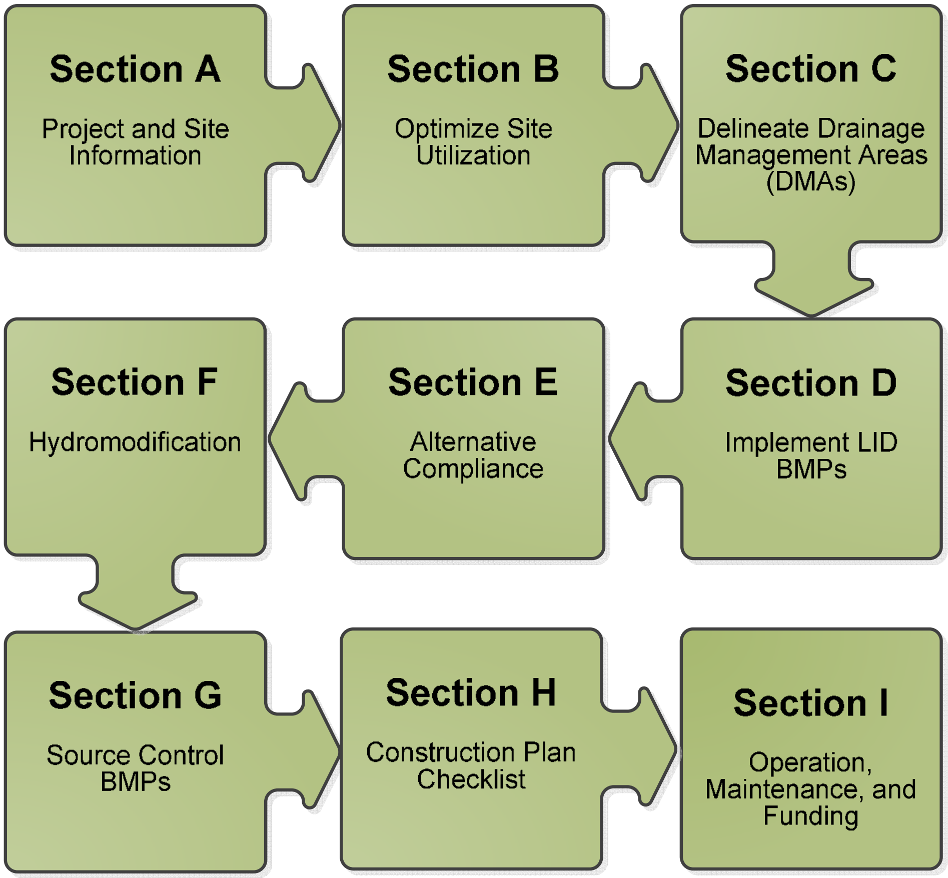
A Brief Introduction

This Project-Specific WQMP Template for the **Santa Ana Region** has been prepared to help guide you in documenting compliance for your project. Because this document has been designed to specifically document compliance, you will need to utilize the WQMP Guidance Document as your "how-to" manual to help guide you through this process. Both the Template and Guidance Document go hand-in-hand, and will help facilitate a well prepared Project-Specific WQMP. Below is a flowchart for the layout of this Template that will provide the steps required to document compliance.



OWNER'S CERTIFICATION

This Project-Specific Water Quality Management Plan (WQMP) has been prepared for **the Owner** by Thienes Engineering, Inc. for the **Moreno Valley Logistics Center** project.

This WQMP is intended to comply with the requirements of **Moreno Valley** for **PA15-0014 (BLDG 1), PA15-0015 (BLDG 2), PA15-0016 (BLDG 3), and PA15-0017 (BLDG 4)** which includes the requirement for the preparation and implementation of a Project-Specific WQMP.

The undersigned, while owning the property/project described in the preceding paragraph, shall be responsible for the implementation and funding of this WQMP and will ensure that this WQMP is amended as appropriate to reflect up-to-date conditions on the site. In addition, the property owner accepts responsibility for interim operation and maintenance of Stormwater BMPs until such time as this responsibility is formally transferred to a subsequent owner. This WQMP will be reviewed with the facility operator, facility supervisors, employees, tenants, maintenance and service contractors, or any other party (or parties) having responsibility for implementing portions of this WQMP. At least one copy of this WQMP will be maintained at the project site or project office in perpetuity. The undersigned is authorized to certify and to approve implementation of this WQMP. The undersigned is aware that implementation of this WQMP is enforceable under **Moreno Valley** Water Quality Ordinance (Municipal Code Section 8.10).

"I, the undersigned, certify under penalty of law that the provisions of this WQMP have been reviewed and accepted and that the WQMP will be transferred to future successors in interest."

Project Characteristics

Proposed or Potential Land Use(s)	Light Industrial
Proposed or Potential SIC Code(s)	1541
Area of Impervious Project Footprint (SF)	0
Total Area of proposed Impervious Surfaces within the Project Limits (SF)/or Replacement	3,698,244 (84.90 acres)
Does the project consist of offsite road improvements?	☒ Y ☐ N
Does the project propose to construct unpaved roads?	☐ Y ☒ N
Is the project part of a larger common plan of development (phased project)?	☐ Y ☒ N

Existing Site Characteristics

Total area of existing Impervious Surfaces within the project limits (SF)	0
Is the project located within any MSHCP Criteria Cell?	☐ Y ☒ N
If so, identify the Cell number:	N/A
Are there any natural hydrologic features on the project site?	☐ Y ☒ N
Is a Geotechnical Report attached?	☒ Y ☐ N
If no Geotech. Report, list the NRCS soils type(s) present on the site (A, B, C and/or D)	Geotech Report Available
What is the Water Quality Design Storm Depth for the project?	0.64

Project Description:
The overall project property encompasses approximately 84.9 acres (an additional 1.28 acres for Cosmo Street). Currently, the site consists of several undeveloped dirt lots. Runoff generally surface drains south-easterly and into the Perris Valley Storm Drain Channel. Proposed improvements to the site consist of the construction of four commercial type buildings ranging from 92,222 to 1,331,770 square feet. There will be truck yards and vehicle parking lots adjacent to each building. There will be several sand filter basins: Basins "4" and "5" south of Building 1, Basin "3" west of Building 1, Basin "2" south of Building 2, Basin "6" east of Building 3 and Basin "1" east of Building 4. The existing Cosmos Street will be extended southerly between Buildings 1 and 2. The remainder of the project site will be reserved for landscaping. Treatment for Cosmo Street will be taken to Sand Filter Basin "2."

BMP Hierarchy:

Infiltration - the project is bypassing all infiltration BMPs because the entire site sits over a groundwater plume as shown in Appendix 5.

Biofiltration - the project is bypassing biofiltration facilities, in the form of planters, because the project is required to detain stormwater for 100-year purposes. Planters are not practical for 100-year detention since the ponding depth and tributary area are maxed out at 6-inches and 10 acres, respectfully. Furthermore, the County of Riverside Airport Land Use Commission (ALUC) had a hearing on October 8, 2015 for jurisdiction case no. PA15-0014, PA15-0015, PA15-0016, and PA15-0017 (Moreno Valley Logistics Center) to provide their concerns and requirements. Condition #4 requires all basins to drawdown within 48 hours and to remain totally dry between rainfalls. In order to design an Extended

Detention Basin (EDB) to drawdown 100% of the volume within 48 hours, we are unable to hold 50% of the volume for 24+ hours. EDBs rely on holding stormwater for longer periods of time as their primary treatment mechanism. Not being able to do so would reduce treatment efficiency.

Treatment Control - the project proposes to use sand filter basins to avoid infiltration over a groundwater plume, to assist with 100-year detention, and to meet the drawdown requirements of ALUC.

See Appendix 5 for more detail.

A.1 Maps and Site Plans

When completing your Project-Specific WQMP, include a map of the local vicinity and existing site. In addition, include all grading, drainage, landscape/plant palette and other pertinent construction plans in Appendix 2. At a **minimum**, your WQMP Site Plan should include the following:

- Drainage Management Areas
- Proposed Structural BMPs
- Drainage Path
- Drainage Infrastructure, Inlets, Overflows
- Source Control BMPs
- Buildings, Roof Lines, Downspouts
- Impervious Surfaces
- Standard Labeling

Use your discretion on whether or not you may need to create multiple sheets or can appropriately accommodate these features on one or two sheets. Keep in mind that the Co-Permittee plan reviewer must be able to easily analyze your project utilizing this template and its associated site plans and maps.

A.2 Identify Receiving Waters

Using Table A.1 below, list in order of upstream to downstream, the receiving waters that the project site is tributary to. Continue to fill each row with the Receiving Water's 303(d) listed impairments (if any), designated beneficial uses, and proximity, if any, to a RARE beneficial use. Include a map of the receiving waters in Appendix 1.

Table A.1 Identification of Receiving Waters

Receiving Waters	EPA Approved 303(d) List Impairments	Designated Beneficial Uses	Proximity to RARE Beneficial Use
Perris Valley Storm Drain	None	None	Not classified as a RARE waterbody.
San Jacinto River, Reach 3	None	AGR, GWR, REC1, REC2, WARM, WILD	Not classified as a RARE waterbody.
Canyon Lake (aka San Jacinto River, Reach 2)	Nutrients, Pathogens	MUN, AGR, GWR, REC1, REC2, WARM, WILD	Not classified as a RARE waterbody.
San Jacinto River, Reach 1	None	MUN, AGR, GWR, REC1, REC2, WARM, WILD	Not classified as a RARE waterbody.

Receiving Waters	EPA Approved 303(d) List Impairments	Designated Beneficial Uses	Proximity to RARE Beneficial Use
Lake Elsinore	Nutrients, Organic Enrichment/Low Dissolved Oxygen, PCBs (polychlorinated biphenyls), Sediment Toxicity, Unknown Toxicity	REC1, REC2, WARM, WILD	Not classified as a RARE waterbody.
Temescal Creek, Reach 6	Indicator Bacteria	GWR, REC1, REC2, WARM, WILD	Not classified as a RARE waterbody.
Temescal Creek, Reach 5	None	AGR, GWR, REC1, REC2, WARM, WILD, RARE	23 miles
Temescal Creek, Reach 4	None	AGR, GWR, REC1, REC2, WARM, WILD, RARE	29 miles
Temescal Creek, Reach 3 (aka Lee Lake)	None	AGR, IND, GWR, REC1, REC2, WARM, WILD	Not classified as a RARE waterbody.
Temescal Creek, Reach 2	None	AGR, IND, GWR, REC1, REC2, WARM, WILD	Not classified as a RARE waterbody.
Temescal Creek, Reach 1	pH	REC1, REC2, WARM, WILD	Not classified as a RARE waterbody.
Santa Ana River, Reach 3	Pathogens, Copper, and Lead	AGR, GWR, REC1, REC2, WARM, WILD, RARE	46 miles
The Prado Basin Management Zone	Pathogens and Nitrate	REC1, REC2, WARM, WILD, RARE	46 miles
Santa Ana River, Reach 2	Indicator Bacteria	AGR, GWR, REC1, REC2, WARM, WILD, RARE	51 miles
Santa Ana River, Reach 1	None	REC1, REC2, WARM, WILD	Not classified as a RARE waterbody.
Tidal Prism of Santa Ana River and Newport Slough	Enterococcus, Fecal Coliform, Total Coliform	REC1, REC2, COMM, WILD, RARE, MAR	77 miles
Pacific Ocean Near shore Zone	None	IND, NAV, REC1, REC2, COMM, WILD, RARE, SPWN, MAR, SHEL	77 miles
Pacific Ocean Offshore Zone	None	IND, NAV, REC1, REC2, COMM, WILD, RARE, SPWN, MAR	78 miles

A.3 Additional Permits/Approvals required for the Project:

Table A.2 Other Applicable Permits

Agency	Permit Required	
State Department of Fish and Game, 1602 Streambed Alteration Agreement	☒ Y	☐ N
State Water Resources Control Board, Clean Water Act (CWA) Section 401 Water Quality Cert.	☒ Y	☐ N
US Army Corps of Engineers, CWA Section 404 Permit	☒ Y	☐ N
US Fish and Wildlife, Endangered Species Act Section 7 Biological Opinion	☒ Y	☐ N
Statewide Construction General Permit Coverage	☒ Y	☐ N
Statewide Industrial General Permit Coverage	☒ Y	☐ N
Western Riverside MSHCP Consistency Approval (e.g., JPR, DBESP)	☐ Y	☒ N
Other *(please list in the space below as required)* City of Moreno Valley Grading Permit	☒ Y	☐ N
Other *(please list in the space below as required)* City of Moreno Valley Building Permit	☒ Y	☐ N

If yes is answered to any of the questions above, the Co-Permittee may require proof of approval/coverage from those agencies as applicable including documentation of any associated requirements that may affect this Project-Specific WQMP.

Section B: Optimize Site Utilization (LID Principles)

Review of the information collected in Section 'A' will aid in identifying the principal constraints on site design and selection of LID BMPs as well as opportunities to reduce imperviousness and incorporate LID Principles into the site and landscape design. For example, **constraints** might include impermeable soils, high groundwater, groundwater pollution or contaminated soils, steep slopes, geotechnical instability, high-intensity land use, heavy pedestrian or vehicular traffic, utility locations or safety concerns. **Opportunities** might include existing natural areas, low areas, oddly configured or otherwise unbuildable parcels, easements and landscape amenities including open space and buffers (which can double as locations for bioretention BMPs), and differences in elevation (which can provide hydraulic head). Prepare a brief narrative for each of the site optimization strategies described below. This narrative will help you as you proceed with your LID design and explain your design decisions to others.

The 2010 Santa Ana MS4 Permit further requires that LID Retention BMPs (Infiltration Only or Harvest and Use) be used unless it can be shown that those BMPs are infeasible. Therefore, it is important that your narrative identify and justify if there are any constraints that would prevent the use of those categories of LID BMPs. Similarly, you should also note opportunities that exist which will be utilized during project design. Upon completion of identifying Constraints and Opportunities, include these on your WQMP Site plan in Appendix 1.

Site Optimization

The following questions are based upon Section 3.2 of the WQMP Guidance Document. Review of the WQMP Guidance Document will help you determine how best to optimize your site and subsequently identify opportunities and/or constraints, and document compliance.

Did you identify and preserve existing drainage patterns? If so, how? If not, why?

- *There are no creeks, wetlands, or riparian habitats nearby.*
- *Existing drainage patterns flows southeasterly and into the Perris Valley Storm Drain Channel. Proposed condition drainage patterns mimic pre-development conditions.*

Did you identify and protect existing vegetation? If so, how? If not, why?

- *Not applicable, there are no sensitive areas.*
- *Not applicable, there are no existing trees or vegetation to preserve.*

Did you identify and preserve natural infiltration capacity? If so, how? If not, why?

- *Infiltration is not recommended because the project site is situated over a known groundwater plume.*

Did you identify and minimize impervious area? If so, how? If not, why?

- *Impervious area on the site has been minimized to County/City standards.*
- *Due to the nature of the project site (large trucks), substitution of pavement for landscaping is not feasible. The project does not propose overflow parking where substitution of pavement for landscaping would be optimal. Landscaping has been provided wherever applicable and to the maximum extent practicable.*
- *The entire Design Capture Volume (DCV) is handled by the proposed BMPs. Permeable pavement is not needed to meet the DCV.*

Did you identify and disperse runoff to adjacent pervious areas? If so, how? If not, why?

- *Roof runoff is directed to the proposed BMPs for treatment.*
- *The site is not on a hillside.*
- *All stormwater runoff will be piped or sheet flow towards their respective BMPs.*

Section C: Delineate Drainage Management Areas (DMAs)

Utilizing the procedure in Section 3.3 of the WQMP Guidance Document which discusses the methods of delineating and mapping your project site into individual DMAs, complete Table C.1 below to appropriately categorize the types of classification (e.g., Type A, Type B, etc.) per DMA for your project site. Upon completion of this table, this information will then be used to populate and tabulate the corresponding tables for their respective DMA classifications.

Table C.1 DMA Classifications

DMA Name or ID	Surface Type(s)[1]	Area (Sq. Ft.)	Area (Acres)	DMA Type
1A	Roofs/Conc/Asphalt	307,098	7.05	Type D
1B	Ornamental Landscaping	69,696	1.60	Type D
2A	Roofs/Conc/Asphalt	297,515	6.83	Type D
2B	Ornamental Landscaping	50,094	1.15	Type D
3A	Roofs/Conc/Asphalt	609,840	14.00	Type D
3B	Ornamental Landscaping	50,094	1.15	Type D
4A	Roofs/Conc/Asphalt	1,078,110	24.75	Type D
4B	Ornamental Landscaping	113,256	2.60	Type D
5A	Roofs/Conc/Asphalt	609,840	14.00	Type D
5B	Ornamental Landscaping	115,434	2.65	Type D
6A	Roofs/Conc/Asphalt	226,512	5.20	Type D
6B	Ornamental Landscaping	45,738	1.05	Type D
7	Ornamental Landscaping	180,774	4.15	Type A

[1] *Reference Table 2-1 in the WQMP Guidance Document to populate this column*

Table C.2 Type 'A', Self-Treating Areas

DMA Name or ID	Area (Sq. Ft.)	Stabilization Type	Irrigation Type (if any)
7	180,774	California Native Vegetation	Timed Sprinklers

Table C.3 Type 'B', Self-Retaining Areas

Self-Retaining Area				Type 'C' DMAs that are draining to the Self-Retaining Area		
DMA Name/ ID	Post-project surface type	Area (square feet) [A]	Storm Depth (inches) [B]	DMA Name / ID	[C] from Table C.4 = [C]	Required Retention Depth (inches) [D]

$$[D] = [B] + \frac{[B]\cdot[C]}{[A]}$$

Table C.4 Type 'C', Areas that Drain to Self-Retaining Areas

DMA					**Receiving Self-Retaining DMA**		
DMA Name/ ID	Area (square feet)	Post-project surface type	Runoff factor	Product	DMA name /ID	Area (square feet)	Ratio
	[A]		[B]	[C] = [A] x [B]		[D]	[C]/[D]

Table C.5 Type 'D', Areas Draining to BMPs

DMA Name or ID	BMP Name or ID
1A	Sand Filter Basin #1
1B	Sand Filter Basin #1
2A	Sand Filter Basin #2
2B	Sand Filter Basin #2
3A	Sand Filter Basin #3
3B	Sand Filter Basin #3
4A	Sand Filter Basin #4
4B	Sand Filter Basin #4
5A	Sand Filter Basin #5
5B	Sand Filter Basin #5
6A	Sand Filter Basin #6
6B	Sand Filter Basin #6

Note: More than one drainage management area can drain to a single LID BMP, however, one drainage management area may not drain to more than one BMP.

Section D: Implement LID BMPs

D.1 Infiltration Applicability

Is there an approved downstream ‘Highest and Best Use’ for stormwater runoff (see discussion in Chapter 2.4.4 of the WQMP Guidance Document for further details)? ☐ Y ☒ N

If yes has been checked, Infiltration BMPs shall not be used for the site. If no, continue working through this section to implement your LID BMPs. It is recommended that you contact your Co-Permittee to verify whether or not your project discharges to an approved downstream ‘Highest and Best Use’ feature.

Geotechnical Report

A Geotechnical Report or Phase I Environmental Site Assessment may be required by the Copermittee to confirm present and past site characteristics that may affect the use of Infiltration BMPs. In addition, the Co-Permittee, at their discretion, may not require a geotechnical report for small projects as described in Chapter 2 of the WQMP Guidance Document. If a geotechnical report has been prepared, include it in Appendix 3. In addition, if a Phase I Environmental Site Assessment has been prepared, include it in Appendix 4.

Is this project classified as a small project consistent with the requirements of Chapter 2 of the WQMP Guidance Document? ☐ Y ☒ N

Infiltration Feasibility

Table D.1 below is meant to provide a simple means of assessing which DMAs on your site support Infiltration BMPs and is discussed in the WQMP Guidance Document in Chapter 2.4.5. Check the appropriate box for each question and then list affected DMAs as applicable. If additional space is needed, add a row below the corresponding answer.

Table D.1 Infiltration Feasibility

Does the project site…	YES	NO
…have any DMAs with a seasonal high groundwater mark shallower than 10 feet?		X
If Yes, list affected DMAs:		
…have any DMAs located within 100 feet of a water supply well?		X
If Yes, list affected DMAs:		
…have any areas identified by the geotechnical report as posing a public safety risk where infiltration of stormwater could have a negative impact?		X
If Yes, list affected DMAs:		
…have measured in-situ infiltration rates of less than 1.6 inches / hour?	X	
If Yes, list affected DMAs: DMAs 4 and 5 have a rate of 0.3 in/hr and DMA 2 has a rate of 2.5 in/hr. However, infiltration is infeasible due to the fact that the project site is located over a known groundwater plume.		
…have significant cut and/or fill conditions that would preclude in-situ testing of infiltration rates at the final infiltration surface?		X
If Yes, list affected DMAs:		
…geotechnical report identifies other site-specific factors that would preclude effective and safe infiltration?		X
Describe here:		
…have areas of known soil or groundwater contamination (unless with written authorization from the Regional Board Executive Officer)	X	
If yes, list affected DMAs: The entire project site is located within the vicinity of a groundwater plume area.		

If you answered “Yes” to any of the questions above for any DMA, Infiltration BMPs should not be used for those DMAs and you should proceed to the assessment for Harvest and Use below.

D.2 Harvest and Use Assessment

Please check what applies*:*

☐ Reclaimed water will be used for the non-potable water demands for the project.

☐ Downstream water rights may be impacted by Harvest and Use as approved by the Regional Board (verify with the Copermittee).

☐ The Design Capture Volume will be addressed using Infiltration Only BMPs. In such a case, Harvest and Use BMPs are still encouraged, but it would not be required if the Design Capture Volume will be infiltrated or evapotranspired.

If any of the above boxes have been checked, Harvest and Use BMPs need not be assessed for the site. If neither of the above criteria applies, follow the steps below to assess the feasibility of irrigation use, toilet use and other non-potable uses (e.g., industrial use).

Irrigation Use Feasibility

Complete the following steps to determine the feasibility of harvesting stormwater runoff for Irrigation Use BMPs on your site:

Step 1: Identify the total area of irrigated landscape on the site, and the type of landscaping used.

Total Area of Irrigated Landscape: 14.35 acres

Type of Landscaping (Conservation Design or Active Turf): Conservation design

Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for irrigation use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.

Total Area of Impervious Surfaces: 70.55 acres

Step 3: Cross reference the Design Storm depth for the project site (see Exhibit A of the WQMP Guidance Document) with the left column of Table 2-3 in Chapter 2 to determine the minimum area of Effective Irrigated Area per Tributary Impervious Area (EIATIA).

Enter your EIATIA factor: 1.05

Step 4: Multiply the unit value obtained from Step 3 by the total of impervious areas from Step 2 to develop the minimum irrigated area that would be required.

Minimum required irrigated area: 74.07 acres

Step 5: Determine if harvesting stormwater runoff for irrigation use is feasible for the project by comparing the total area of irrigated landscape (Step 1) to the minimum required irrigated area (Step 4).

Minimum required irrigated area (Step 4)	Available Irrigated Landscape (Step 1)
74.07 acres	14.35 acres

Attachment: G2 - Preliminary Water Quality Management Plan (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

Toilet Use Feasibility

Complete the following steps to determine the feasibility of harvesting stormwater runoff for toilet flushing uses on your site:

Step 1: Identify the projected total number of daily toilet users during the wet season, and account for any periodic shut downs or other lapses in occupancy:

Projected Number of Daily Toilet Users: 1,050 (# of parking stalls)

Project Type: Industrial

Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for toilet use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.

Total Area of Impervious Surfaces: 70.55 acres

Step 3: Enter the Design Storm depth for the project site (see Exhibit A) into the left column of Table 2-2 in Chapter 2 to determine the minimum number or toilet users per tributary impervious acre (TUTIA).

Enter your TUTIA factor: 185

Step 4: Multiply the unit value obtained from Step 3 by the total of impervious areas from Step 2 to develop the minimum number of toilet users that would be required.

Minimum number of toilet users: 13,052

Step 5: Determine if harvesting stormwater runoff for toilet flushing use is feasible for the project by comparing the Number of Daily Toilet Users (Step 1) to the minimum required number of toilet users (Step 4).

Minimum required Toilet Users (Step 4)	**Projected number of toilet users (Step 1)**
13,052	*1,050*

Other Non-Potable Use Feasibility

Are there other non-potable uses for stormwater runoff on the site (e.g. industrial use)? See Chapter 2 of the Guidance for further information. If yes, describe below. If no, write N/A.

N/A

Step 1: Identify the projected average daily non-potable demand, in gallons per day, during the wet season and accounting for any periodic shut downs or other lapses in occupancy or operation.

Average Daily Demand: N/A

Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for the identified non-potable use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.

Total Area of Impervious Surfaces: N/A

Step 3: Enter the Design Storm depth for the project site (see Exhibit A) into the left column of Table 2-3 in Chapter 2 to determine the minimum demand for non-potable uses per tributary impervious acre.

Enter the factor from Table 2-3: N/A

Step 4: Multiply the unit value obtained from Step 4 by the total of impervious areas from Step 3 to develop the minimum number of gallons per day of non-potable use that would be required.

Minimum required use: N/A

Step 5: Determine if harvesting stormwater runoff for other non-potable use is feasible for the project by comparing the Number of Daily Toilet Users (Step 1) to the minimum required number of toilet users (Step 4).

Minimum required non-potable use (Step 4)	**Projected average daily use (Step 1)**
N/A	N/A

If Irrigation, Toilet and Other Use feasibility anticipated demands are less than the applicable minimum values, Harvest and Use BMPs are not required and you should proceed to utilize LID Bioretention and Biotreatment, unless a site-specific analysis has been completed that demonstrates technical infeasibility as noted in D.3 below.

D.3 Bioretention and Biotreatment Assessment

Other LID Bioretention and Biotreatment BMPs as described in Chapter 2.4.7 of the WQMP Guidance Document are feasible on nearly all development sites with sufficient advance planning.

Select one of the following:

☐ LID Bioretention/Biotreatment BMPs will be used for some or all DMAs of the project as noted below in Section D.4 (note the requirements of Section 3.4.2 in the WQMP Guidance Document).

☒ A site-specific analysis demonstrating the technical infeasibility of all LID BMPs has been performed and is included in Appendix 5. If you plan to submit an analysis demonstrating the technical infeasibility of LID BMPs, request a pre-submittal meeting with the Copermittee to discuss this option. Proceed to Section E to document your alternative compliance measures.

D.4 Feasibility Assessment Summaries

From the Infiltration, Harvest and Use, Bioretention and Biotreatment Sections above, complete Table D.2 below to summarize which LID BMPs are technically feasible, and which are not, based upon the established hierarchy.

Table D.2 LID Prioritization Summary Matrix

DMA Name/ID	LID BMP Hierarchy				No LID (Alternative Compliance)
	1. Infiltration	2. Harvest and use	3. Bioretention	4. Biotreatment	
1A	☐	☐	☐	☐	☒
1B	☐	☐	☐	☐	☒
2A	☐	☐	☐	☐	☒

3A	☐	☐	☐	☐	☒
3B	☐	☐	☐	☐	☒
4A	☐	☐	☐	☐	☒
4B	☐	☐	☐	☐	☒
5A	☐	☐	☐	☐	☒
5B	☐	☐	☐	☐	☒
6A	☐	☐	☐	☐	☒
6B	☐	☐	☐	☐	☒
7	☐	☐	☐	☐	☒

For those DMAs where LID BMPs are not feasible, provide a brief narrative below summarizing why they are not feasible, include your technical infeasibility criteria in Appendix 5, and proceed to Section E below to document Alternative Compliance measures for those DMAs. Recall that each proposed DMA must pass through the LID BMP hierarchy before alternative compliance measures may be considered.

<u>BMP Hierarchy</u>:

Infiltration - the project is bypassing all infiltration BMPs because the entire site sits over a groundwater plume as shown in Appendix 5.

Biofiltration - the project is bypassing biofiltration facilities, in the form of planters, because the project is required to detain stormwater for 100-year purposes. Planters are not practical for 100-year detention since the ponding depth and tributary area are maxed out at 6-inches and 10 acres, respectfully. Furthermore, the County of Riverside Airport Land Use Commission (ALUC) had a hearing on October 8, 2015 for jurisdiction case no. PA15-0014, PA15-0015, PA15-0016, and PA15-0017 (Moreno Valley Logistics Center) to provide their concerns and requirements. Condition #4 requires all basins to drawdown within 48 hours and to remain totally dry between rainfalls. In order to design an Extended Detention Basin (EDB) to drawdown 100% of the volume within 48 hours, we are unable to hold 50% of the volume for 24+ hours. EDBs rely on holding stormwater for longer periods of time as their primary treatment mechanism. Not being able to do so would reduce treatment efficiency.

Treatment Control - the project proposes to use sand filter basins to avoid infiltration over a groundwater plume, to assist with 100-year detention, and to meet the drawdown requirements of ALUC.

See Appendix 5 for more detail.

DMA 7 is considered a self-treating area and will not be routed through the proposed sand filter basins due to a technical infeasibility. Due to the difference in elevation between the site and the public right-of-way, these landscaped areas could not drain onsite.

D.5 LID BMP Sizing

Each LID BMP must be designed to ensure that the Design Capture Volume will be addressed by the selected BMPs. First**,** calculate the Design Capture Volume for each LID BMP using the V_{BMP} worksheet in Appendix F of the LID BMP Design Handbook. Second**,** design the LID BMP to meet the required V_{BMP} using a method approved by the Copermittee. Utilize the worksheets found in the LID BMP Design Handbook or consult with your Copermittee to assist you in correctly sizing your LID BMPs. Complete Table D.3 below to document the Design Capture Volume and the Proposed Volume for each LID BMP. Provide the completed design procedure sheets for each LID BMP in Appendix 6. You may add additional rows to the table below as needed.

Table D.3 DCV Calculations for LID BMPs

DMA Type/ID	**DMA Area (square feet)**	**Post-Project Surface Type**	**Effective Impervious Fraction, I_f**	**DMA Runoff Factor**	**DMA Areas x Runoff Factor**	***n/a***		
	[A]		[B]	[C]	[A] x [C]			
N/A	*N/A*	*N/A*	*N/A*	*N/A*	*N/A*	*Design Storm Depth (in)*	*Design Capture Volume,* V_{BMP} *(cubic feet)*	*Proposed Volume on Plans (cubic feet)*
	$A_T = \Sigma[A]$				$\Sigma = [D]$	[E]	$[F] = \frac{[D]x[E]}{12}$	[G]

[B], [C] is obtained as described in Section 2.3.1 of the WQMP Guidance Document

[E] is obtained from Exhibit A in the WQMP Guidance Document

[G] is obtained from a design procedure sheet, such as in LID BMP Design Handbook and placed in Appendix 6

Section E: Alternative Compliance (LID Waiver Program)

LID BMPs are expected to be feasible on virtually all projects. Where LID BMPs have been demonstrated to be infeasible as documented in Section D, other Treatment Control BMPs must be used (subject to LID waiver approval by the Copermittee). Check one of the following Boxes:

☐ LID Principles and LID BMPs have been incorporated into the site design to fully address all Drainage Management Areas. No alternative compliance measures are required for this project and thus this Section is not required to be completed.

- *Or-*

☒ The following Drainage Management Areas are unable to be addressed using LID BMPs. A site-specific analysis demonstrating technical infeasibility of LID BMPs has been approved by the Co-Permittee and included in Appendix 5. Additionally, no downstream regional and/or sub-regional LID BMPs exist or are available for use by the project. The following alternative compliance measures on the following pages are being implemented to ensure that any pollutant loads expected to be discharged by not incorporating LID BMPs, are fully mitigated.

E.1 Identify Pollutants of Concern

Utilizing Table A.1 from Section A above which noted your project’s receiving waters and their associated EPA approved 303(d) listed impairments, cross reference this information with that of your selected Priority Development Project Category in Table E.1 below. If the identified General Pollutant Categories are the same as those listed for your receiving waters, then these will be your Pollutants of Concern and the appropriate box or boxes will be checked on the last row. The purpose of this is to document compliance and to help you appropriately plan for mitigating your Pollutants of Concern in lieu of implementing LID BMPs.

Table E.1 Potential Pollutants by Land Use Type

Priority Development Project Categories and/or Project Features (check those that apply)	General Pollutant Categories							
	Bacterial Indicators	Metals	Nutrients	Pesticides	Toxic Organic Compounds	Sediments	Trash & Debris	Oil & Grease
☐ Detached Residential Development	P	N	P	P	N	P	P	P
☐ Attached Residential Development	P	N	P	P	N	P	P	P(2)
☒ Commercial/Industrial Development	P(3)	P	P(1)	P(1)	P(5)	P(1)	P	P
☐ Automotive Repair Shops	N	P	N	N	P(4, 5)	N	P	P
☐ Restaurants (>5,000 ft^2)	P	N	N	N	N	N	P	P
☐ Hillside Development (>5,000 ft^2)	P	N	P	P	N	P	P	P
☒ Parking Lots (>5,000 ft^2)	P(6)	P	P(1)	P(1)	P(4)	P(1)	P	P
☐ Retail Gasoline Outlets	N	P	N	N	P	N	P	P
Project Priority Pollutant(s) of Concern(7)	☒	☒	☐	☐	☒	☐	☒	☐

P = Potential

N = Not Potential

(1) A potential Pollutant if non-native landscaping exists or is proposed onsite; otherwise not expected

(2) A potential Pollutant if the project includes uncovered parking areas; otherwise not expected

(3) A potential Pollutant is land use involving animal waste

(4) Specifically petroleum hydrocarbons

(5) Specifically solvents

(6) Bacterial indicators are routinely detected in pavement runoff

(7) Pollutants that are listed for the development type, and also are on the 303(d) list or have adopted TMDLs, are considered Pollutants of Concern.

E.2 Stormwater Credits

Projects that cannot implement LID BMPs but nevertheless implement smart growth principles are potentially eligible for Stormwater Credits. Utilize Table 3-8 within the WQMP Guidance Document to identify your Project Category and its associated Water Quality Credit. If not applicable, write N/A.

Table E.2 Water Quality Credits

Qualifying Project Categories	Credit Percentage[2]
N/A	
Total Credit Percentage[1]	

[1] Cannot Exceed 50%

[2] Obtain corresponding data from Table 3-8 in the WQMP Guidance Document

E.3 Sizing Criteria

After you appropriately considered Stormwater Credits for your project, utilize Table E.3 below to appropriately size them to the DCV, or Design Flow Rate, as applicable. Please reference Chapter 3.5.2 of the WQMP Guidance Document for further information.

Table E.3 Treatment Control BMP Sizing

DMA Type/ ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	*Design Storm Depth (in)*	*Design Capture Volume,* V_{BMP} *(cubic*	*Proposed Volume on Plans (cubic feet)*
	[A]		[B]	[C]	[A] x [C]			
1A	307,098	Roofs/Conc/Asphalt	*1.00*	*0.89*	*273,931.4*	*0.64*	*14609.7*	*18,774*
1B	69,696	Ornamental Landscaping	*0.10*	*0.11*	*7,698.5*	*0.64*	*410.6*	
2A	297,515	Roofs/Conc/Asphalt	*1.00*	*0.89*	*265,383.2*	*0.64*	*14153.8*	*17,466*
2B	50,094	Ornamental Landscaping	*0.10*	*0.11*	*5,533.3*	*0.64*	*295.1*	
3A	609,840	Roofs/Conc/Asphalt	*1.00*	*0.89*	*543,977.3*	*0.64*	*29012.1*	*41,361*
3B	50,094	Ornamental Landscaping	*0.10*	*0.11*	*5,533.3*	*0.64*	*295.1*	
4A	1,078,110	Roofs/Conc/Asphalt	*1.00*	*0.89*	*961,674.1*	*0.64*	*51289.3*	*56,063*
4B	113,256	Ornamental Landscaping	*0.10*	*0.11*	*12,510.0*	*0.64*	*667.2*	
5A	609,840	Roofs/Conc/Asphalt	*1.00*	*0.89*	*543,977.3*	*0.64*	*29012.1*	*32,886*
5B	115,434	Ornamental Landscaping	*0.10*	*0.11*	*12,750.6*	*0.64*	*680*	
6A	226,512	Roofs/Conc/Asphalt	*1.00*	*0.89*	*202,048.7*	*0.64*	*10775.9*	*13,860*
6B	45,738	Ornamental Landscaping	*0.10*	*0.11*	*5,052.1*	*0.64*	*269.4*	
	3,573,227				*2,840,070*	0.64	151,470.3	180,410

[B], [C] is obtained as described in Section 2.3.1 from the WQMP Guidance Document
[E] is obtained from Exhibit A in the WQMP Guidance Document
[G] is for Flow-Based Treatment Control BMPs [G] = 43,560, for Volume-Based Control Treatment BMPs, [G] = 12
[H] is from the Total Credit Percentage as Calculated from Table E.2 above
[I] as obtained from a design procedure sheet from the BMP manufacturer and should be included in Appendix 6

E.4 Treatment Control BMP Selection

Treatment Control BMPs typically provide proprietary treatment mechanisms to treat potential pollutants in runoff, but do not sustain significant biological processes. Treatment Control BMPs must have a removal efficiency of a medium or high effectiveness as quantified below:

- **High**: equal to or greater than 80% removal efficiency
- **Medium**: between 40% and 80% removal efficiency

Such removal efficiency documentation (e.g., studies, reports, etc.) as further discussed in Chapter 3.5.2 of the WQMP Guidance Document, must be included in Appendix 6. In addition, ensure that proposed Treatment Control BMPs are properly identified on the WQMP Site Plan in Appendix 1.

Table E.4 Treatment Control BMP Selection

Selected Treatment Control BMP Name or ID[1]	Priority Pollutant(s) of Concern to Mitigate[2]	Removal Efficiency Percentage[3]
Sand Filter Basin	Bacterial Indicators	Medium / 65% [4]
Sand Filter Basin	Metals	Medium / 72-86% [4]
Sand Filter Basin	Trash and Debris	High / 89% [4]
Sand Filter Basin	Toxic Organic Compounds	High / 89% [4]

[1] Treatment Control BMPs must not be constructed within Receiving Waters. In addition, a proposed Treatment Control BMP may be listed more than once if they possess more than one qualifying pollutant removal efficiency.

[2] Cross Reference Table E.1 above to populate this column.

[3] As documented in a Co-Permittee Approved Study and provided in Appendix 6.

[4] Medium/High removal effectiveness as documented in Appendix E of "Design Handbook for Low Impact Development Best Management Practices" by Riverside County Flood Control and Water Conservation District (rev. 9/11). Percentages as documented in TC-40 for Media Filter of "New Development and Redevelopment Handbook" by CASQA (January 2003).

Attachment: G2 - Preliminary Water Quality Management Plan (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

Section F: Hydromodification

F.1 Hydrologic Conditions of Concern (HCOC) Analysis

Once you have determined that the LID design is adequate to address water quality requirements, you will need to assess if the proposed LID Design may still create a HCOC. Review Chapters 2 and 3 (including Figure 3-7) of the WQMP Guidance Document to determine if your project must mitigate for Hydromodification impacts. If your project meets one of the following criteria which will be indicated by the check boxes below, you do not need to address Hydromodification at this time. However, if the project does not qualify for Exemptions 1, 2 or 3, then additional measures must be added to the design to comply with HCOC criteria. This is discussed in further detail below in Section F.2.

HCOC EXEMPTION 1: The Priority Development Project disturbs less than one acre. The Copermittee has the discretion to require a Project-Specific WQMP to address HCOCs on projects less than one acre on a case by case basis. The disturbed area calculation should include all disturbances associated with larger common plans of development.

Does the project qualify for this HCOC Exemption? ☐ Y ☒ N

If Yes, HCOC criteria do not apply.

HCOC EXEMPTION 2: The volume and time of concentration[1] of storm water runoff for the post-development condition is not significantly different from the pre-development condition for a 2-year return frequency storm (a difference of 5% or less is considered insignificant) using one of the following methods to calculate:

- Riverside County Hydrology Manual
- Technical Release 55 (TR-55): Urban Hydrology for Small Watersheds (NRCS 1986), or derivatives thereof, such as the Santa Barbara Urban Hydrograph Method
- Other methods acceptable to the Co-Permittee

Does the project qualify for this HCOC Exemption? ☐ Y ☒ N

If Yes, report results in Table F.1 below and provide your substantiated hydrologic analysis in Appendix 7.

Table F.1 Hydrologic Conditions of Concern Summary

	2 year – 24 hour		
	Pre-condition	**Post-condition**	**% Difference**
Time of Concentration	N/A	N/A	N/A
Volume (Cubic Feet)	N/A	N/A	N/A

[1] Time of concentration is defined as the time after the beginning of the rainfall when all portions of the drainage basin are contributing to flow at the outlet.

HCOC EXEMPTION 3: All downstream conveyance channels to an adequate sump (for example, Prado Dam, Lake Elsinore, Canyon Lake, Santa Ana River, or other lake, reservoir or naturally erosion resistant feature) that will receive runoff from the project are engineered and regularly maintained to ensure design flow capacity; no sensitive stream habitat areas will be adversely affected; or are not identified on the Co-Permittees Hydromodification Sensitivity Maps.

Does the project qualify for this HCOC Exemption? ☒ Y ☐ N

If Yes, HCOC criteria do not apply and note below which adequate sump applies to this HCOC qualifier:

The adequate sumps that apply to the project site are Canyon Lake, Lake Elsinore, Prado Dam, and the Santa Ana River. Runoff from the project site will drain to Perris Valley Storm Drain, Canyon Lake, Lake Elsinore, Prado Dam and the Santa Ana River, which are engineered and regularly maintained. These waterbodies are not sensitive stream habitats. No stream habitat areas will be affected by the development.

F.2 HCOC Mitigation

If none of the above HCOC Exemption Criteria are applicable, HCOC criteria is considered mitigated if they meet one of the following conditions:

a. Additional LID BMPS are implemented onsite or offsite to mitigate potential erosion or habitat impacts as a result of HCOCs. This can be conducted by an evaluation of site-specific conditions utilizing accepted professional methodologies published by entities such as the California Stormwater Quality Association (CASQA), the Southern California Coastal Water Research Project (SCCRWP), or other Co-Permittee approved methodologies for site-specific HCOC analysis.

b. The project is developed consistent with an approved Watershed Action Plan that addresses HCOC in Receiving Waters.

c. Mimicking the pre-development hydrograph with the post-development hydrograph, for a 2-year return frequency storm. Generally, the hydrologic conditions of concern are not significant, if the post-development hydrograph is no more than 10% greater than pre-development hydrograph. In cases where excess volume cannot be infiltrated or captured and reused, discharge from the site must be limited to a flow rate no greater than 110% of the pre-development 2-year peak flow.

Be sure to include all pertinent documentation used in your analysis of the items a, b or c in Appendix 7.

Section G: Source Control BMPs

Source control BMPs include permanent, structural features that may be required in your project plans — such as roofs over and berms around trash and recycling areas — and Operational BMPs, such as regular sweeping and "housekeeping", that must be implemented by the site's occupant or user. The MEP standard typically requires both types of BMPs. In general, Operational BMPs cannot be substituted for a feasible and effective permanent BMP. Using the Pollutant Sources/Source Control Checklist in Appendix 8, review the following procedure to specify Source Control BMPs for your site:

1. ***Identify Pollutant Sources***: Review Column 1 in the Pollutant Sources/Source Control Checklist. Check off the potential sources of Pollutants that apply to your site.

2. ***Note Locations on Project-Specific WQMP Exhibit***: Note the corresponding requirements listed in Column 2 of the Pollutant Sources/Source Control Checklist. Show the location of each Pollutant source and each permanent Source Control BMP in your Project-Specific WQMP Exhibit located in Appendix 1.

3. ***Prepare a Table and Narrative***: Check off the corresponding requirements listed in Column 3 in the Pollutant Sources/Source Control Checklist. In the left column of Table G.1 below, list each potential source of runoff Pollutants on your site (from those that you checked in the Pollutant Sources/Source Control Checklist). In the middle column, list the corresponding permanent, Structural Source Control BMPs (from Columns 2 and 3 of the Pollutant Sources/Source Control Checklist) used to prevent Pollutants from entering runoff. **Add additional narrative** in this column that explains any special features, materials or methods of construction that will be used to implement these permanent, Structural Source Control BMPs.

4. ***Identify Operational Source Control BMPs:*** To complete your table, refer once again to the Pollutant Sources/Source Control Checklist. List in the right column of your table the Operational BMPs that should be implemented as long as the anticipated activities continue at the site. Copermittee stormwater ordinances require that applicable Source Control BMPs be implemented; the same BMPs may also be required as a condition of a use permit or other revocable Discretionary Approval for use of the site.

Table G.1 Permanent and Operational Source Control Measures

Potential Sources of Runoff pollutants	Permanent Structural Source Control BMPs	Operational Source Control BMPs
A. On-site storm drain inlets	• Mark all inlets with the words "Only Rain Down the Storm Drain" or similar.	• Maintain and periodically repaint or replace inlet markings annually. • Provide stormwater pollution prevention information to new site owners, lessees, or operators upon occupancy and annually thereafter. • See CASQA fact sheets SC-44 for "Drainage System Maintenance," and SD-13 for "Storm Drain Signage" included in Appendix of this document. • Include the following lease agreements: "Tenant shall not allow anyone to discharge anything to storm drain or to store or deposit materials so as to create a potential discharge to storm drains."

Potential Sources of Runoff pollutants	Permanent Structural Source Control BMPs	Operational Source Control BMPs
B. Interior floor drains and elevator shaft sump pumps	• Interior floor drains and elevator shaft sump pumps will be plumbed to sanitary sewer.	• Inspect and maintain drains semi-annually to prevent blockages and overflow.
D2. Landscape / Outdoor Pesticide Use	• Landscape plans will minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to stormwater pollution. • Pest-resistant plants will be used adjacent to hardscape. • The landscape plans will consider plants appropriate to the site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, and plant interactions.	• Maintain landscaping only using minimum pesticides, when needed. • See Appendix 10 for “Landscape and Gardening” brochure by RCFlood. • Provide Integrated Pest Management (IPM) information to new owners, lessees and operators upon occupancy and annually thereafter. IPM is an effective and environmentally sensitive approach to pest management.
G. Refuse Areas	• Site refuse will be handled by contractor on a weekly basis. • Signs will be posted on or near dumpsters with the words “Do not dump hazardous materials here” or similar.	• A minimum of two receptacles will be provided and locate indoors. Receptacles are to be inspected daily and repairs or replacements to leaky receptacles will be completed immediately. Receptacles are to remain covered with not in use. Dumping of liquid or hazardous wastes is prohibited. A “no hazardous materials” sign will be posted. Spills will be cleaned immediately upon discovery. Spill control materials will be available onsite. See Appendix 10 for CASQA fact sheets SC-34 for “Waste Handling and Disposal” and SD-32 for “Trash Storage Areas”
H. Industrial processes	• All process activities to be performed indoors. No processes to drain to exterior or to storm drain system.	• See Appendix 10 for CASQA fact sheet SC-10 for “Non-Stormwater Discharges”
M. Loading Docks	• Spills will be cleaned up immediately and disposed of properly.	• Move loaded and unloaded items indoors as soon as possible. • See Appendix 10 for CASQA fact sheets SC-30 for “Outdoor Loading and Unloading” and SD-31 for “Maintenance Bays and Docks”
P. Plazas, sidewalks, and parking lots (only parking lots applicable)		• Sweep parking lots monthly to prevent accumulation of litter and debris. Collect debris from pressure washing to prevent entry into the storm drain system. Collect washwater containing any cleaning agent or degreaser and discharge to the sanitary sewer not to a storm drain. • See Appendix 10 for CASQA fact sheet SC-43 for “Parking/Storage Area Maintenance”

Attachment: G2 - Preliminary Water Quality Management Plan (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

Potential Sources of Runoff pollutants	Permanent Structural Source Control BMPs	Operational Source Control BMPs
Q. Additional CASQA fact sheets (see Appendix 10)		• SC-10: Non-Stormwater Discharge • SC-11: Spill Prevention, Control & Cleanup • SC-32: Outdoor Equipment Operations • SC-35: Safer Alternative Products • SC-41: Building and Grounds Maintenance • SC-42: Building Repair and Construction • SD-12: Efficient Irrigation

Section H: Construction Plan Checklist

Populate Table H.1 below to assist the plan checker in an expeditious review of your project. The first two columns will contain information that was prepared in previous steps, while the last column will be populated with the corresponding plan sheets. This table is to be completed with the submittal of your final Project-Specific WQMP.

Table H.1 Construction Plan Cross-reference

SFB #5	Sand Filter Basin #5	WQMP Site Map	33.874725	-117.236625
SFB #6	Sand Filter Basin #6	WQMP Site Map	33.873985	-117.237762

Note that the updated table — or Construction Plan WQMP Checklist — is **only a reference tool** to facilitate an easy comparison of the construction plans to your Project-Specific WQMP. Co-Permittee staff can advise you regarding the process required to propose changes to the approved Project-Specific WQMP.

Section I: Operation, Maintenance and Funding

The Copermittee will periodically verify that Stormwater BMPs on your site are maintained and continue to operate as designed. To make this possible, your Copermittee will require that you include in Appendix 9 of this Project-Specific WQMP:

1. A means to finance and implement facility maintenance in perpetuity, including replacement cost.
2. Acceptance of responsibility for maintenance from the time the BMPs are constructed until responsibility for operation and maintenance is legally transferred. A warranty covering a period following construction may also be required.
3. An outline of general maintenance requirements for the Stormwater BMPs you have selected.
4. Figures delineating and designating pervious and impervious areas, location, and type of Stormwater BMP, and tables of pervious and impervious areas served by each facility. Geo-locating the BMPs using a coordinate system of latitude and longitude is recommended to help facilitate a future statewide database system.
5. A separate list and location of self-retaining areas or areas addressed by LID Principles that do not require specialized O&M or inspections but will require typical landscape maintenance as noted in Chapter 5, pages 85-86, in the WQMP Guidance. Include a brief description of typical landscape maintenance for these areas.

Your local Co-Permittee will also require that you prepare and submit a detailed Stormwater BMP Operation and Maintenance Plan that sets forth a maintenance schedule for each of the Stormwater BMPs built on your site. An agreement assigning responsibility for maintenance and providing for inspections and certification may also be required.

Details of these requirements and instructions for preparing a Stormwater BMP Operation and Maintenance Plan are in Chapter 5 of the WQMP Guidance Document.

Maintenance Mechanism: City of Moreno Valley:

Stormwater Treatment Device and Control Measure Access and Maintenance Covenant

Will the proposed BMPs be maintained by a Home Owners' Association (HOA) or Property Owners Association (POA)?

☐ Y ☒ N

Include your Operation and Maintenance Plan and Maintenance Mechanism in Appendix 9. Additionally, include all pertinent forms of educational materials for those personnel that will be maintaining the proposed BMPs within this Project-Specific WQMP in Appendix 10.

Attention: Mr. Scott Mulkay
Vice President – Regional Development Manager

Project No.: **14G160-2**

Subject: **Results of Infiltration Testing**
Proposed Moreno Valley Logistics Center
SWC Indian Street at Krameria Avenue
Moreno Valley, California

Gentlemen:

In accordance with your request, we have conducted infiltration testing at the subject site. We are pleased to present this report summarizing the results of the infiltration testing and our design recommendations.

Scope of Services

The scope of services performed for this project was in Proposal No. 14P266, dated June 4, 2014. The scope of services included a surface reconnaissance, subsurface exploration, field testing, and geotechnical engineering analysis to determine the infiltration rate of the onsite soils. The infiltration testing was performed in general accordance with ASTM Test Method D-3385-03, Standard Test Method for Infiltration Rate of Soils in Field Using Double Ring Infiltrometer.

Site and Project Description

The subject site is located on the west side of Indian Street, southwest of the intersection of Indian Street and Krameria Avenue in Moreno Valley, California. The site is bounded to the north by commercial/industrial buildings under construction, to the east by Indian Street, and to the south and west by the Perris Valley Storm Drain channel and a vacant lot. The Building 2 option is located west of the primary site and is bounded to the north by a vacant lot, to the east by the primary site, to the south by a vacant lot, and to the west by the Perris Valley Storm Drain channel.

The primary site is a roughly triangular-shaped parcel, 58.7 acres in size. The site is currently vacant and undeveloped. Ground surface cover consists of exposed soil with sparse to moderate amounts of native grass and weed growth. Based on the disturbed alluvial soils encountered at the ground surface, it appears that the ground surface has been previously tilled. The Building 2 option site is a trapezoidal-shaped parcel, 6.9± acres in size. This site is vacant and undeveloped. The ground surface cover consists of exposed soil with sparse to moderate amounts of native grass and weed growth and also appears to have been previously tilled.

Detailed topographic information including existing site grades were not available at the time of this report. Based on visual observations made at the time of the subsurface investigation, the overall site topography generally slopes downward to the southwest at an estimated gradient of less than 3± percent.

Proposed Development

Based on the conceptual site plan provided to our office by the client, the primary site will be developed with one (1) commercial/industrial building, 1,333,586± ft^2 in size. This building will be identified as Building 1. Loading docks will be located along the east, south, and west sides of the building. The building will be surrounded by asphaltic concrete pavements in the automobile parking and drive lanes and Portland cement concrete in the loading dock areas. Landscape planters will be located in limited areas throughout the parking lot.

The Building 2 site will be developed with one (1) commercial/industrial building, 117,660± ft^2 in size. Loading docks will be located along the west side of the building. The building will be surrounded by asphaltic concrete pavements in the parking and drive lanes and Portland cement concrete pavements in the loading dock area.

Based on the conceptual site plan, the site will utilize an on-site storm water disposal system. The storm water disposal system will consist of an infiltration basin located in the south corner of the primary site. The plan also indicates that an infiltration basin will be constructed in the south area of the Building 2 site. As discussed with the project civil engineer, it is our understanding that the bottom of the infiltration basins will be approximately 6 to 8 feet below the existing site grades. We performed infiltration testing as requested within the proposed infiltration basins for Buildings 1 and 2.

Concurrent Study

SCG is currently conducting a geotechnical feasibility study for the subject site. As a part of this study, a total of fifteen (15) borings were advanced to a depth 30± feet below existing site grades. The results of this study will be published in the geotechnical report, 14G160-1.

Subsurface Exploration

Scope of Exploration

The subsurface exploration for this phase of the project consisted of three (3) backhoe excavated trenches, extending to depths of 6 to 8± feet below existing site grades as requested by the civil engineer. The trenches were logged during excavation by a member of our staff. The approximate locations of the infiltration trenches (identified as I-1, I-2 and I-3) are indicated on the Infiltration Test Location Plan, enclosed as Plate 2 of this report.

Geotechnical Conditions

Disturbed alluvial soils were encountered at all of the infiltration test trench locations extending to depths of 1 to 1½± feet below existing site grades. These soils consist of loose sandy silts with trace amounts of artificial debris. Native alluvial soils were encountered beneath the disturbed alluvium at all of the infiltration trenches extending to the maximum explored depth of 8± feet below existing site grades. The native alluvial soils encountered generally consist of fine sandy silts, clayey silts, fine to coarse sands and fine sandy clays. Free water was not encountered during the excavation of any of the trenches. The Trench Logs, which illustrate the conditions encountered at the trench locations, are included with this report.

Infiltration Testing

We understand that the results of the testing will be used to prepare a preliminary design for the storm water infiltration systems that will be used to store and/or dispose of storm water at the subject site. The infiltration testing was performed in general accordance with ASTM Test Method D-3385-03, Standard Test Method for Infiltration Rate of Soils in Field Using Double Ring Infiltrometer.

Two stainless steel infiltration rings were used for the infiltration testing. The outer infiltration ring is 2 feet in diameter and 20 inches in height. The inner infiltration ring is 1 foot in diameter and 20 inches in height. At each test location, the outer ring was driven 3± inches into the soil at the base of the trench. The inner ring was centered inside the outer ring and subsequently driven 3± inches into the soil at the base of the trench. The rings were driven into the soil using a ten pound sledge hammer. The soil surrounding the wall of the infiltration rings was only slightly disturbed during the driving process.

Infiltration Testing Procedure

The infiltration testing was performed at Infiltration Trench Nos. I-1, I-2 and I-3. The infiltration testing consisted of filling the inner ring and the annular space (the space between the inner and outer rings) with water, approximately 3 to 4± inches above the soil. To prevent the flow of water from one ring to the other, the water level in both the inner ring and the annular space between the rings were maintained using constant-head float valves. The volume of water that was added to maintain a constant head in the inner ring and the annular space during each time interval was determined and recorded. A cap was placed over the rings to minimize the evaporation of water during the test.

The schedule for readings was determined based on the observed soil type at the base of each backhoe excavated trench. Due to the varying silt and clay content of the exposed soils at each infiltration test location, the volumetric measurements were made at increments of 5 to 30 minutes. The water volume measurements are presented on the spreadsheets enclosed with this report. The infiltration rates for each of the timed intervals are also tabulated on these spreadsheets.

The infiltration rates for all the tests are calculated in centimeters per hour and then converted to inches per hour. These rates are summarized below:

Infiltration Test No.	Approximate Elevation of Test (ft msl)	Soil Description	Infiltration Rate (inches/hr)
I-1	1471	Clayey fine to medium Sand	0.3
I-2	1473	fine to coarse Sand	14.9
I-3	1475	Silty fine to medium Sand/fine to medium Sandy Silt	2.5

Laboratory Testing

Grain Size Analysis

The grain size distribution of selected soils from the base of each infiltration test trench has been determined using a range of wire mesh screens. These tests were performed in general accordance with ASTM D-422 and/or ASTM D-1140. The weight of the portion of the sample retained on each screen is recorded and the percentage finer or coarser of the total weight is calculated. The results of these tests are presented at the end of this report.

Design Recommendations

A total of three (3) infiltration tests were performed at the subject site. As noted above, the calculated infiltration rates at the infiltration locations range from 0.3 to 14.9 inches per hour. The primary reason that the infiltration rates vary is the amount of clay and silt content, which varies at different depths and locations within the native soils throughout the subject site. Higher clay and silt content was observed within the soils exposed at the bottom of Infiltration Trench No. I-1 and I-3, which exhibited slower infiltration rates.

Based on these considerations, the designer of the system may wish to apply a factor of safety to the recommended infiltration rate at his discretion. **Based on the infiltration test results from Infiltration Trench Nos. I-1 and I-2, we recommend a design infiltration rate of 0.3 inches per hour be used in the design of the proposed detention/infiltration basin located at the southeast corner of Building 1.** Please note that a fine to coarse sand stratum was encountered at the base of the Infiltration Test No. I-2. This fine to coarse sand stratum appears to be a localized condition and does not accurately reflect the subsurface conditions throughout the site. The below grade storm water detention/infiltration system should not be designed for a localized stratum that does not represent the on-site subsurface conditions. **Based on the infiltration test results from Infiltration Trench No. I-3, we recommend a design infiltration rate of 2.5 inches per hour be used in the possible proposed detention/infiltration basin located south of Building 2.**

The design of the storm water infiltration systems should be performed by the project civil engineer, in accordance with the city of Moreno Valley and/or Riverside county guidelines. However, it is recommended that the systems be constructed so as to facilitate removal of silt and clay, or other deleterious materials from any water that may enter the systems. The presence of such materials would decrease the effective infiltration rates. It is recommended that the project civil engineer apply an appropriate factor of safety. **The infiltration rates recommended above are based on the assumption that only clean water will be introduced to the subsurface profile. Any fines, debris, or organic materials could significantly impact the infiltration rates.** It should be noted that the recommended infiltration rates are based on infiltration testing at three (3) discrete locations and the overall infiltration rate of the storm water infiltration systems could vary considerably.

Infiltration versus Permeability

Infiltration rates are based on unsaturated flow. As water is introduced into soils by infiltration, the soils become saturated and the wetting front advances from the unsaturated zone to the saturated zone. Once the soils become saturated, infiltration rates become zero, and water can only move through soils by hydraulic conductivity at a rate determined by pressure head and soil permeability. The infiltration rates presented herein were determined in accordance with the ASTM Test Method D-3385-03 standard, and are considered valid for the time and place of the actual test. Changes in soil moisture content will affect these infiltration rates. Infiltration rates should be expected to decrease until the soils become saturated. Soil permeability values will then govern groundwater movement. Permeability values may be on the order of 10 to 20 times less than infiltration rates. The system designer should incorporate adequate factors of safety and allow for overflow design into appropriate traditional storm drain systems, which would transport storm water off-site.

Location of Infiltration Systems

The use of on-site storm water infiltration systems carries a risk of creating adverse geotechnical conditions. Increasing the moisture content of the soil can cause the soil to lose internal shear strength and increase its compressibility, resulting in a change in the designed engineering properties. Structures and pavements adjacent to the infiltration areas could potentially be damaged due to saturation of subgrade soils.

If possible, all of the proposed infiltration systems for this site should be located at least 25 feet away from any structures, including retaining walls. Even with this provision of locating the infiltration systems at least 25 feet from any structures, it is possible that infiltrating water into the subsurface soils could have an adverse effect on the proposed structures (if any). It should also be noted that utility trenches which happen to collect storm water can also serve as conduits to transmit storm water toward the structure (if any), depending on the slope of the utility trench. Therefore, consideration should also be given to the proposed locations of underground utilities which may pass near the proposed infiltration systems.

General Comments

This report has been prepared as an instrument of service for use by the client in order to aid in the evaluation of this property and to assist the architects and engineers in the design and preparation of the project plans and specifications. This report may be provided to the contractor(s) and other design consultants to disclose information relative to the project. However, this report is not intended to be utilized as a specification in and of itself, without appropriate interpretation by the project architect, structural engineer, and/or civil engineer. The design of the infiltration system is the responsibility of the civil engineer. The role of the geotechnical engineer is limited to determination of infiltration rate only. By using the design infiltration rates contained herein, the civil engineer agrees to indemnify, defend, and hold harmless the geotechnical engineer for all aspects of the design and performance of the infiltration system. The reproduction and distribution of this report must be authorized by the client and Southern California Geotechnical, Inc. Furthermore, any reliance on this report by an unauthorized third party is at such party's sole risk, and we accept no responsibility for damage or loss which may occur.

The analysis of this site was based on a subsurface profile interpolated from limited discrete soil samples. While the materials encountered in the project area are considered to be representative of the total area, some variations should be expected between trench locations and testing depths. If the conditions encountered during construction vary significantly from those detailed herein, we should be contacted immediately to determine if the conditions alter the recommendations contained herein.

This report has been based on assumed or provided characteristics of the proposed development. It is recommended that the owner, client, architect, structural engineer, and civil engineer carefully review these assumptions to ensure that they are consistent with the characteristics of the proposed development. If discrepancies exist, they should be brought to our attention to verify that they do not affect the conclusions and recommendations contained herein. We also recommend that the project plans and specifications be submitted to our office for review to verify that our recommendations have been correctly interpreted.

The analysis, conclusions, and recommendations contained within this report have been promulgated in accordance with generally accepted professional geotechnical engineering practice. No other warranty is implied or expressed.

Closure

We sincerely appreciate the opportunity to be of service on this project. We look forward to providing additional consulting services during the course of the project. If we may be of further assistance in any manner, please contact our office.

Respectfully Submitted,

Vicky,

Due to the requirements by the ALUC, the City will accept the use of the SF Basin.

Subject: PA15-0014 - Moreno Valley Logistics Center

Hi Hoang,

Per our conversation:

- The project site has six Extended Detention Basins (EDBs) proposed.
- County of Riverside Airport Land Use Commission (ALUC) is restricting water quality management basins to a maximum 48-hour detention period following the conclusion of the storm event. See item#4 on PDF page 4 of 51 of attachment.
- Melanie's redlines from the 1st review tells us that sand filters are treatment control BMPs and that we have bypassed part of the hierarchy.
- The email attached is from you, me, and Melanie about how we decided that EDBs are best for the site since it allows larger tributary areas and nobody is concerned with the small amount of infiltration from an EDB over a plume.
- In order to design an EDB to drawdown 100% of the volume within 48 hours, we are unable to hold 50% of the volume for 24+ hours.

We either need clearance for (1) to allow for these EDBs to drawdown 50% of the volume in less than 24 hours (preliminary numbers are around 10 hours) which kind of defeats the purpose of EDBs since they rely on holding stormwater for longer periods of time, or 2) the project is allowed to bypass this part of the hierarchy and revert to sand filter basins.

Please provide an answer today.. it'd be much appreciated, thank you!

COUNTY OF RIVERSIDE
AIRPORT LAND USE COMMISSION

STAFF REPORT

AGENDA ITEM: 3.4

HEARING DATE: October 8, 2015

CASE NUMBER: ZAP1137MA15 – Prologis – Scott Mulkay (Representative: T&B Planning, Inc. – Grant Henninger)

APPROVING JURISDICTION: City of Moreno Valley

JURISDICTION CASE NO: PA 15-0014 (Plot Plan – Building 1), PA 15-0015 (Plot Plan – Building 2), PA 15-0016 (Plot Plan – Building 3), PA 15-0017 (Plot Plan – Building 4), PA 15-0018 (Tentative Parcel Map No. 36150), P 15-036 (Specific Plan Amendment)

MAJOR ISSUES: None.

RECOMMENDATION: Staff recommends a finding of CONSISTENCY for the Specific Plan Amendment, the Parcel Map, and the Plot Plans, subject to the conditions included herein.

PROJECT DESCRIPTION: The applicant proposes development of Moreno Valley Logistics Center, consisting of four industrial (predominantly warehouse) buildings, on 84.82 net acres:

- Building 1 (PA15-0014) --- 1,351,770 square feet gross floor area, including 30,000 square feet of office space;
- Building 2 (PA15-0015) --- 122,516 square feet gross floor area, including 10,000 square feet of office space;
- Building 3 (PA15-0016) --- 97,222 square feet gross floor area, including 10,000 square feet of office space;
- Building 4 (PA15-0017) --- 166,010 square feet of floor area, including 10,000 square feet of office space.

Tentative Parcel Map No. 36150 (PA15-0018) would divide the portion of the site easterly of the Perris Valley Storm Drain Channel (69.55 acres) into two lots, so that Buildings 1 and 2 would be on separate legal lots. The applicant also proposes to amend (PA15-036) the Moreno Valley Industrial Specific Plan (Specific Plan No. 208) so as to allow the buffer between industrial and residential uses along the portion of the west side of Indian Street southerly of Krameria Avenue and northerly of the Perris Valley Storm Drain Channel to be reduced from 250 feet to 100 feet. (This provision already applies to areas northerly of Krameria Avenue extending north to Iris Avenue.)

CONDITIONS:

1. Any outdoor lighting installed shall be hooded or shielded to prevent either the spillage of lumens or reflection into the sky. Outdoor lighting shall be downward facing.

2. The following uses shall be prohibited:

   (a) Any use which would direct a steady light or flashing light of red, white, green, or amber colors associated with airport operations toward an aircraft engaged in an initial straight climb following takeoff or toward an aircraft engaged in a straight final approach toward a landing at an airport, other than an FAA-approved navigational signal light or visual approach slope indicator.

   (b) Any use which would cause sunlight to be reflected towards an aircraft engaged in an initial straight climb following takeoff or towards an aircraft engaged in a straight final approach towards a landing at an airport.

   (c) Any use which would generate smoke or water vapor or which would attract large concentrations of birds, or which may otherwise affect safe air navigation within the area. (Such uses include landscaping utilizing water features, aquaculture, production of cereal grains, sunflower, and row crops, composting operations, trash transfer stations that are open on one or more sides, recycling centers containing putrescible wastes, construction and demolition debris facilities, fly ash disposal, and incinerators.)

   (d) Any use which would generate electrical interference that may be detrimental to the operation of aircraft and/or aircraft instrumentation.

   (e) In Buildings 3 and 4: Children's schools, day care centers, libraries, hospitals, skilled nursing and care facilities, congregate care facilities, noise sensitive outdoor nonresidential uses and hazards to flight.

3. The attached notice shall be given to all prospective purchasers of the property and tenants of the buildings, and shall be recorded as a deed notice.

4. The proposed detention basins on the site (including water quality management basins) shall be designed so as to provide for a maximum 48-hour detention period following the conclusion of the storm event for the design storm (may be less, but not more), and to remain totally dry between rainfalls. Vegetation in and around the detention basins that would provide food or cover for bird species that would be incompatible with airport operations shall not be utilized in project landscaping. Trees shall be spaced so as to prevent large expanses of contiguous canopy, when mature. Landscaping in and around the detention

Subject: RE: WQMP - Krameria Ave & Indian Street

Vicky,

The City does not have any objection to allow 30 ac that are tributary to each basin. As far as the separation, the City does not have a criteria. It is up to the engineer of work to determine what works for their situation, is safe and functions properly.

Subject: WQMP - Krameria Ave & Indian Street

Morning Hoang,

Hope you've been well. We have a ~63 acre project site along the S/W corner of Krameria Avenue and Indian Street intersection. It's the property immediately south of PA13-0022. Being under the same circumstances, nearby air force contamination and infiltration rates well below the 1.6 in/hr minimum, we are choosing to use sand filter basins (SFBs) again. The site's existing and proposed drainage flows from northerly to southerly.

We are proposing the use of two SFBs each taking in approximately 30 acres, however, the LID handbook states a maximum of 25 acres of tributary area per SFB. Will you allow an additional 5 acres of tributary area per basin? Also, these SFBs will be next to each other. What is the minimum separation you would like to see between the SFBs?

Your assistance is greatly appreciated.

Thank you,
Vicky Li, EIT, QSP

Appendix 8: Source Control

Pollutant Sources/Source Control Checklist

STORMWATER POLLUTANT SOURCES/SOURCE CONTROL CHECKLIST

How to use this worksheet (also see instructions in Section G of the WQMP Template):

1. Review Column 1 and identify which of these potential sources of stormwater pollutants apply to your site. Check each box that applies.
2. Review Column 2 and incorporate all of the corresponding applicable BMPs in your WQMP Exhibit.
3. Review Columns 3 and 4 and incorporate all of the corresponding applicable permanent controls and operational BMPs in your WQMP. Use the format shown in Table G.1on page 23 of this WQMP Template. Describe your specific BMPs in an accompanying narrative, and explain any special conditions or situations that required omitting BMPs or substituting alternative BMPs for those shown here.

