- (ii) the character, dimensions, or location of any improvement erected on the Land;
- (iii) the subdivision of land; or
- (iv) environmental protection;

or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.

(b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.

2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
  - (a) created, suffered, assumed, or agreed to by the Insured Claimant;
  - (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
  - (c) resulting in no loss or damage to the Insured Claimant;
  - (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 or 10); or
  - (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
  - (a) a fraudulent conveyance or fraudulent transfer, or
  - (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

#### EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of: [The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.
7. [Variable exceptions such as taxes, easements, CC&R's, etc. shown here.]

#### ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY (07-26-10)

#### EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
  - (i) the occupancy, use, or enjoyment of the Land;
  - (ii) the character, dimensions, or location of any improvement erected on the Land;
  - (iii) the subdivision of land; or
  - (iv) environmental protection;

or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.

(b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d),

- 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
  - (a) created, suffered, assumed, or agreed to by the Insured Claimant;
  - (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
  - (c) resulting in no loss or damage to the Insured Claimant;
  - (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
  - (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
  - (a) a fraudulent conveyance or fraudulent transfer, or
  - (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

## First American Title

### Privacy Information

#### We Are Committed to Safeguarding Customer Information

In order to better serve your needs now and in the future, we may ask you to provide us with certain information. We understand that you may be concerned about what we will do with such information - particularly any personal or financial information. We agree that you have a right to know how we will utilize the personal information you provide to us. Therefore, together with our subsidiaries we have adopted this Privacy Policy to govern the use and handling of your personal information.

#### Applicability

This Privacy Policy governs our use of the information that you provide to us. It does not govern the manner in which we may use information we have obtained from any other source, such as information obtained from a public record or from another person or entity. First American has also adopted broader guidelines that govern our use of personal information regardless of its source. First American calls these guidelines its Fair Information Values.

#### Types of Information

Depending upon which of our services you are utilizing, the types of nonpublic personal information that we may collect include:

- Information we receive from you on applications, forms and in other communications to us, whether in writing, in person, by telephone or any other means;
- Information about your transactions with us, our affiliated companies, or others; and
- Information we receive from a consumer reporting agency.

#### Use of Information

We request information from you for our own legitimate business purposes and not for the benefit of any nonaffiliated party. Therefore, we will not release your information to nonaffiliated parties except: (1) as necessary for us to provide the product or service you have requested of us; or (2) as permitted by law. We may, however, store such information indefinitely, including the period after which any customer relationship has ceased. Such information may be used for any internal purpose, such as quality control efforts or customer analysis. We may also provide all of the types of nonpublic personal information listed above to one or more of our affiliated companies. Such affiliated companies include financial service providers, such as title insurers, property and casualty insurers, and trust and investment advisory companies, or companies involved in real estate services, such as appraisal companies, home warranty companies and escrow companies. Furthermore, we may also provide all the information we collect, as described above, to companies that perform marketing services on our behalf, on behalf of our affiliated companies or to other financial institutions with whom we or our affiliated companies have joint marketing agreements.

#### Former Customers

Even if you are no longer our customer, our Privacy Policy will continue to apply to you.

#### Confidentiality and Security

We will use our best efforts to ensure that no unauthorized parties have access to any of your information. We restrict access to nonpublic personal information about you to those individuals and entities who need to know that information to provide products or services to you. We will use our best efforts to train and oversee our employees and agents to ensure that your information will be handled responsibly and in accordance with this Privacy Policy and First American's Fair Information Values. We currently maintain physical, electronic, and procedural safeguards that comply with federal regulations to guard your nonpublic personal information.

#### Information Obtained Through Our Web Site

First American Financial Corporation is sensitive to privacy issues on the Internet. We believe it is important you know how we treat the information about you we receive on the Internet.

In general, you can visit First American or its affiliates' Web sites on the World Wide Web without telling us who you are or revealing any information about yourself. Our Web servers collect the domain names, not the e-mail addresses, of visitors. This information is aggregated to measure the number of visits, average time spent on the site, pages viewed and similar information. First American uses this information to measure the use of our site and to develop ideas to improve the content of our site.

There are times, however, when we may need information from you, such as your name and email address. When information is needed, we will use our best efforts to let you know at the time of collection how we will use the personal information. Usually, the personal information we collect is used only by us to respond to your inquiry, process an order or allow you to access specific account/profile information. If you choose to share any personal information with us, we will only use it in accordance with the policies outlined above.

#### Business Relationships

First American Financial Corporation's site and its affiliates' sites may contain links to other Web sites. While we try to link only to sites that share our high standards and respect for privacy, we are not responsible for the content or the privacy practices employed by other sites.

#### Cookies

Some of First American's Web sites may make use of "cookie" technology to measure site activity and to customize information to your personal tastes. A cookie is an element of data that a Web site can send to your browser, which may then store the cookie on your hard drive.

[FirstAm.com](http://FirstAm.com) uses stored cookies. The goal of this technology is to better serve you when visiting our site, save you time when you are here and to provide you with a more meaningful and productive Web site experience.

#### Fair Information Values

**Fairness** We consider consumer expectations about their privacy in all our businesses. We only offer products and services that assure a favorable balance between consumer benefits and consumer privacy.

**Public Record** We believe that an open public record creates significant value for society, enhances consumer choice and creates consumer opportunity. We actively support an open public record and emphasize its importance and contribution to our economy.

**Use** We believe we should behave responsibly when we use information about a consumer in our business. We will obey the laws governing the collection, use and dissemination of data.

**Accuracy** We will take reasonable steps to help assure the accuracy of the data we collect, use and disseminate. Where possible, we will take reasonable steps to correct inaccurate information. When, as with the public record, we cannot correct inaccurate information, we will take all reasonable steps to assist consumers in identifying the source of the erroneous data so that the consumer can secure the required corrections.

**Education** We endeavor to educate the users of our products and services, our employees and others in our industry about the importance of consumer privacy. We will instruct our employees on our fair information values and on the responsible collection and use of data. We will encourage others in our industry to collect and use information in a responsible manner.

**Security** We will maintain appropriate facilities and systems to protect against unauthorized access to and corruption of the data we maintain.

Attachment: Phase I Environmental Site Assessment (March 2018) (3376 : The proposal includes a General Plan Amendment, Specific Plan

## EXECUTIVE SUMMARY

### TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

### DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## EXECUTIVE SUMMARY

### STANDARD ENVIRONMENTAL RECORDS

#### **State- and tribal - equivalent NPL**

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there is 1 RESPONSE site within approximately 1 mile of the target property.

#### **State- and tribal - equivalent CERCLIS**

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/30/2017 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

#### ***Local Lists of Hazardous waste / Contaminated Sites***

SCH: This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category. depending on the level of threat to public health and safety or the environment they pose.

A review of the SCH list, as provided by EDR, and dated 10/30/2017 has revealed that there is 1 SCH site within approximately 0.25 miles of the target property.

| <u>Equal/Higher Elevation</u>   | <u>Address</u>              | <u>Direction / Distance</u>   | <u>Map ID</u> | <u>Page</u> |

 Description: he U.S. Army Air Corps acquired 162.84 acres by lease from a private party on 8 May 1944. A total of 3.04 acres were acquired by license from three private individuals between October 1944 and January 1945. Total acquisition was 165.88 acres. The site is located in Moreno Valley in Riverside County, California, approximately 1 mile northwest of Lake Perris. The property is largely undeveloped, but a small portion has been incorporated into a local park and housing development.  
 Current Program: Not reported  
 History: Based on documentation, the range was used as a range and included a platform for the following types of practice: A-GC gun mount, Sperry ball turret, Emerson nose turret, machine gun, and Martin upper with steel sighting support. he lease for the 162.84 acres was terminated on 1 December 1946. The three licenses were terminated on 7 September 1946 and 7 October 1946. Currently, the property is largely undeveloped. A small portion of the former range is now part of a local park and the Del Rey housing development.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

|   | Data Release Frequency: Quarterly      |

#### NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## **Federal Delisted NPL site list**

### Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

## **Federal CERCLIS list**

### FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

|   | Data Release Frequency: Varies          |

### SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## **Federal CERCLIS NFRAP site list**

### SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

|   | Data Release Frequency: Quarterly      |

### **Federal RCRA non-CORRACTS TSD facilities list**

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

### **Federal RCRA generators list**

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

| Number of Days to Update: 45            | Next Scheduled EDR Contact: 04/09/2018  |
|   | Data Release Frequency: Quarterly       |

## RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

|   | Data Release Frequency: Varies          |

### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

|   |   |

Data Release Frequency: Quarterly

## **State- and tribal - equivalent CERCLIS**

### ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 10/30/2017  
Date Data Arrived at EDR: 10/31/2017  
Date Made Active in Reports: 12/15/2017

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### ***Local Brownfield lists***

#### **US BROWNFIELDS: A Listing of Brownfields Sites**

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

 Data Release Frequency: No Update Planned

## US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 01/09/2018

 Data Release Frequency: Semi-Annually

### DEED: Deed Restriction Listing

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## Other Ascertainable Records

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

### SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

 Data Release Frequency: Varies

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

## WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board's review found that more than one-third of the region's active disposal pits are operating without permission.

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

|                                  |                                 |

#### EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

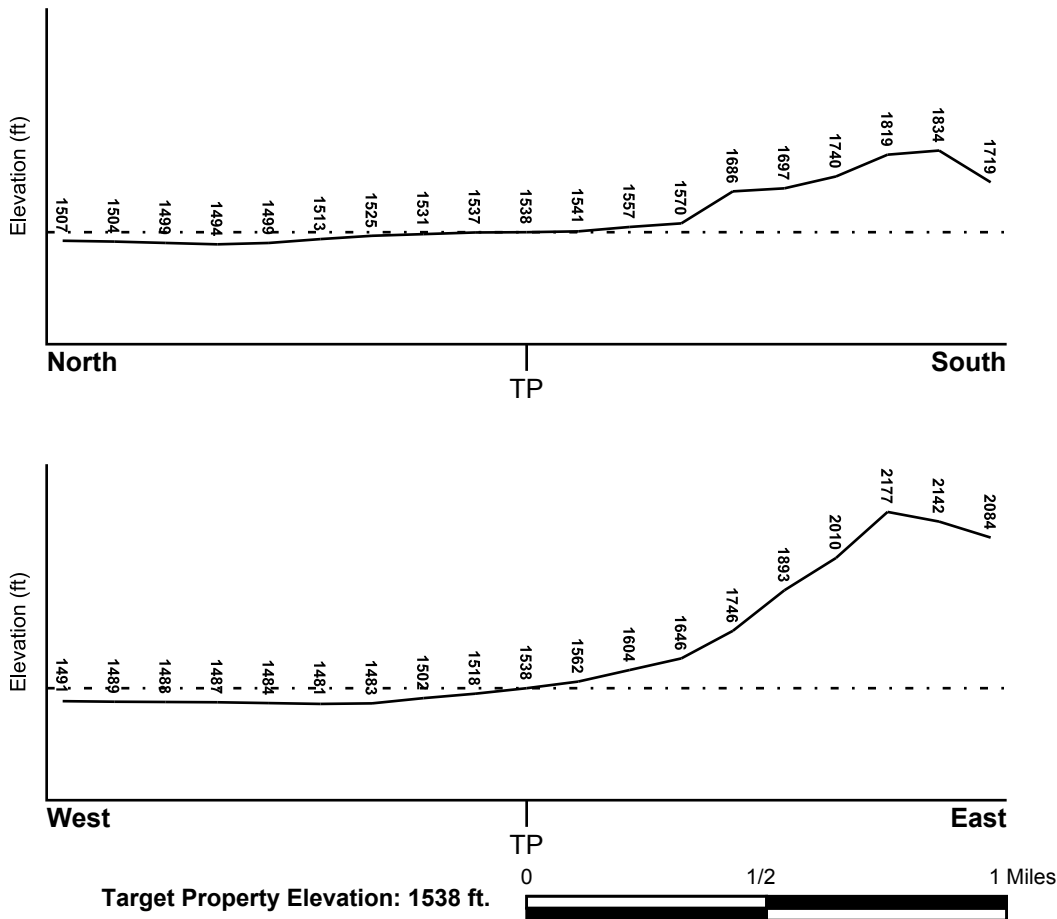

**TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**TARGET PROPERTY TOPOGRAPHY**

General Topographic Gradient: General WNW

**SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

### **FEMA FLOOD ZONE**

|   |                         |
|---|-------------------------|
| <u>Flood Plain Panel at Target Property</u> | <u>FEMA Source Type</u> |

### **NATIONAL WETLAND INVENTORY**

|                                    |  |
|------------------------------------|--|
| <u>NWI Quad at Target Property</u> | <u>NWI Electronic Data Coverage</u>            |
| NOT AVAILABLE                      | YES - refer to the Overview Map and Detail Map |

### HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

#### ***Site-Specific Hydrogeological Data\*:***

|                |            |
|----------------|------------|
| Search Radius: | 1.25 miles |
| Status:        | Not found  |

### **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| <u>MAP ID</u> | <u>LOCATION FROM TP</u> | <u>GENERAL DIRECTION GROUNDWATER FLOW</u> |
|---------------|-------------------------|---|
| Not Reported  |                         |   |

\* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### **ROCK STRATIGRAPHIC UNIT**

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

#### Soil Map ID: 1

Soil Component Name: GREENFIELD

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information |           |           |                    |   |   |  |                      |

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Wetland Inventory

Source: Department of Fish & Game

Telephone: 916-445-0411

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water  
Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water  
Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### Water Well Database

Source: Department of Water Resources  
Telephone: 916-651-9648

#### California Drinking Water Quality Database

Source: Department of Public Health  
Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

## OTHER STATE DATABASE INFORMATION

#### California Oil and Gas Well Locations

Source: Department of Conservation  
Telephone: 916-323-1779  
Oil and Gas well locations in the state.

### RADON

#### State Database: CA Radon

Source: Department of Health Services  
Telephone: 916-324-2208  
Radon Database for California

#### Area Radon Information

Source: USGS  
Telephone: 703-356-4020  
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA  
Telephone: 703-356-4020  
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Group Delta Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

**Certified Sanborn Results:**

**Certification #** 78DB-4391-A4D0

**PO #** EN324

**Project** Continental Village

**UNMAPPED PROPERTY**

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 78DB-4391-A4D0

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

## EDR Aerial Photo Decade Package

**Site Name:**

Continental Village  
Krameria Ave and Lasselle Str  
Moreno Valley, CA 92555  
EDR Inquiry # 5219776.9

**Client Name:**

Group Delta Consultants  
1035 S. Milliken Ave Suite G  
Ontario, CA 91761  
Contact: Jack Packwood

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

## EXECUTIVE SUMMARY

Urban Crossroads, Inc. has prepared this noise study to determine the noise exposure and the necessary noise mitigation measures, if any, for the proposed Continental Villages development (“Project”). The Project site is located on the northeast corner of Lasselle Street and Krameria Avenue in the City of Moreno Valley. The Project is proposed to consist of up to 112 apartments/duplexes and 21,000 square feet of commercial retail use. This study has been prepared to satisfy the City of Moreno Valley noise standards, and identifies thresholds of significance based on guidance in Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (1)

### OFF-SITE TRAFFIC NOISE ANALYSIS

Traffic generated by the operation of the proposed Project will influence the traffic noise levels in surrounding off-site areas. To quantify the traffic noise increases on the surrounding off-site areas, the changes in traffic noise levels on 11 roadway segments surrounding the Project site were calculated based on the change in the average daily traffic (ADT) volumes. The traffic noise levels provided in this analysis are based on the traffic forecasts found in *Continental Villages Traffic Impact Analysis* prepared by Urban Crossroads, Inc. (2) To assess the off-site noise level impacts associated with the proposed Project, noise contour boundaries were developed for Existing, Opening Year 2023, and Horizon Year 2040 traffic conditions. The analysis shows that the unmitigated Project-related traffic noise level increases under all traffic scenarios will be *less than significant*.

### ON-SITE TRAFFIC NOISE ANALYSIS

A noise impact analysis has been completed to determine the noise exposure levels that would result from off-site traffic noise sources, and to identify potential noise mitigation measures, if any, that would achieve acceptable Project exterior and interior noise levels. The primary source of traffic noise affecting the Project site is anticipated to be from Lasselle Street and Krameria Avenue. The Project will also experience some background traffic noise impacts from the Project’s internal parking lot, however, due to the lower traffic volume and speeds of vehicles transiting on these roadways, traffic noise from these roadways will not make a significant contribution to the noise environment at the Project site.

### EXTERIOR NOISE LEVELS

The future unmitigated on-site traffic noise levels at the residential building façades are shown to approach 59.8 dBA CNEL and represent *normally acceptable* exterior noise levels for residential home land use. (3) Further, Project interior noise levels are analyzed herein to identify the necessary interior noise reduction measures, if any, to satisfy the City of Moreno Valley General Plan Noise Element 45 dBA CNEL interior noise level standard.

## INTERIOR NOISE LEVELS

This noise study evaluates the interior noise levels at the Project building based on the City of Moreno Valley 45 dBA CNEL residential interior noise level standard. The Project buildings are shown to require a Noise Reduction (NR) of up to 14.8 dBA and a windows-closed condition requiring a means of mechanical ventilation (e.g. air conditioning). To meet the City of Moreno Valley 45 dBA CNEL interior noise standards the following on-site standard construction measures are required:

- Windows/Glass Doors: All units require windows and sliding glass doors that have well-fitted, well-weather-stripped assemblies, and minimum sound transmission class (STC) ratings of 27.
- Exterior Doors (Non-Glass): All exterior doors shall be well weather-stripped and have well-sealed perimeter gaps to achieve minimum sound transmission class (STC) ratings of 27. (4)
- Exterior Walls: At any penetrations of exterior walls by pipes, ducts, or conduits, the space between the wall and pipes, ducts, or conduits shall be caulked or filled with mortar to form an airtight seal.
- Roof: Roof sheathing of wood construction shall be per manufacturer's specification or caulked plywood of at least one-half inch thick. Ceilings shall be per manufacturer's specification or well-sealed gypsum board of at least one-half inch thick. Insulation with at least a rating of R-19 shall be used in the attic space.
- Ventilation: Arrangements for any habitable room shall be such that any exterior door or window can be kept closed when the room is in use and still receive circulated air. A forced air circulation system (e.g. air conditioning) or active ventilation system (e.g. fresh air supply) shall be provided which satisfies the requirements of the Uniform Building Code.

Based on the results of this analysis, the Project will satisfy the 45 dBA CNEL interior noise level standard with standard building construction. Exhibit ES-A shows the on-site recommendations.

## OPERATIONAL NOISE ANALYSIS

Using reference noise levels to represent the expected noise sources from the Continental Villages site, this analysis estimates the Project-related stationary-source noise levels at nearby sensitive receiver locations. The normal activities associated with the proposed Continental Villages are anticipated to include roof-top air conditioning units, residential entry gate activity, residential and commercial parking lot vehicle movements, and outdoor pool/spa activity. The operational noise analysis shows that the Project-related stationary-source noise levels due to the roof-top air conditioning units, residential entry gate activity, residential and commercial parking lot vehicle movements, and outdoor pool/spa activity will satisfy the City of Moreno Valley noise level standards at 200 feet from the property line of the noise source (Project site) and at all nearby receiver locations.

In addition, this analysis demonstrates that the Project will contribute *less than significant* operational noise level contributions to the existing ambient noise environment during the daytime and nighttime hours at all of the sensitive receiver locations. Therefore, the operational noise level impacts associated with the proposed Project activities, such as the roof-top air conditioning units, residential entry gate activity, residential and commercial parking lot vehicle movements, and outdoor pool/spa activity, will be *less than significant*.

### CONSTRUCTION NOISE ANALYSIS

Construction-related noise impacts are expected to create temporary and intermittent high-level noise conditions at receivers surrounding the Project site when certain activities occur at the closest point to the nearby receiver locations from primary Project construction activity. Using sample reference noise levels to represent the planned construction activities of the Continental Villages site, this analysis estimates the Project-related construction noise levels at nearby receiver locations. Based on the analysis, the Project-related short-term construction noise levels are shown to satisfy the City of Moreno Valley Municipal Code 60 dBA  $L_{eq}$  daytime noise level threshold at noise-sensitive receiver locations with the planned temporary construction noise attenuation measures (Project Design Features). To reduce the Project construction noise levels at the adjacent receiver locations, R2 and R6, the Project Design Features (PDFs) include noise attenuation measures in the form of a minimum 10-foot high temporary noise barrier at the Project site boundary for the future residential uses represented by R6, and a 50-foot buffer for large mobile equipment (greater than 80,000 pounds) for both R2 and R6, as shown on Exhibit ES-B. The construction noise PDFs are outlined below. With the PDFs identified herein, the noise impact due to Project construction is considered a *less than significant* impact.

### CONSTRUCTION VIBRATION ANALYSIS

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods used, distance to the affected structures and soil type. It is expected that ground-borne vibration from temporary Project construction activities would cause only intermittent, localized intrusion. The analysis shows that the unmitigated Project-construction vibration levels will remain below the Federal Transit Administration (FTA) 80 VdB threshold at the nearby receiver locations, and are therefore, considered a *less than significant* impact.

Further, vibration levels at the site of the closest sensitive receiver are unlikely to be sustained during the entire construction period but will occur rather only during the times that heavy construction equipment is operating at the Project site perimeter.

## CONSTRUCTION NOISE PROJECT DESIGN FEATURES

The following PDFs are included in the Project design to reduce construction noise and vibration levels produced by the construction equipment to the nearby sensitive land uses.

- If R6 represents occupied residential use at the time of Project construction, install a minimum 10-foot high temporary construction noise barrier at the Project's site boundary adjacent to sensitive receiver location R6, shown on Exhibit ES-B, for the duration of Project construction. The noise control barriers must have a solid face from top to bottom. The noise control barrier must meet the minimum height and be constructed as follows:
  - The temporary noise barrier shall provide a minimum transmission loss of 20 dBA (Federal Highway Administration, Noise Barrier Design Handbook). The noise barrier shall be constructed using an acoustical blanket (e.g. vinyl acoustic curtains or quilted blankets) attached to the construction site perimeter fence or equivalent temporary fence posts. Example photos are provided in Appendix 11.2.;
  - The noise barrier must be maintained, and any damage promptly repaired. Gaps, holes, or weaknesses in the barrier or openings between the barrier and the ground shall be promptly repaired;
  - The noise control barrier and associated elements shall be completely removed, and the site appropriately restored upon the conclusion of the construction activity.
- Large mobile equipment (greater than or equal to 80,000 pounds) (5) shall not be used within 50 feet of receiver locations R2 and R6 if occupied at the time of Project construction, as shown on Exhibit ES-B. Instead, smaller, rubber-tired mobile equipment (less than 80,000 pounds) or equivalent alternative equipment shall be used within this area during Project construction.
- Prior to approval of grading plans and/or issuance of building permits, plans shall include a note indicating that Project construction activities shall comply with the City of Moreno Valley Municipal Code requirements. (6)
- During all Project site construction, the construction contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers, consistent with manufacturers' standards. The construction contractor shall place all stationary construction equipment so that emitted noise is directed away from the noise sensitive receptors nearest the Project site.
- The construction contractor shall locate equipment staging in areas that will create the greatest distance between construction-related noise sources and noise-sensitive receivers nearest the Project site during all Project construction (i.e., to the western center).
- The contractor shall design delivery routes to minimize the exposure of sensitive land uses or residential dwellings to delivery truck-related noise.

## SUMMARY OF SIGNIFICANCE FINDINGS

The results of this Continental Villages Noise Impact Analysis are summarized below based on the significance criteria in Section 4 of this report. Table ES-1 shows the findings of significance for each potential noise and/or vibration impact before and after any required mitigation measures.

TABLE ES-1: SUMMARY OF SIGNIFICANCE FINDINGS

| Analysis               | Report Section | Significance Findings        |           |
|------------------------|----------------|------------------------------|-----------|
|                        |                | Unmitigated                  | Mitigated |
| Off-Site Traffic Noise | 7              | <i>Less Than Significant</i> | -         |
| On-Site Traffic Noise  | 8              | <i>Less Than Significant</i> | -         |
| Operational Noise      | 10             | <i>Less Than Significant</i> | -         |
| Construction Noise     | 11             | <i>Less Than Significant</i> | -         |
| Construction Vibration |                | <i>Less Than Significant</i> | -         |

# 1 INTRODUCTION

This noise analysis has been completed to determine the noise impacts associated with the development of the proposed Continental Villages (“Project”). This noise study briefly describes the proposed Project, provides information regarding noise fundamentals, describes the local regulatory setting, provides the study methods and procedures for traffic noise analysis, and evaluates the future exterior noise environment. In addition, this study includes an analysis of the potential Project-related long-term operational and short-term construction noise impacts.

## 1.1 SITE LOCATION

The proposed Continental Villages site is located on the northeast corner of Lasselle Street and Krameria Avenue in the City of Moreno Valley, as shown on Exhibit 1-A. Existing uses in the Project study area include existing residential homes northwest, south, and east of the Project site, the Lasselle Elementary School north of the Project site, and future residential uses, currently under construction, north of the Project site.

## 1.2 PROJECT DESCRIPTION

The Project is proposed to consist of up to 112 apartments/duplexes and 21,000 square feet of commercial retail use, as shown on Exhibit 1-B. The on-site Project-related noise sources are expected to include: roof-top air conditioning units, residential entry gate activity, residential and commercial parking lot vehicle movements, and outdoor pool/spa activity.

## 2 FUNDAMENTALS

Noise has been simply defined as "unwanted sound." Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm or when it has adverse effects on health. Noise is measured on a logarithmic scale of sound pressure level known as a decibel (dB). A-weighted decibels (dBA) approximate the subjective response of the human ear to broad frequency noise source by discriminating against very low and very high frequencies of the audible spectrum. They are adjusted to reflect only those frequencies which are audible to the human ear. Exhibit 2-A presents a summary of the typical noise levels and their subjective loudness and effects that are described in more detail below.

**EXHIBIT 2-A: TYPICAL NOISE LEVELS**

| <b>COMMON OUTDOOR ACTIVITIES</b>                  | <b>COMMON INDOOR ACTIVITIES</b>             | <b>A - WEIGHTED SOUND LEVEL dBA</b> | <b>SUBJECTIVE LOUDNESS</b>      | <b>EFFECTS OF NOISE</b>    |
|---|---|-------------------------------------|---------------------------------|----------------------------|
| THRESHOLD OF PAIN                                 |   | 140                                 | <b>INTOLERABLE OR DEAFENING</b> | <b>HEARING LOSS</b>        |

### 2.1 RANGE OF NOISE

Since the range of intensities that the human ear can detect is so large, the scale frequently used to measure intensity is a scale based on multiples of 10, the logarithmic scale. The scale for measuring intensity is the decibel scale. Each interval of 10 decibels indicates a sound energy ten times greater than before, which is perceived by the human ear as being roughly twice as loud. (7) The most common sounds vary between 40 dBA (very quiet) to 100 dBA (very loud). Normal conversation at three feet is roughly at 60 dBA, while loud jet engine noises equate to 110 dBA

at approximately 100 feet, which can cause serious discomfort. (8) Another important aspect of noise is the duration of the sound and the way it is described and distributed in time.

## 2.2 NOISE DESCRIPTORS

Environmental noise descriptors are generally based on averages, rather than instantaneous, noise levels. The most commonly used figure is the equivalent level ( $L_{eq}$ ). Equivalent sound levels are not measured directly but are calculated from sound pressure levels typically measured in A-weighted decibels (dBA). The equivalent sound level ( $L_{eq}$ ) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period and is commonly used to describe the “average” noise levels within the environment.

Peak hour or average noise levels, while useful, do not completely describe a given noise environment. Noise levels lower than peak hour may be disturbing if they occur during times when quiet is most desirable, namely evening and nighttime (sleeping) hours. To account for this, the Day-Night Average Noise Level (LDN) and the Community Noise Equivalent Level (CNEL), representing a composite 24-hour noise level is utilized. The LDN and CNEL are weighted averages of the intensity of a sound, with corrections for time of day, and averaged over 24 hours. The LDN time of day corrections include the addition of 10 decibels to dBA  $L_{eq}$  sound levels at night between 10:00 p.m. and 7:00 a.m. The CNEL time of day corrections require the addition of 5 decibels to dBA  $L_{eq}$  sound levels in the evening from 7:00 p.m. to 10:00 p.m., in addition to the corrections for the LDN. These additions are made to account for the noise sensitive time periods during the evening and night hours when sound appears louder. LDN and CNEL do not represent the actual sound level heard at any particular time, but rather represent the total sound exposure. The City of Moreno Valley relies on the 24-hour CNEL level to assess land use compatibility with transportation related noise sources, and therefore, this analysis uses the CNEL noise level to apply the more conservative evening hour corrections to the 24-hour noise levels.

## 2.3 SOUND PROPAGATION

When sound propagates over a distance, it changes in level and frequency content. The manner in which noise reduces with distance depends on the following factors.

### 2.3.1 GEOMETRIC SPREADING

Sound from a localized source (i.e., a stationary point source) propagates uniformly outward in a spherical pattern. The sound level attenuates (or decreases) at a rate of 6 dB for each doubling of distance from a point source. Highways consist of several localized noise sources on a defined path and hence can be treated as a line source, which approximates the effect of several point sources. Noise from a line source propagates outward in a cylindrical pattern, often referred to as cylindrical spreading. Sound levels attenuate at a rate of 3 dB for each doubling of distance from a line source. (7)

### 2.3.2 GROUND ABSORPTION

The propagation path of noise from a highway to a receptor is usually very close to the ground. Noise attenuation from ground absorption and reflective wave canceling adds to the attenuation associated with geometric spreading. Traditionally, the excess attenuation has also been expressed in terms of attenuation per doubling of distance. This approximation is usually sufficiently accurate for distances of less than 200 ft. For acoustically hard sites (i.e., sites with a reflective surface between the source and the receptor, such as a parking lot or body of water), no excess ground attenuation is assumed. For acoustically absorptive or soft sites (i.e., those sites with an absorptive ground surface between the source and the receptor such as soft dirt, grass, or scattered bushes and trees), an excess ground attenuation value of 1.5 dB per doubling of distance is normally assumed. When added to the cylindrical spreading, the excess ground attenuation results in an overall drop-off rate of 4.5 dB per doubling of distance from a line source. (9)

### 2.3.3 ATMOSPHERIC EFFECTS

Receptors located downwind from a source can be exposed to increased noise levels relative to calm conditions, whereas locations upwind can have lowered noise levels. Sound levels can be increased at large distances (e.g., more than 500 feet) due to atmospheric temperature inversion (i.e., increasing temperature with elevation). Other factors such as air temperature, humidity, and turbulence can also have significant effects. (7)

### 2.3.4 SHIELDING

A large object or barrier in the path between a noise source and a receptor can substantially attenuate noise levels at the receptor. The amount of attenuation provided by shielding depends on the size of the object and the frequency content of the noise source. Shielding by trees and other such vegetation typically only has an “out of sight, out of mind” effect. That is, the perception of noise impact tends to decrease when vegetation blocks the line-of-sight to nearby resident. However, for vegetation to provide a substantial, or even noticeable, noise reduction, the vegetation area must be at least 15 feet in height, 100 feet wide and dense enough to completely obstruct the line-of sight between the source and the receiver. This size of vegetation may provide up to 5 dBA of noise reduction. The FHWA does not consider the planting of vegetation to be a noise abatement measure. (9)

## 2.4 NOISE CONTROL

Noise control is the process of obtaining an acceptable noise environment for a particular observation point or receptor by controlling the noise source, transmission path, receptor, or all three. This concept is known as the source-path-receptor concept. In general, noise control measures can be applied to any and all of these three elements.

## 2.5 NOISE BARRIER ATTENUATION

Effective noise barriers can reduce noise levels by 10 to 15 dBA, cutting the loudness of traffic noise in half. A noise barrier is most effective when placed close to the noise source or receptor.

Noise barriers, however, do have limitations. For a noise barrier to work, it must be high enough and long enough to block the path of the noise source. (9)

## 2.6 LAND USE COMPATIBILITY WITH NOISE

Some land uses are more tolerant of noise than others. For example, schools, hospitals, churches, and residences are more sensitive to noise intrusion than are commercial or industrial developments and related activities. As ambient noise levels affect the perceived amenity or livability of a development, so too can the mismanagement of noise impacts impair the economic health and growth potential of a community by reducing the area's desirability as a place to live, shop and work. For this reason, land use compatibility with the noise environment is an important consideration in the planning and design process. The FHWA encourages State and Local government to regulate land development in such a way that noise-sensitive land uses are either prohibited from being located adjacent to a highway, or that the developments are planned, designed, and constructed in such a way that noise impacts are minimized. (10)

## 2.7 COMMUNITY RESPONSE TO NOISE

Community responses to noise may range from registering a complaint by telephone or letter, to initiating court action, depending upon each individual's susceptibility to noise and personal attitudes about noise. Several factors are related to the level of community annoyance including:

- Fear associated with noise producing activities;
- Socio-economic status and educational level;
- Perception that those affected are being unfairly treated;
- Attitudes regarding the usefulness of the noise-producing activity;
- Belief that the noise source can be controlled.

Approximately ten percent of the population has a very low tolerance for noise and will object to any noise not of their making. Consequently, even in the quietest environment, some complaints will occur. Another twenty-five percent of the population will not complain even in very severe noise environments. Thus, a variety of reactions can be expected from people exposed to any given noise environment. (11) Surveys have shown that about ten percent of the people exposed to traffic noise of 60 dBA will report being highly annoyed with the noise, and each increase of one dBA is associated with approximately two percent more people being highly annoyed. When traffic noise exceeds 60 dBA or aircraft noise exceeds 55 dBA, people may begin to complain. (11)

Despite this variability in behavior on an individual level, the population as a whole can be expected to exhibit the following responses to changes in noise levels as shown on Exhibit 2-B. An increase or decrease of 1 dBA cannot be perceived except in carefully controlled laboratory experiments, a change of 3 dBA are considered *barely perceptible*, and changes of 5 dBA are considered *readily perceptible*. (9)

**EXHIBIT 2-B: NOISE LEVEL INCREASE PERCEPTION****2.8 VIBRATION**

According to the Federal Transit Administration (FTA) *Transit Noise Impact and Vibration Assessment* (12), vibration is the periodic oscillation of a medium or object. The rumbling sound caused by the vibration of room surfaces is called structure-borne noise. Sources of ground-borne vibrations include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or human-made causes (e.g., explosions, machinery, traffic, trains, construction equipment). Vibration sources may be continuous, such as factory machinery, or transient, such as explosions. As is the case with airborne sound, ground-borne vibrations may be described by amplitude and frequency.

There are several different methods that are used to quantify vibration. The peak particle velocity (PPV) is defined as the maximum instantaneous peak of the vibration signal. The PPV is most frequently used to describe vibration impacts to buildings but is not always suitable for evaluating human response (annoyance) because it takes some time for the human body to respond to vibration signals. Instead, the human body responds to average vibration amplitude often described as the root mean square (RMS). The RMS amplitude is defined as the average of the squared amplitude of the signal and is most frequently used to describe the effect of vibration on the human body. Decibel notation (VdB) is commonly used to measure RMS. Decibel notation (VdB) serves to reduce the range of numbers used to describe human response to vibration. Typically, ground-borne vibration generated by man-made activities attenuates rapidly with distance from the source of the vibration. Sensitive receivers for vibration include structures (especially older masonry structures), people (especially residents, the elderly, and sick), and vibration-sensitive equipment.

