address those and the last thing I'll mention given the time is on the health risk assessments. We did have our consultant re-run the numbers for the construction period and the numbers they got were dramatically different from the EIR… 22 cancers in a million for an adult and 33 in a million for children. And yeah, construction is only expected to occur for 11.5 months; that's almost a year, but in EIR it assumes it is a four month construction period. They only look at the grading period, so when our consultant ran it with the full construction

period and the other numbers I think were much from the EIR. The numbers did go up, so whatever the rationales might be from looking out 70 years, applying the air districts methodologies; they certainly don't have the methodologies that says its eleven and a half month construction project, just look at four months. That's not their methodology. Our people did it and got much bigger numbers. This has to be addressed and perhaps mitigation, but I see I'm out of time unless you have a question. Thank you.

CHAIR VAN NATTA – Okay thank you very much. Our next speaker is Hans Wolterbeek.

SPEAKER WOLTERBEEK – Good evening Madam Chair and Councilmen. Basically I looked at the SP18 concerns about documentation in the EIR. There is a table in the EIR, Appendix B in the EIR; not the DEIR and I went through that table you have those tables; I gave those to you, effectively there is a Supreme Court decision Pueblo Vs. United States 50F3D856 of 1995, which basically said that emails or any written documentation really is not enough in communicating with Indian Tribes or Indian Bands and three Indians Bands apparently were not properly contacted according to that criteria. Email contact for the Morongo Band appears to be incorrect in the EIR; at least I was unable to find an email contact to invite them to this meeting, so if that indeed is the truth, then what impact did the lack of notification of this meeting have on behalf of the Morongo Band and what about the delivery of the EIR. Now the document is not complete and needs to be undated. Basically when you look at the table and that's the document and that's what I'm going to be talking about here, it basically says some things and it leaves a lot of conclusions out, so therefore I came up with conclusions and I did coordinate a little bit with one of the Staff and basically I drew what conclusions I could. There were probably more communications. I could not see them and they were not in that table you have in front of you. In addition and I think that is very important. In the EIR by the way states that an archeologist will be on site and Indian Bands will be notified if something is found, which is okay for some Bands when you read through EIR, however again in that magic table that I was talking about, there is Soboba and Cahuilla Bands and I hope that I pronounced that correctly, ask them Indian monitors on the site. Were these concerns fully addressed and documented. I'm sorry, I could not tell that from those two tables. The EIR also states that the City does not require the developer to stay for an Indian monitor from the Indian Bands. Okay I can see that for a small development; a small project, but this is not a small project, so why not. Just because it wasn't done before, doesn't mean we cannot do that now and impose that on the developer. It is not that high an expense. It is at most basically it seems to me when they are digging up the ground, which as everybody says seems to be one man; one year, so one man year is not that expensive for a company the size of Prologis.

CHAIR VAN NATTA – Thank you very much for your comments.

SPEAKER WOLTERBEEK – I'm already out of time.

CHAIR VAN NATTA – Your time is up. Our next speaker is Deanna Reeder. Hello again.

SPEAKER REEDER – Hello. Um, two things. One; the moratorium and Prologis, they should have never done that moratorium, that was dumb and they did it based on an emergency ordinance, which means it should have been a threat to the health, safety or welfare of the community and I can't see how building or not building could have done that, so that was a pile of crap. You're right, you were put on hold for a year, however, let's go talk about when you bought that piece of property and why. Prologis is the company that Sketchers was leasing from before they moved here. In 2007 is when Benzeevi signed that deal with Sketchers, which means in 2007 Prologis knew that Sketchers was moving there and that they were going to put a warehouse there and it was in 2007 that Benzeevi started formulating his plan for the World Logistics Center because it was in the Sketchers EIR and Draft EIR as a logistics modified General Plan, so Prologis you knew about the World Logistics Center when you made your application. You knew exactly what the plan was, so that's probably and I'll say probably why you bought the property because you are in the warehouse business and you knew that Benzeevi was going to talk the City Council into it because after all his money buys what he wants. So no, you don't get a pass on skipping over what the World Logistics Center affects are going to be. You knew it was going there when you bought that property and you knew what it was going to be when you made your application, so you need to take those affects into consideration in your EIR. Thank you.

CHAIR VAN NATTA – Thank you for your comments. Our next speaker is Tom Thornsley.

SPEAKER THORNSLEY – I see you have a bigger timer now. I can see it. Thank you although it's not running.

CHAIR VAN NATTA – It will when you start talking.

SPEAKER THORNSLEY – Hi, good evening. I'm happy to be here. My name is Tom Thornsley. I'm a resident of Moreno Valley. I'm one of those folks who is definitely not in favor of this City's constant conversion of land uses to now permit warehousing. This location was designated as a community node which had housing, commercial and Business Park which had a more diverse range of employment opportunities. You as the Commission have seen over the last five years a multitude of proposals coming in to you where the request has been to change the land use from Business Park to Light Industrial so that it can convert to warehouse use; we're talking the mega warehouse use and not the small business park type use, so therefore we are moving farther and farther away from what had been the General Plan's goals and objectives which this project

cites as there rationale for doing that. Objective 2.5 promote a mix of industrial uses which provide sound and diverse economic base and ample employment opportunities for City's and the goals it says, a well-organized designed high quality functional balance of urban and rural land uses that meet the need of a diverse population and promote the degree of health, safety and well-being. The way this land is currently designated, meets all those criteria when that area was designated and the land uses were established. All that was taken into account and it was set forward to be that way. Why the City went for a moratorium and wants to change it, wants to look at it, is way beyond me other than somebody is trying to scratch somebody's back. I feel for the developer that he bought the property at one time under a different tenure for the City, but it's like when I buy stock. If I don't get out of it in time I lose my money. You know this isn't what we should be going after right now. We did the corridor study. We did not do it on a macro analysis, we did a micro analysis of just this particular area. You have to look at what has been changed throughout the City over the course of the last five to six years and analyze just where we are going with our land use changes. We are not following the General Plan design. We are letting our City be designed piecemeally by these constant changes and I think it's time that we… well when they did the moratorium it should have been Citywide and it should have been a full size assessment on it and I think that's what we need to do in the future. Thank you very much.

CHAIR VAN NATTA – Thank you for your comments. Our next speaker is George Hague. Can we take a brief recess? We have a Commissioner that left the room and he'll be back in a minute. I didn't want anybody to miss your comments.

SPEAKER HAGUE – George Hague, Moreno Valley, Sierra Club. The developer states in their response to comments that there was a recent court case that allows for mitigation of AG. This project destroys 80 acres of AG; prime AG. You know the thousands of citrus that disappeared and they're saying they can't do that here locally because there isn't an AG mitigation program here in the County. I would say that by the time there is occupancy of this project there will be one and you could condition this project based on that, but even if that didn't happen there are State AG Programs for conservation of AG that we could make sure that they apply for, so just because there isn't one in the County doesn't mean there isn't one that they could actually use. The developer also believes the cumulative impacts… this is also handled already. The World Logistics Center was out there and they knew it; other people knew it. Their impacts needs to be included. Cal Trans… you received a letter late probably at the last hearing saying we need a mitigation bank here for Highway 60; State Route 60. All of us who use State Route 60, please have such a thing. Please make this developer be part of that. We need it. We can't just allow thousands and thousands of additional trucks and traffic to impact State Route 60 without any mitigation. The World Logistics Center will cast a toxic plume. You can go to their documents. They have wonderful pictures of the toxic plume of cancer

that is going to cover this City. It goes out over Lake Perris even. It goes in places it was never before seen east of San Bernardino almost all the way out to Palm Springs. This is significant. This project will add to that as you heard a few minutes ago from another speaker that this project will add to the cancer problems of our area and actually beyond our area. That is why some people are concerned about the warehousing in Moreno Valley because they know the plumes and toxicity of these projects does not stop at the border of Moreno Valley. At least this project is being somewhat honest with its traffic and trucks and so forth. They mentioned that south on Moreno Beach this project will have an impact. There is a housing development going in near the substation. This project will go by that now. It says there is an impact at Alessandro and Moreno Beach. It continues on to Nason and Moreno Beach there will be a significant impact. For some reason it all disappears because the City has this kind of bogus idea that beyond 5 miles there are no impacts. Well you know that Nason is going to continue on all the way to 215 and vice versa, so at Heacock and Perris and these other intersections there is going to be impacts, but this City doesn't require those mitigations.

CHAIR VAN NATTA – Okay, your time is up now Mr. Hague.

SPEAKER HAGUE – So Alessandro is a truck route. Cactus is a truck route. World Logistics Center isn't going stop them.

CHAIR VAN NATTA – Thank you for your comments. Our next speaker is Monique Gordon. It's for Item 2 she says. Excuse me, oh for item 2. It was on this list so we'll take it off. Okay, thank you. Seeing no more speaker slips for the public comments and nobody else approaching the microphone there, I'm going to close the public comment and we'll have questions from the Commissioners.

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Excuse me Chair. The applicant would have an opportunity to rebut if they choose to do so.

CHAIR VAN NATTA – Exactly, thank you. Did you have anything else you wish to comment on? Okay, seeing no request from the applicant for rebuttal then we will go on. Were there any questions from the Commissioners of either Staff or the applicant regarding the presentations?

COMMISSIONER RAMIREZ – Yes for me one of the biggest issues is traffic, especially traffic along Highway 60. Now it is evident that eventually this entire Highway 60 corridor is going to have to be redeveloped from approximately where Frederick and Pigeon Pass is all way throughout to the east end. We received this letter dated March 17th, 2014 recommending the City of Moreno Valley coordinate a State sponsored program of collecting transportation mitigation fees from development projects to make improvements to the State

highway system. My first question is have we started this program? If so can we ask Prologis to contribute to the fees of this program?

TRANSPORTATION DIVISION ENGINEER LLOYD – Good evening Chair and Commissioners. I'm Michael Lloyd with Transportation Engineering Division. I'm aware of that letter and we have received similar letters for other projects from Cal Trans making a similar statement and if you'll notice in that it states a State sponsored program, so we've been in a position where any type of fair share payment program from developers to the State would need to be established by the State even though the State is asking the City to take the initiative, so it's a little confusing. We have had conversations ever since I've been at the City for approximately seven to eight years now with Cal Trans and this topic comes up regularly, however the State has made no movement. To put it into maybe a little more perspective, the State really needs to initiate the dialogue with a regional type of agency such as WRCOG or RCTC because it would make no sense for Moreno Valley to collect developer impact fees and give it to the State when other jurisdictions around us aren't doing so, so this was a regional effort and I'm guessing why we haven't seen any movement from Cal Trans is there just hasn't been any momentum on a regional basis. So to answer your question a little more directly, yes we are aware of this and we've had conversations with Cal Trans and my guess is those conversations will continue to occur, but as I mentioned, it really needs to be focused on a regional basis very similar to our TUMF program so that those regional impacts, where part of a regional effort to address them and not just on city basis.

COMMISSIONER RAMIREZ – Very well, thank you.

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Yeah Michael is it correct to say that the current TUMF system actually does provide some improvements related to the freeway?

TRANSPORTATION DIVISION ENGINEER LLOYD – That is correct. We do collect fees as part of the TUMF program to address the ramp terminals at the arterials. I believe Cal Trans' focus is really more on establishing a program to establish a fee collection system for the actual mainline of the freeway, but John you're correct. The fees that are collected as part of the TUMF regional program, some of those monies are geared towards the ramps; the connections with arterial streets.

CHAIR VAN NATTA – Okay any questions of the Commissioners?

COMMISSIONER SIMS – I do have some… I looked over the EIR and the Traffic Impact Analysis Report and it is clear to me when I was reading through the Traffic Impact Analysis that the cumulative analysis at build out with the improvements does not include the World Logistics Center and so when you look through the tables, specifically Table 4.11.j of the Traffic Impact Analysis it shows

that most intersections with the Prologis project with improvements will be at a level of service C and D, but I repeat that those levels of service projections are made without knowing the cumulative impacts of the World Logistics Center, which is just within a mile of this facility and as we heard earlier today it is eighteen times the size of the Prologis project. I think in the spirit of transparency and care for the entire City, based on some of the City leadership support of the World Logistics project, that in the absence of this project; the Prologis project doing a cumulative traffic analysis that includes the World Logistics Center, I believe the City should initiate a traffic study that includes an overall traffic impact analysis for all of this magnitude of change in the land use for the warehouses. It just seems like it's a piecemeal effect of unknown traffic impacts that we just don't know about and so I would… I just think at this point it just seems like it's hard to make a decision. I mean it seems like a good project; the Prologis. We've heard about it. We've read about it, but there's just unknown in the cumulative effect. We're making a big decision. You know we're opening the gates to more and more warehouse reuse of land that wasn't speculated.

CHAIR VAN NATTA – At this point though we're kind of into asking questions and not up for discussion and so do have questions or anything?

COMMISSIONER SIMS – So my first question is am I clear that the Prologis EIR Traffic Impact Analysis does not include the cumulative effects of the World Logistics Center?

INTERIM PLANNING OFFICIAL ORMSBY – That's correct and from a CEQA standpoint it wouldn't be typically required because of the fact that the cumulative impact list would be established during that notice of preparation period, which occurred several years before the World Logistics project was submitted.

COMMISSIONER SIMS – Okay so my next question is in the EIR there is a generation factor for jobs, so it's on page 4.10.5 of the EIR and there is a formula in there that says one employee; the generation factor for employees for warehouse use is one employee per 1,465 square feet of warehouse and in the document it states that this equates to 1,532 jobs which I assume are permanent jobs that would be expected to be created, so my question to Staff or the applicant would be does this factor come from? Is it a Southern California number? Is it a national average? You know how do we reconcile that? The second question is how does that factor compare with actual job creation in warehouses within the City of Moreno Valley?

INTERIM PLANNING OFFICIAL ORMSBY – The applicant would best address that and I'll defer to them as which member of their team would like to address that.

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Yeah I'll address your second question. On a warehouse facility by facility it varies quite a

bit. I would suggest that the average is close to that on a project. There are projects that have one job for every 3,000 square and there are projects that have one job for every seven or eight hundred square feet, but on average something similar to one for every 1,500 square feet is probably not off the mark on actual averages.

SPEAKER NORTON – Kent Norton with LSA. Again, Mr. Terell is correct. That was an area wide average. The information was averaged over the Southern California regional projects and so yes, a lot of projects would vary, but that number appears to be fairly representative of warehouse projects in Western Riverside County. Actually, the comments about the cumulative traffic, if I may just very quickly answer that. Our traffic people indicated that the build out analysis for Prologis even though it doesn't include the World Logistics Center specifically, as I said the reason for that is the NOP was issued well before Prologis was issued, well before any application for the World Logistics project which is the time when the baseline is set for studies such as traffic, but the Prologis traffic study does look at General Plan build out and there were more trips… the existing land use I believe was mentioned earlier; the existing land use for the project would actually generate more trips than this proposed Prologis project, so the cumulative analysis for the General Plan EIR analysis actually would show more trips than this project would actually generate, so I just wanted to clarify that.

COMMISSIONER SIMS – But that is just for the Prologis area?

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Kent, if I can… you are talking about General Plan build out on a City-wide basis?

SPEAKER NORTON – Right

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Yeah, so that would have allocated whatever the current land use is in the General Plan city-wide and not just this property. That would be typically how the build out would be done.

SPEAKER NORTON – If you'd like, Megan Macias, the Director of our Traffic Group is here and she can answer any specific questions you have about the traffic analysis if you like.

COMMISSIONER LOWELL - I had a question while you are still standing up here. One of the public speakers beforehand, I believe his name was Michael Lozeau… I forgot…

SPEAKER NORTON – Lozeau

COMMISSIONER LOWELL - He said there are new CEQA requirements that would be in effect if the project went in today versus when the project was conditioned in 2007. Could you enlighten us on what that would be if the project went into the new set of conditions today?

SPEAKER NORTON – I don't have notes on that… I didn't… Could you expand on that a little bit? I don't have that in my note.

COMMISSIONER LOWELL – That was from one of the public speakers. He came up and he said that there would be new CEQA requirements if the project went through today versus in 2007 when the project was presented to the City.

SPEAKER NORTON – Well you mean the requirements; the development requirements on projects changed throughout time. The 2007 and 2008 period was when the environmental baseline was set for the analysis in the EIR, however when development comes on line when Prologis comes to pull building permits for example, they would be required to meet the current development requirements of the City as well as items like the California Green Building Code, Title 24. Does that answer your question?

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Oh Kent, as I recall the comment and obviously the person that still in the audience, they could probably correct that if I have it wrong, that there other projects that have been submitted after this project, therefore they should be reviewed because the development landscape in the City is different. That's true, but there is a reason why when projects are submitted and the baseline is submitted, it's not constantly changed because theoretically a project… this is not what happened in this case, but a project could have been submitted yesterday and somehow because it was submitted yesterday before a decision on this project was made, it has to be assessed, so it's kind of what I call an expose facto. At some point in time there has to be a scope of work and that is what is reviewed so that the applicant can rely on that and not constantly having to redo their studies as they get closer and closer to a decision on their project. So there is a reason for the rationale of not going back and adding additional projects after that baseline and I believe that the comment was talking about that, that conditions have changed which they have as far as what projects have been submitted to the City.

COMMISSIONER LOWELL – I appreciate that. Thank you very much but I really kind of concerned; well not concerned but just curious how the CEQA requirements… have they made dramatic changes between 2007 and 2014 or are they pretty much standard.

SPEAKER NORTON – The CEQA requirements… the CEQA requirements have changed incrementally other than since then greenhouse gases have been added and some changes to the environmental checklist in the State CEQA Guidelines have changed but the overall CEQA process remains the same and

just remember that development has to meet the current development requirements of the City and that my reference to 2007 and 2008 is only regarding the environmental baseline against which certain impacts are measured; the existing conditions in 2007 and 2008 are used as the baseline in the EIR to determine impacts.

COMMISSIONER LOWELL – Okay, thank you, I appreciate it.

CHAIR VAN NATTA – Okay Commissioners, does anybody else have any questions?

VICE CHAIR GIBA – I may have missed this but could you I think Jeff, could you respond to Mr. Wolterbeek's concern about the Native American contact record? I'm very concerned about it and I have that little sheet.

ASSOCIATE PLANNER BRADSHAW – The email exchange from earlier this afternoon…what I can say with confidence is that the Tribal groups that the City coordinated with, mitigation has been imposed on the project that the applicants agreed to that would include tribal monitors per the request of those groups that asked for such. The specifics in terms of what is summarized in Appendix B, I would defer I think to Kent and I hate to make him walk back up again, but I think he is going to be a little familiar with the content and the preparation of the summary data than I am. I would defer to him.

VICE CHAIR GIBA – Thank you

SPEAKER NORTON – The information in Appendix B that Mr. Wolterbeek referred to was some additional notifications that LSA assisted the City with by notifying the Native American Tribes that are listed on the Native American Heritage Commission's list. We have a person who helps us coordinate those in our Irvine office. It was an additional level of trying to reach out to the Tribes on the City's behalf and let them know about the project continuing on and as far as I know all of the Tribes that were indicated were contacted. We used various methods of contacting and Mr. Wolterbeek referred to a 1995 Federal case, however remember that this is… we're talking about CEQA of the CEQA process and actually the SP18 notification process and consultation process between the City and the Native American Groups is a separate State requirement, actually even separate from the CEQA process, but I believe the City's fulfilled all of its requirements regarding SP18 and has consulted with tribes that indicated that they would like to do that as evidenced by the substantial changes to the mitigations measures in response to their comments on the Draft EIR.

VICE CHAIR GIBA – The last time we all met we had a lot of speakers and I don't know if this will affect you so…

SPEAKER NORTON – Maybe I should stay

VICE CHAIR GIBA – There was one in particular that really caught my eye and so I wanted to… Michael this is probably going to be one of your questions because you know me and traffic right… This was from Ms. Coggins… through San Mateo Canyon and all the traffic goes through there as a short cut to Loma Linda and Redlands; the 10 freeway or whatever. Ever since Sketchers has been built truck traffic has increased past my house and either of you are welcome to come by. When the trucks go by my windows rattle. I have stopped… that's her comments and I did take a little trip up there and that road is not exactly in the best of shape. Last time you mentioned that that is considered an artery for truck traffic. It appears to me that when we looked at the traffic mitigations there was nothing basically north of the 60. Everything dealt with intersections and south of the 60. Was there any consideration at all for the Redlands Boulevard traffic going through there because if this is starting to be a big concern just with one warehouse in there, Aldi's is going to be building theirs and if Prologis gets approved that adds to that and I'm not even going to talk about the World Logistics Center. So is there anything that can be done about that Redlands Boulevard? Can it be changed so that it is no longer a truck traffic artery or can the streets and the roads be improved such that they will take some pressure off of the homes and stuff going up? It is a beautiful route up that way but it doesn't look like it should be a truck route.

TRANSPORTATION DIVISION ENGINEER LLOYD – Michael Lloyd again with Transportation Engineering. Yes Commissioner, action could be taken at the… truck routes are established within the Municipal Code and action by City Council could certainly change that, so it is something if Council took that up and directed Staff, we would investigate and make a proposal to make a change to the truck routes. I would note that Redlands does cross out of the City of Moreno Valley into the County. The County portion of Redlands Boulevard is an established truck route, so the City could certainly take action and say it is not a truck route, however as soon as you cross into the County it is a truck route, so we now have an enforcement problem, so it's not inconceivable or insurmountable to change the designation, it would require a cooperative effort between the City and County to have it removed as a truck route. So it is a possibility, however to my knowledge, there has been no conversations to change that current designation.

VICE CHAIR GIBA – Is there any reason why we can't pursue that conversation… it seemed to me that there were a couple of residents who brought that concern up and that was the first time I've had an opportunity to hear that and again if we are pursuing that direction what would we do? There is your question what would we do as a City, a Commission and a Staff and how would that affect the outcome of what we're doing this evening?

TRANSPORTATION DIVISION ENGINEER LLOYD – If Staff were directed to investigate this and pursue it, Staff would contact the County and begin the dialogue on how to remove the County's portion so that we're working in concert.

Assuming the County was amicable to the request we would then move forward to work collectively I guess to have the portions removed; the designation removed from the City as well as the County and it would require action as I mentioned by our City Council and it would require action I believe at the County level and I don't know to what level that would need to occur. I don't know if it is handled administratively or if it would need to go to the Board of Supervisors. I'm not familiar on how the County makes their designations on truck routes, so it would require a little investigation on my part and certainly that dialogue with the County would establish very clearly and quickly what needs to occur.

VICE CHAIR GIBA – So with that recommendation to the Council, could that come from the Commission, but not necessarily effect the outcome of what we determine here but also add that as a mitigation measure down the road?

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Vice Chair Giba, I don't think it would be a mitigation measure on this project.

VICE CHAIR GIBA – okay

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – I don't think it would be appropriate, because I would suggest that this project didn't allocate any truck traffic onto Redlands Boulevard.

VICE CHAIR GIBA – That's going to be the natural flow as we've been seeing and we may not have anticipated that I'm sure.

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – And not to discount the public comments, because I don't live on Redlands Boulevard, but I drive it quite often. It's very rare that I see a truck on Redlands Boulevard and usually when I see it, it is a Coke truck or a Pepsi truck. I've seen others but they don't have markings on them, but I know I've seen the Pepsi truck and the Coke truck on there and they are making local deliveries in essence. But yes, it would certainly… I don't know that it's appropriate to make that recommendation to the Council as part of this action, but certainly separately the Commission could suggest that and I would hope that if this project goes forward to the City Council that those residents that are concerned about it will express those concerns again directly to the City Council. But yes, it would be appropriate probably separate from this project.

VICE CHAIR GIBA – Thank you John. Thank you Michael.

COMMISSIONER LOWELL – I have a question for Staff. The project proposes a General Plan Amendment; I remember just recently that we approved the Housing Element where we had to verify and look at where different types of housing; residential, apartments, mixed use, all that was located. How would this General Plan effect what we just recently approved?

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – It doesn't affect it. This particular residential zoning was not counted as required to meet the State guidelines. The State guidelines require that you have a certain capacity in low, moderate and above moderate. In the low and moderate, this was not counted towards that so it doesn't affect compliance with those regulations. In the above moderate, the City was substantially over the regional housing needs assessment that was provided to us. As I recall it was by a factor or three or four times, so removal of residential in this particular area would not impact a compliance of the Housing Element.

COMMISSIONER LOWELL – Even though there is some R15 that is going to be removed, I would envision that would be apartments and…

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – For the low and moderate income categories, the only ones that could be counted were either specific projects; affordable housing projects that were under review or R30, so R20, R15, R10, none of those were counted towards the regional housing needs assessment.

COMMISSIONER LOWELL – I appreciate it, thank you.

CHAIR VAN NATTA – Any other questions? Yes go ahead.

COMMISSIONER BARNES – I have a question for Staff. Could you give me a little background on the General Plan? When was it adopted and is it scheduled for regular revision or is it cast in stone?

INTERIM PLANNING OFFICIAL ORMSBY – The General Plan was last updated in totality in 2006 and it would be due to be updated roughly 10 years from then, so we're looking at a few years still.

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Yeah the General Plan is not set in stone and the first General Plan was adopted in 1988 or 89…. 88, so it was 18 years from the first one to the first update and not to cast aspersions on other communities, in Riverside they just updated their General Plan a couple of years ago. Previous to that the latest update was in 1973; comprehensive. So General Plans can change up to four times a year. Each element of a General Plan can be modified up to four times a year under State law, so obviously you wouldn't make wholesale changes four times a year, but it is not intended to be a… it is intended to be a living document, but obviously the framework you need to look at comprehensively. They recommend 10 years. Sometimes it's a little bit longer than that.

COMMISSIONER BARNES – And I guess that's the point of my question, not specific to this project, but the fact that we are considering making a change to it,

but it's an old document and we all know that a lot has happened in the intervening time, so even discounting this project, it would be subject to review and probably some substantial changes, so I think we need to keep that in mind when consider making a change to it that it's dated.

COMMISSIONER LOWELL – Piggybacking on that last comment Mr. Terell, you said the General Plan can be amended up to four times a year. Is this amendment considered one of those four times?

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Yes. I believe we had… did we have one this year already? I don't believe so.

INTERIM PLANNING OFFICIAL ORMSBY – I don't believe we've had one this year, but there are a couple perhaps in the pipeline, but this would be the first one this year.

COMMISSIONER LOWELL – Thank you.

COMMISSIONER SIMS – Are there any general triggers of best practice in a city planning department of when there is known development activity that is not consistent with the current General Plan where there would be a stop in the jurisdiction say maybe it is time to do a comprehensive General Plan amendment? Perhaps a trigger such that x percent of the total city is being redeveloped to a certain other type of land use?

INTERIM PLANNING OFFICIAL ORMSBY – There isn't any guidance in the State General Plan Guidelines that I'm aware of and John might have some other thoughts on that. I mean the other thing that should be considered is the General Plan was updated in 2006, but we did go through a recession period. In some respects there hasn't been as much change as there would generally be in that same number of years as during a more active time period. Certainly there was in the first couple of years but during the recession things were slower.

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Chris is correct. There is no guidance that I'm aware of in planning literature on a set percentage, because if you were looking at a substantial project you'd always want to look at the impacts on the adjacencies anyways and I think as you requested on this project some information perspective on you know what other vacant land is available for this use, I think that's a reasonable question to ask when any major change is made to the General Plan. How does this affect the overall composition of the City as far as uses and how might that compare to other communities? I think that is a reasonable question to ask whenever a major change comes forward.

CHAIR VAN NATTA – I get to ask questions now? One question Planner Bradshaw… was there any communication back and forth from the Auto Mall

about the increase of traffic going along Eucalyptus through the middle of the mall there?

ASSOCIATE PLANNER BRADSHAW – I'm not aware of any such communication.

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Maybe I can answer that. When talking about a different subject I did talk to Glen Moss who is the owner of the current dealerships in the Auto Mall and he was looking forward to the concept of having more traffic come through the Auto Mall and he did not express any concerns about this project. Then I asked him specifically do you have any concerns and he said no. He is looking forward to that road going through.

CHAIR VAN NATTA – Okay. Another question I think at our last meeting, we were talking about the flow of traffic going through there and that this would complete Eucalyptus over to Redlands Boulevard which would make from this project probably as much traffic up getting onto the freeway on Redlands as on Moreno Beach and had a concern about whether or not that intersection would be able to handle it and is there anything going towards that area to improve the access or traffic flow on and off of Redlands Boulevard.

TRANSPORTATION DIVISION ENGINEER LLOYD – You're correct that the analysis did assume a split between the two interchanges. I don't recall off the top of my head the exact split but it was roughly speaking about 50/50 utilizing Redlands versus Moreno Beach Drive and the analysis did not find any direct impacts at the Moreno Beach Drive interchange. It did identify some cumulative impacts. Some of the mitigation measures identified for those cumulative impacts have actually been implemented with the recent completion of the Capital Improvement Project where Eucalyptus was connected to Moreno Beach Drive and the southerly or eastbound ramps were reconstructed. So we are in the process of getting those improvements in. The first phase of improvements to the Moreno Beach interchange have been implemented and the second phase I believe the design is wrapping up and should be done in the next year and it's a matter of identifying a full funding package so it can go out to construction, so it is in the process for Moreno Beach Drive.

CHAIR VAN NATTA – Okay how about Redlands?

TRANSPORTATION DIVISION ENGINEER LLOYD – Redlands, I'm not aware of any improvements at this point in time to actually reconstruct the interchange. Just as a reminder, the Aldi project was conditioned to put in a traffic signal as well as turn lane improvements for the westbound ramps or the ramps on the north side of the interchange. This project is conditioned similarly. This project was also conditioned as well as Aldi to install a traffic signal where Eucalyptus will intersect with Redlands, so those were identified for both projects as direct

impacts and there were mitigation measures imposed on the project to address those impacts.

CHAIR VAN NATTA – Does that mean they are going to be done?

TRANSPORTATION DIVISION ENGINEER LLOYD – Yes

CHAIR VAN NATTA – When these are completed then there will be lights there. There will be traffic signals, an additional off ramp from the freeway to Redlands etc.

TRANSPORTATION DIVISION ENGINEER LLOYD – That is correct. Neither project would receive a Certificate of Occupancy allowing them to utilize the building until those improvements are complete and accepted by the City.

CHAIR VAN NATTA – Okay, then the other question of course, we know Redlands Boulevard is a major artery going northbound up towards the Redlands area; Loma Linda area, San Bernardino and so forth, because to get to the 10 freeway otherwise you would either have to go through the badlands and meet up with the 10 there or go all the way to the 215 interchange, so it's not realistic to expect that that is not going to continue to be a truck route as you said, only a portion of it is within the City, so are there any plans to upgrade the road bed there to make it more safe for truck traffic?

TRANSPORTATION DIVISION ENGINEER LLOYD – The roadway per our General Plan is designated as a divided arterial, so that would mean an additional lane in the northbound as well as the southbound direction so that we would have a four lane facility with a median. So we'd have two lanes in each direction. As of this time, funding has not been identified to move forward with designer construction, so it is part of our Capital Improvement Program, so that we've identified it as a need, however it is what is referred to as an unfunded project.

CHAIR VAN NATTA – Are funds for that possibly going…are any funds going towards that going to come from this project; from the Aldi project or from the World Logistics Center?

TRANSPORTATION DIVISION ENGINEER LLOYD – That would be established based upon the yearly update or the yearly approval of the CIP; the Capital Improvement Program where Staff works with Council to establish priorities and identify funding, so the possibility is out there. When this project is complete and has paid their DIF and TUMF the fees would be paid to the City. It would go into the pool of funds for that.

CHAIR VAN NATTA – Does it come from DIF and TUMF fees?

TRANSPORTATION DIVISION ENGINEER LLOYD – It is a possibility and there are other funding sources that the City utilizes to build roadways that would include gas tax monies, Measure A monies. We pursue grant monies through the State and the Federal Government, so we often to get a project out to bid in construction, it's generally a pool or several funding sources to get it out to construction.

CHAIR VAN NATTA – Well I can't see telling the people who live along Redlands Boulevard which has always been an arterial that okay now we're not going to make it not an arterial because the trucks are making noise, but I can see where right now it is a hazard and there have been accidents on that road because of the heavy traffic and there are trucks besides the Pepsi and Coke trucks. I was coming down south on Redlands Boulevard from Redlands about two weeks ago and a truck coming up the other way hit debris that was… asphalt debris that was on the road and it went straight through my bumper, so I see that happening. It could have gone through my windshield just as easily. It went through my bumper instead. That is a hazardous road because of the conditions that it is in and should be addressed sooner rather than later.

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Yeah I think one of things though and I don't know where you had that incident happen, within the City limits is what… Redlands Boulevard within the City limits is part of the City's development impact fee program and I'm not sure if it is a TUMF road as well. It is okay, so fees are part of the system on which fees from any development are collected and then it is a policy decision both the WRCOG level as well as the City and County level of how to spend those monies and I'm assuming if it is on the TUMF network inside the City, it is in the County as well. So I understand…

CHAIR VAN NATTA – The funds from these project are going to go into that fund which could be used there at the discretion of the City's planning…

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Well it would be the City Council or the County Board of Supervisors

CHAIR VAN NATTA - …deciding that that is an impact area?

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Correct; yes

CHAIR VAN NATTA – Okay, another questions?

COMMISSIONER BARNES – Yeah I have a question of Staff. In the resolution that would go to the City Council should this project be approved, one of the, or the primary consideration to override the impacts that aren't sufficiently mitigated is overriding considerations and it lists four of them. On page 126, the project will

provide development consistent of Municipal standards, codes and policies. This project provides development, improves and maximizes economic viability of a vacant site by transitioning the project to productive light industrial and there are two more, but in reading through the documentation that we've been given I don't find a lot of substance that supports those overriding considerations. If we are going to elect to do that, what is the basis for those comments and what makes them significant enough to override them.

INTERIM PLANNING OFFICIAL ORMSBY – I didn't see the information on that particular page number, so I'm not actually able to take a look at that. I'm thinking we might want to have the applicant…

VICE CHAIR GIBA – 227, just right next door… the bullet point. There are four bullet points Chris.