IF THESE SOURCES WILL BE ON THE PROJECT SITE …	… THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
☐ A. **On-site storm drain inlets**	☐ **Locations of inlets.**	☐ **Mark all inlets with the words "Only Rain Down the Storm Drain" or similar. Catch Basin Markers may be available from the Riverside County Flood Control and Water Conservation District, call 951.955.1200 to verify.**	☐ **Maintain and periodically repaint or replace inlet markings.** ☐ **Provide stormwater pollution prevention information to new site owners, lessees, or operators.** ☐ **See applicable operational BMPs in Fact Sheet SC-44, "Drainage System Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com** ☐ **Include the following in lease agreements: "Tenant shall not allow anyone to discharge anything to storm drains or to store or deposit materials so as to create a potential discharge to storm drains."**
☐ B. **Interior floor drains and elevator shaft sump pumps**		☐ **State that interior floor drains and elevator shaft sump pumps will be plumbed to sanitary sewer.**	☐ **Inspect and maintain drains to prevent blockages and overflow.**
☐ C. **Interior parking garages**		☐ **State that parking garage floor drains will be plumbed to the sanitary sewer.**	☐ **Inspect and maintain drains to prevent blockages and overflow.**

STORMWATER POLLUTANT SOURCES/SOURCE CONTROL CHECKLIST

IF THESE SOURCES WILL BE ON THE PROJECT SITE …	… THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
☐ D1. **Need for future indoor & structural pest control**		☐ **Note building design features that discourage entry of pests.**	☐ **Provide Integrated Pest Management information to owners, lessees, and operators.**
☐ D2. **Landscape/ Outdoor Pesticide Use**	☐ **Show locations of native trees or areas of shrubs and ground cover to be undisturbed and retained.** ☐ **Show self-retaining landscape areas, if any.** ☐ **Show stormwater treatment and hydrograph modification management BMPs. (See instructions in Chapter 3, Step 5 and guidance in Chapter 5.)**	**State that final landscape plans will accomplish all of the following.** ☐ **Preserve existing native trees, shrubs, and ground cover to the maximum extent possible.** ☐ **Design landscaping to minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to stormwater pollution.** ☐ **Where landscaped areas are used to retain or detain stormwater, specify plants that are tolerant of saturated soil conditions.** ☐ **Consider using pest-resistant plants, especially adjacent to hardscape.** ☐ **To insure successful establishment, select plants appropriate to site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, and plant interactions.**	☐ **Maintain landscaping using minimum or no pesticides.** ☐ **See applicable operational BMPs in "What you should know for…..Landscape and Gardening"** at http://rcflood.org/stormwater/**Error! Hyperlink reference not valid.** ☐ **Provide IPM information to new owners, lessees and operators.**

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
☐ E. **Pools, spas, ponds, decorative fountains, and other water features.**	☐ **Show location of water feature and a sanitary sewer cleanout in an accessible area within 10 feet. (Exception: Public pools must be plumbed according to County Department of Environmental Health Guidelines.)**	**If the Co-Permittee requires pools to be plumbed to the sanitary sewer, place a note on the plans and state in the narrative that this connection will be made according to local requirements.**	☐ **See applicable operational BMPs in** "Guidelines for Maintaining Your Swimming Pool, Jacuzzi and Garden Fountain" at http://rcflood.org/stormwater/
☐ F. **Food service**	☐ **For restaurants, grocery stores, and other food service operations, show location (indoors or in a covered area outdoors) of a floor sink or other area for cleaning floor mats, containers, and equipment.** ☐ **On the drawing, show a note that this drain will be connected to a grease interceptor before discharging to the sanitary sewer.**	☐ **Describe the location and features of the designated cleaning area.** ☐ **Describe the items to be cleaned in this facility and how it has been sized to insure that the largest items can be accommodated.**	☐ **See the brochure, "**The Food Service Industry Best Management Practices for: Restaurants, Grocery Stores, Delicatessens and Bakeries" at http://rcflood.org/stormwater/ **Provide this brochure to new site owners, lessees, and operators.**
☐ G. **Refuse areas**	☐ **Show where site refuse and recycled materials will be handled and stored for pickup. See local municipal requirements for sizes and other details of refuse areas.** ☐ **If dumpsters or other receptacles are outdoors, show how the designated area will be covered, graded, and paved to prevent run-on and show locations of berms to prevent runoff from the area.** ☐ **Any drains from dumpsters, compactors, and tallow bin areas shall be connected to a grease removal device before discharge to sanitary sewer.**	☐ **State how site refuse will be handled and provide supporting detail to what is shown on plans.** ☐ **State that signs will be posted on or near dumpsters with the words "Do not dump hazardous materials here" or similar.**	☐ **State how the following will be implemented:** **Provide adequate number of receptacles. Inspect receptacles regularly; repair or replace leaky receptacles. Keep receptacles covered. Prohibit/prevent dumping of liquid or hazardous wastes. Post "no hazardous materials" signs. Inspect and pick up litter daily and clean up spills immediately. Keep spill control materials available on-site. See Fact Sheet SC-34, "Waste Handling and Disposal" in the CASQA Stormwater Quality Handbooks at** www.cabmphandbooks.com

IF THESE SOURCES WILL BE ON THE PROJECT SITE …	… THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
☐ H. **Industrial processes.**	☐ **Show process area.**	☐ **If industrial processes are to be located on site, state: "All process activities to be performed indoors. No processes to drain to exterior or to storm drain system."**	☐ **See Fact Sheet SC-10, "Non-Stormwater Discharges" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com** See the brochure "Industrial & Commercial Facilities Best Management Practices for: Industrial, Commercial Facilities" at http://rcflood.org/stormwater/

STORMWATER POLLUTANT SOURCES/SOURCE CONTROL CHECKLIST

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
☐ I. Outdoor storage of equipment or materials. (See rows J and K for source control measures for vehicle cleaning, repair, and maintenance.)	☐ Show any outdoor storage areas, including how materials will be covered. Show how areas will be graded and bermed to prevent run-on or run-off from area. ☐ Storage of non-hazardous liquids shall be covered by a roof and/or drain to the sanitary sewer system, and be contained by berms, dikes, liners, or vaults. ☐ Storage of hazardous materials and wastes must be in compliance with the local hazardous materials ordinance and a Hazardous Materials Management Plan for the site.	Include a detailed description of materials to be stored, storage areas, and structural features to prevent pollutants from entering storm drains. Where appropriate, reference documentation of compliance with the requirements of Hazardous Materials Programs for: ▪ Hazardous Waste Generation ▪ Hazardous Materials Release Response and Inventory ▪ California Accidental Release (CalARP) ▪ Aboveground Storage Tank ▪ Uniform Fire Code Article 80 Section 103(b) & (c) 1991 ▪ Underground Storage Tank www.cchealth.org/groups/hazmat/	☐ See the Fact Sheets SC-31, "Outdoor Liquid Container Storage" and SC-33, "Outdoor Storage of Raw Materials " in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
☐ J. **Vehicle and Equipment Cleaning**	☐ **Show on drawings as appropriate:** **(1) Commercial/industrial facilities having vehicle/equipment cleaning needs shall either provide a covered, bermed area for washing activities or discourage vehicle/equipment washing by removing hose bibs and installing signs prohibiting such uses.** **(2) Multi-dwelling complexes shall have a paved, bermed, and covered car wash area (unless car washing is prohibited on-site and hoses are provided with an automatic shut-off to discourage such use).** **(3) Washing areas for cars, vehicles, and equipment shall be paved, designed to prevent run-on to or runoff from the area, and plumbed to drain to the sanitary sewer.** **(4) Commercial car wash facilities shall be designed such that no runoff from the facility is discharged to the storm drain system. Wastewater from the facility shall discharge to the sanitary sewer, or a wastewater reclamation system shall be installed.**	☐ **If a car wash area is not provided, describe any measures taken to discourage on-site car washing and explain how these will be enforced.**	**Describe operational measures to implement the following (if applicable):** ☐ **Washwater from vehicle and equipment washing operations shall not be discharged to the storm drain system.** Refer to "Outdoor Cleaning Activities and Professional Mobile Service Providers" for many of the Potential Sources of Runoff Pollutants categories below. Brochure can be found at http://rcflood.org/stormwater/ ☐**Car dealerships and similar may rinse cars with water only.**

STORMWATER POLLUTANT SOURCES/SOURCE CONTROL CHECKLIST

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
☐ K. **Vehicle/Equipment Repair and Maintenance**	☐ **Accommodate all vehicle equipment repair and maintenance indoors. Or designate an outdoor work area and design the area to prevent run-on and runoff of stormwater.** ☐ **Show secondary containment for exterior work areas where motor oil, brake fluid, gasoline, diesel fuel, radiator fluid, acid-containing batteries or other hazardous materials or hazardous wastes are used or stored. Drains shall not be installed within the secondary containment areas.** ☐ **Add a note on the plans that states either (1) there are no floor drains, or (2) floor drains are connected to wastewater pretreatment systems prior to discharge to the sanitary sewer and an industrial waste discharge permit will be obtained.**	☐ **State that no vehicle repair or maintenance will be done outdoors, or else describe the required features of the outdoor work area.** ☐ **State that there are no floor drains or if there are floor drains, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements.** ☐ **State that there are no tanks, containers or sinks to be used for parts cleaning or rinsing or, if there are, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements.**	**In the Stormwater Control Plan, note that all of the following restrictions apply to use the site:** ☐ **No person shall dispose of, nor permit the disposal, directly or indirectly of vehicle fluids, hazardous materials, or rinsewater from parts cleaning into storm drains.** ☐ **No vehicle fluid removal shall be performed outside a building, nor on asphalt or ground surfaces, whether inside or outside a building, except in such a manner as to ensure that any spilled fluid will be in an area of secondary containment. Leaking vehicle fluids shall be contained or drained from the vehicle immediately.** ☐ **No person shall leave unattended drip parts or other open containers containing vehicle fluid, unless such containers are in use or in an area of secondary containment.** Refer to "Automotive Maintenance & Car Care Best Management Practices for Auto Body Shops, Auto Repair Shops, Car Dealerships, Gas Stations and Fleet Service Operations". Brochure can be found at http://rcflood.org/stormwater/ Refer to Outdoor Cleaning Activities and Professional Mobile Service Providers for many of the Potential Sources of Runoff Pollutants categories below. Brochure can be found at http://rcflood.org/stormwater/

IF THESE SOURCES WILL BE ON THE PROJECT SITE …	… THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
☐ L. **Fuel Dispensing Areas**	☐ **Fueling areas[6] shall have impermeable floors (i.e., portland cement concrete or equivalent smooth impervious surface) that are: a) graded at the minimum slope necessary to prevent ponding; and b) separated from the rest of the site by a grade break that prevents run-on of stormwater to the maximum extent practicable.** ☐ **Fueling areas shall be covered by a canopy that extends a minimum of ten feet in each direction from each pump. [Alternative: The fueling area must be covered and the cover's minimum dimensions must be equal to or greater than the area within the grade break or fuel dispensing area[1].] The canopy [or cover] shall not drain onto the fueling area.**		☐ **The property owner shall dry sweep the fueling area routinely.** ☐ **See the Fact Sheet SD-30 , "Fueling Areas" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**

---

[6] The fueling area shall be defined as the area extending a minimum of 6.5 feet from the corner of each fuel dispenser or the length at which the hose and nozzle assembly may be operated plus a minimum of one foot, whichever is greater.

STORMWATER POLLUTANT SOURCES/SOURCE CONTROL CHECKLIST

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
☐ M. **Loading Docks**	☐ **Show a preliminary design for the loading dock area, including roofing and drainage. Loading docks shall be covered and/or graded to minimize run-on to and runoff from the loading area. Roof downspouts shall be positioned to direct stormwater away from the loading area. Water from loading dock areas shall be drained to the sanitary sewer, or diverted and collected for ultimate discharge to the sanitary sewer.** ☐ **Loading dock areas draining directly to the sanitary sewer shall be equipped with a spill control valve or equivalent device, which shall be kept closed during periods of operation.** ☐ **Provide a roof overhang over the loading area or install door skirts (cowling) at each bay that enclose the end of the trailer.**		☐ **Move loaded and unloaded items indoors as soon as possible.** ☐ **See Fact Sheet SC-30, "Outdoor Loading and Unloading," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**

STORMWATER POLLUTANT SOURCES/SOURCE CONTROL CHECKLIST

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
☐ N. **Fire Sprinkler Test Water**		☐ **Provide a means to drain fire sprinkler test water to the sanitary sewer.**	☐ **See the note in Fact Sheet SC-41, "Building and Grounds Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**
O. **Miscellaneous Drain or Wash Water or Other Sources** ☐ **Boiler drain lines** ☐ **Condensate drain lines** ☐ **Rooftop equipment** ☐ **Drainage sumps** ☐ **Roofing, gutters, and trim.** ☐ **Other sources**		☐ **Boiler drain lines shall be directly or indirectly connected to the sanitary sewer system and may not discharge to the storm drain system.** ☐ **Condensate drain lines may discharge to landscaped areas if the flow is small enough that runoff will not occur. Condensate drain lines may not discharge to the storm drain system.** ☐ **Rooftop equipment with potential to produce pollutants shall be roofed and/or have secondary containment.** ☐ **Any drainage sumps on-site shall feature a sediment sump to reduce the quantity of sediment in pumped water.** ☐ **Avoid roofing, gutters, and trim made of copper or other unprotected metals that may leach into runoff.** ☐ **Include controls for other sources as specified by local reviewer.**	

STORMWATER POLLUTANT SOURCES/SOURCE CONTROL CHECKLIST

IF THESE SOURCES WILL BE ON THE PROJECT SITE …	… THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
☐ P. **Plazas, sidewalks, and parking lots.**			☐ **Sweep plazas, sidewalks, and parking lots regularly to prevent accumulation of litter and debris. Collect debris from pressure washing to prevent entry into the storm drain system. Collect washwater containing any cleaning agent or degreaser and discharge to the sanitary sewer not to a storm drain.**

Table of Contents

List of Appendices

I. Inspection and Maintenance Log

Date	Observations/Actions	Inspector

Additional inspection and maintenance logs to be included in Appendix 1 of this O&M Plan.

II. Updates, Revisions, and Errata

Revision Number	Date	Brief Description of Update/Revision/Errata, include section and page number	Prepared and Approved By

Additional updates, revisions, and errata to be include in Appendix 2 of this O&M Plan.

III. Introduction

Proposed improvements to the site consist of the construction of four commercial type buildings ranging from 94,000 to 1,334,000 square feet.

The overall project property encompasses approximately 84.9 acres (an additional 1.28 acres for Cosmo Street). There will be truck yards and vehicle parking lots adjacent to each building. There will be several water quality / detention basins. The existing Cosmos Street will be extended southerly between Buildings 2 and 3. The remainder of the project site will be reserved for landscaping.

Existing Conditions

The project site consists of several undeveloped dirt lots. Runoff generally surface drains south-easterly and into the Perris Valley Storm Drain Channel.

Proposed Conditions

Building 1 Lot:

Runoff from the east half of Building 1, the building's easterly truck yard, and the east half of the northerly parking lot drains to catch basins in the easterly truck yard. It is then conveyed southerly via a proposed storm drain to Basin #4.

Runoff from the west half of Building 1, the building's southerly and westerly truck yards, and the west half of the northerly parking lot drains to catch basins in the southerly truck yard. It is then conveyed southerly via a proposed storm drain to Basin #5. Basin #5 also accepts runoff from Basin #3 and the offsite dirt lot to the west.

Basin #5 discharges to Basin #4, which discharges into the Perris Valley Storm Drain Channel via a proposed storm drain at the Building 1 Lot's southeast corner.

The landscape areas fronting Indian Street, Krameria Avenue and the southern extension of Cosmos Street surface drain to their respective streets.

Building 2 Lot:

Runoff from Building 2, the building's westerly truck yard, easterly parking lot, and the southerly drive aisle drains to a catch basin in the southerly drive aisle. It is then conveyed southerly via a proposed storm drain to Basin #2. Basin #2 discharges into the Perris Valley Storm Drain Channel via a proposed storm drain at the Building 2 Lot's southwest corner.

The landscape area at the Building 2 Lot's northwest corner surface drains to the Perris Valley Storm Drain Channel.

Building 3 Lot:

Runoff from Building 3, the building's northerly and easterly truck yards, and the building's southerly and westerly parking lots drains to catch basins in the truck yards and parking lots. It is then conveyed easterly via a proposed storm drain to Basin #6. Basin #6 discharges into the Perris Valley Storm Drain Channel via a proposed storm drain at the Building 3 Lot's southeast corner.

The landscape area at the north end of the Building 3 Lot surface drains to the Perris Valley Storm Drain Channel. The landscape area adjacent to the southerly property line of the Building 3 Lot surface drains to Cardinal Avenue.

Building 4 Lot:

Runoff from Building 4, the building's easterly truck yard, northerly and southerly parking lots drains to catch basins in the truck yard. It is then conveyed easterly to Basin #1. Basin #1 discharges into the Perris Valley Storm Drain Channel via a proposed storm drain at the Building 4 Lot's southeast corner.
The landscape area fronting Heacock Avenue surface drains to Heacock Avenue.

IV. Responsibility for Maintenance

IV.A General

Funding will be provided by the owner:

Moorpark Country Properties, a California Corporation

Contact: Harry Muranaka, Trustee
Contact: Roy Muranaka, Trustee

Prologis, Inc.
17777 Center Court Drive North, Suite 100
Cerritos, CA 90703
(562) 345-9200
Contact: Scott Mulkay

A copy of the Covenant Agreement will be attached in Appendix 3 of this O&M Plan.

IV.B Staff Training Program

Staff training records and descriptions will be inserted in Appendix 4 of this O&M Plan.

IV.C Records

Maintenance records are to be inserted chronologically in Appendix 1 of this O&M Plan.

IV.D Safety

All maintenance procedures shall comply with the latest OSHA standards.

V. Summary of Drainage Management Areas and Stormwater BMPs

V.A Drainage Areas

See Appendix 5 of this O&M Plan for WQMP site map.

DMA Name or ID	Surface Type(s)[1]	Area (Sq. Ft.)	Area (Acres)	DMA Type
1A	Roofs/Conc/Asphalt	307,098	7.05	Type D
1B	Ornamental Landscaping	69,696	1.60	Type D
2A	Roofs/Conc/Asphalt	297,515	6.83	Type D
2B	Ornamental Landscaping	50,094	1.15	Type D
3A	Roofs/Conc/Asphalt	609,840	14.00	Type D
3B	Ornamental Landscaping	50,094	1.15	Type D
4A	Roofs/Conc/Asphalt	1,078,110	24.75	Type D
4B	Ornamental Landscaping	113,256	2.60	Type D
5A	Roofs/Conc/Asphalt	609,840	14.00	Type D
5B	Ornamental Landscaping	115,434	2.65	Type D
6A	Roofs/Conc/Asphalt	226,512	5.20	Type D
6B	Ornamental Landscaping	45,738	1.05	Type D
7	Ornamental Landscaping	180,774	4.15	Type A

V.B Structural Post-Construction BMPs

See Appendix 5 of this O&M Plan for WQMP site map.

Additional BMP details are available in Appendix 10 of the WQMP.

V.C Self-Retaining Areas or Other

DMA 7 is a self-treating area that flows off-site.

Attachment: G2 - Preliminary Water Quality Management Plan (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

VI. Stormwater BMP Design Documentation

VI.A "As-Built" Drawings of each Stormwater BMP

See Appendix 6 of this O&M Plan for "as-built" drawings.

VI.B Manufacturer's Data, Manuals, and Maintenance Requirements

Not applicable, there are no manufactured stormwater BMPs.

VI.C Specific Operation and Maintenance Concerns and Troubleshooting

Not applicable.

VII. Maintenance Schedule or Matrix

VII.A Maintenance Schedule

Schedule (Sand Filter Basin)	Inspection and Maintenance Activity (Sand Filter Basin)
Semi-monthly including just before the annual storm season and following rainfall events.	• Routine maintenance and inspection. • Remove debris and litter from the entire basin to minimize filter clogging and to improve aesthetics. • Check for obvious problems and repair as needed. Address odor, insects, and overgrowth issues associated with stagnant or standing water in the basin bottom. There should be no long-term ponding water. • Check for erosion and sediment laden areas in the basins. Repair as needed. Clean forebay of debris, litter, sediment, etc upon discovery. • Revegetate side slopes where needed.
Annually. Schedule these inspections within 72 hours after a significant rainfall and prior to the rainy season (October 1st). "Significant rainfall" is defined as 0.5 inches or greater of rainfall: http://www.wrh.noaa.gov/forecast/wxtables/	• Inspection of hydraulic and structural facilities. Examine the inlet for blockage, the embankment and spillway integrity, as well as damage to any structural element. • Check side slopes and embankments for erosion, slumping and overgrowth. • Inspect the sand media at the filter drain to verify it is allowing acceptable infiltration. **Scarify the top 3 inches by raking the filter drain's sand surface annually.** • Check the filter drain underdrains for damage or clogging. Repair as needed. • Repair basin inlets, outlets, forebays, and energy dissipaters whenever damage is discovered. • No water should be present 72 hours after an event. No long tern standing water should be present at all. No algae formation should be visible. Correct problem as needed.
Every 5 years or sooner depending on the observed drain times (no more than 72 hours to empty the basin).	• Remove the top 3 inches of sand from the filter drain and backfill with 3 inches of new sand to return the sand layer to its original depth. When scarification or removal of the top 3 inches of sand is no longer effective, remove and replace sand filter layer.

VII.B Service Agreement Information

See Appendix 8 of this O&M Plan for service agreement information with any contractors regarding the O&M of BMPs at the site, if any.

THIS INSTRUMENT is made and entered into this _______ day of _________ 2016, by and between MOORPARK COUNTRY PROPERTIES, A CALIFORNIA CORPORATION, AS TO AN UNDIVIDED 90% INTEREST; AND C-R COUSINS, INC., MONEY PURCHASE PLAN AS TO AN UNDIVIDED 10% INTEREST hereinafter referred to as "Owner," and the City of Moreno Valley, a municipal corporation, hereinafter referred to as "City."

RECITALS

WHEREAS, the Owner owns real property ("Property") in the City specifically described in Exhibit "A," which is attached hereto and incorporated herein by this reference; and

WHEREAS, at the time of approval of the development project known as MORENO VALLEY LOGISTICS CENTER (the "Project") for the Property, the City required the Project to employ on-site storm water and non-storm water control measures to mitigate the Project impacts to water quality and minimize pollutants in urban storm water runoff; and

WHEREAS, the City and Owner, its successors, and assigns, agree that the health, safety and welfare of the residents of the City, require that on-site storm water and non-storm water management control measures be constructed and implemented and adequately maintained on the Property; and

WHEREAS, the Owner has chosen to install SIX (6) SAND FILTER BASINS, hereinafter referred to as the "Device" and other control measures all as described in the Final Water Quality Management Plan (WQMP) to minimize pollutants in urban storm water and non-storm water runoff; and

WHEREAS, the Device and other control measures have been installed and/or implemented in accordance with the WQMP, project plans and specifications approved by the City; and

WHEREAS, the Device and other control measures, being installed on private property and draining only private property are private facilities with all maintenance or replacement therefore being the sole responsibility of the Owner; and

WHEREAS, the Owner is aware that periodic and continuous maintenance including, but not necessarily limited to, filter material replacement and sediment removal is required to assure discharges from the Device, other control measures and the Project are in compliance with the City's Municipal Code for storm water and non-storm water discharges and that such maintenance activity will require compliance with all Federal, State and local laws and regulations, including those pertaining to confined space and waste disposal methods in effect at the time such maintenance occurs;

NOW, THEREFORE, in consideration of City's approval of the Project and the foregoing premises, the mutual covenants contained herein, and the following terms and conditions, the City and Owner agree as follows:

1. The Owner hereby provides the City and its designees with full right of access to the Device and other control measures and the immediate vicinity of the property at any time, upon reasonable notice; or in the event of emergency, as determined by City's Public Works Director/City Engineer or designees, no advance notice; for the purpose of inspection, sampling and testing of the Device and other control measures, and in cases of emergency, where the public health, safety, or welfare is compromised, such emergency shall be declared a “nuisance” as defined in the Municipal Code. Such conditions that created the emergency shall be abated as provided for in the Municipal Code and at the Owner’s expense as provided for in Section 3, below.

2. The Owner shall diligently maintain the Device and other control measures in a manner assuring all discharges from the Device, other control measures and the Project are in compliance with the Municipal Code for storm water and non-storm water discharges at all times. All reasonable precautions shall be exercised by the Owner and the Owner’s representatives in the removal and extraction of materials from the Device and other control measures, and the ultimate disposal of the

materials in a manner consistent with all applicable laws. As may be requested from time to time by the City, the Owner shall provide the City with documentation identifying the materials removed, the quantity and the recycle of disposal destinations, as appropriate.

3. In the event the Owner fails to perform the necessary maintenance contemplated by this Instrument, within five (5) days of being given written notice by the City, the lack of maintenance shall be considered a public health and safety concern and declared a “nuisance”, the City shall take all necessary actions as provided in the Municipal Code, to abate the nuisance and charge the entire cost and expense to the Owner, including administrative costs, attorneys' fees and interest thereon at the maximum rate authorized by law from the date of the notice of expense until paid in full. Additionally, any discharge as a result from the lack of maintenance prescribed herein from the Device to the City’s maintained Municipal Separate Storm Sewer System shall be considered an illegal discharge and considered a violation of the Municipal Code and shall cease immediately. Such cessation may include a yellow or red tag issued to the Project.

4. This Instrument shall be recorded in the Official Records of the County of Riverside at the expense of the Owner and shall constitute notice to all successors and assigns to the title to the Property of the obligations herein set forth. This Instrument shall also constitute a lien against the Property in such amount as will fully reimburse the City, including interest as herein above set forth, subject to

foreclosure in event of default in payment.

5. It is the intent of the Owner that the burdens and benefits herein undertaken shall constitute covenants that run with the Property and shall constitute a lien against the Property.

6. This covenant imposes no liability of any kind whatsoever on the City and the Owner agrees to hold the City harmless from any liability in the event the Device and other control measures fail to operate in accordance with the plans and specification submitted to the City.

7. The obligations herein undertaken shall be binding upon the heirs, successors, executors, administrators and assigns of the Owner hereto. The term "Owner" shall include not only the Owner, but also its heirs, successors, executors, administrators, lessees and assigns. The Owner shall notify any successor to title of all or part of the Property about the existence of this Instrument. The Owner shall provide such notice prior to such successor obtaining an interest in all or part of the Property. The Owner shall provide a copy of such notice to the City at the same time such notice is provided to the successor.

8. Time is of the essence in the performance of this Instrument.

9. Any notice to a party required or called for in this Instrument shall be served in person, or by deposit in the U.S. Mail, first class postage prepaid, to the address set forth below. Notice(s) shall be deemed effective upon receipt, or seventy-two (72) hours after deposit in the U.S. Mail, whichever is earlier. A party may change notice address only by providing written notice thereof to the other party.

3.7 Sand Filter Basin

Type of BMP	Treatment
Treatment Mechanisms	Filtration, Biofiltration
Maximum Tributary Area	25 acres
Other Names	Sand Filter, Media Filter, Pocket Filter

Description

The Sand Filter Basin (SFB) is a basin where the entire invert is constructed as a stormwater filter, using a sand bed above an underdrain system. Stormwater enters the SFB at its forebay where trash and sediment accumulate or through overland sheet flow. Overland sheet flow into the Sand Filter Basin is biofiltered through the vegetated side slopes or other pre-treatment. Flows pass into the sand filter surcharge zone and are gradually filtered through the underlying sand bed. The underdrain gradually dewaters the sand bed and discharges the filtered runoff to a nearby channel, swale, or storm drain.

The primary advantage of the SFB is its effectiveness in removing pollutants where infiltration into the underlying soil is not practical, and where site conditions preclude the use of a Bioretention Facility . The primary disadvantage is a potential for clogging if silts and clays are allowed to flow into the SFB. In addition, this BMP's performance relies heavily on its being regularly and properly maintained.

While this BMP is not currently considered an LID BMP, when designed in accordance with this manual, a Sand Filter Basin is considered to be a highly effective Treatment Control BMP.

Siting Considerations

SFBs should be avoided where onsite configurations include a base flow and/or where this BMP would be put into operation while construction, grading or major landscaping activities are taking place in the tributary catchment. **This BMP has a flat surface area**, so it may be challenging to incorporate into steeply sloping terrain. SFBs should be set away from areas that could discharge fine sediments into the basin such as at the bottom of a slope. **See Section 1 of Riverside County Flood Control and Water Conservation District's "Basin Guidelines" (Appendix C) for additional requirements** (i.e., fencing, maintenance access, etc.) or other guidelines issued by the Engineering Authority (EA)[1].

---

[1] The Engineering Authority (EA) may choose to alter these guidelines and may have different/additional requirements. These entities, along with the District, will be referred to as the EA.

Attachment: G2 - Preliminary Water Quality Management Plan (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

SAND FILTER BASIN BMP FACT SHEET

Setbacks

The bottom of the sand filter should remain above the seasonal high groundwater level. Always consult your geotechnical engineer for additional site specific recommendations.

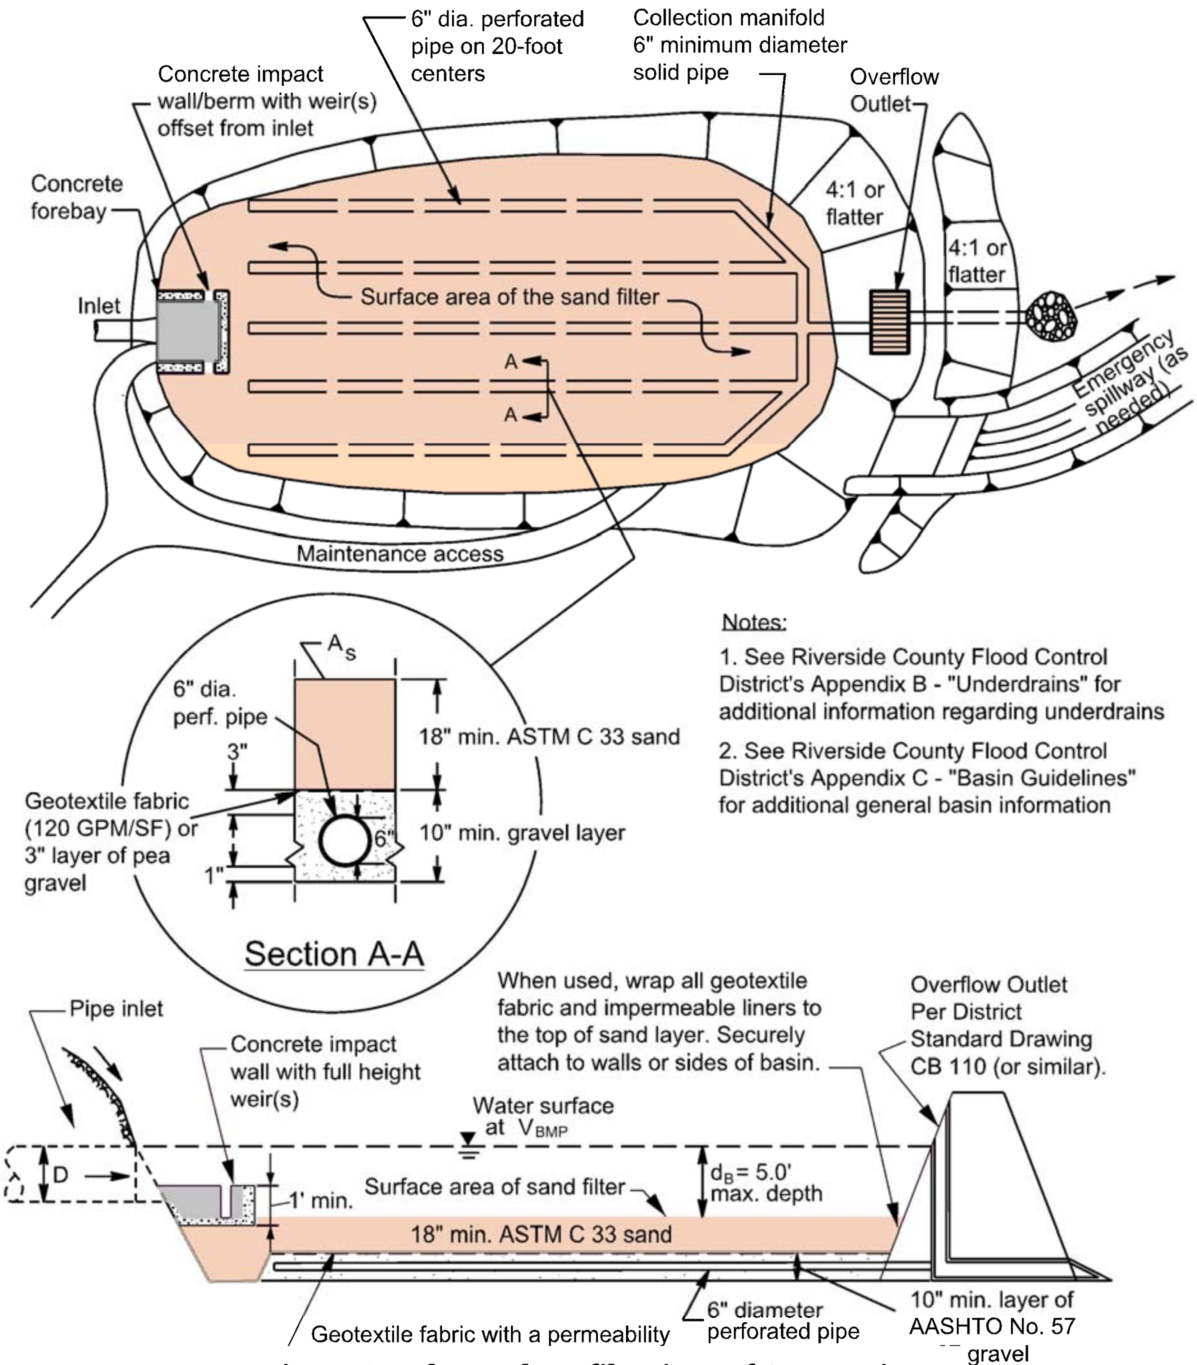

Figure 1 – Plan and Profile Views of SFB Basin

SAND FILTER BASIN BMP FACT SHEET

Forebay

A concrete forebay shall be provided to reduce sediment clogging and to reduce erosion. The forebay shall have a design volume of at least 0.5% V_{BMP} and a minimum 1 foot high concrete splashwall. Full height notch-type weir(s), offset from the line of flow from the basin inlet to prevent short circuiting shall be used to outlet the forebay. It is recommended that two weirs be used and that they be located on opposite sides of the forebay (see Figure 1).

Underdrains

Underdrain piping shall consist of a manifold (collector) pipe with perforated lateral branching. The lateral branching conveys the filtered water to the manifold where it is discharged into the outlet structure. See Appendix B for additional information.

Overflow Structure

An overflow must be provided to drain volume in excess of V_{BMP} or to help drain the system if clogging were to occur. Overflows shall flow to an acceptable discharge point such as a downstream conveyance system. Overflows must be placed above the water quality capture volume and near the outlet of the system. The overflow structure shall be similar to the District's Standard Drawing CB 110.

SAND FILTER BASIN BMP FACT SHEET

Recommended Maintenance

Table 1 - Recommended Inspection and Maintenance Activities for SFBs

Schedule	Inspection and Maintenance Activity
Semi-monthly including just before the annual storm season and following rainfall events.	• Routine maintenance and inspection. • Remove debris and litter from the entire basin to minimize filter clogging and to improve aesthetics. • Check for obvious problems especially filter clogging and signs of long term ponding. Repair as needed. Address odor, insects, and overgrowth issues associated with stagnant or standing water in the basin bottom. There should be no long-term ponding water. • Check for erosion and sediment laden areas in the basin. Repair as needed. Clean forebay if needed. • Revegetate side slopes where needed.
Annually. If possible, schedule these inspections within 72 hours after a significant rainfall.	• Inspection of hydraulic and structural facilities. Examine the overflow outlet for clogging, the embankment and spillway integrity, and damage to any structural element. • Check side slopes and embankments for erosion, slumping and overgrowth. • Inspect the sand media at the filter drain to verify it is allowing acceptable infiltration. **Scarify the top 3 inches by raking the filter drain's sand surface annually.** • Check the filter drain underdrains for damage or clogging. Repair as needed. • Repair basin inlets, outlets, forebays, and energy dissipaters whenever damage is discovered. • No water should be present 72 hours after an event. No long term standing water should be present at all. No algae formation should be visible. Correct problem as needed.
Every 5 years or sooner depending on the observed drain times (no more than 72 hours to empty the basin).	• Remove the top 3 inches of sand from the filter drain and backfill with 3 inches of new sand to return the sand layer to its original depth. When scarification or removal of the top 3 inches of sand is no longer effective, remove and replace sand filter layer.

Attachment: G2 - Preliminary Water Quality Management Plan (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

Table 2 - Design and Sizing Criteria for SFBs

Design Parameter	Extended Detention Basin
Maximum tributary area	25 acres [2]
Basin design volume	100% of V_{BMP}
Maximum basin depth	5 feet
Forebay volume	0.5 % of V_{BMP}
Longitudinal Slope	0%
Transverse Slope (min.)	0%
Outlet erosion control	Energy dissipaters to reduce velocities[1]

1. **Ventura County's Technical Guidance Manual for Stormwater Quality Control Measures**
2. **CA Stormwater BMP Handbook for New Development and Significant Redevelopment**

Note: The information contained in this BMP Factsheet is intended to be a summary of design considerations and requirements. Additional information which applies to all detention basins may be found in the District's "Basin Guidelines" (Appendix C). In addition, information herein may be superseded by other guidelines issued by the EA.

Design Procedure

1. Enter the Tributary Area, A_{TRIB}
2. Enter the Design Capture Volume, V_{BMP}, determined from Section 2.1 of this Handbook
3. SFB Geometry

Determine the minimum sand filter area required. The filtration bed surface shall be flat with the maximum depth for the reservoir design volume no greater than 5 feet*. The reservoir design volume does not include the volume of the sand filter. No credit is given for voids in the sand layer toward the reservoir volume since the sand is part of the water quality filter and not a reservoir layer. The design storage volume shall equal 100 percent of V_{BMP}. The minimum sand filter area (As) of the basin's bottom shall be determined using the equation:

$$A_s = (V_{BMP} / d_B)$$

Where:

V_{BMP} = Design Volume, ft^3
d_B = proposed basin depth (5 feet maximum), ft

Once the basin side slopes, proposed basin depth and depth of freeboard are entered, the spreadsheet will calculate the minimum total depth required to use this BMP. This is the depth from the top of the basin (including freeboard) down to the bottom of the underdrain gravel layer. This depth can be used to determine if enough vertical separation is available between the BMP and its outlet destination.

Attachment: G2 - Preliminary Water Quality Management Plan (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

SAND FILTER BASIN BMP FACT SHEET

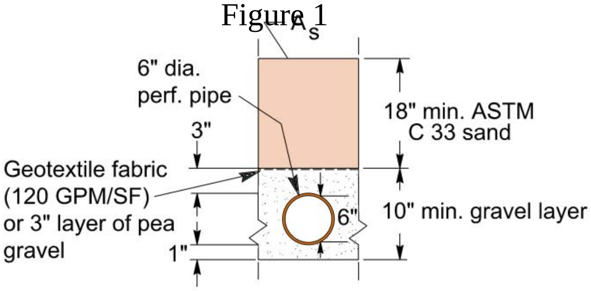
*Note: The 5 foot maximum depth equates to a minimum filter media infiltration rate of 0.83 inches per hour with a 72 hour drawdown time. Studies have shown that while initially most filter media will infiltrate at a much higher rate, it is not uncommon for that rate to decrease significantly over a very short period of time. (Urbonas, 1996)

4. Enter the proposed surface area of the basin.

5. Forebay

Provide a concrete forebay. Its volume shall be at least 0.5% V_{BMP} with a minimum 1 foot high concrete splashwall. Full-height notch-type weir(s) shall be used to outlet the forebay. The weir(s) must be offset from the line of flow from the basin inlet. It is recommended that two weirs be used and that they be located on opposite sides of the forebay (see Figure 1). Notches shall not be less than 1.5 inches in width.

Figure 1



6. Filter Media

Provide, as a minimum, an 18-inch layer of filter media (ASTM C-33 sand). Other filter media may be considered with sufficient supporting documentation. Where a medium level of removal efficiency is desired for nutrients, the depth of the sand layer must be increased to 36 inches.

5. Underdrains

Underdrains shall be provided per the guidelines outlined in Appendix B.

Landscaping and garden maintenance activities can be major contributors to water pollution. Soils, yard wastes, over-watering and garden chemicals become part of the urban runoff mix that winds its way through streets, gutters and storm drains before entering lakes, rivers, streams, etc. Urban runoff pollution contamiates water and harms quatic life!

In Riverside County, report illegal discharges into the storm drain, call

...Only Rain Down ...the Storm Drain

What you should know for... Landscape and Gardening

Best Management tips for:

- Professionals
- Novices
- Landscapers
- Gardeners
- Cultivators

Tips for Landscape & Gardening

This brochure will help you to get the most of your lawn and gardening efforts and keep our waterways clean. Clean waterways provide recreation, establish thriving fish habitats, secure safe sanctuaries for wildlife, and add beauty to our communities. NEVER allow gardening products or waste water to enter the street, gutter or storm drain.

General Landscaping Tips

- Protect stockpiles and materials from wind and rain by storing them under tarps or secured plastic sheeting.
- Prevent erosion of slopes by planting fast-growing, dense ground covering plants. These will shield and bind the soil.
- Plant native vegetation to reduce the amount of water, fertilizers and pesticides applied to the landscape.

- Never apply pesticides or fertilizers when rain is predicted within the next 48 hours.

Garden & Lawn Maintenance

- Do not overwater. Use irrigation practices such as drip irrigation, soaker hoses or micro-spray systems. Periodically inspect and fix leaks and misdirected sprinklers.
- Do not rake or blow leaves, clippings or pruning waste into the street, gutter or storm drain. Instead, dispose of green waste by composting, hauling it to a permitted landfill, or recycling it through your city's program.

- Consider recycling your green waste and adding "nature's own fertilizer" to your lawn or garden.
- Read labels and use only as directed. Do not over-apply pesticides or fertilizers. Apply to spots as needed, rather than blanketing an entire area.
- Store pesticides, fertilizers and other chemicals in a dry covered area to prevent exposure that may result in the deterioration of containers and packaging.
- Rinse empty pesticide containers and re-use rinse water as you would use the product. Do not dump rinse water down storm drains or sewers. Dispose of empty containers in the trash.
- When available, use non-toxic alternatives to traditional pesticides, and use pesticides specifically designed to control the pest you are targeting.
- Try natural long-term common sense solutions first. Integrated Pest Management (IPM) can provide landscaping guidance and solutions, such as:
  - **Physical Controls** - Try hand picking, barriers, traps or caulking holes to control weeds and pests.
  - **Biological Controls** - Use predatory insects to control harmful pests.
  - **Chemical Controls** - Check out www.ipm.ucdavis.edu before using chemicals. Remember, all chemicals should be used cautiously and in moderation.
- If fertilizer is spilled, sweep up the spill before irrigating. If the spill is liquid, apply an absorbent material such as cat litter, and then sweep it up and dispose of it in the trash.
- Take unwanted pesticides to a Household Waste Collection Center to be recycled.
- *Dumping toxics into the street, gutter or storm drain is illegal!*

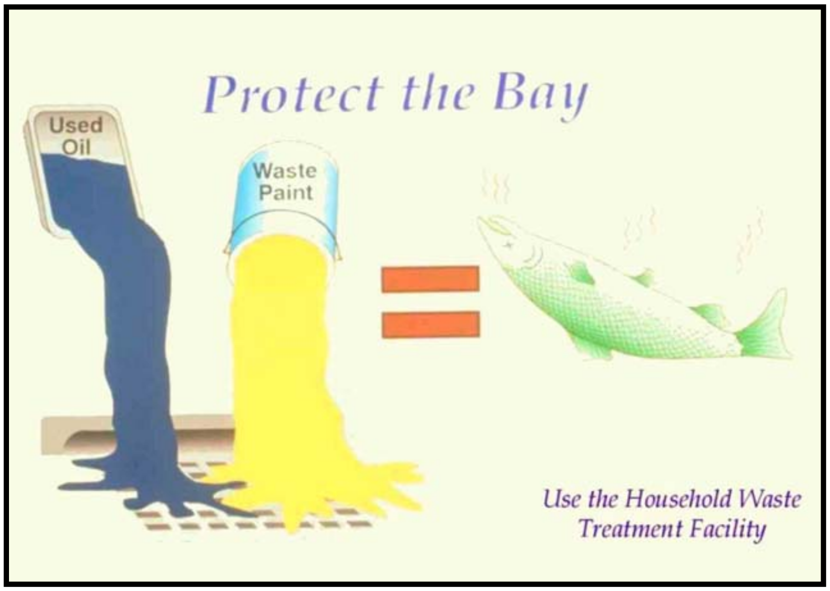
Non-Stormwater Discharges SC-10



Art Credit: Margie Winter

Description

Non-stormwater discharges are those flows that do not consist entirely of stormwater. Some non-stormwater discharges do not include pollutants and may be discharged to the storm drain. These include uncontaminated groundwater and natural springs. There are also some non-stormwater discharges that typically do not contain pollutants and may be discharged to the storm drain with conditions. These include car washing, air conditioner condensate, etc. However there are certain non-stormwater discharges that pose environmental concern. These discharges may originate from illegal dumping or from internal floor drains, appliances, industrial processes, sinks, and toilets that are connected to the nearby storm drainage system. These discharges (which may include: process waste waters, cooling waters, wash waters, and sanitary wastewater) can carry substances such as paint, oil, fuel and other automotive fluids, chemicals and other pollutants into storm drains. They can generally be detected through a combination of detection and elimination. The ultimate goal is to effectively eliminate non-stormwater discharges to the stormwater drainage system through implementation of measures to detect, correct, and enforce against illicit connections and illegal discharges of pollutants on streets and into the storm drain system and creeks.

Approach

Initially the industry must make an assessment of non-stormwater discharges to determine which types must be eliminated or addressed through BMPs. The focus of the following approach is in the elimination of non-stormwater discharges.

Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

Targeted Constituents

Sediment	
Nutrients	✓
Trash	
Metals	✓
Bacteria	✓
Oil and Grease	✓
Organics	✓

CASQA
California Stormwater Quality Association

Attachment: G2 - Preliminary Water Quality Management Plan (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

Pollution Prevention

- Ensure that used oil, used antifreeze, and hazardous chemical recycling programs are being implemented. Encourage litter control.

Suggested Protocols

Recommended Complaint Investigation Equipment

- Field Screening Analysis
  - pH paper or meter
  - Commercial stormwater pollutant screening kit that can detect for reactive phosphorus, nitrate nitrogen, ammonium nitrogen, specific conductance, and turbidity
  - Sample jars
  - Sample collection pole
  - A tool to remove access hole covers
- Laboratory Analysis
  - Sample cooler
  - Ice
  - Sample jars and labels
  - Chain of custody forms
- Documentation
  - Camera
  - Notebook
  - Pens
  - Notice of Violation forms
  - Educational materials

General

- Develop clear protocols and lines of communication for effectively prohibiting non-stormwater discharges, especially those that are not classified as hazardous. These are often not responded to as effectively as they need to be.
- Stencil or demarcate storm drains, where applicable, to prevent illegal disposal of pollutants. Storm drain inlets should have messages such as "Dump No Waste Drains to Stream" stenciled or demarcated next to them to warn against ignorant or intentional dumping of pollutants into the storm drainage system.

- See SC44 Stormwater Drainage System Maintenance for additional information.

Illicit Connections

- Locate discharges from the industrial storm drainage system to the municipal storm drain system through review of "as-built" piping schematics.
- Isolate problem areas and plug illicit discharge points.
- Locate and evaluate all discharges to the industrial storm drain system.

Visual Inspection and Inventory

- Inventory and inspect each discharge point during dry weather.
- Keep in mind that drainage from a storm event can continue for a day or two following the end of a storm and groundwater may infiltrate the underground stormwater collection system. Also, non-stormwater discharges are often intermittent and may require periodic inspections.

Review Infield Piping

- A review of the "as-built" piping schematic is a way to determine if there are any connections to the stormwater collection system.
- Inspect the path of floor drains in older buildings.

Smoke Testing

- Smoke testing of wastewater and stormwater collection systems is used to detect connections between the two systems.
- During dry weather the stormwater collection system is filled with smoke and then traced to sources. The appearance of smoke at the base of a toilet indicates that there may be a connection between the sanitary and the stormwater system.

Dye Testing

- A dye test can be performed by simply releasing a dye into either your sanitary or process wastewater system and examining the discharge points from the stormwater collection system for discoloration.

TV Inspection of Drainage System

- TV Cameras can be employed to visually identify illicit connections to the industrial storm drainage system.

Illegal Dumping

- Regularly inspect and clean up hot spots and other storm drainage areas where illegal dumping and disposal occurs.
- On paved surfaces, clean up spills with as little water as possible. Use a rag for small spills, a damp mop for general cleanup, and absorbent material for larger spills. If the spilled material is hazardous, then the used cleanup materials are also hazardous and must be sent to a certified laundry (rags) or disposed of as hazardous waste.

- Never hose down or bury dry material spills. Sweep up the material and dispose of properly.
- Use adsorbent materials on small spills rather than hosing down the spill. Remove the adsorbent materials promptly and dispose of properly.
- For larger spills, a private spill cleanup company or Hazmat team may be necessary.

Once a site has been cleaned:

- Post “No Dumping” signs with a phone number for reporting dumping and disposal.
- Landscaping and beautification efforts of hot spots may also discourage future dumping, as well as provide open space and increase property values.
- Lighting or barriers may also be needed to discourage future dumping.
- See fact sheet SC11 Spill Prevention, Control, and Cleanup.

Inspection

- Regularly inspect and clean up hot spots and other storm drainage areas where illegal dumping and disposal occurs.
- Conduct field investigations of the industrial storm drain system for potential sources of non-stormwater discharges.
- Pro-actively conduct investigations of high priority areas. Based on historical data, prioritize specific geographic areas and/or incident type for pro-active investigations.

Reporting

- A database is useful for defining and tracking the magnitude and location of the problem.
- Report prohibited non-stormwater discharges observed during the course of normal daily activities so they can be investigated, contained, and cleaned up or eliminated.
- Document that non-stormwater discharges have been eliminated by recording tests performed, methods used, dates of testing, and any on-site drainage points observed.
- Document and report annually the results of the program.
- Maintain documentation of illicit connection and illegal dumping incidents, including significant conditionally exempt discharges that are not properly managed.

Training

- Training of technical staff in identifying and documenting illegal dumping incidents is required.
- Consider posting the quick reference table near storm drains to reinforce training.
- Train employees to identify non-stormwater discharges and report discharges to the appropriate departments.

- Educate employees about spill prevention and cleanup.

- Well-trained employees can reduce human errors that lead to accidental releases or spills. The employee should have the tools and knowledge to immediately begin cleaning up a spill should one occur. Employees should be familiar with the Spill Prevention Control and Countermeasure Plan.

- Determine and implement appropriate outreach efforts to reduce non-permissible non-stormwater discharges.

- Conduct spill response drills annually (if no events occurred to evaluate your plan) in cooperation with other industries.

- When a responsible party is identified, educate the party on the impacts of his or her actions.

Spill Response and Prevention

- See SC11 Spill Prevention Control and Cleanup.

Other Considerations

- Many facilities do not have accurate, up-to-date schematic drawings.

Requirements

Costs (including capital and operation & maintenance)

- The primary cost is for staff time and depends on how aggressively a program is implemented.

- Cost for containment and disposal is borne by the discharger.

- Illicit connections can be difficult to locate especially if there is groundwater infiltration.

- Indoor floor drains may require re-plumbing if cross-connections to storm drains are detected.

Maintenance (including administrative and staffing)

- Illegal dumping and illicit connection violations requires technical staff to detect and investigate them.

Supplemental Information

Further Detail of the BMP

Illegal Dumping

- Substances illegally dumped on streets and into the storm drain systems and creeks include paints, used oil and other automotive fluids, construction debris, chemicals, fresh concrete, leaves, grass clippings, and pet wastes. All of these wastes cause stormwater and receiving water quality problems as well as clog the storm drain system itself.

- Establish a system for tracking incidents. The system should be designed to identify the following:

  - Illegal dumping hot spots

  - Types and quantities (in some cases) of wastes
  - Patterns in time of occurrence (time of day/night, month, or year)
  - Mode of dumping (abandoned containers, "midnight dumping" from moving vehicles, direct dumping of materials, accidents/spills)
  - Responsible parties

One of the keys to success of reducing or eliminating illegal dumping is increasing the number of people at the facility who are aware of the problem and who have the tools to at least identify the incident, if not correct it. Therefore, train field staff to recognize and report the incidents.

What constitutes a "non-stormwater" discharge?

- Non-stormwater discharges to the stormwater collection system may include any water used directly in the manufacturing process (process wastewater), air conditioning condensate and coolant, non-contact cooling water, cooling equipment condensate, outdoor secondary containment water, vehicle and equipment wash water, sink and drinking fountain wastewater, sanitary wastes, or other wastewaters.

Permit Requirements

- Facilities subject to stormwater permit requirements must include a certification that the stormwater collection system has been tested or evaluated for the presence of non-stormwater discharges. The State's General Industrial Stormwater Permit requires that non-stormwater discharges be eliminated prior to implementation of the facility's SWPPP.

Performance Evaluation

- Review annually internal investigation results; assess whether goals were met and what changes or improvements are necessary.
- Obtain feedback from personnel assigned to respond to, or inspect for, illicit connections and illegal dumping incidents.

Stormwater
Quality
Association

Description

Many activities that occur at an industrial or commercial site have the potential to cause accidental or illegal spills. Preparation for accidental or illegal spills, with proper training and reporting systems implemented, can minimize the discharge of pollutants to the environment.

Spills and leaks are one of the largest contributors of stormwater pollutants. Spill prevention and control plans are applicable to any site at which hazardous materials are stored or used. An effective plan should have spill prevention and response procedures that identify potential spill areas, specify material handling procedures, describe spill response procedures, and provide spill clean-up equipment. The plan should take steps to identify and characterize potential spills, eliminate and reduce spill potential, respond to spills when they occur in an effort to prevent pollutants from entering the stormwater drainage system, and train personnel to prevent and control future spills.

Approach

Pollution Prevention

- Develop procedures to prevent/mitigate spills to storm drain systems. Develop and standardize reporting procedures, containment, storage, and disposal activities, documentation, and follow-up procedures.

- Develop a Spill Prevention Control and Countermeasure (SPCC) Plan. The plan should include:

  - Description of the facility, owner and address, activities and chemicals present
  - Facility map
  - Notification and evacuation procedures
  - Cleanup instructions
  - Identification of responsible departments
  - Identify key spill response personnel

- Recycle, reclaim, or reuse materials whenever possible. This will reduce the amount of process materials that are brought into the facility.

Suggested Protocols (including equipment needs)

Spill Prevention

- Develop procedures to prevent/mitigate spills to storm drain systems. Develop and standardize reporting procedures, containment, storage, and disposal activities, documentation, and follow-up procedures.

- If consistent illegal dumping is observed at the facility:
  - Post “No Dumping” signs with a phone number for reporting illegal dumping and disposal. Signs should also indicate fines and penalties applicable for illegal dumping.
  - Landscaping and beautification efforts may also discourage illegal dumping.
  - Bright lighting and/or entrance barriers may also be needed to discourage illegal dumping.

- Store and contain liquid materials in such a manner that if the tank is ruptured, the contents will not discharge, flow, or be washed into the storm drainage system, surface waters, or groundwater.

- If the liquid is oil, gas, or other material that separates from and floats on water, install a spill control device (such as a tee section) in the catch basins that collects runoff from the storage tank area.

- Routine maintenance:
  - Place drip pans or absorbent materials beneath all mounted taps, and at all potential drip and spill locations during filling and unloading of tanks. Any collected liquids or soiled absorbent materials must be reused/recycled or properly disposed.
  - Store and maintain appropriate spill cleanup materials in a location known to all near the tank storage area; and ensure that employees are familiar with the site’s spill control plan and/or proper spill cleanup procedures.
  - Sweep and clean the storage area monthly if it is paved, *do not hose down the area to a storm drain.*

Attachment: G2 - Preliminary Water Quality Management Plan (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

  - Check tanks (and any containment sumps) daily for leaks and spills. Replace tanks that are leaking, corroded, or otherwise deteriorating with tanks in good condition. Collect all spilled liquids and properly dispose of them.

- Label all containers according to their contents (e.g., solvent, gasoline).

- Label hazardous substances regarding the potential hazard (corrosive, radioactive, flammable, explosive, poisonous).

- Prominently display required labels on transported hazardous and toxic materials (per US DOT regulations).

- Identify key spill response personnel.

Spill Control and Cleanup Activities

- Follow the Spill Prevention Control and Countermeasure Plan.

- Clean up leaks and spills immediately.

- Place a stockpile of spill cleanup materials where it will be readily accessible (e.g., near storage and maintenance areas).

- On paved surfaces, clean up spills with as little water as possible. Use a rag for small spills, a damp mop for general cleanup, and absorbent material for larger spills. If the spilled material is hazardous, then the used cleanup materials are also hazardous and must be sent to a certified laundry (rags) or disposed of as hazardous waste. Physical methods for the cleanup of dry chemicals include the use of brooms, shovels, sweepers, or plows.

- Never hose down or bury dry material spills. Sweep up the material and dispose of properly.

- Chemical cleanups of material can be achieved with the use of adsorbents, gels, and foams. Use adsorbent materials on small spills rather than hosing down the spill. Remove the adsorbent materials promptly and dispose of properly.

- For larger spills, a private spill cleanup company or Hazmat team may be necessary.

Reporting

- Report spills that pose an immediate threat to human health or the environment to the Regional Water Quality Control Board.

- Federal regulations require that any oil spill into a water body or onto an adjoining shoreline be reported to the National Response Center (NRC) at 800-424-8802 (24 hour).

- Report spills to local agencies, such as the fire department; they can assist in cleanup.

- Establish a system for tracking incidents. The system should be designed to identify the following:

  - Types and quantities (in some cases) of wastes

  - Patterns in time of occurrence (time of day/night, month, or year)

  - Mode of dumping (abandoned containers, "midnight dumping" from moving vehicles, direct dumping of materials, accidents/spills)

  - Responsible parties

Training

- Educate employees about spill prevention and cleanup.

- Well-trained employees can reduce human errors that lead to accidental releases or spills:

  - The employee should have the tools and knowledge to immediately begin cleaning up a spill should one occur.

  - Employees should be familiar with the Spill Prevention Control and Countermeasure Plan.

- Employees should be educated about aboveground storage tank requirements. Employees responsible for aboveground storage tanks and liquid transfers should be thoroughly familiar with the Spill Prevention Control and Countermeasure Plan and the plan should be readily available.

- Train employees to recognize and report illegal dumping incidents.

Other Considerations (Limitations and Regulations)

- State regulations exist for facilities with a storage capacity of 10,000 gallons or more of petroleum to prepare a Spill Prevention Control and Countermeasure (SPCC) Plan (Health & Safety Code Chapter 6.67).

- State regulations also exist for storage of hazardous materials (Health & Safety Code Chapter 6.95), including the preparation of area and business plans for emergency response to the releases or threatened releases.

- Consider requiring smaller secondary containment areas (less than 200 sq. ft.) to be connected to the sanitary sewer, prohibiting any hard connections to the storm drain.

Requirements

Costs (including capital and operation & maintenance)

- Will vary depending on the size of the facility and the necessary controls.

- Prevention of leaks and spills is inexpensive. Treatment and/or disposal of contaminated soil or water can be quite expensive.

Maintenance (including administrative and staffing)

- This BMP has no major administrative or staffing requirements. However, extra time is needed to properly handle and dispose of spills, which results in increased labor costs.

Supplemental Information

Further Detail of the BMP

Reporting

Record keeping and internal reporting represent good operating practices because they can increase the efficiency of the facility and the effectiveness of BMPs. A good record keeping system helps the facility minimize incident recurrence, correctly respond with appropriate cleanup activities, and comply with legal requirements. A record keeping and reporting system should be set up for documenting spills, leaks, and other discharges, including discharges of hazardous substances in reportable quantities. Incident records describe the quality and quantity of non-stormwater discharges to the storm sewer. These records should contain the following information:

- Date and time of the incident
- Weather conditions
- Duration of the spill/leak/discharge
- Cause of the spill/leak/discharge
- Response procedures implemented
- Persons notified
- Environmental problems associated with the spill/leak/discharge

Separate record keeping systems should be established to document housekeeping and preventive maintenance inspections, and training activities. All housekeeping and preventive maintenance inspections should be documented. Inspection documentation should contain the following information:

- The date and time the inspection was performed
- Name of the inspector
- Items inspected
- Problems noted
- Corrective action required
- Date corrective action was taken

Other means to document and record inspection results are field notes, timed and dated photographs, videotapes, and drawings and maps.

Aboveground Tank Leak and Spill Control

Accidental releases of materials from aboveground liquid storage tanks present the potential for contaminating stormwater with many different pollutants. Materials spilled, leaked, or lost from tanks may accumulate in soils or on impervious surfaces and be carried away by stormwater runoff.

The most common causes of unintentional releases are:

- Installation problems
- Failure of piping systems (pipes, pumps, flanges, couplings, hoses, and valves)
- External corrosion and structural failure
- Spills and overfills due to operator error
- Leaks during pumping of liquids or gases from truck or rail car to a storage tank or vice versa

Storage of reactive, ignitable, or flammable liquids should comply with the Uniform Fire Code and the National Electric Code. Practices listed below should be employed to enhance the code requirements:

- Tanks should be placed in a designated area.
- Tanks located in areas where firearms are discharged should be encapsulated in concrete or the equivalent.
- Designated areas should be impervious and paved with Portland cement concrete, free of cracks and gaps, in order to contain leaks and spills.
- Liquid materials should be stored in UL approved double walled tanks or surrounded by a curb or dike to provide the volume to contain 10 percent of the volume of all of the containers or 110 percent of the volume of the largest container, whichever is greater. The area inside the curb should slope to a drain.
- For used oil or dangerous waste, a dead-end sump should be installed in the drain.
- All other liquids should be drained to the sanitary sewer if available. The drain must have a positive control such as a lock, valve, or plug to prevent release of contaminated liquids.
- Accumulated stormwater in petroleum storage areas should be passed through an oil/water separator.

Maintenance is critical to preventing leaks and spills. Conduct routine inspections and:

- Check for external corrosion and structural failure.
- Check for spills and overfills due to operator error.
- Check for failure of piping system (pipes, pumps, flanger, coupling, hoses, and valves).
- Check for leaks or spills during pumping of liquids or gases from truck or rail car to a storage facility or vice versa.

- Visually inspect new tank or container installation for loose fittings, poor welding, and improper or poorly fitted gaskets.

- Inspect tank foundations, connections, coatings, and tank walls and piping system. Look for corrosion, leaks, cracks, scratches, and other physical damage that may weaken the tank or container system.

- Frequently relocate accumulated stormwater during the wet season.

- Periodically conduct integrity testing by a qualified professional.

Vehicle Leak and Spill Control
Major spills on roadways and other public areas are generally handled by highly trained Hazmat teams from local fire departments or environmental health departments. The measures listed below pertain to leaks and smaller spills at vehicle maintenance shops.

In addition to implementing the spill prevention, control, and clean up practices above, use the following measures related to specific activities:

Vehicle and Equipment Maintenance

- Perform all vehicle fluid removal or changing inside or under cover to prevent the run-on of stormwater and the runoff of spills.

- Regularly inspect vehicles and equipment for leaks, and repair immediately.

- Check incoming vehicles and equipment (including delivery trucks, and employee and subcontractor vehicles) for leaking oil and fluids. Do not allow leaking vehicles or equipment onsite.

- Always use secondary containment, such as a drain pan or drop cloth, to catch spills or leaks when removing or changing fluids.

- Immediately drain all fluids from wrecked vehicles.

- Store wrecked vehicles or damaged equipment under cover.

- Place drip pans or absorbent materials under heavy equipment when not in use.

- Use adsorbent materials on small spills rather than hosing down the spill.

- Remove the adsorbent materials promptly and dispose of properly.

- Promptly transfer used fluids to the proper waste or recycling drums. Don't leave full drip pans or other open containers lying around.

- Oil filters disposed of in trashcans or dumpsters can leak oil and contaminate stormwater. Place the oil filter in a funnel over a waste oil recycling drum to drain excess oil before disposal. Oil filters can also be recycled. Ask your oil supplier or recycler about recycling oil filters.

- Store cracked batteries in a non-leaking secondary container. Do this with all cracked batteries, even if you think all the acid has drained out. If you drop a battery, treat it as if it is cracked. Put it into the containment area until you are sure it is not leaking.

Vehicle and Equipment Fueling

- Design the fueling area to prevent the run-on of stormwater and the runoff of spills:
  - Cover fueling area if possible.
  - Use a perimeter drain or slope pavement inward with drainage to a sump.
  - Pave fueling area with concrete rather than asphalt.
- If dead-end sump is not used to collect spills, install an oil/water separator.
- Install vapor recovery nozzles to help control drips as well as air pollution.
- Discourage "topping-off' of fuel tanks.
- Use secondary containment when transferring fuel from the tank truck to the fuel tank.
- Use adsorbent materials on small spills and general cleaning rather than hosing down the area. Remove the adsorbent materials promptly.
- Carry out all Federal and State requirements regarding underground storage tanks, or install above ground tanks.
- Do not use mobile fueling of mobile industrial equipment around the facility; rather, transport the equipment to designated fueling areas.
- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Train employees in proper fueling and cleanup procedures.

Industrial Spill Prevention Response

For the purposes of developing a spill prevention and response program to meet the stormwater regulations, facility managers should use information provided in this fact sheet and the spill prevention/response portions of the fact sheets in this handbook, for specific activities. The program should:

- Integrate with existing emergency response/hazardous materials programs (e.g., Fire Department)
- Develop procedures to prevent/mitigate spills to storm drain systems
- Identify responsible departments
- Develop and standardize reporting procedures, containment, storage, and disposal activities, documentation, and follow-up procedures
- Address spills at municipal facilities, as well as public areas

- Provide training concerning spill prevention, response and cleanup to all appropriate personnel

Outdoor Loading/Unloading SC-30

Photo Credit: Geoff Brosseau

Description

The loading/unloading of materials usually takes place outside on docks or terminals; therefore, materials spilled, leaked, or lost during loading/unloading may collect in the soil or on other surfaces and have the potential to be carried away by stormwater runoff or when the area is cleaned. Additionally, rainfall may wash pollutants from machinery used to unload or move materials. Implementation of the following protocols will prevent or reduce the discharge of pollutants to stormwater from outdoor loading/unloading of materials.

Approach

Reduce potential for pollutant discharge through source control pollution prevention and BMP implementation. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

Pollution Prevention

- Keep accurate maintenance logs to evaluate materials removed and improvements made.
- Park tank trucks or delivery vehicles in designated areas so that spills or leaks can be contained.
- Limit exposure of material to rainfall whenever possible.
- Prevent stormwater run-on.
- Check equipment regularly for leaks.

Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

Targeted Constituents

CASQA
California Stormwater Quality Association

Attachment: G2 - Preliminary Water Quality Management Plan (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

Suggested Protocols

Loading and Unloading – General Guidelines

- Develop an operations plan that describes procedures for loading and/or unloading.
- Conduct loading and unloading in dry weather if possible.
- Cover designated loading/unloading areas to reduce exposure of materials to rain.
- Consider placing a seal or door skirt between delivery vehicles and building to prevent exposure to rain.
- Design loading/unloading area to prevent stormwater run-on, which would include grading or berming the area, and position roof downspouts so they direct stormwater away from the loading/unloading areas.
- Have employees load and unload all materials and equipment in covered areas such as building overhangs at loading docks if feasible.
- Load/unload only at designated loading areas.
- Use drip pans underneath hose and pipe connections and other leak-prone spots during liquid transfer operations, and when making and breaking connections. Several drip pans should be stored in a covered location near the liquid transfer area so that they are always available, yet protected from precipitation when not in use. Drip pans can be made specifically for railroad tracks. Drip pans must be cleaned periodically, and drip collected materials must be disposed of properly.
- Pave loading areas with concrete instead of asphalt.
- Avoid placing storm drains in the area.
- Grade and/or berm the loading/unloading area to a drain that is connected to a deadend.

Inspection

- Check loading and unloading equipment regularly for leaks, including valves, pumps, flanges and connections.
- Look for dust or fumes during loading or unloading operations.

Training

- Train employees (e.g., fork lift operators) and contractors on proper spill containment and cleanup.
- Have employees trained in spill containment and cleanup present during loading/unloading.
- Train employees in proper handling techniques during liquid transfers to avoid spills.
- Make sure forklift operators are properly trained on loading and unloading procedures.

Spill Response and Prevention

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Contain leaks during transfer.
- Store and maintain appropriate spill cleanup materials in a location that is readily accessible and known to all and ensure that employees are familiar with the site's spill control plan and proper spill cleanup procedures.
- Have an emergency spill cleanup plan readily available.
- Use drip pans or comparable devices when transferring oils, solvents, and paints.

Other Considerations (Limitations and Regulations)

- Space and time limitations may preclude all transfers from being performed indoors or under cover.
- It may not be possible to conduct transfers only during dry weather.

Requirements

Costs

Costs should be low except when covering a large loading/unloading area.

Maintenance

- Conduct regular inspections and make repairs as necessary. The frequency of repairs will depend on the age of the facility.
- Check loading and unloading equipment regularly for leaks.
- Conduct regular broom dry-sweeping of area.

Supplemental Information

Further Detail of the BMP

Special Circumstances for Indoor Loading/Unloading of Materials

Loading or unloading of liquids should occur in the manufacturing building so that any spills that are not completely retained can be discharged to the sanitary sewer, treatment plant, or treated in a manner consistent with local sewer authorities and permit requirements.

- For loading and unloading tank trucks to above and below ground storage tanks, the following procedures should be used:
  - The area where the transfer takes place should be paved. If the liquid is reactive with the asphalt, Portland cement should be used to pave the area.
  - The transfer area should be designed to prevent run-on of stormwater from adjacent areas. Sloping the pad and using a curb, like a speed bump, around the uphill side of the transfer area should reduce run-on.

  - The transfer area should be designed to prevent runoff of spilled liquids from the area. Sloping the area to a drain should prevent runoff. The drain should be connected to a dead-end sump or to the sanitary sewer. A positive control valve should be installed on the drain.

- For transfer from rail cars to storage tanks that must occur outside, use the following procedures:

  - Drip pans should be placed at locations where spillage may occur, such as hose connections, hose reels, and filler nozzles. Use drip pans when making and breaking connections.

  - Drip pan systems should be installed between the rails to collect spillage from tank cars.

Outdoor Equipment Operations SC-32

Description

Outside process equipment operations and maintenance can contaminate stormwater runoff. Activities, such as grinding, painting, coating, sanding, degreasing or parts cleaning, landfills and waste piles, solid waste treatment and disposal, are examples of process operations that can lead to contamination of stormwater runoff. Source controls for outdoor process equipment operations and maintenance include reducing the amount of waste created, enclosing or covering all or some of the equipment, installing secondary containment, and training employees.

Approach

Pollution Prevention

- Perform the activity during dry periods.
- Use non-toxic chemicals for maintenance and minimize or eliminate the use of solvents.

Suggested Protocols

- Consider enclosing the activity in a building and connecting the floor drains to the sanitary sewer.
- Cover the work area with a permanent roof if possible.
- Minimize contact of stormwater with outside process equipment operations through berming and drainage routing (run-on prevention). If possible, connect process equipment area to public sewer or facility wastewater treatment system. Some municipalities require that secondary containment areas be connected to the sanitary sewer, prohibiting any hard connections to the storm drain.
- Dry clean the work area regularly.

Training

- Train employees to perform the activity during dry periods only or substituting benign materials for more toxic ones.
- Train employee and contractors in proper techniques for spill containment and cleanup. Employees should have the tools and knowledge to immediately begin cleaning up a spill should one occur.

Spill Response and Prevention

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.

Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize

Targeted Constituents

Sediment	✓
Nutrients	
Trash	
Metals	✓
Bacteria	
Oil and Grease	✓
Organics	✓

CASQA
California Stormwater Quality Association

- Have employees trained in emergency spill cleanup procedures present when dangerous waste, liquid chemicals, or other wastes are delivered.

- Place a stockpile of spill cleanup materials where it will be readily accessible.

- Prevent operator errors by using engineering safe guards and thus reducing accidental releases of pollutant.

- Inspect storage areas regularly for leaks or spills. Also check for structural failure, spills and overfills due to operator error, and/or failure of piping system.

Other Considerations

- Providing cover may be expensive.

- Space limitations may preclude enclosing some equipment.

- Storage sheds often must meet building and fire code requirements.

Requirements

Costs

Costs vary depending on the complexity of the operation and the amount of control necessary for stormwater pollution control.

Maintenance

- Conduct routine preventive maintenance, including checking process equipment for leaks.

- Clean the storm drain system regularly.

Supplemental Information

Further Detail of the BMP

Hydraulic/Treatment Modifications

If stormwater becomes polluted, it should be captured and treated. If you do not have your own process wastewater treatment system, consider discharging to the public sewer system. Use of the public sewer might be allowed under the following conditions:

- If the activity area is very small (less than a few hundred square feet), the local sewer authority may be willing to allow the area to remain uncovered with the drain connected to the public sewer.

- It may be possible under unusual circumstances to connect a much larger area to the public sewer, as long as the rate of stormwater discharges does not exceed the capacity of the wastewater treatment plant. The stormwater could be stored during the storm and then transferred to the public sewer when the normal flow is low, such as at night.

Industries that generate large volumes of process wastewater typically have their own treatment system and corresponding permit. These industries have the discretion to use their wastewater treatment system to treat stormwater within the constraints of their permit requirements for process treatment. It may also be possible for the industry to discharge the stormwater directly to an effluent outfall without treatment as long as the total loading of the discharged process

Attachment: G2 - Preliminary Water Quality Management Plan (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

water and stormwater does not exceed the loading had a stormwater treatment device been used. This could be achieved by reducing the loading from the process wastewater treatment system. Check with your Regional Water Quality Control Board or local sewering agency, as this option would be subject to permit constraints and potentially regular monitoring.

Waste Handling & Disposal SC-34

Photo Credit: Geoff Brosseau

Description

Improper storage and handling of solid wastes can allow toxic compounds, oils and greases, heavy metals, nutrients, suspended solids, and other pollutants to enter stormwater runoff. The discharge of pollutants to stormwater from waste handling and disposal can be prevented and reduced by tracking waste generation, storage, and disposal; reducing waste generation and disposal through source reduction, reuse, and recycling; and preventing run-on and runoff.

Approach

Pollution Prevention

- Accomplish reduction in the amount of waste generated using the following source controls:
  - Production planning and sequencing
  - Process or equipment modification
  - Raw material substitution or elimination
  - Loss prevention and housekeeping
  - Waste segregation and separation
  - Close loop recycling
- Establish a material tracking system to increase awareness about material usage. This may reduce spills and minimize contamination, thus reducing the amount of waste produced.
- Recycle materials whenever possible.

Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

Targeted Constituents

Sediment	
Nutrients	
Trash	
Metals	✓
Bacteria	✓
Oil and Grease	✓
Organics	✓

CASQA
California
Stormwater
Quality
Association

Suggested Protocols

General

- Cover storage containers with leak proof lids or some other means. If waste is not in containers, cover all waste piles (plastic tarps are acceptable coverage) and prevent stormwater run-on and runoff with a berm. The waste containers or piles must be covered except when in use.

- Use drip pans or absorbent materials whenever grease containers are emptied by vacuum trucks or other means. Grease cannot be left on the ground. Collected grease must be properly disposed of as garbage.

- Check storage containers weekly for leaks and to ensure that lids are on tightly. Replace any that are leaking, corroded, or otherwise deteriorating.

- Sweep and clean the storage area regularly. If it is paved, do not hose down the area to a storm drain.

- Dispose of rinse and wash water from cleaning waste containers into a sanitary sewer if allowed by the local sewer authority. Do not discharge wash water to the street or storm drain.

- Transfer waste from damaged containers into safe containers.

- Take special care when loading or unloading wastes to minimize losses. Loading systems can be used to minimize spills and fugitive emission losses such as dust or mist. Vacuum transfer systems can minimize waste loss.

Controlling Litter

- Post “No Littering” signs and enforce anti-litter laws.

- Provide a sufficient number of litter receptacles for the facility.

- Clean out and cover litter receptacles frequently to prevent spillage.

Waste Collection

- Keep waste collection areas clean.

- Inspect solid waste containers for structural damage regularly. Repair or replace damaged containers as necessary.

- Secure solid waste containers; containers must be closed tightly when not in use.

- Do not fill waste containers with washout water or any other liquid.

- Ensure that only appropriate solid wastes are added to the solid waste container. Certain wastes such as hazardous wastes, appliances, fluorescent lamps, pesticides, etc., may not be disposed of in solid waste containers (see chemical/ hazardous waste collection section below).

- Do not mix wastes; this can cause chemical reactions, make recycling impossible, and complicate disposal.

Good Housekeeping

- Use all of the product before disposing of the container.
- Keep the waste management area clean at all times by sweeping and cleaning up spills immediately.
- Use dry methods when possible (e.g., sweeping, use of absorbents) when cleaning around restaurant/food handling dumpster areas. If water must be used after sweeping/using absorbents, collect water and discharge through grease interceptor to the sewer.

Chemical/Hazardous Wastes

- Select designated hazardous waste collection areas on-site.
- Store hazardous materials and wastes in covered containers and protect them from vandalism.
- Place hazardous waste containers in secondary containment.
- Make sure that hazardous waste is collected, removed, and disposed of only at authorized disposal areas.
- Stencil or demarcate storm drains on the facility's property with prohibitive message regarding waste disposal.