The background vibration-velocity level in residential areas is generally 50 VdB. Ground-borne vibration is normally perceptible to humans at approximately 65 VdB. For most people, a vibration-velocity level of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels. Typical outdoor sources of perceptible ground-borne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If a roadway is smooth, the ground-borne vibration is rarely perceptible. The range of interest is from approximately 50 VdB, which is the typical background vibration-velocity level, to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings. Exhibit 2-C illustrates common vibration sources and the human and structural response to ground-borne vibration.

### 3 REGULATORY SETTING

To limit population exposure to physically and/or psychologically damaging as well as intrusive noise levels, the federal government, the State of California, various county governments, and most municipalities in the state have established standards and ordinances to control noise. In most areas, automobile and truck traffic is the major source of environmental noise. Traffic activity generally produces an average sound level that remains fairly constant with time. Air and rail traffic, and commercial and industrial activities are also major sources of noise in some areas. Federal, state, and local agencies regulate different aspects of environmental noise. Federal and state agencies generally set noise standards for mobile sources such as aircraft and motor vehicles, while regulation of stationary sources is left to local agencies.

#### 3.1 STATE OF CALIFORNIA NOISE REQUIREMENTS

The State of California regulates freeway noise, sets standards for sound transmission, provides occupational noise control criteria, identifies noise standards, and provides guidance for local land use compatibility. State law requires that each county and city adopt a General Plan that includes a Noise Element which is to be prepared according to guidelines adopted by the Governor's Office of Planning and Research (OPR). (3) The purpose of the Noise Element is to *limit the exposure of the community to excessive noise levels.*

#### 3.2 STATE OF CALIFORNIA GREEN BUILDING STANDARDS CODE

The State of California's noise insulation standards are codified in the California Code of Regulations, Title 24, Building Standards Administrative Code, Part 2, and the California Building Code. These noise standards are applied to new construction in California for the purpose of controlling interior noise levels resulting from exterior noise sources. The regulations specify that acoustical studies must be prepared when noise-sensitive structures, such as residential buildings, schools, or hospitals, are developed near major transportation noise sources, and where such noise sources create an exterior noise level of 60 dBA CNEL or higher. Acoustical studies that accompany building plans for noise-sensitive land uses must demonstrate that the structure has been designed to limit interior noise in habitable rooms to acceptable noise levels. For new residential buildings, schools, and hospitals, the acceptable interior noise limit for new construction is 45 dBA CNEL.

#### 3.3 CITY OF MORENO VALLEY GENERAL PLAN

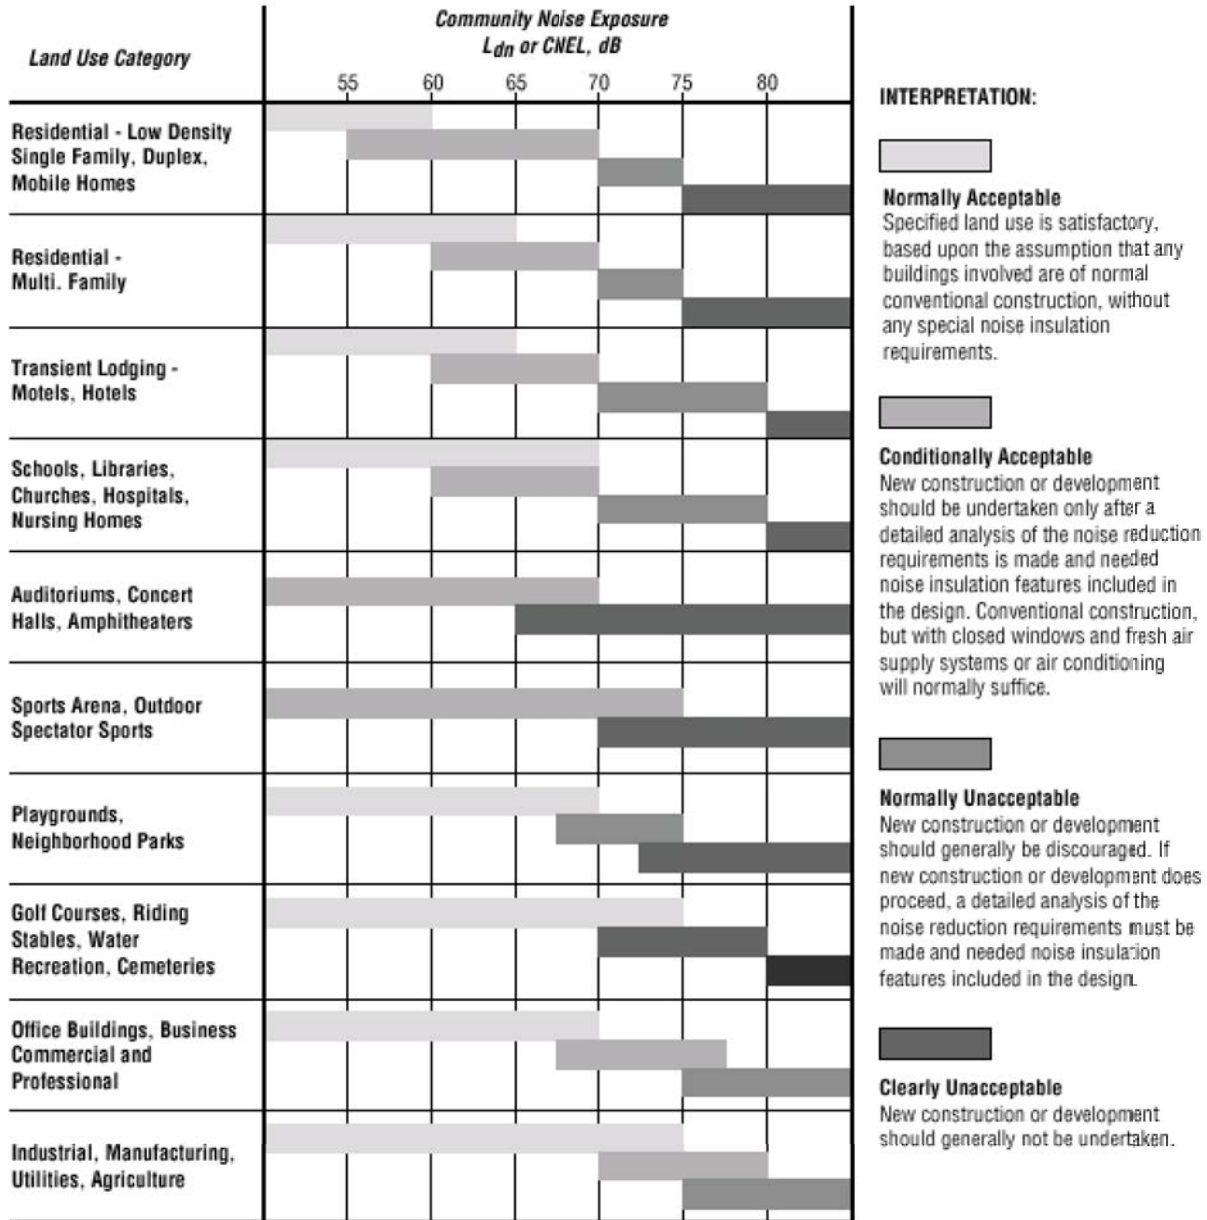

The City of Moreno Valley Noise Element typically provides the standards for land use compatibility for community noise exposure. However, the City of Moreno Valley General Plan does not include a noise element or specific transportation-related noise standards. Rather, noise is considered in the Environmental Safety section of the General Plan Safety Element. (13) While the General Plan provides background and noise fundamentals, it does not identify criteria to assess the impacts associated with off-site transportation-related noise impacts. Therefore, for this analysis, the transportation noise criteria are derived from standards contained in the California Office of Planning and Research (OPR) *General Plan Guidelines*.

The OPR land use/noise compatibility standards are used by many California cities and counties and specify the maximum noise levels allowable for new developments impacted by transportation noise sources. The OPR land use/noise compatibility criteria, found in Figure 2 of the *General Plan Guidelines, Appendix C: Noise Element Guidelines*, identify the criteria for residential uses such as the Project, as shown on Exhibit 3-A. When the unmitigated exterior noise levels approach 65 dBA CNEL Project land use is considered *normally acceptable*. With exterior noise levels range from 60 to 70 dBA CNEL, residential uses are considered *conditionally acceptable*, and with exterior noise levels greater than 70 dBA CNEL, they are considered *normally unacceptable*. For *normally unacceptable* land use, *new construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.* (3)

The purpose of the transportation noise criteria is to protect, create, and maintain an environment free from noise and vibration that may jeopardize the health or welfare of sensitive receptors, or degrade quality of life. City General Policies (City of Moreno Valley General Plan, pp.9-31, 9-32) act to ensure that when exterior noise levels exceed 65 dBA CNEL at sensitive receptors, mitigation is provided to ensure that interior noise levels of 45 dBA CNEL are maintained. General Plan Policies in this regard are consistent with, and support, the California Building Code interior noise standards.

### 3.4 OPERATIONAL NOISE STANDARDS

To analyze noise impacts originating from a designated fixed location or private property such as the Continental Villages Project, stationary-source (operational) noise such as the expected roof-top air conditioning units, residential entry gate activity, residential and commercial parking lot vehicle movements, and outdoor pool/spa activity are typically evaluated against standards established under a City's Municipal Code.

The City of Moreno Valley Municipal Code, Chapter 11.80 *Noise Regulation*, provides performance standards and noise control guidelines for determining and mitigating non-transportation or stationary-source noise impacts from operations at private properties. The City of Moreno Valley Municipal Code defines *Maximum Sound Levels (in dB(A)) for Source Land Uses* in Table 11.80.030-2 for *Residential* and *Commercial* land uses. As defined by the Municipal Code, Section 11.80.020 *Definitions*, *Residential* land use means *all uses of land primarily for dwelling units, as well as hospitals, schools, colleges and universities, and places of religious assembly.* (6) For the purpose of this analysis, the Continental Villages Project is considered *Residential* land use. Based on this standard, the operational noise level limits for residential land use, from Table 11.80.030-2, of 60 dBA  $L_{eq}$  during the daytime (8:00 a.m. to 10:00 p.m.) hours and 55 dBA  $L_{eq}$  during the nighttime (10:01 p.m. to 7:59 a.m.) hours shall apply to the operational noise from the Project.

Further, Section 11.80.030 (C) *Prohibited Acts, Nonimpulsive Sound Decibel Limits*, states: *No person shall maintain, create, operate or cause to be operated on private property any source of sound in such a manner as to create any nonimpulsive sound which exceeds the limits set forth for the source land use category (as defined in Section 11.80.020) in Table 11.80.030-2 when measured at a distance of two hundred (200) feet or more from the real property line of the source of the sound, if the sound occurs on a privately owned property...* (6) Therefore, at a distance of 200 feet from the property line, the Project's operational noise levels shall not exceed the 60 dBA  $L_{eq}$  daytime and 50 dBA  $L_{eq}$  nighttime noise level standards for residential land uses, as shown on Table 3-1.

The City of Moreno Valley Municipal Code also identifies continuous sound level limits in Table 11.80.030-1 based on the Center for Disease Control and Prevention and the National Institute for Occupational Safety and Health (NIOSH) noise exposure guidelines. A division of the U.S. Department of Health and Human Services, NIOSH identifies a noise level threshold based on the duration of exposure to the source. The City of Moreno Valley noise level threshold starts at 90 dBA for more than eight hours per day, and for every increase, the exposure time is reduced. The City of Moreno Valley identifies noise level thresholds of 92 dBA for more than 6 hours per day, 95 dBA for more than 4 hour per day, 97 dBA for more than 3 hours per day, and up to 100 dBA for more than 2 hours per day. However, this noise study uses the more restrictive City of Moreno Valley noise level limits identified on Table 11.80.030-2 for source land uses in the Municipal Code, shown on Table 3-1 of this report, to evaluate the potential operational noise levels due to the operation of the Project.

**TABLE 3-1: OPERATIONAL NOISE STANDARDS AT 200 FEET FROM THE SOURCE**

| Jurisdiction                       | Source Land Use | Time Period                        | Maximum Noise Level for Source Land Uses @ 200' (dBA L <sub>eq</sub> ) <sup>2</sup> |
|------------------------------------|-----------------|------------------------------------|---|
| City of Moreno Valley <sup>1</sup> | Residential     | Daytime (8:00 a.m. - 10:00 p.m.)   | 60  |
|                                    |                 | Nighttime (10:01 p.m. - 7:59 a.m.) | 55  |

<sup>1</sup> Source: City of Moreno Valley Municipal Code, Chapter 11.80 Noise Regulation, Table 11.80.030-2 Maximum Sound Levels (in dB(A)) for Source Land Uses when measured at a distance of 200 feet from the property line of the source land use (Appendix 3.1).

<sup>2</sup> L<sub>eq</sub> represents a steady state sound level containing the same total energy as a time varying signal over a given sample period.

### 3.5 CONSTRUCTION NOISE STANDARDS

To analyze noise impacts originating from the construction of the Continental Villages site, noise from construction activities are typically evaluated against standards established under a City's Municipal Code. The Municipal Code noise standards for construction are described below for the City of Moreno Valley to determine the potential noise impacts at nearby receiver locations. The construction-related noise standards are shown on Table 3-2.

The Municipal Code noise standards for construction are described below for the City of Moreno Valley to determine the potential noise impacts at nearby sensitive receiver locations. As a subset of its stationary-source noise regulations, the City Municipal Code establishes permitted hours of construction activity. More specifically, Municipal Code Section 11.80.030 (D) (7), *Construction and Demolition*, provides the following:

*No person shall operate, or cause operation of any tools or equipment used in construction, drilling, repair, alteration, or demolition work between the hours of eight p.m. and seven a.m. the following day such that the sound there from creates a noise disturbance, except for emergency work by public service utilities or for other work approved by the city manager or designee.*

Therefore, based on the Section 11.80.030 (D) (7) construction regulations, a construction-related *noise disturbance* occurs if Project construction activity occurs outside of the permitted hours. However, for this analysis, the stationary-source noise level limits of 60 dBA L<sub>eq</sub> (daytime) for residential uses, and 65 dBA L<sub>eq</sub> (daytime) for commercial uses are used as appropriate thresholds for the land uses (e.g. residential homes and office buildings, respectively) in the Project study area. In addition, grading operations shall be limited to the hours identified in Section 8.21.050 (O) of 7:00 a.m. to 6:00 p.m., Monday through Friday, and 8:00 a.m. to 4:00 p.m. on weekends and holidays or as approved by the City Engineer. The City of Moreno Valley construction noise standards are shown on Table 3-2 and included in Appendix 3.1. As previously discussed in Section 3.4, the construction noise level threshold used in this noise study represents a conservative approach, since it is more restrictive than the continuous sound level limits of Table 11.80.030-1 of the City of Moreno Valley Municipal Code.

TABLE 3-2: CONSTRUCTION NOISE STANDARDS FROM THE SOURCE LAND USE

| Jurisdiction                       | Permitted Hours of Construction Activity   | Construction Noise Level Standards (dBA L <sub>eq</sub> ) <sup>2</sup> |            |

### 3.6 VIBRATION STANDARDS

The City of Moreno Valley has not identified or adopted specific vibration level standards. However, the United States Department of Transportation Federal Transit Administration (FTA) provides guidelines for maximum-acceptable vibration criteria for different types of land uses. These guidelines allow 80 VdB for residential uses and buildings where people normally sleep. (12) Operational and construction activities can result in varying degrees of ground-borne vibration, depending on the equipment and methods used, distance to the affected structures and soil type. Construction vibration is generally associated with pile driving and rock blasting. Other construction equipment such as air compressors, light trucks, hydraulic loaders, etc., generates little or no ground vibration. Large bulldozers and loaded trucks can cause perceptible vibration levels proximate receptors. The FTA guidelines of 80 VdB for sensitive land uses provide a substantiated basis for determining the relative significance of potential Project-related vibration impacts due to on-site operational and construction activities.

## 4 SIGNIFICANCE CRITERIA

The following significance criteria are based on guidance provided by Appendix G of the California Environmental Quality Act (CEQA) Guidelines. For the purposes of this report, impacts would be potentially significant if the Project results in or causes:

- A. Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- B. Exposure of persons to or generation of excessive ground-borne vibration or ground-borne noise levels.
- C. A substantial permanent increase in ambient noise levels in the Project vicinity above existing levels without the proposed Project; or
- D. A substantial temporary or periodic increase in ambient noise levels in the Project vicinity above noise levels existing without the proposed Project.
- E. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the Project area to excessive noise levels.
- F. For a project within the vicinity of a private airstrip, expose people residing or working in the Project area to excessive noise levels.

While the CEQA Guidelines and the City of Moreno Valley General Plan Guidelines provide direction on noise compatibility and establish noise standards by land use type that are sufficient to assess the significance of noise impacts under CEQA Guideline A, they do not define the levels at which increases are considered substantial for use under Guidelines B, C, and D. CEQA Guidelines E and F apply to nearby public and private airports, if any, and the Project's land use compatibility.

The Project site is not located within two miles of a public airport or within an airport land use plan; nor is the Project within the vicinity of a private airstrip. As such, the Project site would not be exposed to excessive noise levels from airport operations, and therefore, impacts are considered *less than significant*, and no further noise analysis is conducted in relation to Guidelines E and F.

Noise level increases resulting from the Project are evaluated based on the Appendix G CEQA Guidelines described above at the closest sensitive receiver locations. Under CEQA, consideration must be given to the magnitude of the increase, the existing ambient noise levels and the location of noise-sensitive receivers in order to determine if a noise increase represents a significant adverse environmental impact. This approach recognizes *that there is no single noise increase that renders the noise impact significant*. (14)

Unfortunately, there is no completely satisfactory way to measure the subjective effects of noise or of the corresponding human reactions of annoyance and dissatisfaction. This is primarily because of the wide variation in individual thresholds of annoyance and differing individual experiences with noise. Thus, an important way of determining a person's subjective reaction to a new noise is the comparison of it to the existing environment to which one has adapted—the so-called *ambient* environment.

In general, the more a new noise exceeds the previously existing ambient noise level, the less acceptable the new noise will typically be judged. The Federal Interagency Committee on Noise (FICON) (15) developed guidance to be used for the assessment of project-generated increases in noise levels that consider the ambient noise level. The FICON recommendations are based on studies that relate aircraft noise levels to the percentage of persons highly annoyed by aircraft noise. Although the FICON recommendations were specifically developed to assess aircraft noise impacts, these recommendations are often used in environmental noise impact assessments involving the use of cumulative noise exposure metrics, such as the average-daily noise level (i.e., CNEL) or energy average noise level (i.e.,  $L_{eq}$ ).

For example, if the ambient noise environment is quiet (<60 dBA) and the new noise source greatly increases the noise levels, an impact may occur if the noise criteria may be exceeded. Therefore, for this analysis, FICON identifies a *readily perceptible* 5 dBA or greater project-related noise level increase is considered a significant impact when the noise criteria for a given land use is exceeded. According to the FICON, in areas where the without project noise levels range from 60 to 65 dBA, a 3 dBA *barely perceptible* noise level increase appears to be appropriate for most people. When the without project noise levels already exceed 65 dBA, any increase in community noise louder than 1.5 dBA or greater is considered a significant impact if the noise criteria for a given land use is exceeded, since it likely contributes to an existing noise exposure exceedance. Table 4-1 below provides a summary of the potential noise impact significance criteria, based on guidance from FICON.

**TABLE 4-1: SIGNIFICANCE OF NOISE IMPACTS AT NOISE-SENSITIVE RECEIVERS**

| Without Project Noise Level | Potential Significant Impact |
|-----------------------------|------------------------------|
| < 60 dBA                    | 5 dBA or more                |
| 60 - 65 dBA                 | 3 dBA or more                |
| > 65 dBA                    | 1.5 dBA or more              |

Federal Interagency Committee on Noise (FICON), 1992.

## 4.1 SIGNIFICANCE CRITERIA SUMMARY

Noise impacts shall be considered significant if any of the following occur as a direct result of the proposed development. Table 4-2 shows the significance criteria summary matrix.

### OFF-SITE TRAFFIC NOISE

- When the noise levels at existing and future noise-sensitive land uses (e.g. residential, etc.):
  - are less than 60 dBA CNEL and the Project creates a *readily perceptible* 5 dBA CNEL or greater Project-related noise level increase; or
  - range from 60 to 65 dBA CNEL and the Project creates a *barely perceptible* 3 dBA CNEL or greater Project-related noise level increase; or
  - already exceed 65 dBA CNEL, and the Project creates a community noise level impact of greater than 1.5 dBA CNEL (FICON, 1992).

### ON-SITE TRAFFIC NOISE

- If the on-site traffic noise levels exceed the 70 dBA CNEL *normally unacceptable* land use compatibility criteria and interior noise levels exceed 45 dBA CNEL (Figure 2 of the OPR *General Plan Guidelines, Appendix C: Noise Element Guidelines*).

### OPERATIONAL NOISE

- If Project-related operational (stationary source) noise levels:
  - exceed the 60 dBA  $L_{eq}$  daytime or 55 dBA  $L_{eq}$  nighttime noise level standards at 200 feet from the property line of the noise source (City of Moreno Valley Municipal Code, Table 11.80.030-2); or
  - exceed the 60 dBA  $L_{eq}$  daytime or 55 dBA  $L_{eq}$  nighttime noise level standards at residential receivers in the City of Moreno Valley (City of Moreno Valley Municipal Code, Table 11.80.030-2).
- If the existing ambient noise levels at the nearby noise-sensitive receivers near the Project site:
  - are less than 60 dBA  $L_{eq}$  and the Project creates a *readily perceptible* 5 dBA  $L_{eq}$  or greater Project-related noise level increase; or
  - range from 60 to 65 dBA  $L_{eq}$  and the Project creates a *barely perceptible* 3 dBA  $L_{eq}$  or greater Project-related noise level increase; or
  - already exceed 65 dBA  $L_{eq}$ , and the Project creates a community noise level increase of greater than 1.5 dBA  $L_{eq}$  (FICON, 1992).

### CONSTRUCTION NOISE AND VIBRATION

- If Project-related construction activities:
  - create noise levels at sensitive residential receivers in the City of Moreno Valley which exceed the short-term daytime construction noise level threshold of 60 dBA  $L_{eq}$  at noise-sensitive residential receiver locations or 65 dBA  $L_{eq}$  at non-noise-sensitive commercial receiver locations, or the continuous noise level limit of 90 dBA  $L_{eq}$  at any land use (based on the City of Moreno Valley Municipal Code, Table 11.80.030-2 noise level limits, and the Table 11.80.030-1 continuous noise level limits).

- If short-term project generated construction source vibration levels could exceed the FTA maximum acceptable vibration standard of 80 vibration decibels (VdB) at noise-sensitive receiver locations.

TABLE 4-2: SIGNIFICANCE CRITERIA SUMMARY

| Analysis         | Receiving Land Use           | Condition(s)  | Significance Criteria                      |                        |
|------------------|------------------------------|---|--|------------------------|
|                  |                              |   | Daytime                                    | Nighttime              |
| Off-Site Traffic | Noise-Sensitive <sup>1</sup> | if ambient is < 60 dBA CNEL                               | ≥ 5 dBA CNEL Project increase              |                        |
|                  |                              | if ambient is 60 - 65 dBA CNEL                            | ≥ 3 dBA CNEL Project increase              |                        |
|                  |                              | if ambient is > 65 dBA CNEL                               | ≥ 1.5 dBA CNEL Project increase            |                        |
| On-Site Traffic  | Noise-Sensitive              | Exterior Noise Level Compatibility Criteria               | See Exhibit 3-A.                           |                        |
|                  |                              | Interior Noise Level Standard                             | 45 dBA CNEL                                |                        |
| Operational      | Noise-Sensitive              | At 200' from the property line of the source <sup>2</sup> | 60 dBA L <sub>eq</sub>                     | 55 dBA L <sub>eq</sub> |
|                  |                              | At residential land use <sup>2</sup>                      | 60 dBA L <sub>eq</sub>                     | 55 dBA L <sub>eq</sub> |
|                  |                              | if ambient is < 60 dBA L <sub>eq</sub> <sup>1</sup>       | ≥ 5 dBA L <sub>eq</sub> Project increase   |                        |
|                  |                              | if ambient is 60 - 65 dBA L <sub>eq</sub> <sup>1</sup>    | ≥ 3 dBA L <sub>eq</sub> Project increase   |                        |
|                  |                              | if ambient is > 65 dBA L <sub>eq</sub> <sup>1</sup>       | ≥ 1.5 dBA L <sub>eq</sub> Project increase |                        |

## 5 EXISTING NOISE LEVEL MEASUREMENTS

To assess the existing noise level environment, four 24-hour noise level measurements were taken at potential receiver locations in the Project study area. The receiver locations were selected to describe and document the existing noise environment within the Project study area. Exhibit 5-A provides the boundaries of the Project study area and the noise level measurement locations. To fully describe the existing noise conditions, noise level measurements were collected by Urban Crossroads, Inc. on Wednesday, August 15<sup>th</sup>, 2018. Appendix 5.1 includes study area photos.

### 5.1 MEASUREMENT PROCEDURE AND CRITERIA

To describe the existing noise environment, the hourly noise levels were measured during typical weekday conditions over a 24-hour period. By collecting individual hourly noise level measurements, it is possible to describe the daytime and nighttime hourly noise levels and calculate the 24-hour CNEL. The long-term noise readings were recorded using Piccolo Type 2 integrating sound level meter and dataloggers. The Piccolo sound level meters were calibrated using a Larson-Davis calibrator, Model CAL 150. All noise meters were programmed in "slow" mode to record noise levels in "A" weighted form. The sound level meters and microphones were equipped with a windscreen during all measurements. All noise level measurement equipment satisfies the American National Standards Institute (ANSI) standard specifications for sound level meters ANSI S1.4-2014/IEC 61672-1:2013. (16)

### 5.2 NOISE MEASUREMENT LOCATIONS

The long-term noise level measurements were positioned as close to the nearest sensitive receiver locations as possible to assess the existing ambient hourly noise levels surrounding the Project site. Both Caltrans and the FTA recognize that it is not reasonable to collect noise level measurements that can fully represent every part of a private yard, patio, deck, or balcony normally used for human activity when estimating impacts for new development projects. This is demonstrated in the Caltrans general site location guidelines which indicate that, *sites must be free of noise contamination by sources other than sources of interest. Avoid sites located near sources such as barking dogs, lawnmowers, pool pumps, and air conditioners unless it is the express intent of the analyst to measure these sources.* (7) Further, FTA guidance states, *that it is not necessary nor recommended that existing noise exposure be determined by measuring at every noise-sensitive location in the project area. Rather, the recommended approach is to characterize the noise environment for clusters of sites based on measurements or estimates at representative locations in the community.* (12)

Based on recommendations of Caltrans and the FTA, it is not necessary to collect measurements at each individual building or residence, because each receiver measurement represents a group of buildings that share acoustical equivalence. (12) In other words, the area represented by the receiver shares similar shielding, terrain, and geometric relationship to the reference noise source. Receivers represent a location of noise sensitive areas and are used to estimate the future noise level impacts. Collecting reference ambient noise level measurements at the nearby

sensitive receiver locations allows for a comparison of the before and after Project noise levels and is necessary to assess potential noise impacts due to the Project's contribution to the ambient noise levels.

### 5.3 NOISE MEASUREMENT RESULTS

The noise measurements presented below focus on the average or equivalent sound levels ( $L_{eq}$ ). The equivalent sound level ( $L_{eq}$ ) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period. Table 5-1 identifies the hourly daytime (8:00 a.m. to 10:00 p.m.) and nighttime (10:01 p.m. to 7:59 a.m.) noise levels at each noise level measurement location consistent with the City of Moreno Valley Municipal Code. Appendix 5.2 provides a summary of the existing hourly ambient noise levels described below:

- Location L1 represents the noise levels adjacent to the Project site boundaries on Quarter Horse Road near Lasselle Elementary School. The noise level measurements collected show an overall 24-hour exterior noise level of 58.2 dBA CNEL. The energy (logarithmic) average daytime noise level was calculated at 53.1 dBA  $L_{eq}$  with an average nighttime noise level of 52.5 dBA  $L_{eq}$ .
- Location L2 represents the noise levels south of the Project site across Krameria Avenue near existing residential homes. The noise level measurements collected show an overall 24-hour exterior noise level of 62.5 dBA CNEL. The energy (logarithmic) average daytime noise level was calculated at 58.1 dBA  $L_{eq}$  with an average nighttime noise level of 57.4 dBA  $L_{eq}$ .
- Location L3 represents the noise levels southwest of the Project site on Krameria Avenue, adjacent to existing residential homes. The noise level measurements collected show an overall 24-hour exterior noise level of 64.5 dBA CNEL. The energy (logarithmic) average daytime noise level was calculated at 61.0 dBA  $L_{eq}$  with an average nighttime noise level of 58.9 dBA  $L_{eq}$ .
- Location L4 represents the noise levels west of the Project site across Lasselle Street near existing residential homes. The noise level measurements collected show an overall 24-hour exterior noise level of 72.5 dBA CNEL. The energy (logarithmic) average daytime noise level was calculated at 68.4 dBA  $L_{eq}$  with an average nighttime noise level of 64.9 dBA  $L_{eq}$ .

Table 5-1 provides the (energy average) noise levels used to describe the daytime and nighttime ambient conditions. These daytime and nighttime energy average noise levels represent the average of all hourly noise levels observed during these time periods expressed as a single number. Appendix 5.2 provides summary worksheets of the noise levels for each hour as well as the minimum, maximum,  $L_1$ ,  $L_2$ ,  $L_5$ ,  $L_8$ ,  $L_{25}$ ,  $L_{50}$ ,  $L_{90}$ ,  $L_{95}$ , and  $L_{99}$  percentile noise levels observed during the daytime and nighttime periods.

The background ambient noise levels in the Project study area are dominated by the transportation-related noise associated with the arterial roadway network. This includes the auto and heavy truck activities near the noise level measurement locations. The 24-hour existing noise level measurements are shown on Table 5-1.

TABLE 5-1: 24-HOUR AMBIENT NOISE LEVEL MEASUREMENTS

| Location <sup>1</sup> | Distance to Project Boundary (Feet) | Description  | Energy Average Noise Level (dBA L <sub>eq</sub> ) <sup>2</sup> |           | CNEL |
|-----------------------|-------------------------------------|--|--|-----------|------|

## 6 METHODS AND PROCEDURES

The following section outlines the methods and procedures used to model and analyze the future traffic noise environment.

### 6.1 FHWA TRAFFIC NOISE PREDICTION MODEL

The expected roadway noise level increases from vehicular traffic were calculated by Urban Crossroads, Inc. using a computer program that replicates the Federal Highway Administration (FHWA) Traffic Noise Prediction Model- FHWA-RD-77-108. (17) The FHWA Model arrives at a predicted noise level through a series of adjustments to the Reference Energy Mean Emission Level (REMEL). In California the national REMELs are substituted with the California Vehicle Noise (Calveno) Emission Levels. (18) Adjustments are then made to the REMEL to account for: the roadway classification (e.g., collector, secondary, major or arterial), the roadway active width (i.e., the distance between the center of the outermost travel lanes on each side of the roadway), the total average daily traffic (ADT), the travel speed, the percentages of automobiles, medium trucks, and heavy trucks in the traffic volume, the roadway grade, the angle of view (e.g., whether the roadway view is blocked), the site conditions ("hard" or "soft" relates to the absorption of the ground, pavement, or landscaping), and the percentage of total ADT which flows each hour throughout a 24-hour period.

#### 6.1.1 OFF-SITE TRAFFIC NOISE PREDICTION MODEL INPUTS

Table 6-1 presents the roadway parameters used to assess the Project's off-site transportation noise impacts. Table 6-1 identifies the 11 study area roadway segments, the distance from the centerline to adjacent land use based on the functional roadway classifications per the City of Moreno Valley General Plan Circulation Element, and the posted vehicle speeds. For this analysis, soft site conditions are used to analyze the traffic noise impacts within the Project study area. Soft site conditions account for the sound propagation loss over natural surfaces such as normal earth and ground vegetation. Caltrans' research has shown that the use of soft site conditions is appropriate for the application of the FHWA traffic noise prediction model as used in this off-site traffic noise analysis. (19)

The Existing, Opening Year 2023, and Horizon Year 2040 average daily traffic volumes used for this study are presented on Table 6-2 and are provided by *Continental Villages Traffic Impact Analysis* prepared by Urban Crossroads, Inc. (2) Table 6-3 presents the time of day vehicle splits and Table 6-4 presents the traffic flow distributions (vehicle mix) used for this analysis. The vehicle mix provides the hourly distribution percentages of automobile, medium trucks, and heavy trucks for input into the FHWA noise prediction model.

### 6.1.2 ON-SITE TRAFFIC NOISE PREDICTION MODEL INPUTS

The on-site roadway parameters including the ADT volumes used for this analysis are presented on Table 6-5. Based on the City of Moreno Valley General Plan Environmental Impact Report, Lasselle Street is classified as a 4-lane Arterial, and Krameria Avenue is classified as a 4-lane Minor Arterial. (20) To predict the future on-site noise environment at the Project site, Horizon Year 2040 with Project ADT volumes were obtained from the *Traffic Impact Analysis*. The traffic volumes shown on Table 6-1 reflect future long-range traffic conditions needed to assess the future on-site traffic noise environment and to identify potential mitigation measures (if any) that address the worst-case future conditions. For the purposes of this analysis, soft site conditions were used to analyze the on-site traffic noise impacts for the Project study area. Soft site conditions account for the sound propagation loss over natural surfaces such as normal earth and ground vegetation. Research conducted by Caltrans has shown that the use of soft site conditions is appropriate for the application of the FHWA traffic noise prediction model used in this analysis. (19)

As previously described, Table 6-3 presents the time of day vehicle splits and Table 6-4 presents the traffic flow distributions (vehicle mix) used for this analysis. The vehicle mix provides the hourly distribution percentages of automobile, medium trucks, and heavy trucks for input into the FHWA noise prediction model.

TABLE 6-5: ON-SITE ROADWAY PARAMETERS

| Roadway      | Lanes | Classification <sup>1</sup> | Design Capacity Volume <sup>2</sup> | Speed Limit (mph) <sup>2</sup> | Site Conditions |
|--------------|-------|-----------------------------|-------------------------------------|--------------------------------|-----------------|
| Lasselle St. | 4     | Arterial                    | 33,800                              | 50                             | Soft            |
| Krameria Av. | 4     | Minor Arterial              | 5,700                               | 35                             | Soft            |

<sup>1</sup> Source: City of Moreno Valley General Plan Environmental Impact Report, Section 5.2 Traffic/Circulation, Tables 5.2-5 to 5.2-7.

<sup>2</sup> Horizon Year 2040 with Project Traffic Volumes (Exhibit 7-2) from the Continental Villages Traffic Impact Analysis prepared by Urban Crossroads, Inc.

To predict the future noise environment at the residential buildings within the Project site, coordinate information was collected to identify the noise transmission path between the noise source and receiver. The coordinate information is based on the Project site plan showing the plotting of the building in relationship to Lasselle Street and Krameria Avenue. The exterior noise level impacts at the first-floor building facade were placed five feet above the pad elevation, with second-floor receiver locations at 14 feet.