INTERIM PLANNING OFFICIAL ORMSBY – Oh 227… okay, I'm think we may want to have the applicant address that and the Environmental Consultant. They prepared the overriding findings.

APPLICANT CAVANAGH – I'll let Kent address that. The one thing I would say though it gets back to what is the right land use for the property and what is the right use for the community and this sort of gets back to, is the current General Plan designation the best use. I guess that's a soft answer to the question and you know I have to… I was very disappointed when the City took the position that they wanted to have a land use study done somewhat at our expense because I thought we were kind of targeted in some ways because there was a lot of other properties that could have been included in that, that weren't, but that aside, I think the findings of the consultant that did the land use study somewhat answers your question as to what is the best; the highest and best use for that land and it is in conformance with what our proposed project is and that gets back to a lot of the things that I said earlier that relate to job creation, traffic impacts that as Kent said I believe are lessened by our proposed use than the current existing plan, the fees that are created and more specifically on the fees, I would say that a lot of the fees that are paid are fees that we don't get the benefit of. We don't directly get the benefit of school fees, the taxing of the Police Department and Fire Department is drastically less than compared to the current zoning, so there are some hidden benefits and it sort of a bundled answer and Kent wrote that so I'll let him respond to it, but that was a few things that I wanted to cover.

SPEAKER NORTON – As you are aware, the CEQA process is balancing act of looking at the adverse impacts of a project and seeing if any benefits of that project are outweighed by those benefits, so in the findings the statement of overriding considerations as the Commissioner identified, there are four primary ones and I'm not sure if you had a specific question about a specific one, but in general as I'm sure you're aware, the new industrial uses would generate short term as well as long term employment. They would make a considerable

infrastructure improvements to the area. They would develop the site in a productive manner for light industrial uses and that development would have to be consistent with the City's development guidelines for those uses. Those are the benefits that have been identified for the project and those benefits have to be weighed against the adverse impacts that the EIR identifies and that's the City's; that's the heart of the CEQA process for the City.

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Yeah and to add onto that, that is one of the things that the policymakers; you have the opportunity to override. Obviously it is not required, the opportunity based on what you would see as the beneficial; whether it is economic, social or other benefits you see of the project that outweigh the potential impact; the environmental impact. So it's an opportunity; to some extent a value judgment, but you've been provided with identifying some potential items that the Consultant and Staff has concurred that would provide that benefit.

COMMISSIONER BARNES – Right, and I didn't ask the question with any pre-judgment, it just seems like we're going through hundreds and hundreds of pages of analysis and some of it negative and we're going to make a ruling based on four sentences. To help me make the decision, I would like to see some specific substance to those and again this is just a general observation. It would help me to have some specifics of those things that basically explain those to me in more detail as they relate to this project.

SPEAKER NORTON – I would say the EIR document in various places provides quite a bit of that information. The project description itself describes in detail the kinds of infrastructure improvements that will be required and the project will install. It talks about the employment benefits that the project will generate. It identifies the transition of the land uses from vacant to the proposed uses; yes different than what it is designated for now, but that's where the General Plan Amendment and Zone Change process and then indicating especially in a number of mitigation measures that the City's development codes and requirements will be followed and then the mitigation typically identifies actions that have to be taken over and above simple compliance with established laws and regulations, including the City's development or review process. So it is in there; yes it's not all in this document as part of this. The findings are more designed to outline the extent of the impacts and how those or to what degree those are mitigated. We could certainly provide additional documentation as a supplement to this for the statement of overriding considerations, but you probably had enough to read regarding this project already, but we can certainly provide that clarification if the Commission so desires.

COMMISSIONER BARNES – Thank you.

CITY ATTORNEY CURLEY – And if I might… lawyers have trouble being quiet. Putting it in context your point is very well taken and let me walk you through just

a very few minor but critical elements. In the EIR, the CEQA process… if you have unmitigated or problems that you haven't solved, you can't recommend approval. That's basic, but and this is as you've heard the concept of balancing or the concept of what is called overriding considerations and I'm going to go just straight to the statute, because it's probably most convenient. If specific economic, legal, social, technological or other benefits of a proposed project outweigh the unavoidable adverse environmental impacts, you may then consider that project acceptable. The key is, as it goes on and this is called the statement of overriding considerations, which means what it says, those statements must be supported by substantial evidence in the record. Substantial evidence is defined in there as fact; fact backed by expert opinion or fact based on in essence the circumstances, so you need meat on the bones. You mentioned four sentences; that's pretty thin meat. We would need as was offered to augment that to say the factors that are presented that allow you to say the impacts that are there, while real in the balance are outweighed by the benefits, that needs to be augmented in the statement of overriding considerations, so it is clear to the world what you were thinking when you said we will trump those defects or those problems if you will. The environmental document again as was noted will state in it the objectives that this project is trying to accomplish; bringing jobs. It is bringing development. It's bringing many positives, so that is the objective they were aiming at. You then measure did they hit those objectives. Did they carry off those good things and do those good things outweigh the identified non-mitigated or just broadly stated bad things. If you go back to elementary school where the teacher said show your work, two plus two may be four, but they wanted to see you actually write that formula, that's what you want to augment this with, your four sentences. Show the work, put the meat on to support that legal, economic, social, technological or other benefit. If you do that you've conformed to CEQA. You haven't left people scratching their head. Why did Jeffrey Barnes say this was better than not, so your point is well taken and that should be augmented. Keep in mind you are recommending to the Council. Your recommendation can be augment that statement of overriding considerations; put some more meat on those bones.

COMMISSIONER BARNES – Thank you.

CHAIR VAN NATTA – Okay you had a question also?

VICE CHAIR GIBA – Yes. I wondered if… well I actually have two but this is the more important one. Would it be appropriate Jeff and Chris for you to just briefly and don't go away, briefly go over the project alternatives so that we kind of have a good idea of what those alternatives are on this EIR and its thing. Would that be an appropriate question for you to do or too much to go into or…

ASSOCIATE PLANNER BRADSHAW – No I just want to make sure I'm understanding the question.

VICE CHAIR GIBA – There are six alternatives to this project.

ASSOCIATE PLANNER BRADSHAW – There are alternatives that are discussed in the EIR and then there also some alternatives suggested as actions that the Planning Commission, and ultimately Council could take, so there is some discussion of alternatives in the Staff Report that are distinct from alternatives in the EIR. I just want to make sure that I'm responding to you with the correct information.

VICE CHAIR GIBA – You know just clarify both of them if you would like very briefly, but I was looking at page 215… adequacy of the range of project alternatives… alternative 1 through 6. In other words you said alternative 1, no project existing zoning and so on. And I ask that for a couple of reasons, as I read through it, sometimes my brain just doesn't really digest it property, but on the other hand we've also got people here that might like to have better understanding. Now before you address that, I do have one for Mr. Cavanagh real quick if I may. Because in the EIR and you yourself invoked the 60 document; the State Route 60 Corridor Study as one reason or consideration why this project should be approved, I went back to the document and on page 30 if I may just for the record says, the alternatives received mixed reviews from the community and here are the bullet points… concerns about how new development along corridor would lead to a loss of the existing rural lifestyle, concerns about how residential adjacent to the freeway can impact the health, desire for high and large lot homes, mixed input on whether additional family, a broad desire for more realistic planning that reflects current market conditions, support for utilizing future detention basins, concerns about the negative effects of additional logistics warehouses and concerns about over-saturating the corridor with retail uses. Then it goes on to say the City Staff and the consultant team used the community's comments to refine the land use alternatives and select a preferred alternative. I read that over five times. I couldn't see anything in there that said we wanted a warehouse out in that location nor could I understand how we could come to that conclusion selecting that alternative with that warehouse there, because there were three or four more. So my question to you if would help me please better understand this as this is… I would consider this substantial evidence of the community's involvement in how they feel about what should be out here. How do you draw your conclusions as to why we should put a warehouse out there, especially the size of the warehouse that you are suggesting?

SPEAKER CAVANAGH – Your question is interesting. I didn't write the land use study, so I'm speaking absent their input here, but I would answer that in a couple ways. One is that we looked at this property as an ideal location for the product that we have proposed to build and the reason for that is its proximity to the freeways and the population base that would provide labor and the amenity base that would provide places for people to go eat and experience things outside the workplace. Those are all key ingredients for what makes a good

location for building what we build. The other is the market demand and if you looked at the existing zoning for business park that runs along the freeways not only from our property but all the way east out through the Highland Fairview project, that product type has struggled in good times and failed horribly in bad times and so I would just suggest that the General Plan that was originally created, perhaps got it wrong. I don't know the thought process that went into it back into 2006 or prior to that, but it is not where the economy has gone in the Inland Empire and what has driven our market and driven our entire economic base in the Inland Empire has been warehouse distribution and that has been documented and studied ad nauseam and I think we looked at that location and felt it was an ideal location for what we wanted to do and I think that has been proven out by Aldi wanting to be there and Sketchers wanting to be there and it is a similar location going down the 215 corridor. I don't really differentiate the two very much, also I would say I think it's better in some respects because it is right on the freeway and most of the opportunities down the 215 corridor are away from the freeway and that makes those less desirable in that regard. And then the residential, you know that is sort of a decision that you make… does Moreno Valley need more rooftops or does Moreno Valley need more jobs and I think that answer has been proven out pretty clearly at least in my opinion and I have heard that over and over again and you know the other piece of this that probably doesn't get said but I'll say it is that most of the comments that get made at these forums and the land use study and those opportunities for the public to come forward, the people that come and state their opinion are usually the people that have strong feelings against what is going on. The people that are supportive usually are at home on their couch and that's just a fact of life and I don't know what you'd do about that, but it is what it is and people experience that every time you get together. It is very rare that I sit here and hear anybody come up and say what a great job you are doing, so I mean that's just the life or the experience that you have and we have when we are proposing something. I don't know if that answers your question, but I think that… I'm trying to be Rami and Associates in their absence.

VICE CHAIR GIBA – Thank you very much

CHAIR VAN NATTA – Unless we have any other questions let's go into our Commissioner discussion. Thank you very much. Okay who would like to talk about their conclusions first? Who wants to go first? Well I usually go last but I can go first. I don't have a problem with that. My outlook on all of these things when they come up is a little bit different than the experiences than the rest of the Commission. I have a tendency to be very practical. Since I'm not an Engineer... how many of them are up here… I don't always expect everything to come out with all the perfect answers and with everything being exactly right. I look at things in terms of alternatives and so we're looking here at highest and best use perhaps of the land and highest and best use for the community and I'm thinking really what we have is we have three options. We can either say leave the land vacant, don't do anything with it, you know let's protect the little birds

and other creatures that are on the land and not disturb their habitat and you know let's just go back and plant some more trees on it, which really isn't going to help the community very much. We could look at what would happen if we just developed it the way that it is already zoned to be developed; business park, offices, some more residential and so forth and has been very correctly brought up right now we don't need more rooftops. We need jobs. We need the infrastructure that would be paid for by development that would increase the tax base, put money in for schools, for Fire Department, for the TUMF fees, improve the traffic flow by putting traffic lights and additional off-ramps and this sort of thing and so that's what I'm looking at this in terms of it may not be a perfect project. I don't think we'll ever see a perfect project, but I don't think there is any demand in today's economy for Business Park, offices and so forth. We're already seeing retail that is closing down. We lost the Best Buy a couple of years ago. We are now losing the Office Max out there in that area because people are not going to stores to buy things. They are going online. They're buying things and what is needed in order to support that kind of an economy is someplace to store, warehouse and distribute those items for people that are buying them and so I see this type of a project as being something that is coming along with our digital age, our information age and so forth as being something that is meeting a need. If there was a need for what was originally zoned for that area then we would probably have applicants saying you know we want to build a business park. We want to build some offices there. We want to build more houses. We don't have applicants for those things because there is not a demand for them and so with the demand comes the need for them, with the need comes the development and it's kind of where the money flows and so I'm looking at this and thinking there is a lot that this project brings to the community. There are some challenges of course and yes it is going to increase traffic, but anything you put there is going to increase traffic. The original project as was mentioned; the original zoning that was there, if it was built out that way it would be even more traffic than what this particular project is, so I think it is an attractive project. I think it fits well where it is. It is close to the freeway. It will bring good things to Moreno Valley including jobs and even though there may be some challenges to it, I think that the benefits outweigh the challenges and those are my comments.

COMMISSIONER SIMS – I think the… a lot of this going through right now is you… the warehouses on the east end is a big decision. The project end itself seems to be a good project. I do have concerns. We're coming out of a steep economic recession and the current thought is we don't need new rooftops and maybe so. But I look at the commercial development that we have, especially as we move out into the east end. I sometimes ponder with what would help support Moreno Valley commercial. You know there is a lot of businesses that have gone out of business. We have indoor swap meets and 99 cent stores and different things and is that a function of the demographics of the City or is it a function that we've been in a series of… we don't have the rooftops and we don't have the population to support more restaurants, to support more service

oriented. We're losing businesses in Stonegate. The Best Buy moved out. The Office Depot is closing. I happened to be in Office Depot the other day and it is not because of the lack of business, it is because it is a tenant landlord relationship that they are intending to change the occupancy because that space is directly adjacent to a Best Buy or the former Best Buy. So what I worry about is when we commit to such a large area within the City towards a warehouse; warehousing, that's cast in stone. The City will seal its fate that that is what it is going to be and you know I'm not an Economist. I don't understand long term what that means, but there is a lot of change. The General Plan; a comprehensive General Plan Amendment coming out of the recession and not doing overlays and piecemeal fashion seems a more appropriate approach and as far as the traffic study goes, you know I appreciate the comments made and I'm not a Traffic Engineer per say. I did take a little bit of it in College and so forth, but at the end of the day I just think the City; the leadership in the City has come out in support of the World Logistics Center. It's a no commodity. The Aldi project has gone through. Now the Prologis is here in front of us today. We have 3,000 acres sitting just directly to the east and we don't have a cumulative traffic impact analysis and it just seems inappropriate; it would seem appropriate for transparency for the City at large to understand what the overall traffic impact is and I think the City could fund and would do it quickly based on take the cumulative work from the EIR for the World Logistics and the Prologis and do a comprehensive look at that and perhaps even do a comprehensive General Plan Amendment taking into account that we're moving out of a recession. So anyhow, this is kind of a big decision tonight, so I would encourage just some more comprehensive looks. We're coming out of something that was bad. The economy is moving better in pockets. Is this the pocket… is this the hotbed of what Moreno Valley will forever be is warehouse?

COMMISSIONER LOWELL – I echo Mr. Sims comments also. I echo Ms. Van Natta's comments. My concerns are as a personal note, I like to evaluate projects not only on their legality, meeting zoning and General Plan and what not. I also like to look at the project on its entirety; if it's a good project in the right location. I personally really like this project. I think the layout of the buildings; I think the tenant; I think the property owner is a fantastic project. I do believe it is in the wrong location. I believe it is too close to the residential developments. I believe that the people that moved into the east end of the City did not anticipate large warehouses coming in. I would approve this project if it were farther away but I'm very hesitant to establish this large complex. It will add a book end to that end of our City that will essentially allow the way for more and more warehouses between this project and the World Logistics Center. I personally think that we need to evaluate the grand scheme of things of basically reevaluate our General Plan and see what the future of the City should hold and not amend the General Plan tonight.

CHAIR VAN NATTA – Who would like to comment next?

VICE CHAIR GIBA – Well everything that everybody said is very relevant. It's very important. I'm one of those that believes that we should have the proper project in the proper place. It's always been my feelings. When we did the study on the 60 Corridor, I was probably the most vocal about the fact that we didn't get enough weigh in from the entire community as to how that area of our community should be built up at all. I think there is a lot that the other people had spoken in the previous meeting that we had and what Mr. Sims and Mr. Lowell said as well as what Meli has said that all these things are very difficult to take into consideration. This is a very nice project. It really is. When I looked at all the plans and all the layouts, Prologis knows what they're doing. They build a very nice facility. If they had built just Building 1 and just Building 2 with Eucalyptus coming down underneath and not Buildings 3, 4, 5 and 6 going down into the residential area it probably would be much more appealing considering we already have Aldi's and Sketchers all along that 60 freeway corridor, but it's a very large area covering dropping down into the residential neighborhood. The traffic studies; absolutely correct Meli. If we put in the other types of facilities, apartments, restaurants and whatever the original plan would have specified, we may have more traffic. Yes, Prologis is putting a lot of money into upgrades and repairs of our area, but I think what we need to start doing in this City is we need to start getting a better vision for who we are and what we are. Sometimes we take the easy way out. I'll give you an analogy. When I was a recruiter in the Navy, Cat 4's were easy to come by. Those are the guys that were very low on the scope but they really wanted to go into the Navy, but the Navy didn't need Cat 4's academically, educationally and test score wise, but they were easy to come by so every recruiter had a whole bunch of Cat 4's ready to go into the Navy. The hard part was to go out there and find those Cat 1's and Cat 2's. They were the high scoring people that they could put into the nuclear programs. I think sometimes we're hurting ourselves. We're shooting ourselves in the foot by not going out and searching for the proper projects for the proper locations any more. We're changing this as there have been other comments made. We have been changing. We're no longer the same City we were in 1984 when we first incorporated and we also have a change of Councilmembers and we are a whole different Commission here. Mr. Cavanagh I apologize to you that I was not here in 2007. I don't know why that area was chosen. I don't know why the decisions were made back then. They were difficult decisions to make I'm sure on your part because you guys are builders of wonderful warehouses. I'm not going to dispute that, but I'm having a very, very, very difficult time with this one in that much like Mr. Lowell said a wonderful facility, but possibly in the wrong location and back in 2007 you had a choice of a lot of other locations in the City that you could have built that at and you chose to come to the east side for whatever reasons. So it is a difficult one Mr. Sims; you're right and it is a decision; I think a pivotal moment right now where we have to make a very hard decision as to what we are going to do on that east side and so that's as one individual would say, that's all I've got to say about that.

COMMISSIONER BARNES – I think the comment I'd like to add is that at least in my perspective a decision on this project tonight does not in my mind cast the dye for everything in the east half of Moreno Valley. The quality of the Prologis project I think stands on its own merit and in the location that it's at, given the surroundings and the things that have changed in the economy and the development in that area, it deserves to be analyzed by itself and to lump it together with what may happen in the east end, I think is not necessarily fair to this project and I know that whichever way I vote on this project, does not mean that I will vote the same way on what might come down the pike at some point, so I agree with the Chairperson that I think at this point in time, knowing what we know about the quality of the project and what their proposal is that I think it's a good project and should stand on its own merits and I think that it does and should something else east of it come down the pike, it will be reviewed on its own merits at whatever point in time it comes before us and I don't think we should penalize this project for what that project might be. So I think this is a quality project that deserves consideration.

COMMISSIONER RAMIREZ – Well I think everybody made some valid points. You know the bottom line is does the benefit outweigh the environmental impact and the impact for the entire community. You know there is a lot of economic impacts with this project. We're talking 19 million dollars in fees; 1.5 million dollars a year in tax revenue. You know that is revenue that we can use to support our public safety, our Police Department, you know hire crossing guards and things of that nature. Yeah the project is relatively close to some neighborhoods, but logistically it is located in an ideal spot which is close to the freeway. If we can address the traffic issues such as making a recommendation of that Redlands Boulevard corridor; truck corridor north of the freeway so that can be eliminated, enhancing other truck routes such as Moreno Beach Drive south from Eucalyptus as soon as you're going southbound past those apartment homes. That is a very dangerous area. It is a very dangerous corridor. We're talking about big trucks driving south or maybe even north and at some times pedestrians are fighting for their lives just trying to walk or ride their bikes through there, so I don't know if that is something that we can make as a recommendation to our Capital Improvement Plan or what have you, but I think it's a good project. Seeing no two jobs is very difficult. You know I have a job and I'm sure most of you out there have a job too and coming from a family whose dad used to leave at three in the morning to drive all the way to LA for work and sit two hours in traffic on the way there and two hours in traffic on the way back and didn't have a dad that was really very motivated to support the family emotionally, so any time you can keep residents close to their job and close to home that's a good thing. It means they'll be able to spend more quality time with their families, so I like this project and I'm ready to vote yes for this.

COMMISSIONER BAKER – I guess I'll bring up the rear on this. I've really thought a lot about this last month we've been on this and the deal is here the economics of the whole United States and California has changed a hundred

percent. Like Meli was saying it's an ecommerce deal, that's why we have that Amazon; what is that, a million plus square foot warehouse out here, the one over in San Bernardino. People are just not going to the Best Buy's and Circuit City's or even Office Max to buy their products anymore. If they can it online or in the mail, that's what they're doing, so the number one thing we've got here is there's a lot of things here that maybe we look at that aren't a hundred percent where they need to be, but I think overall we've got to look at what's good for the economic base for Moreno Valley and hopefully we can work through some of the mitigation problems on the transportation. I know I'll do all I can to help on that, but I think it's a good project. I've reviewed these people online and other projects they've had. It's a top notch company we're dealing with here, so I'm for it. It's a good project. I think need to move forward with this and like you said, if there is some things we need to do on the transportation; I don't know how we build that into a motion here, but I'd like to see the project move forward, okay.

CHAIR VAN NATTA – I do want to come back with just one little comment here and a little bit of rebuttal. I'm looking at this and I've heard a couple of the Commissioners say oh it's the right project but it's in the wrong place and I'm looking at the map here and I'm seeing that this is bounded on the north by State Route 60, on the west by the Auto Mall, on the east by Aldi and most of the south border is that row of rocky hills that goes through there. It only abuts residential area on the corner and yet it's separated by the Quincy Street Channel there, so I don't really see that it is effecting existing residential all that much in this project. I don't see anything that I would think would make a better fill for that spot than a project of this type. What else are you going to put there? If you put residential there, you're going to have residential in between the Auto Mall and Aldi. I mean that doesn't make any sense to put anything there other than some sort of a commercial development and as I mentioned earlier and as Commissioner Baker acknowledged, this is the wave of the future. It's not turning Moreno Valley into a City of warehouses. It's opening us up to what's happening for now and for the future which is the distribution type centers and so forth and as another Commissioner mentioned also, it does not mean that if we're approving this that we're saying yes to warehousing all over the east side. Each project deserves and each applicant deserves consideration for their project and for what it offers and it needs to be weighed on its own merit. Yes, you have to look at the cumulative effect, but there are other projects that have been proposed that have not even come before us yet and I don't think we can say, oh let's hold off on making a decision on this until we see what this other project is going to do. I don't think that would be fair to the applicant and I don't think that would be fair to the City of Moreno Valley. We can certainly use as Commissioner Ramirez commented, we can certainly use the revenue that it's going to bring to the City to improve things and the jobs that it will bring and I think it's a good project.

COMMISSIONER SIMS – I like to note here. I tend to agree with Commissioner Giba that I'd be more supportive. I think the Prologis is a good project. I checked them out as well and did my research on it and the project end itself is a

nice looking project. I tend to agree that part of the project south of what would be Eucalyptus is what disturbs me most about it. I think along the freeway seems reasonable but anyhow… those houses are you know Sand Wedge; the back end of the property is directly adjacent to existing residential homes and more likely than not over time you'll see more warehouse goes up to between Redlands Boulevard and this project all along Eucalyptus, so that whole neighborhood will be impacted. But anyhow needless to say, you know the right place for the right kind of development. There are 1504… I asked City Staff the commercial brokerage provided. There are 1504 acres within the City of Moreno Valley and Perris available that is already zoned for industrial warehouse. You drive along the 215 freeway. There is a bunch of vacant land already there with railroad, freeway. It's all warehouse, so you know is this the right place. We have all the south entry into the City that's warehouse. You have Alessandro and Cactus bound with warehouse and distribution, its proximity to large industrial with the March Air Reserve Base. This just seems kind of moving warehouses into the east end. It's our last entry portal into the City. That's what we're going to be seen as is as people coming out from a nice weekend and nice areas out in the desert, they're going to be coming into warehouses. There is going to be a fly-in Pilot station with Subway at the intersections, so anyhow I know this project stands on its own and it's a nice project. It is a pivotal decision I personally believe as a Commissioner.

VICE CHAIR GIBA – No I never implied that it had anything to do with any other warehousing. My concern was is… as a matter of fact I think I even stated that for you. If this warehouse was Building 1 and Building 2 with Eucalyptus then you have these warehouses along the 60 and that's great, but as Mr. Sims said and I don't know if Mr. Lowell mentioned it as well, it's the extension down into an area that makes it very difficult. It begins to see warehouse tops. That area to me could be better developed for other reasons.

CHAIR VAN NATTA – For example?

VICE CHAIR GIBA – To stay within the same context is what you originally. It might take us awhile Ms. Meli. It might take us a lot of work, but to use some vision as to who you can go out and actually bring to those locations rather than sit around and wait for the only answer we seem to find, which is a warehouse project and we do have good warehouse projects and this is a beautiful warehouse project. There is no argument whatsoever. I never said that it wasn't well done, but there is probably a better location for it and I don't believe the east side is the best location, at least that location originally was some of the plans that were put forward from this document. There were other alternatives for building small light industrial, which what it was originally; mixed use facilities. The vision was given to me John Terell when I first came on in 2011 and he took me through there. He said this is mixed use and there should be some apartments. There should be some houses there. There should be some light industrial there, restaurants, hotels. That's the kind of vision and that's the kind

of thing that will support the east side and its growth and not only that, support that hospital corridor back behind it, so as you come in, you come into warehouses and you still have a hospital corridor that they will build, but not right away, so I too feel that it's probably not the… I honestly say if you just build Buildings 1 and 2, you'd probably have the perfect fit there you know, but that's just my opinion.

CHAIR VAN NATTA – No and discussing this here, but if you only put buildings north of Eucalyptus then what are going to put south of Eucalyptus? You're not going to put other types of properties facing Eucalyptus that are going to be different than what you've put on the north side. I mean you are looking at this here and you're saying okay just complete this area here with those and leave this something else. Well what else would you put other than going on both sides of Eucalyptus with a similar…?

VICE CHAIR GIBA – What's wrong with hotels? What's wrong with restaurants?

CHAIR VAN NATTA – Because there's no hotels or restaurants that want to come out there right now and there are other places that will be available for them.

VICE CHAIR GIBA – If you show them what you can do with it Meli, they can do it, but your premise is usually very different from mine and you say… you know I kinda say if… you say you can't build it they won't come and you've got to have a market for it. If you don't go out and actually go for that market, you take your vision and you go and you try to actually sell what you have. Look I use the recruiter example. I put in over 126 people in this area in five years. I had to go to a lot of kids. I had to talk on a lot of telephones, meet a lot of parents, test and evaluate a lot of people to get those kids into the service. We have to do the same thing with our City. We may have to go out and do a little bit of work.

CHAIR VAN NATTA – But when you are looking at a project of this type. Okay let's say for example you want to have a hotel come in. I don't know of any hotels that come in and build next to an Auto Mall. That's not the kind of area that they would come to. You know if we want to attract the higher end retail and we want to attract the hotels and so forth, we have to have the jobs and other things that are going to attract them to the area and when you are looking at it here, all of this along here along this side, it's all those hills and everything and you've got commercial there, you've got the freeway there, you've got commercial here, so you only have this one corner here that abuts the residential, which may or may not stay residential in the future.

VICE CHAIR GIBA – To the east of that there is still open land that you continue to grow and I go back to their document. I think one person said the State Route 60 Study was a good start and within this study they talked about key guidance

for future development; pedestrian bicycle connectivity, neighborhood connectivity and all kinds of potential futures right next to that Auto Mall.

CHAIR VAN NATTA – But it wasn't all in this section right here necessarily. There was also some talk…

VICE CHAIR GIBA – Exactly

CHAIR VAN NATTA - … about the other side north of the 60 and other areas too. I think once you start in this area here, it's like this whole thing goes together. It's all in a square there basically and developing it all together just makes sense because they brought together a comprehensive plan that brings it all together that it does not look… when you look at the pictures of the project; the concepts of the project, it doesn't look like a bunch of big square box warehouses, it looks like a commercial development. There is a mix of sizes. A mix of different layouts of the buildings and so forth. It's not like one big box warehouse after another. It's laid out attractively.

VICE CHAIR GIBA – Good points.

CHAIR VAN NATTA – Thank you.

VICE CHAIR GIBA – We just agree to disagree agreeably

CHAIR VAN NATTA – That's fine. If we all agree, then most this wouldn't be necessary. We could just have one person up here if we were just saying the same thing.

VICE CHAIR GIBA – Thank you Meli.

CHAIR VAN NATTA – Okay, any other comments from… further discussion?

COMMISSIONER BAKER – One thing I would like to add. On these big projects… you know we talk about the streets, but the infrastructure that it's going to provide in that end of town; like I'm talking the water, the sewer and the electric. I don't know how much of that is there, but it has to be a definite improvement that they are going to bring into that area. It is isn't probably there right now. Am I correct there? I mean is that bringing in water, sewer and electric… or electric is probably there, but…

COMMISSIONER SIMS – I live out there towards that area and we have water and sewer at our house.

COMMISSIONER BAKER – I mean up and down Redlands Boulevard?

COMMISSIONER SIMS – Somehow we struggle through… we make it.

CHAIR VAN NATTA – No, we're talking about Quincy

COMMISSIONER BAKER – I'm talking about…

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Commissioner Baker, yes there is sewer and water extended to that general vicinity. This project would… the major infrastructure that this project if it were approved would provide is extending Eucalyptus Avenue from the Auto Mall to the Aldi site, so it would continue that road, so you could go I guess almost from one end of the City to the other on Eucalyptus once that area is developed. And then underneath that road would be the water, sewer and electric lines that would connect a gap. So it exists in that area, they would just be closing that gap. If I had to say what is the major infrastructure this will provide is? It is most likely the road improvements.

CHAIR VAN NATTA – Okay through here all the way through to… giving an alternative to driving on the 60. Also if somebody wanted to get from this side to that side without getting on the freeway, they could.

COMMISSIONER SIMS – I do want to have one last poke at this thing. You know the east end of the area, there are people that have moved out to the east end. Those are larger lots; half acre; you know larger kind of things and does have the potential for making… in fact the development that this… the housing that's directly that this project now abuts and Meli as you suggest as it goes east that it will logically fill in and then that's where that Adam Hall Nursery is. That will all become a big box or boxes or something like that. Those are all half acre homes. Those people who moved out there 20 years ago, based on the investment they made and based on the trust of the City for the General Plan to be rural residential out there, now will have big boxes right next to it. There are significant amount of areas within the City where projects like this could coexist in an area that's not intrusive on residential areas and anyhow, we are going to disagree on this and that's fine. I get it, but it's just people make investments. The investor in Stonegate I'm sure when they went and did their thing, they didn't anticipate a five or six year economic downturn, but rooftops are what support it. Why is the Canyon Springs area so well? There's obviously problems in Moreno Valley with the commercial when you look at the Moreno Valley Mall. That is a very under-utilized, under-whelming commercial center. Why is that? Why is Stonegate having trouble? Why are things right in the heart of the City get boarded up and they go pretty ratty; our commercial development? I don't why. I'm not an economist, but I just think there is reason we need… there's not a bad thing having more residential in a well thought out, well planned residential and we can set our mark and have parks. You know look at the City of Eastvale. That's one of the most affluent City's in all of Southern California. It's not by the coast. It's pierced by major freeways. It's probably located… it does very well. There's like 500 or 600 hundred thousand dollar home is the median price in that

thing. They don't have warehouses. They commercial supporting a very higher end, but they planned it that way. There were very conscientious. They set very, very strict limits. They created some community service districts. They have an abundance of parks. The residents pay dearly for that. We could do stuff like that here, but we have to have the vision and we have to go for it and set that.

CHAIR VAN NATTA – I'll give you a reason why we're having problems with our retail and part of it is that people have to drive through Eastvale area to get to jobs. Eastvale is thriving because they are closer to jobs and they are closer to the higher paying jobs, so when people have to drive as you were mentioning, your father. When people have to drive an hour or two to get to work, they quite often stop and do their shopping where it is that they are working. If we bring more jobs here, we will also by bringing the jobs, enhance the retail and enhance the shopping and everything else like that. House tops don't work if you don't work if you don't have jobs for the people who live in them. Okay, well we're definitely split on this. It will be interesting to see how it goes, but we will need a motion before we can take a vote on it.

COMMISSIONER LOWELL – I have one quick question of Staff. Last time this came before us there were options that we had to vote on yes or no. I don't see that in here. One of the recommendations is just to approve everything blanketly. Do we have the option of voting option A, B or C like we did last time?

ASSOCIATE PLANNER BRADSHAW – Those alternatives are in the March 13th Staff Report and they are still available there for reference.

COMMISSIONER LOWELL – I don't have that in front of me unfortunately.

ASSOCIATE PLANNER BRADSHAW – We can provide a copy to you. We still have them for reference here. The recommendation in that same March report is the same recommendation we carried into tonight's report. We didn't try and provide all those alternatives in formal recommendation language, but we do have the alternatives for reference. The first was to approve the project as it's proposed, but to condition two of the warehouse buildings to not be built for the first 18 months of approval. That was one of the options. Alternative two of those suggested was to deny the General Plan Amendment and Zone Change for the two sites; Buildings 1 and 2 which are the two sites located immediately adjacent to the Auto Mall, but approve the proposed land use changes for the remainder of the project site. This would prevent warehouse facilities from developing along those two sites immediately adjacent to the Auto Mall and the third alternative was to deny the land use changes and through that denial, deny the project as presented to you this evening.

COMMISSIONER LOWELL – But there is no option to deny the General Plan Amendment but approve the balance of the project as it stands?

ASSOCIATE PLANNER BRADSHAW – The project as proposed… we didn't suggest that alternative.

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – Yeah can you clarify… the General Plan Amendment affects most of the property, so are you saying approve part of the General Plan Amendment and not another part?

COMMISSIONER LOWELL – I don't have last month's information in front of me, so there was a map on there that showed where the zoning would change and I'm not familiar with exactly how those zones lay out because I don't have that map in front of me today.