Run-on/Runoff Prevention

- Prevent stormwater run-on from entering the waste management area by enclosing the area or building a berm around the area.
- Prevent waste materials from directly contacting rain.
- Cover waste piles with temporary covering material such as reinforced tarpaulin, polyethylene, polyurethane, polypropyleneor hypalon.
- Cover the area with a permanent roof if feasible.
- Cover dumpsters to prevent rain from washing waste out of holes or cracks in the bottom of the dumpster.
- Move the activity indoor after ensuring all safety concerns such as fire hazard and ventilation are addressed.

Inspection

- Inspect and replace faulty pumps or hoses regularly to minimize the potential of releases and spills.
- Check waste management areas for leaking containers or spills.

- Repair leaking equipment including valves, lines, seals, or pumps promptly.

Training

- Train staff in pollution prevention measures and proper disposal methods.
- Train employees and contractors in proper spill containment and cleanup. The employee should have the tools and knowledge to immediately begin cleaning up a spill should one occur.
- Train employees and subcontractors in proper hazardous waste management.

Spill Response and Prevention

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Have an emergency plan, equipment and trained personnel ready at all times to deal immediately with major spills
- Collect all spilled liquids and properly dispose of them.
- Store and maintain appropriate spill cleanup materials in a location known to all near the designated wash area.
- Ensure that vehicles transporting waste have spill prevention equipment that can prevent spills during transport. Spill prevention equipment includes:
  - Vehicles equipped with baffles for liquid waste
  - Trucks with sealed gates and spill guards for solid waste

Other Considerations (Limitations and Regulations)

Hazardous waste cannot be reused or recycled; it must be disposed of by a licensed hazardous waste hauler.

Requirements

Costs

Capital and O&M costs for these programs will vary substantially depending on the size of the facility and the types of waste handled. Costs should be low if there is an inventory program in place.

Maintenance

- None except for maintaining equipment for material tracking program.

Supplemental Information

Further Detail of the BMP

Land Treatment System

Minimize runoff of polluted stormwater from land application by:

- Choosing a site where slopes are under 6%, the soil is permeable, there is a low water table, it is located away from wetlands or marshes, and there is a closed drainage system

- Avoiding application of waste to the site when it is raining or when the ground is saturated with water

- Growing vegetation on land disposal areas to stabilize soils and reduce the volume of surface water runoff from the site

- Maintaining adequate barriers between the land application site and the receiving waters (planted strips are particularly good)

- Using erosion control techniques such as mulching and matting, filter fences, straw bales, diversion terracing, and sediment basins

- Performing routine maintenance to ensure the erosion control or site stabilization measures are working

Examples

The port of Long Beach has a state-of-the-art database for identifying potential pollutant sources, documenting facility management practices, and tracking pollutants.

Safer Alternative Products SC-35

Objectives

- Educate
- Reduce/Minimize
- Product Substitution

Targeted Constituents

Sediment	
Nutrients	✓
Trash	
Metals	✓
Bacteria	
Oil and Grease	✓
Organics	✓

California Stormwater Quality Association

Description

Promote the use of less harmful products and products that contain little or no TMDL pollutants. Alternatives exist for most product classes including chemical fertilizers, pesticides, cleaning solutions, janitorial chemicals, automotive and paint products, and consumables (batteries, fluorescent lamps).

Approach

Pattern a new program after the many established programs around the state and country. Integrate this best management practice as much as possible with existing programs at your facility.

Develop a comprehensive program based on:

- The “Precautionary Principle,” which is an alternative to the "Risk Assessment" model that says it's acceptable to use a potentially harmful product until physical evidence of its harmful effects are established and deemed too costly from an environmental or public health perspective. For instance, a risk assessment approach might say it's acceptable to use a pesticide until there is direct proof of an environmental impact. The Precautionary Principle approach is used to evaluate whether a given product is safe, whether it is really necessary, and whether alternative products would perform just as well.
- Environmentally Preferable Purchasing Program to minimize the purchase of products containing hazardous ingredients used in the facility's custodial services, fleet maintenance, and facility maintenance in favor of using alternate products that pose less risk to employees and to the environment.
- Integrated Pest Management (IPM) or Less-Toxic Pesticide Program, which uses a pest management approach that minimizes the use of toxic chemicals and gets rid of pests by methods that pose a lower risk to employees, the public, and the environment.
- Energy Efficiency Program including no-cost and low-cost energy conservation and efficiency actions that can reduce both energy consumption and electricity bills, along with long-term energy efficiency investments.

Consider the following mechanisms for developing and implementing a comprehensive program:

- Policies

- Procedures
  - Standard operating procedures (SOPs)
  - Purchasing guidelines and procedures
  - Bid packages (services and supplies)
- Materials
  - Preferred or approved product and supplier lists
  - Product and supplier evaluation criteria
  - Training sessions and manuals
  - Fact sheets for employees

Implement this BMP in conjunction with the Vehicle and Equipment Management fact sheets (SC20 – SC22) and SC41, Building and Grounds Maintenance.

Training

- Employees who handle potentially harmful materials in the use of safer alternatives.
- Purchasing departments should be encouraged to procure less hazardous materials and products that contain little or no harmful substances or TMDL pollutants.

Regulations

This BMP has no regulatory requirements. Existing regulations already encourage facilities to reduce the use of hazardous materials through incentives such as reduced:

- Specialized equipment storage and handling requirements,
- Storm water runoff sampling requirements,
- Training and licensing requirements, and
- Record keeping and reporting requirements.

Equipment

- There are no major equipment requirements to this BMP.

Limitations

- Alternative products may not be available, suitable, or effective in every case.

Requirements

Cost Considerations

- The primary cost is for staff time to: 1) develop new policies and procedures and 2) educate purchasing departments and employees who handle potentially harmful materials about the availability, procurement, and use of safer alternatives.

- Some alternative products may be slightly more expensive than conventional products.

Supplemental Information

Employees and contractors / service providers can both be educated about safer alternatives by using information developed by a number of organizations including the references and resources listed below.

The following discussion provides some general information on safer alternatives. More specific information on particular hazardous materials and the available alternatives may be found in the references and resources listed below.

- Automotive products – Less toxic alternatives are not available for many automotive products, especially engine fluids. But there are alternatives to grease lubricants, car polishes, degreasers, and windshield washer solution. Rerefined motor oil is also available.
- Vehicle/Trailer lubrication – Fifth wheel bearings on trucks require routine lubrication. Adhesive lubricants are available to replace typical chassis grease.
- Cleaners – Vegetables-based or citrus-based soaps are available to replace petroleum-based soaps/detergents.
- Paint products – Water-based paints, wood preservatives, stains, and finishes are available.
- Pesticides – Specific alternative products or methods exist to control most insects, fungi, and weeds.
- Chemical Fertilizers – Compost and soil amendments are natural alternatives.
- Consumables – Manufacturers have either reduced or are in the process of reducing the amount of heavy metals in consumables such as batteries and fluorescent lamps. All fluorescent lamps contain mercury, however low-mercury containing lamps are now available from most hardware and lighting stores. Fluorescent lamps are also more energy efficient than the average incandescent lamp.
- Janitorial chemicals – Even biodegradable soap can harm fish and wildlife before it biodegrades. Biodegradable does not mean non-toxic. Safer products and procedures are available for floor stripping and cleaning, as well as carpet, glass, metal, and restroom cleaning and disinfecting.

Examples

There are a number of business and trade associations, and communities with effective programs. Some of the more prominent are listed below in the references and resources section.

References and Resources

Note: Many of these references provide alternative products for materials that typically are used inside and disposed to the sanitary sewer as well as alternatives to products that usually end up in the storm drain.

California Stormwater Quality Association

Description

Stormwater runoff from building and grounds maintenance activities can be contaminated with toxic hydrocarbons in solvents, fertilizers and pesticides, suspended solids, heavy metals, abnormal pH, and oils and greases. Utilizing the protocols in this fact sheet will prevent or reduce the discharge of pollutants to stormwater from building and grounds maintenance activities by washing and cleaning up with as little water as possible, following good landscape management practices, preventing and cleaning up spills immediately, keeping debris from entering the storm drains, and maintaining the stormwater collection system.

Approach

Reduce potential for pollutant discharge through source control pollution prevention and BMP implementation. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

Pollution Prevention

- Switch to non-toxic chemicals for maintenance when possible.
- Choose cleaning agents that can be recycled.
- Encourage proper lawn management and landscaping, including use of native vegetation.

Attachment: G2 - Preliminary Water Quality Management Plan (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

- Encourage use of Integrated Pest Management techniques for pest control.

- Encourage proper onsite recycling of yard trimmings.

- Recycle residual paints, solvents, lumber, and other material as much as possible.

Suggested Protocols

Pressure Washing of Buildings, Rooftops, and Other Large Objects

- In situations where soaps or detergents are used and the surrounding area is paved, pressure washers must use a water collection device that enables collection of wash water and associated solids. A sump pump, wet vacuum or similarly effective device must be used to collect the runoff and loose materials. The collected runoff and solids must be disposed of properly.

- If soaps or detergents are not used, and the surrounding area is paved, wash runoff does not have to be collected but must be screened. Pressure washers must use filter fabric or some other type of screen on the ground and/or in the catch basin to trap the particles in wash water runoff.

- If you are pressure washing on a grassed area (with or without soap), runoff must be dispersed as sheet flow as much as possible, rather than as a concentrated stream. The wash runoff must remain on the grass and not drain to pavement.

Landscaping Activities

- Dispose of grass clippings, leaves, sticks, or other collected vegetation as garbage, or by composting. Do not dispose of collected vegetation into waterways or storm drainage systems.

- Use mulch or other erosion control measures on exposed soils.

Building Repair, Remodeling, and Construction

- Do not dump any toxic substance or liquid waste on the pavement, the ground, or toward a storm drain.

- Use ground or drop cloths underneath outdoor painting, scraping, and sandblasting work, and properly dispose of collected material daily.

- Use a ground cloth or oversized tub for activities such as paint mixing and tool cleaning.

- Clean paintbrushes and tools covered with water-based paints in sinks connected to sanitary sewers or in portable containers that can be dumped into a sanitary sewer drain. Brushes and tools covered with non-water-based paints, finishes, or other materials must be cleaned in a manner that enables collection of used solvents (e.g., paint thinner, turpentine, etc.) for recycling or proper disposal.

- Use a storm drain cover, filter fabric, or similarly effective runoff control mechanism if dust, grit, wash water, or other pollutants may escape the work area and enter a catch basin. This is particularly necessary on rainy days. The containment device(s) must be in place at the beginning of the work day, and accumulated dirty runoff and solids must be collected and disposed of before removing the containment device(s) at the end of the work day.

- If you need to de-water an excavation site, you may need to filter the water before discharging to a catch basin or off-site. If directed off-site, you should direct the water through hay bales and filter fabric or use other sediment filters or traps.

- Store toxic material under cover during precipitation events and when not in use. A cover would include tarps or other temporary cover material.

Mowing, Trimming, and Planting

- Dispose of leaves, sticks, or other collected vegetation as garbage, by composting or at a permitted landfill. Do not dispose of collected vegetation into waterways or storm drainage systems.

- Use mulch or other erosion control measures when soils are exposed.

- Place temporarily stockpiled material away from watercourses and drain inlets, and berm or cover stockpiles to prevent material releases to the storm drain system.

- Consider an alternative approach when bailing out muddy water: do not put it in the storm drain; pour over landscaped areas.

- Use hand weeding where practical.

Fertilizer and Pesticide Management

- Follow all federal, state, and local laws and regulations governing the use, storage, and disposal of fertilizers and pesticides and training of applicators and pest control advisors.

- Use less toxic pesticides that will do the job when applicable. Avoid use of copper-based pesticides if possible.

- Do not use pesticides if rain is expected.

- Do not mix or prepare pesticides for application near storm drains.

- Use the minimum amount needed for the job.

- Calibrate fertilizer distributors to avoid excessive application.

- Employ techniques to minimize off-target application (e.g., spray drift) of pesticides, including consideration of alternative application techniques.

- Apply pesticides only when wind speeds are low.

- Fertilizers should be worked into the soil rather than dumped or broadcast onto the surface.

- Irrigate slowly to prevent runoff and then only as much as is needed.

- Clean pavement and sidewalk if fertilizer is spilled on these surfaces before applying irrigation water.

- Dispose of empty pesticide containers according to the instructions on the container label.

- Use up the pesticides. Rinse containers, and use rinse water as product. Dispose of unused pesticide as hazardous waste.

- Implement storage requirements for pesticide products with guidance from the local fire department and County Agricultural Commissioner. Provide secondary containment for pesticides.

Inspection
- Inspect irrigation system periodically to ensure that the right amount of water is being applied and that excessive runoff is not occurring. Minimize excess watering and repair leaks in the irrigation system as soon as they are observed.

Training
- Educate and train employees on pesticide use and in pesticide application techniques to prevent pollution.

- Train employees and contractors in proper techniques for spill containment and cleanup.

- Be sure the frequency of training takes into account the complexity of the operations and the nature of the staff.

Spill Response and Prevention
- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.

- Place a stockpile of spill cleanup materials, such as brooms, dustpans, and vacuum sweepers (if desired) near the storage area where it will be readily accessible.

- Have employees trained in spill containment and cleanup present during the loading/unloading of dangerous wastes, liquid chemicals, or other materials.

- Familiarize employees with the Spill Prevention Control and Countermeasure Plan.

- Clean up spills immediately.

Other Considerations
Alternative pest/weed controls may not be available, suitable, or effective in many cases.

Requirements
Costs
- Cost will vary depending on the type and size of facility.

- Overall costs should be low in comparison to other BMPs.

Maintenance
Sweep paved areas regularly to collect loose particles. Wipe up spills with rags and other absorbent material immediately, do not hose down the area to a storm drain.

Supplemental Information

Further Detail of the BMP

Fire Sprinkler Line Flushing

Building fire sprinkler line flushing may be a source of non-stormwater runoff pollution. The water entering the system is usually potable water, though in some areas it may be non-potable reclaimed wastewater. There are subsequent factors that may drastically reduce the quality of the water in such systems. Black iron pipe is usually used since it is cheaper than potable piping, but it is subject to rusting and results in lower quality water. Initially, the black iron pipe has an oil coating to protect it from rusting between manufacture and installation; this will contaminate the water from the first flush but not from subsequent flushes. Nitrates, polyphosphates and other corrosion inhibitors, as well as fire suppressants and antifreeze may be added to the sprinkler water system. Water generally remains in the sprinkler system a long time (typically a year) and between flushes may accumulate iron, manganese, lead, copper, nickel, and zinc. The water generally becomes anoxic and contains living and dead bacteria and breakdown products from chlorination. This may result in a significant BOD problem and the water often smells. Consequently dispose fire sprinkler line flush water into the sanitary sewer. Do not allow discharge to storm drain or infiltration due to potential high levels of pollutants in fire sprinkler line water.

CASQA
California Stormwater Quality Association

Description

Modifications are common particularly at large industrial sites. The activity may vary from minor and normal building repair to major remodeling, or the construction of new facilities. These activities can generate pollutants including solvents, paints, paint and varnish removers, finishing residues, spent thinners, soap cleaners, kerosene, asphalt and concrete materials, adhesive residues, and old asbestos installation. Protocols in this fact sheet are intended to prevent or reduce the discharge of pollutants to stormwater from building repair, remodeling, and construction by using soil erosion controls, enclosing or covering building material storage areas, using good housekeeping practices, using safer alternative products, and training employees.

Approach

Pollution Prevention

- Recycle residual paints, solvents, lumber, and other materials to the maximum extent practical.
- Buy recycled products to the maximum extent practical.
- Inform on-site contractors of company policy on these matters and include appropriate provisions in their contract to ensure certain proper housekeeping and disposal practices are implemented.

- Make sure that nearby storm drains are well marked to minimize the chance of inadvertent disposal of residual paints and other liquids.

Suggested Protocols

Repair & Remodeling

- Follow BMPs identified in Construction BMP Handbook.
- Maintain good housekeeping practices while work is underway.
- Keep the work site clean and orderly. Remove debris in a timely fashion. Sweep the area.
- Cover materials of particular concern that must be left outside, particularly during the rainy season.
- Do not dump waste liquids down the storm drain.
- Dispose of wash water, sweepings, and sediments properly.
- Store materials properly that are normally used in repair and remodeling such as paints and solvents.
- Sweep out the gutter or wash the gutter and trap the particles at the outlet of the downspout if when repairing roofs, small particles have accumulated in the gutter. A sock or geofabric placed over the outlet may effectively trap the materials. If the downspout is tight lined, place a temporary plug at the first convenient point in the storm drain and pump out the water with a vactor truck, and clean the catch basin sump where you placed the plug.
- Properly store and dispose waste materials generated from construction activities. See Construction BMP Handbook.
- Clean the storm drain system in the immediate vicinity of the construction activity after it is completed.

Painting

- Enclose painting operations consistent with local air quality regulations and OSHA.
- Local air pollution regulations may, in many areas of the state, specify painting procedures which if properly carried out are usually sufficient to protect water quality.
- Develop paint handling procedures for proper use, storage, and disposal of paints.
- Transport paint and materials to and from job sites in containers with secure lids and tied down to the transport vehicle.
- Test and inspect spray equipment prior to starting to paint. Tighten all hoses and connections and do not overfill paint containers.
- Mix paint indoors before using so that any spill will not be exposed to rain. Do so even during dry weather because cleanup of a spill will never be 100% effective.
- Transfer and load paint and hot thermoplastic away from storm drain inlets.

- Do not transfer or load paint near storm drain inlets.
- Plug nearby storm drain inlets prior to starting painting and remove plugs when job is complete when there is significant risk of a spill reaching storm drains.
- Cover nearby storm drain inlets prior to starting work if sand blasting is used to remove paint.
- Use a ground cloth to collect the chips if painting requires scraping or sand blasting of the existing surface. Dispose the residue properly.
- Cover or enclose painting operations properly to avoid drift.
- Clean the application equipment in a sink that is connected to the sanitary sewer if using water based paints.
- Capture all cleanup-water and dispose of properly.
- Dispose of paints containing lead or tributyl tin and considered a hazardous waste properly.
- Store leftover paints if they are to be kept for the next job properly, or dispose properly.
- Recycle paint when possible. Dispose of paint at an appropriate household hazardous waste facility.

Training

Proper education of off-site contractors is often overlooked. The conscientious efforts of well trained employees can be lost by unknowing off-site contractors, so make sure they are well informed about what they are expected to do.

Spill Response and Prevention

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Place a stockpile of spill cleanup materials where it will be readily accessible.
- Clean up spills immediately.
- Excavate and remove the contaminated (stained) soil if a spill occurs on dirt.

Limitations

- This BMP is for minor construction only. The State's General Construction Activity Stormwater Permit has more requirements for larger projects. The companion "Construction Best Management Practice Handbook" contains specific guidance and best management practices for larger-scale projects.
- Hazardous waste that cannot be reused or recycled must be disposed of by a licensed hazardous waste hauler.
- Be certain that actions to help stormwater quality are consistent with Cal- and Fed-OSHA and air quality regulations.

Attachment: G2 - Preliminary Water Quality Management Plan (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

Requirements

Costs

These BMPs are generally low to modest in cost.

Maintenance

N/A

Supplemental Information

Further Detail of the BMP

Soil/Erosion Control

If the work involves exposing large areas of soil, employ the appropriate soil erosion and control techniques. See the Construction Best Management Practice Handbook. If old buildings are being torn down and not replaced in the near future, stabilize the site using measures described in SC-40 Contaminated or Erodible Areas.

If a building is to be placed over an open area with a storm drainage system, make sure the storm inlets within the building are covered or removed, or the storm line is connected to the sanitary sewer. If because of the remodeling a new drainage system is to be installed or the existing system is to be modified, consider installing catch basins as they serve as effective "in-line" treatment devices. See Treatment Control Fact Sheet TC-20 Wet Pond/Basin in Section 5 of the New Development and Redevelopment Handbook regarding design criteria. Include in the catch basin a "turn-down" elbow or similar device to trap floatables.

Oil and Grease	✓
Organics	✓

CASQA California Stormwater Quality Association

Description

Parking lots and storage areas can contribute a number of substances, such as trash, suspended solids, hydrocarbons, oil and grease, and heavy metals that can enter receiving waters through stormwater runoff or non-stormwater discharges. The protocols in this fact sheet are intended to prevent or reduce the discharge of pollutants from parking/storage areas and include using good housekeeping practices, following appropriate cleaning BMPs, and training employees.

Approach

The goal of this program is to ensure stormwater pollution prevention practices are considered when conducting activities on or around parking areas and storage areas to reduce potential for pollutant discharge to receiving waters. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

Pollution Prevention

- Encourage alternative designs and maintenance strategies for impervious parking lots. (See New Development and Redevelopment BMP Handbook)
- Keep accurate maintenance logs to evaluate BMP implementation.

Attachment: G2 - Preliminary Water Quality Management Plan (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

SC-43 Parking/Storage Area Maintenance

Suggested Protocols

General

- Keep the parking and storage areas clean and orderly. Remove debris in a timely fashion.
- Allow sheet runoff to flow into biofilters (vegetated strip and swale) and/or infiltration devices.
- Utilize sand filters or oleophilic collectors for oily waste in low quantities.
- Arrange rooftop drains to prevent drainage directly onto paved surfaces.
- Design lot to include semi-permeable hardscape.
- Discharge soapy water remaining in mop or wash buckets to the sanitary sewer through a sink, toilet, clean-out, or wash area with drain.

Controlling Litter

- Post "No Littering" signs and enforce anti-litter laws.
- Provide an adequate number of litter receptacles.
- Clean out and cover litter receptacles frequently to prevent spillage.
- Provide trash receptacles in parking lots to discourage litter.
- Routinely sweep, shovel, and dispose of litter in the trash.

Surface Cleaning

- Use dry cleaning methods (e.g., sweeping, vacuuming) to prevent the discharge of pollutants into the stormwater conveyance system if possible.
- Establish frequency of public parking lot sweeping based on usage and field observations of waste accumulation.
- Sweep all parking lots at least once before the onset of the wet season.
- Follow the procedures below if water is used to clean surfaces:
  - Block the storm drain or contain runoff.
  - Collect and pump wash water to the sanitary sewer or discharge to a pervious surface. Do not allow wash water to enter storm drains.
  - Dispose of parking lot sweeping debris and dirt at a landfill.
- Follow the procedures below when cleaning heavy oily deposits:
  - Clean oily spots with absorbent materials.
  - Use a screen or filter fabric over inlet, then wash surfaces.

Attachment: G2 - Preliminary Water Quality Management Plan (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

  - Do not allow discharges to the storm drain.
  - Vacuum/pump discharges to a tank or discharge to sanitary sewer.
  - Appropriately dispose of spilled materials and absorbents.

Surface Repair

- Preheat, transfer or load hot bituminous material away from storm drain inlets.
- Apply concrete, asphalt, and seal coat during dry weather to prevent contamination from contacting stormwater runoff.
- Cover and seal nearby storm drain inlets where applicable (with waterproof material or mesh) and manholes before applying seal coat, slurry seal, etc. Leave covers in place until job is complete and all water from emulsified oil sealants has drained or evaporated. Clean any debris from these covered manholes and drains for proper disposal.
- Use only as much water as necessary for dust control, to avoid runoff.
- Catch drips from paving equipment that is not in use with pans or absorbent material placed under the machines. Dispose of collected material and absorbents properly.

Inspection

- Have designated personnel conduct inspections of parking facilities and stormwater conveyance systems associated with parking facilities on a regular basis.
- Inspect cleaning equipment/sweepers for leaks on a regular basis.

Training

- Provide regular training to field employees and/or contractors regarding cleaning of paved areas and proper operation of equipment.
- Train employees and contractors in proper techniques for spill containment and cleanup.

Spill Response and Prevention

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Place a stockpile of spill cleanup materials where it will be readily accessible or at a central location.
- Clean up fluid spills immediately with absorbent rags or material.
- Dispose of spilled material and absorbents properly.

Other Considerations

Limitations related to sweeping activities at large parking facilities may include high equipment costs, the need for sweeper operator training, and the inability of current sweeper technology to remove oil and grease.

SC-43 Parking/Storage Area Maintenance

Requirements

Costs

Cleaning/sweeping costs can be quite large. Construction and maintenance of stormwater structural controls can be quite expensive as well.

Maintenance

- Sweep parking lot regularly to minimize cleaning with water.
- Clean out oil/water/sand separators regularly, especially after heavy storms.
- Clean parking facilities regularly to prevent accumulated wastes and pollutants from being discharged into conveyance systems during rainy conditions.

Supplemental Information

Further Detail of the BMP

Surface Repair

Apply concrete, asphalt, and seal coat during dry weather to prevent contamination from contacting stormwater runoff. Where applicable, cover and seal nearby storm drain inlets (with waterproof material or mesh) and manholes before applying seal coat, slurry seal, etc. Leave covers in place until job is complete and all water from emulsified oil sealants has drained or evaporated. Clean any debris from these covered manholes and drains for proper disposal. Only use only as much water as is necessary for dust control to avoid runoff.

Stormwater
Quality
Association

Description

As a consequence of its function, the stormwater conveyance system collects and transports urban runoff and stormwater that may contain certain pollutants. The protocols in this fact sheet are intended to reduce pollutants reaching receiving waters through proper conveyance system operation and maintenance.

Approach

Pollution Prevention

Maintain catch basins, stormwater inlets, and other stormwater conveyance structures on a regular basis to remove pollutants, reduce high pollutant concentrations during the first flush of storms, prevent clogging of the downstream conveyance system, restore catch basins' sediment trapping capacity, and ensure the system functions properly hydraulically to avoid flooding.

Suggested Protocols

Catch Basins/Inlet Structures

- Staff should regularly inspect facilities to ensure compliance with the following:
  - Immediate repair of any deterioration threatening structural integrity.
  - Cleaning before the sump is 40% full. Catch basins should be cleaned as frequently as needed to meet this standard.
  - Stenciling of catch basins and inlets (see SC34 Waste Handling and Disposal).

Attachment: G2 - Preliminary Water Quality Management Plan (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

- Clean catch basins, storm drain inlets, and other conveyance structures before the wet season to remove sediments and debris accumulated during the summer.

- Conduct inspections more frequently during the wet season for problem areas where sediment or trash accumulates more often. Clean and repair as needed.

- Keep accurate logs of the number of catch basins cleaned.

- Store wastes collected from cleaning activities of the drainage system in appropriate containers or temporary storage sites in a manner that prevents discharge to the storm drain.

- Dewater the wastes if necessary with outflow into the sanitary sewer if permitted. Water should be treated with an appropriate filtering device prior to discharge to the sanitary sewer. If discharge to the sanitary sewer is not allowed, water should be pumped or vacuumed to a tank and properly disposed. Do not dewater near a storm drain or stream.

Storm Drain Conveyance System

- Locate reaches of storm drain with deposit problems and develop a flushing schedule that keeps the pipe clear of excessive buildup.

- Collect and pump flushed effluent to the sanitary sewer for treatment whenever possible.

Pump Stations

- Clean all storm drain pump stations prior to the wet season to remove silt and trash.

- Do not allow discharge to reach the storm drain system when cleaning a storm drain pump station or other facility.

- Conduct routine maintenance at each pump station.

- Inspect, clean, and repair as necessary all outlet structures prior to the wet season.

Open Channel

- Modify storm channel characteristics to improve channel hydraulics, increase pollutant removals, and enhance channel/creek aesthetic and habitat value.

- Conduct channel modification/improvement in accordance with existing laws. Any person, government agency, or public utility proposing an activity that will change the natural (emphasis added) state of any river, stream, or lake in California, must enter into a Steam or Lake Alteration Agreement with the Department of Fish and Game. The developer-applicant should also contact local governments (city, county, special districts), other state agencies (SWRCB, RWQCB, Department of Forestry, Department of Water Resources), and Federal Corps of Engineers and USFWS.

Illicit Connections and Discharges

- Look for evidence of illegal discharges or illicit connections during routine maintenance of conveyance system and drainage structures:
  - Is there evidence of spills such as paints, discoloring, etc?

  - Are there any odors associated with the drainage system?
  - Record locations of apparent illegal discharges/illicit connections?
  - Track flows back to potential dischargers and conduct aboveground inspections. This can be done through visual inspection of upgradient manholes or alternate techniques including zinc chloride smoke testing, fluorometric dye testing, physical inspection testing, or television camera inspection.
  - Eliminate the discharge once the origin of flow is established.

- Stencil or demarcate storm drains, where applicable, to prevent illegal disposal of pollutants. Storm drain inlets should have messages such as "Dump No Waste Drains to Stream" stenciled next to them to warn against ignorant or intentional dumping of pollutants into the storm drainage system.

- Refer to fact sheet SC-10 Non-Stormwater Discharges.

Illegal Dumping

- Inspect and clean up hot spots and other storm drainage areas regularly where illegal dumping and disposal occurs.

- Establish a system for tracking incidents. The system should be designed to identify the following:
  - Illegal dumping hot spots
  - Types and quantities (in some cases) of wastes
  - Patterns in time of occurrence (time of day/night, month, or year)
  - Mode of dumping (abandoned containers, "midnight dumping" from moving vehicles, direct dumping of materials, accidents/spills)
  - Responsible parties

- Post "No Dumping" signs in problem areas with a phone number for reporting dumping and disposal. Signs should also indicate fines and penalties for illegal dumping.

- Refer to fact sheet SC-10 Non-Stormwater Discharges.

Training

- Train crews in proper maintenance activities, including record keeping and disposal.

- Allow only properly trained individuals to handle hazardous materials/wastes.

- Have staff involved in detection and removal of illicit connections trained in the following:
  - OSHA-required Health and Safety Training (29 CFR 1910.120) plus annual refresher training (as needed).

  - OSHA Confined Space Entry training (Cal-OSHA Confined Space, Title 8 and Federal OSHA 29 CFR 1910.146).

  - Procedural training (field screening, sampling, smoke/dye testing, TV inspection).

Spill Response and Prevention

- Investigate all reports of spills, leaks, and/or illegal dumping promptly.

- Clean up all spills and leaks using "dry" methods (with absorbent materials and/or rags) or dig up, remove, and properly dispose of contaminated soil.

- Refer to fact sheet SC-11 Spill Prevention, Control, and Cleanup.

Other Considerations (Limitations and Regulations)

- Clean-up activities may create a slight disturbance for local aquatic species. Access to items and material on private property may be limited. Trade-offs may exist between channel hydraulics and water quality/riparian habitat. If storm channels or basins are recognized as wetlands, many activities, including maintenance, may be subject to regulation and permitting.

- Storm drain flushing is most effective in small diameter pipes (36-inch diameter pipe or less, depending on water supply and sediment collection capacity). Other considerations associated with storm drain flushing may include the availability of a water source, finding a downstream area to collect sediments, liquid/sediment disposal, and prohibition against disposal of flushed effluent to sanitary sewer in some areas.

- Regulations may include adoption of substantial penalties for illegal dumping and disposal.

- Local municipal codes may include sections prohibiting discharge of soil, debris, refuse, hazardous wastes, and other pollutants into the storm drain system.

Requirements

Costs

- An aggressive catch basin cleaning program could require a significant capital and O&M budget.

- The elimination of illegal dumping is dependent on the availability, convenience, and cost of alternative means of disposal. The primary cost is for staff time. Cost depends on how aggressively a program is implemented. Other cost considerations for an illegal dumping program include:

  - Purchase and installation of signs.

  - Rental of vehicle(s) to haul illegally-disposed items and material to landfills.

  - Rental of heavy equipment to remove larger items (e.g., car bodies) from channels.

  - Purchase of landfill space to dispose of illegally-dumped items and material.

Attachment: G2 - Preliminary Water Quality Management Plan (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

- Methods used for illicit connection detection (smoke testing, dye testing, visual inspection, and flow monitoring) can be costly and time-consuming. Site-specific factors, such as the level of impervious area, the density and ages of buildings, and type of land use will determine the level of investigation necessary.

Maintenance

- Two-person teams may be required to clean catch basins with vactor trucks.
- Teams of at least two people plus administrative personnel are required to identify illicit discharges, depending on the complexity of the storm sewer system.
- Arrangements must be made for proper disposal of collected wastes.
- Technical staff are required to detect and investigate illegal dumping violations.

Supplemental Information

Further Detail of the BMP

Storm Drain Flushing

Flushing is a common maintenance activity used to improve pipe hydraulics and to remove pollutants in storm drainage systems. Flushing may be designed to hydraulically convey accumulated material to strategic locations, such as an open channel, another point where flushing will be initiated, or the sanitary sewer and the treatment facilities, thus preventing resuspension and overflow of a portion of the solids during storm events. Flushing prevents "plug flow" discharges of concentrated pollutant loadings and sediments. Deposits can hinder the designed conveyance capacity of the storm drain system and potentially cause backwater conditions in severe cases of clogging.

Storm drain flushing usually takes place along segments of pipe with grades that are too flat to maintain adequate velocity to keep particles in suspension. An upstream manhole is selected to place an inflatable device that temporarily plugs the pipe. Further upstream, water is pumped into the line to create a flushing wave. When the upstream reach of pipe is sufficiently full to cause a flushing wave, the inflated device is rapidly deflated with the assistance of a vacuum pump, thereby releasing the backed up water and resulting in the cleaning of the storm drain segment.

To further reduce impacts of stormwater pollution, a second inflatable device placed well downstream may be used to recollect the water after the force of the flushing wave has dissipated. A pump may then be used to transfer the water and accumulated material to the sanitary sewer for treatment. In some cases, an interceptor structure may be more practical or required to recollect the flushed waters.

It has been found that cleansing efficiency of periodic flush waves is dependent upon flush volume, flush discharge rate, sewer slope, sewer length, sewer flow rate, sewer diameter, and population density. As a rule of thumb, the length of line to be flushed should not exceed 700 feet. At this maximum recommended length, the percent removal efficiency ranges between 65-75% for organics and 55-65% for dry weather grit/inorganic material. The percent removal efficiency drops rapidly beyond that. Water is commonly supplied by a water truck, but fire hydrants can also supply water. To make the best use of water, it is recommended that reclaimed water be used or that fire hydrant line flushing coincide with storm sewer flushing.

Efficient Irrigation SD-12

Design Objectives

☑ Maximize Infiltration

☑ Provide Retention

☑ Slow Runoff

Minimize Impervious Land Coverage

Prohibit Dumping of Improper Materials

Contain Pollutants

Collect and Convey

Description

Irrigation water provided to landscaped areas may result in excess irrigation water being conveyed into stormwater drainage systems.

Approach

Project plan designs for development and redevelopment should include application methods of irrigation water that minimize runoff of excess irrigation water into the stormwater conveyance system.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment. (Detached residential single-family homes are typically excluded from this requirement.)

Design Considerations

Designing New Installations

The following methods to reduce excessive irrigation runoff should be considered, and incorporated and implemented where determined applicable and feasible by the Permittee:

- Employ rain-triggered shutoff devices to prevent irrigation after precipitation.
- Design irrigation systems to each landscape area's specific water requirements.
- Include design featuring flow reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines.
- Implement landscape plans consistent with County or City water conservation resolutions, which may include provision of water sensors, programmable irrigation times (for short cycles), etc.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Design timing and application methods of irrigation water to minimize the runoff of excess irrigation water into the storm water drainage system.

- Group plants with similar water requirements in order to reduce excess irrigation runoff and promote surface filtration. Choose plants with low irrigation requirements (for example, native or drought tolerant species). Consider design features such as:

    - Using mulches (such as wood chips or bar) in planter areas without ground cover to minimize sediment in runoff

    - Installing appropriate plant materials for the location, in accordance with amount of sunlight and climate, and use native plant materials where possible and/or as recommended by the landscape architect

    - Leaving a vegetative barrier along the property boundary and interior watercourses, to act as a pollutant filter, where appropriate and feasible

    - Choosing plants that minimize or eliminate the use of fertilizer or pesticides to sustain growth

- Employ other comparable, equally effective methods to reduce irrigation water runoff.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define “redevelopment” in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of “ redevelopment” must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under “designing new installations” above should be followed.

Storm Drain Signage SD-13

Design Objectives

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- ☑ Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Waste materials dumped into storm drain inlets can have severe impacts on receiving and ground waters. Posting notices regarding discharge prohibitions at storm drain inlets can prevent waste dumping. Storm drain signs and stencils are highly visible source controls that are typically placed directly adjacent to storm drain inlets.

Approach

The stencil or affixed sign contains a brief statement that prohibits dumping of improper materials into the urban runoff conveyance system. Storm drain messages have become a popular method of alerting the public about the effects of and the prohibitions against waste disposal.

Suitable Applications

Stencils and signs alert the public to the destination of pollutants discharged to the storm drain. Signs are appropriate in residential, commercial, and industrial areas, as well as any other area where contributions or dumping to storm drains is likely.

Design Considerations

Storm drain message markers or placards are recommended at all storm drain inlets within the boundary of a development project. The marker should be placed in clear sight facing toward anyone approaching the inlet from either side. All storm drain inlet locations should be identified on the development site map.

Designing New Installations

The following methods should be considered for inclusion in the project design and show on project plans:

- Provide stenciling or labeling of all storm drain inlets and catch basins, constructed or modified, within the project area with prohibitive language. Examples include "NO DUMPING

CASQA
CALIFORNIA STORMWATER
QUALITY ASSOCIATION

– DRAINS TO OCEAN" and/or other graphical icons to discourage illegal dumping.

- Post signs with prohibitive language and/or graphical icons, which prohibit illegal dumping at public access points along channels and creeks within the project area.

Note - Some local agencies have approved specific signage and/or storm drain message placards for use. Consult local agency stormwater staff to determine specific requirements for placard types and methods of application.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. If the project meets the definition of "redevelopment", then the requirements stated under " designing new installations" above should be included in all project design plans.

Additional Information

Maintenance Considerations

- Legibility of markers and signs should be maintained. If required by the agency with jurisdiction over the project, the owner/operator or homeowner's association should enter into a maintenance agreement with the agency or record a deed restriction upon the property title to maintain the legibility of placards or signs.

Placement

- Signage on top of curbs tends to weather and fade.

- Signage on face of curbs tends to be worn by contact with vehicle tires and sweeper brooms.

Supplemental Information

Examples

- Most MS4 programs have storm drain signage programs. Some MS4 programs will provide stencils, or arrange for volunteers to stencil storm drains as part of their outreach program.

Maintenance Bays & Docks SD-31

Design Objectives

Maximize Infiltration

Provide Retention

Slow Runoff

Minimize Impervious Land Coverage

☑ Prohibit Dumping of Improper Materials

☑ Contain Pollutants

Collect and Convey

Description

Several measures can be taken to prevent operations at maintenance bays and loading docks from contributing a variety of toxic compounds, oil and grease, heavy metals, nutrients, suspended solids, and other pollutants to the stormwater conveyance system.

Approach

In designs for maintenance bays and loading docks, containment is encouraged. Preventative measures include overflow containment structures and dead-end sumps. However, in the case of loading docks from grocery stores and warehouse/distribution centers, engineered infiltration systems may be considered.

Suitable Applications

Appropriate applications include commercial and industrial areas planned for development or redevelopment.

Design Considerations

Design requirements for vehicle maintenance and repair are governed by Building and Fire Codes, and by current local agency ordinances, and zoning requirements. The design criteria described in this fact sheet are meant to enhance and be consistent with these code requirements.

Designing New Installations

Designs of maintenance bays should consider the following:

- Repair/maintenance bays and vehicle parts with fluids should be indoors; or designed to preclude urban run-on and runoff.
- Repair/maintenance floor areas should be paved with Portland cement concrete (or equivalent smooth impervious surface).

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Repair/maintenance bays should be designed to capture all wash water leaks and spills. Provide impermeable berms, drop inlets, trench catch basins, or overflow containment structures around repair bays to prevent spilled materials and wash-down waters form entering the storm drain system. Connect drains to a sump for collection and disposal. Direct connection of the repair/maintenance bays to the storm drain system is prohibited. If required by local jurisdiction, obtain an Industrial Waste Discharge Permit.

- Other features may be comparable and equally effective.

The following designs of loading/unloading dock areas should be considered:

- Loading dock areas should be covered, or drainage should be designed to preclude urban run-on and runoff.

- Direct connections into storm drains from depressed loading docks (truck wells) are prohibited.

- Below-grade loading docks from grocery stores and warehouse/distribution centers of fresh food items should drain through water quality inlets, or to an engineered infiltration system, or an equally effective alternative. Pre-treatment may also be required.

- Other features may be comparable and equally effective.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Additional Information

Stormwater and non-stormwater will accumulate in containment areas and sumps with impervious surfaces. Contaminated accumulated water must be disposed of in accordance with applicable laws and cannot be discharged directly to the storm drain or sanitary sewer system without the appropriate permit.

Other Resources

A Manual for the Standard Urban Stormwater Mitigation Plan (SUSMP), Los Angeles County Department of Public Works, May 2002.

Model Standard Urban Storm Water Mitigation Plan (SUSMP) for San Diego County, Port of San Diego, and Cities in San Diego County, February 14, 2002.

Ventura Countywide Technical Guidance Manual for Stormwater Quality Control Measures, July 2002.

Trash Storage Areas SD-32

Description

Trash storage areas are areas where a trash receptacle (s) are located for use as a repository for solid wastes. Stormwater runoff from areas where trash is stored or disposed of can be polluted. In addition, loose trash and debris can be easily transported by water or wind into nearby storm drain inlets, channels, and/or creeks. Waste handling operations that may be sources of stormwater pollution include dumpsters, litter control, and waste piles.

Approach

This fact sheet contains details on the specific measures required to prevent or reduce pollutants in stormwater runoff associated with trash storage and handling. Preventative measures including enclosures, containment structures, and impervious pavements to mitigate spills, should be used to reduce the likelihood of contamination.

Design Objectives

☐ Maximize Infiltration
☐ Provide Retention
☐ Slow Runoff
☐ Minimize Impervious Land Coverage
☐ Prohibit Dumping of Improper Materials
☑ Contain Pollutants
☐ Collect and Convey

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment. (Detached residential single-family homes are typically excluded from this requirement.)

Design Considerations

Design requirements for waste handling areas are governed by Building and Fire Codes, and by current local agency ordinances and zoning requirements. The design criteria described in this fact sheet are meant to enhance and be consistent with these code and ordinance requirements. Hazardous waste should be handled in accordance with legal requirements established in Title 22, California Code of Regulation.

Wastes from commercial and industrial sites are typically hauled by either public or commercial carriers that may have design or access requirements for waste storage areas. The design criteria in this fact sheet are recommendations and are not intended to be in conflict with requirements established by the waste hauler. The waste hauler should be contacted prior to the design of your site trash collection areas. Conflicts or issues should be discussed with the local agency.

Designing New Installations

Trash storage areas should be designed to consider the following structural or treatment control BMPs:

- Design trash container areas so that drainage from adjoining roofs and pavement is diverted around the area(s) to avoid run-on. This might include berming or grading the waste handling area to prevent run-on of stormwater.
- Make sure trash container areas are screened or walled to prevent off-site transport of trash.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

Attachment: G2 - Preliminary Water Quality Management Plan (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

- Use lined bins or dumpsters to reduce leaking of liquid waste.
- Provide roofs, awnings, or attached lids on all trash containers to minimize direct precipitation and prevent rainfall from entering containers.
- Pave trash storage areas with an impervious surface to mitigate spills.
- Do not locate storm drains in immediate vicinity of the trash storage area.
- Post signs on all dumpsters informing users that hazardous materials are not to be disposed of therein.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define “redevelopment” in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of “ redevelopment” must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under “designing new installations” above should be followed.

Additional Information

Maintenance Considerations

The integrity of structural elements that are subject to damage (i.e., screens, covers, and signs) must be maintained by the owner/operator. Maintenance agreements between the local agency and the owner/operator may be required. Some agencies will require maintenance deed restrictions to be recorded of the property title. If required by the local agency, maintenance agreements or deed restrictions must be executed by the owner/operator before improvement plans are approved.

EXECUTIVE SUMMARY

Urban Crossroads, Inc. has prepared this noise study to determine the noise exposure and the necessary noise mitigation measures for the proposed Moreno Valley Logistics Center development (“Project”). The Project site is located south of Krameria Avenue between Heacock Street and Indian Street in the City of Moreno Valley. The Project is proposed to consist of 1,351,770 square feet (sf) of high-cube warehouse use/distribution center within a single building (Building 1) and 385,748 square feet of general light industrial use. Building 2, located on the southwest corner of Cosmos Street and Krameria Avenue, is proposed to consist of 122,516 sf of general light industrial use; Building 3, located at the eastern terminus of Cardinal Avenue, is proposed to consist of 97,222 sf of general light industrial use; and Building 4, located on the east of Heacock Street and south of Krameria Avenue (North), is proposed to consist of 166,010 sf of general light industrial use. This study has been prepared to satisfy the City of Moreno Valley noise standards and to ensure that adequate noise abatement measures are incorporated into the Project’s development.

OFF-SITE TRAFFIC NOISE ANALYSIS

Traffic generated by the proposed Project will influence the traffic noise levels in surrounding off-site areas. To quantify the off-site traffic noise increases on the surrounding off-site areas, the changes in traffic noise levels on 24 roadway segments surrounding the Project site were estimated based on the change in the average daily traffic (ADT) volumes. The traffic noise levels provided in this analysis are based on the traffic forecasts found in the *Moreno Valley Logistics Center Traffic Impact Analysis* prepared by Urban Crossroads, Inc. (1) To assess the off-site noise level impacts associated with the proposed Project, noise contour boundaries were developed for Existing (without and with Indian Street Bridge), Opening Year (2020), and General Plan Buildout (2035) conditions. The off-site traffic noise analysis indicates that the Project’s contributions to roadway noise levels at adjacent land uses will be *less than significant* under Existing (without and with Indian Street Bridge), Opening Year (2020), and General Plan Buildout (2035) conditions.

The Project-related increases must be compared with the cumulative noise level increases without the Project to determine if the Project noise level increases represent a *cumulatively considerable* impact. The Project’s actual contribution to the cumulative noise level increases will approach 0.3 dBA CNEL, and will not exceed the significance thresholds for the adjacent land uses on the study area roadway segments. Therefore, since the Project-related off-site traffic noise level increases represent a *less than significant* contribution to the overall cumulative noise impacts at the adjacent land uses, the Project-related traffic noise level increases are *less than cumulatively considerable*.

Attachment: H - Noise Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

OPERATIONAL NOISE ANALYSIS

Using sample reference noise levels to represent the noise sources from the Moreno Valley Logistics Center site, this analysis estimates the Project-related operational stationary-source noise levels at nearby sensitive receiver locations. The normal activities associated with the proposed Moreno Valley Logistics Center are anticipated to include idling trucks, delivery truck activities, parking, backup alarms, refrigerated containers or reefers, as well as loading and unloading of dry goods. The operational noise analysis shows that the stationary-source noise levels due to the idling trucks, delivery truck activities, parking, backup alarms, refrigerated containers or reefers, as well as loading and unloading of dry goods will not exceed the City of Moreno Valley Municipal Code noise level standards at a distance of 200 feet from the property line of the noise source (Project site). This analysis accounts for the noise associated with cold storage (refrigeration) as a worst-case scenario since it includes the additional noise from the refrigerated containers/reefers on trucks within the Project site, and may conservatively overstate the actual noise levels due to tenant operations at the Project site. Currently the proposed Project could not use more than 10% of the Project for cold storage. This noise analysis has assumed the possibility of more than 10% of cold storage only for the purposes of over-estimating as opposed to under-estimating potential noise impacts. As proposed, no more than 10% of the Project could be used for cold storage.

Although the Project-related operational noise levels are shown to be less than significant based on the City of Moreno Valley Municipal Code standards at 200 feet, some receiver locations are located within 200 feet from the Project site boundaries. Therefore, to determine the potential Project-related operational noise impacts at each receiver location, the Project-related noise level contribution is evaluated at each receiver location based on the magnitude of the Project-related increase on the ambient noise levels. This analysis demonstrates that the Project will not contribute an operational noise level impact to the existing ambient noise environment at any of the sensitive receiver locations. Therefore, the operational noise level impacts associated with the proposed 24-hour, seven days per week Project activities, such as the idling trucks, delivery truck activities, parking, backup alarms, refrigerated containers or reefers, as well as loading and unloading of dry goods, will be *less than significant*.

OPERATIONAL NOISE ABATEMENT MEASURES

The routine operation of the Project will not exceed the City of Moreno Valley standards for stationary noise impacts. To further reduce potential operational noise levels received at adjacent residential land uses, it is recommended that the Lead Agency require the following as Project Conditions of Approval:

- All on-site operating equipment under the control of the building user that is used in outdoor areas (including but not limited to trucks, tractors, forklifts, and hostlers), shall be operated with properly functioning and well-maintained mufflers. The City of Moreno Valley may conduct periodic inspection at its discretion.
- Maintain quality pavement conditions on the property that are free of vertical deflection (i.e. speed bumps) to minimize truck noise. The City of Moreno Valley may conduct periodic inspection at its discretion.

Attachment: H - Noise Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

- Consistent with Mitigation Measure AQ-6 of the *Moreno Valley Logistics Center Air Quality Impact Analysis*, and enforced by the California Air Resources Board (CARB), the truck access gates and loading docks within the truck court on the Project site shall be posted with signs which state:
    - Truck drivers shall turn off engines when not in use;
    - Diesel trucks servicing the Project shall not idle for more than five (5) minutes; and
    - Telephone numbers of the building facilities manager and the CARB to report violations.

OPERATIONAL VIBRATION IMPACTS

The operation of the Project site will include heavy trucks transiting on site to and from the loading dock areas. Truck vibration levels are dependent on vehicle characteristics, load, speed, and pavement conditions. Typical vibration levels for heavy trucks at normal traffic speeds do not exceed 65 VdB, and therefore, will be below the FTA vibration threshold of 80 VdB at nearby sensitive receiver locations. Since truck deliveries transiting on site will be travelling at very low speeds it is expected that delivery truck vibration impacts at nearby homes will be *less than significant*.

CONSTRUCTION NOISE ANALYSIS

Construction noise represents a short-term increase on the ambient noise levels. Construction-related noise impacts are expected to create temporary and intermittent high-level noise conditions at receivers surrounding the Project site when certain activities occur at the Project site boundary. Using sample reference noise levels to represent the planned construction activities of the Moreno Valley Logistics Center site, including Phase 1 (Buildings 1 and 2) and Phase 2 (Buildings 3 and 4) activities, this analysis estimates the Project-related construction noise levels at nearby sensitive receiver locations.

The construction noise analysis shows that the unmitigated daytime construction activities may exceed the City of Moreno Valley Municipal Code 65 dBA Leq noise level threshold at 200 feet during Phase 1 (Buildings 1 and 2) grading and paving activities at receiver location R8. The construction of a 6-foot high temporary noise barrier, as shown on Exhibit ES-A, is required within 280 feet of receiver location R8 to satisfy the 65 dBA Leq noise level threshold during the Phase 1 (Buildings 1 and 2) grading and paving activities. With the recommended construction noise mitigation measures identified in this report, the daytime construction noise level impacts at all noise-sensitive receiver locations will be *less than significant*.

In addition to the daytime construction activities, the Project may pursue a temporary use or special event permit to allow for nighttime concrete pour activities during the building construction and paving stages of Project construction. Nighttime concrete pours are typically conducted during the summer months due to the warmer daytime weather conditions. While Section 11.80.030 (7) of the City of Moreno Valley Municipal Code currently prohibits nighttime construction activities, Section 11.80.030 (E) (8) allows for a temporary use or special event permit (Section 11.80.040). (2) The temporary use or special event permit shall be submitted to the City of Moreno Valley Planning Department for approval and meet the provisions Municipal Code Section 11.80.040.

Attachment: H - Noise Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

To estimate the nighttime construction noise levels at the nearby receiver locations, sample reference noise level measurements were collected during nighttime concrete pour activities at a similar industrial development site. Based on the reference concrete pour noise measurements, the noise levels at the nearby sensitive receiver locations are expected to approach 59.3 dBA Leq during Phase 1 and 49.6 dBA Leq during Phase 2. If the Project pursues nighttime concrete pours during the building construction and paving stages of Project construction due to the weather conditions, this analysis demonstrates that these activities will not exceed the City of Moreno Valley 60 dBA Leq nighttime noise level standards. The construction noise analysis shows that nighttime concrete pour noise levels for Phases 1 and 2 of Project construction will satisfy the City of Moreno Valley 60 dBA Leq nighttime noise level standard at all receiver locations representing a *less than significant* noise impact.

CONSTRUCTION VIBRATION ANALYSIS

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods used, distance to the affected structures and soil type. It is expected that ground-borne vibration from Project construction activities would cause only intermittent, localized intrusion. This analysis shows the construction vibration levels are expected to approach 68.8 VdB at the eight receiver locations. Based on the FTA vibration standards for annoyance and building damage of 80 VdB and 90 VdB, respectively, the proposed Project construction activities will not include or require equipment, facilities, or activities that would result in a *barely perceptible* human response (annoyance) or building damage at the nearby residential homes, and therefore, impacts due to vibration are considered *less than significant.*

CONSTRUCTION MITIGATION MEASURES

Though construction noise is temporary, intermittent and of short duration, and will not present any long-term impacts, the following practices would reduce any noise level increases produced by the construction equipment to the nearby noise-sensitive residential land uses:

- Prior to approval of grading plans and/or issuance of building permits, plans shall include a note indicating that noise-generating Project construction activities that would create noise levels of greater than 60 dBA Leq at sensitive receivers shall only occur between the permitted hours of 7:00 a.m. to 8:00 p.m. on any day. Grading operations shall be limited to between the hours of 8:00 a.m. to 6:00 p.m. weekdays, and 8:00 a.m. to 4:00 p.m. on weekends and holidays, or as otherwise approved by the City Engineer. The Project construction supervisor shall ensure compliance with the note and the City shall conduct periodic inspection at its discretion.
- Install 6-foot high temporary noise control barrier for a length of approximately 400 feet as shown on Exhibit ES-A at the Project site boundaries when Phase 1 grading and paving construction activities occur within 280 feet of receiver location R8. Alternatively, with the approval of the homeowner at receiver location R8, the 6-foot high temporary noise barrier can be installed at the property line of the residential home. The noise control barrier must present a solid face from top to bottom. The noise control barrier must be a minimum height of 6-feet.
    - o The noise barrier may be constructed using an acoustical blanket (e.g. vinyl acoustic curtains or quilted blankets) attached to the construction site perimeter fence or equivalent temporary fence posts.

  - The noise barriers must be maintained and any damage promptly repaired. Gaps, holes, or weaknesses in the barrier or openings between the barrier and the ground shall be promptly repaired.
  - The noise control barriers and associated elements shall be completely removed and the site appropriately restored upon the conclusion of the construction activity.
- During all Project site construction, the construction contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers, consistent with manufacturers' standards. The construction contractor shall place all stationary construction equipment so that emitted noise is directed away from the noise sensitive receptors nearest the Project site.
- The construction contractor shall locate equipment staging in the vicinity of the intersection of Cosmos Street and Krameria Avenue to create additional distance between construction-related noise sources and noise-sensitive receivers nearest the Project site during all stages of Building 1 construction.
- The construction contractor shall limit haul truck deliveries to the same hours specified for construction equipment (between the hours of 7:00 a.m. to 8:00 p.m. on any day). The contractor shall prepare a haul route exhibit for review and approval by the Public Works Department, Land Development Division, and shall design delivery routes to minimize the exposure of sensitive land uses or residential dwellings to delivery truck-related noise (City of Moreno Valley Municipal Code, Section 8.21.050 (H) (7)).
- Any nighttime construction activity requires an exemption from the City of Moreno Valley Municipal Code as indicated in Section 11.80.030 (E) (8) for a special event permit (Section 11.80.040). The special event permit application shall be submitted to the City of Moreno Valley Planning Department for approval and meet the requirements of Municipal Code Section 11.80.040.

ALTERNATE SITE PLAN COMPARISON

This noise study evaluates the Project's worst-case condition based on the four-building Project site plan which consists of: 1,351,770 square feet (sf) of high-cube warehouse use/distribution center within a single building (Building 1) and 385,748 square feet of general light industrial use within Buildings 2 to 4. If the alternate site plan with a 166-space truck parking lot in lieu of Building 2 is implemented, the operational and construction noise levels would be reduced. The removal of Building 2 would reduce the total loading dock areas and potential operational noise sources within the Project site, in addition to reducing the amount of construction activity required on-site.

1 INTRODUCTION

This noise analysis has been completed to determine the noise impacts associated with the development of the proposed Moreno Valley Logistics Center ("Project"). This noise study briefly describes the proposed Project, provides information regarding noise fundamentals, describes the local regulatory setting, provides the study methods and procedures for traffic noise analysis, and evaluates the future exterior noise environment. In addition, this study includes an analysis of the potential Project-related long-term operational and short-term construction noise impacts.

1.1 SITE LOCATION

The proposed Moreno Valley Logistics Center site is located south of Krameria Avenue between Heacock Street and Indian Street in the City of Moreno Valley, as shown on Exhibit 1-A. The Project site is currently vacant. Under existing conditions, the Project site is surrounded to the north and south by a mixture of industrial warehouse buildings and a few undeveloped and underutilized parcels that are designated by the Moreno Valley Industrial Area Plan (MVIAP) for future industrial development; to the west by March Air Reserve Base, and to the east by a single-family residential neighborhood. The Perris Valley Storm Drain Channel transects the Project site in a northwest to southeast direction. Approximately 15.3 acres of the Project site are located west of the Perris Valley Storm Drain Channel and approximately 74.1 acres of the Project site are located east of the Perris Valley Storm Drain Channel. (3) The Interstate 215 (I-215) Freeway is located approximately 1.3 miles west of the Project site.

1.2 PROJECT DESCRIPTION

The Project is proposed to consist of 1,351,770 square feet (sf) of high-cube warehouse use/distribution center within a single building (Building 1) and 385,748 square feet of general light industrial use. Building 2, located on the southwest corner of Cosmos Street and Krameria Avenue, is proposed to consist of 122,516 sf of general light industrial use; Building 3, located at the eastern terminus of Cardinal Avenue, is proposed to consist of 97,222 sf of general light industrial use; and Building 4, located on the east of Heacock Street and south of Krameria Avenue (North), is proposed to consist of 166,010 sf of general light industrial use, as shown on Exhibit 1-B. For the purposes of this analysis, the Project is anticipated to have an Opening Year of 2020.

The Project also includes an Alternate Site plan that would omit Building 2 and construct a 166-space truck trailer parking lot in its place. In the event the alternate site plan is implemented, the truck trailer parking lot will be utilized as overflow parking for Building 1. The alternative site plan would not involve any changes to the intensity of use, size, location, configuration, or design of proposed Buildings 1, 3, or 4.

To present the potential worst-case noise conditions, this analysis assumes all tenants within the Project building would be operational 24 hours per day, seven days per week. This analysis accounts for the noise associated with cold storage (refrigeration) as a worst-case scenario as it accounts for the additional noise from the refrigerated containers/reefers on trucks within the Project site, and may conservatively overstate the actual noise levels due to tenant operations at the Project site. Currently the proposed Project could not use more than 10% of the Project for cold storage. This noise analysis has assumed the possibility of more than 10% of cold storage only for the purposes of over-estimating as opposed to under-estimating noise impacts. As proposed, no more than 10% of the Project could be used for cold storage.

Business operations would primarily be conducted within the enclosed buildings, with the exception of traffic movement, parking, and the loading and unloading of trucks at designated loading bays. The on-site Project-related noise sources are expected to include: idling trucks, delivery truck activities, parking, backup alarms, refrigerated containers or reefers, as well as loading and unloading of dry goods. This noise analysis is intended to describe noise level impacts associated with the expected typical warehouse and distribution storage activities at the Project site.

2 FUNDAMENTALS

Noise has been simply defined as "unwanted sound." Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm or when it has adverse effects on health. Noise is measured on a logarithmic scale of sound pressure level known as a decibel (dB). A-weighted decibels (dBA) approximate the subjective response of the human ear to broad frequency noise source by discriminating against very low and very high frequencies of the audible spectrum. They are adjusted to reflect only those frequencies which are audible to the human ear. Exhibit 2-A presents a summary of the typical noise levels and their subjective loudness and effects that are described in more detail below.

EXHIBIT 2-A: TYPICAL NOISE LEVELS

COMMON OUTDOOR ACTIVITIES	COMMON INDOOR ACTIVITIES	A - WEIGHTED SOUND LEVEL dBA	SUBJECTIVE LOUDNESS	EFFECTS OF NOISE
THRESHOLD OF PAIN		140	INTOLERABLE OR DEAFENING	HEARING LOSS
NEAR JET ENGINE		130		
		120		
JET FLY-OVER AT 300m (1000 ft)	ROCK BAND	110		
LOUD AUTO HORN		100	VERY NOISY	
GAS LAWN MOWER AT 1m (3 ft)		90		
DIESEL TRUCK AT 15m (50 ft), at 80 km/hr (50 mph)	FOOD BLENDER AT 1m (3 ft)	80		SPEECH INTERFERENCE
NOISY URBAN AREA, DAYTIME	VACUUM CLEANER AT 3m (10 ft)	70	LOUD	
HEAVY TRAFFIC AT 90m (300 ft)	NORMAL SPEECH AT 1m (3 ft)	60		
QUIET URBAN DAYTIME	LARGE BUSINESS OFFICE	50	MODERATE	
QUIET URBAN NIGHTTIME	THEATER, LARGE CONFERENCE ROOM (BACKGROUND)	40		SLEEP DISTURBANCE
QUIET SUBURBAN NIGHTTIME	LIBRARY	30	FAINT	NO EFFECT
QUIET RURAL NIGHTTIME	BEDROOM AT NIGHT, CONCERT HALL (BACKGROUND)	20		
	BROADCAST/RECORDING STUDIO	10	VERY FAINT	
LOWEST THRESHOLD OF HUMAN HEARING	LOWEST THRESHOLD OF HUMAN HEARING	0

2.1 RANGE OF NOISE

Since the range of intensities that the human ear can detect is so large, the scale frequently used to measure intensity is a scale based on multiples of 10, the logarithmic scale. The scale for measuring intensity is the decibel scale. Each interval of 10 decibels indicates a sound energy ten times greater than before, which is perceived by the human ear as being roughly twice as loud. (4) The most common sounds vary between 40 dBA (very quiet) to 100 dBA (very loud). Normal conversation at three feet is roughly at 60 dBA, while loud jet engine noises equate to 110 dBA at approximately 100 feet, which can cause serious discomfort. (5) Another important aspect of noise is the duration of the sound and the way it is described and distributed in time.

2.2 NOISE DESCRIPTORS

Environmental noise descriptors are generally based on averages, rather than instantaneous, noise levels. The most commonly used figure is the equivalent level (Leq). Equivalent sound levels are not measured directly but are calculated from sound pressure levels typically measured in A-weighted decibels (dBA). The equivalent sound level (Leq) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period and is commonly used to describe the “average” noise levels within the environment.

Peak hour or average noise levels, while useful, do not completely describe a given noise environment. Noise levels lower than peak hour may be disturbing if they occur during times when quiet is most desirable, namely evening and nighttime (sleeping) hours. To account for this, the Day-Night Average Noise Level (LDN) and the Community Noise Equivalent Level (CNEL), representing a composite 24-hour noise level is utilized. The LDN and CNEL are weighted averages of the intensity of a sound, with corrections for time of day, and averaged over 24 hours. The LDN time of day corrections include the addition of 10 decibels to dBA Leq sound levels at night between 10:00 p.m. and 7:00 a.m. The CNEL time of day corrections require the addition of 5 decibels to dBA Leq sound levels in the evening from 7:00 p.m. to 10:00 p.m., in addition to the corrections for the LDN. These additions are made to account for the noise sensitive time periods during the evening and night hours when sound appears louder. LDN and CNEL do not represent the actual sound level heard at any particular time, but rather represent the total sound exposure. The City of Moreno Valley relies on the 24-hour CNEL level to apply the more conservative evening hour corrections to the 24-hour noise levels.

2.3 SOUND PROPAGATION

When sound propagates over a distance, it changes in level and frequency content. The manner in which noise reduces with distance depends on the following factors.

2.3.1 GEOMETRIC SPREADING

Sound from a localized source (i.e., a stationary point source) propagates uniformly outward in a spherical pattern. The sound level attenuates (or decreases) at a rate of 6 dB for each doubling of distance from a point source. Highways consist of several localized noise sources on a defined path and hence can be treated as a line source, which approximates the effect of several point sources. Noise from a line source propagates outward in a cylindrical pattern, often referred to as cylindrical spreading. Sound levels attenuate at a rate of 3 dB for each doubling of distance from a line source.

2.3.2 GROUND ABSORPTION

The propagation path of noise from a highway to a receptor is usually very close to the ground. Noise attenuation from ground absorption and reflective wave canceling adds to the attenuation associated with geometric spreading. Traditionally, the excess attenuation has also been expressed in terms of attenuation per doubling of distance. This approximation is usually sufficiently accurate for distances of less than 200 ft. For acoustically hard sites (i.e., sites with a reflective surface between the source and the receptor, such as a parking lot or body of water), no excess ground attenuation is assumed. For acoustically absorptive or soft sites (i.e., those sites with an absorptive ground surface between the source and the receptor such as soft dirt, grass, or scattered bushes and trees), an excess ground attenuation value of 1.5 dB per doubling of distance is normally assumed. When added to the cylindrical spreading, the excess ground attenuation results in an overall drop-off rate of 4.5 dB per doubling of distance from a line source.

2.3.3 ATMOSPHERIC EFFECTS

Receptors located downwind from a source can be exposed to increased noise levels relative to calm conditions, whereas locations upwind can have lowered noise levels. Sound levels can be increased at large distances (e.g., more than 500 feet) due to atmospheric temperature inversion (i.e., increasing temperature with elevation). Other factors such as air temperature, humidity, and turbulence can also have significant effects.

2.3.4 SHIELDING

A large object or barrier in the path between a noise source and a receptor can substantially attenuate noise levels at the receptor. The amount of attenuation provided by shielding depends on the size of the object and the frequency content of the noise source. Shielding by trees and other such vegetation typically only has an “out of sight, out of mind” effect. That is, the perception of noise impact tends to decrease when vegetation blocks the line-of-sight to nearby residents.

2.4 TRAFFIC NOISE PREDICTION

Vehicle noise is a combination of the noise produced by the engine, exhaust, and tires on the roadway. According to the *Highway Traffic Noise Analysis and Abatement Policy and Guidance,* provided by the Federal Highway Administration (FHWA), the level of traffic noise depends on three primary factors: the volume of the traffic, the speed of the traffic, and the vehicle mix within the flow of traffic. Generally, the loudness of traffic noise is increased by heavier traffic volumes, higher speeds, and a greater number of trucks. (6) A doubling of the traffic volume, assuming that the speed and vehicle mix do not change, results in a noise level increase of 3 dBA. The vehicle mix on a given roadway may also have an effect on community noise levels. As the number of medium and heavy trucks increases and becomes a larger percentage of the vehicle mix, adjacent noise level impacts will increase.

2.5 NOISE CONTROL

Noise control is the process of obtaining an acceptable noise environment for a particular observation point or receptor by controlling the noise source, transmission path, receptor, or all

Attachment: H - Noise Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

three. This concept is known as the source-path-receptor concept. In general, noise control measures can be applied to any and all of these three elements.

2.6 NOISE BARRIER ATTENUATION

Effective noise barriers can reduce noise levels by 10 to 15 dBA, cutting the loudness of traffic noise in half. A noise barrier is most effective when placed close to the noise source or receptor. Noise barriers, however, do have limitations. For a noise barrier to work, it must be high enough and long enough to block the path of the noise source. (6)

2.7 LAND USE COMPATIBILITY WITH NOISE

Some land uses are more tolerant of noise than others. For example, schools, hospitals, churches and residences are more sensitive to noise intrusion than are commercial or industrial developments and related activities. As ambient noise levels affect the perceived amenity or livability of a development, so too can the mismanagement of noise impacts impair the economic health and growth potential of a community by reducing the area's desirability as a place to live, shop and work. For this reason, land use compatibility with the noise environment is an important consideration in the planning and design process. The FHWA encourages State and Local government to regulate land development in such a way that noise-sensitive land uses are either prohibited from being located adjacent to a highway, or that the developments are planned, designed, and constructed in such a way that noise impacts are minimized. (7)

2.8 COMMUNITY RESPONSE TO NOISE

Community responses to noise may range from registering a complaint by telephone or letter, to initiating court action, depending upon each individual's susceptibility to noise and personal attitudes about noise. Several factors are related to the level of community annoyance including:

- Fear associated with noise producing activities;
- Socio-economic status and educational level;
- Perception that those affected are being unfairly treated;
- Attitudes regarding the usefulness of the noise-producing activity;
- Belief that the noise source can be controlled.

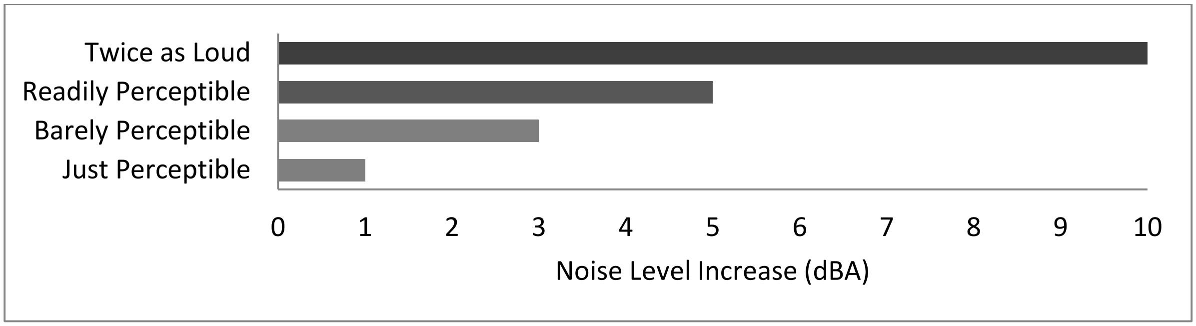
Approximately ten percent of the population has a very low tolerance for noise and will object to any noise not of their making. Consequently, even in the quietest environment, some complaints will occur. Another twenty-five percent of the population will not complain even in very severe noise environments. Thus, a variety of reactions can be expected from people exposed to any given noise environment. (8) Surveys have shown that about ten percent of the people exposed to traffic noise of 60 dBA will report being highly annoyed with the noise, and each increase of one dBA is associated with approximately two percent more people being highly annoyed. When traffic noise exceeds 60 dBA or aircraft noise exceeds 55 dBA, people may begin to complain. (8)

Despite this variability in behavior on an individual level, the population as a whole can be expected to exhibit the following responses to changes in noise levels as shown on Exhibit 2-B. An increase or decrease of 1 dBA cannot be perceived except in carefully controlled laboratory

Attachment: H - Noise Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

experiments, a change of 3 dBA are considered *barely perceptible*, and changes of 5 dBA are considered *readily perceptible*. (6)

EXHIBIT 2-B: NOISE LEVEL INCREASE PERCEPTION



2.9 VIBRATION

According to the Federal Transit Administration (FTA) *Transit Noise Impact and Vibration Assessment* (9), vibration is the periodic oscillation of a medium or object. The rumbling sound caused by the vibration of room surfaces is called structure borne noise. Sources of ground-borne vibrations include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or human-made causes (e.g., explosions, machinery, traffic, trains, construction equipment). Vibration sources may be continuous, such as factory machinery, or transient, such as explosions. As is the case with airborne sound, ground-borne vibrations may be described by amplitude and frequency.

Vibration is usually expressed in peak particle velocity (PPV) in inches per second (in/sec) and discussed in decibel (dB) units in order to compress the range of numbers required to describe vibration. Vibration impacts are generally associated with activities such as train operations, construction and heavy truck movements. Although PPV is appropriate for evaluating the potential for building damage, it is not always suitable for evaluating human response (annoyance). It takes some time for the human body to respond to vibration signals. In a sense, the human body responds to average vibration amplitude often described as the root-mean-square (RMS). The RMS of a signal is the average of the squared amplitude of the signal, typically calculated over a 1-second period. As with airborne sound, the RMS velocity is often expressed in decibel notation as vibration decibels (VdB), which serves to reduce the range of numbers used to describe human response to vibration.

The background vibration-velocity level in residential areas is generally 50 VdB. Ground-borne vibration is normally perceptible to humans at approximately 65 VdB. For most people, a vibration-velocity level of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels. Typical outdoor sources of perceptible ground-borne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If a roadway is smooth, the ground-borne vibration is rarely perceptible. The range of interest is from approximately 50 VdB, which is the typical background vibration-velocity level, to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings. Exhibit 2-C illustrates common vibration sources and the human and structural response to ground-borne vibration.

EXHIBIT 2-C: TYPICAL LEVELS OF GROUND-BORNE VIBRATION

3 REGULATORY SETTING

To limit population exposure to physically and/or psychologically damaging as well as intrusive noise levels, the federal government, the State of California, various county governments, and most municipalities in the state have established standards and ordinances to control noise. In most areas, automobile and truck traffic is the major source of environmental noise. Traffic activity generally produces an average sound level that remains fairly constant with time. Air and rail traffic, and commercial and industrial activities are also major sources of noise in some areas. Federal, state, and local agencies regulate different aspects of environmental noise. Federal and state agencies generally set noise standards for mobile sources such as aircraft and motor vehicles, while regulation of stationary sources is left to local agencies.

3.1 STATE OF CALIFORNIA NOISE REQUIREMENTS

The State of California regulates freeway noise, sets standards for sound transmission, provides occupational noise control criteria, identifies noise standards and provides guidance for local land use compatibility. State law requires that each county and city adopt a General Plan that includes a Noise Element which is to be prepared according to guidelines adopted by the Governor's Office of Planning and Research. (10) The purpose of the Noise Element is to *limit the exposure of the community to excessive noise levels*.