## 6.2 VIBRATION ASSESSMENT

This analysis focuses on the potential ground-borne vibration associated with vehicular traffic and construction activities. Ground-borne vibration levels from automobile traffic are generally overshadowed by vibration generated by heavy trucks that roll over the same uneven roadway surfaces. However, due to the rapid drop-off rate of ground-borne vibration and the short duration of the associated events, vehicular traffic-induced ground-borne vibration is rarely perceptible beyond the roadway right-of-way, and rarely results in vibration levels that cause damage to buildings in the vicinity.

However, while vehicular traffic is rarely perceptible, construction has the potential to result in varying degrees of temporary ground vibration, depending on the specific construction activities and equipment used. Ground vibration levels associated with various types of construction equipment are summarized on Table 6-6. Based on the representative vibration levels presented for various construction equipment types, it is possible to estimate the human response (annoyance) using the following vibration assessment methods defined by the FTA. To describe the human response (annoyance) associated with vibration impacts the FTA provides the following equation:  $L_{VdB}(D) = L_{VdB}(25 \text{ ft}) - 30\log(D/25)$

**TABLE 6-6: VIBRATION SOURCE LEVELS FOR CONSTRUCTION EQUIPMENT**

## 7 OFF-SITE TRAFFIC NOISE IMPACTS

To assess the off-site transportation CNEL noise level impacts associated with development of the proposed Project, noise contours were developed based on *Continental Villages Traffic Impact Analysis*. (2) Noise contour boundaries represent the equal levels of noise exposure and are measured in CNEL from the center of the roadway. Noise contours were developed for the following traffic scenarios:

- Existing Conditions Without / With Project: This scenario refers to the existing present-day noise conditions without and with the proposed Project.
- Opening Year 2023 Without / With Buildout of the Project: This scenario refers to Year 2023 noise conditions without and with Buildout of the proposed Project. This scenario includes all cumulative projects identified in the *Traffic Impact Analysis*.
- Horizon Year 2040 Without / With Project: This scenario refers to the background noise conditions at future Year 2040 without and with the proposed Project. This scenario corresponds to 2040 conditions, and includes all cumulative projects identified in the *Traffic Impact Analysis*.

### 7.1 TRAFFIC NOISE CONTOURS

Noise contours were used to assess the Project's incremental traffic-related noise impacts at land uses adjacent to roadways conveying Project traffic. The noise contours represent the distance to noise levels of a constant value and are measured from the center of the roadway for the 70, 65, and 60 dBA noise levels. The noise contours do not consider the effect of any existing noise barriers or topography that may attenuate ambient noise levels. In addition, because the noise contours reflect modeling of vehicular noise on area roadways, they appropriately do not reflect noise contributions from the surrounding stationary noise sources within the Project study area. Tables 7-1 and 7-6 present a summary of the exterior traffic noise levels, without barrier attenuation, for the study area roadway segments analyzed from the without Project to the with Project conditions under Existing, Opening Year 2023, and Horizon Year 2040 conditions. Appendix 7.1 includes a summary of the traffic noise level contours for each of the traffic scenarios.

TABLE 7-1: EXISTING WITHOUT PROJECT CONDITIONS NOISE CONTOURS

## 7.2 EXISTING CONDITION PROJECT TRAFFIC NOISE LEVEL CONTRIBUTIONS

Table 7-1 presents the Existing without Project conditions CNEL noise levels. The without Project exterior noise levels are expected to range from 62.2 to 73.5 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 7-2 shows the Existing with Project conditions will range from 62.4 to 73.5 dBA CNEL. As shown on Table 7-7 the Project will generate a noise level increase of up to 0.8 dBA CNEL on the study area roadway segments. Based on the significance criteria in Section 4, the Project-related noise level increases are considered *less than significant* under Existing with Project conditions at the land uses adjacent to roadways conveying Project traffic.

### 7.3 OPENING YEAR 2023 PROJECT TRAFFIC NOISE LEVEL CONTRIBUTIONS

Table 7-3 presents the Opening Year 2023 without Project conditions CNEL noise levels which are expected to range from 62.8 to 74.1 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 7-4 shows the Opening Year 2023 with Project conditions will range from 63.0 to 74.1 dBA CNEL. As shown on Table 7-8 the Project will generate a noise level increase of up to 0.7 dBA CNEL on the study area roadway segments. Based on the significance criteria in Section 4, the Project-related noise level increases are considered *less than significant* under Opening Year 2023 with Project conditions at the land uses adjacent to roadways conveying Project traffic.

## 7.4 HORIZON YEAR 2040 PROJECT TRAFFIC NOISE LEVEL CONTRIBUTIONS

Table 7-5 presents the Horizon Year 2040 without Project conditions CNEL noise levels are expected to range from 63.2 to 74.5 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 7-6 shows the Horizon Year 2040 with Project conditions will range from 63.4 to 74.5 dBA CNEL. As shown on Table 7-9 the Project will generate a noise level increase of up to 0.7 dBA CNEL on the study area roadway segments. Based on the significance criteria in Section 4, the Project-related noise level increases are considered *less than significant* under Horizon Year 2040 with Project conditions at the land uses adjacent to roadways conveying Project traffic.

<sup>3</sup> Significance Criteria (Section 4).

## 8 ON-SITE TRAFFIC NOISE IMPACTS

A noise impact analysis has been completed to determine the noise exposure levels that would result from off-site traffic noise sources, and to identify potential noise mitigation measures that would achieve acceptable Project exterior and interior noise levels. The primary source of traffic noise affecting the Project site is anticipated to be from Lasselle Street and Krameria Avenue. The Project will also experience some background traffic noise impacts from the Project's internal parking lot, however, due to the lower traffic volume and speeds of vehicles transiting on these roadways, traffic noise from these roadways will not make a significant contribution to the noise environment at the Project site.

### 8.1 EXTERIOR NOISE ANALYSIS

Using the FHWA traffic noise prediction model, and the parameters outlined in Section 6, the expected future exterior noise levels are calculated at the building façades. Table 8-1 presents a summary of future exterior noise levels at the first-floor receiver locations. The on-site traffic noise level analysis indicates that the unmitigated exterior noise levels will approach 59.8 dBA CNEL. The on-site traffic noise analysis calculations are provided in Appendix 8.1.

As shown on Table 8-1, future unmitigated on-site traffic noise levels are shown to approach 59.8 dBA CNEL and represent *normally acceptable* exterior noise levels for residential land use. (13) Therefore, no exterior noise mitigation is required. Further, Project interior noise levels are analyzed herein to identify the necessary interior noise reduction measures, if any, to satisfy the City of Moreno Valley General Plan Noise Element 45 dBA CNEL interior noise level standard.

**TABLE 8-1: UNMITIGATED EXTERIOR TRAFFIC NOISE LEVELS**

| Building        | Roadway      | Unmitigated Noise Level (dBA CNEL) | Threshold (dBA CNEL) | Land Use Compatibility     |
|-----------------|--------------|------------------------------------|----------------------|----------------------------|
| West Buildings  | Lasselle St. | 58.2                               | < 65 dBA CNEL        | <i>Normally Acceptable</i> |
| South Buildings | Krameria Av. | 59.3                               | < 65 dBA CNEL        | <i>Normally Acceptable</i> |
| East Buildings  | Krameria Av. | 59.8                               | < 65 dBA CNEL        | <i>Normally Acceptable</i> |

## 8.2 INTERIOR NOISE ANALYSIS

To ensure that the interior noise levels comply with the City of Moreno Valley interior noise level standards, future noise levels were calculated at the first and second-floor building façades.

### 8.2.1 NOISE REDUCTION METHODOLOGY

The interior noise level is the difference between the predicted exterior noise level at the building facade and the noise reduction of the structure. Typical building construction will provide a Noise Reduction (NR) of approximately 12 dBA with "windows open" and a minimum 25 dBA noise reduction with "windows closed." (9; 21) However, sound leaks, cracks and openings within the window assembly can greatly diminish its effectiveness in reducing noise. Several methods are used to improve interior noise reduction, including: (1) weather-stripped solid core exterior doors; (2) upgraded dual glazed windows; (3) mechanical ventilation/air conditioning; and (4) exterior wall/roof assemblies free of cut outs or openings.

### 8.2.2 INTERIOR NOISE LEVEL ASSESSMENT

Tables 8-2 and 8-3 show that units within the Project buildings will require a windows-closed condition and a means of mechanical ventilation (e.g. air conditioning). Table 8-2 shows that the future exterior noise levels at the first-floor building façade are expected to approach 59.8 dBA CNEL. The first-floor interior noise level analysis shows that the City of Moreno Valley 45 dBA CNEL interior noise level standard can be satisfied using standard windows and sliding glass doors with minimum STC ratings of 27. Table 8-3 shows that the future exterior noise levels at the second-floor building façade are expected to approach 59.7 dBA CNEL. The second-floor interior noise level analysis shows that the City of Moreno Valley 45 dBA CNEL interior noise level standard can be satisfied using standard windows and sliding glass doors with minimum STC ratings of 27.

**TABLE 8-2: FIRST-FLOOR INTERIOR NOISE IMPACTS (CNEL)**

## 9 RECEIVER LOCATIONS

To assess the potential for long-term operational and short-term construction noise impacts, the following six receiver locations, as shown on Exhibit 9-A, were identified as representative locations for analysis. Sensitive receivers are generally defined as locations where people reside or where the presence of unwanted sound could otherwise adversely affect the use of the land. Noise-sensitive land uses are generally considered to include: schools, hospitals, single-family dwellings, mobile home parks, churches, libraries, and recreation areas. Moderately noise-sensitive land uses typically include: multi-family dwellings, hotels, motels, dormitories, out-patient clinics, cemeteries, golf courses, country clubs, athletic/tennis clubs, and equestrian clubs. Land uses that are considered relatively insensitive to noise include business, commercial, and professional developments. Land uses that are typically not affected by noise include: industrial, manufacturing, utilities, agriculture, natural open space, undeveloped land, parking lots, warehousing, liquid and solid waste facilities, salvage yards, and transit terminals.

Noise-sensitive receivers near the Project site include existing residential homes, Lasselle Elementary School, and future residential homes currently under construction, as described below. Other sensitive land uses in the Project study area that are located at greater distances than those identified in this noise study will experience lower noise levels than those presented in this report due to the additional attenuation from distance and the shielding of intervening structures.

- R1: Located approximately 202 feet north of the Project site, R1 represents an existing baseball diamond and bleachers within Lasselle Elementary School. A 24-hour noise level measurement was taken near this location, L1, to describe the existing ambient noise environment.
- R2: Location R2 represents an existing Lasselle Elementary School classroom building at roughly 109 feet north of the Project site. A 24-hour noise level measurement was taken near this location, L1, to describe the existing ambient noise environment.
- R3: Location R3 represents the existing residential homes located south of the Project site at approximately 133 feet. A 24-hour noise level measurement was taken near this location, L2, to describe the existing ambient noise environment.
- R4: Located approximately 123 feet south of the Project site, R4 represents the existing residential homes south of Krameria Avenue. A 24-hour noise level measurement was taken near this location, L3, to describe the existing ambient noise environment.
- R5: Location R5 represents existing residential homes at roughly 148 feet west of the Project site. A 24-hour noise level measurement was taken near this location, L5, to describe the existing ambient noise environment.
- R6: Location R6 represents the future residential homes currently under construction northwest of the Project site at approximately 30 feet. A 24-hour noise level measurement, L4, is used to describe the existing ambient noise environment at this location.

## 10 OPERATIONAL NOISE IMPACTS

This section analyzes the potential stationary-source operational noise impacts at the nearby receiver locations, identified in Section 9, resulting from operation of the proposed Continental Villages Project. Exhibit 10-A identifies the representative receiver locations and noise source locations used to assess the operational noise levels.

### 10.1 REFERENCE NOISE LEVELS

To estimate the Project operational noise impacts, reference noise level measurements were collected from similar types of activities to represent the noise levels expected with the development of the proposed Project. This section provides a detailed description of the reference noise level measurements shown on Table 10-1 used to estimate the Project operational noise impacts. It is important to note that the following projected noise levels assume the worst-case noise environment with the roof-top air conditioning units, residential entry gate activity, residential and commercial parking lot vehicle movements, and outdoor pool/spa activity all operating continuously. These noise level impacts will likely vary throughout the day.

#### 10.1.1 ROOF-TOP AIR CONDITIONING UNITS

To assess the noise levels created by the roof-top air conditioning units at the Project site, reference noise levels measurements were taken at the Santee Walmart on July 27<sup>th</sup>, 2015. Located at 170 Town Center Parkway in the City of Santee, the noise level measurements describe a mechanical roof-top air conditioning unit on the roof of an existing Walmart store, with additional units operating in the background. The reference noise level represents a Lennox SCA120 series 10-ton model packaged air conditioning unit. Using a uniform reference distance of 50 feet, the reference noise level is 57.2 dBA  $L_{eq}$ . The operating conditions of the reference noise level measurement reflect peak summer cooling requirements with measured temperatures approaching 96 degrees Fahrenheit (°F) with average daytime temperatures of 82°F. The noise attenuation provided by a parapet wall is not reflected in this reference noise level measurement.

#### 10.1.2 RESIDENTIAL ENTRY GATE ACTIVITY

A reference noise level measurement was collected on Wednesday, November 29<sup>th</sup>, 2017, by Urban Crossroads, Inc. at entry gate to the Oak Glen Apartments residential community in the City of Irvine. The reference noise level measurement represents multiple noise sources which produced a reference noise level of 54.0 dBA  $L_{eq}$  at the uniform reference distance of 50 feet. The noise sources associated with the reference entry gate activity measurement include residential entry and exit gates opening and closing, cars and trucks driving over the metal gate tracks, keypad code entry, and phone ringing and people talking over the entrance intercom. Entry gate activities are conservatively anticipated to operate for 60 minutes per hour.

### 10.1.3 PARKING LOT VEHICLE MOVEMENTS (RESIDENTIAL)

To determine the noise levels associated with a residential apartment community parking lot, Urban Crossroads collected reference noise level measurements at the Windemere Apartment community in the City of Riverside on August 24<sup>th</sup>, 2016. The reference 1-hour noise level measurement is based on the peak hour of activity over a total measurement duration of 24-hours and indicates that the parking lot vehicle movements generates noise levels of 40.8 dBA  $L_{eq}$  at a normalized distance of 50 feet. The residential parking lot noise levels are mainly due to cars pulling in and out of spaces and residents going to and from their apartment homes, and includes horns honking in the parking lot. Noise associated with parking lot vehicle movements is expected during the typical daytime, and nighttime conditions for the entire hour (60 minutes).

### 10.1.4 PARKING LOT VEHICLE MOVEMENTS (COMMERCIAL)

To determine the noise levels associated with commercial parking lot vehicle movements, Urban Crossroads collected reference noise level measurements at the Laguna Niguel Walmart located at 27470 Alicia Parkway on May 30, 2012. The 15-minute noise level measurement indicates that the parking lot vehicle movements generates noise levels of 45.1 dBA  $L_{eq}$  at a normalized distance of 50 feet. The parking lot noise levels are mainly due to cars pulling in and out of spaces, car alarms sounding, and customers moving shopping carts. Noise associated with parking lot vehicle movements is expected during the typical daytime, and nighttime conditions for the entire hour (60 minutes).

### 10.1.5 OUTDOOR POOL/SPA ACTIVITY

To represent the noise levels associated with pool activities, Urban Crossroads collected a reference noise level measurement on July 5<sup>th</sup>, 2017 at the Covenant Hill Clubhouse Pool in the unincorporated community of Ladera Ranch in the County of Orange. The measured reference noise level at the uniform 50-foot reference distance is 51.0 dBA  $L_{eq}$  for pool activity. The pool activity noise levels include kids playing, running, screaming, splashing, playing with a ball, and parents talking. Noise associated with pool activities is expected to occur for the entire hour (60 minutes).

## 10.2 PROJECT OPERATIONAL NOISE LEVELS

Using the reference noise levels to represent the proposed Project operations that include roof-top air conditioning units, residential entry gate activity, residential and commercial parking lot vehicle movements, and outdoor pool/spa activity, Urban Crossroads, Inc. calculated the operational source noise levels that are expected to be generated at the Project site and the Project-related noise level increases that would be experienced at each of the sensitive receiver locations. Table 10-2 presents the combined total operational noise level projections at 200 feet consistent with the City of Moreno Valley Municipal Code. The Project operational noise levels at 200 feet are estimated at 47.0 dBA  $L_{eq}$ . Based on the results of this analysis, the Project operational noise levels associated with the Continental Villages will satisfy the City of Moreno Valley Municipal Code 60 dBA  $L_{eq}$  daytime and 55 dBA  $L_{eq}$  nighttime exterior noise level standards at 200 feet from the source land use.

**TABLE 10-2: OPERATIONAL NOISE LEVEL PROJECTIONS AT 200 FEET**

| Noise Source                              | Ref. Noise Level (dBA $L_{eq}$ ) | Ref. Distance (Feet) | Distance Atten. @ 200' (dBA $L_{eq}$ ) <sup>1</sup> | Hourly Activity (Mins.) <sup>2</sup> | Hourly Activity Adjustment (dBA $L_{eq}$ ) | Noise Level @ 200' (dBA $L_{eq}$ ) |
|---|----------------------------------|----------------------|---|--------------------------------------|--|------------------------------------|
| Roof-Top Air Conditioning Unit            | 77.2                             | 5'                   | -32.0   | 39                                   | -1.9                                       | 43.3                               |

| <b>Combined Noise Level:</b>              |                                  |                      |   |                                      |  | 47.0                               |

<sup>1</sup> Drop off rate of 6 dBA per doubling of distance from point sources and 4.5 dBA per doubling of distance from line sources.

<sup>2</sup> Anticipated duration (minutes within the hour) of noise activity during peak hourly conditions expected at the Project site.

Table 10-3 indicates that the unmitigated hourly noise levels associated with the Continental Villages Project at the nearby sensitive receiver locations are expected to range from 38.3 to 47.0 dBA  $L_{eq}$ . The Project-related operational noise levels, as shown on Table 10-3, will satisfy the City of Moreno Valley 60 dBA  $L_{eq}$  daytime and 55 dBA  $L_{eq}$  nighttime exterior noise level standards at all nearby sensitive receiver locations. The operational noise level calculations are included in Appendix 10.1.

<sup>1</sup> See Exhibit 10-A for the receiver and noise source locations.

<sup>2</sup> Reference noise sources as shown on Table 10-1.

<sup>3</sup> Calculations for each noise source are provided in Appendix 10.1.

<sup>4</sup> Do the Project operational noise levels exceed the standards (Table 3-1)?

"n/a" = school uses do not represent sensitive receiver locations during the nighttime hours when they are unoccupied.

### 10.3 PROJECT OPERATIONAL NOISE CONTRIBUTION

To describe the Project operational noise level contributions, the Project operational noise levels are combined with the existing ambient noise levels measurements for the nearby receiver locations potentially impacted by Project operational noise sources. Since the units used to measure noise, decibels (dB), are logarithmic units, the Project-operational and existing ambient noise levels cannot be combined using standard arithmetic equations. (7) Instead, they must be logarithmically added using the following base equation:

$$SPL_{Total} = 10\log_{10}[10^{SPL1/10} + 10^{SPL2/10} + \dots + 10^{SPLn/10}]$$

Where "SPL1," "SPL2," etc. are equal to the sound pressure levels being combined, or in this case, the Project-operational and existing ambient noise levels. The difference between the combined Project and ambient noise levels describe the Project noise level contributions to the existing ambient noise environment. Noise levels that would be experienced at receiver locations when Project-source noise is added to the ambient daytime and nighttime conditions are presented on Tables 10-4 and 10-5.

As indicated on Tables 10-4 and 10-5, the Project will contribute a daytime operational noise level increase of up to 0.2 dBA L<sub>eq</sub> and a nighttime operational noise level increase of up to 0.3 dBA L<sub>eq</sub> at the sensitive receiver locations. Since the Project-related operational noise level contributions will satisfy the significance criteria discussed in Section 4, the increases at the sensitive receiver locations will be *less than significant*.

## 11 CONSTRUCTION IMPACTS

This section analyzes potential impacts resulting from the short-term construction activities associated with the development of the Project. Exhibit 11-A shows the construction noise source locations in relation to the nearby receiver locations previously described in Section 9.

### 11.1 CONSTRUCTION NOISE LEVELS

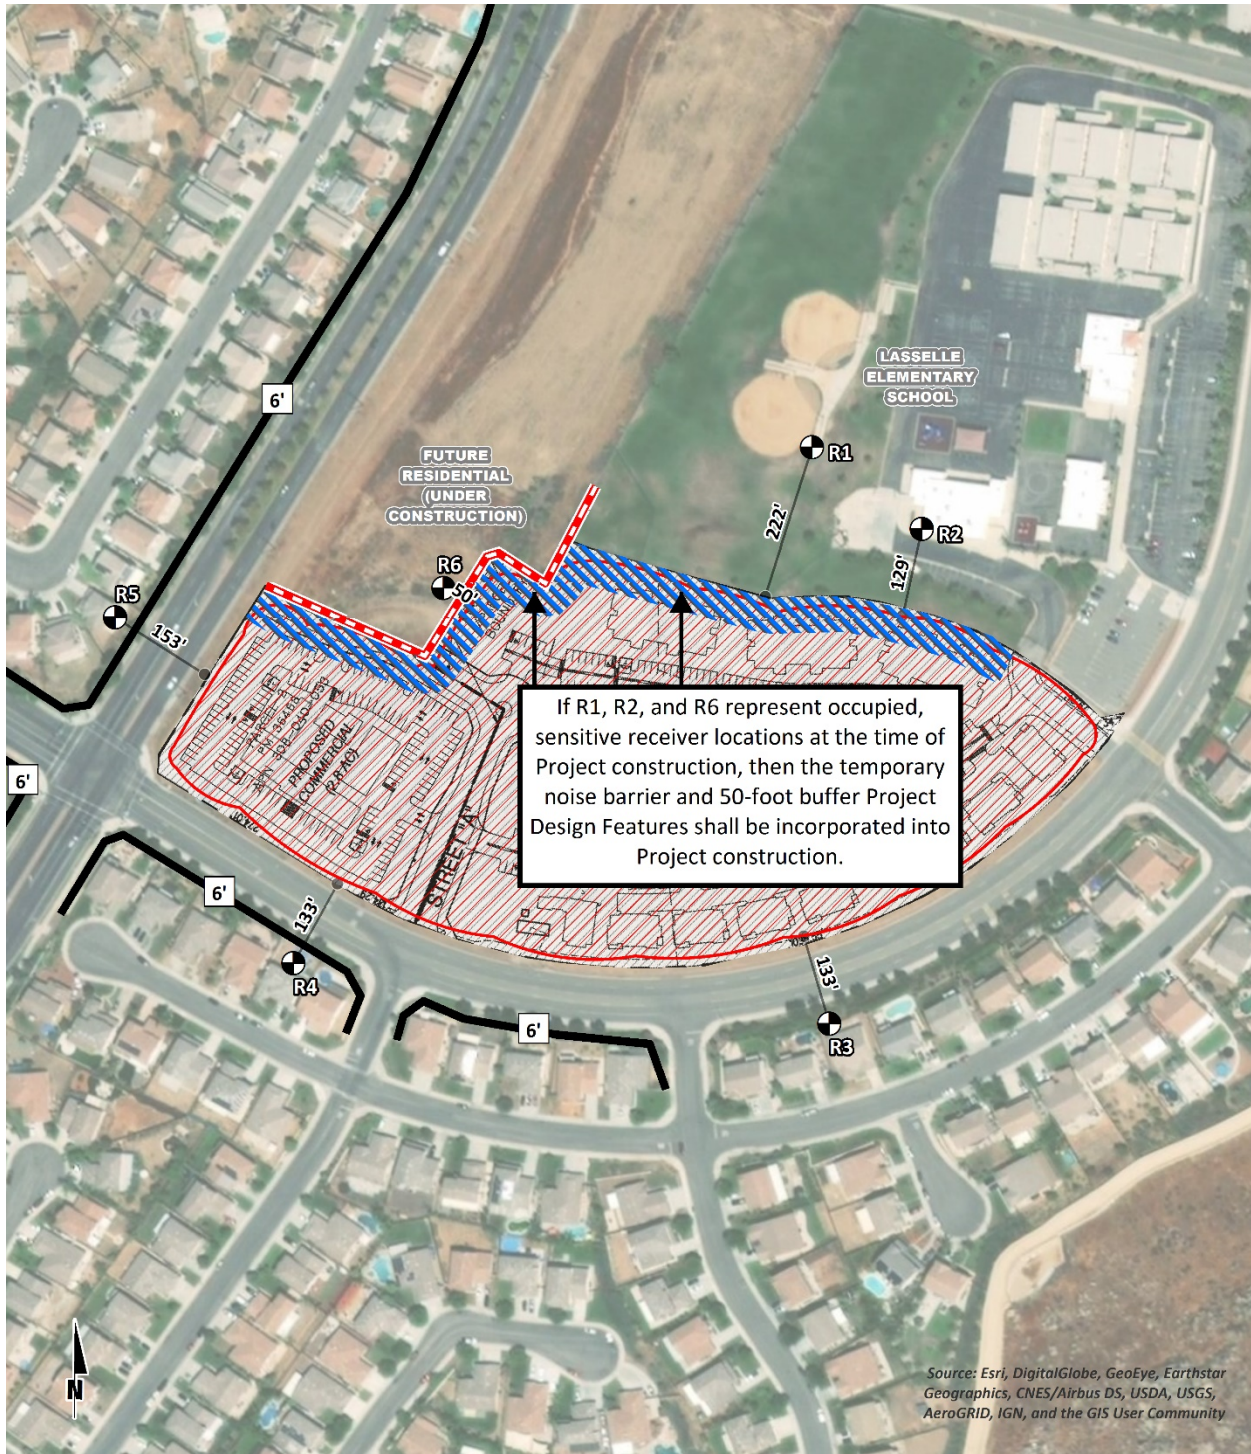

Noise generated by the Project construction equipment will include a combination of trucks, power tools, concrete mixers and portable generators that when combined can reach high levels. The number and mix of construction equipment is expected to occur in the following stages:

- Site Preparation
- Grading
- Building Construction
- Paving
- Architectural Coating

This construction noise analysis was prepared using reference noise level measurements taken by Urban Crossroads, Inc. to describe the typical construction activity noise levels for each stage of Project construction. The construction reference noise level measurements represent a list of typical construction activity noise levels. Noise levels generated by heavy construction equipment can range from approximately 68 dBA to in excess of 80 dBA when measured at 50 feet. However, these noise levels diminish with distance from the construction site at a rate of 6 dBA per doubling of distance. For example, a noise level of 80 dBA measured at 50 feet from the noise source to the receiver would be reduced to 74 dBA at 100 feet from the source to the receiver and would be further reduced to 68 dBA at 200 feet from the source to the receiver. The construction stages are based on the *Continental Villages Air Quality Impact Analysis* prepared by Urban Crossroads, Inc. (22)

## 11.2 CONSTRUCTION REFERENCE NOISE LEVELS

To describe the Project construction noise levels, measurements were collected for similar activities at several construction sites. Table 11-1 provides a summary of the construction reference noise level measurements. Since the reference noise levels were collected at varying distances of 30 feet and 50 feet, all construction noise level measurements presented on Table 11-1 have been adjusted for consistency to describe a common reference distance of 50 feet.

**TABLE 11-1: CONSTRUCTION REFERENCE NOISE LEVELS**

| ID | Noise Source   | Duration (h:mm:ss) | Reference Distance From Source (Feet) | Reference Noise Levels @ Reference Distance (dBA $L_{eq}$ ) | Reference Noise Levels @ 50 Feet (dBA $L_{eq}$ ) <sup>4</sup> |

<sup>1</sup>As measured by Urban Crossroads, Inc. on 10/14/15 at a business park construction site located at the northwest corner of Barranca Parkway and Alton Parkway in the City of Irvine.

<sup>2</sup>As measured by Urban Crossroads, Inc. on 10/20/15 at a construction site located in Rancho Mission Viejo.

<sup>3</sup>Reference noise level measurements were collected from a nighttime concrete pour at an industrial construction site, located at 27334 San Bernardino Avenue in the City of Redlands, between 1:00 a.m. to 2:00 a.m. on 7/1/15.

<sup>4</sup>Reference noise levels are calculated at 50 feet using a drop off rate of 6 dBA per doubling of distance (point source).

### 11.3 CONSTRUCTION NOISE ANALYSIS

Using the reference construction equipment noise levels, calculations of the Project construction noise level impacts at the nearby receiver locations were completed. Tables 11-2 to 11-6 present the short-term construction noise levels for each stage of construction, without accounting for the noise attenuation measures included in the Project Design Features (PDFs). Table 11-7 provides a summary of the construction noise levels by stage at the noise receiver locations. Based on the stages of construction, the noise levels associated with the proposed Project are expected to create temporarily high noise levels at the nearby receiver locations. To assess the peak construction noise levels, this analysis shows the highest noise impacts when the equipment with the highest reference noise level is operating at the closest point from the primary construction activity to each receiver location.

## 11.4 CONSTRUCTION NOISE THRESHOLDS OF SIGNIFICANCE

The construction noise analysis shows that the highest construction noise levels will occur when equipment is operating at the closest point from primary construction activity to each sensitive receiver location. As shown on Table 11-7, the construction noise levels without Project Design Features are expected to range from 43.3 to 73.5 dBA L<sub>eq</sub> at the nearby receiver locations.

With the planned temporary construction noise attenuation measures as a part of the Project Design Features (PDFs), the construction noise levels at the potentially impacted receiver locations will approach 59.4 dBA L<sub>eq</sub> which will satisfy the 60 dBA L<sub>eq</sub> threshold for noise-sensitive receiver locations, as shown on Table 11-7. Therefore, the noise impact due to Project construction is considered a *less than significant* impact with the planned PDFs. The PDFs include a minimum 10-foot high temporary noise barrier at the Project site boundary for the future residential uses represented by R6, and a 50-foot buffer for large mobile equipment (greater than 80,000 pounds) for both R2 and R6, as shown on Exhibit 11-A.

The construction noise analysis presents a conservative approach with the highest noise-level-producing equipment for each stage of Project construction operating at the closest point from primary construction activity to the nearby sensitive receiver locations. This scenario is unlikely to occur during typical construction activities and likely overstates the construction noise levels which will be experienced at each receiver location. With the construction noise PDFs identified in this noise study, shown on Exhibit 11-A, the worst-case construction noise levels at the nearby residential receivers would be reduced.

The noise attenuation provided through temporary noise barriers depends on many factors including cost, wind loading, the location of the receiver, and the ability to place barriers such that the line-of-sight of the receiver is blocked to the noise source, among others. This analysis assumes a temporary noise barrier constructed using frame-mounted materials such as vinyl acoustic curtains or quilted blankets attached to the construction site perimeter fence. Appendix 11.1 includes the construction noise level calculations without and with the temporary noise barriers. Sample temporary noise barrier photos are provided in Appendix 11.2 for reference.

## 11.5 CONSTRUCTION VIBRATION IMPACTS

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods used, distance to the affected structures and soil type. It is expected that ground-borne vibration from Project construction activities would cause only intermittent, localized intrusion. The proposed Project's construction activities most likely to cause vibration impacts are:

- **Heavy Construction Equipment:** Although all heavy mobile construction equipment has the potential of causing at least some perceptible vibration while operating close to buildings, the vibration is usually short-term and is not of sufficient magnitude to cause building damage.
- **Trucks:** Trucks hauling building materials to construction sites can be sources of vibration intrusion if the haul routes pass through residential neighborhoods on streets with bumps or potholes. Repairing the bumps and potholes generally eliminates the problem.

Ground-borne vibration levels resulting from construction activities occurring within the Project site were estimated by data published by the Federal Transit Administration. Construction activities that would have the potential to generate low levels of ground-borne vibration within the Project site include grading. Using the vibration source level of construction equipment provided on Table 6-6 and the construction vibration assessment methodology published by the FTA, it is possible to estimate the Project vibration impacts. Table 11-8 presents the expected Project related vibration levels at the nearby receiver locations.

Based on the reference vibration levels provided by the FTA, a large bulldozer represents the peak source of vibration with a reference level of 87 VdB at 25 feet. At distances ranging from 50 to 222 feet from primary Project construction activities, construction vibration levels are expected to range from 29.5 to 78.0 VdB, as shown on Table 11-8. Using the construction vibration assessment methods provided by the FTA, Project construction vibration levels are shown to remain below the FTA 80 VdB threshold the nearby sensitive receiver locations, and therefore, is considered a *less than significant* impact.

Further, vibration levels at the site of the closest sensitive receiver are unlikely to be sustained during the entire construction period but will occur rather only during the times that heavy construction equipment is operating at the Project site perimeter.

TABLE 11-8: UNMITIGATED CONSTRUCTION EQUIPMENT VIBRATION LEVELS

| Receiver Location <sup>1</sup> | Distance to Construction Activity (Feet) | Receiver Vibration Levels (VdB) <sup>2</sup> |            |               |                 |                         | Threshold Exceeded? <sup>3</sup> |
|--------------------------------|--|--|------------|---------------|-----------------|-------------------------|----------------------------------|
|                                |  | Small Bulldozer                              | Jackhammer | Loaded Trucks | Large Bulldozer | Highest Vibration Level |                                  |
| R1                             | 222'                                     | 29.5   | 50.5       | 57.5          | 58.5            | 58.5                    | No                               |
| R2                             | 129'                                     | 36.6   | 57.6       | 64.6          | 65.6            | 65.6                    | No                               |
| R3                             | 133'                                     | 36.2   | 57.2       | 64.2          | 65.2            | 65.2                    | No                               |
| R4                             | 133'                                     | 36.2   | 57.2       | 64.2          | 65.2            | 65.2                    | No                               |
| R5                             | 153'                                     | 34.4   | 55.4       | 62.4          | 63.4            | 63.4                    | No                               |
| R6                             | 50'                                      | 49.0   | 70.0       | 77.0          | 78.0            | 78.0                    | No                               |

<sup>1</sup> Noise receiver locations are shown on Exhibit 11-A.

<sup>2</sup> Based on the Vibration Source Levels of Construction Equipment included on Table 6-6.

<sup>3</sup> Does the peak vibration exceed the FTA maximum acceptable vibration standard of 80 VdB?

Chapter 11. 80 N OISE REGULATION

11. 80. 010 Legislative findings.

It is found and declared that:

- A. Excessive sound within the limits of the city is a condition which has existed for some time, and the amount and intensity of such sound is increasing.
- B. Such excessive sound is a detriment to the public health, safety, and welfare and quality of life of the residents of the city.
- C. The necessity in the public interest for the provisions and prohibitions hereinafter contained and enacted is declared as a matter of legislative determination and public policy, and it is further declared that the provisions and prohibitions hereinafter contained and enacted are in pursuance of and for the purpose of securing and promoting the public health, safety, welfare and quality of life of the city and its inhabitants. (Ord. 740 § 1.2, 2007)

11. 80. 020 Definitions.