COMMUNITY & ECONOMIC DEVELOPMENT DIRECTOR TERELL – The quick answer is if you wanted to only approve part of the project, for example the part north of Eucalyptus. The project would…we'd need to take that back and revise the exhibits, because the General Plan Amendment didn't match up exactly to Eucalyptus Avenue. So if a majority of the Commission wanted to pursue what I call an alternative to the project as proposed, we would need to revise that and bring that back to you.

VICE CHAIR GIBA – How do we do that John? I mean is there some kind of a motion you'd make for saying can we look at another alternative for this project?

CHAIR VAN NATTA – I don't think we should.

CITY ATTORNEY CURLEY – If I might… what is before you is the applicant's request that is for you to recommend to the Council. You know you are not deciding it. Under the statue, you have the duty as the Planning Advisory Body to give the Council the decision maker, your thoughts on it, so you could go through the one through seven and certify the EIR, but if it was your pleasure to augment the statement of overriding considerations that would be a recommendation. I'm just dropping down here. Number four, General Plan Amendment. A recommendation would be to approve part of it; you know lot one and two or however you want to designate it and not the rest and go on… Zone Change, we recommend you approve part or not. The Council will get that. They will consider your advice. They have the privilege to say thank you, we're going to do just that. Thank you but we're not going to listen to you at all. Thank you somewhere in between.

CHAIR VAN NATTA – That's happened before

CITY ATTORNEY CURLEY – So they will take your advice as their land use advisors, but you're not the bottom line, so in each one of these, depending on how creative you want to be on your recommendation, but you could give Staff here the narrative; you know, approve lot one and two or this or that. That's what would get written up in the recommendation for the Council's consideration.

CHAIR VAN NATTA – I think what we have here is a proposal that has been brought after much work between Staff and the applicant and after much delay of time and everything like that. We have a project that's their vision of what they would like to do with the property and I think we should make a decision whether we're going to say yes go ahead to the City Council and this is our recommendation or whether we're going to say no we don't like it and let them make their decision on that. But I think as it stands, is how we should vote on it because all we're doing is making a recommendation.

COMMISSIONER LOWELL – I agree. I think we've been leading them on a little too long so we need to make a decision, yes or no.

VICE CHAIR GIBA – I agree and I think I've already made my recommendations.

COMMISSIONER LOWELL – When we vote on this are we going to vote on items one through seven blanketly or are we going to vote on item 1 by itself, 2 by itself, 3 by itself and so on.

CHAIR VAN NATTA – No, let's just read the whole thing; the recommendation, approve, read the whole seven and then we'll yeah or nay.

COMMISSIONER LOWELL – I understand.

CHAIR VAN NATTA – Commissioner Baker would you make the motion.

COMMISSIONER BAKER - Okay I move that we **APPROVE** Resolution No's. 2014-09 and 2014-10 and thereby **RECOMMEND** that the City Council take the following actions:

1. **CERTIFY** that the Environmental Impact Report (EIR) for the Prologis Eucalyptus Industrial Park Project (Attachments 5 and 6) has been completed in compliance the California Environmental Quality Act;

2. **ADOPT** the Findings and Statement of Overriding Considerations regarding the Final EIR for the Prologis Eucalyptus Industrial Park Project attached hereto as Exhibit A to Attachment 2;

3. **APPROVE** the Mitigation Monitoring Program for the Final EIR for the proposed Prologis Eucalyptus Industrial Park Project attached hereto as Exhibit B to Attachment 2;

4. **APPROVE** General Plan Amendment application PA07-0082 as shown for Exhibit A to Attachment 3;

5. **APPROVE** Zone Change application PA07-0081 as shown on Exhibit B to Attachment 3;

6. **APPROVE** Master Plot Plan PA07-0083 and related Plot Plans PA07-0158 through PA07-0162, subject to the attached conditions of approval included as Exhibit C to Attachment 3;

7. **APPROVE** Tentative Parcel Map 35679 (PA07-0084), subject to the attachment conditions of approval included as Exhibit D to Attachment 3.

CITY ATTORNEY CURLEY – And if I might add, does that include the augmented conditions that were on your dais this evening? I assume it did, but so the record is complete. You have two colored sheets, a purple and a blue one. I think your intent was to include that. It was part of the second? Alright disregard me. Never mind.

COMMISSIONER BARNES – Second

CHAIR VAN NATTA – Okay we have a motion and a second. We will go to a roll call vote please.

COMMISSIONER SIMS – No

COMMISSIONER LOWELL – With all due respect I vote no

COMMISSIONER BAKER – Yes

COMMISSIONER BARNES – Yes

COMMISSIONER RAMIREZ – Yes

VICE CHAIR GIBA – No

CHAIR VAN NATTA – Yes

CHAIR VAN NATTA – Okay so we have 4 yesses and 3 no's and the motion passes. And could somebody do something about the air conditioning.

COMMISSIONER LOWELL – I agree

COMMISSIONER BARNES - I'll second that

INTERIM PLANNING OFFICIAL ORMSBY – We will try to take care of that.

CHAIR VAN NATTA – And Staff…

INTERIM PLANNING OFFICIAL ORMSBY - Just a wrap up for this item, the Planning Commission recommendation will be referred to the City Council for final action.

CHAIR VAN NATTA – And I'm doing nothing until somebody turns the air conditioner back up a little. Yeah 5 minutes.

(RECESS)

Facts, Findings and Statement of Overriding Considerations Regarding the Environmental Effects and the Approval of the ProLogis Eucalyptus Industrial Park (State Clearinghouse No. 2008021002)

I. INTRODUCTION

The City Council of the City of Moreno Valley (this "Council"), in certifying the EIR for the Prologis Eucalyptus Industrial Park and approving Tentative Parcel Map 35679 and a Site Plan authorizing the construction of up to approximately 2,244,638 square feet of distribution warehouse space (the "Project"), makes the Findings described below and adopts the Statement of Overriding Considerations presented at the end of the Findings. The Environmental Impact Report ("EIR") was prepared by the City of Moreno Valley ("City") acting as lead agency pursuant to the California Environmental Quality Act ("CEQA"). Hereafter, unless specifically identified, the Notice of Preparation ("NOP"), Notice of Availability & Completion ("NOA/NOC"), Draft EIR ("DEIR"), Technical Studies, Final EIR containing Responses to Comments and textual revisions to the Draft EIR ("FEIR"), and the Mitigation Monitoring and Reporting Program ("MMRP") will be referred to collectively herein as the "EIR." These Findings are based on the entire record before this Council, including the EIR. This Council adopts the facts and analyses in the EIR, which are summarized below for convenience. The omission of some detail or aspect of the EIR does not mean that it has been rejected by this Council.

II. PROJECT SUMMARY

A. PROJECT DESCRIPTION

1. Site Location

The Project is located in the eastern portion of the City of Moreno Valley. The Project site consists of ten parcels totaling approximately 122.8 net acres located south of and adjacent to SR-60, east of Moreno Valley Auto Mall, and adjacent to and west of the Quincy Channel.

The Project site is vacant and supports mainly weedy vegetation. The major road that provides access to the Project site is Eucalyptus Avenue. Land adjacent to the Project site includes vacant land east and south of the proposed Project site, SR-60 to the north, and the Moreno Valley Auto Mall and the City

of Moreno Valley Fire Station No. 58 northwest of the Project site. Existing single-family residential uses are located approximately 50 feet southeast of the southeastern corner of the Project site.

2. Project Description

The Project site is approximately 122.8 acres in size. The proposed Project includes the construction and operation of a warehouse facility comprising six buildings consisting of a total of approximately 2,244,638 square feet. The Project site is divided into northern and southern areas. The northern area, north of the future Eucalyptus Avenue, would contain approximately 1,030,377 square feet of warehouse uses divided between two buildings (No. 1 and 2). Development in the southern area, south of the future Eucalyptus Avenue, would consist of approximately 1,214,261 square feet of warehouse uses divided among four separate buildings (No. 3 through 6). The master and individual building plans, including grading, landscaping, elevations, and selected line of sight plans. The proposed Project includes the construction of asphalt/concrete surfaces in parking and driving areas, and landscaping along the perimeter and roadway frontages.

The Project site is currently designated Residential in the City's General Plan. The site is zoned as Business Park (BP), Business Park/Mixed Use (BPX), Residential 15 District (R15), Residential 5 District (R5), and Residential Agriculture 2 (RA-2). The zoning is not consistent with the existing General Plan land use and the Project is not consistent with the General Plan and zoning. Therefore the Project will require a General Plan Amendment which would change the designation to Business Park and a Zone Change that would change the zoning of the site to Light Industrial (LI).

3. Actions Covered by the EIR

The EIR will support the following discretionary and non-discretionary approvals:

- General Plan Amendment to amend the Land Use Element resulting in a change of land use designations for the southern portion of the project site (approximately 71.3 acres) from Residential 15, Residential 5, and Residential Agriculture to Business Park.
- General Plan Amendment to amend the Circulation Element including (1) elimination of undeveloped Quincy Street from Eucalyptus Avenue to Encilia Avenue; and (2) realignment of Encilia Avenue from its current alignment such that its westerly terminus is located at Moreno Beach Drive instead of the current General

Plan westerly terminus at Eucalyptus Avenue. The segment between Quincy Channel and Moreno Beach Drive would be classified as a Collector.

- Change of Zone resulting in a change from Business Park (BP), Business Park Mixed-Use (BPX), Residential 15 (R15), Residential 5 (R5), and Residential Agriculture (RA-2) to Light Industrial (LI) on the project site.
- Modification of the Primary Animal Keeping Overlay (PAKO) zone district per the recommended change of zone.
- Modification of the Master Plan of Trails to eliminate trail segment along the west side of the Quincy Channel north of the future Eucalyptus Avenue and add a segment along the north side of Eucalyptus Avenue from the Quincy Channel to the west boundary of the project site.
- Approval of a Master Plot Plan and five related Plot Plans.
- Tentative Parcel Map approval.
- Certification of the Environmental Impact Report.
- Final Parcel Map, public improvement agreement, and related securities approval.
- Issuance of an encroachment permit for any construction work done in any City-controlled ROW. Encroachment permit issuance requires approval of improvement plans, public improvement agreement execution with securities posted, and satisfying those conditions of approval required prior to grading.
- Approval of a Storm Water Pollution Prevention Plan (SWPPP) to accommodate site runoff during construction.
- Approval of a Preliminary Water Quality Management Plan (P-WQMP) and Final Water Quality Management Plan (F-WQMP) to mitigate for post-construction runoff flows (non-discretionary).
- Issuance of a Grading Permit that requires approval of a grading plan, approval of the final drainage study, approval of the F-WQMP, obtaining an Notice of Intent and Water Discharge Identification Number, obtaining a WQMP#, and satisfying those conditions of approval required prior to grading (non-discretionary).
- Issuance of a Building permit. The comprehensive building permit includes building, plumbing, mechanical, and electrical permits (non-discretionary).

Approvals and permits required by other agencies include:

- Approval from the City and Riverside County Flood Control and Water Conservation District (RCFCWCD) to ensure that construction site drainage velocities are equal to or less than the pre-construction conditions and downstream water quality is not worsened
- Approval of Quincy Channel improvements from the RCFCWCD
- A Section 404 Permit from the U.S. Army Corps of Engineers (USACE)
- A Section 401 Water Quality Certification from the Regional Water Quality Control Board (RWQCB)
- A Section 1602 Streambed Alteration Agreement from the California Department of Fish and Wildlife (CDFW)
- Encroachment permits from Caltrans for any construction work done in any State-controlled right of way(i.e., SR-60)

B. PROJECT OBJECTIVES

The Project Objectives include the following:

- Provide industrial warehouse facilities that meet the substantial and unmet demands of businesses located in the City and County;
- Provide new industrial development that is attractive and minimizes conflicts with the surrounding existing uses;
- Provide a variety of new employment opportunities for the citizens of Moreno Valley and surrounding communities;
- Encourage warehouse distribution services that take advantage of the area's close proximity to various freeways and transportation corridors;
- Encourage new development consistent with the capacity and municipal service capabilities;
- Provide infrastructure improvements to meet phased Project needs in an efficient and cost-effective manner;

- Cluster industrial warehouse uses near access points to the state highway system to reduce traffic congestion on surface streets and to reduce air pollutant emissions from vehicle sources;
- Develop land uses that provide the City with a positive revenue/cost ratio and provide needed infrastructure in a timely fashion;
- Address community circulation, both vehicular and pedestrian, utilizing available capacity within the existing circulation system, and provide fair share improvements to various future-year deficient intersection or road segments; and
- Reduce peak hour vehicle trips, energy and water consumption compared to existing General Plan land uses.

III. ENVIRONMENTAL REVIEW AND PUBLIC PARTICIPATION

The City has conducted an extensive review of this Project which included the DEIR, FEIR and supporting technical studies, along with a public review and comment period first during the circulation of the Notice of Preparation/Initial Study and then through the circulation of the DEIR. The following is a summary of the environmental review of this Project:

- On February 4, 2008, the City circulated a Notice of Preparation ("NOP") and the Initial Study that identified the environmental issues that the City anticipated would be analyzed in the Project's DEIR to the State Clearinghouse, responsible agencies, and other interested parties.
- On February 13, 2008, the City conducted a public scoping meeting to allow members of the public to provide comments and input regarding the scope and content of the DEIR.
- The NOP public review period ran for 30 days, from February 4 to March 4, 2008. Written comments on the NOP were received from 22 different agencies, organizations, and individuals. The scope of the issues identified in the comments expressing concern included potential impacts associated with:
    - Change in use from established General Plan and zoning designations. This issue was discussed in Section 4.1, Aesthetics, and Section 4.8, Land Use, of the DEIR;

- Short-term and long-term air pollutant emissions including dust and diesel particulates from truck exhaust that could negatively affect nearby residential uses. This issue was discussed in Section 4.3, Air Quality, of the DEIR;

- Short-term and long-term noise impacts that could affect nearby residential uses. These issues were discussed in Section 4.9, Noise, of the DEIR;

- Potential impacts to future planned school sites were addressed in Section 4.8, Land Use, of the DEIR;

- Potential water-related impacts (drainage, water quality of runoff from the project) were addressed in Section 4.7, Hydrology and Water Quality, in the DEIR;

- Project truck traffic causing congestion on local roads, intersections, and freeway ramps, primarily on Redlands Boulevard, and impacts to vehicular, bicycle, and pedestrian safety. These issues were discussed in Section 4.11, Transportation, of the DEIR;

- Impacts to aesthetics from loss of views, loss of neighborhood character, and increased night lighting as this area transitions from previously planned residential and business park uses to industrial uses along the south side of SR-60. These issues were discussed in Section 4.1, Aesthetics, and 4.8, Land Use, of the DEIR; and

- Potential loss of biological or cultural (archaeological) resources by grading and development of the site, and suggestions to consult with local Native American tribes per SB 18. These issues were discussed in Section 4.4, Biological Resources, and 4.5, Cultural Resources, of the DEIR.

- Based on the Initial Study, included in the DEIR in Appendix A, and comments received pursuant to the NOP, it was determined that some issues need not be addressed in depth in the DEIR because previous studies of other analyses provided sufficient information, analysis, and mitigation to conclude that there was little or no potential for significant impacts. These environmental topics included: (1) Geology and Soils; (2) Mineral Resources; (3) Public Services; (4) Recreation; and, (5) Forest Resources.

- As required by the California Environmental Quality Act (CEQA) Guidelines Section 15087, a Notice of Completion (NOC) of the Draft EIR State Clearinghouse No. 2008021002 for the Eucalyptus Industrial Park project was filed with the State Clearinghouse on July 17, 2012, and the Notice of Availability (NOA) of the Draft EIR was filed with the Riverside County Clerk on July 18, 2012.

- The Draft EIR was circulated for public review for a period of 48 days, from July 18, 2012 to September 4, 2012. Copies of the Draft EIR were distributed to all Responsible Agencies and to the State Clearinghouse in addition to various public agencies, citizen groups, and interested individuals. Copies of the Draft EIR were also made available for public review at the City Planning Department, at one area library, and on the internet. A total of thirteen (13) comment letters were received on the DEIR. Ten of the comment letters received were from Federal, State, regional, or local agencies. Three comment letters were received from private organizations or conservation groups – no letters were received from individuals. The City prepared specific responses to all comments. The responses to comments are included in Section 2.0 of the FEIR.

- On (date) in accordance with *Public Resources Code* Section 21092.5, the City provided written responses to public agencies that commented on the DEIR.

- On (date), Notice of the City Council hearing to consider the Project was provided in the following newspaper(s) of general and/or regional circulation: Press Enterprise.

- On (date), this Council held a public hearing to consider the Project and staff recommendations. The City, after considering written comments and oral testimony on the EIR, determined that no new information was presented that would require recirculation of the EIR. Following public testimony, submission of additional written comments, and staff recommendations, this Council certified the EIR, adopted these Facts, Findings and the Statement of Overriding Considerations, and the further recommendations in the Staff Report, and approved the Project (collectively the "Approvals").

IV. INDEPENDENT JUDGMENT FINDING

The Applicant retained the independent consulting firm of LSA Associates, Inc. ("LSA") to prepare the EIR for the Project. LSA has prepared the EIR under the supervision, direction and review of

the City with the assistance of an independent peer review (Willdan Engineering). The City of Moreno Valley is the Lead Agency for the preparation of the EIR, as defined by CEQA CPRC Section 21067 as amended. The City Council has received and reviewed the EIR prior to certifying the EIR and prior to making any decision to approve or disapprove the Project.

Finding: The EIR for the Project reflects the City's independent judgment. The City has exercised independent judgment in accordance with *Public Resources Code* Section 21082.1(c) (3) in directing the consultant in the preparation of the EIR, as well as reviewing, analyzing, and revising material prepared by the consultant.

A. GENERAL FINDING ON MITIGATION MEASURES

In preparing the Approvals for this Project, City staff incorporated the mitigation measures recommended in the EIR as applicable to the Project. In the event that the Approvals do not use the exact wording of the mitigation measures recommended in the EIR, in each such instance, the adopted Approvals are intended to be identical or substantially similar to the recommended mitigation measure. Any minor revisions were made for the purpose of improving clarity or to better define the intended purpose.

Finding: Unless specifically stated to the contrary in these findings, it is this Council's intent to adopt all mitigation measures recommended by the EIR which are applicable to the Project. If a measure has, through error, been omitted from the Approvals or from these Findings, and that measure is not specifically reflected in these Findings, that measure shall be deemed to be adopted pursuant to this paragraph. In addition, unless specifically stated to the contrary in these Findings, all Approvals repeating or rewording mitigation measures recommended in the EIR are intended to be substantially similar to the mitigation measures recommended in the EIR and are found to be equally effective in avoiding or lessening the identified environmental impact. In each instance, the Approvals contain the final wording for the mitigation measures.

V. ENVIRONMENTAL IMPACTS AND FINDINGS

City staff reports, the EIR, written and oral testimony at public meetings or hearings, these facts, findings, and statement of overriding considerations, and other information in the administrative record, serve as the basis for the City's environmental determination.

The detailed analysis of potentially significant environmental impacts and proposed mitigation measures for the Project is presented in Section 4.0 of the DEIR and Section 3.0 of the FEIR. Responses to comments on the DEIR, along with copies of the comments, are provided in Chapter 2.0 of the FEIR.

The EIR evaluated thirteen major environmental categories for potential impacts including Aesthetics, Agricultural Resources, Air Quality, Biological Resources, Cultural Resources, Hazerds and Hazardous Materials, Hydrology and Water Quality, Land Use, Noise, Population and Housing, Transportation, Utilities and Service Systems, and Greenhouse Gases and Global Climate Change. Both Project-specific and cumulative impacts were evaluated. Of these thirteen major environmental categories, this Council concurs with the conclusions in the EIR that the issues and sub issues discussed in Sections V.A and V. B below either are less-than-significant without mitigation or can be mitigated below a level of significance. For the remaining potential environmental impacts that cannot feasibly be mitigated below a level of significance discussed in Section V.C, overriding considerations exist which make these potential impacts acceptable to this Council.

A. LESS-THAN-SIGNIFICANT ENVIRONMENTAL IMPACTS NOT REQUIRING MITIGATION

The Moreno Valley City Council hereby finds that the following potential environmental impacts of the Project are less-than-significant and therefore do not require the imposition of mitigation measures.

1. Aesthetics

a. Light and Glare

Potential Significant Impact: Whether the Project would create a new source of substantial light or glare that would adversely affect day or nighttime views in the area.

Findings: Potential impacts of the Project related to light and glare are discussed in detail in Section 4.1 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to light and glare with the adherence to established City ordinances and development guidelines, therefore, no mitigation is required.

Facts in Support of the Findings: Section 4.1 identifies no sources of light or glare on the Project site. Development of the Project site would introduce new sources of light and glare into the area in the form of street lighting, parking lot lighting, and security lighting for the buildings. Lighting within loading

areas (areas within the public view include the loading areas of Buildings 1, 2, and 3) will be directed downward so as to not Project lighting into the sky. The overall increase in ambient light in the area is expected to be incremental with compliance with the City's development standards for lighting. The proposed Project will incrementally increase the amount of daytime glare in the Project area from introducing windows and metal fixtures into the area. All development in the City, which includes light generated from warehouse buildings and parking lots, is required to adhere to lighting requirements contained in the City's Municipal Code. The Project is consistent with General Plan policies and Municipal Code requirements regarding light and glare, therefore, no impacts associated with this issue would occur and no mitigation is required (DEIR, pgs. 4.1-8 to 4.1-9).

b. Light and Glare

Potential Significant Impact: Whether the Project would create a new source of substantial light or glare that would adversely affect day or nighttime views in the area.

Findings: Potential impacts of the Project related to light and glare are discussed in detail in Section 4.1 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to light and glare with the adherence to established City ordinances and development guidelines, therefore, no mitigation is required.

Facts in Support of the Findings: Section 4.1 identifies no sources of light or glare on the Project site. Development of the Project site would introduce new sources of light and glare into the area in the form of street lighting, parking lot lighting, and security lighting for the buildings. Lighting within loading areas (areas within the public view include the loading areas of Buildings 1, 2, and 3) will be directed downward so as to not Project lighting into the sky. The overall increase in ambient light in the area is expected to be incremental with compliance with the City's development standards for lighting. The proposed Project will incrementally increase the amount of daytime glare in the Project area from introducing windows and metal fixtures into the area. All development in the City, which includes light generated from warehouse buildings and parking lots, is required to adhere to lighting requirements contained in the City's Municipal Code. The Project is consistent with General Plan policies and Municipal Code requirements regarding light and glare, therefore, no impacts associated with this issue would occur and no mitigation is required (DEIR, pgs. 4.1-8 to 4.1-9).

2. Air Quality

a. Construction-Chronic Health Risk Impacts

Potential Significant Impact: Whether the Project would expose sensitive receptors to substantial pollutant concentrations.

For Maximum Individual Cancer Risk (MICR), the applicable thresholds are:

- An increased cancer risk greater than 10 in 1 million (1.0×10^{-5}) at any receptor location; or
- A cancer burden greater than 0.5.

For non-cancer chronic Hazard Index (HI); the applicable threshold is:

- A cumulative increase for any target organ system exceeding 1.0 at any receptor location.

Findings: Potential impacts of the Project related to construction-chronic health risks are discussed in detail in Section 4.3 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to sensitive receptor health risks and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.3 of the DEIR, the only toxic air pollution emissions in any significant quantity associated with the construction of the Project occur from diesel-powered equipment exhaust. A screening health risk assessment was performed according to the published Office of Environmental Health Hazard Assessment (OEHHA) health risk techniques.[1] According to the health risk assessment, the cancer risk due to construction of the Project is less than the threshold of 10 in 1 million. Therefore, health risks would be less than significant and no mitigation is required. (DEIR, pgs. 4.3-13 to 4.3-14)

b. Operational-Acute Health Risk Emission Impacts

Potential Significant Impact: Whether the Project would expose sensitive receptors to substantial pollutant concentrations.

For MICR, the applicable thresholds are:

[1] OEHHA, *Air Toxics Hot Spots Program Risk Assessment Guidelines*, August 2003, Appendix D, *Risk Assessment Procedures to Evaluate Particulate Emissions from Diesel-Fueled Vehicles*.

- An increased cancer risk greater than 10 in 1 million (1.0×10^{-5}) at any receptor location; or

For non-cancer chronic and acute HI; the applicable threshold is:

- A cumulative increase for any target organ system exceeding 1.0 at any receptor location.

Findings: Potential impacts of the Project related to operational-acute health risks are discussed in detail in Section 4.3 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to operational-acute health risks and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.3 of the DEIR, a screening level health risk assessment was performed for the operational emissions associated with the proposed Project based on the SCAQMD's *Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis* guidance. The operations expected to occur at this facility will not emit any toxic chemicals in any significant quantity other than vehicle exhaust. According to the health risk assessment the nearest residences would experience a cancer risk of 4.33 in 1 million, which is below the 10 in 1 million threshold. The nearest residences would also experience a chronic HI of 0.0016 and an acute HI of 0.0000088. Both the chronic and acute HI would be below the chronic and acute HI threshold of 1.0. Since the operational phase of the proposed Project would not exceed any of the long-term acute health risk assessment thresholds, a less than significant impact would occur. No mitigation is required. (DEIR, pgs. 4.3-14 to 4.3-18)

c. Operational-Carcinogenic and Chronic Health Risk Emission Impacts

Potential Significant Impact: Whether the proposed Project would expose sensitive receptors to substantial pollutant concentrations.

For MICR, the applicable thresholds are:

- An increased cancer risk greater than 10 in 1 million (1.0×10^{-5}) at any receptor location; or

For non-cancer health risk HI; the applicable threshold is:

- A cumulative increase for any target organ system exceeding 1.0 at any receptor location.

Findings: Potential impacts of the Project related to operational-carcinogenic and chronic health risk emission impacts are discussed in detail in Section 4.3 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to health risks related to operational emissions and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.3 of the DEIR, the closest residences to the Project would be exposed to a lifetime inhalation cancer risk of no more than 4.33 in 1 million, a 30-year inhalation cancer risk of no more than 3.88 in 1 million, and nearby workers a 40-year career inhalation cancer risk of no more than 1.5 in 1 million. The chronic health risk index is significantly less than the threshold of 1.0, in this case 0.0016 for residents and workers. No significant carcinogenic or chronic health risks would occur from Project-related traffic. No significant health risk would occur from Project-related truck traffic, and no mitigation is necessary. (DEIR, pg. 4.3-18)

d. Air Quality Impacts to Adjacent Future Development

Potential Significant Impact: Whether the proposed Project would expose sensitive receptors to substantial pollutant concentrations.

Findings: Potential impacts of the Project related to air quality impacts to adjacent future developments are discussed in detail in Section 4.3 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to air quality impacts to adjacent future development and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.3 of the DEIR, based on the land use assumptions for the future L-Aquila D'Pietra (LADP) Project, residential development would be located along the southern Project boundary between the proposed Project and the proposed LADP. It is anticipated that the proposed Project site would be fully developed prior to the occupation of any dwelling units in LADP; therefore, no construction-related air quality impacts to adjacent sensitive receptors would result from development of the proposed Project.

The primary health risk is from heavy-duty truck emissions is diesel particulate exhaust. According to the screening-level assessment, the future residential units south of the Project site would be exposed to an unmitigated inhalation cancer risk of approximately 4.3 in 1 million, which is less than the threshold of 10 in 1 million. The corresponding chronic and acute hazard indices would be approximately 0.0016 and 0.000088, which is less than the threshold of 1.0 for the chronic hazard index and acute hazard index. Since the screening-level analysis overall Project health risks are below established thresholds, any detailed assessment would also produce less than significant health risk levels. Therefore, a less than

significant impact associated with future uses that may occupy adjacent properties subsequent to development of the proposed Project would occur. No mitigation is required. (DEIR, pgs. 4.3-18 to 4.3-19)

e. Long-Term Microscale (CO Hotspot) Impacts

Potential Significant Impact: Whether the proposed Project would violate any air quality standard or contribute substantially to an existing or projected air quality violation. For CO, the applicable thresholds are:

- California State one-hour CO standard of 20.0 ppm; and
- California State eight-hour CO standard of 9.0 ppm.

Findings: Potential impacts of the Project related to long-term microscale emissions are discussed in detail in Section 4.3 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to long-term microscale emissions and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.3 of the DEIR, the highest one-hour CO concentration experienced at any of the intersections in the Project vicinity would not exceed the one hour CO State standard of 20 ppm. Based on the *Air Quality Analysis* prepared for the proposed Project, the proposed Project would contribute, at most, a 0.1 ppm increase to the one-hour CO concentrations for all scenarios. This is below the 1.0 ppm increase threshold. Also the highest eight-hour CO concentration experienced at any of the intersections in the Project vicinity would not exceed the eight-hour CO state standard of 35 ppm. Based on the *Air Quality Analysis* prepared for the proposed Project, the proposed Project would contribute, at most, a 0.1 ppm increase to the eight-hour CO concentrations for all scenarios. This is below the 0.45 ppm increase threshold. Since the proposed Project would not exceed the one-hour or eight-hour CO concentration standards, it is reasonable to conclude that no CO hot spots would occur. Therefore, the proposed Project would not have a significant impact on local air quality for CO and no mitigation measures would be required. (DEIR, pgs. 4.3-19 to 4.3-20)

f. Odors

Potential Significant Impact: Whether the Project would create objectionable odors affecting a substantial number of people.

Findings: Potential impacts of the Project related to objectionable odors are discussed in detail in Section 4.3 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts due to objectionable odors and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.3 of the DEIR, the Project does not propose land uses typically associated with emitting objectionable odors. Potential odors during Project construction may result from heavy equipment exhaust and the application of asphalt and architectural coatings. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less-than-significant. Project-related operational odor sources such as vehicle exhaust and routine painting/ maintenance activities are typical of industrial/commercial activities and would be localized to the immediate Project vicinity, with little or no off-site effects. Accordingly, impacts related to objectionable odors will be less-than-significant and no mitigation is required. (DEIR, pg. 4.3-20)

3. Biological Resources

a. Habitat Fragmentation/Wildlife Movement

Potential Significant Impact: Whether the Project would interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.

Findings: Potential impacts of the Project related to habitat fragmentation and wildlife movement are discussed in detail in Section 4.4 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts to habitat and wildlife movement and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.4 of the DEIR, the proposed Project site is isolated from regional wildlife corridors by existing barriers including urban development, agricultural uses, and roadways. Land uses adjacent to the Project site include fallow agricultural land to the south and east, commercial uses to the west, and residential uses to the north across SR-60. Due to the nature of development occurring in the Project area and the current condition of the Project site, it is highly unlikely that the Project site is utilized as a wildlife movement corridor, with the exception of the Quincy Channel. The proposed Project will not affect the majority of Quincy Channel, thus allowing wildlife to continue using the existing channel to traverse the site. The quality of on-site habitat has been diminished due to the previous and frequent ground disturbance and past agricultural activities. In addition, the

existing roadways and infrastructure features further isolate the Project site from natural areas. Due to the disturbed condition of the Project site, the nature of development to the southeast and west, the intervening presence of roadways and infrastructure, and adherence to City development standards identified in the Municipal Code, development of the proposed Project will not result in significant habitat fragmentation or substantially affect established wildlife corridors or wildlife movement. A less than significant impact would result and no mitigation is required. (DEIR, pg. 4.4-23)

b. Adopted Policies and Ordinances

Potential Significant Impact: Whether the Project would conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

Findings: Potential impacts of the Project related to adopted policies and ordinances are discussed in detail in Section 4.4 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in conflict with local policies or ordinances and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.4 of the DEIR, city policies or ordinances identified in the General Plan protecting biological resources include: mitigation of impacts to riparian areas or other natural sensitive communities (Policy 7.4.1), preservation of natural drainage courses in their natural hydrological state (Policy 7.4.3), and City fulfillment of obligations set forth within any agreements and permits related to the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) implementation (Policy 7.4.5).

The Quincy Channel, located adjacent and to the east of the proposed Project site, is considered a sensitive natural habitat due to the value it provides as nesting sites and foraging sites for migratory birds. The proposed Project would be designed to minimize encroachment into this natural area through setback requirements established in Sections 9.16.120 and 9.05.040 of the City's Municipal Code, thus preserving this habitat area in its natural state pursuant to the City's General Plan. At the northeast corner of Building 2, the development plans call for a minimum setback from Quincy Channel due to the topography and alignment of the creek. From that point, the plan provides a setback and landscaped buffer area between the drainage area and the structures proposed on the site that widens and varies from 25 to 50 feet (including the flood control access road). Therefore, the proposed Project would not conflict with local policies or ordinances protecting biological resources and a less than significant impact would occur. No mitigation is required. (DEIR, pg. 4.4-24)

c. Adopted Habitat Conservation Plans

Potential Significant Impact: Whether the Project would conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

Findings: Potential impacts of the Project related to adopted habitat conservation plans are discussed in detail in Section 4.4 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in conflicts with local habitat conservation plans and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.4 of the DEIR, the Project site is located within the Western Riverside County MSHCP, however, the Project site is not within any MSHCP criteria cell or habitat linkage. Furthermore, the Project site is not located within an MSHCP mammal or amphibian survey area; a Narrow Endemic Plant Species Survey Area or Criteria Area Plant Species Survey Area; or a riparian, wetland, or vernal pool habitat/species survey area. A habitat assessment for the burrowing owl is required under the MSHCP. While the Project site is not within any MSHCP conservation areas, the Project is still subject to provisions of the MSHCP. In particular, the Project applicant will be required to provide payment of mitigation fees and adhere to the requirements established in the MSHCP. Pursuant to agreements with the USFWS and the CDFG, the payment of the mitigation fee prior to the issuance of a building permit by the City, and compliance with applicable provisions of the MSHCP provides full mitigation under CEQA, FESA, and CESA for impacts to the species and habitats covered by the MSHCP. Therefore, development of the proposed Project will not conflict with the provisions of the MSHCP. A less than significant impact would occur and no mitigation is required.