3.2 STATE OF CALIFORNIA GREEN BUILDING STANDARDS CODE

The 2014 State of California's Green Building Standards Code contains mandatory measures for non-residential building construction in Section 5.506 on Environmental Comfort. (11) These noise standards are applied to new construction in California for the purpose of controlling interior noise levels resulting from exterior noise sources. The regulations specify that acoustical studies must be prepared when non-residential structures are developed in areas where the exterior noise levels exceed 65 dBA CNEL, such as within a noise contour of an airport, freeway, railroad, and other areas where noise contours are not readily available. If the development falls within an airport or freeway 65 dBA CNEL noise contour, the combined sound transmission class (STC) rating of the wall and roof-ceiling assemblies must be at least 50. For those developments in areas where noise contours are not readily available and the noise level exceeds 65 dBA Leq for any hour of operation, a wall and roof-ceiling combined STC rating of 45, and exterior windows with a minimum STC rating of 40 are required (Section 5.507.4.1).

3.3 CITY OF MORENO VALLEY GENERAL PLAN NOISE ELEMENT

The City Noise Element typically provides the standards for land use compatibility for community noise exposure. However, the City of Moreno Valley General Plan does not include a noise element or specific transportation related noise standards. Rather, noise is considered in the Environmental Safety section of the General Plan Safety Element. (12) While the General Plan provides background and noise fundamentals, it does not identify criteria to assess the impacts associated with off-site transportation related noise impacts. Therefore, for the purpose of this analysis, the transportation noise criteria are derived from standards contained in the General Plan Guidelines, a publication of the California Office of Planning and Research (OPR). The OPR land use/noise compatibility standards are used by many California cities and counties and specify the maximum noise levels allowable for new developments impacted by transportation noise sources

The purpose of the transportation noise criteria is to protect, create, and maintain an environment free from noise and vibration that may jeopardize the health or welfare of sensitive receptors, or degrade quality of life. City General Policies (City of Moreno Valley General Plan, pp.9-31, 9-32) act to ensure that when exterior noise levels exceed 65 dBA CNEL at sensitive receptors, mitigation is provided to ensure that interior noise levels of 45 dBA CNEL are maintained. General Plan Policies in this regard are consistent with, and support, the California Building Code interior noise standards.

3.4 OPERATIONAL NOISE STANDARDS

To analyze noise impacts originating from a designated fixed location or private property such as the Moreno Valley Logistics Center Project, stationary-source (operational) noise such as the expected idling trucks, delivery truck activities, parking, backup alarms, refrigerated containers or reefers, as well as loading and unloading of dry goods are typically evaluated against standards established under a City's Municipal Code. Therefore, this analysis presents the City of Moreno Valley Municipal Code stationary-source noise standards, provided in Appendix 3.1.

The City of Moreno Valley Municipal Code, Chapter 11.80 *Noise Regulation*, provides performance standards and noise control guidelines for determining and mitigating non-transportation or stationary-source noise impacts from operations at private properties. The City of Moreno Valley Municipal Code defines *Maximum Sound Levels (in dB(A)) for Source Land Uses* in Table 11.80.030-2 for *Residential* and *Commercial* land uses. As defined by the Municipal Code, Section 11.80.020 *Definitions*, *Commercial* land use *means all uses of land not otherwise classified as residential,* and *Residential* land use *means all uses of land primarily for dwelling units, as well as hospitals, schools, colleges and universities, and places of religious assembly.* (2) For the purpose of this analysis, the Moreno Valley Logistics Center Project is considered *Commercial* land use since it is not classified as residential. Based on this standard, the operational noise level limits for commercial land use, from Table 11.80.030-2, of 65 dBA Leq during the daytime (8:00 a.m. to 10:00 p.m.) hours and 60 dBA Leq during the nighttime (10:01 p.m. to 7:59 a.m.) hours shall apply to the operational noise from the Project.

Further, Section 11.80.030 (C) *Prohibited Acts, Nonimpulsive Sound Decibel Limits*, states: *No person shall maintain, create, operate or cause to be operated on private property any source of sound in such a manner as to create any nonimpulsive sound which exceeds the limits set forth for the source land use category (as defined in Section 11.80.020) in Table 11.80.030-2 when measured at a distance of two hundred (200) feet or more from the real property line of the source of the sound, if the sound occurs on a privately owned property…* (2) Therefore, at a distance of 200 feet from the property line, the Project's operational noise levels shall not exceed the 65 dBA Leq daytime and 60 dBA Leq nighttime noise level standards for commercial land uses, as shown on Table 3-1.

TABLE 3-1: OPERATIONAL NOISE STANDARDS AT 200 FEET FROM THE SOURCE

Jurisdiction	Source Land Use	Time Period	Maximum Noise Level For Source Land Uses @ 200' (dBA Leq)[2]
City of Moreno Valley[1]	Commercial	Daytime (8:00 a.m. - 10:00 p.m.)	65
		Nighttime (10:01 p.m. - 7:59 a.m.)	60

[1] Source: City of Moreno Valley Municipal Code, Chapter 11.80 Noise Regulation, Table 11.80.030-2 Maximum Sound Levels (in dB(A)) for Source Land Uses when measured at a distance of 200 feet from the property line of the source land use (Appendix 3.1).

[2] Leq represents a steady state sound level containing the same total energy as a time varying signal over a given sample period.

3.5 CONSTRUCTION NOISE STANDARDS

To analyze noise impacts originating from the construction of the Moreno Valley Logistics Center Project, noise from construction activities are typically limited to the hours of operation established under a City's Municipal Code. The Municipal Code noise standards for construction are described below for the City of Moreno Valley to determine the potential noise impacts at nearby sensitive receiver locations. As a subset of its stationary-source noise regulations, the City Municipal Code establishes additional restrictions on construction-source noise. More specifically, Municipal Code Section 11.80.030 (D) (7), *Construction and Demolition*, provides the following:

> *No person shall operate or cause operation of any tools or equipment used in construction, drilling, repair, alteration or demolition work between the hours of eight p.m. and seven a.m. the following day such that the sound there from creates a noise disturbance, except for emergency work by public service utilities or for other work approved by the city manager or designee.*

A *noise disturbance*, as defined by the City of Moreno Valley Municipal Code, means any sound which:

- *Disturbs a reasonable person of normal sensitivities;*
- *Exceeds the sound level limits set forth in this chapter [Table 11.80.030-2];*

- *Is plainly audible as defined in this section. Where no specific distance is set forth for the determination of audibility, references to noise disturbance shall be deemed to mean plainly audible at a distance of two hundred (200) feet from the real property line of the source of the sound, if the sound occurs on a privately owned property, or from the source of the sound, if the sound occurs on public right, public space or other publicly owned property.*

Therefore, based on the Section 11.80.030 (D) (7) construction regulations, a construction-related *noise disturbance* occurs when the noise levels exceed the *commercial* land use criteria of 65 dBA Leq during the daytime hours and 60 dBA Leq during the nighttime hours at a distance of 200 feet from the property line of the source (Project site). In addition, grading operations shall be limited to the hours identified in Section 8.21.050 (O) of 7:00 a.m. to 6:00 p.m., Monday through Friday, and 8:00 a.m. to 4:00 p.m. on weekends and holidays or as approved by the City Engineer. The City of Moreno Valley construction noise standards are shown on Table 3-2 and included in Appendix 3.1.

TABLE 3-2: CONSTRUCTION NOISE STANDARDS

Jurisdiction	Permitted Hours of Construction Activity	Construction Noise Level Standard at 200 Feet (dBA Leq)[2]	
		Daytime	Nighttime
City of Moreno Valley[1]	General Activity: 7:00 a.m. to 8:00 p.m. on any day. Grading is limited to 7:00 a.m. to 6:00 p.m. Monday to Friday; 8:00 a.m. to 4:00 p.m. on weekends and holidays.	65	60

[2] Acceptable threshold for determining the relative significance of short-term Project construction noise levels, based on the City of Moreno Valley stationary noise standards shown on Table 3-1.

"Daytime" = 8:00 a.m. to 10:00 p.m.; "Nighttime" = 10:01 p.m. to 7:59 a.m.

3.6 VIBRATION STANDARDS

The City of Moreno Valley has not identified or adopted vibration standards. However, the United States Department of Transportation Federal Transit Administration (FTA) provides guidelines for maximum-acceptable vibration criteria for different types of land uses. These guidelines allow 80 VdB as an annoyance threshold for residential uses and buildings where people normally sleep. (13) To assess the potential for building damage due to Project-related vibration sources, the FTA identifies a level of 90 VdB for *buildings extremely susceptible to vibration damage*, such as residential homes.

Operational and construction activities can result in varying degrees of ground-borne vibration, depending on the equipment and methods used, distance to the affected structures and soil type. Construction vibration is generally associated with pile driving and rock blasting. Other construction equipment such as air compressors, light trucks, hydraulic loaders, etc., generates little or no ground vibration. Occasionally large bulldozers and loaded trucks can cause perceptible vibration levels at close proximity. While not enforceable regulations within the City of Moreno Valley, the FTA vibration threshold of 80 VdB for annoyance and 90 VdB for building damage at sensitive land uses provide the basis for determining the relative significance of potential Project-related vibration impacts due to on-site operational and construction activities.

This page intentionally left blank

4 SIGNIFICANCE CRITERIA

The following significance criteria are based on guidance provided by Appendix G of the California Environmental Quality Act (CEQA) Guidelines. For the purposes of this report, impacts would be potentially significant if the Project is determined to result in or cause:

A. Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;

B. Exposure of persons to or generation of excessive ground-borne vibration or ground-borne noise levels.

C. A substantial permanent increase in ambient noise levels in the Project vicinity above existing levels without the proposed Project; or

D. A substantial temporary or periodic increase in ambient noise levels in the Project vicinity above noise levels existing without the proposed Project.

E. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the Project area to excessive noise levels.

F. For a project within the vicinity of a private airstrip, expose people residing or working in the Project area to excessive noise levels.

While the CEQA Guidelines and the City of Moreno Valley General Plan Guidelines provide direction on noise compatibility and establish noise standards by land use type that are sufficient to assess the significance of noise impacts under the first threshold, they do not define the levels at which increases are considered substantial for use under the second, third and fourth threshold. The fifth and sixth thresholds apply to nearby public and private airports, if any, and the Project's land use compatibility, as discussed below.

A CEQA Initial Study was prepared for the Moreno Valley Logistics Center which addresses the E and F thresholds of the noise-related CEQA Guidelines related to the Project site. (14) The Initial Study indicates that the Project site is located within two miles of a public airport, the March Air Reserve Base (ARB). Based on General Plan Figure 5.4-1, *March Air Reserve Base Noise Impact Area*, the Project site is located outside of the 60 dBA CNEL noise contour and would not be subjected to excessive noise levels due to operations at the March ARB. Further, since the Project site is not located within the March ARB noise contours, the Project would not expose people residing or working in the Project area to excessive noise levels due to its location within two miles of a public airport. Therefore, the Initial Study concludes that the Project site will experience a *less than significant* impact due to airport operations at the March ARB, and no further analysis is required. (14)

4.1 NOISE-SENSITIVE RECEIVERS

Noise level increases resulting from the Project are evaluated based on the Appendix G CEQA Guidelines described above at the closest sensitive receiver locations. Under CEQA, consideration must be given to the magnitude of the increase, the existing ambient noise levels and the location of noise-sensitive receivers in order to determine if a noise increase represents a significant adverse environmental impact. This approach recognizes *that there is no single noise increase that renders the noise impact significant.* (15)

Unfortunately, there is no completely satisfactory way to measure the subjective effects of noise or of the corresponding human reactions of annoyance and dissatisfaction. This is primarily because of the wide variation in individual thresholds of annoyance and differing individual experiences with noise. Thus, an important way of determining a person's subjective reaction to a new noise is the comparison of it to the existing environment to which one has adapted—the so-called *ambient* environment.

In general, the more a new noise exceeds the previously existing ambient noise level, the less acceptable the new noise will typically be judged. With this in mind, the Federal Interagency Committee on Noise (FICON) (16) developed guidance to be used for the assessment of project-generated increases in noise levels that take into account the ambient noise level. The FICON recommendations are based on studies that relate aircraft noise levels to the percentage of persons highly annoyed by aircraft noise. Although the FICON recommendations were specifically developed to assess aircraft noise impacts, these recommendations are often used in environmental noise impact assessments involving the use of cumulative noise exposure metrics, such as the average-daily noise level (i.e., CNEL).

For example, if the ambient noise environment is quiet (<60 dBA) and the new noise source greatly increases the noise levels, an impact may occur if the noise criteria may be exceeded. Therefore, for the purpose of this analysis, FICON identifies a *readily perceptible* 5 dBA or greater project related noise level increase is considered a significant impact when the noise criteria for a given land use is exceeded. According to the FICON, in areas where the without project noise levels range from 60 to 65 dBA, a 3 dBA *barely perceptible* noise level increase appears to be appropriate for most people. When the without project noise levels already exceed 65 dBA, any increase in community noise louder than 1.5 dBA or greater is considered a significant impact if the noise criteria for a given land use is exceeded, since it likely contributes to an existing noise exposure exceedance. Table 4-1 below provides a summary of the potential noise impact significance criteria, based on guidance from FICON.

TABLE 4-1: SIGNIFICANCE OF NOISE IMPACTS AT NOISE-SENSITIVE RECEIVERS

Without Project Noise Level	Potential Significant Impact
< 60 dBA	5 dBA or more
60 - 65 dBA	3 dBA or more
> 65 dBA	1.5 dBA or more

Federal Interagency Committee on Noise (FICON), 1992.

4.2 NON-NOISE-SENSITIVE RECEIVERS

The City of Moreno Valley General Plan Safety Element does not identify specific exterior noise level standards for non-noise sensitive land uses such as the industrial use of the Project site. Therefore, the land use compatibility criteria for non-noise sensitive land uses is derived from standards contained in the *General Plan Guidelines*, a publication of the California Office of Planning and Research (OPR) prepared in October, 2003. (10) The OPR guideline for the *normally acceptable* exterior noise level for non-noise-sensitive land use, such as industrial use, is 70 dBA CNEL. Noise levels greater than 70 dBA CNEL are considered *conditionally acceptable*.

To determine if Project-related traffic noise level increases are significant at off-site non-noise-sensitive land uses, a *readily perceptible* 5 dBA and *barely perceptible* 3 dBA criteria are used. When the without Project noise levels at the non-noise-sensitive land uses are below the *normally acceptable* 70 dBA CNEL compatibility criteria, a *readily perceptible* 5 dBA or greater noise level increase is considered a significant impact. When the without Project noise levels are greater than the *normally acceptable* 70 dBA CNEL land use compatibility criteria, a *barely perceptible* 3 dBA or greater noise level increase is considered a significant impact since the noise level criteria is already exceeded. The noise level increases used to determine significant impacts for non-noise-sensitive land uses is generally consistent with the FICON noise level increase thresholds for noise-sensitive land uses but instead rely on the OPR *General Plan Guidelines* exterior noise level criteria.

Noise impacts shall be considered significant if any of the following occur as a direct result of the proposed development. Table 4-2 shows the significance criteria summary matrix.

OFF-SITE TRAFFIC NOISE

- When the noise levels at existing and future noise-sensitive land uses (e.g. residential, etc.):
  - are less than 60 dBA and the Project creates a *readily perceptible* 5 dBA or greater Project related noise level increase; or
  - range from 60 to 65 dBA and the Project creates a *barely perceptible* 3 dBA or greater Project noise level increase; or
  - already exceed 65 dBA, and the Project creates a community noise level impact of greater than 1.5 dBA (FICON, 1992).
- When the noise levels at existing and future non-noise-sensitive land uses (e.g. business park, industrial, etc.):
  - are less than the OPR General Plan Guidelines *normally acceptable* 70 dBA and the Project creates a *readily perceptible* 5 dBA or greater Project related noise level increase; or
  - are greater than the OPR General Plan Guidelines *normally acceptable* 70 dBA and the Project creates a *barely perceptible* 3 dBA or greater Project noise level increase.

OPERATIONAL NOISE

- If Project-related operational (stationary source) noise levels exceed the 65 dBA Leq daytime or 60 dBA Leq nighttime noise level standards at a distance of 200 feet from the property line of the noise source (City of Moreno Valley Municipal Code, Table 11.80.030-2).

Attachment: H - Noise Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

- If the existing ambient noise levels at the nearby noise-sensitive receivers near the Project site:
    - are less than 60 dBA and the Project creates a *readily perceptible* 5 dBA or greater Project-related noise level increase; or
    - range from 60 to 65 dBA and the Project creates a *barely perceptible* 3 dBA or greater Project-related noise level increase; or
    - already exceed 65 dBA, and the Project creates a community noise level impact of greater than 1.5 dBA (FICON, 1992).
- If long-term Project generated operational source vibration levels could exceed the FTA maximum acceptable vibration standard of 80 vibration decibels (VdB) at sensitive receiver locations (Federal Transit Administration, Transit Noise and Vibration Impact Assessment, May 2006).

CONSTRUCTION NOISE AND VIBRATION

- If Project-related construction activities:
    - occur at any time other than between the permitted hours of 7:00 a.m. to 8:00 p.m. on any day. Grading operations shall be limited to between the hours of 8:00 a.m. to 6:00 p.m. weekdays, and 8:00 a.m. to 4:00 p.m. on weekends and holidays, or as otherwise approved by the City Engineer (City of Moreno Valley Municipal Code, Sections 11.80.030 (D) (7), and 8.21.050 (O)) and would create noise levels of greater than 60 dBA Leq at sensitive receivers; or
    - create noise levels at sensitive residential receivers in the City of Moreno Valley which exceed the short-term construction noise level limit of 65 dBA Leq during the daytime hours or 60 dBA Leq during the nighttime hours at 200 feet from the Project site (City of Moreno Valley Municipal Code, Section 11.80.030 (D) (7)).
- If short-term Project generated construction-source vibration levels could exceed the FTA maximum acceptable vibration standard for annoyance assessment of 80 vibration decibels (VdB) or for building damage of 90 VdB at sensitive receiver locations (Federal Transit Administration, Transit Noise and Vibration Impact Assessment, May 2006).

5 EXISTING NOISE LEVEL MEASUREMENTS

To assess the existing noise level environment, nine 24-hour noise level measurements were taken at sensitive receiver locations in the Project study area. The receiver locations were selected to describe and document the existing noise environment within the Project study area. Exhibit 5-A provides the boundaries of the Project study area and the noise level measurement locations. To fully describe the existing noise conditions, noise level measurements were collected by Urban Crossroads, Inc. from Monday, March 9th to Tuesday, March 10th, 2015. Appendix 5.1 includes study area photos.

5.1 MEASUREMENT PROCEDURE AND CRITERIA

To describe the existing noise environment, the hourly noise levels were measured during typical weekday conditions over a 24-hour period. By collecting individual hourly noise level measurements, it is possible to describe the daytime and nighttime hourly noise levels and calculate the 24-hour CNEL. The long-term noise readings were recorded using Piccolo Type 2 integrating sound level meter and dataloggers. The Piccolo sound level meters were calibrated using a Larson-Davis calibrator, Model CAL 150. All noise meters were programmed in "slow" mode to record noise levels in "A" weighted form. The sound level meters and microphones were equipped with a windscreen during all measurements. All noise level measurement equipment satisfies the American National Standards Institute (ANSI) standard specifications for sound level meters ANSI S1.4-2014/IEC 61672-1:2013. (17)

5.2 NOISE MEASUREMENT LOCATIONS

The 24-hour noise level measurements were positioned at the nearest sensitive receiver locations to assess the existing ambient hourly noise levels surrounding the Project site. To describe the existing noise environment, it is not necessary to collect measurements at each individual building or residence, because each receiver measurement represents a group of buildings that share acoustical equivalence. In other words, the area represented by the receiver shares similar shielding, terrain, and geometric relationship to the reference noise source. Receivers represent a location of noise sensitive areas and are used to estimate the future noise level impacts. Collecting reference ambient noise level measurements at the nearby sensitive receiver locations allows for a comparison of the before and after Project noise levels and is necessary to assess potential cumulative noise impacts.

5.3 NOISE MEASUREMENT RESULTS

The noise measurements presented below focus on the average or equivalent sound levels (Leq). The equivalent sound level (Leq) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period. Table 5-1 identifies the hourly daytime (8:00 a.m. to 10:00 p.m.) and nighttime (10:01 p.m. to 7:59 a.m.) noise levels at each noise level measurement location. Appendix 5.2 provides a summary of the existing hourly ambient noise levels described below:

- Location L1 represents the noise levels at the southeast corner of Cactus Avenue and Unity Court adjacent to existing residential homes. The noise level measurements collected show an overall 24-hour exterior noise level of 79.7 dBA CNEL. The hourly noise levels measured at location L1 ranged from 73.0 to 77.2 dBA Leq during the daytime hours and from 68.2 to 76.5 dBA Leq during the nighttime hours. The energy (logarithmic) average daytime noise level was calculated at 75.3 dBA Leq with an average nighttime noise level of 73.0 dBA Leq.
- Location L2 represents the existing noise levels on Heacock Street north of Meyer Drive near existing residential homes. The noise level measurements collected show an overall 24-hour exterior noise level of 72.1 dBA CNEL. The hourly noise levels measured at location L2 ranged from 64.3 to 68.0 dBA Leq during the daytime hours and from 61.3 to 68.3 dBA Leq during the nighttime hours. The energy (logarithmic) average daytime noise level was calculated at 65.9 dBA Leq with an average nighttime noise level of 65.6 dBA Leq.
- Location L3 represents the noise levels at the southeast corner of 6th Street and Midway Street near an existing baseball diamond and park. The 24-hour CNEL indicates that the overall exterior noise level is 58.9 dBA CNEL. At location L3 the background ambient noise levels ranged from 44.8 to 53.4 dBA Leq during the daytime hours to levels of 46.7 to 56.7 dBA Leq during the nighttime hours. The energy (logarithmic) average daytime noise level was calculated at 50.2 dBA Leq with an average nighttime noise level of 52.9 dBA Leq.
- Location L4 represents the existing noise levels on Heacock Street north of Gentian Avenue adjacent to an existing residential community. The noise level measurements collected show an overall 24-hour exterior noise level of 74.7 dBA CNEL. The hourly noise levels measured at location L4 ranged from 65.9 to 70.6 dBA Leq during the daytime hours and from 62.0 to 72.2 dBA Leq during the nighttime hours. The energy (logarithmic) average daytime noise level was calculated at 68.8 dBA Leq with an average nighttime noise level of 68.1 dBA Leq.
- Location L5 represents the noise levels on Iris Avenue west of Indian Street and the Rainbow Ridge Elementary School. An existing logistics warehouse is located south of this location across Iris Avenue. The noise level measurements collected show an overall 24-hour exterior noise level of 73.1 dBA CNEL. The hourly noise levels measured at location L5 ranged from 62.6 to 68.0 dBA Leq during the daytime hours and from 55.6 to 72.8 dBA Leq during the nighttime hours. The energy (logarithmic) average daytime noise level was calculated at 66.2 dBA Leq with an average nighttime noise level of 67.0 dBA Leq.

Attachment: H - Noise Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

- Location L6 represents the existing noise levels north of the Project site on Indian Street near an existing residential home. The noise level measurements collected show an overall 24-hour exterior noise level of 68.8 dBA CNEL. The hourly noise levels measured at location L6 ranged from 56.5 to 67.1 dBA Leq during the daytime hours and from 51.8 to 67.6 dBA Leq during the nighttime hours. The energy (logarithmic) average daytime noise level was calculated at 61.5 dBA Leq with an average nighttime noise level of 62.5 dBA Leq.
- Location L7 represents the noise levels on Indian Street south of Krameria Avenue near existing residential homes located northeast of the Project site. The 24-hour CNEL indicates that the overall exterior noise level is 67.2 dBA CNEL. At location L7 the background ambient noise levels ranged from 59.6 to 67.9 dBA Leq during the daytime hours to levels of 50.8 to 66.0 dBA Leq during the nighttime hours. The energy (logarithmic) average daytime noise level was calculated at 64.1 dBA Leq with an average nighttime noise level of 60.6 dBA Leq.
- Located east of the Project site, location L8 represents the existing noise levels on Indian Street near existing residential homes. The noise level measurements collected show an overall 24-hour exterior noise level of 66.4 dBA CNEL. The hourly noise levels measured at location L8 ranged from 57.8 to 62.9 dBA Leq during the daytime hours and from 50.7 to 65.0 dBA Leq during the nighttime hours. The energy (logarithmic) average daytime noise level was calculated at 60.8 dBA Leq with an average nighttime noise level of 60.2 dBA Leq.
- Location L9 represents the noise levels at east of the Project site on Indian Street, south of Superior Avenue near existing residential homes. The 24-hour CNEL indicates that the overall exterior noise level is 58.2 dBA CNEL. At location L9 the background ambient noise levels ranged from 47.7 to 56.5 dBA Leq during the daytime hours to levels of 45.1 to 55.6 dBA Leq during the nighttime hours. The energy (logarithmic) average daytime noise level was calculated at 53.1 dBA Leq with an average nighttime noise level of 51.7 dBA Leq.

Table 5-1 provides the (energy average) noise levels used to describe the daytime and nighttime ambient conditions. These daytime and nighttime energy average noise levels represent the average of all hourly noise levels observed during these time periods expressed as a single number. The energy average noise levels are used to describe the ambient noise levels during the daytime (8:00 a.m. to 10:00 p.m.) and nighttime (10:01 p.m. to 7:59 a.m.) hours, and to determine the potential Project impacts as they relate to the daytime and nighttime noise level standards of the City of Moreno Valley Municipal Code. In addition, the energy average noise levels provide an ambient baseline noise level for estimating the Project-related noise level increases at receiver locations. While the use of the highest ambient noise level during the daytime and nighttime periods may describe the worst-case ambient noise level conditions, their use for describing the potential Project-related noise level increases would diminish the Project noise level contributions to the ambient noise conditions. Therefore, the energy average noise levels are used to describe the existing ambient conditions during each timeframe, consistent with the daytime and nighttime noise level standards identified in the City of Moreno Valley Municipal Code.

Appendix 5.2 provides a summary of the noise levels for each hour as well as the minimum, maximum, L_1, L_2, L_5, L_8, L_{25}, L_{50}, L_{90}, L_{95}, and L_{99} percentile noise levels observed during the daytime and nighttime period. The background ambient noise levels in the Project study area are dominated by the transportation-related noise associated with the arterial roadway network. This includes the auto and heavy truck activities near the noise level measurement locations on Cactus Avenue, Heacock Street, Iris Avenue, and Indian Street. In addition, noise due to the March Air Reserve Base aircraft operations is included in the ambient noise level measurements due to aircraft flyovers. Secondary background ambient noise is also included in the noise level measurements from existing stationary noise sources in the Project study area such as existing truck loading activities north of the Project site, however, these impacts are generally overshadowed by vehicular traffic noise levels.

Since Project truck traffic is expected to travel north on Heacock Street near existing residential homes, noise level measurement locations L1 to L4 were chosen to present the existing ambient noise levels without any Project-related truck trips on the study area roadway segments. The 24-hour existing noise level measurements shown on Table 5-1 present the worst-case existing unmitigated ambient noise conditions.

TABLE 5-1: 24-HOUR AMBIENT NOISE LEVEL MEASUREMENTS

Location[1]	Distance To Project Boundary (Feet)	Description	Hourly Noise Level (dBA Leq)[2]		CNEL
			Daytime	Nighttime	
L1	10,500'	Located at the southeast corner of Cactus Avenue and Unity Court adjacent to existing residential homes.	75.3	73.0	79.7
L2	8,330'	Located on Heacock Street north of Meyer Drive near existing residential homes.	65.9	65.6	72.1
L3	5,360'	Located at the southeast corner of 6th Street and Midway Street near an existing baseball diamond and park.	50.2	52.9	58.9
L4	5,880'	Located on Heacock Street north of Gentian Avenue adjacent to an existing residential community.	68.8	68.1	74.7
L5	2,740'	Located on Iris Avenue west of Indian Street and the Rainbow Ridge Elementary School. An existing logistics warehouse is located south of Iris Avenue.	66.2	67.0	73.1
L6	1,250'	Located north of the Project site on Indian Street near an existing residential home.	61.5	62.5	68.8
L7	90'	Located on Indian Street south of Krameria Avenue near existing residential homes and northeast of the Project site.	64.1	60.6	67.2
L8	100'	Located east of the Project site on Indian Street near existing residential homes.	60.8	60.2	66.4
L9	75'	Located east of the Project site on Indian Street, south of Superior Avenue near existing residential homes.	53.1	51.7	58.2

[1] See Exhibit 5-A for the noise level measurement locations.

[2] Energy (logarithmic) average hourly levels. The long-term 24-hour measurement printouts are included in Appendix 5.2.

"Daytime" = 8:00 a.m. to 10:00 p.m.; "Nighttime" = 10:01 p.m. to 7:59 a.m.

6 METHODS AND PROCEDURES

The following section outlines the methods and procedures used to model and analyze the future traffic noise environment.

6.1 FHWA TRAFFIC NOISE PREDICTION MODEL

The estimated roadway noise impacts from vehicular traffic were calculated using a computer program that replicates the Federal Highway Administration (FHWA) Traffic Noise Prediction Model- FHWA-RD-77-108. (18) The FHWA Model arrives at a predicted noise level through a series of adjustments to the Reference Energy Mean Emission Level (REMEL). In California the national REMELs are substituted with the California Vehicle Noise (Calveno) Emission Levels, which are used in this analysis to describe the off-site transportation noise levels. (19) Adjustments are then made to the REMEL to account for: the roadway classification (e.g., collector, secondary, major or arterial), the roadway active width (i.e., the distance between the center of the outermost travel lanes on each side of the roadway), the total average daily traffic (ADT), the travel speed, the percentages of automobiles, medium trucks, and heavy trucks in the traffic volume, the roadway grade, the angle of view (e.g., whether the roadway view is blocked), the site conditions ("hard" or "soft" relates to the absorption of the ground, pavement, or landscaping), and the percentage of total ADT which flows each hour throughout a 24-hour period.

6.2 OFF-SITE TRAFFIC NOISE PREDICTION MODEL INPUTS

Table 6-1 presents the roadway parameters used to assess the Project’s off-site transportation noise impacts. Table 6-1 identifies the 24 study area roadway segments, the distance from the centerline to adjacent land use based on the functional roadway classifications according to the City of Moreno Valley General Plan Circulation Element, and the posted vehicle speeds. For the purpose of the off-site analysis, soft site conditions were used to analyze the traffic noise impacts on each roadway segment in the Project study area. Soft site conditions are typically used to describe off-site traffic noise level impacts. In addition, Caltrans research has shown that the use of soft-site conditions is more appropriate for the application of the Federal Highway Administration (FHWA) traffic noise prediction model used in this analysis. (20)

The Existing (without and with Indian Street Bridge), Opening Year (2020), and General Plan Buildout (2035) conditions ADT volumes used for this study are presented on Table 6-2 and were provided by the *Moreno Valley Logistics Center Traffic Impact Analysis* prepared by Urban Crossroads, Inc. (1) Table 6-3 provides the time of day (daytime, evening, and nighttime) vehicle splits.

Autos	67.67%	6.10%	26.23%	100.00%
Medium Trucks	86.87%	2.02%	11.11%	100.00%
Heavy Trucks	78.67%	10.43%	10.90%	100.00%

[1] Source: Based on existing 24-hour classification counts by vehicle type taken on 4/28/2015 on Heacock Street south of Cardinal Avenue (Moreno Valley Logistics Center Traffic Impact Analysis, Urban Crossroads, Inc., September 2015).
"Daytime" = 7:00 a.m. to 7:00 p.m.; "Evening" = 7:00 p.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.

According to the *Moreno Valley Logistics Center Traffic Impact Analysis* prepared by Urban Crossroads, Inc., the Project is expected to generate a net total of approximately 4,960 trip-ends per day (actual vehicles) with 504 AM peak hour trips and 536 PM peak hour trips. (1) The net Project trip generation includes 1,441 truck trip-ends per day with 117 AM peak hour truck trips and 133 PM peak hour truck trips. To determine the off-site traffic noise impacts on the study area roadway segments, this analysis uses the net total of 1,411 trip-ends per day to evaluate the Project-related off-site noise level increases. While the traffic volumes presented in the *Moreno Valley Logistics Center Traffic Impact Analysis* are expressed as Passenger Car Equivalent (PCE) trips, the Moreno Valley Logistics Center Noise Impact Analysis relies on the net Project trips to accurately account for the effect of individual truck trips on the study area roadway network.

To quantify the off-site noise levels, the Project related truck trips were added to the heavy truck category in the FHWA noise prediction model. The addition of the Project related truck trips increases the percentage of heavy trucks in the vehicle mix. This approach recognizes that the FHWA noise prediction model is significantly influenced by the number of heavy trucks in the vehicle mix.

The 1,411 daily Project truck trip-ends trucks were assigned to the 24 individual off-site study area roadway segments based on the estimated Project truck trip distribution percentages. Using the Project truck trips in combination with the Project trip distribution, it is possible to calculate the number of additional Project truck trips and vehicle mix percentages for each of the study area roadway segments. Tables 6-4 to 6-7 describe the distribution of traffic flow by vehicle type (vehicle mix) by roadway segment for each of the off-site Project traffic conditions.

TABLE 6-4: EXISTING WITHOUT PROJECT CONDITIONS VEHICLE MIX

Classification	Total % Traffic Flow			Total
	Autos	Medium Trucks	Heavy Trucks	
All Segments	89.71%	3.29%	7.00%	100.00%

6.3 VIBRATION ASSESSMENT

This analysis focuses on the potential ground-borne vibration associated with vehicular traffic and construction activities. Ground-borne vibration levels from automobile traffic are generally overshadowed by vibration generated by heavy trucks that roll over the same uneven roadway surfaces. However, due to the rapid drop-off rate of ground-borne vibration and the short duration of the associated events, vehicular traffic-induced ground-borne vibration is rarely perceptible beyond the roadway right-of-way, and rarely results in vibration levels that cause damage to buildings in the vicinity.

However, while vehicular traffic is rarely perceptible, construction has the potential to result in varying degrees of temporary ground vibration, depending on the specific construction activities and equipment used. Ground vibration levels associated with various types of construction equipment are summarized on Table 6-9. Based on the representative vibration levels presented for various construction equipment types, it is possible to estimate the human response (annoyance) using the following vibration assessment methods defined by the FTA. To describe the human response (annoyance) associated with vibration impacts the FTA provides the following equation: $L_{VdB}(D) = L_{VdB}(25\text{ ft}) - 30\log(D/25)$

TABLE 6-9: VIBRATION SOURCE LEVELS FOR CONSTRUCTION EQUIPMENT

Equipment	Vibration Decibels (VdB) at 25 feet[1]

7 OFF-SITE TRANSPORTATION NOISE IMPACTS

To assess the off-site transportation CNEL noise level impacts associated with development of the proposed Project, noise contours were developed based on the *Moreno Valley Logistics Center Traffic Impact Analysis*. (1) Noise contour boundaries represent the equal levels of noise exposure and are measured in CNEL from the center of the roadway. Noise contours were developed for the following traffic scenarios:

- Existing Without Project: This scenario refers to the existing present-day noise conditions without the proposed Project.
- Existing With Project: This scenario refers to the existing present-day noise conditions with the proposed Project, under the following two conditions:
  - Without Indian Street Bridge: This scenario refers to the existing present-day noise conditions without the Indian Street Bridge over the Perris Valley Storm Drain.
  - With Indian Street Bridge: This scenario refers to the existing present-day noise conditions with the Indian Street Bridge over the Perris Valley Storm Drain.
- Opening Year (2020) Without / With Project: This scenario refers to the background noise conditions at future Year 2020 without and with the proposed Project. This scenario corresponds to 2020 conditions, and includes all cumulative projects identified in the Traffic Impact Analysis.
- General Plan Building (2035) Without / With Project: This scenario refers to the background noise conditions at future Year 2035 without and with the proposed Project. This scenario corresponds to 2035 conditions, and includes all cumulative projects identified in the Traffic Impact Analysis.

7.1 TRAFFIC NOISE CONTOURS

To quantify the Project's traffic noise impacts on the surrounding areas, the changes in traffic noise levels on 24 roadway segments surrounding the Project were calculated based on the changes in the average daily traffic volumes. Based on the noise impact significance criteria described in Section 4, a significant off-site traffic noise level impact occurs:

- When the noise levels at existing and future noise-sensitive land uses (e.g. residential, etc.):
  - are less than 60 dBA and the Project creates a *readily perceptible* 5 dBA or greater Project related noise level increase; or
  - range from 60 to 65 dBA and the Project creates a *barely perceptible* 3 dBA or greater Project noise level increase; or
  - already exceed 65 dBA, and the Project creates a community noise level impact of greater than 1.5 dBA (FICON, 1992).
- When the noise levels at existing and future non-noise-sensitive land uses (e.g. business park, industrial, etc.):
  - are less than the OPR General Plan Guidelines *normally acceptable* 70 dBA and the Project creates a *readily perceptible* 5 dBA or greater Project related noise level increase; or
  - are greater than the OPR General Plan Guidelines *normally acceptable* 70 dBA and the Project creates a *barely perceptible* 3 dBA or greater Project noise level increase.

Noise contours were used to assess the Project's incremental traffic-related noise impacts at land uses adjacent to roadways conveying Project traffic. The noise contours represent the distance to noise levels of a constant value and are measured from the center of the roadway for the 70, 65, and 60 dBA noise levels. The noise contours do not take into account the effect of any existing noise barriers or topography that may affect ambient noise levels. In addition, since the noise contours reflect modeling of vehicular noise on study area roadways, they appropriately do not reflect noise contributions from the surrounding stationary noise sources within the Project study area. Tables 7-1 through 7-7 present a summary of the unmitigated exterior traffic noise levels for the 24 study area roadway segments analyzed from the without Project to the with Project conditions in each of the three timeframes: Existing (without and with Indian Street Bridge), Opening Year (2020), and General Plan Buildout (2035) conditions. Appendix 7.1 includes a summary of the traffic noise level contours for each of the seven traffic scenarios.

Attachment: H - Noise Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

7.2 EXISTING CONDITIONS PROJECT TRAFFIC NOISE LEVEL CONTRIBUTIONS

Table 7-1 presents the Existing without Project conditions CNEL noise levels. From this we can see that the exterior noise levels are expected to range from 45.2 to 73.5 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 7-2 shows the Existing with Project without Indian Street Bridge conditions will range from 45.2 to 73.7 dBA CNEL. As shown on Table 7-8 the Project will generate noise level increases approaching 0.8 dBA CNEL under the without Indian Street Bridge conditions. Based on the significance criteria outlined in Section 4, the Project-related increases at the adjacent land uses represent a *less than significant* impact under Existing with Project without Indian Street Bridge conditions.

Table 7-3 shows the Existing with Project with Indian Street Bridge conditions will range from 45.2 to 73.6 dBA CNEL. As shown on Table 7-9 the Project will generate noise level increases approaching 0.6 dBA CNEL under the with Indian Street Bridge conditions. Based on the significance criteria outlined in Section 4, the Project-related increases at the adjacent land uses represent a *less than significant* impact under Existing with Project with Indian Street Bridge conditions. Further, the Project-related noise level increases will be up to 0.2 dBA CNEL less than those under the without Indian Street Bridge conditions.

7.3 OPENING YEAR (2020) PROJECT TRAFFIC NOISE LEVEL CONTRIBUTIONS

Table 7-10 presents a comparison of the Opening Year (2020) without and with Project conditions CNEL noise levels. Table 7-4 shows that the exterior noise levels without accounting for any noise attenuation features are expected to range from 45.2 to 75.6 dBA CNEL under Opening Year (2020) without Project conditions. Table 7-5 presents the Opening Year (2020) with Project conditions noise level contours that are expected to range from 45.2 to 75.7 dBA CNEL. As shown on Table 7-10 the Project will generate noise level increases approaching 0.4 dBA CNEL. Based on the significance criteria outlined in Section 4, the Project-related increases at the adjacent land uses represent a *less than significant* impact under Opening Year (2020) conditions.

7.4 GENERAL PLAN BUILDOUT (2035) PROJECT TRAFFIC NOISE LEVEL CONTRIBUTIONS

Table 7-11 presents a comparison of the General Plan Buildout (2035) without and with Project conditions CNEL noise levels. Table 7-6 shows that the exterior noise levels without accounting for any noise attenuation features are expected to range from 61.3 to 76.3 dBA CNEL under General Plan Buildout (2035) without Project conditions. Table 7-7 presents the General Plan Buildout (2035) with Project conditions noise level contours that are expected to range from 61.6 to 76.4 dBA CNEL. As shown on Table 7-11 the Project will generate noise level increases approaching 0.3 dBA CNEL. Based on the significance criteria outlined in Section 4, the Project-related increases at the adjacent land uses represent a *less than significant* impact under General Plan Buildout (2035) conditions.

7.5 CUMULATIVE PROJECT TRAFFIC NOISE IMPACTS

According to the U.S. Environmental Protection Agency (EPA), cumulative impacts represent the combined incremental effects of human activities that accumulate over time. (21) While the incremental impacts may be insignificant by themselves, the combined effect may result in a significant impact. The level of significance attributed to a cumulative noise impact is based on a comparison of the Existing without Project noise levels with the future General Plan Buildout (2035) without Project noise levels. Table 7-12 shows that the cumulative increase from Existing to General Plan Buildout (2035) without Project conditions (column 6) will range from 0.5 to 16.1 dBA CNEL. Based on the significance criteria in Section 4, the cumulative increases represent a *potentially significant* cumulative impact on 10 of the study area roadway segments.

Since the cumulative increase is shown to be potentially significant for 10 of the study area roadway segments, it is necessary to determine the Project-related contribution to the cumulative noise level increase on the affected roadway segments. As shown on Table 7-12, the Project-related noise level contribution is calculated for each roadway segment. To determine if the Project-related contribution to the cumulative noise impact is potentially significant, the Existing without Project noise levels were subtracted from the General Plan Buildout (2035) with Project noise levels to determine the Project plus cumulative noise level increase. As shown on Table 7-12, the General Plan Buildout (2035) with Project plus cumulative noise level increases over Existing without Project conditions (column 10) will range from 0.7 to 16.4 dBA CNEL and represent *potentially significant* impacts under General Plan Buildout (2035) conditions. However, to determine if the Project's contribution to the cumulative impact is cumulatively considerable, the General Plan Buildout (2035) without Project noise level increases are subtracted from the General Plan Buildout (2035) with Project noise level increases.

Table 7-12 shows the actual Project-related contribution to the cumulative noise level increases (column 13) will approach 0.3 dBA CNEL and will not exceed the significance thresholds at the adjacent land uses. Therefore, since the Project-related off-site traffic noise level increases represent a *less than significant* contribution to the cumulative noise impacts, the Project-related traffic noise level increases are *less than cumulatively considerable*.

[1] The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the nearest adjacent land use.

[2] Cumulative noise level increase from Existing without Project (Table 7-1) to Year 2035 without Project conditions (Table 7-6).

[3] Does the increase exceed the significance criteria in Section 4? Land use sensitivity is based on the City of Moreno Valley General Plan Land Use Map, Figure 2-2.

[4] Project-related noise level increase from Existing without Project (Table 7-1) to Year 2035 with Project conditions (Table 7-7).

[5] Total Project contribution to the cumulative noise level increase.

[6] Does the Project-related contribution to the cumulative noise level increase exceed the significance criteria at the adjacent land uses?

8 RECEIVER LOCATIONS

To assess the potential for long-term operational and short-term construction noise impacts, the following eight receiver locations, as shown on Exhibit 8-A, were identified as representative locations for analysis. Many of these receiver locations coincide with the existing noise level measurement locations outlined in Section 5 and previously shown on Exhibit 5-A. Sensitive receivers are generally defined as locations where people reside or where the presence of unwanted sound could otherwise adversely affect the use of the land. Noise-sensitive land uses are generally considered to include: schools, hospitals, single-family dwellings, mobile home parks, churches, libraries, and recreation areas. Moderately noise-sensitive land uses typically include: multi-family dwellings, hotels, motels, dormitories, out-patient clinics, cemeteries, golf courses, country clubs, athletic/tennis clubs, and equestrian clubs. Land uses that are considered relatively insensitive to noise include business, commercial, and professional developments. Land uses that are typically not affected by noise include: industrial, manufacturing, utilities, agriculture, natural open space, undeveloped land, parking lots, warehousing, liquid and solid waste facilities, salvage yards, and transit terminals.

Representative sensitive receivers in the vicinity of the Project site include the single-family residential homes at locations R1, and R3 to R8. Receiver location R2 represents Rainbow Ridge Elementary School. The closest noise-sensitive receiver is represented by location R8 where an existing residential home is located approximately 101 feet east of the Project site boundary.

R1: Located approximately 2,744 feet north of the Project site on Iris Avenue, R1 represents existing single-family residential homes. A long-term noise measurement was taken near this location, L5, to describe the existing ambient noise environment.

R2: Location R2 represents Rainbow Ridge Elementary School located roughly 2,853 feet northeast of the Project site.

R3: Location R3 represents the existing residential homes situated north of the Project site at a distance of approximately 1,544 feet on Indian Street. A long-term noise measurement was taken near this location, L6, to describe the existing ambient noise environment.

R4: Location R4 represents the existing residential homes situated approximately 471 feet northeast of the Project site. A long-term noise measurement was taken near this location, L7, to describe the existing ambient noise environment.

R5: At a distance of approximately 133 feet, location R5 represents single-family residential homes adjacent to Indian Street, east of the Project site. A long-term noise measurement was taken near this location, L7, to describe the existing ambient noise environment.

R6: Location R6 represents the existing residential homes situated east of the Project site at a distance of approximately 161 feet across Indian Street. A long-term noise measurement was taken near this location, L8, to describe the existing ambient noise environment.

R7: Location R7 represents the existing residential homes situated approximately 144 feet east of the Project site across Indian Street. A long-term noise measurement was taken near this location, L9, to describe the existing ambient noise environment.

R8: At a distance of approximately 101 feet, location R8 represents a single-family residential home southeast of the Project site.

9 OPERATIONAL NOISE IMPACTS

This section analyzes the potential stationary-source operational noise impacts at nearby receiver locations resulting from operation of the proposed Moreno Valley Logistics Center. Exhibit 9-A identifies the representative receiver locations and noise source locations used to assess the operational noise levels.

9.1 OPERATIONAL NOISE STANDARDS

The City of Moreno Valley Municipal Code, Chapter 11.80 *Noise Regulation*, provides performance standards and noise control guidelines for determining and mitigating non-transportation or stationary-source noise impacts from operations at private properties. The City of Moreno Valley Municipal Code defines *Maximum Sound Levels (in dB(A)) for Source Land Uses* in Table 11.80.030-2 for *Residential* and *Commercial* land uses. As defined by the Municipal Code, Section 11.80.020 *Definitions*, *Commercial* land use *means all uses of land not otherwise classified as residential,* and *Residential* land use *means all uses of land primarily for dwelling units, as well as hospitals, schools, colleges and universities, and places of religious assembly.* (2) For the purpose of this analysis, the Moreno Valley Logistics Center Project is considered *Commercial* land use since it is not classified as residential. Based on this standard, the operational noise level limits for commercial land use, from Table 11.80.030-2, of 65 dBA Leq during the daytime (8:00 a.m. to 10:00 p.m.) hours and 60 dBA Leq during the nighttime (10:01 p.m. to 7:59 a.m.) hours shall apply to the operational noise from the Project.

Further, Section 11.80.030 (C) *Prohibited Acts*, *Nonimpulsive Sound Decibel Limits*, states: *No person shall maintain, create, operate or cause to be operated on private property any source of sound in such a manner as to create any nonimpulsive sound which exceeds the limits set forth for the source land use category (as defined in Section 11.80.020) in Table 11.80.030-2 when measured at a distance of two hundred (200) feet or more from the real property line of the source of the sound, if the sound occurs on a privately owned property…* (2) Therefore, at a distance of 200 feet from the property line, the Project's operational noise levels shall not exceed the 65 dBA Leq daytime and 60 dBA Leq nighttime noise level standards for commercial land use.

9.2 OPERATIONAL NOISE SOURCES

To present the potential worst-case noise conditions, this analysis assumes all tenants within the Project building would be operational 24 hours per day, seven days per week. This analysis accounts for the noise associated with cold storage (refrigeration) as a worst-case scenario since it includes the additional noise from the refrigerated containers/reefers on trucks within the Project site, and may conservatively overstate the actual noise levels due to tenant operations at the Project site. Currently the proposed Project could not use more than 10% of the Project for cold storage. This noise analysis has assumed the possibility of more than 10% of cold storage only for the purposes of over-estimating as opposed to under-estimating noise impacts. As proposed, no more than 10% of the Project could be used for cold storage.

Attachment: H - Noise Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

Business operations would primarily be conducted within the enclosed buildings, with the exception of traffic movement, parking, and the loading and unloading of trucks at designated loading bays. Therefore, the on-site Project related noise sources are expected to include: idling trucks, delivery truck activities, parking, backup alarms, refrigerated containers or reefers, as well as loading and unloading of dry goods. No additional on-site noise sources are included in the analysis based on observations made during the reference noise level measurements, provided in Appendix 9.1, at similar logistics warehouses. Additional on-site noise sources such as power generators, HVAC equipment, or material handling equipment will vary by tenant and do not represent the major noise sources for the Project land uses, and as such, are not included as specific references in this analysis. The proposed Project site plan does not identify the use of power generators, and the material handling noise levels are expected to occur within each building. Other operational noise levels associated with the activities expected at the proposed Moreno Valley Logistics Center such as background HVAC equipment are reflected in the reference noise level measurements. This noise analysis is intended to describe noise level impacts associated with the expected typical warehouse and distribution storage activities at the Project site.

9.3 REFERENCE NOISE LEVELS

Since the future tenants of the proposed Project are unknown, the Project's operational noise levels were estimated based on reference noise level measurements of similar operational activities. The reference noise levels are intended to describe the expected operational noise sources that may include idling trucks, delivery truck activities, parking, backup alarms, refrigerated containers or reefers, as well as loading and unloading of dry goods. To estimate the Project off-site operational noise impacts associated with the Moreno Valley Logistics Center, the following reference noise level measurements were collected from existing logistics warehouse operations containing similar operational noise sources, as shown on Table 9-1. Appendix 9.1 includes reference noise source descriptions and photos for each location.

9.3.1 WORST-CASE REFERENCE NOISE LEVELS

To describe the worst-case Project-only operational noise levels associated with the Moreno Valley Logistics Center Project, this analysis relies on a reference noise level of 70.1 dBA Leq at a distance of 30 feet from the truck idling/reefer activity taken at the Nature's Best distribution facility, described in Appendix 9.1. This analysis assumes both tenants within the Project building would be operational 24 hours per day, seven days per week. In addition, this analysis accounts for the noise associated with cold storage (refrigeration) as a worst-case scenario as it accounts for the additional noise from the refrigerated containers/reefers on trucks within the Project site, and may conservatively overstate the actual noise levels due to tenant operations at the Project site. Currently the proposed Project could not use more than 10% of the Project for cold storage.

As shown on Table 9-1, the reference noise level of 70.1 dBA is measured at a distance of 30 feet at a height of 8 feet. While the specific noise levels at the Project site will depend on the actual tenant, the intensity and the daytime / nighttime hours of operation, a reference noise level of 70.1 dBA Leq at 30 feet is used to describe the peak Project operational noise activity since it represents similar operational characteristics. The reference noise levels are intended to describe noise level impacts associated with the expected typical warehouse and distribution storage operations at the Project site.

TABLE 9-1: REFERENCE NOISE LEVEL MEASUREMENTS

Noise Source	Duration (hh:mm:ss)	Distance From Source (Feet)	Noise Source Height (Feet)	Hourly Activity (Minutes)[4]	Hourly (dBA Leq)
Truck Idle/Reefer Activity[1]	0:14:00	30'	8'	60	70.1
Entry Gate Activity[1]	0:10:00	20'	8'	60	69.2
Entry Gate Activity[2]	0:15:00	20'	8'	60	64.0
Unloading/Docking Activity[2]	0:15:00	30'	8'	60	67.2
Distribution/Warehouse Activity[3]	24:00:00	25'	8'	60	69.1

[1] Reference noise level measurements were collected from the existing operations of the Nature's Best distribution facility located at 16081 Fern Avenue in the City of Chino. The reference noise level measurements were collected on Wednesday, January 7, 2015.

[2] Reference noise level measurements were collected from the existing operations of the Motivational Fulfillment & Logistics Services distribution facility located at 6810 Bickmore Avenue in the City of Chino. The reference noise level measurements were collected on Wednesday, January 7, 2015.

[3] The reference noise level measurements include the daytime and nighttime noise levels associated with idling trucks, delivery truck activities, parking, backup alarms, refrigerated containers or reefers, as well as loading and unloading of dry goods. Reference noise level measurements were collected from the existing 24-hour operations of Veg Fresh Farms and FedEx distribution facility located at 500 East Orangethorpe Avenue in the City of Anaheim. The reference noise level measurements were collected on Tuesday, January 22, 2013.

[4] Duration (minutes within the hour) of noise activity during peak hourly conditions.

9.4 PROJECT OPERATIONAL NOISE LEVELS

Based upon the reference noise levels, it is possible to estimate the Project operational stationary-source noise levels at a distance of 200 feet, consistent with the City of Moreno Valley Municipal Code requirements, and at each of the eight noise receiver locations. The operational noise level calculations shown on Tables 9-2 and 9-3 account for the distance attenuation provided due to geometric spreading, when sound from a localized stationary source (i.e., a point source) propagates uniformly outward in a spherical pattern. With geometric spreading, sound levels attenuate (or decrease) at a rate of 6 dB for each doubling of distance from a point source (idling trucks, delivery truck activities, parking, backup alarms, refrigerated containers or reefers, as well as loading and unloading of dry goods).

Table 9-2 presents the combined total operational noise level projections at a distance of 200 feet consistent with the City of Moreno Valley Municipal Code. The Project operational noise levels at a distance of 200 feet are estimated at 53.6 dBA Leq. Based on the results of this analysis, the Project operational noise levels associated with the Moreno Valley Logistics Center will satisfy the daytime and nighttime exterior noise level standards for commercial-source land uses of 65 dBA Leq and 60 dBA Leq, respectively, at a distance of 200 feet and, therefore, will be *less than significant*.

TABLE 9-2: OPERATIONAL NOISE LEVEL PROJECTIONS AT A DISTANCE OF 200 FEET

Noise Source	Reference Noise Level (dBA Leq)	Distance Attenuation at 200 feet (dBA Leq)[1]	Hourly Activity (Minutes)[2]	Hourly Activity Adjustment (dBA Leq)	Calculated Noise Level at 200 feet (dBA Leq)
Truck Idle/Reefer Activity	70.1	-16.5	60	0.0	53.6

[1] Drop off rate of 6 dBA per doubling of distance (point source).
[2] Duration (minutes within the hour) of noise activity during peak hourly conditions.

Table 9-3 presents the exterior noise levels including the barrier attenuation provided by the existing 6-foot barriers in the Project study area, as previously shown on Exhibit 9-A. Table 9-3 indicates that the hourly noise levels associated with the Moreno Valley Logistics Center Project at the eight sensitive receiver locations are expected to range from 24.4 to 46.6 dBA Leq. The noise levels experienced at the nearby sensitive receiver locations include attenuation due to the distance from each receiver to the noise source, and the existing barriers at residential homes. The operational noise level calculations are included in Appendix 9.2.

9.5 PROJECT OPERATIONAL NOISE LEVEL CONTRIBUTIONS

Although the Project-related operational noise levels are shown to be less than significant based on the City of Moreno Valley Municipal Code standards at 200 feet, some receiver locations are located within 200 feet from the Project site boundaries. Therefore, to determine the potential Project-related operational noise impacts at each receiver location, the Project-related noise level contribution is evaluated at each receiver location based on the magnitude of the Project-related increase on the ambient noise levels.

To describe the Project operational noise level contributions, the Project operational noise levels are combined with the existing ambient noise levels measurements for the five receiver locations potentially impacted by Project operational noise sources. Since the units used to measure noise, decibels (dB), are logarithmic units, the Project-operational and existing ambient noise levels cannot be combined using standard arithmetic equations. (4) Instead, they must be logarithmically added using the following base equation:

$$SPL_{Total} = 10\log_{10}[10^{SPL1/10} + 10^{SPL2/10} + \ldots 10^{SPLn/10}]$$

Where "SPL1," "SPL2," etc. are equal to the sound pressure levels being combined, or in this case, the Project-operational and existing ambient noise levels. The difference between the combined Project and ambient noise levels describe the Project noise level contributions to the existing ambient noise environment. Noise levels that would be experienced at receiver locations when Project-source noise is added to ambient daytime and nighttime conditions are presented on Tables 9-4 and 9-5, respectively. The noise levels presented on Tables 9-4 and 9-5 include the attenuation provided by the existing 6-foot high noise barriers in the Project study area, shown on Exhibit 9-A. The noise measurement and sensitive receiver locations are shown on Exhibit 9-B.

LEGEND:

△ Noise Measurement Locations

● Receiver Locations

As indicated on Table 9-4, the Project is expected to generate a daytime operational noise level contribution of up to 0.9 dBA Leq at the nearby receiver locations. Based on the significance criteria described in Section 4, the Project-related operational noise level contributions to the daytime ambient noise levels at nearby sensitive receiver locations will be *less than significant*.

Table 9-5 shows the Project is expected to generate a nighttime operational noise level contribution of up to 1.2 dBA Leq at the nearby receiver locations. Based on the significance criteria described in Section 4, the Project-related operational noise level contributions to the nighttime ambient noise levels at nearby sensitive receiver locations will be *less than significant*. On this basis, Project operational stationary-source noise levels would not result in a substantial temporary/periodic, or permanent increase in ambient noise levels in the Project vicinity above levels existing without the Project, and impacts in will be *less than significant*.

9.6 OPERATIONAL NOISE ABATEMENT MEASURES

The routine operation of the Project will not exceed the City of Moreno Valley standards for stationary noise impacts. To further reduce potential operational noise levels received at adjacent residential land uses, it is recommended that the Lead Agency require the following as Project Conditions of Approval:

- All on-site operating equipment under the control of the building user that is used in outdoor areas (including but not limited to trucks, tractors, forklifts, and hostlers), shall be operated with properly functioning and well-maintained mufflers. The City of Moreno Valley may conduct periodic inspection at its discretion.
- Maintain quality pavement conditions on the property that are free of vertical deflection (i.e. speed bumps) to minimize truck noise. The City of Moreno Valley may conduct periodic inspection at its discretion.
- Consistent with Mitigation Measure AQ-6 of the *Moreno Valley Logistics Center Air Quality Impact Analysis*, and enforced by the California Air Resources Board (CARB), the truck access gates and loading docks within the truck court on the Project site shall be posted with signs which state:
    - Truck drivers shall turn off engines when not in use;
    - Diesel trucks servicing the Project shall not idle for more than five (5) minutes; and
    - Telephone numbers of the building facilities manager and the CARB to report violations.

Attachment: H - Noise Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

9.7 OPERATIONAL VIBRATION IMPACTS

Although the human threshold of perception for vibration is around 65 VdB, human response to vibration is not usually significant unless the vibration exceeds 70 VdB. Truck vibration levels are dependent on vehicle characteristics, load, speed, and pavement condition. Typical vibration levels for heavy trucks at normal traffic speeds do not exceed 65 VdB, and therefore, will be below the FTA vibration threshold of 80 VdB at nearby sensitive receiver locations. Truck deliveries transiting on site will be travelling at very low speeds so it is expected that delivery truck vibration impacts at nearby homes will be *less than significant*.

9.8 ALTERNATE SITE PLAN COMPARISON

This noise study evaluates the Project's worst-case condition based on the four-building Project site plan. If the alternate site plan with a 166-space truck parking lot in lieu of Building 2 is implemented, the operational noise levels would be reduced. The removal of Building 2 would reduce the total loading dock areas and potential operational noise sources within the Project site, thereby reducing the total operational noise levels expected at the nearby receiver locations.

10 CONSTRUCTION IMPACTS

This section analyzes potential impacts resulting from the short-term construction activities associated with the development of the Project.

10.1 CONSTRUCTION NOISE STANDARDS

To analyze noise impacts originating from the construction of the Moreno Valley Logistics Center Project, noise from construction activities are typically limited to the hours of operation established under a City's Municipal Code. The Municipal Code noise standards for construction are described below for the City of Moreno Valley to determine the potential noise impacts at nearby sensitive receiver locations. As a subset of its stationary-source noise regulations, the City Municipal Code establishes additional restrictions on construction-source noise. More specifically, Municipal Code Section 11.80.030 (D) (7), *Construction and Demolition*, provides the following:

> *No person shall operate or cause operation of any tools or equipment used in construction, drilling, repair, alteration or demolition work between the hours of eight p.m. and seven a.m. the following day such that the sound there from creates a noise disturbance, except for emergency work by public service utilities or for other work approved by the city manager or designee.*

A *noise disturbance*, as defined by the City of Moreno Valley Municipal Code, means any sound which:

- *Disturbs a reasonable person of normal sensitivities;*
- *Exceeds the sound level limits set forth in this chapter [Table 11.80.030-2];*
- *Is plainly audible as defined in this section. Where no specific distance is set forth for the determination of audibility, references to noise disturbance shall be deemed to mean plainly audible at a distance of two hundred (200) feet from the real property line of the source of the sound, if the sound occurs on a privately owned property, or from the source of the sound, if the sound occurs on public right, public space or other publicly owned property.*

Therefore, based on the Section 11.80.030 (D) (7) construction regulations, a construction-related *noise disturbance* occurs when the noise levels exceed the *commercial* land use criteria of 65 dBA Leq during the daytime hours and 60 dBA Leq during the nighttime hours at a distance of 200 feet from the property line of the source (Project site). In addition, grading operations shall be limited to the hours identified in Section 8.21.050 (O) of 7:00 a.m. to 6:00 p.m., Monday through Friday, and 8:00 a.m. to 4:00 p.m. on weekends and holidays or as approved by the City Engineer.

10.2 CONSTRUCTION NOISE LEVELS

Noise generated by the Project construction equipment will include a combination of trucks, power tools, concrete mixers and portable generators that when combined can reach high levels. Construction at the Project site is anticipated to occur in two overlapping phases:

- Phase 1: Construction of Buildings 1 and 2.
- Phase 2: Construction of Buildings 3 and 4.

The number and mix of construction equipment is expected to occur in each the following five stages, for each building within the Project site:

- Grading
- Trenching
- Building Construction
- Architectural Coating
- Paving

Construction is expected to commence in April 2016 and will last through May 2017. Phase 1 of Project construction is anticipated to occur from April 29th, 2016 to April 26th, 2017. Phase 2 of Project construction is expected to start on July 1st, 2016 and continue through March 2nd, 2017. This construction noise analysis was prepared using reference noise level measurements taken by Urban Crossroads, Inc. to describe the typical construction activity noise levels for each stage of Project construction. The construction reference noise level measurements, provided in Appendix 10.1, represent a list of typical construction activity noise levels. Noise levels generated by heavy construction equipment can range from approximately 60 dBA to in excess of 72 dBA when measured at 200 feet. However, these noise levels diminish with distance from the construction site at a rate of 6 dBA per doubling of distance. For example, a noise level of 72 dBA measured at 200 feet from the noise source to the receiver would be reduced to 66 dBA at 400 feet from the source to the receiver, and would be further reduced to 60 dBA at 800 feet from the source to the receiver. The types of equipment for each construction stage are generally consistent with the data used to support the construction emissions in the *Moreno Valley Logistics Center Air Quality Impact Analysis* prepared by Urban Crossroads Inc. (22)

10.3 CADNAA NOISE PREDICTION MODEL

The CadnaA (Computer Aided Noise Abatement) software is used to graphically represent the noise level contour boundaries for each stage of construction. CadnaA has the ability to analyze the noise level of multiple types of noise sources and calculates the noise levels at any location. The program has the ability to analyze the noise level of multiple types of noise sources and to calculate the effects of topography, buildings and multiple barriers. The noise level contour boundaries of each stage of Project construction are shown on Exhibits 10-A to 10-J based on the results of the construction noise analysis.

10.4 CONSTRUCTION REFERENCE NOISE LEVELS

To describe the Project construction noise levels, measurements were collected for similar activities at several construction sites. Table 10-1 provides a summary of the fifteen construction reference noise level measurements. Since the reference noise levels were collected at varying distances, all construction noise level measurements presented on Table 10-1 have been adjusted to describe a common reference distance of 50 feet.

For comparison with the City of Moreno Valley construction regulations Section 11.80.030 (D) (7), the construction noise levels are presented at a distance of 200 feet for each stage of construction. Appendix 10.1 includes a detailed construction reference noise level memo and reference noise source photos for each type of construction activity.

TABLE 10-1: CONSTRUCTION REFERENCE NOISE LEVELS

ID	Noise Source	Reference Distance From Source (Feet)	Reference Noise Levels @ Reference Distance		Reference Noise Levels @ 50 Feet[5]	
			dBA Leq	dBA Lmax	dBA Leq	dBA Lmax
1	Truck Pass-Bys & Dozer Activity[1]	30'	63.6	68.1	59.2	63.7

15	Concrete Mixer Pour Activities[4]	50'	67.7	79.2	67.7	79.2

[1] As measured by Urban Crossroads, Inc. on 10/14/15 at a business park construction site located at the northwest corner of Barranca Parkway and Alton Parkway in the City of Irvine.

[2] As measured by Urban Crossroads, Inc. on 10/20/15 at a construction site located in Rancho Mission Viejo.

[3] As measured by Urban Crossroads, Inc. on 10/30/15 during grading operations within an industrial construction site located in the City of Ontario.

[4] Reference noise level measurements were collected from a nighttime concrete pour at an industrial construction site, located at 27334 San Bernardino Avenue in the City of Redlands, between 1:00 a.m. to 2:00 a.m. on 7/1/15.

[5] Reference noise levels are calculated at 50 feet using a drop off rate of 6 dBA per doubling of distance (point source).

10.5 CONSTRUCTION NOISE ANALYSIS

Tables 10-2 to 10-5 show the daytime Project construction stages and the reference construction noise levels used for each stage. Table 10-6 shows the nighttime building construction and paving reference noise levels for the potential nighttime concrete pour activities during the building construction and paving stages in Phases 1 and 2. Table 10-7 provides a summary of the noise levels from each stage of construction by the time of day the activities will take place at a distance of 200 feet from the noise source. This approach is consistent with the City of Moreno Valley Municipal Code 65dBA Leq daytime and 60 dBA Leq nighttime noise level standards at 200 feet from the source land use. Based on the reference construction noise levels, the noise levels due to Project construction at a distance of 200 feet, when the peak reference noise level is operating at a single point nearest the sensitive receiver location, will range from 59.6 to 67.5 dBA Leq.

TABLE 10-2: GRADING EQUIPMENT NOISE LEVELS AT 200 FEET

Reference Construction Activity[1]	Reference Noise Level @ 50 Feet (dBA Leq)	Noise Level @ 200 Feet (dBA Leq)

TABLE 10-7: CONSTRUCTION EQUIPMENT NOISE LEVEL SUMMARY AT 200 FEET

Time of Day	Construction Noise Levels by Phase at 200 Feet (dBA Leq)				
	Grading	Trenching	Building Construction & Arch. Coating	Paving	Peak
Daytime	67.5	61.4	67.5	67.5	67.5
Nighttime	n/a	n/a	59.6	59.6	59.6

"n/a" = Only building construction and paving concrete pour activities are expected during the nighttime hours.

Using the peak reference construction noise level for each stage of construction, shown on Table 10-7, the construction noise levels by stage, were calculated at the nearby receiver locations under Phase 1 and 2 conditions: Phase 1 includes Buildings 1 and 2; and Phase 2 includes Buildings 3 and 4. It is important to note that once Buildings 1 and 2 are constructed, the building structures themselves will provide substantial additional attenuation for nearby sensitive receiver locations during the construction stages for Buildings 3 and 4. As such, this analysis includes the additional attenuation provided by Buildings 1 and 2 during Phase 2 conditions. To describe the conservative worst-case conditions, all reference noise sources are located at the site boundaries for grading, trenching, and paving activities. During the building construction and architectural coating activities all noise sources were placed at the boundaries for each building structure. The construction noise levels at each receiver location include the additional attenuation provided by the existing barriers in the Project study area. The noise barrier attenuation calculations are provided in Appendix 10.2.

10.5.1 DAYTIME CONSTRUCTION NOISE LEVELS

Table 10-8 shows the highest Phase 1 construction noise levels will range from 39.2 to 67.2 dBA Leq at the nearby receiver locations. A review of the analysis shown on Table 10-8 indicates that the unmitigated daytime construction activities may exceed the City of Moreno Valley Municipal Code 65 dBA Leq noise level threshold at 200 feet during Phase 1 (Buildings 1 and 2) grading and paving activities at receiver location R8. To satisfy the 65 dBA Leq noise level threshold during the Phase 1 (Buildings 1 and 2) grading and paving activities, the construction of a 6-foot high temporary noise barrier is required near receiver location R8. With the recommended construction noise mitigation measures identified in this report, the daytime construction noise level impacts at all noise sensitive receiver locations will be *less than significant*. Exhibits 10-A to 10-C show the noise contours by stage for Phase 1 daytime construction.

The peak construction noise levels for Phase 2 of Project construction are shown on Table 10-9 and are expected to range from 35.8 to 57.6 dBA Leq. Based on the construction noise analysis results shown on Table 10-9, the construction noise levels for Phase 2 of Project construction will satisfy the City of Moreno Valley 65 dBA Leq daytime noise level standard at all receiver locations and represents a *less than significant* noise impact. Exhibits 10-D to 10-F present the noise contours by stage for Phase 2 daytime construction.

10.5.2 NIGHTTIME CONSTRUCTION NOISE LEVELS

In addition to the daytime construction activities, the Project may pursue a temporary use or special event permit to allow for nighttime concrete pour activities during the building construction and paving stages of Project construction. Nighttime concrete pours are typically conducted during the summer months due to the warmer daytime weather conditions. While Section 11.80.030 (7) of the City of Moreno Valley Municipal Code currently prohibits nighttime construction activities, Section 11.80.030 (E) (8) allows for a temporary use or special event permit (Section 11.80.040). (2) The temporary use or special event permit shall be submitted to the City of Moreno Valley Planning Department for approval and meet the provisions Municipal Code Section 11.80.040.

To estimate the nighttime construction noise levels at the nearby receiver locations, sample reference noise level measurements were collected during nighttime concrete pour activities at a similar industrial development site. Appendix 10.1 includes the reference noise level measurement data and photos for the nighttime construction activities.

Table 10-10 shows the highest Phase 1 nighttime concrete pour construction noise levels will range from 31.2 to 59.3 dBA Leq at the nearby receiver locations. The peak nighttime concrete pour construction noise levels for Phase 2 of Project construction are shown on Table 10-11 and are expected to range from 27.8 to 49.6 dBA Leq. Based on the analysis results shown on Tables 10-10 and 10-11, the nighttime construction noise levels for Phases 1 and 2 of Project construction will satisfy the City of Moreno Valley 60 dBA Leq nighttime noise level standard at all receiver locations and represent a *less than significant* noise impact. Exhibits 10-G and 10-H show the noise contours by stage for Phase 1 nighttime construction, and Exhibits 10-I and 10-J show the noise contours by stage for Phase 2 nighttime construction.

10.6 MITIGATED CONSTRUCTION NOISE LEVELS

As previously discussed in Section 10.5.1, the unmitigated daytime construction activities may exceed the City of Moreno Valley Municipal Code 65 dBA Leq noise level threshold at 200 feet during Phase 1 (Buildings 1 and 2) grading and paving activities at receiver location R8. To satisfy the 65 dBA Leq noise level threshold during the Phase 1 (Buildings 1 and 2) grading and paving activities, the construction of a 6-foot high temporary noise barrier is required when activities occur within 280 feet of receiver location R8, as shown on Exhibit ES-A.

Table 10-12 shows the construction noise levels at receiver location R8 will be reduced to 60.3 dBA Leq with the attenuation provided by the 6-foot high temporary construction noise barriers during the grading and paving stages of construction. With the recommended construction noise mitigation measures identified in this report, the daytime construction noise level impacts at all noise sensitive receiver locations will be *less than significant*.

TABLE 10-12: MITIGATED PHASE 1 CONSTRUCTION NOISE LEVELS

Receiver Location[1]	Type of Noise/ Attenuation	Construction Noise Levels at Receiver Locations (dBA Leq)			Threshold Exceeded?[7]
		Grading	Paving	Peak

10.7 CONSTRUCTION NOISE MITIGATION MEASURES

Though construction noise is temporary, intermittent and of short duration, and will not present any long-term impacts, the following practices would reduce any noise level increases produced by the construction equipment to the nearby noise-sensitive residential land uses:

- Prior to approval of grading plans and/or issuance of building permits, plans shall include a note indicating that noise-generating Project construction activities that would create noise levels of greater than 60 dBA Leq at sensitive receivers shall only occur between the permitted hours of 7:00 a.m. to 8:00 p.m. on any day. Grading operations shall be limited to between the hours of 8:00 a.m. to 6:00 p.m. weekdays, and 8:00 a.m. to 4:00 p.m. on weekends and holidays, or as otherwise approved by the City Engineer. The Project construction supervisor shall ensure compliance with the note and the City shall conduct periodic inspection at its discretion.
- Install 6-foot high temporary noise control barrier for a length of approximately 400 feet as shown on Exhibit ES-A at the Project site boundaries when Phase 1 grading and paving construction activities occur within 280 feet of receiver location R8. Alternatively, with the approval of the homeowner at receiver location R8, the 6-foot high temporary noise barrier can be installed at the property line of the residential home. The noise control barrier must present a solid face from top to bottom. The noise control barrier must be a minimum height of 6-feet.
    - The noise barrier may be constructed using an acoustical blanket (e.g. vinyl acoustic curtains or quilted blankets) attached to the construction site perimeter fence or equivalent temporary fence posts.
    - The noise barriers must be maintained and any damage promptly repaired. Gaps, holes, or weaknesses in the barrier or openings between the barrier and the ground shall be promptly repaired.
    - The noise control barriers and associated elements shall be completely removed and the site appropriately restored upon the conclusion of the construction activity.
- During all Project site construction, the construction contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers, consistent with manufacturers' standards. The construction contractor shall place all stationary construction equipment so that emitted noise is directed away from the noise sensitive receptors nearest the Project site.
- The construction contractor shall locate equipment staging in the vicinity of the intersection of Cosmos Street and Krameria Avenue to create additional distance between construction-related noise sources and noise-sensitive receivers nearest the Project site during all stages of Building 1 construction.
- The construction contractor shall limit haul truck deliveries to the same hours specified for construction equipment (between the hours of 7:00 a.m. to 8:00 p.m. on any day). The contractor shall prepare a haul route exhibit for review and approval by the Public Works Department, Land Development Division, and shall design delivery routes to minimize the exposure of sensitive land uses or residential dwellings to delivery truck-related noise (City of Moreno Valley Municipal Code, Section 8.21.050 (H) (7)).
- Any nighttime construction activity requires an exemption from the City of Moreno Valley Municipal Code as indicated in Section 11.80.030 (E) (8) for a special event permit (Section 11.80.040). The special event permit application shall be submitted to the City of Moreno Valley

Planning Department for approval and meet the requirements of Municipal Code Section 11.80.040.