For purposes of this chapter, certain words and phrases used herein are defined as follows:

- “A-weighted sound level” means the sound pressure level in decibels as measured with a sound level meter using the A-weighting network. The unit of measurement is the dB(A).
  - “Commercial” means all uses of land not otherwise classified as residential, as defined in this section.
  - “Construction” means any site preparation, and/or any assembly, erection, repair, or alteration, excluding demolition, of any structure, or improvements to real property.
  - “Continuous airborne sound” means sound that is measured by the slow-response setting of a meter manufactured to the specifications of ANSI Section 1.4-1983 (R2006) “Specification for Sound Level Meters,” or its successor.
  - “Daytime” means eight a.m. to ten p.m. the same day.
  - “Decibel” (dB) means a unit for measuring the amplitude of sound, equal to twenty (20) times the logarithm to the base ten (10) of the ratio of the pressure of the sound measured to the reference pressure, which is twenty (20) microPascals (twenty (20) microNewtons per square meter.)
  - “Demolition” means any dismantling, intentional destruction or removal of structures or other improvements to real property.
  - “Disturb” means to interrupt, interfere with, or hinder the enjoyment of peace or quiet or the normal listening activities or the sleep, rest or mental concentration of the hearer.
  - “Emergency” means any occurrence or set of circumstances involving actual or imminent physical trauma or significant property damage which necessitates immediate action. Economic loss alone shall not constitute an emergency. It shall be the burden of an alleged violator to prove an “emergency.”
  - “Emergency work” means any work made necessary to restore property to a safe condition following an emergency, or to protect persons or property threatened by an imminent emergency, to the extent such work is, in fact, necessary to protect persons or property from exposure to imminent danger or damage.
  - “Frequency” means the number of complete oscillation cycles per unit of time.
  - “Impulsive sound” means sound of short duration, usually less than one second, with an abrupt onset and rapid decay. Examples of sources of impulsive sound include explosions, drop forge impacts, and discharge of firearms.
  - “Nighttime” means 10:01 p.m. to 7:59 a.m. the following day.
  - “Noise disturbance” means any sound which:
    1. Disturbs a reasonable person of normal sensitivities;
    2. Exceeds the sound level limits set forth in this chapter; or
    3. Is plainly audible as defined in this section. Where no specific distance is set forth for the determination of audibility, references to noise disturbance shall be deemed to mean plainly audible at a distance of two hundred (200) feet from the real property line of the source of the sound, if the sound occurs on privately owned property, or from the source of the sound, if the sound occurs on public right of way, public space or other publicly owned property.
  - “Person” means any person, person’s firm, association, copartnership, joint venture, corporation, or any entity public or private in nature.
  - “Plainly audible” means that the sound or noise produced or reproduced by any particular source, can be clearly distinguished from ambient noise by a person using his/her normal hearing faculties.
  - “Public right-of-way” means any street, avenue, boulevard, sidewalk, bike path or alley, or similar place normally accessible to the public which is owned or controlled by a governmental entity.
  - “Public space” means any park, recreational or community facility, or lot which contains at least one building that is open to the general public during its hours of operation.
  - “Residential” means all uses of land primarily for dwelling units, as well as hospitals, schools, colleges and universities, and places of religious assembly.
  - “Sound” means an oscillation in pressure, particle displacement, particle velocity or other physical parameter, in a medium with internal forces that causes compression and rarefaction of that medium capable of producing an auditory impression. The description of sound may include any characteristic of such sound, including duration, intensity and frequency.
  - “Sound level” means the weighted sound pressure level as measured in dB(A) by a sound level meter and as specified in American National Standards Institute (ANSI) specifications for sound-level meters (ANSI Section 1.4-1971 (R1976)). If the frequency weighting employed is not indicated, the A-weighting shall apply.
  - “Sound level meter” means an instrument, demonstrably capable of accurately measuring sound levels as defined above.
- All technical definitions not defined above shall be in accordance with applicable publications and standards of the American National Standards Institute (ANSI). (Ord. 740 § 1.2, 2007)

11. 80. 030 Prohibited acts.

- A. General Prohibition. It is unlawful and a violation of this chapter to maintain, make, cause, or allow the making of any sound that causes a noise disturbance, as defined in Section [11.80.020](#).
- B. Sound causing permanent hearing loss.
  1. Sound level limits. Based on statistics from the Center for Disease Control and Prevention and the National Institute for Occupational Safety and Health, Table 1 and Table 1-A specify sound level limits which, if exceeded, will have a high probability of producing permanent hearing loss in anyone in the area where the sound levels are being exceeded. No sound shall be permitted within the city which exceeds the parameters set forth in Tables 11.80.030-1 and 11.80.030-1-A of this chapter:

Table 11.80.030-1  
MAXIMUM CONTINUOUS SOUND LEVELS\*

| Duration per Day | Sound level [db(A)] |
|------------------|---------------------|
| Continuous Hours |                     |
| 8                | 90                  |
| 6                | 92                  |

|      |     |
|------|-----|
| 4    | 95  |
| 3    | 97  |
| 2    | 100 |
| 1.5  | 102 |
| 1    | 105 |
| 0.5  | 110 |
| 0.25 | 115 |

\* When the daily sound exposure is composed of two or more periods of sound exposure at different levels, the combined effect of all such periods shall constitute a violation of this section if the sum of the percent of allowed period of sound exposure at each level exceeds 100 percent

Table 11.80.030-1A  
MAXIMUM IMPULSIVE SOUND  
LEVELS

| Number of Repetitions per 24-Hour Period | Sound level [dB(A)] |
|--|---------------------|
| 1  | 145                 |
| 10                                       | 135                 |
| 100                                      | 125                 |

2. Exemptions. No violation shall exist if the only persons exposed to sound levels in excess of those listed in Tables 11.80.030-1 and 11.80.030-1A are exposed as a result of:

- a. Trespass;
- b. Invitation upon private property by the person causing or permitting the sound; or
- c. Employment by the person or a contractor of the person causing or permitting the sound.

C. Nonimpulsive Sound Decibel Limits. No person shall maintain, create, operate or cause to be operated on private property any source of sound in such a manner as to create any nonimpulsive sound which exceeds the limits set forth for the source land use category (as defined in Section 11.80.020) in Table 11.80.030-2 when measured at a distance of two hundred (200) feet or more from the real property line of the source of the sound, if the sound occurs on privately owned property, or from the source of the sound, if the sound occurs on public right-of-way, public space or other publicly owned property. Any source of sound in violation of this subsection shall be deemed prima facie to be a noise disturbance.

Table 11.80.030-2  
MAXIMUM SOUND LEVELS (IN dB(A)) FOR SOURCE LAND USES

| Residential |           | Commercial |           |
|-------------|-----------|------------|-----------|
| Daytime     | Nighttime | Daytime    | Nighttime |
| 60          | 55        | 65         | 60        |

D. Specific Prohibitions. In addition to the general prohibitions set out in subsection A of this section, and unless otherwise exempted by this chapter, the following specific acts, or the causing or permitting thereof, are regulated as follows:

1. Motor Vehicles. No person shall operate or cause to be operated a public or private motor vehicle, or combination of vehicles towed by a motor vehicle, that creates a sound exceeding the sound level limits in Table 11.80.030-2 when the vehicle(s) are not otherwise subject to noise regulations provided for by the California [Vehicle Code](#).
2. Radios, Televisions, Electronic Audio Equipment, Musical Instruments or Similar Devices from a Stationary Source. No person shall operate, play or permit the operation or playing of any radio, tape player, television, electronic audio equipment, musical instrument, sound amplifier or other mechanical or electronic sound making device that produces, reproduces or amplifies sound in such a manner as to create a noise disturbance. However, this subsection shall not apply to any use or activity exempted in subsection E of this section and any use or activity for which a special permit has been issued pursuant to Section [11.80.040](#).
3. Radios, Electronic Audio Equipment, or Similar Devices from a Mobile Source Such as a Motor Vehicle. Sound amplification or reproduction equipment on or in a motor vehicle is subject to regulation in accordance with the California [Vehicle Code](#) when upon the public right-of-way. When upon public space or publicly owned property other than the public right-of-way or upon private property open to the public, sound amplification or reproduction equipment shall not be operated in such a manner that it is plainly audible at a distance of fifty (50) feet in any direction from the vehicle.
4. Portable, Hand-Held Music or Sound Amplification or Reproduction Equipment. Such equipment shall not be operated on a public right-of-way, public space or other publicly owned property in such a manner as to be plainly audible at a distance of fifty (50) feet in any direction from the operator.
5. Loudspeakers and Public Address Systems.
  - a. Except as permitted by Section [11.80.040](#), no person shall operate, or permit the operation of, any loudspeaker, public address system or similar device, for any commercial purpose:
    1. Which produces, reproduces or amplifies sound in such a manner as to create a noise disturbance; or
    2. During nighttime hours on a public right-of-way, public space or other publicly owned property.
  - b. No person shall operate, or permit the operation of, any loudspeaker, public address system or similar device, for any noncommercial purpose, during nighttime hours in such a manner as to create a noise disturbance.
6. Animals. No person shall own, possess or harbor an animal or bird that howls, barks, meows, squawks, or makes other sounds that:
  - a. Create a noise disturbance;
  - b. Are of frequent or continued duration for ten (10) or more consecutive minutes and are plainly audible at a distance of fifty (50) feet from the real property line of the source of the sound; or
  - c. Are intermittent for a period of thirty (30) or more minutes and are plainly audible at a distance of fifty (50) feet from the real property line of the source of the sound.
7. Construction and Demolition. No person shall operate or cause the operation of any tools or equipment used in construction, drilling, repair, alteration or demolition work between the hours of eight p.m. and seven a.m. the following day such that the sound there from creates a noise disturbance, except for emergency work by public service utilities or for other work approved by the city manager or designee. This section shall not apply to the use of power tools as provided in subsection (D)(9) of this section.
8. Emergency Signaling Devices. No person shall intentionally sound or permit the sounding outdoors of any fire, burglar or civil defense alarm, siren or whistle, or similar stationary emergency signaling device, except for emergency purposes or for testing as follows:
  - a. Testing of a stationary emergency signaling device shall not occur between seven p.m. and seven a.m. the following day;
  - b. Testing of a stationary emergency signaling device shall use only the minimum cycle test time, in no case to exceed sixty (60) seconds;
  - c. Testing of a complete emergency signaling system, including the functioning of the signaling device and the personnel response to the signaling device, shall not occur more than once in each calendar month. Such testing shall only occur only on weekdays between seven a.m. and seven p.m. and shall be exempt from the time limit specified in subsection (D)(8)(2) of this

section.

9. Power Tools. No person shall operate or permit the operation of any mechanically, electrically or gasoline motor-driven tool during nighttime hours so as to cause a noise disturbance across a residential real property boundary.

10. Pumps, Air Conditioners, Air-Handling Equipment and Other Continuously Operating Equipment. Notwithstanding the general prohibitions of subsection a of this section, no person shall operate or permit the operation of any pump, air conditioning, air-handling or other continuously operating motorized equipment in a state of disrepair or in a manner which otherwise creates a noise disturbance distinguishable from normal operating sounds.

E. Exemptions. The following uses and activities shall be exempt from the sound level regulations except the maximum sound levels provided in Tables 11.80.030-1 and 11.80.030-1A:

1. Sounds resulting from any authorized emergency vehicle when responding to an emergency call or acting in time of an emergency.
  2. Sounds resulting from emergency work as defined in Section [11.80.020](#)
  3. Any aircraft operated in conformity with, or pursuant to, federal law, federal air regulations and air traffic control instruction used pursuant to and within the duly adopted federal air regulations; and any aircraft operating under technical difficulties in any kind of distress, under emergency orders of air traffic control, or being operated pursuant to and subsequent to the declaration of an emergency under federal air regulations.
  4. All sounds coming from the normal operations of interstate motor and rail carriers, to the extent that local regulation of sound levels of such vehicles has been preempted by the Noise Control Act of 1972 (42 U.S.C. § 4901 et seq.) or other applicable federal laws or regulations
  5. Sounds from the operation of motor vehicles, to the extent they are regulated by the California [Vehicle Code](#).
  6. Any constitutionally protected noncommercial speech or expression conducted within or upon a any public right-of-way, public space or other publicly owned property constituting an open or a designated public forum in compliance with any applicable reasonable time, place and manner restrictions on such speech or expression or otherwise pursuant to legal authority.
  7. Sounds produced at otherwise lawful and permitted city-sponsored events, organized sporting events, school assemblies, school playground activities, by permitted fireworks, and by permitted parades on public right-of-way, public space or other publicly owned property.
  8. An event for which a temporary use permit or special event permit has been issued under other provisions of this code, where the provisions of Section [11.80.040](#) are met, the permit granted expressly grants an exemption from specific standards contained in this chapter, and the permittee and all persons under the permittee's reasonable control actually comply with all conditions of such permit. Violation of any condition of such a permit related to sound or sound equipment shall be a violation of this chapter and punishable as such.
- F. Nothing in this chapter shall be construed to limit, modify or repeal any other regulation elsewhere in this code relating to the regulation of noise sources, nor shall any such other regulation be read to permit the emission of noise in violation of any provision of this chapter. (Ord. 740 § 1.2, 2007)

#### 11.80.040 Special provisions for temporary use and special event permits.

The exemption by permit set forth in Section [11.80.030\(E\)\(8\)](#) shall be subject to the following requirements and conditions:

- A. The permit application shall include the name, address and telephone number of the permit applicant; the date, hours and location for which the permit is requested; and the nature of the event or activity. It shall also specify the types of sounds and/or sound equipment to be permitted, the proposed duration of such sound, the specific standards from which the sound is to be exempted, and the reasons for each requested exemption.
- B. The permit shall be issued provided the proposed activity meets the requirements of this section and the issuing official determines that the sound to be emitted at the event as proposed would not be detrimental to the public health, safety or welfare, that the event cannot reasonably achieve its legitimate aims and purposes without the exemption and that the sound levels proposed will not unreasonably damage the peace and quiet enjoyment of the lawful users of surrounding properties, nor constitute a public nuisance.
- C. The official issuing the permit may prescribe any reasonable conditions or requirements he/she deems necessary to minimize noise disturbances upon the community or the surrounding neighborhood, and/or to protect the health, safety or welfare of the public, including participants in the permitted event, including use of mufflers, screens or other sound-attenuating devices.
- D. Any permit granted must be in writing and shall contain all conditions upon which the permit shall be effective.
- E. No more than six events requiring a sound limit exemption may be held at any particular location upon privately owned or controlled property per calendar year, provided further that the number of events shall not exceed the number permitted under the regulations for the type of permit issued. For purposes of this subsection, "location" means a legal parcel of real property or a complete shopping or commercial center or mall sharing common parking and access even if comprised of multiple legal parcels.
- F. The exemption from sound limits under such permit shall not exceed maximum period of four hours in one twenty-four (24) hour day.
- G. The permit will only be granted for hours between nine a.m. and ten p.m. on all days other than Friday and Saturday; and, on Friday and Saturday, between the hours of nine a.m. and one a.m. of the following day, except in the following circumstances:
  1. A permit may be granted for hours between nine a.m. on New Year's Eve and one a.m. the following day (New Year's Day).
  2. A permit may be granted for hours between nine a.m. and two a.m. the following day if there are no residences, hospitals, or nursing homes within a 0.5 mile radius of the property where the function is taking place.
- H. Functions for which the permits are issued shall be limited to a continuous airborne sound level not to exceed seventy (70) dB(A), as measured two hundred (200) feet from the real property boundary of the source property if on private property, or from the source if on public right of way, public space or other publicly owned property. (Ord. 740 § 1.2, 2007)

#### 11.80.050 Measurement or assessment of sound.

A. Measurement With Sound Meter.

1. The measurement of sound shall be made with a sound level meter meeting the standards prescribed by ANSI Section 1.4-1983 (R2006). The instruments shall be maintained in calibration and good working order. A calibration check shall be made of the system at the time of any sound level measurement. Measurements recorded shall be taken so as to provide a proper representation of the source of the sound. The microphone during measurement shall be positioned so as not to create any unnatural enhancement or diminution of the measured sound. A windscreen for the microphone shall be used at all times. However, a violation of this chapter may occur without the occasion of the measurements being made as otherwise provided.
  2. The slow meter response of the sound level meter shall be used in order to best determine the average amplitude.
  3. The measurement shall be made at any point on the property into which the sound is being transmitted and shall be made at least three feet away from any ground, wall, floor, ceiling, roof and other plane surface.
  4. In case of multiple occupancy of a property, the measurement may be made at any point inside the premises to which any complainant has right of legal private occupancy; provided that the measurement shall not be made within three feet of any ground, wall, floor, ceiling, roof or other plane surface.
  5. All measurements of sound provided for in this chapter will be made by qualified officials of the city who are designated by the city manager or designee to operate the apparatus used to make the measurements.
- B. Assessment Without Sound Level Meter. Any police officer, code enforcement officer, or other official designated by the city manager or designee who hears a noise or sound that is plainly audible, as defined in Section [11.80.020](#), in violation of this chapter, may enforce this chapter and shall assess the noise or sound according to the following standards:
1. The primary means of detection shall be by means of the official's normal hearing faculties, not artificially enhanced.
  2. The official shall first attempt to have a direct line of sight and hearing to the vehicle or real property from which the sound or noise emanates so that the official can readily identify the offending source of the sound or noise and the distance involved. If the official is unable to have a direct line of sight and hearing to the vehicle or real property from which the sound or noise emanates, then the official shall confirm the source of the sound or noise by approaching the suspected vehicle or real property until the official is able to obtain a direct line of sight and hearing, and confirm the source of the sound or noise that was heard at the place of the original assessment of the sound or noise.
  3. The official need not be required to identify song titles, artists, or lyrics in order to establish a violation. (Ord. 740 § 1.2, 2007)

#### 11.80.060 Violation.

A. Violation of Sound Level Limits. Any person violating any of the provisions of this chapter shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punishable by a fine not to exceed one thousand dollars (\$1,000.00) and/or six months in the county jail, or both. Notwithstanding the foregoing, any violation of the provisions of this chapter may, in the discretion of the citing officer or the city attorney, be cited and/or prosecuted as an infraction or be subject to civil citation pursuant to Chapter 1.10.

B. Joint and Several Responsibility. In addition to the person causing the offending sound, the owner, tenant or lessee of property, or a manager, overseer or agent, or any other person lawfully entitled to possess the property from which the offending sound is emitted at the time the offending sound is emitted, shall be responsible for compliance with this chapter if the additionally responsible party knows or should have known of the offending noise disturbance. It shall not be a lawful defense to assert that some other person caused the sound. The lawful possessor or operator of the premises shall be responsible for operating or maintaining the premises in compliance with this chapter and may be cited regardless of whether or not the person actually causing the sound is also cited.

C. Violation May be Declared a Public Nuisance. The operation or maintenance of any device, equipment, instrument, vehicle or machinery in violation of any provisions of this chapter which endangers the public health, safety and quality of life of residents in the area is declared to be a public nuisance, and may be subject to abatement summarily or by a restraining order or injunction issued by a court of competent jurisdiction. (Ord. 824 § 1.2, 2011; Ord. 740 § 1.2, 2007)

24-Hour Noise Level Measurement Summary

Date: Wednesday, August 15, 2018  
 Project: Continental Villages

Location: L3 - Located southwest of the Project site on Krameria Avenue, adjacent to existing residential homes.

Meter: Piccolo I

JN: 11577  
 Analyst: R. Saber

Attachment: Noise Assessment (Nov 2018) (3376 : The proposal includes a General Plan Amendment, Specific Plan Amendment, Change of Zone, a Plot Plan)

**24-Hour Noise Level Measurement Summary**

Date: Thursday, August 16, 2018  
 Project: Continental Villages

Location: L4 - Located west of the Project site across Lasselle Street near existing residential homes.

Meter: Piccolo I

JN: 11577  
 Analyst: R. Saber

Hourly L<sub>eq</sub> dBA Readings (unadjusted)

# TABLE OF CONTENTS

**TABLE OF CONTENTS**..... III

**APPENDICES**..... V

**LIST OF EXHIBITS**..... VII

**LIST OF TABLES** ..... IX

**LIST OF ABBREVIATED TERMS** ..... XI

**1 INTRODUCTION**..... 1

    1.1 Project Overview ..... 1

    1.2 Analysis Scenarios ..... 3

    1.3 Study Area ..... 4

    1.4 Summary of Intersection Analysis..... 6

    1.5 Local and Regional Funding Mechanisms ..... 13

    1.6 Site Adjacent Roadway and Site Access Improvements ..... 16

**2 METHODOLOGIES** ..... 19

    2.1 Level of Service ..... 19

    2.2 Intersection Capacity Analysis ..... 19

    2.3 Traffic Signal Warrant Analysis Methodology..... 21

    2.4 Roadway Segment Capacity Analysis ..... 22

    2.5 Queuing Analysis..... 23

    2.6 Minimum Level of Service (LOS) ..... 24

    2.7 Thresholds of Significance..... 24

    2.8 Project Fair Share Calculation Methodology ..... 24

**3 AREA CONDITIONS** ..... 27

    3.1 Existing Circulation Network..... 27

    3.2 City of Moreno Valley General Plan Circulation Element ..... 27

    3.3 Transit Service ..... 27

    3.4 Bicycle & Pedestrian Facilities..... 34

    3.5 Existing (2018) Traffic Counts ..... 34

    3.6 Intersection Operations Analysis ..... 39

    3.7 Traffic Signal Warrants Analysis..... 39

    3.8 Roadway Segment Analysis..... 39

    3.9 Queuing Analysis..... 44

    3.10 Recommended Improvements ..... 44

# 1 INTRODUCTION

This report presents the results of the traffic impact analysis (TIA) for the proposed Continental Villages development (“Project”) located on the northeast corner of Lasselle Street and Krameria Avenue in the City of Moreno Valley as shown on Exhibit 1-1.

The purpose of this traffic impact analysis is to evaluate the potential circulation system deficiencies that may result from the development of the proposed Project, and to recommend improvements to achieve acceptable circulation system operational conditions. This traffic study has been prepared in accordance with the City of Moreno Valley Transportation Engineering Division’s Traffic Impact Analysis Preparation Guide (August 2007) and consultation with City of Moreno Valley staff during the scoping process. (1) The approved Project Traffic Study Scoping agreement is provided in Appendix 1.1 of this TIA.

## 1.1 PROJECT OVERVIEW

For the purposes of this analysis, in an effort to conduct a conservative analysis, the Project has been evaluated to consist of up to 112 apartments/duplexes and 21,000 square feet (sf) of commercial retail use. Per the City’s traffic study guidelines, the Opening Year Cumulative will have a 5-year minimum time horizon from baseline conditions. As such, the Opening Year Cumulative analysis will assess 2023 traffic conditions.

Vehicular access will be provided via the following driveways (see Exhibit 1-1):

- Lasselle Street & Driveway 1 – Right-in right-out only
- Colt Way & Krameria Avenue/Driveway 2 – Full access driveway
- Krameria Avenue & Driveway 3/Quarter Horse Road – Full-access driveway

Trips generated by the Project’s proposed land uses have been estimated based on trip generation rates collected by the Institute of Transportation Engineers (ITE) Trip Generation Manual, 10<sup>th</sup> Edition, 2017. (2) The Project is estimated to generate a net total of 2,056 trip-ends per day on a typical weekday with approximately 215 net AM peak hour trips and 167 net PM peak hour trips. The assumptions and methods used to estimate the Project’s trip generation characteristics are discussed in greater detail in Section 4.1 *Project Trip Generation* of this report.

### 1.1.1 SITE PLAN DRIVEWAY LOCATIONS

As shown on Exhibit 1-1, each driveway meets the required 100-foot spacing. As such, the location of each Project driveway is acceptable based on the City of Moreno Valley Municipal Code and City staff.

EXHIBIT 1-1: PRELIMINARY SITE PLAN

## 1.2 ANALYSIS SCENARIOS

For the purposes of this traffic study, potential impacts to traffic and circulation have been assessed for each of the following conditions:

- Existing (2018) (1 scenario)
- Existing plus Project (E+P) (1 scenario)
- Opening Year Cumulative (2023), Without and With Project (2 scenarios)
- Horizon Year (2040), Without and With Project (2 scenarios)

### 1.2.1 EXISTING (2018) CONDITIONS

Information for Existing (2018) conditions is disclosed to represent the baseline traffic conditions as they existed at the time this report was prepared.

### 1.2.2 EXISTING PLUS PROJECT CONDITIONS

The Existing plus Project (E+P) analysis determines circulation system deficiencies that would occur on the existing roadway system in the scenario of the Project being placed upon Existing conditions.

### 1.2.3 OPENING YEAR CUMULATIVE (2023) CONDITIONS

To account for growth in traffic between Existing Conditions (2018) and the Project Opening Year Cumulative (2023), a compounded annual traffic growth rate of 2.0 percent was assumed (10.41 percent aggregate growth in background traffic for the period from 2018 through 2023).

The 2.0 percent annual growth rate is intended to capture non-specific ambient traffic growth. Conservatively, the TIA estimates area-wide traffic growth, then adds traffic generated by other known or probable related projects. These related projects are at least in part already accounted for in the assumed annual 2.0 percent ambient growth in traffic noted above; and in some instances, these related projects would likely not be implemented and operational within the 2023 Opening Year Cumulative time frame assumed for the Project. The resulting traffic growth rate used in the TIA (2.0 percent compounded annual ambient growth plus traffic generated by related projects) would therefore tend to overstate rather than understate background cumulative traffic impacts under 2023 traffic conditions.

### 1.2.4 HORIZON YEAR (2040) CONDITIONS

The Horizon Year (2040) Without Project traffic conditions were derived from the Riverside County Transportation Analysis Model (RivTAM) modified to represent Horizon Year conditions for the City of Moreno Valley using accepted procedures for model forecast refinement and smoothing. The traffic forecasts reflect the area-wide growth anticipated between Existing conditions and Horizon Year conditions. The Horizon Year With Project traffic forecasts were determined by adding the Project traffic to the Horizon Year (2040) Without Project traffic forecasts from the RivTAM model. The Horizon Year traffic forecasts used in the traffic analysis were refined with existing peak hour traffic count data collected at intersection analysis locations. The

initial estimate of the future peak hour turning movements have, therefore, been reviewed for reasonableness. The reasonableness checks performed include a review of traffic flow conservation in addition to a comparison with the Existing and Opening Year Cumulative traffic volumes. Where necessary, the Horizon Year volumes have been adjusted to achieve flow conservation, reasonable growth, and reasonable diversion between parallel routes.

The Horizon Year Without and With Project traffic conditions analyses will be utilized to determine if improvements funded through regional transportation mitigation fee programs, such as the Transportation Uniform Mitigation Fee (TUMF) and Development Impact Fee (DIF) programs, or other approved funding mechanism can accommodate the long-range cumulative traffic at the target Level of Service (LOS) identified in the City of Moreno Valley General Plan. (3) If the “funded” improvements can provide the target LOS, then the Project’s payment into TUMF and/or DIF will be considered as long-range cumulative mitigation through the conditions of approval. Other improvements needed beyond the “funded” improvements (such as localized improvements to non-TUMF facilities) are identified as such. Post-processing worksheets for Horizon Year (2040) Without Project traffic conditions are provided in Appendix 4.1.

### 1.3 STUDY AREA

To ensure that this TIA satisfies the City of Moreno Valley’s traffic study requirements, Urban Crossroads, Inc. prepared a project traffic study scoping package for review by City of Moreno Valley staff prior to the preparation of this report. The scoping agreement provides an outline of the Project study area, trip generation, trip distribution, and analysis methodology and is included in Appendix 1.1.

#### 1.3.1 INTERSECTIONS

The 7 study area intersections shown on Exhibit 1-2 and listed in Table 1-1 were selected for this TIA based on the City of Moreno Valley’s Traffic Study Guidelines and in consultation with City of Moreno Valley staff. Pursuant to the Traffic Study Guidelines, the City requires analysis of intersections where the Project would contribute 50 or more peak hour trips.<sup>1</sup> In an effort to conduct a conservative analysis, the trip generation for the proposed Project has been utilized to determine if the 50 peak hour trip criteria has been met at the study area intersections.

---

<sup>1</sup> The “50 or more peak hour trips” intersection analytic protocol stipulated in the City’s Traffic Study Guidelines is consistent with standard industry practice. It is noted further that the 50 peak hour trip threshold is employed by other agencies throughout southern California including Caltrans, County of Riverside, County of San Bernardino, and the County of Orange.

EXHIBIT 1-2: LOCATION MAP

LEGEND:

-  - EXISTING INTERSECTION ANALYSIS LOCATION
-  - FUTURE INTERSECTION ANALYSIS LOCATION
-  - ROADWAY SEGMENT ANALYSIS LOCATION

**TABLE 1-1: INTERSECTION ANALYSIS LOCATIONS**

| ID | Intersection Location                              | Jurisdiction          | CMP? |
|----|--|-----------------------|------|
| 1  | Kitching Street & Krameria Avenue                  | City of Moreno Valley | No   |
| 2  | Lasselle Street & Iris Avenue                      | City of Moreno Valley | No   |
| 3  | Lasselle Street & Cahuilla Drive                   | City of Moreno Valley | No   |
| 4  | Lasselle Street & Driveway 1 – Future Intersection | City of Moreno Valley | No   |
| 5  | Lasselle Street & Krameria Avenue                  | City of Moreno Valley | No   |
| 6  | Driveway 2/Colt Way & Krameria Avenue              | City of Moreno Valley | No   |
| 7  | Krameria Avenue & Driveway 3/Quarter Horse Road    | City of Moreno Valley | No   |

The intent of a Congestion Management Program (CMP) is to more directly link land use, transportation, and air quality, thereby prompting reasonable growth management programs that will effectively utilize new transportation funds, alleviate traffic congestion and related impacts, and improve air quality. Counties within California have developed CMPs with varying methods and strategies to meet the intent of the CMP legislation. The County of Riverside CMP became effective with the passage of Proposition 111 in 1990 and updated most recently in 2011. The Riverside County Transportation Commission (RCTC) adopted the 2011 CMP for the County of Riverside in December 2011. (4) There are no CMP intersections in this study area.

### 1.3.2 ROADWAY SEGMENTS

The roadway segment study area utilized for this analysis is based on a review of the key roadway segments in which the Project is anticipated to contribute 50 or more peak hour trips. The study area identifies a total of 6 existing/future roadway segments. The roadway segments include the segments on either side of the study area intersections and are listed in Table 1-2.

**TABLE 1-2: ROADWAY SEGMENT ANALYSIS LOCATIONS**

| ID | Roadway Segment | Segment Limits                     |
|----|-----------------|------------------------------------|
| 1  | Krameria Avenue | Kitching Street to Lasselle Street |
| 2  | Krameria Avenue | Lasselle Street to Colt Way        |
| 3  | Lasselle Street | Iris Avenue to Cahuilla Drive      |
| 4  | Lasselle Street | Cahuilla Drive to Driveway 1       |
| 5  | Lasselle Street | Driveway 1 to Krameria Avenue      |

### 1.4 SUMMARY OF INTERSECTION ANALYSIS

This section provides a summary of the analysis results for Existing, E+P, Opening Year Cumulative, and Horizon Year traffic conditions. A summary of intersection LOS by analysis scenario is shown in Exhibit 1-3 and improvement needs to address those deficiencies are summarized in Table 1-3.

## Existing (2018) Conditions

### *Intersection Operations Analysis*

As shown on Exhibit 1-3, all of the study area intersections are currently operating at an acceptable LOS during the peak hours. The City is currently in the process of implementing a road diet along Krameria Avenue starting from the intersection at Lasselle Street to the east up to Cahuilla Drive. The road diet is anticipated to reduce the number of travel lanes along Krameria Avenue in order to accommodate a wide shoulder with bike lanes. The intersection of Lasselle Street and Krameria Avenue is anticipated to operate at an unacceptable LOS during the AM peak hour with the road diet improvements in place for Existing (2018) traffic conditions. The road diet improvements would eliminate the existing 2<sup>nd</sup> eastbound left turn lane and the 2<sup>nd</sup> through lane in both the eastbound and westbound directions in place of a right turn lane.

### *Roadway Segment Analysis*

The study area roadway segments are currently operating at an acceptable LOS for Existing (2018) traffic conditions.

### *Peak Hour Queuing Analysis*

A queuing analysis was performed at 5 study area intersections in close proximity to the Project in order to determine if the turn pocket lengths can accommodate the 95<sup>th</sup> percentile queues. The analysis was conducted for the weekday AM and weekday PM peak hours. The intersection of Lasselle Street and Krameria Avenue currently experiences queuing issues during the AM or PM peak hours for the northbound left turn pocket and northbound right turn pocket.

A 180-foot northbound left turn lane and 280-foot right turn lane are recommended in order to accommodate the 95<sup>th</sup> percentile peak hour queues for Existing (2018) traffic conditions.

## E+P Conditions

### *Intersection Operations Analysis*

As shown in Exhibit 1-3, the intersection of Lasselle Street and Krameria Avenue is anticipated to operate at an unacceptable LOS with the implementation of the road diet improvements, consistent with Existing (2018) traffic conditions. The road diet improvements would eliminate the existing 2<sup>nd</sup> eastbound left turn lane and the 2<sup>nd</sup> through lane in both the eastbound and westbound directions in place of a right turn lane. However, the intersection is anticipated to operate at an acceptable LOS without the implementation of the road diet along Krameria Avenue.

### *Roadway Segment Analysis*

Consistent with Existing (2018) traffic conditions, the study area roadway segments are anticipated to continue to operate at an acceptable LOS for E+P traffic conditions.

**EXHIBIT 1-3: SUMMARY OF DEFICIENT INTERSECTIONS BY ANALYSIS SCENARIO**

| # | Intersection                                       | Existing (2018) | E+P | Opening Year (2023) Without Project | Opening Year (2023) With Project | Horizon Year (2040) Without Project | Horizon Year (2040) With Project |
|---|--|-----------------|-----|-------------------------------------|----------------------------------|-------------------------------------|----------------------------------|
| 1 | Kitching St. & Krameria Av.                        |                 |     |                                     |                                  |                                     |                                  |

<sup>1</sup> Improvements included in Regional TUMF or City of Moreno Valley DIF programs have been identified as such.

<sup>2</sup> Costs have been estimated using the data provided in Appendix "G" of the CMP (2003 Update) for preliminary construction costs.

<sup>3</sup> Appendix "G" costs escalated by a factor of 1.484 except Traffic Signals. This is consistent with the methodology used by other near-by agencies.

<sup>4</sup> Program improvements constructed by project may be eligible for fee credit. In lieu fee payment is at discretion of City. Represents the fair share percentage for the Project during the most impacted peak hour.

<sup>5</sup> Total project fair share contribution consists of the improvements which are not already included in the City-wide DIF/County TUMF for those intersections wholly or partially within the City of Moreno Valley.

<sup>6</sup> Rough order of magnitude cost estimate.

<sup>7</sup> Total project fair share contribution consists of the improvements which are not already included in a fee program for those intersections wholly or partially within the City of Moreno Valley.

### *Peak Hour Queuing Analysis*

A queuing analysis was performed at 5 study area intersections in close proximity to the Project in order to determine if the turn pocket lengths can accommodate the 95<sup>th</sup> percentile queues. The analysis was conducted for the weekday AM and weekday PM peak hours for E+P traffic conditions. With the addition of Project traffic, there are no additional intersection movements that are anticipated to experience queuing issues during the AM or PM peak hours for E+P conditions, in addition to the movements previously identified under Existing conditions.

Consistent with Existing (2018) traffic conditions, a 180-foot northbound left turn lane and 280-foot right turn lane are recommended in order to accommodate the 95<sup>th</sup> percentile peak hour queues for E+P traffic conditions. The Project should contribute fair share towards the turn pocket improvements for the northbound left and right turn lanes as they are needed to address Existing queuing deficiencies at the intersection of Lasselle Street and Krameria Avenue.