In addition to the MSHCP, the Project site is within the boundaries of the Stephens Kangaroo Rat Habitat Conservation Plan (SKR HCP) established by the County of Riverside. Development of the proposed Project will not conflict with the provisions of the SKR HCP. The payment of a local mitigation fee prior to issuance of a grading permit by the City will be required. There are no other requirements for the Project under the SKR HCP and a less than significant impact would occur with payment of the fee and no further mitigation is required. (DEIR, pg. 4.4-24)

d. Endangered and Threatened Species

Potential Significant Impact: Whether the Project would have a substantial adverse effect, either directly or through habitat modifications, on any species identified as endangered or threatened in local or

regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (CDFW) or U.S. Fish and Wildlife Service (USFWS).

Findings: Potential impacts of the Project related to endangered and threatened species are discussed in detail in Section 4.4 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts to endangered or threatened species and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.4 of the DEIR, no species listed by the State and/or Federal Government as Endangered or Threatened was identified on site during the field surveys; however, Swainson's hawk, a State-listed species, and Stephens' kangaroo rat, a federally and State-listed species, have a low potential to occur on the site.

The Project site is not located within any USFWS designated critical habitat . Swainson's hawk would be expected to occur on the site, if at all, only during migration as foraging individuals. Swainson's hawk is covered by the MSHCP. Mitigation for covered species consists of participation in the MSHCP.

The Project site is also within the SKR HCPFee Area. The proposed Project site is not within an SKR Core Area. The SKR HCP provides Take Authorization for the SKR within its boundaries, and no surveys or additional measures are required other than paying a development fee prior to issuance of a grading permit by the City. In the absence of a significant impact, no mitigation is warranted. (DEIR, pg. 4.4-25)

e. Cumulative Biological Impacts

Potential Significant Impact: Whether the Project in connection with past, current, and probably future projects would incrementally effect biological resources.

Findings: Potential impacts of the Project related to cumulative biological impacts are discussed in detail in Section 4.4 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant cumulative impacts to biological resources and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.4 of the DEIR, the proposed Project would not make a cumulatively considerable contribution to impacts on endangered or threatened species, riparian habitat or natural plant communities, jurisdictional waters, habitat fragmentation, wildlife movement, local policies and ordinances, or habitat conservation plans. There are no projects that would, in combination with the proposed Project, produce a significant impact to non-listed sensitive species.

Therefore, there are no significant cumulative impacts anticipated to occur that are associated with biological resources. With implementation of Project-level Mitigation Measures 4.4.6.1 through 4.4.6.3, the Project's contribution to cumulative biological impacts will not be cumulatively considerable and no additional mitigation is required. (DEIR, pgs 4.4-30 to 4.4-31)

4. Cultural Resources

a. Historical Structures and Features

Potential Significant Impact: Whether the Project would cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5.

Findings: Potential impacts of the Project related to historical structures and features are discussed in detail in Section 4.5 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts to historical structures and features and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.5 of the DEIR, no structures or unique features are currently located within the Project limits. An online title search was conducted and historic maps were reviewed to determine the potential for structures and/or the remains of former sites of buildings or resources within the Project limits. No evidence of past structures or historic features was identified, nor was evidence of such structures identified during the on-site cultural resource survey or the records search. As no evidence has been identified to suggest the presence of past or current structures on site, no impacts related to historic structures or features will occur. In the absence of a significant impact, no mitigation is warranted. (DEIR, pg.4.5-5)

b. Human Remains

Potential Significant Impact: Whether the Project would disturb any human remains, including those interred outside of formal cemeteries.

Findings: Potential impacts of the Project related to human remains are discussed in detail in Section 4.5 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts to human remains and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.5 of the DEIR, the Project site was utilized for agricultural production. No evidence suggesting the Project site has been utilized in the past for human

burials has been identified.[2] In the unlikely event human remains are discovered during grading or construction activities, State law (Health and Safety Code §7050.5) requires that no further disturbance shall occur until the County Coroner has made determination of the origin and disposition pursuant to Public Resources Code 5097.98. Because adherence to provisions of Health and Safety Code §7050.5 is required of all development projects, and because adherence to the requirements in State law sufficiently mitigates for potential impacts to human remains, no significant impact related to this issue will occur. Because potential impacts associated with this issue are less than significant, no mitigation is required. (DEIR, pg. 4.5-5)

c. Cumulative Cultural Resources

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have a cumulative significant impact on cultural resources.

Findings: Potential impacts of the Project related to cumulative cultural resources are discussed in detail in Section 4.5 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant cumulative impacts to cultural resources and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.5 of the DEIR, on-site sediments and cumulative archaeological and paleontological discoveries elevate the potential for the on-site presence of archaeological and paleontological resources. The proposed Project includes measures to identify, recover, and/or record any archaeological or paleontological resource that may occur within the Project limits. Although unlikely to occur, potential impacts associated with human remains would be reduced to a less than significant level through adherence to existing State law. There are no projects that would, in combination with the proposed Project, result in any significant cumulative impacts on historical, archaeological, or paleontological resources, or cumulative impacts to human remains. Therefore, the Project will not make a significant contribution to any cumulatively considerable impacts associated with cultural resources, and no mitigation is required. (DEIR, pg. 4.5-8)

5. <u>Hazards and Hazardous Materials</u>

a. Routine Transport, Use, or Disposal of Hazardous Materials and Reasonable Foreseeable Upset and Accident Conditions

[2] *Chapter 5.10 Cultural Resources*, City of Moreno Valley General Plan Final EIR, July 2006.

Potential Significant Impact: Whether the Project would create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Also, whether the Project would create a significant hazard to the public through the routine transport, use, or disposal of hazardous materials.

Findings: Potential impacts of the Project related to routine transport, use or disposal of hazardous materials and/or the risk of upset or accidental relaease of hazardous materials into the environment are discussed in detail in Section 4.6 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to routine transport, use or disposal of hazardous materials and, therefore, no mitigation is required.

Facts in Support of the Findings: Two *Phase I Environmental Site Assessments* (ESAs) were prepared for the proposed Project site. During the on-site inspection, no hazardous materials handling, storage, or disposal areas were observed. Additionally, no evidence of stressed vegetation, discolored water, or pools of liquid was observed during the on-site reconnaissance. However, because the Project site has been historically utilized for agricultural production and because of the close proximity to SR-60, soil samples were taken in various parts of the Project site to further evaluate the potential contamination on the site. Laboratory results indicated no detectable concentrations of hydrocarbon compounds in the samples collected. However, there were detectable concentrations of organochlorine pesticides and PCBs in samples collected from possible drainage accumulation and pesticide usage on site. These concentrations were within the allowable Preliminary Remedial Goals (PRGs) for the Project.

During the Project's construction and operation, it is likely that materials such as fuels, lubricants, solvents, cleansers, and paints will be transported to and from the site. The use and transport of these materials and all potentially hazardous materials would be handled according to the appropriate State and Federal regulations. Adherence to existing regulations as they relate to the handling and transport of potentially hazardous materials during construction would reduce impacts associated with this issue to a less than significant level and no mitigation is required. (DEIR, pgs. 4.6-6 through 4.6-11)

b. Hazardous Material Sites

Potential Significant Impact: Whether the Project would be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment.

Findings: Potential impacts of the Project related to hazardous material sites are discussed in detail in Section 4.6 of the DEIR. Based on the entire record before us, this Council finds that development of the

Project will not result in significant impacts due to hazardous material sites and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.6 of the DEIR, a database review was conducted for both of the Phase 1 ESAs conducted for the Project site. Based on the database review, the Project site is not included on the State of California Hazardous Waste and Substances Site List (Cortese list) pursuant to the California Code (Section 65962.5). The Project site is not listed in the NPL; Corrective Action Order Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) list; Emergency Response Notification System (ERNS) list; Resource Conservation and Recovery Act System; Toxic Release Inventory System (TRIS); CAL-SITES Database for Annual Work Plan; California Department of Toxic Substances Control (DTSC); Regional Water Quality Control Board (RWQCB); California Waste Management Board (CWMB); Solid Waste Information System (SWIS); Waste Management Units Database System (WMUDS); California Border Zone Properties (Deed Restriction Properties); DTSC Hazardous Waste and Substances Site List (Cortese list); or any Leaking Underground Storage Tank (LUST) database.

Because the Project site is not identified on a list of hazardous materials sites, the potential that the development of the site would create a significant hazard to the public or environment is less than significant. In addition, the results of the site investigations performed by RM Environmental indicate that no significant amount of any hazardous material exists on site. Therefore, impacts associated with this issue are less than significant and no mitigation would be required. (DEIR, pgs. 4.6-11 through 4.6-12)

c. Existing or Proposed Schools

Potential Significant Impact: Whether the Project would create hazardous emissions or handle acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school.

Findings: Potential impacts of the Project related to existing or proposed schools are discussed in detail in Section 4.6 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to existing or proposed schools and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.6 of the DEIR, at the time the NOP for the proposed Project was released, the Moreno Valley Unified School District (MVUSD) had identified three potential school sites within the Project vicinity. Of these potential school sites, High School #5 was the closest planned school to the Project site as it was to be located on the adjacent parcel east of the Project site. Due to MVUSD concerns regarding the placement of schools in areas that may be rezoned with

warehousing uses, MVUSD has made a decision to abandon the development of these school facility projects on the identified sites.[3] Therefore, no planned school facilities would be located adjacent to or within 0.25 mile of the Project site. Since there are no schools planned, proposed, or operating within 0.25 mile of the Project site, no impacts associated with this issue would occur and no mitigation is required. (DEIR, pgs. 4.6-12 through 4.6-13)

[3] *Resolution No. 2007-08-8,* Board of Education of the Moreno Valley Unified School District, April 15, 2008.

d. Emergency Response Plan

Potential Significant Impact: Whether the Project would impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan.

Findings: Potential impacts of the Project related to emergency response plans are discussed in detail in Section 4.6 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to emergency response plans and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.6 of the DEIR, in February 2006, the County of Riverside, in cooperation with the cities and special districts, completed its Emergency Operations Plan (EOP). The EOP establishes the emergency organization, assigns tasks, specifies general procedures, and provides for coordination of planning efforts of the various emergency staff and resources.

Construction activities that may temporarily restrict vehicular traffic would be required to implement adequate measures to facilitate the passage of people and vehicles through/around any required road closures. During the operational phase of the proposed Project, on-site access for fire and emergency vehicles would be required to comply with standards established by the City Public Works Department. The size and location of fire suppression facilities (e.g., hydrants) and fire access routes would be required to conform to Fire Department standards. As required of all development in the City, the operation of the proposed Project would be required to conform to applicable Uniform Fire Code standards. The submittal of such plans would be considered a condition of approval, which would be part of the permitting process initiated by the applicant and approved by the City in accordance with City standards. As with any development, access to and through the Project would be required to comply with the required street widths, as determined in the General Plan Circulation Element, and the Uniform Fire Code. Therefore, implementation of the proposed Project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. No significant impact would occur and no mitigation is required. (DEIR, pg. 4.6-13)

e. Wildland Fires

Potential Significant Impact: Whether the Project would expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildland.

Findings: Potential impacts of the Project related to wildland fires are discussed in detail in Section 4.6 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to wildland fires and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.6 of the DEIR, the Project site is not located within a "High Fire Hazard Area" or within an area susceptible to wildfires identified by the City of Moreno Valley. Areas surrounding the Project site consist of urban, built, and open space. Because of lack of abundant vegetation and the extensive amount of development within the vicinity of the Project site, on-site and adjacent areas do not have the capability to support a wildfire. The proposed uses on site do not typically create a fire hazards nor are they subject to wildland fire hazards due to the type of construction materials used. The Project will be designed and constructed to comply with adopted standards and guidelines for fire protection. Irrigated landscaping will surround Project buildings, and are required to include fire suppression features by law. Due to the location of the fire station adjacent to the Project in the northwest corner and the low probability that the Project site would be subject or susceptible to wildland fires, no significant impact related to this issue would occur. No mitigation is required. (DEIR, pgs. 4.6-13 through 4.6-14)

f. Cumulative Impacts from Hazards and Hazardous Materials

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would cumulatively increase the risk of hazardous materials and exposure to hazardous materials.

Findings: Potential impacts of the Project related to cumulative hazardous materials impacts are discussed in detail in Section 4.6 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to cumulative hazardous materials and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.6 of the DEIR, the proposed Project would not result in significant cumulative impacts associated with the routine transport, use, and disposal of hazardous materials; or the emission or handling of hazardous substances. As areas of the eastern portion of Moreno Valley continue to develop, the amount of truck traffic is expected to increase in proportion to the amount of industrial or commercial development that take place in the area. The trucks traveling in the area of the Project and the surrounding areas may contain hazardous materials as well as contribute to emission in the cumulative area. Accidental spills and leaks are unplanned occurrences. It is impossible to predict the occurrences of such events and the likelihood of such events occurring in close proximity to

each other at the same time is very small; therefore, such events cannot be considered cumulatively significant.

As anticipated in the City's General Plan, demographic increases, continued retail and service demands, and the availability of vacant property will lead to the new residential, commercial, and industrial development in the City and surrounding area. While the project-specific hazardous material impacts of individual development projects will be addressed separately in future CEQA documents, anticipated future development will contribute, through increases in the number of locations that sell, store, transport, or dispose of hazardous materials, to a cumulative increase in risk for hazardous material incidents. As with the proposed Project, it is anticipated that future development projects will be required to adhere to applicable local, State, and Federal requirements that regulate the use, release, storage, sale, and transport of hazardous materials. Such compliance would ensure that the proposed Project will not make a significant contribution to a cumulatively considerable impact in this regard, and no mitigation measures for cumulative impacts are required. (DEIR, pg. 4.6-14)

6. Hydrology, Drainage, and Water Quality

a. Groundwater

Potential Significant Impact: Whether the Project would substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level

Findings: Potential impacts of the Project related to groundwater are discussed in detail in Section 4.7 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to groundwater and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.7 of the DEIR, the proposed Project would obtain water service from the EMWD. It is anticipated that the proposed Project would primarily utilize imported water purchased from Metropolitan. In the event that imported water is not available, this imported water would be supplemented by local groundwater sources.

The implementation of the existing West San Jacinto Groundwater Basin Management Plan would ensure that local groundwater resources are conserved and groundwater overdraft does not occur. If the use of groundwater supplies was necessary, the proposed Project would be required to comply with any future water use restricting regulations further minimizing impacts to groundwater supply.

As identified in the City's General Plan, the proposed Project would not interfere with groundwater recharge as the Project site is not identified as a groundwater recharge area.[4] Therefore, the proposed Project would not interfere with groundwater recharge activities. Impacts associated with this issue are less than significant and no mitigation measure is required. (DEIR, pg. 4.7-14)

b. Flooding-Related Impacts

Potential Significant Impact: Whether the Project would place within a 100-year flood hazard area structures that would impede or redirect flood flows.

Findings: Potential impacts of the Project related to flooding are discussed in detail in Section 4.7 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to flooding and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.7 of the DEIR, flooding in the City of Moreno Valley could result from intense storms resulting in rapid runoff. The Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) identify areas subject to flooding during the 100-year storm.[5] Based on these FIRMs and the Project site does not fall within a 100-year flood zone.[6] The proposed Project is industrial in nature and the implementation of the proposed Project would not result in the placement of housing within a 100-year floodplain. Because the Project site does not lie within a 100-year floodplain and does not include housing, impacts related to this issue are less than significant. No further discussion or mitigation is required. (DEIR, pgs. 4.7-14 through 4.7-17)

c. Drainage Pattern-Related Impacts

Potential Significant Impact: Whether the Project would substantially alter the existing local drainage patterns of the site and substantially increase the rate or amount of surface runoff in a manner which would result in substantial erosion, siltation, or flooding on or off site.

Findings: Potential impacts of the Project related to drainage patterns are discussed in detail in Section 4.7 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts related to drainage patterns and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.7 of the DEIR, the proposed Project would alter the existing drainage patterns and affect surface runoff; however, several BMPs would be designed

---

4 *Section 5.7 Hydrology/Water Quality*, City of Moreno Valley General Plan Final Program EIR, City of Moreno Valley, July 2006.

5 The term "100-year" is a measure of the size of the flood, not how often it occurs. The "100-year flood" is a flooding event that has a one percent chance of occurring in any given year.

6 FEMA DFIRM Data, 2008.

and installed on site to minimize these alterations, resulting in a less than significant impact. Development of the Project site would result in increased impervious surfaces in the form of roadways, parking lots, and industrial warehouse buildings. The proposed Project incorporates six detention/sedimentation basins for both water quality and quantity control purposes. The Project would also include vegetated swales, detention/sedimentation basins, and sand filters.

Under post-development conditions, all on-site flows would be routed to Quincy Channel. This drainage pattern would mimic the existing drainage pattern, which has flows draining to the Quincy Channel and the unnamed dry wash to the south. Since the unnamed dry wash connects to Quincy Channel farther south of the Project, all flows under existing conditions drain into Quincy Channel. Flows in Quincy Channel are routed to the Perris Valley Storm Drain where flows continue onto the San Jacinto River and eventually reach Lake Elsinore.

Increased runoff from the site could result in substantial erosion of local drainage ways and siltation of downstream receiving waters. However, with the proposed drainage system installed on site, the proposed Project would not produce any post-development peak flow leaving the site larger than the pre-development peak flows leaving the site for the analyzed storms. In addition, because the implementation of various BMPs will reduce off-site flow velocity and volume, erosional runoff and silt volumes would be minimized to the greatest extent practical. Because the proposed Project would maintain existing drainage patterns on site and implement BMPs that would minimize erosion and generation of silt on site, impacts associated with this issue are less than significant and no mitigation measures are required. (DEIR, pg. 4.7-17)

d. Hydrology and Water Quality Cumulative Impacts

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have significant cumulative impacts on hydrology and water quality.

Findings: Potential impacts of the Project related to cumulative hydrology and water quality impacts are discussed in detail in Section 4.7 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant cumulative impacts to hydrology and water quality and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.7 of the DEIR, increases in the amount and extent of development in the City and surrounding areas will increase the potential for pollutants in runoff, which in turn would affect water quality. The Project's water quality impacts will be mitigated through on-site detention/sedimentation basins and other water pollution control mechanisms such as

vegetated swales, sand filters, and storm drain inlet filters. Similar requirements will be placed on all other development in the Project vicinity by the City and the RWQCB, further reducing the potential for cumulative impacts. Since all development within the City is required to account and mitigate for their individual water quality impacts before runoff leaves each individual site, it is reasonable to conclude that water quality would be maintained throughout the cumulative area. Adherence to NPDES, SWPPP, and WQMP requirements will reduce any such cumulative water quality impact to a less than significant level.

Groundwater recharge policies and practices implemented by the RWQCB and local agencies will ensure groundwater supplies are maintained at appropriate levels. As such, no significant cumulative groundwater supply impacts are anticipated to occur with the development of the proposed Project.

The drainage system for the proposed Project would be designed so that runoff from the Project site after Project development is directed to on-site treatment BMPs and flow volumes would be equal to or less than historic conditions at any given discharge location. This same requirement will be placed on all other development in the vicinity of the Project site by the City of Moreno Valley. Therefore, the proposed Project will not make a significant contribution to any cumulatively considerable impacts related to drainage or water quality and no mitigation is required. (DEIR, pgs. 4.7-28 through 4.7-29)

8. Land Use and Planning

a. Physically Divide an Established Community

Potential Significant Impact: Whether the Project would physically divide an established community.

Findings: Potential impacts of the Project related to the physically dividing an established community are discussed in detail in Section 4.8 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts due to a physical divide of an established community and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.8 of the DEIR, land uses adjacent to the Project site include residential uses to the southeast, vacant land to the south, commercial uses to the west, SR-60 and residential uses to the north, and active hay/alfalfa production uses to the east. The Project site does not contain any existing housing, nor does the site complement or constitute part of a community or neighborhood. Based on this information, the proposed Project will physically divide an existing established community. No impact related to this issue would occur; therefore, no mitigation is required. (DEIR, pgs. 4.8-4 through 4.8-5)

b. Conflict with Any Applicable Habitat or Natural Community Conservation Plan

Potential Significant Impact: Whether the Project would conflict with any applicable habitat conservation plan or natural community conservation plan.

Findings: Potential impacts of the Project related to the conflict with any applicable habitat conservation plan are discussed in detail in Section 4.8 of the DEIR. Based on the entire record before us, this Council finds that development of the Project will not result in significant impacts due to a conflict with any applicable habitat or natural community conservation plan and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.8 in the DEIR, the Project site is located within the MSHCP area.[7]. The Project site is not within an MSHCP criteria cell or habitat linkage. Furthermore, the Project site is not located within an MSHCP mammal or amphibian survey area, Narrow Endemic Plant Species Survey Area (NEPSSA), Criteria Area Plant Species Survey Area (CAPSSA), or a riparian, wetland, or vernal pool habitat/species survey area.[8]

While the Project site is not within any conservation area delineated in the MSHCP, the Project is still subject to provisions of the MSHCP. In particular, the Project proponent will be required to provide payment of mitigation fees and adhere to the requirements established in the MSHCP. Pursuant to agreements with the USFWS and the CDFW, the payment of the mitigation fees and compliance provisions of the MSHCP provides full mitigation under the CEQA, FESA, and CESA for impacts to the species and habitats covered by the MSHCP. Since the City has adopted the MSHCP and its requirements and provisions, and since the Project is within the City, the proposed Project would be required to adhere to applicable MSHCP requirements and fees. Therefore, the proposed Project would not conflict with any applicable HCP and no significant impact associated with this issue would occur. No mitigation would be required. (DEIR, pg. 4.8-4)

c. Cumulative Land Use Impacts

Potential Significant Impact: Whether the Project in connection with past, current, and foreseeable future projects would incrementally affect biological resources.

Findings: Potential impacts of the Project related to cumulative land use impacts are discussed in detail in Section 4.8 of the DEIR. Based on the entire record before us, this Council finds that development of

[7] City of Moreno Valley General Plan Final Program EIR, Figure 5.9-4 Reche Canyon/Badlands Area.
[8] http://www.rctlma.org/gis/rciprepgen.html, site accessed December 4, 2007.

the Project will not result in significant cumulative impacts related to land uses and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.8 of the DEIR, implementation of the proposed Project represents establishment of new land uses within the currently undeveloped Project site that would result in an intensification of permitted land uses associated with a land use change from Business Park and Residential to Light Industrial uses, changes to the General Plan Circulation Element, and the loss of the Primary Animal Keeping Overlay (PAKO) associated with the RA-2 zone. However, the proposed Project is generally consistent with regional plans and planning efforts, although it is not fully consistent with the SCAG's RTP and Compass Blueprint Plan because it eliminates some housing in favor of industrial employment uses. It will incrementally improve the City's long-standing jobs/housing ratio, which is also a regional goal of the various SCAG plans. It is also not consistent with existing General Plan land use designations, objectives and policies, nor is it consistent with existing zoning designations on the site. For these reasons, a General Plan Amendment and Zone Change are proposed for consideration by the City.

The proposed changes in land use will also result in a loss of up to 584 (R-15) multi-family residential units, many of which could have contributed to the City's affordable housing supply at some point in the future. However, this was determined to be a less than significant Project impact on local housing because the City's Housing Element identifies over twice as much potential affordable housing as the City's RHNA allocation, so it will not make a significant contribution to a cumulatively considerable impact on regional housing.

The Project would also not make a similar cumulatively considerable land use impact relative to dividing an established community or conflicting with an approved habitat conservation plan and no mitigation is required. (DEIR, pgs. 4.8-17 to 4.8-18)

8. <u>Noise</u>

a. Airport Noise

Potential Significant Impacts: Whether a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would results in exposure of people residing or working in the Project area to excessive noise levels. Or if a Project within the vicinity of a private airstrip, would expose people residing or working in the Project area to excessive noise levels.

Findings: Potential impacts of the Project relating to airport noise are discussed in detail in Section 4.9 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to airport noise will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.9 of the DEIR, the proposed Project site is located approximately 5 miles northeast of the March Air Reserve Base. Aircraft operations from the airport currently contribute intermittent single-event noise. However, the proposed Project is not identified as being within the noise or safety contours delineated for the MARB Airport. The proposed Project is not located within two miles of a public or private airport; therefore, the proposed Project would not have the potential to expose people to excessive noise levels from airport operations and no impact regarding this issue would occur with implementation of the proposed Project. No mitigation is required. (DEIR, pg. 4.9-10)

b. Ground-Borne Vibrations

Potential Significant Impact: Whether the Project would result in exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels.

Findings: Potential impacts of the Project relating groundborne vibration and groundborne noise are discussed in detail in Section 4.9 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to ground-borne vibration and groundborne noise will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.9 of the DEIR, the Project site is not located near steel-wheeled trains. Additionally, roadways in the Project area are either paved or would be paved and would not result in traffic driving over rough roads. Construction activities for the Project site do not include blasting or pile driving. The primary vibratory source during the construction of the proposed Project would be large bulldozers. Based on published data, typical bulldozer activities generate an approximate vibration level of 0.089 in/sec at a distance of 25 feet. At the distance of the nearest residence to the Project boundary (about 50 feet) the estimated vibration level will be 0.0415 in/sec. While heavy-duty earthmoving equipment would be used during the construction phase of the Project, the level of vibration would not be excessive or permanent, nor would it exceed the level at which building damage typically occurs. Therefore, impacts from construction-related groundborne vibration construction would be less than significant and no mitigation is required. (DEIR, pg. 4.-11)

c. Long-Term Traffic Noise

Potential Significant Impact: Whether the Project would result in a substantial temporary, periodic, and/or permanent increase in ambient noise levels in the Project vicinity above levels existing without the Project.

Findings: Potential impacts of the Project related to long-term noise are discussed in detail in Section 4.9 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to long-term noise will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.9 of the DEIR, the *Noise Impact Analysis* (Appendix H) indicates that implementation of the proposed Project would result in relatively minor changes in traffic noise levels except along Eucalyptus Avenue between Moreno Beach Drive and Driveway A. The largest Project-related increase in traffic noise would be along Eucalyptus Avenue/Fir Avenue between Auto Mall Drive and Redlands Boulevard. This segment would experience a 13.6 dBA increase over the baseline (with the Project) scenario and a 13.3 dBA increase over the baseline (with the Project) scenario in opening year (2012). In addition, the roadway segment along Eucalyptus Avenue between Moreno Beach Drive and Auto Mall Drive would experience a 4.5 dBA increase over the baseline scenario in 2012. However, no noise-sensitive uses exist or are planned near either roadway segment.

For the Project build out year (2035) analysis, the greatest increase in noise levels is along Eucalyptus Avenue between Auto Mall Drive and Redlands Boulevard, where an increase of up to 1.3 dBA is predicted, with the ambient noise level predicted to be 71.6 dBA at 50 feet from the centerline of the street. In addition, the greatest increases in noise levels associated with the General Plan Build Out Year is along Eucalyptus Avenue between Auto Mall Drive and Redlands Boulevard, where an increase of up to 0.9 dBA is predicted, with the ambient noise level predicted to be 73.0 dBA at 50 feet from the centerline of the street. However, no noise-sensitive uses exist or are planned near the roadway segment. Therefore, noise impacts at the roadway segments where an increase of more than 3.0 dBA would occur are considered less than significant because there are no sensitive receptors located along the roadway segments that would be affected. All other roadway segments would have an increase in noise of less than 3.0 dBA, which would not be perceptible to the human ear in an outdoor environment. Therefore, impacts would be less than significant and no mitigation measures would be required for off-site areas. (DEIR, pgs. 4.9-11 to 4.9-19)

d. Long-Term Operational Noise

Potential Significant Impact: Whether the Project would cause exposure of persons to or generation of noise levels in excess of standards established in the City of Moreno Valley General Plan, Moreno Valley Municipal Code, or applicable standards of other agencies.

Findings: Potential impacts of the Project related to long-term operational noise are discussed in detail in Section 4.9 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to long-term operational noise will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.9 of the DEIR, potential long-term stationary noise impacts would primarily be associated with operations at the proposed warehouse and the light industrial uses. The proposed on-site uses would generate noise from truck delivery, loading/unloading activities at the loading areas, and other noise-producing activities within the parking lot. Through distance divergence, attenuation, and building shielding these sources of noise would be reduced to less than significant levels; and no mitigation is required. (DEIR, pgs. 4.9-20 to 4.9-22)

e. Noise Impacts to Adjacent Future Development

Potential Significant Impact: Whether the Project would result in a substantial permanent increase in ambient noise levels in the Project vicinity above levels existing without the Project.

Findings: Potential impacts of the Project related to noise impacts to adjacent future development are discussed in detail in Section 4.9 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to noise impacts to adjacent future development and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.9 of the DEIR, based on the land use assumptions for the future LADP Project, residential development would be located along the southern Project boundary between the proposed Project and the proposed LADP. It is anticipated that the proposed Project site would be fully developed prior to the occupation of any dwelling units in LADP; therefore, no construction-related noise impacts to future adjacent sensitive receptors would result from development of the proposed Project. Also, the proposed on-site uses would generate noise from truck delivery, loading/unloading activities at the loading areas, and other noise-producing activities within the parking lot. Through distance divergence, attenuation, and building shielding these sources of noise

would be reduced to less than significant levels. Therefore, a less than significant impact would occur to adjacent future development and no mitigation is required. (DEIR, pgs. 4.9-23 to 4.9-24)

f. Cumulative Noise Impacts

Potential Significant Impact: Whether the Project in connection with past, current, and probable future Project would cause cumulative noise impacts within the City of Moreno Valley.

Findings: Potential impacts of the Project related to cumulative noise are discussed in detail in Section 4.9 of the DEIR. Based on the entire record before us, this Council finds that no significant cumulative impacts related to noise will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: Construction crew commutes and the transport of construction equipment, materials, and fill to the site for the proposed Project would incrementally increase noise levels on access roads leading to the site. Secondary sources of noise would include noise generated during excavation, grading, and building erection on the Project site. Although it is unlikely that adjacent properties will be developed at the same time as the proposed Project, if adjacent properties are developed at the same time as the proposed Project, implementation of the stated mitigation measures in Section 4.9 of the DEIR would render the cumulative impacts of the proposed Project to less than significant levels.

Section 4.9 of the DEIR compared cumulative noise levels that would occur both with and without the Project. According to the analysis the proposed Project would not expose sensitive uses located adjacent to area roadways to excessive noise levels. The future roadway noise assessment concludes that there will be no significant roadway noise impacts associated with cumulative and cumulative plus Project conditions. Therefore, there are no projects that would, in combination with the proposed Project, produce significant noise impacts to sensitive land uses from on-site operational noise. Thus, no cumulatively considerable noise impacts are expected to occur in this area, and the proposed Project will not make a significant contribution to cumulative noise impacts, so no mitigation measures are required. (DEIR, pg. 4.9-27)

9. <u>Population and Housing</u>

a. Population Growth

Potential Significant Impact: Whether the Project would induce substantial population growth in an area, either directly (e.g., new homes and businesses) or indirectly (e.g., extension of roads and infrastructure).

Findings: Potential impacts of the Project related to population growth are discussed in detail in Section 4.10 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to population growth will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.10 of the DEIR, the development of the proposed on-site warehouse distribution uses would create new jobs in the local economy. The proposed Project would generate up to 1,532 job opportunities.[9] The new employment opportunities resulting from development of the proposed warehouse uses would improve the City's current jobs-to-housing ratio by providing jobs to local residents. While the places of residence of the persons accepting employment provided by the proposed uses is uncertain, due to the City's projected jobs-to-housing ratio, it is reasonable that a large percentage of these jobs would be filled by persons already living within the City or Project area; therefore, no significant increase in population of the City would result from the development or operation of the proposed on-site uses. In the absence of a significant impact, no mitigation is required. (DEIR, pgs. 4.10-3 to 4.10-5)

b. Displace Substantial Housing/People

Potential Significant Impact: Whether the Project would displace substantial numbers of people or existing housing, necessitating the construction of replacement housing elsewhere.

Findings: Potential impacts of the Project related to displacement of housing or people are discussed in detail in Section 4.10 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to displacement of housing or people will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.10 of the DEIR, the Project site has not been historically utilized for residential uses, and no residential structures are currently located within the Project limits. The construction and operation of the proposed on-site uses would neither displace existing housing or residents nor require the construction of replacement housing elsewhere in the City. However, the areas currently zoned for residential uses on the site could support up to 681 units. Approximately 80 percent of that potential new housing was in the R15 category, which is considered high enough density to support affordable housing programs. In addition, a portion of the Project site is shown in the latest Housing Element for the City (2008–2014) as a potential location for affordable housing in the future (2011 Housing Element, Vacant Properties Inventory). Development of the site as proposed could

[9] 1 employee/1,465 square feet of warehouse use × 2,244,419 square feet of warehouse uses = 1,532 employees.

eliminate as many as 681 housing units from the site, with 80 percent of those units (548) at a density that is generally accepted as helping to promote housing affordability (15 units per acre) on a regional level. These changes may incrementally hinder the City's ability to achieve its affordable housing goals in the future. However, the proposed Project would not reduce the City's potential pool of affordable housing to below its RHNA number; therefore, it would not create a significant impact related to the City's Housing Element, and no mitigation is required. (DEIR, pg. 4.10-6)

c. Cumulative Population and Housing Impacts

Potential Significant Impact: Whether the Project could cause an increase in population that is substantial in relation to the past, current, and probable future projects.

Findings: Potential impacts of the Project related to cumulative impacts of the proposed Project on housing or population are discussed in detail in Section 4.10 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to cumulative impacts on housing or population will occur as a result of development of the Project and, therefore, no mitigation is required.

Fact Supporting the Findings: The project includes development of 2.2 million square feet of new industrial uses, but would eliminate the potential for up to 681 new residential units, most of which would be in the R15 category, which can support affordable housing programs. The proposed industrial uses would provide additional employment opportunities for City and area residents. The proposed project, together with the other developments identified in Chapter 3, will serve existing and future cumulative demands for both housing and employment within the City. The proposed uses would not induce significant population or housing growth in areas where growth was not previously anticipated.

10. <u>Transportation</u>

a. Air Traffic Patterns

Potential Significant Impact: Whether the Project would result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks.