10.8 CONSTRUCTION VIBRATION IMPACTS

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods used, distance to the affected structures and soil type. It is expected that ground-borne vibration from Project construction activities would cause only intermittent, localized intrusion. The proposed Project's construction activities most likely to cause vibration impacts are:

- Heavy Construction Equipment: Although all heavy mobile construction equipment has the potential of causing at least some perceptible vibration while operating close to buildings, the vibration is usually short-term and is not of sufficient magnitude to cause building damage. It is not expected that heavy equipment such as large bulldozers would operate close enough to any residences or buildings to cause a vibration impact.
- Trucks: Trucks hauling building materials to construction sites can be sources of vibration intrusion if the haul routes pass through residential neighborhoods on streets with bumps or potholes. Repairing the bumps and potholes generally eliminates the problem.

Ground-borne vibration levels resulting from construction activities occurring within the Project site were estimated by data published by the Federal Transit Administration. Construction activities that would have the potential to generate low levels of ground-borne vibration within the Project site include demolition, grading, and paving. Using the vibration source levels of construction equipment provided on Table 6-9 and the construction vibration assessment methodology published by the FTA, it is possible to estimate the Project vibration impacts. Table 10-13 presents the expected Project related vibration levels at the five receiver locations.

TABLE 10-13: CONSTRUCTION EQUIPMENT VIBRATION LEVELS

Receiver[1]	Distance To Construction Activity (Feet)	Receiver Vibration Levels (VdB)[2]					Threshold Exceeded?[3]
		Small Bulldozer	Jackhammer	Loaded Trucks	Large Bulldozer	Peak Vibration

[1] Noise receiver locations are shown on Exhibit 8-A.
[2] Based on the Vibration Source Levels of Construction Equipment included on Table 6-9.
[3] Does the peak vibration exceed the FTA maximum acceptable vibration standard of 80 (VdB)?

Based on the reference vibration levels provided by the FTA, a large bulldozer represents the peak source of vibration with a reference level of 87 VdB at a distance of 25 feet. At distances ranging from 101 to 2,853 feet from the Project site, construction vibration levels are expected to range from 25.3 to 68.8 VdB. Using the construction vibration assessment methods provided by the FTA the proposed Project site will not include or require equipment, facilities, or activities that would result in a perceptible human response (annoyance). In addition, the 90 VdB threshold for building damage will also be satisfied and no building damage at the nearby receiver locations is expected due to Project construction.

The construction of the Project is not expected to generate vibration levels exceeding the FTA maximum acceptable vibration standard of 80 (VdB). Further, impacts at the site of the closest sensitive receiver are unlikely to be sustained during the entire construction period, but will occur rather only during the times that heavy construction equipment is operating adjacent to the Project site perimeter. Therefore, the potential for the Project to result in exposure of persons to, or generation of, excessive ground-borne vibration is *less than significant*.

10.9 ALTERNATE SITE PLAN COMPARISON

This noise study evaluates the Project's worst-case condition based on the four-building Project site plan. If the alternate site plan with a 166-space truck parking lot in lieu of Building 2 is implemented, the construction noise levels would be reduced. The removal of Building 2 would reduce the duration of and equipment used in Project construction, thereby reducing the construction noise levels expected at the nearby receiver locations.

APPENDIX 3.1:

CITY OF MORENO VALLEY MUNICIPAL CODE

This page intentionally left blank

Moreno Valley Municipal Code

Title 11 PEACE, MORALS AND SAFETY

Chapter 11.80 NOISE REGULATION

11.80.010 Legislative findings.

It is found and declared that:

A. Excessive sound within the limits of the city is a condition which has existed for some time, and the amount and intensity of such sound is increasing.

B. Such excessive sound is a detriment to the public health, safety, and welfare and quality of life of the residents of the city.

C. The necessity in the public interest for the provisions and prohibitions hereinafter contained and enacted is declared as a matter of legislative determination and public policy, and it is further declared that the provisions and prohibitions hereinafter contained and enacted are in pursuance of and for the purpose of securing and promoting the public health, safety, welfare and quality of life of the city and its inhabitants. (Ord. 740 § 1.2, 2007)

11.80.020 Definitions.

For purposes of this chapter, certain words and phrases used herein are defined as follows:

"A-weighted sound level" means the sound pressure level in decibels as measured with a sound level meter using the A-weighting network. The unit of measurement is the dB(A).

"Commercial" means all uses of land not otherwise classified as residential, as defined in this section.

"Construction" means any site preparation, and/or any assembly, erection, repair, or alteration, excluding demolition, of any structure, or improvements to real property.

"Continuous airborne sound" means sound that is measured by the slow-response setting of a meter manufactured to the specifications of ANSI Section 1.4-1983 (R2006) "Specification for Sound Level Meters," or its successor.

"Daytime" means eight a.m. to ten p.m. the same day.

"Decibel" (dB) means a unit for measuring the amplitude of sound, equal to twenty (20) times the logarithm to the base ten (10) of the ratio of the pressure of the sound measured to the reference pressure, which is twenty (20) microPascals (twenty (20) microNewtons per square meter.)

"Demolition" means any dismantling, intentional destruction or removal of structures or other improvements to real property.

"Disturb" means to interrupt, interfere with, or hinder the enjoyment of peace or quiet or the normal listening activities or the sleep, rest or mental concentration of the hearer.

"Emergency" means any occurrence or set of circumstances involving actual or imminent physical trauma or significant property damage which necessitates immediate action. Economic loss alone shall not constitute an emergency. It shall be the burden of an alleged violator to prove an "emergency."

"Emergency work" means any work made necessary to restore property to a safe condition following an emergency, or to protect persons or property threatened by an imminent emergency, to the extent such work is, in fact, necessary to protect persons or property from exposure to imminent danger or damage.

"Frequency" means the number of complete oscillation cycles per unit of time.

"Impulsive sound" means sound of short duration, usually less than one second, with an abrupt onset and rapid decay. Examples of sources of impulsive sound include explosions, drop forge impacts, and discharge of firearms.

"Nighttime" means 10:01 p.m. to 7:59 a.m. the following day.

"Noise disturbance" means any sound which:

1. Disturbs a reasonable person of normal sensitivities;

2. Exceeds the sound level limits set forth in this chapter; or

3. Is plainly audible as defined in this section. Where no specific distance is set forth for the determination of audibility, references to noise disturbance shall be deemed to mean plainly audible at a distance of two hundred (200) feet from the real property line of the source of the sound, if the sound occurs on privately owned property, or from the source of the sound, if the sound occurs on public right of way, public space or other publicly owned property.

"Person" means any person, person's firm, association, copartnership, joint venture, corporation, or any entity public or private in nature.

"Plainly audible" means that the sound or noise produced or reproduced by any particular source, can be clearly distinguished from ambient noise by a person using his/her normal hearing faculties.

"Public right-of-way" means any street, avenue, boulevard, sidewalk, bike path or alley, or similar place normally accessible to the public which is owned or controlled by a governmental entity.

"Public space" means any park, recreational or community facility, or lot which contains at least one building that is open to the general public during its hours of operation.

"Residential" means all uses of land primarily for dwelling units, as well as hospitals, schools, colleges and universities, and places of religious assembly.

"Sound" means an oscillation in pressure, particle displacement, particle velocity or other physical parameter, in a medium with internal forces that causes compression and rarefaction of that medium capable of producing an auditory impression. The description of sound may include any characteristic of such sound, including duration, intensity and frequency.

"Sound level" means the weighted sound pressure level as measured in dB(A) by a sound level meter and as specified in American National Standards Institute (ANSI) specifications for sound-level meters (ANSI Section 1.4-1971 (R1976)). If the frequency weighting employed is not indicated, the A-weighting shall apply.

"Sound level meter" means an instrument, demonstrably capable of accurately measuring sound levels as defined above.

Attachment: H - Noise Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

All technical definitions not defined above shall be in accordance with applicable publications and standards of the American National Standards Institute (ANSI). (Ord. 740 § 1.2, 2007)

11.80.030 Prohibited acts.

A. General Prohibition. It is unlawful and a violation of this chapter to maintain, make, cause, or allow the making of any sound that causes a noise disturbance, as defined in Section 11.80.020.

B. Sound causing permanent hearing loss.

1. Sound level limits. Based on statistics from the Center for Disease Control and Prevention and the National Institute for Occupational Safety and Health, Table 1 and Table 1-A specify sound level limits which, if exceeded, will have a high probability of producing permanent hearing loss in anyone in the area where the sound levels are being exceeded. No sound shall be permitted within the city which exceeds the parameters set forth in Tables 11.80.030-1 and 11.80.030-1-A of this chapter:

Table 11.80.030-1

MAXIMUM CONTINUOUS SOUND LEVELS*

Duration per Day Continuous Hours	Sound level [db(A)]
8	90
6	92
4	95
3	97
2	100
1.5	102
1	105
0.5	110
0.25	115

* When the daily sound exposure is composed of two or more periods of sound exposure at different levels, the combined effect of all such periods shall constitute a violation of this section if the sum of the percent of allowed period of sound exposure at each level exceeds 100 percent

Table 11.80.030-1A

MAXIMUM IMPULSIVE SOUND LEVELS

Number of Repetitions per 24-Hour Period	Sound level [dB(A)]

Attachment: H - Noise Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

1	145
10	135
100	125

2. Exemptions. No violation shall exist if the only persons exposed to sound levels in excess of those listed in Tables 11.80.030-1 and 11.80.030-1A are exposed as a result of:

a. Trespass;

b. Invitation upon private property by the person causing or permitting the sound; or

c. Employment by the person or a contractor of the person causing or permitting the sound.

C. Nonimpulsive Sound Decibel Limits. No person shall maintain, create, operate or cause to be operated on private property any source of sound in such a manner as to create any nonimplusive sound which exceeds the limits set forth for the source land use category (as defined in Section 11.80.020) in Table 11.80.030-2 when measured at a distance of two hundred (200) feet or more from the real property line of the source of the sound, if the sound occurs on privately owned property, or from the source of the sound, if the sound occurs on public right-of-way, public space or other publicly owned property. Any source of sound in violation of this subsection shall be deemed prima facie to be a noise disturbance.

Table 11.80.030-2

MAXIMUM SOUND LEVELS (IN dB(A)) FOR SOURCE LAND USES

Residential		Commercial	
Daytime	**Nighttime**	**Daytime**	**Nighttime**
60	55	65	60

D. Specific Prohibitions. In addition to the general prohibitions set out in subsection A of this section, and unless otherwise exempted by this chapter, the following specific acts, or the causing or permitting thereof, are regulated as follows:

1. Motor Vehicles. No person shall operate or cause to be operated a public or private motor vehicle, or combination of vehicles towed by a motor vehicle, that creates a sound exceeding the sound level limits in Table 11.80.030-2 when the vehicle(s) are not otherwise subject to noise regulations provided for by the California Vehicle Code.

2. Radios, Televisions, Electronic Audio Equipment, Musical Instruments or Similar Devices from a Stationary Source. No person shall operate, play or permit the operation or playing of any radio, tape player, television, electronic audio equipment, musical instrument, sound amplifier or other mechanical or electronic sound making device that produces, reproduces or amplifies sound in such a manner as to create a noise disturbance. However, this subsection shall not apply to any use or activity exempted in subsection E of this section and any use or activity for which a special permit has been issued pursuant to Section 11.80.040.

3. Radios, Electronic Audio Equipment, or Similar Devices from a Mobile Source Such as a Motor Vehicle. Sound amplification or reproduction equipment on or in a motor vehicle is subject to regulation in accordance with the California Vehicle Code when upon the public right-of-way. When upon public space or publicly owned property other than the public right-of-way or upon private property open to the public, sound amplification or reproduction equipment shall not be operated in such a manner that it is plainly audible at a distance of fifty (50) feet in any direction from the vehicle.

4. Portable, Hand-Held Music or Sound Amplification or Reproduction Equipment. Such equipment shall not be operated on a public right-of-way, public space or other publicly owned property in such a manner as to be plainly audible at a distance of fifty (50) feet in any direction from the operator.

5. Loudspeakers and Public Address Systems.

a. Except as permitted by Section 11.80.040, no person shall operate, or permit the operation of, any loudspeaker, public address system or similar device, for any commercial purpose:

1. Which produces, reproduces or amplifies sound in such a manner as to create a noise disturbance; or

2. During nighttime hours on a public right-of-way, public space or other publicly owned property.

b. No person shall operate, or permit the operation of, any loudspeaker, public address system or similar device, for any noncommercial purpose, during nighttime hours in such a manner as to create a noise disturbance.

6. Animals. No person shall own, possess or harbor an animal or bird that howls, barks, meows, squawks, or makes other sounds that:

a. Create a noise disturbance;

b. Are of frequent or continued duration for ten (10) or more consecutive minutes and are plainly audible at a distance of fifty (50) feet from the real property line of the source of the sound; or

c. Are intermittent for a period of thirty (30) or more minutes and are plainly audible at a distance of fifty (50) feet from the real property line of the source of the sound.

7. Construction and Demolition. No person shall operate or cause the operation of any tools or equipment used in construction, drilling, repair, alteration or demolition work between the hours of eight p.m. and seven a.m. the following day such that the sound there from creates a noise disturbance, except for emergency work by public service utilities or for other work approved by the city manager or designee. This section shall not apply to the use of power tools as provided in subsection (D)(9) of this section.

8. Emergency Signaling Devices. No person shall intentionally sound or permit the sounding outdoors of any fire, burglar or civil defense alarm, siren or whistle, or similar stationary emergency signaling device, except for emergency purposes or for testing as follows:

a. Testing of a stationary emergency signaling device shall not occur between seven p.m. and seven a.m. the following day;

b. Testing of a stationary emergency signaling device shall use only the minimum cycle test time, in no case to exceed sixty (60) seconds;

c. Testing of a complete emergency signaling system, including the functioning of the signaling device and the personnel response to the signaling device, shall not occur more than once in each calendar month. Such testing shall only occur only on weekdays between seven a.m. and seven p.m.

and shall be exempt from the time limit specified in subsection (D)(8)(2) of this section.

9. Power Tools. No person shall operate or permit the operation of any mechanically, electrically or gasoline motor-driven tool during nighttime hours so as to cause a noise disturbance across a residential real property boundary.

10. Pumps, Air Conditioners, Air-Handling Equipment and Other Continuously Operating Equipment. Notwithstanding the general prohibitions of subsection a of this section, no person shall operate or permit the operation of any pump, air conditioning, air-handling or other continuously operating motorized equipment in a state of disrepair or in a manner which otherwise creates a noise disturbance distinguishable from normal operating sounds.

E. Exemptions. The following uses and activities shall be exempt from the sound level regulations except the maximum sound levels provided in Tables 11.80.030-1 and 11.80.030-1A:

1. Sounds resulting from any authorized emergency vehicle when responding to an emergency call or acting in time of an emergency.

2. Sounds resulting from emergency work as defined in Section 11.80.020

3. Any aircraft operated in conformity with, or pursuant to, federal law, federal air regulations and air traffic control instruction used pursuant to and within the duly adopted federal air regulations; and any aircraft operating under technical difficulties in any kind of distress, under emergency orders of air traffic control, or being operated pursuant to and subsequent to the declaration of an emergency under federal air regulations.

4. All sounds coming from the normal operations of interstate motor and rail carriers, to the extent that local regulation of sound levels of such vehicles has been preempted by the Noise Control Act of 1972 (42 U.S.C. § 4901 et seq.) or other applicable federal laws or regulations

5. Sounds from the operation of motor vehicles, to the extent they are regulated by the California Vehicle Code.

6. Any constitutionally protected noncommercial speech or expression conducted within or upon a any public right-of-way, public space or other publicly owned property constituting an open or a designated public forum in compliance with any applicable reasonable time, place and manner restrictions on such speech or expression or otherwise pursuant to legal authority.

7. Sounds produced at otherwise lawful and permitted city-sponsored events, organized sporting events, school assemblies, school playground activities, by permitted fireworks, and by permitted parades on public right-of-way, public space or other publicly owned property.

8. An event for which a temporary use permit or special event permit has been issued under other provisions of this code, where the provisions of Section 11.80.040 are met, the permit granted expressly grants an exemption from specific standards contained in this chapter, and the permittee and all persons under the permittee's reasonable control actually comply with all conditions of such permit. Violation of any condition of such a permit related to sound or sound equipment shall be a violation of this chapter and punishable as such.

F. Nothing in this chapter shall be construed to limit, modify or repeal any other regulation elsewhere in this code relating to the regulation of noise sources, nor shall any such other regulation be read to permit the emission of noise in violation of any provision of this chapter. (Ord. 740 § 1.2, 2007)

Attachment: H - Noise Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

11.80.040 Special provisions for temporary use and special event permits.

The exemption by permit set forth in Section 11.80.030(E)(8) shall be subject to the following requirements and conditions:

A. The permit application shall include the name, address and telephone number of the permit applicant; the date, hours and location for which the permit is requested; and the nature of the event or activity. It shall also specify the types of sounds and/or sound equipment to be permitted, the proposed duration of such sound, the specific standards from which the sound is to be exempted, and the reasons for each requested exemption.

B. The permit shall be issued provided the proposed activity meets the requirements of this section and the issuing official determines that the sound to be emitted at the event as proposed would not be detrimental to the public health, safety or welfare, that the event cannot reasonably achieve its legitimate aims and purposes without the exemption and that the sound levels proposed will not unreasonably damage the peace and quiet enjoyment of the lawful users of surrounding properties, nor constitute a public nuisance.

C. The official issuing the permit may prescribe any reasonable conditions or requirements he/she deems necessary to minimize noise disturbances upon the community or the surrounding neighborhood, and/or to protect the health, safety or welfare of the public, including participants in the permitted event, including use of mufflers, screens or other sound-attenuating devices.

D. Any permit granted must be in writing and shall contain all conditions upon which the permit shall be effective.

E. No more than six events requiring a sound limit exemption may be held at any particular location upon privately owned or controlled property per calendar year, provided further that the number of events shall not exceed the number permitted under the regulations for the type of permit issued. For purposes of this subsection, “location” means a legal parcel of real property or a complete shopping or commercial center or mall sharing common parking and access even if comprised of multiple legal parcels.

F. The exemption from sound limits under such permit shall not exceed maximum period of four hours in one twenty-four (24) hour day.

G. The permit will only be granted for hours between nine a.m. and ten p.m. on all days other than Friday and Saturday; and, on Friday and Saturday, between the hours of nine a.m. and one a.m. of the following day, except in the following circumstances:

1. A permit may be granted for hours between nine a.m. on New Year’s Eve and one a.m. the following day (New Year’s Day).

2. A permit may be granted for hours between nine a.m. and two a.m. the following day if there are no residences, hospitals, or nursing homes within a 0.5 mile radius of the property where the function is taking place.

H. Functions for which the permits are issued shall be limited to a continuous airborne sound level not to exceed seventy (70) dB(A), as measured two hundred (200) feet from the real property boundary of the source property if on private property, or from the source if on public right of way, public space or other publicly owned property. (Ord. 740 § 1.2, 2007)

Attachment: H - Noise Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

11.80.050 Measurement or assessment of sound.

A. Measurement With Sound Meter.

1. The measurement of sound shall be made with a sound level meter meeting the standards prescribed by ANSI Section 1.4-1983 (R2006). The instruments shall be maintained in calibration and good working order. A calibration check shall be made of the system at the time of any sound level measurement. Measurements recorded shall be taken so as to provide a proper representation of the source of the sound. The microphone during measurement shall be positioned so as not to create any unnatural enhancement or diminution of the measured sound. A windscreen for the microphone shall be used at all times. However, a violation of this chapter may occur without the occasion of the measurements being made as otherwise provided.

2. The slow meter response of the sound level meter shall be used in order to best determine the average amplitude.

3. The measurement shall be made at any point on the property into which the sound is being transmitted and shall be made at least three feet away from any ground, wall, floor, ceiling, roof and other plane surface.

4. In case of multiple occupancy of a property, the measurement may be made at any point inside the premises to which any complainant has right of legal private occupancy; provided that the measurement shall not be made within three feet of any ground, wall, floor, ceiling, roof or other plane surface.

5. All measurements of sound provided for in this chapter will be made by qualified officials of the city who are designated by the city manger or designee to operate the apparatus used to make the measurements.

B. Assessment Without Sound Level Meter. Any police officer, code enforcement officer, or other official designated by the city manager or designee who hears a noise or sound that is plainly audible, as defined in Section 11.80.020, in violation of this chapter, may enforce this chapter and shall assess the noise or sound according to the following standards:

1. The primary means of detection shall be by means of the official's normal hearing faculties, not artificially enhanced.

2. The official shall first attempt to have a direct line of sight and hearing to the vehicle or real property from which the sound or noise emanates so that the official can readily identify the offending source of the sound or noise and the distance involved. If the official is unable to have a direct line of sight and hearing to the vehicle or real property from which the sound or noise emanates, then the official shall confirm the source of the sound or noise by approaching the suspected vehicle or real property until the official is able to obtain a direct line of sight and hearing, and confirm the source of the sound or noise that was heard at the place of the original assessment of the sound or noise.

3. The official need not be required to identify song titles, artists, or lyrics in order to establish a violation. (Ord. 740 § 1.2, 2007)

11.80.060 Violation.

A. Violation of Sound Level Limits. Any person violating any of the provisions of this chapter shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punishable by a fine not to exceed one thousand dollars ($1,000.00) and/or six months in the county jail, or both.

Notwithstanding the foregoing, any violation of the provisions of this chapter may, in the discretion of the citing officer or the city attorney, be cited and/or prosecuted as an infraction or be subject to civil citation pursuant to Chapter 1.10.

B. Joint and Several Responsibility. In addition to the person causing the offending sound, the owner, tenant or lessee of property, or a manager, overseer or agent, or any other person lawfully entitled to possess the property from which the offending sound is emitted at the time the offending sound is emitted, shall be responsible for compliance with this chapter if the additionally responsible party knows or should have known of the offending noise disturbance. It shall not be a lawful defense to assert that some other person caused the sound. The lawful possessor or operator of the premises shall be responsible for operating or maintaining the premises in compliance with this chapter and may be cited regardless of whether or not the person actually causing the sound is also cited.

C. Violation May be Declared a Public Nuisance. The operation or maintenance of any device, equipment, instrument, vehicle or machinery in violation of any provisions of this chapter which endangers the public health, safety and quality of life of residents in the area is declared to be a public nuisance, and may be subject to abatement summarily or by a restraining order or injunction issued

by a court of competent jurisdiction. (Ord. 824 § 1.2, 2011; Ord. 740 § 1.2, 2007)

FHWA-RD-77-108 HIGHWAY NOISE PREDICTION MODEL

Scenario: Existing Without Project
Road Name: Graham St.
Road Segment: n/o Cactus Av.
Project Name: MV Logistics Center
Job Number: 9303

SITE SPECIFIC INPUT DATA

Highway Data

Average Daily Traffic (Adt): 6,000 vehicles
Peak Hour Percentage: 10%
Peak Hour Volume: 600 vehicles
Vehicle Speed: 45 mph
Near/Far Lane Distance: 36 feet

Site Data

Barrier Height: **0.0 feet**
Barrier Type (0-Wall, 1-Berm): 0.0
Centerline Dist. to Barrier: 100.0 feet
Centerline Dist. to Observer: 100.0 feet
Barrier Distance to Observer: 0.0 feet
Observer Height (Above Pad): 5.0 feet
Pad Elevation: 0.0 feet
Road Elevation: 0.0 feet

FHWA-RD-77-108 HIGHWAY NOISE PREDICTION MODEL

Scenario: Existing + Project w/ Indian St Bri
Road Name: Heacock St.
Road Segment: s/o Nandina Av.
Project Name: MV Logistics Center
Job Number: 9303

SITE SPECIFIC INPUT DATA

Highway Data

Average Daily Traffic (Adt): 200 vehicles
Peak Hour Percentage: 10%
Peak Hour Volume: 20 vehicles
Vehicle Speed: 25 mph
Near/Far Lane Distance: 24 feet

Site Data

Barrier Height: 0.0 feet
Barrier Type (0-Wall, 1-Berm): 0.0
Centerline Dist. to Barrier: 100.0 feet
Centerline Dist. to Observer: 100.0 feet
Barrier Distance to Observer: 0.0 feet
Observer Height (Above Pad): 5.0 feet
Pad Elevation: 0.0 feet
Road Elevation: 0.0 feet
Road Grade: 0.0%
Left View: -90.0 degrees
Right View: 90.0 degrees

NOISE MODEL INPUTS

Site Conditions (Hard = 10, Soft = 15)

Autos: 15
Medium Trucks (2 Axles): 15
Heavy Trucks (3+ Axles): 15

Vehicle Mix

VehicleType	Day	Evening	Night	Daily
Autos:	67.7%	6.1%	26.2%	89.71%
Medium Trucks:	86.9%	2.0%	11.1%	3.29%
Heavy Trucks:	78.7%	10.4%	10.9%	7.00%

Noise Source Elevations (in feet)

Autos: 0.000
Medium Trucks: 2.297
Heavy Trucks: 8.004 *Grade Adjustment:* 0.0

Lane Equivalent Distance (in feet)

Autos: 99.403
Medium Trucks: 99.314
Heavy Trucks: 99.323

FHWA-RD-77-108 HIGHWAY NOISE PREDICTION MODEL

Scenario: Existing + Project w/ Indian St Bri
Road Name: John F. Kennedy Dr.
Road Segment: e/o Heacock St.

Project Name: MV Logistics Center
Job Number: 9303

SITE SPECIFIC INPUT DATA

Highway Data

Average Daily Traffic (Adt): 8,900 vehicles
Peak Hour Percentage: 10%
Peak Hour Volume: 890 vehicles
Vehicle Speed: 45 mph
Near/Far Lane Distance: 48 feet

Site Data

Barrier Height: **0.0 feet**
Barrier Type (0-Wall, 1-Berm): 0.0
Centerline Dist. to Barrier: 100.0 feet
Centerline Dist. to Observer: 100.0 feet
Barrier Distance to Observer: 0.0 feet
Observer Height (Above Pad): 5.0 feet
Pad Elevation: 0.0 feet
Road Elevation: 0.0 feet
Road Grade: 0.0%
Left View: -90.0 degrees
Right View: 90.0 degrees

NOISE MODEL INPUTS

Site Conditions (Hard = 10, Soft = 15)

Autos: 15
Medium Trucks (2 Axles): 15
Heavy Trucks (3+ Axles): 15

Vehicle Mix

VehicleType	Day	Evening	Night	Daily
Autos:	67.7%	6.1%	26.2%	89.83%
Medium Trucks:	86.9%	2.0%	11.1%	3.25%
Heavy Trucks:	78.7%	10.4%	10.9%	6.92%

Noise Source Elevations (in feet)

Autos: 0.000
Medium Trucks: 2.297
Heavy Trucks: 8.004 *Grade Adjustment:* 0.0

Lane Equivalent Distance (in feet)

Autos: 97.206
Medium Trucks: 97.115
Heavy Trucks: 97.124

FHWA Noise Model Calculations

VehicleType	REMEL	Traffic Flow	Distance	Finite Road	Fresnel	Barrier Atten	Berm Atten
Autos:	68.46	-2.81	-4.43	-1.20	-4.77	0.000	0.000

FHWA-RD-77-108 HIGHWAY NOISE PREDICTION MODEL

Scenario: Opening Year Cumulative w/ Proj
Road Name: Heacock St.
Road Segment: s/o John F. Kennedy Dr.

Project Name: MV Logistics Center
Job Number: 9303

SITE SPECIFIC INPUT DATA

Highway Data

Average Daily Traffic (Adt): 28,260 vehicles
Peak Hour Percentage: 10%
Peak Hour Volume: 2,826 vehicles
Vehicle Speed: 50 mph
Near/Far Lane Distance: 48 feet

Site Data

Barrier Height: **0.0 feet**
Barrier Type (0-Wall, 1-Berm): 0.0
Centerline Dist. to Barrier: 100.0 feet
Centerline Dist. to Observer: 100.0 feet
Barrier Distance to Observer: 0.0 feet
Observer Height (Above Pad): 5.0 feet
Pad Elevation: 0.0 feet
Road Elevation: 0.0 feet
Road Grade: 0.0%
Left View: -90.0 degrees
Right View: 90.0 degrees

NOISE MODEL INPUTS

Site Conditions (Hard = 10, Soft = 15)

Autos: 15
Medium Trucks (2 Axles): 15
Heavy Trucks (3+ Axles): 15

Vehicle Mix

VehicleType	Day	Evening	Night	Daily
Autos:	67.7%	6.1%	26.2%	90.90%
Medium Trucks:	86.9%	2.0%	11.1%	2.90%
Heavy Trucks:	78.7%	10.4%	10.9%	6.20%

Noise Source Elevations (in feet)

Autos: 0.000
Medium Trucks: 2.297
Heavy Trucks: 8.004 *Grade Adjustment:* 0.0

Lane Equivalent Distance (in feet)

Autos: 97.206
Medium Trucks: 97.115
Heavy Trucks: 97.124

FHWA-RD-77-108 HIGHWAY NOISE PREDICTION MODEL

Scenario: Opening Year Cumulative w/ Proj
Road Name: Harley Knox Bl.
Road Segment: w/o Patterson Av.
Project Name: MV Logistics Center
Job Number: 9303

SITE SPECIFIC INPUT DATA

Highway Data

Average Daily Traffic (Adt):	29,230 vehicles
Peak Hour Percentage:	10%
Peak Hour Volume:	2,923 vehicles
Vehicle Speed:	45 mph
Near/Far Lane Distance:	48 feet

Site Data

Barrier Height:	**0.0 feet**
Barrier Type (0-Wall, 1-Berm):	0.0
Centerline Dist. to Barrier:	100.0 feet
Centerline Dist. to Observer:	100.0 feet
Barrier Distance to Observer:	0.0 feet
Observer Height (Above Pad):	5.0 feet
Pad Elevation:	0.0 feet
Road Elevation:	0.0 feet
Road Grade:	0.0%
Left View:	-90.0 degrees
Right View:	90.0 degrees

NOISE MODEL INPUTS

Site Conditions (Hard = 10, Soft = 15)

Autos:	15
Medium Trucks (2 Axles):	15
Heavy Trucks (3+ Axles):	15

Vehicle Mix

VehicleType	*Day*	*Evening*	*Night*	*Daily*
Autos:	67.7%	6.1%	26.2%	90.29%
Medium Trucks:	86.9%	2.0%	11.1%	3.10%
Heavy Trucks:	78.7%	10.4%	10.9%	6.62%

Noise Source Elevations (in feet)

Autos:	0.000
Medium Trucks:	2.297
Heavy Trucks:	8.004

Grade Adjustment: 0.0

Lane Equivalent Distance (in feet)

Autos:	97.206
Medium Trucks:	97.115
Heavy Trucks:	97.124

FHWA-RD-77-108 HIGHWAY NOISE PREDICTION MODEL

Scenario: GP Building (2035) w/o Project
Road Name: Heacock St.
Road Segment: s/o Gentian Av.

Project Name: MV Logistics Center
Job Number: 9303

SITE SPECIFIC INPUT DATA

Highway Data

Average Daily Traffic (Adt): 24,000 vehicles
Peak Hour Percentage: 10%
Peak Hour Volume: 2,400 vehicles
Vehicle Speed: 50 mph
Near/Far Lane Distance: 24 feet

Site Data

Barrier Height: 0.0 feet
Barrier Type (0-Wall, 1-Berm): 0.0
Centerline Dist. to Barrier: 100.0 feet
Centerline Dist. to Observer: 100.0 feet
Barrier Distance to Observer: 0.0 feet
Observer Height (Above Pad): 5.0 feet
Pad Elevation: 0.0 feet
Road Elevation: 0.0 feet
Road Grade: 0.0%
Left View: -90.0 degrees
Right View: 90.0 degrees

NOISE MODEL INPUTS

Site Conditions (Hard = 10, Soft = 15)

Autos: 15
Medium Trucks (2 Axles): 15
Heavy Trucks (3+ Axles): 15

Vehicle Mix

VehicleType	Day	Evening	Night	Daily
Autos:	67.7%	6.1%	26.2%	89.71%
Medium Trucks:	86.9%	2.0%	11.1%	3.29%
Heavy Trucks:	78.7%	10.4%	10.9%	7.00%

Noise Source Elevations (in feet)

Autos: 0.000
Medium Trucks: 2.297
Heavy Trucks: 8.004 Grade Adjustment: 0.0

Lane Equivalent Distance (in feet)

Autos: 99.403
Medium Trucks: 99.314

FHWA-RD-77-108 HIGHWAY NOISE PREDICTION MODEL

Scenario: GP Building (2035) w/ Project
Road Name: Heacock St.
Road Segment: s/o Iris Av.
Project Name: MV Logistics Center
Job Number: 9303

SITE SPECIFIC INPUT DATA

Highway Data

Average Daily Traffic (Adt): 26,350 vehicles
Peak Hour Percentage: 10%
Peak Hour Volume: 2,635 vehicles
Vehicle Speed: 50 mph
Near/Far Lane Distance: 24 feet

Site Data

Barrier Height: **0.0 feet**
Barrier Type (0-Wall, 1-Berm): 0.0
Centerline Dist. to Barrier: 100.0 feet
Centerline Dist. to Observer: 100.0 feet
Barrier Distance to Observer: 0.0 feet
Observer Height (Above Pad): 5.0 feet
Pad Elevation: 0.0 feet
Road Elevation: 0.0 feet
Road Grade: 0.0%
Left View: -90.0 degrees
Right View: 90.0 degrees

NOISE MODEL INPUTS

Site Conditions (Hard = 10, Soft = 15)

Autos: 15
Medium Trucks (2 Axles): 15
Heavy Trucks (3+ Axles): 15

Vehicle Mix

VehicleType	Day	Evening	Night	Daily
Autos:	67.7%	6.1%	26.2%	90.71%
Medium Trucks:	86.9%	2.0%	11.1%	2.96%
Heavy Trucks:	78.7%	10.4%	10.9%	6.33%

Noise Source Elevations (in feet)

Autos: 0.000
Medium Trucks: 2.297
Heavy Trucks: 8.004 *Grade Adjustment:* 0.0

Lane Equivalent Distance (in feet)

Autos: 99.403
Medium Trucks: 99.314
Heavy Trucks: 99.323

SUBJECT: OPERATIONAL REFERENCE NOISE LEVEL MEASUREMENTS MEMO

The following reference noise level measurements were collected to represent the operational noise sources within the Project site. This appendix includes reference noise source descriptions and photos for each location.

NATURE'S BEST DISTRIBUTION FACILITY (COLD STORAGE)

On Wednesday, January 7th, 2015, Urban Crossroads, Inc. collected short-term operational noise level measurements at the Nature's Best distribution facility located at 16081 Fern Avenue in the City of Chino. Operations at the Nature's Best distribution facility measurements represent the typical weekday logistics warehouse activities with both dry goods and cold storage from a single building with loading dock areas located on both sides of the building. To describe the loading dock activities, a reference noise level measurement was collected to represent the truck idling/reefer activity. A second reference noise level measurement at this location was collected to assess the entry gate noise source activity.

TRUCK IDLING/REEFER ACTIVITY

During the fourteen minute truck idling/reefer activity reference noise level measurement, approximately twenty delivery trucks were docked, idling, or parked in the northern loading dock area. The truck idling/reefer activity reference noise level measurement was taken in the center of the loading dock activity area, and represents multiple concurrent noise sources resulting in a combined noise level of 70.1 dBA Leq.

Specifically, the truck idling/reefer activity reference noise level measurement represents one truck located approximately thirty feet from the noise level meter with another truck passing by to park roughly 20 feet away, both with their engines idling. Throughout the reference noise level measurement a separate docked and running reefer truck was located approximately 50 feet east of the measurement location. Additional background noise sources included truck pass-by noise, truck drivers talking to each other next to docked trucks, and air brake release noise when trucks parked.

ENTRY GATE ACTIVITY

The entry gate activity reference noise level measurement was taken over a ten minute period and represents the multiple noise sources associated with the eastern entry gate to the loading dock area of the Nature's Best distribution center producing a reference noise level of 69.2 dBA Leq. The entry gate activity noise sources included in this measurement account for the sound of the gates rattling and squeaking during normal opening and closing operations, the gate closure equipment, as well as the associated noise as trucks approach and stop at the gate.

MOTIVATIONAL FULFILLMENT & LOGISTICS SERVICES DISTRIBUTION FACILITY (DRY GOODS)

Additional short-term reference noise level measurements were collected on Wednesday, January 7th, 2015, by Urban Crossroads, Inc. at the Motivational Fulfillment & Logistics Services distribution facility

Attachment: H - Noise Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

located at 6810 Bickmore Avenue in the City of Chino. The noise level measurements represent the typical weekday dry goods logistics warehouse operation in a single building with a loading dock area on the western side of the building façade. Two reference noise level measurements were taken at this location, including entry gate activity and unloading/docking activity noise sources. Up to ten trucks were observed in the loading dock area including a combination of track trailer semi-trucks, two-axle delivery trucks, and background forklift operations.

ENTRY GATE ACTIVITY

The entry gate activity noise level measurement was taken at the southern entry gate over a fifteen minute period and represents multiple noise sources producing a reference noise level of 64.0 dBA Leq. The noise sources included at this measurement location account for the rattling and squeaking during normal opening and closing operations, the gate closure equipment, truck engines idling outside the entry gate, and background forklift backup alarm noise.

UNLOADING/DOCKING ACTIVITY

The unloading/docking activity noise level measurement was taken over a fifteen minute period and represents multiple noise sources taken from the center of loading dock activities generating a reference noise level of 67.2 dBA Leq. At this measurement location, the noise sources associated with employees unloading a docked truck container included the squeaking of the truck's shocks when weight was removed from the truck, employees playing music over a radio, as well as a forklift horn and backup alarm. In addition, during the noise level measurement a truck entered the loading dock area and proceeded to reverse and dock in a nearby loading bay, adding truck engine and air brakes noise.

VEGFRESH FARMS / FEDEX DISTRIBUTION FACILITY

A fifth noise level measurement, taken on Tuesday, January 22, 2013, by Urban Crossroads, Inc. included 24-hour operational noise level measurements at the Veg Fresh Farms and FedEx distribution facility located at 500 East Orangethorpe Avenue in the City of Anaheim. The Veg Fresh Farms that includes cold storage and FedEx distribution center noise level measurement represent the typical weekday logistics warehouse operation over a 24-hour period consisting of buildings with over 150 loading bays (docks). The reference noise level measurement collected at this location was 69.1 dBA Leq.

While the specific noise levels at the Project site will depend on the actual tenant, the intensity and the daytime / nighttime hours of operation, the worst-case reference noise level is used to describe the peak Project operational noise activity since it represents similar operational characteristics. The reference noise levels are intended to describe noise level impacts associated with the expected typical warehouse and distribution storage operations at the Project site.

CONSTRUCTION REFERENCE NOISE LEVEL MEASUREMENTS MEMO

This page intentionally left blank

URBAN CROSSROADS

41 Corporate Park | Suite 300 | Irvine, CA 92606 | (949) 660-1994
www.urbanXroads.com

SUBJECT: CONSTRUCTION REFERENCE NOISE LEVEL MEASUREMENTS MEMO

This Construction Reference Noise Level Measurements Memo has been prepared to summarize the sample reference noise level measurements collected by Urban Crossroads, Inc. To describe peak construction noise activities, we have historically relied on reference noise level measurements provided in the Federal Highway Administration (FHWA) Roadway Construction Noise Model (RCNM). However, our experience demonstrates that the RCNM significantly overstates the predicted construction noise levels. This is largely due the fact that RCNM is based on construction equipment data collected from the Central Artery/Tunnel project in Boston, Massachusetts in the early 1990's. Due to substantial changes in the air quality emission requirements in the State of California Air Resources Board (ARB), the RCNM reference noise level measurements do not adequately describe modern construction equipment noise levels. In addition, the RCNM methodology places all construction equipment at a single point near the property line. This scenario simply does not occur in the real world as typical construction activity represents a variety of equipment operating at different locations throughout the project site.

REFERENCE NOISE LEVEL MEASUREMENTS

To estimate a project's construction-related noise levels, sample reference noise level measurements of similar construction activities were collected by Urban Crossroads, Inc. to describe the different stages of construction. The reference noise levels are intended to represent typical construction noise levels when multiple pieces of equipment are operating simultaneously at a construction site. The following reference noise level measurements were collected from existing construction operations with similar equipment as those expected with future construction of comparable land uses. Appendix A includes the data collected from each of the reference noise level measurements adjusted to present noise levels at a uniform reference distance of 50 feet. Appendix B includes the reference noise source photos by identification number ("ID"). Table 1 summarizes the reference noise level measurements. The reference noise level measurements are identified by land use type and location below.

BUSINESS PARK CONSTRUCTION SITE, CITY OF IRVINE

On Wednesday, October 14th, 2015, Urban Crossroads, Inc. collected short-term construction noise level measurements at a business park construction site located at the northwest corner of Barranca Parkway and Alton Parkway in the City of Irvine. The reference noise level measurements include the following noise source activities: a truck pass-by and background dozer activity (ID 1) and dozer activity (ID 2). Both measurements were taken at a distance of approximately 30 feet from the source and represent typical construction activities during the grading stage of construction.

RESIDENTIAL CONSTRUCTION SITE, CITY OF RANCHO MISSION VIEJO

On Tuesday, October 20th, 2015, Urban Crossroads, Inc. collected short-term construction noise level measurements at a residential construction site located in the unincorporated area within the County of Orange known as Rancho Mission Viejo. The reference noise level measurements include the following noise source activities: construction vehicle maintenance (ID 3), foundation trenching (ID 4), rough grading activities (ID 5), and residential building framing (ID 6). All reference measurements were taken at this location at a distance of approximately 30 feet from the noise source.

INDUSTRIAL SITE, CITY OF ONTARIO

Additional short-term reference noise level measurements were collected on Friday, October 30th, 2015, by Urban Crossroads, Inc. at an active industrial construction site in the City of Ontario. The reference noise level measurements represent the grading activities associated with industrial/warehousing construction. Five reference noise level measurements were taken at this location to describe: a water truck pass-by and backup alarm (ID 7), a dozer pass-by (ID 8), two scrapers and a water truck pass-by (ID 9), two scrapers pass-by (ID 10), and scraper, water truck and dozer activities over a 30-minute period (ID 11). All reference measurements taken at this location were at a distance of approximately 30 feet from the source.

INDUSTRIAL SITE, CITY OF REDLANDS

On July 1st, 2015, Urban Crossroads, Inc. collected short-term construction noise level measurements of a nighttime concrete pour at an industrial construction site located at 27334 San Bernardino Avenue in the City of Redlands. The reference noise level measurements include the following nighttime building construction and paving-related noise source activities: concrete mixer truck movements (ID 12), concrete paver activities (ID 13), concrete mixer pour & paving activities (ID 14), concrete mixer backup alarms and air brakes (ID 15), and a one-hour measurement over the duration of all reference measurements at this location of concrete mixer pour activities (ID 16).

TABLE 1: CONSTRUCTION REFERENCE NOISE LEVEL MEASUREMENTS SUMMARY

ID	Noise Source	Reference Distance From Source (Feet)	Reference Noise Levels @ Reference Distance		Reference Noise Levels @ 50 Feet[6]	
			dBA Leq	dBA Lmax	dBA Leq	dBA Lmax
1	Truck Pass-Bys & Dozer Activity[1]	30'	63.6	68.1	59.2	63.7
2	Dozer Activity[1]	30'	68.6	76.4	64.2	72.0

[1] As measured by Urban Crossroads, Inc. on 10/14/15 at a business park construction site located at the northwest corner of Barranca Parkway and Alton Parkway in the City of Irvine.

[2] As measured by Urban Crossroads, Inc. on 10/20/15 at a construction site located in Rancho Mission Viejo.

[3] As measured by Urban Crossroads, Inc. on 10/20/15 at a residential construction site located in Rancho Mission Viejo.

[4] As measured by Urban Crossroads, Inc. on 10/30/15 during grading operations within an industrial construction site located in the City of Ontario.

[5] Reference noise level measurements were collected from a nighttime concrete pour at an industrial construction site, located at 27334 San Bernardino Avenue in the City of Redlands, between 1:00 a.m. to 2:00 a.m. on 7/1/15.

[6] Reference noise levels are calculated at 50 feet using a drop off rate of 6 dBA per doubling of distance (point source).

MODELED AND MEASURED CONSTRUCTION NOISE LEVELS

A RCNM construction noise analysis was prepared by Urban Crossroads, Inc. on October 17th, 2014 for an industrial project site in the City of Ontario. The noise levels due to construction in the industrial portion of the project site (Planning Area 1) were estimated at up to thirteen receiver locations to determine the potential noise impacts at adjacent sensitive land uses. Returning to the same industrial project site over a year later, in October 2015, Urban Crossroads, Inc. collected noise level measurements at the same receiver locations to validate the modeled RCNM construction noise levels with actual construction noise level measurements collected in the field. The grading stage of construction was chosen for this comparison since grading activities typically represent the worst-case construction activities due to the number and size of the mobile equipment used in the grading process.

MODELED CONSTRUCTION NOISE LEVELS

As shown on Table 2, the modeled RCNM noise levels during the grading stage of construction were estimated to produce a noise level approaching 92.6 dBA Leq at a distance of 50 feet from the project site boundary. The RCNM noise levels reflect the combined construction noise level impacts of excavators, graders, tractors, loaders, backhoes, rubber tired dozers, and scrapers producing a noise level of 92.6 dBA Leq. At nearby receiver locations, this results in a short-term construction noise level approaching 88.2 dBA Leq.

TABLE 2: RCNM MODELED CONSTRUCTION NOISE LEVELS

Equipment Type[1]	Quantity	Usage Factor[2]	Hours Of Operation[3]	Reference Noise Level @ 50 Feet (dBA Leq)	Combined Level @ 50 Feet (dBA Leq)
Excavator	2	40%	3.2	81.0	80.0
Grader	8	40%	3.2	85.0	90.1
Tractor/Loader/Backhoe	5	40%	3.2	78.0	81.0
Rubber Tired Dozer	2	40%	3.2	79.0	78.0
Scraper	5	40%	3.2	84.0	87.0
Combined Hourly Noise Levels 50 Feet (Leq dBA)					92.6

Receiver Location	Distance To Property Line (Feet)[4]	Distance Attenuation (dBA Leq)[5]	Estimated Noise Barrier Attenuation (dBA Leq)	Construction Noise Level (dBA Leq)
R2	83'	-4.4	0.0	88.2
R3	78'	-3.9	-5.6	83.1

[2] Estimates the fraction of time each piece of equipment is operating at full power during a construction operation.
[3] Represents the actual hours of peak construction equipment activity out of a typical 8 hour workday.
[4] Distance from the nearest point of construction activity to the nearest receiver.
[5] Point (stationary) source drop off rate of 6.0 dBA per doubling of distance.

MEASURED CONSTRUCTION NOISE LEVELS

To describe the actual construction noise levels based on typical conditions, short-term construction noise level measurements were collected in the field during grading activities at receiver locations R2 and R3. Appendix C includes study area photos of the measurement locations and the construction activities observed from each location at the project site. To validate the construction noise levels, measurements were collected during continuous on-site grading activities on Friday, October 30th, and again on Friday, November 6th, 2015.

Grading activities observed on the site during the short-term noise level measurements include water trucks queuing and refilling at a stationary tank, trencher activity, up to three scrapers operating simultaneously, and dozer activity. The water truck queuing activity was the closest equipment observed near the project site boundaries due to the stationary location of the water refill tank, at a distance of approximately 100 feet from the receiver locations. The trencher was observed at a distance of roughly 600 feet from the receiver locations, and the scrapers and dozer activities were at approximately 900 feet from the receiver locations. Additional stationary scrapers were located at a distance of approximately 700 feet from the receiver locations. Additional background construction noise sources include forklifts, cranes, and man lifts used in the building construction stage of a portion of the site located roughly 900 feet southeast of the receiver locations. The construction activities observed during the short-term measurements represent typical grading activities within an industrial construction site, with multiple pieces of equipment operating at varying distances from the project site boundaries.

Table 3 shows the modeled RCNM noise levels using the actual distances from each receiver location to the nearest equipment activity observed during the short-term noise level measurements. Based on the RCNM model, the peak grading construction noise levels would range from 80.9 to 86.5 dBA Leq when equipment is located at 100 feet from each receiver location. By calculating the modeled RCNM noise level at each location, a comparison can be made between the modeled and measured grading construction noise levels to calibrate the construction noise model.

TABLE 3: MODELED CONSTRUCTION NOISE LEVELS BASED ON ACTUAL EQUIPMENT DISTANCES

Equipment Type[1]	Quantity	Usage Factor[2]	Hours Of Operation[3]	Reference Noise Level @ 50 Feet (dBA Leq)	Combined Level @ 50 Feet (dBA Leq)
Excavator	2	40%	3.2	81.0	80.0
Grader	8	40%	3.2	85.0	90.1
Tractor/Loader/Backhoe	5	40%	3.2	78.0	81.0
Rubber Tired Dozer	2	40%	3.2	79.0	78.0
Scraper	5	40%	3.2	84.0	87.0
Combined Hourly Noise Levels 50 Feet (Leq dBA)					92.6

Receiver Location	Distance To Closest Equipment Activity (Feet)[4]	Distance Attenuation (dBA Leq)[5]	Estimated Noise Barrier Attenuation (dBA Leq)	Construction Noise Level (dBA Leq)
R2	100'	-6.0	0.0	86.5
R3	100'	-6.0	-5.6	80.9

[2] Estimates the fraction of time each piece of equipment is operating at full power during a construction operation.
[3] Represents the actual hours of peak construction equipment activity out of a typical 8 hour workday.
[4] Distance from the nearest point of construction activity to the nearest receiver.
[5] Point (stationary) source drop off rate of 6.0 dBA per doubling of distance.

To determine the project-only construction noise levels at each receiver location during the grading activities observed at the project site, the ambient without project noise level measurements are compared to the short-term with project noise level measurements. The ambient noise level measurements from the original noise study are shown on Table 4 in addition to the new short-term noise level measurements collected during typical grading activity at the receiver locations on Day 1, Friday, October 30th 2015. By subtracting the previous ambient noise level from the new combined (project construction plus ambient) noise level measurements at each receiver, the project-only construction noise levels can be logarithmically calculated. Table 4 shows the project-only construction noise levels ranged from 61.4 to 63.4 dBA Leq, and are significantly lower than those modeled with the RCNM at the same receiver locations.

Based on the Day 1 analysis, the differences between the peak RCNM model and typical measured construction noise levels range from 19.6 to 23.2 dBA Leq. This analysis demonstrates how the RCNM overstates the potential construction noise level impacts by placing all equipment at a single point at the project site boundary. In reality, the grading equipment within the project site was observed to operate in different locations throughout the project site. . In addition, the typical construction noise levels measured at the receiver locations reflect modern construction equipment noise level emissions that are largely overstated using the older RCNM reference noise levels.

TABLE 4: DAY 1 CONSTRUCTION NOISE LEVEL COMPARISON

Original Noise Study			Calibration			
Receiver Location[1]	Measured Daytime Ambient Noise Levels (dBA Leq)[2]	Peak Modeled RCNM Grading Construction Noise Levels (dBA Leq)[3]	Calculated RCNM Noise Levels to Closest Observed Equipment (dBA Leq)[4]	Measured Typical Grading Construction Noise Levels at Receivers (dBA Leq)[5]	Calculated Project-Only Construction Noise Levels (dBA Leq)[6]	Difference Between Modeled & Measured Noise Levels (dBA Leq)[7]
R2	70.3	88.2	86.5	71.1	63.4	23.2
R3	68.3	83.1	80.9	69.1	61.4	19.6

[1] Receiver locations from the construction noise analysis which are closest to the Planning Area 1 construction activities.
[2] Ambient noise level measurements taken on 3/13/14 at the receiver locations during the Ontario industrial project noise study.
[3] Estimated construction noise levels based on the RCNM peak construction noise analysis methodology. These conditions are not likely to occur as the RCNM assumes all equipment is operating simultaneously at a single point at the project site boundary.
[4] Modeled RCNM construction noise levels at each receiver location based on the observed distance to the nearest construction equipment activity during the noise level measurements, shown on Table 3.
[5] Measured noise levels at the receiver locations during one hour of typical grading activities in the center of the construction site.
[6] Project only construction noise levels calculated based on the logarithmic noise level difference between the measured noise levels during grading activity and the ambient without project noise levels measured at each receiver location.
[7] Difference between the peak RCNM modeled noise levels and the typical noise levels measured at the receiver locations during typical grading activities.

Similarly, the Day 2 short-term construction noise level measurements are shown on Table 5 in relation to the RCNM modeled noise levels. Table 5 shows the project-only construction noise levels ranged from 64.1 to 65.3 dBA Leq, and are significantly lower than those modeled with the RCNM at the same receiver locations. Based on the Day 2 analysis, the differences between the peak RCNM model and typical measured construction noise levels range from 16.8 to 21.2 dBA Leq. This Day 2 analysis is consistent with the Day 1 typical grading construction noise level measurements taken a week later at the same receiver locations.

CONCLUSIONS

The sample reference noise level measurements were taken by Urban Crossroads, Inc. in order to better describe the noise levels from various typical construction activities at different land use types. To quantify the difference between the modeled RCNM and measured construction noise levels in the field, Urban Crossroads, Inc. compared the modeled results of a RCNM construction noise level analysis with the actual measured noise levels observed in the field during typical grading activities at the same project site. While the RCNM equipment database and methodology provides conservative, worst-case, construction noise levels for specific pieces of equipment, our field measurements show how the RCNM methodology overstates the noise levels experienced at the nearby receiver locations during actual construction activities.

This analysis demonstrates how the RCNM overstates the potential construction noise level impacts by placing all equipment at a single point at the project site boundary. In reality based on our observations in the field, the grading equipment within the project site was observed to operate at different locations throughout the project site. In addition, the typical construction noise levels measured at the receiver locations reflect modern construction equipment noise level emissions that are largely overstated using the older RCNM reference noise levels. The reference noise level measurements presented in this memo are, therefore, representative of typical construction noise levels to accurately describe potential construction noise impacts at nearby receiver locations for a given project. This memo presents typical construction activity reference noise levels. Detailed site specific analysis is needed to assess potential construction noise level impacts at nearby sensitive receiver locations on a project by project basis and to identify the appropriate mitigation measures as needed at future construction sites.

APPENDIX 10.2:

CONSTRUCTION EXISTING BARRIER ATTENUATION CALCULATIONS

This page intentionally left blank

STATIONARY SOURCE NOISE PREDICTION MODEL

11/6/2015

Observer Location: **R1**
Source: Grading
Condition: Construction Phase 1

Project Name: MV Logistics
Job Number: 9303
Analyst: A. Wolfe

NOISE MODEL INPUTS

Noise Distance to Observer 2,743.0 feet
Noise Distance to Barrier: 2,733.0 feet
Barrier Distance to Observer: 10.0 feet

Observer Elevation: 1,510.0 feet
Noise Source Elevation: 1,489.0 feet
Barrier Elevation: 1,510.0 feet

Barrier Height: **6.0 feet**
Noise Source Height: 8.0 feet
Observer Height: 5.0 feet

Barrier Type (0-Wall, 1-Berm): 0
Drop Off Coefficient: 20.0

20 = 6 dBA per doubling of distance
15 = 4.5 dBA per doubling of distance

NOISE MODEL PROJECTIONS

1 INTRODUCTION

This report presents the results of the traffic impact analysis (TIA) for the proposed Moreno Valley Logistics Center ("Project") located south of Krameria Avenue between Heacock Street and Indian Street in the City of Moreno Valley as shown on Exhibit 1-1.

The purpose of this traffic impact analysis is to evaluate the potential circulation system deficiencies that may result from the development of the proposed Project, and to recommend improvements to achieve acceptable circulation system operational conditions. This traffic study has been prepared in accordance with the City of Moreno Valley Transportation Engineering Division's *Traffic Impact Analysis Preparation Guide* (August 2007), the California Department of Transportation (Caltrans) *Guide for the Preparation of Traffic Impact Studies* (December 2002), and consultation with City of Moreno Valley staff during the scoping process. (1) (2) The approved Project Traffic Study Scoping agreement is provided in Appendix 1.1 of this TIA.

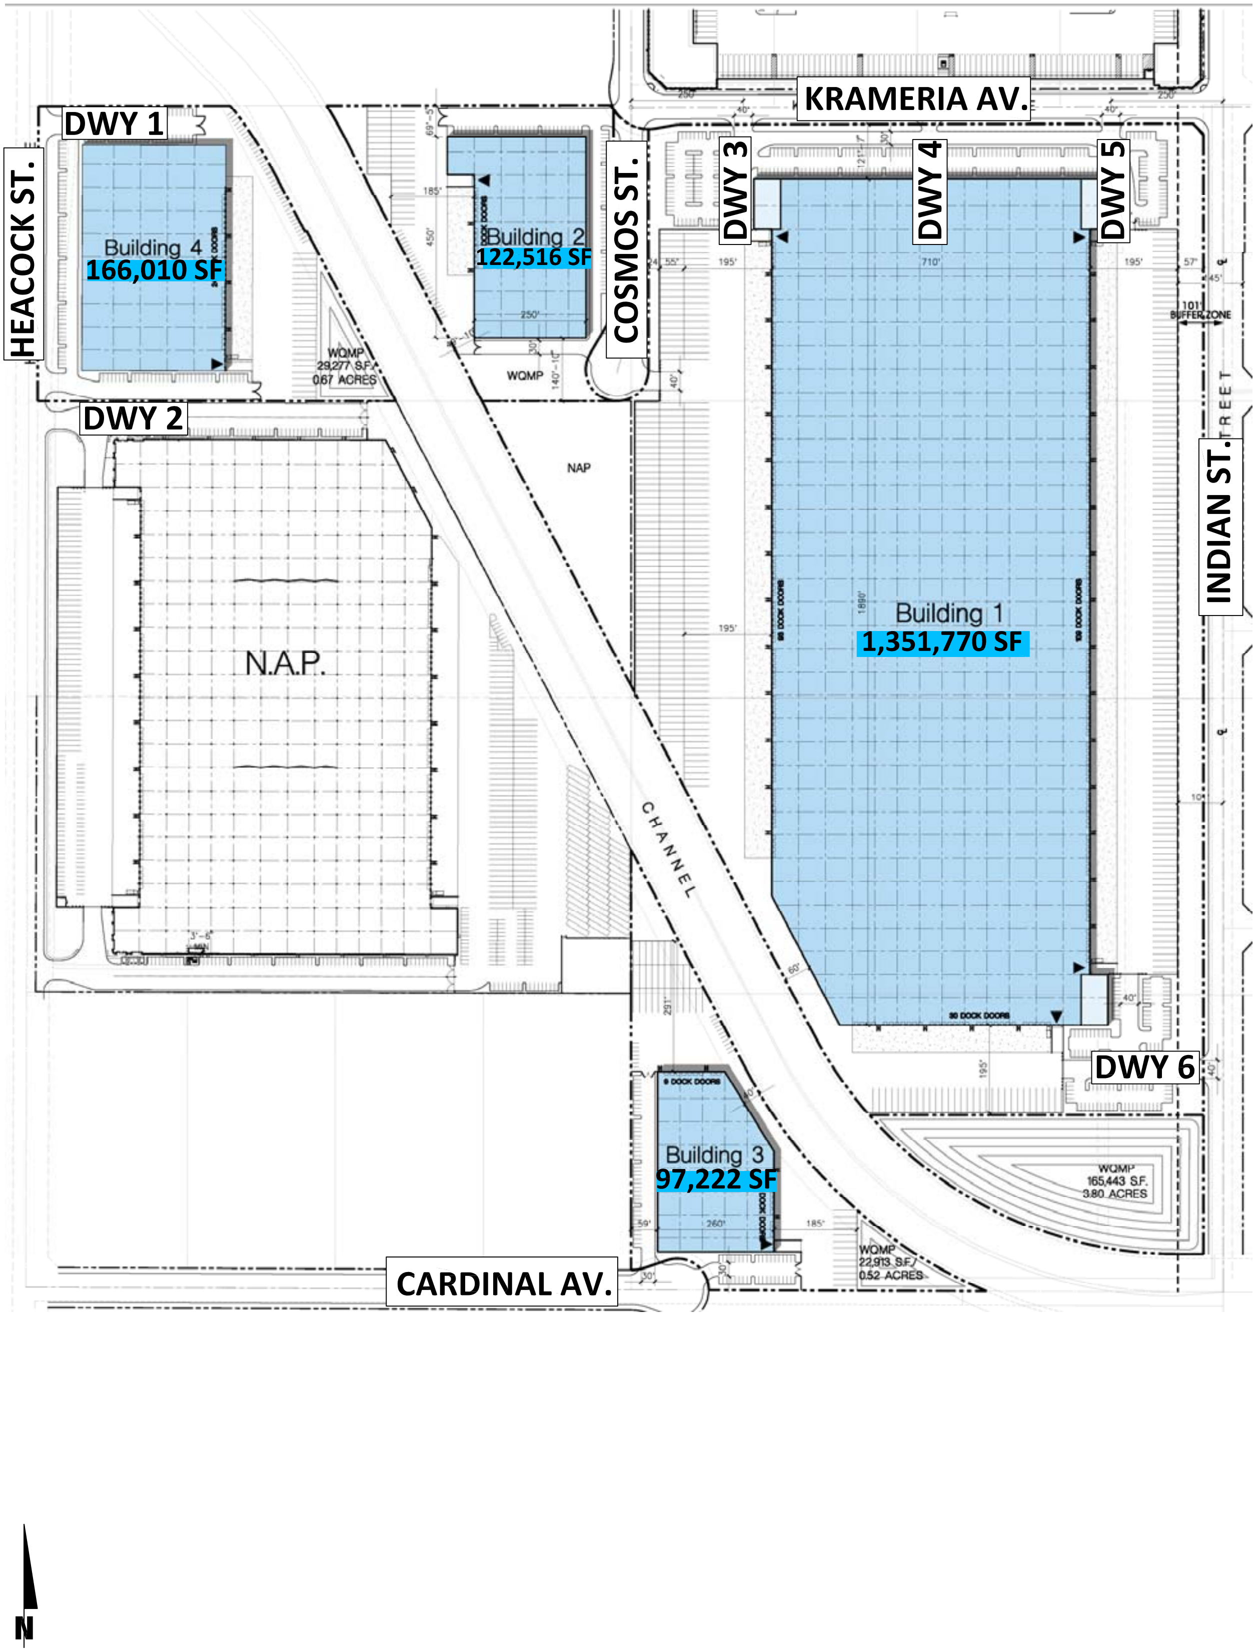
1.1 PROJECT OVERVIEW

The Project is proposed to consist of 1,351,770 square feet (sf) of high-cube warehouse use/distribution center within a single building (Building 1) and 385,748 square feet of general light industrial use. Building 2 located on the southwest corner of Cosmos Street and Krameria Avenue is proposed to consist of 122,516 sf of general light industrial use, Building 3 located at the eastern terminus of Cardinal Avenue is proposed to consist of 97,222 sf of general light industrial use, and Building 4 located on the east of Heacock Street and south of Krameria Avenue (North) is proposed to consist of 166,010 sf of general light industrial use. Per the City's traffic study guidelines, the Opening Year will have a 5 year minimum horizon from baseline conditions. As such, the Opening Year analysis will assess 2020 traffic conditions.

Vehicular and truck traffic access will be provided via the following driveways (see Exhibit 1-1):

- Heacock Street / Driveway 1 – Full access driveway providing access to passenger cars and heavy trucks for Building 4.
- Heacock Street / Driveway 2 – Full access driveway providing access to both passenger cars and heavy trucks for Building 4.
- Heacock Street / Cardinal Avenue – Full access intersection providing access to both passenger cars and heavy trucks for Building 3.
- Cosmos Street / Krameria Avenue – Full access intersection providing access to both passenger cars and heavy trucks for Buildings 1 and 2. Although the intersection would allow for full access, heavy trucks will be prohibited from utilizing Krameria Avenue to the east through signage and additional design features (e.g., reductions to the curb radius on the southeast corner).
- Driveway 3 / Krameria Avenue – Full access driveway providing access to both passenger cars and heavy trucks for Building 1. Although the driveway would allow for full access, heavy trucks will be prohibited from utilizing Krameria Avenue to the east through signage and additional design features (e.g., reductions to the curb radius on the southeast corner).

EXHIBIT 1-1: PRELIMINARY SITE PLAN



09301 - site plan.dwg

- Driveway 4 / Krameria Avenue – Full access driveway providing access to passenger cars only for Building 1.
- Driveway 5 / Krameria Avenue – Full access driveway providing access to both passenger cars and heavy trucks for Building 1. Although the driveway would allow for full access for passenger cars, heavy trucks will be prohibited from utilizing Krameria Avenue to the east through signage and design features for the intersection. The northbound right turn lane from Driveway 5 would include a small turning radius on the southeast corner and signage to prohibit use by heavy trucks.
- Indian Street / Driveway 6 – Full access driveway providing access to passenger cars only to Building 1. The layout of and geometry of the parking prohibits heavy trucks from entering or existing the driveway. However, if in the future Indian Street is extended over the Perris Valley Storm Drain Channel and the City's truck route is modified to the north to Driveway 6 from its current terminus, then heavy truck access could be accommodated to and from the south on Indian Street via Driveway 6 with modifications to the parking layout.

Regional access to the project site is provided via the I-215 Freeway at Cactus Avenue and Harley Knox Boulevard interchanges.

Trips generated by the Project's proposed land uses have been estimated based on trip generation rates collected by the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 9th Edition, 2012. (3) The Project is estimated to generate a net total of 6,975 passenger-car-equivalent (PCE) trip-ends per day on a typical weekday with approximately 660 net AM PCE peak hour trips and 718 net PM PCE peak hour trips. The assumptions and methods used to estimate the Project's trip generation characteristics are discussed in greater detail in Section 4.1 *Project Trip Generation* of this report.

1.2 ANALYSIS SCENARIOS

For the purposes of this traffic study, potential impacts to traffic and circulation have been assessed for each of the following conditions:

- Existing (2015) (1 scenario)
- Existing plus Project (E+P), Without and With Indian Street Bridge (2 scenarios)
- Opening Year Cumulative (2020), Without and With Project (2 scenarios)
- General Plan Buildout (Post 2035), Without and With Project (2 scenarios)

1.2.1 EXISTING (2015) CONDITIONS

Information for Existing (2015) conditions is disclosed to represent the baseline traffic conditions as they existed at the time this report was prepared.

1.2.2 EXISTING PLUS PROJECT CONDITIONS

The Existing plus Project (E+P) analysis determines circulation system deficiencies that would occur on the existing roadway system in the scenario of the Project being placed upon Existing conditions. Pursuant to the request of City staff, the E+P analysis has been prepared for both Without and With the future Indian Street bridge over the Perris Valley Storm Drain Channel.

1.2.3 OPENING YEAR CUMULATIVE (2020) CONDITIONS

To account for background traffic, other known cumulative development projects in the study area were included in addition to 10.41% of ambient growth for Opening Year Cumulative traffic conditions in conjunction with traffic associated with the proposed Project. Although it is unlikely that these cumulative projects would be fully built and occupied by Year 2020, they have been included in an effort to conduct a conservative analysis and overstate and opposed to understate potential cumulative traffic impacts.

The currently adopted Southern California Association of Governments (SCAG) 2012 Regional Transportation Plan (RTP) (April 2012) growth forecasts for the unincorporated areas of the City of Moreno Valley identifies projected growth in population of 187,400 in 2008 to 255,200 in 2035, or a 36.2 percent increase over the 27 year period. (5) The change in population equates to roughly a 1.15 percent growth rate compounded annually. Similarly, growth over the same 27 year period in households is projected to increase by 42.5 percent, or 1.32 percent annual growth rate. Finally, growth in employment over the same 27 year period is projected to increase by 99.4 percent, or a 2.59 percent annual growth rate.

Based on a comparison of Existing traffic volumes to the General Plan Buildout (Post 2035) forecasts, the average growth rate is estimated at approximately 5.68 percent per year, compounded annually between Existing and General Plan Buildout (Post 2035) traffic conditions. The annual growth rate at each individual intersection is not lower than 2.49 percent per year, compounded annually to as high as 10.64 percent per year, compounded annually over the same time period. Therefore, the annual growth rate utilized for the purposes of this analysis (2.0 percent per year) would appear to conservatively approximate the anticipated regional growth in traffic volumes in the City of Moreno Valley for both Opening Year Cumulative and General Plan Buildout (Post 2035) traffic conditions, especially when considered along with the addition of project-related traffic. As such, the growth in traffic volumes assumed in this traffic impact analysis would tend to overstate as opposed to understate the potential impacts to traffic and circulation.

1.2.4 GENERAL PLAN BUILDOUT (POST 2035) CONDITIONS

The General Plan Buildout (Post 2035) Without Project traffic conditions were derived from the Riverside County Transportation Analysis Model (RivTAM) modified to represent General Plan Buildout conditions for the City of Moreno Valley using accepted procedures for model forecast refinement and smoothing. The traffic forecasts reflect the area-wide growth anticipated between Existing conditions and General Plan Buildout conditions. The General Plan Buildout With Project traffic forecasts were determined by adding the Project traffic to the General Plan Buildout Without Project traffic forecasts from the RivTAM model. The General Plan Buildout traffic forecasts used in the traffic analysis were refined with existing peak hour traffic count data collected at intersection analysis locations. The initial estimate of the future peak hour turning movements has, therefore, been reviewed for reasonableness. The reasonableness checks performed include a review of traffic flow conservation in addition to a comparison with the Existing and Opening Year Cumulative traffic volumes. As such, the General Plan Buildout Without and With Project traffic forecasts also include the traffic generated by the cumulative

Attachment: I1 - Traffic Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

development projects considered for the Opening Year Cumulative analysis. Where necessary, the General Plan Buildout volumes have been adjusted to achieve flow conservation, reasonable growth, and reasonable diversion between parallel routes.

The General Plan Buildout Without and With Project traffic conditions analyses will be utilized to determine if improvements funded through regional transportation mitigation fee programs, such as the TUMF and DIF programs, or other approved funding mechanism can accommodate the long-range cumulative traffic at the target LOS identified in the City of Moreno Valley General Plan. (4) If the "funded" improvements can provide the target LOS, then the Project's payment into TUMF and/or DIF will be considered as long-range cumulative mitigation through the conditions of approval. Other improvements needed beyond the "funded" improvements (such as localized improvements to non-TUMF facilities) are identified as such.

1.3 STUDY AREA

To ensure that this TIA satisfies the City of Moreno Valley's traffic study requirements, Urban Crossroads, Inc. prepared a project traffic study scoping package for review by City of Moreno Valley staff prior to the preparation of this report. The scoping agreement provides an outline of the Project study area, trip generation, trip distribution, and analysis methodology and is included in Appendix 1.1.

1.3.1 INTERSECTIONS

The following 32 study area intersections listed in Table 1-1 and shown on Exhibit 1-2 were selected for this TIA based on the City of Moreno Valley's traffic study guidelines and consultation with City of Moreno Valley staff. The study area includes intersections where the Project is anticipated to contribute 50 or more peak hour trips per the City of Moreno Valley's traffic study guidelines. (1)

TABLE 1-1: INTERSECTION ANALYSIS LOCATIONS

ID	Intersection Location	Jurisdiction	CMP?

25	Driveway 5 / Krameria Avenue – Future Intersection	Moreno Valley	No
26	Indian Street / Krameria Avenue	Moreno Valley	No
27	Indian Street / Driveway 6 – Future Intersection	Moreno Valley	No
28	Indian Street / San Michele Road	Moreno Valley	No
29	Indian Street / Nandina Avenue	Moreno Valley	No
30	Indian Street / Harley Knox Boulevard	Perris	No
31	Perris Boulevard / Cactus Avenue	Moreno Valley	No
32	Perris Boulevard / Krameria Avenue	Moreno Valley	No

It should also be noted that the 50 peak hour trip threshold is used by numerous other agencies throughout Southern California including Caltrans, County of Riverside, County of San Bernardino, and the County of Orange. The 50 peak hour trip threshold represents approximately 3 percent of the theoretical capacity of an intersection, estimated based on the Highway Capacity Manual (HCM) at approximately 1700 vehicles per hour. In effect, acting as the lead agency, these jurisdictions have established 50 project trips as the threshold for when to analyze signalized intersections. Therefore, a project trip contribution of less than 50 peak hour trips is generally considered less than significant and is typically not evaluated.

The intent of a CMP is to more directly link land use, transportation, and air quality, thereby prompting reasonable growth management programs that will effectively utilize new transportation funds, alleviate traffic congestion and related impacts, and improve air quality. Counties within California have developed CMPs with varying methods and strategies to meet the intent of the CMP legislation. The County of Riverside CMP became effective with the passage of Proposition 111 in 1990 and updated most recently updated in 2011. The Riverside County Transportation Commission (RCTC) adopted the 2011 CMP for the County of Riverside in December 2011. (6) There are 4 study area intersections that are ramp-to-arterial intersections with the I-215 Freeway, which are identified as CMP facilities.