### **Opening Year Cumulative (2023) Conditions**

#### *Intersection Operations Analysis*

As shown on Exhibit 1-3, there are 2 study area intersections that are anticipated to operate at an unacceptable LOS during one or both peak hours for Opening Year Cumulative (2023) Without Project traffic conditions. The addition of Project traffic is not anticipated to result in any additional deficiencies in addition to the locations identified under Opening Year Cumulative (2023) Without Project traffic conditions. The Project should contribute fair share towards the following improvements to address the deficiencies that are anticipated to occur under both Opening Year Cumulative (2023) Without and With Project traffic conditions:

#### **Improvement – Lasselle Street & Iris Avenue (#2)**

- Add an eastbound right turn lane and modify the traffic signal to implement overlap phasing on the right turn lane

#### **Improvement – Lasselle Street & Krameria Avenue (#5)**

- Add a 2<sup>nd</sup> northbound left turn lane
- Restripe the eastbound approach with 2 lefts, 1 through, and 1 right turn lane
- Modify the traffic signal to implement overlap phasing on the eastbound right turn lane
- The road diet lanes on the westbound approach can remain

#### *Roadway Segment Analysis*

The study area roadway segment of Lasselle Street between Iris Avenue and Cahuilla Drive (#3) is anticipated to operate at an unacceptable LOS for Opening Year Cumulative (2023) Without Project traffic conditions. The addition of Project traffic is not anticipated to result in any additional roadway segment deficiencies from the location identified previously for Opening Year Cumulative (2023) Without Project traffic conditions.

### *Peak Hour Queuing Analysis*

A queuing analysis was performed at 5 study area intersections in close proximity to the Project in order to determine if the turn pocket lengths can accommodate the 95<sup>th</sup> percentile queues. The analysis was conducted for the weekday AM and weekday PM peak hours for Opening Year Cumulative (2023) traffic conditions. The intersection of Lasselle Street and Krameria Avenue is anticipated to continue to experience queuing issues during the AM or PM peak hours for the northbound left turn pocket and northbound right turn pocket. In addition, the westbound left turn pocket is also anticipated to experience queues during the AM peak hour only for Opening Year Cumulative (2023) Without Project traffic conditions. With the addition of Project traffic, the southbound left turn pocket is anticipated to experience queuing issues during the AM peak hour only.

Consistent with Existing (2018) and E+P traffic conditions, a 180-foot northbound left turn lane and 280-foot right turn lane are recommended in order to accommodate the 95<sup>th</sup> percentile peak hour queues for Opening Year Cumulative (2023) traffic conditions. Additionally, a 270-foot southbound left turn lane is recommended in order to accommodate the 95<sup>th</sup> percentile peak hour queues for Opening Year Cumulative (2023) traffic conditions. The Project should contribute fair share towards the turn pocket improvements for the northbound left and right turn lanes and modifications to the existing landscaped median to accommodate a 270-foot southbound left turn lane at the intersection of Lasselle Street and Krameria Avenue.

### **Horizon Year (2040) Conditions**

#### *Intersection Operations Analysis*

As shown on Exhibit 1-3, there is 1 additional study area intersection anticipated to operate at an unacceptable LOS for both Horizon Year (2040) Without Project and With Project, beyond those previously identified in Opening Year Cumulative (2023) Without Project traffic conditions. The Project should contribute fair share towards the following improvements to address the deficiencies that are anticipated to occur under both Horizon Year (2040) Without and With Project traffic conditions:

#### ***Improvement – Kitching Street & Krameria Avenue (#1)***

- Add an eastbound right turn lane
- Modify the traffic signal to implement overlap phasing on the eastbound right turn lane

#### ***Improvement – Lasselle Street & Iris Avenue (#2)***

- Add an eastbound right turn lane and modify the traffic signal to implement overlap phasing on the right turn lane

### **Improvement – Lasselle Street & Krameria Avenue (#5)**

- Add a 2<sup>nd</sup> northbound left turn lane
- Add an eastbound right turn lane and modify the traffic signal to implement overlap phasing on the eastbound right turn lane
- The road diet lanes on the westbound approach can remain

#### *Roadway Segment Analysis*

The study area roadway segment of Lasselle Street between Iris Avenue and Cahuilla Drive (#3) is anticipated to operate at an unacceptable LOS for Horizon Year (2040) Without Project traffic conditions. The addition of Project traffic is not anticipated to result in any additional roadway segment deficiencies in addition to the location identified previously for Horizon Year (2040) Without Project traffic conditions.

#### *Peak Hour Queuing Analysis*

A queuing analysis was performed at 5 study area intersections in close proximity to the Project in order to determine if the turn pocket lengths can accommodate the 95<sup>th</sup> percentile queues. The analysis was conducted for the weekday AM and weekday PM peak hours for Horizon Year (2040) Without and With Project traffic conditions. The intersection of Lasselle Street and Krameria Avenue is anticipated to continue to experience queuing issues during the AM or PM peak hours for the northbound left turn pocket, northbound right turn pocket, southbound left turn pocket, and westbound left turn pocket for Horizon Year (2040) Without Project traffic conditions. There are no additional turn pockets anticipated to experience peak hour queues with the addition of Project traffic for Horizon Year (2040) With Project traffic conditions.

Consistent with Existing (2018), E+P, and Opening Year Cumulative (2023) traffic conditions, a 180-foot northbound left turn lane and 280-foot northbound right turn lane are recommended in order to accommodate the 95<sup>th</sup> percentile peak hour queues for Horizon Year (2040) traffic conditions. Consistent with Opening Year Cumulative (2023) traffic conditions, a 270-foot southbound left turn lane is recommended in order to accommodate the 95<sup>th</sup> percentile peak hour queues for Horizon Year (2040) traffic conditions. The Project should contribute fair share towards the turn pocket improvements for the northbound left and right turn lanes and modifications to the existing landscaped median to accommodate a 270-foot southbound left turn lane at the intersection of Lasselle Street and Krameria Avenue. Although there is an anticipated queue that exceeds the storage length for the westbound left turn lane at Lasselle Street and Krameria Avenue, additional improvements have not been recommended as the existing striped two-way-left-turn lane could accommodate up to an additional vehicle (15-feet) without spilling back to the upstream intersection of Colt Way.

## 1.5 LOCAL AND REGIONAL FUNDING MECHANISMS

Transportation improvements throughout the City of Moreno Valley are funded through a combination of project mitigation, fair share contributions or development impact fee programs, such as TUMF program or the City's DIF program.

### 1.5.1 TRANSPORTATION UNIFORM MITIGATION FEE (TUMF) PROGRAM

The Western Riverside Council of Governments (WRCOG) is responsible for establishing and updating Transportation Uniform Mitigation Fee (TUMF) rates. The County may grant to developers a credit against the specific components of fees for the dedication of land or the construction of facilities identified in the list of improvements funded by each of these fee programs. Fees are based upon projected land uses and a related transportation need to address growth based upon a 2016 Nexus study.

TUMF is an ambitious regional program created to address cumulative impacts of growth throughout western Riverside County. Program guidelines are being handled on an iterative basis. Exemptions, credits, reimbursements and local administration are being deferred to primary agencies. The County of Riverside serves this function for the proposed Project. Fees submitted to the County are passed on to the WRCOG as the ultimate program administrator.

TUMF guidelines empower a local zone committee to prioritize and arbitrate certain projects. The Project is located in the Central Zone. The zone has developed a 5-year capital improvement program to prioritize public construction of certain roads. TUMF is focused on improvements necessitated by regional growth.

### 1.5.2 CITY OF MORENO VALLEY DEVELOPMENT IMPACT FEE (DIF) PROGRAM

The City of Moreno Valley has created its own local Development Impact Fee (DIF) program to impose and collect fees from new residential, commercial and industrial development for the purpose of funding roadways and intersections necessary to accommodate City growth as identified in the City's General Plan Circulation Element. The City's DIF program includes facilities that are not part of, or which may exceed improvements identified and covered by the TUMF program. As a result, the pairing of the regional and local fee programs provides a more comprehensive funding and implementation plan to ensure an adequate and interconnected transportation system. Under the City's DIF program, the City may grant to developers a credit against specific components of fees when those developers construct certain facilities and landscaped medians identified in the list of improvements funded by the DIF program.

The timing to use the DIF fees is established through periodic capital improvement programs which are overseen by the City's Public Works Department. Periodic traffic counts, review of traffic accidents, and a review of traffic trends throughout the City are also periodically performed by City staff and consultants. The City uses this data to determine the timing of implementing the improvements listed in its facilities list.

The Project Applicant would pay requisite DIF pursuant to incumbent City ordinance requirements. Payment of requisite DIF would satisfy the Applicant's mitigation responsibilities for potentially significant impacts affecting DIF-funded facilities.

### 1.5.3 FAIR SHARE FEES

The Project Applicant's responsibilities may also be fulfilled through payment of fair-share fees. Fair share fees would be paid in instances where required traffic facilities are not otherwise funded by TUMF and/or DIF programs noted above. Fair share calculations are provided in Table 1-4 for each of the study area intersections where the Project is anticipated to contribute cumulatively to a peak hour queuing issue.

Table 1-4

## Project Fair Share Calculations

| # | Intersection                | Existing (2018) | Project | 2040 With Project | Total New Traffic | Project Fair Share <sup>1</sup> |              |
|---|-----------------------------|-----------------|---------|-------------------|-------------------|---------------------------------|--------------|
| 1 | Kitching St. & Krameria Av. | AM:             | 1,974   | 62                | 4,292             | 2,318                           | <b>2.7%</b>  |
|   |                             | PM:             | 1,007   | 46                | 3,159             | 2,152                           | 2.1%         |
| 2 | Lasselle St. & Iris Av.     | AM:             | 4,314   | 96                | 6,315             | 2,001                           | <b>4.8%</b>  |
|   |                             | PM:             | 4,228   | 75                | 6,586             | 2,358                           | 3.2%         |
| 5 | Lasselle St. & Krameria Av. | AM:             | 3,656   | 162               | 5,195             | 1,539                           | <b>10.5%</b> |
|   |                             | PM:             | 2,559   | 128               | 3,881             | 1,322                           | 9.7%         |

\* Highest fair share percentage represented in **BOLD** and shown on Table 1-3.

<sup>1</sup> Fair share based on net new traffic which is calculated from Project traffic volumes divided by the 2040 With Project less Existing (2018) traffic

## 1.6 SITE ADJACENT ROADWAY AND SITE ACCESS IMPROVEMENTS

This section summarizes Project site access and on-site circulation recommendations. Vehicular access will be provided via the following driveways:

- Lasselle Street & Driveway 1 – Right-in right-out only
- Colt Way & Krameria Avenue/Driveway 2 – Full access driveway
- Krameria Avenue & Driveway 3/Quarter Horse Road – Full-access driveway

### 1.6.1 SITE ADJACENT ROADWAY IMPROVEMENTS

Since both Lasselle Street and Krameria Avenue are built out to their ultimate cross-section, according to the City of Moreno Valley General Plan along the Project's frontage, there are no roadway improvement recommendations. However, additional curb, gutter, and sidewalk improvements are recommended, as needed for site access along the Project's frontage consistent with the City's standards.

### 1.6.2 SITE ACCESS IMPROVEMENTS

The recommended site access driveway improvements for the Project are described below. Exhibit 1-4 illustrates the on-site and site adjacent recommended roadway lane improvements. Construction of on-site and site adjacent improvements are recommended to occur in conjunction with adjacent Project development activity or as needed for Project access purposes.

**Lasselle Street & Driveway 1 (#5)** – Install a stop control on the westbound approach and construct the intersection with the following geometrics:

- Northbound Approach: One through lane and one shared through-right turn lane.
- Southbound Approach: Two through lanes.
- Eastbound Approach: Not Applicable (N/A)
- Westbound Approach: One right turn lane.

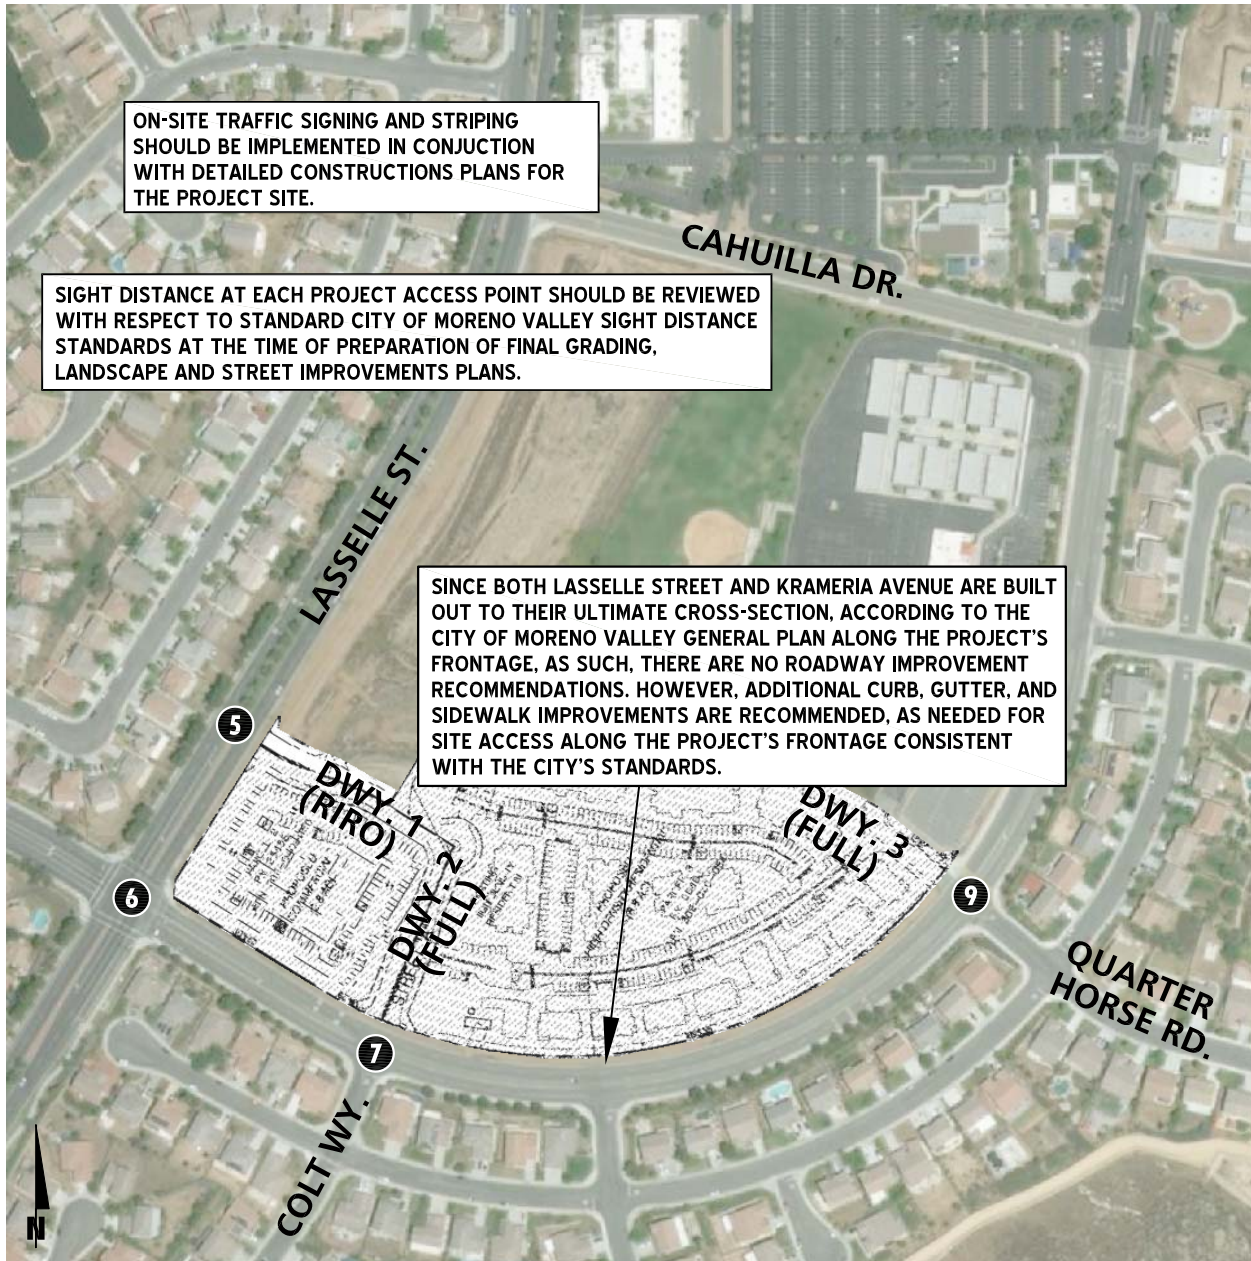

**Lasselle Street & Krameria Avenue (#6)** – Maintain the existing lane geometrics and modify the southbound left turn lane to accommodate 270-feet of storage.

**Driveway 2/Colt Way & Krameria Avenue (#7)** – Install a stop control on the southbound approach and construct the intersection with the following geometrics:

- Northbound Approach: One shared left-through-right turn lane.
- Southbound Approach: One shared left-through-right turn lane.
- Eastbound Approach: One left turn lane, one through lane, and one shared through-right turn lane.
- Westbound Approach: One left turn lane, one through lane, and one shared through-right turn lane.

**Krameria Avenue & Driveway 3/Quarter Horse Road (#8)** – Maintain the existing traffic controls and lane geometrics.

**EXHIBIT 1-4: SITE ADJACENT ROADWAY AND SITE ACCESS RECOMMENDATIONS**

**LEGEND:**

- = TRAFFIC SIGNAL
- = STOP SIGN
- = EXISTING LANE
- = LANE IMPROVEMENT
- TWLTL** = TWO WAY LEFT TURN LANE
- RTO** = RIGHT TURN OVERLAP
- 150' = MINIMUM TURN POCKET LENGTH
- 150' = TURN POCKET IMPROVEMENT

On-site traffic signing and striping should be implemented in conjunction with detailed construction plans for the Project site.

Sight distance at each project access point should be reviewed with respect to standard City of Moreno Valley sight distance standards at the time of preparation of final grading, landscape and street improvement plans.

### **1.6.3 QUEUING ANALYSIS AT THE PROJECT DRIVEWAYS**

A queuing analysis was conducted for the Project driveways for Horizon Year (2040) traffic conditions to determine the turn pocket lengths necessary to accommodate near-term 95<sup>th</sup> percentile queues. The analysis was conducted for the weekday AM and weekday PM peak hours for all analysis scenarios. Queuing worksheets are included in Appendix 1.2.

## 2 METHODOLOGIES

This section of the report presents the methodologies used to perform the traffic analyses summarized in this report. The methodologies described are consistent with City of Moreno Valley's traffic study guidelines. (1)

### 2.1 LEVEL OF SERVICE

Traffic operations of roadway facilities are described using the term "Level of Service" (LOS). LOS is a qualitative description of traffic flow based on several factors such as speed, travel time, delay, and freedom to maneuver. Six levels are typically defined ranging from LOS A, representing completely free-flow conditions, to LOS F, representing breakdown in flow resulting in stop-and-go conditions. LOS E represents operations at or near capacity, an unstable level where vehicles are operating with the minimum spacing for maintaining uniform flow.

### 2.2 INTERSECTION CAPACITY ANALYSIS

The definitions of LOS for interrupted traffic flow (flow restrained by the existence of traffic signals and other traffic control devices) differ slightly depending on the type of traffic control. The LOS is typically dependent on the quality of traffic flow at the intersections along a roadway. The Highway Capacity Manual (HCM) methodology expresses the LOS at an intersection in terms of delay time for the various intersection approaches. (5) The HCM uses different procedures depending on the type of intersection control.

#### 2.2.1 SIGNALIZED INTERSECTIONS

##### *City of Moreno Valley and City of Perris*

The City of Moreno Valley and City of Perris require signalized intersection operations analysis based on the methodology described in the HCM. (5) Intersection LOS operations are based on an intersection's average control delay. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. For signalized intersections, LOS is directly related to the average control delay per vehicle and is correlated to a LOS designation as described in Table 2-1. Study area intersections have been evaluated using the Synchro (Version 10) analysis software package.

Synchro is a macroscopic traffic software program that is based on the signalized intersection capacity analysis as specified in the HCM. Macroscopic level models represent traffic in terms of aggregate measures for each movement at the study intersections. Equations are used to determine measures of effectiveness such as delay and queue length. The level of service and capacity analysis performed by Synchro takes into consideration optimization and coordination of signalized intersections within a network.

**TABLE 2-1: SIGNALIZED INTERSECTION LOS THRESHOLDS**

| Description   | Average Control Delay (Seconds),<br>V/C ≤ 1.0 | Level of Service, V/C ≤ 1.0 | Level of Service, V/C > 1.0 |
|---|---|-----------------------------|-----------------------------|
| Operations with very low delay occurring with favorable progression and/or short cycle length.  | 0 to 10.00                                    | A                           | F                           |
| Operations with low delay occurring with good progression and/or short cycle lengths.   | 10.01 to 20.00                                | B                           | F                           |
| Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.  | 20.01 to 35.00                                | C                           | F                           |
| Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.                             | 35.01 to 55.00                                | D                           | F                           |
| Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay. | 55.01 to 80.00                                | E                           | F                           |
| Operation with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths   | 80.01 and up                                  | F                           | F                           |

Source: HCM 6<sup>th</sup> Edition

The peak hour traffic volumes have been adjusted using a peak hour factor (PHF) to reflect peak 15-minute volumes. Common practice for LOS analysis is to use a peak 15-minute rate of flow. However, flow rates are typically expressed in vehicles per hour. The PHF is the relationship between the peak 15-minute flow rate and the full hourly volume (e.g.  $PHF = \frac{\text{Hourly Volume}}{4 \times \text{Peak 15-minute Flow Rate}}$ ). The use of a 15-minute PHF produces a more detailed analysis as compared to analyzing vehicles per hour. Existing PHFs have been used for all analysis scenarios. Per the HCM, PHF values over 0.95 often are indicative of high traffic volumes with capacity constraints on peak hour flows, while lower PHF values are indicative of greater variability of flow during the peak hour. (5)

### 2.2.2 UNSIGNALIZED INTERSECTIONS

The unsignalized intersections in the study area are located within the City of Moreno Valley. The City of Moreno Valley requires the operations of unsignalized intersections be evaluated using the methodology described in the HCM. (5) The LOS rating is based on the weighted average control delay expressed in seconds per vehicle (see Table 2-2).

TABLE 2-2: UNSIGNALIZED INTERSECTION LOS THRESHOLDS

| Description   | Average Control Delay Per Vehicle (Seconds) | Level of Service, V/C ≤ 1.0 | Level of Service, V/C > 1.0 |
|---|---|-----------------------------|-----------------------------|
| Little or no delays.  | 0 to 10.00                                  | A                           | F                           |
| Short traffic delays.                                       | 10.01 to 15.00                              | B                           | F                           |
| Average traffic delays.                                     | 15.01 to 25.00                              | C                           | F                           |
| Long traffic delays.  | 25.01 to 35.00                              | D                           | F                           |
| Very long traffic delays.                                   | 35.01 to 50.00                              | E                           | F                           |
| Extreme traffic delays with intersection capacity exceeded. | > 50.00                                     | F                           | F                           |

Source: HCM 6<sup>th</sup> Edition

At two-way or side-street stop-controlled intersections, LOS is calculated for each controlled movement and for the left turn movement from the major street, as well as for the intersection as a whole. For approaches composed of a single lane, the delay is computed as the average of all movements in that lane. For all-way stop controlled intersections, LOS is computed for the intersection as a whole.

### 2.3 TRAFFIC SIGNAL WARRANT ANALYSIS METHODOLOGY

The term "signal warrants" refers to the list of established criteria used by the California Department of Transportation (Caltrans) and other public agencies to quantitatively justify or ascertain the potential need for installation of a traffic signal at an otherwise unsignalized intersection. This TIA uses the signal warrant criteria presented in the latest edition of the Caltrans California Manual on Uniform Traffic Control Devices (CA MUTCD) for all unsignalized study area intersections. (6)

The signal warrant criteria for Existing study area intersections are based upon several factors, including volume of vehicular and pedestrian traffic, frequency of accidents, and location of school areas. The CA MUTCD indicate that the installation of a traffic signal should be considered if one or more of the signal warrants are met. (6) Specifically, this TIA utilizes the Peak Hour Volume-based Warrant 3 as the appropriate representative traffic signal warrant analysis for existing traffic conditions. Warrant 3 is appropriate to use for this TIA because it provides specialized warrant criteria for intersections with urban characteristics (e.g. located in communities with populations of more than 10,000 persons or with adjacent major streets operating below 40 miles per hour). For the purposes of this study, the speed limit was the basis for determining whether Urban or Rural warrants were used for a given intersection.

Future unsignalized intersections, that currently do not exist, have been assessed regarding the potential need for new traffic signals based on future average daily traffic (ADT) volumes, using the Caltrans planning level ADT-based signal warrant analysis worksheets.

As shown in Table 2-3, traffic signal warrant analyses were performed for the following unsignalized study area intersections during the peak weekday conditions wherein the Project is anticipated to contribute the highest trips:

**TABLE 2-3: TRAFFIC SIGNAL WARRANT ANALYSIS LOCATIONS**

| ID | Intersection Location                 | Jurisdiction  |
|----|---------------------------------------|---------------|
| 7  | Driveway 2/Colt Way & Krameria Avenue | Moreno Valley |
| 8  | Krameria Avenue & Cahuilla Drive      | Moreno Valley |
| 9  | Krameria Avenue & Quarter Horse Road  | Moreno Valley |

The Existing conditions traffic signal warrant analysis is presented in the subsequent section, Section 3 *Area Conditions* of this report. The traffic signal warrant analyses for future conditions are presented in Section 5 *E+P Traffic Analysis*, Section 6 *Opening Year Cumulative (2023) Traffic Analysis*, and Section 7 *Horizon Year (2040) Traffic Analysis* of this report.

It is important to note that a signal warrant defines the minimum condition under which the installation of a traffic signal might be warranted. Meeting this threshold condition does not require that a traffic control signal be installed at a particular location, but rather, that other traffic factors and conditions be evaluated in order to determine whether the signal is truly justified. It should also be noted that signal warrants do not necessarily correlate with LOS. An intersection may satisfy a signal warrant condition and operate at or above acceptable LOS or operate below acceptable LOS and not meet a signal warrant.

## 2.4 ROADWAY SEGMENT CAPACITY ANALYSIS

Roadway segment operations have been evaluated using the City of Moreno Valley Daily Roadway Capacity Values provided in the City of Moreno Valley's Transportation Engineering Division Traffic Impact Analysis (TIA) Preparation Guide. (1) Per the City of Moreno Valley TIA guidelines, roadway segments within the study area should maintain the LOS capacities illustrated on Exhibit 2-1. The daily roadway segment capacities for each type of roadway are summarized in Table 2-4. As noted in both the City of Moreno Valley's traffic study guidelines, these roadway capacities are "rule of thumb" estimates for planning purposes and are affected by such factors as intersections (spacing, configuration and control features), degree of access control, roadway grades, design geometrics (horizontal and vertical alignment standards), sight distance, vehicle mix (truck and bus traffic) and pedestrian bicycle traffic. In other words, while using average daily traffic (ADT) for planning purposes is suitable with regards to evaluating potential volume to capacity with future forecasts, it is not suitable for operational analysis because it does not account for the factors listed previously. As such, where the ADT based roadway segment analysis indicates a deficiency (unacceptable LOS), a review of the more detailed peak hour intersection analysis and progression analysis are undertaken. The more detailed peak hour intersection analysis explicitly accounts for factors that affect roadway capacity. Therefore, roadway segment widening is typically only recommended if the peak hour intersection analysis indicates the need for additional through lanes.

**TABLE 2-4: ROADWAY SEGMENT CAPACITY LOS THRESHOLDS<sup>1</sup>**

| Facility Type                  | Level of Service Capacity <sup>1</sup> |        |        |        |        |
|--------------------------------|--|--------|--------|--------|--------|
|                                | A                                      | B      | C      | D      | E      |
| Six Lane Divided Arterial      | 33,900                                 | 39,400 | 45,000 | 50,600 | 56,300 |
| Four Lane Divided Arterial     | 22,500                                 | 26,300 | 30,000 | 33,800 | 37,500 |
| Four Lane Undivided Arterial   | 15,000                                 | 17,500 | 20,000 | 22,500 | 25,000 |
| Two Lane Industrial Collector  | 7,500                                  | 8,800  | 10,000 | 11,300 | 12,500 |
| Two Lane Undivided Residential | N/A                                    | N/A    | N/A    | N/A    | 2,000  |

<sup>1</sup> These maximum roadway capacities have been extracted from the City of Moreno Valley's Transportation Division's TIA Preparation Guidelines (August 2007). These roadway capacities are "rule of thumb" estimates for planning purposes. The LOS "E" service volumes are estimated maximum daily capacity for respective roadway classifications. Capacity is affected by such factors as intersections (spacing, configuration and control features), degree of access control, roadway grades, design geometrics (horizontal and vertical alignment standards), sight distance, vehicle mix (truck and bus traffic) and pedestrian and bicycle traffic.

## 2.5 QUEUING ANALYSIS

A queuing analysis was conducted for all study area intersections for E+P, Opening Year Cumulative (2023), and Horizon Year (2040) traffic conditions in an effort to determine the turn pocket lengths necessary to accommodate 95<sup>th</sup> percentile queues. The analysis was conducted for both the weekday AM and weekday PM peak hours.

The traffic modeling and signal timing optimization software package Synchro (Version 10) has been utilized to assess queues. Synchro is a macroscopic traffic software program that is based on the signalized and unsignalized intersection capacity analyses as specified in the Highway Capacity Manual (HCM). Macroscopic level models represent traffic in terms of aggregate measures for each movement at the study intersections. Equations are used to determine measures of effectiveness such as delay and queue length in Synchro. The LOS and capacity analysis performed by Synchro takes into consideration optimization and coordination of signalized intersections within a network.

A vehicle is considered queued whenever it is traveling at less than 10 feet/second. A vehicle will only become queued when it is either at the stop bar or behind another queued vehicle. Although only the 95<sup>th</sup> percentile queue has been utilized for purposes of determining the necessary turn pocket storage lengths, the 50<sup>th</sup> percentile queues are also reported. The 50<sup>th</sup> percentile queue is the maximum back of queue on a typical cycle during the peak hour, while the 95<sup>th</sup> percentile queue is the maximum back of queue with 95<sup>th</sup> percentile traffic volumes during the peak hour. The 50<sup>th</sup> percentile, or average, queue represents the typical queue length for peak hour traffic conditions, while the 95<sup>th</sup> percentile queue is derived from the average queue plus 1.65 standard deviations. The 95<sup>th</sup> percentile queue is not necessarily ever observed; it is simply based on statistical calculations. However, many jurisdictions utilize the 95<sup>th</sup> percentile queues for design purposes.

## 2.6 MINIMUM LEVEL OF SERVICE (LOS)

The definition of an intersection deficiency in the City of Moreno Valley is based on the City of Moreno Valley General Plan Circulation Element. The City of Moreno Valley General Plan states that target LOS C or LOS D be maintained along City roads (including intersections) wherever possible. Exhibit 2-1 depicts the level of service standards within the City. LOS D is applicable to intersections and roadway segments that are adjacent to freeway on/off ramps and/or adjacent to employment generating land uses. LOS C is applicable to all other intersections and roadway segments. Boundary intersections are assumed to be LOS D.

## 2.7 THRESHOLDS OF SIGNIFICANCE

This section outlines the methodology used in this analysis related to identifying circulation system deficiencies.

The following types of traffic deficiencies are considered to be significant under the California Environmental Quality Act (CEQA):

- When project traffic, added to existing traffic, will deteriorate the LOS to below the target LOS.
- When cumulative traffic exceeds the target LOS.

Lastly, the City of Moreno Valley also does not have a significance threshold for peak hour queues. For the purposes of this analysis, if the addition of Project traffic is found to have a less than significant impact to the peak hour operations, then a less than significant impact has also been identified for the peak hour queues at the same intersection. However, queuing results have been reported at the City's request.

## 2.8 PROJECT FAIR SHARE CALCULATION METHODOLOGY

In cases where this TIA identifies that the Project would contribute to cumulatively considerable traffic deficiencies, Project fair share costs of improvements necessary to address those deficiencies have been identified. The Project's fair share is determined based on the following equation, which is the ratio of Project traffic to new traffic, where new traffic is total future (Horizon Year) traffic less existing baseline traffic:

$$\text{Project Fair Share \%} = \text{Project Traffic} / (\text{2040 With Project Total Traffic} - \text{Existing Traffic})$$

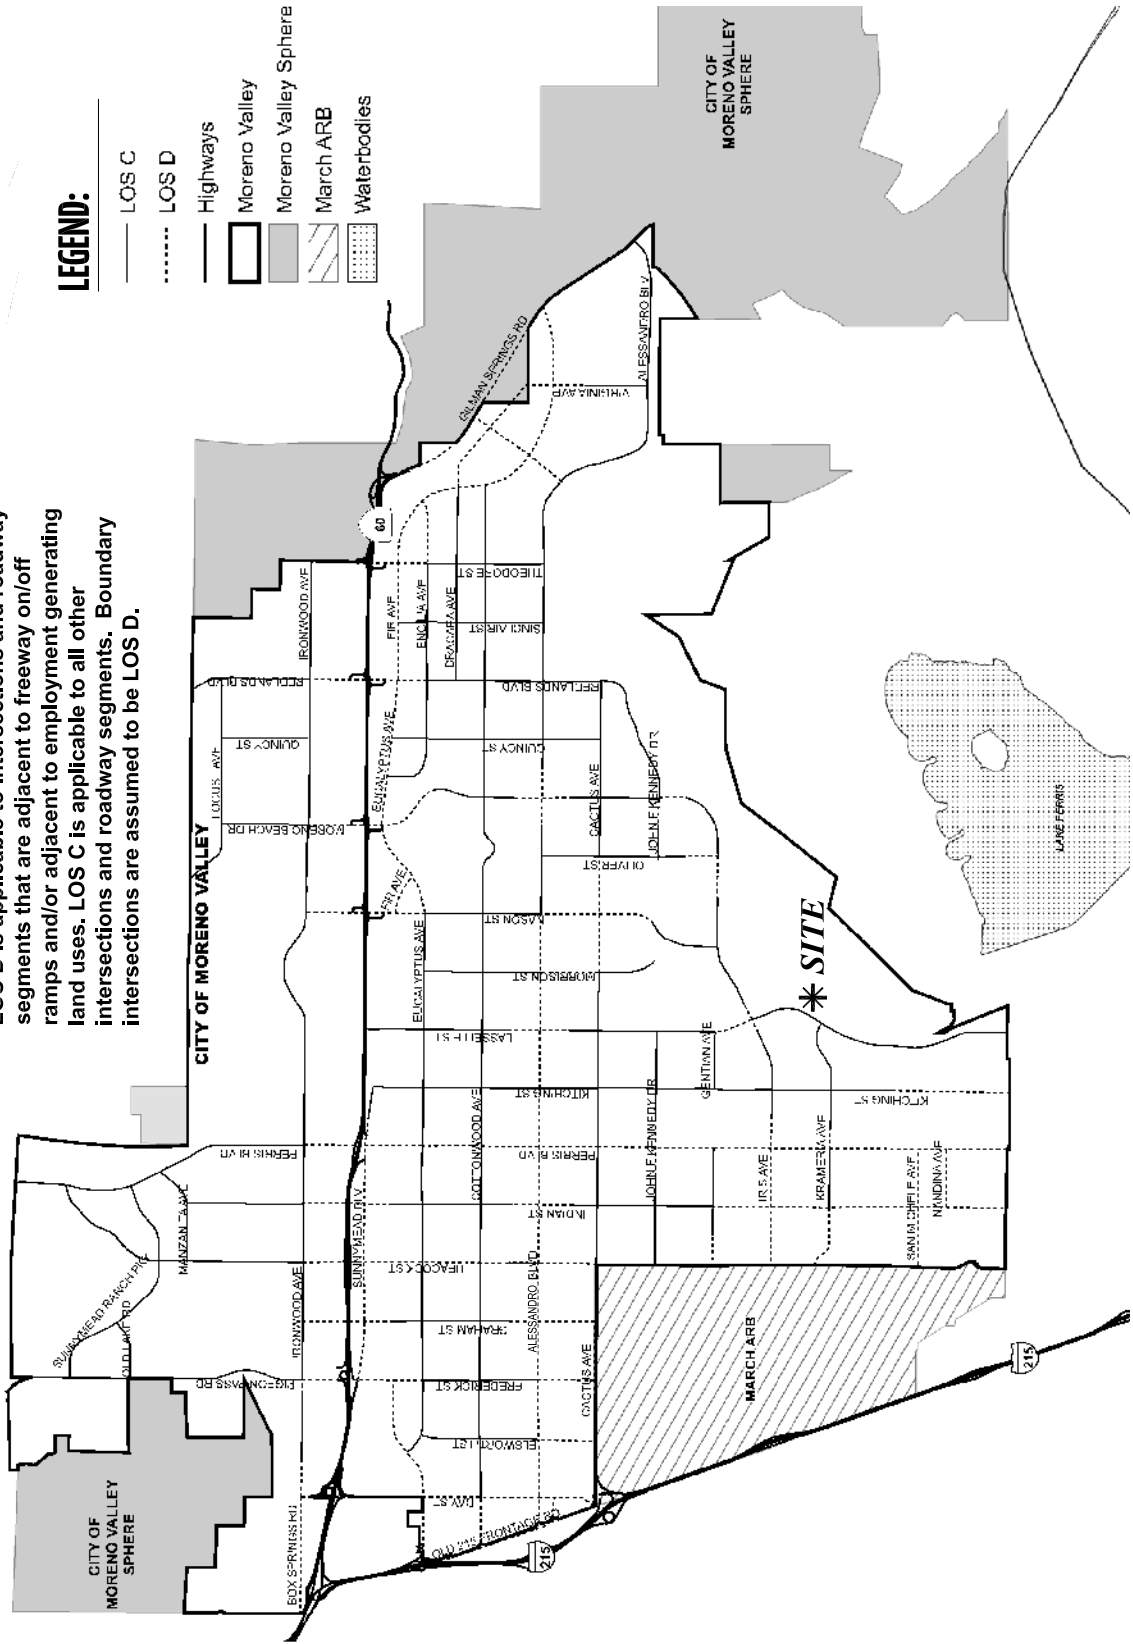

The Project fair share contribution calculations are presented in Section 1.5 *Local and Regional Funding Mechanisms* of this TIA.