Findings: Potential impacts of the Project related to air traffic patterns are discussed in detail in Section 4.11 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to air traffic patterns will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.11 of the DEIR, the proposed Project site is located approximately 5.5 miles northwest of the March Air Reserve Base and is not within the designated safety zones or the flight paths established for this facility.[10] The proposed Project does not consist of any uses that would cause changes to air traffic volumes or otherwise affect air traffic patterns. Additionally, the proposed Project does not include any visual, electronic, or physical hazards to aircraft in flight and is not anticipated to disrupt or alter air traffic patterns, including either an increase in traffic levels or a change in location. As such, no impacts associated with this issue would occur and no mitigation is required. (DEIR, pg. 4.11-16)

b. Design Features or Incompatible Uses

Potential Significant Impact: Whether the proposed Project would substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

Findings: Potential impacts of the Project related to design features or incompatible uses are discussed in detail in Section 4.11 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to design features or incompatible uses will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.11 of the DEIR, roadway improvements in and around the Project site would be designed and constructed to satisfy all City requirements for street widths, corner radii, intersection control as well as incorporate design standards tailored specifically to site access requirements.

The final design of all roadways and intersections within the Project site access would be reviewed by a licensed professional civil engineer to ensure adequate safety when traveling to and from the Project site. The proposed Project does not include any sharp curves or dangerous intersections in its design. Adherence to applicable existing requirements of the City of Moreno Valley consistent with the City's Circulation Element Objectives 5.1 (create a safe, efficient, and neighborhood-friendly street system), 5.5 (maximize efficiency of the local circulation system by using appropriate policies and standards to design, locate, and size roadways), and 5.11 (eliminate obstructions that impede safe movement of vehicles, bicyclists, and pedestrians) and other agencies would reduce impacts associated with this issue to a less than significant level and no mitigation is required. (DEIR, pgs. 4-17)

[10] March Air Reserve Compatibility Plan, December 29, 2004. http://www.rcaluc.org/filemanager/plan/old//March%20Air%20Reserve%20Base%20(MARB).pdf. Accessed June 3, 2008.

c. Inadequate Emergency Access

Potential Significant Impact: Whether the Project would result in inadequate emergency access.

Findings: Potential impacts of the Project related to emergency access are discussed in detail in Section 4.11 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to emergency access will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.11 of the DEIR, the developers of the proposed Project would be required to design, construct, and maintain structures, roadways, and facilities to provide for adequate emergency access and evacuation. Construction activities, which may temporarily restrict vehicular traffic, would be required to implement adequate and appropriate measures to facilitate the passage of persons and vehicles through/around any required road closures. The proposed Project design would be submitted to and approved by the City's Fire and Police Departments prior the issuance of building permits. Adherence to applicable existing requirements of the City of Moreno Valley and other agencies would reduce impacts associated with this issue to a less than significant level and no further discussion is required. (DEIR, pgs. 4.11-17 to 4.11-18)

d. Inadequate Parking Capacity

Potential Significant Impact: Whether the Project would result in inadequate parking capacity.

Findings: Potential impacts of the Project related to parking capacity are discussed in detail in Section 4.11 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to parking capacity will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.11 of the DEIR, the preliminary site plan indicates that 1,091 automobile parking spaces are provided, which includes spaces for employees, drivers, and handicap spaces, and is well above the minimum requirement of 562 spaces. The design of the proposed Project would be required to comply with parking standards prior to final site plan approval. Adherence to parking standards contained in the Zoning Code would ensure that the proposed Project would not result in inadequate parking capacity. Impacts associated with parking capacity are less than significant and no mitigation is required. (DEIR, pg. 4.11-18)

e. Alternative Transportation

Potential Significant Impact: Whether the proposed Project would conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.

Findings: Potential impacts of the Project related to alternative transportation are discussed in detail in Section 4.11 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to alternative transportation will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.11 of the DEIR, the design of the Project would be required to adhere to applicable City of Moreno Valley standards that support and/or facilitate alternative modes of transportation, including but not limited to pedestrian pathways and sidewalks consistent with the City's Circulation Element Objective 5.8. Through the City's Project review process, policies, plans, and/or programs supporting alternative transportation would be reviewed and incorporated as applicable. Consequently, a less than significant impact would occur as a result of the proposed Project and no mitigation is required. (DEIR, pg. 4.11-18)

11. Utilities and Service Systems

a. Solid Waste Facilities

Potential Significant Impact: Whether the Project would be served by a landfill with insufficient permitted capacity to accommodate the Project's solid waste disposal needs.

Findings: Potential impacts of the Project related to solid waste facilities are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to solid waste facilities will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, based on a solid waste generation of 0.006 pound per square foot per day for industrial uses, the proposed Project is anticipated to generate approximately 6.73 tons of solid waste per day (2,456 tons/year). Solid waste from the proposed Project would be hauled by Waste Management of Inland Valley and transferred to the Badlands Sanitary Landfill, located in Moreno Valley, northeast of the Project site. The volume of solid waste generated by the proposed Project per day represents 0.17 percent of the current permitted throughput and 0.29 percent of the current surplus capacity at the Badlands Sanitary Landfill. As adequate daily surplus capacity exists at the receiving landfill, development of the proposed Project would not

significantly affect current operations or the expected lifetime of the landfill serving the Project area. No significant solid waste disposal impact would occur and no mitigation is required. (DEIR, pgs. 4.12-3 to 4.12-4)

b. Solid Waste Reduction

Potential Significant Impact: Whether the Project would fail to comply with applicable Federal, State, and local statutes and regulations related to solid waste.

Findings: Potential impacts of the Project related to solid waste reduction are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to solid waste reduction will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the proposed Project would be required to coordinate with the waste hauler to develop collection of recyclable materials for the Project on a common schedule as set forth in applicable local, regional, and State programs. Recyclable materials that would be recycled by the Project include paper products, glass, aluminum, and plastic.

Additionally, the proposed Project would be required to comply with applicable elements of AB 1327, Chapter 18 (California Solid Waste Reuse and Recycling Access Act of 1991) and other applicable local, State, and Federal solid waste disposal standards, thereby ensuring that the solid waste stream to the Badlands Sanitary Landfill is reduced in accordance with existing regulations. Impacts are considered less than significant and require no mitigation. (DEIR, pg. 4.12-4)

c. Solid Waste Cumulative Impacts

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have an incremental impact on solid waste.

Findings: Potential impacts of the Project related to cumulative solid waste are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant cumulative impacts related to solid waste will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the Badlands Sanitary Landfill has an estimated closure date of 2016, the City's waste hauler will also use other County landfills in the area (e.g., Lamb Canyon Landfill and El Sobrante Landfill). The estimated closure date of the Lamb Canyon Landfill is 2023 and the estimated closure date of the El Sobrante Landfill is 2030. With planned expansion activities of landfills in the Project vicinity and projected growth rates contained

within the City's General Plan EIR, sufficient landfill capacity would exist to accommodate future disposal needs through City build out in 2030. Therefore, build out of the City General Plan would not create demands for solid waste services that would exceed the capabilities of the County's waste management system. Consequently, cumulative impacts associated with solid waste within the City would be considered less than significant and no mitigation is required. (DEIR, pg. 4.12-5)

d. Construction or Expansion of Water Treatment Facility

Potential Significant Impact: Whether the Project would require the construction of new water treatment facilities or expansion of existing facilities, the construction of which would cause significant environmental effects.

Findings: Potential impacts of the Project related to construction or expansion of water treatment facilities are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts that would cause the construction or expansion of water treatment facilities will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the water demand required for the proposed Project totals 0.04 and 0.03 percent of the 2015 and 2035 projected Eastern Municipal Water District (EMWD) supplies. The amount of water demand would be within the existing available supply even with a reduction in deliveries from the State Water Project (SWP). Imported sources of water will be supplemented by an increase in desalination of brackish groundwater, recycled water use, and water use efficiency, and implementation of aggressive conservation measures by the EMWD. The proposed Project would not require the construction of new water treatment facilities or expansion of existing facilities, which could cause significant environmental effects. Impacts related to this issue would be less than significant and no mitigation is required. (DEIR, pgs. 4.12-15 to 4.12-16)

e. Adequate Water Supply

Potential Significant Impact: Whether the Project would have sufficient water supplies available to serve the Project from existing entitlements and resources, or are new or expanded entitlements needed.

Findings: Potential impacts of the Project related to adequate water supply are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to adequate water supply will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the anticipated water demand for the proposed Project is substantially less than what is identified for the General Plan land uses and what was used in the formulation of the 2010 Urban Water Management Plan. The water demand required for the proposed Project would total 0.05 and 0.04 percent of the EMWD's 2015 and 2035 supplies. The Project's water consumption represents substantially less than 1 percent of the consumption yearly capacity and because the EMWD indicates that water to service the Project's proposed industrial uses is available, no significant water supply impacts would occur with implementation of the industrial use, and no mitigation would be necessary. (DEIR, pg. 4.12-17 to 4.12-22)

f. Cumulative Impacts to Water Supply Services

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would have a cumulative impact to water supply services.

Findings: Potential impacts of the Project related to cumulative water supply services are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant cumulative impacts related to water supply services will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the projected demand for the EMWD service area for the year 2015 is 213,900 acre-feet per year (AFY). The cumulative projects including the proposed Project would make up approximately 0.11 percent of the projected demand for 2015. For the year 2035, the EMWD service area projected demand is 302,200 AFY. The proposed Project would consist of 0.63 percent of the Project water demand. As the cumulative projects including the proposed Project constitute less than one percent of the projected water demand in both 2015 and 2025, the cumulative impact of the proposed Project would be less than significant.

Metropolitan Water District (Metropolitan) will continue to rely on the plans and policies outlined in its Regional Urban Water Master Plan (RUWMP) and Integrated Regional Water Plan (IRP) to address water supply shortages and interruptions (including potential shut downs of SWP pumps) to meet water demands. Metropolitan has also analyzed the reliability of water delivery through the SWP and the Colorado River Aqueduct. Metropolitan's IRP and RUWMP conclude that, with the storage and transfer programs developed by Metropolitan, there will be a reliable source of water to serve its member agencies' needs through 2035. The EWMD is a member agency of Metropolitan and would have water supplies for projected growth through 2035 in wet, dry, and multiple-dry years, so cumulative impacts to water supply would be less than significant. The proposed Project would connect to existing conveyance

infrastructure and adequate treatment capacity is available, so the proposed Project would not make a significant contribution to any cumulatively considerable impacts on water supply or infrastructure and no mitigation is required. (DEIR, pg 4.12-22)

g. Wastewater Treatment Requirements

Potential Significant Impact: Whether the Project would exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board (RWQCB).

Findings: Potential impacts of the Project related to wastewater treatment requirements are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to wastewater treatment requirements will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the proposed Project would result in a connection to the sewer line underlying the future Eucalyptus Avenue. The EMWD expects this sewer to be in service once it is necessary for demand expected from the proposed Project. It is anticipated that all wastewater generated by the proposed Project would be routed to and treated by the Moreno Valley Regional Water Reclamation Facility (MVRWRF). The MVRWRF is a Publically Owned Treatment Works (POTW), so operational discharge flows treated at the MVRWRF would be required to comply with the Waste Discharge Requirements (WDRs) for that facility. Compliance with condition or permit requirements established by the City and WDRs at the MVRWRF would ensure that discharges into the wastewater treatment facility system from the operation of the proposed Project would not exceed applicable Santa Ana RWQCB wastewater treatment requirements. Expected wastewater flows from the proposed Project will not exceed the capabilities of the serving treatment plant, so no significant impact related to this issue would occur and no mitigation would be required. (DEIR, pg. 4.12-24)

h. Wastewater Treatment Capacity and/or New or expanded Wastewater Treatment Facilities

Potential Significant Impact: Whether the Project would result in a determination by the wastewater treatment provider, which serves or may serve the Project, that it lacks adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments.

Also, whether the proposed Project would require the construction of new wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

Findings: Potential impacts of the Project related to wastewater capacity are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related to wastewater capacity will occur as a result of development of the Project and no new wastewater treatment facilities or expansion of existing facilities would be required, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the proposed Project would result in a connection to the sewer line underlying the future Eucalyptus Avenue. The EMWD expects this sewer to be in service once it is necessary for demand expected from the proposed Project. It is anticipated that all wastewater generated by the proposed Project would be routed to and treated by the MVRWRF. The MVRWRF is a POTW, so operational discharge flows treated at the MVRWRF would be required to comply with the WDRs for that facility. Compliance with condition or permit requirements established by the City and WDRs at the MVRWRF would ensure that discharges into the wastewater treatment facility system from the operation of the proposed Project would not exceed applicable Santa Ana RWQCB wastewater treatment requirements. Expected wastewater flows from the proposed Project will not exceed the capabilities of the serving treatment plant, so no significant impact related to wastewater would occur and no mitigation would be required. (DEIR, pg. 4.12-25)

i. Cumulative Impacts to Wastewater Facilities

Potential Significant Impact: Whether the Project in connection with past, current, and probable future projects would result in cumulative impacts to wastewater facilities.

Findings: Potential impacts of the Project related to cumulative wastewater facilities are discussed in detail in Section 4.12 of the DEIR. Based on the entire record before us, this Council finds that no significant cumulative impacts related to wastewater facilities will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the proposed Project would not have a cumulatively significant impact on wastewater infrastructure because the proposed Project would not require the expansion of existing infrastructure; only connections to existing infrastructure would be required by the Project. By adhering to the wastewater treatment requirements established by the Santa Ana RWQCB through the NPDES permit, wastewater from the Project site that is processed through the MVRWRF would meet established standards. As the wastewater from all development within the service area of the MVRWRF would be similarly treated under the NPDES, no cumulatively significant exceedance of Santa Ana RWQCB wastewater treatment requirements would occur.

The proposed Project would not result in significant impacts to wastewater treatment or wastewater treatment facilities. The MVRWRF also plans expand the capacity of the wastewater facility. The ultimate expansion of the MVRWRF will allow it to process 41 mgd of wastewater. The wastewater generation of the listed cumulative projects represents 4.8 percent of the future capacity of the 2013 expansion and 2.5 percent of the ultimate expansion of the MVRWRF. The projected wastewater generation of the cumulative projects represents a small percentage of the average wastewater capacity and, because there are no projects that would, in combination with the proposed industrial uses, result in any significant impact related to wastewater treatment or cause significant environmental effects, the Project will not make a significant contribution to any cumulatively considerable impacts associated with wastewater and no mitigation is required. (DEIR, pg. 4.12-26)

11. Global Climate Change

a. Greenhouse Gas Plan, Policy, Regulation Consistency

Potential Significant Impact: Whether the Project would conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases.

Findings: Potential impacts of the Project related to greenhouse gas plans, policies, or regulation consistency are discussed in detail in Section 4.13 of the DEIR. Based on the entire record before us, this Council finds that no significant impacts related greenhouse gas plans, policies or regulations will occur as a result of development of the Project and, therefore, no mitigation is required.

Facts in Support of the Findings: According to Section 4.13 of the DEIR, the proposed Project includes a variety of physical attributes and operational programs that would generally contribute to a reduction in operational-source pollutant emissions including GHG emissions. Future development that would occur under the proposed Project would be consistent with state and local greenhouse gas emission reduction strategies and policies. The Project would implement appropriate GHG reduction strategies and would ensure that it does not conflict with or impede implementation of reduction goals identified in AB 32, Governor's Executive Order S-3-05, and other strategies to help reduce GHGs to the level proposed by the Governor. In addition, the Project would also be subject to all applicable regulatory requirements, which would also reduce the GHG emissions of the Project. Therefore, the proposed Project would not conflict with any applicable plan, program, policy, or regulation related to the reduction of GHG emissions. Impacts are considered less than significant and no mitigation is required. (DEIR, pgs. 4.13-10 to 4.13-17)

B. ENVIRONMENTAL IMPACTS MITIGATED TO A LEVEL OF LESS-THAN-SIGNIFICANT

Public Resources Code Section 21081 states that no public agency shall approve or carry out a project for which an EIR has been completed which identifies one or more significant effects unless the public agency makes one or more of the following findings:

I. Changes or alterations have been required in, or incorporated into, the Project which mitigate or avoid the significant effects on the environment.

II. Those changes or alterations are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency.

III. Specific economic, legal, social, technological, or other considerations make infeasible the mitigation measures or alternatives identified in the EIR, and overriding economic, legal, social, technological, or other benefits of the Project outweigh the significant effects on the environment.

Certain of the following issues from the environmental categories analyzed in the EIR, including biological resources, cultural and paleontological resources, hydrology, drainage, and water quality, noise (short-term construction), transportation (local intersections), utilities, and global climate change (individually and cumulatively) were found to be potentially significant, but can be mitigated to a less-than-significant level with the imposition of mitigation measures. This Council hereby finds pursuant to *Public Resources Code* Section 21081 that all potentially significant impacts listed below can and will be mitigated to below a level of significance by imposition of the mitigation measures in the EIR; and that these mitigation measures are included as Conditions of Approval and set forth in the Mitigation Monitoring and Reporting Program (MMRP) adopted by this Council. Specific findings of this Council for each category of such impacts are set forth in detail below.

1. Air Quality

a. Localized Construction Equipment Exhaust Emissions Impacts

Potentially Significant Impact: The EIR evaluated and concluded that the Project has the potential to exceed short-term construction thresholds.

Finding: Implementation of the following mitigation measures will reduce the potential adverse impacts to sensitive or special status species to less than significant:

4.3.6.3A *Prior to the issuance of grading permits, the project applicant shall require by contract specifications that all trucks hauling dirt, sand, soil, or other loose materials are to be covered or shall maintain at least 2 feet of freeboard in accordance with the requirements of California Vehicle Code (CVC) Section 23114 (freeboard means vertical space between the top of the load and top of the trailer).*

4.3.6.3B *Prior to the issuance of grading permits, the project applicant shall provide evidence to the City that construction access roads shall be paved at least 100 feet onto the site from the main road.*

4.3.6.3C *Prior to the issuance of grading permits, the project applicant shall require by contract specifications that all streets within the construction site shall be swept once per day if visible soil materials are carried to adjacent streets.*

Facts in Support of the Finding: SCAQMD has developed LST methodology that can be used to determine whether or not a project may generate significant adverse localized air quality impacts. LSTs represent the maximum emissions from a project that would not cause or contribute to an exceedance of the most stringent applicable Federal or State ambient air quality standard and are developed based on the ambient concentrations of that pollutant for each source receptor area. The emissions of concern from construction activities are NOX, CO, PM_{10}, and $PM_{2.5}$ resulting from on-site combustion emissions from construction equipment and on-site fugitive PM_{10} dust from construction site preparation activities.

According to Section 4.3 of the DEIR, the air pollutant emission rates for the proposed construction activities are below the localized construction thresholds at the nearest sensitive receptor for CO, NO_X, PM_{10}, and $PM_{2.5}$. Thus, no mitigation is required. However, implementation of **Mitigation Measures 4.3.6.2A through 4.3.6.2M** and the incorporation of these additional requirements as **Mitigation Measures 4.3.6.3A through 4.3.6.3C** are designed to track both standard requirements and mitigation measures as part of the project's Mitigation Monitoring and Reporting Program (MMRP). Therefore, impacts related to construction exhaust emissions are less than significant. (DEIR, pgs. 4.3-29 to 4.3-30)

2. Biological Resources

a. Candidate, Non-listed Sensitive, or Other Special Status Species

Potential Significant Impact: The EIR evaluated and concluded that the Project has the potential to affect migratory bird species and 15 non-listed special status species, including burrowing owl.

Finding: Implementation of the following mitigation measures will reduce the potential adverse impacts to sensitive or special status species to less than significant:

4.4.6.1A *If tree removal or clearing and grubbing activities must take place during the general nesting season (February 1 through August 31), a nesting bird survey shall be conducted within seven (7) days prior to any vegetation disturbance activities. If passerine birds are found to be nesting or there is evidence of nesting behavior inside the impact area, an exclusion buffer, to be determined by the appropriate agency (e.g. the City, County, and/or CDFG), shall be set in place around the nest where no vegetation disturbance will be permitted. For raptor species, such as hawks and owls, this buffer may be as large as 500 feet. A qualified biologist shall closely monitor nests until it is determined that they are no longer active, at which time construction activity in the vicinity of nests may continue.*

4.4.6.1B *Prior to site grading, a pre-construction survey shall be required for the burrowing owl to confirm the presence/absence of this species from the site. The survey shall be conducted by a qualified biologist within 30 days prior to ground disturbance, and in accordance with MSHCP survey requirements, to avoid direct take of burrowing owls. If burrowing owls are determined to occupy the project site or immediate vicinity, the City of Moreno Valley Planning Department shall be notified and avoidance measures as identified in Mitigation Measure 4.4.6.1C shall be implemented. Implementation of avoidance measures shall be executed pursuant to the MSHCP, the California Fish and Game Code, and the MBTA, and according the Burrowing Owl Survey Protocol and Mitigation Guidelines (CBOC 1993) and reviewed the City of Moreno Valley, the County of Riverside, and/or by the CDFG.*

4.4.6.1C *As recommended in the BUOW Survey and Mitigation Guidelines prepared by the CBOC, no disturbance to an occupied burrow shall occur within approximately 160 feet of an occupied burrow during the non-breeding season (September 1 through January*

31), or within approximately 250 feet of an occupied burrow during the breeding season (February 1 through August 31). For unavoidable impacts, passive relocation of burrowing owls shall be implemented. Passive relocation shall be conducted by a qualified biologist in accordance with procedures set forth by the MSHCP and California Burrowing Owl Consortium. Passive relocation of occupied burrows supporting a breeding pair of burrowing owls shall be conducted outside of the breeding season pursuant to the California Fish and Game Code and the MBTA.

Facts in Support of the Finding: According to Section 4.4 of the DEIR, one non-listed special status species, grasshopper sparrow, was observed on the site during the burrowing owl survey. Fourteen other non-listed special status species, including burrowing owl, have a low to moderate potential to occur on the site based on existing habitat quality. None of these species is listed as Threatened or Endangered under State or Federal law, all are relatively widespread, and the site does not contain high quality habitat for any of them. Therefore, any impacts to these species by the Project would not be considered significant. Neither additional surveys nor additional conservation measures for these species will be required for the proposed Project, with the exception of burrowing owl.

The planning area may support habitat for bird species protected under the California Fish and Game Code and Migratory Bird Treaty Act (MBTA). If clearing and grubbing activities take place during the general bird nesting season (February 1 through August 31), potential impacts to bird species protected under the California Fish and Game Code and MBTA may occur, therefore **Mitigation Measure 4.4.6.1A** is required.

The Project site also contains habitat suitable to support the burrowing owl. Although burrowing owl was not found on the site during the focused survey, the species is highly mobile, so there is a potential that at some future date prior to Project development, this species may occupy the site. This is a potentially significant impact requiring **Mitigation Measures 4.4.6.1B and 4.4.6.1C.** Implementation of the above-listed mitigation measures would reduce impacts to migratory bird species and non-listed sensitive species to a less than significant level. (DEIR, pgs. 4.4-25 to 4.4-27).

b. Riparian Habitat or Other Sensitive Natural Communities

Potential Significant Impact: The EIR evaluated and concluded that the Project has the potential to permanently affect 0.36 acre of riparian/riverine habitat and to temporarily affect 0.35 acre of riparian/riverine habitat.

Finding: Implementation of the following mitigation measures will reduce the potential adverse impacts to riparian habitat or other sensitive natural communities to less than significant:

4.4.6.2A *As outlined in the project's Determination of a Biologically Equivalent or Superior Preservation (DBESP) report, the project applicant shall compensate for the temporary and permanent impact on and loss of jurisdictional waters and streambeds by providing a minimum 2:1 off-site replacement of equivalent riverine/riparian habitat prior to project construction. Offsite restoration, enhancement, and/or land purchase mitigation for the drainage impacts will occur at an offsite location through one or more of the following: an USACE approved mitigation bank, through an in lieu fee mitigation program, and/or land purchase and conservation. CDFW and USFWS will need to provide concurrence that this mitigation is equivalent or superior to that proposed for impact through their review and acceptance of the DBESP.*

4.4.6.2B *Riparian/riverine resources that are temporarily impacted by project construction shall be returned to their preconstruction contours and hydroseeded, as outlined in the DBESP.*

Facts in Support of the Findings: According to Section 4.4 of the DEIR, the Project site consists of highly disturbed land from which most natural vegetation has been removed by regular disking for weed abatement and historical citrus cultivation. No special status species plants were recorded on site within the southern and western drainages due to the site's long-standing disturbances and the fact that on-site soils may not be capable of supporting most sensitive plant species.

However, implementation of the proposed Project would result in permanent impacts on 0.36 acre of riparian/riverine areas as a result of the construction of the detention basins, and drain outlets. In addition to permanent impacts, the proposed Project would result in temporary impacts on 0.35 acre of riparian/riverine areas associated with construction activities. Minimal intrusion into the drainages would be necessary and no construction is anticipated in the drainages themselves.

Following construction, temporary impact areas would be restored to their pre-construction contours and revegetated per a Habitat Mitigation and Monitoring Plan (HMMP) to be written for the Project site. The HMMP would be developed to address temporary impacts on riverine/riparian areas subject to jurisdiction under the MSHCP, waters of the United States subject to jurisdiction under Section 404 of the Clean Water Act (CWA), waters of the state subject to jurisdiction under Section 401 of the CWA, and jurisdictional streambeds subject to jurisdiction under Sections1600–1616 of the California Fish and

Game Code. Therefore, the proposed mitigation design is directed at providing adequate mitigation based on impacts on the largest jurisdictional area (namely, CDFW jurisdictional streambeds). Because implementation of the proposed Project would have impacts on riparian/riverine areas on site, mitigation would be required. Implementation of the **Mitigation Measures 4.4.6.2A and 4.4.6.2B** would reduce impacts to riparian habitat to a less than significant level. (DEIR, pgs. 4.4-29 to 4.4-27)

c. Jurisdictional Waters/Wetlands

Potential Significant Impact: The EIR evaluated and concluded that the Project has the potential to permanently affect 0.051 non-wetland waters of the United States (US) and 0.362 acre of CDFW jurisdictional area, and to temporarily affect 0.054 acre of non-wetland waters of the U.S. and 0.33 acre of CDFW jurisdictional area.

Findings: Implementation of the following mitigation measures will reduce the potential adverse impacts to jurisdictional waters and wetlands to less than significant:

4.4.6.3A *The project applicant shall obtain a Section 404 Nationwide or Individual Permit, as appropriate, from the USACE, a Section 401/Porter-Cologne Water Quality Certification from the RWQCB, and a Section 1602 Streambed Alteration Agreement from the CDFW. Offsite restoration, enhancement, and/or land purchase mitigation of jurisdictional drainage impacts will occur at an off-site location through one or more of the following: an USACE approved mitigation bank, through an in-lieu fee mitigation program, and/or land purchase and conservation.*

Facts in Support of the Findings: According to Section 4.4 of the DEIR, there is a clear connection to drainages associated with the San Jacinto watershed, and all three drainages (western, southern, and eastern) located on or adjacent to the Project site are determined to be jurisdictional waters of the United States. Implementation of the proposed Project would result in permanent impacts to 0.051 acre (354 linear feet) of non-wetland waters of the US and waters of the State and 0.362 acre (440 linear feet) of state streambed associated with the eastern, southern, and western drainages. In addition to permanent impacts, the proposed Project would result in temporary impacts to 0.054 acre (332 linear feet) of non-wetland waters of the US and waters of the State and 0.33 acre (547 linear feet) of State streambed associated with construction activities. This is a significant impact requiring mitigation.

The proposed on-site restoration of temporary impact areas and the long-term enhancement of off-site riparian/riverine habitat managed by Santa Ana Water Authority provides adequate mitigation for identified impacts to on-site jurisdictional areas. Implementation of the recommended **Mitigation**

Measure 4.4.6.3A would reduce impacts to jurisdictional waters to less than significant levels. (DEIR, pgs. 4.4-29 to 4.4-30)

3. Cultural Resources

a. Prehistoric Cultural Resources

Potential Significant Impact: The EIR evaluated and concluded that the Project could have an adverse effect on significant archaeological resource pursuant to Section 15064.5.

Finding: Implementation of the following mitigation measures will reduce the impact to unique archaeological resources to less than significant:

4.5.6.1A *Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a Cultural Resources Monitoring Agreement has been secured for qualified Tribal representatives, and that a professional archaeological monitor meeting Secretary of Interior standards has been retained by the Applicant to conduct monitoring of all mass grading and trenching activities and has the authority to temporarily halt and redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project Archaeologist and Tribal representatives shall attend the pre-grading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.*

4.5.6.1B *Prior to the issuance of a grading permit, the Applicant shall provide evidence to the City of Moreno Valley that appropriate Native American representative(s), Project Archaeologist, and the Tribal representative(s) shall be allowed to monitor and have received a minimum of 30 days advance notice of all mass grading and trenching activities. During grading and trenching operations, the Tribal representatives and the project archaeological monitor shall observe all mass grading and trenching activities per the Cultural Resources Monitoring Agreement. If the Tribal representatives suspect that an archaeological resource may have been unearthed, the archaeologist, in consultation with the tribal representative, shall immediately halt and redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. In consultation with the appropriate Native American Tribe(s), the archaeological monitor shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2.*

4.5.6.1C *If a significant archaeological resource(s) is discovered on the property, ground disturbing activities shall be suspended 100 feet around the resource(s). The archaeological monitor and representatives of the appropriate Native American Tribe(s), the Project Applicant, and the City Planning Division shall confer regarding mitigation of the discovered resource(s). A treatment plan and/or preservation plan shall be prepared and by the archaeological monitor and reviewed by representatives of the appropriate Native American Tribe(s), the Project Applicant, and the City Planning Division and implemented by the archaeologist to protect the identified archaeological resource(s) from damage and destruction. The landowner shall relinquish ownership of all archaeological artifacts that are of Native American origin found on the Project site to the culturally affiliated Native American tribe(s) for proper treatment and disposition. A final report containing the significance and treatment findings shall be prepared by the archaeologist and submitted to the City Planning Division, the appropriate Native American tribe(s), and the Eastern Information Center at the University of California, Riverside. All cultural material, excluding sacred, ceremonial, grave goods and human remains, collected during the grading monitoring program and from any previous archaeological studies or excavations on the project site shall be curated, as determined by the treatment plan, according to the current professional repository standards and may include the Pechanga Bands curatorial facility.*

4.5.6.1D *Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan:*

"If any suspected archaeological resources are discovered during ground-disturbing activities and the archaeological monitor or Tribal representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the project archaeologist and the Tribal representatives to the site to assess the significance of the find."

4.5.6.1E *If human remains are encountered, California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to California Public Resources Code Section 5097.98(b), remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made by the Coroner. If the Riverside County Coroner determines the remains to be Native*

American, the California Native American Heritage Commission must be contacted within 24 hours. The Native American Heritage Commission must then immediately notify the "most likely descendant(s)" of receiving notification of the discovery. The most likely descendant(s) shall then make recommendations within 48 hours, and engage in consultations concerning the treatment of the remains as provided in Public Resources Code §5097.98.

Facts in Support of the Finding: Based on Section 4.5 of the DEIR, a reconnaissance pedestrian-survey for the Project site was conducted in November 2007. Although the Project site is located within the Moreno Hills Complex, no archaeological resources were identified on the Project site during the field survey, and the cultural resource assessment concluded the Project would have no significant impacts; however, there is a potential for Project grading to disturb previously undiscovered cultural resources. While there is no recorded or surface evidence that archaeological resources are present on site, the Project is located in an area with a high potential of containing prehistoric archaeological resources. Therefore, a potential exists that excavation and construction activities may uncover previously undetected prehistoric or historic cultural resources. This is a potentially significant impact under CEQA and requires mitigation. Adherence to the above **Mitigation Measures 4.5.6.1A** through **4.5.6.1E** would reduce potential impacts to archaeological resources to a less than significant level. (DEIR, pgs. 4.5-6 to 4.5-7)

b. Paleontological Resources

Potential Significant Impact: The EIR evaluated and concluded that the Project could have an adverse effect on significant paleontological resource or site or unique geologic feature.

Findings: Implementation of the following mitigation measures will reduce the impact to unique paleontological resource or unique geologic feature to less than significant:

4.5.6.2A *Prior to the issuance of grading permits, the project applicant shall submit to and receive approval from the City, a Paleontological Resource Impact Mitigation Program (PRIMP). The PRIMP shall include the provision of a trained paleontological monitor during on-site soil disturbance activities. The monitoring for paleontological resources shall be conducted during the rough-grading phase of the project. In the event that paleontological resources are unearthed or discovered during excavation, Mitigation Measure 4.5.6.2C shall apply. Conversely, if no paleontological resources are unearthed or discovered on site during excavation, no additional action is required.*

4.5.6.2B *The paleontological monitor shall be equipped to rapidly remove any large fossil specimens encountered during excavation. During monitoring, samples of soil shall be collected and processed to recover microvertebrate fossils. Processing shall include wet screen washing and microscopic examination of the residual materials to identify small vertebrate remains.*

4.5.6.2C *If paleontological resources are unearthed or discovered during excavation of the project site, the monitoring for paleontological resources shall be conducted on a full-time basis for the duration of the rough-grading of the project site. The following recovery processes shall apply:*

- *Upon encountering a large deposit of bone, salvage of all bone in the area shall be conducted with additional field staff and in accordance with modern paleontological techniques.*
- *All fossils collected during the project shall be prepared to a reasonable point of identification. Excess sediment or matrix shall be removed from the specimens to reduce the bulk and cost of storage. Itemized catalogs of all material collected and identified shall be provided to the museum repository along with the specimens.*
- *A report documenting the results of the monitoring and salvage activities and the significance of the fossils shall be prepared.*
- *All fossils collected during this work, along with the itemized inventory of these specimens, shall be deposited in a museum repository for permanent curation and storage.*

4.5.6.2D *Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan:*

"If any suspected paleontological resources are discovered during ground-disturbing activities, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call a qualified paleontologist to the site to assess the significance of the find. A qualified paleontologist shall evaluate the suspected resource. If the paleontologist determines that the find is not unique, construction shall be permitted to proceed. However, if the paleontologist determines that further information is needed to

evaluate significance, the City of Moreno Valley shall be notified and a treatment plan shall be prepared and implemented in consultation with the City to protect the identified paleontological resource(s) from damage and destruction."