1.3.2 ROADWAY SEGMENTS

The roadway segment study area utilized for this analysis is based on a review of the key roadway segments in which the Project is anticipated to contribute 50 or more peak hour trips. The study area identifies a total of 48 existing/future roadway segments. The roadway segments include the segments on either side of the study area intersections and are listed in Table 1-2.

48		North of Harley Knox Boulevard	Perris

1.3.3 FREEWAY MAINLINE SEGMENTS

Study area freeway mainline analysis locations were selected based on Caltrans traffic study guidelines, which may require the analysis of State highway facilities. (2) This study evaluates the following freeway segments adjacent to the point of entry to the State Highway System (SHS), where the Project is anticipated to contribute 50 or more peak hour trips (see Table 1-3):

TABLE 1-3: FREEWAY MAINLINE SEGMENT ANALYSIS LOCATIONS

ID	Freeway Mainline Segments
1	I-215 Freeway – Southbound, North of Cactus Avenue
2	I-215 Freeway – Southbound, South of Cactus Avenue
3	I-215 Freeway – Southbound, North of Harley Knox Boulevard
4	I-215 Freeway – Southbound, South of Harley Knox Boulevard
5	I-215 Freeway – Northbound, North of Cactus Avenue
6	I-215 Freeway – Northbound, South of Cactus Avenue
7	I-215 Freeway – Northbound, North of Harley Knox Boulevard
8	I-215 Freeway – Northbound, South of Harley Knox Boulevard

1.3.4 FREEWAY MERGE/DIVERGE RAMP JUNCTIONS

The study area freeway merge/diverge ramp junction analysis locations include the following freeway ramp junctions for each direction of flow as shown on Table 1-4, where the Project is anticipated to contribute 50 or more peak hour trips:

TABLE 1-4: FREEWAY MERGE/DIVERGE RAMP JUNCTION ANALYSIS LOCATIONS

ID	Freeway Merge/Diverge Ramp Junctions
1	I-215 Freeway – Southbound, Loop Off-Ramp at Cactus Avenue(Diverge) – Upstream
2	I-215 Freeway – Southbound, Loop Off-Ramp at Cactus Avenue(Diverge) – Downstream
3	I-215 Freeway – Southbound, Off-Ramp at Harley Knox Boulevard (Diverge)
4	I-215 Freeway – Southbound, On-Ramp at Harley Knox Boulevard (Merge)
5	I-215 Freeway – Northbound, On-Ramp at Cactus Avenue (Merge)
6	I-215 Freeway – Northbound, On-Ramp at Harley Knox Boulevard (Merge)
7	I-215 Freeway – Northbound, Off-Ramp at Harley Knox Boulevard (Diverge)

1.4 SUMMARY OF INTERSECTION ANALYSIS

A summary of the peak hour intersection LOS are provided on Table 1-5 for each of the analysis scenarios and on Table 1-6 for the study area roadway segments. The I-215 Freeway mainline segments are anticipated to operate at acceptable LOS for each of the analysis scenarios until General Plan Buildout (Post 2035) traffic conditions (see Table 1-7). Similarly, the -215 Freeway merge/diverge ramp junctions are also anticipated to operate at acceptable LOS for each of the analysis scenarios until Opening Year Cumulative (2020) traffic conditions (see Table 1-8).

1.5 LOCAL AND REGIONAL FUNDING MECHANISMS

Transportation improvements throughout the City of Moreno Valley are funded through a combination of project mitigation, fair share contributions or development impact fee programs, such as Transportation Uniform Mitigation Fee (TUMF) program or the County's Development Impact Fee (DIF) program. Identification and timing of needed improvements is generally determined through local jurisdictions based upon a variety of factors.

1.5.1 TRANSPORTATION UNIFORM MITIGATION FEE (TUMF) PROGRAM

The Western Riverside Council of Governments (WRCOG) is responsible for establishing and updating TUMF rates. The County may grant to developers a credit against the specific components of fees for the dedication of land or the construction of facilities identified in the list of improvements funded by each of these fee programs. Fees are based upon projected land uses and a related transportation needs to address growth based upon a 2009 Nexus study.

* **BOLD** = Unacceptable Level of Service

[1] Number of lanes are in the specified direction and is based on existing conditions.

[2] Density is measured by passenger cars per mile per lane (pc/mi/ln).

TUMF is an ambitious regional program created to address cumulative impacts of growth throughout western Riverside County. Program guidelines are being handled on an iterative basis. Exemptions, credits, reimbursements and local administration are being deferred to primary agencies. The County of Riverside serves this function for the proposed Project. Fees submitted to the County are passed on to the WRCOG as the ultimate program administrator.

TUMF guidelines empower a local zone committee to prioritize and arbitrate certain projects. The Project is located in the Central Zone. The zone has developed a 5-year capital improvement program to prioritize public construction of certain roads. TUMF is focused on improvements necessitated by regional growth. The I-215/Cactus Avenue interchange, I-215/Harley Knox Boulevard interchange, Cactus Avenue, Harley Knox Boulevard, Heacock Street, Indian Street, and Perris Boulevard are designated TUMF roadways/facilities within the Project's traffic study area.

1.5.2 CITY OF MORENO VALLEY DEVELOPMENT IMPACT FEE (DIF) PROGRAM

The City of Moreno Valley has created its own local Development Impact Fee (DIF) program to impose and collect fees from new residential, commercial and industrial development for the purpose of funding roadways and intersections necessary to accommodate City growth as identified in the City's General Plan Circulation Element. The City's DIF program includes facilities that are not part of, or which may exceed improvements identified and covered by the TUMF program. As a result, the pairing of the regional and local fee programs provides a more comprehensive funding and implementation plan to ensure an adequate and interconnected transportation system. Under the City's DIF program, the City may grant to developers a credit against specific components of fees when those developers construct certain facilities and landscaped medians identified in the list of improvements funded by the DIF program.

The timing to use the DIF fees is established through periodic capital improvement programs which are overseen by the City's Public Works Department. Periodic traffic counts, review of traffic accidents, and a review of traffic trends throughout the City are also periodically performed by City staff and consultants. The City uses this data to determine the timing of implementing the improvements listed in its facilities list.

As shown in Table 1-9, a few of the facilities forecasted to be impacted by the Project are planned for improvements through the City's DIF Program. The Project applicant will be subject to the City's DIF fee program, and will pay the requisite City DIF fees at the rates then in effect pursuant to the City's ordinance. The project applicant's payment of the requisite DIF fees at the rates then in effect pursuant to the DIF Program will mitigate its impacts to DIF-funded facilities.

									TOTAL	**$524,790**		**$10,910**	
Total Project Fair Share Contribution to the City of Moreno Valley (non-DIF/TUMF)[7]										**$4,513,194**		**$198,550**	
Total Project Fair Share Contribution to the City of Perris[8]										**$1,820,722**		**$160,018**	
Total Project Fair Share Contribution to the March Joint Powers Authority[9]										**$664,734**		**$46,092**	

[1] Improvements included in TUMF Nexus or City of Moreno Valley DIF programs.

[2] Costs have been estimated using the data provided in Appendix G of the San Bernardino County CMP (2003 Update) for preliminary construction costs. Appendix G costs escalated by a factor of 1.7493 to reflect 2020 conditions, except for Traffic Signals.

[3] Program improvements constructed by project may be eligible for fee credit. In lieu fee payment is at discretion of City. Represents the fair share percentage for the Project during the most impacted peak hour.

[4] Although the interchange is identified as a TUMF interchange, the interchange is not currently identified on the Central Zone 5-Year Transportation Improvement Program Amendment (adopted January 6, 2014).

[5] Fair share percentage is not shown as the recommended improvements at this location are included in a pre-existing fee program.

[6] The City of Perris is currently improving Harley Knox Boulevard between the I-215 Freeway and Perris Boulevard. Based on discussions with City staff, the improvements are anticipated to be completed by Fall 2015.

[7] Total project fair share contribution consists of the improvements which are not already included in the City-wide DIF/County TUMF for those intersections wholly or partially within the City of Moreno Valley.

[8] Total project fair share contribution consists of the improvements which are not already included in a fee program for those intersections wholly or partially within the City of Perris.

[9] Total project fair share contribution consists of the improvements which are not already included in a fee program for those intersections wholly or partially within the March Joint Powers Authority (JPA).

[10] If improvements are not fully covered by an applicable pre-existing fee program, then the intersection has been identified to have a significant impact even after mitigation measures are implements. However, if the improvements in a pre-existing fee program are fully funded by the pre-existing fee program, then the intersection is found to have no significant impact after the implementation of the mitigation measures.

[11] Project to implement improvement due to additional storage needed to accommodate 95th percentile queues.

1.5.3 FAIR SHARE CONTRIBUTION

Project mitigation may include a combination of fee payments to established programs (e.g., TUMF and/or DIF), construction of specific improvements, payment of a fair share contribution toward future improvements or a combination of these approaches. Improvements constructed by development may be eligible for a fee credit or reimbursement through the program where appropriate (to be determined at the City of Moreno Valley's discretion).

When off-site improvements are identified with a minor share of responsibility assigned to proposed development, the approving jurisdiction may elect to collect a fair share contribution or require the development to construct improvements. Detailed fair share calculations, for each peak hour, has been provided on Table 1-10 for the applicable deficient intersections shown previously on Table 1-9. Improvements included in a defined program and constructed by development may be eligible for a fee credit or reimbursement through the program where appropriate.

1.6 PROJECT IMPACTS AND MITIGATION MEASURES

This section provides a summary of recommended mitigation measures necessary to address Project impacts for E+P traffic conditions, by development phase. Section 2.0 *Methodologies* provides information on the methodologies used in the analysis and Section 5.0 *E+P Traffic Conditions* includes the detailed analysis. The recommended mitigation measures necessary to reduce Project impacts to less-than-significant are discussed in Section 1.6.2. The construction of facilities by the Project applicant would be eligible for DIF credit and reimbursement if the construction exceeds the Project's fair share, as identified in Table 1-9. The City shall review the proposed mitigation measures to determine if the Project shall construct certain improvements, including traffic signals or contribute fair share.

1.6.1 PROJECT IMPACTS

Potential Impact 1.1 – Heacock Street / Cactus Avenue (#10) – Although this intersection was found to operate at an acceptable LOS for the overall intersection (LOS D or better) during the peak hours under E+P traffic conditions, the addition of Project traffic is anticipated to worsen the northbound left turn lane's individual LOS from acceptable to unacceptable LOS, for both without and with the Indian Street extension. The addition of Project traffic is anticipated to also worsen the northbound left turn 95th percentile queue, which would likely exceed the existing available storage. As such, the impact is considered significant (Impact 1.1).

Potential Impact 2.1 – Heacock Street / Gentian Avenue (#12) – Although this intersection was found to operate at an unacceptable LOS (LOS F) during the PM peak hour under Existing traffic conditions, the intersection is anticipated to continue to operate at unacceptable levels during one or more of the peak hours with the addition of Project traffic, for both without and with the Indian Street extension. As such, the impact is considered cumulatively significant (Impact 2.1).

Table 1-10

	AM:	3,182	50	6,699	3,517	**1.4%**
	PM:	3,379	54	7,570	4,191	1.3%
32	Perris Bl / Krameria Av					
	AM:	2,553	58	5,343	2,790	**2.1%**
	PM:	2,430	61	5,794	3,364	1.8%

BOLD = Fair share percentage for the Project based on the highest peak hour.

[1] For intersections that are currently operating at acceptable LOS under Existing traffic conditions, Project fair share percentage based on net new traffic between Existing (2015) and General Plan Buildout (Post 2035) traffic conditions.

For intersections that are currently operating at an unacceptable LOS under Existing traffic conditions, Project fair share percentage based on total traffic for General Plan Buildout (Post 2035) traffic conditions.

Potential Impact 3.1 – Heacock Street / Iris Avenue (#13) – Although this intersection was found to operate at an unacceptable LOS (LOS E) during the PM peak hour under Existing traffic conditions, the intersection is anticipated to continue to operate at unacceptable levels during one or more of the peak hours with the addition of Project traffic, for both without and with the Indian Street extension. As such, the impact is considered cumulatively significant (Impact 3.1).

Potential Impact 4.1 – Heacock Street / San Michele Road (#18) – This intersection was found to operate at acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project traffic is anticipated to result in deficient peak hour operations during the PM peak hour only, for both without and with the Indian Street extension. As such, the impact is considered significant (Impact 4.1).

Potential Impact 5.1 – Indian Street / Harley Knox Boulevard (#30) – This intersection was found to operate at acceptable LOS (LOS C or better) during the peak hours under Existing traffic conditions, however, the addition of Project traffic (with Indian Street extension alternative only) is anticipated to result in deficient peak hour operations during the PM peak hour only. The City of Perris is currently improving Harley Knox Boulevard between the I-215 Freeway and Perris Boulevard. Based on discussions with City staff, the improvements are anticipated to be completed by Fall 2015. With the implementation of the planned improvements, there are no LOS deficiencies anticipated with the addition of Project traffic. As such, the impact is considered less-than-significant.

1.6.2 MITIGATION MEASURES

Mitigation Measure 1.1 – ***Heacock Street / Cactus Avenue (#10)*** – The following improvement is necessary to reduce the Project's proportionate increase in queues, thus reducing the Project's impact to less-than-significant:

- Restripe the northbound left turn lane to provide 315-feet of storage from the existing 215-feet in order to accommodate the anticipated 95th percentile queues.

Mitigation Measure 2.1 – ***Heacock Street / Gentian Avenue (#12)*** – The following improvement is necessary to reduce the Project's proportionate increase in delay to pre-project levels or better, thus reducing the Project's cumulative impact to less-than-significant:

- Payment of the Project's DIF fees to be applied towards the installation of a traffic signal to improve the existing deficiency.

Mitigation Measure 3.1 – ***Heacock Street / Iris Avenue (#13)*** – The following improvements are necessary to reduce the Project's proportionate increase in delay to pre-project levels or better, thus reducing the Project's cumulative impact to less-than-significant:

- Payment of the Project's DIF fees to be applied towards the installation of a traffic signal to improve the existing deficiency.
- Mitigation measure also consists of a westbound right turn lane with overlap phasing. The Project would pay its fair share to the City of Moreno Valley towards the addition of a westbound right turn lane with overlap phasing.

Mitigation Measure 4.1 – Heacock Street / San Michele Road (#18) – The following improvement is necessary to reduce the Project's proportionate increase in delay to pre-project levels or better, thus reducing the Project's impact to less-than-significant:

- Modify the existing traffic signal to implement overlap phasing on the westbound right turn lane.

The potential off-site impacts to the study area intersections are anticipated to be relatively the same for the proposed Project, without or with the bridge. As such, the development of the proposed Project is not anticipated to drive the need for the Indian Street bridge over the Perris Valley Storm Drain Channel.

1.7 CUMULATIVE IMPACTS AND RECOMMENDED IMPROVEMENTS

1.7.1 INTERSECTIONS AND ROADWAY SEGMENTS

This section provides a summary of recommended mitigation measures necessary to address the cumulative traffic impacts. A summary of the operationally deficient study area intersections and recommended improvements required to achieve acceptable circulation system operational conditions are described in detail within Section 6.0 *Opening Year Cumulative (2020) Traffic Conditions,* and Section 7.0 *General Plan Buildout (Post 2035) Traffic Conditions* of this report. Cumulative impacts are deficiencies that would not be directly caused by the Project. The Project would, however, contribute traffic to these deficient facilities along with other cumulative development projects, resulting in a cumulatively considerable impact.

The recommended mitigation measures necessary to reduce Project impacts to less-than-significant are discussed below. The construction of facilities by the Project applicant would be eligible for fee credit and reimbursement if the construction exceeds the Project's fair share, as identified in Table 1-10. The City shall review the proposed mitigation measures to determine if the Project shall construct certain improvements, including traffic signals, or contribute fair share.

Table 1-9 lists the recommended improvements necessary to reduce the identified intersection LOS deficiencies, by analysis scenario. Street and intersection improvements that may be funded though the TUMF and/or DIF programs are noted. If a particular facility tentatively listed in Table 1-9 is ultimately excluded from the TUMF and/or DIF programs, the Project would be responsible for, and would be required to pay, fair share fees for improvement of affected facilities. These fees are collected as part of a funding mechanism aimed at ensuring that regional highways and arterial expansions keep pace with the projected vehicle trip increases. Alternatively, minor fair share responsibilities may be waived when collection is infeasible or where other mitigation assignments substantially exceed the Project's demonstrated impacts.

Improvements included in a defined program and constructed by development may be eligible for a fee credit or reimbursement through the program where appropriate. A rough order of magnitude cost has been prepared to determine the appropriate contribution value based upon the project's fair share of traffic as part of the project approval process. Table 1-9 also summarizes the applicable cost associated with each of the recommended improvements based on the preliminary construction cost estimates found in Appendix “G” of the San Bernardino County CMP in conjunction with a cost escalation factor of 1.749 to reflect 2020 costs. These estimates are a rough order of magnitude only as they are intended only for discussion purposes and do not imply any legal responsibility or formula for contributions or mitigation.

Mitigation Measure 5.1 – Prior to the issuance of building permits, the Project applicant shall participate in the City’s DIF and County TUMF fee programs by paying the requisite fees at the time of building permit, and in addition pay the Project’s fair share amount of $198,550 for the improvements identified in Table 1-9 that are consistent with the improvements shown on Table 5-6, Table 6-6, and Table 7-6, or as agreed to by the City and applicant. This fair share payment should only be collected if the City creates a fee program that includes the improvements in which this fair share contribution is intended to construct. The City shall ensure that the improvements will be constructed pursuant to the fee program at that point in time necessary to avoid identified significant impacts.

Mitigation Measure 6.1 – Table 1-9 includes 4 intersections that either shares a mutual border with the City of Perris or are wholly located within the City of Perris’ jurisdiction and have recommended improvements which are not covered by payment of fees. The City of Moreno Valley shall participate in a multi-jurisdictional effort with the City of Perris to develop a study to identify fair share contribution funding sources attributable to and paid from private and public development to supplement other regional and State funding sources necessary to implement the improvements identified in Table 1-9, that are located in the City of Perris’ jurisdiction. The Developer’s fair-share amount for the 4 intersections that either shares a mutual border with the City of Perris or are wholly located within the City of Perris’ jurisdiction that have recommended improvements which are not covered by payment of fees equals $160,018. Developer shall be required to pay this $160,018 amount to the City of Moreno Valley prior to the issuance of the Project's final certificate of occupancy.

Mitigation Measure 7.1 – Table 1-9 includes 5 intersections that either shares a mutual border with the March Joint Powers Authority (March JPA) or are wholly located within the March JPA’s jurisdiction and have recommended improvements which are not covered by payment of fees. The City of Moreno Valley shall participate in a multi-jurisdictional effort with the March JPA to develop a study to identify fair share contribution funding sources attributable to and paid from private and public development to supplement other regional and State funding sources necessary to implement the improvements identified in Table 1-9, that are located in the March JPA’s jurisdiction. The Developer’s fair-share amount for the 5 intersections that either shares a mutual border with the March JPA or are wholly located within the March JPA’s jurisdiction that have recommended improvements which are not covered by payment of fees equals $46,092. Developer shall be required to pay this $46,092 amount to the City of Moreno Valley prior to the issuance of the Project's final certificate of occupancy.

Attachment: I1 - Traffic Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

1.7.2 MITIGATION MEASURES TO ADDRESS CUMULATIVE DEFICIENCIES ON FREEWAY FACILITIES

The SCAG RTP includes a list of projects in the Federal Transportation Improvement Program (FTIP). The following is an applicable FTIP project within the study area: interchange improvements at I-215/Cactus Avenue, which includes the extension of the northbound auxiliary lane between Cactus Avenue and Alessandro Boulevard to the north (to be completed by 2018). In addition, the I-215 North Project, includes the construction of a high-occupancy vehicle lane in each direction of the I-215 Freeway between Nuevo Road and Box Springs Road within the existing median. Based on information provided on the Project website, these improvements are longer range as priority has been given to the I-215 South and I-215 Central projects.

The planned SCAG RTP and I-215 North projects will provide capacity enhancements to the cumulatively impacted freeway segments and ramp junctions, however, peak hour LOS is still anticipated to LOS E or F for certain freeway facilities under both Opening Year Cumulative (2020) and General Plan Buildout (Post 2035) traffic conditions.

Neither Caltrans or the State have adopted a fee program that can ensure that locally-contributed impact fees will be tied to improvements to freeway mainlines, and only Caltrans has the jurisdiction over mainline improvements. Because Caltrans has exclusive control over state highway improvements, ensuring that fair share contributions to mainline improvements are actually part of a program tied to implementation is within the jurisdiction of Caltrans. As such, the City of Moreno Valley may decide whether specific overriding economic, legal, social, technological, or other benefits of the Project outweigh the unavoidable adverse cumulative traffic impacts associated with the Project.

1.8 SITE ADJACENT ROADWAY AND SITE ACCESS IMPROVEMENTS

This section summarizes Project site access and on-site circulation recommendations. Vehicular and truck traffic access will be provided via the following driveways (see Exhibit 1-1):

- Heacock Street / Driveway 1 – Full access driveway providing access to passenger cars and heavy trucks for Building 4.
- Heacock Street / Driveway 2 – Full access driveway providing access to both passenger cars and heavy trucks for Building 4.
- Heacock Street / Cardinal Avenue – Full access intersection providing access to both passenger cars and heavy trucks for Building 3.
- Cosmos Street / Krameria Avenue – Full access intersection providing access to both passenger cars and heavy trucks for Buildings 1 and 2. Although the intersection would allow for full access, heavy trucks will be prohibited from utilizing Krameria Avenue to the east through signage and additional design features (e.g., reductions to the curb radius on the southeast corner).
- Driveway 3 / Krameria Avenue – Full access driveway providing access to both passenger cars and heavy trucks for Building 1. Although the driveway would allow for full access, heavy trucks will be prohibited from utilizing Krameria Avenue to the east through signage and additional design features (e.g., reductions to the curb radius on the southeast corner).

- Driveway 4 / Krameria Avenue – Full access driveway providing access to passenger cars only for Building 1.
- Driveway 5 / Krameria Avenue – Full access driveway providing access to both passenger cars and heavy trucks for Building 1. Although the driveway would allow for full access for passenger cars, heavy trucks will be prohibited from utilizing Krameria Avenue to the east through signage and design features for the intersection. The northbound right turn lane from Driveway 5 would include a small turning radius on the southeast corner and signage to prohibit use by heavy trucks.
- Indian Street / Driveway 6 – Full access driveway providing access to passenger cars only to Building 1. The layout of and geometry of the parking prohibits heavy trucks from entering or existing the driveway. However, if in the future Indian Street is extended over the Perris Valley Storm Drain Channel and the City's truck route is modified to the north to Driveway 6 from its current terminus, then heavy truck access could be accommodated to and from the south on Indian Street via Driveway 6 with modifications to the parking layout.

Regional access to the project site is provided via the I-215 Freeway at Cactus Avenue and Harley Knox Boulevard interchanges.

Roadway improvements necessary to provide site access and on-site circulation are assumed to be constructed in conjunction with site development and are described below. These improvements are required to be in place prior to occupancy. Exhibit 1-3 illustrates the site-adjacent roadway improvement recommendations and site access improvements. Construction of on-site and site adjacent improvements are recommended to occur in conjunction with adjacent Project development activity or as needed for Project access purposes.

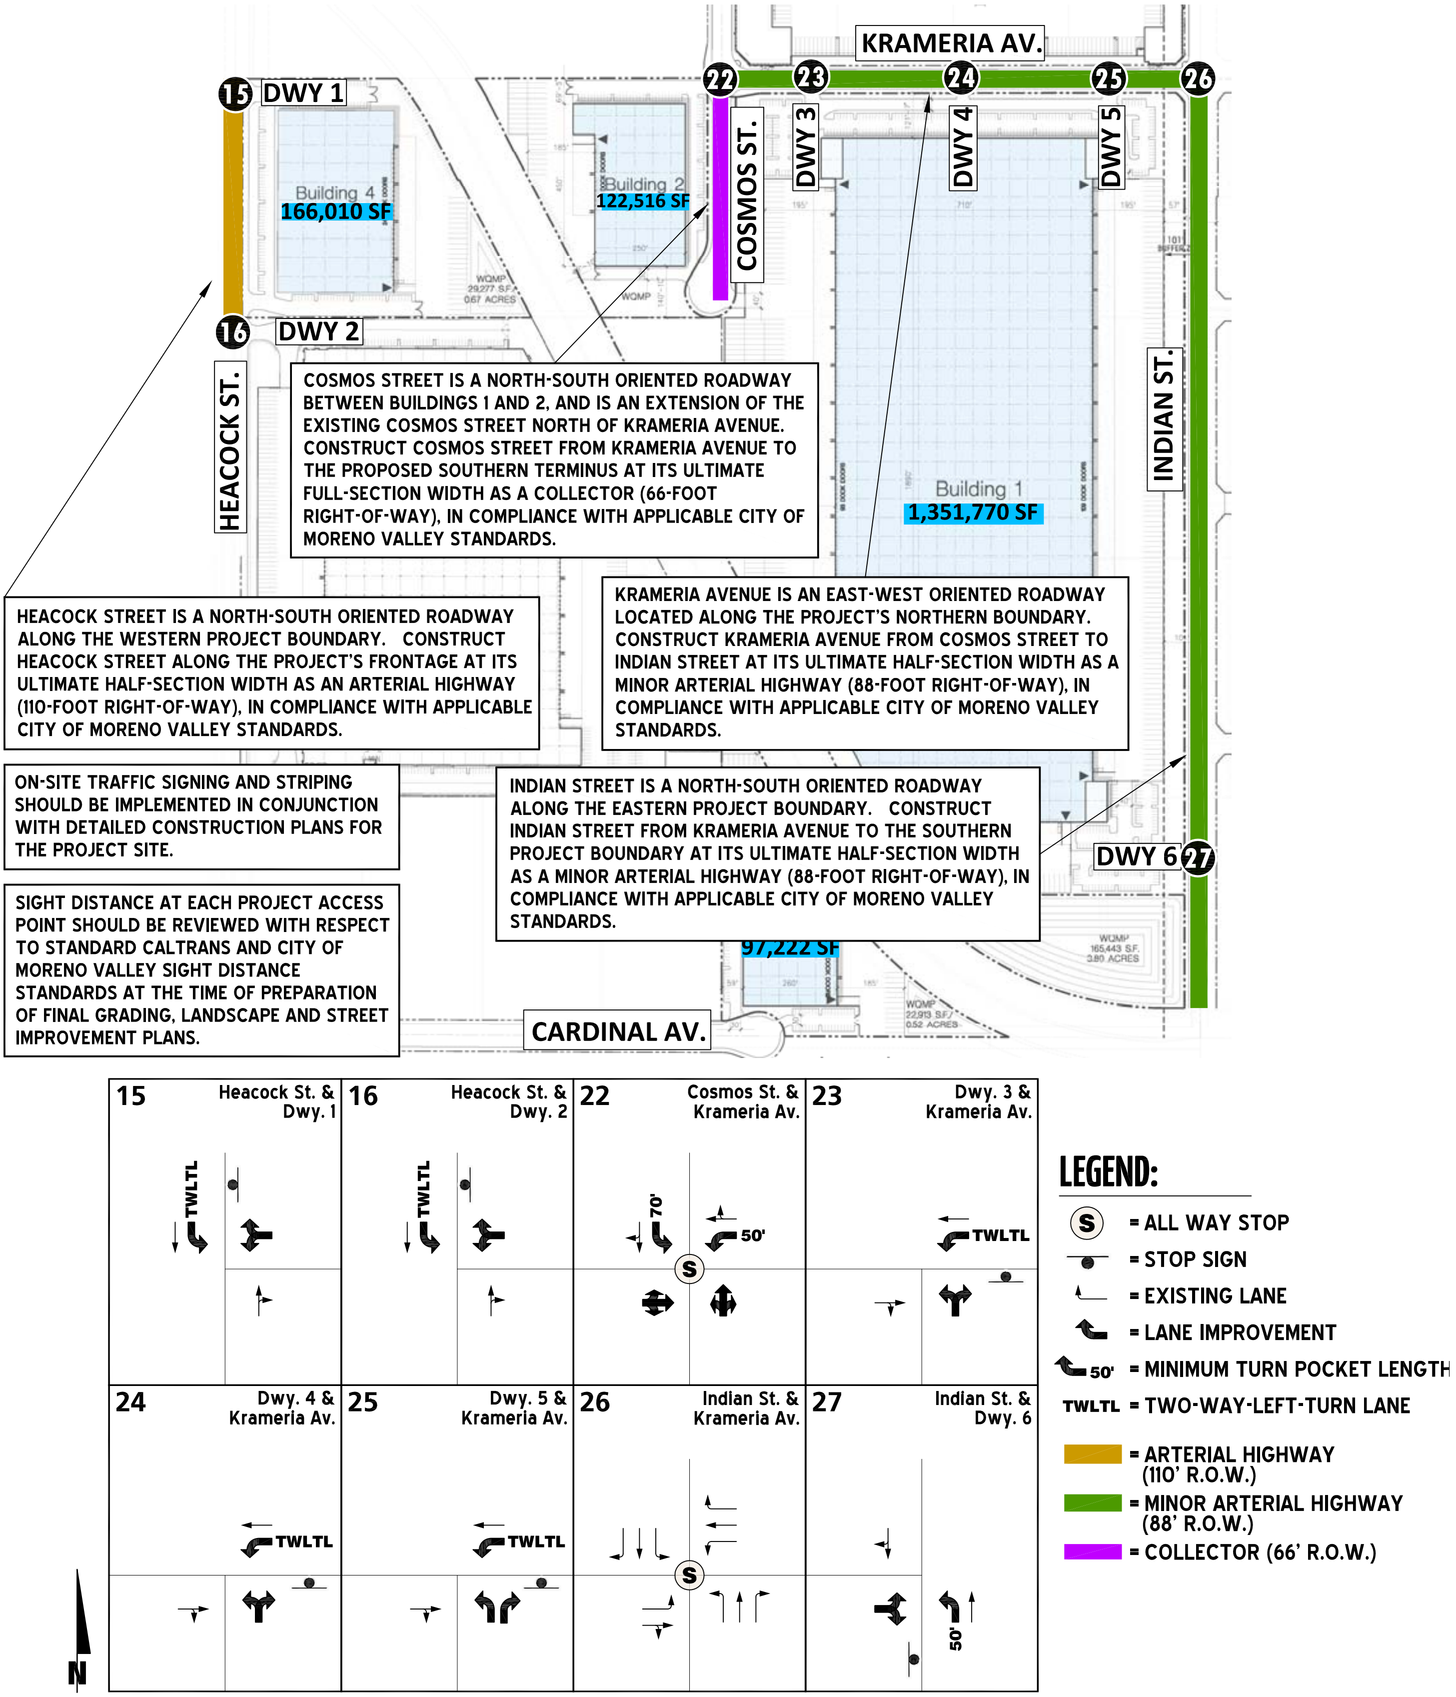
Heacock Street – Heacock Street is a north-south oriented roadway along the western Project boundary. Construct Heacock Street along the Project's frontage at its ultimate half-section width as an Arterial Highway (110-foot right-of-way), in compliance with applicable City of Moreno Valley standards.

Krameria Avenue – Krameria Avenue is an east-west oriented roadway located along the Project's northern boundary. Construct Krameria Avenue from Cosmos Street to Indian Street at its ultimate half-section width as a Minor Arterial Highway (88-foot right-of-way), in compliance with applicable City of Moreno Valley standards.

Cosmos Street – Cosmos Street is a north-south oriented roadway between Buildings 1 and 2, and is an extension of the existing Cosmos Street north of Krameria Avenue. Construct Cosmos Street from Krameria Avenue to the proposed southern terminus at its ultimate full-section width as a Collector (66-foot right-of-way), in compliance with applicable City of Moreno Valley standards.

Indian Street – Indian Street is a north-south oriented roadway along the eastern Project boundary. Construct Indian Street from Krameria Avenue to the southern Project boundary at its ultimate half-section width as a Minor Arterial Highway (88-foot right-of-way), in compliance with applicable City of Moreno Valley standards.

EXHIBIT 1-3: SITE ACCESS AND SITE ADJACENT ROADWAY RECOMMENDATIONS



COSMOS STREET IS A NORTH-SOUTH ORIENTED ROADWAY BETWEEN BUILDINGS 1 AND 2, AND IS AN EXTENSION OF THE EXISTING COSMOS STREET NORTH OF KRAMERIA AVENUE. CONSTRUCT COSMOS STREET FROM KRAMERIA AVENUE TO THE PROPOSED SOUTHERN TERMINUS AT ITS ULTIMATE FULL-SECTION WIDTH AS A COLLECTOR (66-FOOT RIGHT-OF-WAY), IN COMPLIANCE WITH APPLICABLE CITY OF MORENO VALLEY STANDARDS.

HEACOCK STREET IS A NORTH-SOUTH ORIENTED ROADWAY ALONG THE WESTERN PROJECT BOUNDARY. CONSTRUCT HEACOCK STREET ALONG THE PROJECT'S FRONTAGE AT ITS ULTIMATE HALF-SECTION WIDTH AS AN ARTERIAL HIGHWAY (110-FOOT RIGHT-OF-WAY), IN COMPLIANCE WITH APPLICABLE CITY OF MORENO VALLEY STANDARDS.

KRAMERIA AVENUE IS AN EAST-WEST ORIENTED ROADWAY LOCATED ALONG THE PROJECT'S NORTHERN BOUNDARY. CONSTRUCT KRAMERIA AVENUE FROM COSMOS STREET TO INDIAN STREET AT ITS ULTIMATE HALF-SECTION WIDTH AS A MINOR ARTERIAL HIGHWAY (88-FOOT RIGHT-OF-WAY), IN COMPLIANCE WITH APPLICABLE CITY OF MORENO VALLEY STANDARDS.

ON-SITE TRAFFIC SIGNING AND STRIPING SHOULD BE IMPLEMENTED IN CONJUNCTION WITH DETAILED CONSTRUCTION PLANS FOR THE PROJECT SITE.

INDIAN STREET IS A NORTH-SOUTH ORIENTED ROADWAY ALONG THE EASTERN PROJECT BOUNDARY. CONSTRUCT INDIAN STREET FROM KRAMERIA AVENUE TO THE SOUTHERN PROJECT BOUNDARY AT ITS ULTIMATE HALF-SECTION WIDTH AS A MINOR ARTERIAL HIGHWAY (88-FOOT RIGHT-OF-WAY), IN COMPLIANCE WITH APPLICABLE CITY OF MORENO VALLEY STANDARDS.

SIGHT DISTANCE AT EACH PROJECT ACCESS POINT SHOULD BE REVIEWED WITH RESPECT TO STANDARD CALTRANS AND CITY OF MORENO VALLEY SIGHT DISTANCE STANDARDS AT THE TIME OF PREPARATION OF FINAL GRADING, LANDSCAPE AND STREET IMPROVEMENT PLANS.

LEGEND:

- Ⓢ = ALL WAY STOP
- ● = STOP SIGN
- ↰ = EXISTING LANE
- ↰ = LANE IMPROVEMENT
- ↰ 50' = MINIMUM TURN POCKET LENGTH
- TWLTL = TWO-WAY-LEFT-TURN LANE
- 🟧 = ARTERIAL HIGHWAY (110' R.O.W.)
- 🟩 = MINOR ARTERIAL HIGHWAY (88' R.O.W.)
- 🟪 = COLLECTOR (66' R.O.W.)

Wherever necessary, roadways adjacent to the Project, site access points and site-adjacent intersections will be constructed to be consistent with or within the recommended roadway classifications and respective cross-sections in the City of Moreno Valley General Plan Circulation Element.

On-site traffic signing and striping should be implemented in conjunction with detailed construction plans for the Project site.

Sight distance at each project access point should be reviewed with respect to standard Caltrans and City of Moreno Valley sight distance standards at the time of preparation of final grading, landscape and street improvement plans.

1.9 TRUCK ACCESS AND CIRCULATION

Due to the typical wide turning radius of large trucks, a truck turning template has been overlaid on the site plan at each applicable Project driveway anticipated to be utilized by heavy trucks in order to determine appropriate curb radii and to verify that trucks will have sufficient space to execute turning maneuvers. For the purposes of this evaluation, the WB-67 class truck template has been utilized. WB-67 class trucks are approximately 73.5 feet in length.

Exhibit 1-4 illustrates the proposed truck access for the site and circulation for each of the applicable Project driveways. As shown on Exhibit 1-4, the Project driveways will need to provide a minimum 50-foot curb radius on the southeast corner of each Project driveway in order to accommodate the ingress and egress of WB-67 trucks (or smaller). A truck turning template has not been overlaid on Driveways 4 and 6 as they are anticipated to be utilized by heavy trucks.

1.10 QUEUING ANALYSIS AT THE PROJECT DRIVEWAYS

A queuing analysis was conducted along the site adjacent roadways of Heacock Street, Krameria Avenue and Indian Street for Horizon Year (2035) traffic conditions to determine the turn pocket lengths necessary to accommodate near term 95th percentile queues. The analysis was conducted for the weekday AM and weekday PM peak hours.

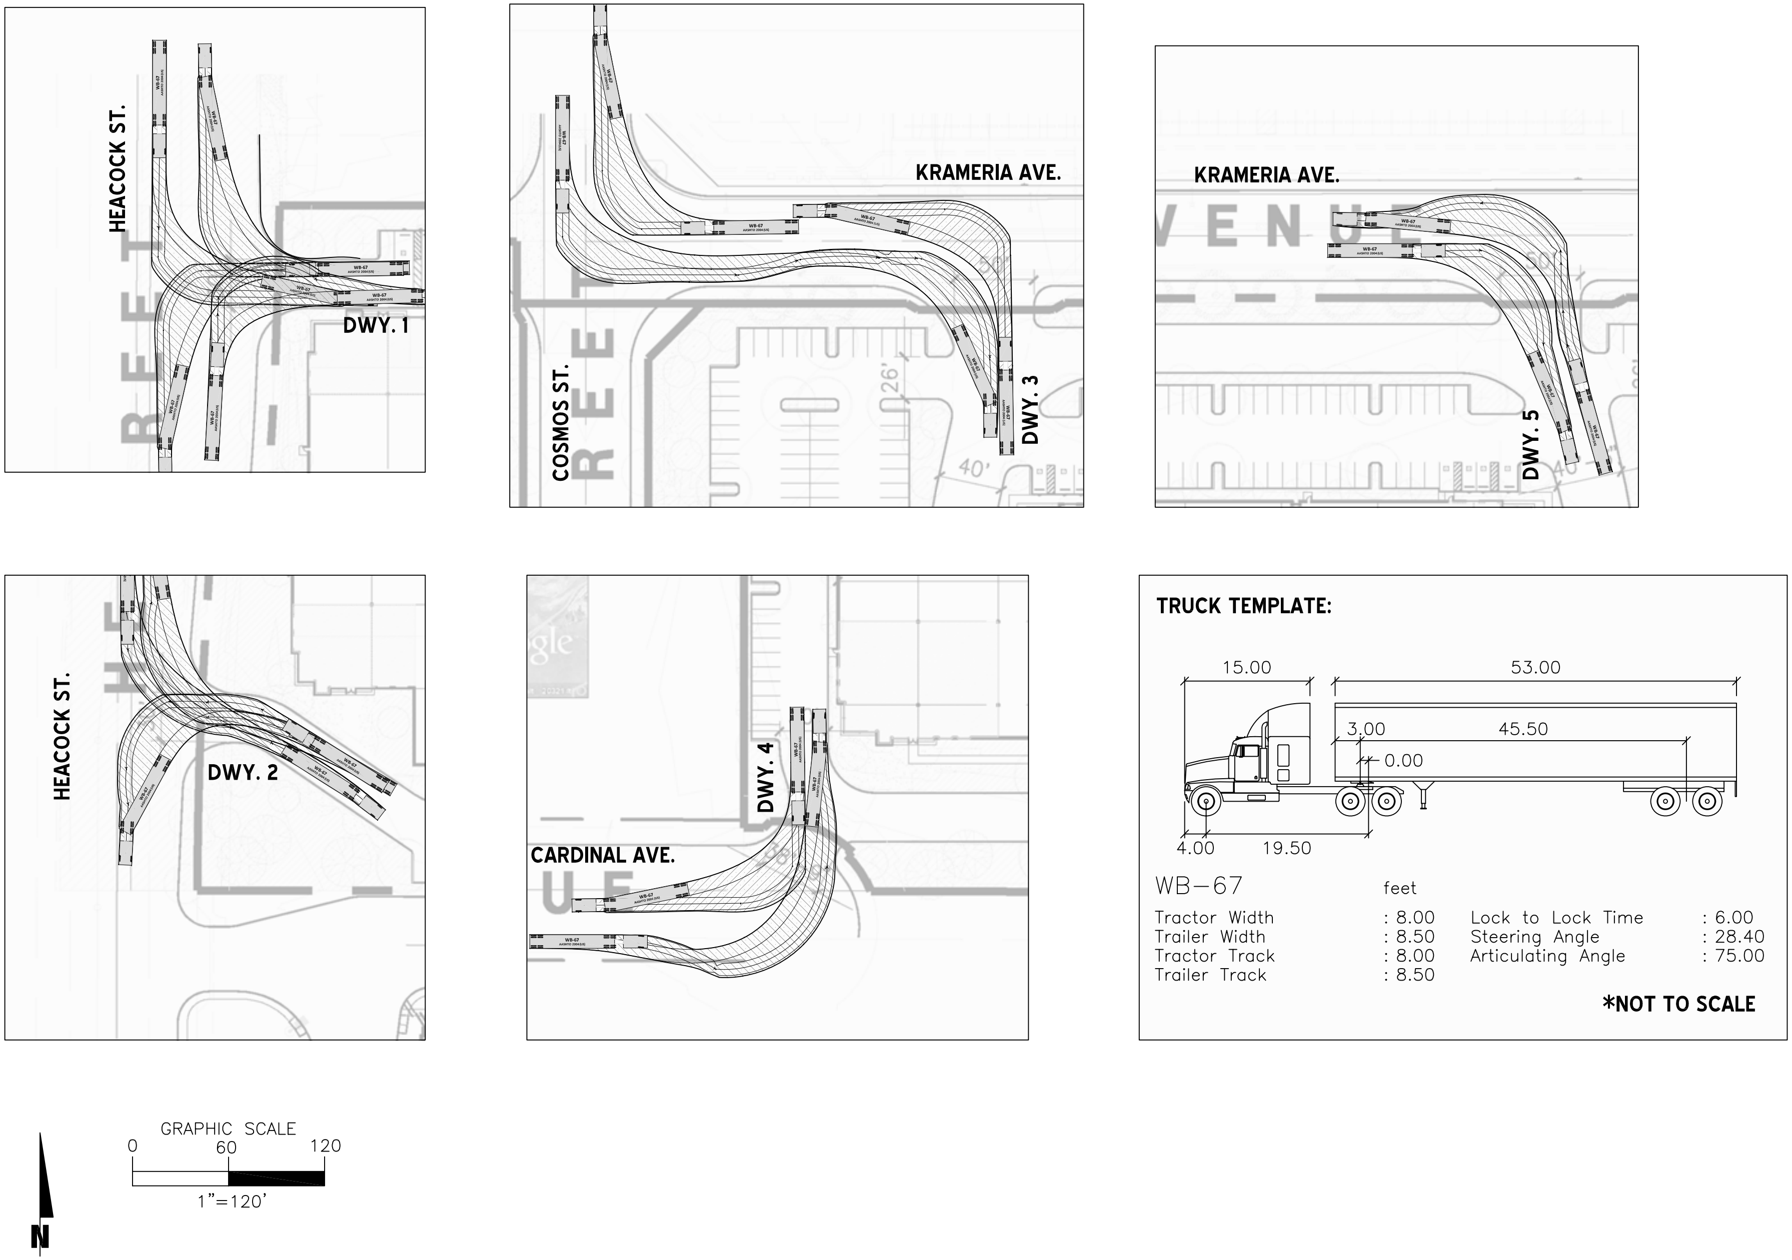
The traffic modeling and signal timing optimization software package Synchro (Version 8 Build 801) has been utilized to assess queues at the Project access points. Synchro is a macroscopic traffic software program that is based on the signalized and unsignalized intersection capacity analyses as specified in the HCM. SimTraffic is designed to model networks of signalized and unsignalized intersections, with the primary purpose of checking and fine tuning signal operations. SimTraffic uses the input parameters from Synchro to generate random simulations. The 95th percentile queue is not necessarily ever observed, it is simply based on statistical calculations (or Average Queue plus 1.65 standard deviations). However, the average queue is the average of all the two-minute maximum queues observed by SimTraffic. The maximum back of queue observed for every two-minute period is recorded by SimTraffic.

SimTraffic has been utilized to assess peak hour queuing at the site access driveways for Horizon Year With Project traffic conditions. The random simulations generated by SimTraffic have been utilized to determine the 95th percentile queue lengths observed for each turn lane. A SimTraffic simulation has been recorded 5 times, during the weekday AM and weekday PM peak hours, and has been seeded for 15-minute periods with 60-minute recording intervals.

A vehicle is considered queued whenever it is traveling at less than 10 feet/second. A vehicle will only become queued when it is either at the stop bar or behind another queued vehicle. Although only the 95th percentile queue has been utilized for purposes of determining the necessary turn pocket storage lengths, the 50th percentile queues are also reported. The 50th percentile queue is the maximum back of queue on a typical cycle during the peak hour, while the 95th percentile queue is the maximum back of queue with 95th percentile traffic volumes during the peak hour. In other words, if traffic were observed for 100 cycles, the 95th percentile queue would be the queue experienced with the 95th busiest cycle (or 5% of the time). The 50th percentile, or average, queue represents the typical queue length for peak hour traffic conditions, while the 95th percentile queue is derived from the average queue plus 1.65 standard deviations. The 95th percentile queue is not necessarily ever observed, it is simply based on statistical calculations. However, many jurisdictions utilize the 95th percentile queues for design purposes.

The storage length recommendations for the turning movements at the Project were shown previously on Exhibit 1-3 for Horizon Year traffic conditions. Although not indicated, it should be noted that the two-way-left-turn lanes shown on Exhibit 1-3 all require less than 50 feet of storage. Queuing results are provided in Appendix 1.2.

EXHIBIT 1-4: TRUCK ACCESS



This Page Intentionally Left Blank

2 METHODOLOGIES

This section of the report presents the methodologies used to perform the traffic analyses summarized in this report. The methodologies described are generally consistent with City of Moreno Valley and Caltrans traffic study guidelines. (1) (2)

2.1 LEVEL OF SERVICE

Traffic operations of roadway facilities are described using the term "Level of Service" (LOS). LOS is a qualitative description of traffic flow based on several factors such as speed, travel time, delay, and freedom to maneuver. Six levels are typically defined ranging from LOS A, representing completely free-flow conditions, to LOS F, representing breakdown in flow resulting in stop-and-go conditions. LOS E represents operations at or near capacity, an unstable level where vehicles are operating with the minimum spacing for maintaining uniform flow.

2.2 INTERSECTION CAPACITY ANALYSIS

The definitions of LOS for interrupted traffic flow (flow restrained by the existence of traffic signals and other traffic control devices) differ slightly depending on the type of traffic control. The LOS is typically dependent on the quality of traffic flow at the intersections along a roadway. The *Highway Capacity Manual* (HCM) methodology expresses the LOS at an intersection in terms of delay time for the various intersection approaches. (7) The HCM uses different procedures depending on the type of intersection control.

2.2.1 SIGNALIZED INTERSECTIONS

City of Moreno Valley, City of Perris, County of Riverside, March Joint Powers Authority

The City of Moreno Valley, City of Perris, County of Riverside, and March Joint Powers Authority (JPA) require signalized intersection operations analysis based on the methodology described in the HCM. (7) Intersection LOS operations are based on an intersection's average control delay. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. For signalized intersections LOS is directly related to the average control delay per vehicle and is correlated to a LOS designation as described in Table 2-1. Study area intersections have been evaluated using the Synchro (Version 8 Build 806) analysis software package.

Synchro is a macroscopic traffic software program that is based on the signalized intersection capacity analysis as specified in the HCM. Macroscopic level models represent traffic in terms of aggregate measures for each movement at the study intersections. Equations are used to determine measures of effectiveness such as delay and queue length. The level of service and capacity analysis performed by Synchro takes into consideration optimization and coordination of signalized intersections within a network.

Attachment: I1 - Traffic Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

TABLE 2-1: SIGNALIZED INTERSECTION LOS THRESHOLDS

Description	Average Control Delay (Seconds), V/C ≤ 1.0	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Operations with very low delay occurring with favorable progression and/or short cycle length.	0 to 10.00	A	F
Operations with low delay occurring with good progression and/or short cycle lengths.	10.01 to 20.00	B	F
Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.01 to 35.00	C	F
Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.01 to 55.00	D	F
Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	55.01 to 80.00	E	F
Operation with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths	80.01 and up	F	F

Source: HCM

The peak hour traffic volumes have been adjusted using a peak hour factor (PHF) to reflect peak 15 minute volumes. Common practice for LOS analysis is to use a peak 15-minute rate of flow. However, flow rates are typically expressed in vehicles per hour. The PHF is the relationship between the peak 15-minute flow rate and the full hourly volume (e.g. PHF = [Hourly Volume] / [4 x Peak 15-minute Flow Rate]). The use of a 15-minute PHF produces a more detailed analysis as compared to analyzing vehicles per hour. Existing PHFs have been used for all analysis scenarios. Per the HCM, PHF values over 0.95 often are indicative of high traffic volumes with capacity constraints on peak hour flows while lower PHF values are indicative of greater variability of flow during the peak hour. (7)

California Department of Transportation (Caltrans)

Per the Caltrans *Guide for the Preparation of Traffic Impact Studies*, the traffic modeling and signal timing optimization software package Synchro (Version 8 Build 806) has also been utilized to analyze signalized intersections under Caltrans' jurisdiction, which include interchange to arterial ramps (i.e. I-215 Freeway ramps at Harley Knox Boulevard). (2) Signal timing for the freeway arterial-to-ramp intersections have been obtained from Caltrans District 8 and were utilized for the purposes of this analysis.

2.2.2 UNSIGNALIZED INTERSECTIONS

The City of Moreno Valley, City of Perris, County of Riverside, and March JPA requires the operations of unsignalized intersections be evaluated using the methodology described the HCM. (7) The LOS rating is based on the weighted average control delay expressed in seconds per vehicle (see Table 2-2).

TABLE 2-2: UNSIGNALIZED INTERSECTION LOS THRESHOLDS

Description	Average Control Delay Per Vehicle (Seconds)	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Little or no delays.	0 to 10.00	A	F
Short traffic delays.	10.01 to 15.00	B	F
Average traffic delays.	15.01 to 25.00	C	F
Long traffic delays.	25.01 to 35.00	D	F
Very long traffic delays.	35.01 to 50.00	E	F
Extreme traffic delays with intersection capacity exceeded.	> 50.00	F	F

Source: HCM

At two-way or side-street stop-controlled intersections, LOS is calculated for each controlled movement and for the left turn movement from the major street, as well as for the intersection as a whole. For approaches composed of a single lane, the delay is computed as the average of all movements in that lane. For all-way stop controlled intersections, LOS is computed for the intersection as a whole.

2.3 ROADWAY SEGMENT CAPACITY ANALYSIS

Roadway segment operations have been evaluated using the City of Moreno Valley Daily Roadway Capacity Values provided in the *City of Moreno Valley Transportation Engineering Division Traffic Impact Analysis (TIA) Preparation Guide* and the City of Perris Daily Roadway Capacity Values provided in the City of Perris General Plan Circulation Element. (1) (8) Per the City of Moreno Valley TIA guidelines, roadway segments within the study area should maintain the LOS capacities illustrated on Exhibit 2-1. The City of Perris requires LOS D capacities to be maintained on City roadways. The daily roadway segment capacities for each type of roadway are summarized in Table 2-3. As noted in both the City of Moreno Valley's traffic study guidelines and City of Perris' General Plan Circulation Element, these roadway capacities are "rule of thumb" estimates for planning purposes and are affected by such factors as intersections (spacing, configuration and control features), degree of access control, roadway grades, design geometrics (horizontal and vertical alignment standards), sight distance, vehicle mix (truck and bus traffic) and pedestrian bicycle traffic. In other words, while using average daily traffic (ADT) for planning purposes is suitable with regards to evaluating potential volume to capacity with future forecasts, it is not suitable for operational analysis because it does not account for the factors listed previously. As such, where the ADT based roadway segment analysis indicates a deficiency (unacceptable LOS), a review of the more detailed peak hour intersection analysis and progression analysis are undertaken. The more detailed peak hour

Attachment: I1 - Traffic Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

intersection analysis explicitly accounts for factors that affect roadway capacity. Therefore, roadway segment widening is typically only recommended if the peak hour intersection analysis indicates the need for additional through lanes.

TABLE 2-3: ROADWAY SEGMENT CAPACITY LOS THRESHOLDS[1]

City of Moreno Valley:

Facility Type	Level of Service Capacity[1]				
	A	B	C	D	E
Six Lane Divided Arterial	33,900	39,400	45,000	50,600	56,300
Four Lane Divided Arterial	22,500	26,300	30,000	33,800	37,500
Four Lane Undivided Arterial	15,000	17,500	20,000	22,500	25,000
Two Lane Industrial Collector	7,500	8,800	10,000	11,300	12,500
Two Lane Undivided Residential	N/A	N/A	N/A	N/A	2,000

[1] These maximum roadway capacities have been extracted from the City of Moreno Valley's Transportation Division's TIA Preparation Guidelines (August 2007). These roadway capacities are "rule of thumb" estimates for planning purposes. The LOS "E" service volumes are estimated maximum daily capacity for respective roadway classifications. Capacity is affected by such factors as intersections (spacing, configuration and control features), degree of access control, roadway grades, design geometrics (horizontal and vertical alignment standards), sight distance, vehicle mix (truck and bus traffic) and pedestrian and bicycle traffic.

City of Perris:

Facility Type	Level of Service Capacity[1]				
	A	B	C	D	E
Six Lane Urban Arterial	32,340	37,730	43,100	48,500	53,900
Four Lane Urban Arterial	21,540	25,130	28,700	32,300	35,900
Two Lane Arterial	10,800	12,600	14,400	16,200	18,000
Four Lane Secondary Arterial	15,540	18,130	20,700	23,300	25,900
Two Lane Collector	7,800	9,100	10,400	11,700	13,000

[1] Source: Table CE-9 of the City of Perris General Plan Circulation Element and Figure C-2 of the County of Riverside General Plan Circulation Element.

All capacity exhibits are based on optimum conditions and are intended as guidelines for planning purposes only.

2.4 FREEWAY OFF-RAMP QUEUING ANALYSIS

The study area for this TIA includes the freeway-to-arterial interchange of the I-215 Freeway at Cactus Avenue and Harley Knox Boulevard off-ramps. Consistent with Caltrans requirements, the 95th percentile queuing of vehicles has been assessed at the off-ramps to determine potential queuing impacts at the freeway ramp intersections on both Cactus Avenue and Harley Knox Boulevard. Specifically, the queuing analysis is utilized to identify any potential queuing and “spill back” onto the I-215 Freeway mainline from the off-ramps.

The traffic progression analysis tool and HCM intersection analysis program, Synchro, has been used to assess the potential impacts/needs of the intersections with traffic added from the proposed Project. Storage (turn-pocket) length recommendations at the ramps have been based upon the 95th percentile queue resulting from the Synchro progression analysis. The queue length reported is for the lane with the highest queue in the lane group.

There are two footnotes which appear on the Synchro outputs. One footnote indicates if the 95th percentile cycle exceeds capacity. Traffic is simulated for two complete cycles of the 95th percentile traffic in Synchro in order to account for the effects of spillover between cycles. In practice, the 95th percentile queue shown will rarely be exceeded and the queues shown with the footnote are acceptable for the design of storage bays. The other footnote indicates whether or not the volume for the 95th percentile queue is metered by an upstream signal. In many cases, the 95th percentile queue will not be experienced and may potentially be less than the 50th percentile queue due to upstream metering. If the upstream intersection is at or near capacity, the 50th percentile queue represents the maximum queue experienced.

A vehicle is considered queued whenever it is traveling at less than 10 feet/second. A vehicle will only become queued when it is either at the stop bar or behind another queued vehicle. Although only the 95th percentile queue has been reported in the tables, the 50th percentile queue can be found in the appendix alongside the 95th percentile queue for each ramp location. The 50th percentile maximum queue is the maximum back of queue on a typical cycle during the peak hour, while the 95th percentile queue is the maximum back of queue with 95th percentile traffic volumes during the peak hour. In other words, if traffic were observed for 100 cycles, the 95th percentile queue would be the queue experienced with the 95th busiest cycle (or 5% of the time). The 50th percentile or average queue represents the typical queue length for peak hour traffic conditions, while the 95th percentile queue is derived from the average queue plus 1.65 standard deviations. The 95th percentile queue is not necessarily ever observed, it is simply based on statistical calculations.

2.5 TRAFFIC SIGNAL WARRANT ANALYSIS METHODOLOGY

The term "signal warrants" refers to the list of established criteria used by Caltrans and other public agencies to quantitatively justify or ascertain the potential need for installation of a traffic signal at an otherwise unsignalized intersection. This TIA uses the signal warrant criteria presented in the latest edition of the Federal Highway Administration's (FHWA) *Manual on Uniform Traffic Control Devices (MUTCD)*, as amended by *the MUTCD 2014 California Supplement*, for all study area intersections. (9)

The signal warrant criteria for Existing study area intersections are based upon several factors, including volume of vehicular and pedestrian traffic, frequency of accidents, and location of school areas. Both the FHWA's *MUTCD* and the *MUTCD 2014 California Supplement* indicate that the installation of a traffic signal should be considered if one or more of the signal warrants are met. (9) Specifically, this TIA utilizes the Peak Hour Volume-based Warrant 3 as the appropriate representative traffic signal warrant analysis for existing traffic conditions. Warrant 3 criteria are basically identical for both the FHWA's *MUTCD* and the *MUTCD 2014 California Supplement*. Warrant 3 is appropriate to use for this TIA because it provides specialized warrant criteria for intersections with rural characteristics (e.g. located in communities with populations of less than 10,000 persons or with adjacent major streets operating above 40 miles per hour). For the purposes of this study, the speed limit was the basis for determining whether Urban or Rural warrants were used for a given intersection.

Attachment: I1 - Traffic Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

Future unsignalized intersections, that currently do not exist, have been assessed regarding the potential need for new traffic signals based on future average daily traffic (ADT) volumes, using the Caltrans planning level ADT-based signal warrant analysis worksheets.

As shown on Table 2-4, traffic signal warrant analyses were performed for the following unsignalized study area intersections during the peak weekday conditions wherein the Project is anticipated to contribute the highest trips:

TABLE 2-4: TRAFFIC SIGNAL WARRANT ANALYSIS LOCATIONS

ID	Intersection Location	Jurisdiction
7	Western Way / Harley Knox Boulevard	Perris
12	Heacock Street / Gentian Avenue	Moreno Valley, March JPA
13	Heacock Street / Iris Avenue	Moreno Valley, March JPA
15	Heacock Street / Driveway 1 – Future Intersection	Moreno Valley, March JPA
16	Heacock Street / Driveway 2 – Future Intersection	Moreno Valley, March JPA
17	Heacock Street / Cardinal Avenue	Moreno Valley, March JPA
19	Heacock Street / Nandina Avenue	Moreno Valley, March JPA
20	Heacock Street/Webster Avenue / Harley Knox Boulevard	Perris
21	Cosmos Street / Krameria Avenue (North)	Moreno Valley
22	Cosmos Street / Krameria Avenue	Moreno Valley
23	Driveway 3 / Krameria Avenue – Future Intersection	Moreno Valley
24	Driveway 4 / Krameria Avenue – Future Intersection	Moreno Valley
25	Driveway 5 / Krameria Avenue – Future Intersection	Moreno Valley
26	Indian Street / Krameria Avenue	Moreno Valley
27	Indian Street / Driveway 6	Moreno Valley

The Existing conditions traffic signal warrant analysis is presented in the subsequent section, Section 3 *Area Conditions* of this report. The traffic signal warrant analyses for future conditions are presented in Section 5 *E+P Traffic Analysis,* Section 6 *Opening Year Cumulative (2020) Traffic Analysis,* and Section 7 *General Plan Buildout (Post 2035) Traffic Analysis* of this report.

It is important to note that a signal warrant defines the minimum condition under which the installation of a traffic signal might be warranted. Meeting this threshold condition does not require that a traffic control signal be installed at a particular location, but rather, that other traffic factors and conditions be evaluated in order to determine whether the signal is truly justified. It should also be noted that signal warrants do not necessarily correlate with LOS. An intersection may satisfy a signal warrant condition and operate at or above acceptable LOS or operate below acceptable LOS and not meet a signal warrant.

2.6 FREEWAY MAINLINE SEGMENT ANALYSIS METHODOLOGY

Consistent with recent Caltrans guidance and because impacts to freeway segments dissipate with distance from the point of State Highway System (SHS) entry, quantitative study of freeway segments beyond those immediately adjacent to the point of entry is not required. As such, the traffic study has evaluated the freeway segments along the I-215 Freeway where the Project is anticipated to contribute 50 or more peak hour trips. Because impacts to freeway segments dissipate with distance from the point of SHS entry, quantitative evaluation of freeway segments with less than 50 peak hour trips is not necessary.

The freeway system in the study area has been broken into segments defined by the freeway-to-arterial interchange locations. The freeway segments have been evaluated in this TIA based upon peak hour directional volumes. The freeway segment analysis is based on the methodology described in the HCM and performed using HCS2010 software. The performance measure preferred by Caltrans to calculate LOS is density. Density is expressed in terms of passenger cars per mile per lane. Table 2-5 illustrates the freeway segment LOS descriptions for each density range utilized for this analysis.

TABLE 2-5: DESCRIPTION OF FREEWAY MAINLINE LOS

Level of Service	Description	Density Range (pc/mi/ln)[1]
A	Free-flow operations in which vehicles are relatively unimpeded in their ability to maneuver within the traffic stream. Effects of incidents are easily absorbed.	0.0 – 11.0
B	Relative free-flow operations in which vehicle maneuvers within the traffic stream are slightly restricted. Effects of minor incidents are easily absorbed.	11.1 – 18.0
C	Travel is still at relative free-flow speeds, but freedom to maneuver within the traffic stream is noticeably restricted. Minor incidents may be absorbed, but local deterioration in service will be substantial. Queues begin to form behind significant blockages.	18.1 – 26.0
D	Speeds begin to decline slightly and flows and densities begin to increase more quickly. Freedom to maneuver is noticeably limited. Minor incidents can be expected to create queuing as the traffic stream has little space to absorb disruptions.	26.1 – 35.0
E	Operation at capacity. Vehicles are closely spaced with little room to maneuver. Any disruption in the traffic stream can establish a disruption wave that propagates throughout the upstream traffic flow. Any incident can be expected to produce a serious disruption in traffic flow and extensive queuing.	35.1 – 45.0
F	Breakdown in vehicle flow.	>45.0

[1] pc/mi/ln = passenger cars per mile per lane. Source: HCM

The number of lanes for existing baseline conditions has been obtained from field observations conducted by Urban Crossroads in April 2015. These existing freeway geometrics have been utilized for Existing, E+P, Opening Year Cumulative, and General Plan Buildout Without and With Project conditions.

The I-215 Freeway mainline volume data were obtained from the Caltrans Performance Measurement System (PeMS) website for the segments of the I-215 Freeway interchange, south of Cactus Avenue and north of Harley Knox Boulevard. The data was obtained from April 2015. In an effort to conduct a conservative analysis, the maximum value observed within the three day period was utilized for the weekday morning (AM) and weekday evening (PM) peak hours. In addition, truck traffic, represented as a percentage of total traffic, has been utilized for the purposes of this analysis in an effort to not overstate traffic volumes and peak hour deficiencies. As such, actual vehicles (as opposed to PCE volumes) have been utilized for the purposes of the basic freeway segment analysis. (10)

2.7 FREEWAY MERGE/DIVERGE RAMP JUNCTION ANALYSIS

The freeway system in the study area has been broken into segments defined by freeway-to-arterial interchange locations resulting in 6 existing on and off ramp locations where the Project is anticipated to contribute 50 or more peak hour trips. Although the HCM indicates the influence area for a merge/diverge junction is 1,500 feet, the analysis presented in this traffic study has been performed at all ramp locations with respect to the nearest on or off ramp at each interchange in an effort to be consistent with Caltrans guidance/comments on other projects Urban Crossroads has worked on in the region.

The merge/diverge analysis is based on the HCM Ramps and Ramp Junctions analysis method and performed using HCS2010 software. The measure of effectiveness (reported in passenger car/mile/lane) are calculated based on the existing number of travel lanes, number of lanes at the on and off ramps both at the analysis junction and at upstream and downstream locations (if applicable) and acceleration/deceleration lengths at each merge/diverge point. Table 2-6 presents the merge/diverge area level of service descriptions for each density range utilized for this analysis.

TABLE 2-6: DESCRIPTION OF FREEWAY MERGE AND DIVERGE LOS

Level of Service	Density Range (pc/mi/ln)[1]
A	≤10.0
B	10.0 – 20.0
C	20.0 – 28.0
D	28.0 – 35.0
E	>35.0
F	Demand Exceeds Capacity

[1] pc/mi/ln = passenger cars per mile per lane. Source: HCM

Similar to the basic freeway segment analysis, the I-215 Freeway mainline volume data were obtained from the Caltrans maintained PeMS website for the segments of the I-215 Freeway interchange, south of Cactus Avenue and north of Harley Knox Boulevard. The ramp data (per the count data presented in Appendix 3.1) were then utilized to flow conserve the mainline volumes to determine the remaining I-215 Freeway mainline segment volumes. Flow conservation checks ensure that traffic flows from north to south (and vice versa) of the interchange area with no unexplained loss of vehicles. The data was obtained from April 2015. In an effort to conduct a conservative analysis, the maximum value observed within the three

Attachment: I1 - Traffic Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

day period was utilized for the weekday morning (AM) and weekday evening (PM) peak hours. In addition, truck traffic, represented as a percentage of total traffic, has been utilized for the purposes of this analysis in an effort to not overstate traffic volumes and peak hour deficiencies. (10) As such, actual vehicles (as opposed to PCE volumes) have been utilized for the purposes of the freeway ramp junction (merge/diverge) analysis.

2.8 THRESHOLDS OF SIGNIFICANCE

The definition of an intersection/roadway segment deficiency has been obtained from each of the applicable surrounding jurisdictions. The following thresholds of significance will be utilized to determine if the addition of project-related traffic will result in significant impacts, and whether the implementation of the recommended feasible improvements would result in exceeding the LOS thresholds for each applicable jurisdiction.

2.8.1 CITY OF MORENO VALLEY

The definition of an intersection deficiency in the City of Moreno Valley is based on the City of Moreno Valley General Plan Circulation Element. The City of Moreno Valley General Plan states that target LOS C or LOS D be maintained along City roads (including intersections) wherever possible. An exhibit depicting the level of service standards within the City is provided on Exhibit 2-1.

2.8.2 CITY OF PERRIS

LOS D is considered to be the limit of acceptable traffic operations during the peak hour in the City of Perris for both intersections and roadway segments.

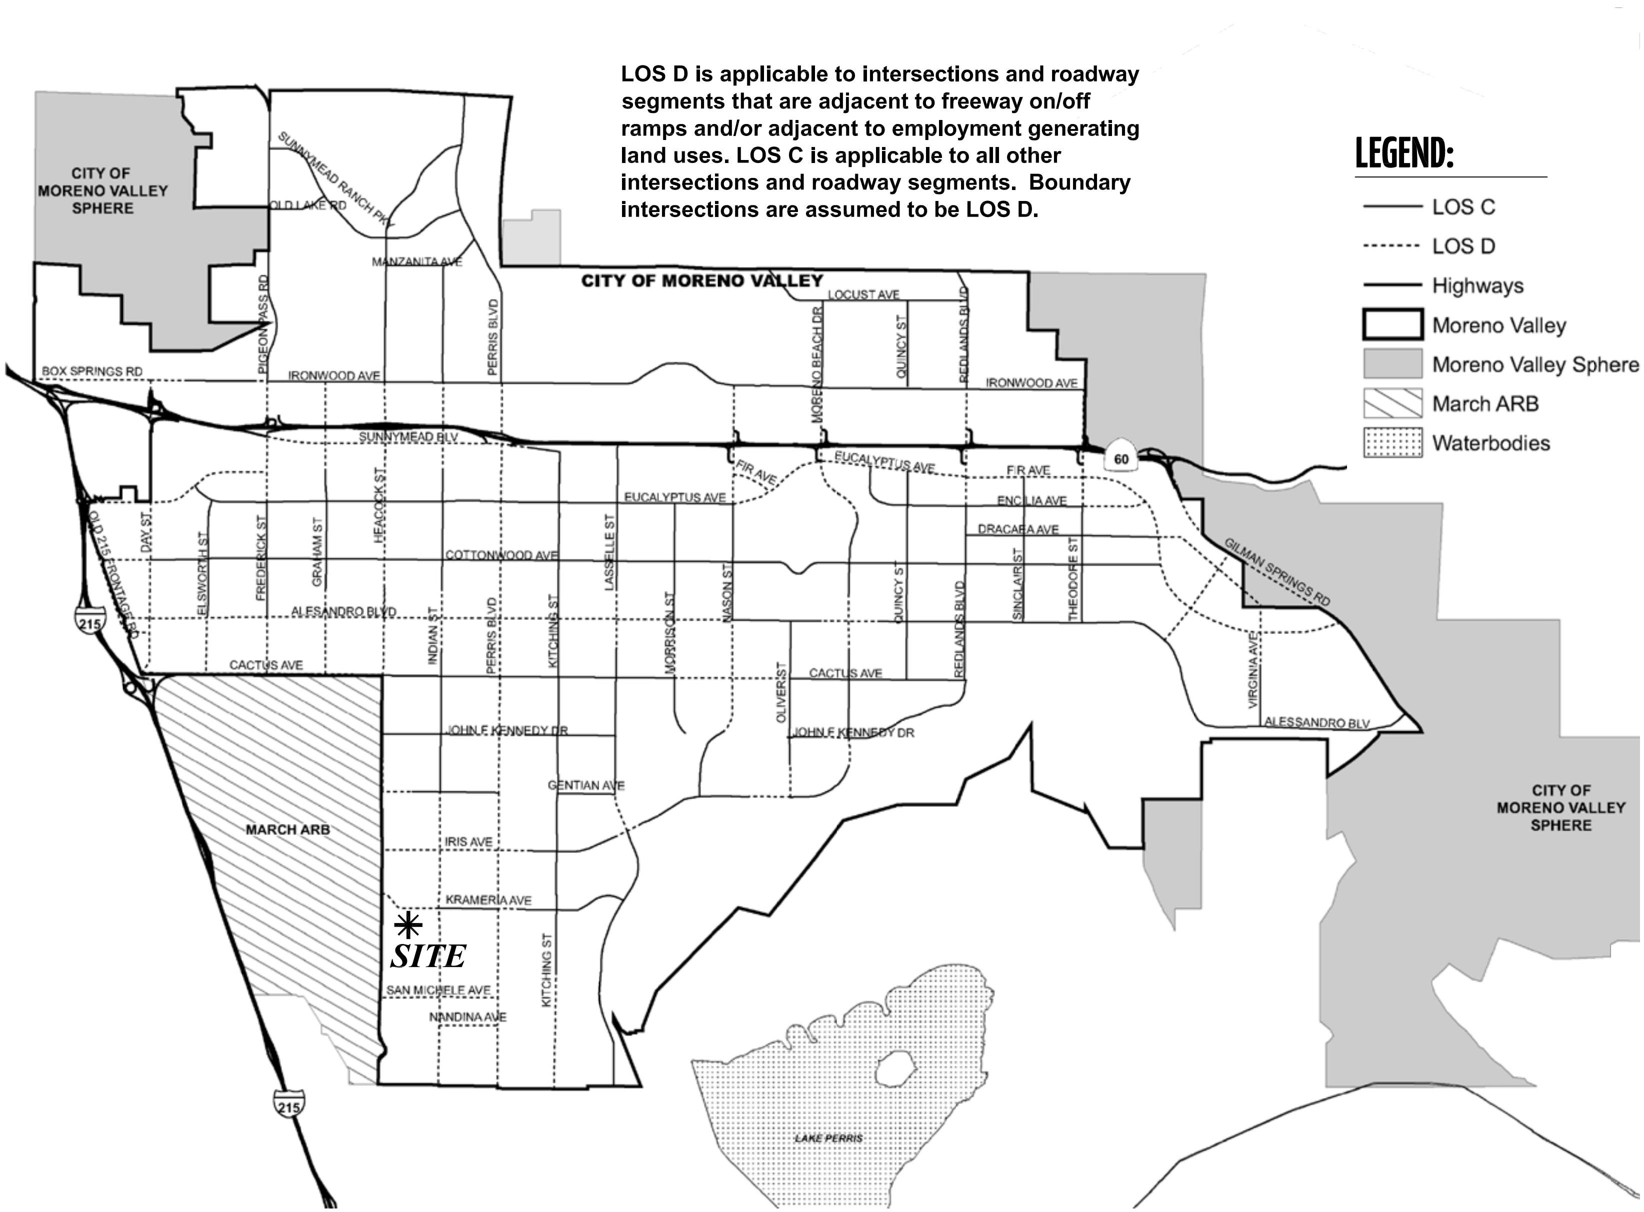
2.8.3 COUNTY OF RIVERSIDE

The County of Riverside General Plan Policy C 2.1 states that the County will maintain the following County-wide target level of service (LOS): LOS C on all County-maintained roads and conventional State Highways (including intersections). As an exception, LOS D may be allowed in Community Development areas at intersections of any combination of Secondary Highways, Major Highways, Arterial Highways, Urban Arterial Highways, Expressways or conventional State Highways. LOS E may be allowed in designated Community Centers to the extent that it would support transit-oriented development and pedestrian communities. As the Project is located within a Community Development area, LOS D has been considered acceptable at any intersection or study area roadway segment within the County of Riverside because all of the study area intersections are classified as Secondary Highways or a higher classification.