**EXHIBIT 2-1: CITY OF MORENO VALLEY LEVEL OF SERVICE (LOS) STANDARDS**

LOS D is applicable to intersections and roadway segments that are adjacent to freeway on/off ramps and/or adjacent to employment generating land uses. LOS C is applicable to all other intersections and roadway segments. Boundary intersections are assumed to be LOS D.

### 3 AREA CONDITIONS

This section provides a summary of the existing circulation network, the City of Moreno Valley General Plan Circulation Network, and a review of existing peak hour intersection operations and traffic signal warrant analyses.

#### 3.1 EXISTING CIRCULATION NETWORK

Pursuant to the scoping agreement with City of Moreno Valley staff (Appendix 1.1), the study area includes a total of 7 existing and future intersections as shown previously on Exhibit 1-2 have been evaluated at the request of City staff. Exhibit 3-1 illustrates the study area intersections located near the proposed Project and identifies the number of through traffic lanes for existing roadways and intersection traffic controls.

The City is currently in the process of implementing a road diet along Krameria Avenue starting from the intersection at Lasselle Street to the east up to Cahuilla Drive. The road diet is anticipated to reduce the number of travel lanes along Krameria Avenue from four lanes to two lanes (one lane in each direction of travel) in order to accommodate a wide shoulder with bike lanes. The road diet improvements would eliminate the existing 2<sup>nd</sup> eastbound left turn lane and the 2<sup>nd</sup> through lane in both the eastbound and westbound directions at Lasselle Street and Krameria Avenue in place of a right turn lane.

#### 3.2 CITY OF MORENO VALLEY GENERAL PLAN CIRCULATION ELEMENT

The roadway classifications and planned (ultimate) roadway cross-sections of the major roadways within the study area, as identified on the City of Moreno Valley General Plan Circulation Element, are described subsequently. Exhibit 3-2 shows the City of Moreno Valley General Plan Circulation Element, and Exhibit 3-3 illustrates the City of Moreno Valley General Plan roadway cross-sections.

Exhibit 3-4 illustrates the City of Perris General Plan Circulation Element and the City of Perris General Plan roadway cross-sections are shown on Exhibit 3-5.

#### 3.3 TRANSIT SERVICE

The study area is currently served by the Riverside Transit Authority (RTA), a public transit agency serving the unincorporated Riverside County region. As shown on Exhibit 3-6, RTA Routes 18, 19, and 20 serves portions of Kitching Street, Iris Avenue, Krameria Avenue, Lasselle Street, and Perris Boulevard. RTA Route 41 serves Lasselle Street/Evans Road and portions of Ramona Expressway within the study area.

Transit service is reviewed and updated by RTA periodically to address ridership, budget, and community demands. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate.

### 3.4 BICYCLE & PEDESTRIAN FACILITIES

In an effort to promote alternative modes of transportation, the City of Moreno Valley General Plan also includes a trails and bikeway system. The City of Moreno Valley trails and bikeway system are shown on Exhibit 3-7 and Exhibit 3-8, respectively. There is an improved trail to the southeast of the proposed Project along the east side of the existing residential area and northwest of the Lake Perris State Recreation Park. This improved trail also serves as a Class I bicycle path. Lasselle Street has Class II bicycle lanes to the south of Krameria Avenue, but has planned future Class II bicycle lanes to the north of Krameria Avenue. Krameria Avenue is also proposed to accommodate Class II bicycle lanes. The City of Perris' proposed bikeways and trail improvements are shown on Exhibit 3-9. Both Evans Road and Ramona Expressway are proposed to accommodate Class II bicycle lanes.

Field observations conducted in September 2018 indicate moderate pedestrian and bicycle activity within the study area at Perris Boulevard and Krameria Avenue, Kitching Street and Krameria Avenue, Lasselle Street and Iris Avenue, and Krameria Avenue near the existing Lasselle Elementary School and Moreno Valley College. Exhibit 3-10 illustrates the existing pedestrian facilities, including sidewalks and crosswalk locations, and the existing Class II bicycle lanes within the study area.

### 3.5 EXISTING (2018) TRAFFIC COUNTS

The intersection LOS analysis is based on the traffic volumes observed during the peak hour conditions using traffic count data collected in March 2018. The following peak hours were selected for analysis:

- Weekday AM Peak Hour (peak hour between 7:00 AM and 9:00 AM)
- Weekday PM Peak Hour (peak hour between 4:00 PM and 6:00 PM)

The weekday AM and weekday PM peak hour count data is representative of typical weekday peak hour traffic conditions in the study area. There were no observations made in the field that would indicate atypical traffic conditions on the count dates, such as construction activity or detour routes and near-by schools were in session and operating on normal schedules.

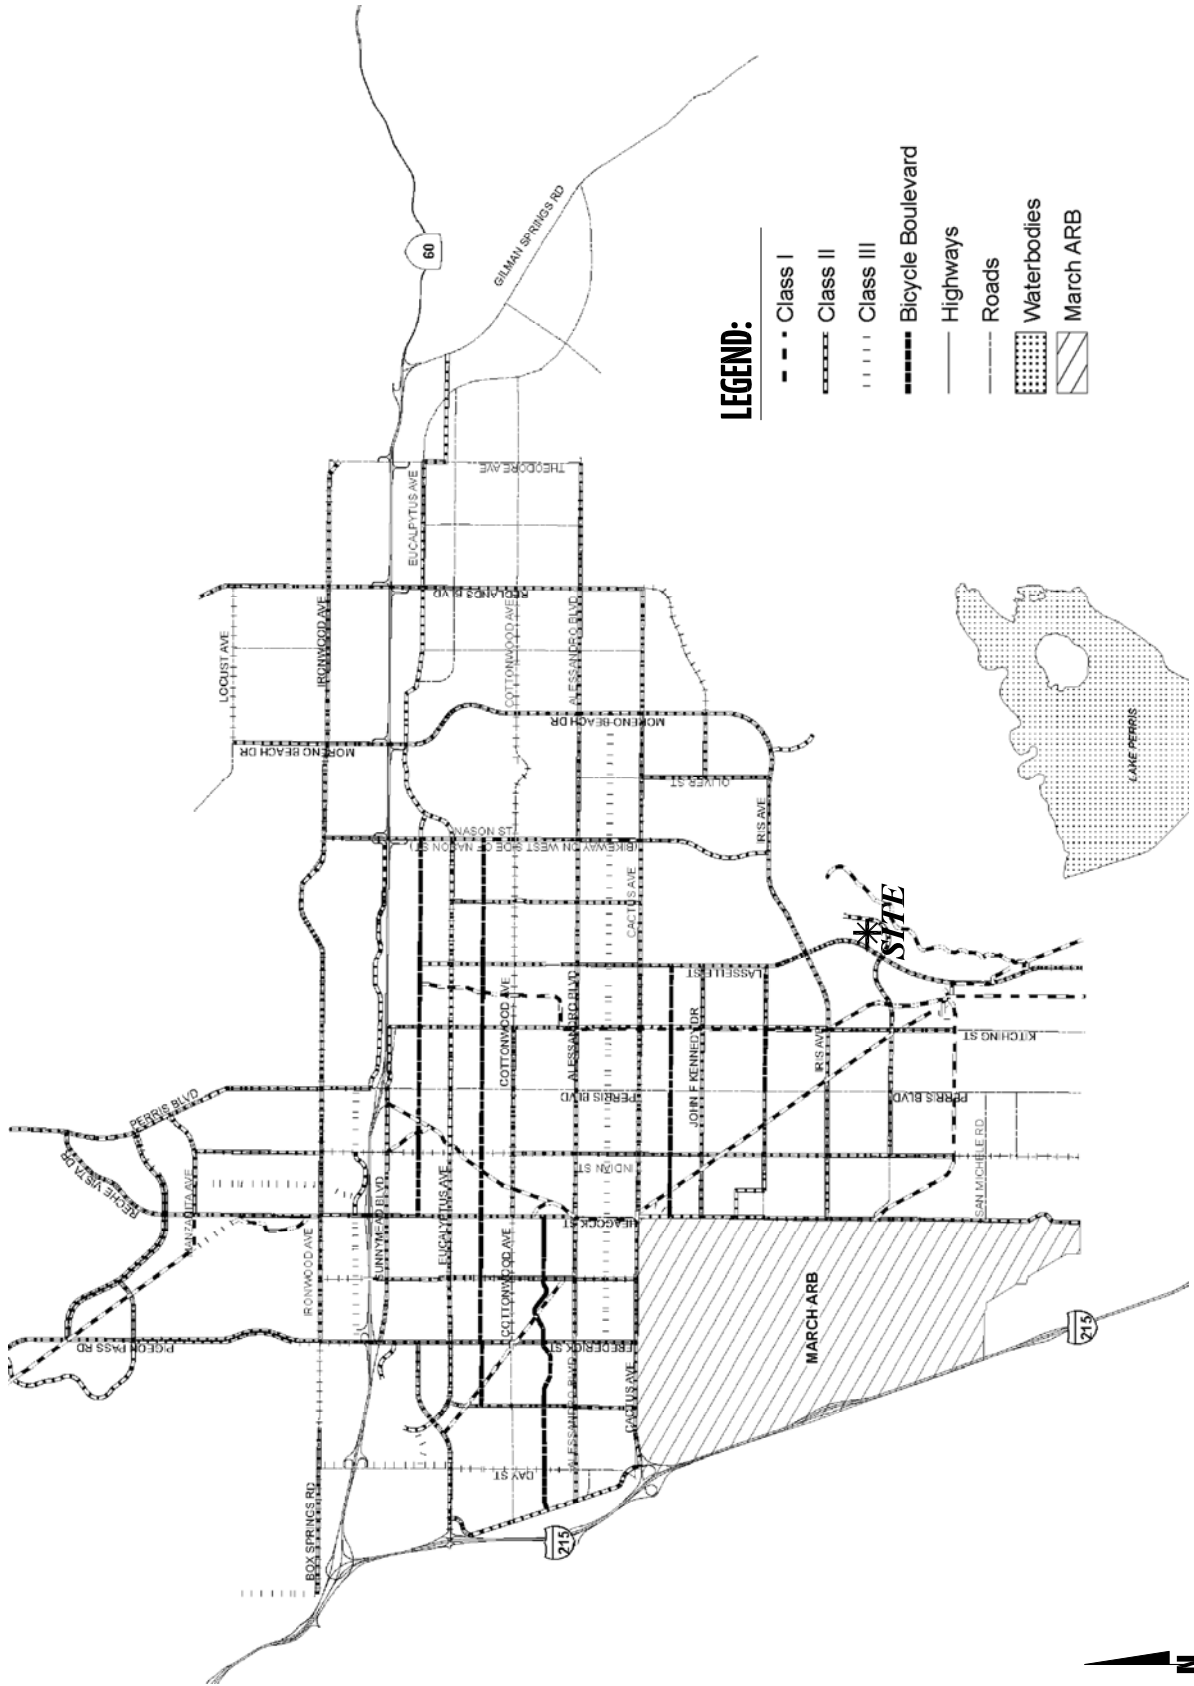

The raw manual peak hour turning movement traffic count data sheets are included in Appendix 3.1. These raw turning volumes have been flow conserved between intersections with limited access, no access, and where there are currently no uses generating traffic (e.g., between ramp-to-arterial intersections, etc.).

Existing weekday average daily traffic (ADT) volumes on arterial highways throughout the study area are shown on Exhibit 3-11. Where actual 24-hour tube count data was not available, Existing ADT volumes were based upon factored intersection peak hour counts collected by Urban Crossroads, Inc. using the following formula for each intersection leg:

$$\text{Weekday PM Peak Hour (Approach Volume + Exit Volume)} \times 14.8852 = \text{Leg Volume}$$

EXHIBIT 3-8: CITY OF MORENO VALLEY BIKE PLAN

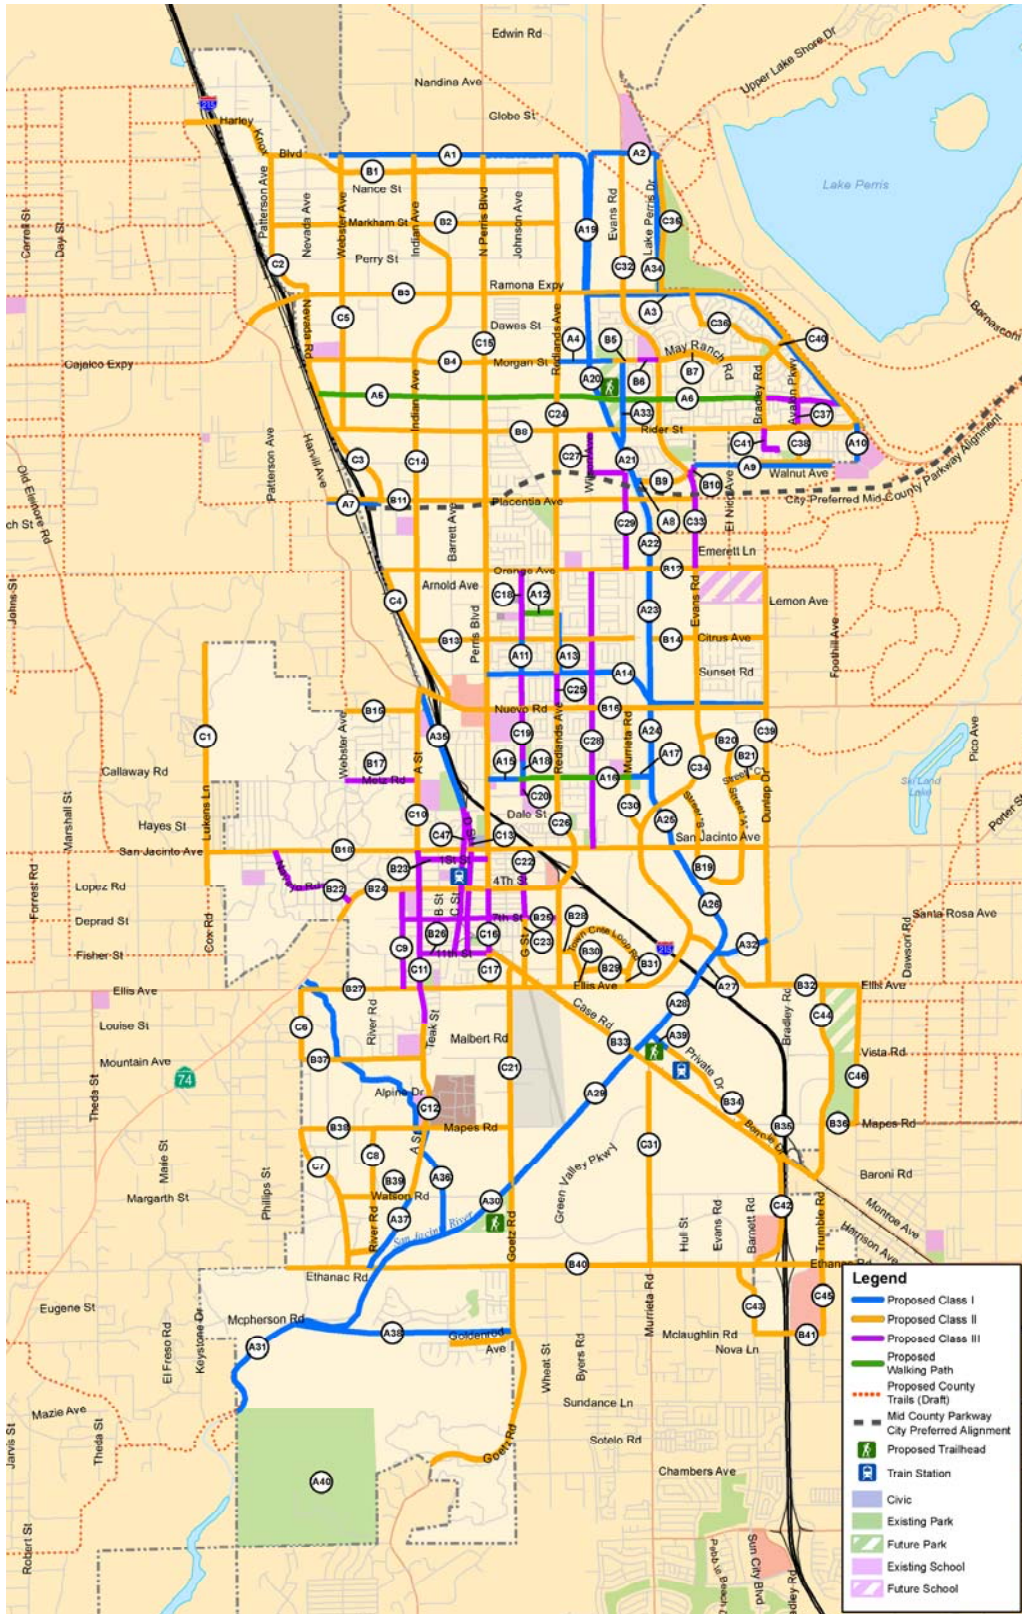

11575 - mv-bike routes.dwg

Attachment: Traffic Assessment (Nov 2018) (3376 : The proposal includes a General Plan Amendment, Specific Plan Amendment, Change of

EXHIBIT 3-9: CITY OF PERRIS PROPOSED BIKEWAYS AND TRAIL IMPROVEMENTS

- = BIKE LANE
- B = BUS STOP
- 0 = NO CROSSWALK
- 0 = FUTURE INTERSECTION
- 0 = CROSSWALK ON ALL APPROACHES
- 0 = SCHOOL CROSSWALK ON TWO APPROACHES
- 0 = SCHOOL CROSSWALK ON FOUR APPROACHES

A comparison of the PM peak hour and daily traffic volumes of various roadway segments within the study area indicated that the peak-to-daily relationship is approximately 6.72 percent. As such, the above equation utilizing a factor of 14.8852 estimates the ADT volumes on the study area roadway segments assuming a peak-to-daily relationship of approximately 6.72 percent (i.e.,  $1/0.0672 = 14.8852$ ) and was assumed to sufficiently estimate average daily traffic (ADT) volumes for planning-level analyses. Existing weekday AM and weekday PM peak hour intersection volumes are also shown on Exhibit 3-11.

### 3.6 INTERSECTION OPERATIONS ANALYSIS

Existing peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2.2 *Intersection Capacity Analysis* of this report. The intersection operations analysis results are summarized in Table 3-1 which indicates that the existing study area intersections are currently operating at an acceptable LOS during the peak hours. However, the intersection of Lasselle Street and Krameria Avenue is anticipated to operate at an unacceptable LOS during the AM peak hour with the road diet improvements in place for Existing (2018) traffic conditions. The road diet improvements would serve as a traffic calming measure and provide additional facilities for other modes of transportation (i.e., bicyclists), but would reduce capacity for vehicular traffic. As such, if the City moves forward with the proposed road diet improvements along Krameria Avenue, there may be periods during the morning peak hour when intersections along Krameria Avenue would operate at a deficient LOS.

Consistent with Table 3-1, a summary of the peak hour intersection LOS for Existing conditions are shown on Exhibit 3-12. The intersection operations analysis worksheets are included in Appendix 3.2 of this TIA.

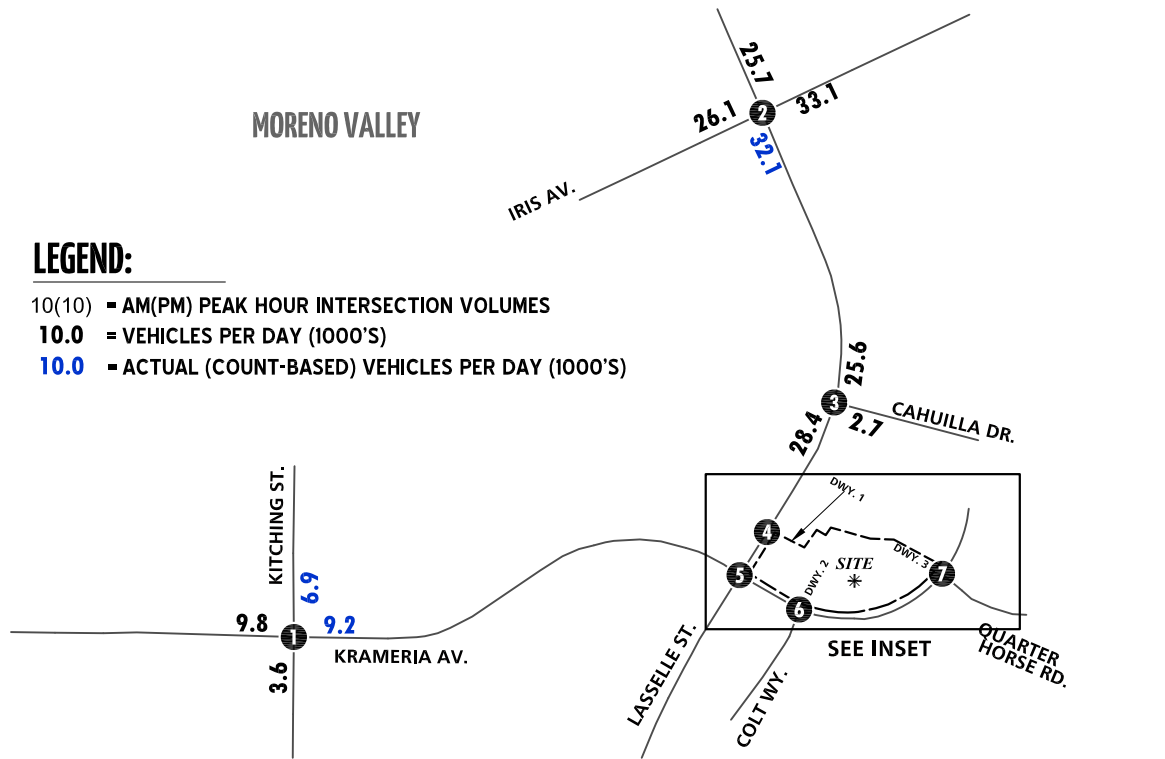

### 3.7 TRAFFIC SIGNAL WARRANTS ANALYSIS

Traffic signal warrants for Existing traffic conditions are based on existing peak hour intersection turning volumes. No study area intersections currently warrant a traffic signal for Existing traffic conditions (see Appendix 3.3).

### 3.8 ROADWAY SEGMENT ANALYSIS

The City of Moreno Valley General Plan Circulation Element provides roadway volume capacity values presented previously in Table 2-4. The roadway segment capacities are approximate figures only, and are used at the General Plan level to assist in determining the roadway functional classification (number of through lanes) needed to meet traffic demand. Table 3-2 provides a summary of the Existing (2018) conditions roadway segment capacity analysis based on the City of Moreno Valley Roadway Segment Capacity/LOS Thresholds identified previously in Table 2-4. As shown in Table 3-2, all of the study area roadway segments currently operate at an acceptable LOS based on the City's planning level daily roadway capacity thresholds.

**BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-turn Overlap Phasing; d = Defacto Right Turn Lane

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all-way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> AWS = All-way Stop; CSS = Cross-street Stop; TS = Traffic Signal

| 2 |              | Lasselle St. to Colt Wy.     | 4D              | 37,500                    | 5,606         | 0.15             | A                |
| 3 | Lasselle St. | Iris Av. to Cahuilla Dr.     | 4D              | 37,500                    | 32,045        | 0.85             | D                |
| 4 |              | Cahuilla Dr. to Driveway 1   | 4D              | 37,500                    | 25,435        | 0.68             | B                |
| 5 |              | Driveway 1 to Krameria Av.   | 4D              | 37,500                    | 25,435        | 0.68             | B                |

<sup>1</sup> These maximum roadway capacities have been obtained from the City of Moreno Valley's Transportation Division's TIA Preparation Guidelines (August 2007).

<sup>2</sup> V/C = Volume to Capacity Ratio

<sup>3</sup> LOS = Level of Service

### 3.9 QUEUING ANALYSIS

A queuing analysis was conducted at 5 study area intersections in close proximity to the Project in order to determine 95<sup>th</sup> percentile queues during the peak hours. The queuing analysis results are summarized in Table 3-3 for Existing (2018) traffic conditions, which indicates that the following movements currently experience queuing issues based on the 95<sup>th</sup> percentile peak hour traffic flows:

- Lasselle Street and Krameria Avenue (#5), northbound left turn lane (AM and PM peak hours)
- Lasselle Street and Krameria Avenue (#5), northbound right turn lane (AM peak hour only)

Queuing worksheets for Existing (2018) traffic conditions are included in Appendix 3.4.

### 3.10 RECOMMENDED IMPROVEMENTS

As previously shown in Table 3-3, there are 2 movements that are currently experience queuing issues during the AM or PM peak hours. Recommended improvements to address queuing issues for Existing (2018) traffic conditions are shown in Table 3-4. A 180-foot northbound left turn lane and 280-foot northbound right turn lane are recommended in order to accommodate the 95<sup>th</sup> percentile peak hour queues for Existing (2018) traffic conditions.

Table 3-3

**BOLD** = Inadequate 95th percentile storage.

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

Table 3-4

## 4 PROJECTED FUTURE TRAFFIC

This section presents the traffic volumes estimated to be generated by the Project, as well as the Project's trip assignment, onto the study area roadway network. The Project has been evaluated to consist of up to 112 apartments/duplexes and 21,000 sf of commercial retail use. Per the City's traffic study guidelines, the Opening Year Cumulative will have a 5-year minimum horizon from baseline conditions. As such, the Opening Year Cumulative analysis will assess 2023 traffic conditions.

Vehicular access will be provided via the following driveways (see Exhibit 1-1):

- Lasselle Street & Driveway 1 – Right-in right-out only
- Colt Way & Krameria Avenue/Driveway 2 – Full access driveway
- Krameria Avenue & Driveway 3/Quarter Horse Road – Full-access driveway

Regional access to the Project site is provided via the I-215 Freeway at Cactus Avenue and Ramona Expressway interchanges.

### 4.1 PROJECT TRIP GENERATION

Trip generation represents the amount of traffic which is both attracted to and produced by a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to and produced by the specific land uses being proposed for a given development. The ITE Trip Generation Manual is a nationally recognized source for estimating site-specific trip generation. ITE's most current version of the Trip Generation Manual is based on more than 4,800 trip generation studies submitted to ITE by public agencies, consulting firms, universities/colleges, developers, associations, and local sections/districts/student chapters of ITE. (2)

In order to develop the traffic characteristics of the proposed project, trip generation rates are based on the ITE Trip Generation Manual (10<sup>th</sup> Edition, 2017) for the following land uses: (2)

- Multifamily Housing (Low-Rise) – ITE Land Use 220
- Shopping Center – ITE Land Use 820

Table 4-1 presents the trip generation rates for each of the land uses above. Internal capture is a percentage reduction that can be applied to the trip generation estimates for individual land uses to account for trips internal to the site. In other words, trips may be made between individual retail uses on-site and can be made either by walking or using internal roadways without using external streets. Internal capture reductions between the proposed land uses have been taken into account based on the City's maximum allowable 10 percent.

Table 4-1

## Proposed Project Trip Generation Summary

| Land Use                                  | Units | ITE LU Code | AM Peak Hour |      |       | PM Peak Hour |      |       | Daily |
|---|-------|-------------|--------------|------|-------|--------------|------|-------|-------|
|   |       |             | In           | Out  | Total | In           | Out  | Total |       |
| <b>Trip Generation Rates</b> <sup>1</sup> |       |             |              |      |       |              |      |       |       |
| Multifamily Housing (Low-Rise)            | DU    | 220         | 0.11         | 0.35 | 0.46  | 0.35         | 0.21 | 0.56  | 7.32  |

<sup>1</sup> Trip Generation Source: Institute of Transportation Engineers (ITE), Trip Generation Manual, Tenth Edition (2017).

<sup>2</sup> DU = Dwelling Units; TSF = Thousand Square Feet

<sup>3</sup> Trip generation rate based on the regression equation for ITE Land Use Code 820.

<sup>4</sup> Pass-by Reduction Source: ITE Trip Generation Handbook, Third Edition (2017).

Pass-by trips are defined as intermediate stops on the way from an origin to a primary trip destination without a route diversion. Pass-by trips are attracted from traffic passing the site on an adjacent street or roadway that offers direct access to the generator. These types of trips are many times associated with retail uses. As the Project is proposed to include retail use, pass-by reduction percentages have been obtained and applied from the ITE Trip Generation Handbook, 3<sup>rd</sup> Edition (2017). (7)

Table 4-1 also summarizes the trip generation based on the proposed Project land uses. As shown in Table 4-1, the proposed Project is anticipated to generate a total of approximately 2,056 trip-ends per day on a typical weekday with 215 vehicle trips during the weekday AM peak hour and 167 vehicle trips during the weekday PM peak.

## 4.2 PROJECT TRIP DISTRIBUTION

Trip distribution is the process of identifying the probable destinations, directions, or traffic routes that will be utilized by Project traffic. The potential interaction between the planned land uses and surrounding regional access routes are considered to identify the route where the Project traffic would distribute.

The Project trip distribution patterns for the residential use utilized for the purposes of this analysis are shown on Exhibit 4-1. The Project trip distribution patterns for the retail use is shown on Exhibit 4-2.

## 4.3 MODAL SPLIT

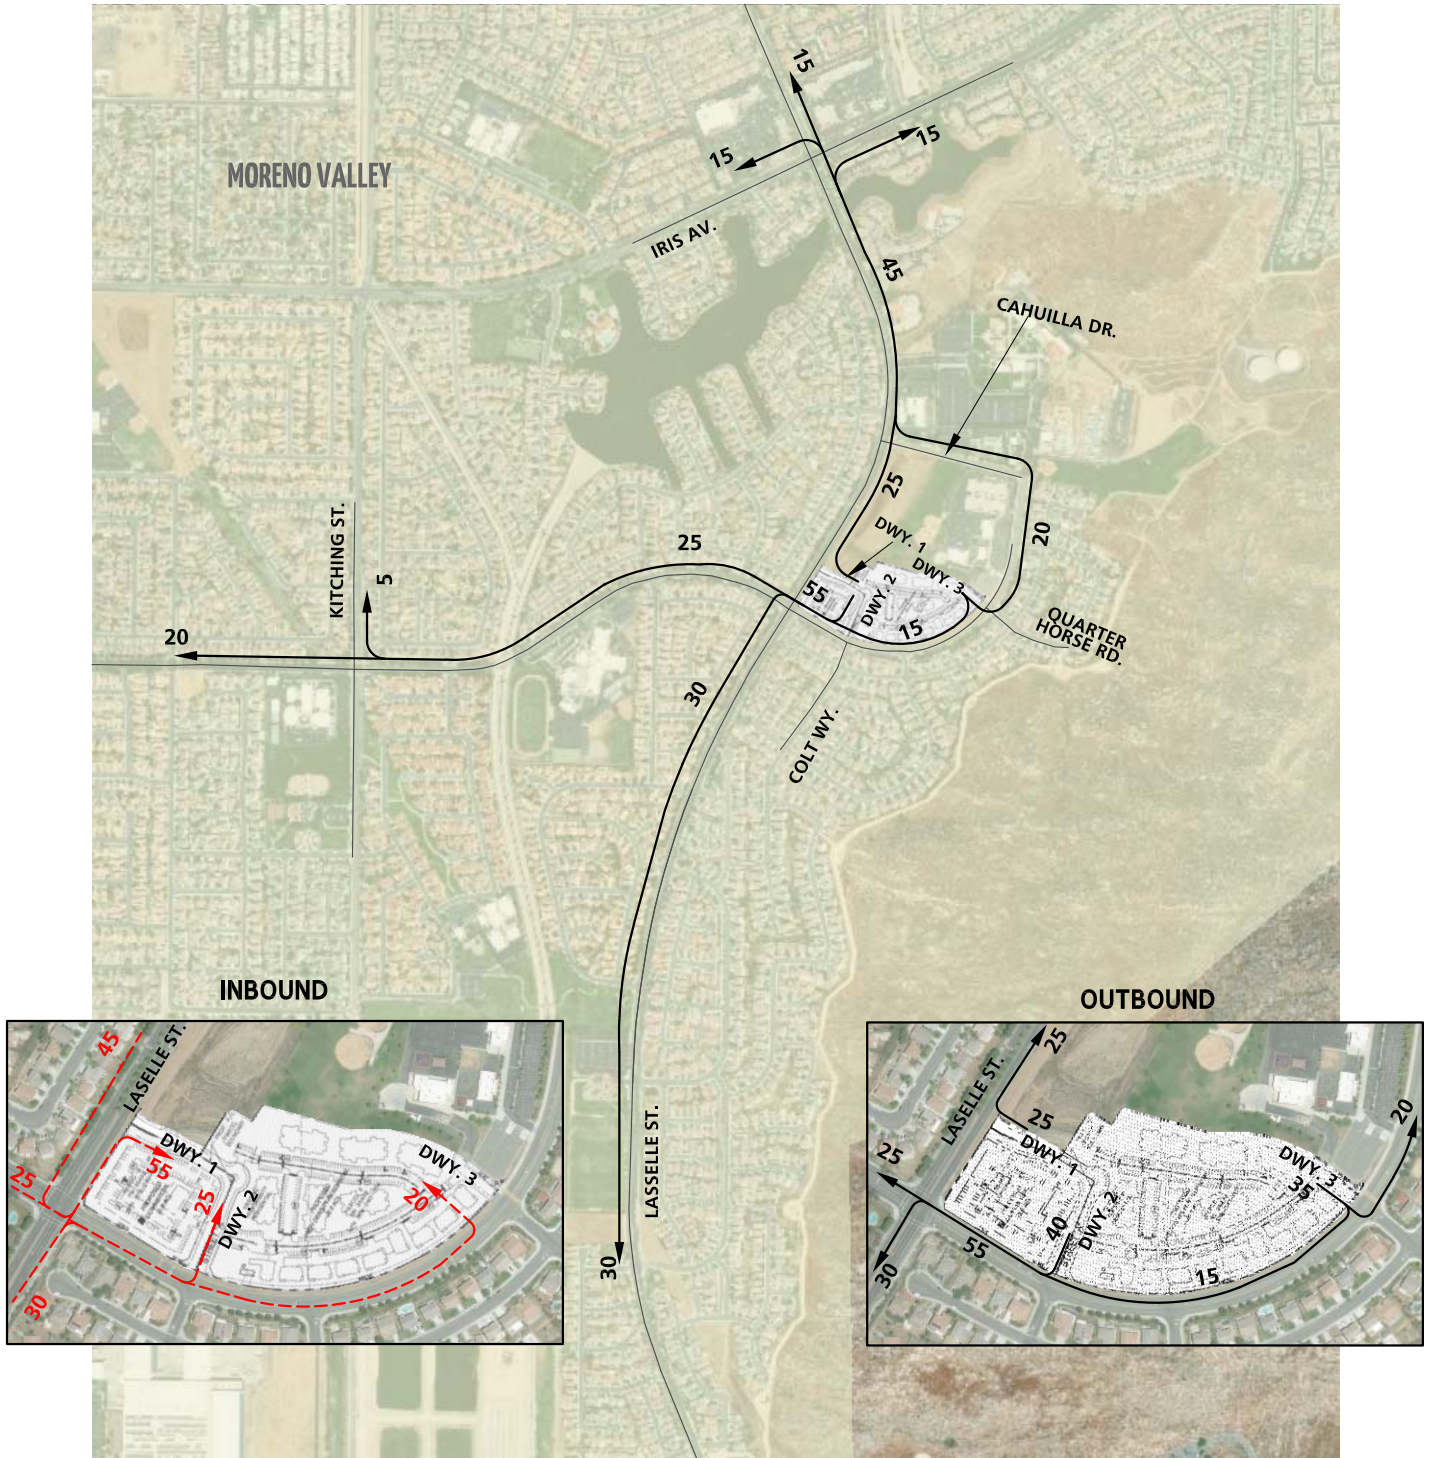

The traffic reducing potential of public transit, walking, or bicycling have not been considered in this TIA. Essentially, the traffic projections are "conservative" in that these alternative travel modes might be able to reduce the forecasted traffic volumes.