Facts in Support of the Findings: According to Section 4.5 of the DEIR, the proposed Project site is located within an area that has a high potential to contain near-surface Pleistocene fossils.[11] The paleontological literature search indicated that there is potential for significant, nonrenewable resources that to encountered during onsite construction activities. Therefore, a paleontological resources impact mitigation program (PRIMP), including excavation monitoring by a qualified paleontologist, is recommended for earthmoving activities in Pleistocene sediments on the Project site with potential to contain significant, nonrenewable paleontological resources. Although no paleontological resources were identified on site during the field survey, because of the location of the Project site and associated sensitivity for paleontological resources, the potential exists that paleontological resources maybe uncovered during construction. Adherence to the **Mitigation Measures 4.5.6.2A through 4.5.6.2D** will reduce potential impacts to paleontological resources to a less than significant level. (DEIR, pgs. 4.5-7 to 4.5-8)

4. <u>Hydrology, Drainage, and Water Quality</u>

a. Construction-Related Water Quality Impacts

Potential Significant Impact: The EIR evaluated and concluded that the Project could violate water quality standards or waste discharge requirements during construction phases of the Project in form of increased soil erosion, sedimentation, or storm water discharges.

Findings: Implementation of the following mitigation measures will reduce the impact to construction-related water quality to less than significant:

4.7.6.1A *Prior to grading plan approval and the first issuance of a grading permit by the City, the project applicant shall provide evidence to the City that a Notice of Intent (NOI) has been filed with the Regional Water Quality Control Board for coverage under the State NPDES General Construction Permit for discharge of storm water associated with construction activities.*

4.7.6.1B *Prior to grading plan approval and the first issuance of a grading permit by the City, the project applicant shall submit to the City of Moreno Valley a Storm Water Pollution*

[11] Ibid.

Prevention Plan (SWPPP). The SWPPP shall include a surface water control plan and erosion control plan citing specific measures to control on-site and off-site erosion during the entire grading and construction period. Additionally, the SWPPP shall identify structural and nonstructural BMPs to control sediment and nonvisible discharges from the site. BMPs to be implemented in the SWPPP may include (but shall not be limited to) the following:

- *Sediment discharges from the site may be controlled by the following: sandbags, silt fences, straw wattles and temporary debris basins (if deemed necessary), and other discharge control devices. The construction and condition of the BMPs will be periodically inspected during construction, and repairs will be made when necessary as required by the SWPPP.*
- *No materials of any kind shall be placed in drainage ways.*
- *Materials that could contribute nonvisible pollutants to storm water must be contained, elevated, and placed in temporary storage containment areas.*
- *All loose piles of soil, silt, clay, sand, debris, and other earthen material shall be protected per RWQCB standards to eliminate any discharge from the site. Stockpiles will be surrounded by silt fences.*
- *The SWPPP will include inspection forms for routine monitoring of the site during the construction phase to ensure NPDES compliance.*
- *Additional BMPs and erosion control measures will be documented in the SWPPP and utilized if necessary.*
- *The SWPPP will be kept on site for the entire duration of project construction and will also be available to the local RWQCB for inspection at any time.*

In the event that it is not feasible to implement the above BMPs, the City of Moreno Valley can make a determination that other BMPs will provide equivalent or superior treatment either on or off site.

4.7.6.1C *Prior to the issuance of grading permits, the project applicant shall provide evidence to the City that the following provisions have been added to construction contracts for the project:*

- *The Construction Contractor shall be responsible for performing and documenting the application of BMPs identified in the SWPPP. Weekly inspections shall be performed on sediment control measures called for in the SWPPP. Monthly reports shall be maintained by the Contractor and submitted to the City for inspection. In addition, the Contractor will also be required to maintain an inspection log and have the log on site to be reviewed by the City of Moreno Valley and the representatives of the Regional Water Quality Control Board.*

Facts in Support of the Findings: According to Section 4.7 of the DEIR, the construction and grading phases of the project site would require the disturbance of surface soils and removal of existing orange groves and vegetative cover. During the construction period, grading and excavation activities would result in exposure of soil to storm runoff, potentially causing erosion and sediment in runoff. If not managed through Best Management Practices (BMPs), the runoff could cause erosion and increased sedimentation in local drainage ways such as the Quincy Channel. The potential for chemical releases is present at most construction sites in the form of fuels, solvents, glues, paints, and other building construction materials. However, implementation of construction practices and adherence to existing water quality regulations and **Mitigation Measures 4.7.6.1A** through **4.7.6.1C** would reduce these impacts to a less than significant level. (DEIR, pgs. 4.7-21 to 4.7-23)

b. Operational-Related Water Quality Impacts

Potential Significant Impact: The EIR evaluated and concluded that the Project could violate water quality standards or waste discharge requirements during the operational phases of the project in the form of increased soil erosion, sedimentation, or urban runoff.

Findings: Implementation of the following mitigation measure will reduce the impact to operational-related water quality to less than significant:

4.7.6.2A *Prior to grading plan approval and the first issuance of a grading permit by the City, the project applicant shall receive approval from the City of Moreno Valley for a Final Water Quality Management Plan (F-WQMP). The F-WQMP shall specifically identify pollution prevention, site design, source control, and treatment control BMPs that shall be used on site to control predictable pollutant runoff in order to reduce impacts to water quality to the maximum extent practicable. BMPs to be implemented in the F-WQMP may include (but shall not be limited to) the following:*

- *Required landscaped areas shall not use decorative concrete or impervious surfaces.*
- *Landscape plans shall incorporate native and drought-tolerant plants, trees, and shrubs. Landscaping shall be maintained weekly and maintenance contractor will properly dispose of all landscape wastes.*
- *Irrigation systems shall be inspected monthly by the landscape contractor to check for overwatering, leaks, or excessive runoff to paved areas. Timers will be used to prevent overwatering.*
- *Signage will be inspected and maintained twice a year for legibility.*
- *Outdoor Loading/Unloading truck docks shall be kept in a clean and orderly condition with weekly inspections, continuous monitoring and immediate clean up of spills.*
- *Parking area maintenance shall be swept or vacuumed at least quarterly, if there is any trash or debris in between the routine sweeping, it shall be swept or vacuumed immediately.*
- *Trash enclosures will be inspected and maintained weekly or as needed by maintenance contractor.*
- *On-site extended detention/sedimentation basins and sand filters will treat all of the site's runoff via vegetated swales and will be maintained and inspected at least twice a year and prior to October 1.*
- *Additional BMPs will be documented in the WQMP and utilized if necessary.*

In the event that it is not feasible to implement the above BMPs, the City of Moreno Valley can make a determination that other BMPs will provide equivalent or superior treatment either on or off site.

Facts in Support of the Findings: According to Section 4.7 of the DEIR, the proposed Project would result in the conversion of existing on-site permeable surfaces to impermeable surfaces, thereby altering the current drainage pattern. Upon development of the proposed on-site uses, storm runoff from the roadways, parking lots, and buildings may carry a variety of pollutants such as sediment, pathogens, petroleum products, commonly utilized construction materials, landscaping chemicals, and (to a lesser

extent) trace metals such as zinc, copper, lead, cadmium, and iron, which may lead to the degradation of storm water in downstream channels. These impacts to water quality are considered significant impacts that require mitigation. **Mitigation Measure 4.7.6.2A** has been identified to reduce impacts to water quality to less than significant.

The proposed Project would also incorporate on-site drainage that would have hydrodynamic infrastructure components that would meet City and County water quality requirements. Through the use of site design BMPs, source control BMPs, and treatment control BMPs, the resulting pollutant loads coming from the proposed Project would be reduced thereby ultimately reducing pollutants discharged from urban storm water runoff to surface water bodies. Because adherence to the requirements of the NPDES permit, which include implementation of the BMPs outlined in the WQMP, would be required by the City during the operation of the proposed Project, potential water quality impacts resulting from storm water and urban runoff would be reduced to a less than significant level. (DEIR, pgs. 4.7-23 to 4.7-26)

c. Drainage Capacity-Related Impacts

Potential Significant Impact: The EIR evaluated and concluded that the Project could create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff.

Findings: Implementation of the following mitigation measure will reduce the impact to drainage to less than significant:

4.7.6.3A *Prior to the approval of a rough grading plan, the project proponent shall receive approval on a project-specific Final Hydrology Study, with supporting engineering calculations, from the City Engineer. The Final Hydrology Study shall incorporate relevant requirements identified by the City, and/or site-specific geotechnical investigations.*

Facts in Support of the Findings: According to Section 4.7 of the DEIR, development and operation of the proposed Project would result in the generation of the additional storm water flows that would be above those generated in existing site conditions. With the construction and maintenance of adequate storm water drainage systems, through the adherence of **Mitigation Measure 4.7.6.3A**, impacts would be less than significant. In addition, the design and installation of the proposed drainage improvements will be required to adhere to applicable City and County standards. (DEIR, pgs. 4.7-26 to 4.7-28)

5. <u>Noise</u>

a. Short-Term Construction Noise

Potential Significant Impact: The EIR evaluated and concluded that noise levels from grading and other construction activities for the proposed Project may range up to 91 dBA at the closest residences southeast of the Project site for very limited times when construction occurs near the Project's boundary. Construction-related noise impacts from the proposed Project would be potentially significant.

Finding: Implementation of the following mitigation measures will reduce potential short-term construction noise impacts to less than significant:

4.9.6.1A *During all project site excavation and grading on site, the project contractor shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers consistent with manufacturers' standards.*

4.9.6.1B *The project contractor shall place all stationary construction equipment so that emitted noise is directed away from sensitive receptors nearest to the project site.*

4.9.6.1C *The construction contractor shall locate equipment staging in areas that will create the greatest distance between construction-related noise sources and noise-sensitive receptors nearest to the project site during all project construction.*

4.9.6.1D *During all project site construction activities at Building 6 (i.e., closest to existing residences), the construction contractor shall limit all construction-related activities that would result in high noise levels to between the hours of 6:00 a.m. and 8:00 p.m. on weekdays and between the hours of 7:00 a.m. to 8:00 p.m. on weekends and holidays, unless written approval is obtained from the City Building Official or City Engineer for specific construction activities that must be conducted outside of the permitted time periods.*

Facts in Support of the Finding: According to Section 4.9 of the DEIR, two types of short-term noise impacts could occur during the construction of the Project. First, construction crew commutes and the transport of construction equipment and materials to the site for the proposed Project would incrementally increase noise levels on access roads leading to the site. The second type of short-term noise impact is related to noise generated during excavation, grading, and building erection on the Project site. Construction of the proposed Project is expected to require the use of scrapers, bulldozers, and water and pickup trucks. The site preparation phase, which includes excavation and grading of the site, tends to generate the highest noise levels, because the noisiest construction equipment is earthmoving equipment. Earthmoving equipment includes excavating machinery such as backfillers, bulldozers, draglines, and front loaders.

Earthmoving and compacting equipment includes compactors, scrapers, and graders. Typical operating cycles for these types of construction equipment may involve one or two minutes of full-power operation followed by three to four minutes at lower power settings. The maximum noise level generated by each scraper on the proposed Project site is assumed to be approximately 87 dBA L_{max} at 50 feet from the scraper. Each bulldozer would generate approximately 85 dBA Lmax at 50 feet. The maximum noise level generated by water and pickup trucks is approximately 86 dBA L_{max} at 50 feet from these vehicles. Each doubling of the sound sources with equal strength increases the noise level by three (3) dBA. Assuming that each piece of construction equipment operates at some distance from the other equipment, the worst-case composite noise level during this phase of construction would be 91 dBA L_{max} at a distance of 50 feet from the active construction area.

The nearest noise-sensitive receptor locations to the Project site are existing residences approximately 50 feet to the southeast. These nearest residents may be subject to short-term, intermittent, maximum noise reaching 91 dBA L_{max}, generated by construction activities on the Project site. This noise level would exceed the City's exterior noise standard of 60 dBA[12] CNEL for residential uses. However, no significant construction noise impacts would occur if construction of the proposed Project would occur within the permitted hours of 6:00 a.m. to 8:00 p.m. of any working day, and within the permitted hours of 7:00 a.m. and 8:00 p.m. on Sundays and Federal holidays. Compliance with the construction hours specified in the City's Municipal Code would result in construction noise impacts that are less than significant. While impacts would be considered less than significant as long as construction activities occur within the designated hours identified in the City's Municipal Code, mitigation measures have been identified to reduce the noise levels that would expose nearby sensitive receptors to noise levels in excess of the City's noise standards.

With adherence to the City's designated construction hours and with implementation of the proposed **Mitigation Measures 4.9.6.1A through 4.9.6.1D**, potential short-term construction noise impacts would be reduced below the level of significance. (DEIR, pgs. 4.9-25 to 4.9-27)

6. <u>Transportation</u>

a. Future Year 2035 with Project Conditions (Intersection) Traffic and Level of Service

Potential Significant Impact: The EIR evaluated and concluded that the Project could cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system.

[12] *Chapter 11.80.030 Table 11.80.030-2, City of Moreno Valley Municipal Code,* City of Moreno Valley.

Findings: Implementation of the following mitigation measures will reduce the impact related to future traffic LOS to less than significant:

4.11.6.4A. *Prior to issuance of a Certificate of Occupancy the project applicant shall construct the following traffic improvements:*

- *Redlands Boulevard/SR-60 Westbound Ramps. Install a traffic signal. This improvement is currently approved, and permitted by Caltrans. If not otherwise completed prior to project opening, the required traffic signal shall be constructed by the Applicant prior to issuance of the first Certificate of Occupancy.*
- *Redlands Boulevard/Fir Avenue/Eucalyptus Avenue. If not otherwise completed prior to project opening, prior to issuance of the first Certificate of Occupancy, the Applicant shall construct the following improvements: Install a traffic signal and add a northbound left-turn lane and a southbound left-turn lane.*

If the improvements are constructed by others prior to the Certificate of Occupancy, the applicant shall pay its fair share towards the improvements through the City's DIF program.

4.11.6.4B *Prior to issuance of building permits, the project applicant shall pay the fair-share contribution toward the following traffic improvements through fees paid to the City of Moreno Valley based on the City's DIF system and the County's TUMF program:*

- ***Moreno Beach Drive/SR-60 Eastbound Ramps.*** *The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF would mitigate the significant impact at this location. This project is scheduled to go into construction by the end of this year and completed by the end of 2013.*
- ***Redlands Boulevard/SR-60 Westbound Ramps.*** *Install a traffic signal. This improvement is currently approved, and permitted by Caltrans. If not otherwise completed prior to project opening, the required traffic signal shall be constructed by the Applicant prior to issuance of the first Certificate of Occupancy.*
- ***Redlands Boulevard/Fir Avenue/Eucalyptus Avenue****. If not otherwise completed prior to project opening, prior to issuance of the first Certificate of Occupancy, the Applicant shall construct the following improvements: Install a traffic signal. This improvement is*

listed in the City's DIF program. Add a northbound left-turn lane and a southbound left-turn lane.

4.11.6.4C *Prior to issuance of building permits, the project applicant shall pay the fair-share contribution toward the following traffic improvements through fees paid to the City of Moreno Valley based on the City's DIF system and the County's TUMF program:*

- ***Moreno Beach Drive/SR-60 Eastbound Ramps.*** *The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF would mitigate the significant impact at this location.*
- ***Moreno Beach Drive/Cottonwood Avenue.*** *Add a southbound through lane. This improvement is listed in the City's DIF program. Therefore, payment of the DIF would mitigate the significant impact at this location.*
- ***Moreno Beach Drive/Alessandro Boulevard.*** *Add a southbound through lane. This improvement is listed in the City's DIF program. Therefore, payment of the DIF would mitigate the significant impact at this location.*
- ***Redlands Boulevard/SR-60 Westbound Ramps.*** *Install a traffic signal. This improvement is listed in the City's DIF program and will be installed before building occupancy since it was identified as a direct project impact. Add a northbound through lane. The Redlands Boulevard/SR-60 Interchange reconstruction would implement the northbound through lane. The interchange reconstruction project is programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.*
- ***Redlands Boulevard/SR-60 Eastbound Ramps.*** *The Redlands Boulevard/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF. Therefore, payment of the TUMF would mitigate the significant impact at this location.*
- ***Redlands Boulevard/Fir Avenue/Eucalyptus Avenue.*** *Install a traffic signal. Add a westbound right-turn lane and provide overlap phasing for the westbound right turns. Add a westbound left-turn lane and an eastbound left-turn lane. These improvements are programmed in the City's DIF program. Add a northbound left-turn lane a southbound*

through lane and a southbound left-turn lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.

- ***Redlands Boulevard/Eucalyptus Avenue.*** *Add a southbound right-turn lane. This improvement is programmed in the TUMF. Therefore, payment of the TUMFs would mitigate the significant impact at this location.*
- ***Redlands Boulevard/Alessandro Boulevard.*** *Add a southbound left-turn lane. This improvement is programmed in the TUMF. Therefore, payment of the TUMFs would mitigate the significant impact at this location.*

4.11.6.4D *Prior to issuance of building permits, the project applicant shall pay the fair-share contribution toward the following traffic improvements through fees paid to the City of Moreno Valley based on the City's DIF system and the County's TUMF program. At some locations, the DIF and TUMFs would not fully mitigate the projects impact. For these locations, additional improvements shall be implemented by the project applicant prior to the issuance of a certificate of occupancy for the project:*

- ***Nason Street/Eucalyptus Avenue.*** *Add a northbound right-turn lane. This improvement is programmed in the City's DIF; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, the project shall contribute a fair share (calculated to be 1.76%) toward restriping the westbound approach to provide dual left-turn lanes*
- ***Nason Street/Alessandro Boulevard.*** *Add an eastbound through lane and a westbound through lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, the project shall contribute a fair share (calculated to be 1.4%) toward modification of the traffic signal to provide overlap phasing for the eastbound right-turn lane.*
- ***Moreno Beach Drive/SR-60 Westbound Ramps.*** *The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF would mitigate the significant impact at this location.*

- ***Moreno Beach Drive/SR-60 Eastbound Ramps.*** *The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF would mitigate the significant impact at this location.*

- ***Moreno Beach Drive/Eucalyptus Avenue.*** *Convert the existing eastbound through lane to a left-turn lane and the eastbound right-turn lane to a shared through/right-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, the project shall contribute a fair share (calculated to be 8.63%) toward modification of the traffic signal to provide right-turn overlap phasing for the westbound right turn.*

- ***Moreno Beach Drive/Cottonwood Avenue.*** *Add a southbound through lane. This improvement is programmed in the City's DIF program. Therefore, payment of the DIF would mitigate the significant impact at this location.*

- ***Moreno Beach Drive/Alessandro Boulevard.*** *Add 2 southbound through lanes, 2 northbound through lanes, an eastbound through lane, and a westbound through lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would mitigate the significant impact at this location.*

- ***Redlands Boulevard/SR-60 Westbound Ramps.*** *Install a traffic signal. This improvement is programmed in the City's DIF program and will be installed before building occupancy since it was identified as a direct project impact.*

- ***Redlands Boulevard/SR-60 Eastbound Ramps.*** *The Redlands Boulevard/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF. Therefore, payment of the TUMF would mitigate the significant impact at this location.*

- ***Redlands Boulevard/Fir Avenue-Eucalyptus Avenue.*** *Install a traffic signal and add a westbound left-turn lane, eastbound through lane, eastbound left-turn lane, and a westbound right-turn lane with overlap phasing. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a southbound through lane, southbound left-turn lane, northbound through lane, northbound left-turn lane. These*

improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.

- ***Redlands Boulevard/Eucalyptus Avenue.*** *Install a traffic signal and add a westbound left-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a northbound left-turn lane and a southbound left-turn lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.*

- ***Redlands Boulevard/Alessandro Boulevard.*** *Install a traffic signal. This improvement is programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a southbound left-turn lane, a northbound left-turn lane, a westbound left-turn lane, an eastbound left-turn lane, a westbound right-turn lane, and a southbound through lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.*

4.11.6.4E *Prior to issuance of building permits, the project applicant shall implement the following improvements, either through fees paid to the City of Moreno Valley based on the City's DIF system and the County's TUMF program, or through a fair-share contribution to the City of Moreno Valley as noted below:*

- ***Nason Street/Eucalyptus Avenue.*** *Add a northbound right-turn lane and an eastbound right-turn lane. These improvements are programmed in the City's DIF; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. Implementation of the improvements identified for this intersection in* ***Mitigation Measure 4.11.6.4D*** *would also partially mitigate the significant impact at this intersection. In addition, the project shall pay a fair share (calculated to be 1.6%) toward modification of the traffic signal to provide right-turn overlap phasing for the eastbound and northbound right turns.*

- ***Nason Street/Alessandro Boulevard.*** *Add an eastbound through lane and westbound through lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. Implementation of the improvements identified for this intersection in*

Mitigation Measure 4.11.6.4D *would also partially mitigate the significant impact at this intersection. In addition, the project shall pay a fair share (calculated to be 1.35%) toward the addition of an eastbound left-turn lane and modification of the traffic signal to provide overlap phasing for the westbound right-turn lane.*

- ***Moreno Beach Drive/SR-60 Westbound Ramps.*** *The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF would mitigate the significant impact at this location.*

- ***Moreno Beach Drive/SR-60 Eastbound Ramps.*** *The Moreno Beach Drive/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF and is currently in the design phase. Therefore, payment of the TUMF would mitigate the significant impact at this location.*

- ***Moreno Beach Drive/Eucalyptus Avenue.*** *Restripe eastbound approach to dual left-turn lanes and add a northbound through lane, a westbound through lane, and a southbound right-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. Implementation of the improvements identified for this intersection in* ***Mitigation Measure 4.11.6.4D*** *would also partially mitigate the significant impact at this intersection. In addition, the project shall pay a fair share (calculated to be 5.17%) toward modification of the traffic signal to provide right-turn overlap phasing for the southbound right-turn lane.*

- ***Moreno Beach Drive/Cottonwood Avenue.*** *Add a southbound through lane, a northbound through lane, an eastbound left-turn lane, an eastbound through lane, a westbound through lane, and a westbound left-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would mitigate the significant impact at this location.*

- ***Moreno Beach Drive/Alessandro Boulevard.*** *Add 2 southbound through lanes, add 2 northbound through lanes, an eastbound through lane, and a westbound through lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would mitigate the significant impact at this location.*

- ***Auto Mall Drive/Eucalyptus Avenue.*** *Install a traffic signal. This improvement is programmed in the City's DIF program; therefore, payment of the DIF would mitigate the significant impact at this location.*

- ***Redlands Boulevard/SR-60 Westbound Ramps.*** *Install a traffic signal. This improvement is programmed in the City's DIF program and will be installed before building occupancy since it was identified as a direct project impact. Therefore, payment of the DIF would mitigate the significant impact at this location.*

- ***Redlands Boulevard/SR-60 Eastbound Ramps.*** *The Redlands Boulevard/SR-60 Interchange reconstruction would fully mitigate the project impact at this location. The interchange reconstruction project is programmed in the TUMF. Therefore, payment of the TUMF would mitigate the significant impact at this location.*

- ***Redlands Boulevard/Fir Avenue-Eucalyptus Avenue.*** *Install a traffic signal and add a westbound left-turn lane, eastbound through lane, eastbound left-turn lane, a westbound right-turn lane with overlap phasing, and a southbound right-turn lane with overlap phasing. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a southbound through lane, a southbound left-turn lane, a northbound through lane, a northbound left-turn lane, and a northbound right-turn lane. These improvements are programmed in the TUMF. Therefore, payment of the TUMF would also partially mitigate the significant impact at this location. In addition, the project shall pay a fair share (calculated to be 10.44%) of the cost of adding a southbound left-turn lane.*

- ***Redlands Boulevard/Eucalyptus Avenue.*** *Install a traffic signal and add a westbound left-turn lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a northbound left-turn lane, a northbound through lane, a southbound left-turn lane, and a southbound through lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.*

- ***Redlands Boulevard/Cottonwood Avenue.*** *Add an eastbound through lane and westbound through lane. These improvements are programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at*

this intersection. In addition, add a northbound through lane, and a southbound through lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.

- ***Redlands Boulevard/Alessandro Boulevard.*** *Install a traffic signal. This improvement is programmed in the City's DIF program; therefore, payment of the DIF would partially mitigate the significant impact at this intersection. In addition, add a southbound left-turn lane, a northbound left-turn lane, a westbound left-turn lane, an eastbound left-turn lane, a westbound right-turn lane, a southbound through lane, a westbound through lane, and an eastbound through lane. These improvements are programmed in the TUMF. Therefore, payment of the DIF and TUMF would mitigate the significant impact at this location.*

4.11.6.4F *If the Encilia Avenue and Quincy Street Connection plan is implemented as part of the proposed project, then prior to issuance of building permits, the project applicant shall implement the following improvements: In addition to those identified in* ***Mitigation Measure 4.11.6.4E****, either through fees paid to the City of Moreno Valley based on the City's DIF system and the County's TUMF program, or through a fair-share contribution to the City of Moreno Valley as noted below:*

- ***Moreno Beach Drive/Eucalyptus Avenue.*** *Restripe the southbound shared through/right-turn lane to a southbound through lane. This improvement is programmed in the City's DIF program; therefore, payment of the DIF would mitigate the impacts of the project at this intersection.*

- ***Redlands Boulevard/Fir Avenue-Eucalyptus Avenue.*** *Pay the fair share (calculated to be 10.84%) to add a southbound right-turn lane.*

- ***Redlands Boulevard/Encilia Avenue-Eucalyptus Avenue.*** *Install a traffic signal and add a westbound left-turn lane. These improvements are programmed in the City's DIF program. In addition, add a northbound left-turn lane, northbound through lane, southbound left-turn lane, and a southbound through lane. These improvements are programmed in the TUMF program. Therefore, payment of the DIF and TUMF would fully mitigate the impact of the project at this intersection.*

- ***Moreno Beach Drive/Encilia Avenue.*** *Install a traffic signal, add a northbound through lane, southbound left-turn lane, and a southbound through lane. This improvement is*

programmed in the City's DIF program; therefore, payment of the DIF would mitigate the impacts of the project at this intersection.

Facts in Support of the Findings: Future Year (2035) with Project conditions considers the addition of traffic generated by the proposed project to Future Year (2035) Baseline conditions. The addition of project traffic to the Future Year (2035) scenario would result in conditions exceeding City and Caltrans LOS standards at twelve intersections.

All of the intersections that are forecast to experience a deficient LOS with the proposed project would also operate with a deficient LOS without the proposed project. Although the proposed project does not cause these intersections to operate at an unsatisfactory LOS, it does contribute to the worsening of the intersections' LOS and therefore mitigation would be required to offset the cumulative impact of the project.

Freeway mainline and ramp junctions were evaluated in the Future Year 2035 plus Project condition. Nine segments are forecast to operate at an unsatisfactory level of service in the Future Year 2035 Cumulative plus Project condition. The Traffic Study for the proposed Project also analyzes the Future Year 2035 plus Project conditions a.m. and p.m. peak hour ramp merge-diverge volumes and levels of service for the freeway segments on SR-60. Nine ramp junctions are forecast to operate at an unacceptable level of service in the future Year 2035 plus Project condition. (DEIR pgs. 4.11-25 to 4.11-27)

According to Section 4.11 in the DEIR, with the implementation of the recommended improvements, the minimum level of service standards would be maintained for the Future Year (2035) with Project scenario and impacts would be reduced to a less than significant level for all identified intersections. In addition, reconstruction of the interchanges at the location of the deficient freeway ramp intersections identified in **Mitigation Measure 4.11.6.2D** are already programmed into the TUMF program. It is anticipated that by future year (2035) improvement to the identified freeway ramps and intersections would be built through the TUMF process and coordination by Caltrans, WRCOG, and the City of Moreno Valley. Because the project would pay its fair-share cost associated with these improvements and because such improvements are anticipated to be constructed by the future year (2035), impacts associated with this issue are less than significant after the identified mitigation measures have been implemented. (DEIR, pg. 4.11-35)

b. General Plan Build Out With Project Conditions (Intersection) Traffic and Level of Service Impacts

Potential Significant Impact: The EIR evaluated and concluded that the Project could cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system.

Findings: Implementation of **Mitigation Measure 4.11.6.4E** will reduce the impact related to General Plan buildout to less than significant.

Facts in Support of the Findings: General Plan Build Out with project conditions considers the addition of traffic generated by the proposed project to General Plan Build Out baseline conditions. An intersection LOS analysis was conducted to determine General Plan Build Out intersection performance. The addition of project traffic to the General Plan Build Out scenario would result in conditions exceeding City and Caltrans LOS standards at 13 intersections.

All of the intersections that are forecast to experience a deficient LOS with the proposed project would also operate with a deficient LOS without the proposed project. Although the proposed project does not cause these intersections to operate at an unsatisfactory LOS, it does contribute to the worsening of the intersections' LOS and therefore mitigation would be required to offset the cumulative impact of the project. (DEIR, pg. 4.11-28)

According to Section 4.11of the DEIR, with the implementation of the recommended improvements, the minimum level of service standards would be maintained for the General Plan Build Out with Project scenario and impacts would be reduced to a less than significant level for all identified intersections. However, as noted previously, improvements to the freeway intersections and infrastructure are under the authority of Caltrans. In addition, the deficient freeway ramp intersections identified in **Mitigation Measure 4.11.6.2E** are already programmed into the TUMF program. It is anticipated that by the General Plan Build Out, improvements to the identified freeway ramps and intersections would be built through the TUMF process and coordination by Caltrans, WRCOG, and the City of Moreno Valley. Because the project would pay its fair-share cost associated with these improvements and because such improvements are anticipated to be constructed by the future year (2035), impacts associated with this issue are less than significant after the identified mitigation measures have been implemented. (DEIR, pg. 4.11-37)

7. Utilities and Service Systems

a. Storm Water Drainage Requirements

Potential Significant Impact: The EIR evaluated and concluded that the Project could result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

Findings: Implementation of the following mitigation measures will reduce the impact to storm water drainage to less than significant:

4.7.6.3A *Prior to the approval of associated project rough grading plan, the project proponent shall receive approval on a project-specific Final Hydrology Study, with supporting engineering calculations, from the City Engineer. The Final Hydrology Study shall incorporate relevant requirements identified by the City, and/or site-specific geotechnical investigations.*

Facts in Support of the Findings: According to Section 4.12 of the DEIR, the proposed Project would route storm water flows from the Project site into Quincy Channel after flows are routed through a combination of water quality basins and sand filters. Due to the installation of impervious surfaces on the Project site, the post-development flows would be higher than the pre-development flows. To avoid a significant impact to the existing drainage capacity, the post-development flows coming from the proposed Project site are required to be equal to or less than pre-development flows.[13] To reduce flows to below or equal to pre-development conditions, the on-site storm water flows would be routed to the on-site detention basins[14] before flows are routed off site. While the increase in impervious surfaces attributable to the proposed Project would contribute to a greater volume and higher velocity of storm water flows, the proposed Project's water quality basins would accept and accommodate runoff that would result from project construction at pre-project conditions.

As identified in the Preliminary Hydrology Calculations[15] prepared for the Project, to adequately contain and store the greatest volume that would be generated, the Project site would require a minimum storage volume of 13.6 acre-feet. The proposed amount of storage area (20.3 acre-feet) is greater than the required amount of storage area. Based on this, it appears there is excess capacity of 6.7 acre-feet (20.3 acre-feet – 13.6 acre-feet = 6.7 acre-feet) of storage area available from the on-site detention basins; therefore, the proposed Project appears to have adequate drainage capacity that would result in post-development flows being reduced to pre-development flows before leaving the Project site. However, to ensure that impacts associated with on-site drainage capacity are reduced to a less significant level, the

[13] As part of the MS4 Permit issuance requirements, projects must identify any Hydrologic Conditions of Concern and demonstrate that changes to hydrology are minimized to ensure that post-development runoff rates and velocities from a site do not adversely affect downstream erosion, sedimentation, or stream habitat.

[14] A detention basin is an area where excess storm water is stored or held temporarily and then slowly drains when water levels in the receiving channel recede. In essence, the water in a detention basin is temporarily detained until additional room becomes available in the receiving channel.

Mitigation Measure 4.7.6.3A has been identified to reduce potential impacts to less than significant levels. (DEIR, pgs. 4.12-16 to 4.12-17)

8 Global Climate Change

a. Greenhouse Gas Emissions

Potential Significant Impact: The EIR evaluated and concluded that the Project could have an adverse effect due to the generation of greenhouse gas emissions (GHGs).