2.8.4 MARCH JOINT POWERS AUTHORITY

Based on the March JPA Traffic Impact Study Preparation Guide (August 3, 2011), all intersections and roadway segments within the March JPA Planning Area shall operate at LOS D or better with limiting circumstances of LOS E to occur. LOS E may also be allowed to the

EXHIBIT 2-1: CITY OF MORENO VALLEY LEVEL OF SERVICE (LOS) STANDARDS



LOS D is applicable to intersections and roadway segments that are adjacent to freeway on/off ramps and/or adjacent to employment generating land uses. LOS C is applicable to all other intersections and roadway segments. Boundary intersections are assumed to be LOS D.

09301 - mv-los.dwg

extent that would support transit-oriented development (TOD) and walkable communities. LOS E is also acceptable during peak hours at interchange ramp intersections where ramp metering occurs. The Project is not proposed to be a TOD and the Cactus Avenue on-ramps are currently metered, as such, the minimum LOS utilized for the purposes of this analysis is LOS D for both intersections and roadway segments.

2.8.5 CALTRANS

Caltrans endeavors to maintain a target LOS at the transition between LOS C and LOS D on SHS facilities, however, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. If an existing State highway facility is operating at less than this target LOS, the existing LOS should be maintained. Caltrans acknowledges that the region-wide goal for an acceptable LOS on all freeways, roadway segments, and intersections is LOS D. Consistent with the City of Moreno Valley LOS threshold of LOS D and in excess of the CMP stated LOS threshold of LOS E, LOS D will be used as the target LOS for freeway ramps, freeway segments, and freeway merge/diverge ramp junctions.

2.8.7 CMP

In an effort to more directly link land use, transportation and air quality and promote reasonable growth, the County of Riverside adopted a Congestion Management Plan (CMP) (December 2011). The Riverside County Transportation Commission (RCTC) monitors the CMP roadway network system to minimize LOS deficiencies. Within the project study area, the I-215 Freeway is recognized as a key transportation facility within the CMP system. Although Caltrans utilizes LOS D as their stated threshold, RCTC has adopted LOS E as the minimum standard for intersections and segments along the CMP System of Highways and Roadways. However, for the purposes of this traffic impact analysis, LOS D has been considered to be the limit of acceptable traffic operations for the I-215 Freeway mainline segments and ramp junctions in an effort to be conservative.

2.9 CEQA COMPLIANCE AND DOCUMENTATION

This section outlines the methodology used in this analysis related to identifying circulation system deficiencies.

2.9.1 INTERSECTIONS/ROADWAY SEGMENTS

The following types of traffic deficiencies are considered to be significant under the California Environmental Quality Act (CEQA):

- When project traffic, added to existing traffic, will deteriorate the LOS to below the target LOS.
- When cumulative traffic exceeds the target LOS.

2.9.2 CALTRANS FACILITIES

To determine whether the addition of project traffic to the SHS freeway segments would result in a deficiency, the following will be utilized:

- The traffic study finds that the LOS of a segment will degrade from D or better to E or F.
- The traffic study finds that the project will exacerbate an already deficient condition by contributing 50 or more peak hour trips. A segment that is operating at or near capacity is deemed to be deficient.

2.10 PROJECT FAIR SHARE CALCULATION METHODOLOGY

Improvements found to be included in the City of Moreno Valley's DIF program and WRCOG TUMF, will be identified as such. For improvements that do not appear to be in either of the pre-existing fee programs, a fair share financial contribution based on the Project's fair share impact may be imposed in order to mitigate the Project's share of impacts in lieu of construction.

If the intersection is currently operating at deficient LOS under Existing traffic conditions, the Project's fair share cost of improvements would be determined based on the following equation, which is the ratio of Project traffic to total traffic:

Project Fair Share % = Project Traffic / General Plan Buildout Total Traffic

If the intersection is currently operating at acceptable LOS under Existing traffic conditions, the Project's fair share cost of improvements would be determined based on the following equation, which is the ratio of Project traffic to new traffic, where new traffic is total future traffic less existing baseline traffic:

Project Fair Share % = Project Traffic / (General Plan Buildout Total Traffic – Existing Traffic)

3 AREA CONDITIONS

This section provides a summary of the existing circulation network, the City of Moreno Valley General Plan Circulation Network, and a review of existing peak hour intersection operations, roadway segment, traffic signal warrant, and freeway mainline operations analyses.

3.1 EXISTING CIRCULATION NETWORK

Pursuant to the agreement with City of Moreno Valley staff (Appendix 1.1), the study area includes a total of 32 existing and future intersections as shown previously on Exhibit 1-2 where the Project is anticipated to contribute 50 or more peak hour trips. Exhibit 3-1 illustrates the study area intersections located near the proposed Project and identifies the number of through traffic lanes for existing roadways and intersection traffic controls.

3.2 CITY OF MORENO VALLEY GENERAL PLAN CIRCULATION ELEMENT

As noted previously, the Project site is located within the City of Moreno Valley. However, the study area includes intersections within the neighboring jurisdiction of Perris and March Joint Powers Authority (JPA) (e.g., study area intersections along Harley Knox Boulevard, etc.).

3.2.1 CITY OF MORENO VALLEY

The roadway classifications and planned (ultimate) roadway cross-sections of the major roadways within the study area, as identified on the City of Moreno Valley General Plan Circulation Element, are described subsequently. Exhibit 3-2 shows the City of Moreno Valley General Plan Circulation Element, and Exhibit 3-3 illustrates the City of Moreno Valley General Plan roadway cross-sections.

3.2.2 CITY OF PERRIS

The roadway classifications and planned (ultimate) roadway cross-sections of the major roadways within the City of Perris as identified in the City of Perris General Plan Circulation Element are described subsequently. The circulation plan and proposed roadway cross-sections defined within the City of Perris are shown on Exhibits 3-4 and 3-5.

3.2.3 COUNTY OF RIVERSIDE / MARCH JOINT POWERS AUTHORITY

The roadway classifications and planned (ultimate) roadway cross-sections of the major roadways within the study area, as identified on the Riverside County General Plan Circulation Element, are described subsequently. Exhibit 3-6 shows the Riverside County General Plan Circulation Element, and Exhibit 3-7 illustrates the Riverside County General Plan roadway cross-sections.

3.3 TRUCK ROUTES

While the City of Moreno Valley's General Plan recognizes the trucking industry and the importance of the region's role in the movement of goods, there are no truck routes defined within the County. Exhibit 3-8 shows the existing truck routes throughout the City of Moreno Valley. Based on the exhibit, the following roadways within the study area are identified as truck routes: Cactus Avenue, Elsworth Street, Frederick Street, Graham Street, Heacock Street, Perris Boulevard, Indian Street, San Michele Road, and Nandina Avenue. The City of Perris also has a designated truck route map in their General Plan, which is shown on Exhibit 3-9. As shown, Harley Knox Boulevard, east of the I-215 Freeway, Perris Boulevard, and Indian Street, are identified as designated City of Perris truck routes within the study area.

The development of the proposed Project would require a modification to the Existing Truck Routes, as shown on Exhibit 3-8 to extend the existing truck route along Indian Street from San Michele to Driveway 6 to the north. The proposed modification is only necessary if and when the Indian Street bridge is constructed over the Perris Valley Storm Drain Channel to provide access to trucks serving Building 1.

3.4 TRANSIT SERVICE

The study area is currently served by the Riverside Transit Authority (RTA), a public transit agency serving the unincorporated Riverside County region. As shown on Exhibit 3-10, there are currently 2 existing bus routes that serve the roadways within the study area in close proximity to the proposed Project. RTA Route 19 serves Perris Boulevard north of Iris Avenue, Iris Avenue east of Perris Boulevard, Perris Boulevard south of Krameria Avenue, and Krameria Avenue east of Perris Boulevard. RTA Route 20 runs along Indian Street between Iris Avenue and Krameria Avenue and along both Krameria Avenue and Iris Avenue east of Indian Street. However, RTA Route 20 only runs along this route when schools are in session.

Transit service is reviewed and updated by RTA periodically to address ridership, budget and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate. As such, it is recommended that the applicant work in conjunction with RTA to potentially provide bus service to the site.

3.5 BICYCLE & PEDESTRIAN FACILITIES

In an effort to promote alternative modes of transportation, the City of Moreno Valley also includes a trails and bikeway system. The City of Moreno Valley trails and bikeway system are shown on Exhibit 3-11 and Exhibit 3-12. There is a Class I bike path/multi-purpose trail planned near the vicinity of the proposed Project along the Perris Valley Storm Drain Channel. Class I bikeways are separated from the road. There are Class II bike lanes proposed along Heacock Street, Iris Street, Indian Street, and Krameria Avenue near the vicinity of the Project. Class II bike lanes are striped on the road. Indian Street is proposed to have Class III bike lanes south of the Perris Valley Storm Drain Channel. Class III bike lanes are bike lanes to be shared with vehicles, but are typically signed although not striped.

URBAN CROSSROADS

Field observations conducted in April 2015 indicate nominal pedestrian and bicycle activity within the study area. Exhibit 3-13 illustrates the existing pedestrian facilities, including sidewalks and crosswalk locations.

3.6 EXISTING (2015) TRAFFIC COUNTS

The intersection LOS analysis is based on the traffic volumes observed during the peak hour conditions using traffic count data collected in April 2015. The following peak hours were selected for analysis:

- Weekday AM Peak Hour (peak hour between 7:00 AM and 9:00 AM)
- Weekday PM Peak Hour (peak hour between 4:00 PM and 6:00 PM)

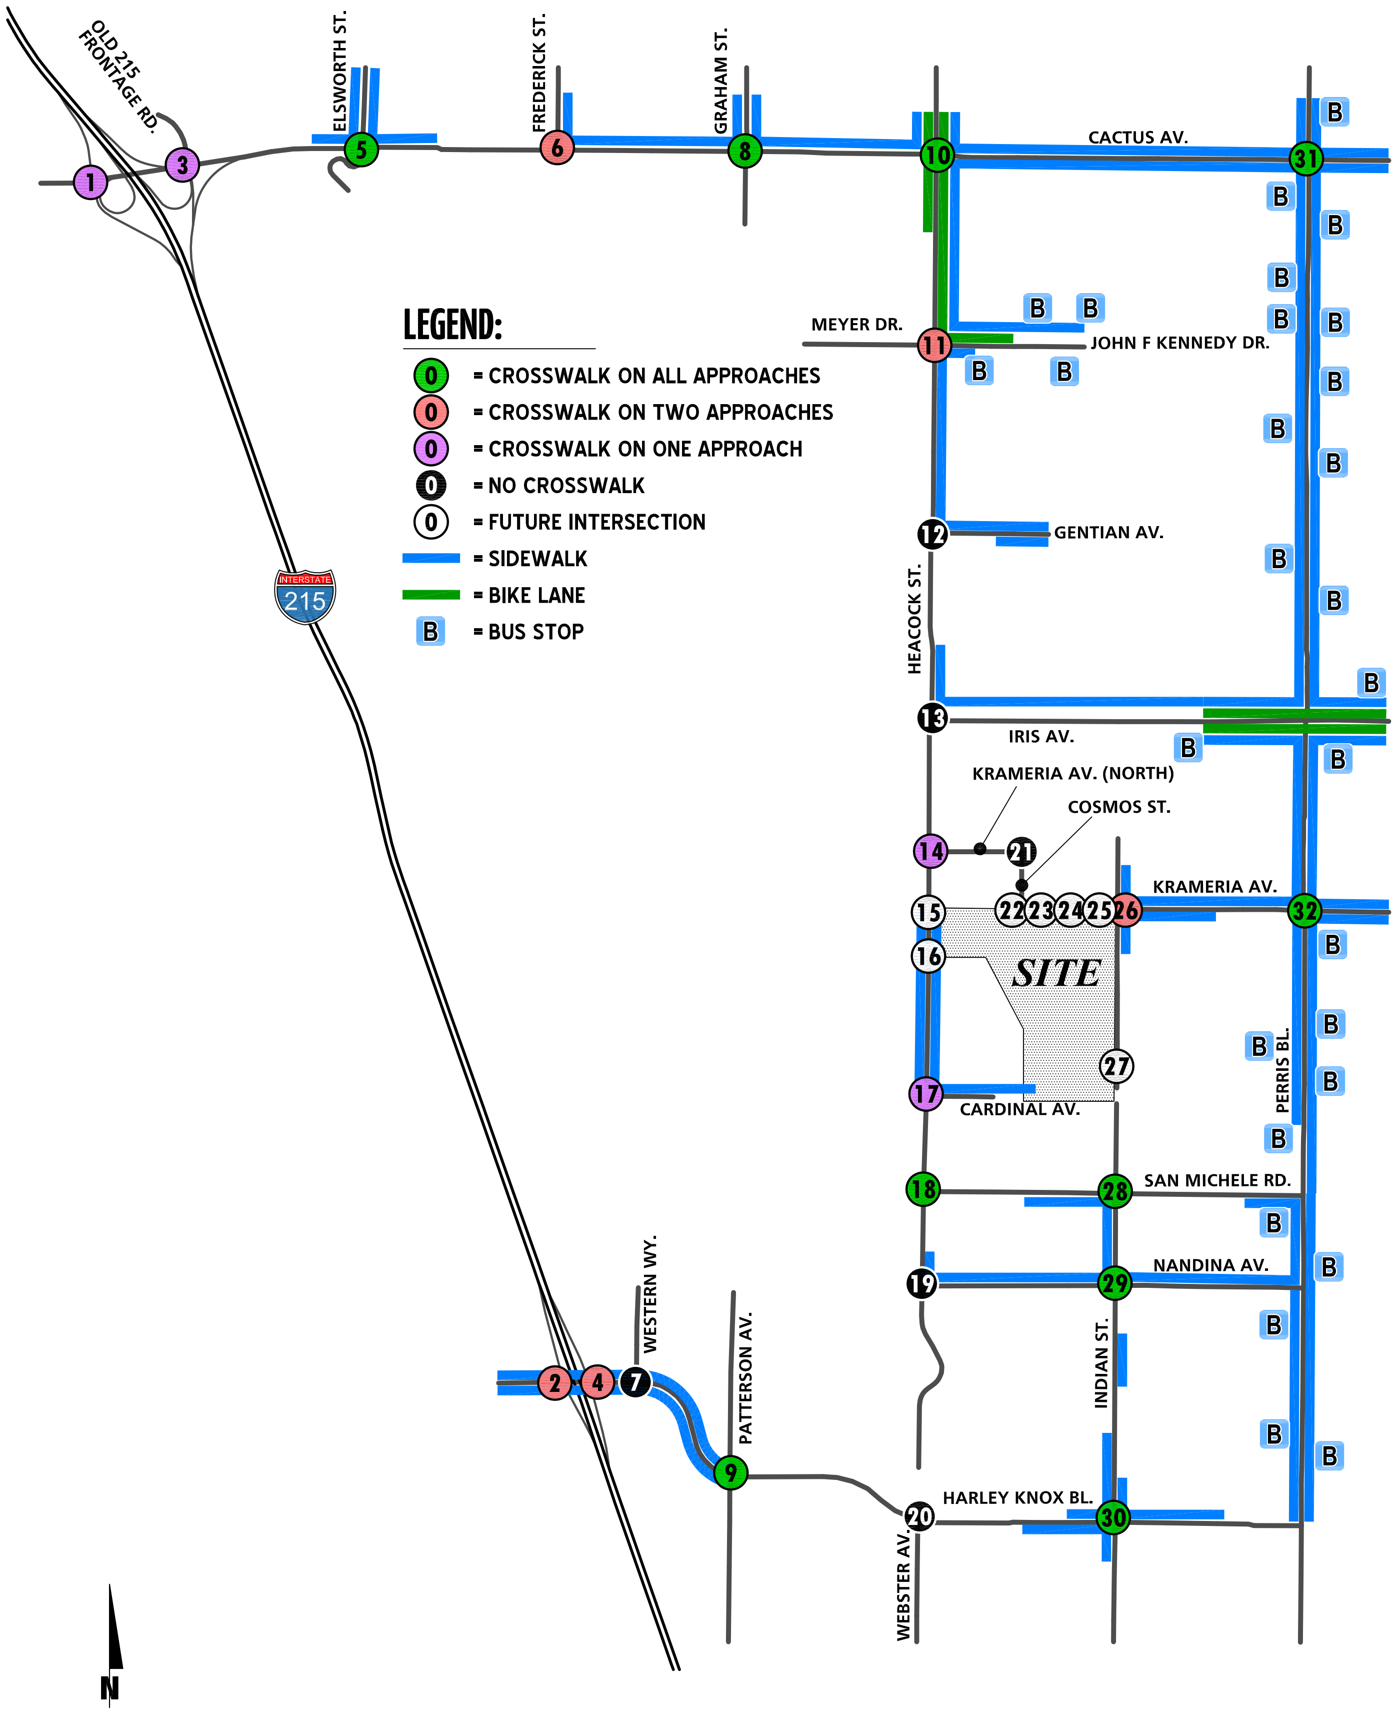
The weekday AM and weekday PM peak hour count data is representative of typical weekday peak hour traffic conditions in the study area. There were no observations made in the field that would indicate atypical traffic conditions on the count dates, such as construction activity or detour routes and near-by schools were in session and operating on normal schedules. The City of Perris is currently widening Harley Knox Boulevard from east of Western Way to Perris Boulevard. As such, older historical counts have been utilized for any intersections that were closed or operating under unusual circumstances. A growth factor of 2 percent per year has been applied to these intersections to represent 2015 traffic conditions. This methodology was reviewed and approved by City staff.

The raw manual peak hour turning movement traffic count data sheets are included in Appendix 3.1. These raw turning volumes have been flow conserved between intersections with limited access, no access and where there are currently no uses generating traffic (e.g., between ramp-to-arterial intersections, etc.). The traffic counts collected in April 2015 include the vehicle classifications as shown below:

- Passenger Cars
- 2-Axle Trucks
- 3-Axle Trucks
- 4 or More Axle Trucks

To represent the impact large trucks, buses and recreational vehicles have on traffic flow; all trucks were converted into PCEs. By their size alone, these vehicles occupy the same space as two or more passenger cars. In addition, the time it takes for them to accelerate and slow-down is also much longer than for passenger cars, and varies depending on the type of vehicle and number of axles. For the purpose of this analysis, a PCE factor of 1.5 has been applied to 2-axle trucks, 2.0 for 3-axle trucks and 3.0 for 4+-axle trucks to estimate each turning movement. These factors are consistent with the values recommended for use in the San Bernardino County CMP and are in excess of the factor recommended for use in the County of Riverside traffic study guidelines. (11) Although the County of Riverside has a recommended PCE factor of 2.0, the San Bernardino County CMP PCE factors have been utilized in an effort to conduct a more conservative analysis.

EXHIBIT 3-13: EXISTING PEDESTRIAN FACILITIES



Existing weekday average daily traffic (ADT) volumes on arterial highways throughout the study area are shown on Exhibit 3-14. Where actual 24-hour tube count data was not available, Existing ADT volumeswere based upon factored intersection peak hour counts collected by Urban Crossroads, Inc. using the following formula for each intersection leg:

Weekday PM Peak Hour (Approach Volume + Exit Volume) x 11.3847 = Leg Volume

A comparison of the PM peak hour and daily traffic volumes of various roadway segments within the study area indicated that the peak-to-daily relationship is approximately 8.78 percent. As such, the above equation utilizing a factor of 11.3847 estimates the ADT volumes on the study area roadway segments assuming a peak-to-daily relationship of approximately 8.78 percent (i.e., 1/0.0878 = 11.3847) and was assumed to sufficiently estimate average daily traffic (ADT) volumes for planning-level analyses. Existing weekday AM and weekday PM peak hour intersection volumes (in PCE) are also shown on Exhibit 3-14.

3.7 INTERSECTION OPERATIONS ANALYSIS

Existing peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2.2 Intersection Capacity Analysis of this report. The intersection operations analysis results are summarized in Table 3-1 which indicates that the existing study area intersections are currently operating at an acceptable LOS during the peak hours (i.e., LOS D or better), with the exception of the following:

ID	Intersection Location
12	Heacock Street / Gentian Avenue – LOS F PM peak hour only
13	Heacock Street / Iris Avenue – LOS E PM peak hour only

Consistent with Table 3-1, a summary of the peak hour intersection LOS for Existing conditions are shown on Exhibit 3-15. The intersection operations analysis worksheets are included in Appendix 3.2 of this TIA.

3.8 EXISTING CONDITIONS ROADWAY SEGMENT CAPACITY ANALYSIS

The City of Moreno Valley General Plan Circulation Element provides roadway volume capacity values presented previously on Table 2-3. The roadway segment capacities are approximate figures only, and are used at the General Plan level to assist in determining the roadway functional classification (number of through lanes) needed to meet traffic demand. Table 3-2 provides a summary of the Existing (2015) conditions roadway segment capacity analysis based on the City of Moreno Valley and City of Perris General Plan Circulation Element Roadway Segment Capacity/ (LOS) Thresholds identified previously on Table 2-3. As shown on Table 3-2, all but 1 of the study area roadway segments currently operate at an acceptable LOS based on the City's planning level daily roadway capacity thresholds.

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; >> = Free-Right Turn Lane; d= Defacto Right Turn Lane

[2] Per the 2010 Highway Capacity Manual, overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

[3] CSS = Cross-street Stop; TS = Traffic Signal; AWS= All ways stop

48		North of Harley Knox Boulevard	4D	35,900	13,201	0.37	A	D

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] These maximum roadway capacities have been obtained from the City of Moreno Valley's Transportation Division's Traffic Impact Analysis Preparation Guidelines (August 2007), Table CE-9 of the City of Perris General Plan Circulation Element, or Figure C-2 of the County of Riverside General Plan Circulation Element.

[2] V/C = Volume to Capacity Ratio

[3] LOS = Level of Service

As shown below, the following roadway segment is currently operating at an unacceptable LOS based on daily roadway segment capacities:

ID	Street	Segment
34	Heacock Street	South of Gentian Avenue – LOS F

3.9 OFF-RAMP QUEUING ANALYSIS

A queuing analysis was performed for the off-ramps at the I-215 Freeway Cactus Avenue and Harley Knox Boulevard interchanges to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially "spill back" onto the I-215 Freeway mainline. Queuing analysis findings are presented in Table 3-3. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline. As shown on Table 3-3, there are no movements that are currently experiencing queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows. Worksheets for Existing traffic conditions off-ramp queuing analysis are provided in Appendix 3.3.

3.10 TRAFFIC SIGNAL WARRANTS ANALYSIS

Traffic signal warrants for Existing traffic conditions are based on existing peak hour intersection turning volumes. The following study area intersections currently warrant a traffic signal for Existing traffic conditions:

ID	Intersection Location	Jurisdiction	CMP?
7	Western Way / Harley Knox Boulevard	Perris	No
12	Heacock Street / Gentian Avenue	Moreno Valley, March JPA	No
13	Heacock Street / Iris Avenue	Moreno Valley, March JPA	No

Existing conditions traffic signal warrant analysis worksheets are provided in Appendix 3.4.

3.11 BASIC FREEWAY SEGMENT ANALYSIS

Existing mainline directional volumes for the weekday AM and PM peak hours are provided on Exhibit 3-16. As shown on Table 3-4, the basic freeway segments evaluated for the purposes of this TIA were found to operate at an acceptable LOS (i.e., LOS C or better) during the peak hours. Existing basic freeway segment analysis worksheets are provided in Appendix 3.5.

3.12 FREEWAY MERGE/DIVERGE ANALYSIS

Ramp merge and diverge operations were also evaluated for Existing conditions and the results of this analysis are presented in Table 3-5. As shown in Table 3-5, the freeway ramp merge and diverge areas currently operate at acceptable LOS (i.e., LOS D or better). Existing freeway ramp junction operations analysis worksheets are provided in Appendix 3.6.

Table 3-3

Peak Hour Off-Ramp Queuing Analysis for Existing (2015) Conditions

Intersection	Movement	Stacking Distance (Feet)	95th Percentile Stacking Distance Required (Feet)		Acceptable?[1]	
			AM Peak Hour	PM Peak Hour	AM	PM
I-215 SB Ramps / Cactus Av.						
	NBR	1,850	51	285 [2]	Yes	Yes
	SBR	1,115	87	0	Yes	Yes
I-215 SB Ramps / Harley Knox Bl.						
	SBL/T	1,330	382	336	Yes	Yes
	SBR	270	44	59	Yes	Yes
I-215 NB Ramps / Cactus Av.						
	NBL	145	321 [2]	26	Yes[3]	Yes
	NBT	1,650	164	26	Yes	Yes
I-215 NB Ramps / Harley Knox Bl.						
	NBL/T	1,120	13	22	Yes	Yes
	NBR	265	47	51	Yes	Yes

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

[2] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

[3] Adjacent through lane has sufficient storage to accommodate any spillover from the northbound left turn lane without spilling back and affecting the I-215 Freeway mainline.

Table 3-4

Basic Freeway Segment Analysis for Existing (2015) Conditions

Freeway	Direction	Mainline Segment	Lanes[1]	Volume		Truck %	Truck %	Density[2]		LOS	
				AM	PM	AM	PM	AM	PM	AM	PM
I-215 Freeway	SB	North of Cactus Avenue	4	4,985	5,540	5%	5%	19.9	22.5	C	C
		South of Cactus Avenue	4	4,693	5,354	4%	4%	18.6	21.5	C	C

3.13 RECOMMENDED IMPROVEMENTS

3.13.1 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

Improvement strategies have been recommended at intersections that have been identified as deficient in an effort to reduce each location's peak hour delay and improve the associated LOS grade to an acceptable LOS (LOS D or better). The effectiveness of the recommended improvement strategies discussed below to address Opening Year Cumulative traffic deficiencies is presented in Table 3-6.

Worksheets for Existing (2015) conditions, with improvements, HCM calculation worksheets are provided in Appendix 3.7.

3.13.2 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON ROADWAY SEGMENTS

As noted in Section 2.3 *Roadway Segment Capacity Analysis*, daily roadway capacities are "rule of thumb" estimates for planning purposes and are affected by such factors as intersections (spacing, configuration and control features), degree of access control, roadway grades, design geometrics (horizontal and vertical alignment standards), sight distance, vehicle mix (truck and bus traffic) and pedestrian bicycle traffic. Where the ADT-based roadway segment analysis indicates a deficiency (unacceptable LOS), a review of the more detailed peak hour intersection analysis have been undertaken. The more detailed peak hour intersection analysis explicitly accounts for factors that affect roadway capacity. Therefore, roadway segment widening is typically only recommended if the peak hour intersection analysis indicates the need for additional through lanes.

As shown on Table 3-6, the Existing (2015) peak hour analysis indicates that the adjacent study area intersections on either side of the deficient roadway segment of Heacock Street between Gentian Avenue and Iris Avenue are anticipated to operate at acceptable LOS with the recommended intersection improvements. As such, roadway segment widening does not appear necessary to address the deficiencies at the identified roadway segment.

3.13.3 RECOMMENDED IMPROVEMENTS TO ADDRESS OFF-RAMP QUEUES

As shown previously on Table 3-3, there are no peak hour queuing issues at the I-215 Freeway at Cactus Avenue or Harley Knox Boulevard interchanges. As such, no improvements have been recommended.

3.13.4 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON FREEWAY FACILITIES

As shown previously on Table 3-4 and Table 3-5, there are no deficient freeway mainline segments or merge/diverge ramp junctions. As such, no improvements have been recommended.

Table 3-6

Intersection Analysis for Existing (2015) Conditions With Improvements

			Intersection Approach Lanes[1]												Delay[2] (secs.)		Level of Service	
		Traffic	Northbound			Southbound			Eastbound			Westbound						
#	Intersection	Control[3]	L	T	R	L	T	R	L	T	R	L	T	R	AM	PM	AM	PM
12	Heacock St / Gentian Av																	
	- Without Improvements	CSS	0	1	1	1	1	0	0	0	0	0	1	d	22.8	**58.0**	C	**F**
	- With Improvements	**TS**	0	1	1	1	1	0	0	0	0	0	1	d	12.4	14.7	B	B
13	Heacock St / Iris Av																	
	- Without Improvements	AWS	0	1	0	1	1	0	0	0	0	1	0	d	15.2	**37.5**	C	**E**
	- With Improvements	**TS**	0	1	0	1	1	0	0	0	0	1	0	d	26.7	38.5	C	D

[1] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for rig turning vehicles to travel outside the through lanes
L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; >> = Free-Right Turn Lane; d= Defacto Right Turn Lane; **1** = Improvement

[2] Per the 2010 Highway Capacity Manual, overall average intersection delay and level of service are shown for intersections with a traffic signal c all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (o movements sharing a single lane) are shown.

[3] CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal

This Page Intentionally Left Blank

4 PROJECTED FUTURE TRAFFIC

This section presents the traffic volumes estimated to be generated by the Project, as well as the Project's trip assignment onto the study area roadway network. The Project is proposed to consist of 1,351,770 square feet (sf) of high-cube warehouse use/distribution center within a single building (Building 1) and 385,748 square feet of general light industrial use. Building 2 located on the southwest corner of Cosmos Street and Krameria Avenue is proposed to consist of 122,516 sf of general light industrial use, Building 3 located at the eastern terminus of Cardinal Avenue is proposed to consist of 97,222 sf of general light industrial use, and Building 4 located on the east of Heacock Street and south of Krameria Avenue (North) is proposed to consist of 166,010 sf of general light industrial use. Per the City's traffic study guidelines, the Opening Year will have a 5 year minimum horizon. As such, the Opening Year analysis will assess 2020 traffic conditions.

The Project is proposed to have access on Heacock Street via Driveways 1 and 2, Cardinal Avenue, Krameria Avenue via a future southern extension of Cosmos Street and Driveways 3 through 5, and Indian Street via Driveway 6. All Project access points are assumed to allow full-access. Driveways 2, 3, and 5 are proposed to allow for truck access, while passenger cars would access all proposed driveways. Regional access to the project site is provided via the I-215 Freeway at Cactus Avenue and Harley Knox Boulevard interchanges.

4.1 PROJECT TRIP GENERATION

Trip generation represents the amount of traffic which is both attracted to and produced by a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to and produced by the specific land uses being proposed for a given development. The ITE Trip Generation manual is a nationally recognized source for estimating site specific trip generation. ITE's most current version of the Trip Generation manual is based on more than 4,800 trip generation studies submitted to ITE by public agencies, consulting firms, universities/colleges, developers, associations and local sections/districts/student chapters of ITE. (3)

4.1.1 HIGH-CUBE WAREHOUSE/DISTRIBUTION CENTER LAND USE

High-cube warehouse/distribution centers (ITE Land Use Code 152) are a unique land use type within the larger, more generalized industrial land use category. ITE's most recent edition of the *Trip Generation* manual (ITE 9th Edition), published in 2012, defines "high-cube warehouses" as *"…used for storage of materials, goods and merchandise prior to their distribution to retail outlets, distribution centers or other warehouses. These facilities are typically characterized by ceiling heights of at least 24 feet with small employment counts due to a high level of mechanization."* The average square footage for the sites surveyed for high-cube warehouse/distribution center (Land Use 152) use is above 500,000 square feet. The number of sites observed in the compilation of this data ranges from 57-70 sites of which more than 20 sites exceed 1,000,000 square feet in gross floor area. The weighted average daily trip generation rate for high-cube warehouse (Land Use 152) use is 1.68 trips per thousand square feet (TSF).

The ITE *Trip Generation* manual includes data regarding the types of vehicles that are generated (passenger cars and trucks), but provides no guidance on vehicle mix (different sizes of trucks). While trucks, as a percentage of total traffic, has been based on the ITE *Trip Generation* manual, data regarding the vehicle mix has been obtained from a separate report; the South Coast Air Quality Management District's (SCAQMD) recent Warehouse Truck Trip Study. (12) (13) The SCAQMD is currently recommending the use of the ITE Trip Generation manual in conjunction with their truck mix by axle-type to better quantify trip rates associated with local warehouse and distribution projects, as truck emission represent more than 90 percent of air quality impacts from these projects. This recommended procedure has been utilized for the purposes of this analysis in effort to be consistent with other technical studies prepared for the Project.

As noted on Table 4-1, refinements to the raw trip generation estimates have been made to provide a more detailed breakdown of trips between passenger cars and trucks. The percentage of trucks has been determined from the table shown on page 267 of the ITE *Trip Generation* manual. As shown on page 267, the truck trip generation rate for weekday daily traffic is 0.64 or 38.1% of the total traffic. Similarly, the truck trip generation rate for the weekday AM peak hour is 0.03 (27.3% of the total traffic) and 0.04 (or 33.3% of the total traffic) for the weekday PM peak hour.

Trip generation for heavy trucks was further broken down by truck type (or axle type). The total truck percentage is comprised of 3 different truck types: 2-axle, 3-axle, and 4+-axle trucks. For the purposes of this analysis, the percentage of trucks, by axle type, were obtained from the SCAQMD interim recommended truck mix. The SCAQMD has recently performed surveys of existing facilities and compiled the data to provide interim guidance on the mix of heavy trucks for these types of high-cube warehousing/distribution facilities. Based on this interim guidance from the SCAQMD, the following truck fleet mix was utilized for the purposes of estimating the truck trip generation for the site: 22.0% of the total trucks as 2-axle trucks, 17.7% of the total trucks as 3-axle trucks, and 60.3% of the total trucks as 4+-axle trucks. Lastly, PCE factors were applied to the trip generation rates for heavy trucks (large 2-axles, 3-axles, 4+-axles).

4.1.2 GENERAL LIGHT INDUSTRIAL LAND USE

General light industrial (ITE Land Use Code 110) has been used to derive site specific trip generation estimates for Buildings 2 through 4. ITE's most recent edition of the *Trip Generation* manual (ITE 9th Edition), published in 2012, defines "light industrial facilities" as "*…free-standing facilities devoted to a single use. The facilities have an emphasis on activities other than manufacturing and typically have minimal office space. Typical light industrial activities include printing, material testing, and assembly of data processing equipment.*" The average square footage for the sites surveyed for general light industrial (Land Use 110) use is above 200,000 square feet. The number of sites observed in the compilation of this data ranges from 18-29 sites of which the majority are less than 500,000 square feet in gross floor area. The weighted average daily trip generation rate for general light industrial (Land Use 110) use is 6.97 trips per thousand square feet (TSF).

Table 4-1

Project Trip Generation Rates (in PCE)

Land Use[1]	Units[2]	ITE LU Code	AM Peak Hour In	AM Peak Hour Out	AM Peak Hour Total	PM Peak Hour In	PM Peak Hour Out	PM Peak Hour Total	Daily

[1] Trip Generation Source: Institute of Transportation Engineers (ITE),Trip Generation Manual, Ninth Edition (2012).

[2] TSF = thousand square feet

[3] Light Industrial Vehicle Mix Source: City of Fontana Truck Trip Generation Study for LU 150, August 2003. PCE rates are per SANBAG.

[4] High Cube Warehouse Vehicle Mix Source: Total truck percentage source from ITE Trip Generation manual.
Truck mix (by axle type) source from SCAQMD. PCE rates are per SANBAG.
AM peak hour = 72.7% passenger cars, 6.01% 2-Axle trucks, 4.83% 3-Axle trucks, 16.46% 4-Axle trucks
PM peak hour = 66.7% passenger cars, 7.33% 2-Axle trucks, 5.89% 3-Axle trucks, 20.08% 4-Axle trucks
ADT = 61.9% passenger cars, 8.38% 2-Axle trucks, 6.74% 3-Axle trucks, 22.98% 4-Axle trucks

The ITE *Trip Generation* manual includes very limited data regarding the types of vehicles that are generated for general light industrial uses (passenger cars and various sizes of trucks). As such, data regarding the vehicle mix has been obtained from a separate report; the City of Fontana *Truck Trip Generation Study* (August 2003) for the general light industrial uses proposed as part of the Project. (14) Buildings 2 through 4 have been identified as light industrial. The "Light Industrial" vehicle mix data has been utilized for all 3 buildings.

Trip generation rates used to estimate Project traffic are shown in Table 4-1 in both PCE and actual vehicles. A summary of the Project's trip generation based on PCE is shown in Table 4-2 while the trip generation based on actual vehicles is shown on Table 4-3 (for comparative purposes). For purposes of this analysis, ITE land use code 152 (High-Cube Warehousing) and land use code 110 (General Light Industrial) have been used to derive site specific trip generation estimates. In order to accurately reflect the impact that heavy trucks would have on the street system, Project trips have been further broken down between passenger cars and trucks for each of the peak hours and weekday daily trip generation

As directed by the City of Moreno Valley and consistent with standard traffic engineering practice in Southern California, PCE factors have been utilized due to the expected heavy truck component for the proposed Project uses. PCEs allow the typical "real-world" mix of vehicle types to be represented as a single, standardized unit, such as the passenger car, to be used for the purposes of capacity and level of service analyses. These PCE factors are consistent with the values recommended by the San Bernardino County CMP and are accepted factors in the City of Moreno Valley. (11) Although the County of Riverside has a recommended PCE factor of 2.0, the San Bernardino County CMP PCE factors have been utilized in an effort to conduct a more conservative analysis.

As shown on Table 4-2, the proposed Project is anticipated to generate a net total of 6,975 PCE trip-ends per day with 660 net PCE AM peak hour trips and 718 net PCE PM peak hour trips.

4.2 PROJECT TRIP DISTRIBUTION

Trip distribution is the process of identifying the probable destinations, directions or traffic routes that will be utilized by Project traffic. The potential interaction between the planned land uses and surrounding regional access routes are considered, to identify the route where the Project traffic would distribute.

The Project trip distribution was developed based on anticipated travel patterns to and from the Project site for both passenger cars and truck traffic. The truck trip distribution patterns have been developed based on the anticipated travel patterns for the high-cube warehousing and light industrial trucks. The Project trip distribution patterns for both passenger cars and trucks were developed based on an understanding of existing travel patterns in the area, the geographical location of the site, and the site's proximity to the regional arterial and state highway system.

Table 4-2

Project Trip Generation Summary (in PCE)

[1] TSF = thousand square feet

[2] Vehicle Mix Source: City of Fontana Truck Trip Generation Study for LU 110, August 2003. PCE rates are per SANBAG.

Vehicle Mix Source: Total truck percentage source from ITE Trip Generation manual. Truck mix (by axle type) source from SCAQMD.

[3] TOTAL NET TRIPS (Actual Vehicles) = Passenger Cars + Net Truck Trips (Actual Vehicles).

[4] The trip generation in this table has been provided for informational purposes only. The trip generation shown in Table 4-2 has been utilized for the purposes of this analysis.

The passenger car and truck trip distributions utilized for the purposes of this analysis are shown on the following exhibits:

- **Exhibit 4-1:** Project (Without Indian Street Bridge) Passenger Car Trip Distribution (to be utilized for E+P Without Indian Street Bridge and Opening Year Cumulative traffic conditions). This trip distribution pattern assumes the currently existing roadway network.
- **Exhibit 4-2:** Project (Without Indian Street Bridge) Truck Trip Distribution (to be utilized for E+P Without Indian Street Bridge and Opening Year Cumulative traffic conditions). This trip distribution pattern assumes the currently existing roadway network.
- **Exhibit 4-3:** Project (With Indian Street Bridge) Passenger Car Trip Distribution (to be utilized for E+P With Indian Street). This trip distribution pattern assumes the Indian Street Bridge over the Perris Valley Storm Drain Channel.
- **Exhibit 4-4:** Project (With Indian Street Bridge) Truck Trip Distribution (to be utilized for E+P With Indian Street). This trip distribution pattern assumes the Indian Street Bridge over the Perris Valley Storm Drain Channel. As shown on Exhibit 4-4, the distribution of trucks with the proposed extension of Indian Street would require the City's truck routes to be extended to the north from its current terminus on Indian Street to Driveway 6.
- **Exhibit 4-5:** General Plan Buildout Project (Passenger Car) Trip Distribution (to be utilized for General Plan Buildout traffic conditions). This distribution pattern assumes both the Indian Street Bridge over the Perris Valley Storm Drain Channel and the Heacock Street extension at Harley Knox Boulevard are both in place.
- **Exhibit 4-6:** General Plan Buildout Project (Truck) Trip Distribution (to be utilized for General Plan Buildout traffic conditions). This distribution pattern assumes both the Indian Street Bridge over the Perris Valley Storm Drain Channel and the Heacock Street extension at Harley Knox Boulevard are both in place. As shown on Exhibit 4-6, the distribution of trucks with the proposed extension of Indian Street would require the City's truck routes to be extended to the north from its current terminus on Indian Street to Driveway 6.

4.3 MODAL SPLIT

The traffic reducing potential of public transit, walking or bicycling have not been considered in this TIA. Essentially, the traffic projections are "conservative" in that these alternative travel modes might be able to reduce the forecasted traffic volumes (employee trips only).

4.4 PROJECT TRIP ASSIGNMENT

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, Project ADT and peak hour intersection turning movement volumes are shown on the following Exhibits:

- Exhibit 4-7: Project Only (Without Indian Street Bridge) Traffic Volumes (in PCE)
- Exhibit 4-8: Project Only (With Indian Street Bridge) Traffic Volumes (in PCE)
- Exhibit 4-9: Project Only (General Plan Buildout) Traffic Volumes (in PCE)

URBAN CROSSROADS

4.5 BACKGROUND TRAFFIC

Future year traffic forecasts have been based upon background (ambient) growth at 2% per year for 2020 traffic conditions. The ambient growth factor is intended to approximate regional traffic growth. This ambient growth rate is added to existing traffic volumes to account for area-wide growth not reflected by cumulative development projects. Ambient growth has been added to daily and peak hour traffic volumes on surrounding roadways, in addition to traffic generated by the development of future projects that have been approved but not yet built and/or for which development applications have been filed and are under consideration by governing agencies.

The currently adopted SCAG 2012 RTP (April 2012) growth forecasts for the unincorporated areas of the City of Moreno Valley identifies projected growth in population of 187,400 in 2008 to 255,200 in 2035, or a 36.2 percent increase over the 27 year period. (5) The change in population equates to roughly a 1.15 percent growth rate compounded annually. Similarly, growth over the same 27 year period in households is projected to increase by 42.5 percent, or 1.32 percent annual growth rate. Finally, growth in employment over the same 27 year period is projected to increase by 99.4 percent, or a 2.59 percent annual growth rate.

Based on a comparison of Existing traffic volumes to the General Plan Buildout (Post 2035) forecasts, the average growth rate is estimated at approximately 5.68 percent compounded annually between Existing and General Plan Buildout (Post 2035) traffic conditions. The annual growth rate at each individual intersection is not lower than 2.49 percent compounded annually to as high as 10.64 percent compounded annually over the same time period. Therefore, the annual growth rate utilized for the purposes of this analysis would appear to conservatively approximate the anticipated regional growth in traffic volumes in the City of Moreno Valley for both Opening Year Cumulative and General Plan Buildout (Post 2035) traffic conditions, especially when considered along with the addition of project-related traffic. As such, the growth in traffic volumes assumed in this traffic impact analysis would tend to overstate as opposed to understate the potential impacts to traffic and circulation.

4.6 CUMULATIVE DEVELOPMENT TRAFFIC

CEQA guidelines require that other reasonably foreseeable development projects which are either approved or being processed concurrently in the study area also be included as part of a cumulative analysis scenario. A cumulative project list was developed for the purposes of this analysis through consultation with planning and engineering staff from the City of Moreno Valley, the cumulative project list includes known and foreseeable projects that are anticipated to contribute traffic to the study area intersections. Adjacent jurisdictions of the County of Riverside, March JPA, City of Riverside, and the City of Perris have also been contacted to obtain the most current list of cumulative projects from their respective jurisdictions. The correspondence and cumulative projects provided by each of the applicable jurisdictions are provided in Appendix 4.1.

Where applicable, cumulative projects anticipated to contribute measurable traffic (i.e. 50 or more peak hour trips) to study area intersections have been manually added to the study area network to generate Opening Year Cumulative forecasts. In other words, this list of cumulative development projects has been reviewed to determine which projects would likely contribute measurable traffic through the study area intersections (e.g., those cumulative projects in close proximity to the proposed Project). For the purposes of this analysis, the cumulative projects that were determined to affect one or more of the study area intersections are shown on Exhibit 4-10 and listed on Table 4-4 have been considered for inclusion.

Although it is unlikely that the majority of these cumulative projects would be fully built and occupied by Year 2020, these have been considered in an effort to conduct a conservative analysis and overstate and opposed to understate potential traffic impacts. Any other cumulative projects that are not expected to contribute measurable traffic to study area intersections since the traffic would dissipate due to the distance from the Project site and study area intersections, have not been accounted for. Any additional traffic generated by other projects not on the cumulative projects list is accounted for through background ambient growth factors that have been applied to the peak hour volumes at study area intersections as discussed in Section 4.5 *Background Traffic*. Cumulative development project ADT and peak hour intersection turning movement volumes are shown on Exhibit 4-11.

4.7 NEAR-TERM TRAFFIC FORECASTS

To provide a comprehensive assessment of potential transportation network deficiencies, two types of analyses, “buildup” and “buildout”, were performed in support of this work effort. The “buildup” method was used to approximate the Opening Year Cumulative traffic forecasts, and is intended to identify the cumulative impacts on both the existing and planned near-term circulation system. The Opening Year Cumulative traffic forecasts include background traffic, traffic generated by other cumulative development projects within the study area, and the traffic generated by the proposed Project. The “buildout” approach is used to forecast the General Plan Buildout Without and With Project conditions of the study area.

The “buildup” approach combines existing traffic counts with a background ambient growth factor to forecast the near-term 2020 traffic conditions. An ambient growth factor of 10.41% (2020) accounts for background (area-wide) traffic increases that occur over time, up to the year 2020 from the year 2015 (compounded two percent per year growth over a five year period). Traffic volumes generated by the Project are then added to assess the EAP and Opening Year Cumulative traffic conditions. The 2020 roadway network is similar to the existing conditions roadway network with the exception of future roadways and intersections proposed to be developed by the Project.

[3] Source: Cactus Avenue and Commerce Center Drive Commercial Center TIA, Urban Crossroads, Inc., December 9, 2008 (Revised).

[4] Source: March Lifecare Campus Specific Plan Traffic Impact Analysis, Mountain Pacific, Inc., May 2009 (Revised).

As noted previously, an analysis of the proposed Project at various development tiers has been assessed for the purposes of this traffic study. The near-term traffic analysis includes the following traffic conditions, with the various traffic components:

- Opening Year Cumulative (2020)
  - Existing 2015 counts
  - Ambient growth traffic (10.41%)
  - Cumulative Development Project traffic
  - Project traffic

4.8 GENERAL PLAN BUILDOUT (POST 2035) VOLUME DEVELOPMENT

The General Plan Buildout (Post 2035) With Project traffic conditions were derived from the Riverside County Transportation Analysis Model (RivTAM) modified to represent General Plan Buildout conditions for the City of Moreno Valley using accepted procedures for model forecast refinement and smoothing. The traffic forecasts reflect the area-wide growth anticipated between Existing conditions and General Plan Buildout conditions.

In most instances the traffic model zone structure is not designed to provide accurate turning movements along arterial roadways unless refinement and reasonableness checking is performed. Therefore, the General Plan Buildout With Project peak hour forecasts were refined using the model derived long-range forecasts, along with existing peak hour traffic count data collected at each analysis location in April 2015. Future estimated peak hour traffic data was used for new intersections and intersections with an anticipated change in travel patterns to further refine the General Plan Buildout With Project peak hour forecasts.

The refined future peak hour approach and departure volumes obtained from the model output data are then entered into a spreadsheet program consistent with the National Cooperative Highway Research Program (NCHRP Report 255), along with initial estimates of turning movement proportions. A linear programming algorithm is used to calculate individual turning movements which match the known directional roadway segment forecast volumes computed in the previous step. This program computes a likely set of intersection turning movements from intersection approach counts and the initial turning proportions from each approach leg.

Typically, the model growth is prorated and is subsequently added to the existing (base validation) traffic volumes to represent Long Range traffic conditions. However, review of the resulting model growth indicates negative growth for several study area intersections. In an effort to conduct a conservative analysis, reductions to traffic forecasts from either Existing or Opening Year Cumulative traffic conditions were not assumed as part of this analysis. As such, in conjunction with the addition of cumulative projects that are not consistent with the General Plan, additional growth has also been applied on a movement-by-movement basis, where applicable, to estimate reasonable General Plan Buildout forecasts. General Plan Buildout turning volumes were compared to Opening Year Cumulative volumes in order to ensure a minimum growth as a part of the refinement process. The minimum growth includes any additional growth between Opening Year Cumulative and General Plan Buildout traffic conditions that is not accounted for by the traffic generated by cumulative development projects and ambient growth rates assumed between Existing (2015) and Opening Year Cumulative traffic conditions. Future estimated peak hour traffic data was used for new intersections and intersections with an anticipated change in travel patterns to further refine the General Plan Buildout peak hour forecasts.

The future General Plan Buildout without Project peak hour turning movements were then reviewed by Urban Crossroads for reasonableness, and in some cases, were adjusted to achieve flow conservation, reasonable growth, and reasonable diversion between parallel routes. Flow conservation checks ensure that traffic flow between two closely spaced intersections, such as two freeway ramp locations, is verified in order to make certain that vehicles leaving one intersection are entering the adjacent intersection and that there are no unexplained loss of vehicles. The result of this traffic forecasting procedure is a series of traffic volumes which are suitable for traffic operations analysis.

The truck competent of RivTAM has data that is unusually low. As such, in an effort to conduct a conservative analysis, the presence of trucks has been accounted for based on the manual volume adjustments made to demonstrate growth above Opening Year Cumulative traffic forecasts, which are presented and evaluated in PCE (see *Section 3.6 Existing (2015) Traffic Counts* for discussion on PCE). As such, the General Plan Buildout forecasts are also assumed to be in PCE for the purposes of this analysis.

Post-processing worksheets for General Plan Buildout Without Project traffic conditions are provided in Appendix 4.2.

This Page Intentionally Left Blank

5 E+P TRAFFIC CONDITIONS

This section discusses the traffic forecasts for Existing plus Project (E+P) conditions and the resulting intersection operations, roadway segment, traffic signal warrant, and freeway mainline operations analyses.

5.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for E+P conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for E+P conditions only (e.g., intersection and roadway improvements at the Project's frontage and driveways).

5.2 E+P (WITHOUT INDIAN STREET BRIDGE) TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes plus Project traffic and assumes the existing roadway network without the Indian Street Bridge over the Perris Valley Storm Drain. Exhibit 5-1 shows the ADT and peak hour intersection turning movement volumes, which can be expected for E+P (Without Indian Street Bridge) traffic conditions.

5.3 E+P (WITH INDIAN STREET BRIDGE) TRAFFIC VOLUME FORECASTS

Pursuant to the request of City staff, the E+P analysis scenario has also been evaluated assuming the Indian Street Bridge over the Perris Valley Storm Drain. This scenario includes Existing traffic volumes plus Project traffic and assumes the Indian Street Bridge over the Perris Valley Storm Drain is in place. Exhibit 5-2 shows the ADT and peak hour intersection turning movement volumes, which can be expected for E+P (With Indian Street Bridge) traffic conditions.

5.4 INTERSECTION OPERATIONS ANALYSIS

E+P peak hour traffic operations have been evaluated, for the study area intersections based on the analysis methodologies presented in Section 2 *Methodologies* of this TIA.

5.4.1 E+P (WITHOUT INDIAN STREET BRIDGE)

The intersection analysis results are summarized in Table 5-1, the addition of Project traffic for E+P (Without Indian Street Bridge) is anticipated to result in the following additional intersection deficiency, in addition to those previously identified for Existing traffic conditions:

ID	Intersection Location
18	Heacock Street / San Michele Road – LOS E PM peak hour only

EXHIBIT 5-1 (1 OF 2): E+P (WITHOUT INDIAN STREET BRIDGE) TRAFFIC VOLUMES (IN PCE)

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] Per the 2010 Highway Capacity Manual, overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

[2] CSS = Cross-street Stop; TS = Traffic Signal: AWS= All-way stop

5.4.2 E+P (WITH INDIAN STREET BRIDGE)

The intersection analysis results are summarized in Table 5-1, the addition of Project traffic (With Indian Street Bridge) is anticipated to result in the following additional intersection deficiencies, in addition to those previously identified for E+P (Without Indian Street Bridge) traffic conditions:

ID	Intersection Location
30	Indian Street / Harley Knox Boulevard – LOS E PM peak hour only

A summary of the peak hour intersection LOS for E+P (Without Indian Street Bridge) conditions are shown on Exhibit 5-3 and on Exhibit 5-4 for E+P (With Indian Street Bridge) traffic conditions. The intersection operations analysis worksheets for E+P, without and with Indian Street bridge, traffic conditions are included in Appendix 5.1 and Appendix 5.2 of this TIA, respectively.

5.5 ROADWAY SEGMENT CAPACITY ANALYSIS

As noted previously, the City of Moreno Valley stated roadway segment capacities are approximate figures only, and are used at the General Plan level to assist in determining the roadway functional classification (number of through lanes) needed to meet future traffic demand.

5.5.1 E+P (WITHOUT INDIAN STREET BRIDGE)

Table 5-2 provides a summary of the E+P (Without Indian Street Bridge) conditions roadway segment capacity analysis based on the City of Moreno Valley and City of Perris General Plan Circulation Element Roadway Segment Capacity/(LOS) Thresholds identified previously on Table 2-3. As shown on Table 5-2, the following additional roadway segments are anticipated to operate at an unacceptable LOS under E+P (Without Indian Street Bridge) traffic conditions, in addition to those previously identified under Existing (2015) traffic conditions:

ID	Street	Segment
35	Heacock Street	North of Iris Avenue – LOS F
36		Iris Avenue to Krameria Avenue (N) – LOS F

5.5.2 E+P (WITH INDIAN STREET BRIDGE)

As shown on Table 5-2, there are no additional roadway segments anticipated to operate at unacceptable LOS under (E+P (With Indian Street Bridge), in addition to those previously identified for E+P (Without Indian Street Bridge) traffic conditions.

EXHIBIT 5-3: SUMMARY OF PEAK HOUR INTERSECTION LOS FOR E+P (WITHOUT INDIAN STREET BRIDGE) CONDITIONS

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] These maximum roadway capacities have been obtained from the City of Moreno Valley's Transportation Division's Traffic Impact Analysis Preparation Guidelines (August 2007), Table CE-9 of the City of Perris General Plan Circulation Element, or Figure C-2 of the County of Riverside General Plan Circulation Element.

[2] V/C = Volume to Capacity Ratio

[3] LOS = Level of Service

5.6 OFF-RAMP QUEUING ANALYSIS

A queuing analysis was performed for the off-ramps at the I-215 Freeway and Cactus Avenue and Harley Knox Boulevard interchanges to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially "spill back" onto the I-215 Freeway mainline. Queuing analysis findings are presented in Table 5-3 for E+P traffic conditions. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline.

5.6.1 E+P (WITHOUT INDIAN STREET BRIDGE)

As shown on Table 5-3, consistent with Existing traffic conditions, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows for E+P (Without Indian Street Bridge) traffic conditions. Worksheets for E+P (Without Indian Street Bridge) traffic conditions off-ramp queuing analysis are provided in Appendix 5.3.

5.6.2 E+P (WITH INDIAN STREET BRIDGE)

As shown on Table 5-3, consistent with Existing traffic conditions, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows for E+P (With Indian Street Bridge) traffic conditions. Worksheets for E+P (With Indian Street Bridge) traffic conditions off-ramp queuing analysis are provided in Appendix 5.4.

5.7 TRAFFIC SIGNAL WARRANTS ANALYSIS

5.7.1 E+P (WITHOUT INDIAN STREET BRIDGE)

The following additional study area intersections are anticipated to meet peak hour volume based traffic signal warrants under E+P (Without Indian Street Bridge) traffic conditions, in addition to those previously warranted under Existing traffic conditions (see Appendix 5.5):

ID	Intersection Location	Jurisdiction	CMP?
17	Heacock Street / Cardinal Avenue	Moreno Valley, March JPA	No
26	Indian Street / Krameria Avenue	Moreno Valley	No

5.7.2 E+P (WITH INDIAN STREET BRIDGE)

The following additional study area intersection is anticipated to meet peak hour volume based traffic signal warrant under E+P (With Indian Street Bridge) traffic conditions, in addition to those previously warranted under E+P (Without Indian Street Bridge) traffic conditions (see Appendix 5.6):

ID	Intersection Location	Jurisdiction	CMP?
19	Heacock Street / Nandina Avenue	Moreno Valley, March JPA	No

	NBT	1,650	164	26	Yes	Yes	164	26	Yes	Yes
I-215 NB Ramps / Harley Knox Bl.	NBL/T	1,120	13	22	Yes	Yes	13	22	Yes	Yes
	NBR	265	62	54	Yes	Yes	62	54	Yes	Yes

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

[2] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

[3] Adjacent through lane has sufficient storage to accommodate any spillover from the northbound left turn lane without spilling back and affecting the I-215 Freeway mainline.

5.8 BASIC FREEWAY SEGMENT ANALYSIS

5.8.1 E+P (WITHOUT INDIAN STREET BRIDGE)

E+P (Without Indian Street Bridge) mainline directional volumes for the weekday AM and PM peak hours are provided on Exhibits 5-5. As shown on Table 5-4, the basic freeway segments analyzed for this study are anticipated to operate at an acceptable LOS (i.e., LOS C or better) during the peak hours, with the addition of Project traffic. E+P (Without Indian Street Bridge) basic freeway segment analysis worksheets are provided in Appendix 5.7.

5.8.2 E+P (WITH INDIAN STREET BRIDGE)

E+P (With Indian Street Bridge) mainline directional volumes for the weekday AM and PM peak hours are provided on Exhibits 5-6. As shown on Table 5-4, the basic freeway segments analyzed for this study are anticipated to operate at an acceptable LOS (i.e., LOS C or better) during the peak hours, with the addition of Project traffic. E+P (With Indian Street Bridge) basic freeway segment analysis worksheets are provided in Appendix 5.8.

5.9 FREEWAY MERGE/DIVERGE ANALYSIS

5.9.1 E+P (WITHOUT INDIAN STREET BRIDGE)

Ramp merge and diverge operations were also evaluated for E+P (Without Indian Street Bridge) traffic conditions and the results of this analysis are presented in Table 5-5. As shown in Table 5-5, the freeway ramp merge and diverge areas are anticipated to operate at acceptable LOS (i.e., LOS D or better). E+P (Without Indian Street Bridge) freeway ramp junction operations analysis worksheets are provided in Appendix 5.9.

5.9.2 E+P (WITH INDIAN STREET BRIDGE)

Ramp merge and diverge operations were also evaluated for E+P (With Indian Street Bridge) traffic conditions and the results of this analysis are presented in Table 5-5. As shown in Table 5-5, the freeway ramp merge and diverge areas are anticipated to operate at acceptable LOS (i.e., LOS D or better). E+P (With Indian Street Bridge) freeway ramp junction operations analysis worksheets are provided in Appendix 5.10.

5.10 PROJECT IMPACTS AND MITIGATION MEASURES

5.10.1 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

Improvements necessary to reduce project-related traffic impacts to less-than-significant are also discussed below. The effectiveness of the proposed recommended mitigation measures are presented in Table 5-6 for E+P traffic conditions. As shown on Table 5-6, the recommended improvements for each of the impacted intersections are the same for each Project alternative (without and with the Indian Street extension), with the exception of the intersection of Indian Street and Harley Knox Boulevard. With the implementation of the intersection mitigation measures discussed below, there are no project-related impacts anticipated to the study area intersections.

---

[1] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for rig turning vehicles to travel outside the through lanes

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; >> = Free-Right Turn Lane; d= Defacto Right Turn Lane; 1 = Improvement

[2] Per the 2010 Highway Capacity Manual, overall average intersection delay and level of service are shown for intersections with a traffic signal c all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (o movements sharing a single lane) are shown.

[3] CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal

[4] The City of Perris is currently improving Harley Knox Boulevard between the I-215 Freeway and Perris Boulevard. Based on discussion with City staff, the improvements are anticipated to be completed by Fall 2015

Potential Impact 1.1 – Heacock Street / Cactus Avenue (#10) – Although this intersection was found to operate at an acceptable LOS for the overall intersection (LOS D or better) during the peak hours under E+P traffic conditions, the addition of Project traffic is anticipated to worsen the northbound left turn lane's individual LOS from acceptable to unacceptable LOS, for both without and with the Indian Street extension. The addition of Project traffic is anticipated to also worsen the northbound left turn 95th percentile queue, which would likely exceed the existing available storage. As such, the impact is considered significant (Impact 1.1).

Mitigation Measure 1.1 – ***Heacock Street / Cactus Avenue (#10)*** – The following improvement is necessary to reduce the Project's proportionate increase in queues, thus reducing the Project's impact to less-than-significant:

- Restripe the northbound left turn lane to provide 315-feet of storage from the existing 215-feet in order to accommodate the anticipated 95th percentile queues.

Potential Impact 2.1 – Heacock Street / Gentian Avenue (#12) – Although this intersection was found to operate at an unacceptable LOS (LOS F) during the PM peak hour under Existing traffic conditions, the intersection is anticipated to continue to operate at unacceptable levels during one or more of the peak hours with the addition of Project traffic, for both without and with the Indian Street extension. As such, the impact is considered cumulatively significant (Impact 2.1).

Mitigation Measure 2.1 – ***Heacock Street / Gentian Avenue (#12)*** – The following improvement is necessary to reduce the Project's proportionate increase in delay to pre-project levels or better, thus reducing the Project's cumulative impact to less-than-significant:

- Payment of the Project's DIF fees to be applied towards the installation of a traffic signal to improve the existing deficiency.

Potential Impact 3.1 – Heacock Street / Iris Avenue (#13) – Although this intersection was found to operate at an unacceptable LOS (LOS E) during the PM peak hour under Existing traffic conditions, the intersection is anticipated to continue to operate at unacceptable levels during one or more of the peak hours with the addition of Project traffic, for both without and with the Indian Street extension. As such, the impact is considered cumulatively significant (Impact 3.1).

Mitigation Measure 3.1 – ***Heacock Street / Iris Avenue (#13)*** – The following improvements are necessary to reduce the Project's proportionate increase in delay to pre-project levels or better, thus reducing the Project's cumulative impact to less-than-significant:

- Payment of the Project's DIF fees to be applied towards the installation of a traffic signal to improve the existing deficiency.
- Mitigation measure also consists of a westbound right turn lane with overlap phasing. The Project would pay its fair share to the City of Moreno Valley towards the addition of a westbound right turn lane with overlap phasing.

Potential Impact 4.1 – Heacock Street / San Michele Road (#18) – This intersection was found to operate at acceptable LOS (LOS D or better) during the peak hours under Existing traffic

Attachment: I1 - Traffic Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

conditions, however, the addition of Project traffic is anticipated to result in deficient peak hour operations during the PM peak hour only, for both without and with the Indian Street extension. As such, the impact is considered significant (Impact 4.1).

Mitigation Measure 4.1 – Heacock Street / San Michele Road (#18) – The following improvement is necessary to reduce the Project's proportionate increase in delay to pre-project levels or better, thus reducing the Project's impact to less-than-significant:

- Modify the existing traffic signal to implement overlap phasing on the westbound right turn lane.

Potential Impact 5.1 – Indian Street / Harley Knox Boulevard (#30) – This intersection was found to operate at acceptable LOS (LOS C or better) during the peak hours under Existing traffic conditions, however, the addition of Project traffic (with Indian Street extension alternative only) is anticipated to result in deficient peak hour operations during the PM peak hour only. The City of Perris is currently improving Harley Knox Boulevard between the I-215 Freeway and Perris Boulevard. Based on discussions with City staff, the improvements are anticipated to be completed by Fall 2015. With the implementation of the planned improvements, there are no LOS deficiencies anticipated with the addition of Project traffic. As such, the impact is considered less-than-significant.

The potential off-site impacts to the study area intersections are anticipated to be relatively the same for the proposed Project, without or with the bridge. As such, the development of the proposed Project is not anticipated to drive the need for the Indian Street bridge over the Perris Valley Storm Drain Channel.

Worksheets for E+P without and with Indian Street Bridge traffic conditions, with improvements, HCM calculation worksheets are provided in Appendix 5.11 and Appendix 5.12, respectively.

5.10.2 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON ROADWAY SEGMENTS

As shown on Table 5-6, the E+P peak hour analysis indicates that the adjacent study area intersections on either side of the deficient roadway segments are anticipated to operate at acceptable LOS with the recommended intersection improvements shown. As such, roadway segment widening does not appear necessary to address the deficiencies at the identified roadway segments.

5.10.3 RECOMMENDED IMPROVEMENTS TO ADDRESS OFF-RAMP QUEUES

As shown previously on Table 5-3, there are no peak hour queuing issues at the I-215 Freeway at Cactus Avenue or Harley Knox Boulevard interchanges for E+P traffic conditions. As such, no improvements have been recommended.

5.10.4 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON FREEWAY FACILITIES

As shown previously on Table 5-4 and Table 5-5, there are no deficient freeway mainline segments or merge/diverge ramp junctions anticipated for E+P traffic conditions. As such, no improvements have been recommended.

6 OPENING YEAR CUMULATIVE (2020) TRAFFIC CONDITIONS

This section discusses the methods used to develop Existing plus Ambient Growth plus Project plus Cumulative (Opening Year Cumulative) (2020) traffic forecasts, and the resulting intersection operations, roadway segment, traffic signal warrant, and freeway mainline operations analyses.

6.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Opening Year Cumulative (2020) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Opening Year Cumulative conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Opening Year Cumulative conditions only (e.g., intersection and roadway improvements along the cumulative development's frontages and driveways).

6.2 OPENING YEAR CUMULATIVE (2020) WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

To account for background traffic, other known cumulative development projects in the study area were included in addition to 10.41% of ambient growth for Opening Year Cumulative traffic conditions. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2020) Without Project traffic conditions are shown on Exhibit 6-1.

6.3 OPENING YEAR CUMULATIVE (2020) WITH PROJECT TRAFFIC VOLUME FORECASTS

To account for background traffic, other known cumulative development projects in the study area were included in addition to 10.41% of ambient growth for Opening Year Cumulative traffic conditions in conjunction with traffic associated with the proposed Project. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2020) With Project traffic conditions are shown on Exhibit 6-2.

EXHIBIT 6-1 (1 OF 2): OPENING YEAR CUMULATIVE (2020) WITHOUT PROJECT TRAFFIC VOLUMES (IN PCE)

6.4 INTERSECTION OPERATIONS ANALYSIS

LOS calculations were conducted for the study intersections to evaluate their operations under Opening Year Cumulative conditions with roadway and intersection geometrics consistent with Section 6.1 *Roadway Improvements*. As shown in Table 6-1, the following additional study area intersections are anticipated to operate at unacceptable LOS during the peak hours under Opening Year Cumulative (2020) traffic conditions, in addition to those previously identified for Existing traffic conditions:

ID	Intersection Location
1	I-215 Southbound Ramps / Cactus Avenue – LOS F AM and PM peak hours
2	I-215 Southbound Ramps / Harley Knox Boulevard – LOS F AM and PM peak hours
3	I-215 Northbound Ramps / Cactus Avenue – LOS F AM and PM peak hours
4	I-215 Northbound Ramps / Harley Knox Boulevard – LOS F PM peak hour only
5	Elsworth Street / Cactus Avenue – LOS F AM peak hour only
7	Western Way / Harley Knox Boulevard – LOS F PM peak hour only
8	Graham Street / Cactus Avenue – LOS F AM and PM peak hours
9	Patterson Avenue / Harley Knox Boulevard – LOS F AM and PM peak hours
10	Heacock Street / Cactus Avenue – LOS E AM peak hour only
18	Heacock Street / San Michele Road – LOS F AM and PM peak hours
28	Indian Street / San Michele Road 0 LOS F AM and PM peak hours
29	Indian Street / Nandina Avenue – LOS F AM and PM peak hours
30	Indian Street / Harley Knox Boulevard – LOS F PM peak hour only
31	Perris Boulevard / Cactus Avenue – LOS E AM peak hour; LOS F PM peak hour
32	Perris Boulevard / Krameria Avenue – LOS E PM peak hour only

There are no additional intersections anticipated to operate at unacceptable LOS with the addition of Project traffic, in addition to those previously identified for Opening Year Cumulative Without Project traffic conditions. A summary of the peak hour intersection LOS for Opening Year Cumulative (2020) Without Project conditions are shown on Exhibit 6-3 and on Exhibit 6-4 for Opening Year Cumulative (2020) With Project traffic conditions. The intersection operations analysis worksheets for Opening Year Cumulative (2020) Without and With Project traffic conditions are included in Appendix 6.1 and Appendix 6.2 of this TIA, respectively. Measures to address near-term cumulative deficiencies for Opening Year Cumulative traffic conditions are discussed in Section 7.10 *Recommended Improvements.*

6.5 ROADWAY SEGMENT CAPACITY ANALYSIS

As noted previously, the roadway segment capacities are approximate figures only, and are typically used at the General Plan level to assist in determining the roadway functional classification (number of through lanes) needed to meet future forecasted traffic demand.