## 4.4 PROJECT TRIP ASSIGNMENT

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution patterns, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, Project ADT and peak hour intersection turning movement volumes are shown on Exhibit 4-3.

**INSET**

#### 4.5 BACKGROUND TRAFFIC

To account for growth in traffic between Existing Conditions (2018) and the Project Opening Year Cumulative (2023), a compounded annual traffic growth rate of 2.0 percent was assumed (10.41 percent aggregate growth in background traffic for the period between 2018 and 2023). The 2.0 percent annual growth rate is intended to capture non-specific ambient traffic growth.

In context, the TIA's assumed 2.0 percent compounded annual growth rate is considered a reasonable approximation of future traffic growth when compared to demographic projections reflected in other local and regional growth modeling efforts. More specifically, the Southern California Association of Governments (SCAG) 2016–2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) growth forecasts for the City of Moreno Valley assume the City population to increase from 197,600 in 2012 to 256,600 by the year 2040, or an approximate 0.94 percent growth rate compounded annually. The RTP/SCS assumed growth in households over the same 28-year period reflects an increase from 51,800 households to 73,000 households; a rate of 1.23 percent compounded annually. At the upper end of assumed RTP/SCS growth rates, employment over the same 28-year period is projected to increase from 31,400 jobs to 83,200 jobs; a rate of approximately 3.54 percent compounded annually. (8) The 2.0 percent compounded annual traffic growth rate used in the TIA reflects the fact that not all persons comprising population growth, household growth, or employment growth would translate on a one-to-one basis as a new vehicle trip in the region; and establishes a judicious midrange estimate lying between the RTP/SCS assumed regional population growth rate (0.94 percent) and the RTP/SCS assumed regional employment growth rate (3.54 percent).

Conservatively, the TIA estimates of area traffic growth then add traffic generated by other known or probable related projects. These related projects are at least in part already accounted for in the assumed annual 2.0 percent ambient growth in traffic noted above; and in some instances, these related projects would likely not be implemented and functional within the 2023 Opening Year Cumulative time frame assumed for the Project. The resulting traffic growth rate used in the TIA (2.0 percent annual ambient growth plus traffic generated by related projects) would therefore tend to overstate rather than understate background cumulative traffic impacts under 2023 conditions.

#### 4.6 CUMULATIVE DEVELOPMENT TRAFFIC

California Environmental Quality Act (CEQA) guidelines require that other reasonably foreseeable development projects which are either approved or being processed concurrently in the study area also be included as part of a cumulative analysis scenario. A cumulative project list was developed for the purposes of this analysis through consultation with planning and engineering staff from the City of Moreno Valley. The cumulative project list includes known and foreseeable projects that are anticipated to contribute traffic to the study area intersections.

Where applicable, cumulative projects anticipated to contribute measurable traffic (i.e. 50 or more peak hour trips) to study area intersections have been manually added to the study area network to generate Opening Year Cumulative forecasts. In other words, this list of cumulative development projects has been reviewed to determine which projects would likely contribute measurable traffic through the study area intersections (e.g., those cumulative projects in close proximity to the proposed Project). For the purposes of this analysis, the cumulative projects that were determined to affect one or more of the study area intersections are shown on Exhibit 4-4 (and listed in Table 4-2), and have been considered for inclusion.

Although it is unlikely that these cumulative projects would be fully built and occupied by Year 2023, they have been included in an effort to conduct a conservative analysis and overstate as opposed to understate potential traffic impacts.

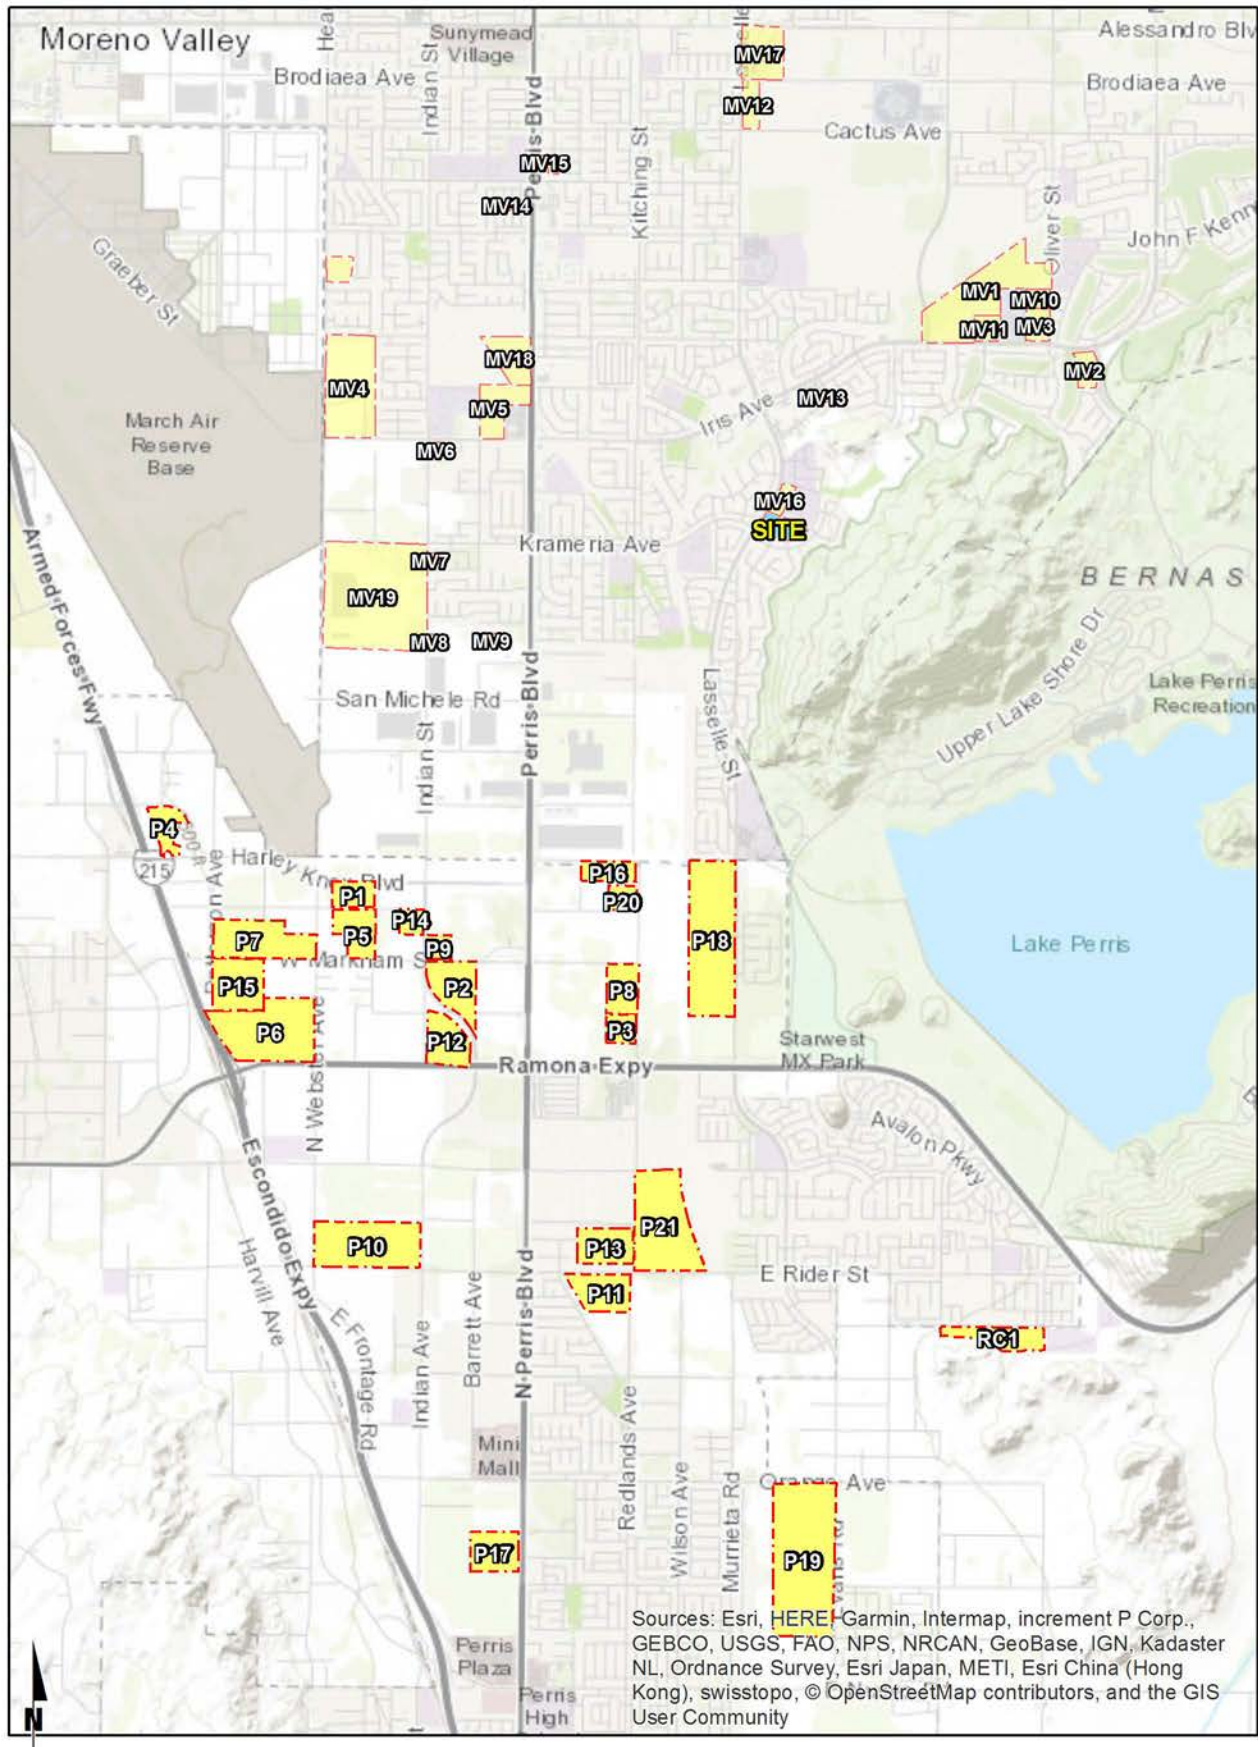

Any other cumulative projects that are not expected to contribute measurable traffic to study area intersections have not been included since the traffic would dissipate due to the distance from the Project site and study area intersections. Any additional traffic generated by other projects not on the cumulative projects list is accounted for through background ambient growth factors that have been applied to the peak hour volumes at study area intersections as discussed in Section 4.5 *Background Traffic*. Cumulative development project ADT and peak hour intersection turning movement volumes are shown on Exhibit 4-5.

#### 4.7 NEAR-TERM TRAFFIC FORECASTS

To provide a comprehensive assessment of potential transportation network deficiencies, a “buildup” analysis was performed in support of this work effort. The “buildup” method was used to approximate the Opening Year Cumulative traffic forecasts, and is intended to identify the cumulative impacts on both the existing and planned near-term circulation system. The Opening Year Cumulative traffic forecasts include background traffic, traffic generated by other cumulative development projects within the study area, and the traffic generated by the proposed Project.

The “buildup” approach combines existing traffic counts with a background ambient growth factor to forecast the near-term 2023 traffic conditions. An ambient growth factor of 10.41% (2023) accounts for background (area-wide) traffic increases that occur over time, up to the year 2023 from the year 2018 (compounded two percent per year growth over a 5-year period). Traffic volumes generated by the Project are then added to assess the Opening Year Cumulative traffic conditions. The 2023 roadway network is similar to the existing conditions roadway network with the exception of future roadways and intersections proposed to be developed by the Project.

Attachment: Traffic Assessment (Nov 2018) (3376 : The proposal includes a General Plan Amendment, Specific Plan Amendment, Change of

As noted previously, an analysis of the proposed Project at various development tiers has been assessed for the purposes of this traffic study. The near-term traffic analysis includes the following traffic conditions, with the various traffic components:

- Opening Year Cumulative (2023) Without Project
  - Existing 2018 counts
  - Ambient growth (10.41%)
  - Cumulative Development traffic
- Opening Year Cumulative (2023) With Project
  - Existing 2018 counts
  - Ambient growth (10.41%)
  - Cumulative Development traffic
  - Project traffic

#### 4.8 HORIZON YEAR (2040) VOLUME DEVELOPMENT

The Horizon Year (2040) With Project traffic conditions were derived from the RivTAM modified to represent Horizon Year conditions for the City of Moreno Valley using accepted procedures for model forecast refinement and smoothing. The traffic forecasts reflect the area-wide growth anticipated between Existing conditions and Horizon Year conditions.

In most instances the traffic model zone structure is not designed to provide accurate turning movements along arterial roadways unless refinement and reasonableness checking is performed. Therefore, the Horizon Year With Project peak hour forecasts were refined using the model derived long-range forecasts, along with existing peak hour traffic count data collected at each analysis location in March 2018. Future estimated peak hour traffic data was used for new intersections and intersections with an anticipated change in travel patterns to further refine the Horizon Year With Project peak hour forecasts.

The refined future peak hour approach and departure volumes obtained from the model output data are then entered into a spreadsheet program consistent with the National Cooperative Highway Research Program (NCHRP Report 255), along with initial estimates of turning movement proportions. A linear programming algorithm is used to calculate individual turning movements which match the known directional roadway segment forecast volumes computed in the previous step. This program computes a likely set of intersection turning movements from intersection approach counts and the initial turning proportions from each approach leg.

Typically, the model growth is prorated and is subsequently added to the existing (base validation) traffic volumes to represent Long Range traffic conditions. However, review of the resulting model growth indicates negative growth for several study area intersections. In an effort to conduct a conservative analysis, reductions to traffic forecasts from either Existing or Opening Year Cumulative traffic conditions were not assumed as part of this analysis. Additional growth has also been applied on a movement-by-movement basis, where applicable, to estimate reasonable Horizon Year forecasts. Horizon Year turning volumes were compared to Opening Year Cumulative volumes in order to ensure a minimum growth as a part of the refinement process. The minimum growth

includes any additional growth between Opening Year Cumulative and Horizon Year traffic conditions that is not accounted for by the traffic generated by cumulative development projects and ambient growth rates assumed between Existing (2018) and Opening Year Cumulative traffic conditions. Future estimated peak hour traffic data was used for new intersections and intersections with an anticipated change in travel patterns to further refine the Horizon Year peak hour forecasts.

The future Horizon Year without Project peak hour turning movements were then reviewed by Urban Crossroads for reasonableness, and in some cases, were adjusted to achieve flow conservation, reasonable growth, and reasonable diversion between parallel routes. Flow conservation checks ensure that traffic flow between two closely spaced intersections, such as two freeway ramp locations, is verified in order to make certain that vehicles leaving one intersection are entering the adjacent intersection and that there are no unexplained loss of vehicles. The result of this traffic forecasting procedure is a series of traffic volumes which are suitable for traffic operations analysis.

Post-processing worksheets for Horizon Year Without Project traffic conditions are provided in Appendix 4.1.

## 5 E+P TRAFFIC CONDITIONS

This section discusses the traffic forecasts for Existing plus Project (E+P) conditions and the resulting intersection operations, queuing, and traffic signal warrant analyses.

### 5.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for E+P conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for E+P conditions only (e.g., intersection and roadway improvements at the Project's frontage and driveways).

### 5.2 E+P TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes plus Project traffic. Exhibit 5-1 shows the ADT and peak hour intersection turning movement volumes, which can be expected for E+P traffic conditions.

### 5.3 INTERSECTION OPERATIONS ANALYSIS

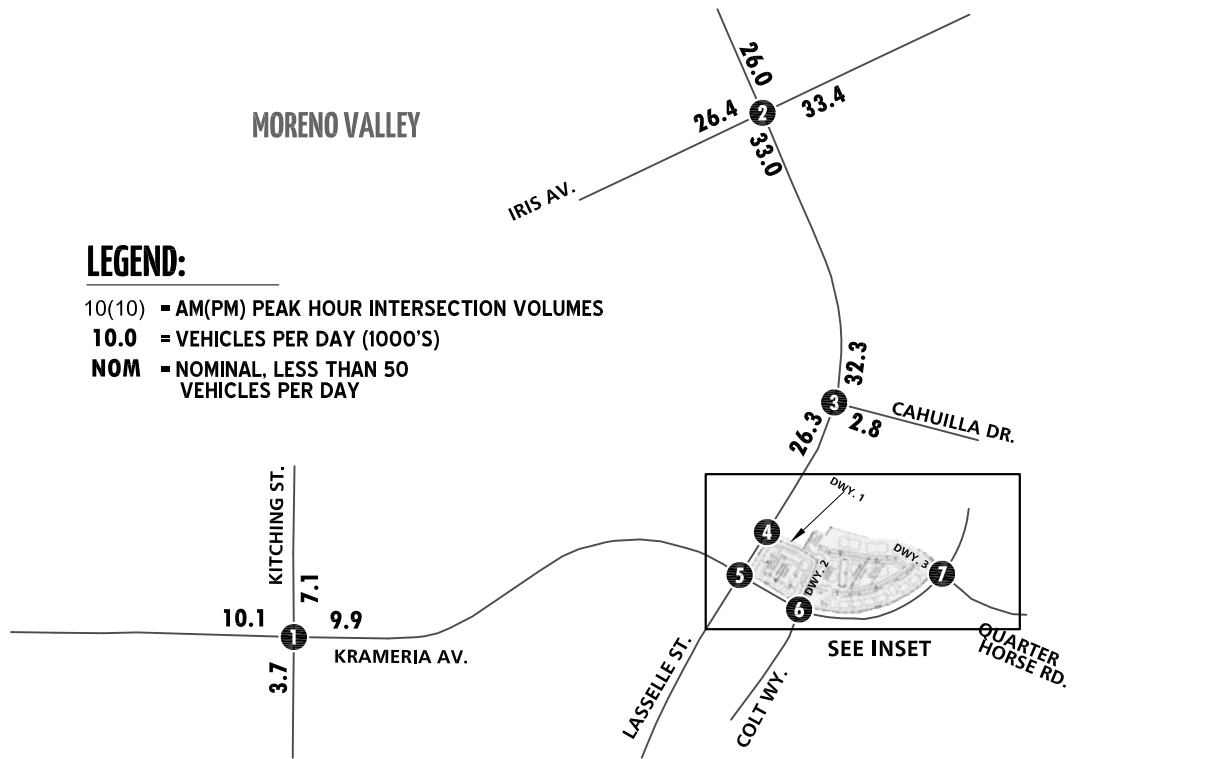

E+P peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2 *Methodologies* of this TIA. The intersection analysis results are summarized in Table 5-1, which indicates that there are no study area intersections anticipated to operate at an unacceptable LOS during one or both peak hours, consistent with Existing (2018) traffic conditions. Also, similar to Existing (2018) traffic conditions, the intersection of Lasselle Street and Krameria Avenue is anticipated to operate at a deficient LOS during the AM peak hour with the implementation of the proposed road diet improvements along Krameria Avenue. Exhibit 5-2 summarizes the weekday AM and PM peak hour study area intersections LOS under E+P traffic conditions, consistent with the results provided in Table 5-1. The intersection operations analysis worksheets are included in Appendix 5.1 of this TIA.

### 5.4 TRAFFIC SIGNAL WARRANTS ANALYSIS

There are no unsignalized study area intersections anticipated to meet either peak hour or planning level (ADT) volume-based traffic signal warrants under E+P traffic conditions (see Appendix 5.2).

**BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all-way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>2</sup> AWS = All-way Stop; CSS = Cross-street Stop; TS = Traffic Signal; **CSS** = Improvement

## 5.5 ROADWAY SEGMENT CAPACITY ANALYSIS

As noted previously, the City of Moreno Valley stated roadway segment capacities are approximate figures only, and are used at the General Plan level to assist in determining the roadway functional classification (number of through lanes) needed to meet future traffic demand.

Table 5-2 provides a summary of the E+P conditions roadway segment capacity analysis based on the City of Moreno Valley Roadway Segment Capacity/LOS Thresholds identified previously in Table 2-4. As shown in Table 5-2, the study area roadway segments are anticipated to continue to operate at an acceptable LOS under E+P traffic conditions, consistent with Existing (2018) traffic conditions.

## 5.6 QUEUING ANALYSIS

A queuing analysis was conducted at 5 study area intersections in close proximity to the Project in order to determine 95<sup>th</sup> percentile queues during the peak hours for E+P traffic conditions. The queuing analysis results are summarized in Table 5-3 for E+P traffic conditions. As shown in Table 5-3, with the addition of Project traffic, there are no additional movements anticipated to experience queuing issues during the AM or PM peak hours for E+P traffic conditions, in addition to those movements previously identified under Existing (2018) traffic conditions. Queuing worksheets for E+P traffic conditions are included in Appendix 5.3.

## 5.7 RECOMMENDED IMPROVEMENTS

### 5.7.1 INTERSECTION IMPROVEMENTS

The study area intersections are anticipated to operate at an acceptable LOS, as such, intersection improvements have not been recommended.

### 5.7.2 QUEUING IMPROVEMENTS

As previously shown in Table 5-3, there are 2 movements that experience queuing issues during the AM or PM peak hours. Recommended improvements to address queuing issues for E+P traffic conditions are shown in Table 5-4. Consistent with Existing (2018) traffic conditions, a 180-foot northbound left turn lane and 280-foot northbound right turn lane in order to accommodate the 95<sup>th</sup> percentile peak hour queues for E+P traffic conditions. The Project should contribute fair share towards the turn pocket improvements for the northbound left and right turn lanes as they are needed to address Existing queuing deficiencies at the intersection of Lasselle Street and Krameria Avenue.

Table 5-2

## Roadway Segment Analysis for E+P Conditions

**BOLD** = Inadequate 95th percentile storage.

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

## 6 OPENING YEAR CUMULATIVE (2023) TRAFFIC CONDITIONS

This section discusses the methods used to develop Opening Year Cumulative (2023) traffic forecasts and the resulting intersection operations, queuing, and traffic signal warrant analyses.

### 6.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Opening Year Cumulative (2023) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Opening Year Cumulative conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Opening Year Cumulative conditions only (e.g., intersection and roadway improvements along the cumulative development's frontages and driveways).

### 6.2 OPENING YEAR CUMULATIVE (2023) WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

To account for background traffic, other known cumulative development projects in the study area were included in addition to 10.41% of ambient growth for Opening Year Cumulative traffic conditions. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2023) Without Project traffic conditions are shown on Exhibit 6-1.

### 6.3 OPENING YEAR CUMULATIVE (2023) WITH PROJECT TRAFFIC VOLUME FORECASTS

To account for background traffic, other known cumulative development projects in the study area were included in addition to 10.41% of ambient growth for Opening Year Cumulative traffic conditions in conjunction with traffic associated with the proposed Project. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2023) With Project traffic conditions are shown on Exhibit 6-2.

## 6.4 INTERSECTION OPERATIONS ANALYSIS

LOS calculations were conducted for the study intersections to evaluate their operations under Opening Year Cumulative conditions with roadway and intersection geometrics consistent with Section 6.1 *Roadway Improvements*. As shown in Table 6-1, the study area intersections are anticipated to operate at an acceptable LOS during the peak hours under Opening Year Cumulative (2023) Without Project traffic conditions, with the exception of the following study area intersections:

- Lasselle Street & Iris Avenue (#2) – LOS E AM and PM peak hours
- Lasselle Street & Krameria Avenue (#5) – LOS F AM peak hour only

The addition of Project traffic is not anticipated to result in any additional deficiencies at the study area intersections, in addition to the locations identified under Opening Year Cumulative (2023) Without Project traffic conditions. A summary of the peak hour intersection LOS for Opening Year Cumulative (2023) Without Project conditions are shown on Exhibit 6-3 and on Exhibit 6-4 for Opening Year Cumulative (2023) With Project traffic conditions. The intersection operations analysis worksheets for Opening Year Cumulative (2023) Without and With Project traffic conditions are included in Appendix 6.1 and Appendix 6.2 of this TIA, respectively. Measures to address near-term cumulative deficiencies for Opening Year Cumulative traffic conditions are discussed in Section 6.8 *Opening Year Cumulative Deficiencies and Recommended Improvements*.

The intersections of Lasselle Street at Krameria Avenue and Driveway 2/Colt Way at Krameria Avenue are anticipated to experience higher delays with the implementation of the road diet improvements along Krameria Avenue. If the road diet improvements are implemented, it is anticipated that there will be periods during the morning peak hour where the intersections along the affected roadway would likely experience higher/unacceptable delays.

## 6.5 TRAFFIC SIGNAL WARRANTS ANALYSIS

There are no unsignalized study area intersections that are anticipated to meet either peak hour or planning level (ADT) volume-based traffic signal warrants for Opening Year Cumulative traffic conditions (see Appendix 6.3 and Appendix 6.4).

Table 6-1

## Intersection Analysis for Opening Year Cumulative (2023) Conditions

| # | Intersection                       | Traffic Control <sup>2</sup> | 2023 Without Project       |             |                  |    | 2023 With Project          |             |                  |    | Acceptable LOS |

| 7 | Krameria Av. & Quarter Horse Rd.   | CSS                          | 21.4                       | 10.0        | C                | B  | 21.9                       | 10.3        | C                | B  | C              |

**BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all-way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>2</sup> AWS = All-way Stop; CSS = Cross-street Stop; TS = Traffic Signal; **CSS** = Improvement

EXHIBIT 6-3: OPENING YEAR CUMULATIVE (2023) WITHOUT PROJECT SUMMARY OF LOS

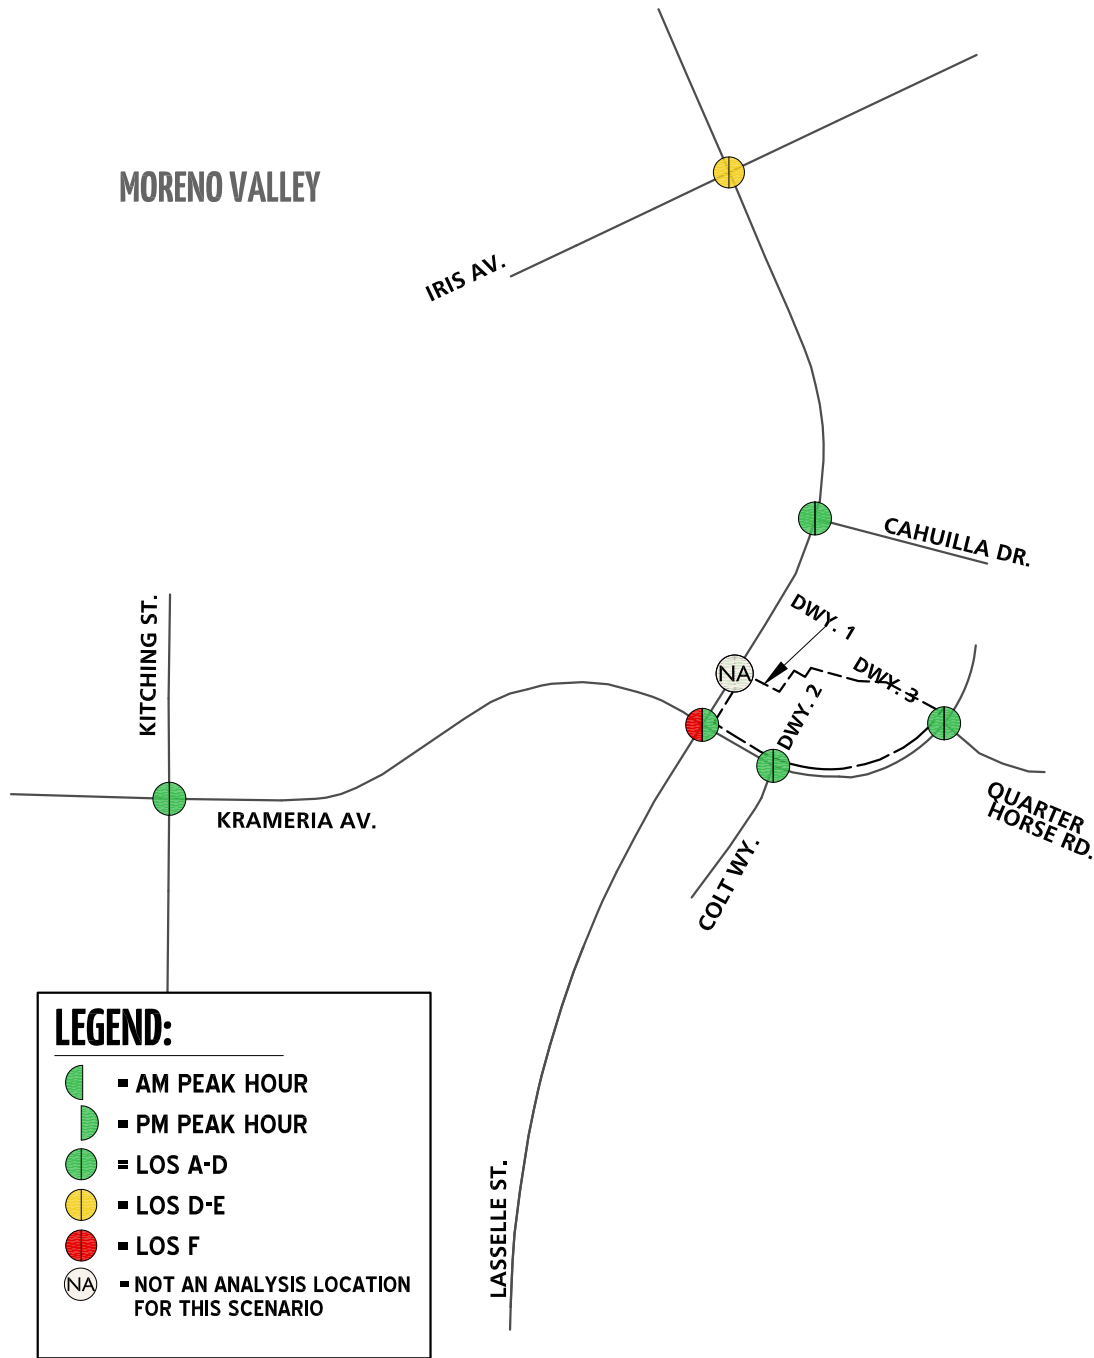

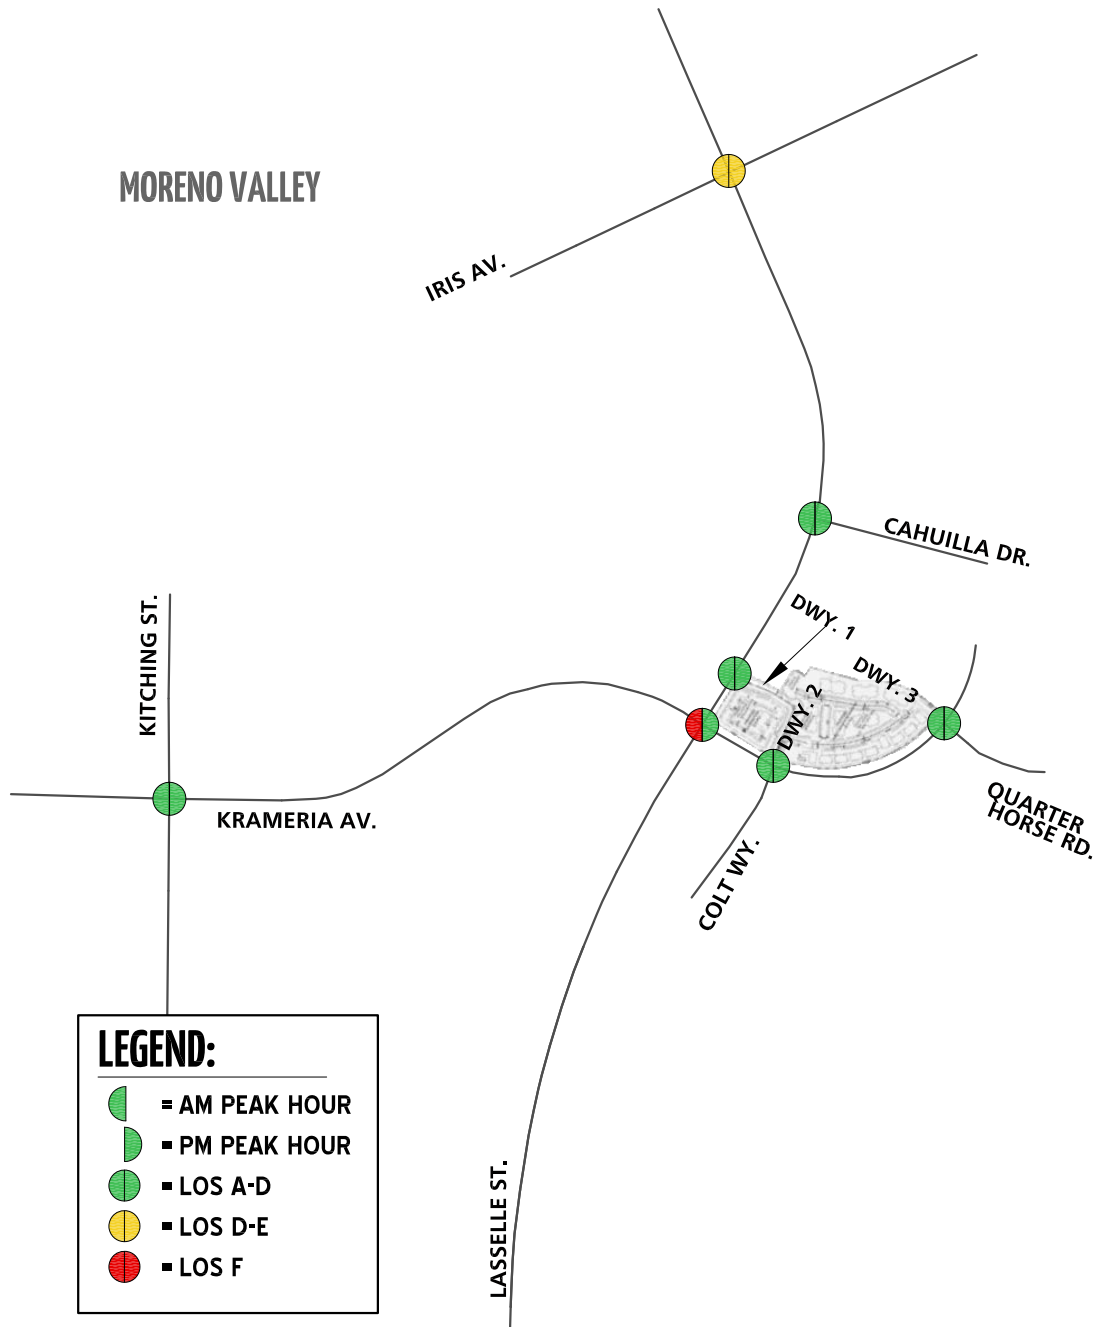

EXHIBIT 6-4: OPENING YEAR CUMULATIVE (2023) WITH PROJECT SUMMARY OF LOS

## 6.6 ROADWAY SEGMENT CAPACITY ANALYSIS

As noted previously, the City of Moreno Valley stated roadway segment capacities are approximate figures only, and are used at the General Plan level to assist in determining the roadway functional classification (number of through lanes) needed to meet future traffic demand.