Findings: Implementation of the following mitigation measures will reduce the impact related to greenhouse gas emissions to less than significant:

4.13.6.1A *Prior to the issuance of building permits, the project applicant shall provide evidence to the City of Moreno Valley that building features have been incorporated in building plans as required by Title 24 of the California Code of Regulations. These features include but are not limited to the following:*

- *Exterior windows shall utilize window treatments for efficient energy conservation.*
- *Per CALGreen Code requirements, water-efficient fixtures and appliances, including but not limited to low-flow faucets, dual-flush toilets minimizing water consumption by 20 percent from the Building Standards Code baseline water consumption shall be used.*
- *Per CALGreen Code requirements, a Commissioning Plan shall be prepared and all building systems (e.g., heating, ventilation, and air-conditioning [HVAC], irrigation systems, lighting, and water heating) shall be commissioned by the Commissioning Authority.*
- *Per CALGreen Code, restrict watering methods (e.g., prohibit systems that apply water to non-vegetated surfaces) and control runoff.*

4.13.6.1B *Prior to the issuance of building permits, the project applicant shall provide evidence to the City of Moreno Valley that the following measures have been incorporated into the design and construction of the project:*

- *Use of locally produced and/or manufactured building materials for at least 10 percent of the construction materials used for the project.*

- *Use of "Green Building Materials," such as those materials that are resource efficient, and recycled and manufactured in an environmentally friendly way, for at least 10 percent of the project.*

- *Limit unnecessary idling of construction equipment. A reduction in equipment idling would reduce fuel consumption, and therefore, GHG emissions.*

- *Maximize the use of electricity from the power grid by replacing diesel- or gasoline-powered equipment. This would reduce GHG emissions because electricity can be produced more efficiently at centralized power plants.*

- *Design the project building to exceed the California Building Code's (CBC) Title 24 energy standard, including, but not limited to, any combination of the following:*

    - *Increase insulation such that heat transfer and thermal bridging is minimized.*

    - *Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.*

    - *Incorporate ENERGY STAR or better rated windows, space heating and cooling equipment, light fixtures, appliances, or other applicable electrical equipment.*

- *Provide a landscape and development plan for the project that takes advantage of shade, prevailing winds, and landscaping.*

- *Install efficient lighting and lighting control systems. Use daylight as an integral part of the lighting systems in buildings.*

- *Install light-colored "cool" roof) and cool pavements.*

- *Install energy-efficient heating and cooling systems, appliances and equipment, and control systems.*

- *Install solar or light-emitting diodes (LEDs) for outdoor lighting for auto parking areas.*

4.13.6.1C *Prior to the issuance of occupancy permits, the project applicant shall provide evidence to the City of Moreno Valley that the following measures have been be incorporated into the operation of the project:*

- *The project applicant shall use less than 3,900 Global Warming Potential (GWP) hydrofluorocarbon (HCF) refrigerants or natural refrigerants (ammonia, propane, carbon dioxide [CO_2]) for refrigeration and fire suppression equipment.*

- *Provide vegetative or man-made exterior wall shading devices for east-, south-, and west facing walls with windows.*

- *Devise a comprehensive water conservation strategy appropriate for the project and its location. The strategy may include the following, plus other innovative measures that may be appropriate:*

    - *Install drought-tolerant plants for landscaping.*

    - *Use reclaimed water for landscape irrigation within the project. Install the infrastructure to deliver and use reclaimed water.*

    - *Install water-efficient irrigations systems, such as weather-based and soil-moisture-based irrigation controllers and sensors for landscaping according to the California Department of Water Resources Model Efficient Landscape Ordinance.*

- *Provide employee education about reducing waste and available recycling services.*

Facts in Support of the Findings: Future development that could occur on the proposed Project site could generate GHG emissions during construction and operation activities. It is anticipated that the majority of energy consumption (and associated generation of GHG emissions) would occur during the project's operation (as opposed to its construction). The total GHG emissions over the entire construction process are expected to be 2,700 metric tons. Based on a comparison of the proposed Project to the South Coast Air Quality Management District tiered interim GHG significance criteria, the most applicable screening threshold listed is the Industrial at 10,000 ton per year (tpy) CO_2e. The long-term project operational GHG emissions for the proposed Project are 79,000 tpy CO_2e and exceed this threshold; therefore, the project operational GHG emissions are significant. In order to ensure that the proposed Project complies with and would not conflict with or impede the implementation of reduction goals identified in AB 32, the Governor's EO S-3-05, and other strategies to help reduce GHGs to the level proposed by the Governor, **Mitigation Measures 4.13.6.1A** through **4.13.6.1C** shall be implemented. The mitigation measure would contribute to a reduction in GHG emissions from energy, mobile, and water

usage sources. With implementation of the identified mitigation measures, the proposed Project's GHG emissions would be reduced to less than significant levels.

C. ENVIRONMENTAL IMPACTS NOT FULLY MITIGATED TO A LEVEL OF LESS-THAN-SIGNIFICANT

The Moreno Valley City Council finds the following environmental impacts identified in the EIR remain significant even after application of all feasible mitigation measures: aesthetics (individually and cumulative), agricultural resources (individually and cumulative), air quality (individually and cumulative), cumulative population and housing, and transportation. In accordance with CEQA Guidelines Section 15092(b)(2), the City Council of the City of Moreno Valley cannot approve the Project unless it first finds (1) under *Public Resources Code* Section 21081(a)(3), and CEQA Guidelines Section 15091(a)(3), that specific economic, legal, social technological, or other considerations, including provisions of employment opportunities to highly trained workers, make infeasible the mitigation measures or Project alternatives identified in the EIR; and (2) under CEQA Guidelines section 15092(b), that the remaining significant effects are acceptable due to overriding concerns described in the CEQA Guidelines Section 15093 and, therefore, a statement of overriding considerations is included herein.

1. Aesthetics (Individual and Cumulative Impacts)

a. Scenic Vistas

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could have adverse effects on one or more scenic vistas, notably views of the Box Springs Mountains, the Badlands, Moreno Peak, and the Russell Mountains.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts to scenic vistas will remain significant and unavoidable.

Facts in Support of the Finding: According to Section 4.1 of the DEIR, the nearest sensitive permanent visual receptor to the Project would be the existing single-family residences to the southeast across future Encilia Avenue. In general, views for the residences southeast of the site will change from vacant land to industrial buildings with extensive landscaping including rows of citrus trees to help provide a visual buffer. Permanent views for residences north of SR-60 and transient views for travelers on SR-60 will change as the tops of the proposed industrial buildings will partially block views of the mountains to the

south. Despite the provision of ornamental landscaping and citrus trees along the northern, western, and southern boundaries, implementation of the proposed Project would obstruct background views of the distant Box Springs Mountains for residences southeast of the Project, foreground and midground views of travelers on SR-60, and background views of the Mount Russell Range for residences north of SR-60 and along Pettit Street. This obstruction of views is a significant visual impact of the proposed Project. The sizes, heights, and general locations of buildings on the site are limited by the types of uses being proposed as part of this Project. Therefore, there is no feasible mitigation available to reduce impacts related to the loss of this viewshed. Since there is no feasible mitigation available to reduce adverse effects on scenic vistas, impacts associated with this issue would remain significant and unavoidable. (DEIR, pgs. 4.1-9 to 4.1-17)

b. Scenic Resources and Scenic Highways

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could have adverse effects on one or more scenic vistas, including views of the Box Springs Mountains and the Badlands for both residents and travelers on SR-60.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts to scenic vistas and scenic highways will remain significant and unavoidable.

Facts in Support of the Finding: According to Section 4.1 of the DEIR, the City of Moreno Valley identifies SR-60 as a local scenic road.[16] According to the City's General Plan, the man-made environment is equally important as natural landforms in terms of scenic values (e.g., buildings, landscaping and signs). Agricultural uses, such as citrus groves, are one example of a man-made environment that constitutes a visually pleasing feature.

Existing views for motorists traveling eastbound and westbound on SR-60 consist of noise attenuation walls, commercial and residential development, landscaping, parking lots, open space, and orange groves in addition to the mountains and badlands in the distance. Development of the proposed Project would alter the existing view by introducing large industrial buildings adjacent to the freeway. Existing eastbound views on SR-60 would be altered with the development of the proposed Project. Motorists would still view noise attenuation walls, urban development, landscaping, and scattered trees as they look

[16] *Conservation Element, Figure 7-2 Major Scenic Resources,* City of Moreno Valley General Plan, adopted July 11, 2006.

to the south, although these views would be of short duration for motorists traveling at normal freeway speeds.

The proposed Project would have highly reflective surfaces at the taller (43 feet) glass veneered office towers, but would not result in development along ridge lines. The proposed Project would result in an increased number of large bulk structures, but would include colors and materials that are compatible with the existing environment. The proposed ornamental landscaping and citrus trees would provide some visual screening. However, the proposed Project would result in the obstruction of most of the Mount Russell Range for motorists traveling on SR-60, so the proposed buildings would obstruct the view of a scenic feature. The proposed Project meets criteria in both the moderate and major visual intrusion categories. In an overabundance of caution, the worst-case scenario is utilized. Therefore, it is anticipated that based on Project design features, the proposed Project would have a major visual intrusion (i.e., significant impact) for motorists traveling on SR-60. Incorporation of the proposed building façades and ornamental landscaping design features will soften the visual appearance of the buildings from SR-60; however, the obstruction of local views will still be significant, and there are no feasible mitigation measures available that would reduce these impacts to less than significant levels. Therefore, impacts associated with this issue would remain significant and unavoidable. (DEIR, pgs. 4.1-17 to 4.1-19)

c. Existing Visual Character or Quality of Site and its Surroundings

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could have adverse effects that change the general character of the Project site (e.g., loss of open area), the components of the visual settings (e.g., landscaping and architectural elements), and the visual compatibility between proposed site uses and adjacent land uses.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts to the existing visual character of the site will remain significant and unavoidable.

Facts in Support of the Finding: The significance of visual impacts is inherently subjective as individuals respond differently to changes in the visual characteristics of an area. Development of the proposed Project would change the existing character of the Project site from open space to a more urbanized setting with large industrial buildings. The change in the character of the site would constitute a significant alteration of the existing visual character of the Project site.

According to Section 4.1 of the DEIR, the proposed Project features a variety of architectural elements including façade accents such as corner treatments and roof trim. The Project also provides variation in wall planes that serve to avoid an institutional appearance and break up the bulk of the buildings. This variation would create shadow lines at various times of the day. The proposed ornamental landscaping would replace the scattered weedy vegetation. Landscaping on the site would be provided in accordance with City Municipal Code Chapter 9.17, which requires the installation of landscaping on site and the planting of one tree for every 30 linear feet of building dimension that is visible from the parking lot or public right-of-way. As part of conditions of approval for the proposed Project, orange trees would be planted on the northern portion of the Project site adjacent to SR-60 and along the perimeter of the proposed Project site adjacent to the public right-of-way or residential zoning.

Since the Project site is currently vacant, suburban development of any type would cause a fundamental change in the visual characteristics of the Project site. In addition, the site is currently planned for industrial, business park, single-family, and multifamily uses, which would be different in appearance from the proposed industrial warehouse buildings. Of these uses, the lower density housing (R2) is currently designated adjacent to the existing residences southeast of the Project site.

The proposed Project would replace the existing vacant parcel and citrus groves with development that is visually compatible with the existing commercial development to the west and the existing and the

approved Ridge industrial development to the east, but it will not be compatible with the residential uses to the southeast or farther to the north across SR-60.

Incorporation of the proposed building façades and landscaping design features will soften the visual appearance of the buildings from both SR-60 and nearby residences; however, the fundamental change in visual character of the area will still be significant. Even with compliance with the City's General Plan and Municipal Code development guidelines for industrial development, including the 250-foot buffer between industrial and residential land uses, the anticipated fundamental change in views expected in this area will be significant. Due to the heights and masses of buildings needed to accommodate the proposed land uses, no feasible mitigation is available that would reduce these potential impacts to less than significant levels. Therefore, impacts associated with this issue would remain significant and unavoidable. (DEIR, pgs. 4.1-19 to 4.1-21)

d. Cumulative Aesthetics Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could in connection with past, present, and probable future projects adversely affect one or more scenic vistas.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this cumulative impact to a level of less than significant. Accordingly, Project-related cumulative impacts to scenic vistas will remain significant and unavoidable.

Facts in Support of the Finding: The development of the proposed Project would partially obstruct views of surrounding mountain ranges from current vantage points near the Project structures. However, vistas would not be completely obstructed from viewpoints through parking circulation areas, openings between rows of buildings or trees, or at the end of vehicular rights-of-way. Development of lands within the City, particularly along SR-60, would result in the cumulative conversion from open space to a more urbanized land use. The proposed Project would continue a recent development trend in the City to expand industrial uses along the south side of SR-60 east of the City's Auto Center. This development trend has not yet been incorporated into the City's General Plan. The proposed Project, in conjunction with other cumulative projects, would be developed in a manner consistent with existing development trends in the City. Since other cumulative projects in the area would include similar distribution uses, it can be anticipated that such uses would have a similar design and massing as the proposed Project. Since the proposed Project would obstruct views of the surrounding mountains, it can be reasonable to conclude that similar warehouse distribution uses would also obstruct views of the surrounding mountains. In

addition, General Plan Policy 7.7.4 in the Conservation Element requires the designation of SR-60 as a local scenic roadway. Therefore, the proposed Project, in combination with other cumulative projects in the eastern portion of the City and along SR-60 would have a cumulatively significant and unavoidable impact on aesthetics (i.e., views and scenic resources) in this portion of the City. (DEIR, pgs. 4.1-21 to 4.1-22)

2. Agricultural Resources (Individual and Cumulative Impacts)

a. Conversion of State Designated Farmland

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could impact 82.5 acres of Prime Farmland.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts to state designated farmland will remain significant and unavoidable.

Facts in Support of the Finding: Section 4.2 of the DEIR identifies several potential agricultural conservation measures contained in the City's General Plan that include: enrolling productive agricultural land into a Williamson Act Contract; providing protection to ongoing agricultural operations from complaints and nuisance complaints from adjacent new development; protecting productive agricultural land subject to conversion through the purchase of or transfer of its development rights; purchasing conservation easements on existing agricultural land to ensure that the land is never converted to urban uses; and donating funds to a regional or statewide program that promotes and implements the use of agricultural land conservation easements.

The potential agricultural conservation measures identified in the DEIR are not considered to be feasible by the City for the following reasons:

Williamson Act Contracts: Williamson Act contracts are entered into voluntarily by property owners and the City cannot force owners to participate in this program. In addition, Williamson Act contracts will result only in temporary preservation of agricultural land since property owners have the option of non-renewal of these contracts at any time after the ten-year contract period ends.

Protecting Existing Agricultural Operations: Providing protection for ongoing agricultural activities from new developments, such as buffers between agricultural operations and new development or requiring the

notification and disclosure of agricultural activities to the purchasers adjacent properties, will not permanently protect agricultural land.

Transfer of Development Rights, Conservation Easements, or Agricultural Conservation Bank: The purchase or transfer of development rights, purchase of conservation easements, or donation of funds to assist in the conservation of agricultural land would need to be implemented to ensure the preservation of agricultural land. As stated previously, the City anticipates the conversion of agricultural land within the City and does not set aside land for permanent preservation. The current General Plan does not include any agricultural designations. The City allows agricultural uses in all land use designations as an interim use until such time as the land is developed per the vision identified in the General Plan. One of the goals stated in the City's recent General Plan is the "…orderly conversion of agricultural lands." For this reason, the City expects that the majority of the land within the City will be converted to urban uses, although some agriculture will continue as interim uses, as allowed by the City's Development Code for all zoning categories. The existing and continued reduction in productive agricultural operations within the City is produced by several factors including; urbanization in the City and Inland Empire resulting in dramatically increasing land prices; high water and labor costs; environmental regulation (e.g., insects, odors, groundwater contamination, and solid waste removal); and competition from Kern County and the Central Valley with lower land costs and reduced regulations. (DEIR, pgs. 4.1-10 to 4.1-14)

The City has determined that these measures are economically infeasible and that they are contrary to the City's vision (as stated in its General Plan) for the Project site and alternative mitigation has not been identified, and impacts related to this issue remain significant and unavoidable. (DEIR, pgs. 4.2-6 to 4.2-9)

b. Conversion of Farmland to a Non-Agricultural Use

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would result in the development of industrial uses on land that has historically been utilized for citrus production.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts from the conversion of farmland to a non-agricultural use will remain significant and unavoidable.

Facts in Support of the Finding: According to Section 4.2 of the DEIR, the Project site has historically been in agricultural production and was most recently used to grow citrus. The conversion of the Project site to a non-agricultural use is a result of various economic and demographic factors. Increased cost for

water and a continuing demand for housing and other development in the City and region are the primary reasons for this agricultural land conversion. A LESA model was also used to evaluate the site. It was determined that the Project LESA score is 85.3, which is considered significant. The Project does not include design features that would prevent the existing agricultural operations in the area from continuing. The Project would convert land that was previously used for agriculture and the development of the proposed Project may contribute to the conversion of adjacent lands. However, the Project is a logical extension of development in the City and does not create leapfrog development or islands of agricultural land that would be difficult to farm. The City recognizes development pressures within the City, and that these pressures will increase as the City continues to build out. Additionally, while the Project would not directly cause the conversion of adjacent agricultural land to non-agricultural uses because in has lied fallow for several years, it would contribute to development pressure within the City that could potentially lead to the conversion of agricultural land off site. However, as stated in the previous discussion of these Findings regarding the conversion of state designated farmland, the City has determined the agricultural conservation measures identified by the City are economically infeasible and that they are contrary to the City's vision (as stated in its General Plan) for the Project site and alternative mitigation has not been identified. Therefore, impacts associated with this issue remain significant and unavoidable. (DEIR, pgs. 4.1-9 to 4.1-10)

c. Cumulative Agricultural Resource Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would have a significant cumulative impact on agricultural resources in Riverside County.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts to cumulative state designated farmland will remain significant and unavoidable.

Facts in Support of the Finding: According to Section 4.2 of the DEIR, the Project-related impacts to Prime Farmland and the conversion of agricultural land to a non-agricultural use cannot be mitigated through a local or regional program to mitigate impacts to agricultural resources. As stated previously, the City does not maintain a General Plan or zoning designation for agricultural uses and there are no Project-level feasible mitigation measures that would help reduce cumulative impacts. The cumulative effect of development in the region will continue to result in the conversion of agricultural lands to non-agricultural uses. Because agricultural land, including Prime Farmland, Farmland of Statewide Importance, and Farmland of Local Importance are finite resource, the conversion of approximately 122.8

acres of farmland to industrial uses, combined with planned and future development in the City and region, represents a significant cumulative impact to agricultural operations and resources. As stated in the previous discussion of these Findings regarding the conversion of state designated farmland and conversion of agricultural land to a non-agricultural land use, the City has determined the agricultural conservation measures identified by the City are economically infeasible and that they are contrary to the City's vision (as stated in its General Plan) for the Project site and alternative mitigation has not been identified. Therefore, cumulative impacts to agricultural resources are considered significant and unavoidable. (DEIR, pg. 4.1-11)

2. Air Quality (Project-Specific and Cumulative Impact)

a. Air Quality Management Plan Consistency

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project has the potential to conflict with implementation of regional Air Quality Management Plan and the SIP.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that **Mitigation Measures 4.3.6.2A** through **4.3.6.2M** and **4.3.6.3A** through **4.3.6.3C** are incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, the proposed Project will not be consistent with AQMP and the SIP and therefore impacts are considered significant and unavoidable.

Facts in Support of the Finding: An Air Quality Management Plan (AQMP) describes air pollution control strategies to be taken by counties or regions classified as nonattainment areas. The AQMP's main purpose is to bring the area into compliance with the requirements of Federal and State air quality standards. The AQMP uses the assumptions and projections by local planning agencies to determine control strategies for regional compliance status. Therefore, any projects causing a significant impact on air quality would impede the progress of the AQMP. CEQA requires that projects resulting in a General Plan Amendment be analyzed for consistency with the AQMP.

For a Project in the Basin to be consistent with the AQMP, the pollutants emitted from the Project must not exceed the South Coast AQMD significant threshold or cause a significant impact on air quality. One measurement tool in determining consistency with the AQMP is to determine how a Project accommodates the expected increase in population or employment. The proposed Project site is located in an urbanizing area of the City of Moreno Valley along SR-60, which accommodates traffic in the area. In addition, the proposed warehouse uses would be within walking distance of existing homes and

commercial areas in the local vicinity. The proposed Project would add jobs resulting from the development of the warehouse uses to the City, with the potential to minimize the VMT traveled within the Project site and community.

The SCAQMD also has the following consistency criteria: the proposed Project cannot result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP; and the proposed Project cannot exceed the assumptions in the AQMP in 2010 or increments based on the year of Project build-out phase.

Implementation of the proposed Project would require a zone change from Business Park (BP), Business Park Mixed Use (BPX), Multi-Family Residential (R-15), Suburban Residential (R-5), and Residential Agriculture (RA-2) to Light Industrial for the entire 122.8 acres. Since the proposed Project will require a General Plan Amendment, the Project has not been considered in preparation of the General Plan and therefore it is uncertain if it is consistent with the AQMP.

Because the Project site is located in a nonattainment air basin for ozone, PM_{10} and $PM_{2.5}$, the proposed Project's emission of ozone precursors (CO, ROG, and NO_X), PM_{10} and $PM_{2.5}$ would contribute to the existing nonattainment status in the Basin. Thus, according to the SCAQMD Consistency Criterion No. 1, the proposed Project in not consistent with the AQMP.

The proposed Project would have significant impacts. **Mitigation Measures 4.3.6.2A** through **4.3.6.2M** and **Mitigation Measures 4.3.6.3A** through **4.3.6.3C** shall be implemented as part of the proposed Project. The proposed Project would be considered to be consistent only after the City of Moreno Valley General Plan Amendment is approved. Once the City's General Plan Amendment and the required zoning changes are approved, the proposed Project would be included in the next SCAG and SCAQMD AQMP projections. When that occurs, the proposed Project would be consistent with the regional AQMP and the SIP. However, until that occurs, the Project is inconsistent with the regional AQMP and the impacts are considered significant and unavoidable. (DEIR, pgs. 4.3-21 to 4.3-22)

b. Equipment Exhaust from Construction-Related Activities

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project has the potential to exceed applicable daily thresholds that may affect sensitive receptors.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that Mitigation

Measures 4.3.6.2A through 4.3.6.2M are incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, the proposed Project will have a significant impact due to equipment exhaust from construction related activities and therefore impacts are considered significant and unavoidable.

4.3.6.2A *Prior to the issuance of a grading permit, the Project developer shall require by contract specifications that contractors shall place construction equipment staging areas at least 200 feet away from sensitive receptors. Contract specifications shall be included in the proposed Project construction documents, which shall be reviewed by the City.*

4.3.6.2B *Prior to the issuance of a grading permit, the Project developer shall require by contract specifications that contractors shall utilize power sources (e.g., power poles) or clean-fuel generators. Contract specifications shall be included in the proposed Project construction documents, which shall be reviewed by the City.*

4.3.6.2C *Prior to the issuance of a grading permit, the Project developer shall require by contract specifications that contractors shall utilize California Air Resources Board (CARB) Tier II Certified equipment or better during the rough/mass grading phase for the following pieces of equipment: rubber-tired dozers and scrapers. Contract specifications shall be included in the proposed Project construction documents, which shall be reviewed by the City.*

Project start to December 31, 2014: All off-road diesel-powered construction equipment greater than 50 horsepower shall meet Tier 3 off-road emission standards. In addition, all construction equipment shall be outfitted with Best Available Control Technology (BACT) devices certified by CARB. Any emission control devises used by the contractor shall achieve emission reductions that are no less than what would be achieved by a Level 3 diesel emission control strategy for a similarly sized engine as defined by CARB regulations.

Post January 1, 2015: All off-road diesel–powered construction equipment greater than 50 horsepower shall meet Tier 4 emission standards, where available. In addition, all construction equipment shall be outfitted with Best Available Control Technology (BACT) devices certified by CARB. Any emission control devises used by the contractor shall achieve emission reductions that are no less than what would be achieved by a

Level 3 diesel emission control strategy for a similarly sized engine as defined by CARB regulations.

A copy of each unit's certified tier specifications, BACT documentation, and CARB or SCAQMD operating permit shall be provided at the time of mobilization of each applicable unit of equipment.

4.3.6.2D *All clearing, grading, earthmoving, or excavation activities shall cease when winds (as instantaneous gusts) exceed 25 mph per SCAQMD guidelines in order to limit fugitive dust emissions.*

4.3.6.2E *The contractor shall ensure that all disturbed unpaved roads and disturbed areas within the Project are watered at least three times daily during dry weather. Watering, with complete coverage of disturbed areas, shall occur at least three times a day, preferably in the mid-morning, afternoon, and after work is done for the day.*

4.3.6.2F *The contractor shall ensure that traffic speeds on unpaved roads and Project site areas are reduced to 15 miles per hour or less to reduce PM_{10} and $PM_{2.5}$ fugitive dust haul road emissions. Speed limit signs (15 mph maximum) shall be posted at entry points to the Project site, and along any unpaved roads providing access to or within the Project site and/or any unpaved designated on-site travel routes.*

4.3.6.2G *Groundcover shall be replaced, and/or non-toxic soil stabilizers shall be applied (according to manufacturers' specifications) to any inactive construction areas (previously graded areas inactive for ten days or more).*

4.3.6.2H *The contractor shall minimize pollutant emissions by maintaining equipment engines in good condition and in proper tune according to manufacturer's specifications and by not allowing construction equipment to be left idling for more than five minutes (per California law).*

4.3.6.2I *The contractor shall ensure use of low-sulfur diesel fuel in construction equipment as required by the California Air Resources Board (CARB) (diesel fuel with sulfur content of 15 ppm by weight or less).*

4.3.6.2J *Grading plans, construction specifications and bid documents shall also include the following requirements:*

- *Off-road construction equipment shall utilize alternative fuels where feasible e.g., biodiesel fuel (a minimum of B20), natural gas (CNG), liquefied natural gas (LNG), propane, except for equipment where use of such fuels would void the equipment warranty;*

- *Gravel pads shall be provided at all access points to prevent tracking of mud onto public roads;*

- *Install and maintain trackout control devices at all access points where paved and unpaved access or travel routes intersect;*

- *The contractor or builder shall designate a person or person(s) to monitor the dust control program and to order increased watering, as necessary, to prevent transport of dust off site;*

- *The contractor or builder shall post a publicly visible sign with the telephone number and person to contact regarding dust complaints. The contact person shall take corrective action within 24 hours;*

- *High-pressure injectors shall be provided on diesel construction equipment if feasible;*

- *Engine size of construction equipment shall be limited to the minimum practical size;*

- *Substitute gasoline-powered for diesel powered construction equipment where gasoline powered equipment is available;*

- *Use electric construction equipment where it is practical to use such equipment;*

- *Install catalytic converters on gasoline-powered equipment where this type of equipment is available;*

- *Ride-sharing program for the construction crew shall be supported by contractor(s) via incentives or other inducement;*

- *Documentation shall be provided to the City of Moreno Valley indicating that construction workers have been encouraged to carpool or otherwise reduce VMT to the greatest extent practical, including providing information on available park and ride programs;*

- *Lunch vendor services shall be allowed on site during construction to minimize the need for off-site vehicle trips; and*
- *All forklifts used during construction and in subsequent operation of the Project shall be electric or natural gas powered.*

4.3.6.2K *Throughout Project construction, a construction relations officer/community liaison, appointed by the Applicant, shall be retained on site. In coordination and cooperation with the City, the construction relations officer/community liaison shall respond to any concerns related to PM_{10} (fugitive dust) generation or other construction-related air quality issues.*

4.3.6.2L *All Project entrances shall be posted with signs which state:*

- *Truck drivers shall turn off engines when not in use;*
- *Diesel delivery trucks servicing the Project shall not idle for more than three (3) minutes; and*
- *Telephone numbers of the building facilities manager and CARB, to report violations.*

These measures shall be enforced by the on-site facilities manager (or equivalent).

4.3.6.2M *During Project grading and construction, the various Project contractors shall adhere to the control measures listed in Tables 1 and 2.*

Air Quality Measure 4.3.6.2M Table 1: Best Available Control Measures for Fugitive Dust (Applicable to All Construction Activity Sources)

Source Category	***Control Measures***	***Guidance***
Backfilling	• *Stabilize backfill material when not actively handling; and* • *Stabilize backfill material during handling; and* • *Stabilize soil at completion of*	• *Mix backfill soil with water prior to moving; and* • *Dedicate water truck or high capacity hose to backfilling equipment; and*

Source Category	***Control Measures***	***Guidance***
	activity.	• *Empty loader bucket slowly so that no dust plumes are generated; and* • *Minimize drop height from loader bucket.*
Clearing and grubbing	• *Maintain stability of soil through pre-watering of site prior to clearing and grubbing; and* • *Stabilize soil during clearing and grubbing activities; and* • *Stabilize soil immediately after clearing and grubbing activities.*	• *Maintain live perennial vegetation where possible; and* • *Apply water in sufficient quantity to prevent generation of dust plumes.*
Clearing forms	• *Use water spray to clear forms; or* • *Use sweeping and water spray to clear forms; or* • *Use vacuum system to clear forms.*	• *Use of high pressure air to clear forms may cause exceedance of Rule requirements.*
Crushing	• *Stabilize surface soils prior to operation of support equipment; and* • *Stabilize material after crushing.*	• *Follow permit conditions for crushing equipment; and* • *Pre-water material prior to loading into crusher; and* • *Monitor crusher emissions opacity; and* • *Apply water to crushed material to prevent dust*

Air Quality Measure 4.3.6.2M Table 1: Best Available Control Measures for Fugitive Dust (Applicable to All Construction Activity Sources)

Source Category	***Control Measures***	***Guidance***
		plumes.
Cut and fill	• *Pre-water soils prior to cut and fill activities; and* • *Stabilize soil during and after cut and fill activities.*	• *For large sites, pre-water with sprinklers or water trucks and allow time for penetration; and* • *Use water trucks/pulls to water soils to depth of cut prior to subsequent cuts.*
Demolition – mechanical/ manual	• *Stabilize wind erodible surfaces to reduce dust; and* • *Stabilize surface soil where support equipment and vehicles will operate; and* • *Stabilize loose soil and demolition debris; and* • *Comply with AQMD Rule 1403.*	• *Apply water in sufficient quantities to prevent the generation of visible dust plumes.*
Disturbed soil	• *Stabilize disturbed soil throughout the construction site; and* • *Stabilize disturbed soil between structures.*	• *Limit vehicular traffic and disturbances on soils where possible; and* • *If interior block walls are planned, install as early as possible; and* • *Apply water or a stabilizing agent in sufficient quantities to prevent the generation of*

Air Quality Measure 4.3.6.2M Table 1: Best Available Control Measures for Fugitive Dust (Applicable to All Construction Activity Sources)

Source Category	***Control Measures***	***Guidance***
		visible dust plumes.
Earthmoving activities	• *Pre-apply water to depth of proposed cuts; and* • *Re-apply water as necessary to maintain soils in a damp condition and to ensure that visible emissions do not exceed 100 ft in any direction; and* • *Stabilize soils once earthmoving activities are complete.*	• *Grade each Project phase separately, timed to coincide with construction phase; and* • *Upwind fencing can prevent material movement on site; and* • *Apply water or a stabilizing agent in sufficient quantities to prevent the generation of visible dust plumes.*
Importing/ exporting of bulk materials	• *Stabilize material while loading to reduce fugitive dust emissions; and* • *Maintain at least 6 inches of freeboard on haul vehicles; and* • *Stabilize material while transporting to reduce fugitive dust emissions; and* • *Stabilize material while unloading to reduce fugitive dust emissions; and* • *Comply with CVC Section 23114.*	• *Use tarps or other suitable enclosures on haul trucks; and* • *Check belly-dump truck seals regularly and remove any trapped rocks to prevent spillage; and* • *Comply with track-out prevention/mitigation requirements; and* • *Provide water while loading and unloading to reduce visible dust plumes.*
Landscaping	*Stabilize soils, materials, slopes*	• *Apply water to materials to*

Source Category	*Control Measures*	*Guidance*
		stabilize; and • *Maintain materials in a crusted condition; and* • *Maintain effective cover over materials; and* • *Stabilize sloping surfaces using soil binders until vegetation or ground cover can effectively stabilize the slopes; and* • *Hydroseed prior to rain season.*
Road shoulder maintenance	• *Apply water to unpaved shoulders prior to clearing; and* • *Apply chemical dust suppressants and/or washed gravel to maintain a stabilized surface after completing road shoulder maintenance.*	• *Installation of curbing and/or paving of road shoulders can reduce recurring maintenance costs; and* • *Use of chemical dust suppressants can inhibit vegetation growth and reduce future road shoulder maintenance costs.*
Screening	• *Pre-water material prior to screening; and* • *Limit fugitive dust emissions to opacity and plume length standards; and*	• *Dedicate water truck or high capacity hose to screening operation; and* • *Drop material through the screen slowly and minimize*

Air Quality Measure 4.3.6.2M Table 1: Best Available Control Measures for Fugitive Dust (Applicable to All Construction Activity Sources)

Source Category	***Control Measures***	***Guidance***
	• *Stabilize material immediately after screening.*	*drop height; and* • *Install wind barrier with a porosity of no more than 50 percent upwind of screen to the height of the drop point.*
Staging areas	• *Stabilize staging areas during use; and* • *Stabilize staging area soils at Project completion.*	• *Limit size of staging area; and* • *Limit vehicle speeds to 15 miles per hour; and* • *Limit number and size of staging area entrances/exits.*
Stockpiles/ bulk material handling	*Stabilize stockpiled materials, and stockpiles within 100 yards of off-site occupied buildings must not be greater than 8 ft in height; or must have a road bladed to the top to allow water truck access or must have an operational water irrigation system that is capable of complete stockpile coverage.*	• *Add or remove material from the downwind portion of the storage pile; and* • *Maintain storage piles to avoid steep sides or faces.*
Traffic areas for construction activities	• *Stabilize all off-road traffic and parking areas; and* • *Stabilize all haul routes; and* • *Direct construction traffic over established haul routes.*	• *Apply gravel/paving to all haul routes as soon as possible to all future roadway areas; and* • *Barriers can be used to ensure vehicles are only used on established parking areas/haul routes.*

Air Quality Measure 4.3.6.2M Table 1: Best Available Control Measures for Fugitive Dust (Applicable to All Construction Activity Sources)

Source Category	***Control Measures***	***Guidance***
Trenching	• *Stabilize surface soils where trencher or excavator and support equipment will operate; and* • *Stabilize soils at the completion of trenching activities.*	• *Pre-watering of soils prior to trenching is an effective preventive measure. For deep trenching activities, pre-trench to 18 inches, soak soils via the pre-trench and resuming trenching; and* • *Washing mud and soils from equipment at the conclusion of trenching activities can prevent crusting and drying of soil on equipment.*
Truck loading	• *Pre-water material prior to loading; and* • *Ensure that freeboard exceeds 6 inches (CVC 23114).*	• *Empty loader bucket such that no visible dust plumes are created; and* • *Ensure that the loader bucket is close to the truck to minimize drop height while loading.*
Turf overseeding	• *Apply sufficient water immediately prior to conducting turf vacuuming activities to meet opacity and plume length standards; and* • *Cover haul vehicles prior to exiting the site.*	• *Haul waste material immediately off site.*
Unpaved roads/parking	• *Stabilize soils to meet the applicable performance standards; and*	• *Restricting vehicular access to established unpaved travel paths and parking lots can*

Fugitive Dust Source Category	*Control Measures*
Earthmoving	• *Cease all active operations; or* • *Apply water to soil not more than 15 minutes prior to moving such soil.*
Disturbed surface areas	• *On the last day of active operations prior to a weekend, holiday, or any other period when active operations will not occur for not more than 4 consecutive days: apply water with a mixture of chemical stabilizer diluted*

Air Quality Measure 4.3.6.2M Table 2: Contingency Control Measures for Fugitive Dust (During High Winds in Excess of 25 mph)

Fugitive Dust Source Category	***Control Measures***
	to not less than $^{1}/_{20}$ of the concentration required to maintain a stabilized surface for a period of 6 months; or • *Apply chemical stabilizers prior to wind event; or* • *Apply water to all unstabilized disturbed areas 3 times per day. If there is any evidence of wind driven fugitive dust, watering frequency is increased to a minimum of 4 times per day; or* • *Establish a vegetative ground cover within 21 days after active operations have ceased. Ground cover must be of sufficient density to expose less than 30 percent of unstabilized ground within 90 days of planting, and at all times thereafter; or* • *Utilize any combination of these control actions such that, in total, these actions apply to all disturbed surface areas.*
Unpaved roads	• *Apply chemical stabilizers prior to wind event; or* • *Apply water 2 times per hour during active operation; or* • *Stop all vehicular traffic.*
Open storage piles	• *Apply water 2 times per hour; or* • *Install temporary coverings.*
Paved road track-out	• *Cover all haul vehicles; or* • *Comply with the vehicle freeboard requirements of Section 23114 of the CVC for both public and private roads.*
All categories	• *Executive Officer and the USEPA as equivalent to the methods specified in this table may be used.*

CVC = California Vehicle Code

USEPA = United States Environmental Protection Agency

Facts in Support of the Finding: Grading and other construction activities produce combustion emissions from various sources such as site grading, utility engines, on-site heavy-duty construction vehicles, equipment hauling materials to and from the site, asphalt paving, and motor vehicles transporting the construction crew. The use of construction equipment on site would result in localized exhaust emissions. Activity during peak grading days typically generates a greater amount of air pollutants than other Project construction activities.