Attachment: I1 - Traffic Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] Per the 2010 Highway Capacity Manual, overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

[2] CSS = Cross-street Stop; TS = Traffic Signal: AWS= All-way stop

EXHIBIT 6-3: SUMMARY OF PEAK HOUR INTERSECTION LOS
FOR OPENING YEAR CUMULATIVE (2020) WITHOUT PROJECT CONDITIONS

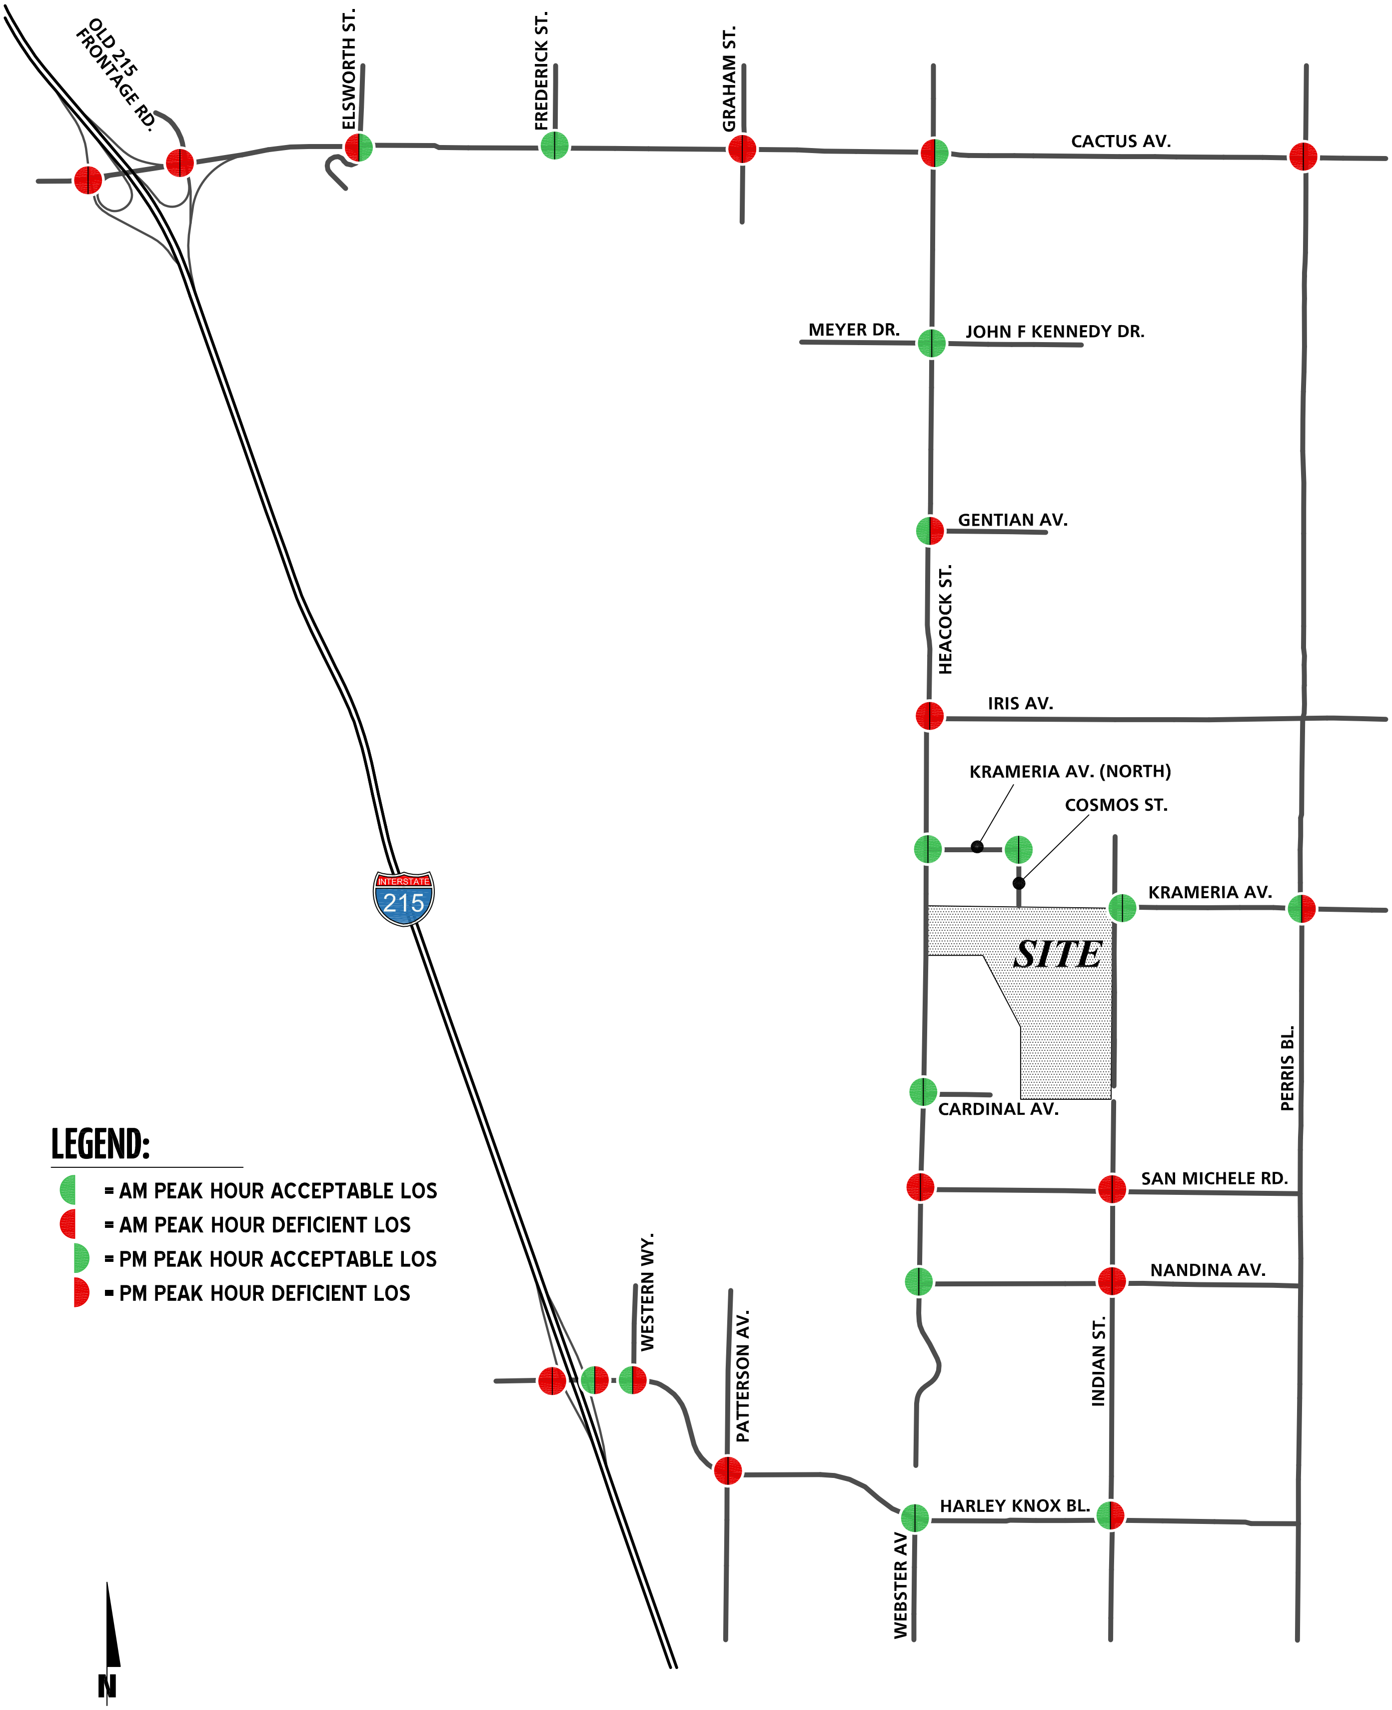

EXHIBIT 6-4: SUMMARY OF PEAK HOUR INTERSECTION LOS FOR OPENING YEAR CUMULATIVE (2020) WITH PROJECT CONDITIONS

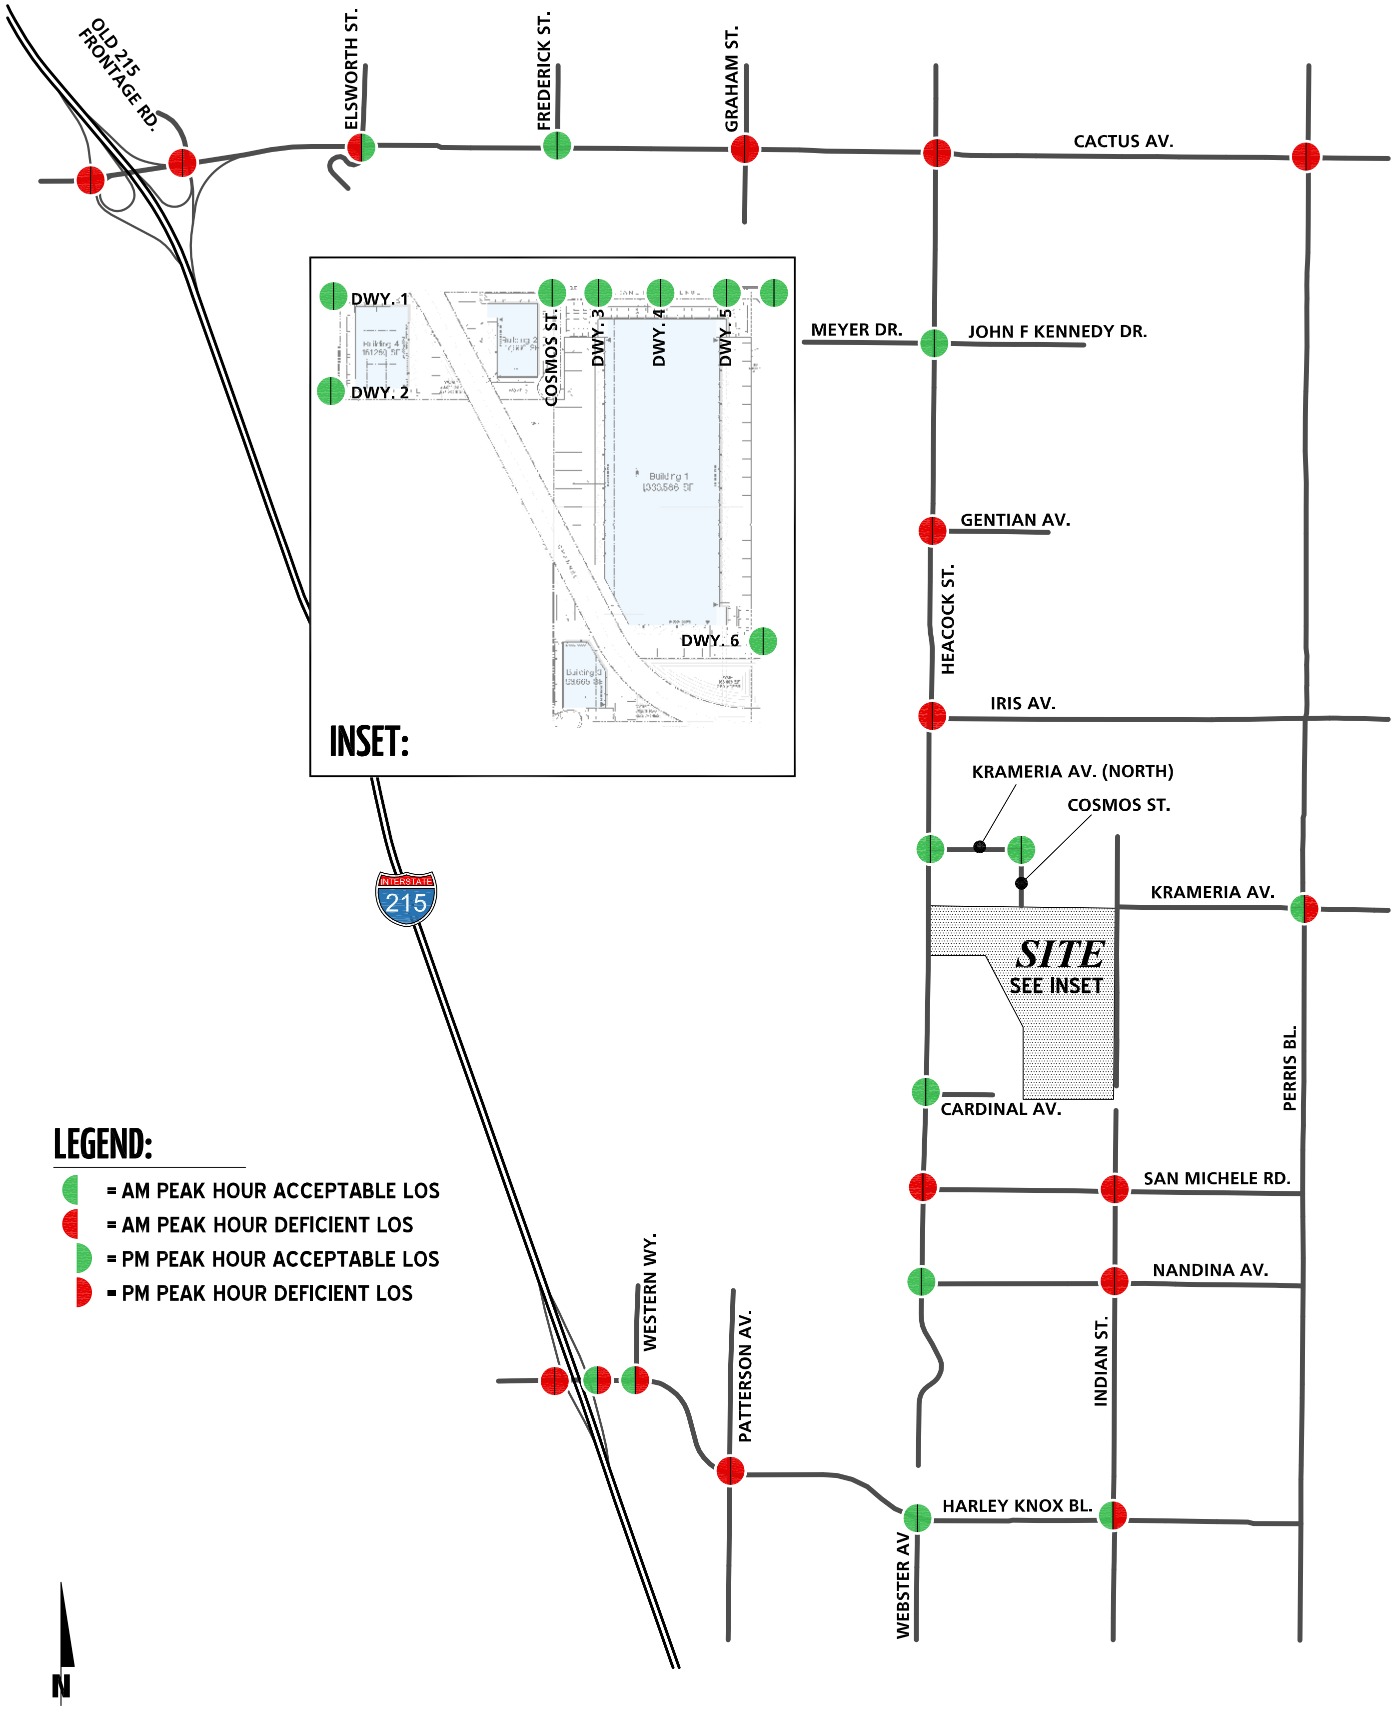

Attachment: I1 - Traffic Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

Table 6-2 provides a summary of the Opening Year Cumulative (2020) conditions roadway segment capacity analysis based on the City of Moreno Valley and City of Perris General Plan Circulation Element Roadway Segment Capacity/(LOS) Thresholds identified previously on Table 2-3. As shown on Table 6-2, the following roadway segments are anticipated to operate at unacceptable LOS (based on daily roadway segment capacities) under Opening Year Cumulative (2020) Without Project traffic conditions:

ID	Street	Segment
1	Cactus Avenue	I-215 SB Ramps to I-215 NB Ramps – LOS F
2		East of I-215 NB Ramps – LOS F
3		West of Elsworth Street – LOS F
4		East of Elsworth Street – LOS E
5		West of Frederick Street – LOS F
6		East of Frederick Street – LOS F
7		West of Graham Street – LOS F
8		East of Graham Street – LOS F
9		West of Heacock Street – LOS F
20	San Michele Road	East of Heacock Street – LOS E
21		West of Indian Street – LOS F
23	Harley Knox Boulevard	I-215 NB Ramps to Western Way – LOS E
24		East of Western Way – LOS F
25		West of Patterson Avenue – LOS E
26		East of Patterson Avenue – LOS F
27		West of Webster Avenue – LOS F
28		East of Webster Avenue – LOS F
29		West of Indian Street – LOS E
34	Heacock Street	South of Gentian Avenue – LOS F
35		North of Iris Avenue – LOS F
36		Iris Avenue to Krameria Avenue (N) – LOS F
47	Indian Street	South of Nandina Avenue – LOS F

The following roadway segment is anticipated to operate at a deficient LOS with the addition of Project traffic, in addition to those previously identified for Opening Year Cumulative Without Project traffic conditions.

ID	Street	Segment
33	Heacock Street	North of Gentian Avenue – LOS E

Table 6-2

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] These maximum roadway capacities have been obtained from the City of Moreno Valley's Transportation Division's Traffic Impact Analysis Preparation Guidelines (August 2007), Table CE-9 of the City of Perris General Plan Circulation Element, or Figure C-2 of the County of Riverside General Plan Circulation Element.

[2] V/C = Volume to Capacity Ratio

[3] LOS = Level of Service

As previously discussed in Section 3.8 *Existing Conditions Roadway Segment Capacity Analysis*, a peak hour assessment of intersections located on either side of a deficient roadway segment has been conducted to determine if peak hour traffic flows can be accommodated by the potentially deficient roadway segment. If it is determined that peak traffic flows can be accommodated at the City's stated LOS thresholds, then roadway segment widening is typically not recommended.

The traffic study is conservative in that the Opening Year (2020) Cumulative peak hour intersection operations and roadway segment analysis does not assume the planned future roadway extension of Heacock Street to Harley Knox Boulevard or Indian Street over the Perris Valley Storm Drain. With the future extension of Heacock Street and Indian Street in place, future year traffic on Heacock Street, Indian Street, and Perris Boulevard in the near-term cumulative scenario would have multiple alternatives in accessing Harley Knox Boulevard. It is assumed that as a result of a reduction in traffic volumes along Indian Street and Perris Boulevard due to the Heacock Street and Indian Street extensions and potentially deficiencies to intersections and roadway segments along Perris Boulevard and Indian Street towards Harley Knox Boulevard would also potentially be reduced.

6.6 OFF-RAMP QUEUING ANALYSIS

A queuing analysis was performed for the off-ramps at the I-215 Freeway and Cactus Avenue and Harley Knox Boulevard interchanges to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially "spill back" onto the I-215 Freeway mainline. Queuing analysis findings are presented in Table 6-3 for Opening Year Cumulative traffic conditions. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline.

As shown on Table 6-3, the following movement may potentially experience queuing issues during the weekday AM peak 95th percentile traffic flows for Opening Year Cumulative traffic conditions:

ID	Intersection Location
2	I-215 SB Ramps / Harley Knox Boulevard – Southbound shared left-through lane (AM peak hour only)

The 95th percentile queues for Opening Year Cumulative traffic conditions indicates potential queuing for the movement and peak hour identified above. As shown, the analysis indicates that potential queues would exceed the length of the off-ramp and could potentially spillback into the adjacent through lanes on the freeway mainline during the AM peak hour only.

The addition of Project traffic is not anticipated to result in any additional queuing issues. However, the addition of Project traffic to the deficient turning movement is cumulatively considerable.

Worksheets for Opening Year Cumulative (2020 Without and With project traffic conditions off-ramp queuing analysis are provided in Appendix 6.3 and Appendix 6.4, respectively.

Attachment: I1 - Traffic Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

Table 6-3

Peak Hour Off-Ramp Queuing Analysis for Opening Year Cumulative (2020) Conditions

Intersection	Movement	Stacking Distance (Feet)	2020 Without Project				2020 With Project			
			95^{th} Percentile Stacking Distance Required (Feet)		Acceptable?[1]		95^{th} Percentile Stacking Distance Required (Feet)		Acceptable?[1]	
			AM Peak Hour	PM Peak Hour	AM	PM	AM Peak Hour	PM Peak Hour	AM	PM
I-215 SB Ramps / Cactus Av.	NBR	1,850	498[2]	584[2]	Yes	Yes	677[2]	631[2]	Yes	Yes
	SBR	1,115	392[2]	66	Yes	Yes	392[2]	66	Yes	Yes
I-215 SB Ramps / Harley Knox Bl.	SBL/T	1,330	**2,096**[2]	891[2]	**No**	Yes	**2,208**[2]	920[2]	**No**	Yes
	SBR	270	198	111	Yes	Yes	202	115	Yes	Yes
I-215 NB Ramps / Cactus Av.	NBL	145	800[2]	93	Yes[3]	Yes	800[2]	93	Yes[3]	Yes
	NBT	1,650	235[2]	58	Yes	Yes	235[2]	59	Yes	Yes
I-215 NB Ramps / Harley Knox Bl.	NBL/T	1,120	110	76	Yes	Yes	110	76	Yes	Yes
	NBR	265	375[2]	113	Yes[3]	Yes	534[2]	139	Yes[3]	Yes

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

[2] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

[3] Adjacent through lane has sufficient storage to accommodate any spillover from the northbound turn lane without spilling back and affecting the I-215 Freeway mainline.

6.7 TRAFFIC SIGNAL WARRANTS ANALYSIS

There are no additional study area intersections that are anticipated to meet either peak hour or planning level (ADT) volume based traffic signal warrants for Opening Year Cumulative traffic conditions (see Appendix 6.5 and Appendix 6.6).

6.8 BASIC FREEWAY SEGMENT ANALYSIS

Opening Year Cumulative (2020) Without Project mainline directional volumes for the weekday AM and PM peak hours are provided on Exhibit 6-5 and on Exhibit 6-6 for Opening Year Cumulative (2020) With Project traffic conditions. As shown on Table 6-4, the freeway segments analyzed for this study are anticipated to operate at an acceptable LOS (i.e., LOS D or better) during the peak hours for both without and with Project traffic conditions. Opening Year Cumulative (2020) Without and With Project basic freeway segment analysis worksheets are provided in Appendix 6.7 and Appendix 6.8, respectively.

6.9 FREEWAY MERGE/DIVERGE ANALYSIS

Ramp merge and diverge operations were also evaluated for Opening Year Cumulative conditions and the results of this analysis are presented in Table 6-5. As shown in Table 6-5, the freeway ramp merge and diverge areas are anticipated to operate at acceptable LOS (i.e., LOS D or better), with the exception of the following ramp junctions:

ID	Freeway Merge/Diverge Ramp Junctions
1	I-215 Freeway – Southbound, Loop Off-Ramp at Cactus Avenue – LOS E AM and PM peak hours
2	I-215 Freeway – Southbound, Loop Off-Ramp at Cactus Avenue – LOS E AM and PM peak hours
3	I-215 Freeway – Southbound, Off-Ramp at Harley Knox Boulevard – LOS E PM peak hour only

Although the addition of Project traffic is not anticipated to result in any new deficiencies, the Project would contribute cumulatively to the impact at the aforementioned ramp junctions. Opening Year Cumulative (2020) Without and With Project freeway ramp junction operations analysis worksheets are provided in Appendix 6.9 and Appendix 6.10, respectively.

6.10 OPENING YEAR CUMULATIVE DEFICIENCIES AND RECOMMENDED IMPROVEMENTS

6.10.1 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

Improvement strategies have been recommended at intersections that have been identified as deficient in an effort to reduce each location's peak hour delay and improve the associated LOS grade to an acceptable LOS (LOS D or better). The effectiveness of the recommended improvement strategies discussed below to address Opening Year Cumulative traffic deficiencies is presented in Table 6-6.

Worksheets for Opening Year Cumulative (2020) Without and With Project traffic conditions, with improvements, HCM calculation worksheets are provided in Appendix 6.11 and Appendix 6.12, respectively.

* Note: The recommended improvements shown in this table are based on conservative traffic forecasts for Opening Year Cumulative traffic conditions and are driven by the amount of cumulative developments as opposed to the Project. These improvements may not be necessary, depending on the amount of growth that actually occurs over the next 5 years.

[1] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; >> = Free-Right Turn Lane; d= Defacto Right Turn Lane; **1** = Improvement

[2] Per the 2010 Highway Capacity Manual, overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

[3] CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal

[4] Improvements also include implementing protected left-turn phasing for the northbound and southbound approaches.

[5] The City of Perris is currently improving Harley Knox Boulevard between the I-215 Freeway and Perris Boulevard. Based on discussions with City staff, the improvements are anticipated to be completed by Fall 2015.

[6] Improvement includes removing the southbound crosswalk (on the west leg) to accommodate additional green time along Cactus Avenue.

[7] Improvements also include implementing protected left-turn phasing for the eastbound and westbound approaches.

6.10.2 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON ROADWAY SEGMENTS

As shown on Table 6-6, the Opening Year Cumulative peak hour analysis indicates that the adjacent study area intersections on either side of the deficient roadway segments are anticipated to operate at acceptable LOS with the recommended intersection improvements shown. These intersection improvements consist of installation of traffic signals, additional turn lanes, additional through lanes, and traffic signal modifications to accommodate right turn overlap phasing. Table 6-7 shows the LOS for each of the applicable roadway segments with improvements consistent with those shown on Table 6-6 for the adjacent study area intersections, where roadway widening through additional through lanes has been recommended. In other words, only the roadway segments adjacent to study area intersections where additional through lanes have been recommended on Table 6-6 are shown on Table 6-7. As shown on Table 6-7, although most roadway segments shown are anticipated to improve in LOS to acceptable levels, there are a few deficient roadway segments with the recommended intersection improvements, however, roadway segment widening does not appear necessary to address the deficiencies at the identified roadway segments based on the peak hour intersection operations analysis shown on Table 6-6. There are also other deficient roadway segments (see Table 6-2), where additional roadway widening has not been recommended as the adjacent study area intersections (see Table 6-1) are anticipated to operate at acceptable LOS during the peak hours.

6.10.3 RECOMMENDED IMPROVEMENTS TO ADDRESS OFF-RAMP QUEUES

With the implementation of the recommended intersection improvements shown on Table 6-6, which are necessary to reduce near-term cumulative impacts to less than significant levels, there are no potential queuing issues anticipated for Opening Year Cumulative traffic conditions (see Table 6-8). As such, no spill-back onto the I-215 Freeway Southbound mainline is anticipated. Worksheets for Opening Year Cumulative (2020) Without and With Project traffic conditions, with improvements, queuing analysis are provided in Appendix 6.13 and Appendix 6.14, respectively.

6.10.4 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON FREEWAY FACILITIES

The SCAG RTP includes a list of projects in the Federal Transportation Improvement Program (FTIP). The following is an applicable FTIP project within the study area: interchange improvements at I-215/Cactus Avenue, which includes the extension of the northbound auxiliary lane between Cactus Avenue and Alessandro Boulevard to the north (to be completed by 2018). However, this improvement is not anticipated to improve the LOS deficiencies at the deficient freeway merge/diverge ramp junctions.

Table 6-7

Roadway Volume/Capacity Analysis for Opening Year Cumulative (2020) Conditions With Improvements

#	Roadway	Segment Limits	Roadway Section[1]	LOS Capacity[2]	2020 w/o Project	V/C[3]	LOS[4]	2020 w/ Project	V/C[3]	LOS[4]	Acceptable LOS

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] Roadway section improvements are consistent with the through lanes recommended as part of the intersection improvements shown on Table 6-6.

[2] These maximum roadway capacities have been obtained from the City of Moreno Valley's Transportation Division's Traffic Impact Analysis Preparation Guidelines (August 2007), Table CE-9 of the City of Perris General Plan Circulation Element, or Figure C-2 of the County of Riverside General Plan Circulation Element.

[3] V/C = Volume to Capacity Ratio

[4] LOS = Level of Service

[5] Additional roadway widening has not been recommended for these deficient roadway segments as the adjacent study area intersections (see Table 6-1 and Table 6-6) are anticipated to operate at acceptable LOS during the peak hours.

Table 6-8

Peak Hour Off-Ramp Queuing Analysis for Opening Year Cumulative (2020) Conditions With Improvements

Intersection	Movement	Stacking Distance (Feet)	2020 Without Project				2020 With Project			
			95th Percentile Stacking Distance Required (Feet)		Acceptable?[1]		95th Percentile Stacking Distance Required (Feet)		Acceptable?[1]	
			AM Peak Hour	PM Peak Hour	AM	PM	AM Peak Hour	PM Peak Hour	AM	PM
I-215 SB Ramps / Cactus Av.	NBR	1,850	0	0	Yes	Yes	0	0	Yes	Yes
	SBR	1,115	253	0	Yes	Yes	253	0	Yes	Yes
I-215 SB Ramps / Harley Knox Bl.	SBL/T	1,330	431[2]	255[2]	Yes	Yes	514	264[2]	Yes	Yes
	SBR	270	46	63	Yes	Yes	46	63	Yes	Yes
I-215 NB Ramps / Cactus Av.	NBL	145	511[2]	94[2]	Yes[3]	Yes	511[2]	94[2]	Yes[3]	Yes
	NBT	1,650	363	105	Yes	Yes	363	105	Yes	Yes
I-215 NB Ramps / Harley Knox Bl.	NBL/T	1,120	95	83	Yes	Yes	95	83	Yes	Yes
	NBR	265	279	100	Yes[3]	Yes	374	127	Yes[3]	Yes

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

[2] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

[3] Adjacent through lane has sufficient storage to accommodate any spillover from the northbound turn lane without spilling back and affecting the I-215 Freeway mainline.

Table 6-9 shows the basic freeway segment analysis LOS for the segment of the I-215 Freeway Northbound, north of Cactus Avenue. At this time, Caltrans has no fee programs or other improvement programs in place to address the deficiencies caused by development projects in the City of Moreno Valley (or other neighboring jurisdictions) on SHS roadway segments. Worksheets for Opening Year Cumulative (2020) Without and With project traffic conditions, with improvements, basic freeway segment analysis are provided in Appendix 6.15 and 6.16, respectively.

Table 6-9

Basic Freeway Segment Analysis for Opening Year Cumulative (2020) Conditions

Freeway	Direction	Mainline Segment	Lanes[1]	2020 Without Project				2020 With Project			
				Density[2]		LOS		Density[2]		LOS	
				AM	PM	AM	PM	AM	PM	AM	PM
I-215 Freeway	NB	North of Cactus Avenue	5	12.2	13.7	B	B	12.3	14.4	B	B

* **BOLD** = Unacceptable Level of Service

[1] Number of lanes are in the specified direction and is based on proposed improvements.

[2] Density is measured by passenger cars per mile per lane (pc/mi/ln).

7 GENERAL PLAN BUILDOUT (POST 2035) TRAFFIC CONDITIONS

This section discusses the methods used to develop General Plan Buildout (Post 2035) Without and With Project traffic forecasts, and the resulting intersection operations, roadway segment, traffic signal warrant, and freeway mainline operations analyses.

7.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for General Plan Buildout conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for General Plan Buildout conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for General Plan Buildout conditions only (e.g., intersection and roadway improvements along the cumulative development's frontages and driveways).
- The extension of Heacock Street to the north of Harley Knox Boulevard.
- The extension of Indian Street over the Perris Valley Storm Drain Channel. As traffic in the area increases and the roadway network begins to build out, the implementation of the Indian Street bridge over the Perris Valley Storm Drain Channel would only help with relieving potential heavy traffic flows along other parallel facilities, such as Heacock Street and Perris Boulevard
- Other parallel facilities, that although not evaluated for the purposes of this analysis, are anticipated to be in place for General Plan Buildout traffic conditions and would affect the travel patterns within the study area (e.g., Nandina Avenue, Markham Street, etc.).

7.2 GENERAL PLAN BUILDOUT (POST 2035) WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-processed volumes obtained from the RivTAM. For additional information on the development of the General Plan Buildout Without Project traffic forecasts, see Section 4.8 *General Plan Buildout (Post 2035) Volume Development* of this TIA. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for General Plan Buildout Without Project traffic conditions are shown on Exhibit 7-1.

7.3 GENERAL PLAN BUILDOUT (POST 2035) WITH PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-processed volumes obtained from the RivTAM, plus Project traffic. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for General Plan Buildout With Project traffic conditions are shown on Exhibit 7-2.

EXHIBIT 7-1 (1 OF 2): GENERAL PLAN BUILDOUT (POST 2035) WITHOUT PROJECT TRAFFIC VOLUMES (IN PCE)

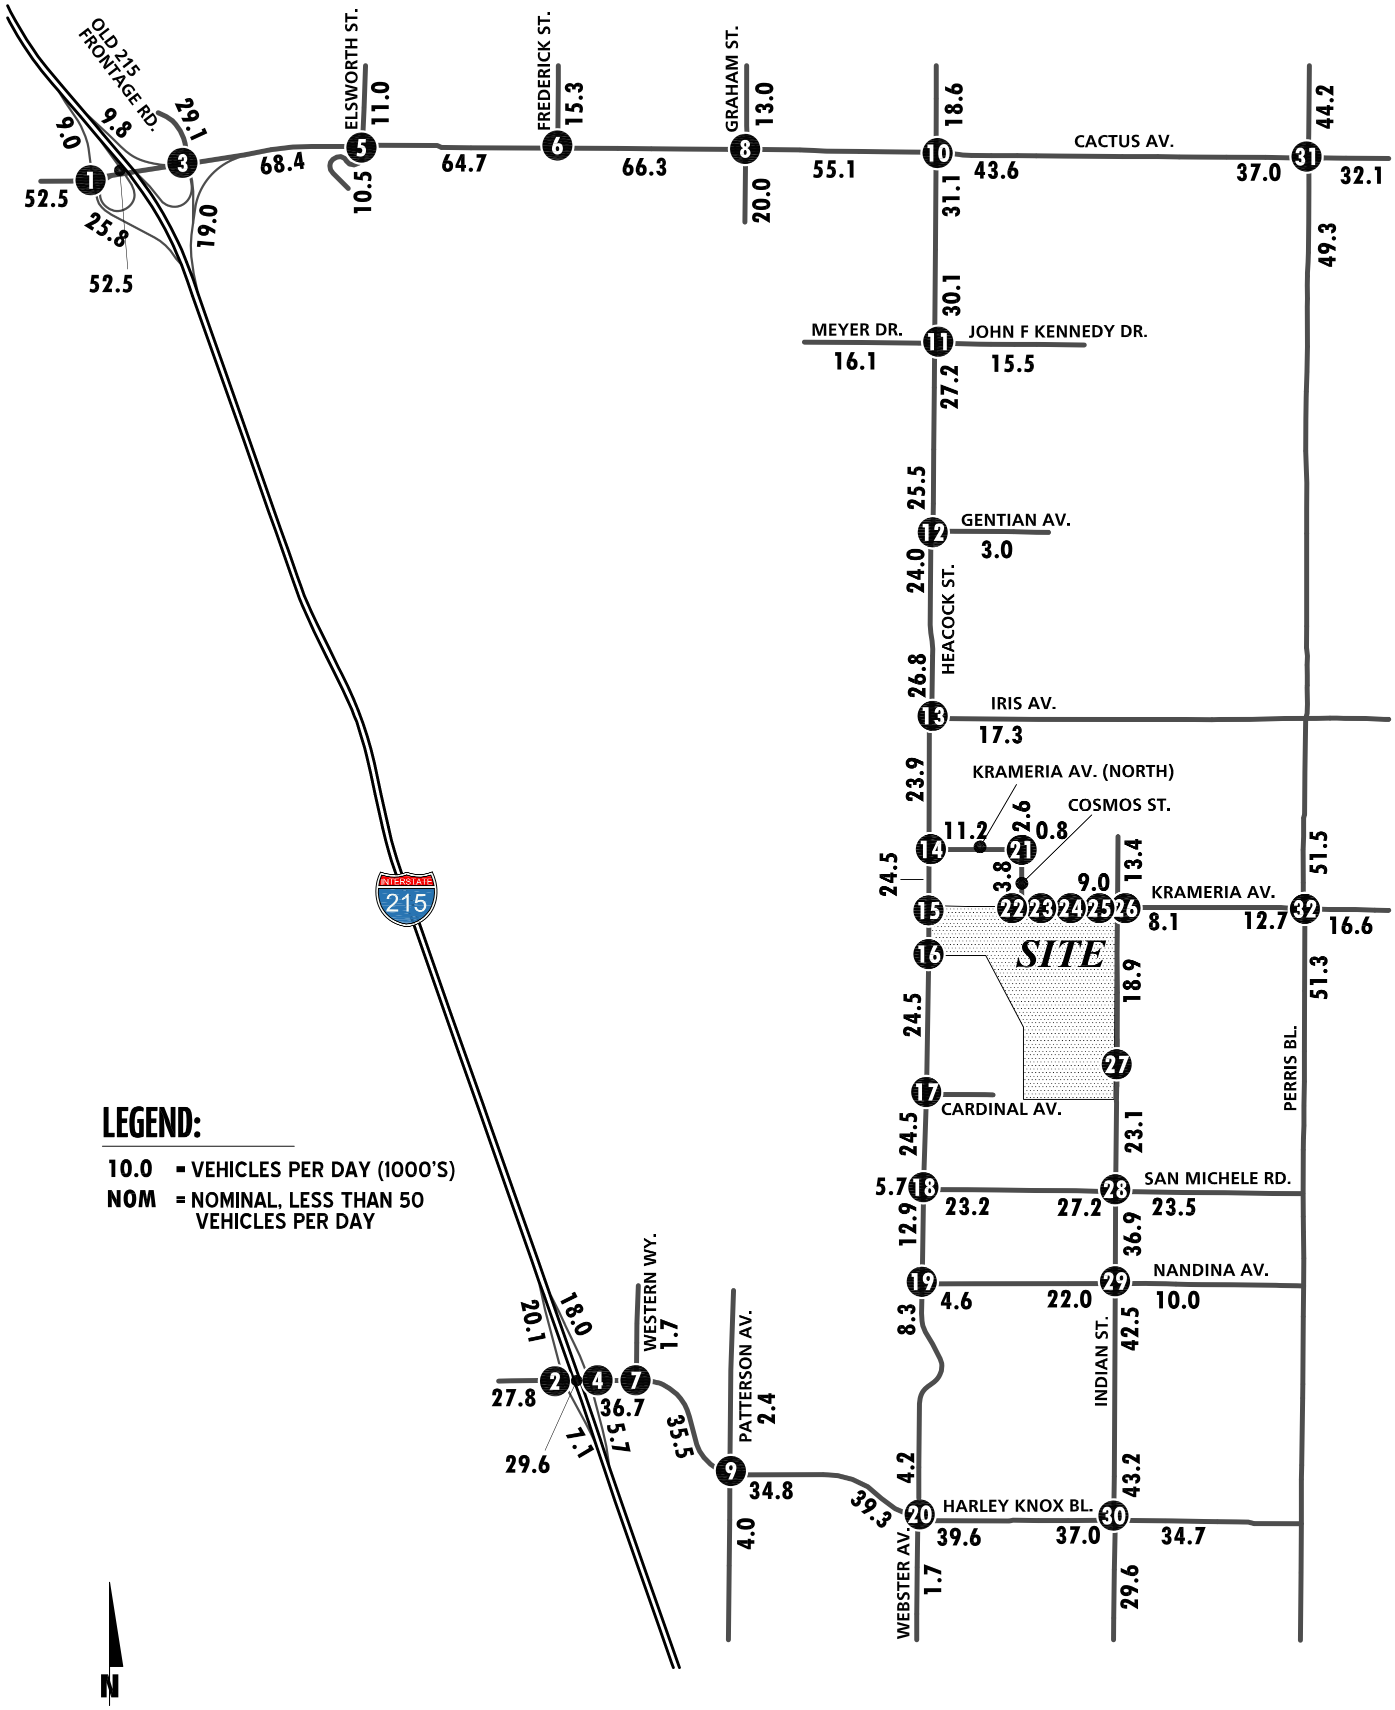

EXHIBIT 7-1 (2 OF 2): GENERAL PLAN BUILDOUT (POST 2035) WITHOUT PROJECT TRAFFIC VOLUMES (IN PCE)

7.4 INTERSECTION OPERATIONS ANALYSIS

7.4.1 GENERAL PLAN BUILDOUT WITHOUT PROJECT TRAFFIC CONDITIONS

LOS calculations were conducted for the study intersections to evaluate their operations under General Plan Buildout Without Project conditions with roadway and intersection geometrics consistent with Section 7.1 *Roadway Improvements*. As shown in Table 7-1, the following additional study area intersections are anticipated to operate at unacceptable LOS during the peak hours under General Plan Buildout traffic conditions, in addition to those previously identified for Opening Year Cumulative traffic conditions:

ID	Intersection Location
20	Heacock Street/Webster Avenue / Harley Knox Boulevard – LOS F PM peak hour only
26	Indian Street / Krameria Avenue – LOS F AM and PM peak hours

A summary of the peak hour intersection LOS for General Plan Buildout Without Project conditions are shown on Exhibit 7-3. The intersection operations analysis worksheets for General Plan Buildout Without Project traffic conditions are included in Appendix 7.1 of this TIA.

7.4.2 GENERAL PLAN BUILDOUT WITH PROJECT TRAFFIC CONDITIONS

As shown on Table 7-1 and illustrated on Exhibit 7-4, there are no additional study area intersections anticipated to experience unacceptable LOS (LOS E or worse) with the addition of Project traffic during one or more peak hours in addition to those previously identified under General Plan Buildout Without Project conditions. However, the Project's contribution to the deficient intersections identified above are significant cumulative impacts as the Project is anticipated to contribute 50 or more peak hour trips. The intersection operations analysis worksheets for Horizon Year With Project traffic conditions are included in Appendix 7.2 of this TIA. Measures to address long range deficiencies for Long Range traffic conditions are discussed in Section 7.10 *Recommended Improvements.*

7.5 ROADWAY SEGMENT CAPACITY ANALYSIS

As noted previously, the roadway segment capacities are approximate figures only, and are typically used at the General Plan level to assist in determining the roadway functional classification (number of through lanes) needed to meet future forecasted traffic demand. Table 7-2 provides a summary of the General Plan Buildout conditions roadway segment capacity analysis based on the City of Moreno Valley and City of Perris General Plan Circulation Element Roadway Segment Capacity/(LOS) Thresholds identified previously on Table 2-3.

Attachment: I1 - Traffic Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

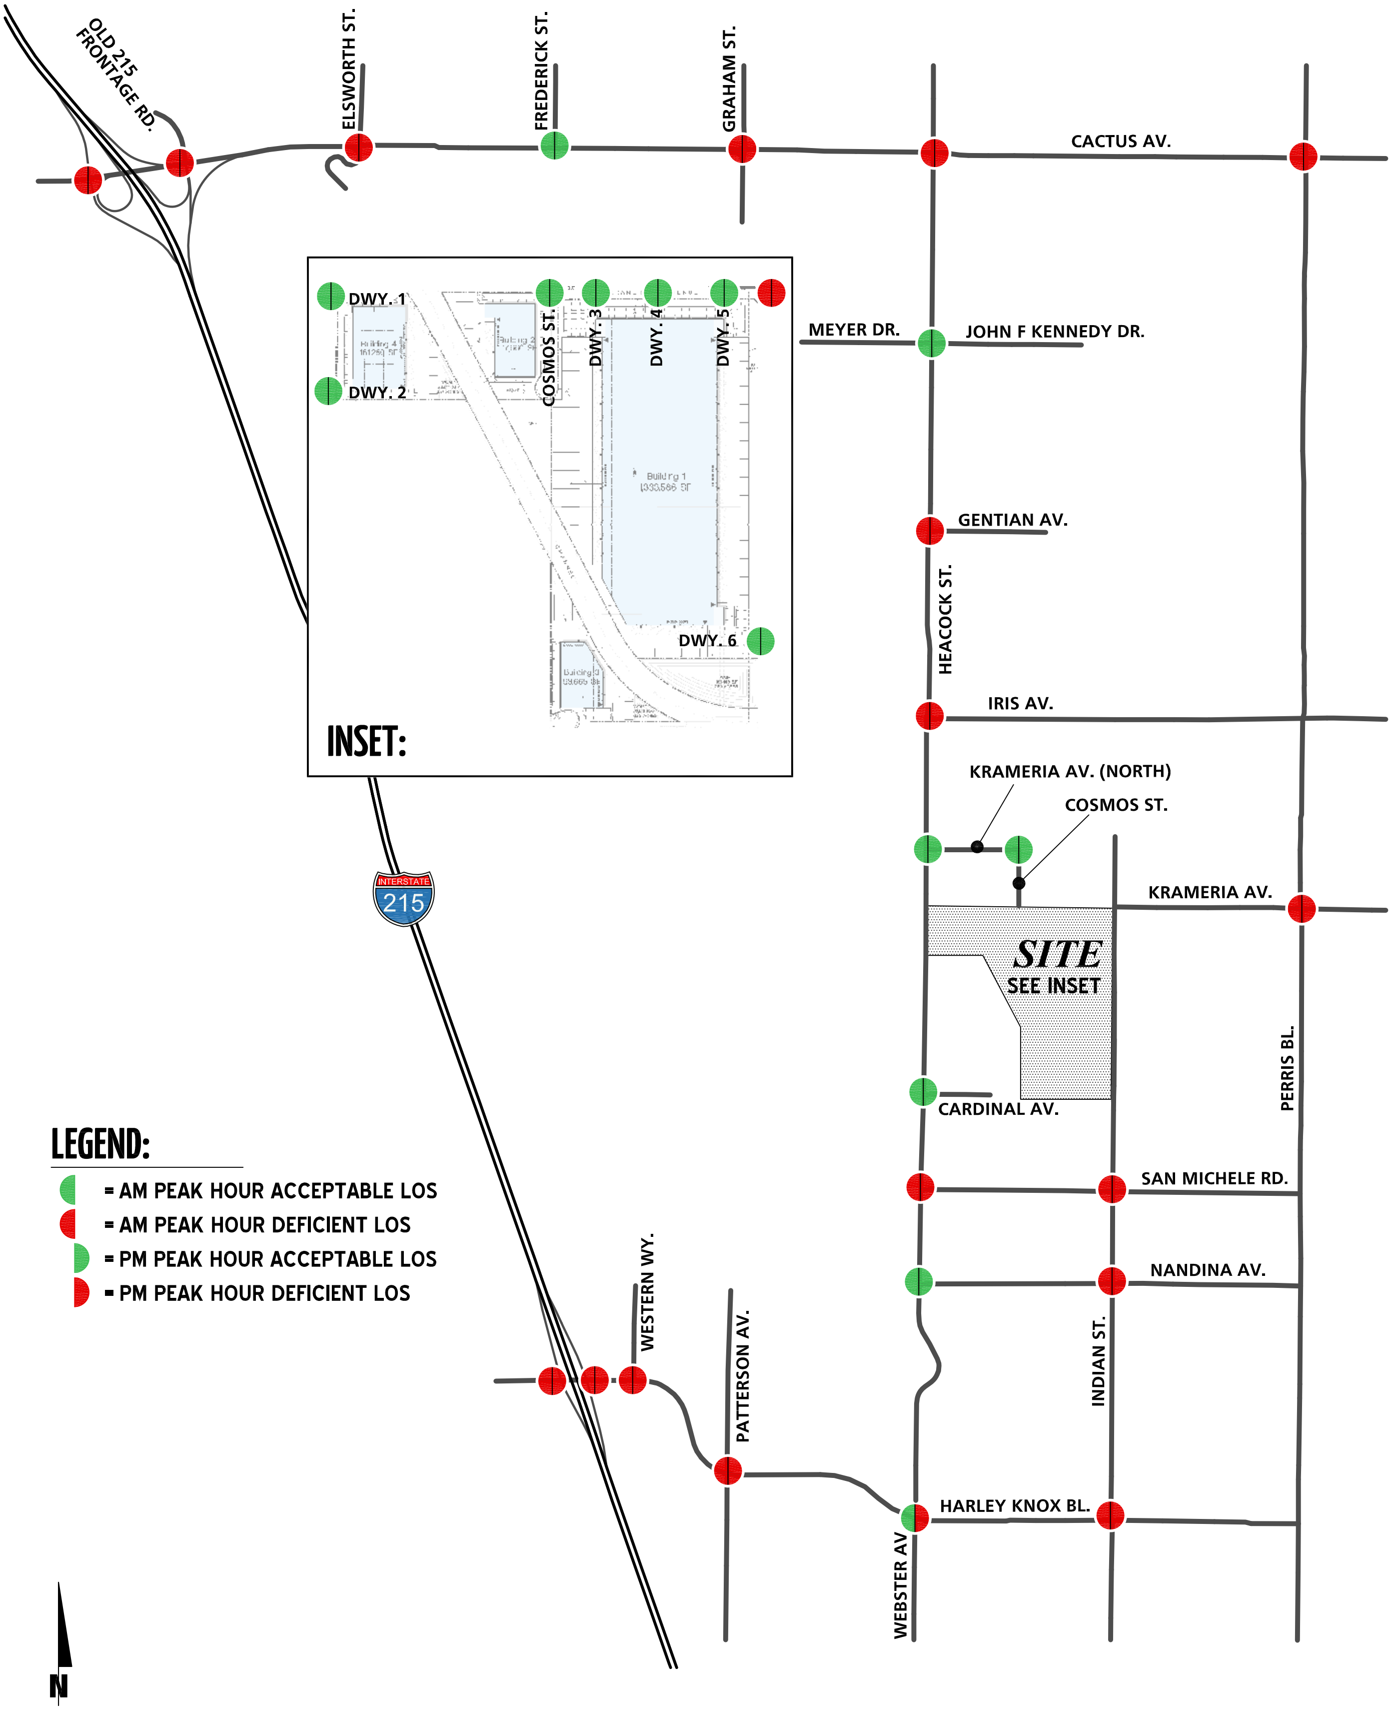
EXHIBIT 7-4: SUMMARY OF PEAK HOUR INTERSECTION LOS FOR GENERAL PLAN BUILDOUT (POST 2035) WITH PROJECT CONDITIONS



Attachment: I1 - Traffic Impact Analysis (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

7.5.1 GENERAL PLAN BUILDOUT WITHOUT PROJECT TRAFFIC CONDITIONS

As shown on Table 7-2, the following roadway segments are anticipated to operate at unacceptable LOS (based on daily roadway segment capacities) under General Plan Buildout Without Project traffic conditions:

ID	Street	Segment
1	Cactus Avenue	I-215 SB Ramps to I-215 NB Ramps – LOS F
2		East of I-215 NB Ramps – LOS F
3		West of Elsworth Street – LOS F
4		East of Elsworth Street – LOS F
5		West of Frederick Street – LOS F
6		East of Frederick Street – LOS F
7		West of Graham Street – LOS F
8		East of Graham Street – LOS F
9		West of Heacock Street – LOS F
10		East of Heacock Street – LOS F
11		West of Perris Boulevard – LOS E
18	Krameria Avenue	West of Perris Boulevard – LOS F
20	San Michele Road	East of Heacock Street- LOS F
21		West of Indian Street – LOS F
23	Harley Knox Boulevard	I-215 NB Ramps to Western Way – LOS F
24		East of Western Way – LOS F
25		West of Patterson Avenue – LOS F
26		East of Patterson Avenue – LOS F
27		West of Webster Avenue – LOS F
28		East of Webster Avenue – LOS F
29		West of Indian Street – LOS F
34	Heacock Street	South of Gentian Avenue
35		North of Iris Avenue
36		Iris Avenue to Krameria Avenue (N)
46	Indian Street	San Michele Road to Nandina Avenue
47		South of Nandina Avenue
48		North of Harley Knox Boulevard

7.5.2 GENERAL PLAN BUILDOUT WITH PROJECT TRAFFIC CONDITIONS

The following roadway segments are anticipated to operate at a deficient LOS with the addition of Project traffic, in addition to those previously identified for General Plan Buildout Without Project traffic conditions:

ID	Street	Segment
12	Krameria Avenue	Heacock Street to Cosmos Street – LOS F
33	Heacock Street	North of Gentian Avenue – LOS E
40		Cardinal Avenue to San Michele Road – LOS E

As previously discussed in Section 3.8 *Existing Conditions Roadway Segment Capacity Analysis*, a peak hour assessment of intersections located on either side of a deficient roadway segment has been conducted to determine if peak hour traffic flows can be accommodated by the potentially deficient roadway segment. If it is determined that peak traffic flows can be accommodated at the City's stated LOS thresholds, then roadway segment widening is typically not recommended.

7.6 OFF-RAMP QUEUING ANALYSIS

7.6.1 GENERAL PLAN BUILDOUT WITHOUT PROJECT TRAFFIC CONDITIONS

A queuing analysis was performed for the off-ramps at the I-215 Freeway and Cactus Avenue and Harley Knox Boulevard interchanges to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially "spill back" onto the I-215 Freeway mainline. Queuing analysis findings are presented in Table 7-3 for General Plan Buildout traffic conditions. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline.

As shown on Table 7-3, the following movement may potentially experience queuing issues during the weekday AM peak 95th percentile traffic flows for General Plan Buildout traffic conditions:

ID	Intersection Location
1	I-215 SB Ramps / Cactus Avenue – Southbound right turn lane (AM peak hour only)
2	I-215 SB Ramps / Harley Knox Boulevard – Southbound shared left-through lane (AM peak hour only); Southbound right turn lane (AM and PM peak hours)
3	I-215 NB Ramps / Cactus Avenue – Northbound left turn lane (AM peak hour only)

The 95th percentile queues for General Plan Buildout Without Project traffic conditions indicates potential queuing for the movements and peak hours identified above. As shown, the analysis indicates that potential queues would exceed the length of the off-ramp and could potentially spillback into the adjacent through lanes on the freeway mainline during the AM and PM peak hours. Worksheets for General Plan Buildout Without Project conditions off-ramp queuing analysis are provided in Appendix 7.3.

Table 7-3

Peak Hour Off-Ramp Queuing Analysis for General Plan Buildout (Post-2035) Conditions

Intersection	Movement	Stacking Distance (Feet)	Post-2035 Without Project				Post-2035 With Project			
			95th Percentile Stacking Distance Required (Feet)		Acceptable? [1]		95th Percentile Stacking Distance Required (Feet)		Acceptable? [1]	
			AM Peak Hour	PM Peak Hour	AM	PM	AM Peak Hour	PM Peak Hour	AM	PM
I-215 SB Ramps / Cactus Av.	NBR	1,850	579 [2]	937 [2]	Yes	Yes	879 [2]	1,015 [2]	Yes	Yes
	SBR	1,115	**1,418 [2]**	655 [2]	**No**	Yes	**1,476 [2]**	668 [2]	**No**	Yes
I-215 SB Ramps / Harley Knox Bl.	SBL/T	1,330	**1,909 [2]**	1,078 [2]	**No**	Yes	**2,172 [2]**	1,136 [2]	**No**	Yes
	SBR	270	**460**	**884 [2]**	**No**	**No**	**479**	**884 [2]**	**No**	**No**
I-215 NB Ramps / Cactus Av.	NBL	145	**1,047 [2]**	274 [2]	**No**	Yes[3]	**957 [2]**	274 [2]	**No**	Yes[3]
	NBT	1,650	1,025 [2]	598 [2]	Yes	Yes	1,109 [2]	598 [2]	Yes	Yes
I-215 NB Ramps / Harley Knox Bl.	NBL/T	1,120	146	591 [2]	Yes	Yes	128	591 [2]	Yes	Yes
	NBR	265	414 [2]	144	Yes[3]	Yes	464 [2]	174	Yes[3]	Yes

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

[2] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

[3] Adjacent through lane has sufficient storage to accommodate any spillover from the northbound turn lane without spilling back and affecting the I-215 Freeway mainline.

7.6.2 GENERAL PLAN BUILDOUT WITH PROJECT TRAFFIC CONDITIONS

As shown on Table 7-3, there are no additional off-ramps anticipated to experience queues that exceed the 95th percentile with the addition of Project traffic, in addition to those previously identified under General Plan Buildout Without Project conditions. However, the addition of Project traffic to the deficient turning movements is cumulatively considerable. Worksheets for Horizon Year With Project conditions off-ramp queuing analysis are provided in Appendix 7.4.

7.7 TRAFFIC SIGNAL WARRANTS ANALYSIS

The following study area intersection is anticipated to warrant a traffic signal for General Plan Buildout Without Project traffic conditions (see Appendix 7.5):

ID	Intersection Location
20	Heacock Street/Webster Avenue / Harley Knox Boulevard

There are no additional intersections anticipated to warrant a traffic signal under General Plan Buildout With Project traffic conditions, in addition to those identified under General Plan Buildout Without Project conditions (see Appendix 7.6).

7.8 BASIC FREEWAY SEGMENT ANALYSIS

7.8.1 GENERAL PLAN BUILDOUT WITHOUT PROJECT TRAFFIC CONDITIONS

General Plan Buildout Without Project mainline directional volumes for the weekday AM and PM peak hours are provided on Exhibit 7-5. As shown on Table 7-4, all of the freeway segments analyzed for this study are anticipated to operate at an unacceptable LOS (i.e., LOS E or worse) during the peak hours, with the exception of the following freeway segments:

ID	Freeway Mainline Segments
5	I-215 Freeway – Northbound, North of Cactus Avenue
6	I-215 Freeway – Northbound, South of Cactus Avenue

General Plan Buildout Without Project basic freeway segment analysis worksheets are provided in Appendix 7.7.

7.8.2 GENERAL PLAN BUILDOUT WITH PROJECT TRAFFIC CONDITIONS

General Plan Buildout With Project mainline directional volumes for the weekday AM and PM peak hours are provided on Exhibit 7-6. As shown on Table 7-4, there are no additional freeway segments anticipated to operate at an unacceptable LOS with the addition of Project traffic, in addition to those previously identified under General Plan Buildout Without Project conditions. Although the addition of Project traffic is not anticipated to result in any new deficiencies, the Project would contribute cumulatively to the impact at the aforementioned freeway mainline segments. Worksheets for General Plan Buildout With Project conditions basic freeway segment analysis worksheets are provided in Appendix 7.8.

* **BOLD** = Unacceptable Level of Service

[1] Number of lanes are in the specified direction and is based on existing conditions.

[2] Density is measured by passenger cars per mile per lane (pc/mi/ln).

7.9 FREEWAY MERGE/DIVERGE ANALYSIS

7.9.1 GENERAL PLAN BUILDOUT (POST 2035) WITHOUT PROJECT TRAFFIC CONDITIONS

Ramp merge and diverge operations were also evaluated for General Plan Buildout Without Project conditions and the results of this analysis are presented in Table 7-5. As shown in Table 7-5, all of the study area freeway merge and diverge ramp junctions are anticipated to operate at deficient LOS (i.e., LOS E or worse). General Plan Buildout Without Project freeway ramp junction operations analysis worksheets are provided in Appendix 7.9.

7.9.2 GENERAL PLAN BUILDOUT (POST 2035) WITH PROJECT TRAFFIC CONDITIONS

As shown on Table 7-5, there are no additional freeway merge/diverge ramp junctions anticipated to operate at an unacceptable LOS with the addition of Project traffic, in addition to those previously identified under General Plan Buildout Without Project conditions. Although the addition of Project traffic is not anticipated to result in any new deficiencies, the Project would contribute cumulatively to the impact at the aforementioned ramp junctions. Worksheets for General Plan Buildout With Project conditions freeway ramp junction operations analysis worksheets are provided in Appendix 7.10.

7.10 RECOMMENDED IMPROVEMENTS

7.10.1 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

Improvement strategies have been recommended at intersections that have been identified as deficient in an effort to reduce each location's peak hour delay and improve the associated LOS grade to an acceptable LOS (LOS D or better). The effectiveness of the recommended improvement strategies discussed below to address General Plan Buildout traffic deficiencies is presented in Table 7-6.

The applicant shall participate in the funding of off-site improvements, including traffic signals that are needed to serve cumulative traffic conditions through the payment of TUMF and City of Moreno Valley DIF fees (if the improvements are included in the TUMF or DIF programs) or on a fair share basis (if the improvements are not included in the TUMF or DIF programs). These fees shall be collected by the City of Moreno Valley, with the proceeds solely used as part of a funding mechanism aimed at ensuring that regional highways and arterial expansions keep pace with the projected population increases. There are no other applicable pre-existing funding programs for the study area aside from TUMF and DIF.

Worksheets for General Plan Buildout Without and With Project conditions, with improvements, HCM calculation worksheets are provided in Appendix 7.11 and Appendix 7.12.

[1] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for righ turning vehicles to travel outside the through lanes

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; >> = Free-Right Turn Lane; d= Defacto Right Turn Lane; **1** = Improvement

[2] Per the 2010 Highway Capacity Manual, overall average intersection delay and level of service are shown for intersections with a traffic signal c all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (o movements sharing a single lane) are shown.

[3] CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal

[4] Improvements also include implementing protected left-turn phasing for the northbound and southbound approaches

[5] The City of Perris is currently improving Harley Knox Boulevard between the I-215 Freeway and Perris Boulevard. Based on discussion with City staff, the improvements are anticipated to be completed by Fall 2015

[6] Improvements also include implementing protected left-turn phasing for the eastbound and westbound approaches

7.10.2 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON ROADWAY SEGMENTS

As shown on Table 7-6, the General Plan Buildout peak hour analysis indicates that the adjacent study area intersections on either side of the deficient roadway segments are anticipated to operate at acceptable LOS with the recommended intersection improvements shown. These intersection improvements consist of installation of traffic signals, additional turn lanes, additional through lanes, and traffic signal modifications to accommodate right turn overlap phasing. Table 7-7 shows the LOS for each of the applicable roadway segments with improvements consistent with those shown on Table 7-6 for the adjacent study area intersections, where roadway widening through additional through lanes has been recommended. In other words, only the roadway segments adjacent to study area intersections where additional through lanes have been recommended on Table 7-6 are shown on Table 7-7. As shown on Table 7-7, although most roadway segments shown are anticipated to improve in LOS to acceptable levels, there are a few deficient roadway segments with the recommended intersection improvements, however, roadway segment widening does not appear necessary to address the deficiencies at the identified roadway segments based on the peak hour intersection operations analysis shown on Table 7-6. There are also other deficient roadway segments (see Table 7-2), where additional roadway widening has not been recommended as the adjacent study area intersections (see Table 7-1) are anticipated to operate at acceptable LOS during the peak hours.

7.10.3 RECOMMENDED IMPROVEMENTS TO ADDRESS OFF-RAMP QUEUES

The 95th percentile queues for General Plan Buildout Without and With Project traffic conditions, with improvements, are shown on Table 7-8. Table 7-8 indicates there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows for General Plan Buildout traffic conditions, with the improvements identified previously in Table 7-6. Worksheets for General Plan Buildout Without and With Project conditions off-ramp queuing analysis, with improvements, are provided in Appendix 7.13 and Appendix 7.14.

7.10.4 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON FREEWAY FACILITIES

The SCAG RTP includes a list of projects in the Federal Transportation Improvement Program (FTIP). The following is an applicable FTIP project within the study area: interchange improvements at I-215/Cactus Avenue, which includes the extension of the northbound auxiliary lane between Cactus Avenue and Alessandro Boulevard to the north (to be completed by 2018). However, this improvement is not anticipated to improve the LOS deficiencies at the deficient freeway merge/diverge ramp junctions.

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] Roadway section improvements are consistent with the through lanes recommended as part of the intersection improvements shown on Table 7-6.

[2] These maximum roadway capacities have been obtained from the City of Moreno Valley's Transportation Division's Traffic Impact Analysis Preparation Guidelines (August 2007), Table CE-9 of the City of Perris General Plan Circulation Element, or Figure C-2 of the County of Riverside General Plan Circulation Element.

[3] V/C = Volume to Capacity Ratio

[4] LOS = Level of Service

[5] Additional roadway widening has not been recommended for these deficient roadway segments as the adjacent study area intersections (see Table 7-1 and Table 7-6) are anticipated to operate at acceptable LOS during the peak hours.

Table 7-8

Peak Hour Off-Ramp Queuing Analysis for General Plan Buildout (Post-2035) Conditions With Improvements

Intersection	Movement	Stacking Distance (Feet)	Post-2035 Without Project				Post-2035 With Project			
			95th Percentile Stacking Distance Required (Feet)		Acceptable?[1]		95th Percentile Stacking Distance Required (Feet)		Acceptable?[1]	
			AM Peak Hour	PM Peak Hour	AM	PM	AM Peak Hour	PM Peak Hour	AM	PM
I-215 SB Ramps / Cactus Av.	NBR	1,850	0[2]	0	Yes	Yes	0	0	Yes	Yes
	SBR	1,115	417[2]	279[2]	Yes	Yes	417[2]	279[2]	Yes	Yes

	SBR	270	407	710[2]	Yes[3]	Yes[3]	407	710[2]	Yes[3]	Yes[3]
I-215 NB Ramps / Cactus Av.	NBL	145	437[2]	168[2]	Yes[3]	Yes[3]	437[2]	168[2]	Yes[3]	Yes[3]
	NBT	1,650	453[2]	424[2]	Yes	Yes	453[2]	424[2]	Yes	Yes
I-215 NB Ramps / Harley Knox Bl.	NBL/T	1,120	170	415[2]	Yes	Yes	170	427[2]	Yes	Yes
	NBR	265	430[2]	138	Yes[3]	Yes	604[2]	160	Yes[3]	Yes

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

[2] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

[3] Adjacent through lane has sufficient storage to accommodate any spillover from the northbound turn lane without spilling back and affecting the I-215 Freeway mainline.

In addition, the Project Study Report/Project Development Support in Riverside County on I-215 and SR-60 between Nuevo Road (I-215) & I-215/SR-60 Junction and Box Springs Road (I-215) & Day Street (SR-60) (prepared by Caltrans in April 2008), also known as the I-215 North Project, includes the construction of an high-occupancy vehicle lane in each direction of the I-215 Freeway between Nuevo Road and Box Springs Road within the existing median. Based on information provided on the Project website, these improvements are longer range as priority has been given to the I-215 South and I-215 Central projects. (15)

Caltrans typically assumes a reduction of 14 percent to the I-215 Freeway mainline through volumes in this region to account for vehicles utilizing the carpool (high-occupancy vehicle) lanes. Although the reduction to I-215 Freeway mainline volumes has been applied to account for the proposed carpool lanes, the analysis is performed assuming the same number of mixed-flow lanes and on and off-ramp configurations as existing baseline conditions.

As shown on Table 7-9, all of the freeway mainline segments are anticipated to operate at an acceptable LOS with the construction of a carpool lane in both directions of travel (i.e., LOS D or better), with the exception of the following:

ID	Freeway Mainline Segments
3	I-215 Freeway – Southbound, North of Harley Knox Boulevard – LOS E AM and PM peak hours
7	I-215 Freeway – Northbound, North of Harley Knox Boulevard – LOS E AM and PM peak hours

Similarly, Table 7-10 shows that the I-215 Freeway ramp junctions are anticipated to operate at an acceptable LOS with the improvements discussed above (i.e., LOS D or better), with the exception of the following freeway ramp junctions:

ID	Freeway Merge/Diverge Ramp Junctions
1	I-215 Freeway – Southbound, Loop Off-Ramp at Cactus Avenue – LOS E PM peak hour only
2	I-215 Freeway – Southbound, Loop Off-Ramp at Cactus Avenue – LOS E PM peak hour only
3	I-215 Freeway – Southbound, Off-Ramp at Harley Knox Boulevard – LOS F AM peak hour; LOS E PM peak hour
5	I-215 Freeway – Northbound, On-Ramp at Cactus Avenue – LOS E AM and PM peak hours
6	I-215 Freeway – Northbound, On-Ramp at Harley Knox Boulevard – LOS E AM and PM peak hours

At this time, Caltrans has no fee programs or other improvement programs in place to address the deficiencies caused by development projects in the City of Moreno Valley (or other neighboring jurisdictions) on SHS roadway segments. Worksheets for General Plan Buildout Without and With Project conditions freeway mainline level of service analysis, with improvements, are provided in Appendix 7.15 and Appendix 7.16. General Plan Buildout Without and With Project freeway ramp junction level of service analysis worksheets, with improvements, are provided in Appendix 7.17 and Appendix 7.18.

Date: April 14, 2015 (Revised May 28, 2015)

This letter acknowledges the City of Moreno Valley Transportation Engineering Division requirements for the traffic impact analysis of the following project:

Case No.	PA15-0014, PA15-0015, PA15-0016, PA15-0017, PA15-0018, P15-036, and P15-037
Project Name:	Moreno Valley Logistics Center
Project Address:	South of Krameria Avenue, between Heacock Avenue and Indian Street
Project Description:	1,737,518 High-Cube Warehouse/Distribution Center and General Light Industrial Use
Related Cases:	

	Consultant	Developer Representative
Name:	URBAN CROSSROADS, INC. Attn: Aric Evatt	Prologis Attn: Scott Mulkay
Address:	41 Corporate Park, Suite 300 Irvine, CA 92606	2817 E. Cedar St., Suite 200 Ontario, CA 91761
Telephone:	949-336-5978	909-673-8730

I. Background

The proposed Moreno Valley Logistics Center development (referred to as "Project") is located south of Krameria Avenue, between Heacock Avenue and Indian Street. The Project is proposed to consist of 1,737,518 square feet of High-Cube Warehouse / General Light Industrial use with four independent buildings consisting of the following square footage:

- Building 1 (1,351,770 square feet of High-Cube Warehouse/Distribution Center)
- Building 2 (122,516 square feet of General Light Industrial use)
- Building 3 (97,222 square feet of General Light Industrial use)
- Building 4 (166,010 square feet of General Light Industrial use)

The Project is anticipated to be built in a single phase and the opening year of 2020 will be evaluated for the purposes of this analysis (minimum five-year opening year per Moreno Valley traffic study guidelines). See preliminary site plan on **Exhibit 1**. **Exhibit 2** illustrates the study area and proposed existing and opening year intersection analysis locations.

The Project proposes to follow a new alignment for Krameria Avenue to provide a 90 degree intersection with Heacock Street and Krameria Avenue (North) (See **Exhibit 2**).

II. Trip Geographic Distribution and Assignment

The project trip distribution patterns were developed based on an understanding of existing travel patterns in the area, the geographical location of the site, the site's proximity to the local arterial and regional state highway system, along with the proposed change in alignment of Krameria Avenue to facilitate site access to Heacock Street:

- **Exhibit 3:** Project (Without Indian Street Bridge) Passenger Car Trip Distribution (to be utilized for Scenarios C. and F. under Section VI. of this scoping agreement). This trip distribution pattern assumes the currently existing roadway network.
- **Exhibit 4:** Project (Without Indian Street Bridge) Trucks Trip Distribution (to be utilized for Scenarios C. and F. under Section VI. of this scoping agreement). This trip distribution pattern assumes the currently existing roadway network.
- **Exhibit 5:** Project (With Indian Street Bridge) Passenger Car Trip Distribution (to be utilized for Scenario D. in Section VI. of this scoping agreement). This trip distribution pattern assumes the Indian Street Bridge over the Perris Valley Storm Drain Channel.
- **Exhibit 6:** Project (With Indian Street Bridge) Trucks Trip Distribution (to be utilized for Scenario D. in Section VI. of this scoping agreement). This trip distribution pattern assumes the Indian Street Bridge over the Perris Valley Storm Drain Channel.
- **Exhibit 7:** General Plan Buildout Project (Passenger Car) Trip Distribution (to be utilized for Scenario H. in Section VI. of this scoping agreement). This distribution pattern assumes both the Indian Street Bridge over the Perris Valley Storm Drain Channel and the Heacock Street extension at Harley Knox Boulevard are both in place.
- **Exhibit 8:** General Plan Buildout Project (Trucks) Trip Distribution (to be utilized for Scenario H. in Section VI. of this scoping agreement). This distribution pattern assumes both the Indian Street Bridge over the Perris Valley Storm Drain Channel and the Heacock Street extension at Harley Knox Boulevard are both in place.

III. Site Trip Generation Forecast

A. Source for trip generation rates: Institute of Transportation Engineers (ITE) Trip Generation Manual 9th Edition (2012) for ITE Land Use Codes 110 (General Light Industrial) and 152 (High-Cube Warehousing).

B. Weekday AM Peak: 7:00-9:00 AM

C. Weekday PM Peak: 4:00-6:00 PM

D. Intersection and link acceptable Level of Service "D" for some intersections and links and Level of Service "C" for others based upon the current City policy. (Use Highway Capacity Manual 2010 operations procedures; parameters per County of Riverside Traffic Impact Analysis Guidelines)

Proposed Use Rates (1) (See attached **Table 1**)

Daily: 6.970 AM: 0.920 PM: 0.970

General Light Industrial (per TSF) _________ _________ _________

High-Cube Warehouse (per TSF) Daily: 1.680 AM: 0.110 PM: 0.120

Internal Trip Allowance: Yes: _________ No: X Percentage: _________

Pass-by Trip Allowance: Yes: _________ No: X Percentage: _________

(1) Institute of Transportation Engineers 9th Edition Trip Generation Manual (2012).

E. As noted on **Table 1**, refinements to raw trip generation estimates have been made to provide a more detailed breakdown of trips by vehicle type. Total vehicle mix percentages were obtained from the City of Fontana Truck Trip Generation Study for General Light Industrial (LU 110), August 2003, and the ITE Trip Generation manual in conjunction with the South Coast Air Quality Management District's (SCAQMD) recommended truck mix, by axle type for High Cube Warehouse/Distribution Center use. PCE factors were applied to the trip generation rates for heavy trucks (large 2-axles, 3-axles, 4+-axles). PCE factors are consistent with the recommended PCE factors in Appendix "C" of the San Bernardino County Congestion Management Program (CMP), 2005 Update.

F. As shown on **Table 2**, the proposed Project is anticipated to generate a net total of 6,975 PCE trip-ends per day with 660 PCE AM peak hour trips and 718 PCE PM peak hour trips.

IV. Specific Project Issues to be Analyzed

A. The traffic study will address the adequacy of site access and identify specific near-term circulation improvements required at study area intersections and roadways to maintain acceptable peak hour and daily levels of service (LOS).

B. The traffic study shall address the project traffic impacts at all study intersections listed in Section VI and provide appropriate mitigation measures if applicable. Peak-hour traffic signal warrants shall be evaluated for all intersections that are not currently signalized.

C. Qualitative assessment of existing and planned non-motorized facilities (e.g., pedestrians, bike routes, trails, etc.) within the study area.

D. The turn pocket lengths will be determined through peak hour traffic simulations developed using SimTraffic software in an effort to identify the required storage capacity for turn lanes at each Project driveway.

E. Study shall address need/timing of Indian Street bridge over Perris Valley Storm Drain Channel.

F. Study shall assess existing truck routes and make recommendations for any revisions.

V. Study Horizon Year

A. Existing (2015)
B. Existing (2015) Plus Project Construction Traffic (Trip Generation TBD)
C. Existing (2015) Plus Project (Without Indian Street Bridge)
D. Existing (2015) Plus Project (With Indian Street Bridge)
E. Opening Year Cumulative (2020) Without Project (existing to opening year-2020, assuming a growth rate of 2% per year and includes the traffic from other cumulative development projects in the vicinity)
F. Opening Year Cumulative (2020) With Project
G. General Plan Buildout (Post-2035) Without Project
H. General Plan Buildout (Post-2035) With Project

Although not required based on the City's traffic study guidelines, the General Plan Buildout (Post-2035) analysis scenario has been included to conduct a conservative analysis.

VI. Facilities to be Studied

A. Analysis Locations: (See **Exhibit 2**)
1. Interstate 215 Southbound Ramps / Cactus Avenue
2. Interstate 215 Southbound Ramps / Harley Knox Boulevard
3. Interstate 215 Northbound Ramps / Cactus Avenue
4. Interstate 215 Northbound Ramps / Harley Knox Boulevard
5. Elsworth Street / Cactus Avenue
6. Frederick Street / Cactus Avenue
7. Western Way / Harley Knox Boulevard
8. Graham Street / Cactus Avenue
9. Patterson Avenue / Harley Knox Boulevard
10. Heacock Street / Cactus Avenue
11. Heacock Street / John F. Kennedy Drive
12. Heacock Street / Gentian Avenue
13. Heacock Street / Iris Avenue
14. Heacock Street / Krameria Avenue (North)
15. Heacock Street / Driveway 1 – Future Intersection
16. Heacock Street / Driveway 2 – Future Intersection
17. Heacock Street / Cardinal Avenue
18. Heacock Street / San Michele Road
19. Heacock Street / Nandina Avenue
20. N. Webster Avenue / Harley Knox Boulevard
21. New Public Street / Krameria Avenue (North) – Future Intersection
22. New Public Street / Krameria Avenue – Future Intersection
23. Driveway 3 / Krameria Avenue – Future Intersection
24. Driveway 4 / Krameria Avenue – Future Intersection
25. Driveway 5 / Krameria Avenue – Future Intersection
26. Indian Street / Krameria Avenue
27. Indian Street / Driveway 6 – Future Intersection
28. Indian Street / San Michele Road
29. Indian Street / Nandina Avenue

Attachment: I1(a) -Traffic Impact Analysis Appendix (2234 : PEN16-0001-PEN16-0007 (PA15-0014-0017) Prologis Plot Plans)

30. Indian Street / Harley Knox Boulevard
31. Perris Boulevard / Cactus Avenue
32. Perris Boulevard / Krameria Avenue

B. Roadway Segments:
All roadway segments adjacent to intersection analysis locations will be analyzed (e.g. all legs of intersections listed above).

VII. Open Items

A. **Cumulative Development Projects:** There is a list of cumulative projects provided on **Table 3** (also shown graphically on **Exhibit 9**) and is consistent with the cumulative lists on other recent projects. It is requested that the list of cumulative development projects be reviewed by the City and projects be removed/added, where applicable.

VIII. Deliverables

a. Draft traffic impact studies (2 copies each)
b. Final traffic impact studies (4 copies each)

All draft and final traffic impact studies shall be delivered with the appropriate review fee to the Permit Technician, Land Development Division - Moreno Valley City Hall, 14177 Frederick Street, Moreno Valley, CA 92552. Please contact the Land Development Division at 951-413-3110 prior to the delivery of the traffic study.

A review fee will be required upon submittal of the traffic study. **A signed copy of this *Scoping Agreement* must be included in the submitted draft and final traffic impact studies.**

If you have any questions regarding this *Scoping Agreement*, please contact Eric Lewis at 951-413-3140.

Recommended By:

Aric Evatt, PTP
President