Table 6-2 provides a summary of the Opening Year Cumulative (2023) conditions roadway segment capacity analysis based on the City of Moreno Valley Roadway Segment Capacity/LOS Thresholds identified previously in Table 2-4. As shown in Table 6-2, the study area roadway segment of Lasselle Street between Iris Avenue and Cahuilla Drive (#3) is anticipated to operate at an unacceptable LOS for Opening Year Cumulative (2023) Without Project traffic conditions. The addition of Project traffic is not anticipated to result in any additional roadway segment deficiencies from the location identified previously for Opening Year Cumulative (2023) Without Project traffic conditions.

## 6.7 QUEUING ANALYSIS

A queuing analysis was conducted at 5 study area intersections in close proximity to the Project in order to determine 95<sup>th</sup> percentile queues during the peak hours for Opening Year Cumulative (2023) traffic conditions. The queuing analysis results are summarized in Table 6-3 for Opening Year Cumulative (2023) traffic conditions which indicates the intersection of Lasselle Street and Krameria Avenue is anticipated to continue to experience queuing issues during the AM or PM peak hours for the northbound left turn pocket and northbound right turn pocket, consistent with Existing and E+P traffic conditions. In addition, the westbound left turn pocket is also anticipated to experience queues during the AM peak hour only for Opening Year Cumulative (2023) Without Project traffic conditions. With the addition of Project traffic, the southbound left turn pocket is anticipated to experience queuing issues during the AM peak hour only. Queuing worksheets for Opening Year Cumulative (2023) Without and With Project traffic conditions are included in Appendix 6.5 and Appendix 6.6, respectively.

## 6.8 OPENING YEAR CUMULATIVE DEFICIENCIES AND RECOMMENDED IMPROVEMENTS

### 6.8.1 INTERSECTION IMPROVEMENTS

Improvements necessary to reduce project-related traffic impacts to less-than-significant are also discussed below. The effectiveness of the proposed recommended mitigation measures are presented in Table 6-4 for Opening Year Cumulative (2023) traffic conditions. With the implementation of the intersection improvements discussed below, there are no cumulatively considerable project-related impacts anticipated to the study area intersections (Project to contribute fair share).

#### ***Improvement – Lasselle Street & Iris Avenue (#2)***

- Add an eastbound right turn lane and modify the traffic signal to implement overlap phasing on the right turn lane

Table 6-2

Roadway Segment Analysis for Opening Year Cumulative (2023) Conditions

| # | Roadway      | Segment Limits               | Roadway Section | LOS Capacity <sup>1</sup> | 2023 NP       | V/C <sup>2</sup> | LOS <sup>3</sup> | 2023 WP       | V/C <sup>2</sup> | LOS <sup>3</sup> |

**BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; d = Defacto right turn lane; 1 = Improvement

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all-way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> TS = Traffic Signal; CSS = Cross-Street Stop

Attachment: Traffic Assessment (Nov 2018) (3376 : The proposal includes a General Plan Amendment, Specific Plan Amendment, Change of

### **Improvement – Lasselle Street & Krameria Avenue (#5)**

- Add a 2<sup>nd</sup> northbound left turn lane
- Restripe the eastbound approach with 2 lefts, 1 through, and 1 right turn lane
- Modify the traffic signal to implement overlap phasing on the eastbound right turn lane
- The road diet lanes on the westbound approach can remain

The intersection operations analysis worksheets for Opening Year Cumulative (2023) With Project traffic conditions, with improvements, are included in Appendix 6.7 of this TIA.

#### **6.8.2 ROADWAY SEGMENT IMPROVEMENTS**

As shown in Table 6-1, the Opening Year Cumulative (2023) peak hour analysis indicates that the adjacent study area intersections on either side of the deficient roadway segment along Lasselle Street is anticipated to operate at acceptable LOS. As such, roadway segment widening does not appear necessary to address the deficiency along the segment of Lasselle Street between Iris Avenue and Cahuilla Drive.

#### **6.8.3 QUEUING IMPROVEMENTS**

As previously shown in Table 6-3, there are 3 movements that experience queuing issues during the AM or PM peak hours for Opening Year Cumulative (2023) With Project traffic conditions. Consistent with Existing (2018) and E+P traffic conditions, a 180-foot northbound left turn lane and 280-foot northbound right turn lane are recommended in order to accommodate the 95<sup>th</sup> percentile peak hour queues for Opening Year Cumulative (2023) traffic conditions. Additionally, a 270-foot southbound left turn lane is recommended in order to accommodate the 95<sup>th</sup> percentile peak hour queues for Opening Year Cumulative (2023) traffic conditions.

The Project should contribute fair share towards the turn pocket improvements for the northbound left and right turn lanes and modifications to the existing landscaped median to accommodate a 270-foot southbound left turn lane at the intersection of Lasselle Street and Krameria Avenue. Recommended improvements to address queuing issues for Opening Year Cumulative (2023) traffic conditions are described below and shown in Table 6-5.

Table 6-5

Peak Hour Queuing Summary for Opening Year Cumulative (2023) Conditions With Improvements

| Intersection                                | Movement | Available Stacking Distance (Feet) | 2023 Without Project         |              |                          |     | 2023 With Project            |              |                          |     |

## 7 HORIZON YEAR (2040) TRAFFIC CONDITIONS

This section discusses the methods used to develop Horizon Year (2040) Without and With Project traffic forecasts, and the resulting intersection operations, queuing, and traffic signal warrant analyses.

### 7.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Horizon Year conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Horizon Year conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Horizon Year conditions only (e.g., intersection and roadway improvements along the cumulative development's frontages and driveways).

### 7.2 HORIZON YEAR (2040) WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-processed volumes obtained from the RivTAM. For additional information on the development of the Horizon Year Without Project traffic forecasts, see Section 4.8 *Horizon Year (2040) Volume Development* of this TIA. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Horizon Year Without Project traffic conditions are shown on Exhibit 7-1.

### 7.3 HORIZON YEAR (2040) WITH PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-processed volumes obtained from the RivTAM, plus Project traffic. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Horizon Year With Project traffic conditions are shown on Exhibit 7-2.

## 7.4 INTERSECTION OPERATIONS ANALYSIS

### 7.4.1 HORIZON YEAR WITHOUT PROJECT TRAFFIC CONDITIONS

LOS calculations were conducted for the study intersections to evaluate their operations under Horizon Year Without Project conditions with roadway and intersection geometrics consistent with Section 7.1 *Roadway Improvements*. As shown in Table 7-1, the study area intersections are anticipated to operate at acceptable LOS for Horizon Year (2040) Without Project traffic conditions, with the exception of the following study area intersection:

- Kitching Street & Krameria Avenue (#1) – LOS D AM peak hour only
- Lasselle Street & Iris Avenue (#2) – LOS E AM and PM peak hours
- Lasselle Street & Krameria Avenue (#5) – LOS F AM peak hour only

A summary of the peak hour intersection LOS for Horizon Year Without Project conditions are shown on Exhibit 7-3. The intersection operations analysis worksheets for Horizon Year Without Project traffic conditions are included in Appendix 7.1.

### 7.4.2 HORIZON YEAR WITH PROJECT TRAFFIC CONDITIONS

As shown in Table 7-1 and illustrated on Exhibit 7-4, there are no additional study area intersections anticipated to experience unacceptable LOS (LOS E or worse) with the addition of Project traffic during one or more peak hours in addition to those previously identified under Horizon Year Without Project traffic conditions. The intersection operations analysis worksheets for Horizon Year With Project traffic conditions are included in Appendix 7.2 of this TIA.

The intersections of Lasselle Street at Krameria Avenue and Driveway 2/Colt Way at Krameria Avenue are anticipated to experience higher delays with the implementation of the road diet improvements along Krameria Avenue. If the road diet improvements are implemented, it is anticipated that there will be periods during the morning peak hour where the intersections along the affected roadway would likely experience higher/unacceptable delays.

## 7.5 TRAFFIC SIGNAL WARRANTS ANALYSIS

There are no unsignalized study area intersections that are anticipated to meet either peak hour or planning level (ADT) volume-based traffic signal warrants for Horizon Year (2040) Without and With Project traffic conditions (see Appendix 7.3 and Appendix 7.4).

Table 7-1

## Intersection Analysis for Horizon Year (2040) Conditions

| # | Intersection                       | Traffic Control <sup>2</sup> | 2040 Without Project       |             |                  |    | 2040 With Project          |             |                  |    | Acceptable LOS |
|---|------------------------------------|------------------------------|----------------------------|-------------|------------------|----|----------------------------|-------------|------------------|----|----------------|

| 7 | Krameria Av. & Quarter Horse Rd.   | CSS                          | 24.2                       | 10.1        | C                | B  | 24.9                       | 10.4        | C                | B  | C              |

**BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all-way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>2</sup> AWS = All-way Stop; CSS = Cross-street Stop; TS = Traffic Signal; **CSS** = Improvement

EXHIBIT 7-3: HORIZON YEAR (2040) WITHOUT PROJECT SUMMARY OF LOS

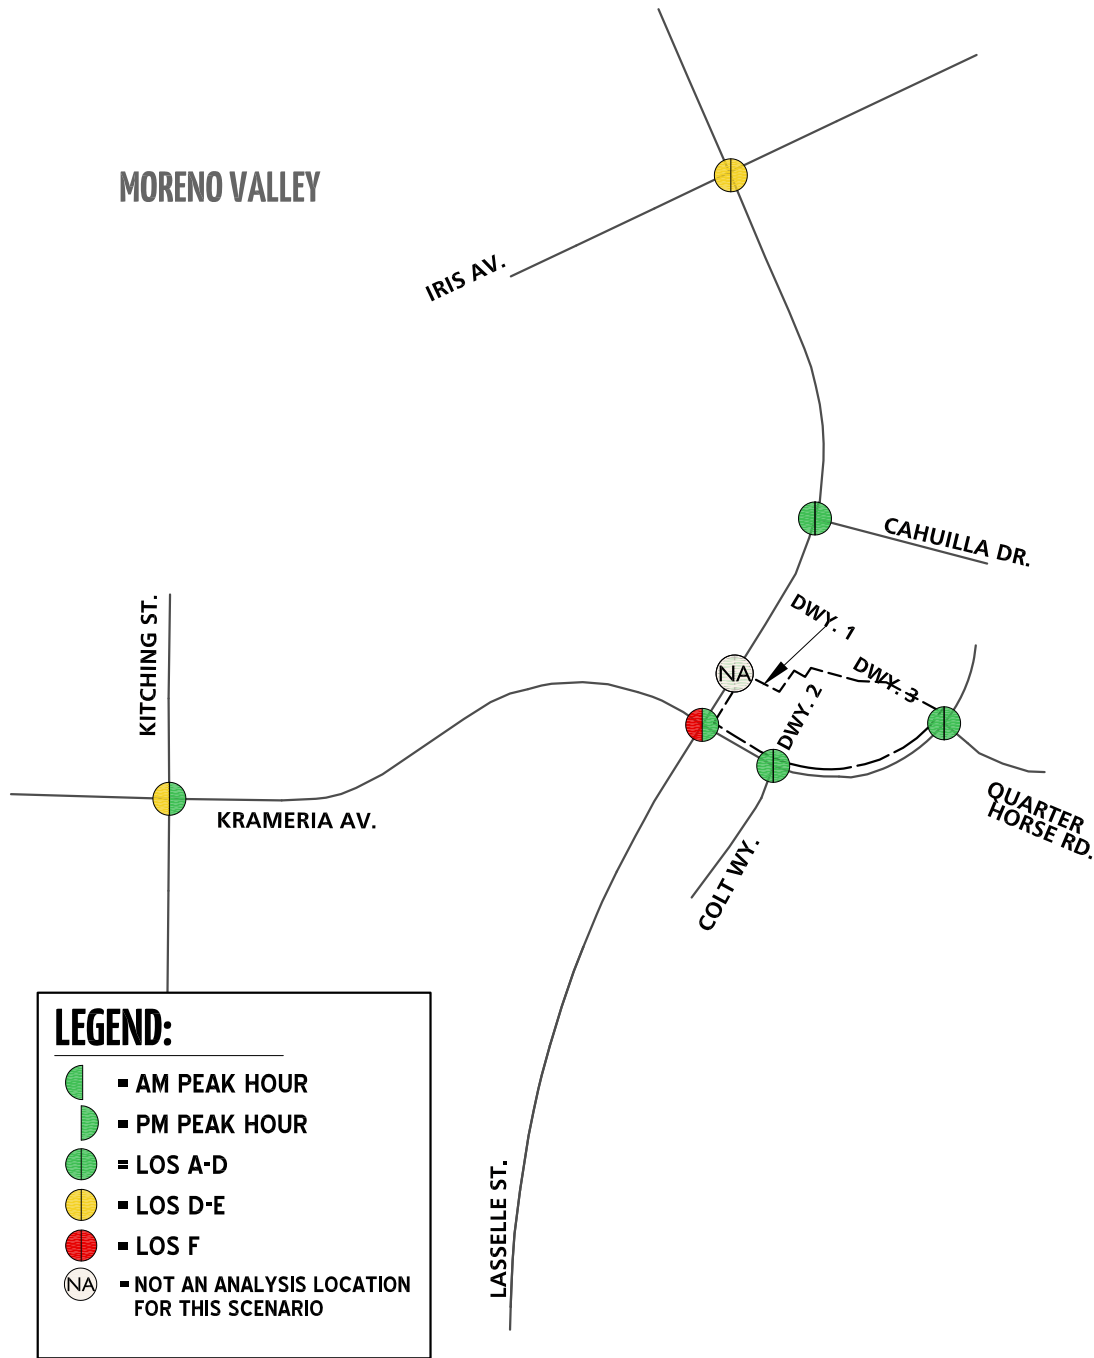

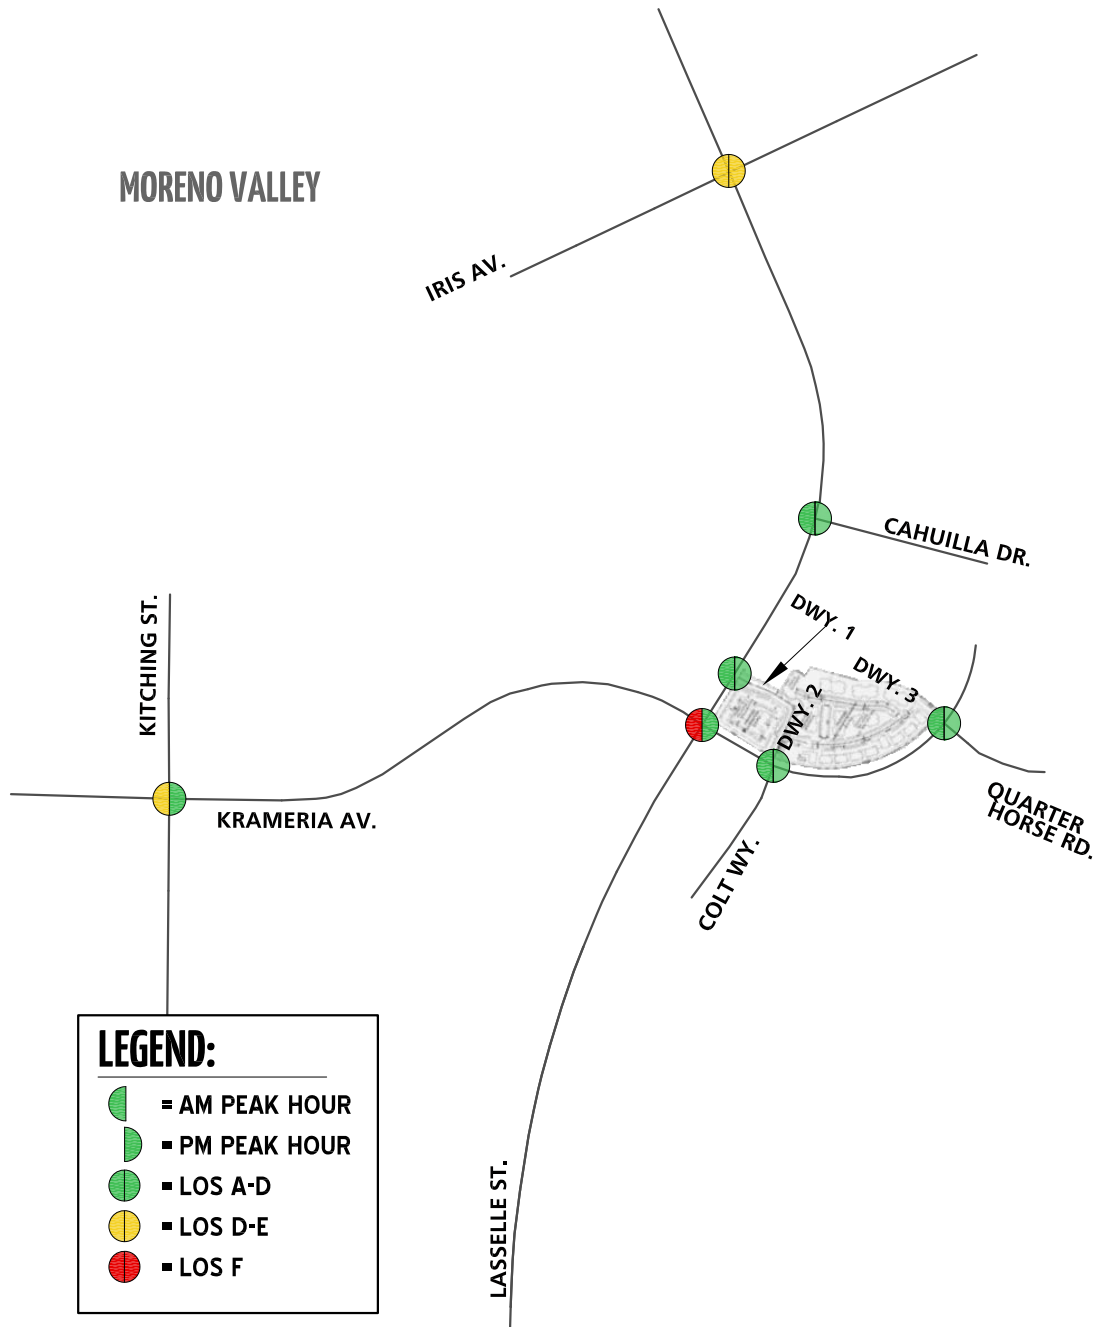

EXHIBIT 7-4: HORIZON YEAR (2040) WITH PROJECT SUMMARY OF LOS

## 7.6 ROADWAY SEGMENT CAPACITY ANALYSIS

As noted previously, the City of Moreno Valley stated roadway segment capacities are approximate figures only, and are used at the General Plan level to assist in determining the roadway functional classification (number of through lanes) needed to meet future traffic demand.

Table 7-2 provides a summary of the Horizon Year (2040) conditions roadway segment capacity analysis based on the City of Moreno Valley Roadway Segment Capacity/LOS Thresholds identified previously in Table 2-4. As shown in Table 7-2, the study area roadway segment of Lasselle Street between Iris Avenue and Cahuilla Drive (#3) is anticipated to operate at an unacceptable LOS for Horizon Year (2040) Without Project traffic conditions. The addition of Project traffic is not anticipated to result in any additional roadway segment deficiencies in addition to the location identified previously for Horizon Year (2040) Without Project traffic conditions.

## 7.7 QUEUING ANALYSIS

A queuing analysis was conducted at 5 study area intersections in close proximity to the Project in order to determine 95<sup>th</sup> percentile queues during the peak hours for Horizon Year (2040) traffic conditions. The queuing analysis results are summarized in Table 7-3 for Horizon Year (2040) traffic conditions which indicates the intersection of Lasselle Street and Krameria Avenue is anticipated to continue to experience queuing issues during the AM or PM peak hours for the northbound left turn pocket, northbound right turn pocket, southbound left turn pocket, and westbound left turn pocket for Horizon Year (2040) Without Project traffic conditions. There are no additional turn pockets anticipated to experience peak hour queues with the addition of Project traffic for Horizon Year (2040) With Project traffic conditions. Queuing worksheets for Horizon Year (2040) Without and With Project traffic conditions are included in Appendix 7.5 and Appendix 7.6, respectively.

Table 7-2

## Roadway Segment Analysis for Horizon Year (2040) Conditions

| # | Roadway      | Segment Limits               | Roadway Section | LOS Capacity <sup>1</sup> | 2040 NP       | V/C <sup>2</sup> | LOS <sup>3</sup> | 2040 WP       | V/C <sup>2</sup> | LOS <sup>3</sup> |

**BOLD** = Inadequate 95th percentile storage.

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

## 7.8 HORIZON YEAR DEFICIENCIES AND RECOMMENDED IMPROVEMENTS

### 7.8.1 INTERSECTION IMPROVEMENTS

Improvements necessary to reduce project-related traffic impacts to less-than-significant are also discussed below. The effectiveness of the proposed recommended mitigation measures are presented in Table 7-4 for Horizon Year (2040) traffic conditions. With the implementation of the intersection improvements discussed below, there are no cumulatively considerable project-related impacts anticipated to the study area intersections (Project to contribute fair share).

#### ***Improvement – Kitching Street & Krameria Avenue (#1)***

- Add an eastbound right turn lane
- Modify the traffic signal to implement overlap phasing on the eastbound right turn lane

#### ***Improvement – Lasselle Street & Iris Avenue (#2)***

- Add an eastbound right turn lane and modify the traffic signal to implement overlap phasing on the right turn lane

#### ***Improvement – Lasselle Street & Krameria Avenue (#6)***

- Add a 2<sup>nd</sup> northbound left turn lane
- Add an eastbound right turn lane and modify the traffic signal to implement overlap phasing on the eastbound right turn lane
- The road diet lanes on the westbound approach can remain

The intersection operations analysis worksheets for Horizon Year (2040) With Project traffic conditions, with improvements, are included in Appendix 7.7 of this TIA.

### 7.8.2 ROADWAY SEGMENT IMPROVEMENTS

As shown in Table 7-1 and with the improvements shown in Table 7-4, the Horizon Year (2040) peak hour analysis indicates that the adjacent study area intersections on either side of the deficient roadway segments are anticipated to operate at acceptable LOS. As such, roadway segment widening does not appear necessary to address the deficiencies.

Table 7-4

## Intersection Analysis for Horizon Year (2040) Conditions With Improvements

| # | Intersection                | Traffic Control <sup>3</sup> | Intersection Approach Lanes <sup>1</sup> |   |    |            |   |   |           |   |            |           |          |          | Delay <sup>2</sup> (secs.) |             | Level of Service |    |
|---|-----------------------------|------------------------------|--|---|----|------------|---|---|-----------|---|------------|-----------|----------|----------|----------------------------|-------------|------------------|----|

**BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; d = Defacto right turn lane; 1 = Improvement

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all-way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> TS = Traffic Signal

### 7.8.3 QUEUING IMPROVEMENTS

As previously shown in Table 7-3, there are movements that experience queuing issues during the AM or PM peak hours for Horizon Year (2040) With Project traffic conditions. Consistent with Existing (2018), E+P, and Opening Year Cumulative (2023) traffic conditions, a 180-foot northbound left turn lane and 280-foot northbound right turn lane are recommended in order to accommodate the 95<sup>th</sup> percentile peak hour queues for Horizon Year (2040) traffic conditions. Consistent with Opening Year Cumulative (2023) traffic conditions, a 270-foot southbound left turn lane is recommended in order to accommodate the 95<sup>th</sup> percentile peak hour queues for Horizon Year (2040) traffic conditions.

The Project should contribute fair share towards the turn pocket improvements for the northbound left and right turn lanes and modifications to the existing landscaped median to accommodate a 270-foot southbound left turn lane at the intersection of Lasselle Street and Krameria Avenue. Although there is an anticipated queue that exceeds the storage length for the westbound left turn lane at Lasselle Street and Krameria Avenue, additional improvements have not been recommended as the existing striped two-way-left-turn lane could accommodate up to an additional vehicle (25-feet) without spilling back to the upstream intersection of Colt Way. Recommended improvements to address queuing issues for Horizon Year (2040) traffic conditions are described below and shown in Table 7-5.

Table 7-5

Peak Hour Queuing Summary for Horizon Year (2040) Conditions With Improvements

| Intersection                                | Movement | Available Stacking Distance (Feet) | 2040 Without Project         |                  |                          |     | 2040 With Project            |              |                          |     |

**BOLD** = Inadequate 95th percentile storage.

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

**I. Background**

The proposed Continental Villages development (referred to as "Project") is located on the northeast corner of Lasselle Street and Krameria Avenue in the City of Moreno Valley. The Project is proposed to consist of 112 apartments/duplexes and 21,000 square feet of retail use.

The Project is anticipated to be built in a single phase and the opening year of 2023 will be evaluated for the purposes of this analysis (minimum five-year opening year per Moreno Valley traffic study guidelines). See preliminary site plan on **Exhibit 1**. **Exhibit 2** illustrates the study area and proposed intersection and roadway segment analyses locations.

**II. Trip Geographic Distribution and Assignment**

The project trip distribution patterns (shown on **Exhibits 3 and 4**) were developed based on an understanding of existing travel patterns in the area, the geographical location of the site, and the site's proximity to the local arterial and regional state highway system.

October 11, 2018

Page 2

**III. Site Trip Generation Forecast**

- A. Source for trip generation rates: Institute of Transportation Engineers (ITE) Trip Generation Manual 10<sup>th</sup> Edition (2017) for ITE Land Use Codes 220 for Multifamily Housing (Low-Rise) and 820 for Shopping Center (based on the ITE Land Use Code 820 regression equation).
- B. Weekday AM Peak: 7:00-9:00 AM
- C. Weekday PM Peak: 4:00-6:00 PM
- D. Intersection and link acceptable Level of Service D for some intersections and links and Level of Service C for others based upon the current City policy. (Use Highway Capacity Manual (6<sup>th</sup> Edition) operations procedures; parameters per County of Riverside Traffic Impact Analysis Guidelines)

**Proposed Use Rates** <sup>(1)</sup> (See attached **Table 1**)

|  |                     |                 |  |
|--|---------------------|-----------------|--|
| <i>Multifamily Housing (Low-Rise)</i> (per DU) | Daily: <u>7.32</u>  | AM: <u>0.46</u> | PM: <u>0.56</u>  |
| <i>Shopping Center</i> (per TSF)               | Daily: <u>99.06</u> | AM: <u>7.73</u> | PM: <u>8.15</u>  |
| Internal Trip Allowance:                       | Yes: <u>X</u>       | No: _____       | Percentage: <u>10% (PM/Daily only)</u>                   |
| Pass-by Trip Allowance:                        | Yes: <u>X</u>       | No: _____       | Percentage: <u>34%<sup>(2)</sup> (PM and Daily only)</u> |

- (1) Institute of Transportation Engineers Trip Generation Manual (10<sup>th</sup> Edition, 2017).
- (2) Institute of Transportation Engineers Trip Generation Handbook (3<sup>rd</sup> Edition 2017).

- A. As shown in **Table 1**, the proposed Project is anticipated to generate a net total of 2,056 trip-ends per day with 215 AM peak hour trips and 167 PM peak hour trips. A maximum 10% reduction has been used to account for internal capture for the PM peak hour and Daily trips.

**IV. Specific Project Issues to be Analyzed**

- A. The traffic study will address the adequacy of site access and identify specific near-term circulation improvements required at study area intersections and roadways to maintain acceptable peak hour and daily levels of service (LOS).
- B. The traffic study shall address the project traffic impacts at all study intersections listed in Section VI and provide appropriate recommended improvements if applicable. Peak-hour traffic signal warrants shall be evaluated for all intersections that are not currently signalized.
- C. Qualitative assessment of existing and planned non-motorized facilities (e.g., pedestrians, bike routes, trails, etc.) within the study area.

October 11, 2018

Page 3

- D. The traffic study shall provide a detail analysis of each driveway location based on Table 9.11.080-14 of the City of Moreno Valley Municipal Code - Design Guidelines, by preparing a table or an exhibit to show the required minimum spacing distance between the Project driveways and whether each proposed driveway location can meet the minimum distance.
- E. The traffic study will include fair share calculations for any study area intersection that is required to contribute to future improvements.
- F. The traffic study shall provide a Queuing Analysis section to determine the 95<sup>th</sup> percentile queues for turning movements (left-turn, right-turn, and/or U-turn) based on forecasted E+P, Opening Year Cumulative (2023) With Project, and Horizon Year (2040) With Project traffic volumes using the Synchro Version 10 software:
  - 1. Lasselle St. & Krameria Av. (all directions)
  - 2. Driveway 2/Colt Wy. & Krameria Av. (all directions)
  - 3. Lasselle St. & Driveway 1 (NB right only)
  - 4. Driveway 3/Quarter Horse Rd. & Krameria Av. (all directions)
  - 5. Lasselle St. & Cahuilla Dr. (NB right only)

If there is not sufficient queuing storage length available, the traffic study shall recommend improvements to resolve such issue.

#### V. Study Horizon Year

- A. Existing (2018)
- B. Existing (2018) Plus Project
- C. Opening Year Cumulative (2023) Without Project (existing to opening year-2023, assuming a growth rate of 2% per year and includes the traffic from other cumulative development projects in the vicinity)
- D. Opening Year Cumulative (2023) With Project
- E. Horizon Year (2040) Without Project
- F. Horizon Year (2040) With Project

#### VI. Facilities to be Studied

- A. Analysis Locations: (See **Exhibit 2**)
  - 1. Kitching Street & Krameria Avenue
  - 2. Lasselle Street & Iris Avenue
  - 3. Lasselle Street & Cahuilla Drive
  - 4. Lasselle Street & Driveway 1 – Future Intersection
  - 5. Lasselle Street & Krameria Avenue
  - 6. Driveway 2/Colt Way & Krameria Avenue
  - 7. Krameria Avenue & Driveway 3/Quarter Horse Road
- B. Roadway Segments:
  - 1. Krameria Avenue between Kitching Street and Lasselle Street
  - 2. Lasselle Street between Iris Avenue and Cahuilla Drive
  - 3. Lasselle Street between Cahuilla Drive and Driveway 1
  - 4. Lasselle Street between Driveway 1 and Krameria Avenue
  - 5. Krameria Avenue between Lasselle Street and Colt Way

October 11, 2018

Page 4

**VII. Other Items**

- A. There is a list of cumulative projects provided in **Table 2** (also shown graphically on **Exhibit 5**) and is consistent with the cumulative lists on other recent projects.
- B. **Exhibit 6** shows the distribution for the apartment complex Parcel 1 (cumulative project) north of the Project site. This distribution is consistent with the Project residential trip distribution previously shown on **Exhibit 3**.

**VIII. Deliverables**

- a. Draft traffic impact studies (2 hard copies plus PDF on a CD or USB drive)
- b. Final traffic impact studies (4 hard copies plus PDF on a CD or USB drive)

All draft and final traffic impact studies shall be delivered with the appropriate review fee to the Permit Technician, Land Development Division - Moreno Valley City Hall, 14177 Frederick Street, Moreno Valley, CA 92552. Please contact the Land Development Division at 951-413-3110 prior to the delivery of the traffic study.

A review fee of \$3,118 will be required upon submittal of the traffic study. **A signed copy of this Scoping Agreement must be included in the submitted draft and final traffic impact studies.** If you have any questions regarding this *Scoping Agreement*, please contact Eric Lewis at 951-413-3140.

If you have any questions regarding this *Scoping Agreement*, please contact Eric Lewis at 951-413-3140.

**Recommended By:**

Charlene So, PE  
Senior Associate  
Urban Crossroads, Inc.

**Approved By:**

Eric Lewis, City of Moreno Valley

\* NOTE: This scoping agreement was reviewed and approved based on the information submitted by Urban Crossroads, Inc. on 10/11/2018. Urban Crossroads and the Project Applicant acknowledge that any changes to the Project (zoning, size, type of use, number or location of access points, etc.) after 10/11/2018 may require this scoping agreement to be revised and resubmitted for review and approval by the City of Moreno Valley.

Notes  
User approved pedestrian interval to be less than phase max green.  
\* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Summary

|                    |      |
|--------------------|------|
| HCM 6th Ctrl Delay | 53.4 |
| HCM 6th LOS        | D    |

Notes

User approved pedestrian interval to be less than phase max green.  
\* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.