Section 4.3 of the DEIR indicates construction equipment/vehicle emissions during proposed on-site grading periods would exceed the SCAQMD daily thresholds for ROG and NO_X. Although construction of the structures uses different types of equipment on site than during grading periods, similarities do exist in terms of equipment exhaust emissions and fugitive dust emissions. While it is anticipated that total emissions during construction would be below the peak grading day emissions, construction emissions of ROG and NO_X would still exceed the SCAQMD daily threshold. This is a significant impact requiring **Mitigation Measures 4.3.6.2A** through **4.3.6.2M.** The use of low-NO_X diesel fuel in construction equipment typically reduces NO_X emissions by 16 percent.[17] Use of this fuel would reduce NO_X emissions but not below SCAQMD thresholds. However, there is no reasonable way to ensure that that retrofitted diesel-powered equipment, low- NO_X diesel fuel, and alternative fuel sources would be available during the construction period; therefore, it is not possible to quantify reductions in NO_X emissions that would result from **Mitigation Measures 4.3.6.2A** through **4.3.6.2M**. Because no additional feasible mitigation is available to reduce construction-related NO_X emissions, this impact remains significant and unavoidable. Furthermore, there is no feasible mitigation to reduce the ROG emissions during architectural coating phase to less than the daily threshold. Thus, the emissions during construction of NO_X and ROG will remain significant. (DEIR, pgs. 4.3-22 to 4.3-29)

c. Architectural Coating Impacts

[17] http://www.aqmd.gov/ceqa/igr/2006/feb/10-01.pdf, site accessed December 30, 2011.

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could potentially exceed applicable daily thresholds for VOC.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that Mitigation Measure 4.2.6.4A is incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of this mitigation measures, impacts related to architectural coatings are considered significant and unavoidable.

4.3.6.4A *The Project applicant shall use "Low-Volatile Organic Compounds" paints, coatings, and solvents with a VOC content lower than required under Rule 1113 (not to exceed 150 grams/liter; 1.25 pounds/gallon). High Pressure Low Volume (HPLV) applications of paints, coatings, and solvents shall be consistent with South Coast Air Quality Management District Rule 1113. Alternatively, the Project applicant shall use materials that do not require painting or are pre-painted.*

Facts in Support of the Finding: Architectural coatings contain volatile organic compounds (VOC) that are similar to ROG and are part of the O_3 precursors. Rule 1113 is applicable to any person who applies or solicits the application of any architectural coating within the Basin. Rule 1113 sets limits on the amount of VOC emissions allowed for all types of architectural coatings, along with a time table for tightening the emissions standards in the future.

According to Section 4.3 of the DEIR, approximately 344 pounds of ROG would be generated during the architectural coating phase of the Project. Manual applications such as paintbrush, hand roller, trowel, spatula, dauber, rag, or sponge have 100 percent transfer efficiency. Construction of the Project using the required HVLP spray method reduces the daily VOC emissions to 224 pounds per day during the architectural coatings application period. The amount of VOC generated per day from the application of architectural coating even with the use of the required HVLP spray method (224 pounds) during the application of architectural coatings would exceed the SCAQMD VOC threshold of 75 lbs/day. Emissions associated with architectural coatings can be reduced by using precoated/natural-colored building materials, water-based or low VOC coating or by using coating transfer or spray equipment with high transfer efficiency. Adherence to SCAQMD Rule 1113 and **Mitigation Measure 4.3.6.4A** would reduce the Project's architectural coatings emissions impact. However, even with adherence to SCAQMD Rule 1113, the SQAQMD VOC threshold would still be exceeded. Therefore, impacts associated with this issue would remain significant and unavoidable. (DEIR, pg. 4.3-31)

d. Long-Term Project-Related Emissions Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could potentially exceed applicable daily thresholds for operational activities.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that Mitigation Measures 4.3.6.5A and 4.3.6.5B are incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, long term construction emissions-related air quality impacts are considered significant and unavoidable.

4.3.6.5A *Prior to issuance of building permits, the Project applicant shall provide evidence to the City that applicable (as determined by the City) Transportation Demand Management (TDM)/Transportation Control Measure (TCM) strategies such as preferential parking for employee vanpooling/carpooling, bicycle parking facilities (such as bicycle lockers and racks), bus turnouts, and other strategies are incorporated into the design of the proposed Project.*

4.3.6.5B *Prior to issuance of building permits, the Project applicant shall provide evidence to the City that energy-efficient and low-emission methods and features of building construction shall be incorporated into the Project design. These methods and features may include (but are not limited to) the following:*

- *Construction of buildings that exceed statewide energy requirements beyond 20 <u>10</u> percent of that identified in Title 24<u>, Part 6 Energy Efficiency Standards:</u>*
    - *Use of low-emissions water heaters;*
    - *Use of central water-heating systems;*
    - *Use of energy-efficient appliances;*
    - *Use of increase insulation;*
    - *Use of automated controls for air conditioners;*
    - *Use of energy-efficient parking lot lighting; and*
    - *Use of lighting controls and energy-efficient lighting.*

- *Utilize low-VOC interior and exterior coatings during Project repainting.*
- *Provide on-site improvements such as sidewalks or pedestrian walkways to promote pedestrian activity and reduce the amount of vehicle trips.*
- *Installation of skylights and energy-efficient lighting that exceeds California Title 24 standards where feasible, including electronic dimming ballasts and computer-controlled daylight sensors in the buildings.*
- *Shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and building shall be planted at the proposed Project site. These strategies will minimize the heat island effect and thereby reduce the amount of air conditioning required.*
- *Strategies to be considered include fans to assist natural ventilation, centralized water and space conditioning systems, high efficiency individual heating and cooling units, and automatic setback thermostats.*
- *Reduction of energy demand associated with potable water conveyance through the following methods:*
    - *Incorporating drought-tolerant plants into the landscaping palette; and*
    - *Use of water-efficient irrigation techniques.*

- *Energy-efficient low-pressure sodium parking lot lights or lighting equivalent as determined by the City, shall be used;*
- *Buildings shall be oriented north-south where feasible;*
- *Implement an on-site circulation plan in parking lots to reduce vehicle queuing;*
- *Develop a trip reduction plan to achieve 1.5 average vehicle ridership (AVR) for businesses with fewer than 250 employees or multitenant worksites;*
- *Include bicycle parking facilities such as bicycle lockers and racks;*
- *Include showers for bicycling employees use; and*
- *Construct on-site pedestrian facility improvements such as building access that is physically separated from street and parking lot traffic and walk paths.*

Facts in Support of the Finding: Although implementation of **Mitigation Measures 4.3.6.5A** through **4.3.6.5B** may reduce vehicle trips associated with the proposed Project, it is not possible to quantify the reduction in the amount of emissions that may occur. Considering the volume of emissions generated and current commuter habits, it is unlikely the implementation of TDMs/TCMs will result in a reduction of operational Project emissions to below existing SCAQMD thresholds. Application of Leadership in Energy and Environmental Design (LEED) standards and green building design principles could reduce emissions from building operations such as heating and cooling; however, such standards and principles would not reduce emissions of CO, ROG, NO_X, PM_{10}, and $PM_{2.5}$ to below SCAQMD thresholds. No other feasible mitigation measures have been identified to reduce the operational emissions of CO, ROG, NO_X, PM_{10}, and $PM_{2.5}$ to a less than significant level. Because the Project site is located in a nonattainment air basin for criteria pollutants, the addition of air pollutants resulting from operation of the proposed Project would contribute to the continuation of nonattainment status in the Basin. In the absence of mitigation to reduce the proposed Project's emission of contribution of CO, ROG, NO_X, PM_{10}, and $PM_{2.5}$ to below SCAQMD thresholds, long-term air quality impacts resulting from the operation of the proposed Project would remain significant and unavoidable. (DEIR, pgs. 4.2-26 to 4.2.28)

e. Project-Related Localized Operational Emissions Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could potentially exceed applicable long-term operational daily thresholds.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that **Mitigation Measures 4.3.6.6A** and **4.3.6.6B** are incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, long term operational-related emission impacts are considered significant and unavoidable.

4.3.6.6A *Prior to issuance of the first building permit, building and site plan designs shall ensure that the Project's energy efficiencies surpass applicable 2008 California Title 24, Part 6 Energy Efficiency Standards by a minimum of 10 percent until January 1, 2014. For building permits issued after that date, new state energy standards require a 20 percent reduction from 2008 Title 24, Part 6 Energy Efficiency Standards. Verification of increased energy efficiencies shall be documented in Title 24 Compliance Reports provided by the Applicant, and reviewed and approved by the City. The following design features shall be used to fulfill this requirement:*

- *Buildings shall exceed California Title 24 Energy Efficiency performance standards for water heating and space heating and cooling, as deemed acceptable by the City.*
- *Increase in insulation such that heat transfer and thermal bridging is minimized.*
- *Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.*
- *Incorporate dual-paned or other energy efficient windows.*
- *Incorporate energy efficient space heating and cooling equipment.*
- *Interior and exterior energy efficient lighting which exceeds the California Title 24 Energy Efficiency performance standards shall be installed, as deemed acceptable by the City. Automatic devices to turn off lights when they are not needed shall be implemented.*
- *To the extent that they are compatible with landscaping guidelines established by the City, shade-producing trees, particularly those that shade paved surfaces such as streets and parking lots and buildings shall be planted at the Project site.*
- *Paint and surface color palette for the Project shall emphasize light and off-white colors which reflect heat away from the buildings.*
- *All buildings shall be designed to accommodate renewable energy sources, such as photovoltaic solar electricity systems, appropriate to their architectural design.*
- *To reduce energy demand associated with potable water conveyance, the Project shall implement the following:*
    - *Landscaping palette emphasizing drought-tolerant plants;*
    - *Use of water-efficient irrigation techniques; and,*
    - *U.S. EPA Certified WaterSense labeled for equivalent faucets, high-efficiency toilets (HETs), and water-conserving shower heads.*
- *The Project shall provide secure, weather-protected, on-site bicycle storage/parking.*
- *The Project shall provide on-site showers (one for males and one for females). Lockers for employees shall be provided.*
- *The Project will establish a Transportation Management Association (TMA). The TMA will coordinate with other TMAs within the City to encourage and coordinate carpooling among building occupants. The TMA will advertise its services to building occupants,*

and offer transit and/or other incentives to reduce greenhouse gas (GHG) emissions. A plan will be submitted by the TMA to the City within two months of Project completion that outlines the measures implemented by the TMA, as well as contact information.

- *The Project shall provide preferential parking for carpools and vanpools. Locations and configurations of proposed preferential parking for carpools and vanpools are subject to review and approval by the City. Prior to final site plan approval, preferential parking for carpools and vanpools shall be delineated on the Project site plan.*
- *The Project shall provide at least two electric vehicle charging stations. Locations and configurations of proposed charging stations are subject to review and approval by the City. Prior to issuance of the first building permit, stub outs for charging stations shall be indicated on the Project building plans.*
- *Lease/purchase documents shall identify that tenants are encouraged to promote the following:*
    - *Implementation of compressed workweek schedules.*
    - *SmartWay partnership;*
    - *Achievement of at least 20 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of consolidated trips carried by SmartWay carriers until it reaches a minimum of 90 percent of all long-haul trips carried by SmartWay 1.0 or greater carriers.*
    - *Achievement of at least 15 percent per year (as a percentage of previous percentage, not total trips) increase in percentage of long-haul trips carried by SmartWay carriers until it reaches a minimum of 85 percent of all consolidator trips carried by SmartWay 1.0 or greater carriers.*
    - *Use of fleet vehicles conforming to 2010 air quality standards or better.*
    - *Installation of catalytic converters on gasoline-powered equipment.*
    - *Inclusion of electric powered and/or compressed natural gas fueled trucks and/or vehicles in fleets.*
    - *Establishment and use of carpool/vanpool programs, complemented by parking fees for single-occupancy vehicles.*
    - *Provision of preferential parking for EV and CNG vehicles.*

- *Use of electrical equipment (instead of gasoline-powered equipment) for landscape maintenance.*
- *Use of electric (instead of diesel or gasoline-powered) yard trucks.*
- *Use of SmartWay 1.25 rated trucks.*
- *Each facility operator shall provide regular sweeping of onsite parking and drive areas using street sweepers that comply with applicable SCAQMD Rules.*
- *Each facility operator shall maintain a log of all trucks entering the facility to ensure that, on average, the daily truck fleet meets applicable air quality emission standards. This log shall be available for inspection by City staff at any time.*
- *Each facility operator shall prohibit all vehicles from idling in excess of five minutes in all onsite areas.*
- *Each facility operator shall ensure that onsite staff in charge of keeping the daily log and monitoring for excess idling will be trained and certified in diesel health effects and technologies, such as by requiring attendance at CARB-approved courses.*
- *Each facility operator which upon occupancy does not already operate 2077 and newer trucks shall in good faith be required to apply for funding to replace or retrofit their trucks such as Carl Moyer, VIP, Prop 1B or similar funds. Should funds be awarded, the tenant shall be required to accept and use them.*

4.3.6.6B *The Project shall be designed to facilitate the reduction of waste generated by building occupants that is hauled to and disposed of in landfills by providing easily accessible areas that are dedicated to the collection and storage of recyclable materials including paper, cardboard, glass, plastics, and metals. Locations of proposed recyclable materials collection areas are subject to review and approval by the City. Prior to Final Site Plan approval, locations of proposed recyclable materials collection areas shall be delineated on the Project site plan.*

f. Cumulative Air Quality Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project could potentially result in a cumulatively considerable net increase of criteria pollutants for which the Project region is in non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors).

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related impacts cumulative air quality impacts will remain significant and unavoidable.

Facts in Support of the Finding: Included in Section 4.3 of the DEIR, the Project would contribute criteria pollutants to the area during Project construction. A number of individual projects in the area may be under construction simultaneously with the proposed Project. Depending on construction schedules and actual implementation of projects in the area, generation of fugitive dust and pollutant emissions during construction would result in substantial short-term increases in air pollutants. This would be a contribution to short-term cumulative air quality impacts.

The traffic study included vehicular trips from all present and future projects in the Project vicinity; therefore, the CO hot spot concentrations calculated at these intersections include the cumulative traffic effect. Based on this, no significant cumulative CO impacts would occur.

Long-term operation of the Project would exceed the standards for CO, ROC, NO_X, PM_{10}, and $PM_{2.5}$. The Basin is in nonattainment for PM_{10} and ozone at the present time; therefore, the construction and operation of the proposed Project would exacerbate nonattainment of air quality standards for PM_{10} and ozone within the Basin and contribute to cumulative air quality impacts. Therefore, long-term cumulative air quality impacts are considered to be significant and unavoidable.

The Health Risk Assessment (HRA) conducted for the proposed Project identified the increase in health risks to the nearby sensitive receptors from the proposed Project's air pollutant emissions. This HRA identified that the Project's incremental increase is only a very small fraction of the ambient condition. Therefore, the concentration of diesel particulates at the Project site is below the established risk threshold. Individuals living and working in southern California may be exposed to levels of diesel emissions that are cumulatively significant; however, that circumstance is not created by the Project.

It is reasonable to anticipate that advancements in truck/transportation technology would reduce the amount of particulate matter in future years. However, a determination of the amount and extent of that reduction in diesel particulate matter from these types of activities is not available at this time. Therefore, in an overabundance of caution, because other cumulative projects in the area would also contribute diesel particulates in the area and because the Riverside area has a level of particulate matter that is above the SCAQMD's recommended cancer risk threshold of 10 in one million, regional impacts associated with

diesel particulate matter are considered cumulatively considerable and the proposed Project will make a significant contribution to that cumulative impact. (DEIR, pgs. 4.3-37 to 4.3-38)

4. Land Use and Planning (Individual and Cumulative)

b. Conflict with Applicable Land Use Plans, Policies, or Regulations

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would potentially conflict with various land use plans, policies, or regulations.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce bring the Project into compliance with all land use plans. Accordingly, Project-related conflicts with land use plans will remain significant and unavoidable.

Facts in Support of the Finding: According to Section 4.8 of the DEIR, a discussion of the proposed Project's consistency with the 2007 AQMP has been analyzed in Section 4.3 (Air Quality) of this EIR. "Since the proposed Project will require a General Plan Amendment, the Project has not been considered in preparation of the City's General Plan and therefore is inconsistent with the AQMP. Amendments to the City of Moreno Valley General Plan, zoning reclassification, and plan approval are required before the affected portion of the proposed Project can be implemented. This is a significant impact requiring mitigation." That section of this EIR concluded that, despite the recommended mitigation, Project air quality impacts related to the AQMP would remain significant.

The Project proposes the development of warehouse uses, which would result in an inconsistency with the existing residential zoning on the southern portion of the site, and the BP zone on the northern portion of the site. The development that would occur with the zone change has the potential to create indirect environmental impacts since the zone change would permit more intense and larger industrial/warehousing uses on the Project site, requiring a discretionary action based on an environmental determination of the Project. These environmental impacts are analyzed through this EIR for each of the environmental topics. The baseline for comparative analysis of environmental impacts would be the existing condition of the Project site. Currently, there is no existing development on the Project site, which represents the worst-case scenario on which the EIR analysis is based. With implementation of the zone change, the proposed Project would be consistent with zoning requirements identified by the City.

According to the latest development plans, the closest loading and unloading operations of the proposed Project (e.g., truck courts) would be located 395 feet northwest of the nearest single-family residence (see plans in Appendix K). In addition, the reconfigured roadways surrounding the Project site would discourage industrial traffic through the residential areas to the southeast. Despite these design characteristics, the fundamental change from residential/business park uses to industrial adjacent to residential represents an incremental adverse effect on the "quality of life" of existing residents in this area, which represents a potentially significant land use compatibility impact. This impact requires the City Council to approve a Zone Change to bring the proposed zoning designations into consistency with the Zoning Map and Municipal Code.

The Compass Growth Vision plan provides a framework for local and regional decision-making regarding growth, transportation, land use, and economic development. The main objective of the Compass Growth Vision is to manage the forecast growth while improving future living conditions for all people within the SCAG area, including live, work, and play activities.

The proposed Project may not be fully consistent with the growth principles of the Compass Growth Vision plan. The nature of the proposed Project allows the transport of commodities from a single area rather than multiple areas, minimizing vehicle trip generation. Conversely, trucks from the proposed Project may increase localized and freeway congestion. The Project eliminates a planned transition of land uses that may incrementally reduce livability in this portion of the City. The proposed Project does support increased prosperity by providing additional (mainly "blue collar") employment opportunities close to existing housing within the City of Moreno Valley. The proposed Project is located in an area where existing infrastructure (freeway, sewer, electrical, water, etc.) is present. The development of the proposed Project will augment existing services available in the City and region. In these ways, the Project is only partially consistent with the principles of the Compass Growth Vision. (DEIR, pgs. 4.8-5 to 4.8-17)

a. Cumulative Land Use and Planning

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would have a cumulative impact to land use and planning issues.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant as there are no known feasible mitigation measures that could reduce this impact to a level of less than significant. Accordingly, Project-related cumulative impacts to land use and planning will remain significant and unavoidable.

Facts in Support of the Finding: Implementation of the proposed Project represents establishment of new land uses within the currently undeveloped Project site that would result in an intensification of permitted land uses associated with a land use change from Business Park and Residential to Light Industrial uses, changes to the General Plan Circulation Element, and the loss of the Primary Animal Keeping Overlay (PAKO) associated with the RA-2 zone. The proposed Project is generally consistent with regional plans and planning efforts, although it is not fully consistent with the SCAG's RTP and Compass Blueprint Plan because it eliminates some housing in favor of industrial employment uses. However, it will incrementally improve the City's long-standing jobs/housing ratio, which is also a regional goal of the various SCAG plans. It is also not consistent with existing General Plan land use designations, objectives and policies, nor is it consistent with existing zoning designations on the site. For these reasons, a General Plan Amendment and Zone Change are proposed for consideration by the City.

In addition, the proposed Project represents a fundamental change in community character for this portion of the City (i.e., mixed residential and business park to industrial warehouse buildings), which can represent an incremental adverse change in terms of public perception. This change would be particularly acute if both the proposed Project and the approved West Ridge Commerce Centre (an industrial Project just east of the proposed Project) were built within a relatively short period of time, as they would both follow relatively closely the completion of the Sketchers Logistics Center (another warehouse Project) east of both the proposed Project and the West Ridge Project, on the east side of Redlands Boulevard. Furthermore, the addition of industrial space from the proposed Project and the adjacent West Ridge (industrial) Project may create an over-supply of warehousing space in the City, based on current economic conditions.

The proposed changes in land use will also result in a loss of up to 584 (R-15) multi-family residential units. However, this was determined to be a less than significant Project impact on local housing because the City's Housing Element identifies over twice as much potential affordable housing as the City's RHNA allocation, so it will not make a significant contribution to a cumulatively considerable impact on regional housing.

Similar to the proposed Project, some of the cumulative projects within the Project vicinity would also require amendments to the existing General Plan and zoning, which may in turn cause additional cumulative impacts. Therefore, planned industrial development in the City may contribute to a cumulatively considerable impact or change in the overall character of the surrounding area, and the proposed Project would make a significant contribution to that change in terms of consistency with adopted land use plans. No feasible mitigation is available to reduce this significant contribution.

However, the Project would not make a similar cumulatively considerable land use impact relative to dividing an established community or conflicting with an approved habitat conservation plan. (DEIR, pgs. 4.8-17 to 4.8-18)

5. <u>Transportation</u>

a. Existing (2011) With Project Conditions (Intersection) Traffic and Level of Service Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that **Mitigation Measure 4.11.6.4A** is incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, existing (2011) with Project LOS impacts are considered significant and unavoidable.

Facts in Support of the Finding: As indicated in Section 4.11 of the DEIR, with the addition of Project traffic, the following intersections are forecast to operate at unsatisfactory levels of service: Redlands Boulevard/SR-60 Westbound Ramps (a.m. and p.m. peak hours); and Redlands Boulevard/Eucalyptus Avenue-Fir Avenue (p.m. peak hour).

The Project would contribute to the worsening of the already unsatisfactory LOS at the intersection of Redlands Boulevard/SR-60 Westbound Ramps and would create a significant impact at the intersection of Redlands Boulevard/Eucalyptus Avenue-Fir Avenue. Therefore, mitigation is required at both intersections.

Also, the following segments are forecast to operate at an unsatisfactory level of service in the Existing plus Project condition: SR-60 Eastbound: Pigeon Pass Road to Heacock Street (a.m. and p.m. peak hours); SR-60 Westbound: Heacock Street to Perris Boulevard (a.m. peak hour); and SR-60 Westbound: Perris Boulevard to Nason Street (a.m. peak hour).

The Project would add to the existing unsatisfactory LOS on these three freeway segments; therefore, the addition of Project traffic would be considered a cumulative impact. Neither the Project applicant nor the City has jurisdiction over Caltrans facilities; therefore, implementation of improvements to the freeway mainline cannot be guaranteed. Review of the SCAG Regional Transportation Improvement Plan (RTIP)

indicates that there are no projects programmed on SR-60 within the study area. Furthermore, Caltrans does not have a mechanism for development projects to contribute to improvements on State Highways. Therefore, the cumulative impact to these three segments of SR-60 would be significant and unavoidable. (DEIR, pgs. 4.11-19)

b. Opening Year 2016 With Project Conditions (Intersection) Traffic and Level of Service Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that **Mitigation Measure 4.11.6.4B** is incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, existing (2016) with Project LOS impacts are considered significant and unavoidable.

Facts in Support of the Finding: Opening Year (2016) with Project conditions considers the addition of traffic generated by the proposed Project to Opening Year (2016) without Project conditions. Section 4.11 of the DEIR indicates that the following intersections would operate at unsatisfactory LOS: Moreno Beach Drive/SR-60 Westbound Ramps (p.m. peak hour); Redlands Boulevard/SR-60 Westbound Ramps (a.m. and p.m. peak hours); and Redlands Boulevard/Eucalyptus Avenue-Fir Avenue (p.m. peak hour). The Project would have a significant impact at all three intersections, and therefore mitigation would be required.

Freeway mainline and ramp junctions were evaluated in the Opening Year (2016) plus Project condition. The following segments are forecast to operate at an unsatisfactory level of service in the Opening Year (2016) plus Project condition: SR-60 Eastbound: Pigeon Pass Road to Heacock Street (a.m. and p.m. peak hours); SR-60 Eastbound: Heacock Street to Perris Boulevard (p.m. peak hour); SR-60 Westbound: Heacock Street to Perris Boulevard (a.m. peak hour); and SR-60 Westbound: Perris Boulevard to Nason Street (a.m. peak hour).

The Project would add to the existing unsatisfactory LOS on these four freeway segments; therefore, the addition of Project traffic would be considered a cumulative impact. Neither the Project applicant nor the City has jurisdiction over Caltrans facilities; therefore, implementation of improvements to the freeway mainline cannot be guaranteed. Review of the RTIP indicates that there are no projects programmed on

SR-60 within the study area. Furthermore, Caltrans does not have a mechanism for development projects to contribute to improvements on State Highways. Therefore, the cumulative impact to these three segments of SR-60 would be significant and unavoidable.

c. Opening Year 2016 Cumulative With Project Conditions (Intersection) Traffic and Level of Service Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that **Mitigation Measure 4.11.6.4C** is incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, existing (2016) cumulative with Project LOS impacts are considered significant and unavoidable.

Facts in Support of the Finding: According to Section 4.11 of the DEIR, an intersection LOS analysis was conducted to determine Opening Year (2016) Cumulative intersection performance. The addition of Project traffic to the Opening Year (2016) Cumulative scenario would result in conditions exceeding the established LOS standard at the following intersections: Moreno Beach Drive/SR-60 Eastbound Ramps (p.m. peak hour); Moreno Beach Drive/Cottonwood Avenue (p.m. peak hour); Moreno Beach Drive/Alessandro Avenue (p.m. peak hour); Redlands Boulevard/SR-60 Westbound Ramps (a.m. and p.m. peak hours); Redlands Boulevard/SR-60 Eastbound Ramps (a.m. and p.m. peak hours); Redlands Boulevard/Fir Avenue-Eucalyptus Avenue (a.m. and p.m. peak hours); Redlands Boulevard/Encilia Avenue-Eucalyptus Avenue (p.m. peak hour); and Redlands Boulevard/Alessandro Boulevard (p.m. peak hour).

While these intersections are forecast to exceed satisfactory levels of service in Opening Year (2016) Cumulative with Project conditions, with the exception of the intersection of Redlands Boulevard/Eucalyptus Avenue-Fir Avenue and Redlands Boulevard/Encilia Avenue-Eucalyptus Avenue, these intersections already exceeded established LOS standards in the Opening Year (2016) Cumulative without-Project condition. Because the proposed Project would contribute to and would cause intersections to operate at unsatisfactory levels, mitigation is required.

Freeway mainline and ramp junctions were evaluated in the Opening Year 2016 Cumulative plus Project condition. The following segments are forecast to operate at an unsatisfactory level of service in the

Opening Year 2016 Cumulative plus Project condition: SR-60 Eastbound: Pigeon Pass Road to Heacock Street (a.m. and p.m. peak hours); SR-60 Eastbound: Heacock Street to Perris Boulevard (a.m. and p.m. peak hours); SR-60 Eastbound: Perris Boulevard to Nason Street (a.m. and p.m. peak hours); SR-60 Westbound: Heacock Street to Perris Boulevard (a.m. and p.m. peak hours); SR-60 Westbound: Perris Boulevard to Nason Street (a.m. and p.m. peak hours); and SR-60 Westbound: Nason Street to Moreno Beach Drive (a.m. peak hour).

The Project would add to the existing unsatisfactory LOS on these six freeway segments; therefore, the addition of Project traffic would be considered a cumulative impact. Review of the RTIP indicates that there are no projects programmed on SR-60 within the study area. Furthermore, neither the Project applicant nor the City has jurisdiction over Caltrans facilities; therefore, implementation of improvements to the freeway mainline cannot be guaranteed. Furthermore, Caltrans does not have a mechanism for development projects to contribute to improvements on State Highways. Therefore, the cumulative impact to these segments of SR-60 would be significant and unavoidable.

d. Cumulative Transportation Impacts

Significant Unavoidable Impact: The EIR evaluated and concluded that the Project would have a cumulative significant impact to transportation.

Finding: Based on the entire record before us, this Council finds that this impact is potentially significant but will be reduced to the extent feasible through mitigation measures. The Council finds that Mitigation **Measure 4.11.6.4C** is incorporated into the MMRP for the Project, and will be implemented as specified therein. However, the Council finds that even with application of these mitigation measures, cumulative transportation impacts are considered significant and unavoidable.

Facts in Support of the Finding: Cumulative impacts associated with traffic volumes are determined based the addition of traffic volumes from approved and pending projects in the area and projected traffic growth to existing traffic volumes. The cumulative analysis forecasts that, with the development of the proposed Project and the cumulative projects, eight intersections would require improvements in order to maintain the City's LOS standard of D.

Those intersections are as follows: Moreno Beach Drive/SR-60 Eastbound Ramps (p.m. peak hour); Moreno Beach Drive/Cottonwood Avenue (p.m. peak hour); Moreno Beach Drive/Alessandro Avenue (p.m. peak hour); Redlands Boulevard/SR-60 Westbound Ramps (a.m. and p.m. peak hours); Redlands Boulevard/SR-60 Eastbound Ramps (a.m. and p.m. peak hours); Redlands Boulevard/Fir Avenue-

Eucalyptus Avenue (a.m. and p.m. peak hours); Redlands Boulevard/Encilia Avenue-Eucalyptus Avenue (p.m. peak hour); and Redlands Boulevard/Alessandro Boulevard (p.m. peak hour).

Although the suggested improvements are consistent with the City's General Plan, the Project will be responsible for contributing its fair share toward the funding of the future improvements via payment of the City's DIF. Of these eight affected intersections, five intersections are under the jurisdiction of the City of Moreno Valley.

Three intersections are under the jurisdiction of Caltrans. The improvements identified in **Mitigation Measure 4.11.6.4C** would reduce impacts at these intersections to a less than significant level. However, since the affected freeway ramp intersections are under the jurisdiction of Caltrans, neither the Project proponent nor the City has control over the specific timing of when the improvements would be constructed. It is anticipated that by opening year (2016), improvements at these intersections would not be constructed, as they are not currently planned for near-term construction. Therefore, this cumulative impact in opening year (2016) remains significant and unavoidable until such time as the improvements to this interchange are constructed by Caltrans, WRCOG, and the City of Moreno Valley through the TUMF process.

Because TUMF provides a mechanism for collecting fees from all development projects in the area that would contribute traffic to the existing roadway network, fees for the improvements to the affected freeway intersections would be collected. Therefore, it is anticipated that since these freeway intersection improvements are programmed into the TUMF program, such improvements would be constructed by future year (2035) and would be able to accommodate future year (2035) traffic levels, resulting in a less than significant cumulative impact.

D. ADEQUACY OF THE RANGE OF PROJECT ALTERNATIVES

The EIR analyzed four alternatives to the Project as proposed, and evaluated these alternatives for their ability to meet the Project's objectives as described in Section II.B above. CEQA requires the evaluation of a "No Project Alternative" to assess a maximum net change in the environment as a result of implementation of the Project. The No Project Alternative, referred to as the No Project/Existing Zoning Alternative, makes a reasoned assessment as to the future development of the subject site should the Project under consideration not be developed yet the site would be developed in a similar manner to the proposed Project and consistent with existing zoning for the site. A Reduced Intensity Alternative, a Commercial Center (mixed retail/office) Alternative, and an Off-site Alternative were also selected for analysis. CEQA requires the evaluation of alternatives that can reduce the significance of identified impacts and "feasibly attain most of the basic objectives of the proposed Project." Thus, in order to develop a range of reasonable alternatives, the Project Objectives must be considered when this Council is evaluating the alternatives.

1. Alternative 1 – No Project/Existing Zoning Alternative
